# The new MIDI Timepiece™ for ADAT™, Pro Tools™ and video

Does your studio combine MIDI with ADAT's, Pro Tools, or video? Then the MIDI Timepiece AV is for you. We took our world-renowned MIDI Time Piece II and added synchronisation features you really need, like video genlock, ADAT sync and word clock sync. Even Digidesign superclock!

Slave ADATs, Digidesign hardware or word-clock compatible devices to SMPTE and video. Drive your ADATs from your sequencer without an Alesis BRC™. Or control everything from an MMC controller like JLCopper's CuePoint™. The MTP-AV pulls it all together for stable, centralised, hassle-free synchronisation and MIDI networking. For Macintosh, Windows and stand-alone setups.

# ultimate digital studio package

## PRO TOOLS YAMAHA 02R MAC 9500

Here it is the ULTIMATE studio package from TSC. This complete solution offers the very best in state-of-the-art digital-audio recording and mixing. First up is a ProTools III PCI comprising of the core and two 666 I/O audio interfaces. Next is the superb Yamaha 02r digital mixing console which features superb automated digital mixing along with in-built digital processing. Finally we have the Apple Power Macintosh 9500/150, a real barnstormer of a computer featuring a 150Mhz 604 processor and six PCI slots. Put this little lot together and you've got one hell of a system! Just check the spec of the components:

### POWERMACH 9500/150

- PowerPC 604 processor running @ 150Mhz
- 32Mb RAM, Level 2 cache CD-ROM
- Supported 2 Gig Drive
- Extended keyboard and mouse included
- 17" Trinitron color monitor

### YAMAHA 02R MIXING CONSOLE

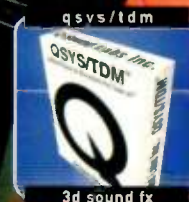

- Ultra high quality digital mixing
- Full moving fader automation
- In-built digital EQ and DSP effects
- Includes 2x CD8 AES/EBU 8 output boards
- Can be configured with up to 40 ins/outs

### PRO TOOLS I

- Pro Tools III PCI system core
- 2 x Digidesign 888 audio interfaces
- 16 XLR balanced ins. 16 XLR balanced outs
- 16 AES/EBU connectors
- 16 channel playback 16 track recording

**PRO  
TOOLS**

Customise your Pro Tools system in almost any way imaginable using add-ons and plug-ins such as **noise reduction**, **D-Verb** 24bit digital reverb, **MasterList** CD creator, **QSYS/3D** sound FX, **TC Tools** multi-band EQ, **TC Tools** reverb chorus & delay. And much more.

you may have noticed that over the past few months, a seemingly endless stream of new effects units has come onto the market — and the same goes for compact mixers. Part of this is obviously due to manufacturers cashing in on a lucrative niche opened up by somebody else (this is certainly the case when it comes to small mixers), but there's also a trend for music manufacturing companies to diversify as they expand, which results in more overlap between the products from different companies. While this presents users with a potentially confusing choice of models or makes, it does force down prices. Having recently returned from a tour of various American manufacturing facilities, it's obvious to me that they've all made major investments in automated assembly plant to enable them to compete on price terms with Far Eastern companies. But having made this investment, they have to maintain a high volume of throughput to justify having the machines, hence the pressure to diversify. At one time we complained about the Japanese making products obsolete — or at least out of date — every six months, but now it's the Americans who are bombarding us with 'new improved' versions.

So, we have more choice and lower prices — which is obviously good — but do we really get anything new for our money? After all, high-quality reverb has been around for more than a decade, good analogue mixers have been around forever, and just how many compressors and gates is it possible to fit into the average home studio? I don't know about you, but I'd like to see more innovation. Effects

units get cheaper, but they still offer the same reverb, delay, pitch-shift and modulation effects. Relatively few units include vocoding, not a difficult thing to do using a modern digital effects engine — and few people have really explored the possibilities of dynamic, complex filtering which could, for

example, put some of what Emu's Morpheus does for synthesis into an outboard processor.

The same thing is true of synths and sound modules. Few offer new sounds or new synthesis methods. There are exciting exceptions, one of which (the Yamaha VL70m) is

featured in this issue, but I can't help feeling that most manufacturers are happy to peddle the same tired old additive synthesis sounds. Ask them why, and they'll tell you they're making what people ask for — the same thing as before but cheaper — but then how can an end-user ask for something new unless he knows it exists? For example, who was clamouring for FM before Yamaha's DX-series, who craved morphing filters before the Emu Morpheus — and who'd even heard of physical modelling before Yamaha's VL1? All the truly great products have been the result of somebody's inspiration, not a wish list from users of existing equipment. Valuable feedback can be had from users on things like price, subjective sounds and user interfaces, but when it comes to giving them something they've never had, how can they be expected to know? Great new ideas turn up in software packages all the time, so why can't the same imagination be directed towards hardware?

One American DIY store (Eagle Hardware) uses the catchphrase, 'more of everything', and that's exactly what we're seeing at the moment. But when it comes to musical instruments or sound processing equipment, I don't want more of the same — I want something truly fresh that inspires me to do something new with my music!

Paul White Editor

## Shareware? Where?

Thanks for a very informative article on shareware sample editors ('Share & Enjoy: Making the Most of Synth Sampler RAM With Your Mac') in SOS's September issue. Could you please let me know if it is possible to purchase any of this software — especially *Sound Hack* — in the UK, since I'm not yet an Internet user?

Ardy  
London

**Derek Johnson replies:** *There is an easy answer: if you've got a CD-ROM drive, you could buy the Music & MIDI for the Macintosh CD-ROM from Archipel Studios in France, which contains 650Mb of music*

*users out there, a CD-ROM collection of PC music-related software is available from the same source for the same price.*

*For readers who don't have a CD-ROM drive either, we've looked into Mac PD/shareware libraries, but the general vibe seems to be that they've mostly decided that it's too much trouble to distribute Mac software in this way, since the majority of Mac users have, or have access to someone who has, an Internet account. Obtaining software via the Internet is cheap, easy, and often provides the latest versions without having to wait for them to filter through to a library. We did have a word with the London Mac Users Group, though, and they offer a 'shareware on demand' service for members: for a nominal amount per disk, LMUG will locate the shareware you're after, from their large collection of CD-ROMs or the Internet. Membership to LMUG costs £25 a year for wage earners, or £15 a year for non-wage earners. LMUG can*

*and MIDI files and software. There, in the Sound Utilities section, are Sound Hack v0.743, SoundEffects v0.9.2 and Sound Sculptor v1.1.1. Discussions of versions of these packages formed the core of Mark Tinley's article. The disc also features a variety of editor/librarians (for the Kawai K1, Yamaha DX7, Casio CZ-series, Roland MT32 and SC155, amongst others), system files, demos, and a load of other sound utilities. The disc costs just £29.95 and is available from Time & Space (01442 870681). For the PC*

*be reached at PO Box 3550, London SE4 1RT, Tel: 0181 314 1753, or email [lmug@netclub-lon.com](mailto:lmug@netclub-lon.com). Of course, if any readers have a favourite library, they should let us know. And don't forget: if the author of a shareware package you like and use, requests a registration fee or some other small payment, it's good practice to comply — you'll be enabling him or her to carry on writing software, and registration means you'll usually hear of upgrades before people who don't support the shareware system.* □

## Roland Patch Match

I am using a Roland E15 keyboard to control a Roland D50 via MIDI. My problem is that whenever I select a patch on the E15, the patch on the

**Derek Johnson replies:** *It is possible to turn off Program Change reception on the D50 — all the info is on page 54 of the advanced user manual. To save*

Roland E15.

D50 is changed according to the number chosen on the E15. What can I do in order for the D50 to remain as is while changing patch numbers on the E15?

Suren Ramdin  
South Africa

*you looking it up, you need to press the 'MIDI' button (it's under the joystick) three times, and you'll find the Program Change on/off switch in this screen — simply press the button underneath the display to select the state you require.* □

## Editors Choice

I own a Korg 05RAW, and find the front-panel method of editing to be limiting and awkward. I believe there are software editors in existence, and I'd like to try these.

I use a PC.  
David Brightman  
Wakefield

*and store libraries of your edits on your PC's hard drive. Contact MusicTrack on 01462 733310 for Unisyn (or check out the MOTU web site on <http://www.motu.com/MOTUHome.html>) and Arbiter Music Technology on 0181 202 1199 (<http://www.demon.co.uk/arbiter>) for MIDIQuest.*

**Derek Johnson replies:** *There are two answers to your question: Mark of the Unicorn's Unisyn (£229) and SoundQuest's MIDIQuest (£199). Both come with hundreds of drivers for MIDI-equipped devices, and both include a driver for the Korg 05RAW. With either piece of software, you'll be able to edit sounds graphically,*

*Interestingly, as this magazine went to press we heard about a new version 6.0 of MIDIQuest — full details in next month's 'Shape of Things to Come'. Suffice to say that there are loads of new features, including full 32-bit operation under Windows 95. Be warned that the new version is available only on CD-ROM, so you'll need a drive.* □

# Now Shipping!

The pioneering technology of Logic Audio 2.5 allows you to work the way you want to... without traditional limitations.

## Now for Windows '95:

# Logic

A | U | D | I | O

### MIDI Sequencing:

Logic Audio for Windows '95™ offers the most powerful MIDI sequencing ability available today. Experience the incredible power of real-time, non-destructive editing with the highest resolution available, 960 ppq. The extensive array of configurable virtual tools allows for unprecedented levels of control over your MIDI studio. Virtually unlimited tracks along with user definable screen sets (up to 90 per song) allows for total customisation of your creative environment.

### Professional Scoring:

No need for separate scoring packages, Logic Audio™ has all the tools you'll need built right in. Unlimited number of staves, WYSIWYG editing, Percussion Staves/ Drum Notation, Guitar Tablature, Transposable Chord Symbols, Multi-Bar rests, Text & Lyric mode options, Grace & Independent notes, cross staff beaming just to name a few. Experience why more and more Scoring/ Engraving professionals are using Logic Audio as their turn-key solution.

### Digital Audio:

Enter the world of professional, multitrack digital audio on your Windows '95 compatible pc. Along with a powerful set of real-time, non-destructive wave editing tools, Logic Audio 2.5™ also provides a built in stereo sample editor which includes the award winning suite of powerful DSP Functions known as the Digital Factory.™ Professional Time Compression/ Expansion, Pitch Shifting, Audio Quantising and much, much more...

### Logic Audio:

The only integrated MIDI, Scoring and Digital Audio Recording package for those unwilling to settle for second best. The most cutting edge technology in music is now available for Windows '95. The most powerful composition and production tool available at a price that is thousands less than traditional pc based digital audio workstations. Logic Audio is available at fine music and computer stores all over the world.

## AWE-somely Free

I was lucky enough to have a letter printed in the March 1996 issue [*the letter requested advice on buying second-hand synths*]. Thanks very much for the advice — I'll take it up if the Rand/Pound exchange rate ever sways in my favour!

I've spent many hours searching the Internet for high-quality vintage synth samples, only to find that the quality doesn't equate to the size of the files downloaded. In utter frustration, I turned my attention to emulating vintage sounds on my Soundblaster AWE32 PC soundcard (reviewed in SOS June 1994). After analysing how synths produce their sounds, I wrote some small utilities for generating simple waveforms — white noise,

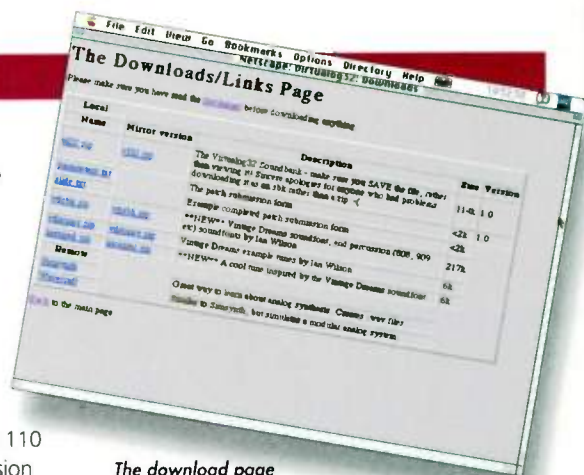

sawtooth, ring-modulated and FM waves, for example. The results have been encouraging, and to date I've completed four SoundFonts.

The advantages of these SoundFonts are that they are glitch-free, since no sampling took place, and they are extremely small because of the simple waveforms used. The first completed SoundFont (VINTAGE.SBK) has about 110 sounds and approximately 70 percussion sounds, and takes up a mere 96K of AWE32 RAM. And most importantly, it's provided totally free of charge! Robin Edwards was kind enough to spare some space on his Virtualog32 web site, from where the

SoundFonts can be downloaded (<http://www.gold.net/clockworx/virtualog32/>).

I originally planned to market them, but it turned out that the market for the AWE32 here in SA isn't large enough. They can, of course, be converted to other formats using conversion programs (*Convert* for PC clones springs immediately to mind). The SoundFonts are as follows:

- VINTAGE.SBK: Plenty of early '80s vintage synth and percussion sounds.
- VD909.SBK: Ever-essential Roland

The download page of Virtualog 32 web site, where Ian Wilson's free SoundFonts can be found.

TR909 sounds.

- VD808.SBK: Yes, also-ever-essential Roland TR808 sounds.
- VD101.SBK: An imaginary TR101 (sic) drum machine.

The sounds are, of course, not identical to the originals they attempt to emulate, but I think they could make a refreshing change from the current cluster of over-used samples. Future SoundFonts will include some mathematically generated renditions of simple FM sounds, ring-modulated and additive waveforms, and a set of TB303-type sounds.

Thanks once again for an excellent magazine.

Ian Wilson

Republic of South Africa ☐

## Fun in the .WAVs

At the moment, I'm using an AWE32 soundcard to record and play back samples, but now I'd like to add a stand-alone sampler to my MIDI-based home studio. I need a unit that will allow samples to be uploaded from the sampler (ideally via a serial port protocol) and be treated as standard .WAV type files, thereby allowing permanent storage and general data manipulation within the Windows environment. The problem I am encountering is that the mid-range stand-alone units don't really support these features. I know you can use software sample format converters that run on the Windows desktop and use MIDI SysEx to upload and download samples, but the data rate is very slow, and formatting sample types for every edit is time-consuming. I also know that a SCSI interface can be used for

data transfer of audio files, but would this be an ideal solution to my problem?

David Pendry.

Via the internet

**Derek Johnson replies:** A number of software solutions are available. KCCM's ReSample Professional (£199, Et Cetera Distribution, 01706 228039, reviewed SOS September 1995) can read an amazing range of samples from native disks; it can also write to a number of native disk formats. A brief glance at the compatibility chart reveals that as well as .WAV files, ReSample is compatible with AIFF, Akai S1000/2800/3000, AVR, Kurzweil K2000, SBK, Roland S550, Yamaha SY85, Yamaha TX16W, and many other formats. The results can then be edited comprehensively on your PC — minimum 386, Windows 3.1, 4Mb of RAM, with more

recommended, a soundcard to audition playback, and a MIDI interface for SDS. Edited samples could be saved to native disk (in most cases) or beamed out via SDS. Software such as this means that you have a huge potential source of samples from PD libraries on the Internet, not to mention ease of editing using your computer.

SMDI (SCSI MIDI Digital Interchange) is a sample transfer protocol pioneered by Peavey that is being supported by an increasing number of software applications and hardware samplers — Peavey's own DPM SP, Emu's ESI32, and Kurzweil's K2000, for example. You can dig up loads of info at <http://www.peavey.com/>. The standard avoids MIDI entirely, transferring data between samplers and computers using SCSI connections. This method is much faster than SDS — but then the

receding glaciers from the last ice age are faster than SDS. Just be sure to check that the sampler you want to buy, plus the software you plan to use, is compatible with SMDI if you want to take advantage of its speed.

PC software that can read .WAV files and also send/receive samples via SDS includes Turtle Beach's recently-discontinued SampleVision (reviewed in SOS December 1995) and Sonic Foundry's Sound Forge (£299, Arbiter Music Technology, 0181 970 1910, reviewed in SOS May 1996). Recent versions of Sound Forge can also send samples via SMDI, and ReSample will add this capability with its imminent v2.0 upgrade.

By complete coincidence, there's also a feature in this very issue which seems relevant to your problem; check out 'SCSI Logic', starting on page 78. ☐

# MORE BUSES, MORE PREAMPS, MORE EQ, MORE FEATURES. INTRODUCING THE NEW CR1604-VLZ.

Five years of user input, new materials, new technologies and the soul of our 8•Bus...at a super-low price.

**TRIM** control on the channel strip: 60dB total mic gain; -10dB "virtual pad" for line inputs.

**6 AUX SENDS** per ch. Aux 1 & 2 switch-able pre/post. Post-fader Aux 3-4 /5-6 selectable via Shift switch.

**HI EQ.** ±15dB shelving at 12kHz.

**SWEETENABLE MIDRANGE.** Wide, musical peaking EQ with 100Hz to 8kHz range. ±15dB range.

**LO EQ.** ±15dB shelving at 80Hz.

**LOW CUT FILTER** is a must for live sound and acoustic (microphone) recording. Sharp, 18dB/octave @ 75Hz high-pass filter lets you add Lo shelving EQ to vocals without boosting undesirable mic thumps, stage rumble, wind noise, P-pops, etc.

**PAN** control with constant loudness to maintain stereo perspective.

**MUTE** switch.

**MUTE & OVERLOAD LED.** -20dB SIGNAL PRESENT & SOLO LED.

**SOLO.** In-place AFL or PFL.

**BUS ASSIGN** for Subs 1-2, 3-4 & Main L/R.

**60MM FADERS** with 8•Bus log taper, special lip seal & long-life wiper material.

**BUILT-IN** power supply.  
**PHANTOM** power switch.

Studio-quality **DISCRETE MIC PREAMP** on every channel.

Pre-fader **INSERT** on every ch.

The original CR-1604 defined the modern compact mixer. Now we've "raised the standard" by adding over 20 new features like true 4-bus design, our famous mic preamps on every channel, flexible routing and monitoring, and swept mid EQ — for just scarcely more than the original CR-1604. Call for a free 40-page brochure.

## 5-WAY PHYSICAL CONFIGURATION

via our famous rotating input/output "pod." In minutes you can switch the CR1604-VLZ between ultra-compact 8-rack space configuration with pod to back ①, rackmount jacks-to-top ② or tabletop/jacks-to-back ③. Optional RotoPod-VLZ bracket places input/output jacks on same plane as the controls (tabletop ④ or rackmount ⑤).

**MONO OUTPUT** (bal./unbal.) has separate level control.

**RCA TAPE** inputs and outputs (unbalanced).

Separate **CONTROL ROOM OUTPUT** (bal./unbal.).

**DIRECT OUTPUTS** (bal./unbal.) channels 1-8.

**SUBMASTER OUTPUTS** (bal./unbal.).

**16 STUDIO-GRADE MIC PREAMPS** means the new CR1604-VLZ actually costs less than our classic CR-1604 & XLR10 expander combination!

**VLZ (Very Low Impedance) CIRCUITRY** developed for our 8•Bus consoles, further reduces noise and crosstalk in critical signal path areas.

**SOLID STEEL** main chassis. **SEALED** rotary controls.

## AUX SEND 1 & 2 MASTERS.

Stereo **AUX RETURNS 1 & 2** with 20dB gain above Unity for boosting weak effects.

**EFFECTS TO MONITORS** controls fold Aux Return 1 & 2 back into Aux Sends 1 & 2 so that on-stage performers can hear effects.

**AUX SEND 1 & 2 SOLO** switches with LEDs.

Stereo **AUX RETURNS 3 & 4.**

Aux Return 3 **ASSIGN SWITCHES** to Main Mix, Subs 1 & 2 or Subs 3 & 4.

Aux Return 4 **ASSIGN** to Control Rm/Phones.

**CONTROL ROOM/PHONES** level control.

**TAPE INPUT LEVEL** control and **TAPE TO MAIN MIX** switch.

**SWITCHING MATRIX.** This fantastic creative feature lets you route any combination of Tape, Subs 1 & 2, Subs 3 & 4 or Main Mix to Control Room/Phones bus. Lets you create custom headphone or broadcast mixes, monitor 2-track output or route a cue/click track to phones, create a second stereo main output with its own level control & more (covered in the extensive manual).

Global **SOLO** level control.

Global **AFL/PFL SOLO** switch.

**SUB ASSIGN** to Left or Right Main Mix.

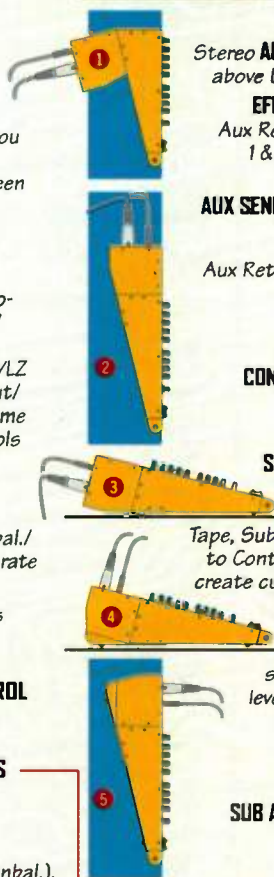

**MAIN MIX FADER.** BNC lamp socket. Global **AUX RETURN SOLO** with LED.

**LED METERS** with -30 to +28 range & **LEVEL SET LED.**

**RUDE SOLO LED.**

**HEADPHONE** output.

60mm **SUB-MASTER** log-taper faders.

## Let him run Cake(walk)

About three years ago, I got into MIDI sequencing with a cheap Yamaha QX5FD sequencer/TG100 sound module setup, but I've recently started yearning for

such as *Cakewalk Home Studio*, using the TG100 as a MIDI interface (via its serial connector) and sound module. Will this work, and will I need any other software

to get it to work?

Philip Logan Carlisle

**Derek Johnson replies:**

*A couple of calls to Cakewalk distributor Et Cetera (01706 228039) and Yamaha (01908 369269) revealed that your system is perfectly adequate, and should quite happily run something like Home Studio. One*

*extra bit of software you will need is Yamaha's serial driver, which is available free of charge from any Yamaha dealer (or from Yamaha Japan's web site at <http://www.yamaha.co.jp/english/>). You'll also need an appropriate cable. Call Et Cetera for advice, or check out Josty Cables (01642 769000).* □

The Cakewalk range.

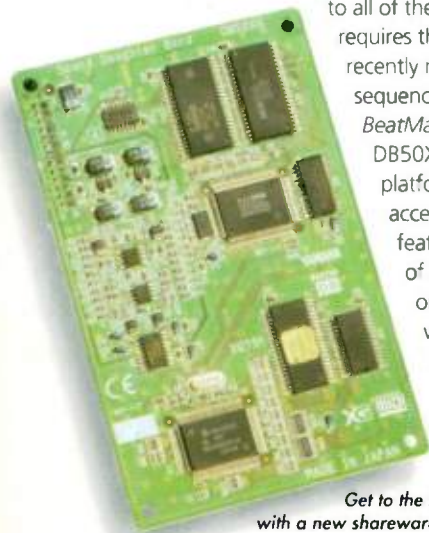

Yamaha's TG100.

the flexibility of software sequencing. Although money has been tight, my employer has recently provided me with a laptop PC (a Toshiba 486DX 75MHz, with 8Mb RAM and a 350Mb hard drive), which I'd like to use for music if possible. I'd like to run a budget sequencer,

## Free Card Trick

I read with interest your review of Yamaha's DB50XG daughter board back in *SOS's* May 1996 issue. It mentions that full access to all of the features of the card requires the Yamaha XG Editor. I recently released a shareware MIDI sequencer on the Internet, called *BeatMaster*, for which I used the DB50XG as the design platform. It thus provides full access to all of the board's features. The demo version of *BeatMaster* can be found on the Harmony Central web site: <http://www.harmonycentral.com/Software/Dos/EamonnMartin>. Via the Internet □

Get to the heart of the DB50XG with a new shareware sequencer.

## In Search of... the ARP 2100

I enjoyed Robert Alexander's ARP 2500 retrospective in the August 1996 issue of *SOS*, and I thought readers would like to hear about the even larger ARP 2100 and 1631. Both these instruments were in development at the end of ARP's life, and a small number of both were hand-built before ARP finally disappeared. The 2100 had about eight times the power of the 2500, and the 1631 was an expansion wing for the 2100.

Although the spec of the 2100/1631 combination may be rather tempting — a quadruple envelope generator system where each stage has its own modulation input, two LFOs with 16 waveforms each, and a velocity-sensitive, 5-octave keyboard, for example — the actual pleasure of owning such a system is balanced by the compromises in its design. Basically, the sound is great, but the control surface is not.

The 2100 uses a variant of the 2500's 'slide-and-click' method of making connections, but there are so many CV sources and destinations that a 2500-style control panel would be incredibly large. The rather inelegant solution is a single slider, plus 71 buttons to access the 850 control options — this makes the DX7 look programmer-friendly. There is also a limit to the 2100's internal connections. The many CV sources are assigned to patch matrices by no less than 64 multiplexer chips. This cuts down the physical size of the unit dramatically, but since the chips have no external CV connections, once you've used up your four EGs, there is no way at all of connecting an extra one to the matrix. Finally, although there are 32 EGs, the instrument is permanently partitioned into eight synth voices, with no connections between them. Adding the 1631 expander provides another eight partitions, but there is still no interconnection, so each voice has only four envelopes. However, since each voice can be

set to a completely different timbre, you can layer sounds to provide the finished result.

Reliability is also a problem: for every hour you play, you can expect a corresponding hour of service time. I get by because I repair the 2100 myself, otherwise the situation would be impossible. But the effort is definitely worth it. Anonymous

**Derek Johnson replies:** *It was interesting to hear — anonymously — of this apparently undocumented footnote from ARP's last days. The alert amongst you will recall reader Martin Straw alluding mysteriously to the 2100 at the end of his Rhodes Chroma letter back in November 1995, itself a response to Norman Fay's Chroma retrospective in October 1995. And without further details, the Chroma link seems to offer the most likely solution to the question of the mysterious '2100': the description of programming it with 72 buttons and a single slider seems to indicate that this particular machine might be some kind of modular prototype of the Chroma, before the electronics were refined and the final package designed. Interestingly, the working name for the Chroma was actually the ARP 2100. Thanks to Martin Newcomb of the Synthesizer Museum (Tel: 01279 771619) for his input on this particular puzzle. The 1631 is a strange one, especially since ARP 1600-series products were generally sequencers. Perhaps it's simply an 8-voice expander for the Chroma — which was 16-voice polyphonic, remember — or a prototype for the keyboardless Chroma that was eventually released. What suggests that these particular units may be a Chroma precursor is that the copy of an engineering flow chart for the 1631 supplied by our anonymous correspondent is actually dated December 1982 — about a year after ARP went under and the Chroma design team joined CBS, who eventually released the Chroma. Anyway, thanks for the info... whoever you are.* □

# Paranormal EQ

It's uncanny.

