UDISCO RADIO RECEIVERS

Lay Australia at your finger-tips.

Matthew Flinders in his frail craft could never have dreamed that hisfeat of sea manship in circumnavigating Australia would be duplicated nightly but a short century later.

Yet this is so. Nightly, owners of "UDISCO" Radio Receivers—without stirring from comfortable homes—are accomplishing what to Flinders entailed many weary days of hunger and privation.

All "UDISCO" Sets, whether "Eights," "Sixes," "Fives," or "Threes," are built to a standard of excellence in efficiency and design never before equalled in the world.

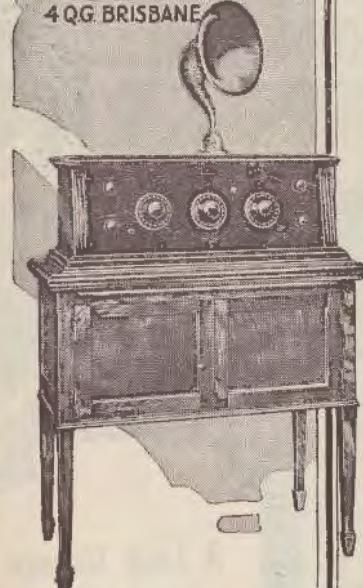

Only the best components—assembled with scientific precision by a specially trained corps of radio Engineers—are incorporated.

The "Capacidyne" circuit employed ensures reception of Stations operating on any wavelength between 20 and 2000 metres. This circuit—a purely Australian invention—gives selectivity, volume without distortion, superlative tone quality and ease of control.

Tuning dials synchronise—wavelengths are controlled with one switch—volume by another.

Housed in full polished cabinets of pleasing design, "UDISCO" Receivers are masterpieces of craftsmanship.

THE TABLE TALKER

The new goose-neck design is the result of research in radio acoustics, which definitely establishes its value in relation to the diaphragm fitted. One feature is the patent material used in the construction of the horn, which eliminates any suggestion of harshness. It is now possible to control volume and sensitivity with the small lever located at the rear of the base. Elegantly shaped, it still has that tasteful neutral brown finish and felt-padded base. Height, 18 in.; bell, 10 in.

THE BRANDOLA

Specially built to bring greater volume with minimum current input and exceptional clarity over the full frequency range. A large diaphragm gives new rounded fulness to the low registers and new clarified lightness to the high. The semi-goose-neck horn is constructed of material which eliminates harshness or metallic resonance. Reproduction is controlled by a thumbscrew on the base. Polished walnut plinth with electroplate fittings. Height, 26 in.; bell, 12 in.

£6/10/- each Retail

"Bosch" Radio Receiver

"The Amborola"

In presenting "The Amborola" Radio Receiver, a product of the American Bosch Magneto Corporation, we are offering a set which not only touches the highest peak for efficiency and quality, but is also a finished article of furniture which should be the pride of any home.

"The Amborola" is a powerful 6 valve radio receiver which excels in quality of tone, its simplicity of operation, its precision manufacture, and its beauty of craftsmanship both inside and out. Two indicators only are needed for all tuning. The indicator setting, once established for any station wave length is the setting for that station every time it is wanted. There is no fussing with the dials.

"The Amborola" is extremely selective, insuring a penetration of local or close by stations and the reception of more distant programmes with power and clarity.

Wireless Telephone Installation

HOME FOR INCURABLES, RYDE.

One of the most interesting wireless installations is that installed by Amalgamated Wireless at the Ryde Home for Incurables. It proved an instantaneous success, the inmates being highly delighted with the broadcasting services at their disposal. The set is the Radiola Hospital Installation, Type 2, and has a unique feature, in that each patient listening in has a choice of either Farmer's Broadcasting Service—2FC—or Broadcasters' Ltd. service—2BL.

The installation consists of two receiver sections operating at the same time off one aerial. These two units having distribution panels or amplifiers which in turn provide broadcasting service on seventy-two bedside headphones, and two loud speakers, the latter for the use of the nursing staff. On the wall at the side of each bed, there is affixed a small box in which are two plug sockets, the patient plugging in for whichever service is desired. The headphones, when not in use, are hung on a hook on the plug box. Whilst the volume from the loud speakers is sufficiently loud enough to dance to in comfort, the instrument is so designed that at all times the volume in the headphones never exceeds that of comfort. Furthermore, the wiring of the phones has been so arranged that should all but one of the patients disconnect from one broadcasting station and plug into the other, the volume in the remaining pair of phones in circuit is exactly the same as when the whole seventy-two are being operated.

Should one pair of phones break down, burn out, or otherwise become inoperative, it does not interfere with any of the other listeners-in to any material extent, so it will be seen that all contingencies have been provided for.

The manipulation of the set is exceedingly simple, being confined to four "on" "off" switches for each broadcasting station. A simple change over switch disconnects the accumulators from the set and connects them on to a Tungar charger, which silently charges them through the night and in the morning they are ready for the next day's work. The instrument is in use at every broadcasting period throughout the day. Five miles of wire were used in the installation. All batteries are housed in special boxes, thus eliminating the untidy features in connection with batteries often seen in large wireless installations. The distribution wires for the telephones throughout the building terminate at a common panel in the wall in the control room immediately under the main distribution panels, into which they are connected by special cords and plugs.

Police Wireless

NEW STATION SOON.

A complete radio transmitting and receiving station will shortly be established at Police Headquarters, Sydney, as the Chief Secretary (Mr. Lazzarini) and Commissioner of Police (Mr. Mitchell) consider that the results obtained with the radio-equipped police patrol cars warrant a substantial development of the system.

Wireless as an aid to the police, says the Commissioner, has been most satisfactory. Mr. Mitchell mentioned the case of a young woman who last week left home with the intention of committing suicide, and who was prevented by the police patrol. The patrol having learned by radio of the girl's intention, hurried to the gap and caught her as she was running to the edge.

But such an occurrence is unusual. It is the every day—or every night—results that give the radio patrol cars their value. Eight, ten, twelve, or more times a night, as the patrol cars drive steadily round the city and suburban streets, the wireless operator picks up a message from the broadcasting station at Willoughby, which sends the car off on a mission of investigation. Perhaps a householder has heard someone trying to break into his home, or a man has been assaulted in a dark lane. Or a motor car left on the street has disappeared or a suspicious character has been lurking round a jeweller's shop. These are typical cases and the wireless message is sent out with such celerity that the police patrol, comprising two detectives besides the driver of the car and the wireless operator, are on the scene in a few minutes, often quickly enough to clean up the case and apprehend a suspect immediately.

The speed with which the minions of the law arrive sometimes astounds those who shout for help. Only this week a man reported to Darlinghurst Police that he had been assaulted. Word flashed through the air and hardly had the victim finished his story when the wireless patrol arrived keen and ready to assist in hunting down the assailants. But the assaulted person had had time to think and he now said he did not wish for police intervention as he was capable of dealing with his enemies in his own way at a future date.

The Commissioner of Police is a keen student of radio so far as it affects his organisation, and when the new station has been erected at police headquarters—transferring the scene of the trans- provide transmitting sets on the patrol cars so that mission from Willoughby—steps will be taken to messages can be answered as well as received.

A word to radio experimenters: The wavelength of the new station will not be made public.

To Get the BEST from your Radio Set

TO GET THE BEST FROM YOUR RADIO SET,

KEEP YOUR BATTERIES PROPERLY CHARGED.

With a TUNGAR Battery Charger rundown batteries need not be the reason for missing any broadcast programmes. Very often the Concerts received by the Radio Operators are not sufficiently clear. This is due to the declining strength of the battery. It may often mean an evening of disappointment, for it frequently happens when least expected, and company invited to hear some artist go away without the promised entertainment.

The TUNGAR prevents such disappointment, and by its frequent charging saves the Radio Battery from becoming rundown.

Enjoy the pleasure of your Radio Set by avoiding those inconveniences which the TUNGAR so readily prevents.

Our new TUNGAR Beside T., explaining the simplicity of charging your Radio Batteries with a TUNGAR, mailed free.

The TUNGAR will also charge your Car Batteries.

"ATLAS"

"BURGINPHONE" Wireless Receivers Australia's Best By Test

Manufactured in Australia,
for Australians, by
AUSTRALIANS.

At no time has any receiver stood away from its field of competitors more sharply in point of quality than does the present "Burginphone" models.

Note the way the "BURGINPHONE" is built—no disappointing evidence of cheapening, no hurried workmanship—it's a quality receiver through and through, and it looks it!

All that the eye sees in its appearance of custom-built beauty, its better equipment, its many engineering features, is confirmed by the brilliancy of the machine's performance.

The "BURGINPHONE" trade mark is virtually a guarantee of dependability, of intrinsic worth, of practicability, because every "BURGINPHONE" product is scientific in principle and is not marketed until fully tested by competent Engineers.

