Perfect Control

HAVE you absolute control of your receiver? Absolute control means the ability to tune in any particular station without interference. It means being able to tune down softly on the local station, and yet be able to bring up the volume of the distant station without sacrificing tone or suffering interference.

A Centralah Radiohm does it for you!

Control your radio receiver with a Centralah Radiohm for greatest flexibility and power. Gives smooth variation of resistance. Ideal for plate circuit control of oscillation. Now used as a standard by most of the prominent manufacturers.

Genuine RADIOTRONS bear the above seal

RADIOTRON UX 199

Equally serviceable as a detector or as a high efficiency radio or audio frequency amplifier. Extremely economical in operation. Adaptable to dry battery operated sets.
Filament voltage 3. Current .06 amps. **Price 13/6**

RADIOTRON UX 201A

The standard all round flexible storage battery valve—good in any detector or amplifier circuit—sure to give the best results at the lowest operating cost.
Filament voltage 5. Current .25 amps. **Price 12/-**

RADIOTRON UX 120

New dry cell Radiotron for use in the last stage of audio amplification only. Exceedingly high filament emission. Volume equal to that of two UV199's.
Filament voltage 3. Current .125 amps. **Price 17/6**

RADIOTRON UX 112

A new power valve similar to the familiar UV201A, but several times as powerful. Designed for use as last valve in accumulator operated sets, when it will deliver far more energy than the average loud speaker requires. Two of these valves will give exceptional results. Filament voltage 5. Current 5 amps.

ANNOUNCING

The "Imperia"

Neutrodyne Kit

The very latest in improved
Neutrodyne Kits.

The Neutroformers are ready
mounted on the best type of
.0005 Straight-Line Frequency
Condensers.

The Panel Drilling Template sup-
plied in this kit can be pasted on
the panel and the holes drilled.

When the Condensers are mounted
the Neutroformers will be found
to be at the correct angle for
neutralisation.

Two of the latest improved type
of Neutrodons are also supplied
in the kit.

Wiring Circuit and hints on the
construction and neutralization
of a Neutrodyne are supplied
in each Kit.

Price £4/-/-

COMPLETE

EASY TERMS, £1 down, 2/6 per
Week.

"IMPERIA" Neutrodyne Kits are obtainable at leading Radio Dealers, or

WIRELESS WEEKLY

VOL. 9, No. 14.

FRIDAY, JAN. 28, 1927.

And Now, We See By Radio!

THIS week John Citizen learned that direct and constant communication by wireless telegraphy between Australia and Great Britain is commercially sound. He received the news with complete indifference, for sound business is nothing new to him, even when dealing with such an ethereal commodity as sound. He merely accepted it as further proof that modern business follows the path pioneered by science, and in this case it was his opinion that business was a little slow, for it is two years since science showed that beam radio is practicable.

After the first announcements those two years of constant newspaper publicity made him tired of the word "beam." Record around-the-world relays by amateur experimenters no longer calls for his wonderment; regular broadcast reception from Japan and America, and nightly reception of news bulletins from England, has dulled the novelty of long-distance radio. But there are two developments, both to follow successful beam communication, which have not received the full glare of the newspaper spotlight, as has the beam, and which, therefore, will probably surprise John Citizen when they are introduced apparently over night.

The first is direct telephone communication with England, the linking up of the London and Australian telephone exchanges so that one may speak to a friend in Newcastle, England, from one's own home in Newcastle, Australia. The beam system

between America and England only preceded telephone conversation between those two countries by a few days. We already have a beam system, and no doubt if there was the same demand for telephone communication between Australia and England we would even now be able to converse with people in England.

The second surprising development scheduled to follow the beam very soon is the transmission of pictures by wireless. Already a group of London newspapers are said to be arranging for the publication of pictures of the Duke of York's arrival in Australia the day after he steps ashore.

The transmission of pictures by radio must not be confused with television, a far more wonderful invention than either of these, but one which writers of scientific fiction have made the average man familiar with in countless stories. Actually, it is only within the last few months that the miracle has become fact, and the commercialisation of television will become all the more surprising, because it has been treated as a product of the imagination of fiction writers instead of scientists.

Television is seeing what is happening at a distance in the same instant as it happens, regardless of intervening objects, and the name denotes that this feat is performed by means of a system of electric telegraphy. The history of television dates from 1873 when the light sensitive properties of selenium were discovered.

Between You And Me And The Microphone

Conducted by Jack Plugge

IN A PRIVATE audience granted to him by the Pope, Senator Marconi was presented with a gold medal in token of his achievements.

IT WAS a red letter day in the history of 2MK, operated by Mockler Bros., Bathurst, when Beryl Mills (Miss Australia, 1926), broadcast from the station last month.

AT 6.45 P.M. (Sydney time), February 1, WEMC, Berrien Springs, Michigan, U.S.A., will carry out a special broadcast with its new 4,000 watt transmitter, which it is hoped will be heard here. The programme will consist of instrumental and vocal music and will be broadcast on a wavelength of 315 metres.

"I TRUST I am not too personal or impudent," writes a lady radio enthusiast to 2FC, "but does your piano stool need greasing? For some days past I have noticed between items what appears to be a squeaking noise. I have a receiver which transmits sounds fairly faithfully, and I have concluded that something in the studio wants oiling."

THE WRITER was perfectly correct that something needed a little lubrication, but it was not the piano stool. It was the door of the studio, which developed a most pronounced squeak, and which up to the time of receipt of the above letter, had defied all efforts for its eradication. The studio staff did not mind the squeak—in fact, they rather liked it—but when they found it was getting on the nerves of a listener, they took up the problem in real earnest and now it is no more.

INCIDENTALLY, there are many things which radio listeners hear without the broadcasting officials intending them to. A well known "radio uncle" once started the children's session with the remark, "Drat these young rascals, I'm tired of talking to them." The remark was intended as private to a friend, but the microphone had been switched on and hundreds of youngsters heard the words quite plainly.

THE AVERAGE man's life is now divided between worry over two tubes—radio and inner.

A WELL-KNOWN actress recently returned from England, where she has been for several years, said she wanted to sing over the radio badly. She did!

EXCITED VOICE on the phone: "John, come home at once, I've mixed the plugs, the radio is covered with ice and the ice box is singing, 'Red Hot Mamma!'"

"THE IDEA that relativity dispenses of ether is only true mathematically in the sense that you do not have to talk about it," says Sir Oliver Lodge. "Very well: We won't."

"Aussie Speaking."

Mr. F. G. Kellaway, Managing Director of the Marconi Company, presents that people in England will shortly be able to converse with people in Sydney and Melbourne.

"Do you still want Leicester Square? Central calling, here's your number."

"Are you there?"

"Aussie speaking, down from under. Hello, Johnny... Thought I'd give you just a ring. How's the Prince 'n everything?"

"Oh, I say! A ripping notion! Here we chat across the ocean."

"Eleven thousand miles or so..."

"Most extraord'nry thing, you know. A jolly wave that makes a girth right round the blooming bally earth. I mean to say, eh, what?"

"Yes, some sturt! But, gee, it's hot. How's the weather. I'm going to surf."

"Fog—no name! or else it's rain and sodden turf. Can't play golf or any game."

"Sounds bad to me, but, boy, you ought to see, young Charlton and the Jap. They made a race of every lap."

"Perhaps I will, by television."

"Or better still, watch the decision, when record smashers bring back our Ashes."

(Here Big Ben rings).

"Well, so long, it's time to stop."

"Au revoir, Pip Pip, old top."

—R. E. Corder.

MRS. LOTTA HARRAUFF, well-known in American broadcasting circles, asserts that women constitute 80 per cent. of the U.S. listening public.

ON SEPTEMBER 1 last, Cape Town had 4,000 licensed listeners—the highest figure ever reached. The second birthday of the station was celebrated on September 15. Renewals at the moment are uncertain, and many "pirates" are being prosecuted.

A MEMBER of the "leper colony" on an island near New Bedford, Massachusetts, has been granted an amateur transmitting licence by the U.S. Naval Wireless Department. His name is Archibald Thomas. The radio inspector conducted the necessary examination over the ordinary wire telephone.

"I SEE THAT you make a practice of inquiring for the whereabouts of missing persons," wrote a listener to 2BL this week. "There was a man named . . . to whom I lent \$5 last year, and I have never seen or heard of him since. Would you mind announcing from your station that I would like to hear from Mr. . . .?" The Managing Director of 2BL read the letter a second time, smiled sadly, shook his head gently, and went on with his job.

THE WINNER of the Perfect Girl competition conducted by 3LO is an envied young person, but judging by some of the correspondence received at the studio office the envy will not be confined to girls alone. One correspondent seriously writes, "As your station appears to be in favor of competitions, I would suggest that you set up a competition for the young men as well as the ladies. You could have them send in photos and give a prize for the most handsome young gent, or something similar. It would arouse some interest for the young fellows. Hoping to see something done for the young gents." There are possibilities in the suggestion, for instance, a competition entitled "April's Most Beautiful Bridegroom!"

A Three-foot Shelf of Radio Books

A selection from the wide assortment of Radio Books designed to quench the listeners' thirst for knowledge. A simple guide to a better understanding of the miracle radio.

NOWHERE in the history of the world is there record of a quest for knowledge so widespread as that of present-day radio enthusiasts. Once gripped by the wireless germ a listener rarely finds satisfying answers to the hundreds of questions which arise in his mind from a brief study of broadcasting. Radio has done more than all the scientific novels and beautifully illustrated encyclopaedias of recent years, to show that science is marvellously interesting and not the dry subject most of us believe. The curiosity of the listener, once aroused, does not stop at circuits. He wants to know the fundamental principles underlying radio and thus is led on to better understanding of life.

There is a wide assortment of books and publications designed by their authors to quench in part the listeners' thirst for knowledge. With the new "Encyclopaedia Britannica" containing some half dozen articles by radio authorities, including Marconi, making its bow to the public and

serving as a perpetual reminder of a concentrated source of affording a liberal education, it is but natural for a number of radio experimenters and beginners to enquire: "Why not outline a collection of books and publications suitable for a 'three-foot shelf' radio library?"

To select from the large number of radio books a score of those most suitable for the radio experimenter or enthusiast without knowing the stage of advancement of the prospective reader is a difficult task. Rather would I select from my own bookshelf those publications which I have found most useful, and leave the listener to choose for himself.

Intended specially for those devoted to radio as an experimental field and others whose thirst for radio knowledge is deep-seated, is a book entitled "Signals Through Space Without Wires," written by Sir Oliver Lodge, in 1884, selected because of its lucid treatment of the foundations of the subject and tests the early experiments of Heinrich Hertz, who

discovered radio waves.

A book which has stood for many years as a main source of technical radio information is that by Prof. J. A. Fleming now in its fourth edition, entitled, "The Principles of Electric Wave Telegraphy and Telephony." The author is the eminent English physicist and designer of the two electrode valve that bears his name, the Fleming valve. The contents of this book are suggested by the following subtitles: "The Production of High Frequency Currents and Electric Oscillations," "High Frequency Electrical Measurements," "Damping and Resonance," "Stationary Electric Waves on Wires," "Electric Radiation," "Detection and Measurements of Electric Waves," "The Apparatus of Radio Telegraphy," "Radio Telegraphic Stations," "Radio Telegraphic Transmission," and "Radio Telephony."

"Electric Waves" is the title of the classical work written by Heinrich Hertz, the discoverer of radio waves, which book was translated into Eng-

lish in 1900 by D. E. Jones. Though it was published in 1900, by dealing in fundamentals it has not been robbed of its value by the intervening years. Among the chapter headings are the following: "On Very Rapid Electric Oscillations," "Upon the Electric Discharge," "Oscillation Upon a Neighboring Circuit," "Finite Velocity of Electromagnetic Actions," "Electromagnetic Waves in Air and Their Reflection," "Propagation of Electric Waves by Wires," and "Mechanical Action of Electric Waves in Wires."

The growing importance of radio as a means of determining direction and position of ships and aircraft gives new emphasis to a book entitled "Direction and Position Finding," written by E. Keen, of Sheffield, England. Citation of some of the chapter headings will suggest the contents of this book: "The Theory of the Wireless Direction Finder," "Position Finding," "Night Effect," "Elimination of Night Effect Errors in Bearings," and "Receiving Apparatus." The author gives practical instructional details of direction finding installations for shore service, as well as for ships and aircraft. He also discusses freak phenomena encountered in direction finding work and indicates how to eliminate faults peculiar to a radio direction finding receiver.

A sort of vest pocket radio encyclopaedia was issued in 1924 by the International Correspondence Schools. Its exact title is "I. C. S. Handbook for Radio Operators," and, as this designation implies, it contains a variety of information, including definitions of electrical terms, explanations, both by means of text and diagrams, of electric circuits, oscillating circuits, antenna systems, batteries, generators, motors and miscellaneous radio devices. In addition, within its 500 small pages are to be found useful data on electron tubes, transmitting and receiving stations and tables and data on designing inductance coils, etc. In brief, this handbook is chockful of information of interest to the experimenter.

"Radio Telephony for Amateurs" is the title of a book written by Stuart Ballantine, formerly expert radio aid in the United States Navy. To those engaged in the fascinating experimental field of radio the title is suggestive and an examination of its contents proves that its name is not misleading. For within its pages are to be found photographs and diagrams showing transmitting circuits, antenna systems, schemes of resistance and transformer couplings in receiving apparatus, etc.

The "three foot shelf" of the radio experimenter's library might well re-

serve an inch or two of space for a book of a decidedly popular nature, "Radio for Everybody," written by Austin G. Lesserbarbour, formerly managing editor of the "Scientific American," qualifies to this description, and at the same time contains helpful suggestions for the embryo amateur—that is, the broadcast listener who is in the transition period from a radio fan to full fledged experimenter. This statement is borne out by some of the chapter headings in "Radio for Everybody": "Operating the Radio Receiving Set and Mastering the Telegraph Code," "Transmitting the Dots and Dashes of the Damped Radio Telegraphy" and the "Gentle Art of Amplifying." This book is written in an interesting style. A book of similar appeal is "Radio for All," produced by Hugo Gernsback, editor of "Radio News."