The precision and sheer musicality of Ghost's EQ will take your breath away.

Drawing on 22 years of Soundcraft experience, Ghost's new EQ is perfectly in tune with today's music.

Two fully parametric, overlapping mid bands with shelving high and low filters redefine the classic British EQ.

But there's much more.

Each channel strip benefits from its own dedicated circuit board and supports both the main input plus a mix B path

for tape or other input signals.

Ghost's flexibility

and fidelity are staggering.

The signal path quiet, true and uncompromised. And the automated mutes, just part of

Ghost's comprehensive machine control and MIDI implementation,

don't so much cut, as fade very quickly. There are no thumps and no clicks.

You'll hear nothing untoward from ProMic either, Ghost's microphone preamplifier boasts a better

gain to noise performance than you'd expect on consoles costing many times more.

We could go on, but to appreciate fully the ergonomic and audio integrity of Ghost you need to see and hear one in the flesh.

So call +44 (0)1707 665000 to find out more.

**Soundcraft**

## Lost in the Digital Dreadzone

Congratulations on printing a couple of priceless articles in recent issues of SOS, namely 'The Digital Dreadzone', by Paul D Lehrman (June 1996 issue), and the interview with Richard Symons of Pro Tape (July issue). Both these articles made me feel that I was not quite as alone in the digital jungle as I had thought. Let me explain.

At the end of last year, I was complaining to a friend that I was fed up with constantly having to re-thread the tape on my trusty old TEAC A3440, as it had no sensors to locate the end of the tape, and was thinking of getting an ADAT machine. "No, don't do that", he said. "Hard disk is the way it's going. I should wait. By this time next year, you'll be spoilt for choice."

He was right. However, after reading numerous articles in SOS and elsewhere, I am no longer sure what I am buying. At first, I thought I was buying some sort of self-contained digital Portastudio, but when I began to be asked by retailers how I was going

to store and retrieve all this digital data, I started to get a little worried. Despite my research, I was totally overwhelmed by discussion of the complexities of SCSI, Zip drives, Jaz drives, SADIes, MTCs, MMCs, onboard optical interfaces, standard IDEs, and so on, all of which allow your machine to talk, or not talk, to itself or other machines, depending, of course, on whether they have a similar list of acronyms. Dazed and confused, I slunk away, aware that I was possibly developing serious Luddite tendencies.

I therefore take heart from the fact that even professionals such as Lehrman concede that today's technology is developing too fast for its (and therefore our) own good. And even if we can get to the point where we want to store our ideas (oh yes, I remember now... I was writing a song!), Richard Symons would

not like to guarantee anything in digital form being retrievable after 10 years.

There, that settles it. After months of brain-numbing research, I'm going to upgrade to a... TEAC with a magic eye!

Keith Hale  
Canterbury □

## The Price is Wrong!

I feel that I must respond to a comment made by Paul White in his leader in the August issue. Although I agree with most of the comments to do with the issue of the never-ending learning curve, development of new instruments/recording technology, and so on, the statement that "on the value-for-money front, we are all doing fine" is hard to swallow, because as far as I can see, a lot of this stuff seems to cost far too much.

Can the majority of the readers of this magazine quite happily go and drop a grand on a valve microphone today and £3500 on a hard disk system tomorrow? If you purchased a Yamaha VL1 two years ago for £4000, I bet you'd be miffed at seeing them sold off for less than £800 new today. I remember remarking to a friend 10 years ago that I was using a Synclavier that cost \$30,000, and she pointed out that you could buy a house for that much. I think of that comment from time to time, and it does help me get a sense of perspective.

I understand that the

manufacturers have to make a profit on their efforts, but I often find myself wondering exactly what the profit margin really is for some of the gear, or is it the retailers who are making the bucks? You know, the guys that don't publish their prices in the ads in the magazines, promise you the best price in the UK and then waste your time when you try to get that price. Perhaps someone could provide some illumination on that area for the readers.

Thanks for publishing a generally useful and informative mag.  
Chris Vine  
Via the Internet

**Paul White replies:** *This seems to be the year for people to take issue with me, but then it all makes for interesting debate. Take PCs — well, somebody should, that's for sure! (More hate email?) On the one hand you say recording kit costs too much, but then you admit that a few years back you were using a Synclavier that cost as much as a house! Now you can do most of the same things using hardware that costs little more*

*than a decent garden shed — in my book that's cheaper. Likewise, you say that it's infuriating to buy something and then see it plummet in price — but again, that means it's now cheaper.*

*Even so, I know exactly what you mean, and every now and then, when reviewing some new and stunningly 'cheap' effects processor costing 'only' £250, I get a devilish temptation to point out that for the same money you could buy a washing machine or video recorder, with far more gubbins in it, that you'd probably get a lot more use out of. But then, consumer products are cheap because of the economies of scale. It's true that importers, taxmen, retailers, agents, shipping companies, and goodness knows who else, add greatly to the price we pay for anything (I guess a manufacturer has to be able to build something for between 25 and 30% of what it finally sells for to make a living), but that must be equally true whether you buy a TV or a Japanese synth.*

*But to get back to the original point: I never said that recording was cheap (it's probably the most expensive indoor hobby around!)*

*— I only said that it's a lot cheaper than it was. A hand-made valve capacitor mic will still cost a grand or two, because that reflects the effort that goes into building it. You don't have to buy one — you can make do with a mass-produced back-electret mic and still get great results. A friend recently showed me a camera magazine with a £65,000 lens in it, but that doesn't mean you can't take good pictures with an 80 quid lens. And as for hard disk systems (don't talk to me about hard disk systems), I got a really good trade deal on my first 650Mb drive to use with Sound Tools and it still cost me £2500! Now you can buy a 2Gb drive for less than the VAT on that figure. And what about my original Macintosh SE30, which originally cost over three grand? Now you'd be hard pushed to get a taker at £200. And that reminds me: I bought a Mac LCII system from Dixons three years ago and they just tried to sell me a further two years' warranty on it. The cost of the warranty was about fifty quid more than the system is now worth. Sometimes the fact that something just got cheaper is little consolation. □*

OK for writing letters

BRILLIANT | FOR | WRITING | NOTES

**P**ractical, sure. Musical, er...well. For all its qualities, the QWERTY keyboard is not exactly a source of inspiration when creating music. The new Yamaha QY700 on the other hand is designed from scratch to deliver instant and intuitive access to one of the most powerful composition engines ever devised. A high resolution, 110,000 note professional multitrack sequencer forms its heart with 32 instrument and 16 accompaniment tracks. And an ear boggling 3,876 preset phrases, covering all styles of music, take the grind out of writing backings.

**QY700**

Non-destructive "Groove Quantizing" templates let you change the feel of the song without losing the original data.

While the 32 part multitimbral XG tone generator offers 480 editable voices and 11 complete drum kits.

There are three on board effects processors too with 11 reverb, 11 chorus and 42 variation effects including delay, modulation, distortion and EQ.

But thanks to the QY700's brilliant interface, this massive power is at all times under control. Your control.

With a suggested selling price of just £999 you'll want to know more, so call 01908 369269 today for a free brochure.

High resolution (1/480 quarter-notes)... 110 000 event battery backed sequencer memory... 48 track, 64 note polyphonic sequencer... MIDI in\*2, MIDI out\*2... 32 part multi-timbral sound generator... Full voice editing - Resonant filters - LFO and Mono mode... 3 independent effects processors... Database of 3876 phrases let you create 16 track loops (up to 256 bars in length) then apply 100 editable groove templates... MTC synchronisation... DD/HD floppy disk... Footswitch control...

**YAMAHA**

Yamaha-Kemble Music (UK) Ltd. Pro Music Division

## ► A Score for PC Users

Help! I'm trying to find a supplier for SongWright V, a PC music notation package. Have you heard of one, or could you point me in the right direction? I hope you can help...

Gary Turner  
Via the Internet

**Derek Johnson replies:** A quick trawl around the Internet and a fax to SongWright Software reveals that SongWright is now up to version 6, and retails for US\$119.95. SongWright inform us that while they have no specific representation in the UK or Europe, they are happy to sell their products direct to customers (or dealers) in this part of the world — simply add US\$10 overseas shipping and handling. The ideal payment method would be a credit card, but a banker's cheque in dollars drawn on a US bank would work. Check with your bank.

For readers who aren't familiar with SongWright, it's an affordable but powerful notation package, using a WYSIWYG interface, with a minimum requirement of an IBM PC-compatible with 512K of RAM; DOS 2.1; CGA, EGA, VGA or Hercules graphics display. Add an AdLib or SoundBlaster compatible sound board, and virtually any MIDI interface for audio and MIDI playback. Alert readers will have noticed that SongWright runs under DOS, which is perhaps its attraction for some potential users who simply require scorewriting on a PC. It will run under Windows, but needs slightly more memory to do so.

Music can be entered via the PC keyboard, a MIDI keyboard, the mouse, or by loading a Standard MIDI File. Many functions — justification, bar lines, and note beaming, for example — are automatic. SongWright even features a graphic symbols editor/librarian, which allows you to draw any kind of symbol and place it anywhere in the music. Compositions can be played back via PC speakers or via any connected MIDI instruments; AdLib or SoundBlaster users can take advantage of 64 'realistic' instrument sounds and drum patches. If you want more information about SongWright, contact: SongWright Software, 7 Loudoun St SE, Leesburg, VA 22075 USA. Tel: 001 703 777 7232; Fax 001 703 777 7503. Email [songwright@aol.com](mailto:songwright@aol.com).

Incidentally, anyone can have an informative five-page brochure faxed back to them by the company. Call SongWright's main number from your fax machine during the UK daytime, when the company's automated message system is on. When your call is answered, press '3' when prompted, for a list of fax options, then '1' for the SongWright brochure, and follow the instructions until a voice asks you to press the 'Start' button on your fax machine. It takes a couple of minutes, but saves you waiting for the mail. SongWright also produce Do Re Mi (\$79.95), a package which reads a SongWright file and composes an accompaniment of up to three polyphonic instruments, plus bass and drums, and the SongWright Symbol Collection (\$25) of over 400 musical symbols, including orchestral and piano symbols, guitar chords, Gregorian chant neumes, and more. □

## Garage Music

Could SOS possibly point me in the direction of a studio designer who wouldn't mind a small project? I'm planning to convert a garage into a project studio and need to soundproof it effectively for all types of instruments, except drums. I can tackle the construction myself, but I do need a proper and effective design to work from, which would also preferably give indications of quantities of material and where they may be obtained. Perhaps you could also recommend one of the books advertised in SOS Bookshop as being particularly helpful.

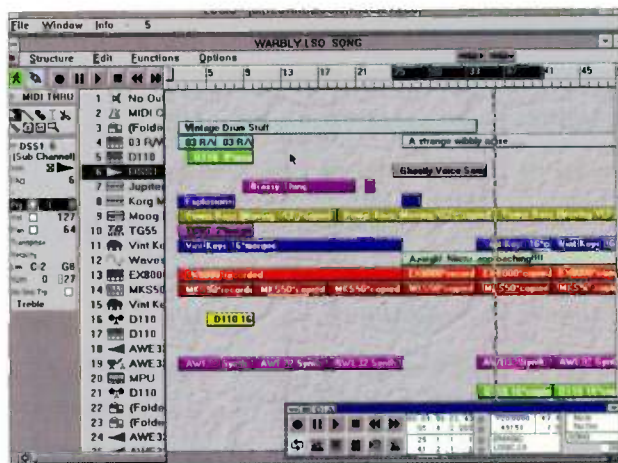

Lastly, I plan to run Emagic Logic in my studio, but need to know the minimum specifications for a PC needed to run this. Robert McChesney Weybridge

**Derek Johnson replies:** We can actually point you in the direction of a studio designer: the Studio Wizard Organisation are happy to quote for any job of any size, from simple advice,

planning and design, right up to construction and specifying and installing equipment. They will even provide the service you require — give advice, provide plans, put forward ideas for the raw materials — and then leave you to it. The Studio Wizard Organisation can be

contacted on 01362 668900, or mobile 0860 666532. Their informative web site is at <http://www.sworg.demon.co.uk>.

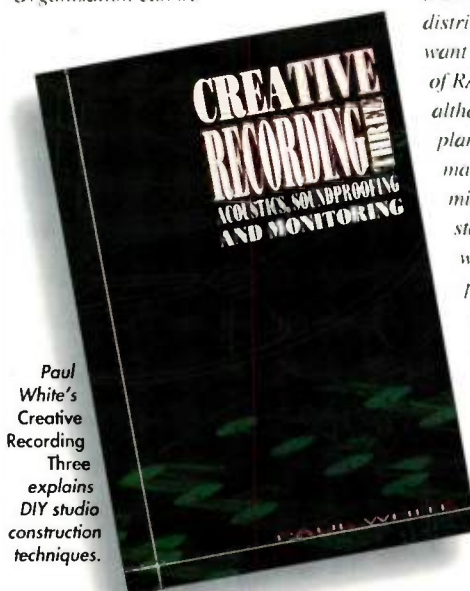

As for books, Creative Recording Three: Acoustics, Soundproofing and Monitoring, by SOS editor Paul White, is an excellent place to start. It's priced at just £9.95, plus postage, from SOS Bookshelf (order number B317). Occasional SOS contributor David Mellor's How to Set up a Home Recording Studio has recently been updated, to include soundproofing and acoustics. This book is also available from the SOS Bookshelf, and costs £8.95

Emagic's Logic for the PC.

plus postage (order number B116). Check out the mail order section at the back of the mag for ordering and postage details. And remember, SOS subscribers get 10% off all books in the Bookshelf!

The second part of your query was answered by a quick call to UK Emagic distributors Sound Technology: if you just want to run Logic, a 486 DX266 with 8Mb of RAM would be an absolute minimum, although that would be a bit slow. If you plan to run Logic Audio, the same machine with 12Mb of RAM would be a minimum, although a more sensible starting point would be a Pentium 90 with 16Mb or more of RAM. The program takes about 4-5Mb of hard disk space, and if you do go for Logic Audio, you'll need a fast hard drive. You will, of course, also need MIDI and/or audio hardware in order to communicate with the outside world. If you've got any more queries along these lines, call Sound Technology on 01462 480000. □

Paul White's Creative Recording Three explains DIY studio construction techniques.

FOLIO  
Notepad

SPIRIT

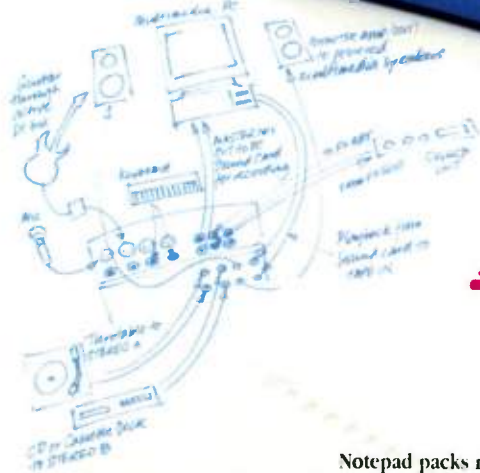

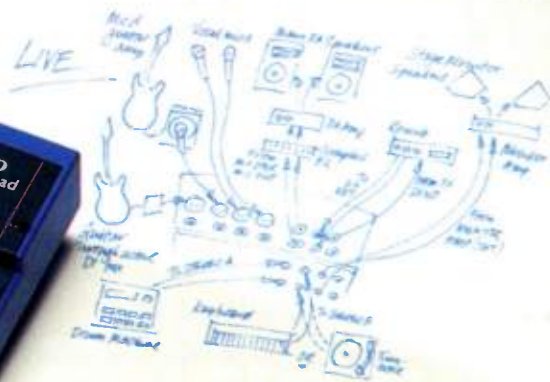

# IT'S NOT THE SIZE IT'S WHAT YOU CAN DO WITH IT

Folio Notepad is small but surprisingly versatile. Musicians, sound engineers, multimedia users, DJs and many others will find plenty of uses for Notepad at live venues, in studios, bars, schools, places of worship and even "on location". Notepad's use of high quality components and short signal path mean it sounds cleaner than many large "professional" consoles.

Here are some of the uses you could put Notepad to.

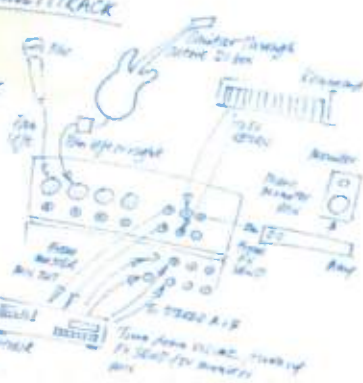

**MULTIMEDIA**  
Recording and playback of music using a PC fitted with stereo sound card

## RECORDING TO MULTITRACK

Record up to 2 tape tracks at once. Pan instruments to both sides if they are intended for the track or Pan hard left and right to record in two separate tracks

**£199** UK RRP

## THE FACTS

Folio Notepad is a compact DAT-quality 10 input stereo mixer that is flexible enough to be used in a wide variety of applications, either as the main mixer in small configurations or as a submixer in larger setups.

Unlike many small mixers, Notepad is no toy. It incorporates tried and trusted circuit designs and components used on our flagship mixing desks.

Notepad packs many of the features normally reserved for larger consoles: 4 mono mic/line inputs with high quality preamps, 48V phantom power and 2-band EQ; 2 stereo inputs with switchable RIAA allowing direct connection of turntables; post-fade effects send and stereo return; separate Mix and Monitor outputs...and much more.

At Spirit, sound quality is paramount and Notepad is no exception. But don't just listen to us - visit your Spirit dealer, listen to Notepad and judge for yourself.

# shape of things to come

by Derek Johnson & Debbie Poyser

## Peak reaches new heights

**B**IAS Peak, the digital audio editing software for the Apple Mac reviewed in last month's issue, has now reached v1.1. The upgrade is available free to registered v1.0x users, and can be downloaded from the tech support page of BIAS's web site. New features for v1.1 include support for QuickTime and .WAV files, tape-style scrubbing, audio compression support, phase vocoder, gain envelope, vertical scaling, and find/repair clicks.

BIAS have also announced some preliminary details of the forthcoming v1.5, which will be launched at the AES show in LA in November: this upgrade will add extended sampler support (including Akai, Roland and MIDI Sample Dump Standard), batch processing, playlists, and overviews.

**A** Natural Audio Ltd, Suite 6, The Kinetic Centre,

## Groove Tubes rest their case

**T**he American-built range of mics from Groove Tubes now come supplied with sturdy aluminium attaché-type cases — at no extra charge. The cases feature adjustable internal partitioning and a lock for added security. In case you need

reminding, there are three mics in the GT range: the MD1 cardioid valve condenser; the MD2 cardioid, large-diaphragm mic with adjustable attenuation; and the top of the range MD3, which has the benefit of variable polar pattern response. In addition, both the MD2 and MD3 models are supplied with the ST1 Shock Therapy integrated shock mount, and a pop filter.

## Sounds in the WORX

**G**erman software house Prosoniq Products have introduced *sonicWORX* (yes, it really is spelt that way), a DSP software package for Macintosh (also native Power Mac) which uses neural networking technology to process audio files. This new technology is claimed to give *sonicWORX* powerful sound manipulation capabilities

far beyond conventional FFT (Fast Fourier Transform) analysis/resynthesis. At present, the software comes in two completely different forms:

- *sonicWORX Artist* (£399): this package aims to help you design completely new sounds for movie soundtracks, dance and experimental music, and so on. It comes with over 50 plug-in modules including: transform multiplication; audio maximiser; 18-band vocoder; room simulation; filters; de-reverberation; real audio morphing; transwave cycling; normalising; pitch-shifting; time-stretching; and the "drum loop jungle-iser".
- *sonicWORX Studio* (£699): the *Studio* package offers a complete range of post-processing/mastering tools, combining standard DSP functions with completely new algorithms, including intelligent phase alignment for vinyl cutting; high quality de-noising and de-crackling/de-clicking algorithms; psychoacoustic effects; and audio refreshing. It also features standard functions like normalising, sample rate conversion, and stereo pitch-shifting and time-stretching.

Both products are imported into the UK by Turnkey Professional, although they will also be available through any authorised Digidesign dealer.

**A** Turnkey Professional, T14-116 Charing Cross Rd,  
London WC2H 0DT.

**T** 0171 240 4036.

In last month's Crosstalk, we mentioned that Yamaha's SY85 had finally been discontinued, after several years of extreme popularity. However, SY85 owners needn't be worried that support will cease for the instrument: we've spotted third-party sound specialist Sounds OK offering a good deal on Sound Source Unlimited SY85 sound

## SY-saver from Sounds OK

disks: buy the four SSU disks, which usually retail for £32 each, and they're yours for £79 in total.

Sounds OK will also throw in a copy of their UK Sounds disk for nothing — that's a saving of £69 in all. The UK disk features a set of dance/ambient sounds created by Sounds OK's own Paul Wells.

Other synths are also in on the special offer vibe: any three SSU Korg 01-series disks can be purchased for £75 (instead of £39 each) and any three SSU Korg X3/X3r disks for £69, against the usual price of £29 each. All prices include VAT, but exclude £2 postage and packing.

**A** Sounds OK, 10 Frimley Gardens, Frimley, Camberley, Surrey GU16 5JX.  
**T** 01276 682313.  
**F** 01276 682717.

Peavey's long-awaited Addverb III multi-effects processor is now available in the UK. The new unit is suitable for a wide range of applications, and features true stereo ins and outs, fully user-definable algorithms, and a total of 35 effects, including two

## Peavey's added value

independent chorus effects and two independent pitch-shifters. There is room for 128 user patches onboard, alongside 128 factory settings, and up to eight effects can be used at once. If reverb is your bag, you can blow all the Addverb III's processing power on one of eight 'ultra reverb' algorithms, or you can split it up between a collection of effects. The Addverb III retails for £299.

Even more affordable is the £155 DeltaFex, which features stereo ins and outs, 16 different effect types — including seven reverbs, four delays, chorus, flange, rotary speaker, and a paralleled delay/reverb — and two adjustable parameters per effect. The rotary speaker speed can be controlled in real time via a footswitch, and the front panel has wet/dry, input level, and output level controls.

# Moog Music: The return

One manufacturer's name stands above all others in the recent resurgence of interest in analogue synthesis: Moog. That name is now being revived for a line of synths based on classic Moog technology and made in the USA. Available first will be the 9500 series modular synth, a fully-customisable system which can draw from a selection of 26 different modules, including VCO; noise generator; random signal generator; low-pass filter; high-pass filter; fixed filter bank; envelope generator; sample & hold; ring modulator; dual-trigger delay; reverberation unit; and mixer. Two 'preset' configurations are also available: the System I (£3695), and the System IV (£5195).

Early October will see the reappearance of the Minimoog, at a projected retail price of just £1199. All new Moog products are being made to the exact original specification, including original circuit diagrams, and original components. Where components have gone out of production, Moog have commissioned new parts to be made to the specification of the old ones.

Also coming full circle is the UK distribution of the new Moog instruments: it's to be handled exclusively in the UK by Turnkey Professional — part of the Arbiter Group, who were the original Moog distributors from the late '60s to the early '70s.

**A** Turnkey Professional,  
114-116 Charing Cross Road, London WC2H 0DT.  
**T** 0171 240 4036.  
**F** 0171 497 0690.

## MIDI's greatest hits

Leicester-based Wernick Musical Instruments have unleashed a new electronic drum pad on an unsuspecting world...

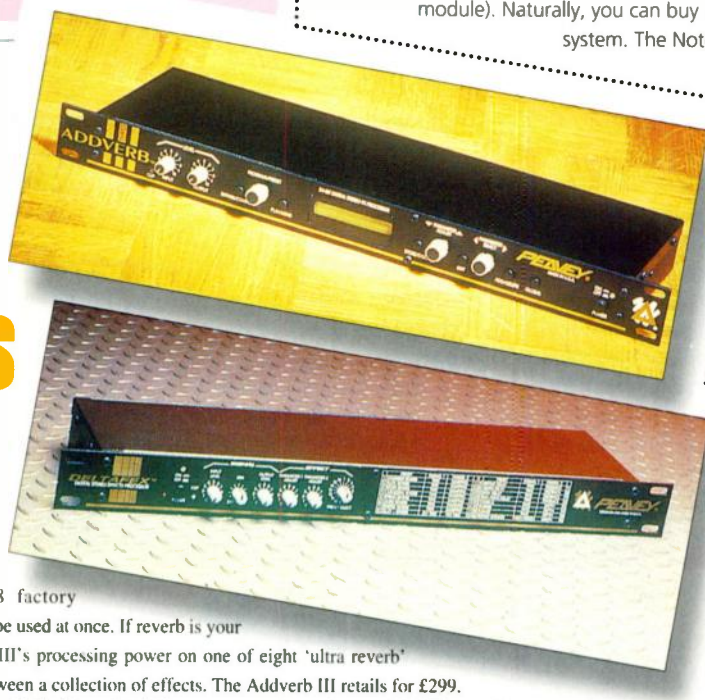

First seen at this year's Frankfurt Musikmesse in March, the Wernick Notepad consists of a single MIDI drum trigger pad, which can be plugged into any commercially-available trigger-to-MIDI system (such as the trigger inputs on the Alesis DM5 drum sound module). Naturally, you can buy more than one pad and build up a custom system. The Notepad costs just £85 including VAT for the

black or white version. Dayglo models, for

the techno-heads out there, can be had for a fiver more. Session percussionist Pablo Cook swears by the Notepad, and has been using several on the Pulp tour and while working with William Orbit.

Wernick also debuted the intriguingly-named Xylosynth, a 31-pad electronic Xylophone, at Frankfurt. Currently made to order, this unusual percussion instrument has already been purchased by Miss Saigon productions in Germany. Wernick suggest that it will be of particular interest to concert percussionists and schools.

# shape of things to come

## MIDI interfaces, Et Cetera...

**E**t Cetera Distribution have a new multi-port MIDI interface card for PCs. The MIDI Edge 1x4 is a professional card with four independent MIDI inputs, giving 64 MIDI channels for playback, and one MIDI input. It also comes with a WaveBlaster-compatible connector for add-on Wavetable boards such as the Yamaha DB50XG daughter board, plus multi-

card and multi-client drivers for Windows 3.1x and Windows 95. These drivers mean that you can use two MIDI Edge cards in the same PC if you like (and if you have the slots available). The retail price of the new card is just £129 including VAT.

Also new from Et Cetera is a new version of the *DART* (Digital Audio Reconstruction Technology) software for PC. *DART Pro* is shipping now, and adds de-noising, de-hissing, an updated Wave manager, and a spectrum analyser to *DART*'s original click, pop, and surface noise

removal facilities. The de-noising option allows the user to remove any constant noise disturbance; according to Et Cetera, *DART Pro* will take a noise print from a highlighted area of noise, analyse it, and then remove that noise from an entire wave file — especially handy for removing surface noise from old records. The de-hissing process can be used, for example, to remove hiss from old cassette recordings, and the new Wave Manager allows you to compile renovated audio material into a playlist, which can then be played in order onto DAT or cassette.

