Radio Hispanic Market Report

Audience Estimates in the Arbitron Defined Metropolitan Area for

Los Angeles

Winter 1989 - Spring 1989

ARBITRON

THE ARBITRON COMPANY

THIS REPORT NOT ACCREDITED BY EMRC/ This report is not part of a regular syndicated rating service accredited by the Electronic Media Rating Council. Arbitron has not applied for EMRC accreditation for this report. Arbitron does provide syndicated services which are accredited by the EMRC.

WARNING

All Arbitron audience estimates and Arbitron maps are copyrighted. The willful, unauthorized use of any Arbitron audience estimate or map constitutes copyright infringement which could subject the infringer to civil damages of up to $50,000 and criminal penalties of up to one year imprisonment and a $25,000 fine pursuant to Chapter 5, Sections 504 and 506 of Title 17 of the U.S. Code.

PREFACE

The Hispanic Market Report is a compilation of radio audience estimates designed to represent a typical week of radio listening for the survey periods contained herein. The estimates are based on listening information recorded in seven-day diaries by persons 12 years and older who have identified themselves as Hispanic. All audience estimates are approximations subject to statistical variations related to sample size and other limitations. The reliability of audience estimates cannot be determined to any precise mathematical value or definition.

This report is intended to furnish radio station, advertiser and agency clients of Arbitron with an aid in evaluating radio audience size and composition. Arbitron attempts to provide herein a summary description of methodology that may be understood by all who use the report. A more detailed description of Arbitron methodology can be found in a separate publication, provided to all syndicated radio report subscribers, entitled *Radio Description of Methodology*.

PLEASE NOTE/Users of this report should become familiar with the sections of this report entitled the *Description of Methodology* (Pages ii-iv) and *Limitations* (Page iii-iv, Paragraph 43). Further, instructions for estimating reliability and effective sample bases for this report may be found on Page v. See Page 2 for the Table of Contents and surveys applicable to this market.

The data above are the most current data available to Arbitron as of this survey period. Stations are listed only if they have met Arbitron's Minimum Reporting Standards for this survey (see Pars 36-39 in the back of this report.) The county or split county listing reflects the geographic location of the station's City of License. Stations for which no National Representative and/or Network information is on file are listed above by N/A or a blank, as appropriate.

Policies and Procedures for Special Station Activities and Rating Distortion

The information appearing on these pages relating to Rating Distortion, Rating Bias and Extemporaneous Comments is furnished solely for the use of Arbitron clients in making their own evaluations of the audience estimates reported. Such activities or occurrences may or may not have had an effect on listening and/or the recording thereof. Arbitron makes no attempt to assess their impact. The information appearing on this page related to Rating Distortion Activities is based upon Arbitron's policy statement dated May 20, 1977, and Policies and Procedures releases of February 1978, December 1981, January 1987 and February 1988.

Special Station Activities/Stations or other identified sources may initiate a complaint about a station's activities as they may relate to Arbitron's Special Station Activities guidelines. All complaints must be in writing and addressed to: **Special Station Activity Committee, Arbitron/Radio, The Arbitron Building, Laurel, MD 20707.** However, Arbitron reserves the right to consider information received anonymously only if, in the opinion of Arbitron, the activity has the potential to be classified as "Rating Distortion" or "Rating Bias." Arbitron will accept complaints up to the day after the final date of the survey.

a. Rating Distortion/Any action(s) which may result in manipulated or inflated audience estimates through bribery, breaches of diary security, promotional activities or other forms of improper inducement. These activities include, *but are not limited to,* activities which might confuse diarykeepers and/or activities which Arbitron believes might (a) cause diarykeepers to falsify their listening records without causing a corresponding change in actual listening, (b) affect the way in which diarykeepers record or report their listening, or (c) encourage diarykeepers to use their diaries for anything but the recording of actual listening, or in any manner inconsistent with the diary instructions.

Arbitron may delete from its reports, computer tapes or other peripheral products the audience estimates for stations that have engaged in Rating Distortion activities. When a station's audience estimates are deleted for Rating Distortion activities, a notice will appear on the cover of the Hispanic Market Report and the station's activities will be noted on Page 5B. Appropriate notice will be made for all other applicable Arbitron services.

The following categories and examples are only illustrative and are not all-inclusive:

1. **Diary Manipulation** may involve a request to diarykeepers to take some positive or negative action with respect to a certain station, such as "please give us your support" or "don't list [my competitor]" or other statements encouraging the recording and/or reporting of listening other than actual listening.

2. **Improper Promotional Activities** include, but are not limited to contests which may look like a survey; contests which offer prizes based on amounts of listening recorded or claimed; attempts to cause diarykeepers to lose their anonymity; promotional "time sheet" and/or "payroll" activities where winners are paid according to claimed listening; or promotions which might cause a diarykeeper to surrender a diary in trade for a prize or for cash.

3. **Breaches of Diary Security** may take different forms, which include but are not limited to, an offer to pay diarykeepers to falsify reported listening or surrender diaries.

b. Rating Bias/Announcements or statements on-air, in print or in any other medium which may interfere with the objectivity or conduct of the survey process. This interference includes activities which sensitize the public to (1) current or future Arbitron surveys, (2) Arbitron diaries, (3) "generic" radio listening surveys or (4) any part of the process of measuring radio listening. These activities are generally preplanned, repeated or stylized promotional messages that alert, inform or request cooperation with radio audience measurement services, or refer to diary recording or reporting. These announcements may encourage participants to be cooperative with the survey, to listen all day, to listen for several days, to record all listening to a station, or to take special notice of call letters, personality names, programming or any other aspect of a station's on-air content.