Going from one extreme to the other and from the new to the old, the experimenter's radio library should include a highly technical and fundamental book entitled "Elements of the Mathematical Theory of Electricity and Magnetism," written by Sir J. J. Thompson, an eminent English physicist, who was then identified with the celebrated Cavendish Laboratory of Cambridge, England. This book rests on a bedrock foundation of fundamentals, as can be noted by some of the chapter headings: "General Principles of Electrostatics," "Lines of Force," "Condensers," "Electrical Images and Inversion," "Magnetism," "Magnetic Inductions," "Magnetic Force Due to Currents," and "Dimensions of Electrical Quantities."

Intended especially for radio telegraph operators navigating on the seven seas, J. C. Hawkhead and H. M. Dowsett are joint authors of a treatise entitled "Handbook of Technical Instruction for Wireless Telegraphists." It is based upon the reasonable presumption that radio operators on ships are in need of special instruction inasmuch as their knowledge of radio should be more comprehensive than land telegraphers. The latter when beset by operating troubles are in ready touch with linemen and engineers, whereas radio operators on ships must do their own "trouble shooting." This handbook, other than containing descriptions of conventional transmitting and receiving equipment, gives constructional details covering the rigging up of emergency radio outfitts.

"Wireless Telegraphy and Telephony," by H. M. Dowsett, of London, begins its instruction with the atom, and in order to assist students in understanding atomic processes a provisional model of an atom is de-

scribed. The elements of radio testing are given liberal space in this book, including measurements of audibility, direction finding and signal strength, measurements of dielectric strength, the measurements of frequency and the measurements of resistances and inductances. Moreover, a chapter is devoted to instructions in measuring the direction and distance of transmitting stations and the intensity of received signals.

An exclusive treatment of the modern electron tube is given in the book, "The Thermionic Vacuum Tube and Its Application," by a noted authority, Dr. H. J. Von Der Bilt, former expert of the Western Electric Company. The preliminary chapters deal with the elementary principles of this modern Aladdin lamp, and then, by progressive steps, the author treats of the rectification and amplification properties of the tube, and finally we are told about some of its numerous other applications.

"The Radio Amateur's Handbook," written by F. E. Handy, and published by the American Radio Relay League, has just been announced. Judging from advance notices, it is destined to occupy a conspicuous position on the "three foot shelf" of the radio experimenter's library. It offers a solicitous and guiding hand to the broadcast listener to "come on over" into the field of experimental radio. Once the novice is introduced to the new adventure this handbook tells him how to construct and operate a short wave transmitting and receiving station of modern design.

A valuable reference book on matters of radio interest is the "Year Book of Wireless Telegraphy," published in May of each year by the Wireless Press, Ltd., 12 Henrietta-street, London, England. There is also issued a considerably abbreviated edition of the "Year Book of Wireless Telegraphy," which is intended primarily for experimenters, amateurs and persons interested in broadcast reception. This abbreviated edition contains the same material as the complete year book, except that material primarily of interest to commercial companies has been omitted.

The books mentioned in this article will serve as a nucleus to a useful and instructive three-foot shelf of radio books. Having once mastered the fundamental principles of radio, which he will find therein, the reader may be left to choose for himself the rest of his small library. Unfortunately, not all these books are obtainable first hand in Sydney. For the enthusiast not wishing to go to the trouble of indenting them, we will publish next week a complete list, with prices, of all the radio publications obtainable here.

The Theosophical Broadcasting Station

**A full description of
2GB, the only crystal
controlled broadcasting
station in Australia.**

A NEW announcer has appeared at the Theosophical Broadcasting Station 2GB, Mr. J. K. Powell, who will be remembered by most listeners for his inspiring cheerio talks from 2FC. Mr. Powell is a young Irishman, who came out to Western Australia as a youth 20 years ago, travelled the country in the capacity of a commercial, started "Sparks" fortnightly magazine in West Australia and founded a Sydney version of "Sparks" five years ago.

He is an optimist of the first water and most of his activities at 2GB will be directed in the way of bringing good cheer to the hearts of his listeners. For five minutes each morning, Mr. Powell puts on the air some cheerio talk for the children, and at 9.30 he "cheerios" women listeners for 15 minutes. From 10 to 10.15 each night (Saturdays and Sundays excepted) he concludes his day's work with 10 minutes cheerio for men. Not an easy thing to do—talk cheerio stuff three times a day for five days in the week without becoming stilted, but Mr. Powell is one of those rare individuals who seem fairly to exude happiness and insists on being cheerful at all times and in all weathers. 2GB hopes to have many country school children listening in to its gospel of good cheer.

The engagement of Mr. Powell follows a slight reorganisation in the staff of 2GB. It is now four months since the station made its first official transmission and during that time many improvements have been made in the transmission and programmes. The design of the station is unique and in accordance with the latest developments of both receiving and transmitting plant. It differs from other Australian stations in that the wireless and sound currents

The Transmitter Room and Aerial.

are combined, while both are of very small power and the combination is afterwards amplified until the power required is obtained.

The main studio is on the seventh floor of Adyar House, in Bligh Street, Sydney, the Headquarters of the Theosophical Society, Australian Section. Adjoining the studio is a comfortable waiting room and accommodation for the office staff. Adyar Hall itself, which is renowned for its acoustic properties, is used as a studio for band items, etc.

An auxiliary studio is also fitted at the Manor, Mosman, for the convenience of various lecturers and artists who may find it inconvenient to travel to the city studio. Both studios are used during an evening's transmission.

Carbon microphones are at present being used in the studio, similar to

those in use at the other Australian stations, but it is hoped to supplement these by a different type in which all "hiss" will be eliminated. This has been found to be essential for the satisfactory broadcasting of church services, conferences, etc.

The sound currents from the microphone are magnified by a six-valve amplifier before being passed through a telephone line to the actual transmitting station and a receiving set is fitted so that the actual quality of transmission from the station can be controlled from the studio.

Arrangements are also made at the studio for connecting microphones, situated in Adyar Hall, the Liberal Catholic Church, or any other hall in Sydney to the Station. The studio is connected with the actual transmitting station by means of telephone

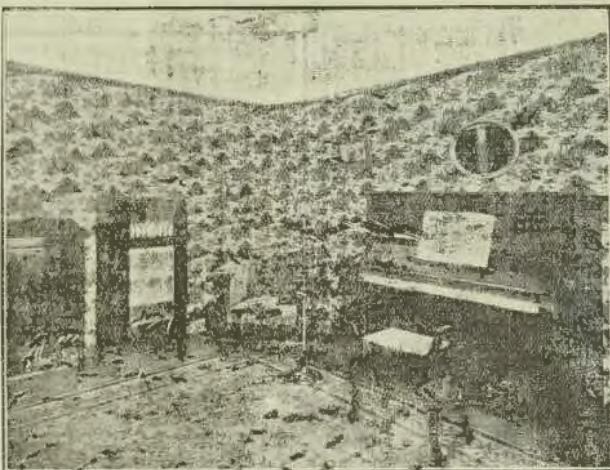

wires which pass underneath the harbor to Mosman.

The transmitting station is picturesquely situated in the gardens attached to the Manor, the residence of Bishop Leadbeater and Bishop Arundale at Mosman. The transmitting aerials are supported by two wooden masts, one at the front of the Manor being 100 feet high, while the other is at the rear and is about 80 feet above the transmitting plant.

The sound currents from the Studio are fed into a connection board where convenient arrangements are made for supplying the station with sound currents from either the studio in Bligh-street, that in the Manor itself, or from any hall situated in North Sydney. The sound currents from this connection board are first reduced in strength as may be necessary for clear transmission and are then fed through a one stage amplifier to the modulating valves, which have a power of about 10 watts.

A quartz crystal ensures constant wave-length. Small wireless currents are fed through a control valve to a third valve, which, working in conjunction with the modulating valves, combines them with the sound currents to form the actual wireless telephony currents which are necessary to actuate a receiver. At this stage the power of the currents is only about five watts.

These currents are then amplified by three stages before being put into the aerial. The first stage uses a

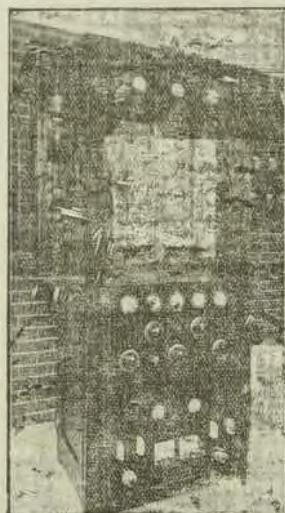

The 2GB Studio at Adyar Hall.

240 watt valve, the second stage a 140 watt valve and the last stage a large water-cooled valve capable of handling 35,000 watts without being in any way overloaded. All the valves have been supplied by Philips. The water-cooled valve is a most interesting piece of apparatus. It requires 200 gallons of fresh water an hour to keep it cool in addition to powerful air blasts.

The high voltage supply for the small valves is obtained by stepping up the ordinary lighting current of 240 volts to 1,000 volts, which is then converted to direct current at about 450 volts by means of small rectifying valves. That for the large valves is obtained by stepping up the 415 current from the power mains to 25,000 volts and converting this to direct current at about 10,000 volts by means of two water-cooled valves.

The method of combining the wireless and sound currents is very interesting to a technical person, because no iron-cored chokes are used in the process. It is possible to adopt this improved method because the combination is effected with such very small powers. This method also results in considerable economy, both in capital cost and running expenses. Thus, whereas certain stations have advertised the fact that they require 35,000 watts to maintain an input of 5,000 watts, this station only requires 19,000 watts for an input of 15,000 watts. It is fascinating to move a

The Transmitter.

small dial similar to that on a broadcast receiver and watch the power of the station vary from nothing to its maximum.

The design also permits of the inclusion of various devices for the limitation of unwanted sidebands and thus prevent the station from unduly interfering with reception from other stations on nearby wave-lengths. With regard to the installation of the quartz crystal drive to ensure stability of wavelength, a recent international wireless conference recommended the compulsory adoption of this method of wavelength control as being the only way to solve the interference problem.

The wavelength of the station is 316 metres. This can be received on any set, the tuning position being almost exactly midway between 2BC and 2KY. Similar coils to those used for 2BL should be used. The station should be on full power by the middle of September.

The station and studio equipment has been built by the Theosophical Broadcasting Station, Ltd., Mr. E. G. Beard, the designing and constructing engineer, being loaned by United Distributors, Ltd., for the erection of the station. The station was opened eight weeks after actual work was commenced, thus nearly equaling the record for speedy erection established by the same engineer during the construction of 2KY, the latter station taking seven weeks to build.

Convict Riot at Parramatta Directed by Loud Speakers

CONVICTS, red-coated soldiers, warders and other relics of chain gang days, wrangled in murderous fury on the banks of the picturesque Parramatta. From all sides of this square mile of hate and revolt came an uncanny voice which controlled every move.

Never was there a more striking contrast!

The grey gaol walls, the iron gates, the escaping convicts, the waiting swamp—were typical of the one bloody chapter in Australia's history. Dominating all and representing the triumph of science in 1927 were the Loud Speakers on the gum trees. These caught up the distant voice and thundered it forth.

Thus was the big riot scene in "The Term of His Natural Life" filmed at Dundas, near Sydney.

This historic film—the greatest ever produced in the Commonwealth—has created controversies, interested Governments, and involved most costly preparations.

Yet without the loud speakers, and the Burgess' Batteries, which supplied the electrical energy, the task of filming the riot of 500 convicts over such a large area would have been a hundred times more difficult.

Norman Dawn, the producer, took every human precaution to guard against failure. Microphone, batteries and loud speakers were the best obtainable, and every part of the riot was rehearsed. Four superb cameras were used.

When Australians see the result on the screen shortly, they will realize how grandly modern equipment, aided by Australian skill and genius, can triumph over difficulties.

The photographs reproduced on this page have historic interest. The first shows Mr. Dawn directing the mob scene with Mr. Len H. Ross at the camera. Every instruction given by the producer was caught up by his Burgess Batteries and sent out from the distant gum trees fringing the immense arena.

Producer Dawn directing each move in the scene through the microphones.

In the second photograph a Red Coat and a convict, with other "supers," are awaiting the summons to join in the riot. In front is the electrical equipment which made everything possible.

Awaiting the summons to join in the riot. Supers in the historic film, "The Term of His Natural Life."

HE SHOULD LAUGH.

A WEEK or two ago mention was made of the difficulty broadcasting stations have had in supplying requests for broadcasting the laugh of the kookaburra. The matter was just recorded casually, but a response has reached 2FC from a resident of Little Elswick Street, Leichhardt. The writer explains that he is the owner of a kookaburra which will laugh "on request," either by day or by night. "I will be pleased to let you use him for a star item by arrangement," says the bird owner. 2FC has made arrangements to give listeners the benefit of some of his laughter.

However, a Jackass in Queensland has the "laugh" over the Southern stations in the matter of being the first of his variety to broadcast. On Sunday afternoon recently he sat on an electric light standard in the Brisbane Botanic Gardens and laughed to his heart's content at the microphone, which was waiting for the band programme. The operator in charge of the amplifier at the Gardens was quick to appreciate the novelty the Jackass was affording listeners, and he accordingly controlled it so satisfactorily that the "laugh" came through just as though the "stunt" had been rehearsed.

The Safety Valve

A department in which readers are invited to relieve their feelings by commendation or condemnation of broadcasting stations and their programmes. All letters must be addressed to "The Safety Valve," Wireless Weekly, 51 Castlereagh St., Sydney.

APPRECIATES JAZZ.

Dear Sir.—Just a letter of appreciation of the Jazz Band which was broadcast from the studio last night. The whole of the items were played with perfect rhythm, and the melody could be followed from start to finish, not like most of the Jazz Band broadcast in Sydney, who seem to synchronize their music from start to finish, and to the average listener the melody is very hard to follow.