*DART Pro* costs £389; the original *DART* is still available at £89. Current *DART* users can upgrade for just £49.

Note that we inadvertently printed Et Cetera's old address with our news item about the *Cakewalk* v5.0 sequencer updates last month — the following address is the correct one!

**A** Et Cetera Distribution,  
Valley House, 2 Bradwood  
Court, St Crispin Way,  
Haslingden, Lancs BB4 4PW.  
**T** 01706 228039.  
**F** 01706 222989.

Dave Stewart and Barbara Gaskin are in the process of finishing off their fifth album, and on September 28 take a break to make a rare live appearance. Dave and Barbara will be joined by guitarist Andy Reynolds at the Queen Elizabeth Hall for a concert presented by CD Journal *Unknown Public*.

**T** Queen Elizabeth Hall  
Box Office 0171 960 4242.  
**W** <http://www.demon.co.uk/creative/davebarb/>

Ex-Japan members Steve Jansen and Richard Barbieri were asked by JVC to compose a soundtrack for one of a series of ambient videos back in 1984, shortly after Japan folded. The tracks were recorded and mixed in Tokyo, and came out as *Worlds In A Small Room*; the accompanying video featured footage of space shuttle missions. The album is quite hard to get these days, so the duo have re-issued selected tracks, under the same album title, together with three new pieces, on CD.

Symetrix's new 551E 5-band parametric EQ uses a new type of EQ circuitry, dubbed UltraQ. This incorporates five fully-overlapping frequency bands, each allowing for a range of 10Hz to 20kHz, and independent knobs for adjusting frequency, bandwidth, and cut/boost. Other features include low- and high-cut filters, and connections on both XLRs and quarter-inch jacks.

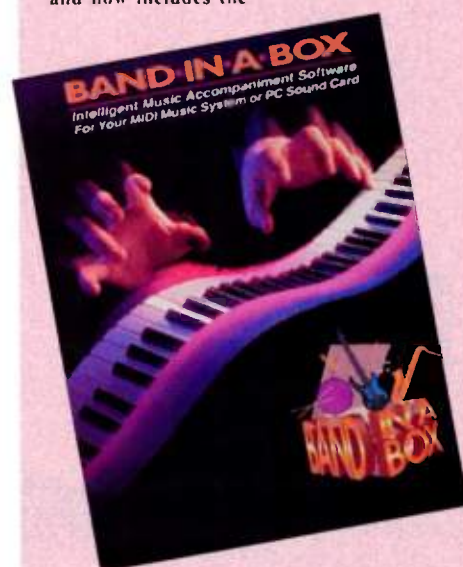

**T** Fusion plc, 01932 882222.

## Better Band in the Box

**P**G Music's popular *Band in a Box* composition/auto-accompaniment software has reached version 7.0 for Windows; over 60 new features have been added to the new upgrade. *BIAB* v7.0 costs £89.95; you can upgrade from an earlier version, or crossgrade from a Mac or Atari version, for just £45. Here's just a few of those new features:

- Improved notation.
- Step/notation edit of Stylemaker patterns.
- Style changes at any bar.
- Scroll-ahead option for notation.
- Improved synth support.

PG Music's *Pianist* range is also expanding and now includes the

following: The Bluegrass Band; The Children's Pianist; The New Age Pianist; The Blues Pianist; The Pianist Volume 3; and The Jazz Soloist Volumes 1, 2 and 3. Demos are available from the Arbiter web site.

## Dedicated to DJs

**T**he Royal Festival Hall, in London SE1, is the venue for the DJ Workshop 96, taking place on Saturday, October 5. This event, dedicated to all things DJ, originates from the DJ course run at the British Record Industry School in South London, and aims to

be both fun and educational. Tickets cost £15 for participants or £5 if you just want to watch, with doors opening at 11am, and closing time at around 10pm. Professional DJs lending their expertise to the event include DJ Kofi, Nicky Blackmarket, Outmaster Swift, Alex Knight, and many more. Last year's event attracted over 500 participants and spectators.

## Alesis axe prices

**N**ews from Sound Technology this month kicks off with some welcome tidings on the Alesis price front. The ADAT XT 8-track digital tape recorder has had £500 carved off its price, bringing it down to £2699, while the Microverb 4 and Midiverb 4 effects processors have both been reduced by £70 each, to £229 and £329 respectively. Monitor One speakers now cost £329 — that's a drop of £74 — while the Monitor Twos have plummeted to £599 from £799. Lastly, the 3630 is now £225 (down £50), and the DM5 18-bit digital drum module retails for £429, down £70.

Sound Technology also

distribute Samson products, and new to that range is the MixPad 12, a 12-input version of the compact MixPad 9 mixer (reviewed in March 1996's SOS). The Mixpad 12 features 12 channels with six balanced XLR mid/line inputs and three stereo inputs, two auxiliary sends per channel, two stereo effects returns, and 2-band EQ. The M12 costs just £275, and Sound Technology will even throw in a £90 Samson microphone, absolutely free, to purchasers.

**A** Sound Technology plc, Letchworth Point, Letchworth, Herts SG6 1ND.

**T** 01462 480000.

## CP Mega: it's in the bag

**C**P Mega Ltd have introduced a range of rugged carrying bags for audio equipment. The Pro Bag Range features four models of audio bag and audio organiser, and has been designed in conjunction with recordists assigned to BBC World News and

Reuters. The bags use a combination of double-skin Cordura, closed-cell, semi-rigid foam cushioning, and transparent covers; equipment access and user comfort have been foremost in the design process. As an example of what you can expect to pay, the model VA02 audio bag pictured here costs around £182 including VAT. Not cheap, but they're built to last, with a lifetime warranty on materials and workmanship.

**A** CP Mega Ltd, Worton Hall Industrial Estate, Worton Road, Isleworth, Middlesex TW7 6ER.

**T** 0181 568 1881.

**F** 0181 568 1141.

## Dawsons Music: It's big up North

**W**arrington's Dawsons Music are

sponsoring what is claimed to be the biggest ever exhibition of musical instruments and audio technology in the North. Music User 96 is to be held at Haydock Racecourse (located near

the junction of the M6 and the A580, between Liverpool and Manchester) on October 25-27. The first day is dedicated to the education market exclusively, but the remaining two days are open to anyone, with over 50 exhibitors showing more than 150 brands. Music User 96 will be divided into three areas: music in the Home, in Performance, and in the Studio, between them covering domestic, live and studio instruments and technology.

**A** Dawsons Music Ltd, 65 Sankey Street, Warrington WA1 12SU.

**T** Ticket info hotline 01925 574495.

**F** 01925 417812.

# The 1066

## Our Next Industry Standard

Look at the equipment list of any large studio or live concert system and chances are you'll find **dbx** products. Studio and live sound engineers rely on **dbx** to deliver silky smooth vocals and crisp, tight drums and bass which are the **dbx** trademark.

In building a successor to our early classics we talked to hundreds of working engineers and producers about the way they work and what's important to them in a dynamics processor.

The result is our new 1066 Compressor/Limiter/Gate. Classic **dbx** sound, an almost fanatical level of build-quality and the most comprehensive specification of any processor in its class.

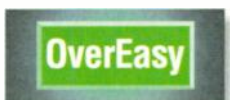

### A Solid Foundation

The heart of any dynamics processor is its VCA and **dbx** really scores in this department. Our proprietary VCA's are

good enough to be used in famous name mixing consoles as well as our own products, and the 1066 features our best VCA yet. The new V2™ boasts superb dynamic range while maintaining very low distortion and almost immeasurable noise.

### Classic DBX features at your fingertips

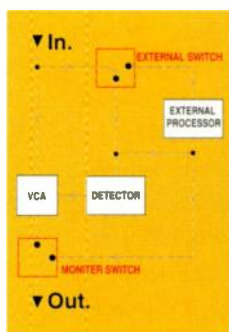

Our original *OverEasy*® soft-knee compression is

switchable to hard-knee for that almost special-effects sound.

### The Smartest Sidechain

The 1066 makes using external devices in the sidechain simplicity itself. *Monitor* lets you instantly flip between the sidechain and

the compressed signal for rapid set-up whilst the *External* switch allows you to A/B processed and unprocessed signal without the need for complex patch-bay normalisation.

### PeakStopPlus™:

is **dbx**'s latest limiting algorithm and the best yet. It suppresses those unwanted transients while minimising the distortion common to many other hard limiters.

Add to this numerous other switching options, a ratio control on the gate and metering of input level, output level and gain reduction and you have the most comprehensive set of controls available.

### Hand built in the USA.

All **dbx** effects are hand built in our factories and scrupulously tested before shipping. Components are meticulously selected and the 1066 is no exception. It features illuminated switches, detented pots and new super bright lightpipe technology which replaces standard LEDs found in other units.

We think the 1066 is a worthy successor to our original compressors. See and hear one for yourself and see if it sets your standards.

**dbx**

## Voyage to Mansfield

Electronic music and Tangerine

Dream fanzine *Voyager* is presenting 'The Xmas Concert part III: The Revenge'. On stage will be Andy Pickford (see interview back in *SOS* July 1995), with support from *Sound On Sound* contributor Paul Nagle, and Asana. Paul will be releasing the fourth CD in his *Elements* series — entitled *Earthshaper* — on the night. There will also be a fully-licensed bar and a raffle. The date is November 30, the time is 5.30, and the venue is The Sherwood Suite, Mansfield Leisure Centre, Mansfield. Note that seating is strictly limited to 130, so book early! Advance tickets cost £8, and can be had from Julian Bickmore on 01623 657 907, or Midas Records on 01332 349 429.

MTV's London-based TV complex has recently purchased six Sennheiser UHF multiple-channel radio mic systems from Marquee Audio. The system comprises six EM2004 switchable-frequency receivers and four EK4015 miniature, camera-mountable, true-diversity receivers, plus six 16-channel switchable SK50 UHF belt-pack transmitters. John Whitworth, MTV's Senior Technical Manager, notes: "We chose Sennheiser above the rest because of its better sound quality and robustness."

**T** Sennheiser UK Ltd  
01494 551551.

Control Synthesis — producers of the Deep Bass Nine TB303 clone — inform us that they have had a hand in the development of the Emu Orbit's synth module's sound ROM, lending a European feel to an otherwise American product. To go back to the Deep Bass Nine briefly: a limited number are actually available from Control Synthesis for the knock-down price of £279, against the original £449 retail.

**T** 01270 883779.

Aspen Media Ltd will supply and fit Tascam's new v4 software (with a retail value of £58.75) free of charge to your DA88, SY88 and RC848 when they next service your machines. Remember that a full service is recommended every 500 hours or so.

**T** 01442 399949.

## Raven: Spec up price down

**Q**uasimidi's Raven synth (reviewed in *SOS* March 1996) has undergone a hefty price cut — from £1599 on its launch to a list price of £999, including VAT. If the Raven is your kind of synth, you can spend some of that £600 you've saved on a tasty new upgrade. With the £249

Raven Max upgrade board, the Raven can have its sound pool expanded to an amazing 112Mb, featuring 1000 extra sounds, with the focus on new drums and percussion instruments, vintage synths, vocal hooks, and effects. In addition, the Raven Max expansion provides new sequencer functions, including copying and deleting pattern and user motifs, and using the Motivator for direct recording onto any track of the Raven's sequencer.

**A** Quasimidi Musikelektronik GmbH,  
Eisenbahnstr. 13,  
D-35274 Kirchhain, Germany.  
**T** 0049 6422 94020.  
**F** 0049 6422 940244.

**T**hefts of pro audio gear appear to be sadly on the increase; the latest to be hit are Blue Systems of Saffron Walden. If you're offered any of the following under dodgy circumstances, contact Blue Systems or Saffron Walden police station. The list is as follows: Power

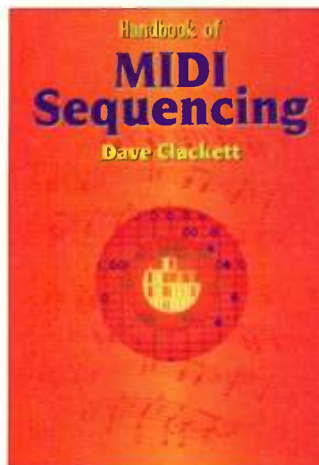

Mac 7100/80 64/700CD, 2Mb video; Apple 17-inch display with Adaptec; Bluedisc 2.1Gb drive; Bluedisc 230Mb drive; Vista scanner; two Sony DTC1000 ES DAT recorders; six Syquest EZ Drives; 16U full flightcase, green; 12U full flightcase, blue; Tascam MM1 mixer; Opcode Studio 3 MIDI interface; rackmount hard drive, 44/200Mb, with 'Vibe Control' on front panel; two SoundTech 31-band EQs; Akai S1000 sampler with 32Mb memory, SCSI; Oberheim Matrix 1000 synth module; Emu Proteus 1 synth module, expanded; Roland Super JX synth with card; Roland U220 sound module; Alesis ADAT 8-track digital

recorder; two Fostex D80 digital recorders; Panasonic SV3800 DAT machine; Denon CD player; TEAC V3000 cassette deck; three Tascam DA20 DAT machines; two pairs of Yamaha NS10M monitors; six Lexicon LXP15 MkII effects processors; five dual balanced SPL Vitalizers; SPL EQ Magic; Ensoniq DP/4 effects; two Ensoniq MR rack synths; four Novation Bass Station keyboards; four Novation Drum Station drum modules; Evolution MKS149; two Beyer boom stands; Yamaha CD8-AD; eight Blue Canamps headphone amps (distinctive, and last to be manufactured in this style); Yamaha ProMix 01 mixer; Adaptec SCSI card; Roland JV1080 synth; Yamaha SU10 sampler; 10 EZ cartridges; four Akai 8Mb cards for S1000/S1100; Denon PMA250; SIMMs (four 4Mb 72-pin, three 16Mb 30-pin, two 8Mb 72-pin); Office Pro 95 CD-ROM; five Windows 95 CD-ROMs; 8-way jack-jack loom; three MO650 cartridges.

## Fab new features for UltraMix

**M**ackie Designs' UltraMix Universal Automation System Software has reached v1.11 for both Mac and PC versions — and views and features for both platforms are identical. Files are easily interchanged between the platforms, and the new upgrade offers speed improvements, bug fixes, and "higher performance and stability".

New features include:

- Clipboard edit filter.
- Enhanced event editor.
- Default mix snapshot.
- Program change editing.

In addition, key encryption for the

Mac program has been removed, and a new Quick Start manual and in-depth user manual are now available. Ultramix costs £2199 including VAT; the upgrade is free to existing users.

# caught in the net

## SABINE

Sabine Inc, best known for their amazing feedback control technology, have launched a web site that will feature product info, reviews and user lists, with links to Sabine's artist endorsees coming soon. Full specs, graphs and drawings are also included.

**W** <http://www.sabineinc.com>

## AXIS AUDIO

Stockport-based Axis Audio, UK distributors for Groove Tubes mics, FAR studio monitors and RSP Technologies Circle Sound equipment, are now on the Internet. Full information, prices, and useful links to other sites will all be on their page, along with on-line order forms.

**W** <http://www.axisasl.demon.co.uk>

## SADiE USERS FORUM

Following the launch of SADiE's web site last month, Studio Audio & Video have passed on some information about an independent SADiE users forum that's just been started. Administered by Jim Rusby at the University of Oregon, the mailing list will be monitored by Studio Audio & Video, while remaining independent of the company. To subscribe to the list, simply send an email, with "subscribe sadie" in the body of the message, to the address below.

**E** [majordomo@lists.uoregon.edu](mailto:majordomo@lists.uoregon.edu).

## STUDIO WIZARD

The Studio Wizard Organisation — they who design and build studios to any budget — have had a change in their web site's URL. Try the address below.

**W** <http://www.sworg.demon.co.uk>

## BASS CONTROL

Bass Control, the "first fully-searchable database of music industry services on the net", has recently made it to number five of the Yellow Pages Top 10 UK web sites.

**W** <http://194.72.94.4/basscontrol/>

## SONGLINK INTERNATIONAL

Tipsheet/magazine *SongLink International* has been running for three years, and as part of the celebrations has launched a web site. The magazine is published 10 times a year and provides details of artists looking for songs worldwide, details of record company A&R executives, and lots of other useful info for songwriters.

**W** <http://www.webcom.com/genoogrp/songlink/>

**F**or a limited period, Heavenly Music have cut the prices of their acclaimed MIDI song files and building block files. The list includes (with original prices in brackets): Dr Beat Volumes 1-6, £8.50 each (£14.99); Rhythm's Greatest Hits 1 and 2, £8.50 each (£16.99); Break Beats Deluxe, £8.50 (£16.99); Afro Cuba, £8.50 (£16.99); Beat 'n' Bass, £8.50 (£14.99); The Jam Files 1 and 2, £8.50 each (£14.99); Ultimate Blues 1 and 2, £8.50 each (£14.99); Hit Shot, £12 (£19.99); Jungle, £9 (£16.99); Dr.Rave 1 and 2, £8.50 (£14.99); Arpeggiotron, £10 (£12.99);

## Heavenly new prices

Bytes 'n' Pieces, £13 (£19.99); QY/QS Phrase Disks 1 and 2, £12 each (£19.99); The Techno Files, £8.50 (£14.99); and MIDI Song Files, £4.99 each (£5.99 each).

## Fit kit from Twiddly Bits

The latest entry into Keyfax Software's series of building block MIDI file disks is *Twiddly Bits Volume 7 — Programmer's Toolkit*. The disk contains a collection of dance-orientated arpeggios and keyboard riffs, plus a range of NRPN (Non-Registered Parameter Numbers) data files that allows users to take advantage of enhanced General MIDI-equipped sound modules — Yamaha XG or

Roland GS — to create analogue synth-type effects such as filter sweeps, resonance whistles, and so on. The disk costs £19.95 plus £2 postage, and comes with a 12-page manual.

**A** Keyfax Software UK, PO Box 4408, Henley on Thames, Oxon RG9 1FS.  
**T** 01734 471382.

**W** <http://www.gmedia.net/keyfax>

## Zoom 1202: Alive & kicking

Last month's news pages announced the arrival of Zoom's new Studio 1204 effects processor — check out the review elsewhere in this issue for more details. When the news item was written, we were under the impression that the 1204 was a replacement for the earlier 1202, but since then, distributors Exclusive have called to let us know that the 1202 is still very much in the Zoom range, though one thing has changed: £50 has been

shaved off the retail price. At the new price of £149.99, the 1202 is even better value than before.

**A** Exclusive Distribution, Unit 10, Furmston Court, Icknield Way, Letchworth, Herts SG6 1UJ.  
**T** 01462 481148.  
**F** 01462 481149.

## 'Check gets mate

The *Sound Check* audio test CD, recorded and

compiled by Stephen Court and Alan Parsons, has become an international reference for producers, musicians and sound designers, and has just been upgraded. *Sound Check II* is available in two forms: the CD alone, which now features extra test tracks and new packaging; and a deluxe set that includes (built into a double CD case) a mic and spectrum analyser. In conjunction with the CD's 1/3rd octave tones tracks, these are all the tools you need to make general room and loudspeaker measurements, whenever and wherever you may need to. *Sound Check II* costs £28.78 plus postage, while the *Sound Check II* plus Spectrum Analyser set costs £73.43 plus postage. Both are available from SOS mail order.

**A** Sound On Sound Ltd, Media House, Trafalgar Way, Bar Hill, Cambridge CB3 8SQ.  
**T** Mail Order Hotline 01954 789888.  
**F** 01954 789895.

## HNB sell company mini!

HNB have added a professional MiniDisc blank to their own-branded range of blank media. The 74-minute MD74 features a precision sputter-coated recording layer to "ensure an exceptionally low block error rate", and a high carrier-to-noise ratio, even after over one million read/write cycles. The disc has been introduced in response to professional users, such as BBC TV News and Radio, making increasing use of the format.

**A** HNB Communications Ltd, 73-75 Scrubs Lane, London NW10 6QU.  
**T** 0181 962 5000.  
**F** 0181 962 5050.

The studios of long-wave radio station Atlantic 252 have become the first in Ireland to buy a Soundcraft Ghost desk (see review starting on page 112 of this issue), which was installed during recent refurbishments. A multitrack console was chosen so that station promotional material could be produced on-site.

**T** 01707 665000.

Gremlins meant that an item in last month's 'Education Corner' for King's Lynn-based Norfolk College of Arts & Technology was printed with incorrect contact details. The item concerned the college becoming established as a centre for music-based courses in East Anglia. In addition to their current BTEC National Diploma in Popular Music, a range of specialist modules, including Music Technology and Recording Techniques, have been added as part time/evening courses from September. Our apologies to the college for this error: the correct details follow.

**A** Norfolk College of Arts & Technology, Tennyson Avenue, King's Lynn, Norfolk PE30 2QW.

**T** 01553 761144, ext 271.

**F** 01553 764902.

We concluded that Viscount's EFX10 multi-effects unit, reviewed in last month's issue, was very good value at £249. Imagine our surprise to hear of a further £50 being shaved off the price by UK distributors Turnkey — the EFX10 can now be yours for just £199.

**T** 0171 240 4036.

**W** <http://www.demon.co.uk/turnkey>

Our apologies to photographer Piers Allardye: we omitted to credit his photographs, which accompanied the School of Audio Engineering 20th anniversary feature, in the last (September '96) issue of *Sound On Sound*.

## Hey, big Spondor

**T**ony Larking Sales have been appointed UK distributor for the Spondor SA series of active monitors. The range currently consists of two models, the SA200 and SA300 nearfield monitors, and both are two-way reflex enclosures, bi-amped via Spondor's own integrated amplifier design. Each pair is matched to within 0.75dB to ensure "outstanding stereo imaging", and magnetic shielding is standard.

**A** Tony Larking Pro Sales Ltd, Norton Mill House, Nortonbury Lane, Letchworth, Herts SG6 1AN.

**T** 01462 490600.

**F** 01462 490700.

**P**C users looking for some way to scan printed music and convert it into a MIDI file should check out Musitek's *MidiScan* (£189) or *PianoScan* (£89). The former, currently at v2.5,

can read up to 16 staves and 24 pages at a time, while *PianoScan* reads two staves and up to 24 pages at a time. Both packages offer similar facilities; they will both:

- Interpret pitch, duration, clef, key, time signature and accidentals; nearly all elements of printed music will be extracted.
- Work with any TWAIN-compatible scanner — or even a fax machine if you use fax modem software.

## Take note with Musitek

- Produce multitrack MIDI files.
- Interpret pre-scanned TIFF, BMP and PCX files.

In order to use the software, you need a TWAIN-compliant greyscale or colour scanner (minimum 200dpi); a hand scanner can be used for *PianoScan*, but a flatbed is preferred.

**A** Software Partners, PO Box 201, Station Road, Claverdon, Works CV35 8ZU.

**T** 01926 842998.

**F** 01926 842384.

## Changing times for DA60

**T**ascam's four-head timecode DAT machine, the DA60, has been enhanced both in name and features: the DA60 MkII now offers a built-in chase synchronise which locks to and generates all timecode formats, and locks to external word clock and video sync, and an RS422 implementation that provides extensive machine emulation. Improved servo hardware and control software provide for fast lock-up times,

and audio performance has been enhanced through the use of new A/D and D/A circuits, extending the MkII's dynamic range and lowering its noise floor. According to Tascam, the new machine's features are available "at almost no additional cost". The DA60

MkII costs £4999 inc VAT (the original DA60 cost £4463, plus £504 for the timecode board).

**A** TEAC UK Ltd, 5 Marlin House, The Croyley Centre, Watford, Herts WD1 8YA.

**T** 01923 819630.

# Let's talk rubbish

Our industry generates huge amounts of hype and rubbish.

At Studiospares we research everything that we catalogue.

All have been selected for quality, cost effectiveness and suitability for their application.

If we catalogue it, then it's OK. For every item included, Studiospares have probably binned two others.

Keep rubbish in our bin, not yours.

# Turnkey

If you want to **look** at equipment we'll send you some brochures...

If you'd prefer to **listen** and evaluate a wide range of products by strict A/B comparison there is currently only one option.

Turnkey's revamped and enlarged demo facilities feature what we believe to be the world's largest digital comparator systems for pro audio\* and the only one of its type in the U.K.

Over 70 effects processors are available for instantaneous A/B via relay switching, eliminating the repatching time which makes good comparisons so difficult. 16 pairs of studio monitors, 10 power amps, 16 mixing consoles and around 30 sources and recorders from DATs, CDs, HDRs and Multitracks are on the same matrix so you can instantly configure complete systems.

Take 8 bus consoles - hundreds are bought each year on recommendation. Bearing in mind the sums involved it's hard to believe that the opportunity to properly compare the various brands for EQ and noise has not previously been offered.

We've taken the same innovative approach to demonstrating all our products from CD Rom samples to analog synthesizers.

Most dealers will tell you which products best suit your needs. Only one can show you.

One side of the switcher-equipped recording room.

Compare 6 mics. by recording simultaneously to ADAT.

Pro-Tools III and Soundcraft DC2020 in Studio 1.

Huge range across Mac, PC and Acorn platforms.

\* The leading manufacturer of this equipment tells us that the Turnkey systems are the largest ever supplied worldwide.

# AKAI

## DIRECT TO DISK - THE PROFESSIONAL WAY

The DR8 and DR16 recorders utilise Akai's 24-bit internal processing enabling simultaneous 8 track recording, 16 track playback (DR16 only), real-time dynamic digital mix capability and random-access editing, a full range of optional cards allow TC, RS422 & Bi-phase sync. and ADAT optical I/O. Both will record and play back on a range of SCSI devices including MO and Iomega drives.

Now the introduction of the optional graphics board, using technology from the Post Production DD1500, means you can have lightning fast graphics and smooth scrolling, without using a computer! It even adds 5 levels of undo, and track labelling etc via a PC keyboard. Our special bundle prices include a rock solid Seagate Barracuda hard drive, MIDI board for synchronization, graphics board, colour monitor and QWERTY keyboard!

- Easy operation, MTR feel
- 8/16 track record & play
- 16 ch. programmable mix
- Full sync. facilities
- Fully file compatible with DD1500

### Yamaha MD4 MIDIDISC

Whilst good results can be got from a modern 4 track cassette - there's no comparison between that and Yamaha's new digital multitrack. The MD4 combines the clarity of digital recording with the convenience of almost immediate access to any part of the song (no rewind or fast-forward). If you've tried computer based hard-disk recording and found it too complex - you'll be delighted by the straightforward controls of the MD4 - it's really just like using a tape recorder, but without the limitations.

