Broadcast Programmes a Week in advance

VOLUME 10

Registered at the G.P.O., Sydney, for
transmission by post as a newspaper.

NUMBER 3

Friday, May 13, 1927.

Price Threepence

TAKE the ROUGH SPOTS out of Your RECEPTION!

The
**Muter Interference
Eliminator
and Static Reducer**

*will accomplish this for you
as quickly as you can fit it
to your receiver.*

Fit it to your receiver and immediately you hear the difference—clear, strong, unwavering signals minus interference and distortionary noises. The Muter Eliminator incorporates a tuning coil balanced by a variable condenser, thus providing an additional means of tuning for the valve or crystal set.

It supersedes any previously known form of wave-trap, because it may be used either by the method of **induction** or by **absorption**, simply connected between aerial and earth of your receiver.

Cut out interference. Cut down static. Fit a Muter Eliminator to your set right away, and say goodbye to summer-reception troubles.

Radiotrons

are World-Renowned for
RELIABILITY and EFFICIENCY

UX-199

UX171

UX-112

RADIOTRONS UV 199 and UX 199.

UV 199 (or UX199) is the smallest Radiotron made, and it is adaptable to either portable or home dry battery operated sets. It is equally serviceable as a detector or as a high-efficiency radio or audio frequency amplifier.

"A" battery is subjected to very slight drain. The two Radiotrons are electrically identical, differing only in their bases.

Price 13/-

RADIOTRON Every Genuine Radiotron UX 171

A new power Radiotron, UX171, designed to operate loud speakers of low impedance at considerable volume with a minimum of distortion. It is intended for use in the last audio stage only.

Price, £1/15/-

RADIOTRON UX 112

A new power valve similar to the familiar UV201A, but several times as powerful. Designed for use as last valve in accumulator operated sets, when it will deliver far more energy than the average loud speaker requires. Two of these valves will give exceptional results. Filament voltage 5. Current 5 amps.

Price £1/15/0

Queen St., Brisbane
Bower's Building, Charles St., Adelaide

RADIOTRON UX 200a

A wonderful detector of great sensitivity. It is an alkali vapour valve, and employs a new type of filament.

One point of great value about this valve is that both the filament and plate are non-critical. This means that one control, such as the Beachstat, can be used to operate the detector as well as other valves in any Receiver.

Price £1/10/-

RADIOTRON UX 201a.

The sturdy UX-201A is the standard, all-round flexible storage battery valve of radio—good in any detector or amplifier circuit. It is recognised as the standard storage battery valve. Its thornated filament has an electron emission

on which is extraordinarily high; and this at low current consumption with resulting long life.

Price 11/-

RADIOTRON UX 120

New dry cell Radiotron for use in the last stage of audio amplification only. Exceedingly high filament emission. Volume equal to that of two UX199's.

Price 15/-

UX-200A

UX201A

UX120

WIRELESS WEEKLY

VOL. 10, No. 3.

FRIDAY, 13th MAY, 1927.

Faint Praise—

OFFICIALDOM came out of the Canberra broadcast rather better than most expected. Government functions burdened with formality offer small opportunity for enterprise and the vast nature of the Canberra broadcast required enterprise above all.

Nothing on such a scale had hitherto been attempted in Australia and the responsibility of carrying out the transmission lay heavily on inexperienced shoulders. We can imagine a few enthusiasts recognising the importance of the broadcasting among the hundred trivial flutterings in political nests; we can imagine them striving to win through with officialdom on their backs, well meaning, indefinite, courteous, but selfish, self-important, imbecile, and disastrous.

We have the enthusiast to thank that there was no disaster. He could not prevent, however, the whole broadcast smacking of political restraint. One felt that the announcer suffered from Parliamentary nervousness. He might not say too much, nor might he say too little.

It was evident that he was, to say the least, merely an acquaintance of the microphone rather than a familiar. His fragmentary announcements betrayed this. He failed to say when, where, and who was speaking, and we were left to guess that it was Mr. Bruce, or the Duke of York—a state of affairs made doubly worse by the fact that there was no official broadcasting programme.

We cannot say that his descriptions were vivid and clear, they conveyed us many names and ranks, a

fleeting glimpse of the parade, the march past, the scarlet Senate; they did not convey atmosphere. Color was absent, not because he lacked a command of words but because the scene instead of stimulating his imagination to excitement pitch left him cool and calm. One felt that he was impressed, but that the impression was registered as one only among others. Although an inexperienced broadcaster, he was an experienced newspaperman, and in this respect was different from the average listener. What would have excited and interested the average man he merely observed and commented upon.

In choosing the official announcer we cannot help believing that, in an endeavour to find a man with special qualifications for the job the authorities overlooked the usual qualifications of the announcer. He possessed a thorough knowledge of Parliamentary procedure, and a fair acquaintance with the famous 400, but not more than an ordinary broadcasting voice and personality.

In the mush of the long land lines the infections of his voice were lost. Technically the transmission was inferior to most long land-line broadcasts listened to in the past. However, when we consider that this transmission entailed more miles of land line than has ever been used in Australia for broadcasting purposes, and that the transmission changing from point to point had to be followed by operators in every State, we realise that on the whole it was well done.

Between You And Me And The Microphone

Conducted by Jack Plugge

AT A RECENT BALLOT taken by some 3,000 wireless traders on the question of the most suitable period of the year in which to hold a London Wireless Exhibition, voting was decidedly in favour of the choice of the month of September, which won the vote by a majority of 861. Strangely enough, the second most popular month was May, which had 457 votes.

THE HUMAN SIDE of broadcasting is exemplified by a letter received by Station 2BL from Wairio, New Zealand. Recently a Sydney man became ill, and it became necessary to acquaint his sister, who was in N.Z., with the information at once. An appeal to 2BL met with ready sympathy, and the information broadcast with a request that it be passed on to the man's sister, and within a few hours she had received the message. A letter has now been received expressing her thanks.

A SUB-COMMITTEE of the Union Internationale met recently at Geneva and was attended by delegates from several European countries. One of the chief subjects discussed was the actual transfer of programmes between different countries by land line, and the mutual exchange of lectures and talks. It was thought that this would inspire listeners with a desire to visit each other's countries.

AN INTERESTING STORY comes from Enfield, a small town in Victoria near Ballarat. Arrangements were well in hand for a wedding. It was to be a quiet family affair, but there was no piano in the house. How was the wedding march to be played? An inspiration seized the bride elect. She wrote to the manager of 3LO—would he be so kind as to broadcast the glad strains of Mendelssohn? Nothing easier. At the time appointed 3LO broadcast the wedding march as played in the studio. The wedding guests heard the march on the family radio set and were happy. Half Victoria listening in, wished the young couple every happiness. Several months have elapsed since a Sydney broadcasting station did the same thing, but both 2FC and 2BL have a standing offer to play the wedding march for any young couple who wish to receive it by radio. It costs the happy couple nothing, and both 2FC and 2BL have very fine organists.

"YOU SAID A MOUTHFUL": A headline in an American paper runs: "Simple Eliminator Cuts Out Most Man-Made Static."

AN APPEAL on behalf of the aborigines at Wallaga Lakes Station, near Tilba Tilba, is made by "Uncle George" of 2BL. On a recent holiday he visited the settlement and succeeded in collecting enough money among the party to enable a set to be installed. The work of educating and entertaining the natives is being admirably carried out by Mr. and Mrs. Sampsey, and to help their work "Uncle George" asks listeners-in to forward papers, magazines or books to the station.

ADORATION

Sweetheart with the rose-kissed cheek,
You move me to this song,
A finer feeling ne'er will speak;
So high it knows no wrong.

Though untold time it's taken,
For slow nature to unfold,
At last 'tis not mistaken,
And has struck the proper mold.

You personify the fragrance,
That rules the Realm above;
I look an Angel askance
With you on Earth to Love—

My wave length.

ERNEST GROSS

THOSE ENGAGED on short-wave development work are likely to experience something of a shock as a result of the publication in the United States of a patent granted on February 8th of this year to R. A. Fessenden. Briefly, the patent is granted to Fessenden for the use of wavelengths between one and fifty metres for directional wireless purposes. The claim is based on early work, when the applicant is stated to have discovered for the first time that directive wireless was more satisfactory and less affected by the usual causes of variation when wavelengths between one and fifty metres were employed. It is scarcely to be imagined that in this country a patent could be granted giving to one inventor the control of the use of a complete wavelength for any particular application.

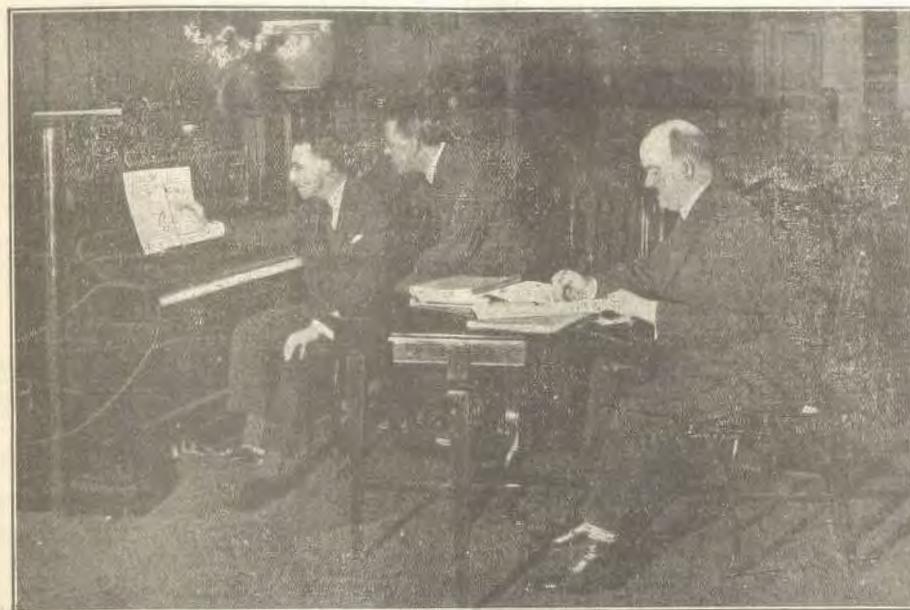

TWO OPINIONS: "I do not think television will ever become more than a stunt."—Mr. Thomas A. Edison.

"Mr. Edison is probably not aware of the recent developments in television."—Mr. John L. Baird.

THE JOHANNESBURG (S.A.) broadcasting station, which owns the distinction of being the first important station to close down for financial reasons, will shortly resume regular programmes under the control of a new South African broadcasting company. An unusually interesting method of checking "piracy" is to be adopted. Under the scheme the sale of wireless apparatus to non-licence holders will be prohibited.

"BUNKY DOO": Every listener to 2BL—adults and children alike—know "Uncle George's" familiar good-night to the kiddies at the end of the bed-time session—"Bunk Doo." So popular has the phrase become that Mr. Herbert Carroll, the popular composer, has written a song with the title "Bunk Doo," and dedicated it to Uncle George. The song, which has a "catchy" air, is to be published by Albert's, and will be introduced by Uncle George from 2BL.

THE DUKE'S FAVORITE: Through the medium of Joe Aronson and his Syncopated Symphonists from 3LO, Melbourne, the favorite melodies of the Duke and Duchess of York have been discovered. At the State Government ball during the Melbourne visit of the Royal couple, Joe Aronson's band was chosen to provide the melody and rhythm. During a waltz the Duke approached Joe Aronson and asked if "Bye bye, Blackbird" could be played. The waltz was stopped forthwith and the Duke's favorite fox trot held the attention of the dancing visitors. Later the Duchess approached the band and asked if she might choose a number for herself. Naturally, Joe Aronson was only too eager to assent. He handed the Duchess a list of the items which the band played, but she smilingly shook her head when confronted by so many melodies. "Could you suggest one?" was the Royal request. Aronson suggested "Who," a modern fox trot, which immediately met with the Duchess's approval. "Who" was played with several encores.

BUILDING A PROGRAMME.—Messrs. Chapple, Anderson and Cochrane of 2FC preparing a programme

Is There An Ideal Programme?

Most listeners-in have no conception of the work involved in one week's programme, nor are they aware of the restrictions and limitations which make the perfect programme an impossibility

HAVE you ever tried to build up an ideal programme for broadcasting? Every large broadcasting station is trying its hardest every day and has never yet claimed to have thoroughly succeeded, although some come very near it on the year's average. What a broadcast station, with the aid of a large staff, accomplishes with assiduous attention is very often slashed to pieces and thrown down by armchair critics with a stroke of the pen. There is never an idle moment in a busy broadcasting office such as 2FC or 3LO, although there is a large staff continually at work under the immediate supervision of the general director of programmes, behind the twinkle in whose eyes lurks an accumulation of programme material that would stagger a timberyard full of those jerry-builders who write to the papers!

Before a programme can be broadcast it must first of all be built! The

master architect of programmes for 3LO is, of course, Major Conder, and at 2FC, Mr. Anderson, under whose eagle eyes every item broadcast from those two stations must first pass muster. Every programme issued from 3LO or 2FC has its foundations laid at least three weeks ahead of the time, when you actually see it in print, and it is usually completed in all its details about a week before it reaches the public, because it has to be sent all over Australia to be in the hands of the newspapers in every State in time to be published on the due date. But, of course, some of the most important items in each week's programme cannot possibly be arranged so early.

The busy manager sits in a perpetual state of interview with artists eager to be broadcast. He has to arrange voice tests, file the results for reference, unearth from an elaborate index system the ghosts of long-buried repertoires and persuade coy

performers that they really must hold themselves in readiness to attend at the times set down for them. It is astonishing exactly how coy and hard to bind down some of these performers can be! Three weeks go by so suddenly for some people and so slowly for others that appointments have to be kept well in hand by the staff up to the last moment.