The best item on the programme last night was undoubtedly "Barcelona." The rippling counter melody of this song as played by the band is something worth listening to. Another item that I would like to mention was the excellent singer who sang the chorus of each song. Every word came through as clear as a bell, and I am sure that if this novelty is continued it will be appreciated by the majority of radiologists who do not dance. In fact, the whole performance of the band and singer is far superior to most of the imported jazz records.

Yours, etc.,
G. MASON.

Leichhardt.

[The writer voices the views of a great many 2FC correspondents. An article by Mr. Eric Pearce, conductor of the 2FC Dance Band, will be published in an early issue.]

A MARVELLOUS SET.

Dear Sir.—Since I last wrote you about the failure of your "Extraordinary One Valve Set," described in "Wireless Weekly," October 22, I have located the fault, a burnt out valve, which I was unlucky enough to have obtained. I had not wired up too well, so when I purchased a new valve I reversed the connections. Result, excellent. I get the four Sydney stations just like clockwork every night, and very loudly too. I turn the rheostat about third of the way round in tuning and then turn it back a bit. That would not be harmful, would it? Thanking you for giving me such a marvellous little set.

Yours, etc.,

J.D.

Newcastle.

[Vale, Tech.—Ed.]

PARDON THE CRITICISM, 4QG.

Dear Sir.—A word from a new recruit to wireless. Although static is annoying at this time of the year, I manage to get fairly good results from 9.30 to close down. 3LO is easily the best, although all the others are very good and their programmes afford excellent entertainment, except 4QG, who, I hope, will pardon the criticism, but what we want is entertainment—not education.

Personally, as soon as a lecture starts I cut him out and try for 3LO, 2FC or 5CI. I have a library of books and spend at least two hours a day in study, so no one can accuse me of not wanting to improve myself. Further, the studio director dominates the whole programme, until one gets tired of his voice. As we don't bother to listen to him he is wasting our money and an excellent station.

Would it be asking too much to ask the 4QG announcer to read over racing results twice, and slowly. We only live for the gee-gees, and the results are read so fast, and so often interrupted by static that nothing less than a dictaphone could catch what is being said, and until we pick the Caulfield and Melbourne Cup double we cannot afford such an outlay.

Yours, etc.,
TINY.

Longreach.

A FEW SUGGESTIONS.

Dear Sir.—I wish to offer a few suggestions for new features for 2FC, in order that they may keep up your reputation of providing for the community a contribution towards that irresistible desire of humanity, "Something new."

First, I would point out that although the orchestral music from cinema theatres is very acceptable, there is a feeling that something is missing, especially when the laughter or applause of the audience is heard. I suggest that arrangements be made to broadcast a description of either the story or the programme with respect to the cinema, or the acts as the case may be, with the orchestra as a background.

Yours, etc.,
H. SWITZER.

Hurstville.

[The broadcasting of University Memorial has already been arranged for by 2FC.]

IN DEFENCE OF THE FARMER.

Dear Sir.—There is another aspect of the Farmer and radio situation I would like to draw attention to. It would be pretty safe to say that 50 per cent. of the city licensees are held by crystal users, which goes near to equalizing the percentages of valve users in the crystal and valve zones. Many of those in the valve zones are unable to use accumulators, therefore tied to the unsatisfactory and expensive dry batteries. That residents of distant or valve zone-cities use sets only goes to show that other recreations open to them are not serious competitors, and leaves the conclusion that a very large body of country residents incurs the disproportionate cost of the necessary sets in order to enjoy the benefits which like most good things—are served at minimum cost to city dwellers. Decentralisation is the remedy for the dearth of radio receivers in the country. Scatter the broadcast stations; or perhaps it would be more practicable to establish relay stations, until at most a three valve would give enjoyable speaker results in everyone in the State. Then you would get the answer to your query, "Does the Farmer Want Radio?" He surely does, as much as he wants Parliamentary representation on the basis of acreage and not population.

Yours, etc.,
JAY COBB.

Homebush.

3 LO modestly disclaimed attempting to discover the Perfect Girl when it began its recent Competition. It was looking for an all-rounder, a sort of feminine Rhodes Scholar, who would combine skill in sport, social service records, exquisite deportment and a pretty face.

Well, it has found her, and I have just left her. Her name is Eileen Eliza Harper and she hails from the mountains near Melbourne, a little town called Belgrave.

She is of the class that gentlemen prefer, her fair hair framing a face that is piquant and full of fun. She likes a joke, as long as it is not at her expense. This joke is on SLO, and will cost them a trip through New Zealand, beginning at Milford Sound in the South Island and working up through both Islands by medium of motors, trains and boats, all de luxe, and in charge of Government tourist officers.

To go back to Miss Harper. She was cooking at home, for her first and greatest virtue is that she is a good cook, when Mrs. McDowell, a neighbor, came in full of the idea that Eileen should enter for the SLO Competition. You know how these things start. They all laughed and Eileen went on with her basting or kneading, or whatever it is they do with scenes. When they stopped laughing, Eileen was persuaded to "have a shot" at it.

She was certainly well equipped for it. Her social service included a commission in the Girl Guides, and her face is so lovely that even the stark uniform of that holy army of martyrs did not unduly distress her. Then she was a great hand at organising the outrages known as Queen Carnivals, for wheeling money out of shy citizens. She won the long-distance championship for this, having persuaded a Scotchman 20 miles away to contribute a sovereign to her fund.

Coming to her other accomplishments, the thing she seems to be proudest of is having been born in West Australia, the State that provided Miss Australia. She was born at Karrup, and explained to me that "up" in aboriginal means a drink. I explained that in our State it is "down." These funny local customs!

She is a tennis-player, wields a mean mallet at croquet, and—surprise this—plays baseball like an American. Her indoor work is good. She has taken courses in Domestic Science, though she is far too pretty

The Perfect Girl

Miss Eileen Harper wins SLO Competition—See also cover picture.

over to have to bother. She sings; she plays, she dances, not as you or I do, hoping that our fox-trot will not be mistaken for the Black Shuffie, but as an exhibitioner. Her dancing partner was Tommy Assender, the winner of the Victorian Championship, and runner-up in New South Wales. It will be admitted that she is what is known as "some" dancer.

Educated at one of the crack Melbourne colleges, the Methodist Ladies' College, where the well-known Dr. Fitchett is the Principal, her mental attainments are many. It will be seen, then, that with a face as lovely as hers, with a record of social service, outdoor sport, kitchen and domestic accomplishments, and parlor tricks, Miss Harper has every right to be called a Perfect Girl.

And she will reap the reward of perfection. It is calculated that the full value of the presents to be heaped on her will amount to £1000. She is only 20 years old, so this is a nice little sum to be available at her launching ceremony. She will be feted everywhere she goes in New Zealand, and will be lucky if she is allowed to leave the Dominion alone.

It is an interesting experiment of SLO to broadcast a five minute speech by one of the Japanese swimmers in his own tongue.

One of the two amphibians from Nippon will talk from the SLO studio in English, but the other one, having none, will address the world in Japanese. I believe that a big effort will be made by the Japanese station JOAK to "get" Melbourne that night, so as to give Japan the thrill of listening to one of its nationalists in far-off Australia. This takes place on January 18, the day before the swimming matches, which are to be described and broadcast by Norman McCance. I think this is a mistake. The Japanese speech should be made on the 20th so as to give his countrymen listening in the first news of their victory or defeat.

At all events, it will be a piquant thing to listen to a speech in Japanese. Quite possibly, if the Japs have any sense of humor, that speech might be absolutely paralysing to Australian ears. The old adage that listeners never hear any good of themselves might have a surprising confirmation.

HELLO, NEW YORK!

I was interested in the first chirpings of greetings over the air between London and New York, and felt that both parties might have done better than the feeble twitterings they achieved. After all, it was a great occasion, and some little formality might have been observed. It is to be hoped that when £15 for a few minutes is demanded from the 20th to be hoped that when £15 for a few minutes is demanded from the commercial world, they will manage to pack more significance than the burblings about one innovation being a "milestone."

One effect it has had on my mind, and that is to give me a glimmering that spiritualistic utterances may be something more than fake, after all. My chief argument against them hitherto has been, not the inherent impossibility of survival—my mother-in-law is superior to death, I'm sure—but the senseless cackle of returning spirits. I felt, could not by any chance be other than childish invention of the medium. "I am very happy" seems to be the nearest even Shakespeare and Dante can get to bright chatter. It may be, however, that, like those wireless duologues, the

(Continued overleaf.)

newness of the experience has sapped their intelligence, and all they can be possibly looked to produce is the sort of talk one would expect between two flappers on a telephone.

* * * * *

WIRELESS AND HARRY LAUDER.

I wonder what a plebiscite would reveal as to the most popular personality on the Australian air. In England opinion seems to have crystallised that Sir Harry Lauder takes the palm. It may be that when he has finished his last farewell tour, he may settle down to descriptive work through the microphone.

He has been described as having a genius for drawing pictures with his voice and patter. As the million listeners settle down to hearken to that rich, telling voice, with its fruity chuckle, the walls of their houses melt away and they walk with Lauder through Scotch villages, visit with him in parlors; better still accompany him into warm, red kitchens, and taste the "tay" that is brewed for his arrival.

This is a rare gift, this color in a voice. I have heard one or two in Australian studios who possess it. It is the gift which alone can get the personality of the speaker or singer into the home. I have small doubt that the coming years will bring a tremendous development of this art. Microphone personalities will arise, like stage, like screen personalities. When they do come, they will earn big salaries, for they alone can be listened to as often as tiny perform without boredom. Nothing pulls so quickly as a voice too well remembered, that is only a voice, a bodiless quality. It is the voice that suggests the body, and the spirit and the whole personality that the listeners want to hear again and again. Lauder has it, I can well believe. Who in Australia possesses it in equal measure?

THE QUESTION whether it is desirable for the broadcasting stations to describe the encounters at the various stadiums will probably remain debatable. Trades Hall Station 2KY has broadcast vivid descriptions of a number of vigorous battles, and lately 2BL has been describing the fights from Rushcutters' Bay. Crowds of fight fans who could not attend the recent encounter between Sunny Jim Williams and Tiger Payne, but who listened in at home, congratulated themselves on saving the entrance fee when Mr. Hugh D. McIntosh's broadcast description of the battle was cut short by the black man knocking out his opponent in the second round. 2BL is still considering whether to make the broadcasting of fights a regular feature. The wishes of listeners is the main consideration.

We're Broadcasting About:

AN ARTIST THAT calls for special mention, and who is broadcasting from SLO, is Don Alfonso Zelaya, the South American Pianist. His entertainment is a combination of highly developed artistic talent as a pianist, and brilliant wit as an entertainer.

JOE PEARSON, so well known as a traveller, who has pedalled his bicycle to every corner of Australia, has been induced to give 2FC listeners some of his experiences on the air. Among other subjects, he will speak on the methods of transportation prevailing in Sydney in the 70's and 80's.

2FC LISTENERS are anticipating with pleasure the Sydney Harmonic Society's programme on Monday, January 28. The Royal Sydney Apollo Club will give its first broadcast performance on Monday, February 14. There will be concerts given by the Sydney Madrigal Society and others shortly.

THE ARTS AND CRAFTS Association of New South Wales is using 2GB on the evening of Friday, January 28, at 7.30, to make known the spheres of the Association's usefulness. Lecturers representing the Arts and Crafts Association will speak on subsequent evenings on such subjects as staining of wood for ornamental purposes, beaten copper work, Bath work, beaten silver. Special sessions of 2GB are being held in the afternoon from 3.30 to 4.30, when Mr. J. K. Powell talks on such subjects as cooking vegetables by steam and whole meal foods.

"FEEDING THE FAMILY" will be the subject of Mrs. Jordan's talk during the Women's Session at 2BL on January 28. Following Hilliers' Music at Lunch Time, Miss Monica Scully's pupils will be heard, and also a concert under the auspices of the City Girls' Sporting Association. The evening programme will be contributed by Miss Phyllis Atkinson (Mezzo-Soprano), Miss Amy Ostinga (Contralto), Mr. Peter Sutherland (Bass), Mr. C. L. Robertson (Elocutionist), and Miss Gwendoline Davey (Soprano). There will also be a sporting talk.

THE 2FC HOSPITAL Concert Party will visit the Royal South Sydney Hospital on Saturday, January 29, and will give an entertainment at the N.S.W. Industrial Blind Institution on Thursday, February 19.

MANY LITTLE adjustments with regard to time, have taken place in the SLO programmes since the New Year, the latest of which is that on and after Friday, January 28, the musical programme is timed to start at 7.30 instead of 8 o'clock as hitherto.

ON SUNDAY, January 30, 2BL will broadcast celebrations in connection with the "Back to Wollongong Week." This will include special services at 11 o'clock and 7 o'clock. In the afternoon, Bible Class proceedings conducted by Mr. W. "Cairo" Bradley will be broadcast.

FEW items will be more popular this week than those contributed by the Australian Ladies' Pipe Band, which has recently been engaged to broadcast from SLO. As is generally known, they have just returned from their World Tour, having carried all honors (or nearly all) before them, and won golden opinions wherever they appeared. During their trip abroad they added considerably to their already extensive repertoire, and we are promised some enjoyable selections arranged for the Pipes on the nights they are due to broadcast.

IT IS A matter of conjecture whether or no Australia will develop an original and distinct school of musical composition, or merely assimilate the style of modern European writers and thereby assume a cosmopolitanism which will prevent anything like a separate musical individuality. It would be a good omen if our young composers would look to their native land for inspiration and atmosphere, and 4QG helps towards the attainment of this ideal in broadcasting on February 3 the cornet solo "Wendouree," by Mr. Percy Code, an Australian composer, whose work will be in the hands of Mr. J. W. Burge-meister, the well known cornetist.

Don Zelaya Despises Jazz

**He will broadcast from 3LO on January 30
and from 2FC on February 5 in association
with Madame Elsa Stralia.**

LOOK for Nicaragua on a map of the world and you will find very little sight of that republic. But just glance at the cable news now and again, and you will notice how often it gets into the sensational headlines. Earthquakes, wars and revolutions have given Nicaragua so much publicity that everybody knows the place, although they do not know where it is. Even now it is the storm centre of an international situation.