**NEW PRODUCT**  
**£899**  
INCLUDING 4  
TRACK PACK

- MD4 Features:**
- 4 mixer inputs + 2 sub inputs
  - 3 band EQ per channel
  - 4 x direct track outputs
  - Auto punch in with rehearse

### Audio Media III

A new PCI card giving you 2 channels simultaneous record and 8 tracks of simultaneous playback. Comes with industry standard Sound Designer II software which supports DSP plug-ins.

- Audio Media Package**
- 7100/80 8/350 c/w Kbd.
  - 14" Performa + Display
  - Audio Media II + Sound Designer

# Soundcraft

16 channel Spirit Studio

- Exemplary Build & Audio Quality.
- Spacious & Clear Layout for Easy Operation.
- Up to 72 Inputs at Mixdown.
- Unbeatable Package Prices.

Whether you want to record direct to hard disk with the Fostex D80, or prefer the convenience of tapes with the Alesis ADAT XT, Turnkey has the recording package for you - we are even throwing in the looms and a pair of superb Absolute 2 Monitors!

## UNBEATABLE RECORDING PACKAGES!

Soundcrafts Spirit Studio desks revolutionised the project studio market when they were introduced over 5 years ago offering sound quality and features only previously found on desks several times the price. Even then they were great value for money, but because Soundcraft have recouped their R&D costs, and because of our substantial buying power, they are now available at an unbelievable price. No other desks represents such fantastic value for money, just check out the feature list: 'In line' layout means 40, 56 and 72 inputs respectively for the 16, 24 and 32 channel desks, 4 band EQ with 2 mid sweeps, 6 aux. sends, 8 true subgroups, direct outs on every channel, LED metering, fader reverse - the list is endless!

SONY

- **Lexicon Reverb Quality**
- **Budget Price**
- **Full 19" Rack Units**
- **Reflex Has Extensive Realtime MIDI**

## THE ULTIMATE REVERBS.

Virtually nobody in the industry would dispute that Lexicon have the best sounding reverb algorithms around - after all, they invented digital reverb! Until recently, their products were beyond the reach of the average home studio, but the Alex and Reflex have changed all that.

Both units feature the famous Lexicon reverb sound, and have a wide range of presets to cover almost any application, gated, reverse and cathedral settings are all there! In addition, there is a liberal sprinkling of delays, choruses and flanging etc. If you need MIDI control, the Reflex not only responds to patch changes, but almost any parameter can be controlled in realtime.

The Lexicon PCM70 is a legendary effects processor, and had a lifespan of over 10 years - unbelievable for hi-tech equipment. The PCM80 has taken all that the 70 was best loved for, and added state of the art audio quality, true stereo processing, amazingly detailed editing including MIDI clock control, and a card slot - cards include Dual FX, Pitch FX and the Scott Martin Gershin card.

ALESIS

# The World's Best Selling Outboard Range !

After completely redefining the budget reverb market with the original MIDIVerb - Alesis went on to dominate the mid-priced reverb market with the now legendary Quadverb series. Alesis are best known for the clarity and realism of their reverb algorithms - there are many imitations. On top of this, you get one of the most straight-forward operating systems so that you can actually use their best features

## ADAT XT

ALESIS

Alesis pioneered low cost digital multitrack recording with the introduction of the ADAT, and changed the face of home and professional recording. The new XT version is totally compatible with the old machines, but has numerous improvements.

The design features a die-cast chassis and has a completely redesigned transport, which rewinds and fast-forwards four times as quickly as the old machines. Also BRC style editing can be performed from the front panel with two machines, and an all new display further simplifies operation.

Turnkey are probably the most experienced suppliers of ADAT's, which coupled with our unbeatable pricing makes us the first choice for the new XT.

- Totally compatible with 'black' ADAT's.
- New 4 times speed transport design.
- Absolutely unbeatable price.

RRP £3199

### Reno Portable CD-Rom Drive

# MEDIAVISION

Are you making full use of your sampler? There are now a huge range of CD ROM discs stacked full of library available for virtually any sampler on the market. Each disc can hold up to 650 meg (the equivalent of about 500 HD floppies) and what's more, all the patch data has already been programmed!

The Reno CD ROM drive works with nearly all samplers (please check compatibility when ordering) as well as Mac and PC. Most CD ROM drives can play audio CD's, but require special software on a computer to do so. The Reno though has integral buttons for playback and track search etc, and can even be run off batteries for use as a portable CD player (headphones included). We have managed to secure a quantity of these at a huge discount - order now whilst stocks last!

**RRP £429**

# EMU

## FX Board

Whereas most MIDI instruments use onboard fx for live performance or to improve their grey sounding presets, the EIV FX hardware option is a high quality 24 bit dual stereo fx card, designed for use in a studio environment. Algorithms include reverb, delay, chorus, flange and other ambient fx. Two fx can be stored with every preset and re-sampled internally for further processing of samples. It's fair to say that the EMU engineers are Lexicon fans! (£329)

## 8 Output Board

This hardware option provides an additional 8 balanced outputs bringing the total to an incredible 16! (£799)

**DEAL 1: E-IV + 32 Meg**

**DEAL 2: E-IV 64 Meg, 16 outputs, fx board, JAZ drive, 4x speed CD-ROM drive, QWERTY keyboard & 16 CD-ROM library**

**DEAL 3: 'Hire to Buy' on a trial basis.**

## EMU EIV - The Ultimate Sampler!

Our superb product knowledge and backup service has meant that Turnkey have been chosen by E-mu as the UK's exclusive dealer for the E-IV. If you are in the market for a sampler, or indeed any kind of sound module, you owe it to yourself to have a serious look at the EIV - it's the choice of professionals worldwide.

Standard features include 128 note polyphony, RAM expandable to 128 meg, supreme ease of use, with an icon based O/S & Proteus style multitimbral operation. Synthesis is unrivalled with over 20 different types of filters (up to 6 poles and with morphing), 100's of modulation routings and details like multiple LFO waveforms, and a huge range of DSP processes such as time stretch and sample rate conversion. There are 8 balanced +4dB analog outputs, AES/EBU & SPDIF digital I/O, dual SCSI ports via which it reads Akai and Roland libraries transparently (no need for convert load procedures), and a PC QWERTY keyboard port for titling and easier navigation. Impeccable audio performance can be taken for granted with 128x oversampling sigma/delta ADC's, and 18 bit DACS. A huge library of EMU's own sounds is already available on CD-ROM - we have the lot at Turnkey!

As if all that wasn't enough, there are now a whole range of new features and options:

### V2 Operating System

New features include: SoundSprint - uses buffering to allow sounds to be loaded and played within 1 second over SCSI! • 16 track sequencer • Roland library support • 4 new morphing filters • Time correction DSP adjustable by tempo • Steinberg Recycle support • Iomega JAZ drive support • 12dB output boost • Trigger sampling via MIDI note (All this now comes as standard with the EIV and is also available to existing users for £69 including 2 CD-ROMS.)

# Roland

## JVI080 Super JV Module

In the same way as the S1000 became the industry standard sampler, Roland's JVI080 has become the industry standard synth module. It's not hard to see the reason why - straightforward operation combined with top flight sound quality and a huge range of useable sounds.

But expandability of the machine is where it really comes into its own. There are over 10 different expansion boards which can be fitted (up to 4 at once), each one with as much ROM as the original machine, covering sounds from Vintage to Orchestral and Dance to World.

At Turnkey we have the full range in stock, as well as an unbeatable price on the machine itself. Check one out today!

## Orbit

The Dance Planet

Emu have taken their wealth of experience in making modules such as the Proteus, Vintage Keys and Morpheus, combined it with the filters from the incredible Emulator 4, and with their usual innovation, come up with the Orbit - especially built for dance music.

The Orbit is stacked full of classic drum sounds, pulsating basses, ambient pads, as well as a huge variety of hits and effects. The inclusion of the E4's 16 different types of 6 pole filters mean that this module has more powerful filtering than any other synth. Finally the 'BEATS MODE' includes a wide selection of loops and grooves, which can have their pitch changed without tempo change and vice-versa, and even their sounds too!

The Orbit is already on demo at Turnkey - audition one today!

## ROLAND VS-880 DIGITAL WORKSTATION

It's an 8 track recorder, each with an additional 8 virtual tracks, giving up to 64 in total! Variable levels of data compression can be applied to give unheard of amounts of recording time on a single hard drive (the VS880 supports an internal IDE but we recommend an external SCSI drive such as the Iomega Jaz, for better performance and value.)

Mixing is all digital for superb quality, and is also fully automatable. Built in MIDI synchronisation allows quick and easy setup with any sequencer. An additional fx board can also be added which gives two simultaneous effects busses, featuring RSS and SE70 type effects. Want to know more? Call us or come down for a demo today!

### MC303 Groovebox

The enduring popularity of the TB303, MC202 and TR909 has just refused to go away but increasing rarity has meant that secondhand prices have been driven up to ridiculous levels. Roland, the creators of these machines, now bring you the MC303 Groovebox which combines all their classic drum machine sounds, a step time / real time sequencer, 303 'acid' bass sounds complete with front panel filter controls and a whole host of other useable sounds (it's 16 part multi-timbral!). This box is an all in one dance music solution, and believe us, it sounds the business! Initial supplies will be very limited, order now to avoid disappointment!

### Sound Modules

#### YAMAHA VL1m & VL7

**EXCLUSIVE DEAL OF THE YEAR!!!!**

What we've always been well known for bringing you exclusive deals at knock-down prices, this is definitely the deal of the year!

Without doubt the most powerful commercially available synthesizers ever made, the Yamaha VL series have brought the first major breakthrough in synthesis technology since the advent of FM. Not only do they have a unique implementation of Physical Modelling gives the most breathtakingly realistic acoustic simulations available as well as fantastically powerful lead and bass synth sounds.

Physical modelling takes a completely different approach to sound reproduction than any previous method. Rather than begin with inflexible samples or a simple oscillator, extremely powerful DSP chips simulate in real time characteristics of real instruments such as tubing length, damping, absorption, lipbow pressure, throat characteristics, tongue and many others.

Once the basic (or not so basic!) sound has been created, it can then be passed through a powerful multi-mode filter section with resonance, harmonic enhancer, impulse expander, resonator and five-band fully parametric EQ with key-scaling abilities.

Finally, a 32 bit effects section based on Yamaha's top of the line SPX1000 unit provides up to 3 simultaneous effects processors capable of flanging, pitch-shifting, reverb, delay, distortion etc.

If acoustic simulations aren't your thing, then imagine the virtually limitless palette of synthetic sounds the VL series can produce, in fact we have commissioned top programmers at Yamaha's R&D department to produce a 'Dance and Techno' sound bank which we're giving away with the units (these lead into the built-in 3.5" disk drive).

**£419**

NEW BOXED

#### ACCESS PROGRAMMER

FOR MATRIX 1000 OR MICROWAVE

There's no doubt that the Oberheim Matrix 1000 and Waldorf MicroWave deliver powerful analog sounds. However, when it comes to programming your own sounds, top producers have tended to go for older synths like the Minimoog and Super Jupiter, because their knobs and sliders make for easy creation of new sounds. The Access programmer gives you the best of both worlds - now you can freely experiment with your modern analog synth using the same intuitive front panel, and better still, record every tweak of a parameter into your sequencer.

**SCOOP EXCLUSIVE**

**£369**

NEW BOXED

#### OBBERHEIM MATRIX 1000 EXCLUSIVE

Now almost 10 years old, and still sounding as fresh as the day it was released. The Matrix 1000 is essentially a Matrix in a rack - 4 note polyphonic, 2 oscillators per voice, true analog VCF filters with 8 modes, "Matrix" modulation with 20 sources and 32 destinations, raw gutsy analog sounds. Why 1000! The 1000 presets were generated by Matrix owners worldwide in response to a competition to find the best analog sounds on the planet. You're sure to find the perfect patch for virtually any application. Group mode allows chaining of up to 4 units to create a true monolithic Fully editable via MIDI, Mac, PC or Atari editor (available for only £49).

**FACTORY DIRECT**

#### ROLAND

PC 200-II keyboard

IDEAL ENTRY-LEVEL MIDI CONTROLLER KEYBOARD

Compact touch sensitive master keyboard offering full control over pitch bend and mod, data slider assignable to reverb, pan or any controller, sustain pedal input, transposes over 2 octaves, range, send patch & bank change messages. Check out our unique package prices with these modules.

PC200 PLUS PROTEUS FX **£649** NEW BOXED

PC200 PLUS ANA-VINTAGE **£399** NEW BOXED

PC200 **£149** NEW BOXED

#### WALDORF PULSE

ALL NEW ANALOG MONO SYNTH

Waldorf quality at a previously unheard of price! Their first venture into the burgeoning monosynth market has been universally acclaimed, and rightfully so. The Pulse's three oscillators provide some of the best sounds around, and its modulation matrix allows a far higher degree of programming complexity than anything else in its range. Add to that the fact that editing any parameter sends out a MIDI controller and you have a fantastic all round performer.

**NEW PRODUCT**

**£599**

NEW BOXED

#### EVOLUTION MK149 KEYBOARD

IDEAL ENTRY-LEVEL MIDI CONTROLLER KEYBOARD

Compact touch sensitive master keyboard offering full control over pitch bend and a mod wheel assignable to reverb, pan or any controller, sustain pedal input, transposes over 2 octaves, range, send patch & bank change messages. Check out our unique package prices with these modules.

#### EMU E-IV DEALS

SUPER SAMPLER

EXCLUSIVE UK DEALER EXCLUSIVE UK DEALER

Our superb product knowledge and backup service have lead Turnkey to be chosen by E-mu as the UK's exclusive E-IV dealer. As if this 128 polyphonic sampler wasn't great enough already, version 2.0 software and a range of new extras have transformed the product. Version 2.0 features include a new editable 6 pole filter types (now 20), direct reading of Roland library as well as \$1000, and the incredible SoundPrint technology from the E4K, allowing virtually instantaneous loading of sounds from disk. Also new are the FX board (RRP £329), giving 2 simultaneous top quality FX processors as in the E4K, and the 8 output board (RRP £799) giving an extra 8 balanced analog outputs, bringing the total to an incredible 16!

Our bulk purchasing allows us to bring you these incredible deals -

OUR E-IV PACKAGE:

E-IV 64 Meg, 16 outputs, built-in effects, jax drive, Apple CD-ROM 4x speed CD-ROM drive and 16 CD-ROM library

## Outboard

### VISCONTI

EFX10 Studio Multi-effects

HALF RACKMOUNT EFFECTS

We've just received stocks of Visconti's entry into the fully professional effects market, and it sounds great! The unit features authentic sound quality delivered by 24 bit processors with 128 over-sampling. Dials / Signa converters. True stereo - 20/4 dB connections. Analogue MIDI control, large backlit display, huge range of effects including reverb, delay, chorus, flanging, pitch-shift, wah, phasing, lead simulations, etc. The unit features a significantly different process to other such products, the effect deals with the full frequency range and is substantially smoother and richer. Also included is a "surround" effect which varies the width of the stereo field, massive bulk purchase allows this unbeatable price - check out our new - we guarantee you'll be impressed

## DIGITECH

TSR-12

FEATURES 5-DISC PROCESSING

With the introduction of the Studio Quad, Digitech have decided to stop production of the TSR12 as it is too expensive to make. We have stock of the last ever units available at a bargain price. Features include 5-DISC processing, up to five effects at once including several different types of reverb, delay, chorus, flange, etc. Full MIDI spec allows real-time control of individual effect parameters. Limited stocks only

**RRP £399**  
**£299**  
NEW BOXED

## DIGITECH

STUDIO QUAD

4 CHANNEL STUDIO EFFECTS PROCESSOR

At last - Multi effects as they should be! The new Digitech Studio Quad features not only their custom designed and ultra-powerful 5-DISC chip, but also 4 independent inputs and outputs which, using the built-in mixer, can be configured as 4 mono or 4 stereo channels, feeding 4 stereo outputs. Huge crown, and new intuitive operating system make editing a breeze. 20 bit converters give greater than 90 dB signal to noise ratio. Effects include reverb, delay, chorus, flanging, etc. Hundreds of other features too numerous to mention. Very limited stock, order now to avoid disappointment!

**RRP £399**  
**£299**  
NEW BOXED

## Monitoring

### ABSOLUTE 2

Studio Monitors by SPIRIT

PHONE FOR BEST PRICE

Here at last! Stunning sounding and looking monitors on the UK's leading mixer manufacturer. Incredible bass extension and power handling at a floor price. In stock now, come and audition them ASAP!

**RRP £249**  
**£199**

## ALESIS

### NANOVERB

BULK PURCHASE

To create the NanoVerb™, Alesis created sixteen powerful new preset effects algorithms, added 18 bit digital converters, and fit them into a compact, easy-to-use and incredibly affordable package. Lush Hall, Plate and Room Reverb, rich true stereo Chorus, Flange and Tremolo, and a variety of other effects are all offered. The NanoVerb's powerful assortment of programs offers enough variety that you can use it on your guitar rig, author a multi-media presentation the next day, and mix bands at the coffee house the following night. The Adjust knob allows you to tweak its great-sounding programs until you're just right for your music, while the Input/Output levels and Mix controls ensure proper effect levels for a wide variety of applications. And since the NanoVerb is so affordable, you can put two or three in your rack for dedicating to multiple sources

**RRP £169**  
**£109**  
NEW BOXED

## BEHRINGER

Composer

WORKHORSE COMPRESSOR

A natural sounding and fully featured compressor at a give away price! Built-in gate removes any unwanted noise, soft-knee action makes compression much less obvious, "auto" mode makes quick setup a doddle and side-chain access means it can also be used for de-essing etc.

**RRP £349**  
**£229**  
NEW BOXED

## LEXICON

Alex and Reflex

SPECIAL OFFER

If You're looking for a straight reverb unit, Lexicon have a reputation that's hard to beat! These are the cheapest units to offer the famous "Lex" sound - The Reflex has the additional benefit of dynamic MIDI, allowing real time control of multiple effects parameters. Huge discount at Turnkey!

**RRP from £499**  
**£279**

# DOD 512

## Multi-Effects Processor

*DOD's 512 combines value for money, simplicity, and flexibility. But does it deliver the necessary sound quality too? PAUL WHITE reports.*

**S**imple-to-operate, budget reverb units are no longer a novelty, but DOD are really going for the entry-level user with their 512: it's very easy to use, provides plenty of stock effects, and is eminently affordable.

As you can see from the photo, the 512 favours the rotary switch approach for patch selection. Alesis pioneered this idea, and later added another switch, to access 16 variations on each of the 16 presets. DOD have taken this idea further, adding a bank switch, to double the number of options to 512 — hence the name of the unit. To increase flexibility, DOD have

20Hz-16kHz audio bandwidth. The input may be adjusted to accommodate both pro and semi-pro signal levels, though the input impedance is too low to use directly with a passive electric guitar.

The 32 basic effects combinations offered by the unit are accessed via the 16-way Effect switch and the Bank button, while a Preset switch selects between 16 variations. An additional switch position acts as a bypass mode. This works well, except for the tiny lettering around the Effect switch, which had me peering with a torch from about eight inches away!

Bank A holds 16 different single effects, comprising various reverb types, mono and stereo delays, chorus, flange, phasing, panning and pitch shifting. If a reverb, for example, is selected, the two Parameter controls mentioned earlier vary the stereo width and the EQ, and the 16 variations provide different decay times. In delay mode, you can control decay time (up to 740ms in mono mode), and regeneration,

also provided a couple of controls, labelled Parameter 1 and Parameter 2, which access two key parameters for each effect type.

### DESCRIPTION

Housed in a 1U case and powered by the familiar external PSU, the 512 has stereo inputs and outputs on unbalanced jacks, no MIDI, and no power switch. It does, however, have an integral (simple but functional) noise gate, the threshold of which is controlled by a screwdriver-adjustable pot on the rear panel. Separate knobs provide control of input/output levels and mix, and there's a simple LED metering system for setting the input level.

Electrically, the 512 looks quite impressive, with a 90dB signal-to-noise ratio, 16-bit/44.1kHz sampling, and a

while modulation effects can have their rate and EQ controlled (though I rather expected that rate and *depth* would be controllable). There's also a pitch-shifter, which can be used either for detuning, or for pitch-shifting by up to an octave in either direction, in semitone steps. As with the modulation effect, EQ control is provided.

Bank B combines the modulation effects with either reverb or delay; the user can control delay/decay time, and the balance between the two effects.

### PERFORMANCE

My feelings about the 512 are rather mixed; I like the operating system, and the modulation and delay effects are actually very good, but I find the reverbs disappointing in comparison with some other

### pros & cons

**DOD 512 £199.95**

#### pros

- Inexpensive
- Easy to operate.
- 512 different presets with basic parameter control.

#### cons

- Perfunctory reverb.

#### summary

A useful budget effects unit let down only by its rather lacklustre reverb.

**SOUND ON SOUND**

budget units. There's very little difference between the different reverb types, other than tonality and decay time, and all, to me, sound rather coloured or spring-like — usually a sign of insufficient processing power. The spring reverb emulation, on the other hand, is quite authentic. It's not that DOD/Digitech can't make good reverbs, because Digitech's pro products are exceptionally good — it's simply that high-quality reverb usually requires serious hardware, and the compromises necessary to achieve the low price of the 512 are starting to show.

If you already have a decent reverb unit and simply want good chorus, flange and delay combinations, the DOD 512 begins to look like a better bet, as all the modulations and delays are clean and crisp, with a nice sense of width. The pitch-shifter is also surprisingly well behaved for such a budget unit, though as ever, it still needs to be mixed with some dry signal to be really convincing. The octave-down shift is particularly clean and works well with vocals. Inevitably, there is some delay associated with the pitch-shift effect, but that's part of the deal if you don't want an unduly glitchy result.

### CONCLUSION

The verdict has to be that the 512 is a pretty good all-rounder for the money, with its reverbs being the only area of obvious compromise. If your main need is for a reverb, look elsewhere. Alternatively, if you can stretch to the extra £50, the Digitech Studio Twin (see review in September's *SOS*) still keeps the cost under control but improves on the reverb quality. But if you simply want a basic second effects unit to add to your flexibility, the 512 is worth listening to.

# Spirit Folio Notepad

## 10-Input Micro Mixer

*After finally discovering this little mixer almost lost amongst its own packaging, PAUL WHITE puts it to work.*

If Fisher-Price ever made a child's mixer, it would probably look something like Spirit's Folio Notepad. It's incredibly small, but the designers have managed to cram lots of features into a space no bigger than a mouse mat — four mic/line channels with switchable phantom power, two stereo line/record deck channels, a stereo effects return, and a stereo tape input. Moulded from an alarmingly lilac shade of plastic, with an integral carrying handle, the Folio Notepad has a distinctive curved styling.

Power comes from an external adaptor, and the whole caboodle weighs less than 1.5kg. Car battery use is possible using Spirit's optional Portapower pack, and a stand adaptor is available, so you can mount the mixer atop a mic stand.

### CROSSING THE CHANNELS

Each of the mic/line channels has a balanced XLR mic input and a balanced jack line input. This is followed by an input Level trim control; 2-band bass/treble EQ offering 15dB cut/boost; an effects send pot; a pan pot; and a volume pot. As the Notepad's whole channel strip is no longer than a decent long-throw fader, you can

see why volume pots have been used here.

The two stereo channels are accessed via phono inputs, which are switchable to accept a line-level signal from an instrument, or the output from a record deck fitted with a magnetic cartridge. There are no EQ controls on the stereo inputs, but you still have an effects send, a balance pot and a volume control. Unusually for such a diminutive mixer, both a stereo mix output and a separate monitor amp output are provided, the latter on phonos.

The monitor source can be switched between the stereo mix and a stereo Tape return, also on phonos. The Tape input has its own separate Volume control, and level controls are also available for the Effects Send master, the Master Mix and the Monitor Amp/Headphones. Sadly, you can't route the Tape input into the stereo mix to grab an extra couple of inputs.

Phantom power is provided globally for all four mic inputs; a red LED reminds you when this is switched in. The adjacent green LED shows the Notepad is powered up. Finally on the flashing light front, basic master stereo metering is provided by a pair of LEDs, amber showing average levels and red showing peaks.

### NOTEPAD IN USE

Though this is a simple and visually 'jolly' mixer, that doesn't mean you should dismiss it as somehow inferior. It doesn't have insert points, but other than that, it's a serious mixer in microcosm. For example, the EIN (a means of describing the amount of full gain mic amp noise as an equivalent noise source fed into the input), is -128.5dBu, which equals Spirit's top-end consoles, while the audio bandwidth is flat within a dB from 20Hz to 20kHz. Crosstalk is a reasonable 90dB, and the total harmonic distortion is just 0.005% or less.

Signal levels up to +18dBu can be accommodated, and while this isn't quite as high as a pro mixer, it still leaves adequate headroom for working at +4dBu operating levels. All the jack inputs may be used balanced or unbalanced, and the main output is actually impedance-balanced, which offers many of the benefits of true balancing without the inconvenience of losing half your signal level if you work unbalanced.

### pros & cons

**SPIRIT FOLIO NOTEPAD £199**

#### pros

- Inexpensive.
- Straightforward.
- Good audio quality.

#### cons

- Rudimentary metering.

#### summary

A practical toolkit of a mixer with loads of uses. Could even double as a frisbee!

**SOUND ON SOUND**

Because there's no PFL system, you have to set up input levels by first ensuring that the channel knob and master output knob are at 0dB, then adjusting input gain so that the amber meter LEDs are flashing but the red peak LEDs aren't. Failure to observe this nicety can result in audible distortion.

For a 2-band affair, the tonal control range of the Folio's EQ is very reasonable; enquiries revealed that the EQ frequencies are the same as those used in the rest of the Folio range of mixers.

### CONCLUSION

The Notepad is a very simple, neatly designed mixer that cuts corners on features rather than audio quality. It's a useful tool for small-scale live performance, for adding extra inputs to a larger console, or for augmenting a small recording setup based around a Portastudio (and you can patch two Notepads together to increase the number of channels available). It would also make a good keyboard mixer, providing you don't have a lot of outputs to mix, and having a turntable input makes the Notepad ideal for mixing material from vinyl, while for live recording direct to DAT, the high-quality mic amps deliver full 48V phantom power. If small is all you need, the Notepad delivers.

# 8 BUSS PRICE BREAKTHROUGH!

Never before has anyone been able to offer a recording console of this specification and build quality at such a stunningly low price!