BROADCASTING TO-DAY.

LESS than two years ago, experts gave it as their opinion that Broadcasting would always remain primarily a means of cheap entertainment, but if we may judge from the brief statements in the lay press concerning the various aspects of broadcasting, it is apparent that the old order has changed, and that its true value must be gauged from quite a different angle.

For instance, medical men are beginning to realise the help that radio is able to bring to hospital inmates, so much so that headphones are being very largely used in the big public hospitals, and hundreds of sick patients, provided with a wonderful means of mind relief from their illness, are showering letters of gratitude upon the broadcasting stations.

The aid of the broadcasting stations is now being sought regularly to assist in locating persons wanted urgently. In several cases, these people have been hundreds of miles up-country, and sometimes beyond any other means of speedy communication, but the voice of the announcer has carried the message, which has been picked up by some far-distant listener-in, who has succeeded in passing it on through various channels, until within an incredibly short space of time, it has reached its objective. A definite instance of this was given quite recently, when a Sydney station broadcasted the description of a man who was asked

to return to Sydney immediately, as his wife was seriously ill. The message was handed him at Kempsey in time to permit him boarding the Sydney train immediately.

Country schools are gradually linking up with broadcasting, and, considering the isolated position of a considerable portion of the rural population, it is beyond question that sooner or later radio must be adapted to the spreading of education, partly because of its tremendous scope, and again, because of its vast appeal to the popular imagination.

Consider for a moment, what would have been accomplished in the other branches of science, if their technique could have been popularised as has that of radio. Astronomy, biology, all the others, have phases of great human interest, but they have not discovered the gateway to popularity, the entree to the mind and heart of youth, as radio has done. Naturally enough, for the challenge to universal interest was not put forth.

The broad aspect of radio is, of course, its definite service to the people of the outback, to whom broadcast entertainment is but a secondary consideration compared to the vital fact that it is the means of breaking down that isolation which, previously, was the greatest disability under which they laboured. This, considered from a humanitarian point of view, has a wonderful significance, but perhaps its greatest appeal is that it is ever tending to more closely unite the people of this Commonwealth.

A Long Distance Selective Crystal Receiver

By "WIRELESS WEEKLY."

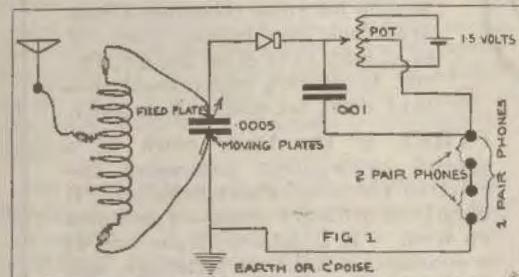

MANY wonderful reports have been received from time to time from "Wireless Weekly" readers concerning long distance crystal reception of N.S.W. and Victorian A class stations. With the object of publishing true and authentic information, we recently constructed the receiver which is herewith described. On completion it was sent to a country subscriber for tests, who, within forty-eight hours after it was despatched, wired us that he had received both 2BL and 2FC, using two pairs of phones. A very long, interesting report has since been

sign of this cheap efficient set is far from being the result of a lucky accident, it does not sacrifice volume for selectivity, nor selectivity for volume, but combines and pleasingly retains the best features of both. Briefly, the circuit is of the adjustable auto coupled type.

Tuning is accomplished with a variable condenser of .0005 capacity. Tests have shown that this circuit (when used with a carborundum crystal) to be fully as selective as any, and far more selective than the majority of crystal hook-ups. Two tuning coils are used, one for the short wave broadcasting stations and one for 2FC. This obviates dead end losses. No. 1 coil is wound with Fifty turns of No. 20 D.C.C. wire on a 4 inch cardboard, rubber or bakelite former, tapped at every 10th turn. No. 2 coil is 140 turns of No. 22 D.C.C. wire wound on the same size former, tapped at every 20th turn.

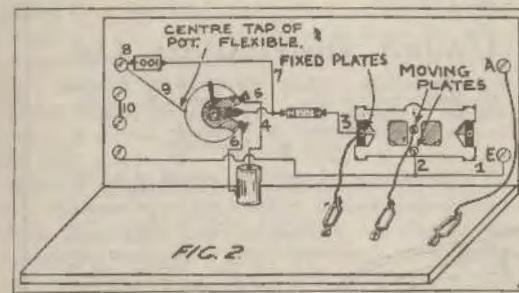

There is nothing difficult about the winding of these coils, and while they are not so imposing as the honeycomb coil types, our tests have proved that they are superior for crystal work. If the wire is wound on tightly there should be no necessity for painting the coil with a binding substance. The variable condenser may be of any good type. A .0005 is recommended.

The crystal detector must be of the carborundum type, in order that its impedance may be regulated by the electrical control unit as shown. This unit is made up of a potentiometer with a tapping taken from the centre of the winding, by means of a standard flexible copper wire. A 1.5 flash light cell is then placed across the two out-

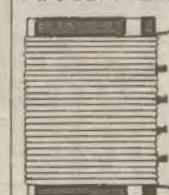

received, which states that this gentleman is consistently receiving these stations, in spite of the fact that the air line distance from Sydney is 149 miles. In view of this fact, we have no hesitation in recommending readers who are situated at distances 100 to 200 miles air line from 2BL or 2FC to build this receiver.

We quite realise there are many country readers who cannot afford valve sets, owing to their heavy initial cost. The parts for building this receiver, however, are reasonably cheap, and the pleasure the completed receiver gives, will more than compensate for the small expense incurred. The de-

THE IMPORTANCE OF PERFECT INSULATION EMPHASISED

PYREX Insulators

PYREX INSULATORS have improved his radio reception a hundred fold. Now he gets every bit of energy that is on the air. Pyrex Insulators really insulate—they don't let energy leak away.

PYREX is the trade mark of a special composition possessing distinctive electrical characteristics. It is not an ordinary glass—it contains no lead. It is homogeneous and of a continuous uniform structure, and so does not depend for its insulating properties on the surface glaze.

PYREX does not absorb water or attract moisture, and its smooth permanent surface prevents the collection of dust. It is mechanically strong and light in weight, and undoubtedly is the best insulating material obtainable.

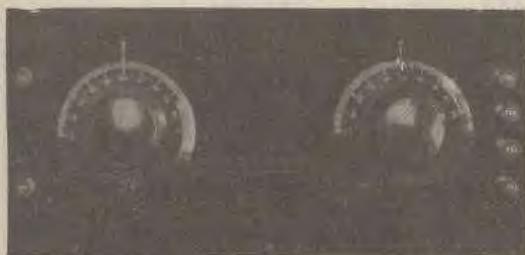

QUAM CONDENSERS—the world's lowest loss condensers use PYREX insulation throughout.

PYREX Broadcast Insulators, 3/6 at all Dealers.

88 Charles St., Launceston

The transmitting and receiving antennae of the McMillan Arctic Expedition are PYREX insulated. 34 Broadcasting Stations in the U.S.A. have recently replaced other insulators with PYREX. The U.S.A. Navy and Coast Guard Lighthouse and Air Mail Service specify and use genuine PYREX.

Front Panel View.

side terminals as shown. It is a simple matter to solder connections to these small cells, if the centre contact and the zinc container are first tinned with a hot soldering iron. A very strong point in favour of this electrically controlled crystal detector, is that the damping effect of the detector on the tuned circuit may be regulated through a wide range, resulting in an equally wide selectivity range.

In actual comparisons with the ordinary crystal detector, it will be found that stations spreading over a scale of 10 degrees of the tuning dial with an ordinary detector, may be restricted to two or three degrees by careful adjustment of the potentiometer.

Method and Order of Construction.

First, drill and mount the panel components as shown, viz., variable condenser, potentiometer and six terminals, not forgetting the small holes in the bottom of the panel for securing the baseboard. The wiring may now be commenced in the following order.

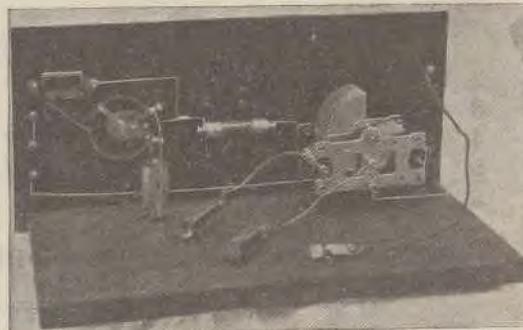

No. 1 links the earth terminal with the phone terminal and is the long connection shown going right across the lower part of the panel. No. 2 is a link taken from No. 1 to the moving arm contact of the condenser. No. 3 is the short link shown from the fixed plate connection to the crystal detector. No. 4 connection goes from the other crystal detector connection to the moving arm contact of the potentiometer. No. 5 and 6 are connected to the end of the 1.5 volt flash light battery. No. 7 is a link taken from No. 4 to one side of the .001 condenser. No. 8 links the other condenser terminal to the top phone connection. No. 9 is the small stranded copper wire which is taken from the centre of potentiometer winding to the top phone terminal. It is not necessary to solder this wire if the open type potentiometer is used, the fine wire may simply be passed around the framework and then twisted together to make a

good contact. No. 10 links the two centre phone terminals together.