Rating Bias may also take the form of a contest or station research activity, if in Arbitron's opinion, there is the possibility that the activity might differentially sensitize the survey participant to the survey process.

For stations determined to have engaged in Rating Bias activities, Arbitron will: (1) place a note on Page 5B and may also (2) place a cover notice and may (3) place the station's audience estimates at the bottom of each page below a distinguishing line. Additionally, appropriate notice may be made for computer tapes and certain other peripheral services.

Sourcing of previous survey information in the form of advertising which notes a station's performance in prior surveys, as permitted by contractual agreement with Arbitron, does not constitute Rating Bias.

c. Extemporaneous Comments/A type of reference on the air or in print that mentions or alludes to a current or future Arbitron survey, diary(ies) or radio rating(s). As the name implies, these are "one-time-only," "unplanned," "slip-of-the-tongue" or "humorous" comments.

If a station's activity has been reviewed and determined to be an extemporaneous comment, Arbitron will report the station's call letters and a brief description of the activity on Page 5B of the appropriate Radio Hispanic Market Report(s).

Arbitron reserves the right to use any available means to draw attention to any station activity which, in Arbitron's opinion, has the potential to affect the survey or its results even though such activity does not meet any of the specific criteria stated above. Arbitron further reserves the right to take stronger action depending upon the content, context, frequency or repetition of the activity.

General Information/With respect to Rating Distortion, Rating Bias and Extemporaneous Comments:

a. In the event that Special Station Activities occur in a Continuous Measurement Market (surveyed 48 weeks of the year), Arbitron's responsive actions will generally apply only to the survey(s) in which the activity occurred. In markets that are not continuously measured, Arbitron will consider any Special Station Activity which occurs during the four weeks prior to the survey period or during the survey itself.

b. To initiate an inquiry by the Special Station Activity Committee, all complaints, inquiries or information must be in written form from an identified source (e.g., station, representative, agency, network or person) accompanied by evidence such as a newspaper clipping, air-check or direct mail advertisement. Information received anonymously may be considered to initiate an inquiry only if, in the opinion of the committee, the activity has the potential to be classified as Rating Distortion or Rating Bias.

c. The initiation of an inquiry is solely within the discretion of the Arbitron Special Station Activity Committee or Executive Management.

d. A simulcast station which is cited for engaging in a Special Station Activity also will cause its AM or FM counterpart to be so cited.

INDUSTRY STATEMENTS

Relating to Survey Announcements/The National Association of Broadcasters (NAB) is "...concerned with the effects of the practice, engaged by some stations of exhorting the public to cooperate with radio ratings surveys" in progress.

The Electronic Media Rating Council (EMRC) opposes "...any attempt by stations to exhort the public to cooperate with radio audience measurement services whether over the air or by any other means, and recommends to syndicated audience measurement services that the practice be discouraged because of its possible biasing effects." The EMRC has amended its minimum standards to define Survey Announcements as biasing.

The American Association of Advertising Agencies (AAAA) "...opposes any attempt in any medium to exhort the public to cooperate with any audience measurement survey by calling attention to such research by any means."

The Arbitron Radio Advisory Council has reiterated its "...continuing opposition to rating bias in the form of on-air survey announcements" and "off-air announcements that call attention to the scheduled survey dates or diary methodology. This opposition includes direct mail, newspapers, or... advertising."

FTC GUIDELINES

The Federal Trade Commission (FTC) Guidelines Regarding Deceptive Claims of Broadcast Audience Coverage point out that radio stations "...should not engage in activities calculated to distort or inflate such data — for example, by conducting a special contest, or instituting unusual advertising or other promotional efforts designed to increase audiences only during the survey period."

Some stations may not be aware that their promotional activity could bias or distort audience estimates. Such activities could affect the behavior of survey participants, thereby changing audience estimates from what they would have been if no such activity had been conducted during the survey period.

The Arbitron Company urges all broadcasters not to engage in any of the above activities.

Special Notices and Station Activities

THE REPORT

HISPANIC REPORT/ This Hispanic Market Report is based on all Hispanic in-tab diaries from the Los Angeles Metro Survey Area, designated in this report as "CSA," for two survey periods:

Winter 1989, January 5 - March 29
Spring 1989, March 30 - June 21

Diary values have been recalculated to represent the Hispanic 12+ population for this survey area. Therefore, the listening estimates reported herein may not be compatible with the listening estimates reported in any local market report. For further information regarding sampling, measurement and calculating techniques, see Page ii in the back of this report.

SPECIAL STATION ACTIVITY

STATION ACTIVITY/ Radio Station KQLZ-FM's morning personality made an announcement over the air on May 16, 1989 at about 8:50 AM which was found to be in violation of our guidelines as a Survey Reference:

> "Remember, if anyone asks you to take part in any kind of radio survey, take some time out and help out. Just tell them the truth. I'm not asking you to lie. Tell them you listen to Pirate Radio."