So far as the idiosyncrasies of performers will allow, the schedules times are run true to the minute, and the intervals of silence are sometimes almost too brief. Sometimes a station is criticised for its lack of variety, but this criticism is surely not founded on an actual study of its programme, as never a day passes without the office being overwhelmed with overtures from various performers, concert promoters, bands, public meetings, and so forth, all of which are given the most favorable consideration, consistent with being in time for preliminary arrangements. Very

frequently, indeed, a last-minute item has to be substituted for some advertised feature. Those candid listeners who think they could build a better programme with their eyes shut can have positively no conception of the laborious weeks of work involved in one week's published programme. To a great extent the office has to be guided by the letters it receives, and letters of appreciation always greatly exceed in number those of condemnation, such as appear in the daily press. It is so very easy for an arm-chair critic to ask why a station broadcasts some items and omits others. But no building can be safely constructed of bricks without straw, concrete without cement, and unweathered sandstone where granite is needed, and critics must remember that the programmes of our largest stations are unique in that they never repeat themselves night after night, as even the very best of theatre or concert programmes do.

Some of the best artists, moreover, flatly refuse to broadcast, or demand a fee which it would be preposterous to expect even 310 to pay. Added to this, some voices that are most acceptable on the platform or stage are a failure before the microphone, while the repertoire of others is so extraordinarily limited that if a station sometimes appears to repeat itself, the blame must be laid at the door of performers themselves. Some day, perhaps, a school for broadcasters will be established, and a broadcasting station will be able to pick and choose from a much greater variety than it now can. It must be remembered that out of the thousands of contributors to its revenue a broadcasting station has to suit a very wide diversity of tastes, and its staff endeavours, on the whole, most successfully, to cater for all these tastes continuously. Those who advocate special or exclusive programmes forget that even the minority have their rights, and it is to the credit of a station that it ever carries a tender spot in its heart for all sorts of minorities, even to the extent of spelling what is often regarded as the first essential of a programme—the "atmosphere."

Even when a critic feels that there is legitimate cause for complaint as regards some of the programmes, there is a much better way of rectifying it than by writing indignantly to the newspapers. The best *Listeners' League* is undoubtedly that run by the G.P.O., where every listener is his own secretary, and can make his own suggestions direct to headquarters. If this is done with due regard to direct specification of the

grounds of complaint, mentioning the item objected to and suggesting the actual name or nature of the performer or item that would be preferred, such criticism will always be heartily welcomed and considered.

Is it likely, then, if large broadcasting companies are striving for the perfect programme, every day of the year, that any individual listener will discover it? I waited very impatiently for the perfect programme which was to result from a newspaper contest recently, I had a suspicion that it would not result for a very good reason—that there is no such thing as a perfect programme. While men and women are men and women no two minds will think exactly the same; just as no two witnesses of the same accident will tell exactly the same story in the witness-box.

I have heard it whispered since that of the 10,000 programmes sent in, not one was found with any novel

WATCH for the details of the world famous Solodyne Receiver next week

*One control
Screened coil
Five valves*

A modern receiver of wonderful import.

or original feature. I confess this has surprised me. Granted that not every novelty could be broadcast, I had expected quite a number of bright ideas that had not occurred to the men who work on the present programmes. After all, in a multitude of counsellors there is wisdom. The trouble about proverbs is, however, that no sooner do you think of a splendid one that fits the case than another comes in your mind to oppose it. It has just occurred to me that too many cooks spoil the broth. So the application of the principle differs according to whether you work out these programme makers in councillors or cooks. Suit yourselves.

As a matter of fact, it was found, I think, that the programmes were merely variants on old programmes.

Instead of "Thanks for the Buggyrider" being in Tuesday's programme, it was in Wednesday's. Many went on the principle of allotting half an hour for jazz orchestra, half an hour for ballads, half an hour for classical instrumental music and so on, which is really the principle on which most stations work, although, of course, with variations.

This matter of programme-building is a very technical and difficult one. There is the question of copyright to be considered in relation to many popular works which the public would like, but cannot be given. Many have wondered why the performances of Gilbert and Sullivan cannot be given on the air. The reason lies in the prohibition by the executor of Sir Arthur Sullivan. Rightly or wrongly, he believes that the performances on the radio of the whole operas will lessen their "pull" in the theatre, and he has, therefore, set his face against it. He has, latterly, been persuaded to agree to individual numbers being done, but at a fee which makes the average broadcasting station very loth to accept the privilege.

This whole matter of rights to broadcast is a most complicated one. At first blush, it would seem that music should be free as the air over which it is proposed to shoot it. The wide publicity given, it is argued, popularises it, and its sale in the form of sheet music should be the greater.

Unfortunately, "should be" is not "is." The painful fact emerges from music sellers that all mechanical forms of music tend to reduce the sale of sheet music. So few people comparatively want to give themselves the trouble to learn painfully on the piano what they can get so easily on the gramophone, the pianoplayer, or the radio. We are becoming mechanised. We take the path of least resistance. Follow this out logically, and you will see that the music writer, who cannot live on air, must be paid to allow his product to live on it. If he is not, he will stop writing music and go in for making boots, for growing wheat, or for producing any other commodity that people will pay for. Then what will the broadcasters do? Stick to Schubert, Bach and the old masters who have not been copyrighted? Fair play's a jewel.

The larger broadcasting companies make no demur to paying the royalties demanded by the Performing Rights Association. Others are threatening to take political action to change the law of copyright so as to make mean writers and musicians give the world their products for nothing. They will have their trouble for their pains.

Radio to make us Healthy

The influence of broadcasting programmes on our mental faculties is dealt with interestingly in this article by a well-known woman medical specialist whose name is withheld in accordance with the rules of the B.M.A.

By A Doctor

THE suggestion that the broadcasting stations should supply only "light music and light entertainment" every evening of the week during the year has aroused much uneasiness in many quarters. And not only amongst the cultured circles does this prospect cause dismay. Those who call themselves "low-brows" appear to be quite pleased with the title; indeed, to judge by the letters recently published, some actually take pride in this designation, whilst others (who have apparently had some degree of education) resent the idea that they should welcome further knowledge in the world of music or general information, and hence raise objections to the classical music and the interesting lectures in the programmes.

The healthy attitude of mind, surely all will agree, is never one of satisfaction with oneself. The wise man is well aware that even the best equipped brain has many gaps in its knowledge. There are innumerable avenues of knowledge and of delight which remain unexplored by even the most cultured men; the paths leading thereto are not trodden because they are unknown. Even the professional workers, and those who are accustomed to dealing with educational and scientific matters, become absorbed in their own work and tend to remain in a narrow rut for a lifetime.

The average man and woman neither buy a book nor attend a lecture which deals with a subject in which they are not already interested. So routine-bound is the mental outlook of the unawakened mind that the thrill of adventure is sought for and obtained by such means of stimulation as is given by a variety of plays, fiction, cinemas and music which appeal to the least intellectual faculties.

In time, such men become unable to appreciate the simple and natural pleasure conveyed by good music, good literature, good art, even the peaceful joys of home life. Picture the condition of our country if the broadcasting authorities were unfortunately influenced to accede to the demands for the provision every evening of nothing but entertainment of this nature. After a few months of such nightly fare, even the "flavoured lowbrow" would clamour for variety. Then might follow a demand for the sensational methods which have been adopted by some

cinemas, journals and vulgar forms of stage patter. Into every home these degrading forms of excitement would then enter, with disastrous consequences to the national character.

The authorities, knowing that their programmes can penetrate into every home in the cities and the lonely country villages, realize, and try to act in accordance with, their tremendous responsibility. The newspapers containing the records of criminal and divorce court proceedings can be avoided by those who do not care for such reading; precautions are usually taken to prevent these pages reaching the eyes of children. So, also, no one desires to see introduced constantly into the home the light fare which is supplied to, and presumably suits the taste of, the average audience in the music-halls of a great metropolis.

Owing to physical disability, many cannot read nor write, nor leave home to visit places of entertainment; hence, for many thousands the wireless will more and more become the chief source of diversion, and even of mental occupation in the case of the very old and the invalid. Continual light entertainment is not conducive either to health or to happiness in such circumstances. And who does not shrink from the thought of providing the young adult and the child with such unnatural nourishment for their impressionable minds?

* * * * *

Too many of those who cater for the public imagine that only poor or indifferent mental fare is enjoyed by the majority. But in truth it is probable that most men prefer what is wholesome, sincere and good; the proof of such a statement is provided by the history of the gramophone. The gramophone companies at first made little progress; their growing popularity and prosperity dates from the time they began to turn out large numbers of records of classical music. The enormous growth of the demand for such records proves not only that there exists a large number of people who appreciate fine music, but also that this public with a critical taste is rapidly becoming more numerous.

* * * * *

There is yet another point of view which demands consideration. Too much music continued over too long a period is unhealthy for mind and body. Undoubtedly I state that even the worker with uneducated taste

would suffer were he to listen every night for several hours to light entertainment and light music. Such fare would not decrease, but increase his fatigue after his day's work. The best kind of rest is obtained by a change of mental occupation and change of thought. To be taken out of oneself is not only the most enjoyable form of recreation, but the most health giving, and the most restful for brain and body.

The clerk, wearied by monotonous office letters, the manual worker and the housewife, worn out after the day's muscular work, each and all will find refreshment by listening to news of another world, such as is obtained from a lecture on the stars, or on journeys through strange countries.

* * * * *

There is much to be said for those who suffer from long hours of entertainment. Those who desire light amusement from 8 to 11 every evening, and dance music from 11 till 1 or 2 a.m., are physically strong enough to be able to find their amusement elsewhere. They can go to the halls provided for such entertainment and pay the musicians a living wage. Again, the need for long hours of sleep by the invalid, by the young, and by the workers, should not be disturbed by the loud speaker of a neighbour. Is it just that brain workers should be kept awake, night after night, by sounds which not only exacerbate their musical sense, but also injure their working power on the following day? This matter demands most serious consideration. The work of this world is not performed by those who require jazz music or light entertainment every evening, and the amusements of the young must not be allowed to ruin the home life, the health and the happiness of the workers.

Every medical man knows that the uneducated are readily hypnotized. The same mental characteristic is evidenced by their unquestioning acceptance of the suggestion that "the classics are heavy." Directly such men hear a few bars of classical music or old-world songs they shut down their wireless, believing that they are to be bored. Let them be more original. Let them enliven those who think for themselves; let them dare to question this myth as to the dullness of good music, good literature, and

(Continued on Page 13)

The Safety Valve

Readers are reminded that the opinions expressed by correspondents are not necessarily those of this journal. A fair measure of criticism is allowed but preference is given to letters combining interest with brevity. Anonymous letters are not considered

NOTHING TO COMPLAIN ABOUT.

Dear Sir.—After listening to the principal stations in operation per medium of a Super-Heterodyne, I would just like to let you know how we appreciate them. I think the programmes from 4QG, 3LO, 2FC, 2BL, and 8CL are all very good, and the listener who finds fault with these stations must have a very poor set, and instead of complaining should utilise all his spare time increasing the efficiency of his set.

Complaints about the speedway items are uncalled for, as nine out of every ten listeners that I ask in this town all like the Speedway from Brisbane, and also the announcer. He has a "happy-go-lucky" way about him, and has the knack of maintaining interest between events. Good luck to him!

We in North Queensland are well satisfied with the programmes. If one station does not suit us, we just go on tuning-in until we get one that does, and that is my advice to all grump listeners.

Yours, etc.,
SUPER-PLEASED.
Townsville, Qld.

THE CHARGING OF ACCUMULATORS.

Dear Sir.—I think this business of charging accumulators is one of the worst things that anyone interested in wireless has to contend with. I have had a lot of trouble with dry batteries, and so also have several of my friends. Anyone who undertakes to charge accumulators ought to be able to test the gravity of the acid, and if this is not up to standard, no good results can be obtained. After many failures in sending accumulators to be charged, I have now put in a charging set of my own.

Yours, etc.,
FRED. BETHELL.
Morgan.

TOO MANY VOCAL ITEMS.

Dear Sir.—I fully endorse S.H.E.Y.'s remarks. To my mind, 3LO is the only good station we have, because we get a bit of everything—2BL and 2FC have too much singing. It is about time we had a change.

Yours, etc.,
W.J.S.
Wollongong.

WHY, OH WHY?

Dear Sir.—I would like to know this: Why are Government officials, who obviously know nothing about broadcasting (technically or otherwise), handling the broadcast at the opening of the Federal Parliament at Canberra? Why are not the broadcasting stations carrying out this most important work?

Hoping to hear other readers' views on this subject.

Yours, etc.,
GENUINE.
Strathfield.

SHOCK EXCITATION.

Dear Sir.—Surely it must be detrimental to the interests of the broadcasting companies to have such powerful stations as 2BL in such a thickly populated area as it is, making hundreds of sets in the locality practically one-station sets and disgusting owners generally.

During the recent storm, when 2BL was off the air for repairs, many local listeners tuned-in 3LO for the first time, delighted to know their sets could do it, but on completion of the repairs out went 3LO and in came 2BL again, much to the chagrin of the aforesaid listeners, who wished the cyclone had blown 2BL to 1HL. A little 2BL is very nice on occasions, but it's rough when you have to take him in overdoes.

Personally, I am just able to tune in 3LO on an eight-valve "Emmc" Super Het, generally without interference, but with nothing to spare. Even the Neutrodyne of "Radio," January 5, is unable to eliminate 2BL here, yet I took that identical set to Swansea, 16 miles this side of Newcastle, and it completely tuned in every "A" class station, Perth excepted, and several "B" stations without interference, on an aerial 100 feet long by 50 feet high, and an aerial like that is "looking for trouble."

My experience there convinced me that we folks in this area have no idea whatever of what good reception is, and never will while such a short-sighted policy prevails. No doubt it is alright for the man in Alaska, but he pays no licence fees locally.

Yours, etc.,
F.S.
Bondi.

EIGHTY-TWO YEARS YOUNG.

Dear Sir.—I want to tell you of the joy broadcasting is to my patient, an old lady of eighty-two. The first time she heard the National Anthem on the wireless she insisted on standing up, and tears ran down her face, and she said, "I never thought it was so grand." She greatly enjoys the Sunday evening services and follows the singing and prayers, but I think her special favourites are the bands. One night she said she hoped the Lord would bless them, as they had given her such great joy. I might add that our set has made life quite different for the rest of the household, too.

Yours, etc.,
NURSE A. W. TURNER.
Melbourne.

THE CAT AND THE KOOKABURRA.

Dear Sir.—A friend who has recently installed a loud-speaker set, referring in a letter to the recent broadcast of the kookaburra, tells me that while the bird was laughing, her blue Persian kitten went searching round the room in an endeavour to find the invisible songster! Surely there could be no more striking testimony to the success of the broadcast.