**YAMAHA**  
**RM800**  
**SERIES**

- 16 or 24 input channels with up to 56 inputs on mixdown
- Wide range input sensitivity control
- Signal and peak indicators on each channel
- 6 aux sends/In line monitor controls
- High quality 100mm long faders
- Switchable phantom power on highest 8 channels
- Stereo buss sub inputs
- Control room assign switches and level control
- Stereo insert I/O on main stereo out
- Group/direct outputs and switches on the highest 8 input channels enabling 16 track operation
- In line monitoring
- 3 band EQ with swept mid and EQ defeat
- -10db unbalanced or +4db balanced outs
- 4 assignable stereo aux returns
- Master aux send controls
- PFL switches
- AFL switches on group busses
- Channel on switches
- Channel insert jacks on group outputs 7 - 8
- 10 assignable bar graph level meters with peak LEDs & continuous display stereo buss meters

# Joe Meek VC3 Pro

## Preamplifier/Compressor/Enhancer

*The Joe Meek Pro Channel is priced within reach of almost every studio owner, yet it delivers the same kind of classic sound as its bigger brothers. PAUL WHITE is introduced to the baby of the Joe Meek range.*

Many of you will already be familiar with Joe Meek processors since our reviews of the Stereo Compressor (August issue) and the Voice Channel (September '95 issue). The Joe Meek range is actually the brainchild of Ted Fletcher, who studied the home-built circuits Joe Meek used back in the '60s, then brought them up to date to improve their noise performance, reliability, and stability. These units are difficult to ignore, especially since they're painted the kind of green you normally only see after tap dancing on fresh caterpillars!

### PRO CHANNEL CONCEPT

Built into an unassuming (aside from the colour), non-rackmounting metal box, the

Pro Channel is a single-channel processor with three stages: a mic/line preamp, a compressor, and an enhancer. The unit may be used instead of a mixer channel for sending a signal directly to tape, or it can be fed into a regular mixer channel.

According to the designer, the Pro Channel's circuitry features a wider than normal frequency response to maintain phase linearity, and it also provides a lot of headroom. With the benefit of switchable phantom power, the transformerless input stage can accept either balanced mic ins, via the rear-panel XLR, or unbalanced line inputs, via a conventional instrument jack.

An insert point is also fitted, enabling further processing to be placed in-line, directly after the input preamp. An additional jack provides a means of mixing an external line input with the unit's main input, prior to compression and enhancement.

As you'd expect, the compressor section is based on the Joe Meek design used in the previous boxes bearing his name: this circuit uses an LED and photocell as a gain control element, with certain feedback techniques used to speed up the normally slow response of the photocell. This rather outdated way of controlling gain is one of the secrets of the vintage compressor sound — some compressors you buy because you can't hear them working; this one you buy because you *can* hear it working. Obviously, you don't get quite as many

### pros & cons

#### JOE MEEK PRO CHANNEL £299

##### pros

- Easy to set up.
- Powerful, up-front compressor sound.
- Effective enhancer.
- Sensible cost.

##### cons

- Very basic metering.
- Unbalanced outputs only.

##### summary

If you like the compressed vocal sound of classic rock recordings, you'll probably love the Pro Channel.

**SOUND ON SOUND**

features as you'd expect to find in a stand-alone compressor, but switchable Fast/Slow attack, variable Release, and variable Compression controls, plus a Bypass button, are all provided. In most situations, this will be quite sufficient.

### SETTING UP

Because this is a soft-knee style of compressor with a progressive ratio, there's no need for a separate ratio control. Furthermore, the compressor metering system has been stripped to the bare bones, so instead of the familiar gain reduction meter, you get a single LED. As you turn up the Compression control, the LED will start to flicker, and this is usually around the right setting. After that, you have to adjust by ear.

The final, and perhaps most unusual, section of the Pro Channel is the enhancer, which seems to combine the controls of a conventional enhancer with a parametric EQ. The Drive control sets the level of a filtered signal fed to a separate compressor inside the enhancer circuit, while the 'Enhance' control sets the amount of processed signal mixed back in with the original. To change the character of the processed signal on which the circuit operates, the user has access to a Q or bandwidth control, linked to the filter circuit. A basic, 5-LED level meter monitors the signal prior to the output level control (two separately buffered, but otherwise identical, outputs are provided on unbalanced jacks). Setting up the enhancer involves turning the Drive control until the Enhance LED lights briefly on signal peaks, and using the Enhance control to set the intensity of the effect.

For those unfamiliar with enhancers, the process adds a sense of brightness and transient detail that EQ often fails to

# Channel

achieve. Different enhancers work in different ways, but this one seems to work by selecting existing high frequency information, then compressing it to increase its average level. The Q control has to be set by ear; the higher the Q, the more the high frequency harmonics appear to 'hang on'.

## AUDIO TEST

Judging a device such as this has to be almost entirely subjective — after first determining that the circuitry is adequately quiet and introduces no obvious distortion, of course. As with the other Joe Meek products, the compressor section is where the serious magic happens: if you compress heavily using a shortish release time, you can get right to the verge of level pumping, which produces a warm, very tight vocal sound with loads of punch. Though this unit is marketed primarily as a vocal processor, its compressor section also works brilliantly on acoustic guitars, basses and rock drums.

The exciter section is also most effective. By turning the Enhance control fully up, you can hear exactly what the Q control is doing, and once the Q is set to produce a subjectively pleasing result, you can back off the Enhance knob to reach a more realistic setting. I found the mid-way Q setting to be about right for most material. At this setting, the effect is to sharpen up high frequency detail without making the sound too harsh, but if you want to get nasty, as you may do when trying to clarify sloppy drums, you can try a higher Q setting. Gentle enhancement combined with tough compression really makes a rock vocal kick out of a mix, whereas to sharpen up drums, you might want to use the slow compressor attack in combination with a higher level of enhancement. The enhancement also adds definition to plucked instruments, working especially well on acoustic guitar and bright bass guitar sounds.

## CONCLUSION

In the final analysis, the Pro Channel has the same warm, family sound as the other Joe Meek compressors, and the mic amp section seems well designed, with no apparent vices. The combination of front-end, compressor and enhancer is particularly useful for piping signals directly to tape (or disk), bypassing the mixer altogether, but the line-in facility also makes the Pro Channel a powerful post-recording tool. Indeed, I tend to compress only slightly when recording, then add more during the mix.

With today's emphasis being more on sound quality than gimmicks, the Pro Channel offers a good balance of cost and performance, and the processing it provides is usable at any level, from home enthusiast to serious professional. In other words, no matter how your studio progresses, it's unlikely that the Pro Channel will ever become obsolete. The only obvious corner cutting is the very basic metering and the fact that the outputs are unbalanced only — but given that this is the baby of the range, that's not too serious a compromise. If you want to be able to hear the compressor you've paid for, Joe Meek boxes won't disappoint, and the Pro Channel is no exception.

# For Every Eventuality

Visualize this. Acrisp 13" brass snare right between your eyes. Toms and cymbals precisely placed across the stereo field. The bass guitar deep and clear, sitting just above the kick drum. Layers of newly strung guitars far to the left and right. Keyboards hovering in the air. Voices floating free. Everything detailed. Everything in it's own space.

Introducing a monitoring system so good that you can close your eyes and still visualize every instrument...

...the Event range of monitors.

## 20/20 Monitoring

"I used the 20/20 bas system while remixing "Slow Jams," the second single from the new Quincey Jones album, O's Jook Joint."

"Event called to see if I would give the 20/20's a listen. The initial listening was very impressive, the sweet high end and the massive tight bottom made me think I was listening to a much larger cabinet. The smooth mids and accurate imaging make the speakers easy to listen to"

"The most enlightening moment came when I took the mix to mastering. I gave the tapes to Bernie Grundman and he put them on and did his initial listen. For the first time ever with one of my mixes, Bernie turned to me and said, "I don't think you need any EQ on this"

Francis Buckley EQ Magazine July 1996

"The Event 20/20's turned out to be damn fine monitors, well up to the task of serious mixing, editing or post-pro work."

"The 20/20's bass end is sufficiently extended to make them useful as the sole pair of monitors in a small studio."

"There's plenty of top end clarity without any tendency to fatigue, and the stereo imaging is excellent."

# Tannoy System

## Nearfield Studio Monitors

***Tannoy's latest nearfields offer an updated version of their famous dual-concentric technology, while still retaining that distinctive Tannoy sound. PAUL WHITE test drives them.***

**W**hile virtually every other loudspeaker manufacturer on the planet has settled for physically separate woofers, tweeters, and occasionally mid-range drivers, Tannoy have exhibited considerable tenacity in adhering to their original dual-concentric concept. For those unfamiliar with dual-concentric loudspeakers, the design is characterised by a horn-loaded tweeter mounted at the centre of the bass/mid driver. To improve the efficiency of the horn design, the bass/mid cone acts as an extension to the tweeter's own short horn. As with all the latest generation of Tannoy dual-concentric speakers, the tweeter incorporates an acoustic waveguide between the pressure transducer and the outside world, to force the tweeter into generating a spherical wavefront — the idea being to better control the directivity of the tweeter.

### DUAL TO THE DEATH

Obviously, Tannoy haven't stuck with the

dual-concentric principle out of blind intransigence: there are a number of well-documented benefits to this approach, the most important of which is that the speaker behaves as a point source of sound, ensuring that the high- and low-frequency components of the sound always arrive with the correct relative phase to each other, regardless of whether the listener is on or off axis. For nearfield use, this also means that the speakers can be used on their sides without compromising their performance. Furthermore, horn loudspeakers are more efficient than direct radiators, so a horn tweeter is able to produce more acoustic energy for the same input power.

Inevitably, every engineering approach has its disadvantages as well as its benefits, and in the case of dual-concentric speakers, the larger you make the speaker, the harder it is to make the woofer and tweeter frequency responses meet smoothly — and there's nowhere to put a mid-range driver. What's more, horn-loaded loudspeakers can suffer from phase problems caused by reflections and air non-linearities occurring inside the throat, resulting in a rather harsh edge to the sound, though even these can be minimised by careful design.

### SYSTEM 600 DESIGN

The System 600s utilise a 6.5-inch driver, which is small enough to enable the woofer and tweeter elements to match up smoothly. The 'tulip' waveguide can be clearly seen at the centre, and the injection-moulded

polypropylene cone is suspended in a high-compliance, nitrile-rubber surround.

The HF diaphragm is fabricated from aluminium and magnesium alloy to give it sufficient rigidity to work as a true piston to 25kHz. This is suspended in an inert, nitrile-rubber mounting with a very narrow roll surround to reduce resonance effects to a bare minimum. The tweeter voice coil is copper, chemically bonded to a Kapton former, and ferrofluid is used in the magnetic gap to aid cooling. A low compression ratio ensures minimal distortion from air compression

*"Judged as nearfield monitors, the System 600s present a good overall balance of sounds, with the proviso that there's no really deep bass."*

effects, and the crossover frequency is at 1.8kHz. Apparently, a low-order crossover is used to ensure a smooth transition between the low LF and HF ranges, and because the drivers behave as a point source, the problems normally associated with overlapping frequency bands are much reduced. The shape of the LF cone profile continues the horn flare of the tweeter, and trim rings are used at the outer edge of the drive unit to help create a smooth transition from the horn flare to the flat baffle.

The vinyl-coated MDF cabinet design is visually attractive and very solidly engineered — as you'd expect from Tannoy's highly advanced cabinet manufacturing plant. As well as looking distinctive, the cabinet shape also makes it very rigid, which helps counteract excessive cabinet vibrations. Chamfered corners are used to reduce cabinet edge diffraction, and the twin reflex ports are

# 600

filled with acoustic foam to fine-tune the cabinet damping.

The sum of all these parts is a passive, 2-way monitor weighing in at 7.5kg and measuring just 220 x 360 x 267mm. A single pair of terminals provides for bare wires, banana plug, or spade terminal connection, and nominal impedance is 8Ω, with a quoted sensitivity of 90dB for 1W at 1 metre. As far as power goes, the speakers are rated at 80W RMS average, or 160W RMS programme material. In practice, a good 100W (into 8Ω) amplifier seems just about right for them.

The rated frequency response of the System 600s extends from 52Hz to 20kHz, and judging by the curves, this is relatively flat within two or three dB either way, with the inevitable roll-off at either extreme. Distortion is quoted as being better than 0.8%, but as the conditions under which this may be measured were not provided, it doesn't mean very much. Dispersion is a creditable 90 degrees to the -6dB point.

## TESTING TESTING

Judged as nearfield monitors, the System 600s present a good overall balance of sounds, with the proviso that there's no really deep bass, and such bass as there is sounds just a hint 'tubby' or constricted. This isn't unusual given the small physical size of these speakers, and in a home studio environment or traditional nearfield application, the bass extension is generally adequate. Removing the foam plugs from the bass ports brings about a slight improvement in the bass end and also seems to open up the overall sound a little.

A good test of monitors is to listen carefully to the vocals on songs that you know are well recorded — and finding a well-recorded song isn't always the simple task it ought to be. Here the System 600s behave quite well, with just a bare hint of edginess in the 3-4kHz area of the spectrum. Once again, this isn't serious, and the mid-range sounds a good deal more open and better defined than it did on some of the older generations of Tannoy monitor.

When the System 600s are presented with a complex mix, the slight edginess noticed on vocals becomes a little more pronounced, though to maintain some perspective, there are far worse behaved monitors in higher price brackets. Perhaps more serious is that complex mixes start to

## pros & cons

### TANNOY SYSTEM 600 £447

#### pros

- Well engineered and sensibly priced.
- Good stereo imaging.
- Wide angle of dispersion.

#### cons

- Not as revealing of detail as I would have liked.
- Limited bass extension

#### summary

Nicely-presented nearfield monitors with a distinctively Tannoy family sound, rather than the completely neutral sound which would be ideal in a reference monitor.

**SOUND ON SOUND**

sound a little confused in the mid range, though the imaging remains better than average. At the top end, cymbals, snare drums and picked guitars are bright and detailed with only a hint of 'splashiness'.

## VERDICT

Every pair of speakers ever built is a compromise, and the System 600s neatly avoid the worst of the old-fashioned, rather coloured Tannoy sound. Their strength remains in their stereo imaging and wide angle of dispersion, both of which are excellent. However, I'm not entirely convinced that the mid-range problems associated with dual-concentric speakers have been entirely eliminated, though the colorations are subtle, and most people will very quickly get used to them. Those with a history of working with Tannoy monitors will probably welcome the System 600s as an improvement on a classic design.

Given their price, these monitors perform pretty well in a nearfield context, and they have the benefit that they can be used 'landscape' rather than 'portrait' without compromising their excellent dispersion. They're also extremely well built. Having said that, there are an awful lot of conventional two-way systems out there competing for your money, and to my ears, some of these sound more transparent than the System 600s, and/or have a greater bass extension. Ultimately, if you're a Tannoy person, you're sure to like the 600s, but if you're not entirely sure, audition them alongside a selection of their competitors and hear for yourself how they compare.

# VTP-1

Dual Vacuum Tube  
Preamp/EQ/Analog to  
Digital Converter from

**DigiTech**

The new VTP-1 from DigiTech offers a unique blend of essential components that can help you, the digital studio owner, add that missing warmth to your recordings. The VTP-1 incorporates a hybrid vacuum tube mic preamp, tube line amp/DI, 4-band equalizer section, and an 18 bit analog to digital converter in an attractive 2U chassis at a price much lower than you would expect.

- Warm up your digitally recorded tracks
- Use as tube DI for synthesizer, electric bass and guitar
- Bypass console for optimum clarity
- Stereo recording direct to DAT
- Adds tube warmth to any microphone
- Great for mastering/mixdown

- Vacuum tube hybrid mic preamp/DI

- Classic high voltage tube input circuits

- Flexible 4 band EQ with dual sweeps

- AES/EBU or SP/DIF 18 bit digital output

- Balanced or unbalanced I/O

- Analog VU meters

- XLR or 1/4" analog connectors

- 48V phantom power

- Effects insert loop

# Tascam M08

## 12-Channel Mini Mixer

*Tascam are known for the quality and reliability of their larger consoles: now they've turned their hands to a super-mini mixer, which will have to slug it out with similar models already on the market.*

**PAUL WHITE** assesses its chances.

I must admit that I did a double take when I first saw this mixer — it's compact, it's mains powered, and it features four mono mic/line channels, plus four more stereo line channels, all with rotary knob rather than fader control. It also has square corners and it's grey! In fact, the only real surprise was that it didn't have 'Mackie 1202' written in the top right-hand corner. Instead, there's a tastefully embossed Tascam M08 logo. I've always had a great

respect for Tascam mixers — indeed, I use one in my own studio — but I can't help wondering why the guys in Japan decided to build a competitor to the Mackie 1202 when that model has been superseded by the more sophisticated 1202VLZ. Not that this in any way detracts from the usefulness of this little mixer, or its exceptional value at under £300, but still...

### DESIGN

Closer inspection reveals some differences of approach between the M08 and its obvious source of inspiration, but the basic concept is very similar. The four mic/line channels have balanced XLR and jack inputs, globally switched phantom power, and insert points, while the stereo channels have dual inputs on unbalanced jacks. All channels are equipped with a gain Trim control, two-band shelving EQ (operating at 12kHz and 80Hz), two Aux Sends, a Pan control, and a Level pot. On the stereo channels, the pan control functions as a balance control and is labelled accordingly, but one area in which Tascam have dropped a couple of points is in the aux send system: Aux 1 is dedicated pre-fade and Aux 2 is dedicated post-fade. There's no global

pre/post switching for Aux 1, something which is now becoming a regular feature on other small mixers, though there is a useful overload LED which lights a few dB before clipping. If you want to use the stereo channels as mono channels, you can plug into the left input only; all channels are fitted with Mute and PFL buttons.

Unlike some small mixers, the M08 provides aux send master level controls as well as two dedicated, stereo aux returns on unbalanced jacks, and these, too, have level controls in the Master section. Provision is made for using a 2-track tape machine, which, as with the Mackie, may be used either for mastering, or may be routed into the stereo mix to add taped effects to a live performance. A monitor level control regulates the headphone output level, and the stereo master level is controlled by a single, stereo Master fader rather than by a

*"If you need a very simple mixer which delivers professional quality at an attractive price, the M08 represents excellent value."*

knob. A high-resolution stereo bargraph meter with a delayed peak hold feature gives the master section a very professional look, while a red PFL LED lets you know if any channels have their PFL buttons down. When a channel PFL is pressed, the channel level is brought up on the main meters to facilitate accurate Trim setting.

Stereo outputs are on both phono and balanced jacks, while further phono inputs provide a way into the aux busses and the stereo buss, as well as accommodating the 2-track returns.

## pros & cons

### TASCAM M08 £299

#### pros

- Excellent EQ.
- Professional metering.
- Rugged, uncluttered construction.
- No external PSU.

#### cons

- Facilities are very basic.

#### summary

A good value mixer for anyone needing to do very simple mixing jobs without compromising on audio performance.

**SOUND ON SOUND**

## OPINION

The M08 is a very straightforward little mixer, well suited to small PA work, keyboard mixing, small MIDI setups, or direct-to-stereo recording. At under £300, it'll cost you about the same as a couple of modest mic preamps in a rack, so it makes a lot of sense, both for live recording or as a front end to a hard disk recording system.

Direct feeds may be taken from the channel insert points or via Aux 1, and for multitrack recording work, this means you could, at a pinch, squeeze a maximum of seven independently controlled outputs from this little mixer.

Operationally, the M08 works smoothly and efficiently, marred only by slightly wobbly control knobs. All mixers using this type of construction have the pots fixed directly to the circuit board, not to the front panel, and if the bushing between the knobs and the panel itself is not snugly fitting, some lateral movement is inevitable. There's not enough movement to cause reliability problems — it's just a little irritating from the tactile point of view.

Electronically, the M08 is quiet and neutral sounding, with well-behaved, reasonably sensitive microphone inputs. The EQ is particularly good, with the High EQ just picking out the right degree of sizzle, and the Low control underpinning the bass end without sounding flabby. In truth, the EQ is probably the only area in which the M08 differs significantly from its competitors. For all the claims of radical technology, new circuitry, and fancy

construction methods, all well-designed mixers of this type and size are pretty close when it comes to noise and distortion performance.

## CONCLUSION

It seems that the mini mixer marketplace just keeps on expanding, which means lots of consumer choice and keen prices. If you need a very simple mixer which delivers professional quality at an attractive price, the M08 represents excellent value. The metering and quality of EQ are better than average, but there's a lot of competition out there, some offering more flexibility by way of routing or aux send switching. However, if basic mixing is all you need, I don't think you'll be in any way disappointed by the quality of the M08.

# Spatializer HTMS 2510

## 3 D Sound Processor

**PAUL WHITE experiments with mind expansion '90s style, and discovers no harmful side effects!**

A number of low-cost, so-called 3D sound systems have appeared on the market recently, mainly aimed at those setting up home cinema systems or playing computer games. These systems vary in cost and effectiveness, but because they're built for a mass market, they're very cheap compared with pro-audio equivalents.

The Spatializer HTMS 2510 was created by the company responsible for the Spatializer TDM software for Pro Tools TDM systems, and as far as I can tell, it works on the same principles as the software, to give a 3D effect to the material being processed. Physically, the Spatializer unit is about the size of a typical rackmount box, but without the mounting 'ears', and is designed to operate at a nominal 4V signal level, making it compatible with -10dBV systems; +4dBu users need to be

aware that they will have very little headroom, though having said that, I ran the Spatializer using my +4dBu insert points without any problems. The audio ins and outs are on phonos, and a second pair of switchable inputs is fitted so that you can switch the processor from TV to hi-fi. Power comes from an external adaptor.

### THE CONTROLS

The Spatializer's control system is incredibly simple. Essentially, the effect is either bypassed or on, with three switchable effect 'levels' accessed from the front panel. A large, green, sci-fi style indicator displays three concentric LED semicircles, and the number of arcs lit indicates the process setting. There's no dynamic display or metering of any kind, but a supplied cordless remote allows you to adjust the effect without leaving the listening position. A further button adds extra bass for the benefit of those who think that too much bass is the same thing as hi-fi sound quality; this is best left firmly in the 'off' position.

### THE EFFECT

The hype that comes with the Spatializer box sounds pretty much like the claims made for almost every other 3D processor, but I'll tell you now that this one really works. I tried it on a few mixes, and as soon as I pressed the 'On' button, sounds and effects panned left and right moved way out beyond the speakers, and sounds which were previously buried in the mix seemed to find a space of their own in which to exist. The process isn't entirely tonally neutral at the highest settings — there seems to be a low-mid boost which warms everything up quite noticeably — but this isn't a violent tonal effect and can be compensated for by rolling off the low end a little. More surprising is the fact that the effect has good mono compatibility, a further indication that equal and opposite components are added to the two outputs. When you switch to mono, these components cancel, leaving the original signal. This effect seems

**pros & cons**

**SPATIALIZER HTMS 2510 £250**

**pros**

- Relatively inexpensive.
- Staggeringly effective stereo expansion.
- Simple to use.

**cons**

- Phono, -10dBV connections.
- No level metering.

**summary**

The Spatializer is sheer magic on a stick — I must possess it!

**SOUND ON SOUND**

to work particularly well on orchestral sounds, where a real concert hall ambience is created, even without reverb or delay. If there's reverb in your original mix, it wraps right around, and although the system fails to position sound behind you, it does have you looking to the sides on occasion.

### THE VERDICT

This box is aimed at home entertainment, and is capable of making a dramatic difference to a stereo TV soundtrack. In the studio, used with care, it can add a completely new dimension to music: I think it would be fair to say that the effect it produces is comparable to what you'd expect from the big-money pro systems.

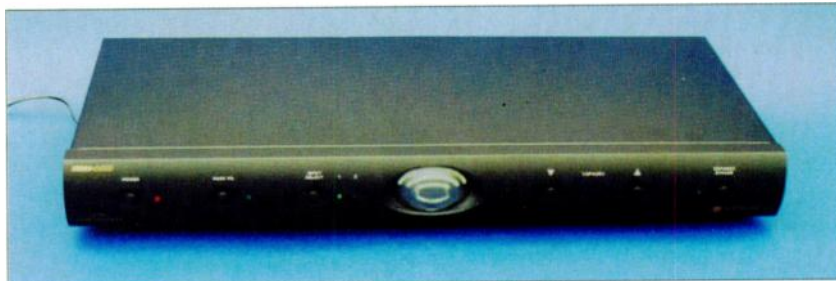

Though you can simply process your whole mix, I'd be more inclined to patch the Spatializer into a couple of mixer group inserts, to process selected instruments and effects returns. This maintains contrast and avoids the possibility of tonal changes on sounds that don't need widening.

At under £250, the Spatializer is a bargain, and as far as I'm concerned, it's a must-have box in that I must have one! I'd be happier if a recording Spatializer was available, operating at +4dBu with jacks instead of phonos, but in the meantime this one will do just fine.

**SOS**

### SPACE ODDITY: ANALYSING THE SPATIALIZER

No precise description of the Spatializer's processing method is provided, though the documentation says that aural cues normally suppressed in conventional stereo recordings are restored by the process. There are only so many ways in which this can be done, and all involve filtering off-axis sounds, introducing phase shifts between the two channels, or both. This particular system shows signs of directly out-of-phase L/R components when connected to my phase meter, but there's also a lot of frequency domain manipulation going on. The design also probably includes some kind of intelligent processing, because previously expanded material isn't over-processed, and central dialogue sounds aren't allowed to become swamped.

# The ST is Dead: Long Live

*These days, you can pick up an Atari ST computer for under £100, and its once-guaranteed studio ascendancy is seriously threatened by the Mac and PC. PAUL WARD checked out all the alternatives when upgrading his computer, and decided to stick with the faithful ST. Here he explains why.*

**T**here seems to be a great deal of doom and gloom surrounding the Atari ST these days. My clunky old 1Mb STM machine with external floppy drive has served me well for the best part of a decade, but recently I too started to succumb to the allure of a newer, faster machine and the exciting prospect of integrated hard disk recording. I looked at the possibility of the PC, Macintosh and Falcon as my next potential studio workhorse, and carefully sifted my way through the information packs and multiple magazine reviews.

However, it quickly became clear that (leaving aside the hard disk recording side of things for the moment) the amount of money I would need to spend in order to achieve merely comparable results to my old ST seemed unreasonably high. The newer operating systems place extremely heavy demands on the hardware they are designed to run on, to the point where the applications appear to play a very minor part in the scheme of things: "Well, sir, you really need

Windows 95 to take advantage of the next generation of applications, so you'll be needing a

100MHz Pentium with at least 16Mb of RAM and a 1Gb hard drive..."

And what of the Falcon? Well, I have to say that I remain unimpressed by the quality of the audio from the Falcon's own outputs. And by the time a decent digital interface and separate audio outputs had been factored in, the costs were beginning to escalate alarmingly.

It was time to make some tough decisions. After sitting and chatting with myself over a couple of capuccinos, I discovered that I was misleading myself somewhat. OK, so we'd all like the added flexibility and increased audio quality of hard disk recording, but do we really need them? Sheepishly, I had to admit that I was the victim of techno-lust!