This particular statement was made within the context of ongoing on-air discussion of KQLZ's performance in the ratings, including repeated requests for "help" in the ratings:

> "KQLZ, the new station that's up against all the odds. We want to go from worst to first and you can help. If anyone calls you and asks what radio station you listen to, you tell em ... Pirate Radio."

> "... you've read about the radio station, "The Edge" - the old KMPC. They turned them off because they had listeners but they didn't support 'em and I'll be running around without a job like J. J. Jackson if you don't support us, Pirate Radio. Tell somebody."

We find the Survey Reference and the ongoing discussion of the ratings to have the potential to bias the survey process by differentially sensitizing KQLZ listeners to the Arbitron survey in progress. Arbitron does not, however, attempt to determine the extent of possible bias.

Arbitron reserves the right to take stronger actions if activities of this or a similar nature are repeated by KQLZ or other co-owned radio stations in future surveys.

Our actions in this matter (Cover Note and Page 5B Note) are intended to alert users of this report to activities which have been conducted in their market. Arbitron continues to discourage radio stations from conducting activities which have the potential to bias or distort survey results.

THE STATIONS

NEW STATIONS, CALL LETTER CHANGES, AND TREND DATA/

Current Call Letters	Former Call Letters	Prior Trend Data	On-Air Date/ Date of Change
KEDG-FM	KMPC-FM	Fall 1988 Summer 1988 Spring 1988	March 2, 1989
KKGO-AM	KSHO-AM	Summer 1988	November 1, 1988
KODJ-FM	KNX -FM	Fall 1988 Summer 1988 Spring 1988	March 2, 1989
KQLZ-FM	KIQQ-FM	Fall 1988 Summer 1988 Spring 1988	March 17, 1989

Stations are identified in this report under their current call letters and the audience estimates reflect listening recorded for the new and, if applicable, the old call letters. The Trends section displays trend data pertaining to both the old and the new call letters. Survey dates will be listed in the "Prior Trend Information" column whenever trend information exists for a station that has changed call letters. The date of the call letter change will also be included in order to identify which call letters were in use during a particular survey. Audience estimates for any new stations beginning broadcast activities during the survey are reported for an "average" week of the twelve week period, including those weeks when the station was not on the air.

Glossary of Selected Arbitron Terms

1. AM-FM TOTALS/A figure shown for AM-FM affiliates in time periods when they are simulcast. *(See Pars. 24 and 36-39.)*

2. AVERAGE QUARTER-HOUR PERSONS/ The estimated number of persons who listened to a station for a minimum of five minutes within a quarter-hour. The estimate is the average of the reported listening in the total number of quarter-hours the station was on the air during a reported daypart.

3. AVERAGE QUARTER-HOUR RATING (Rating Point)/The Average Quarter-Hour Persons estimate expressed as a percentage of the universe.

4. AVERAGE QUARTER-HOUR SHARE/The Average Quarter-Hour Persons estimate for a given station expressed as a percentage of the total Hispanic Market Report Average Quarter-Hour Persons estimate within a reported daypart.

5. CSA TOTALS/The estimated number of persons in the Hispanic Market Report who listened to reported stations as well as to stations that did not meet the Minimum Reporting Standards plus estimates of listening to noncommercial and unidentified stations.

6. CUME DUPLICATION/The percentage of one station's estimated Cume audience that listened to a second station.

7. CUME PERSONS/The estimated number of *different* persons who listened to a station for a minimum of five minutes in a quarter-hour within a reported daypart. (Cume estimates may also be referred to as *cumulative* or *unduplicated* estimates.)

8. CUME RATING/The estimated number of Cume Persons expressed as a percentage of the Hispanic Market Report universe.

9. CUSTOM SURVEY AREA (CSA)/In this Hispanic Market Report, the "CSA" designation refers to the geography of this report which is the same as the Metro definition of the corresponding syndicated Radio Market Report.

10. DAYPART/A reported time segment of a day (e.g., Monday-Friday, 6AM-12AM; Saturday, 10AM-3PM).

11. DIARY MENTIONS/The number of in-tab diaries in which listening to a station is recorded for at least five minutes in a quarter-hour.

12. DIARYKEEPER/Any individual selected and found eligible to receive survey materials.

13. EFFECTIVE SAMPLE BASE (ESB)/The theoretical sample size to be used for estimating the sampling error of audience estimates. *(See Par. 42.)*

14. EXCLUSIVE CUME AUDIENCE/The estimated number of Cume Persons in the Hispanic Market Report who listened to only one station within a reported daypart.

15. GROUP QUARTERS/All persons not living in individual households are classified as residents of group quarters. Group quarters include college dormitories, homes for the aged, military barracks, rooming houses, institutions and other residences of nine or more unrelated individuals.

16. IN-TAB SAMPLE/The number of usable diaries tabulated in producing the report.

17. LISTENING LOCATIONS/Listening estimates for the diarykeeper indicated that listening took place at home, in car or some other place. Some other place includes at work listening.

18. METRO SURVEY AREA (Metro)/Metro Survey Area definitions generally correspond to the federal government's Office of Management and Budget's Metropolitan Statistical Areas, Primary Metropolitan Statistical Areas or Consolidated Metropolitan Statistical Areas subject to exceptions dictated by historical industry usage or other marketing considerations as determined by Arbitron. (Designated as "CSA" in this report.)