Whilst his boyhood home is probably being riddled with bullets, Don Alfonso Zelaya, the famous pianist

academy. Whilst at school at West Point, Don Alfonso saw how peaceful the outside world was compared with his homeland, and realising that even his father had not received ample recognition for his patriotic work, he determined to seek his fortune elsewhere.

At school, he concentrated on musical studies and by the time he had graduated he was able to commence his concert career straight away. Later he abandoned the concert platform because of his opinions on music. Don Alfonso Zelaya sincerely believes he has a mission—and that is to counteract the effects of the jazz craze.

"Without a love and appreciation of good music no country can become great," he says. "Jazz is not music—it will destroy instead of build up. Music is one of the greatest powers for good in the world. It is the cause and foundation of all creation. Nothing can exist, nothing can be without harmony, and music is harmony. Music is felt by the soul, by the brain, just as life must be felt. But jazz expresses the animal nature, it is sensuous instead of spiritual."

Although he is also under contract to Tivoli vaudeville he does not play the lighter music to which vaudeville audiences are more accustomed. "I do not play jazz," says Don Zelaya. "And my audiences are just as well pleased without it." With a smile, he

Madame Elsa Stralia, broadcasting from 2FC on February 5.

whose father was president of the public for fifteen years, is safe and sound in Melbourne under engagement to 3LO Melbourne, and to Tivoli vaudeville. He will give a series of classical recitals through 3LO, and like a previous distinguished visitor, will accompany his piano forte with little lectures on the psychology of music.

Zelaya is booked to return to America on February 5, and on his last night in Australia he will broadcast from 2FC, when in association with Madame Elsa Stralia, the well known dramatic soprano, and Maxim Brodie, tenor, he will render numbers of a novel character.

Zelaya, senior, was a patriot of the heroic order. For fifteen years he guided his turbulent little land through wars and revolutions. He wished that his son would follow in his political footsteps, and with that end in view, sent Don Alfonso to the United States to study at a military

Introducing . . .

Mary-Mary Quite Contrary

NOT more than a few weeks ago, Miss Joy McCallum, the original bedtime story teller at 3LO, renewed her acquaintances with the silver bells, cockleshells, and pretty maids all in a row after an absence of not less than two years. Under the old name of "Mary Mary," she will tell stories to the children from the good old fairy tales of all countries.

While in England she was an Aunt for one hour only at the big London station of 2LO, and met there Uncle Peter and The Wicked Uncle, who is now quite good, and let her talk to a few million children at once, who were delighted to hear an Auntie from far Australia. "Mary Mary" is a most popular teller of tales at the Brisbane Children's Hour, and her experience as Librarian at that pioneer Children's Library will assist her that larger audience of eager little listeners that 3LO attracts.

"Mary Mary" confesses that when she first faced the microphone that fateful day of October three years ago,

Don Alfonso Zelaya, the hater of Jazz.

added: "I can fancy my teacher Careno, with whom I studied for five years in Paris, if he heard a jazz tune. He would go mad."

The programme at 2FC promises to be one of the best broadcast from that station for some time. Madame Elsa Stralia, who is well known to all 2FC listeners, rose to the present position which she occupies in the musical world, as is usual, in such cases, through hard study and consistent attention to her work. She left Sydney a young girl, after appearing with various Williamson productions, and her first chance came when Alfred Butt, of Covent Garden, offered her the part of Donna el Vira in *Don Giovanni*, in association with Destinn, Scotti and McCormick.

she was as frightened as lightning. Miss Muffet was of the Big Spider, and she dared not tell her own people what she had consented to do for fear they should hear her break down in the middle. But she has one of those brothers that always seem to be listening when sisters have a big secret to keep, and he heard his sister's voice on a crystal set at a friend's place, and when "Mary" returned home she found herself famous without having to break the news.

Although she was "Mary Mary" for only three months after that, her departure for England left a gap in very many childish affections that will be glad to be relieved by her return to 3LO Melbourne's Children's Hour.

Coming Features in the Programmes

THROUGH THE COURTESY of the Navy League, 2FC have been given permission to broadcast from King's Hall on Wednesday, February 2, an address by Commander Arthur Marsden, R.N., on "The Navy and the Battle of Jutland." The studio will surround this talk with some very interesting items typical of the sea-shanties and old sea songs—and "Flinders Barr," which, by the way, hides the identity of a well known Naval Commander, in association with Mr. Herbert Fry, who has for some time been training a chorus of picked voices, will build up a real old time story of a night at sea. Listeners will hear the sound of the rising storm, the hauling of the captain, the pipe of the bosun's whistle, and all the hundred and one things incidental to such an experience.

A UNIQUE religious ceremony will be broadcast by 2FC on Sunday, January 30, when the National Pilgrimage to the site of the proposed Roman Catholic Cathedral at Canberra will take place. A special line has been run from the Canberra Post Office to the brow of the hill almost two miles distant. Archbishop Kelly (Sydney), Archbishop Mannix (Melbourne), and Archbishop Duhig (Brisbane) will be present, and a special Boys' Choir will travel from Goulburn to sing various Masses suitable to the occasion. Addresses will be given by the three Archbishops, and a tremendous gathering is expected. The ceremony is timed from 10.30 a.m. to 12.30 p.m., and from 2.30 p.m. to 3.30 p.m.

GREAT SUCCESS is attending the entertaining songs and duos given by those versatile artists, Mr. Alec Kellaway and Miss Estelle Rose, from 3LO. Some fine numbers are being sung by Mr. Kellaway, who is the possessor of a pleasing baritone voice, especially suitable for broadcasting, and the lighter side of the programme is supplied by his daintily clever partner in her character studies.

THOSE LUCKY PEOPLE who are free in the afternoon, will be delighted to know that after a brief absence, Will Page and his popular Players are back at 3LO again, and will broadcast the latest dance music every Tuesday afternoon. All listeners who have danced to this fascinating musical combination, will be glad to once again have the opportunity to issue invitations to their friends for "Tea and Foxtrot."

THE BIRTHS and deaths of famous composers is to be the subject of a series of talks from 2FC shortly. Mr. Adams will give various reminiscences and Mr. Ewart Chaplin will intersperse compositions by the respective composers. In this way Schubert, Mendelssohn, Mozart and others will be commemorated.

SOME INTERESTING talks have been arranged by 2FC, including one by Clunies Ross, on the opportunities and attractions for young Australians in the realm of Veterinary Science. A talk on Western Papua will be given by Rev. B. T. Butcher, a Fellow of the Royal Geographical Society of London, and has been broadcast many times by 2LO. Mr. S. H. Bowden, whose popular talks are always so interesting, will speak on Pompeii, Its Unique Significance, from 2FC studio on Monday evening, January 31, at 7.45, and on Florence on the Arno on Sunday afternoon, February 13, at 4.30.

THE METHOD adopted by 4QG for the broadcasting of church services guarantees transmissions from various denominations in a very fair manner. The Registrar General's figures regarding the percentages of religion from various places of worship being broadcast according to the percentage of religions among the population of Queensland. There are quite a number of Danes, Norwegians and Swedes in Australia, and in Brisbane a Danish Lutheran Church exists. At the request of many Scandinavian listeners, 4QG has arranged to broadcast one or two afternoon services from this Church during the present year.

MR. HAROLD WALDEN, the well-known comedian and entertainer, who has been engaged to broadcast from 3LO, has broadcast in China, and his contributions to the programme on that occasion were heard, and commented upon, in Siberia. Mr. Walden has established an enviable reputation for himself in many parts of the world, and should appeal strongly to Australian listeners. His humor strikes a pleasantly original note, and his style is most refreshing.

TO MANY of the listening public the popular song has a definite call. It expresses "sentiment" for them, and if delivered with a touch of artistry, the effect is often a happy one. Certainly the popular ballad loses nothing in its rendition by the well-known tenor, Mr. Gerald Cashman, who is making a welcome return to 4QG programmes. On February 1, the station will broadcast this artist in the favorite number, "The Land Where the Shamrock Grows."

SIGNOR ALBERTO MARINI,
well known tenor, appearing with
the Italian Opera "Quartetie." He
is heard regularly from 2FC.

Amplification Without Distortion

The outstanding feature of this push-pull two stage audio amplifier is that it will not distort reception when added to your set. It is simply made.

IN the construction of the average radio receiver there is a sacrifice to be made; either volume must be surrendered for clarity or clarity for volume. To retain both features it is necessary to build a receiver, requiring professional skill in the making, and beyond the resources of the average purse.

The trend of 1926-7 development is for clarity rather than volume. The listener in wants good music, and he demands a receiver giving clear and pure reception. The transmission and reception of sound without wires has lost its novelty. The fashionable custom of expressing wonder at this discovery has fallen into desuetude, and the radio enthusiast who would swell his chest with pride when you could hear his little "three banger beefing it out" (to use his own expression) three streets away, has joined the great majority.

The noisy receiver is a nuisance—we all agree upon that—but it raises the interesting question: when is a receiver noisy? Opted gently in the drawing room a set with one, perhaps two, stages of audio amplification may produce a sweet tone, filling the room with a pleasant sound without causing the wallpaper to quiver visibly or the piano strings to vibrate loudly in unison. The same set on the garden lawn one warm summer's night, seems weak, strains may be caught up by a passing breeze and wafted away from the listener. Then it is necessary to add an audio amplifying unit. The advantage of having this unit apart from the set is easily seen.

And in selecting an amplifier we hunt for one that will amplify with purity.

The writer had occasion some little while back to construct an amplifier for a two-valve receiver, having volume enough to fill a tennis court with dance music. This afforded me an opportunity to experiment with all types of amplifiers, resulting in the selection of a push-pull amplifier, which I believe to be the most suitable.

A push-pull transformer is not unlike an audio frequency transformer, and the pair that were used in this particular amplifier were of local make. To make sure of your amplifier reproducing the same as the writer's, I give below a shopping list of the parts used in my unit.

1 Pair Emmco Push-Pull Transformers.

2 Emmco Valve Sockets.

1 Emmco 30 ohm. Rheostat.

1 Emmco S.C. Jack.

4 Lengths of Busbar wire.

1 Radian or Bakelite Panel, 7in. x 3½in.

2 Bakelite Topped terminals and a few yards of low resistance flex.

Raving purchased the above parts, procured home, clear the best table in the house and get to work, starting in the following manner.

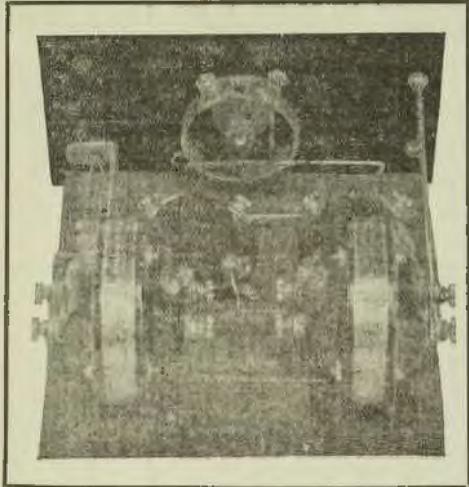

Observe Fig. 3, the panel drilling template of the amplifier. Note the rheostat is in the direct centre of the panel. Stick to this arrangement, it enhances the appearance of finished amplifier.

Righto, tear a leaf out of the kids' exercise book, and, if successful,

place the panel, 7in. x 3½in., on top of it and draw the outline. Dissect the panel into four, and on the centre point make a small dot. This represents the rheostat hole. In the right hand bottom corner, 3in. from the bottom, and 1in. from the side, draw the two lines to meet and in this position the S.C. (single circuiting) Jack is to be affixed. Judge for yourself the positions of the two terminals on the left hand side of your Panel, but it is advisable, if possible, to stick to the measurements given. When you have finished this, cut the paper template to the size of the panel. You now have the full sized template, and all you have to do is place it on the panel and centre punch the holes. Drill these to the correct size of your instrument and when finished, mount the parts.

If you follow closely the back view of the set a very fair idea of the layout of valve sockets and transformers may be gathered. Screw the parts down in the way illustrated and then proceed to wire according to the instructions about to be given.

Make sure that the transformer with the marking INPUT is placed first, and the transformer marked OUTPUT second. Now fire away and join a busbar connection from the top terminal on the panel to the P terminal of the input transformer; and from the bottom terminal to the positive B marking on the same transformer. This constitutes the primary circuit of the first transformer. On this same transformer the marking G1, G2 and -F will also be found. As the numbers suggest G1 connects

with the aerial terminal of the first valve socket, and G2 with the grid terminal of the second valve socket. Do not bother about the -F marking for the present.

On the second transformers you will find the markings P1, P2 and B on the primary side, and T1T on the output side. P1 naturally connects with the plate terminal of the first valve socket and P2 with the plate terminal of the second valve socket. T and T' constitute the two points of the S.C. Jack.

So much for the transformer wiring, with the exception of battery wires. The next and perhaps the most important part to be wired is the filaments. Valves are dear, so go very carefully. Connect the left hand F terminal of the first valve socket with the right hand F terminal of the second valve socket, and from this wire a soldered joint to the right hand terminal of the rheostat. Next join the right hand F terminal of the first valve socket with the left hand F terminal of the second valve socket. To make sure that you have done this correctly check it over with the back panel wiring diagram, Fig. 2. A current diagram is also given and this may substitute for the back panel wiring to the more advanced constructor.

This completes the busbar wiring and the next step is in the various battery leads. These comprise six lengths of flex, about three feet each. Join one of these to the positive B terminal of the output transformer, one to the -F terminal of the input transformer, one to the left hand F terminal of the second valve socket, and two to the vacant terminal of the rheostat.

To connect the batteries to this amplifier, connect the positive B with 90 volts and one of the two flexes of the left hand F terminal of the second valve socket to the -B. The A battery wires constitute the remaining flex off the second valve socket to positive A and one of the two flexes of the rheostat to -A. The C battery wires come next. From the -F marking on the input transformer to -C and the remaining flex off the rheostat to positive C. 45 volts is found very satisfactory for C battery voltage.