## THE NEEDS OF THE ONE...

Most of the music I make is played 'live' from my keyboards and sound modules. When guitar or vocal parts are required (probably in less than 50% of the pieces I produce), I record these to my stalwart Tascam 38 8-track recorder, with MIDI synchronisation provided via an XRI SMPTE generator (God bless MIDI Time Code!). For much of the time, my Tascam remains unpowered, and as a consequence has a great deal of life left in it — at least as far as head wear and transport fatigue are concerned! Over the last couple of years, I've taken to recording 'acoustic' instrumentation into my sampler, saving versions as I go along until I either have the perfect take, or can build it from two or more nearly-perfect takes. Either way, the end result then goes onto the Tascam. The quality may not be up to digital standards, but the tape tracks play a minor part in my own style of music — who would notice the extra fidelity on a distorted guitar overdub anyway?

So what did I do? Well, I went out and bought a new computer — an Atari STe! After a few phone calls to suppliers I eventually came across one, Keychange Music Services, who was not only prepared to help, but actually understood the thought process that had led me back to the ST. After the exchange of questions, advice and information, I had a much clearer idea of what I needed.

## HARD TIMES

I ordered a new 105Mb SCSI hard drive, plus the requisite specialised cable which allows the Atari to make use of it. As far as the hardware is concerned, there is very little in this setup to concern even the most timid of users. Simply connect the hard drive's power cable, plug the SCSI cable between the ST and the drive, and

# the ST!

## or 'How I learned to stop worrying and love the Atari'

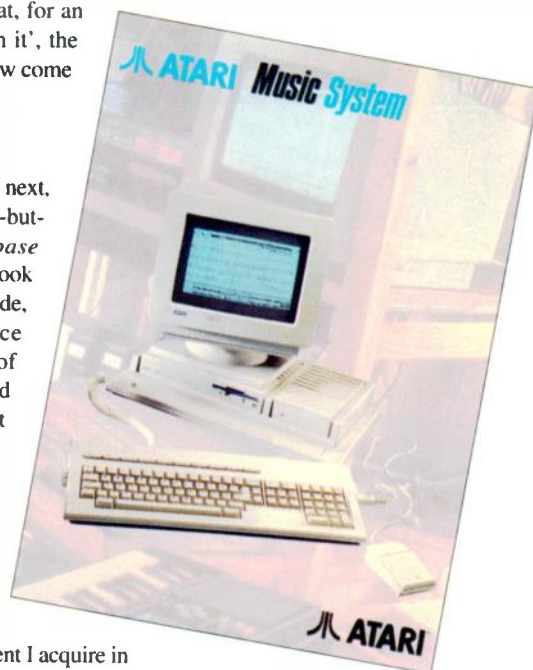

power up. Keychange were happy to format the hard drive for me, and there was nothing else for me to do other than install my application software. Due to restrictions in the specification of SCSI drives, the ST needs to be booted twice (just press the reset button) to allow the drive to be accessed. The automated solution for this is a program called *Coldboot*, which simply sits on a disk in the Atari's internal floppy disk drive and keeps on re-booting the ST until the hard drive responds — whereupon the hard disk boot takes over. Slightly inelegant, perhaps, but no trouble at all once in place — just switch on and wait a few seconds.

The addition of a hard drive to the ST means much more than an improvement in saving and loading times. Tools and accessories that were hidden at the back of your disk box are now constantly at your disposal. The number of accessories or AUTO folder programs is no longer restricted by available space on a floppy disk, or by the necessity to copy the same programs across all of your boot disks. Your machine will be configured in just the way you like, and with the tools and accessories you specify, each time it is switched on. If, like me, you have always struggled

along with floppies in the belief that, for an ST, a hard drive just 'wasn't worth it', the low price of adding one may also now come as a pleasant surprise.

### SOFT SOLUTIONS

An upgrade to 4Mb of memory came next, allowing me to plug in all those cute-but-not-so-little accessories and *Cubase* modules that I had always liked the look of but never had the capacity to include, for both memory and disk space reasons. I use an excellent piece of librarian/database software called *Chameleon* that enables me to not only hold SysEx data for all my existing instruments and processors (and search for them by name or criteria, such as 'soft', 'metallic', 'favourite', or the like), but also has its own programming language with which I can write SysEx transfer routines for any new equipment I acquire in the future. *Chameleon* happily co-exists as an accessory alongside *Cubase*.

### ST SERVICES DIRECTORY

The number of dedicated Atari ST supply, service and spares outlets isn't as high as it once was, but there are still plenty to be going on with. Here's a list of companies who can help you expand your ST and keep it running:

#### REPAIRS, SUPPLIES & UPGRADES

#### PD & SHAREWARE

The Atari public domain/shareware scene is not nearly as moribund as might be expected. There are plenty of libraries out there, run by enthusiasts and supplying some rather good software for

a minimal outlay - and that includes a wide range of editor/librarians, other musical applications, and banks of sounds. Here's a quick list of a few to get you started.

- 16/32 Systems, 173 High Street, Strood, Kent ME2 4TW. Tel: 01634 710788.
- Caledonia PDL, 250 Oldtown Road, Hilton, Inverness IV2 4PT. Tel: 01463 225736.
- FAST Club, PO Box 101, Nottingham NG2 7NN. Tel: 0115 945 5250.
- Floppyshop, PO Box 273, Aberdeen AB9 8SJ. Tel: 01224 312756.
- Goodman PDL, 16 Conrad Close, Meir Hay Estate, Longton, Stoke on Trent, Staffs ST3 1SW. Tel: 01782 335650.
- LAPD, PO Box 2, Heanor, Derbyshire DE75 7YP. Tel: 01773 761944.
- MIG Music, 55 Angel Hill, Sutton, Surrey SM1 3EH. Tel: 0181 641 6808.
- Music Domain, Beaufort, Glencople, Dumfries DC1 4RD. Tel: 01387 770429.
- Riverdene PDL, 30a School Road, Tilehurst, Reading, Berks RG31 5AN.

Tel: 01734 452416.

- Tumblevane PDL, 6 West Road, Emsworth, Hampshire PO10 7JT.
- Westec MIDI Market, 30 Fish Street, Goldhanger, Maldon, Essex CM9 8AT. Tel: 01621 788466

#### ST SHOWING OUT

Every computer platform has its exhibitions and shows, and the ST is no exception. In fact, Goodman PDL are running a pair of Atari Shows on Saturday the 28th September, at the Birmingham Motor Cycle Museum, and Sunday the 29th September at London's Osterley Hotel (near Osterley tube station on the Piccadilly Line). Both shows run from 10am to 5pm, and cost £3 for adults and £1 for children under 12. A good selection of suppliers and PD libraries will be in attendance. Contact Goodman PDL (see above) for further details. Incidentally, Goodman have also bought up the remaining stocks of Steinberg's venerable *Pro 24 v3* Atari sequencing software, and can supply it for the tasty price of £14.95.

Derek Johnson

# Long Live the ST!

## ST SOFTWARE: NETTING THE FREEBIES

If you're not already sorted as regards email and the Internet, the addition of a modem and some basic Internet software is a perfectly reasonable proposition for the ST. I have to admit that this is not a priority for me, since I use an equally ageing PC for this task, but the capability is there. Once you're connected, a quick scout around the Internet soon yields a healthy supply of support software for the ST. I came across lots of useful stuff, including:

- A program to order the running of programs held in the AUTO folder.
- A utility to enable all desktop accessories to be held in their own 'ACCS' folder.

- A copy of *ST Tools* to help me keep my hard drive tidy and optimised.
- A copy of *ST2DOS*, which makes your standard Atari ST-formatted disks readable by a PC.
- *Dump-It*, a utility that permits the ST to make use of those .SYX SysEx files which crop up regularly on Internet ftp sites.
- An up-to-date copy of *Cubase* and its associated drivers (this is completely legit, by the way, as you naturally can't use it without your dongle).

Amongst other bits and pieces I downloaded, I also found a 19-inch screen emulator for the standard 12-inch Atari monitor, and a German to English

translator! Here are the web addresses to check out for Atari-related stuff.

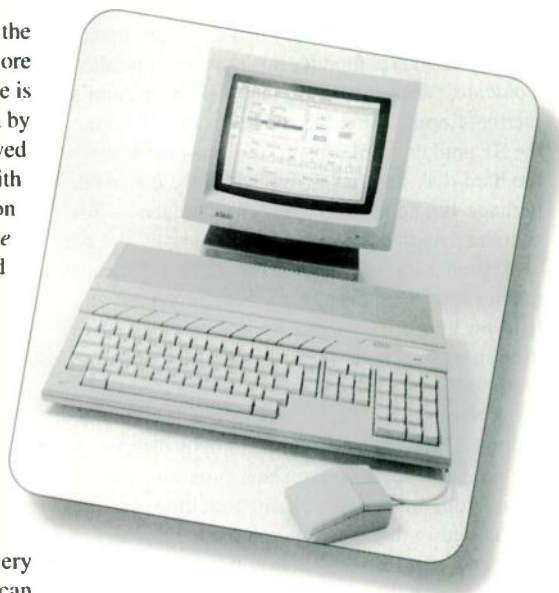

- Steinberg/Cubase:  
<http://www.midifarm.com/steinberg/>  
<ftp://ftp.mcc.ac.uk/pub/music/cubase/>
- Links and a list of the best utilities:  
<http://www.mcc.ac.uk/~dlms/atari.html>
- Utilities:  
<ftp://micros.hensa.ac.uk/micros/atari/>  
<ftp://src.doc.ic.ac.uk/packages/atari/>
- Other useful Atari-based sites:  
<http://www.tripnet.se/~mille/pdman/601.html>  
<http://www.ccn.cs.dal.ca/Services/PDA/atari.html>

► *NVDI* is a program that replaces many of the ST's screen handling functions with faster, more efficient code. Once it's in place, the difference is immediately obvious. Benchmark tests (written by SOS's own Ofir Gal, I should point out!) showed some of the ST's graphics routines running with a speed increase of more than 500%! Version 2.5 of *NVDI* is totally compatible with *Cubase* and makes much lighter work of moving around editor screens. *NVDI* gives the ST a much slicker feel, that belies its humble 8MHz processor speed. Installation is child's play — basically, you just copy one configuration file and a folder of system files to the root folder of your boot disk, move *NVDI* into your AUTO folder, and forget it!

## LIVE AND WORKING

My 'new' ST system is a thing of joy. The very simplicity of the hardware is its strength. I can forget about card slots, interrupts, IRQ settings and megabytes of disk storage space dedicated to keeping the operating system up and running (yes, I have trodden the PC route in my time!).

But the most important thing is that my

combination of Atari ST and *Cubase* still do the job I require of a sequencer. Perhaps I'm delaying the inevitable, and forgoing the delights of hard disk recording in the meantime, but the prices of replacement systems are falling all the time. I can wait.

Of course, I'm sure it won't be too long before I again look at the possibility of upgrading to a newer machine, but in the meantime I have a system that works perfectly well and costs me precious little to maintain. Since the ST is a 'dead' machine as far as games-players or business users are concerned, replacement STs go for a song (£60 seems to be the going rate for a 1Mb machine in my local free paper these days).

So don't despair of your Atari. If you're considering moving to a new computer, take a look at what you really need from your system and see if a couple of upgrades might be a better solution, at least in the mid-term. I'm not here to tell you that you can turn your ST into a PowerMac, but you could provide yourself with a much better working environment than you have currently, for a relatively modest outlay. For myself, I think any new machine that does arrive in my studio in the future is now likely to have to share its living space with an Atari ST for quite some time to come.

SOS

## THE ST: FOR AND AGAINST

### IT'S GOOD BECAUSE...

- It's cheapest by far of the available options, and more than up to sequencing.
- You don't have to faff around with MIDI interfaces: MIDI's built in.
- The operating system's built in, so you don't have to wait for it to boot up.
- Because ST software writers had to work within strict memory limitations, ST software is all pretty efficient and mostly works within 4Mb of memory (or less).
- It's reliable. Most Atari users we've come across have had far fewer problems with their machine than PC or even Mac users.
- If you break one, you can easily pick up a cheap replacement.
- There are lots of add-ons and utilities available to improve its performance.
- A big plus for many is how the ST makes very little noise of its own in the way of disk drives or fans. This helps when miking up and provides a better working environment in any case!

- Adding a second MIDI output port is inexpensive.

### ON THE OTHER HAND...

- It's not really suitable for hard disk recording.
- It's not made any more, though there are loads about second-hand.
- It can feel slow, and software is less sophisticated compared to the latest generation of Macs and PCs.
- Some add-ons are expensive compared to Mac or PC equivalents (but since the basic computer costs so much less...)
- Getting hold of mono monitors is a pain. The Atari ones are often hard to come by (and are often trashed) and the third-party replacements usually lack an internal speaker for the metronome. Standard PC/Mac monitors won't work.
- The limitation of double-density disks can be restrictive when all your other gear relies on high-density. It is possible to upgrade, but a non-standard ST could become a liability should you need to replace it.

# meet your next rack. MR Rack.

64 Voices

12 Meg Wave ROM  
Expandable to 84 Meg  
(3 expansion card slots)

2nd-Generation  
Transwaves™  
(with digital resynthesis)

44.1 kHz Output

Four Outputs  
(four 18-bit DACs)

## totally new totally awesome

The MR-rack cuts no corners to give you great sound – with 44.1 kHz playback through hardware that measures in at an awesome 102 dB signal-to-noise level. (Four 18-bit DACs sure help with that.)

Our all-new waveform ROM has 12 meg of the best sounds you've ever heard, including bigger and better piano, strings, brass, and voices. Plus the second generation of our unique Transwaves™, using digital resynthesis to give you sounds that move and transform under your control.

Great waves become great sounds thanks to MR-rack's all-new synth engine. Each sound is crafted with up to 16 sonic layers, creating the most realistic acoustic and the wildest synthetic sounds imaginable.

Our next-generation effects chip (ESP-2) provides 6 stereo busses for total mixing flexibility. Studio-quality reverb and chorus are always available, plus your choice from a broad selection of insert effects. And our thoughtful design lets you change the insert effect while the MR-rack is playing, without affecting the chorus and reverb.

Forget you ever heard the term "MIDI mode". Working with the MR-rack is easy, because it's always ready to receive on 16 MIDI channels. And it's just as easy to set up splits and layers on a single channel.

We've made selecting sounds a breeze with our proven SoundFinder™ interface – one knob selects the sound type; the other knob picks the sound itself. And with hundreds of great sounds to pick from, you might never need to tweak one. But if you do, we made the most important sound parameters easily available for editing.

Want more? We thought so. The MR-rack has the best expansion options of any synth, with 3 card slots for up to 84 meg of wave data. And we give you tons of memory for your money. (Three times what anyone else offers!) Like our upcoming 8 meg Drums, the 20 meg Dance/Hip-Hop card, and the 24 meg World and Piano cards.

Whoops – ran out of room! So if you want to hear all the other totally cool things about the MR-rack (like the PCMCIA card slot, the 4 outputs, or the Unisyn MR editor we'll give you) just call us, write us, or visit your ENSONIQ dealer and say "I'd like to meet MR-rack!"

# Voyage of Discovery

## EMU LAUNCH PAD MIDI CONTROLLER

**Emu's Launch Pad provides a hardware control surface for the Orbit sound module, but can also be used with other MIDI gear. PAUL NAGLE finds out whether it's destined to become a springboard for many a successful mission...**

### LAUNCH ME!

You can select programs, songs or patch banks using a simple increment/decrement system, or type in a patch number and go straight to it. For live use, you might want to keep your synth nearby so you can see program names. Bank select follows the MMA standard and provides no support for manufacturers (the manual cites Roland as an example) who produce instruments which deviate from this.

When I first heard about the Emu Launch Pad, it was described as some kind of drum machine add-on for the Orbit dance sound module (see review in SOS June '96) complete with velocity-sensitive pads, MIDI sliders, and some cool ways of interacting with the Orbit's Beats mode (a simple, replay-only drum sequencer mode, for those who haven't read the Orbit review). Now that the Launch Pad has arrived, I can tell you that it's actually a combination of MIDI control generator, MIDI clock source, MIDI Machine Control and sequencer transport buttons, and pretty versatile note trigger. It *does* feature velocity-sensitive pads, as well as five sliders and a pitch wheel, and is intended to be

placed in the MIDI chain between your main MIDI controller and the synth to be played, although this could be routed via a sequencer to record the output from the Launch Pad's sliders and other controls. The back panel features inputs for a MIDI switch and continuous controller pedal, plus MIDI In and Out. There's no Thru socket, since all incoming data is passed on unchanged, along with anything generated by the Launch Pad.

When the Launch Pad arrived with me, I was somewhat surprised by its compactness: just 325 x 195 x 40 mm, according to my trusty tape measure, but nevertheless solidly constructed, with a sexy curved metal front panel. A look through the slim 21-page manual revealed no hidden depths (or dimensions, hence the aforementioned tape measure) so I plugged in the obligatory external adapter (supplied) and set about tapping and sliding.

For the purposes of this review, I used an Emu Orbit as my sound source, but most of the facilities

discussed apply equally to any synth with a reasonable MIDI spec.

### HIT ME!

The drum pads are actually more like rather chunky computer keys, and are laid out in the form of a velocity-sensitive, one-octave, polyphonic keyboard (C3-C4). The pads appear to be designed for single finger strikes rather than elaborate flams or trills, and are no substitute for dedicated drum pads. I didn't feel confident enough to really let rip (and I'm not exactly Arnold Schwarzenegger, except perhaps in my command of the English language), because if I dug in too hard around the middle of the scale I could feel the underlying circuit board bending slightly. Two transpose knobs are used to shift the pitch of the pads, either in 12-semitone steps, or by a whopping nine octaves (five up and four down). A third knob controls the MIDI output channel, which is great for quickly sweeping through patches on each layer of a multitimbral synth. It's a pity that this MIDI selection doesn't affect incoming notes too: if you want to use a controller keyboard in conjunction with the Launch Pad, you must select MIDI channels on both devices to jump between voices in this manner. Channel selection affects all the Launch Pad's controls — including the sliders, switches, pads, and pitch wheel — except for the six transport trigger buttons.

### CONTROL ME!

With its five assignable sliders, a sprung pitch-bender knob, inputs for both an on/off foot pedal and a continuous pedal, plus the cutely-named 'Thumby' switch, the Launch Pad is a veritable Swiss army knife for whittling out a real-time performance. This, of course, assumes that you have a synth capable of responding to such twiddling — such as the Orbit. An Orbit patch, for example, has four continuous controllers in its modulation matrix (including mod wheel), with each one routable to over 30 destinations. Sliders A-D on the Launch Pad, by default, produce the first four MIDI control messages — logically enough. However, the mod wheel duplicates the factory setting for slider A, so I reset it to controller 7 (volume) which was far more useful. Typical applications for the footswitch and Thumby would be to produce on/off events such as sustain (hold) or portamento, but you can just as easily pick other controllers too, for more unusual effects. Volume and pan are good candidates, allowing you to make sounds jump instantly from mute to maximum level, or suddenly move between left and right speakers. Equally serviceable is the continuous pedal input, although I'd have liked the option to generate channel aftertouch with it — especially as this is one modulation source which Emu synths will respond to but which can't be generated at all by the Launch Pad.

All settings are remembered when the Launch Pad is turned off, but since customisation is so straightforward, you would probably re-program on the fly most of the time. For the more cautious-minded, all values can be transmitted via the MIDI output as system exclusive data and saved into your favourite sequencer. Reloading a configuration is as simple as playing the SysEx back again.

## BEAT ME!

One of the most nifty features of Emu's Orbit is its Beats mode. For more information you should check out the review in June's SOS, but I'll just say here that the Launch Pad provides a quick method of stepping through the current beats, drum-machine style, whilst adding impromptu whacks via the keys. By holding down the Thumbby button and using the Inc/Dec buttons, you can globally transpose the Launch Pad's output; this command is recognised by the Orbit and is used to introduce variations into the current rhythm, making use of the cunning way in which the drums are mapped out. You need to activate Beats mode on the Orbit itself before it will accept clock information and start/stop commands from the Launch Pad. Resetting the tempo value to zero will stop clock transmission — its workable range is 30-255 bpm. Stepping through patches as the rhythm drives along is fun, and it's easy to stray into some pretty quirky areas. The problem for me was that the Launch Pad didn't add any new dimensions to the Orbit in this respect, or allow me to achieve anything that I couldn't have produced with it and a drum machine or mother keyboard.

## TRANSPORT ME!

The Launch Pad provides a replica of a traditional tape recorder-style transport for sequencer and MIDI Machine Control. I connected it to my VS880 hard disk recorder and it happily played, rewound, fast-forwarded and returned to zero, all very smoothly. It's much more basic in its handling of sequencer controls, with only 'start from zero' and 'stop' being supported. I rather expected more sequencer control than this! With no discernible way of assigning tempo to the sliders, you must set the required tempo using the keypad and then hit the Enter button to activate it. To change tempo, type in the new rate and hit Enter again — a little long-winded for my taste.

Toggling into Trigger mode, the transport keys become six latched note-trigger buttons which you hit once for a note-on event and a second time when you wish the note to stop. This would be useful for starting and stopping sample loops, sound effects or wavesequences from a Korg Wavestation; each button transmits on its own independent MIDI channel for further flexibility. You can jump between trigger and transport modes freely without

**pros & cons**

**EMU LAUNCH PAD £429**

**pros**

- Assignable sliders and switches can generate a wide variety of MIDI controllers.
- Sequencer and MMC transport operation.
- Control of Orbit's Beats mode.

**cons**

- You'd probably have to need all its features to justify buying one, especially at this price.
- The drum pads don't feel substantial enough for a really good pasting.
- Minimal sequencer controls and no dedicated tempo knob.

**summary**

An alternative MIDI controller and a good partner for Emu's Orbit, the Launch Pad would be equally at home on stage or in the studio.

**SOUND ON SOUND**

interrupting the current beat or any notes which are sustaining.

## CONCLUSION

A combination of useful features in a handy-sized box, the Launch Pad is a jack of all trades. I'd probably have sacrificed some of those drum pads for more assignable sliders, but given its intended use with the Emu Orbit (which can respond to only four continuous control changes), perhaps these would have been superfluous. The transport support for MMC works well but the sequencer controls could have been more comprehensive, and would be greatly enhanced by a dedicated tempo knob. The degree of sequencer control provided is fine when the Launch Pad is used with the Orbit's Beats mode (start and stop is all you can do there), but if you were hoping to use it with something like *Cubase*, the limited controllability on offer isn't sufficient.

Probably the best use of the Launch Pad is, as you'd expect, with the Orbit. Live selection of beats, plus manipulation via the sliders, and triggering notes via the keypad, could be turned into a performance by itself. Owners of other synths aren't totally left out, however: they might find the assignable controls, synchronisation and triggering options to be desirable, especially if their main keyboard is lacking in the knobs and sliders department.

With an Orbit in your rack and a Launch Pad strapped about your person (I shudder to think where the power adapter would go) you really could pose as a one-man dance factory.

# Heir

# Apparent?

BOSS SX700 STUDIO EFFECTS PROCESSOR

Boss have been making effects processors in one form or another for well over a decade, from the original 'stomp boxes' and the later Micro Racks to the more recent multi-effects processors, the more-than-capable SE50 and SE70. Having owned most of these, I awaited the arrival of the new Boss SX700 multi-effects processor with interest, as it is obviously designed to fill the gap left when the well-specified SEs were discontinued.

## JUDGING BY APPEARANCES

As you can see from the accompanying photograph, the SX700 comes in a 1U rackmount case and sports the sort of colour scheme that wouldn't look out of place on a sports car. The layout of the front panel is similar at first glance to that on the Boss's recent GX700 guitar effects processor (reviewed in SOS June '96) — but even cursory inspection reveals that the SX700 is a very different beast.

Starting on the left of the unit, there are two rotary controls for setting input and output levels — but unfortunately no wet/dry balance control. To the right of these is the now almost mandatory 2x16-character LCD display. Continuing right, you encounter two rows of five illuminated buttons; the bottom row of these is used to navigate around many of the SX700's more general menu pages, and contains the Exit and Write buttons.

This is where I raise my first gripe with this unit. I am fairly sure that I am not the

*Although much loved by musicians, Boss's SE50 and SE70 effects processors have now been discontinued, and the new SX700 is designed to replace them. ROB BRADY decides whether the SX can follow in the footsteps of its forefathers, or whether it is destined forever to walk in their shadow...*

only person who thinks that putting the Write and Exit buttons next to each other is a bad idea. In a dimly-lit studio, you need every bit of help preventing silly mistakes which can take ages to fix, especially if you are paying for the studio time. If anyone from the Boss R&D department is reading this, please do something about it next time!

Each of the five buttons in the aforementioned top row is dedicated to a single effector (more on this term in a moment). From left to right, you have EQ, Mod (Chorus, Flanging, Pitch effects), Delay, Reverb, and RSS. "Stop right there", you should feel free to cry at this point, "RSS on a Boss multi-effects processor for under £500?" For those of you who have missed the development of this exciting technology, read the 'RSS Enterprise' box elsewhere in this article.

To the right of the main buttons is the data entry knob, with parameter select buttons underneath. The knob is very tactile, and is a joy to use, being both 'stopped' and velocity-sensitive. This latter feature lets you rapidly skip from working with a delay time of (say) seven or eight milliseconds, right up to over a second's worth of delay with just a speedy turn of the knob — but turning the control slowly by the same degree will only produce a very subtle change in the parameter value. Finally, on

## pros & cons

### BOSS SX700 £419

#### pros

- Great sounds at a competitive price.
- RSS alone is worth £419!
- Comprehensive MIDI specification.
- Genuine +4dB operation.

#### cons

- No vocoder.
- No digital I/O (although this isn't really a con at this price!).
- Wall-wart PSU.

#### summary

The SX700 is sure to find a home in many home studios, due to its versatile range of high-quality effects and ease of use — not to mention getting RSS for under £450!

## BRIEF SPEC

- 18-bit 128 x oversampling analogue/digital converters
- 18-bit 16 x oversampling digital/analogue converters
- 44.1kHz sampling frequency
- 31 different effects algorithms
- 19 effects chains
- Frequency Response 12Hz -20kHz with 95dB dynamic range (105dB bypassed)
- 256 patch memories (128 preset, 128 programmable)

► the extreme right of the front panel you encounter the Bypass, Utility, and power switches.

On the back panel are the standard compliment of three MIDI sockets, true stereo In and Out on unbalanced quarter-inch jacks, and sockets for a control pedal (switch), an expression pedal (continuous controller), and Bypass (switch). Also on the back is a switch for setting the input/output level of operation between +4dB or -20dB (why not the more standard -10dB?). This is one area where the SX700 again scores over the older Boss units, and it comes as a pleasant surprise to find professional standards being implemented on a unit in this price bracket.

Unfortunately, following in the tradition of almost every budget effects processor, the SX700 makes use of an external power supply (or wall wart to those of us who dislike them), which is a little irksome when you find out how much spare room there is inside the SX700's case.