Tuning is so simple that it is not necessary to give elaborate instructions. The 50 turn coil tunes all the lower wave stations, the larger 140 turn coil is for use when tuning 2FC only. The tappings and condenser control the wavelength of the tuned circuit, while the potentiometer controls the electrically controlled crystal detector, and increases the selectivity and volume to a very marked degree. The fixed types of carborundum detector obviates the necessity for any further adjustments. The following materials are necessary to build the receiver.

- 1 Panel, 15 x 7 inches.
- 1 Baseboard, 15 x 6 inches.
- 1 .0005 condenser.
- 1 Potentiometer (open type preferred).
- 6 Terminals.
- 1 .001 fixed condenser.
- 1 Carborundum crystal detector.
- 1 1.5 volt flash light battery.
- 3 Battery clips.

(Editor's Note.—This receiver has successfully demonstrated reception of 3LO and 4QG at Croydon, N.S.W. Crystal owners who claim that howling valves cannot be heard with a crystal detector are in for an agreeable surprise.)

View showing Back Panel.

LONG DISTANCE ON CRYSTAL.

Showing that the crystal receiving set is successful in receiving 2FC at even a long distance, the following extract from a letter written by Mr. A. W. H. McDonald, of Arcan Farm, Sunny Corner, nearly 130 miles as the crow flies from Sydney, gives ample demonstration. Mr. McDonald writes in regard to the weather reports at midday, and says:—"I can always pick up your station on my crystal set, day or night."

Queries Met by Every Beginner

'Charging Radio or Car Batteries with Farm Lighting Plants

In compliance with many requests and with the object of further assisting our many country readers to overcome their battery charging difficulties, we are in this article, explaining in as simple a manner as possible, just how they may charge "A," "B" or car accumulators from the small direct current lighting plants which are rapidly becoming so popular with the country squatter.

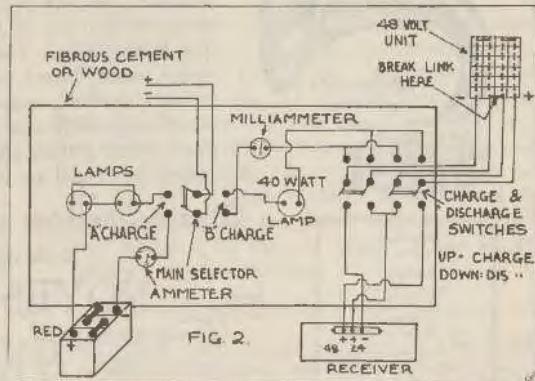

For those who have very little electrical knowledge, we are showing each connection in full detail, and we hasten to explain that if they follow our diagrams, wire for wire, they need have no fear that the battery or batteries will be reversed charged. It is first necessary to find out which wire of the main lighting leads is positive and which is negative. To do this, all that is necessary is a glass of water in which a spoonful of ordinary salt has been dissolved. The ends of the two wires should next be scraped clean of insulation for about an inch, after which they should be dipped into the salt water with the wires held just as far apart as they can be in the glass. (CAUTION: Be careful that the two un-insulated leads do not come together, or the main house fuses will blow). When the wires are dipped in the glass, one of them will give off a great many more bubbles of gas than the other. This wire is the negative and should be plainly marked, so

that it can be readily identified in the future. See Fig. 1.

Next, secure a piece of dry wood, or, if preferred, fibrous cement, and mount on the necessary switches, etc., as shown in drawing Fig. 2, or Fig. 3. Fig. 2 shows connections for a 48-volt battery and Fig. 3 for a 96-volt battery. A milliammeter and ammeter will be an advantage so that the correct charging rate may always be checked for both A and B batteries. It should, however, be distinctly understood that they are not absolutely necessary providing the D.C. voltage plant does not exceed 32 volts, and the lamps as recommended in table are used. A careful study of Fig 2 shows that the 48-volt battery must be split into two units and the 96-volt battery into four units, each of 24 volts. In the well known Philco battery, all that is necessary is to remove the wire from the two centre clips. Each unit is then permanently wired to the charge and discharge switches as shown. Throwing these switches from one side or the other changes the batteries from the charging line to the radio receiver. All the connections as shown are permanent, so that it will pay to run the connecting wires neatly, being sure that good contacts are made throughout.

The solid type of porcelain switches with heavy bronze contacts are strongly recommended. The following table, which shows the correct wattage lamp or lamps to be used for various capacity radio or car accumulators must be strictly adhered to.

The Incomparable Brown in Seven Superb Models

Now that Broadcasting has awakened such an intense national interest, it is only natural to find that Loud Speakers, in common with many other commodities, Radio or otherwise, must be produced in a variety of types at prices that will be within the reach of all. It is for this reason, therefore, that there are now available seven superb models of Brown Loud Speakers.

Of all the Loud Speakers on the market to-day, the Brown is unique, because, by a brilliant application of an entirely original principle, it achieves results which can be obtained in no other speaker. Brown principles of design and construction can be found only in Brown Loud Speakers. The famous tuned reed mechanism, which permits the use of a supersensitive cone-shaped aluminium diaphragm as thin as paper, is responsible for a tonal purity and mellowness which must be heard to be fully appreciated.

Obtainable from all Radio Dealers.

RADIO OR CAR BATTERY TABLE (6 VOLTS).

Voltage of mains.	Capacity of accumulator to be charged.	Size of lamp recommended.	Charging rate approx.
32	20 amps	One 15 watt	.5 amps
32	40 amps	One 30 watt	1 amps
32	60 amps	One 75 watt	2.5 amps
32	80 amps	Two 50 watt	3.4 amps
32	100 amps	Two 50 watt	3.4 amps
32	120 amps	Two 75 watt	5 amps
32	150 amps	Two 75 watt	5 amps

A complete charge in each of the cases given below will require about thirty hours.

With the combination of switches as shown in Figs. 2 and 3, it will be seen that each of the 24 volt units is charged together. The test for completion of charge should be the hydrometer, as this is the only reliable one. The density of the small B accumulators will usually not read higher than 1260 when fully charged. The car or radio batteries, however, will often read as high as 1280 to 1300 when fully charged. The maker's advice which is usually issued with the battery will, however, act as a guide as to the correct density of a fully charged battery.

(Editor's Note.—Readers should distinctly understand that these diagrams are only suitable for D.C. plants.)

Q.: I have constructed the five-valve loop receiver recently described in "Wireless Weekly." The results obtained are all that you claim, except that I find I can get all the local and Interstate stations with the loop in the same position, viz., pointing west. Can you please enlighten "Wireless Weekly" readers as to the cause of this phenomenon, as I feel sure other B.C.L.'s with loop receivers must have experienced the same difficulty.

A.: This phenomenon is very common, and is invariably due to the fact that, somewhere in the

neighbourhood of the receiver, a collection of signals in the form of an aerial, iron roof, or even iron ceilings is reradiating energy. This means that signals will be strongest from almost every direction when they are placed in the direction of this interfering element.

Remedy: Find out where the signals are being re-radiated from by altering the position of the loop until the distant station is a maximum volume. If the direction does not correspond to the compass bearing of that station, you may be sure you have an offending aerial, iron roof, or ceiling in the direction your loop is pointing. Readers who have large iron roof sheds will be wise to earth the iron by taking a wire connection from the water-pipe to the nearest point of the iron. It is a bad policy to have the lead in from an aerial approaching the room where the loop receiver is used, as it will invariably re-radiate, and the directional properties of the loop will be affected.

POINTS FROM LETTERS.

"I have just received my transmitting license and feel it my duty to write and thank you, for I'm sure it's mainly through the course published in "Wireless Weekly" last year that I got the facts." (C.G., Hill End, Q.)

"The two valve receiver described by 'Grid Leak,' in 'Wireless Weekly,' January 1st, 1926, is everything that the writer claims it to be. Used as a single valve receiver, the volume and clarity are wonderful. 2BL, 2FC and 4QG are received at reasonable loud speaker strength" (W.P.H., Long Nose Point).

The following letter has been received from Mr. H. B. James, William Street, Muswellbrook:

Sir,—I have recently completed and tested the Sure Fire Circuit for 3LO, published in "Wireless Weekly," July 31st, 1925, and have found it a highly efficient set. I get the Sydney stations by day on the loud speaker regularly, just a matter of tuning in, while Brisbane, 4QG, Melbourne, 3LO, and Adelaide, 5CL, come in by night with astounding volume. Last night I heard, through 5CL, Adelaide, possibly the most eloquent appeal I have ever heard. It was on behalf of the South Australian Limbless Soldiers

WANTED.—All kinds Secondhand Wireless Sets, Parts, Speakers, etc. Best prices given. JACK RAPKEN, 16 George Street West. MA 1198.