Yours, etc.,
AUDREY HARRIS.
Glebe.

THE BIRTH OF THE SAXOPHONE.

Dear Sir.—I have in my possession a volume of the "Illustrated London News" of 1849, and in a notice of an exhibition in Paris in the issue dated July 7th of that year, mention is made of the saxophone—"a new musical instrument invented by Mr. Saxe, whose name is well known in this branch of art and appropriately named after the inventor." A sketch of the instrument is given.

Yours, etc.,
F.E.G.

BOUQUET FOR MRS. JORDAN.

Dear Sir.—Just a word of commendation on Mrs. Jordan's (2BL) Women's Session. This lady's talks are both interesting and instructive, and it is always a pleasure to listen in when she is on the air. May Mrs. Jordan reign for ever!

Yours, etc.,
A WOMAN LISTENER.
Bankstown.

It's All in the Air

COMMUNITY SINGING AGAIN: Few modern institutions have taken such a hold on the public fancy as community singing, and its "every season through the winter months" is eagerly awaited. 3LO have made arrangements to broadcast the 199 season of Community singing from the Assembly Hall, Melbourne, and every Thursday from 12.15 p.m. to 1.15 p.m. the enthusiastic choristers will be on the air. Various conductors will wield the baton throughout the season, and many novelties are promised.

MADAME ELSA STRALIA: the world-famous soprano, is shortly to commence a brief season of broadcasting at 3LO. Madame Stralia has made tours with such notable people as Dame Clara Butt, Dr. Pachmann, Yvonne and Mark Hambourg. She is all anxiety to commence on her short broadcasting season in Melbourne, which will be but a prelude to English and American operatic tours.

A LADY PIPER: Miss Gertrude Armstrong the well-known lady piper, who is once again at 3LO (with her bagpipes), is a particularly busy person, and has devoted many years to the study of "mine" music. Not many airs are written specially for the pipes—they all have to be transposed and rearranged from other melodies. Miss Armstrong has no fewer than 300 of these airs to her credit—all transcribed and arranged for the bagpipes by herself. Contrary to universal opinion—they originally came from Ireland, but the enterprising Scot, with the march of time, has made certain modifications in the staves and bellows, and therein lies the difference between the pipes of the "O's and the Mac's."

THE FUTURISTS: We must really pass a hearty vote of thanks to that clever band of entertainers "The Futurists," who have introduced listeners to that "pithy" form of entertainment, the "potted" revue. When three or four people have to carry the entire performance on their own backs—it must follow that they must be distinctively smart and up to date, and this describes The Futurists. Whilst their turn is being broadcast, there is not one dull moment; it is witty and tuneful, the vocal contributions being much above the average. These talented people have all had an equal share in the preparation and production of the show, and are to be congratulated on their excellent results.

Mr. Stuart Robertson, the young English basso who is touring Australia in association with Dame Nellie Melba's farewell appearance. Mr. Robertson has been a consistent artist at 3LO London for the last 25 years, and will be broadcast by 2FC, when in Sydney.

JONES AND RAIKES: Entertainers, who have had a long series of engagements with 3LO, will be heard from 2FC on Saturday, May 14.

E. J. VAN DE VELDE: who still remains as active as ever under the impressive title of the 2FC Aerial Ambassador, literally blew back from Adelaide, having concluded a wonderful four days trip there and back. He said "Au revoir" to his Sydney friends on Wednesday night, left Cootamundra on Thursday morning at 6.0 a.m., and the 2FC announcer was reading telegrams during the day from the various points of call—Hay, Mildura and Broken Hill. At Broken Hill thirty wireless enthusiasts were waiting for the landing of the plane. "E.J." was astir the machine, snapping photographs of Biol in Hill. Two talks were given from 5CL, and many listeners to 2FC rang the Studio, congratulating them, and commenting on the excellent reception of the Station in Adelaide. Mr. Van de Velde flew back from Adelaide to Cootamundra in record time, and was back in the Studio next morning with four hundred photographs. His talk from 2FC will be given on Wednesday night, May 18. There will be a number of photographs illustrating this, the 4th of the Series: "Know Your Own Country," which will deal with his trip to Broken Hill and the Darling.

Coming Features in the Broadcasting Programs

LEE WHITE AND CLAY SMITH: Theatrical fame is usually local, but not the name of Lee White and Clay Smith outside a theatre in London, New York, Frisco, Calcutta, Sydney, Auckland, Paris, Berlin or Buenos Aires, and a crowded audience will be there to welcome the famous couple. In the air their name is equally renowned, and now that 3LO have made arrangements to present a series of concerts by Lee White and Clay Smith there will be few idle sets throughout Australia. Few artists have done more to popularise that style of entertainment known as "songs at the piano" than Lee and Clay, as they are affectionately known to all who have heard them. What is the secret? Lee White's entrancing personality, a sunny smile and an uncanny judgment of the songs the public likes are the answer. And this brings us to Clay Smith, the brilliantly unobtrusive partner. Clay writes the wistful ballads, the merry jingles, and the witty word puzzles which have made Lee famous. His piano accompaniment is perfect, yet he supplies the full effect without detracting attention from Lee White. Yet when he does step into the lime-light we find a brilliant light comedian, a bright personality who vies with his beautiful partner in catching the public attention. Lee and Clay are American born, but both proudly claim a Scotch ancestry. "The blood of the Stuarts is in the veins of both families," they explain.

PAULINE PRY: Hides the identity of a recent arrival from England, who will give a series of afternoon talks commencing May 16 (Monday), from 2FC. This lady was private secretary to one of the biggest revue managements in England, for a considerable period, and has many intimate stories to tell us.

A NIGHT WITH CAPTAIN HURLEY: Listeners are reminded to listen in 2FC-wards, on Thursday night, May 12, when the unique story of Captain Hurley's home, and his numberless adventures, will be told.

S. H. BOWDEN: can always be depended upon to give an interesting talk, and he has been booked by 2FC for a series of Sunday talks, on the following interesting subjects: "York, the City of the Duke"; "England's Hollowed Ruins"; "Munster and its Cathedral"; "Lucerne, Queen of the Swiss Lakes," and "England's Baronial Castles." The series will commence on Sunday, May 8.

"FRASQUITA," broadcast on May 6, proved delightful. The opera contains so much tuneful music, it makes it particularly suitable for broadcasting. The 2nd Act will be broadcast by 2FC on Friday, May 13.

BRIDGE LOVERS: Are requested to listen in to the series to be given by the well known bridge authority, Graham Kent, which commences on Friday, May 13. The subject of the first talk is: "What to Lead."

CHINA SOCCER TEAM: Which is touring Australia, and playing matches with the principal States, is due for a match with N.S.W. at the Royal Agricultural Showground on Saturday, May 14, which 2FC is hoping to describe.

STATE WIDE DANCE NIGHT: In connection with "Girls' Realm Week," which commences on Monday, May 16, the Radio Bureau have, at the request of this committee, approached the various Stations to arrange a special dance night. Miss Elaine de Chair is taking particular interest in the work of the Girls' Realm, and a private dance is being given at Government House during the week. Arrangements have been completed whereby Tuesday night, May 17, will be given up as a radio dance night. Loud speakers will give the guests in many thousands of homes a continuous night of dance music. 2FC are placing a band of ten members in the Studio, and commencing at 8.00 sharp, with dance music, giving groups of ten minutes each right through the evening until 11.0 p.m. Four-minute intervals between each group will be filled in with Studio items, including Alfred C'Shea, Australia's foremost tenor, Charles Lawrence, entertainer, Dorothy Deward, soubrette, Len Maurie, popular harpist, and Freda Gilder, contralto. Should this all-night dance programme meet with general approval, it may be possible to make it a regular feature.

THE FOUR WAIFS: Harmonists and vocal comedians, will be heard from 2FC on May 19. On the same evening, 2FC will broadcast several groups from the pianoforte recital by the Russian pianist, Alexander Sverjensky.

SOME NEW ARTISTS FROM 2FC: Neapolitan Duo, mandolin and steel guitars; Miss Kitty Poole, comedienne; Lorraine Kennedy, flute and piccolo solos; T. Rea, trombone; Miss Mariel Bassley, soprano; Andrew Higginson, and Miss Enid Lewis, Jones and Raines, entertainers; Clyde Thorne, violinist; Michael Brien, baritone; Lawrence Broadbent basso cantante; Ted Turrell, comedian and imitator; Howard Leighton, piano novelty pianist.

"AU FAIT": Deservedly popular are the fashion talks of "Au Fait," who is one of the first "lecturers" to broadcast from 3LO. The pleasing thing about these "talks" is that "Au Fait" does not forget to remember that many of her listeners are country people who have not that convenient little shop round the corner to rush to at any moment, but have oftentimes to make do with what they have on hand. Her various hints on fashions—which are of tremendous interest to the majority of women—have made for her a wide circle of friends, and her extensive mail contains many grateful expressions of thanks for help received.

DISTINGUISHED TENOR: Maxim Brodi, the distinguished Russian tenor, who is to be associated with Madame Straika during her broadcasting season from Studio 3LO, is already well known in Australian musical circles, as the possessor of a delightfully pure and resonant tenor voice, with qualities that make it especially adaptable for broadcasting. He has come to Australia via England and South Africa, where he gave many concert recitals, and is fulfilling a brief season in Melbourne, before he goes to America to enter upon some important contracts.

"TAMBOUR MAJOR": As far as we can remember, "Tamour Major" has not been heard on the air in any part of Australia. Edward Eroy is preparing this beautiful old opera, and as a transmission cannot be taken from the actual production, arrangements have been made for a Studio presentation of the gems from "Tamour Major" on Tuesday, May 24. Items from the choruses and the best songs, will be rendered by the principals of the Company.

SYDNEY SMITH, JUNE: will give his final talk on the Australian cricket tour, on Wednesday, May 25.

JACK LUMSDAINE: We wish this popular entertainer from 2FC "Bon Voyage." He sailed on Friday, May 6, for New Zealand, for two months, and may the time pass quickly, for his going leaves a noticeable gap in radio entertainment.

A NEW BAND ON THE AIR: The N.S.W. Tramways Band has been given a Studio engagement by 2FC, and will be heard in a selected programme on Thursday, May 19.

ST. CLEMENTS, MOSMAN: Is fortunate in possessing a very fine organist in the person of Mr. Arthur Massay, and Sunday, May 22, has been given up to the Service of the Church, with an organ recital to precede it from 6.30 to 7.15 p.m.

APPRECIATION of the descriptions of boxing contests at the Studio broadcast periodically by 2BL have recently been received from several outback listeners in New Zealand. Clear reception has been the feature of the descriptions, according to the letters received.

THE PRODUCTION at Hoyt's Theatre, Chatwood, of the musical comedy, "The Radio Girl" (by Rex Shaw), is to be broadcast by 2BL. The first act of the comedy will be broadcast on Wednesday, May 18, and the second act on the following night.

FREQUENTLY UNCLE GEORGE: who conducts 2BL's popular Birthday Club for youngsters, receives postal clubs offering payment for membership of the club. Uncle George wants all his young listeners to understand that the club is absolutely free. No payment at all is necessary, and every youngster who wishes to join is welcome.

ON WEDNESDAY, May 25, the entire programme provided by 4QG will be relayed from the Soldiers' Memorial Hall at Mr. Gravatt. Popular artists will assist and the evening promises to be a good one.

ANOTHER of the choral recitals which have proved acceptable to the majority of 4QG listeners will be relayed from the City Tabernacle, on Thursday, May 26, when the choir, under the leadership of Mr. Sydney May, will provide the programme. The recital will be followed by the relaying of an impromptu programme of music by the Brisbane Mundelpad Concert Band.

MR. GEORGE SAMPSON: who is conducting the Workers' Educational Association Tutorial Classes in music this year and is holding them in the Reception Hall at 4QG, has no less than five different parties of artists assisting him to illustrate his lectures. Each of these parties is composed of distinguished musicians and the efforts of these performers, as reproduced by wireless, have been something well worth while listening for.

4QG will go a long way afield on the night of Saturday, May 28, when it will be connected by land line with Murwillumbah (N.S.W.), so that the choral section of the Murwillumbah Musical Festival may be relayed. Remembering the recent relays from Nambour and Gympie, listeners may look forward with pleasure to the forthcoming broadcast from Murwillumbah.

Victorian Broadcasting

News and Notes

By Our 3LO Correspondent.

THE story of Victorian broadcasting for the past couple of weeks is really the story of the Royal visit. Every event of any importance has been described over the wireless with such detail that those absent from the city have been able to see the ceremonies through the eyes of trained broadcasters.

Notable among these was the University "rag," which was an unexpected addition to the dignified ceremony in the Wilson Hall. Although this latter, including the Duke's speech, was of great interest to the listening public, it was when the noisy but humorous "rag" broke out that the real "fun of the fair" started. I happened to meet Norman McCance in the Registrar's office a minute or two after it began. He was ringing 3LO furiously. Within a very few minutes, despite the difficulties, the mechanics from the studio had hurried up in a car and had connected up a long line which enabled McCance to follow the mad procession that had captured the Duke and to send over the air as fine a bit of humorous description that Victoria has known. I have heard many comments since, not only on the way the broadcaster did his work, but on the way in which 3LO jumped into an emergency.

Donald Maclean, new children's entertainer at 3LO Melbourne. (see letterpress on this page).

POPULAR CONCERTS.

On Anzac night the only entertainment in the city was the broadcasting in 3LO's studio. So great was the crowd seeking admittance that the street doors were closed, and only a secret pass word admitted.

I looked in a little after 8, and found the public space fully occupied. It was appropriately a Diggers' Night, and after the strain of the wonderful and moving march during the day, in which hundreds of thousands of citizens were enabled to participate through the excellent description of almost every move over the wireless, people seemed glad to listen to the lighter side of the war experiences of the men, especially the camp fire songs of the campaigns.

With a couple of bands playing martial music, and the familiar bugle calls echoing with thin sweatness through the studio and thence round Australia, it was easy to recall those years of war and to imagine the city once more full of khaki-clad warriors. For this is the magic and the province of music, to re-create emotions.

DONALD MACLEAN.