## EFFECTS ARCHITECTURE

The basic unit of effects currency in the SX700 is an effector, to use Boss terminology. The effectors are chained together in different orders and configurations in one of 19 preset effect chains to form patches. Sadly, there is no method of creating your own chains, so the presets provided by the designers are the only way of putting the effectors together. Obviously, this is not quite as flexible as, say, the Alesis Q2's virtual patching system, but the preset chains are well thought out, and allow you to create some quite stunning results.

In all, a patch can have up to five effectors running simultaneously, but you can only have one from each effector running at once. (See the 'Effectors In Full' box for a full list). In other words, you can't have a harmoniser and a flanger running simultaneously, or chorus and phasing at the same time, as all of these are generated by the Modulation effector, which has its hands full generating one effect at a time.

Almost all of the SX700's 128 preset patches use more than one effector simultaneously, nearly all have an EQ stage, and many have an RSS element sitting on the end of the effect chain. The five illuminated direct buttons on the front panel allow you to mute each effector, so you can see

what each one is contributing to the overall sound produced by the unit. The direct buttons also come into play when performing editing functions on a patch, for example, enabling you to jump from editing Chorus rate straight to the edit pages for Reverb with a single button press.

## USING THE EFFECTORS

### • EQ

The SX700 always has a three-band parametric equaliser available, no matter how many other complicated effects are running at the same time. The frequencies are split into three bands, and the upper and lower bands are switchable to either parametric or shelving operation. Each band can have up to 12dB of gain applied or removed in a very musical manner. This makes the SX700 very useful to anyone who has a simple shelving EQ section on their mixing desk and needs a little bit more control over a complex signal. The EQ section is also good for reducing hiss from a dirty input signal, or for creative use in effects chains.

### • MODULATION & PITCH EFFECTS

The Modulation effects (chorus, flanging, phasing, and Leslie simulations) are just as good as those found in Roland's much more expensive — and now discontinued — SDX330 (see SOS July '94). The SX700 even manages a more than reasonable impression of the old analogue SDD320 Dimension D Chorus, much sought after by the dance fraternity.

Pitch and harmoniser effects are also controlled by the Modulation effector, so you can't have chorus/harmoniser or flanger/pitch-shifter hybrids, which is a shame, but there have to be some limitations imposed on what is, after all, a mid-price unit. Depending on what else is included in your effects chain, you can use either a two- or four-voice pitch-shifter from the Modulation effector. The amount of shift is adjustable over a range of plus or minus two octaves, although as with many pitch-shifters, the usable range is much less than the theoretical maximum before audio artifacts become apparent. Generally speaking, though, the quality of the SX700's pitch-shifters is notably better than its predecessors, the SE50 and SE70.

The harmoniser in the SX700 has the same limitation as the pitch-shift: depending upon what

## RSS ENTERPRISE — ALL ABOUT RSS

RSS, or to give it its full name, Roland Sound Space, has been with us for a little over five years in one form or another. It first appeared to fanfares of trumpets on *Tomorrow's World*, panning sounds around, behind, above and below an amazed audience. Well, that was the theory, anyway: in practice almost everyone in the country heard a slight phasing occur over their tiny, tinny, mono TV speakers, and not a lot else. Fortunately for Roland, those who heard RSS in a carefully-controlled listening environment were wowed by the clarity and realism of the 3D sound effects produced by their £13,000 box of tricks. Unfortunately, RSS only

sounds great on headphones or in the 'sweet spot' in the middle of a pair of stereo speakers, and its mono compatibility is not its strongest point, either. This is due to the way the process works — it makes use of tiny, calculated phase shifts and delays between the two sides of a stereo mix.

Roland developed RSS by using an acoustically accurate model of a human head suspended in an anechoic chamber. They panned sounds around two microphones in the 'ears' of the head, and measured the changes in phase and timing of the sound reaching the ears. The results were then reverse-engineered to create mathematical representations

of how human hearing works, which form the core of RSS.

Roland initially launched RSS as a £13,000, 4-channel unit, and it has since been used in specially-treated samples for the company's synths and modules (for example the JV1080), and in a limited form for spreading early reflections in two of its high-end reverbs and in the SDX330 chorus. There has also been the Roland RSS10, a cut-down 2-channel 1U rackmount unit costing over £2000 (reviewed SOS March '96). The SX700 is the first product to come out of the Boss/Roland stable costing less than £2000 that has a full RSS implementation, rather than just a gimmick for slightly improving chorus or reverb.

REALTIME SOUND PROCESSOR • WAVE EDITOR • AUDIO DATABASE

now gives you even more time for creative sound editing! WaveLab has quickly established a reputation for its high quality results, ease of use and amazing processing speed. With the new RealtimeEngine you can now put up to 6 DSP processors into the signal path – without needing dedicated DSP hardware.

Once again setting new standards in quality, **WaveLab 1.5** has now broken the 16-bit barrier, offering true 24-bit processing – from audio bandwidth right up to the processing stage. Top professional studio quality for on your PC!

# REALTIME TAKE OFF!

8 Plug-Ins are supplied:  
Reverb, Chorus, Echo,  
3-Band EQ, Leveller,  
Tools One, Resampler  
and AutoPanner.

## Realtime Keyfeatures

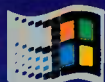

- Native RealtimeEngine
- 32-bit floating point accuracy
- 8, 16, 20 and even 24-bit audio files
- Master section with volume adjustment
- Precise level indicators with clipping LED
- Realtime Dithering up to 24-bit.
- Realtime Noise Shaping
- 6 slots for realtime DSP processors
- 8 Plug-Ins supplied
- Open Plug-In architecture

System Requirements:  
486DX, 16MB RAM, Video card  
supporting 256 colors or more,  
Windows 95/NT 4.x, Hard Disk,  
MME-compatible sound card and  
CD-ROM drive.  
For the RealtimeEngine: Pentium90  
or faster recommended.

The Open Architecture Concept  
lets you expand your WaveLab  
at any time, using optional Steinberg  
and 3<sup>rd</sup> party Plug-Ins.

- 3-tap
- 4-tap
- Stereo
- Quad
- Ducking
- Band-pass

### REVERB

- Room 1, 2, & 3
- Hall 1 & 2
- Garage
- Plate
- Non-linear

### RSS

- 3D Panner
- Single 3D
- Dual 3D
- Quad 3D

▶ other effects you have running in your chain, you can add either two- or four-voice harmonies to the source signal. The harmoniser is semi-intelligent, but you have to tell it what key the song is in — and only Major and Minor keys are supported as standard. If you are feeling adventurous, a user scale can be programmed, allowing you to create more exotic modes. The results are good compared to the competition, but you would not buy the SX700 for this feature alone.

Before moving on, there is one notable omission from the SX700's modulation section — vocoding. Some may say that the less chance people get to use a vocoder, the better, but the vocoder in the SE50 and SE70 was one of the highlights of these units, and allowed the creation of some seriously odd, interesting sounds. It's sorely missed here.

### • DELAY

If you, like me, love messing around with delay to help create riffs and grooves, then the SX700 is going to impress you for its delay facilities alone, regardless of all its other bells and whistles. The SX700 has seven types of delay effect, ranging from a simple mono delay line, passing through the mild insanity of a band-pass delay, and off into the totally hatstand with 4-tap delays and quad delays.

The total amount of delay available is 1400 milliseconds — so if you have a stereo delay the maximum delay is 700ms. When working with multi-tap and quad delays, the total pool of delay is shared between each tap. In other words, you can have one tap taking 700ms, the next 300ms, and the next 300ms, but this means the final one can only have 100ms, bringing the total to 1400ms.

The SX700's delay section also has the added bonus of a very impressive tempo delay facility. This enables delays to be set up without the need for messy calculations to work out the exact delay for a given tempo. Simply tell the SX700 what interval you want the delay to be (minim, crotchet, quaver, semi-quaver, and so on), set the sync source, and you can obtain perfect delays, every time. The sync source can vary: it can be from an internal setting (you define an exact tempo), or MIDI Clock, a control switch (you tap your foot in time), or a MIDI key (same idea as control switch, but using a MIDI keyboard or drum pad). Again, the delay section passed quality control — I was particularly pleased

to note the lack of the background hiss exhibited by the SX700's Boss forebears.

### • REVERB

To be blunt, the reverbs on offer here aren't up to Lexicon PCM80 standard — there is a slightly thin and grainy tail end to longer reverb times — but the SX700 is certainly a match for anything by Alesis or Digitech. In direct comparisons, the SX700 also sounded brighter and more detailed than Boss's own RV70 (which offers similar facilities to those offered by the SX700's reverb effector). This is presumably due to the SX700's greater bit depth in its AD/DA conversion (18-bit instead of 16-bit).

### • RSS

This is, in my opinion, the effector that is going to generate the most interest in the SX700. The RSS effector has two main modes: it can function both as a 3D autopanner and as a fixed positioning system, placing a sound either above or below the listener anywhere in a 360° circle. Sending a hi-hat pattern through the autopanner produces amazing results, with the sound literally moving outside the speakers' traditional sound field and back in again. The extent of the pan is subjectively different, depending on where you sit and how easily your brain is fooled. Playing exactly the same effect to a group of five people produced five different views on how well the system works — but all agreed that the sounds did distinctly move beyond the 'normal' sound field. An afternoon of experimentation revealed that high-frequency sounds (such as hi-hats and sequenced lines) produced the best results, but almost anything can be made to sound better by the use of a little RSS.

At first, the positioning system seemed a little bit disappointing after all the stunning results I'd had from the autopanner, but all it took was a brief glance in the MIDI programming guide (see the 'SX700 & MIDI' box for details) to start the creative juices flowing. You can control the pan position in both the horizontal and vertical plane via SysEx information, so after a few minutes setting up a mixer map in my sequencer, I had created a fully automated 3D panning system, and was able to move a sound around at will. This alone justifies the SX700's existence, as it allows almost any studio access to an effect which would, until recently, have cost thousands of pounds to create.

## SUMMARY

After using the SX700 intensively on a couple of dance remixes, I decided I would have to buy

## STUCK IN THE MIDI WITH YOU: THE SX700 & MIDI

On opening the SX700's manual, I flipped to the back to see what is controllable over MIDI, and was disturbed to find that there was no mention of SysEx or MIDI spec apart from a brief note explaining that the SX700 can receive on the usual 16 channels.

A quick call to Roland

resulted in a comprehensive 20-page MIDI manual dropping through my door a few days later. It turns out that Boss supply the MIDI manual separately, arguing that only a small percentage of users actually use their products to this level. A quick glance through the MIDI manual

revealed that every parameter of the SX700 is controllable via SysEx, and that several parameters can be assigned to more user-friendly continuous controllers. SysEx programming is considered something of a black art, but with a little bit of experimentation, truly breathtaking results can be obtained, of which more in the section dealing with the RSS effector elsewhere in this review (above right).

one. The SX700 has an immediacy which makes it easy to use, but despite this, it also has enough depth to keep the most ardent MIDI programmer busy for months. The sound quality is also much better than anything Boss have produced in the past — in fact I found the SX700 to be one of the sweetest-sounding performers that I have heard at any price. In blind tests, the SX700 matched the quality of my TDM plug-ins, as well as giving processors costing a great deal more a hard time justifying their price. And then, of course, there's the RSS facility, which really makes the SX700 stand out from a crowd of similar effects units.

Of course, I do still have a couple of points to moan about: wall warts have no place in a studio, and should be a thing of the past, and I won't forget the lack of vocoder, either. A last, minor niggle, which is actually more greed than gripe, is

the lack of digital in/out connectors. This would have made the SX700 an absolute dream for Yamaha ProMix 01, Digidesign Pro Tools, and Alesis ADAT users, and would have elevated it to the level of a truly professional piece of equipment. These, however, are comparatively minor complaints — it's hard to find fault in something that I think is one of the best new products to come on the market in the last five years.

E-100

E-200

£100  
SHARING THE INNOVATIVE SERVO CIRCUITRY WITH THE E-200, THE E-100 IS TRULY ONE OF THE BEST VALUES IN THE MICROPHONE WORLD. IN ADDITION TO THE PHENOMENAL WIDE BANDWIDTH RESPONSE, THE E-100'S PHYSICAL DIMENSIONS CONTRIBUTE TO ITS VERSATILITY AS A VOCAL MIC, AN INSTRUMENT MIC, A DRUM KIT MIC, OR AN OVERHEAD MIC.

▶ £299

£200  
DESIGNED FOR CRITICAL APPLICATIONS SUCH AS RECORDING, SOUND REINFORCEMENT AND BROADCAST, IT'S UNIQUE COMBINATION OF TRANSPARENT REPRODUCTION OF ANY SOUND SOURCE AND HIGH SPL CAPABILITY MAKE IT ONE OF THE MOST VERSATILE HIGH QUALITY MICROPHONES EVER MADE. EQUALLY AT HOME IN A VOCAL BOOTH, IN FRONT OF A WHOLE SYMPHONY ORCHESTRA, CLOSE MICKING A KICK DRUM OR RECORDING A CLASSICAL GUITAR.

▶ £449

WHAT HAPPENS BIG IN AMERICA, AS HISTORY WOULD HAVE IT GOES BIG HERE. CAD EQUITTEK ARE THE FASTEST GROWING RANGE OF MICS IN THE US. ONCE AGAIN WE BRING YOU THESE GREAT MICS AT FACTORY DIRECT PRICES. TRY THEM AND BE STUNNED THAT YOU CAN GET A MIC OF THIS QUALITY AT THESE PRICES.

▶ NEW

If you have been in the music industry for a while, we are sure you will have heard of the name ART. Recently ART have totally overhauled their product range.

Some of the existing products have been totally updated and some are totally new. Like their brilliant mic preamps for all price points & the great new effects network. Also the new progate is getting rave reviews in America.

So if you're in the market for some pro-audio equipment, give the new range of ART effects a try, you won't be disappointed!

## Acoustic Tools

### ACOUSTIC TOOLS

We are constantly amazed how many people spend fortunes on their recording equipment (especially their speakers) but then pay no attention to the acoustics of their studio-bedroom-lounge or wherever they happen to be recording.

Well we are here to help. RPG and Music Connections have teamed up to offer you the chance to actually hear your music as it really sounds. We can tailor a package to suit exactly the size and shape of your recording facility. Just think how impressed visitors will be, when they come to your studio and see you know all about acoustics.

Give us a call or visit our showrooms and see how we can effect your monitoring.

**THE BIGGEST AND BEST RANGE OF STOCK IN THE UK**

*Hugh Padgham is one of a select band of producers whose work is always in demand by top musicians, and whose style always seems current and relevant. RICHARD BUSKIN catches up with him on a rare break in his busy schedule, to talk about his latest projects with Sting and Phil Collins.*

**F**rom Phil Collins, The Police, XTC and Paul McCartney, to Sting, Genesis, Melissa Etheridge and David Bowie, the artists and the awards continue to line up for Grammy-winning producer/engineer Hugh Padgham. Padgham has consistently been at the cutting edge of the music scene for almost

job possible. Whether I'm working with new artists, such as Beth Hart, or people whom I've known for a long time, such as Sting or Phil Collins, it's a totally democratic situation. We'll discuss the way in which we want the album to go and then we'll work in conjunction with one another. For instance, on Phil's new album every track has drums. When we started the record I pointed out to him that his last album only had three songs with drums on them, and on one of these you could hardly hear them anyway. So I said, 'Look, Phil, you're a great drummer and I think you deserve a bigger and better drum sound.' There again, I remember working with Paul McCartney years ago and him asking, 'Well, who should we get to play bass on the album?' I said, 'You've got to be joking! You're the best bloody bass player there's ever been!' He genuinely thought that there might be someone better than him, so in that case I had to provide confidence, for want of a better word."

**Has the degree to which you offer advice and express your own point of view increased over the years?**

"It's difficult to say, because I've always had the same kind of approach. You see, although I did learn to play musical instruments as a kid and can read scores, I'm not really a trained musician. Therefore, my input with regard to making records

# Hugh Padgham

## MASTER CRAFTSMAN

two decades, courtesy not only of his good ears, astuteness and application to his work, but also his well-proven ability to match the sound to the talent and the direction to the material. When the talent and material belong to the likes of Sting or Phil Collins, that's no mean feat. Obviously Collins recognises this — after seven years and a one-album hiatus, the two men have recently been working together again, in the setting of a rented French chateau instead of the usual air-conditioned studio. Coming in the middle of a year which had already seen the successful completion of projects with Sting and new LA act The Beth Hart Band,

the Collins sessions had already reached the mixing stage when I caught up with Hugh Padgham at his home in London. A few days later, he would be flying to Miami to produce a couple of tracks on the new Bee Gees album, but, after battling his way through the Friday night traffic, he was still able to take the time out to talk about his work, his preferences, and his views on technology old and new.

### PRODUCTION DEMOCRACY

**Do your roles as a producer and engineer vary from project to project?**

"Yes, although the bottom line is always that we want to go in and do the best

is basically coming from the punter's point of view. Artists like McCartney and Sting don't necessarily need somebody who's a fully-trained musician to come in and try to change their songs. I mean, one reason why I think Sting and I get on so well is that he presents the music and I then translate it into the sonic medium. That's where my main production values come from: being able to comprehend what the artists want to do with their songs."

**Do you ever have difficulty understanding what they actually want?**

"No, that's never a real problem, but I suppose I've been doing this for quite a long time, so I'm used to seeing where people are coming from. There again, it's also down to me getting the kind of projects that I'm good at, because I doubt that I would have many r&b groups asking me to work with them."

**When you work with the likes of Sting and Phil Collins, how do you bring something new to each project? Are they looking for you to do this, or are they basically just relying on you to do what you've done in the past?**

"That's a difficult question. In Sting's case, the music he writes is always quite different from one album to the next, and the minute I hear one of his songs I can 'see' the sound in my head. I can see what he's getting at, and that therefore becomes a new challenge in itself. With Phil

*The Beth Hart Band — just one of Hugh Padgham's recent production projects.*

Collins, on the other hand, just the fact that it's been seven years since we worked together has renewed the excitement in a way. I wouldn't say that Phil's albums progress musically in the same way that Sting's do, but what's interesting about Phil is that he writes these really good songs that only have about three chords in them. If you asked

Sting to write a song with three chords, I don't know if he'd be able to do it! So that's where I think Phil's strength lies; a lot of it has to do with the simplicity of his approach, and that comes from many different facets, including the fact that he's self-taught. If I had to do a Sting record all the time, or if I had to do a Phil Collins record all the

# Hugh Padgham

- time, or if I had to do whoever's record all the time, that would be boring. But it's because everybody's different in so many ways that my interest remains as high as it is."

## CHATEAU COLLINS

**In past interviews you've explained how you achieved Phil Collins' trademark drum and vocal sounds. Have you modified your approach or your methods with regard to the new album?**

"Yes, in some respects. I mean, we certainly don't go for the big Phil Collins drum sound on every track because a) it wouldn't fit and b) it would become a bit tedious! However, as far as the vocals go, his favourite mic is still the same old Beyer 88 dynamic. The thing with Phil is that he sings to the sound, and if you put up a different mic, he himself sounds different. On a couple of songs we put up a different microphone, but generally he sings to what he knows. In many respects that will produce a better performance, and that's the most important thing for me."

**Why did you opt to use Sting's portable studio in conjunction with the French chateau for Phil's album?**

"Well, Sting has, I think, the only known portable SSL board, by which I mean you can literally pack it up in two or three hours and stick it in its flightcases. It's a 64-channel G Plus with Ultimation, which was designed to be pulled apart and put back together again, and

because Sting was on the road, we had this idea to rent his studio. What's brilliant about the system is that it has much shorter cable runs than a normal studio. In a normal studio, you have to put all of the wires through walls, go around corners and that kind of thing, whereas with Sting's setup it's as short as we want it to be. We have long cable runs and short cable runs, but all of the runs are still shorter than normal and I think that always helps sonically."

**What was the setup in the chateau?**

"We had three huge rooms on the ground floor and, unlike Sting's record, where everything — apart from the power supply and tape machines — was in the same room, in this instance we were able to put the drums in the room next door to where we had the equipment. This made it slightly easier from my point of view, as I could listen to the drums through the speakers a bit more. Then we had another room where all of the machines were."

**How did you and Phil see each other?**

"We had video cameras with remote controls. However, we did all of the vocals in the same room together, and as the room with the drums was right next to the control room I sometimes didn't even have to press the talk-back. He could

just hear me talking through the door!"

**As the rooms were so big, how did you avoid too much reverb?**

"Apart from the old thing of closing curtains, putting rugs on the floor, and gaffa-taping bits of carpet onto the walls, we also used studio screens, as well as things called tube-traps. If, for instance,

"I would never work with an artist who I initially considered to be incapable even on a good day."

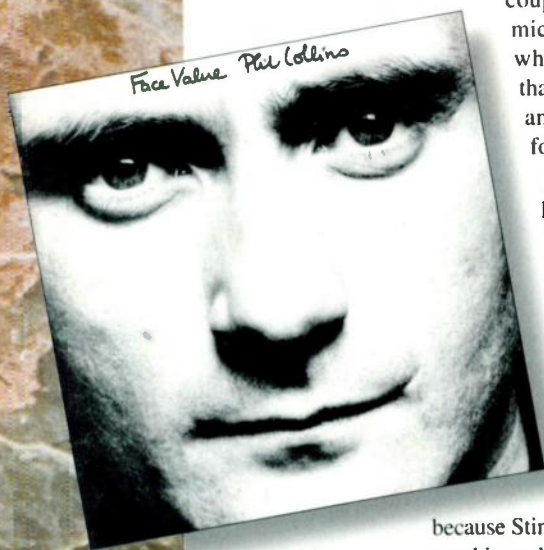

someone is playing an acoustic guitar in a quite reverberant room, you can surround the microphone, the player, and the instrument with some of these tube-traps and they'll radically change the reverberant characteristic of the sound. There again, on one song, we even recorded the drums in the garden..."

**Have you ever done that before?**

"No. I think I once did some outdoor recording with McCartney, but it wasn't as successful as this."

**Was it a particular desire of Phil's to play in the garden?**

"No, it was just a really nice sunny day, and I ►

Phil Collins' Face Value: the genesis of 'that' drum sound...

## KEEPING IT SIMPLE

**Looking back at your career, what would you say have been some of your best or most interesting sound innovations?**

"I can't really think of any one thing. Every day I'll learn something new, and every day there will be something that surprises me. The one basic rule I still adhere to is simplicity, and that applies to my production values as well as my engineering. Using the simplest and cleanest signal path to tape is very important to me. I also think that empty-sounding records are much harder to make than ones that include everything but the kitchen sink. I love it when a song has that minimal aspect to it, although that's not always the case. There are some songs on Phil's new record which have a very full sound because that's how they were written, so I couldn't then say that I was going to take everything away from them. I think that the producer is always at the mercy of the artist's songs. I haven't written the songs. All I'm doing is trying to present the songs that the artist has written in the way that both they and I hopefully think is the best way."

**Fostex**

It records 8 tracks  
simultaneously,  
at CD-quality,  
it does this without  
compression,  
...and there's not a  
tape in sight!

**SLAVE D-80s for 16 & 24 TRACK RECORDING**

The D-80 can be slave or master to other D-80's / DMT-8's and the outside world via its standard in-built MTC, and is sample accurate with Word Clock (optical S/P-DIF).

Finally, someone has developed an expandable IDE-based digital removable hard disk system which offers up to 40 minutes\* of true multitrack recording, non-destructive 'cut, copy, move & paste' editing, instant locate & search, five 'virtual reels', digital and analogue inputs/outputs along with a full function auto locating remote control. And all in a package which is as easy to use as your tape machine and costs no more than £1,499 inc VAT. Naturally, that someone is Fostex.

► thought there would be a great sound outside the chateau because some of the sound was reflecting off the walls. In a normal studio situation we wouldn't have had this kind of opportunity to go outdoors."

**What about extraneous noises, such as birds, or cars passing by?**

"Yes, there were birds, but actually the biggest problem was the breeze, so I had to put wind-shields on quite a few mics. We worked a little bit, setting the drums up in a position that wasn't too affected by the wind, but I also didn't use that many microphones. In the end we were all really surprised and pleased with the sound, and in some ways I wished that we'd done more tracks like that! However, we'd already done nearly all of the drum tracks by the time there was a day nice enough to work outside. There was a little bit of bird noise in the background, but you don't notice it once the music's in there. You only notice it at the very end, and then it's like, 'Oh, that's a good laugh. Let's keep that in and see if anyone can hear it.'"

## THE OLD CHESTNUT

**Do you prefer digital, or analogue?**

"I'm well into keeping up with the modernity of everything, yet ultimately I still think that in terms of warmth and sonic integrity analogue has the edge over digital. Even though we've now got 20-bit and 24-bit digital recording technology, as well as the higher sampling rates, I still have many problems making records on digital that I know I don't have on analogue. I don't really want to get into a whole conversation about that now, but I could easily write a thesis on it! When I'm working fully digital I'm still very much in learning mode, and the interesting thing we did with the new Phil record — which is actually the same as I did seven years ago on the *But Seriously...* album — is record the drums, bass and horns on analogue, and everything else on digital. I've had the luxury of having both and being able to choose between the mediums."

**How come you didn't go for more warmth on the vocals, by also recording them on analogue?**

"Well, it's also a sort of hassle doing this recording on both systems, because you're always sitting there making slaves and then having to slave things back in, and so on. At the same time you've got code on one track and you can't record on the track next to the code if you want to be safe, and so by the time we'd put two bass tracks on, and 12 or 14 drum tracks, there wasn't a whole

lot to play with. Generally, I prefer to record bass on analogue because of the warmth, as well as drums — the transients are uncontrollable on digital. With vocals, you don't really have those kinds of transients. Having said that, I've recorded the last three Sting albums totally digital, even though I've then put things through valve

"I think there's more that can go wrong with a CD these days than there was with a vinyl record."

equipment to try and warm them up."

**Was the decision to record completely digital down to Sting?**

"No, it was really a question of it being the only way we could work. We're always doing multitrack edits and moving things from one end of a song to another, and it's much easier to do that on digital. With Melissa Etheridge, I've done both of her last two albums on analogue. We've gone into rehearsal and totally worked out the album before going into the studio, so then there's no screwing around in that respect. We can record it onto analogue and virtually never have to edit anything, whereas with Sting that's not the way it works. With him, things change during the course of recording the album. Melissa's setup is much more of a rock band kind of thing, so we work it all out, we go in the studio, everybody plays live and we record it! Obviously it's easy to do that on digital as well, but it's very easy to do it on analogue and I think most rock 'n' roll music sounds better — warmer and thicker and gutsier — that way, at least to my ears. I just desperately hope that in the years to come A/D converters will improve to the level of analogue sound."

## COMPUTER LOVE?

**While we're on the subject of technological advancement, do you feel that the momentum of the late '70s and early '80s has declined?**

"No, not at all. I think it's increased quite a lot, in terms of computer and microchip technology. I love computers, and now we've got these things like hard disk recorders cropping up all over the place. It's brilliant not to have tape any more. However, I still don't say that music is any better now than it was 30 years ago when they were recording onto 8-track analogue. I mean, look at The Beatles — their records still sound good!"