19. MINIMUM REPORTING STANDARDS (MRS)/Criteria used to determine the stations listed in this report. *(See Pars. 34-35.)*

20. RATING/*(See Average Quarter-Hour Rating and Cume Rating.)*

21. SAMPLE TARGET/The number of diaries that is the objective for the in-tab sample size.

22. SAMPLING UNIT/A geographic area consisting of a county or part of a county. *(See Par. 28.)*

23. SHARE/*(See Average Quarter-Hour Share.)*

24. SIMULCAST/For the reporting of audience estimates, the simultaneous broadcasting of one station's total and uninterrupted broadcast flow by another station on the other commercial band without any variation except if the simulcast stations choose to separately identify their call letters, frequency and/or city of license, if appropriate, at the same time.

25. TECHNICAL DIFFICULTIES/Time period(s) of five or more consecutive minutes in a quarter-hour during the survey period in which a station listed in this report notified Arbitron in writing of reduced power, intermittent power, signal interference or brief times the station was off the air within the station's authorized broadcast day.

26. TIME SPENT LISTENING (TSL)/An estimate of the amount of time the average person spent listening to radio or to a station during a specific daypart.

27. UNIVERSE/The estimated number of persons in all households (telephone and nontelephone) and in group quarters for the sex-age group and geographic area being reported.

For additional information, the reader is directed to *Standard Definitions of Broadcast Research Terms*, published by the National Association of Broadcasters, 1771 N Street, NW, Washington, DC 20036.

Description of Methodology

SAMPLING AND MEASUREMENT TECHNIQUES

28. SAMPLING METHODOLOGY/Arbitron Radio Hispanic Market Report audience estimates are tabulated using only those diaries returned by diarykeepers who have identified themselves as Hispanic in response to an ethnicity question. Such diaries have been obtained from Radio Market Report syndicated samples according to the procedures described below.

Surveys for Arbitron Radio Market Reports are conducted by using geographic units called sampling units. A sampling unit consists of a county or part of a county. The latter are defined by zip code information based on 1980 Census data, as updated annually by Market Statistics.

Sample targets are established for the Metro and then for each sampling unit proportional to the persons 12+ population in the survey area. The designated sample size for each sampling unit is determined by the sample target and the rate of reponse which Arbitron reasonably expects based on past survey performance.

For each 12-week survey period, a complete new sample of households is computer-selected for each sampling unit through the use of a systematic interval random selection technique. These samples of households are drawn from lists of subscribers appearing in current available telephone directories as maintained by Metromail Corporation. Expanded Sample Frame (ESF) is applied in Metro sampling units in all markets. ESF is designed to supplement standard telephone directory sample selection by including households that are not available in telephone directories in the sample. The ESF sample is computer-generated by subtracting from a file of listed telephone numbers from all possible numbers. Residents of group quarters cannot normally be reached using directories; however, they may be included through the ESF technique if not otherwise excluded. The total sample is then randomly divided into approximately equal weekly groups for placement.

If a need for additional sample arises after the original listed and ESF samples have been selected by the computer, then such additional sample may be selected by reaccessing the listed and ESF computer lists on hand.

29. ARBITRON RADIO LISTENING DIARY/ Arbitron uses one-week individual diaries to gather listening information from persons 12 years and older. Bilingual (Spanish-English) diaries are provided to all survey participants in the Metro of a Hispanic-controlled market who have identified themselves as Hispanic in response to an ethnicity question or from whom ethnic information was not obtained, and to any others indicating a preference for a bilingual diary. Premiums of varying amounts are provided to encourage respondent cooperation. Arbitron sends a diary for each person 12+ reported in the sample household.

30. SAMPLE PLACEMENT AND DATA RETRIEVAL/Initial contact with listed sample households is by a letter informing them of their selection by the computer and stating that an interviewer will be calling to request their cooperation in the survey. Initial contact with ESF sample households is made by the interviewer at the time cooperation is requested.

Arbitron interviewers are instructed to contact all selected sample households by telephone to ascertain the possibility of a media affiliation, to gain acceptance of the diaries, to determine the number of persons 12+ living in the household at the time of the placement call and, where applicable, to determine the ethnicity and demographics of the household.

Interviewers are instructed to make a number of attempts to reach every household selected in the sample. These attempts are made at different hours of the day and evening. Diaries are then mailed directly to the consenting sample households from Arbitron.

After the initial contact, the interviewer is directed to make additional contacts with the sample households to make sure the diary has been received; to assist members of the household in understanding the diary's purpose; to instruct how to keep the diary; to make sure no difficulties have developed; to remind the diarykeepers to return their diaries after the survey week; and to thank them for cooperating in the survey.

Explicit instructions are provided to each interviewer, and independent checks are regularly conducted by Arbitron interviewer coordinators and the Arbitron Field Operations department or the Arbitron Interviewing Center staffs.

31. EXCEPTIONS/Arbitron reserves the right to exercise its best professional research judgment in modifying, waiving or suspending any policy, procedure or element of methodology that would appear to Arbitron to be unreasonable, illogical or impractical in light of known conditions.

PROCESSING TECHNIQUES

32. PROCESSING OF DIARIES/Arbitron makes reasonable efforts to utilize all returned diaries. However, some diaries returned to Arbitron are unusable. Among those which are unusable are diaries which are obviously incomplete; are postmarked and/or arrive on or before the last day of the survey week or after the production cutoff date; or which otherwise lack essential information. Only those with seven usable days are processed. The total number of in-tab diaries may be greater or less than the sample target.