ON THE AIR

CENTENARY COMMEMORATION SERVICE.

ON Sunday, July 18, Station 2BL will broadcast the Centenary Commemoration Service of the Scots Church, Church Hill, Wynyard Square. As this historic edifice is being demolished in connection with the new railway, this will be one of the last services the preacher, the Rev. W. Grassick, will deliver. At 3.30 the Bible Class will be transmitted as usual, and at 4 p.m. a programme is being sup-

MRS. DOROTHY JORDAN,
who is a well known speaker and organiser, has joined
the staff of 2BL, and will deliver talks on subjects of
interest to women.

plied by the Manly Band. The evening service will be from the Newtown Congregational Church, the preacher being the Rev. Mearns Massey, this in turn being followed by a concert from the studio.

THE OPERA 'AIDA.'

On Monday, July 19, the usual daily features as outlined above will be presented by 2BL, and in the afternoon session Mr. J. M. Prentice will deliver a talk on "A Course in Philosophic Thought." David Jones' Tea Room Trio will also be broadcast. During the evening Miss Heather Kinnaird will sing contralto items. A compressed presentation of the opera "Aida" will be presented, in which the principals will be Mr. Robert Harper and Miss Leonore Gotch. The dance of the Nile Maidens will be performed by Broadcasters' Trio. Madame Evelyn Greig, the brilliant Sydney pianist, who has just returned from America, will give the first of a series of talks on "Travel Impressions," dealing with Suva and Honolulu. Al Hammett's Ambassadors' Dance Orchestra will play until midnight.

MR. NORMAN JANSEN.

On Tuesday, July 20, the usual 2BL features throughout the day, and including an afternoon talk on "Modern Psychology." During the evening's programme, Mr. Norman Jansen, baritone, and Miss Helena Stewart, soprano, will be heard in special selected numbers. Mr. Les MacCallum will also be heard in flute solos. At 8 o'clock Hayt's Imperial Orchestra will play.

CONSERVATORIUM CONCERT.

Arrangements are being made on Wednesday, July 21, for a concert to broadcast from the Conservatorium Hall, on which occasion the artists will be Messrs. Wilfred Arlom and R. Moore McMahon in a special Beethoven programme. Mr. Frank Marshall, B.Sc., will continue his talks on the "Treatment of Cancer," and Mr. J. M. Prentice will reply to written questions during his talk on "Foreign Affairs." During the evening Bondi Casino Orchestra will entertain the listeners-in.

AMBITIOUS PROGRAMME.

Station 2BL, on Thursday, July 22, will broadcast the regular daily features, and during the afternoon session David Jones' Tea Room Trio will entertain the listeners-in. A particularly ambitious programme is being presented during the evening session. The Ambassadors' Salon Quartet will be heard in special numbers. Mr. W. Lewis, baritone, and Miss Dorrie Ward will be heard in duets and solo

MISS FREDA GILDER,
Contralto, who made her wireless debut with 2BL.

PHILCO—"Ask the man who has one"—BATTERIES

numbers. Mr. Reg. Harrison, comedian, Miss Dulcie Blair, violinist, Mr. Norman Wright, tenor, and Mr. Bryce Carter are all appearing. Lectures will be delivered by Mr. A. H. Lindoe on "The Art of Accompanying," and Miss Mary Edwards will deliver a travel talk.

JENOLAN CAVES TRANSMISSION.

During the evening session on Friday, July 23, the 2BL Studio is being temporarily transported to the Jenolan Caves, and a special programme will be transmitted, the regular session from the bedtime stories on being held actually inside the Jenolan Caves. The artists on this occasion are being specially selected, and will be transported to Jenolan Caves for the purpose of broadcasting the concert, Bondi Casino until midnight.

SPORTING INFORMATION.

Saturday, July 24, will be devoted by 2BL almost entirely to the transmission of sporting information and utility talks. During the evening's programme, Miss Edith Dickerson in songs at the piano and Mr. and Mrs. Sid Owen in banjo numbers. During the evening session Enmore Symphony Orchestra will entertain the listeners-in.

2BL'S BIG PROGRAMME.

Following on the increase of power at their station, 2BL has greatly increased its programmes. For the most part these are intended to provide a utility service for the benefit of the country and city dwellers. Starting at 7.15 with 20 minutes' physical culture, the station provides a new service of local items and fresh materials received from Rugby. Commencing again at 10 there is a further transmission of news and a musical programme until 11 a.m. Sporting talks of a vast amount of varied information, covering mails, shipping, social notes and other matters, is broadcast until midday. At noon a lady speaker deals with household matters and provides information regarding "How to make," "What to wear," and "How to buy." Stock Exchange information and sporting talks continue until 2 o'clock. The afternoon session are as heretofore, but the services of Mr. J. M. Prentice are being increasingly availed of in regard to talks, while bedtime stories have been definitely and permanently fixed at 6. The evening transmission each night throughout the week is carried on until midnight.

WANTED: Youths with mechanical training, must have knowledge of Radio hook-up's and capable of wiring from a diagram. Good opportunity for those who are ambitious. Any "Wireless Weekly" reader who has the above qualifications apply to KEOGH RADIO SUPPLIES, 40a Park Street, SYDNEY.

Popular Comedians often heard from 2FC.

STUDENTS OF MR. BRASH.

On Friday, 16th, in the afternoon, the vocal students of Mr. James Brash will give a recital from the studio of 2FC, and in the evening the programme will be particularly interesting, as Mr. Raymond Ellis, the English operatic baritone, by permission of J. C. Williamson, sings again at the studio. The Instrumental Trio, consisting of Mr. Lionel Lawson, violinist, Mr. Gladstone Ball, cellist, and Mr. Lindley Evans, pianist, will play. Orchestral items from the Crystal Palace, and Mr. Toscau will describe "How a poster is drawn." By permission of J. C. Williamson, an act from "The Climax," featuring Mr. Guy Bates Post, at the Palace, and it is hoped to have a talk from Mr. Post on that evening.

PITT STREET CONGREGATIONAL CHURCH.

From the Pitt Street Congregational Church on Monday, July 19, will be broadcast the midday meeting by the famous evangelist, Gypsy Smith. In the evening choral programme from Beale's Concert Room. The usual programme from the Haymarket Theatre; the talk by Mr. W. F. Jackson on "Continental Hotels and Meals"; a musical act by Louis Evans and Doreen Walsh; the dance programme by the 2FC Dance Band, conducted by Mr. Eric Pearse.

ALL BLACKS' MATCH.

From the Royal Exchange on Tuesday, July 20, a midday lecture by Mr. H. G. Raggat, of the Department of Mines, on "The Divining Rod—its History and Significance." Afternoon: Scores of the match between the All Blacks and N.S.W. Rugby Union. A vocal programme by the pupils of Mr. Hector Fleming. Evening: The Randwick Band will play a programme of music in the studio. Violin

solo by Mr. Lionel Lawson. From the Adyar Hall items will be taken from the Clement Hosking Song Recital. From Paling's Concert Hall, a programme by the Royal Sydney Philharmonic Society, in which this choir of 200 voices will be heard in the principal choral numbers from "Aida," conducted by Mr. Joseph Bradley. In the studio, comic numbers by Miss Grace Savieri, who played the principal part in Captain Frank Hurley's "Jungle Woman."

GYPSY SMITH.

On Wednesday, July 21, from 2FC, midday Gypsy Smith meeting from the Pitt Street Congregational Church. An orchestral programme in the afternoon from the Lyric Wintergarden Theatre. Dickens reading. In the evening some well known artists will appear, including Mr. A. L. Champion, tenor, Miss Jean Grant, soprano, in songs and duets. The English baritone, Mr. Walter Kingsley, will sing, and Mr. Jack Lumsdaine, the song-writer, will continue his "Music While You Wait" novelty, composing in the studio and singing during the evening a song written by him to a title selected by him early in the evening from those suggested on the telephone by listeners. At 8.30, for the first time in Australia, will be broadcast the Radio Auction Bridge, in which Mr. W. F. H. Master, who is an acknowledged expert in the game of Bridge, will conduct with three other players the broadcast of a specially selected hand, in which the whole of the play will be given, and Bridge listeners may 'phone the studio and have their inquiries concerning the game answered by Mr. Masters and broadcast. This Bridge Session will

BURGESS—"Constant satisfaction assured"—BATTERIES

GILFILLAN NEUTRODYNE

The NEUTRODYNE is easily the most selective circuit yet achieved, and the Gilfillan engineers leave nothing to be desired in the design and workmanship of their Neutrodyne. Pure, distortionless music in any locality and simplicity of control have been their goal, and it has been achieved with every success. A feature of the set is the matched dual control, e.g., to tune-in 3LO Melbourne set each of the 3 dials on Number 35—and, lo! you have the exact tuning of the big Melbourne Station. It is wonderfully accurate, and a wavelength chart gives you the numbers similarly for any other station.