The amplifier is now ready for use. Take two short leads of flex from the two terminals (one on each) on the panel to either your phone terminals or the S.C. Jack marking, being sure that the terminals marked B and P on the input transformer correspond to the B and P leads of the receiver to be amplified.

The writer has found that this amplifier is of very little use to a crystal set, there being practically no primary volume to amplify, but is very efficient when working on either

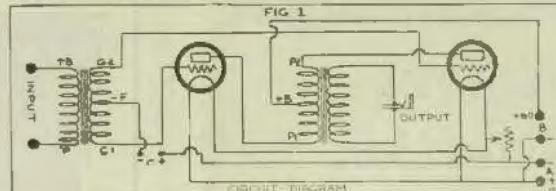

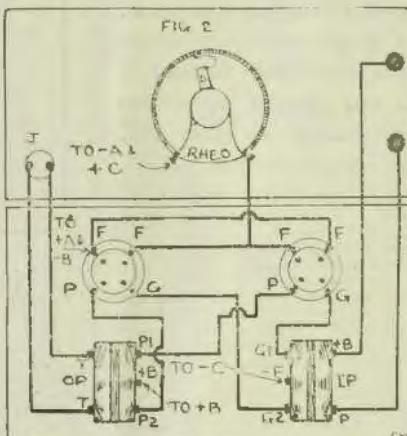

Fig. 1. The circuit diagram.

BACK PANEL WIRING DIAGRAM SHOWING LAYOUT OF PARTS

Fig. 2. The back of panel wiring diagram.

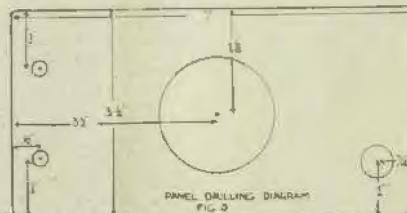

Fig. 3. The panel drilling template.

one or two valve receivers. He would not advise it for use on a three valve receiver, as it brings out distortion. Another point in the favor of this amplifier (and indeed most others) is

that no second set of batteries are required, and may be used in conjunction with the set already in use on the receiver.

Joins Amplion (A'sia), Ltd.

SHOWN here is Mr. W. J. McLellan, who has been appointed to the position of sales manager of Amplion (Asia), Ltd., Sydney. Although only 33 years of age Mr. McLellan has packed a great deal of wireless experience into this period. Educated at the London and Edinburgh Universities he later joined the Research Department of the General Electric Co., London. Leaving that concern, he came to Australia in 1921 and became manager of the wireless department of the British General Electric Co., Ltd., in which capacity he visited all Australian States and New Zealand.

He was a member of the committee of the last Radio and Electrical Exhibition held in Sydney, and is also a member of the committee of the Radio Broadcast Bureau.

Mr. McLellan has a genial personality which has made him many friends in the wireless world. He has been associated with many movements for the advancement of wireless and the announcement of his appointment to this important post with Amplion (Asia), Ltd., will be received with pleasure by the trade generally.

BROADCAST FOR the first time through 2FC, Mr. Arthur Massey will give an Organ recital on Monday, February 7, from St. Clement's, Mosman. He will have the assistance of such well known artists as Mr. Bryson Taylor (tenor), and Mrs. A. Mewton.

Mr. Radio-Dealer

We Put It Squarely Up To You!

1. Are you handling any radio products excepting those of well established, financially strong manufacturers?
2. Are you in danger of finding yourself suddenly loaded with obsolete stock?
3. Have you the certain assurance of 100 per cent. protection against loss, against unfair trade practices?
4. Do you want to make real profit in selling Mingay Super Radio Sets which are indeed "Super" products?
5. Do you want to cash in on our national and unique Advertising Campaign?

If so—Tell us all about yourself now—what you can do—how much business you think you can do, and we will give you full particulars.

1927 is not only going to be—but is now—a real good Radio Year.

NEVER SINCE WE COMMENCED BUSINESS HAS OUR PRODUCTION BEEN IN FRONT OF SALES.

That Proves It!

OUR GOODS ARE RIGHT.

OUR POLICY IS RIGHT.

OUR PRICES ARE RIGHT.

**LET US PUT YOU RIGHT ON A PROFITABLE
PROPOSITION.**

How to Build an Efficient Aerial System

WHAT constitutes a good aerial? This is a question which is answered several times each week in the queries answered department. Apparently there are hundreds of listeners who have traced faulty reception to their aerial, proving that it is the most neglected of all parts of the wireless set. The importance of the antenna system cannot be overstressed. Good and bad results are the product of good and bad aerials, and after all, the aerial erection is not such a difficult job, nor such an expensive job, therefore, why not have it right to begin with.

When one is interested in wireless one develops an "aerial eye." As you pass through different streets you naturally pick out different aerials. Some are high, some are low, some are good, and some are bad, and some ridiculous. The question always enters your mind—Why all these variations? Perhaps the wireless papers don't pay sufficient attention to aerials. If this is so, here is our contribution.

On the aerial a lot depends. It is the one link in the chain of wireless reception which must be efficient, as it means the difference between broad tuning and sharp tuning. If it is too long, interference between stations results. On the other hand, if it is too short, difficulty of handling the receiver is noted. If, again, it is too low screening—resulting in loss of signal-strength—is present. With a reasonably good receiver almost any old type of aerial will function, even a wire clothes line will serve as an aerial, but the efficiency of such an arrangement is low.

Now, just what does an aerial do—how does it function? To explain this fully it would necessitate a technical treatise which no one would want to read. Briefly, however, the aerial system cannot be separated from the earth wire, as one is really part of the other. Just imagining that the aerial proper is one side of a condenser and the earth the other side. As a condenser it will become charged and the radio frequency energy rushes from the top of the aerial down through the set to the end of the earth wire, thence up again through the set to the top of the aerial, then changes direction and down it goes. This energy change of direction takes place several thousands of times a second, depending on the wavelength of the station being received. For instance, if a station

Speaking from 2 FC one night the Technical Editor briefly described his own aerial system four miles from 2BL and 17 miles from 2FC.

In this article we give a more detailed description as requested in subsequent letters.

transmits on a wavelength of 300 metres the frequency or direction change will be one million.

Therefore, it follows that the current actually hasn't time to penetrate into the heart of the wire, but only flows along the surface or outside of the wire. Of course, this skin effect depends to a certain extent on the gauge of wire used. It may interest many to know that from 26 gauge to the smallest gauge the skin effect is practically non-existent.

Speaking of gauge of wire suitable brings us to two most important questions: "What gauge of wire is best?" and also, "How many wires will I use?" We will deal with the latter first.

Years ago it was a common sight to view a twin wire aerial on all ships and the two wires were on spreaders of a standard length of 7-ft. that is the two parallel wires were seven feet apart. Accepting this as standard practice, the radio-man of four years ago invariably erected an aerial of a similar type. As time progressed, many of these aerials were erected until it was accepted that a single wire was equally effective, in fact, it was contended that if anything, a single wire was preferable, as sharper tuning resulted.

Therefore, a single wire let it be. But as we want a large surface, we will have to consider wire gauge. Three strands of No. 20 gauge wire twisted together is the most popular gauge of wire used. It is pliable and easily handled, and, well insulated; a real good aerial results.

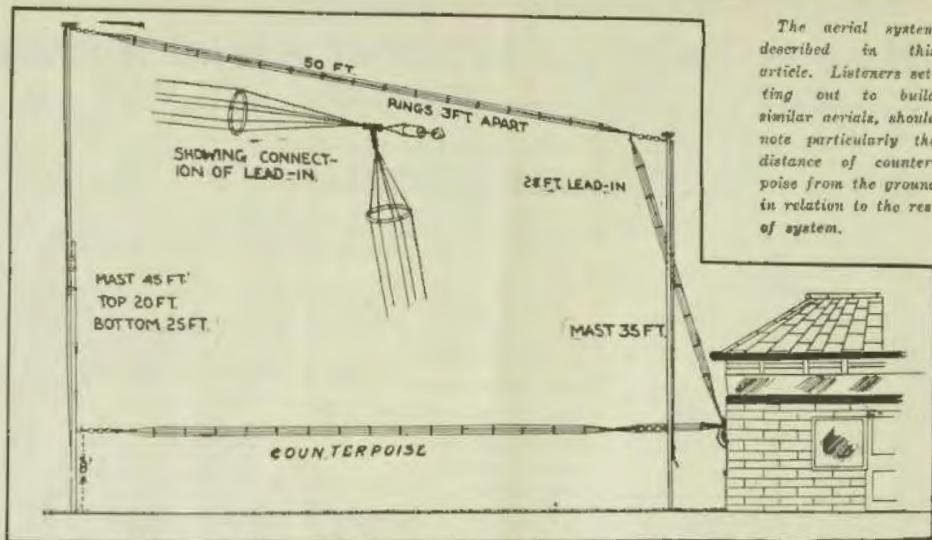

On the length of the aerial quite a lot depends. In the city areas, within 10 to 15 miles from a high power broadcasting station an ex-

tremely long aerial is not desired, otherwise selectivity suffers. Aerial shock excitation in the cause of quite a lot of troubles, and is to be avoided. For some receivers, such as the Browning Drake and the Neutrodyne, a short, vertical aerial is necessary. Between 30 and 50 feet will prove satisfactory. But the man in the country, on the other hand, may find the 100 foot overall is a most satisfactory length. Overall means down lead, and earth included, so that if the down lead or lead in is 25 feet long and the earth wire 10 feet long, the flat top of the aerial should consequently be 65 feet long. For those away from a broadcasting station this aerial is very good.

As before mentioned, the earth is most important. A short earth wire is the ideal, and if 3/20 wire is used in the aerial, then a 3/20 wire will do for the earth lead. If again, a 7/20 wire is used for the aerial, a 7/20 wire should be employed for the earth lead. A very simple and most convenient method of earthing the receiver or of getting a good earth, is to join the earth wire to a water-pipe. Soldering is preferable, but on account of the difficulty of soldering to a waterpipe full of cold water, resort is invariably made to an earth clip.

The water pipe should be scraped clean around that portion to which the earth clip is to be connected, and the earth wire should be clamped under the screw provided for the purpose. The clip should be very tightly clamped to the water pipe to ensure good contact. If a water pipe is not available, burying a sheet of galvanised iron about 3 feet square in some moist portion of the ground, as near to the receiving set as is possible may be substituted. Remember the ground should be moist around this plate, so it may be necessary to dig deep to ensure moistness. To maintain a moist earth a good plan is to embed the galvanised iron sheet in coke and bury a piece of water pipe the same depth as the plate, allowing a few inches to protrude above the surface of the ground into which water can be poured. A sheet of copper also serves as an excellent earth plate.

Almost every aerial has directional qualities, but from the point of view of local reception this may be forgotten about. Still, we will explain these qualities for those who are not aware of their existence. In the standard inverted L aerial, that is an

The aerial system described in this article. Listeners setting out to build similar aerials, should note particularly the distance of counterpoise from the ground in relation to the rest of system.

aerial with the downlead at one end, the stations in the direction of the lead in will be better received than those lying behind the free end. For example, if the aerial is so erected that the down lead is from the north end stations situated to the north will be better received.

A neat looking and popular aerial is the cage, sausage or navy type aerial. This consists of 5 to 7 single strands of wire joined to 2 inch rings at equal distances. The drawing at the head of this article will show what is meant.

There you see a five wire cage aerial with a similar lead in, and also a counterpoise built along similar lines. The wires are soldered equal distances apart around the outside edge of brass rings two inches in diameter, which again are spaced every three feet. The brass rings are the usual curtain rings, and are solid yet light in weight. However, here is what is required.

5 rolls of No. 20 Bare Copper Wire,
24 2-inch Brass Curtain Rings (for aerial and lead in),

4-lb. stick of soft solder.
Sixpennyworth of spirits of salts.
6 Insulators.

1 Lightning Arrestor.
1 Lead in tube.
Halyard Masts, etc.

All obtainable from Anthony Horndens and Sons, Ltd., or Nock and Kirby, Ltd.

We will not concern ourselves too much with the erection of the masts, leaving this to yourselves to devise.

Still, the poles which hold up this particular aerial are nice and high, one being 50-feet above the ground and the other being 35-feet high. The fifty footer is in two pieces, the bottom portion being 35 feet of 3-inch by 3-inch dressed Oregon, whereas the top spar is 23 feet of 2in. x 2in. dressed Oregon. Both these spars are painted white, three coats being applied to resist weather conditions. Both are bolted together, three feet being the overlap. A round wood block is nailed to the top as a truck. Six stays are used—three from the very top and three from the join, and if desired, a whipping stay may be taken from the middle of the top spar. The pulley should be securely fastened and the halyard run through this pulley and tied within 6 feet of the bottom to keep it out of the way when the mast is being erected.

The lower mast consists of 37 feet of 3in. x 3in. dressed Oregon in one long piece, and it is painted and fitted with three stays or guy wires from the top underneath the truck. The usual block, or pulley with its attendant halyard, is fitted as before. Of course, if one doesn't aspire to such heights, two 30 feet spars of 3in. x 3in. Oregon will be quite suitable, provided tall buildings, etc., don't screen the aerial.

Now for receiving purposes, using the guys specified (wire clothes line makes a good guy or No. 12 fencing wire if preferred), it is not necessary to insulate the stays. For transmitting yes, break up the guys with in-

sulators, but for receiving, no, not unless there are about 12 to 15 guys per mast.

Decide where the poles are to be erected. If close to a broadcasting station then thirty feet apart is quite good, allowing for a down lead of between 20 and 30 feet. The one drawn is erected on the highest hill in Marrickville, and the dimensions are given. Actually, each mast is less than 2 feet in the ground. Neighbors came along to assist, and one person was allotted to each top guy and three men raised the mast. Quickly it reached the place—like the Grand Old Duke of York—when it was neither up nor down—that awkward stage—and as all neighbors were Scotsmen, it was precarious indeed. Think of what would have happened if someone had dropped sixteen on the ground. Oh! hateful thought.