All children pass through the stage where the fairy stories are abandoned for tales of adventure and bravery, and 3LO's army of children listeners are of all ages. None is too young to appreciate the stories of Captain Donald Maclean, a new entertainer, during the children's hour of 3LO.

Captain Maclean chose for his opening entertainment the period of Drake and the Spanish Main. To the average child's mind there is no era in British history so enthralling, so adventurous and so romantic as the reign of Queen Elizabeth, he says, and the tales of buried treasure, fierce maritime battles, and England's pioneering navigators.

However, listeners should note that Captain Maclean's lectures and stories are not only of interest to children. Adults will find his tales just as enthralling. He has just returned to Australia after a lecturing tour in the British Isles, where he did much to popularise Australia and encourage immigration by means of a lecture entitled "Australia to-day." This lecture was given throughout the principal cities of England and Scotland under the auspices of civic authorities. "Though I had no

Miss Stephanie Deste to produce *Salome* on the Air at 3LO (see photograph on this page).

connection with Australia House, and received no payment from the Australian Government for my work, I claim that I have done as much as anybody to popularise Australia. On many occasions I have lectured to 3000 people at a time, and in my whole series of lectures I found that 'Australia to-day' was the most popular feature."

Captain Maclean's adventurous and varied career alone will endear him to children's hearts. Born and bred in the Australian bush, Donald Maclean has seen life from many angles. Bush missionary, navy person, city minister, army chaplain, traveller and lecturer and author are a few of his vocations. He is the author of several well-known books, "The Man from Curdies River," "John Scarlett," "The Luck of the Gold Moileire" are some of the most popular, and he has also gained popularity as a writer of short stories in the "Windsor," "Strand," "London," "Wide World," and other magazines.

"*SALOME*" ON THE AIR: That picturesquely personality and brilliant artiste, Miss Stephanie Deste, who plays an important role in "Rose Marie" at His Majesty's Theatre, Melbourne, has had a wish granted. When she first gave elocutionary recitals through 3LO she stated that "*Salome*" would make an excellent subject for broadcasting. 3LO, Melbourne, have now made arrangements for Miss Deste to produce Oscar Wilde's famous play with a cast selected by Miss Deste. A special orchestral accompaniment from the operatic version by Strauss will be a feature of the entertainment. A date has not yet been fixed for the recital.

Day and Night Reception in the Country

CESSNOCK.

Dear Sir.—I live in Cessnock, fifteen miles from Maitland, and experience poor night reception of 2FC and 2BL. I cannot make head or tail of 2FC's night programme (7 p.m. onwards). It is impossible to listen to any item in the whole of the night's programme. 2BL is also the same in this district, though not so bad as 2FC. Yours, etc.,

H.K.

Cessnock.

ALBURY.

Dear Sir.—My report on 2FC and 2BL reception is as follows:

Daylight: 2BL, very weak; 2FC, weak, but far better than 2BL.

Night: 2BL, very good and remaining constant throughout, with only few slight patches of fading. 2FC, only fair, fading troublesome, and also a characteristic mushiness that gives us the impression that they have wandered from their wavelength, this occurring for minute stretches at about five minute intervals. All other inter-State stations good, especially 4QG, and, of course, 3LO. Yours, etc.,

AERIAL.

Albury.

GRETA.

Dear Sir.—I am disappointed in the transmission from 2FC and 2BL. During the daytime these stations are only passable, and at night it is beyond me or any other listener-in that I know to get satisfactory results, as I have listened in to three, four and five valve sets of all makes and they are all the same. Yours, etc., D.E.S.

Greta.

GOULBURN.

Dear Sir.—In the daytime the Sydney stations are almost perfect, but at night they are absolutely impossible because of distortion, and I know that the majority of listeners in this part of N.S.W. are of the same opinion.

I was looking forward so much to the transmission of "The Mikado" but it was a bitter disappointment. I am sure that had Gilbert and Sullivan been listening they wouldn't have recognised their own opera, so there was nothing else to do but switch over to 3LO. This station and 4QG is always excellent at night, when there is no static. It seems such a pity that when 2FC's programmes are often so excellent we are debarred from hearing them.

Yours, etc.,

G.

Goulburn.

A selection of reports on country reception received from listeners in answer to a paragraph inserted in a recent issue of "Wireless Weekly"

NEAR AND DISTANT RECEPTION

Dear Sir.—I believe all the A class stations are efficient. As a close reader of "Wireless Weekly" and a lover of radio reception, I have deducted the following in respect to transmission in relation to distance (A class stations only).

Where the station is from 100 miles to 300 miles distant (approx.), daylight reception is clear and fading is almost absent. At night, however, there is constant fading and indistinctness.

On the other hand, where the station is above 400 miles (approx.) night reception is very good.

The change of seasons affects this deduction only slightly, that is, of course, relatively speaking when comparing each.

4QG on the Clarence River is very "wobbly" at night, while daylight reception is stable and distinct—distance approximately 150 miles. 3LC is excellent; distance 1000 miles (approx.).

Through "Wireless Weekly," in one of your issues last year, appeared reports made in respect to fading of 3LO. These reports were the results of special tests made approximately 100 miles east of Melbourne. They clearly showed that while good reception was available during the daytime, listeners-in invariably tuned-in to 4QG for a clear, distinct night's programme.

This statement will probably be helpful to a great number of listeners who justly complain of poor reception from neighbouring A class stations. As regards reception from 2BL and 2FC on the Clarence, I might add they are evidently much better from this distance—approximately, 350 miles, though quite secondary to 3LO. Yours, etc.,

G.J.C.

Woodford Leigh.

AVON DAM.

Dear Sir.—Reception of 2FC and 2BL is alright in daytime, but as soon as night sets in they are distorted and by the time they are tuned in, especially 2FC, they sound far away. I have only noticed this within the last couple of weeks. This is very hard on the worker, as he can only listen in at night.

Yours, etc.,

M.A.E.

Avon Dam.

QUIRINDI.

Dear Sir.—I am sorry to have to endorse the statements made by other correspondents regarding reception of 2BL and 2FC. I arrive at this conclusion by a very simple method, namely: I tune into Melbourne or Brisbane on my receiver, and then very quietly sit and listen to the programme without having to touch the receiver for an hour or two. If I tune in 2FC or 2BL I have to be in constant attendance at the dial; tuning and re-tuning, owing to distortion in the transmission. This occurs both in day and night reception. Yours, etc.,

F.W.E.

Quirindi.

HAMILTON.

Dear Sir.—I have a Browning-Drake set, but since 2FC altered its wavelength, I cannot get that station at night time for blur and distortion. I get all other stations, interstate as well, excellently, 2BL comes in excellently, but I think their programmes could be bettered. I think if they were interspersed with more musical, instrumental and band items they would be brought up to the standard of 3LO and 4QG. Too much of one thing, such as continual vocal numbers, soon tires one, and it is a pity that such a good station as 2BL should be passed over to listen to the interstate.

Yours, etc.,

G.J.B.H.

Hamilton.

SOUTHERN HIGHLANDS.

Dear Sir.—If reception as experienced by other correspondents is as bad as here on the Southern Highlands, then they have my sympathy. "Impossible" is the only word to describe it.

The affected area here, from enquiries made, extends from Barooga to Goulburn, a distance of 70 odd miles, and includes such towns as Mittagong, Bowral, Moss Vale and Bundanoon, etc. Daylight reception is good, so why this distortion should take place in certain localities, and only from Sydney, is a mystery. Evidently direction and darkness is in some way responsible for the phenomenon, but the main thing is the remedy, and this, in my opinion, lies solely in the erection of relay stations. One strong relay station, transmitting, say, from Katoomba, would give to all now affected an entirely different nightly service.

Yours, etc.,

F.H.P.

Bowral.

Radio to Make us Healthy

(Continued from Page Seven.)

good lectures. After a very little perseverance, they will find, to their surprise and growing delight, that on further acquaintance the only difference between good and bad music is that the good stands the test of time. The inferior article soon palls; the superior works give deeper pleasure the more often they are heard.

* * * * *

Life is not always full of energy and high animal spirits. Horse-play and care-free jollity, however customary amongst the young, can only touch the fringe of life. Sorrow, sickness, evil temptation, tragedy and death await each one of us in the brief passage from birth to the grave. No light entertainment helps a man when he first makes acquaintance with any one of those things. Then he comes in touch with the infinite, with the reality behind the show. Only the great in music and literature give consolation and courage to endure these mighty tests of character. Therefore, they ought to have due place in programmes designed to bring help and give pleasure to every home in this great nation.

— — — — —

On page 33 of "WIRELESS WEEKLY" of April 26th appeared an advertisement featuring the well-known Philips B400 valve. Underneath the block showing the cut section of the valve are published the characteristics, the last line reading: "Impedance (ohms) 13,000." We regret that this line was inadvertently included in the advertisement.

HAWAIIAN DUO: Lovers of that ever-popular form of musical entertainment, the Hawaiian steel guitar and ukulele, will welcome the news that two of the great players of these instruments are shortly to make their bow before the microphone in SLO. Frank and Francis Luiz, who have gained a world-wide reputation as Hawaiian entertainers, will be remembered by Melbourne theatre-goers for their delightful performance with the Hawaiian Troubadors at the Athenaeum Theatre, some few months ago.

— — — — —

In the last issue of "Wireless Weekly" we inadvertently listed the name of Manufacturers' Products Pty., Ltd., as exclusive selling agents for Clyde Batteries. This is not the case, as the Clyde Company distribute Clyde Batteries themselves.

PROOF:—

Results speak louder than words, BUT—

Words Prove This

Petersham,

12th April, 1927

Dear Sirs,

I desire to bring under your notice the splendid results obtained from the MINGAY SUPER THREE SET purchased from you on the 2/4/27. On an Indoor Aerial I have tuned in all the following Stations on the Loud Speaker:— 2KY, 2UE, 2GB, 2BL, 2FC, 3LO, 3AR, 4QG, 5CL and one New Zealand Station, 1YA, Auckland — every night they are working. I may add that this is the first Radio Set I have had.

Yours faithfully,

(Signature on application)

A Wave Trap 3 Valve Reinartz

A Receiver which gives full volume on distant stations.

Of recent weeks there has been a great demand by readers for an extremely selective three valve Reinartz receiver, and this article is in response to these requests. That it is selective, there is no doubt, and that it is extremely sensitive is also true, therefore we feel sure that it will be welcomed by all.

Last week's receiver, it will be remembered, was a three valve set with one stage of radio frequency amplification, detector, and one stage of audio frequency amplification, but this week the straight out detector and two stages of transformer coupled audio frequency are employed. To insure maximum selectivity a wave trap of the auto coupled series type is incorporated in the receiver. The many people living close to 2BL, 2FC, and 2GB will find this wave trap a boon.

The Reinartz form of reaction is reported to, in this receiver, as it is the best for simplicity of control. Instead of the set bursting into oscillation with a "pop" the Reinartz method is different. The reaction is gradually and smoothly brought into play by means of adjusting the small reaction condenser C3. This is simple and effective.

The front panel view shows three big dials which are for the three condensers. Although three condensers are required the main tuning control is the middle one, this condenser tuning the grid circuit of the detector. The condenser on the left governs the

wave trap, the right hand condenser being for the reaction control. From 200 to 800 metres are covered by this Reinartz, this being the range of all Australian and New Zealand stations excepting 6WF, Perth.

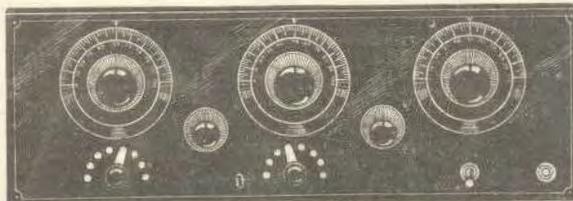

Two rheostats are provided, one for the detector valve and one to govern both audio valves. A selector switch for the wave trap is located under the wave trap condenser; under the grid tuning condenser is placed a selector switch for the aerial. Nothing has been left to chance, everything has been carefully worked out and the selector switches make allowances for different lengths of aerial.

The circuit is the standard Reinartz as may be seen in the diagram, this addition, of course, being the wave trap L1 which is tuned by condenser C1. The grid coil L2 is tuned by condenser C2, C3 being the reaction condenser. This condenser is of 17 plates; whereas both other variable condensers are of 23 plates, although no great harm would be done if all condensers were of 23 plates. The radio frequency choke may not be necessary if the first A.F. transformer is of the large core and large primary type. It was found advantageous in the receiver built by us.

The parts required are enumerated elsewhere in this article, and it behoves the constructor to remember that the valves should be adhered to strictly if the best results are desired. The Radionakes choke is of excellent design, but, if desired, this may be made at home. Obtain a piece of Dilecto or Radion or even fibre tubing 2½ inches long by 1 inch in diameter, and wind on this former 200 turns of the 36 gauge D.S.C. wire, neatly and evenly.

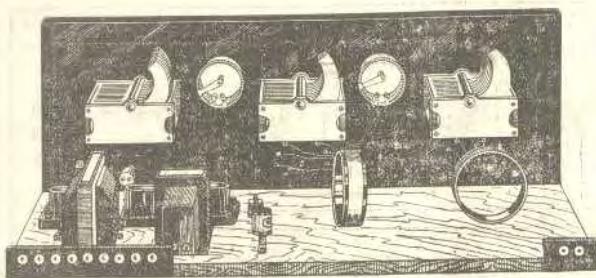

While in the winding humour, wind the coils. For this purpose the 3-inch tubing and the 36 gauge D.S.C. The construction of the coils is fairly straightforward, but it is admitted that extreme care is necessary in handling this thin gauge of wire. The coils must be wound reasonably tightly otherwise the wire is likely to slip. Drive a long nail into an old piece of board and slip the rest of wire over it. Fix a small spring in such way that it makes a rubbing contact with the bottom of the spool thereby creating a nice useful winding tension. The long spring from one of the Eveready refills is just ideal, and a nail through one end and into the board will hold it in position.

Don't make this tension too tight or the wire will break if pulled too hard. Watch out for kinks, as the wire will be weakened at the kink and any attempt to straighten it out usually results in a break.

The front panel.

You can Recharge a Philco for a few pence.

A back of panel view showing arrangement of component parts.