The GN1 and GN2 Models are 5-Valve Sets finished in two-tone Walnut Cabinets with

"A" and "B" Battery Panel Voltmeter as illustrated above.

The GN3 is a smaller 4-Valve (Dry Cell) Neutrodyne in two-tone Walnut Cabinet.

PRICES (complete with **ALL** Accessories, including Loud Speaker, Accumulator, Aerial Equipment, Batteries, Phones, Valves, Phone Plugs, etc.):—

GN1	Neutrodyne Set	£69/-
GN2	Neutrodyne Set	£59/17/9
GN3	Neutrodyne Set	£34/5/-

No Extras to Buy.

continue every Wednesday evening until the series is exhausted, and will provide one of the most unique novelties yet heard of in Australian broadcasting.

CELTIC MUSIC.

The majority of the evening programme on Thursday, July 22, will be given to a night of Celtic music arranged by Mr. Livingstone Mote, with the assistance of Mr. Gladstone Bell, 'cello, Mr. Lionel Lawson, violin, and Mr. Lindley Evans, piano, and several well known singers. A play by Mr. Montgomery Stuart. Popular French talk by Monsieur Maurie Byrne, and the appearance of Mr. Adtree, the well-known Scotch comedian.

2FC SUNDAY SERVICES.

The morning service will be taken from St. Stephen's Presbyterian Church, Phillip Street, and a band concert will be given from the Town Hall by the Metropolitan Band in the afternoon, and in the evening from 8.30 the Leichhardt Band from the Leichhardt Strand Theatre. Mr. Clement Hosking is arranging a vocal programme from the studio between 6 and 7 o'clock, and for the first time in N.S.W. Mr. Gypsy Smith will be heard on the air. The whole of the evening service from the Hippodrome will be broadcast, and as so many will not be able to gain admission, arrangements are being made whereby various halls throughout Sydney will be filled with people who will listen to Mr. Gypsy Smith by means of receiving sets and loud speakers.

LONGEST LAND LINE TRANSMISSION.

Practically the whole of the afternoon of Saturday, July 17, will be adopted to a description from the Show Ground of the match between the All Blacks and N.S.W., the third test match. In the evening, for the first time in the history of the Commonwealth, the longest land line transmission yet attempted in Australia, whereby a complete concert is broadcast, will be a feature of the evening. A special land line has been engaged by 2FC to the Causeway Hall, Canberra, and the whole of the evening's programme from 7.30 till after 10 o'clock will be transmitted from there. Well known Sydney artists will join the 2FC party going to Canberra, including Miss Mabel Batchelor, Mr. Ernest Archer, Mr. Wilfred Thomas, and Mr. R. A. Butterworth. Included in the party will be announcers and mechanics from 2FC studios, and a successful evening is promised. Mr. Ernest Mowle, the well-known conductor and musician, who is now at Canberra, is preparing a very excellent programme, including items from the Canberra Philharmonic Society, consisting of 65 members, assisted by an orchestra of 25. An ambitious programme, including the Sextette from "Lucin," the Misere from "Il Trovatore," and the Inflammatus from Rossini's "Stabat Mater," and solos by various artists. At the conclusion of the concert the 2FC Dance Band will play until midnight.

PHOTOGRAPHS OF TOTI DAL MONTE.

On the night of the transmission of Signorina Toti Dal Monte from the Sydney Town Hall, Station 2FC offered to give a mounted photograph of the famous artiste to the furthest distant correspondent who commented upon the evening's broadcast.

Many hundreds of letters reached 2FC from this and the adjoining States and New Zealand. The awards have now been allotted as follow:

New South Wales—Henry Wilkinson, "River-view," Pomona, Wentworth.

Victoria—W. S. Young, Percy Street, Portland.

South Australia—Roy Brook, Nullarbor, Coonarie.

West Australia—J. L. McKenna, Hoffman Mills, via Yarloop.

Tasmania—J. C. Foley, The Observatory, Hobart.

Queensland—Robert Odgers, Anne Street, Charters Towers.

To all of the other correspondents the station is sending a small souvenir print of Signorina Toti Dal Monte. Two hundred and fifty-one towns are included in the addresses of the various correspondents, and they are spread from Yarloop (over 2000 miles away in the west) to Noumea (1600 miles in the south-east, and again to Charters Towers (over 800 miles north). Letters from New Zealand showed that the interest over there was just as intense as in any portion of the Commonwealth.

PHILIPS
B406

Only perfect reception will give you the uninterrupted dance and Philips valves will give you perfect reception. The B406 is the new wonder valve, designed for use with a 4-volt accumulator, and controlled by a rheostat of at least 12 ohms resistance.

The unique purity of tone and wonderful volume given with this valve combined with its low filament consumption of one-tenth amp. make this valve perhaps the most economical, considering its accomplishments, on the market.

The main characteristics are as follows :

Filament voltage, 3.4-4.0 volts.

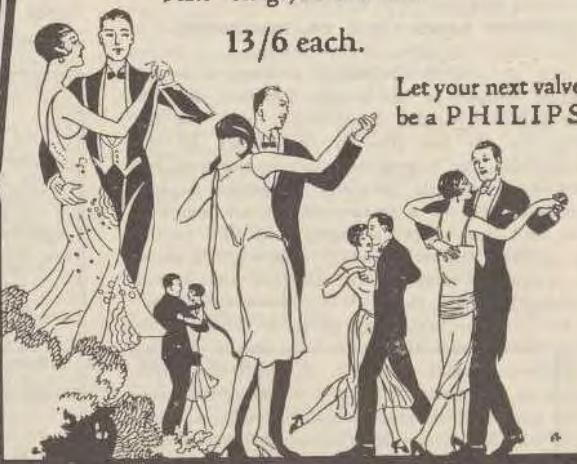

Filament current, 0.1 amp.

Saturation current, 30 m.a.

Plate voltage, 20-120 volts.

13/6 each.

Let your next valve
be a PHILIPS

PHILIPS

RADIO AUCTION BRIDGE

Station 2FC has now completed its arrangements for conducting a series of Radio Auction Bridge Games. Mr. W. F. H. Master, an acknowledged Bridge expert, will conduct the series from 2FC studios. The first game is to be played on Wednesday night, 21st inst., and will commence at 8.30 p.m. The following interesting procedure will be adhered to:—Mr. Master will enter the studio and deal hands for four players. He will then broadcast a description of the cards in each hand, inviting those who are listening to place the cards upon the tables in their homes in like fashion. Mr. Master will then invite the other three players to come into the studio and join him, when the game will be played on its merits by the various contestants. As the bidding is carried on, and each contestant plays his hand, he will make it known through the microphone which will be placed on the table. Listeners may in this way also play the cards in their homes, and as soon as each hand is finished Mr. Master will answer queries to any listener who may care to ring up. The twenty lines on City 11000 will be connected with the studio, and both queries and Mr. Master's replies will be clearly heard on the air. It is hoped that listeners will make the utmost use of these Bridge Sessions to secure any information they may require in regard to this interesting game.

To enable enthusiasts of Auction Bridge—and their name is legion this winter—"Wireless Weekly" has made arrangements whereby the complete play of the "Perfect Hand" dealt each week to the four players at Farmer's Studio can be found in the special columns that will be devoted each week to the Radio Auction Bridge Games which will from week to week form a feature of 2FC's Wednesday evening programmes.

Arrangements are also being made whereby readers of "Wireless Weekly" can write to us asking for the solution of any difficulties which occur to them in the play of the broadcast games or of Bridge generally, and answers will be given each week by Mr. Master in the columns set apart for the purpose.

THEOSOPHICAL STATION.

Mr. Norman D. Hale, Architect of Sydney, and President of the Mosman Radio Research Laboratories has been commissioned to design the operating room and Studio for The Theosophical Broadcasting Station Ltd., at Clifton Gardens, Mosman.

2KY'S STORYTELLER

Mr. W. A. Thompson, who tells those wonderfully interesting stories from 2KY, was born at Barnbra 35 years ago. He is by profession a teacher with the Education Department, from which duties he was relieved by the Hon. D. T. Mutch in 1922 and officially appointed Story-teller for Hospitals and Schools.

Some idea of the beneficial effect upon children of Mr. Thompson's personality may be gained from the testimonials of well known medical men. For instance, Dr. J. Turdy, Metropolitan Medical Officer for Health, wrote: "I can say, as far as children are concerned, that your work has wonderful possibilities, and if more time could be given thereto I am sure much benefit would result."