Usable diaries are prepared for computer processing in accordance with procedures listed in the Arbitron *Radio Edit Procedures Manual*. The listening information in the diaries is then computer-entered so that certain computer checks can be made. These include ascription procedures, the allocation of credit for aberrated call letters and other logical analyses and pretabulation preparations.

CALCULATING TECHNIQUES

33. CALCULATION OF ESTIMATES/

a. Sample Balancing and Tabulation. Hispanic in-tab diaries are weighted to reflect the estimated proportion of sex, age and geography based on the Hispanic population of the survey area. Geographic area and sex-age control is maintained for in-tab diaries by partitioning the survey area into sampling units and into sex-age tabulation groups. The value of each in-tab diary is a result of weighting the in-tab sample to compensate for disproportionate in-tab returns from any sampling unit or sex-age group. With a value established for each diary, listening is estimated by adding the value of each in-tab diary in which listening is recorded to a particular station at a given time.

b. Broadcast Hours. (i) Local time differences within a market that overlaps time zones and time differences caused by seasonal time changes are accounted for in the results by adjusting diary entries to the time observed by the stations listed as Metro-licensed of the market being measured. (ii) Only one set of sign-on/sign-off times for a station is used in calculating audience estimates for the market report. Arbitron uses the sign-on/sign-off times, provided by the station, depicting the month closest to December and the shortest broadcast day within that month. Audience estimates are adjusted for the station's actual broadcast schedule. When a station changes sign-on/sign-off times during an Arbitron survey period, the times used in calculating audience estimates are taken from those days of operation comprising the majority of consecutive days of the survey period. (iii) Simulcast times/status are gathered from stations prior to the beginning of the survey. To be eligible for simulcast reporting for a daypart, there must be 100 percent simulcast for the entire affected daypart during the entire survey.

c. Technical Difficulties. No adjustments are made to either diary entries or reported audience estimates for periods of technical difficulty. The notation of technical difficulties on Page 5B is only to assist the user in making his own evaluation of the audience estimates reported. Arbitron will accept information on technical difficulties only up to the day after the final date of the survey.

d. Rounding of Calculations. At various stages of the projection of data, audience estimates are rounded. Rounding occurs at discrete demographic and daypart summation levels.

e. Status Changes. If there is a change in a station's daytime/24-hour or commercial/non-commercial status during the current survey, the station must notify Arbitron of the change in writing during the survey in order for the station, date and nature of the change to be noted on Page 5B of this report.

CRITERIA FOR REPORTING STATIONS

34. CRITERIA FOR REPORTING STATIONS/ To be listed in an Arbitron report, a commercial radio station must engage in systematic regular commercial broadcasting pursuant to the authority of and the Rules and Regulations of the Federal Communications Commission (FCC) or other appropriate governmental authority. Call letter designations exceeding four characters are shortened to four characters. Reported call letters are those in use on the last day of the survey. In the event a station has changed call letters during the survey period, the first call letters reported are those in use on the last day of the survey, with the station's call letters in use on the first day of the survey noted immediately thereafter. Arbitron maintains call letter history information with

information provided by radio stations and the FCC. In the event of exchanges of call letters or frequencies between stations in this market, the audience estimates published in this report are based on Arbitron's verification and interpretation of information from various sources, which include the FCC, the affected stations and other relevant sources. The specifics of each call letter change are listed on Page 5B of this report.

Audience estimates for a station which does not meet MRS for the Hispanic Market Report cannot be obtained in any way from the data in this report. All radio stations, commercial and noncommercial alike, are measured using the same methodology. However, only audience estimates for commercial stations appear in the Hispanic Market Report. Audience estimates for noncommercial stations are not listed in this report and are not considered in the MRS evaluation.

35. MINIMUM REPORTING STANDARDS (MRS) FOR AM-ONLY AND FM-ONLY STATIONS/A commercial AM-only or FM-only station is included in this report if it has met **all** of the following Minimum Reporting Standards for the Custom Survey Area among persons 12+ for the time the station is on the air during the Monday-Sunday 6AM-Midnight daypart during the current survey of the market:

a. The station must have received five or more minutes of listening in a quarter-hour in at least ten in-tab diaries, **and**

b. The station must have an unrounded Cume rating of 0.5 or greater, **and**

c. The station must have an Average Quarter-Hour **rating** of at least 0.1. In this instance, due to rounding, 0.05 or greater becomes 0.1.