Wind coil L1—the wave trap—first. Make two very small holes 4 of an inch from the edge and thread the beginning of the wire through these holes and wind on 40 turns of wire neatly and evenly. Tappings are taken at the 5th, 10th, 12th, 15th and 20th turn. The method of taking tappings is simple. Hold the thumb over the last turn wound, that is the tapping turn, and pull an inch of wire from the reel, and twist into a loop, making several twists to prevent the loop coming undone later. When the coil is wound don't attempt to further twist the loops or it is likely that a break will be made. Don't be alarmed at these instructions, as they are for your guidance and are told you to avoid the consequences.

When this coil is wound proceed to wind the next coil—the grid coil, also the aerial-reaction coil, both being wound on the same former. The grid coil L2 consists of 40 turns of the same gauge wire, a tapping being made at 5 turns from the earth end as shown. The next coil (L3) of 20 turns is wound consecutively to the grid coil and is tapped at 3, 6, 8, 12, and 20 in the manner already prescribed. When finished winding wipe over the coils with a little shellac varnish. Don't smother the coils, only one wipe with thin varnish will keep every turn of wire in place. Keep the shellac off the loops or taps. This saves time when removing the insulation.

This insulation from the taps must, of course, be scraped off. Use a blunt penknife and carefully scrape each tap. Don't scrape too hard, just gently. Perhaps a small piece of fine sandpaper would prove efficacious instead of a penknife. When the insulation has been scraped off the taps perhaps it would be advisable to tin each tap at this stage. Heat up the soldering iron, and while it is heating apply a small portion of flux to each tap. Now with a nice hot, tinned, soldering iron, pick up a small quantity of solder and apply to each loop.

The solder should "take on" easily. Now leave these coils carefully on one side, out of harm's way, and prepare the panel.

PARTS.

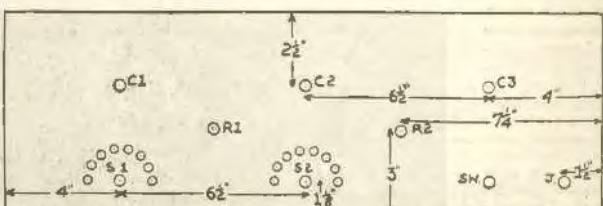

- 1-Dilecto or Radion Panel 21x7x 3-16.
- 2-23 plate (0005) Pilot Condensers 9129.
- 4-17 plate (0003) Pilot Condensers 9117.
- 2-30 ohms. Advance Rheostats.
- 1-B.M.S. Battery Switch.
- 1-B.M.S. S.C. Jack.
- 2-1-inch Arm Selector Switches.
- 4-Contact Studs and 4 Spans.
- 3-All American Valve Sockets.
- 1-Advance 5/1 A.F. Transformer.
- 1-Advance 33/1 A.F. Transformer.
- 1-00025 Wetless Grid Condenser.
- 1-2 meg. Leak.
- 1-Radiotek R.F. Choke.
- 1-Terminal Board.
- 2-Vernier Dials.
- 1-Baseboard, 20 x 9 x 1.
Busbar, Celatsite, Screws, etc.

The panel drilling diagram indicates the positions of the different parts. Compare this diagram with the front panel view for reconciliation

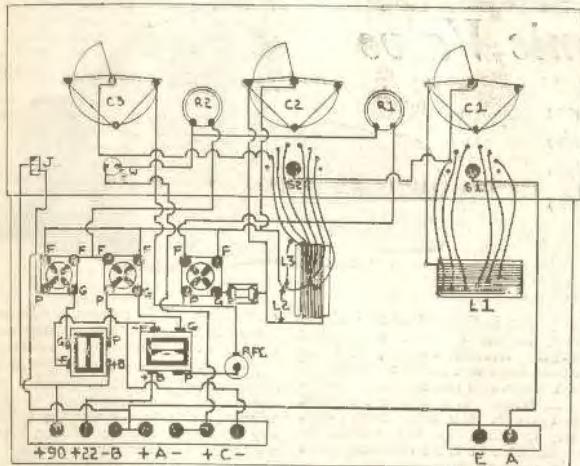

purposes. Lay the panel on the flat surface of a table or bench and centre punch each position. Only the spindle holes of the variable condensers are shown; with the Pilot condensers used in our set a drilling template is provided which shows the positions of the fixing screws. The radial switch arms recommended should be about 1 inch span, and it is advisable to drill the hole for these switches, and mount them, describing an arc in the positions of the contact studs. With a pair of dividers or compasses measure off the positions for each stud, each being $\frac{1}{8}$ ths. of an inch away from its neighbour. Switch stops may be included if desired, the positions for these will not take much determining. Watch carefully that no piece of apparatus fouls another piece. Drill all the holes, including three holes at the bottom of the panel for fixing the panel to the baseboard.

When drilled mount the parts. Begin with mounting the contact studs. Firmly fix each stud to the panel, tightening up the nut at the back securely. When this set was being built a friend presented the writer with a group of small magneto spanners, and they were found to be ideal for many wireless purposes. Get a set, they are very handy. Perhaps you have a friend who believes that "it is better to give, than receive." That is by the way, however.

The baseboard is the next consideration. Firstly fashion small brackets for fixing the coils to the baseboard. When this is being done get someone to square up the baseboard. Sandpaper it well and give it a couple of coats of shellac. Shellac varnish is easily made. Obtain sixpennyworth of dry orange shellac from the ironmonger and shake it into a large mouthed pickle bottle. Pour over it sufficient methylated spirits to cover it and shake well. Leave it overnight and in the morning you will have really good varnish. On examining it you will find that the top is of a nice light shade, varying in density as the depth increases. For the coils the top portion is required, but for the baseboard the shellac may be stirred up. Always keep this shellac well corked up, as by evaporation

The panel drilling template.

The wiring diagram.

all the methylated spirits will vanish, and remember that the cork always sticks. Wash out the brushes in some hot water and soda to prevent them "glueing up."

Screw the parts to the baseboard, noting that the transformers are at right angles to each other. Although the grid condenser is shown as having been mounted on the baseboard, actually it is mounted straight on to the grid of the valve socket. It will be seen too that the wave trap coil is placed at right angles to the grid-aerial-reaction coil. Gauge the distance from the positions of the variable condensers. Fix everything in position, then the set is ready for wiring.

Begin wiring by connecting up the taps from the coils to the contact studs. Follow out carefully the back of panel wiring diagram. Notice that the aerial switch joins the lowest or nearest stud on the wave trap selector. This is to permit the wavetrap being cut out of circuit altogether if desired. For all these connections use some flexible leads, such as Celatsite or spaghetti covered wire. Solder one end of each wire to the already tinned tap, then solder to the correct stud. Take the connections to the variable condensers, then wire up the filaments of the valves, the rheostats, then work back from the audio end. The terminal board is the last thing to be wired in, after which test out the receiver for continuity. Check everything over very carefully—compare with the circuit diagram

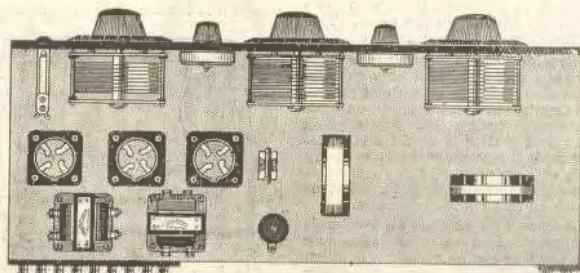

always—and take this further opportunity of understanding the circuit diagram. Connect up the A, B and C batteries. On the actual test Osram D.E.5 b valves were first tried. Being a 5 volt valve a 6 volt accumulator was used for an A battery, and was connected to the correct terminals. The detector valve had 45 volts as a plate battery, while 90 volts were applied to the two audio valves from the Volton batteries. A C battery of 45 volts functioned best as grid bias. When Mullard valves were used the detector voltage was lowered to 23 volts. Remember always to try different plate voltages to the different terminals, and also adjust the grid or C battery to maximum commensurate with results.

However, hook on the aerial and earth and plug in the loud speaker.

Set the left hand, or wave trap switch to the sixth stud, that is the stud which is joined to the aerial switch. This cuts out the wave trap from the circuit. Tuning with the middle condenser C2 bring in the local station to its loudest point. Bring around reaction condenser C3 until the set is just on the point of oscillation. Now move the wave trap selector switch back a point and tune with the wave trap condenser C1 until the signals from the local station are weakened. Find the weakest point—that point when a movement in either direction increases the strength of signal. If possible eliminate the station altogether. If this is not possible on the fifth stud try each successive stud in rotation, tuning each time with the first variable condenser.

The aerial selector switch is very easily adjusted. This is adjusted according to the wave length of the station being received. Perhaps you may hear 3LO, Melbourne, on stud 4 and 5CL, Adelaide, on stud 5. This can be determined for yourself and experience will show you just the best location. It may take a little bit of careful handling to understand the trap arrangement, but after all it is really very easy.

Within half an hour of this receiver being built it was possible to hear 4QG, Brisbane, on good loud speaker strength and 3LO, Melbourne, on medium strength. Adelaide, 5CL, was nicely heard, too, and no sign of the local stations was heard during reception of the interstate stations. A little careful adjustment of the trap was required, but one could always go back to the settings and find the same station. The aerial situated at Narrickville is 78 feet in length overall.

The baseboard layout.

The Thermionic Valve

The first of a series of three articles dealing with the functioning of that all important piece of wireless apparatus, the valve.

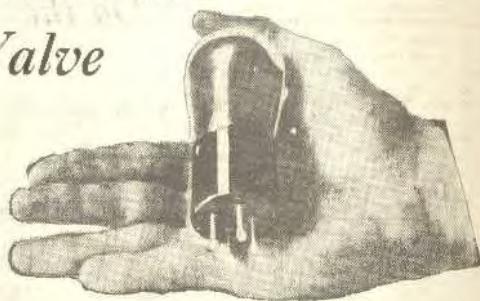

In spite of all that has been written with reference to the three electrode wireless valve it is astonishing to learn of the number of people who have no conception of how a wireless valve works. The correct understanding of the functioning of a wireless valve goes quite a long way to explain the theory underlying the principle of wireless, and, therefore, no one can proceed very far in this vastly fascinating subject without some knowledge of the theory of electrons—that most wonderful of all units of matter.

It must be understood that a complete treatise on wireless valves is not possible in these pages. The writer has an extensive collection of wireless books on his bookshelf and fully two-thirds of them deal with the valve itself entirely, so, please, be content with just a surface glance of this vast subject in the meantime.

Many people wonder where the definition of valve comes in with relation to the "Aladdin's Lamp of Wireless." A valve in a bicycle or motor tube, or a steam valve, is generally understood. In the motor tube the current of air passes in one direction, that is, from the outside to the inside and the valve prevents this air flowing back again. This is similar to a wireless valve, it allows the current of electrons to flow in one direction and not in the other. This will be explained fully later on.

Speaking of electrons, it may seem strange that it is necessary to discuss these little particles of negative electricity before anything of the wireless is understood. The electron theory of matter is of the utmost interest, but remember it is a theory only and has replaced many other previously convincing theories. Let us touch on it for a few moments.

Science tells us that all matter is composed of a number of minute particles known as atoms. The atom again may be split into much smaller particles of two different characteristics—the proton and the electron.

The proton is the central core of the atom, having a positive electrical charge. Around this proton or nucleus exist or revolve a number of electrons, which are of negative electrical value. Two different metals, for example, may differ from each other according to the number or arrangement of these electrons—that is, by the way, however.

A piece of lead, for example, which to the human eye looks a dull solid substance, is in reality made up of many millions of atoms—protons with electrons revolving around them just like the planets revolve around the sun. It is possible that there is an empty space between the protons and electrons and also between the atoms themselves, so what looks solid is really not.

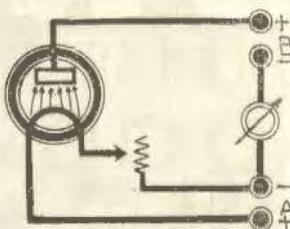

Now some of these electrons never venture far away from the core or proton, some, again, on the other hand, wander away altogether and may be shot through space at a marvellous velocity. Now, these electrons may be disturbed. A piece of copper wire, like all other substances, is comprised of atoms. When an electric current is applied to the copper wire great disturbances take place. We say that the current flows along the wire. Actually the electrons get quite excited and bump into the chap next to him, who in turn bumps into the next fellow, disturbing

everything. This process carries on right along the length of the wire and is known as the flow of current.

Suppose now we branch off on a different tack. Let us go back in the valve. The forerunner of the wireless valve to-day was the ordinary household electric bulb or lamp which was originally produced by that great American inventor, Edison. In the course of his experimenting with the electric bulb which we have to-day he noticed that after burning for a while a deposit of dark substance was registered on the glass of the vacuum bulb. Being of an introspective turn of mind, he set about investigating this phenomena, and as a result he placed a metal cylinder or plate or anode around the filament. He then found that this black deposit represented what we to-day know as electrons and, unfortunately, didn't investigate any further. It was left to Fleming to find the value of these electrons, and this he did.

In the course of his research he found that these electrons were produced by means of heating the tungsten filament and he discovered their property—that is, they were particles of what we know as negative electricity. Many and varied were the experiments he conducted, and as a result, found that electric current flowed from negative to positive, not from positive to negative, which heretofore was the accepted version. This he explained by the fact that positive ions attracted negative ions, a positively charged atom being a positive ion, and a negatively charged atom a negative ion.

Now, if an atom is properly balanced, it will consist of equal values in the proton and the electrons. If a few electrons are attracted from an atom, this atom, having lost some of its negative value, will become positive in its charge. Again, on the other hand, if the atom is "super-charged" with electrons, it will be of more value as a negative quantity than a positive quality. Now, nature is wonderful in the respect that it has a tendency to equalise all things

The Two Electrode Valve showing flow of electrons through valve, and Ammeter in circuit.

in value, so that if one atom is of a positive value, another atom must correspondingly have a negative charge. In the equalising law it appears that there is a tendency to balance all matter so that it was found that if a positively charged atom was in proximity to a negatively charged atom, the positive charged atom attracted the excess negative electrons from the negatively charged atom, thus equalising matters. To prove this, Fleming set about research.