Dr. E. V. Littlejohn, Hon. Physician to the Children's Hospital, stated: "I want to say that I regard your story-telling as a valuable factor in hastening convalescence after acute diseases in children, and also helping chronic cases to get better."

Of Mr. Thompson's story-telling to children, Dr. A. J. Collins, formerly Medical Superintendent of R.P.A. Hospital, wrote: "I cannot speak too highly of its great therapeutic value, and hereby certify that, in my opinion, the work of story-telling in children's wards as conducted by Mr. Thompson is of great value."

Mr. Thompson has officially advised American institutions on the effect, medically and mentally, of story-telling in hospitals and schools. He had four years' service with the 30th Battalion, A.I.F., in Egypt and France, and after the Armistice was signed was Educational Superintendent of the 5th Division. Possessing a typically kindly disposition, he is eminently suitable for the position for which he was selected by 2KY.

HEADQUARTERS FOR COMMERCIAL WIRELESS.

Negotiations have been completed for the purchase by Amalgamated Wireless (A'sia) Ltd. of the premises occupied by Messrs. W. E. Ward & Co. Ltd. at 47 York Street, Sydney.

This is a building of seven floors at the head of Wynyard Street, which can be clearly seen from George Street. The building will be altered to accommodate the city accepting office and the central telegraph office for the Amalgamated Wireless Company's Beam telegraph service to England and Canada, and for other wireless telegraph services to New Guinea, New Caledonia, and other parts of the world; also the wireless telegraph service for communicating with all ships in wireless range with Australia. The building will also be used as the headquarters for the numerous other activities of the wireless company.

THE NEW RADIO TEXT BOOK.

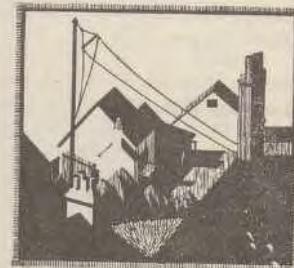

The first edition of "Wireless," the text book for radio enthusiasts which was recently published by J. W. Robinson (Director, Queensland Radio Service) and G. Williams (Instructor, Marconi School of Wireless, Sydney), is rapidly selling out. This book, which was recently reviewed in this paper, is claimed to represent the first serious attempt to produce in Australia a reliable wireless text book. In producing it the authors attempted to fill a long-felt want by compiling a work which, while explaining wireless in a very simple manner, contained a full wealth of technical information suitable even to the advanced student.

"Wireless" is now on sale at various newsagents in Sydney, or copies may be obtained from the publishers, the Read Press Ltd., Albert Street, Brisbane. Price 4/-, post free.

RADIO AND HOME BUILDING.**BUILDERS' VIEWPOINT.**

Builders and architects have lately directed their attention to the influence of radio on home construction. It is felt that modern homes require provision not only for the outdoor aerials which are almost as plentiful as clothes lines in the metropolitan area, but also for indoor aerials. The latter are coming increasingly into vogue being simply a few stretches of wire over a frame inside a room instead of outside the house. The problem for architects—an easy one—is to provide suitable spaces for the aerials. Usually they are tucked away between roof and ceiling.

Mr. Alex. Speers, President of the Master Builders' Association, in an official statement points out that radio is bringing pleasure to the home and is increasing home comforts. By thus making the home brighter and happier, he says radio is helping to develop in Australia a home building nation.

HERE ARE WIRELESS SETS AT PRICES WHICH ENABLE EVERY- ONE TO GET ONE NOW!

Standard One valve Set complete with all accessories but not including Loud Speaker. Every set thoroughly tested and guaranteed to give satisfaction. Usually, £8/15/-. Sale Price, £6/15/-

Standard 2 valve set with all accessories but not including Loud Speaker. Usually, £12/10/-. Sale Price, £10/10/-

Standard 3 and 4 valve Sets are also greatly reduced. Complete with all accessories, batteries, valves and loud speaker. Usually .. £30 and £45
Sale Prices .. £21/10/- and £29

All further reduced by 2/- in the £ discount for Cash.

Scientific Super Valves

RADIOTECHNIQUE SETS A NEW STANDARD OF SUPER QUALITY VALVES AT LOW PRICES.

RADIO MICRO 13/6

The most improved type of Low Consumption Valve. Highly efficient as Detector or Amplifier. Can be worked off dry cells.

Filament, 3.5 volts; .06 amps.; 40-80 volts.

SUPER AMPLI 13/6

Detector, High and Low Frequency Amplifier. Type R46 (201A), 5 volts; .25 amps.; 40-80 volts. Type R41, 3.8 volts; .4 amps.; Plate 40-80 volts.

RADIO AMPLI 8/6

Detector and Amplifier, Fil. 3.8v.; .7 amp.;

Plate, 40-80 volts.

Obtainable with English or American Base

If difficulty is experienced in obtaining supplies communicate with Australasian Representatives

BROWN & DUREAU Ltd. BROUGHTON HOUSE, CLARENCE STREET, SYDNEY;
and at Melbourne, Perth, Wellington and Auckland, N.Z.

NEW HIGH-POWER STATION

Opened July 5th

SOME INTERESTING DETAILS

Station 2BL, which was started about 3½ years ago, was the first commercial station in Australia to be actually heard on the air, although it was not the first to be granted a commercial transmitting license. The station, which was originally housed in a temporary erection on the top of the "Daily Guardian" building in Phillip Street, has grown and developed with great rapidity during the time of its existence. The original power was 500 watts, and this has now been increased to a nominal output of 5000 watts. The new apparatus that has been developed for the purpose of transmitting shows an input of 10 K.W. to the main oscillator, the total input to the station being 32 K.W.

This enormous increase of power will have the effect of making 2BL the highest power station operating in the Southern Hemisphere. The transmitting apparatus is housed at Coogee in a station specially constructed of brick, with concrete floors, designed and built for its present purpose, and the aerial is carried on a mast and a steel tower 140 ft. high. The main power supply is provided by the Sydney City Council electric supply, but this is being regenerated before being supplied to the transmitting apparatus to prevent any possible deflection in voltage of supply.

A considerable amount of the apparatus has been developed and manufactured in Australia, and only such items as could not be produced locally have been imported. The valves, for example, are the finest of their type so far manufactured, and are cased with fuse quartz (silica) instead of the ordinary glass, so as to resist the fierce heat which is developed, and they are carefully shielded and cooled with an air blast. The matter of consistent frequency which is sometimes described as maintaining a correct wave length has received special attention, as well as the suppression of harmonics. The object of the increase of power is not only to improve the transmission, but to ensure better daylight reception as well as night throughout the whole of the State, with improvements in tone and clearness generally.

For the accommodation of artists, palatial studios have been provided in the A.M.L. and F. Co.'s Buildings, 4 Bligh Street, where two floors are occupied. The two studios are necessary in order that the requirements of the station can be met, and these were actually designed and erected for the specific purpose.

The artists that have been actually broadcast

from the Studio represent some of the most distinguished who have so far visited Australia, and include such well known names as Messrs. Zacharewitsch, violinist; Arthur Jordan, famous English tenor; Miss Edna Thomas, singer of negro spirituals; Madame Marie Narelle, famous singer of Irish songs; Madame Kate Rooney-Kirkham; Mr. William Henghan, the Scottish basso; Mr. Alfred Cunningham, baritone soloist, who originally came to Australia with the Westminster Glee Singers; Messrs. Gregory Ivanoff and Gerald Walenn, violinists; M. Paul Vinogradoff, pianist.

Other distinguished people who have co-operated with the Studio are Mr. Roland Foster and Mr. Henry Penn. As far as local artists are concerned the utmost opportunity has been given them to develop their artistic careers, and 2BL has been keenly alert to encourage in every way the development of local talent. Practically all the prominent local musicians have been broadcast at various periods. At one period the station provided the greatest number of hours per day as far as transmission was concerned, and this schedule is now being reverted to. The day's transmission now begins at 7.25 a.m. and continues practically till midnight. During the morning session, which lasts from 10 a.m. to 2 p.m., transmission is continuous, and features talks to the community of women, information re mails, shipping, weather, and a host of other matters. During the luncheon hour between 1 and 2 p.m. an orchestra will be broadcast. The afternoon session from 3 p.m. to 5.30 will cover lectures and entertainment generally. Bedtime Stories, which have always been a feature of 2BL's programme, will start at 6 p.m. for three-quarters of an hour, and will be followed in turn by half an hour's dinner music. At 7.15 a special country session will supply cattle, grain, fruit and vegetable information to the worker on the land. The evening session, as heretofore, will be devoted chiefly to music and entertainment. Every night transmission will be continued until midnight, and a special feature will be the provision of dance music programmes.

Interesting features, such as the introduction of a means whereby telephonic questions were received and broadcast simultaneously, together with replies from the Studio, were introduced by 2BL. Many other novelties have originated in the Studio, and further developments in this direction are promised.