36. MINIMUM REPORTING STANDARDS (MRS) FOR AM-FM COMBINATION STATIONS/

a. AM-FM stations which are simulcast for 10% or less of the total number of quarter-hours when both stations are on the air simultaneously (Monday-Sunday 6AM-Midnight) are considered to be separately programmed stations. Thus, each station will be considered independently, and each must independently meet the criteria used for AM-only or FM-only stations. *(See Par. 35.)*

b. AM-FM stations which are simulcast from 10.1% to 91% of the total number of quarter-hours when both stations are on the air simultaneously (Monday-Sunday 6AM-Midnight) are considered to be partially simulcast stations. Provided that *one* of the two stations meets **all** MRS criteria described in Par. 35 above, the second station is included in the report if it *(i)* meets the criteria of Par. 35(a) and (b) and *(ii)* achieves the Average Quarter-Hour Rating described in Par. 35(c) for any one of the four basic Monday-Friday dayparts; *viz.*, 6AM-10AM, 10AM-3PM, 3PM-7PM, 7PM-Midnight.

c. AM-FM stations which are simulcast more than 91% of the total number of quarter-hours when both stations are on the air simultaneously (Monday-Sunday 6AM-Midnight) are regarded as totally simulcast stations and therefore will be treated as a single station in **all** phases of the MRS criteria described in Par. 35. If the **combined** audience of the two stations is sufficient to meet **all** criteria of Par. 35, then both stations will be listed in the report even though one (or both) stations might not meet the MRS criteria if considered individually.

37. HOME AND OUTSIDE STATIONS/Any station either licensed to a city located within the counties in the Hispanic Market Report or which is recognized under Arbitron's policies and procedures as having acceptable Multi-City of Identification is listed in the report as a home station. Such stations are listed in the data pages of this report above the broken line. All other stations are classified *outside* stations and are listed below the broken line. The MRS for inclusion in this report are the same for all stations. Within each reporting classification, U.S. stations are listed alphabetically followed by non-U.S. stations listed alphabetically.

AM-FM TOTALS

38. CRITERIA/An AM-FM Total line is only available to simulcast stations (see *Pars. 24, 33b and 36).* For simulcast stations a Total line will appear following the AM and FM lines when AM-FM affiliates are simulcast during an entire reported daypart. AM/FM Total lines for simulcast stations are reported in the Target Audience, Specific Audience and Audience Composition sections of this report only. *Note:* No Total line will be shown unless simulcast operation, as defined by Arbitron, is strictly maintained for the entire survey period. *(See Par. 24.)*

Total lines also will be shown although one or both simulcasting stations may not have been on the air during the entire reported daypart. Stations broadcasting for less than an entire reported daypart are indicated by an asterisk next to the station call letters.

39. AM-FM TOTAL AVERAGE QUARTER-HOUR/The AM-FM Total line is the summation of the estimated average number of persons who listened to the AM station plus the estimated average number of persons who listened to the FM station during a reported daypart.

40. AM-FM TOTAL CUME PERSONS/The AM-FM Total line represents the estimated number of *different* persons who listened to either the AM station or the FM station or both stations during the reported daypart. The Total line provides an estimate of the unduplicated audience to the AM-FM combination during the reported daypart. If the Total line *equals* the sum of the individual AM and FM estimates, there is no reported duplication of listening between the two stations. If the Total is *less* than the sum of the individual figures, there is reported duplication (e.g., persons listening to both stations in the same time period).

STATISTICAL RELIABILITY

41. SAMPLING ERROR/Arbitron estimates are subject to the statistical variances associated with all surveys using a sample of the universe and, additionally, to all of the factors described in Special Notices and Paragraph 43. Approximations of the sampling error can be developed by use of Tables A and B included herein. These tables were derived from an empirical study which employed "Jack-Knife Replication." The study, published by Arbitron, is entitled *Arbitron Replication II: A Study of The Reliability of Radio Ratings.* Tables A and B produce estimates of sampling error at the one standard error (*one sigma*) level. Users of this report should keep in mind that, due to the factors discussed in Paragraph 43, the accuracy of Arbitron estimates, data and reports and their statistical evaluators cannot be determined to any precise mathematical value or definition.

42. EFFECTIVE SAMPLE BASE (ESB)/Estimates of the Effective Sample Base indicate the size of a simple random sample (in which all diaries have equal value) that would be required to provide the same degree of reliability as the in-tab sample actually used to produce the audience estimates in this report. The statistical reliability of such estimates depends on the ESB and only indirectly on the number of diaries tabulated. Statistical reliability is also affected by all of the factors described in Paragraph 43. Approximations of ESBs may be determined through the use of squared Table B values included herein. The Arbitron formula for estimating ESBs is based upon the same empirical study referenced above. The Arbitron formula to estimate ESBs takes into account the disproportionate sampling of Metro area, and differences in return rates among sampling units and the individual sex-age categories. As a general rule, ESBs for all Cume estimates will be less than total in-tab diaries, and the ESBs for all Average Quarter-Hour estimates will be larger than the ESBs for Cume estimates and may be even greater than the total in-tab sample. This is due to the interclass correlation of the listening between quarter-hours for the various dayparts.

LIMITATIONS

43. LIMITATIONS/In addition to the sources of possible error which are described elsewhere in this report, the user should be aware of the limitations described below:

a. The sample is drawn from telephone households only. Persons in nontelephone households are thereby excluded from the sample frame. Metro telephone households not listed in directories are sampled using the ESF technique described in Paragraph 28. Commercial establishments listed in directories are specifically excluded from the sample. Steps are taken to exclude residents of group quarters from Arbitron's sample frame. Further, all possible telephone directories may not be available in the lists prepared by Metromail Corporation and used as Arbitron's listed sample frame and not all possible ESF numbers are included in the sample frame.

b. Effort is made to exclude households with a media affiliation. The inclusion or exclusion of such households from the sample is dependent upon information revealed in response to Arbitron's media affiliation question.