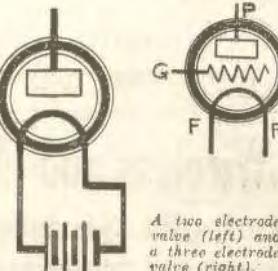

He placed inside the glass bulb a sheath or plate which encircled the filament, and he applied a positive to this plate. This positive charge was found extremely interesting.

It was found that when the filament of a lamp was heated to incandescence the free electrons were shot out into space in ratio with the heat of the filament. The hotter the filament up to a certain point the more the free electrons wandered away. By applying a positive charge to the plate, it was discovered that these free electrons were attracted to the positive charge on the plate, thus causing a current to flow. This current was measurable on a very sensitive instrument known as a galvanometer, and this is shown on the drawing produced. The greater the heat, also the greater the positive charge on the plate, the greater was the flow of electrons from the filament to the plate. Thus the two electrode valve was produced, and using this valve in the standard circuit known at the day, quite good results were obtained.

From this many deductions were made. It was known that as the current flowed only in one direction, a valve action was produced. If a negative charge was impressed on the plate no current flowed, proving that a positive charge was necessary to attract the current flow, thus showing that current flowed from negative to positive. This applies not only to valves, but to all electrical circuits. Thus we have the ordinary spark or induction coil with what is known as a spark gap. If two leads are taken from the beginning and end of the secondary winding of an induction coil and these leads are connected to two points close to each other. If when the secondary winding is charged inductively we have a flow of electric current between each point or ball. This flow is purely the balancing of the atoms, the electrons or negative particles of electricity, being attracted to the excessively positive charged matter, thus evening up the balance of things. We can see the current passing by means of a spark which is produced by the burning of oxygen and dust in the air between the two points. We will leave this subject now for this week. Next week we will proceed further and get an understanding of the three electrode valve as well known to-day in radio circles.

Do the Majority of Listeners want Dance Music ?

NOW that the "A" Class Stations in Sydney have altered their sessions by closing down at 11.0 o'clock each night, with the exception of a late night on Saturday, there is less dance music on the air, with the result that listeners are clamouring for dance programmes. They claim dance music after 10 o'clock is of little value to them, and they ask for it earlier in the evening. Broadcasting stations are dubious of carrying this out to any extent. It has to be remembered that the majority of listeners possess crystal sets, and are unable to work loud speakers, and a preponderance of dance music during the earlier part of the evening is not likely to be well received by head phone listeners. On occasions, however, when the evening is given up to a State-wide dance night, those listeners who do not care for dance music, realising the importance of the occasion, do not object to it. Such an evening is arranged for Tuesdays, May 17, when special dance programmes have been arranged. Mr. C. Faulkner, of the Radio Bureau Broadcast, at the request of the Girls' Realm, and in aid of Girl's Realm Week, which commences on Monday, May 18, has approached the various Stations and made arrangements for continuous dance music. 2FC advise they are starting at 8 o'clock, the famous 2FC Dance Band of ten members, including Len Maurice, whose vocal choruses with the band are so much appreciated. The band will play right through till 11.0 o'clock, giving groups of ten minutes each. During the intervals between dances, there will be time found to introduce studio items, but on that night dance lovers will have a feast of music.

A two electrode valve (left) and a three electrode valve (right).

Several of the leading papers took a plebiscite last year, with the result that band and dance music were very high in the list, and shared that place with church services. Sporting results occupied a very modest place lower down on the list, side by side with classical music.

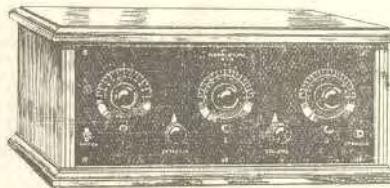

Now we are told sporting men do not worry to write about these things, and for the same reason lovers of classical music are very reticent in expressing their views, whereas, the lover of jazz or popular music is insistent in his claims, and would be quite happy to have dance programmes of this nature to the exclusion of everything else. It is very hard to know exactly what is the feeling of the masses. The columns of this paper are open to a discussion on the matter. Can we not stir into action those listeners who detest noisy music, and who, in the privacy of their own homes, and to their friends, continually remark on the preponderance of popular items in broadcasting programmes? Cannot they be induced to write to the Stations? Listeners' letters are the only tangible evidence of their wishes, and when 2FC, after the description of the arrival of the Duke of York, received nearly 3,000 letters within ten days, they knew had pleased the great majority. If 3,000 unanimous letters are received on one subject only, it is surely proof that general satisfaction is felt everywhere, but if in one week's correspondence, not more than two or three complaints are voiced against a broadcasting programme, is not the Station at liberty to believe it meets with the approval of the majority?

A FEW DAYS AGO Mr. Lyons, resident magistrate of Samarai, visited 4QG and was loud in his praise of the station. In the course of his remarks he stated that 4QG is the most popular broadcasting station with the people of the Pacific Islands. He specially mentioned the broadcasting of copra quotations, which information is of vital importance to the copra growers, not only at Samarai, but throughout the Pacific Islands. 4QG aims at developing the utility side of radio to a high standard, and though the station is chiefly concerned with providing these facilities for Queensland listeners, as an act of grace, requests made by copra growers, as indicated above, have been acceded to.

THE NEW AND IMPROVED WONDERTONE IV. HOME CONSTRUCTION RECEIVER

is the result of exhaustive experiments to place before the Australian public a Receiver that does not require any technical knowledge whatever to build. With our new and simple building instructions, a boy of 7 can build it. Furthermore, the circuit employed is especially designed for the combination of simplicity of Control—Distance—Volume—Clarity—and Selectivity. No jamming of Stations with the new and wonderful "Wondertone" H.C. IV., and no special tools are required, only a screw-driver and pliers. The connecting wires are all cut and prepared to the required lengths, and by following the instructions it is impossible to make a mistake.

Easy to Build

Easy to Use

Illustration of a completed "Wondertone" H.C. IV. Receiver.

| | Complete Parts ready to build. | Assembled, wired and tested ready for use. |
|--|-----------------------------------|--|
| "Wondertone" H.C. IV., parts ready to assemble, with 60 Ampere Hour Accumulator | £19 17 6 | £21 17 6 |
| "Wondertone" H.C. IV., parts ready to assemble, with Dry Cell "A" Battery | £17 12 6 | £19 12 6 |

Loud Speakers, suitable for above from 23 6 to £6 10/-.

The Components include everything necessary for a complete Receiver, such as Polished Maple Cabinet, Bakelite Panel, drilled and engraved, heavy duty "B" Battery, Accumulator or Dry "A" Battery, "C" Battery, "B" Battery, Voltmeter, Hydrometer (for Accumulator), Headphones, Battery Connecting Cable and Aerial Equipment, Blue Print Diagram and Building Instructions.

BROADCASTING PROGRAMMES for the COMING WEEK

Friday, May 13

2FC, SYDNEY

Farmer's Broadcasting Service.

Wave Length, 442 Metres.

MIDDAY SESSION

- 12 noon.—"Big Ben" and announcements.
- 12.15 p.m.—Stock Exchange, first call.
- 12.30 p.m.—Official weather forecast, rainfall, temperature, general memoranda, shipping intelligence, mail services.
- 12.35 p.m.—Studio music.
- 12.45 p.m.—Summary of "Sydney Morning Herald" news service and cables.
- 12.55 p.m.—Rugby wireless news.
- 12.48 p.m.—Studio music.
- 12.55 p.m.—Miss Ida Johnstone, soprano.
- 1 p.m.—"Big Ben." Weather intelligence.
- 1.15 p.m.—"Evening News" midday news service.
- Producers' Distributing Society's Report.
- 1.20 p.m.—Studio music.
- 1.28 p.m.—Stock Exchange, second call.
- 1.30 p.m.—Marching music for school children.
- 1.40 p.m.—Studio music.
- 1.45 p.m.—Miss Ida Johnstone, soprano.
- 1.50 p.m.—Studio music.
- 2 p.m.—"Big Ben." Close down.

AFTERNOON SESSION

- 2 p.m.—"Big Ben" and announcements.
- 2.30 p.m.—Mr. Michael Brien, baritone: "My Dreams" (Postil).
- 2.45 p.m.—The Neapolitan Duo: Mr. Len Gikanian, mandolin, and Mr. Charles Backstrom, steel guitar; (a) Duet, "Mimone" (Nicholle), (b) Mandolin solo, "Serenade" (Selchetti).
- 3 p.m.—Studio music.
- 3.25 p.m.—Mr. Michael Brien, baritone: "Patria" (McGill).
- 3.30 p.m.—Marching music for school children.
- 3.40 p.m.—FROM FARMER'S TEA ROOMS: Miss Muriel Humphries, contralto: "Come Close to Me" (Caruso).
- 3.45 p.m.—A talk by Bertie Cook and Report from Mrs. Ruth Purvis.
- 4 p.m.—FROM FARMER'S TEA ROOMS: Miss Florence Grant, soprano: "The Moonlit Road" (Squire).
- 4.30 p.m.—The Neapolitan Duo: Mr. Len Gikanian, mandolin, and Mr. Charles Backstrom, steel guitar; (a) Duet, "I'm Reckless" (Huber); (b) Steel guitar solo.
- 4.45 p.m.—Studio music.
- 4.50 p.m.—FROM FARMER'S TEA ROOMS: Miss Muriel Humphries, contralto: "The Sweetest Flower that Blooms" (Hawley).
- 4.55 p.m.—Studio music.
- 4.58 p.m.—FROM FARMER'S TEA ROOMS: Miss Florence Grant, soprano: "Home is Where" (MacKenzie Murdoch).
- 4.45 p.m.—Stock Exchange, third call.
- 4.47 p.m.—Studio music.
- 5 p.m.—"Big Ben." Close down.

EARLY EVENING SESSION

- 5.45 p.m.—The Chimes of 2FC.
- 5.55 p.m.—The "Hello Man" talks to the children.

- 5.30 p.m.—A serial story, "Davie's Big Brother."
- 6.00 p.m.—Dinner music.
- 7 p.m.—"Big Ben." Late minute sporting information by the 2FC Racing Commissioner.
- 7.10 p.m.—Dulcetly's Market Reports (wool, wheat and stock).
- 7.15 p.m.—Fruit and Vegetable Markets.
- 7.20 p.m.—Weather and Shipping Intelligence, Stock Exchange.
- 7.25 p.m.—Late "Evening News" news service.

NIGHT SESSION

- 7.45 p.m.—Programme announcements.
- 7.50 p.m.—Studio music.
- 8 p.m.—Mr. Francis Halls, basso.
- 8.45 p.m.—Mr. Clyde Thorpe, violinist: "Spanish Dance" (Rehfeld).
- 8.55 p.m.—Miss Peggy Dunbar, contralto: "Singing On" (Bryant).
- 9.15 p.m.—Mr. Graham Kent will commence a series of Friday night Bridge Pictures.
- 9.25 p.m.—Mr. Francis Halls, basso.
- 9.35 p.m.—Mr. Clyde Thorpe, violinist: "Meditation Thais" (Massenet).
- 9.45 p.m.—Miss Peggy Dunbar, contralto: (a) "Pour la Cloche" (Mallinson). (b) "Ye, Ye, Ye" (Burns).
- 10.15 p.m.—Mr. George Searle, comedian.
- 10.30 p.m.—Mr. Michael Brien, baritone: (a) "Gerardo's Monologue" from "Andrea Chenier" (Gianandrea).
- (b) "The Birth of Morn" (Leoni).
- 10.45 p.m.—Mr. Clyde Thorpe, violinist: "Perpetuum Mobile" (Severini).
- 9.30 p.m.—Miss Peggy Dunbar, contralto: "The Moonlit Road" (Grainger).
- 9.45 p.m.—Mr. George Searle, comedian.
- 9.55 p.m.—Mr. Francis Halls, basso.
- 10.17 p.m.—FROM THE THEATRE ROYAL, SYDNEY: The Second Act of the new Comic Opera (by permission of J. C. Williamson Ltd.)
- 10.30 p.m.—"PRAQUITA."

featuring Miss Muriel Humphries and Herbert Brown.

MUSICAL NUMBERS, ACT TWO, SCENE

"The Night Cabinet";

"El Tango," Sylvia Miller, Alexa Dollhoff.

"The Return of the Legion," Marie Burke, Chorus, Gentlemen and Ballet.

RADIO

IN AUSTRALIA
& NEW ZEALAND.
Incorporating Sea, Land and Air.

REORGANISED

TO APPEAR AS A MONTHLY
Next Issue Next Week

- Watch the bookstalls and newsagents for the striking cover design of the new "Radio" to appear as a monthly early in May.
- It will contain 80 pages (exactly twice the size of the present issue) of interesting and informative articles for radio enthusiasts of all classes, from the beginner to the amateur experimenter.
- Among the features will be a long article by SENATORE GUGLIELMO MARCONI, written specially for "Radio." It will be the first article by the world famous scientist to be published in Australia, and will describe the early experiments which led to the perfection of the beam system of transmission.
- For the broadcast listener J. G. Reed, assistant chief engineer of Amalgamated Wireless, will give the constructional details of a new ultra-selective, soft-toned, distance-getting receiver, the result of a year's experimenting. Attached to the set is a battery eliminator enabling the whole of the power to be drawn from the electric light mains.
- C. D. MacCuran writes for the amateurs whose interests are dealt with in a large Amateur section. An article describing the construction and installation of a small low power, short wave transmitter and receiver will also be published.
- A dozen other articles dealing with all phases of radio broadcast activity are under preparation.

supplied by "The Telegraph."

12.00 p.m.—Close Down.

EARLY EVENING SESSION.

5.0 p.m.—"Daily Standard" News; Weather
Information Announcements.

6.30 p.m.—Bedtime Stories by "The Sand-

man."

7.00 p.m.—Market Reports; Stock Reports.

7.30 p.m.—Weather News; Announcements.

7.45 p.m.—Standard Time Signal.

NIGHT SESSION.

W.E.A. MUSIC CLASS.

The Workers' Educational Association's
Tutoral Classes in Music are being held
this season in the Recreational Hall at 4QG,
and are being conducted by Mr. George
Sampson (Musical Adviser, Department of
Public Instruction; Lecturer in Music
Teachers' Training College).