DESIGNED for power amplification with large loud speakers.
When inserted in last L.F. stage of receiver gives pure and abundant volume.

BROADCASTING NOTES

A CHILDHOOD INFLUENCE.

UNTIL the advent of radio, disobedient and offending children were frightened into more pleasing conduct by their parents' tales of bogey men, policemen, and other formidable characters who, it was alleged, were only too pleased to devour bad little boys and girls. Broadcasting has changed most of that, apart from the fact that in these enlightened times it is a wise father who knows more than his own child. However, it cannot be denied that the children's hour services maintained by the studios are a great influence. "Billy Bunny," the popular children's entertainer at 3LO Melbourne has received many letters in which parents have thanked him for his influence over their children, and they have stated that a word of gentle advice or admonition from "Billy Bunny" has more effect than all their scolding. In one instance a listener-in stated that his daughter, who suffered severely from nervous trouble, was always calm and free from agitation upon hearing "Billy Bunny's" voice, and that since she had a new interest there had been a decided improvement in her condition.

ANOTHER SONG HIT.

"After the Dawn" has already been established by the "Sun Pictorial" Perfect Programme Competition as the most popular vocal and instrumental number so far as listeners-in are concerned, almost every second programme of the 10,000 entries submitted containing Mr. Jack O'Hagan's popular composition. During the past few days he has been singing from 3LO Melbourne another of his compositions, entitled "I wonder will you think of me," and he anticipates that will be even more popular than "After the Dawn." Already one edition is almost depleted, and inquiries have been received for it from all over Australia. Mr. O'Hagan states that he has received so many congratulatory letters from listeners-in after the Perfect Programme Competition that he has been unable to reply to them all. For a start he answered every one that arrived, but later the mailbag became altogether too heavy. However, he fully appreciates all the good wishes sent to him.

LISTENERS LIKED "BELLE OF NEW YORK."

"The most perfect transmission we have ever had" is the verdict of the thousand listeners-in who wrote to 3LO Melbourne congratulating the studio for the "Belle of New York" programme. Letters in this strain were received by the newspapers, by Major Conder, by the programme arranger, by Messrs. An-

drew and Dudley—in fact, by all concerned, and there is no doubt that the requests for another performance of the musical comedy represents the wishes of all listeners. Therefore, they will be pleased to hear that 3LO Melbourne is arranging for another transmission of the piece with the same cast of characters about the end of July. Only one correspondent had any objection. "It is deplorable," he said, "that some of the characters talked with a decided American accent, and frequently it was noticeable that aitches were dropped indiscriminately." This fastidious listener would, apparently, be annoyed if Shakespeare made any of his characters speak colloquially. The dropped aitches and nasal American tones were necessary to the story of the musical comedy, and there is no reason why character should be departed from even if the microphone takes the place of the footlights.

A NEW PIANIST.

Pianoforte is one of the most generally popular items in broadcasting programmes, partly because of the clearness of transmission and partly because of the excellence of the artists engaged. A newcomer to the ranks of 3LO Melbourne is Miss Kathleen Robinson, L.A.B., a talented young pianist from Creswick who has attracted attention by her prominent position in the highest musical examinations. Miss Robinson received her early musical education in Ballarat, later finishing with Mr. Edward Goll in Melbourne. This young artist is embarking on a career as a concert pianist, and 3LO Melbourne are confident that all those listeners-in who hear her will predict a rosy future. Her father is the Rev. Charles Robinson.

2FC AT NOUMEA.

Station 2FC has received a very interesting letter from Mr. H. Russ, of Noumea, New Caledonia, in which he writes in most complimentary terms on the transmission from the Town Hall of the Toti Dal Monte concert. He also refers to a recent service from St. Andrew's Cathedral, and says that the Sunday services are regularly listened to from 2FC Station down in Noumea, owing to the fact that the atmosphere is much more quiet on Sundays and free from commercial station interference. He says that, although 56 minutes in advance of Sydney time, this does not deter them from tuning-in at the beginning of the 2FC sessions. He refers to hearing Melbourne, Adelaide and New Zealand occasionally, but 2FC he gets regularly. Perth is unattainable.

NEW STATION FOR THEOSOPHICAL SOCIETY.

BY the end of July the first tests of the Theosophical Society's broadcasing station will be made, and before the end of August the station will be on the air with regular programmes. Work has already started.

The Theosophical Society aims to broadcast only the very best in music and speech, and will operate in addition, on Sundays from 10.30 a.m. to noon and for a commencement on three evenings a week, and, from 6.30 to 8.30 p.m. Programmes may thus be short, but it is determined to give only the very best, and the Society considers that the highest standard may not be maintained from the outset if it is to broadcast all day and every day. This station is in a position to produce high-class musical programmes. There will also be talks on all forms of Art, on the problems that confront Australasia, and on the methods by which Australia may advance.

The Theosophical broadcasting station is established for propaganda, but, as the Society announces, of propaganda of ideals, propaganda for a great and noble Australia. It does not exist merely to spread Theosophy as such or any other special belief, but will be open to all those who are earnest workers the World Brotherhood. Difference of opinion and of Commonwealth Brotherhood, and, in the future, of the World Brotherhood. Difference of opinion and of method will be encouraged, provided they are dominated by a brotherly spirit towards all.

The Society is building the station with the help of Mr. E. G. Beard, of United Distributors. The studio, which is on the sixth floor of Adyar House, Bligh Street, Sydney, is practically ready, and work is proceeding rapidly with the transmitting station, which is situated at Clifton Gardens.

Mr. Beard states that, by the use of a Piezo crystal drive, special precautions are being taken to keep the station's wavelength constant, so that it will not interfere with any other station. The masts of the station are 100 ft. and 60 ft. high respectively. The station's license provides for a power of 3,000 watts, but the plant, it is stated, will be capable of developing 10,000 to 15,000 watts without overloading. Phillips' water-cooled valves are being used, and they will have a capacity as high as 85,000 watts.

There are five stages of radio between the drive and the aerial, and the method of coupling used is covered by Australian patents. During the last week of July, it is expected, the first small tests on a power of 5 watts will be made, and in the next three weeks the power will be increased to 1,500 watts. Before the end of August the station will be working for the listening public.

H & H

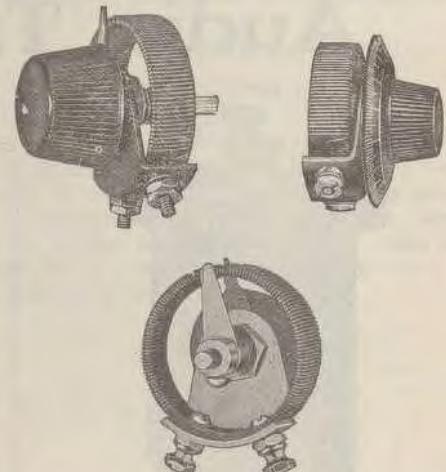

Rheostats

Once Installed, They're Good for Years of

Steady Service.

Rheostats with Dials.

Rheostats with Taper Handles.

A reliable Rheostat for every radio need. Easy to install, and needs only one panel hole 3/8in. in diameter. Contact lever slides quietly and easily over the wires, positive contact at all times. Edges of contact lever curve upward, which makes for smoothness of operation. Exclusive H. & H. feature is the automatic cut out.

Made in 6, 10, 15, 20, and 30 ohm capacities in both styles.

Prices: 5/9 with 2in. Dial.

5/3 with Taper Knob.

Obtainable from leading Radio Importers in every State

AMONGST THE TRADERS

DE FOREST "H" TUBE.

Efficient performance is obtained by the "H" tube on wavelengths of from 1 metre to 200 metres; in fact, on all wavelengths for which a circuit can be provided.

High frequency flash-over does not break down the tube as all leads are brought out at widely separated places.

High plate voltages may be used without fear of damage to any of the elements. Internal construction is rigid and the best of material is used. Both grid and plate are of Molybdenum.

The output ratings given below are approximate, because function and output efficiency depend largely upon the power applied, upon circuit arrangement and upon wavelength.

No base is provided for this tube, in order to give it characteristics of a truly low loss oscillator.

Experiments conducted by the De Forest Laboratories indicate definitely that the new developments embodied in this "H" tube will now permit extremely long distance communication on the high frequencies.

Technical Data.

Plate Voltage, 1,000 to 3,000; Grid Bias Volts, 50 to 500; Filament Volts, 10, Amps. 2.35; Plate Current Milli-amps, 40 to 110; Output R. F. Watts, 20 to 150; Safe Plate Diss. Watts, 170; Grid Leaks Hartley Circuit, ohms, 5,000 to 100,000; Size overall, 6 x 3½ inches.

RADIOTRON, UX.112.