c. The interviewer may not always be under the direct control of Arbitron. In certain instances, independent telephone survey organizations are utilized by Arbitron. As a result, there may be instances where Arbitron instructions are not followed.

d. Nonresponding persons may have listening habits which differ from those of respondents. Persons residing in nontelephone households may have listening habits which differ from those of persons residing in households with telephones.

e. Nonresponding persons in the original designated households sample prevent the in-tab sample from being a perfect probability sample.

f. The sample design and/or response patterns may preclude proportional representation of certain groups within the population such as

ethnic groups, racial groups, persons in certain income or education groups, or persons whose primary language is other than English. Such persons may have listening habits which differ from other persons.

g. Population estimates from Market Statistics used in this report are subject to defects and limitations such as sampling errors, locating undocumented populations, and processing and recording errors. In addition, for those years between decennial Census dates, Census data are based upon a sample which is significantly smaller in most regions than that employed by Arbitron. Market Statistics utilizes published government figures in estimating populations for individual sampling units. These population figures may not include adjustments for known or unknown over- or undercounts of various segments of the population, including undocumented population groups. These defects and limitations in data from Market Statistics are inherent in Arbitron estimates based thereon.

h. Diaries, or portions thereof, may be completed improperly if the diary instructions are not understood or are not followed. Such diaries may therefore be unusable and excluded from the survey. Some diary entries may have been made on the basis of hearsay, recall, the estimates of the diarykeeper or could have been influenced by comments made by the interviewer or others to survey participants.

i. Human and computer processing errors may occur before or after the diaries are received by Arbitron. Consequently, the degree of variance in the data may be greater than that expected from sampling variance alone.

j. The data upon which Arbitron has based its in-tab sample weighting, including racial or ethnic identification, may not be precise. Additionally, zip code information used in this report is subject to defects and limitations. Therefore, defects and limitations found in data supplied by others are inherent in Arbitron estimates based thereon.

k. Logical analysis, preprocessing preparation or ascription of the data may affect some of the diary listening entries before the data are projected. Some diaries, or portions thereof, may also be checked by postsurvey-week telephone validation calls to diarykeepers. Diaries, or portions thereof, may thereby be modified or excluded from the survey. These procedures may affect a station's ability to meet MRS.

l. Arbitron conducts research involving new methods of improving cooperation of diarykeepers and/or securing additional information from such persons. Occasionally, a portion of this research may be integrated with actual surveys and, if and when so done, may cause the degree of variance in the data to be greater than that expected from sampling variance alone.

m. Certain data, such as when the station was on and off the air, facilities, call letters used, slogans claimed, format, programming, National Representative networks and time periods when AM-FM stations were simulcast or separately programmed, are based on data supplied by the stations and/or recent industry publications or notices. These data may not be accurate or timely and may affect the way certain audience estimates are reported.

n. Situations in which stations have or have had the same call letters or frequency or have changed call letters or frequency may result in respondent confusion in correctly identifying the station to which the listening occurred.

o. Mathematical manipulation by the user of narrow demographics or dayparts in this report may produce a result which differs from estimates of broader demographics or dayparts also contained in this report.

p. Trends estimates, if reported herein, may not be comparable over time due to methodological changes, changes in survey area definitions or populations, or conditions not under Arbitron's control such as changes in station operations/facilities/special activities.

q. The audience estimates published herein represent a typical week of radio listening during the survey period stated on the front of this report. The surveys to which Hispanic Market Report Audience Trends estimates apply, if they are reported herein, are identified in the CSA Audience Trends section of this report.

RETENTION OF RAW MATERIALS

44. RETENTION SCHEDULE/In-tab Arbitron listening diaries used for the compilation of the most current audience estimates published in this report, along with all unusable diaries and other survey materials, will be stored for one year from the date on which this report was first mailed to subscribers by Arbitron; after such time all diaries and other survey materials are destroyed. Subscribers to this report are advised that if special cross-tabulations of the reported estimates are desired, they should be ordered before the retention period has expired. Upon proper appointment, subscribers to this report may examine, but not copy, the in-tab Arbitron listening diaries used in this report at Arbitron's Laurel, MD, office.

SPECIAL NOTICES PAGE

45. SPECIAL NOTICES/To the extent that any provisions contained in this description of methodology are inconsistent or conflict with any provision contained in either the *Special Notices* on Page 5B of this report or Paragraph 31 hereof, such are deemed to supersede and/or amend this description of methodology.

DISCLAIMER OF WARRANTIES

46. DISCLAIMER OF WARRANTIES/Arbitron makes no warranties, express or implied, concerning: data gathered or obtained by Arbitron from any source; the present or future methodology employed by Arbitron in producing Arbitron ratings; or the Arbitron data, estimates or ratings contained herein. All Arbitron data and estimates represent only the opinion of Arbitron and reliance thereon and use thereof shall be at subscriber's own risk.