The object of holding these classes at 4QG
is to broaden the interest and
the mind, and to make available to large
numbers the educational material placed before
the students. The classes will extend over
a period, and will be held each Friday
night.

The ordinary lecture, which is usually given at 7.45 p.m., will be dispensed with,
and the classes will begin at that hour.

The tutor, Mr. Sampson, will lecture during
the first portion of each evening, and
charmer music will be played after each
lecture.

7.45 p.m.—From the Reception Hall: W.E.A.
Music Class.

8.0 p.m.—Week-end road information for
Motorists, officially supplied by the Royal
Automobile Club of Queensland.

SILKSTONE APOLLO CLUB.

The second portion of the programme will
be provided by the Silkstone Apollo Club
(Conductor, Mr. Westwood), and will
consist of vocal and duet work.

9.15 p.m.—Silkstone Apollo Club Concert.

10.00 p.m.—"The Daily Mail" News; Football
News; Weather News.

10.30 p.m.—Close Down.

5CL, ADELAIDE

Central Broadcasters, Ltd.

Wave Length, 395 Metres.

Friday.

MORNING SESSION.

12 noon—G.P.O. chimes.

12.15 p.m.—Recitals on the New Reproducing
Singers and the Autotone Reproducers.

12.30 p.m.—"Advertiser" news service.

12.50 p.m.—Market reports.

1.00 p.m.—G.P.O. chimes.

1.15 p.m.—Musical programmes continued.

2.00 p.m.—G.P.O. chimes and close down.

AFTERNOON SESSION.

3.00 p.m.—G.P.O. chimes.

3.15 p.m.—From the Maple Leaf Cafe—Orches-

tral selections.

3.45 p.m.—From the Studio—Musical Items.

4.00 p.m.—G.P.O. chimes.

4.15 p.m.—From the Arcadia Cafe—Orches-

tral selections.

4.45 p.m.—Station announcements.

5.00 p.m.—G.P.O. chimes and close down.

EVENING SESSION.

6.00 p.m.—G.P.O. chimes.

6.15 p.m.—Dinner music by the Covent Garden
Orchestra.

6.45 p.m.—Bedtime stories.

7.30 p.m.—Market reports.

7.45 p.m.—Sporadic talk by "Metropolitan."

8.00 p.m.—G.P.O. chimes.

8.15 p.m.—Malcolm Reid's Orchestra.

8.15 p.m.—Tenor solo, Mr. R. Sims.

8.15 p.m.—Malcolm Reid's Orchestra.

8.35 p.m.—Soprano solo, Miss Joy Watson.

8.45 p.m.—Malcolm Reid's Orchestra.

DESIGN AND CONSTRUCTION

The design and placing of the three fundamental elements in the Redtop valves are perfectly symmetrical, thereby allowing no opportunity for escape of the electrical energy.

The construction of the Redtop valve eliminates vibration. Anchored supports at both the top and the bottom are the reasons.

This construction makes Reception clearer, and it does away with valve noises and brings in purer tone quality.

All the interior elements are thoroughly anchored and welded together, which keeps the relative spacing of the parts uniform under all ordinary conditions of shipping and use, promoting reliability and uniformity.

Inspections during construction and on completion are thorough and rigid. This means every valve is inspected four times before it receives our seal of approval, which is the application of the Redtop coloring.

There is a Reason why **Redtops ARE Better**

INSTRUCTIONS FOR USE

Filament or "A" battery is best of 6 volt storage type, especially if more than one valve is used, although 4 dry cells in series for one valve will ordinarily give 60 to 70 hours service before becoming exhausted.

A rheostat should be used of 25 to 40 ohms resistance when controlling one valve. For controlling more than one valve this resistance can be cut down proportionally, say, to 10 ohms.

In the detector circuit as this valve has a high vacuum, or is "hard," frequently best results will be obtained with plate or "B" voltage as high as 45. The most efficient voltage should be determined by trial of the particular set.

In the amplifier circuit 50 volts are found to be generally satisfactory, as greater amplification is obtained at the higher voltage. Greater life of filament and usually purer tone are obtained by heating the filament at the lower temperatures, giving a better result. However, when a 6-volt battery is used, the filament will not be damaged at full voltage.

Saturday, May 14

2FC, SYDNEY

SUNDAY AND AFTERNOON SESSION

12 noon—"Big Ben" and announcements.
12.5 p.m.—Studio music.
12.10 p.m.—Official weather forecast, rainfall, temperatures, astronomical information, ship-mail intelligence, mail service.
12.20 p.m.—"Hello" of "Sydney Morning Herald," news service.
12.35 p.m.—Radio wireless news.
12.40 p.m.—Studio music.
12.45 p.m.—A Talk on Gardening by Mr. G. J. Lockley ("Redgum").
1 p.m.—"Big Ben," Weather intelligence.
1.3 p.m.—"Evening News" midday news service.
2.20 p.m.—Studio music.

NOTE: Rosehill racing events will be described and run direct from the Course. For the 2FC races running direct from the Course, the 2FC will broadcast from the 2FC. During racing intervals, musical items will be given from the Studio, including Mr. Tom Foggett in piano syncopation. Also the New Wentworth Symphonic Dance Orchestra, under the baton of Mr. Frederick Leighton, will be heard in popular numbers at intervals between 2 p.m. and 3 p.m.
4.30 p.m.—A complete round-up of the day's Sporting and Racing Events.
4 p.m.—"Big Ben." Close down.

EARLY EVENING SESSION

6.15 p.m.—The Chimes of 2FC.
6.50 p.m.—The "Hello" talk to the children.
6.59 p.m.—A serial story, "David's Big Brother."
7.10 p.m.—Dinner music.
7.15 p.m.—"Big Ben." Late sporting information.
7.18 p.m.—"Evening News" late news service.
7.25 p.m.—Studio music.

NIGHT SESSION

7.45 p.m.—Programme announcements.
7.50 p.m.—Studio music.
8 p.m.—"Big Ben." The 2FC Dance Band in popular numbers, with Mr. Len Maurice, baritone.
8.20 p.m.—Miss Eileen Royal, contralto: "The Temple Bath" (Finland).
8.12 p.m.—Mr. Tom Rea, trombone solo.
8.15 p.m.—The 2FC Dance Band (conductor, Mr. Eric Pearce) and Mr. Len Maurice, popular baritone.

8.25 p.m.—Miss Kitty Poole, soubrette.
8.29 p.m.—Montgomery Stuart and Miss Myra Leard in comedy sketches.
8.36 p.m.—The 2FC Dance Band.
8.42 p.m.—Miss Persia Butter, soprano: "At Night" (Rachmaninoff).
8.45 p.m.—Mr. Tom Rea, trombone solo.
8.50 p.m.—Miss Eileen Royal, contralto: "The Sands of Doe" (Clay).
8.54 p.m.—Mr. J. Lance's troupe of Hawaiian instrumentalists from the "Sun," "Sierra."
8.57 p.m.—Mr. Frank Leonard, comedian.
9.10 p.m.—The 2FC Dance Band in popular numbers.
9.15 p.m.—Mr. Tom Rea, trombone solo.
9.20 p.m.—Miss Eileen Royal, contralto: "Violets" (Nom).

PRICE — QUALITY — SERVICE

Is repeated in respect of the

BURNDEPT ETHOVOX LOUD SPEAKER.

In support of this statement we submit the following unsolicited testimonial.

It is a commonplace thing to see the expression "unsolicited testimonial," but this opinion, quoted below, was not only unsolicited, but unsuggested.

Sydney, 5th May, 1927.

Messrs. Johnson & Phillips, Limited,
Clarence Street,
SYDNEY.

Dear Sirs,

I am pleased to say that your "Ethovox" Loud Speaker has proved entirely satisfactory.

The reproduction of broadcast items, when using the "Ethovox", is so near to perfect that it is almost impossible to believe that one is receiving broadcasted matter, the quality of the music and speech being so faithfully reproduced as to be equal to the original interpretation of the various items inside the broadcast studio.

I have never previously tested a Speaker that gave such good results. The tonal quality, absolute absence of resonance, and the reproduction of exceptionally fine and undistorted music and speech, brand the "Ethovox" as the "Super-Speaker" of to-day.

Yours faithfully,

(Sgd.) W. A. HOPKINS,
M.W.L.A.

in Seven Superb Models**

Now that Broadcasting has awokened such an intense national interest, it is only natural to find that Loud Speakers, in common with many other commodities, Radio or otherwise, must be produced in a variety of types at prices that will be within the reach of all. It is for this reason, therefore, that there are now available seven superb models of **Brown** Loud Speakers.

Of all the Loud Speakers on the market to-day, the **Brown** is unique, because, by a brilliant application of an entirely original principle, it achieves results which can be obtained in no other speaker. **Brown** principles of design and construction can be found only in **Brown** Loud Speakers. The famous tuned reed mechanism, which permits the use of a supersensitive cone-shaped aluminium diaphragm as thin as paper, is responsible for a tonal purity and mellowness which must be heard to be fully appreciated.

Obtainable from all Radio Dealers.

PROVEN RELIABLE IN THE HANDS
OF THOUSANDS OF SATISFIED USERS

PHILIPS

New Natural-tone LOUDSPEAKER

With Patented Balanced Magnet System
and floating cone, giving fidelity in repro-
duction beyond compare.

Popular H.T. SUPPLY UNIT

Which eliminates "B" Batteries for all
time. Providing power for your Radio
from the Light Supply, costing but a few
pence per week.

RADIO BATTERY CHARGER

Giving full-wave rectification not possible
in ordinary Chargers and is fool-proof,
silent, and simple to connect. Charges 2,
4, or 6-volt batteries at 1.5 amps. without
attention.

B409

A NEW GENERAL PURPOSE VALVE!

A 409 MINIWATT

Companion to the Famous B406

A magnificent Detector, R.F. and 1st Audio 4-volt Valve—yet requiring a filament
current of only .05 of an ampere!

YOUR BATTERIES LAST NEARLY TWICE AS LONG!

The A409 (companion to the B406) constitutes still another triumph for Philips Laboratories.
There is no other Valve taking such minute current that gives the same undistorted output.

USE IT IN ANY POSITION.

But we commend the B406 for last Stage Audio.

For even greater volume and full round tone use the—

B403—4V. POWER VALVE

This requires but 15 amps. on the filament and is able to
handle without distortion sufficient energy to operate any
speaker at full volume.

**INSIST ON PHILIPS THEN CHOOSE
THE VALVE FOR THE JOB.**

AT ALL DEALERS

"Come on over! It's coming in great tonight!"

Much excitement in the family when the New Broadcast Receiving Set picks up broadcast from other States. Who would want to leave home when the whole world comes singing, playing, talking to your Drawing Room?

The home of the right Radio Equipment is never dull, never monotonous; and young people deserve all the fun they can get out of Radio, even to the jolly music of a fine orchestra in the next State.

| | Cash Price. | Deposit. | Weekly. |
|-------------------------|----------------|----------|---------|
| Two-Valve Colmoxox .. | £16/10/- | £3/8/- | 5/6 |

No. 1450 RESISTANCE.

Amplifier Kit £2/14/-

The only real advance claimed by the makers of this year's best Sets is improvement in tone performance. This improvement can be made in your present Set by simply adding the Centralab Modu-Plug. It replaces the loud speaker plug and gives any degree of tone volume, from a whisper to full strength, by simply turning the small knob on the plug. It reduces interfering noises and gives faithful reproduction.

Do away with all out-of-date and inefficient methods of oscillation and volume control. Use CENTRALAB RADIOHMS. Incorporated in any radio circuit, they give improved efficiency and ease of control. Can be varied noiselessly from zero to maximum range, and are absolutely noiseless in operation.

TWO FAMOUS STARS! WALLACE BEERY Paramount Star in "OLD IRONSIDES"

and
JEFFERSON
 Audio Frequency Amplifying Transformers
Best by Test

AGAIN Jefferson Transformers have achieved well-earned leadership! For the first time in the history of motion pictures, radio was employed in the direction of sea battle scenes when James Cruze broadcasted instructions for the movements of 50 old-time sailing frigates in "Old Ironsides," a Paramount Picture; and JEFFERSON Super-Sensitive Amplifying Transformers were used in all the receiving sets.

Because of the necessity of receiving clear directions from Director Cruze above the din of the sea battle, JEFFERSON Transformers were employed in every receiving set on the vessel.

Obtainable from all Reputable Radio Dealers

SOLE AUSTRALASIAN AGENTS:

Fox & MacGillycuddy Ltd.

DAILY TELEGRAPH BUILDINGS, KING STREET, SYDNEY

Use T.C.C. Condensers

T.C.C. Condensers are tested to a voltage many times greater than they will ever have to withstand in ordinary wireless use. They are absolutely guaranteed against breakdown, and to be within 10 per cent. of their rated capacity. If it's a T.C.C. Green Condenser you can absolutely depend on it. All sizes from .0001 to 5 m.f. Obtainable from Radio Dealers all over the World.

Waltz, "Dandia" (Nichols).

Intermezzo, "Rose Garinda" (Raymond).

Scotch Romance, "The Piper's Wedding" (Thayne).

**"Good Enough!"**

A bull holding a red flag is sweet-tempered in comparison with my wrath when someone excuses bad or unfinished work with the excuse, "It's good enough!"

Of all the accursed things which sap manhood, destroy pride in work, sow mistakes, ruin business and cause disease of the backbone, this phrase is the worst. It is more destructive than bad whisky!

To my way of thinking, the man who shirks his work is only a degree or so better than the one who puts money from the till into his pocket. He is robbing his employer every time.

One of the worst results of this "Good enough" policy is that some of the men who believe in it cannot shake themselves free when they become managers, and the sequel is that the evil spreads throughout the business and may put it on the rocks if not stopped.

If you want an illustration of the exact opposite—the Never Good Enough policy, read up the story of the Burgess Battery Company. It is a mental shower bath.

When the Burgess Company had evolved, at great cost, the finest dry cell battery ever made, they went right on month by month and year by year trying to improve it. They established research and engineering laboratories with highly-paid experts and they enlisted the co-operation of the foremost radio engineers, manufacturers and experimenters in the United States.