However, both masts were erected in their respective positions, and guyed securely to fences, etc., and were ready for the aerial. The making of the aerial took only 1 hour.

Firstly, two shallow sandwich tins were commandeered from the pantry, and into one was poured the raw spirits of salts. The other was placed over the gas and the stick of solder was melted into this sandwich tin. As many rings as could be were immersed in the spirits of salts, and rubbed together with a pencil, thus removing the lacquer. One by one these rings were transferred from the spirits and placed in the molten solder

which had the effect of leaving a coating of solder on each ring—tinning is the name of this process. Then, as each ring was tinned, it was quickly transferred to a basin of cold water, and washed, then wiped dry. All the rings were treated accordingly.

As the top portion of the aerial was fifty feet long, about 52 feet was measured off along the fence, and each of the 5 rolls were unwound to this length, the whole 5 wires being bunched together, and held taut along the fence. At distances of 3 feet a portion of fluxite was applied to each wire, and using what was left of the solder, each strand of wire was treated to a tinning, the soldering iron being used for this purpose.

Then each ring was soldered to these wires. One ring at a time was taken and at equal distances around the outside edge the five wires were soldered. This is a two man job, one man to solder and the other to hold the wires taut and to prevent tangling. One by one each ring was soldered to the wires and when all had been firmly soldered, the two ends were pulled into a conical shape and bound with wire and soldered.

The lead in was treated accordingly and joined to the flat top portion of the aerial, as shown in the drawing. Really the whole operation was very simple—it looks a lot on paper, but actually very easy of construction. Connections were then made to the halyards and the whole erected.

A lightning arrester was installed in the orthodox fashion, and a lead in tube carried the aerial through the wall to the set inside. Care was taken to keep the lead in wires away from the guttering, which, in fact, was joined to the earth wire. The completed aerial looks very attractive and is strong and will survive gales. The halyard is of Europe rope, that is tarred rope, which is not affected by weather conditions. Once a month or so it is lowered and inspected, and the constructor is advised to do likewise, particularly if there are any factory chimneys belching out black smoke, which settles on the insulators. Wipe them frequently.

A counterpoise is another useful unit in an aerial system. As may be gathered, the counterpoise is constructed in a similar manner. Actually it should be the same length and capacity as the aerial, but this was not possible, so this counterpoise is a few feet short. It is erected about 8 feet above the ground—clear of the clothes lines and fruit trees. It is equally well insulated, and has a lead in similar to the aerial. Of course, the usual water pipe earth is present, which is connected to the lightning arrester, thence into the room. Don't be satisfied with a counterpoise for earthing the aerial to—it is not wise.

Inside the room a Dilecta panel has the aerial lead in, the counterpoise lead in and the earth wire, which permits of a tidy arrangement. Flexible leads are available from each terminal and allows a quick convenient change over. To cut down the capacity of the aerial a series of small fixed condensers are always on hand, one or more of which is sometimes connected in series with the aerial.

Finally, don't be concerned about using bare wire—it is perfectly good. After having been erected for a while a coating forms on it which really acts in a similar manner to enamel. The aerial described has rendered yeoman service for over three years, and is good for quite a time yet. Build one like it—you will be pleased with it.

A Remarkably Clear Speaker

PRICE 25/-

Equipped with a non-metal horn, the Western Electric Loud Speaker illustrated, reproduces broadcasting with a purity of tone superior to some loud speakers selling at many times the price.

Only a limited number are available, so if you would secure a REMARKABLY CLEAR Speaker at a price less than that charged for head receivers, place your order without delay.

BROADCASTING PROGRAMMES for the COMING WEEK

Friday, January 28

2FC, SYDNEY

Farmer's Broadcasting Service.

Wave Length, 442 Metres.

EARLY MORNING SESSION.

- 7 a.m.—"Big Ben" and announcements.
- 7.10 a.m.—Music from the Studio.
- 7.15 a.m.—Official Weather—temperatures, rainfall, temperatures, astronomical memoranda, shipping intelligence, news service.
- 7.20 a.m.—Australian market, mining share market, metal quotations.
- 7.35 a.m.—Wool sales, breadfruit markets, interstate markets, produce markets.
- 7.45 a.m.—"Sydney Morning Herald" news service.
- 8 a.m.—"Big Ben." Music from the Studio.
- 8.15 a.m.—Close down.

MORNING SESSION.

- 9.05 a.m.—The Chimes of 2FC.
- 9.20 a.m.—Music from the Studio.
- 9.45 a.m.—"Big Ben" and announcements.
- 9.55 a.m.—Late "Sydney Morning Herald" news service.
- 10.15 a.m.—Music from the Studio—12.50.
- 10.45 a.m.—A Morning Reading.
- 11 a.m.—"Big Ben." Australian Press Association and Reuter's Cable Services.
- 11.10 a.m.—Music from the Studio.
- 11.15 a.m.—A Talk on Home Cooking and Recipes, by Miss Ruth Furst.
- 12.30 a.m.—Close down.

MIDDAY SESSION.

- 12 noon—"Big Ben."
- 12.15 a.m.—Stock Exchange—first Call.
- 12.30 a.m.—Studio music.
- 12.45 p.m.—From Farmer's Oak Hall—Instrumental music from the Oak Hall Trio.
- 12.50 p.m.—From the Studio. Rugby Wireless News.
- 12.55 p.m.—
- 1 p.m.—"Big Ben." Weather information.
- 1.30 p.m.—"Evening News," midday service, "Providence" and "Sisterhood" report.
- 1.35 p.m.—From Farmer's Oak Hall—The Oak Hall Instrumental Trio.
- 1.20 p.m.—Studio Music.
- 1.30 p.m.—Stock Exchange—second Call.
- 1.35 p.m.—Studio music.
- 1.45 p.m.—
- 1.50 p.m.—Studio music.
- 1.55 p.m.—
- 2 p.m.—"Big Ben."
- Close down.

AFTERNOON SESSION.

- 2.30 p.m.—The Chimes of 2FC. From the Studio.—A Vocal Recital by the Students from the Macleay School of Music.
- 2.30 a.m.—From Farmer's Oak Hall—Instrumental music from the Oak Hall Trio.
- 2.35 p.m.—Studio music.
- 2.40 p.m.—From Farmer's Tea Rooms—Miss Diana Booth, soprano.
- 2.45 p.m.—The Oak Hall Instrumental Trio.
- 2.50 p.m.—Studio Music.
- 2.55 p.m.—From Farmer's Tea Rooms—Miss May Craven, mezzo.
- 3.00 p.m.—The Oak Hall Instrumental Trio.

- 3.15 p.m.—Studio music.
- 3.20 p.m.—From Farmer's Tea Rooms—Miss Diana Booth, soprano.
- 3.25 p.m.—The Oak Hall Trio.
- 3.30 p.m.—Studio music.
- 3.40 p.m.—From Farmer's Tea Rooms—Miss May Craven, mezzo.
- 3.45 p.m.—Stock Exchange—third Call.
- 3.50 p.m.—Close down.

EARLY EVENING SESSION.

- 3.45 p.m.—The Chimes of 2FC.
- 3.50 p.m.—"Hello Man" calls to the children.
- 3.55 p.m.—A Story for the older ones.
- 4.00 p.m.—From Farmer's Oak Dining Hall—Vegetable and Instrumental music.
- 4.05 p.m.—A Talk on last minute sporting information by the 2FC Racing Commissioner.
- 4.15 p.m.—"Evening News," late news service, weather information.
- 4.20 p.m.—Dolger's Market reports—Wool, wheat, stock, fruit and vegetable markets.
- 4.25 p.m.—A Talk by Mr. Clines Ross on Veterinary Sciences.

NIGHT SESSION.

- 5.55 p.m.—The Chimes of 2FC.
- 6 p.m.—A Transmission from a J. C. Williamson, Ltd. Theatre.
- 6.30 p.m.—Broadcast from the Lyceum Theatre. Items by the orchestra under the conductorship of Mr. Emanuel Aronoff.
- 6.45 p.m.—From the Studio—Miss Virginia Bassett, contralto.
- 6.55 p.m.—From the Lyceum Theatre—the Vocal Act.
- 7.05 p.m.—From the Studio—Mr. Wally Raynor, comedian.
- 7.25 p.m.—Mr. Norman Francis, tenor.
- 7.42 p.m.—Broadcast from the Lyceum Theatre, items by the orchestra under the baton of Mr. Emanuel Aronoff.
- 7.50 p.m.—From the Studio—Miss Virginia Bassett, contralto.
- 8.10 p.m.—Mr. Wally Raynor, comedian.
- 8.18 p.m.—Mr. Norman Francis, tenor.
- 8.25 p.m.—From the Wentworth New Symphonie Dance Orchestra, conducted by Mr. Sydney Simpson.
- 9.15 p.m.—"Big Ben." Announcements.
- 11.15 p.m.—Dances done from the Wentworth New Symphonie Orchestra until midnight.
- 12 midnight—"Big Ben." National Anthem.
- Close down.

2BL, SYDNEY

Broadcaster's, Ltd.

Wave Length, 358 Metres.

EARLY MORNING SESSION.

- 7.15 a.m.—G.P.O. Clock and Chimes.
- 7.20 a.m.—Musical programme from the Studio.
- 7.25 a.m.—Physical Training and Health exercises.
- 7.25 a.m.—Hints on Health.
- 7.30 a.m.—Physical training and health exercises.
- 7.45 a.m.—G.P.O. Clock and Chimes.
- 7.45 a.m.—Weather report.
- 7.45 a.m.—Sporting information.
- 7.50 a.m.—Broadcaster's special news service.
- 8 a.m.—G.P.O. Clock and Chimes; close down.

MORNING SESSION.

- 10 a.m.—G.P.O. Clock and Chimes.
- 10.15 a.m.—Weather report.
- 10.20 a.m.—Musical programme from the Studio.
- 10.30 a.m.—News service from the "Daily Telegraph."
- 10.35 a.m.—Musical programme from the Studio.

Only a short time ago the man who wanted a radio set had to build it the best way he could, from parts bought and information given, here, there, and everywhere. New ideas have opened up a newer and far surer way.

For instance, the **Emmco** Super-het kit supplies you with the most essential parts for building the King of Receivers (designed and matched for uniform efficiency by experts), full instructions, diagrams, etc., for putting it together, and all at a price that makes it available to everybody. The new way—the **Emmco** way, is not only far better in results, but it is far cheaper.

The **Emmco Radio Handbook** is now available free to all users of **Emmco** parts. Contains 24 pages, including all Australian and New Zealand call signs, selective circuits and up-to-date information. Get a copy from your dealer.

12.59 p.m.—Musical Selections.

FACTS

ABOUT Impedance of Audio Frequency Transformers

THE FAMOUS

FERRANTI

BRITISH MADE

TRANSFORMER

TYPE AF3

Has the following Impedances:

AT 100 PERIODS - - - 50,000 OHMS.

AT 500 PERIODS - - - 410,000 OHMS.

No better Transformer is available at any price.

Price 42/6

Obtainable of all Radio Dealers in Australia.

Dealers please communicate with:—

A. BEAL PRITCHETT (Austs), LTD., Sydney and Melbourne.
WEDMA LIMITED, Adelaide.
EDGAR V. HUDSON, Brisbane.

(a) Amplification with any valve and transformer depends greatly on the transformer impedance; the higher the transformer impedance the better the reproduction, particularly of the lower notes.

HENCE IT IS UNNECESSARY TO VARY THE IMPEDANCE OF THE TRANSFORMER TO MATCH THAT OF THE VALVE USED; ON THE CONTRARY, THE HIGHEST POSSIBLE TRANSFORMER IMPEDANCE SHOULD BE USED AT EVERY STAGE.

(b) IMPEDANCE DEPENDS ON FREQUENCY, AND TO STATE TRANSFORMER IMPEDANCE WITHOUT STATING THE FREQUENCY AT WHICH IT IS MEASURED CONVEYS NOTHING.

A good transformer has a high impedance even at low frequencies to reproduce low notes satisfactorily. A transformer may have a high impedance at a comparatively high frequency, say, 500, and yet be a bad transformer because the whole range of male and female speaking voices, as well as most of the fundamental musical notes, are at frequencies below 500.

TWICE THE SATISFACTION

Nine Outstanding Features of the Ray-O-Vac

The Exclusive construction of Ray-O-Vac "B" batteries combines a number of characteristics which easily distinguish them as leaders in the "B" battery field. Nine features are outstanding—

- 1.—Size can of celluloid
stock.
 - 2.—Water and acid proof
enamel partition
 - 3.—Insulating wave screen
in cabinet.
 - 4.—Insulating compound
between cells.
 - 5.—Waterproof outer con-
tainer.
 - 6.—Screw Post Terminals
make positive connec-
tions with wire without
any solder connections.
 - 7.—Holder in upper end,
8.—Heavy insulating top
seal.
 - 9.—Screw post terminal
soldered securely to in-
dividual cells.
- No. 9203—The Master Ray-O-Vac 45 volt; double the amperage of ordinary 45 . . . £1 16 0
 No. 2301—45 volt flat, with 7 tappings
 No. 2303—45 volt upright, with 3 tappings
 No. 2151—22½ volt flat, with 6 tappings
 No. 2153—22½ volt upright, 2 terminals only. Specially recommended for detector
valve
 No. 5151—BP 22½ volt medium
 No. 4151—22½ volt for portable sets
 No. 231R—4½ "C" battery. Voltage adjustment of 1½, 3 and 4½ volt; can be used
as A, B, or C battery
 No. 631R—4½ volt Grid Bias "C" Battery
 No. 1211—4½ volt "A" battery—the best 4½ volt single cell on the market to-day
 No. 8—4½ volt cell for radio or telephone use
 No. 1231—3 cell 4½ volt A battery in one case

AND Half the Cost

You connect up RAY-O-VAC Batteries and tune in.

The difference is amazing.

No preliminary howls, buzz or shrill whistling. The signals come in true, clear, and strong without the slightest bother.