RESTRICTIONS ON USE OF REPORT

All Arbitron radio audience estimates, together with the map contained herein, are proprietary to Arbitron. They are provided to Arbitron clients pursuant to the terms of written license agreements between Arbitron and such clients. All Arbitron audience data and estimates are for the exclusive use of Arbitron clients and their authorized representatives and may be disclosed only to advertisers, prospective advertisers and their agencies for the purpose of obtaining and retaining advertising accounts and through advertising or promotional literature. For an Arbitron client to divulge any data or estimates to a nonsubscribing station, or to lend and/or give a copy and/or a reproduction of any part of any report to any nonsubscriber, including advertisers and/or their agencies, constitutes a breach of the license agreement between Arbitron and client. Quotations by clients of the estimates as allowed by the preceding sentence for purposes of advertising or promotion must identify Arbitron as the source and that Arbitron's data and estimates are copyrighted. It also should be mentioned that the audience estimates are subject to all qualifications and limitations stated in the Arbitron report. Arbitron recommends that the appropriate market, survey period and kind of audience estimate (e.g., El Paso, Winter 1989/Spring 1989, Hispanic Market Report, Monday-Friday 3PM-7PM, Average Quarter-Hour Estimates, Men 18-24) be stated.

A subscriber to any particular report may not use the demographic data or audience estimates printed in the CSA Audience Trends section, if reported herein, which reference a market report to which they did not subscribe.

Neither this report, the map contained herein nor any audience estimate may be used in any manner by nonclients of Arbitron without written permission from Arbitron.

Users of audience estimates are referred to the current policies of the Federal Trade Commission relating to the use of such estimates.

ARBITRON RADIO RELIABILITY — TABLE A

RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE	RATING	VALUE

Note: When rating is greater than 50.0, use the value given for a rating equal to 100.0 minus the original rating. For example, if the rating were 87.3, use the value shown for a rating of 12.7 (100.0-87.3)

INSTRUCTIONS FOR ESTIMATING THE RELIABILITY OF AUDIENCE RATING ESTIMATES

The reliability of a survey estimate is generally defined in terms of the estimated margin of sampling error around the estimate, or "confidence interval." The confidence interval describes the extent to which a survey estimate, based on a random sample of a population, may vary from the result that would be obtained through a complete census of that population. (See Par. 41 for further discussion.)

Confidence intervals can be calculated for any rating published in this report in two steps: (1) calculating an estimated standard error by dividing the Table A value by the Table B value and then (2) using the estimated standard error to construct a confidence interval around the rating.

1. Calculate an estimate of standard error:

a. Using Table A, select the rating for which you want to calculate standard error and locate the corresponding Table A value. For example, the corresponding Table A value for a 3.7 rating is 18.88. Table A values are simply the square root of [the rating × (100 − the rating)]; therefore, Table A values are constant across all markets and surveys.

b. Using Table B, select the demographic group (down the side) and the daypart (across the top) of the rating and locate the corresponding Table B value. Note that for all Cume ratings, the first column is the appropriate one. Table B values are the square roots of the ESBs (Effective Sample Bases) for each market and survey; therefore, Table B values differ from report to report. The Table B value used in this example is hypothetical. For example, the Table B value for a Metro AQH rating for Men 18+, Mon-Fri 6AM-7PM might be 55.00.

c. Divide the Table A value by the Table B value to obtain an estimated standard error. Using the example above, 18.88 ÷ 55.00 = 0.34.

2. Use the estimated standard error to construct a confidence interval around the rating:

a. The rating +/− one standard error will yield a 68% confidence interval. In the above example, 3.7 +/− 0.34 will yield a confidence interval of 3.36-4.04. Interpretation: The user can be 68% confident that a survey of all Men 18+ would yield a Mon-Fri 6AM-7PM rating between 3.4 and 4.0.

b. The rating +/− (1.64 × the standard error) will yield a 90% confidence interval. In the above example, 3.7 +/− (1.64 × 0.34) would yield an interval of 3.14-4.26. Interpretation: The user can be 90% confident that a survey of all Men 18+ would yield a Mon-Fri 6AM-7PM rating between 3.1 and 4.3.

c. The rating +/− (1.96 × the standard error) will yield a 95% confidence interval (compute as in (b) above), and the rating +/− (2.58 × the standard error) will yield a 99% confidence interval (compute as in (b) above).

TO ESTIMATE RELIABILITY FOR PROJECTED NUMBERS OF PERSONS

To estimate standard error (and construct confidence intervals) for Persons estimates rather than ratings: (1) Convert the Persons estimate into a rating. (Persons ÷ the population × 100). (2) Calculate standard error using the instructions above. (3) Convert standard error for the rating into standard error for the Persons estimate. (Standard error × the population ÷ 100). (4) Use the Persons estimate +/− one standard error for a 68% confidence interval; use the Persons estimate +/− the standard error multiplied by 1.64, 1.96 or 2.58 to get 90%, 95% or 99% confidence intervals, respectively.

TO ESTIMATE EFFECTIVE SAMPLE BASE (ESB) SIZES

Approximate ESB for age/sex groups and dayparts can be calculated by squaring Table B values. For example, the estimated ESB for M18+, M-F 6A-7P, with a hypothetical Table B value of 55.00, would be 55.00 squared, or 3025. (See Par. 42 for further discussion of ESB values.)

TO OBTAIN ADDITIONAL METHODOLOGY DETAILS

Please reference *Radio Description of Methodology* and *Arbitron Replication II: A Study of the Reliability of Radio Ratings* for further discussion of the above and a discussion of more complex applications.

LIMITATIONS

Although Arbitron believes the above described procedures provide report users with useful estimates of standard errors, the reader should note the limitations described in Paragraphs 31, 41, 42, 43, 45 and "Restrictions on Use of Report" herein on Pages ii-iv.