The result has been that every Burgess Battery is as perfect as brains and money can make it. Every battery is tested before it leaves the factory and the discovery of a bad battery would cause an upheaval resembling a Mississippi flood.

There is no accident in the fact that the United States navy, the Canadian Government, the great Atlantic liners, and the foremost airmen and explorers all use Burgess Radio Batteries. It is the reward of the Never Good Enough policy.

Australian radio users have discovered the Burgess Battery to such an extent that New System Telephones Pty., Ltd., of 280 Castlereagh-street, Sydney, have had to use the cable to keep abreast of the demand. Every month a brand new supply of Burgess Batteries reaches Sydney and goes out all over New South Wales. goes out all over New South Wales.*

"Friendship"; contralto solo, "Big Brother" (Garrett), Miss F.; harp solo, "The Bells of Shandon" (Old Irish); Mrs. G.; tenor solo, selected, Mr. J.'s intermezzo, "Flirting Fancies" (Foss), by A.; male quartette, "The Mellow Melon" (Blechardson), by the D.  9.41 p.m.—Songs.
 9.45 p.m.—Cheerio Talk.
 10 p.m.—Close down.

Here's a peculiar fact about Radio Insulation

MATERIAL that is satisfactory for general electrical use often gives poor results in radio-frequency service. Experience has shown that best results come with the use of material and apparatus designed especially for radio's peculiar demands. This is particularly true of insulating material.

Radion is a special material, developed to order by our engineers to meet the needs of radio. For radio-frequency in-

sulation its characteristics are highest, as shown by authoritative laboratory tests.

The use of the most efficient insulation material is important not only for panels but also for dials, sockets, knobs, binding post panels, rotors, stators, spaghetti tubes, etc. In all these there is a Radion product of the right type and size for your set. Radion is also used by leading set manufacturers who appreciate the superiority of "the supreme insulation."

Radion Tubing

Supreme for any coils. The Famous Airzone Coils are now wound on Radion, 2in., 8d.; 2½in., 9d.; 3in., 10d.; 3½in., 11d.; 4in., 1½ per inch.

Surface Leakage very low with Radion Panels.

The high polished, satin-like finish of Radion Panels prevents moisture from gathering to form leakage paths and ensures leakage to ground, surface leakage and dielectric absorption are exceptionally low.

Radion Panels resist warping. They are easy to cut, drill and saw. They do not chip. No special tools needed. Eighteen stock sizes, two kinds, Black and Mahogany.

Radion Sockets eliminate Capacity Effects.

The utmost protection against leakage and losses is provided by Sockets made of Radion No. 2 Sheet, Lined with Tin. Threaded metal bushings mounted in the socket insure positive contact between terminal points. The collar with strong layout lock eliminates the capacity effects.

 7.45 p.m.—Standard Time Signal.

NIGHT SESSION.

W.E.A. MUSIC CLASS.

The Workers' Educational Association's Tutorial Classes in Music are being held this season in the Reception Hall at 4QG, and are being conducted by Mr. George Sampson, Musical Advisor, Department of Public Instruction; Lecturer in Music, Teachers' Training College.

The object of holding the classes at 4QG is to broadcast both the lectures and the music, and so make available to a large audience the educational matter placed before the students. The classes will extend over a period, and will be held each Friday night.

The ordinary lecture which is usually given at 7.45 p.m., will be dispensed with, and the classes will begin at that hour.

The tutor, Mr. Sampson, will lecture during the first portion of each evening, and chamber music will be played after each lecture.

The following artists will illustrate Mr. Sampson's lecture to-night: Miss Vada Jefferies (first violin), Miss Larwill (second violin), Miss Gwen de Groot (viola), Miss Mary Jefferies (cello), Miss Colledge (piano).

7.45 p.m.—From the Reception Hall: W.E.A. Music Class.

9.0 p.m.—Week-end Road Information for Motorists officially supplied by the Royal Automobile Club of Queensland.

- 9.15 p.m.—SILKSTONE APOLLO CLUB: The second portion of the programme will be provided by the Silkstone Apollo Club conductor, Mr. T. Westwood; Male chorus, "Salon Chorus" (from "Fruit Growers' Apollo" Club); tenor solo, "Mary of Aragye" (Nelson); Mr. T. Westwood; male chorus, "Softly, Softly Over the Sea" (Percival); Apollo Club; evolutionary item, selected, Mr. D. Owen; male chorus, "The Volga Bather's Song" (Granville Bantock), Apollo Club; baritone solo, "My Wish Is You" (Marie Little).

The Resco Neutrodyne!

We have made great claims for our wonderful set, and we are pleased to say that all our claims have been substantiated.

Hundreds of satisfied users have written telling us of the wonderful results achieved by the Resco Neutrodyne.

Read what Mr. Stanley Brett, of Thangool, Queensland, says:—

"I am getting wonderful results with the Resco Neutrodyne receiver. I will give you a small list of stations that I have already logged on the loud speaker:—IYA, 4YA, 5KA, 5DN, 5CL, 3LO, 3DB, 3AR, 2FC, 2BL, 2GB, 2KY, 2UW, 2UE, 2EE, JOCK (Japan), and many amateurs. . . . I am well satisfied with these results, considering the price. There is one set in this district which cost £82/-, and for distance getting this Neutrodyne has 'put it across' the more costly set."

This is typical of many letters which we have and you are invited to come and see them for yourself.

Rear the Resco Neutrodyne at our showrooms or in your home.

You Can't Blame The Set

For some time I'd had trouble with my set, and yet everything seemed O.K. James, my neighbour who is something of a connoisseur when it comes to radio batteries, advised me to replace the inferior ones I had been using with Ever-Ready long-life batteries.

Well! I've learnt to depend on my Ever-Ready Batteries—the two I have are still going strong after 9 months' service. What more could you ask?

The "Standard" Dry Cell Radio Battery

Price, 3/-.

The Ever-Ready Radio "Standard" Dry Cell, as illustrated, is fitted with two screw terminals and since its introduction has met with great success, users recognising its immense superiority over any imported cell. Size, 2½ x 6½. Weight, 2 lbs. Also for bells, telephones, signalling and electro-medical apparatus, &c.

"Wanda" Plug Radio Battery

This illustrates the new radio high-tension "B" Battery, which can be obtained 31½, 42 or 63 volts—fitted with a Wanda plug, and 2 screw terminals.

PRICE:

| | |
|-------------------------------|------|
| Small size, type WP, 31½ volt | 9 6 |
| Small size, type WP, 42 volt | 12 6 |
| Small size, type WP, 63 volt | 18 6 |
| Large size, type XP, 31½ volt | 16 6 |
| Large size, type XP, 42 volt | 21 6 |
| Extra large size, type | |
| Super Service, 42 volt | 28 6 |

If unobtainable locally, write for address of nearest source of supply to

 Selection, "From the Highlands" (Otto Langey).

Hope's Free— why buy it?

When you see a capacity in ampere-hours printed upon a P. & R. Battery, then you know it's the capacity. It isn't what somebody thought it might be; it isn't optimism; it isn't an oh-so-hopeful "intermittent" rating; it's capacity: honest-to-goodness valve burning capacity.

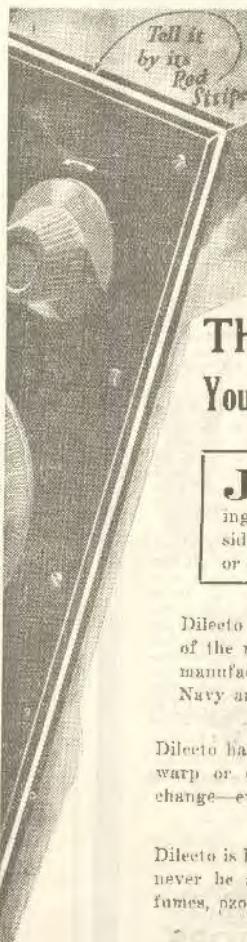

Here are a few more points about P. & R. Batteries. First of all the "Dagente" is a material, the invention and secret of P. & R. It is absolutely acid-proof and leak-proof and it is practically unbreakable—even if dropped from a height. Corrosion of terminals is stopped by petroleum-jelly glands paste is "keyed" in place by a special section of grid. NO MESSY, EXPENSIVE, EVERLASTINGLY ROTTING CRATE IS REQUIRED. The battery is complete.

And, other things being equal, it costs no more than the other kind.

Dilecto

(dist. by its Red Stripe)

Cut to any size and Engraved to Order.

**This Red Stripe tell;
You it's the Perfect Panel**

JUST what qualities must a radio receiver panel possess to be insistently good? It deserves your consideration—if buying a ready-made set or if hitching up your own hook-up.

Dilecto has met with every strict requirement of the most exacting experts of leading radio manufacturers. It has been used by the U.S. Navy and Signal Corps for over nine years.

Dilecto has high dielectric resistance. It cannot warp or crack, check or chip. It will never change—even its sleek, black finish is permanent.

Dilecto is heat-proof up to 220 degrees F. It will never be affected by cold, water, oil, gasoline, fumes, ozone, solvents, and most chemicals.

At last new shipments have arrived.

The Balkite Trickle Charger

A LONG FELT WANT NOW FILLED

The Balkite Trickle Charger may be connected to any 6 volt radio "A" battery of 30 ampere hour capacity or more and left permanently on charge. This is known as trickle charging. Used in this manner, it automatically keeps the "A" battery always at full charge. It converts your "A" battery into a permanent "A" power unit that furnishes full current to the "A" circuit at all times.

With any smaller battery (4 volt or small 6 volt) this charger may be used as an intermittent charger of the usual type. Wherever a low-priced charger is wanted it has no superior. When used in connection with the low-capacity batteries offered by leading manufacturers it makes possible a most

economical installation for sets now using dry cells.

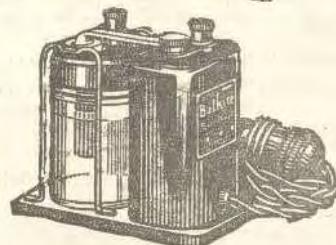

With small batteries this charger can also be used as a trickle charger if a resistance is added to cut down the charging rate to the needs of the set.

When used as a trickle charger, as an added convenience, some owners add a switch, which cuts out the charger during operation. Switches of this type also turn on Balkite "B" when the set is turned on, thus providing an entirely automatic current supply for both circuits.

The Balkite Trickle Charger is 5½ inches long, 2½ inches wide, 5 inches high. It may be put in the usual dry cell compartment. Charging rate, 4 to 5 amperes. Current consumption, 1/16c per hour. Operates from 220-240 AC 50 cycle current.

Only £4 - 7 - 6

The Balkite Trickle Charger

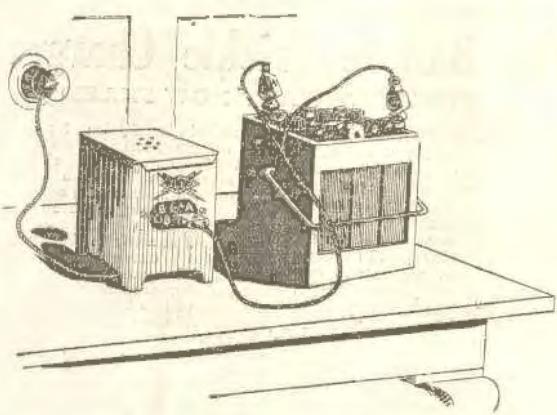

Provides "A" current from the light socket

During the evening the main races at the Sydney Cup will be described.
 10.0 p.m.—From the Studio: "The Sunday Mail"; Weather News; Close Down.

ARRANGEMENTS have been completed by 4QG for the relaying of orchestral music and yodelling turns at regular intervals from the new Picoli Theatre.

4QG WILL broadcast the final session of the Windsor Elstatedfod on May 23, thereby extending the interest of this commendable institution to its large range of patrons. The session will comprise mostly choral work.

A NEW FEATURE in bedtime stories at 4QG will be broadcast shortly, when the session will be relayed from Uncle Jim's home at Greenslopes. The microphone will be installed in the room in which Uncle Jim's kiddies are put to "bye, bye," and before the children tumble off to bed, musical items and stories will be given. On the occasion, Uncle Jim says, Tony, his worthy steed, will be permitted to put his head through the window, in order to view the proceedings.

**5 - VALVE "MAGNAVOX"**

for £4 deposit

For £4 you may take delivery of this fine "Magnavox." There are no extras to buy. It is equipped with one-dial control. With this there is no need for specialised technical knowledge to tune in. Simply turn the dial with one hand and hear any Australasian broadcasting station working on short wave length. The set is ready to instal. Accessories are high-grade. They include Speaker, 6-volt Accumulator, 5 "MAGNAVOX" Valves, 2 45-volt "B" Batteries, 1 22-volt "C" Battery, 1 Grid Battery and Aerial Equipment. The price is £40 cash, but you may take delivery on payment of £4—the balance at 15/6 per week—you enjoy it every day in the week for less than the cost of one evening at the theatre. Payments extend over one year.

Test the "MAGNAVOX" yourself at our Radio Dept., 22 York Street. Mr. Basil Cooke, F.R.A.S., is there, and he will be pleased to advise you personally or by letter concerning any radio problems.

DUBILIER CONDENSERS

The name "Dubilier" represents twenty years of practical research and faithful production of reliable apparatus. No Dubilier product is placed on the market until it has undergone long tests under working conditions.

DUBILIER MICA
CONDENSERS
(Type 600)

To keep the efficiency high the electrical losses in every part of a wireless set must be reduced to the absolute minimum.

Losses in the condensers are extremely detrimental to the proper functioning of the apparatus.

The Type 600 Dubilier Condenser illustrated is constructed with Mica and is enclosed in a moulded insulating case which carries the terminal connections so that the highest insulation is secured.

This condenser will withstand the application of a testing voltage of 1,000 volts.

.001 m.f.d. capacity Price 4/-
.0025 m.f.d. capacity Price 4/-

Supplied in all capacities.

DUBILIER MANNSBRIDGE CONDENSERS.

A special Condenser of the Mansbridge Pattern, designed for "by-pass" work ranging up to 2 m.f.d. capacity and tested to 300 v. D.C. Attractively designed and very compact. Fitted with terminals and tinned lugs for making connections. The base has two projecting pierced lugs for affixing to sub-panel or base-board. Carries the usual Dubilier guarantee.