The reason is this:

Low Internal Resistance

Ray-O-Vacs have only a fraction of the resistance of other "B" Batteries.

No. 2303.

Added to this they
have remarkably
long life.

And the cost
is so low.

No. 231R.

10.30 a.m.—Pontifical High Mass with Cardinal Brumbaugh, Bishop's Chair Goulburn. Conductor, Rev. Brother Fenwick.

 FROM THE STUDIO—

KNOW THE FACTS

—Then Choose

Type 6SR7.

Type 4SR7.

Before buying a Battery, investigate
THE NEW CLYDE "SR" TYPE

You'll recognise the value of its
FEATURES

- (1) Non-corrosive terminals.
- (2) Permanent connecting straps.
- (3) Made in 4 and 6-volt units, built into ONE container.
- (4) Container made in one piece of strong rubber.
- (5) Designed with specially thick plate.

And you'll quickly see the value of these
FACTS

The new "SR" Battery is leak-proof. It eliminates all troubles with corroding wood or iron carrying crates. It is neat and compact in form. It delivers uniform current over a maximum period of time, and does NOT discharge when idle. Moreover, it bears the stamp of CLYDE together with its reputation for long life, dependability, and low cost.

2-VOLT RADIO CELLS

Heavy duty 2-volt cells, in strongly moulded ebonite jars that may be coupled together and used in either 2, 4 or 6 volt units. Supplied with connecting links free of charge.

2V.S5.

2V.S7.

2V.S9.

MOTORISTS!

Thousands of owners have tried, tested, and proven the ability of Clyde to resist heavy use. For all makes or models of Cars, use a Clyde.

Obtainable from Radio Dealers and Garages right throughout Australia.

Valves with the Wonderful **P.M.** Filament

THE wonderful P.M. Filament offers you three times more for your money. It is so tough that even after 1,000 hours' life it can be tied in knots and cannot be broken, except by the very roughest handling—result, safety against accidents.

There is more than strength in the P.M. Filament. It has up to 3 times greater length and up to 5½ times greater emission than an ordinary filament. This is where the P.M. Filament gives you real value.

Another big point, the P.M. Filament requires only one-tenth ampere, giving 7 times the life to each of your accumulator charges. For great economy, great life and great results secure the valves with the **WONDERFUL P.M. FILAMENT**

OBtainable from every radio dealer in Australia.

Mullard
THE •MASTER• VALVE

**Farmer's Standard
FIVE-VALVE RECEIVER**

*Complete with all accessories
ready for immediate operation.*

An ideal receiver for Australian conditions! Reception is clear and distinct, and its selectivity is equally remarkable—there is absolutely no interference from outside stations. All Australian stations, with the exception of Perth, are received at loud speaker strength—Sydney, Melbourne, Brisbane and Adelaide.

The receiver is fitted in a cabinet of Tasmanian blackwood—a very fine piece of workmanship—and is ready for immediate operation, no delicate adjustments being necessary.

The accessories supplied include the following:—

- 5 "Radiotron" Valves.
- 1 Peto and Radford Accumulator.
- 2 "Ever-ready" 60 "B" Batteries.
- 1 "Amplion Jnr. de Luxe" Speaker, with cord.
- Set of aerial equipment, including 100ft. of aerial wire.
- 6 Insulators; 25ft. lead-in-wire.
- 1 Lead-in tube; lightning arrester.

PRICE £40

*See it in operation in the Wireless Department,
Ground Floor.*

Guard against Radio Trouble. Use Only Guaranteed Radio Equipment.

One of the easiest ways of getting into trouble with your radio set is to use accessories that are faulty or of poor quality. To guard against this, we urge all radio fans to buy accessories of known quality—products of world renowned manufacturers. We stock only the latter kind, and for this reason we guarantee them.

Easy Terms

A small deposit secures immediate possession of the following goods and the comfortable weekly payments will suit your pocket. Call or write for full details.

"PHILCO" 90 volt. wet "B" Battery.	£5 12 0
"AMPLION" Loud Speakers.	3 0 0
all sizes from C.A.V."	4 10 0
6 volt. 45 amp. Accumulator.	2 15 0
"Tungar" Battery Charger.	1 10 0
"PHILLIPS" "B" BATTERY ELIMINATOR — Eliminates all "B" Battery troubles.	2 15 0

— And we invite you
to call and hear the new "KEOGH" 7-VALVE "SUPER," the most efficient Set ever offered to the Australian public. This Super Set was designed by our Technical Advisor, Mr. C. W. Slade, Australia's Leading Radio Engineer and Editor, Daily Telegraph Radio Supplement. It is simple to operate, tunes in all Australian stations with natural tone and volume, requires no aerial or earth wires, completely eliminates interference and dues state 7% per cent.

COUNTRY CUSTOMERS ARE ASKED TO WRITE FOR FULL DETAILS.

The Conservation of Energy

RADION Panels far exceed any other insulating material in the conservation of both physical and electrical energy.

Radion can be easily sawed, drilled, machined and otherwise worked with minimum effort and without the slightest danger of chipping, cracking or breaking.

In the conservation of electrical energy, Radion is supreme, due to its established superiority over any other material in the four main

characteristics required, namely:

- 1—Low angle phase difference
- 2—Low dielectric constant
- 3—High resistivity
- 4—Low absorption of moisture

Do not jeopardize the value of your receiving set by using inferior materials. Save time and energy in the making and loss of power in the operation of your set by always insisting upon genuine Radion Panels and parts. Look for the name stamped on every piece.

SEND FOR FREE BOOKLET

"Building Your Own Set"

Our new booklet, "Building Your Own Set", giving wiring diagrams, front and rear views, lists of parts and directions for building the most popular circuits, will be sent free upon request to

Brandles

**The Table-Talker
makes a friend of the electrical impulse**

Acoustics is the science of sound. Radio acoustics is the science of transforming the electrical impulse into an audible sound. The electrical impulse is a jolly little fellow who needs to be consulted if you are to get the best out of him. We've been making friends with him for seventeen years and the *Table-Talker*, is but one result of our efforts. The goose-neck horn means clearer and more rounded tones, and the patent material of which it is constructed eliminates any suggestion of harshness or metallic resonance. Fitted with an adjustable diaphragm, it is finished in a pleasant shade of neutral brown. Height 18", bell 10".

"Ask your Dealer for Brandles."

ciation and Reuter's Cable Services.

11.10 a.m.—Music from the Studio.

DO YOU DAY DREAM?

When you were a boy, did you imagine yourself leading a forlorn hope, rescuing the lovely daughter of a grateful millionaire, making 200 not out against All England, or winning the heavyweight championship? I did!

And now that you have wife and family, sit at a desk all day and mow your lawn in the evening, do you still do great things in day dreams? I do!

That is why I like to read of the adventures of the Burgess Batteries. I just imagine myself in its place and enjoy a thousand thrills!

I plunge under the seven seas in American submarines, hurtle across the United States with the transcontinental mail planes, cruise into a myriad picturesque spots in that magic yacht Spec-Jack.

With our own Captain Hurley, I sit among New Guinea cannibals, charming them with the strains of Rose Marie on my wireless; or I tear a bleeding way through the matted jungles of Brazil, side by side with the intrepid Rice, dodging poisoned darts from head-hunters.

On a hot day, I fly across the North Pole in that supremely reckless and amazingly successful dash by Commander Byrd; ride majestically over the ice floes with Amundsen in the Norge; or fight northward day by day in the grim defeat of Captain Wilkins. I join MacMillan in the Arctic or Hobbs in Greenland.

Yet everywhere Burgess Batteries link these adventurers to the rest of the world which wears trousers and rides in trams!

Mine it is to ride in a tiny swaying basket as the great balloon Goodyear 111 wins international contests; or to look serenely out through the windows of Uncle Sam's latest dirigible.

Best of all are the wild days spent with those handful of brave men, the Mounted Police of Canada's vast north-west. With them I opef blizzards, hunger and wolves, and the deadlier hunger of the men I seek. And at night I report by wireless across a thousand white-capped lonely miles, while my huskies howl outside the log cabin.

Do you wonder that I should like to be a Burgess Battery, chosen as the best friend of the men who are daring death in a thousand adventures?

Guaranteed Workmanship & Clarity of Reproduction

The 'D.J. STANDARD 4'

£25

Absolutely Complete No extras to buy

This powerful and highly selective Set is simplified to the greatest possible extent, there are no moving coils to change or get out of order—only two dials, so simple that anyone can regulate the tuning. Merits Your Appreciation

As is everything else, so in Radio Batteries—the better product fully merits both confidence and appreciation.

EVER-READY Radio Batteries have reached the pinnacle of popularity purely on their merits.

They combine long-life with absolute reliability, and they're ALWAYS FRESH when you buy them.

Ask your Radio dealer for the type you require.

EVER-READY
RADIO BATTERIES

SAFETY FIRST—UTILITY ALWAYS

LOOK FOR THE TRADE MARK

NEW EVER-READY No. 116, OR
"A," "B," OR "C" BATTERY
Price 2/-

One of a group of radio batteries useful in wireless, lights, and amplification. Size, $\frac{3}{4}$ x 4 x $1\frac{1}{2}$. Most useful for bells, telephones, burglar alarms, medical tools, etc. With three brass terminals. Voltages 1.5, 2 or 4.5 volts. Useful for all wireless purposes as well as general utility.

THE "STANDARD"
DRY CELL RADIO
BATTERY.

Price 3/-

The Ever-Ready Radio "Standard" Dry Cell, as illustrated, is fitted with two screw terminals, and since its introduction has met with great success; users recognising its immense superiority over any imported cell. Size, $\frac{3}{4}$ x $\frac{5}{8}$. Weight, 2 lbs. Also for bells, telephones, signalling and electro-medical apparatus, &c.

"STANDARD" "A" BATTERY.

Price 2/-

The Ever-Ready "Standard" "A" Battery (3 cell), 4.5 volt, specially designed for economical operation of 1, 2, or 3 valves, taking 50 amperes at 2 volt. For sets with four or more valves, the most economical service is obtained by using two "Standard" "A" batteries connected in parallel.

If unobtainable locally write for address of nearest source of supply to

EIGHT "LOTUS" Valve Holders fitted with large power valves and fixed to tailboard of Ford Motor Lorry, driven over rough roads for 30 miles, survived the test.

At the finish, each spring was as it started—perfect. No damage or looseness at connection of leg socket and spring—no valve loose from the holder. Both were electrically perfect all the way.

Fit the "LOTUS" to your set, and protect your valves.

Cut the Cost of Your Battery!

You would not put a Rolls Royce engine into a baby-cart, nor drive a huge lorry with a tiny two-cylinder engine! Yet some people do this very thing with their radio battery!

There is the right Burgess Battery for every set in use. Fit the Battery to the set and you will cut your costs surprisingly while getting better results. Our experts have charted the way for you: Burgess "A" is specially designed for radio filament lighting and has remarkable life.

Burgess "B" meets all needs—horizontal or vertical type—from the smaller size for portable sets to over-size for sets drawing heavy current drains of 20 milliamperes or over.

Burgess "C" is for dependable "grid-bias" duty.

BURGESS "B"
BATTERY CHART

Portable Sets : No. 4156 or 5156.
One or 2 Valves : No. 5308 or 5158.
3, 4, or 5 Valves : Nos. 2306, 2308, 2156
or 2158.

6 or more Valves : No. 10308.
On all but Single Valve Sets, use "C"
Battery 2370.
With New Amplifier Valves, use "C"
Battery 5156.

Obtainable from High Class Dealers. Accept no substitutes.

An up-to-date Tuning Device for Modern Set Builders

The Igranic method of tuning is the simple and practical solution of the old problem of cutting down the large number of controls on multi-valve sets. In other words, simplifying tuning.

And, in addition to perfected dual control, its other fine points include the permanent absence of back-lash, accurate square-law characteristics, extremely low electrical losses and a handsome 4" combined knob and dial. In fact, it is SO GOOD that your set certainly deserves it.

How to Select a Radio Receiving Set

Of first importance is tone quality. The pleasure you will derive from a radio receiver will be through the sense of hearing. The time has passed when it is necessary to compromise—except less than truthful reproduction as the "heat" that can be expected from radio—is extremely critical. Have the set demonstrated thoroughly. Hear mello and voice. Shut your eyes. Forget you are listening to radio. Do you hear all the instruments in the band or orchestra—do you hear the low notes as well as the high notes? Does the violin—the cello—the piano sound natural? Is the voice distorted, or clear and natural?

Hear the Garod. Its tone quality is justly acclaimed as a standard of excellence by which all others should be judged. Hearing it for the first time you will be surprised and delighted with radio reception at its best.

Upon your final decision depends the permanency of your investment in a radio receiving instrument. Should you be tempted by superlativeness, price consideration, or even by outward appearance, to accept any radio receiver in which superior tone quality has been made a secondary consideration, you will undoubtedly suffer disappointment.

Programmes are being brought nearer and nearer to perfection. Programmes are being constantly improved. The best the world offers in music and other forms of oral entertainment are being made available for the owner of a radio receiver.

If the receiver you select falls short of perfection in reproduction, you cannot get from it the full measure of pleasurable entertainment you have a right to expect. The very best safeguard against possible disappointment is to make your choice a Garod, acknowledged by the most critical music lovers to be the first to attain the ultimate in actual re-creation of broadcast programs.

The Garod 66 V¹

The standard of excellence in radio. A powerful 5-tube Neutrodyne Receiver in a beautifully finished mahogany cabinet, supported by curved feet. Panel of mahogany slopes at a pleasing angle. Large, beautifully poised pyramidal disk.

Weston double reading voltmeter shows condition of both A and B batteries at all times. Connection cable eliminates unsightly wires. Cabinet size: 36in. long, 12½in. deep, 11in. high.

Have you ever wished to purchase one of the famous Donle-Bristol valves? You know their merits—a master valve.

We are the Export Managers of the Donle-Bristol Corporation, the makers of these valves. Other Agencies include:—

 9.30 p.m.—The "MERCURY" special interstate news service. Weather synopses. Station announcements. Ships within wireless range.
 God Save the King.