Just as Radiotron UX.120 takes the place of UV.199 in the last stage of dry cell tube radio frequency circuits, so UX.112 takes the place of UV or UX.201A in the last audio stage of storage-battery sets. Radiotron UX.112 will deliver far more energy than the average loud speaker requires. This must be regarded as a distinct advantage. It means not only fine quality but long life.

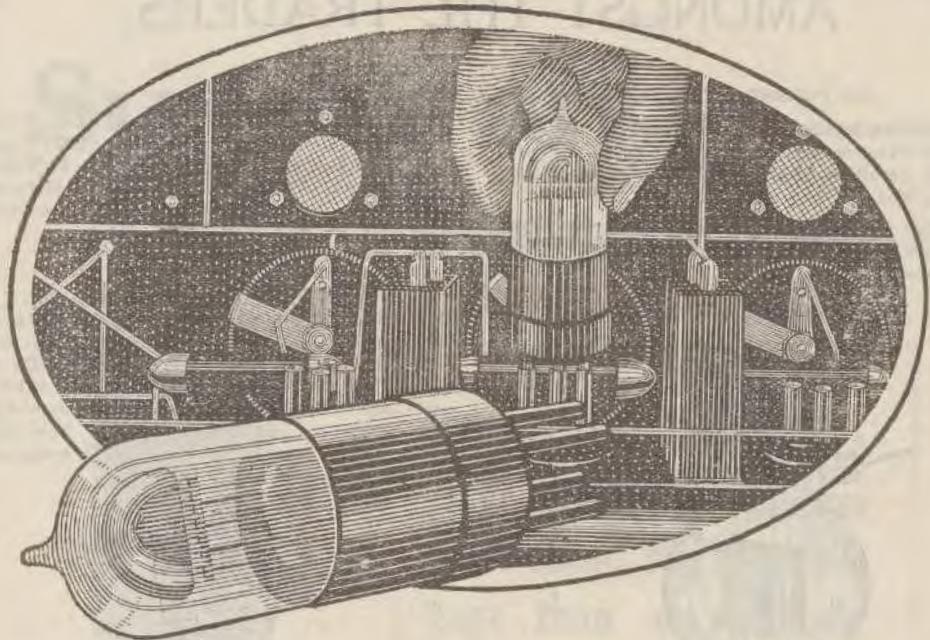

If two UX.112's are used in the audio frequency circuit of a storage battery set results so marvellous are obtained that it is hard to believe that no changes have been made in the hook-up. Agents: Amalgamated Wireless.

IMPROVED SERVICE AT 2KY.

Evening Sessions from 2KY in future will include Editorials by C. G. C. Christie, LL.B., "Thumbnail sketches" of prominent Labor leaders and "Children's Hour" by Mr. Thompson, who devotes the whole of his days and evenings to story telling in hospitals. The 2KY news organisation is now such that items of special news interest are continually being interspersed in the transmissions as they are received, so that the station is gradually achieving the ideal of an aerial newspaper.

"The Valve That Improves With Age"

FUNDAMENTALLY there is a great gulf between the Wuncell and other Dull Emitter valves. For in the Wuncell there is utilised a filament which actually improves with use. A filament which is built up layer upon layer until it is practically as stout as that used in a bright emitter valve. A filament, moreover, which successfully functions at a temperature glow which is almost invisible.

After all, the cost of a valve depends not merely on what you pay for it—the length of service you obtain determines whether that valve has been cheap or expensive. Measured on that basis, the Wuncell valve is by far the most economical Dull Emitter that can be bought—because it lasts longer.

Heat is the great destructive influence which brings most valves to an untimely end. In the ordinary Dull Emitter low current consumption has been obtained by whittling down the diameter of

the filament almost to the point of fragility. But the temperature at which that filament is operated is still very little less than that used in the average bright emitter. And so inevitably there is a tremendous stretching and contracting every time the current is switched on which finds the first weak spot and culminates in a fracture. Quite apart from the technical superiority of the Cossor design—the electron-retaining Grid and Anode system—which is freely admitted, the Wuncell filament offers you three distinct advantages. An unusual robustness which precludes the possibility of early burn-out. A rigidity—due to its unique three-point suspension—which entirely eliminates microphonic noises.

And, finally, a prolific emission of electrons which tends to increase as the valve becomes mellowed by use. Truly the Wuncell sets a new and higher standard in valve economy. The moment you use one you will appreciate its outstanding merit.

THE WUNCCELL DULL EMITTER.

WIRELESS PLAYS ITS PART.

Wireless has once again played a prominent part in bringing aid to a ship wrecked in home waters. On a voyage from Tauranga to Auckland, the s.s. Manaia, with 55 passengers and a crew of 38 aboard, piled up on a reef at the south-east point of Slipper Island. The mishap occurred just before midnight on a dark, squally night. Fortunately there was no panic, and as the ship was fast on the rocks there was no immediate danger.

The wireless equipment was at once brought into action, and an attempt was made to get into touch with Auckland. Owing possibly to the intervening Coromandel range of hill the ship was unable to raise VLD, however, and called up the Chathams, which flashed the message to Wellington, and later to Auckland. Meanwhile the auxiliary scow Mout had picked up the signals from the Manaia, and hastened to the aid of the wrecked steamer. Arriving in the early hours, and being informed that there was no immediate danger, she stood by till morning, when the steamer Ngapuhi, which had been diverted by wireless, arrived and took off the passengers. The crew were later transferred to the Rimu when it was seen that the position of the wrecked ship was hopeless.

The Manaia is a total wreck, but owing to the aid of wireless her passengers suffered hardly any inconvenience whatever. A few years ago, and the story might have been sadly different.

AN ERROR.

ON the back cover of "Wireless Weekly," of Friday, July 9th, appeared a full page advertisement featuring the Siftron, and the well-known Amplion Dragonfly Loud Speaker (Model AR102), the price of which is 25/-. Inadvertently, an illustration shown was that of the AR38, which sells at £3. In order to clear up any doubt in the minds of those who do not happen to be familiar with the appearance of the famous Dragonfly, we are showing below the correct illustration.

Colmovox Super Five Models

1926

Price, £52 11 Os.

FULFILS YOUR UTMOST DESIRE IN BEAUTY AND PERFORMANCE.

The 1926 SUPER COLMOVOX is beautiful to look at — lends an atmosphere of dignity and worth to Library or Drawing Room.

Naturally you expect unusual performance from so beautiful a Radio Set and unusual performance is exactly what you get.

Tuning, for example, is controlled by three dials only—so perfectly adjusted that each station comes in always at the same dial settings.

It never varies. Powerful locals may be on full blast, yet you can tune them out completely and bring in distant stations. Tone reproduction is always clear and true, the volume always adequate.

Non regenerative and extremely silent in operation, this Receiver comprises two stages of tuned Radio Frequency Amplification, Detector and Two stages of Distortionless Audio Amplification. Before you choose the receiving set to occupy the place of honour in your home, be sure to see and try the COLMOVOX. Its beauty you will recognise at a glance. Its extraordinary capabilities we will be always glad to demonstrate.

ALL THE ABOVE AND 250,000 OTHER PARTS
OBTAINABLE FROM

COLVILLE MOORE WIRELESS SUPPLIES LIMITED

EMMCO PARTS

ADD TO THE EFFICIENCY OF YOUR RADIO SET

Build with the best component parts obtainable. This is the first step towards good radio reception. Remember that, whatever the circuit you employ—whatever you know of its efficiency—your set will be no better than the parts you use. Remember also, that the name EMMCO on a radio part, stands for quality, good value, and the utmost efficiency.

SEE

YOUR
DEALERS.

EMMCO
CONDENSER.

The transformer plays a most important part in the operation of your receiver. A poor transformer can only result in weak, inaudible signals—or, perhaps, no signals at all.

Constructed throughout on the soundest engineering principles, the New EMMCO Transformer, with its rugged strength and handsome appearance, fulfills the very highest demands of discriminating radio users to-day.

Obtainable in Ratios 3½ to 1 and 5 to 1; also 2 to 1 and 7½ to 1.

PRICE, 21/-.

There are condensers and condensers, but EMMCO sweeps comparison aside. For the finest tuning on a crowded wave-band—for real selectivity—EMMCO condensers stand alone.

Built like a watch and with the most minute vernier adjustment, it represents the last word in efficiency and workmanship.

THE RADIOLA - SUPER 1926 MODEL

Floor Cabinet Model

Incorporates the five essentials for perfect radio reception—tone quality, volume, selectivity, distance and easy operation—in a superlative degree, plus beauty of appearance.

Hear this Truly Remarkable Radiola!

See how amazingly selective it is. Hear its great volume—note how the tones come in true, clear and melodious.

Unless you have heard the Radiola Super you have not heard the best in radio reception.

We will gladly arrange a demonstration at your own home at any time of the day or evening. Telephone—B 7051

Demonstrations Daily at our Showrooms,
97 Clarence Street.