THERE IS a touch of irony in the fact that composers do not always achieve fame by medium of their best work. Sir Arthur Sullivan wrote the great oratorio, "The Golden Legend," but his comic operas made his name universally known. Edward German, to a lesser degree, had the same experience. Perhaps, his great facility to write breezy melody is responsible. However, listeners to 4QG will find no fault with hearing his fine song "Rolling Down to Rio," rendered by a capable artist, Mr. James Geddes, who broadcasts from the studio on February 12.

MR. CLEMENT MAY, the well known Dickens entertainer, returns to the air on Monday, February 7, and on the same evening, Mr. Kerwin Maegraith, the clever young Adelaide caricaturist, will interpolate his sketches with humorous patter.

Improve Your Reception

Two things hurt! A car which will not start when filled with guests, and a radio set which entertains your friends with hum, buzz, or crackles. In both cases look to your battery.

Pure reception is the long-sought ideal of wireless. The strong clear flow of current which links the listener-in continuously to the broadcasting station is a joy which is by no means general.

When the first wave of novelty and enthusiasm which marked the introduction of radio sets to Australia, had subsided, many sets were neglected or wholly discarded because of faults which could have been avoided. The hum and buzz from eliminators and the crackling from cheap dry batteries sorely tested the nerves of many owners.

To-day the old interest has returned and the use of wireless is expanding phenomenally. One reason for a now permanent condition of stability is the increasing understanding that perfect reception is an every-day possibility. Undoubtedly the finest guarantee available of ever-pleasing reception is that offered by the new 83X Rechargeable Philco B. Battery, which is also Dynamic—beginning its life from the day of purchase. This Philco battery displaces for ever the old 90-volt dry battery.

Not only does the Philco battery banish the hum, buzz and crackle of eliminators and cheap dry batteries, but it also offers op-

portunity for outstanding economies. The reason is not far to seek:

The dry battery wears out quickly—and painfully, in its last stages. It is thrown away perforce and another bought, with the same result.

On the other hand, the Philco 83X is Rechargeable and its life can be measured in years. When you have used it two hours a day for three to four months, it can be recharged for a few shillings at any garage and begins its work again with the same strength and freshness.

Thus in a very real sense, the first cost of a Philco is the last cost. Although, naturally, that first cost is higher than a dry battery, yet the result—spread over a single year—is a saving of pounds. With that absolute economy goes the much-desired flow of pure current, ensuring noiseless reception.

Moreover, the Philco carries a built-in Charge Indicator which tells at a glance the exact condition of the battery and avoids all possibility of that sickening moment when the run-down dry battery suddenly ends its crackling existence without warning.

Give your set, your friends and yourself the privileges of modern wireless by ordering an 83X Philco.

All Readers' Queries Answered Here

In conjunction with Farmer's Broadcasting Service the Technical Editor of "Wireless Weekly" broadcasts answers to all listeners' queries from 2FC each Thursday night. Replies will also appear in these columns.

A one-valve circuit to use with a loop aerial, published at the request of a reader.

B.T. (WEST MAITLAND).—Q: (1) What is your opinion of the 4 valve receiving.

A: (1) I really shouldn't draw comparisons between receivers, but the Browning-Drake is usually associated as a four valve receiver, that is, radio stage, detector stage and two transformer coupled audio stages. Sometimes the audio stages consist of resistances or impedances, hence three stages instead of two thus making a five valve receiver. The Browning-Drake is recognized as a most efficient receiver, and will give good service.

J.R.J. (WOLLONGONG).—Q: I am 12 years of age and am keen wireless enthusiast. Amongst the sets I have built is the Marconi Four Valve which, until it gives 2BL, 2BG, 3LA, and 4BG at excellent speaker strength, does not receive 4GL, 3AR and 1VA. Can you account for this?

A: You haven't told me whether, when hearing 2PC, if the moving plates are all immersed inside the fixed plates. This applies to all condensers. If such is the case, it becomes necessary to add a few more turns to the grid coils. If not then look to the M. Batteries, or the detector valve. Glad to hear from you. Best wishes.

G.R.M. (BRISBANE).—Q: (1) I am living within two miles from 4QL, would the Capacity Coupled One Valve eliminate this station?

A: I cannot tell you definitely, but this receiver and the Extraordinary One Valve, are the most selective sets I know.

Q: (2) Is this set as loud as any ordinary one valve?

A: (2) Yes.

Q: (3) Would the addition of audio frequency amplifier alter its selectivity?

A: (3) No. Audio has nothing to do with selectivity.

Q: (4) Would coils wound on the low loss principle be any improvement?

A: (4) Stick to the specifications with coils, as well as condensers, unless you wish to experiment a bit yourself.

T.M. (HANSTOWN).—Q: I have built a 4 valve receiver and would like to replace from local with the two radio quality valves fitted out, and the other Stage with one R.F. valve fitted out. Will you please supply the necessary information to enable me to switch out one or both R.F. valves at will?

A: It is never advisable to switch R.F. valves in. However, join the A-wire to earth and connect the two radio quality valves of the detector stage with grid condensers in circuit for 3 valves with the grid of the 2nd R.F. valve for 4 valves.

H.C.W. (MARRICKVILLE).—Q: (1) I intend to build a Browning-Drake, and would like to know if the enclosed list of components is satisfactory?

A: (1) The parts you mentioned are quite in order, but use the 002 condenser.

Q: (2) Is it necessary to use the R.F. valve for local stations. If not please tell how to cut out the first valve.

A: (2) It is never necessary to switch out R.F. valves as it is explained to T.M. (see town). Follow the layout given, and see amperages for controlling audio valve filaments.

H.W. (INARRABRENN).—Q: I would you kindly publish a circuit of a single valve receiver, suitable for local conditions, using a lamp aerial?

A: Please take a glance at Fig. 1, and there you will see a circuit to meet with all your requirements. This circuit has been tested quite satisfactorily on local stations, and may be easily constructed if the following instructions are carefully followed:

The circuit is of the conventional primary, secondary and tickler type, that has proved itself to be of great value in more cases than one. The primary has twelve turns, the secondary forty-five, the coupling an inch apart, so the total winding length of each coil are wound with 23-gauge D.C.C. Use a 3-inch former for these two windings. The tickler consists of 25 turns on a two inch former, wound with 22 D.C.C., and mounted perpendicularly on the end of the secondary. The J coil tuner is not unknown to most of us, therefore, no difficulty should be encountered.

Tuning is accomplished by means of the two variable condensers, the loop having a strong directional effect. The station received will not be at its best until the loop is pointed right towards the volume and oscillation is controlled by the rotating of the tickler coil. Use a large pick-up loop, cross-sticks being at least four feet in length and having about 12 turns. Never change the size of the primary winding, as this will affect the volume and the secondary will be affected. We strongly recommend the use of a storage type valve for this receiver.

J.E. (W.G.Y. W.O.Y.).—Would you kindly furnish me with particulars regarding the type of receiver that you have in use?

W.R. (CENTRAL TILBA).—Q: I am desirous of changing my present three detector valves for three UX201A valves. Kindly let me know what size accumulators to use and how long, normally, would it remain charged with the use of these valves?

A: The accumulators should be as large as possible. We would suggest 6 volt, 60 mips, and with this particular size your valves should last for, approximately, 86 hours, without a recharge to the accumulator.

H.D. (WILTON).—Q: Could I use my 15 mfd. condenser in lieu of the .0005 condenser specified in the Split Grid Single Valve Receiver described in the issue of January 11th?

A: We advise you to stick explicitly to the specifications given for that receiver.

ANTONIO (CASINO).—Q: Reading "Wireless Weekly" of 29th October, I noticed the

excellent results obtained by Mr. John Hamilton, of Coogee, using a six valve Stromberg-Carlson Neutralodyne. Could you advise me as to where I could purchase a circuit of this receiver?

A: Kindly get in touch with L. P. R. Bean, of 229 Castlereagh-st., Sydney, to enquire concerning Stromberg-Carlson. Mention this paper.

A.G. (PADDINGTON).—Q: I have a two valve set, and can get 2FC and 2BL very plain on the Loud Speaker, but 2KY and 2BE are very soft. Can you tell me what is wrong?

A: We can quite understand your trouble. You have obviously overlooked the fact that 2BL and 2FC have a far greater power than 2KY and 2BE, and that the latter stations will not come in with anything like the volume of the former.

E.B. (ROZELLE).—Q: (1) How would I work on my four volt acid accumulator?

A: First call on a reliable battery service station and procure the required quantity of the correct specific gravity sulphuric acid. Then charge your accumulator until a full charge is registered, then tip out old acid and fill accumulator half full with distilled water. Shake thoroughly, until you are satisfied that the glass should be clean.

Then add full water and shake with a little more distilled water. Fill accumulator with the new acid and charge up again. Always wear old clothes during this process and wash out the accumulator out of doors, otherwise, if any acid is spilled on your clothes or on the carpet, dire consequences will be the result. If at any time you do drop acid on your clothes, pour the milk on and saturate the spot with milk.

Q: (2) What materials should I get to add a stage of audio to the three coil regenerative receiver?

A: (2) Associated with the three coil regenerative receiver are two stages of audio already, and it is now wise to add a third stage of audio.

C.P.M. (MELBOURNE).—Q: (1) In the Split Grid Single Valve Receiver of the 1/1/21, the grid is connected to a Master Condenser and a variable grid leak. What is the capacity of the condenser and also what is the value of the variable grid leak?

A: (1) The condenser is approximately .00045 mfd. capacity and may be either a Pilot or an Advance. The grid leak is a variable grid leak, from 1 to 5 megohms, and may be a British leak or a Leiss. We have no catalogues.

D.G. (CROYDON PARK).—Q: On a Showell Receiver (one valve) local stations come in very loudly, but there is no sign of inter-ference. The aerial is 60 feet long, with a 16 feet load in. Should the aerial be lengthened would inter-state reception be possible?

A: No. The aerial is long enough. Tuning is perhaps the main difference. Master it. Don't forget the summer conditions are not too good for long distance work.

D.B.C. (CONCORD)—Q: Are "National" accessories available in Sydney?
A: I don't know of any. Why not buy Australian-made goods?

M.V. (HURSTVILLE)—Q: (1) Re Accumulator B batteries. I cannot get pure aluminum for the rectifier, will 99 per cent. aluminum do?
A: (1) Yes.

Q: (2) I have some commercial sulphuric acid which I am breaking down with tap water. Will this answer the purpose?
A: (2) Don't break the acid down with tap water; use distilled water.

Q: (3) I purchased sheet lead 88in. x 14in., which weighs 8lb/in. Will this do?
A: (3) Yes.

N.P.H. (NORTH SYDNEY)—Q: (1) I have recently had an entire stage of audio to my one valve reflector, and I am now troubled with a high pitched whistle. Can you locate this for me?
A: Invariably this high pitched whistle is the result of using two different makes or transformers. To overcome it, reverse the connections of the primary of one of the transformers.

F.M. (ABBOTFORD)—Q: (1) I am going to build a Neutrodine, and I have 1,000 variable condenser and 1,0002 variable condenser. Could I use these with 1,0003 condenser?
A: (1) You could, but you would lose all the best features of the Neutrodine, i.e., ease of tuning. Searching for distant stations would be a very heavy task, too difficult in fact. Why not get three matched condensers, all the one size, and of the same brand. It will be better than.

Q: (2) I have two different ratio transformers, one 1 to 1, and one 2½ to 1. Which will I need in the circuit?
A: (2) It is always Standard practice to place the higher ratio transformer first, with the smaller ratio in the second stage. If placed close together, turn one at right angles to the other. Should a high pitched whistle result, reverse one of the primary connections.

Definitely Reduces Static

THE fitting of a Maclurcan Tone Purifier may be accomplished without trouble and without any interference with the wiring of your receiver. Yet, once fitted, the results are entirely different. The tinny nasal tones so often heard from some radio sets will be rendered full and round, whilst even tone that is already good will be improved considerably. The Tone Purifier also makes it possible to reduce to a great degree static and other extraneous noises

Certified Radio Products

Electrad Glass Grid Leaks

Electrad Grid Leaks are made by a new and controlled process. Each Grid Leak is individually tested before it leaves the Electrad factory. They are non-microphonic and moisture proof, while the resistance is constant.

Sizes $\frac{1}{2}$ to 5 megohms, plain. Price 2/3
 Sizes $\frac{1}{2}$ to 5 megohms, de luxe. Price 3/9

Electrad Lightning Arresters

Consists of an air gap between two copper conductors, arranged in an improved manner, so that it is impossible for the spacing of the gap to vary. It is then hermetically sealed and the gap is therefore absolutely watertight. The housing protecting the air gap is moulded in glazed porcelain with a highly ornamental finish. These arresters comply with Fire Underwriters regulations. Price 3/6

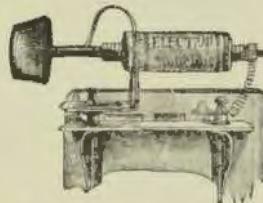

Electrad Certified Condenser

The Six Pressure Points— Ingenious riveting and binding method fastens parts securely at six different points and exerts EVEN PRESSURE upon the largest possible surface.

Thin sheet copper is used in place of tin-foil. A slip of the soldering iron cannot damage the copper and thereby ruin this condenser.

SERVICE

BRITISH AND
AUSTRALIAN MADE.

FROM £6/10/-
TO £11.

AMPLION—creator of the first and finest Loud Speaker is one of the oldest names in Radio. And it is not good because it is old, but old because it is good. Quality is the characteristic that marks all things that last.

The RADIOLUX is the crowning achievement of AMPLION.

Blending exquisite furniture design with the science of electro-acoustics, it also offers the additional advantages of clear, natural tone, stability and prestige.

AMPLION GUARANTEE

The Amplion Loud Speaker is guaranteed against defective material or workmanship, and will be repaired or adjusted free of charge providing it has not been tampered with. Amplion Service Depots are now established in the principal Australasian cities, and Speakers may be returned for attention to—