**Compared to those years when the music was the thing, do you feel that technology today is looked upon as something of a crutch, in the absence of strong material?**

Mercury Falling, the latest in a series of Padgham-produced Sting albums.

# Hugh Padgham

► “Not necessarily. We’ve now got the techno music that came through in the ‘80s with Depeche Mode and so on, and obviously that kind of music couldn’t have existed in the ‘60s, because they didn’t have the technology. Whether you like it or not, it’s a new form of music, and to me it’s no better and no worse.”

**But don’t you feel that studio tricks now allow some artists to get away with sub-standard performances?**

“With that you’ve touched on an interesting point, really. It certainly can be the case, but personally I can’t be bothered with all that. I’m

really not interested in working with somebody who can’t sing or play. This may sound very elitist, but luckily I have always been able to choose what I’ve wanted to do, and so I’ve never got myself into a situation where I’ve had to do a total repair job. Some producers and engineers would absolutely love the idea of being able to sit in front of their Macintosh and go crazy and change it all. For them, that sort of electronic manipulation would be very satisfying to do. It’s like when you first get onto the Internet after weeks of messing around with applications on your Mac — ‘Yes!

I’ve done it!’ I can’t tolerate that kind of thing. I’m not interested and I haven’t got the time for it. Occasionally, if an artist has an aberration, then OK, we can stick it through Sonic Solutions and mend it, but I would never work with an artist who I initially considered to be incapable even on a good day. It’s fantastic when you’re sitting there in the producer’s chair, watching and hearing someone perform and they’re really into it, and you go, ‘My God, that’s fantastic!’ It’s like when Melissa Etheridge sings: there’ll be 99.9% of it there in one take, and that’s because we’ve got her at the right time, the sound is right and it’s a brilliant feeling. That’s not to say that other people don’t also have a brilliant feeling after they’ve spent two days using a Mac to manipulate the voice of somebody who can’t sing. It’s just that personally I prefer to do it in three or four minutes.”

## GOOD GEAR

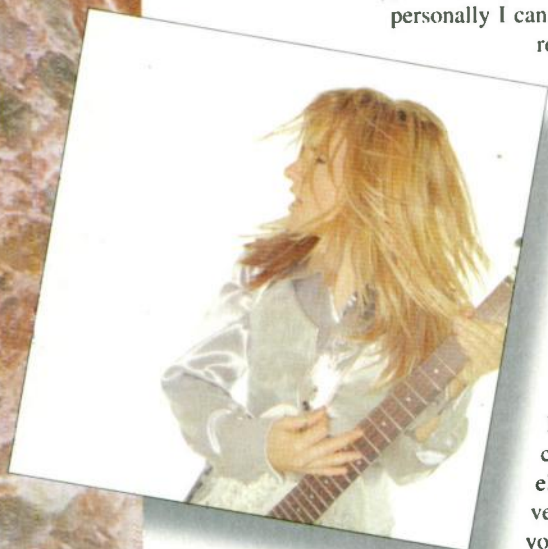

**What equipment do you yourself carry around from project to project?**

“Mostly microphones. Favourite microphones: a few old Neumanns, a couple of KM86s, which you don’t see in every studio, and I’ve also been getting into some mics by Audio Technica. I was mixing at Rooster Studios in London, which is a wonderful little place with a 36-channel Harrison desk, and the owner, Nick Sykes, said, ‘I’ve got this fantastic dynamic bass drum mic from Audio

Technica.’ I think it’s called the RT3. Well, the following week I had a recording session and Nick lent it to me, and it really was fantastic. A month later, Audio Technica then lent me one when the Sting sessions were coming up, along with the company’s version of a U87 condenser mic, which is also really, really good and about half the price of an 87. For the Sting album, we also bought a very expensive Sony G800 valve mic — the one with the fins on it — and that was absolutely fantastic on his vocals. I could record flat and his voice would sound ‘present’ and full. As far back as 1990, the people at Sony lent me prototypes of this microphone, and I would report back my views on its performance. I’m not saying that I had anything in particular to do with its design, but at least I was able to give some sort of feedback that was generally positive. The end product came out really well, but obviously it isn’t fantastic on everything. Every mic has its uses and so, even after having worked for years and years in the studio, it’s still fun to discover new microphones and to experiment with them. Another couple of mics which I have are these Russian Oktavas...”

**And why do you like them?**

“Because they’re cheap! When they first came out, some guy came into The Townhouse saying, ‘You’ve got to try these mics out! You won’t believe how cheap they are!’ So I put them up against some Neumann 87s and Neumann U47 FETs. I was surprised at how good these Oktavas were, so I bought them right there and then, and I still use them. In terms of other equipment, I’ve got a few reverb units that I quite like, such as an old Roland. That’s because, in typical Japanese style, they make a device and then when you go back for another one the following week, it’s already been discontinued and replaced by a new model which isn’t as good! You’re left wondering why they didn’t leave the old version alone, and so I’ve got a few bits of equipment for that very reason. Overall, however, I pride myself on not ever using very much outboard gear when I make records. As for Sting’s gear, I myself spec’d up the outboard aspect of the studio. As a result, there are quite a few valve mic amplifiers, and some valve equalisers and valve microphones, so there’s a lot of choice between solid state and valve. There are also things like old Lexicon PCM42 delay lines, that have a very nice kind of analogue sound to them, even though they’re digital. So there’s a lot of stuff that I like which I can borrow off him, and since I’m able to make do with very little outboard gear anyway, that’s why I myself don’t have a huge collection. When I’m mixing, I love using EMT 140s. I realise that a lot of young engineers today would rarely use an echo plate — the EMTs at The Townhouse are always free whenever I want to use one there — but I’m not a massive fan of digital reverbs. The plates have a real warmth and spread of sound, and there are certain ways in which I use them that I’m not prepared to talk about... Job security, old boy, job security!”

*Melissa Etheridge:  
“99.9% of it is there  
in one take.”*

## MONITORING & MASTERING

When you're trying to get as good a sound as you possibly can, is it easy to lose sight of what the average listener at home is going to pick up on? Perhaps their ears aren't as trained, their equipment isn't as good... Are they even going to hear the work that has gone into the making of the record?

"That's one very good reason why I use AR18s, which cost me \$150 a pair. I find that I have to work on those speakers to make things sound good, or at least what I think sounds good. I've worked with many speakers and I love those by ATC and Roger Quested. They both make smallish nearfield monitors, and when I put them up I can hear the sound so well through them that I don't want to EQ or change anything. I can really hear things change, or

"I still have many problems making records on digital that I know I don't have on analogue."

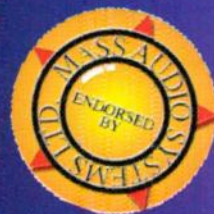

I can hear phase shift when equalisation is introduced — but with those speakers, the end result would probably be a record that would not sound 'present' or 'vibey' enough through the average person's hi-fi system or radio."

**How involved are you with the mastering process? I've spoken with a number of mastering engineers over the years, and I've been amazed to learn how much they will change certain records. Do you keep a tight rein on that sort of thing?**

"Oh yeah, I do. For 16 years I've used Bob Ludwig, who's generally recognised as one of the best mastering engineers in the world — if not *the* best — and 90% of the time I will attend the mastering process unless there's some very serious reason preventing me. To me, it's an integral part of the overall recording process, and it's also wise to keep an eye on the quality control of the resulting CDs. I think there's more that can go wrong with a CD these days than there was with a vinyl record. Many people think that because we're now working in a digital age everything is either just a dot or a dash — or a '1' or a '0', depending on how you want to describe your binaries — and therefore everything is always perfect. A lot of record companies still have that attitude, but there's actually a massive amount that can go wrong. When I hear the quality of some of the CDs out there, it really frightens me. It's very difficult to keep in total control of that, but there are freelance quality-control people who you can hire to make sure that everything is alright. I've listened to the CDs of artists who I've worked with which were manufactured in France, Germany and America, and they've all sounded quite different, and this leads me to another problem that I have these days: years ago we would always get final test pressings to listen to, whereas now it's very rare for producers to get CD pressings; that's a real shame. I get a really hard time from some record companies and artist managements for trying to maintain quality control... It's a real bug in my software right now!"

SOS

# MASS TECHNOLOGY

Unrivalled for quality, the MASS series of Studio Amplification from MASS Technology has been conceived after years of design experience and with a unique approach to the application of technology. Each model is of first class quality and will provide accurate and outstanding results to suit the most discerning studio engineer. Most importantly, they have plenty of power and will ensure a clean and natural sound, whether in a top digital recording studio or home recording environment. The MASS Technology range is designed to match most popular studio monitor speakers and will easily interface with all leading mixing consoles and includes both XLR and 1/4" Jack/Phono connections. Our amplifiers have special 'Pin-Fin' heatsinks which efficiently dissipate heat, this means that (apart from the MASS 1000) our amplifiers are 'Fan free' - this eliminates the noise and interference which can occur on some fan cooled amplifiers. Manufactured with full chrome front panels and "classic look" VU's on the larger models, our amplifiers look great and sound even better!

### MASS 1000 Watt Studio monitor amplifier

## INTEGRATING SAMPLERS & YOUR PC VIA SCSI

*When  
MARTIN WALKER  
decided it was  
time to buy a  
removable SCSI  
hard drive for his*

*sampler, he fondly imagined that it  
would be a centralised storage  
solution for both samples and MIDI  
data from his PC, streamlining song  
organisation and making sample  
management easier. Enter reality...*

# Logic

**W**hen I bought an Akai sampler a couple of years ago, the salesperson told me to expect to need a removable hard drive within a couple of months. At the time, my last thought was spending more money! However, when I discovered that a single song using 8Mb of samples could fill up to five high-density floppy disks, I began to rethink. The last thing you need if you're having a creative burst is several minutes loading time before you hear whether a different sample is more suitable in context. You want to audition it now!

When looking at the options for removable drives, I realised that the same drive could be used by my PC for more general use. The thought of editing and looping samples on a large computer

monitor screen was enticing enough, but if I could also store the sample data for each song on the PC with the MIDI files, everything could be kept in one place. Centralised storage would ensure that a sample associated with one particular song would never be accidentally wiped. At the time, this dream seemed easy enough to achieve — the Akai S2800i had SCSI, the computer could be fitted with a SCSI interface card, so if I bought a SCSI removable hard drive, everything would talk to everything else. Wouldn't it?

How naive this all seems now...

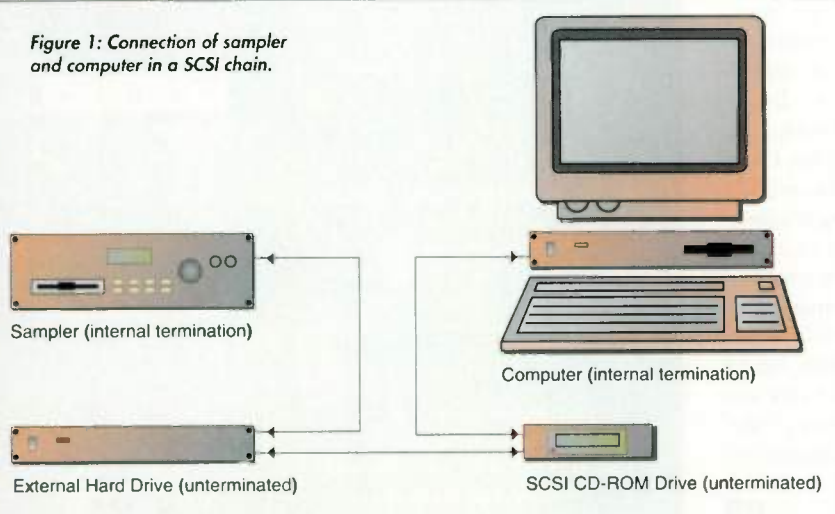

### TRUE LIES

The main fly in the ointment is that hard disks need formatting by the device controlling them. Akai samplers format differently from PCs, so an Akai-formatted cartridge cannot be read by the PC, and vice versa. This is because in order for data to be stored on the disk, a small separate area must be set aside to store the directory (the collection of filenames and location of each file on the disk). CD-ROMs work in the same way, and this is partly why different versions exist for Akai, Roland, Emu, Ensoniq, Kurzweil, and so on. The other factor to bear in mind is that the program data will be different for each brand, with some parameters unique to each device.

Fortunately, in the last few years sampler manufacturers have made efforts to add cross-compatibility to their machines, allowing them to read foreign programs and extract valid information, while discarding anything that would not make sense. However, the option to 'Read Akai-Format Hard Disk' does not yet exist for computers.

It's easy enough to use the same removable drive for a computer and a sampler — just format two cartridges (one from each device) and use only the appropriate one — but unless you want to keep re-plugging SCSI leads from one to the other, you need a way to connect all three devices. Continual swapping of data cables is never a good idea, and if SCSI devices are switched on at the time you may blow something.

Figure 1: Connection of sampler and computer in a SCSI chain.

# DIGITAL SAMPLING PACKAGES

## E-Mu EIV

A powerful stand-alone digital sampler for both studio and live use. EIV's 24 minutes of sampling time allows for the creation of long sound effects sequences or complex individual ambience, dialogue and sound effects samples.

- ◆ 128 voice polyphony
- ◆ Up to 128Mb sample memory
- ◆ Icon-based user interface
- ◆ Graphic waveform editing
- ◆ 8 balanced polyphonic outputs

## E-Mu E4K

More than just an EIV with a keyboard, the E4K is completely at home in any project studio or on stage, with its advanced sound design, huge memory and control features.

- ◆ 128 or 64 voice polyphony
- ◆ 76 note keyboard
- ◆ 270Mb Internal hard drive with over 150Mb of sounds

## E-Mu E64

Very similar to the EIV, same graphic interface that makes E-Mu samplers probably the easiest to operate, but with only 64 voices and RAM expandable to just 64Mb, which makes the E64 about half the price of the EIV.

- ◆ 64 voice polyphony
- ◆ Up to 64Mb sample memory
- ◆ Icon-based user interface
- ◆ Graphic waveform editing

*All E-Mu samplers  
now read Roland  
Sound Libraries*

At Syco we've made purchasing a sampler system much easier with three packages that combine the E-Mu EIV sampler, in different configurations, with a 1U PowerMaster Genesis rack containing a removable storage drive and a CD-ROM drive. Each package also contains a CD-ROM Sound Library.

Call today for our special prices on these E-Mu sampler packages.

# INTEGRATING SAMPLERS & YOUR PC VIA SCSI

## THE TERMINATOR

SCSI devices are designed to be used in daisy-chain fashion, with up to seven devices connected in one long line. To ensure proper operation, the device at each end of the chain must be terminated, while those in between must be left unterminated. An analogy often quoted is that the chain is like a length of string that has to be firmly anchored at both ends. A terminator plug will normally be supplied with each SCSI device, or an internal one may be present, which can be switched in and out as required. At one end of the chain, the computer is in control and should be terminated, while at the far end, the final device in the chain also has to be terminated.

Unfortunately, samplers also need to control the SCSI bus for their own purposes (see Figure 1 for connection details), and problems will occur if both the computer and the sampler try to take control of any SCSI device at the same time. As long as you're careful, things will be OK, but watch out for the following: during the boot-up routine, any controlling SCSI device (in our case, the computer or sampler)

will interrogate the SCSI bus to find any connected devices that are powered up — a sensible procedure. However, if your sampler is busy accessing the drive when you switch on your computer, the inevitable will happen — and it did to me. I lost 100Mb of samples in a few milliseconds when the PC took control of the drive during an Akai sample load and scrambled the data. No doubt the actual sample data was still intact, but the directory was corrupted, so a large group of

samples just disappeared as far as the sampler was concerned. You'll only make this mistake once!

Once the computer has finished setting itself up, it will only access a SCSI drive when you specifically ask it to, so the above problem can only occur while everything is powering up. However, in my experience, on occasions the Akai also refused to read anything from the hard drive unless the PC was switched on as well — this sort of problem can occur because the PC end of the SCSI chain is only properly terminated when power is applied. The safest procedure is to switch on the SCSI drive first, then allow the computer to boot up completely. Finally, switch on the sampler, and wait for it to finish setting itself up before doing anything else.

SCSI devices are normally very reliable in use, but you may get occasional inexplicable errors during read and write operations. Using high-quality (expensive) SCSI cables is the first step towards preventing data errors — never use cheaper parallel printer cables for SCSI use. The best cables have individual shielding for each connection within the cable, and mine are about half an inch thick and not very flexible. If you do have problems, the second thing any technical support person will ask is how long your cables are — anything over one metre in length may give unreliable results. A systematic approach is sometimes needed to track down problems — remove all items from the SCSI chain one by one (powering down and rebooting at each stage) to identify which device is causing the fault. Teething problems can be annoying, but once they're sorted out everything will normally stay very reliable.

## THE FLOPPY ROUTE

I worked with this system for several months, until a project needed sampling on the Akai, but delivering in PC .WAV format. It seemed the ideal time to pursue my original goal of getting the computer and sampler directly connected, but the quickest way to get up and running proved to be by using the humble floppy disk. I had previously bought a copy of *ReSample Professional*, a versatile PC sample-editing and conversion program which will also read Akai-format floppy disks, as well as a selection of other formats, including those for models by General Music and Ensoniq. It also has an extremely good loop finder that can save a lot of editing time! (See SOS September '95 for a review.)

It proved easy enough to save samples onto an Akai floppy, pop them into the PC floppy drive, and read and save them in other formats using *ReSample Professional*. Kurzweil K2000/2500 owners are lucky in that their machines can read DOS-formatted disks, and these can also obviously be read directly by a PC. Once samples were inside the PC, the lure of large-screen editing again took hold.

## GETTING HELP FROM THE INTERNET

While writing this feature I had problems with one of my Syquest cartridges holding PC data. I bought my 270Mb drive in a desktop unit badged by another company, and it arrived with no PC utility programs at all — just a Mac disk and the wrong cable (some things never change). Lack of suitable utilities is a common problem for many people if they buy one of the rack-mounting hard drive systems offered by specialist dealers. However, while browsing the Internet, I discovered that Syquest themselves

provide numerous utilities for use with their drives, that can be downloaded free of charge. By reformatting the cartridge using their utility rather than the generic one provided with Windows 95, I solved the problem. FAQs (Frequently Asked Questions) are also provided by many manufacturers elsewhere on the net; these can solve problems without long and involved telephone calls to voice support lines, which often seem to have one operator per 50 enquiries.

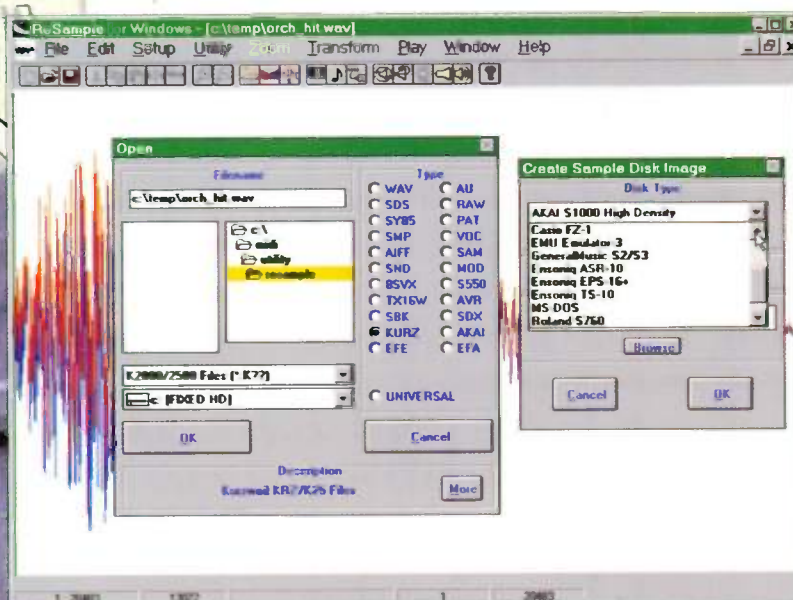

Figure 2: *ReSample Professional* — converts between a multitude of sample formats.

# ARE YOU TAPING THE HISS?

If so you need the ultimate recording combination.

It's always been important to make sure that the front end of the recording chain is as clean and pure as possible. Today's digital technology reveals any weak link in the chain. This means you must choose a microphone that is quiet (*no self-noise*) and a monitoring headphone that will reveal the accuracy of your signal.

The beyerdynamic **MC 834** pure condenser with its natural frequency response, exceptional signal to noise ratio (*non existent self-noise*) and high SPL capability is the answer to digital technology.

Easily outperforming the competition, it ensures your recordings contain the original sound without any added noise or hiss. That's why it has become a regular feature in studios around the world just like some of our other products.

For example, the legendary beyerdynamic **DT 100** professional headphone series, seen wherever musicians are at work. Their exceptionally wide and flat frequency response allow you to hear everything in the mix (*including the hiss*).

So the next time you visit your Pro Audio centre ask for a demonstration of beyerdynamic microphones and professional studio headphones.

Unless, of course you want to carry on taping the hiss....

# INTEGRATING SAMPLERS & YOUR PC VIA SCSI

## CHILL OUT WITH MIDI SAMPLE DUMP

The floppy approach works, but it is a very convoluted procedure to have to go through for editing, when the process also has to be repeated in the reverse direction to get the edited samples

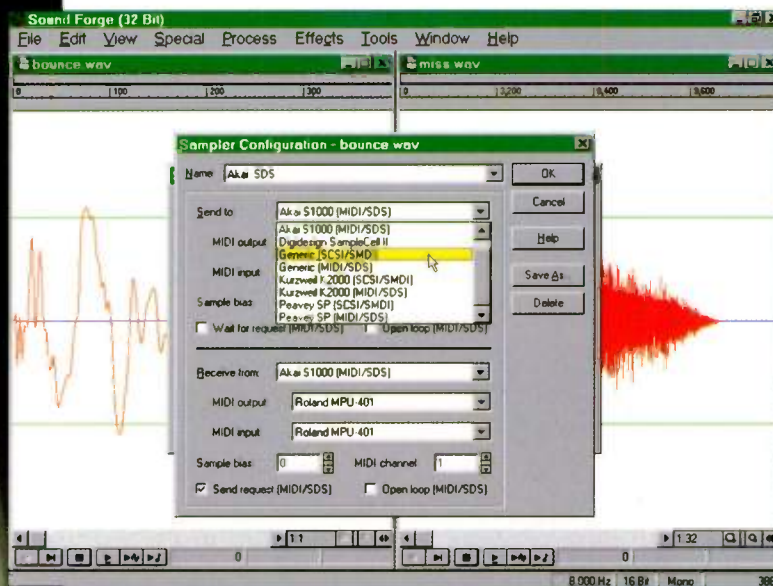

Figure 3: Sound Forge — establishing communication with the sampler.

back inside the sampler. What is needed is a direct connection between sampler and computer, and I decided to pursue the much-maligned MIDI Sample Dump Standard (SDS). Yes, it is like watching paint dry (a single 180k sample will take about one minute to download), but it is a standard that is well documented and has been established for several years. I expected to find many PC programs that supported it. However, there are several (including *Resample Pro*) that will send dumps to a sampler, but no lower-cost programs seem to be available that would work in the other direction. There are many synth editors which allow two-way communication for editing

and library storage, but sample dumps are very different beasts to SysEx dumps.

*SampleVision* for Windows (reviewed in *SOS* December 1995) sounded promising, but Turtle Beach have now discontinued it, and the only product that I could find that fitted the bill was Sonic Foundry's *Sound Forge*. This is a comprehensive sample editing package (see review in the May 1996 issue of *SOS*) that supports MIDI SDS, and has recently had its UK price reduced, which is a bit of a bonus.

Using SDS is easy once you've set up the correct options for your particular sampler — the help file for *Sound Forge* is particularly good, and offers specific advice for connecting to various samplers, including Akai models. Transmitting samples from the program to the sampler worked first time, but I did have problems receiving dumps from the Akai if they were more than a few hundred bytes long, since the program hung until the sampler had finished sending the rest of the data. Sonic Foundry told me that the problem was probably caused by a combination of a slow PC (mine is a VL-BUS 486DX33) and an unbuffered MIDI interface (which most are), since receiving constant packets of SDS data can cause so many interrupts that a slow PC will grind to a halt. When transmitting from the PC, it's the sampler that takes the overhead, so in this direction things are easier for the PC.

## THE SCSI CONNECTION

Throughout daily use for several weeks, *Sound Forge* was a pleasure to use, and my only big disappointment was that Akai samplers cannot use its much higher speed SCSI sample dump facilities. The recent SCSI MIDI Device Interface standard (SMDI) defines a suitable standard for two-way high-speed sample dumps over the SCSI buss; devices supporting this include the Kurzweil K2000/2500 series, and the Peavey SP sampling module. A computer simply has no way of knowing what data is present in a sampler unless it asks the correct questions, and Akai samplers use their own unique set of commands, which is useful for transferring samples between two Akai samplers but not much else. Because SMDI is not implemented by Akai, extra code would need to be written by Sonic Foundry to support only Akai samplers — they're currently working towards this, and will hopefully include it in a future release.

To address this limitation, Akai themselves have produced a Mac program called *MESA* (Modular Editing System by Akai), which has been written from the ground up as a large-screen version of the internal Akai sample and program editing system. Any parameter that can be edited within the Akai sampler on its own little LCD screen has an equivalent control on the computer screen,

## DIVIDE AND CONQUER

Back in the dim and distant past, when hard disks of 20Mb were considered practically unfillable by mere mortals, PC operating systems set an arbitrary limit of 32Mb as the maximum hard disk size. As bigger disks came along, the concept of partitions allowed a larger drive to be split into several sections, each treated by the computer as a separate device. A 90Mb disk had to be viewed as a minimum of three sections. These restrictions have long since been removed, allowing partition sizes upwards of 1Gb, which are vital for hard disk recording.

You may wonder why many samplers still insist that you divide your hard drive into partitions rather than use one large area. One valid reason, which anyone struggling with a hard

disk recording system will know, is that regular defragmentation can make the difference between glitch-free recording and a choppy mess. This is because files newly written to disk are slotted into whatever empty space is available. A single sample may end up split into several sections, each filling a convenient 'hole' on the disk, and writing these sections to disk or loading them back into memory will take longer than a single chunk. With the onset of hard disk recording options for samplers, a separate partition reserved for this function ensures that the recording process is not trying to work around hundreds of small program files already on disk. This will speed up disk reads and writes, and help ensure optimum results during recording. The ideal solution, of course, is to use an entirely separate drive for recording.

# Absolute Zero

 **SPIRIT**  
Absolute Zero

Spirit Absolute 2 shattered the complacent world of nearfield monitoring, rapidly becoming the preferred choice of professional studios around the world. Now you can get the Absolute sound in a smaller 95W per side package.

Absolute Zero delivers crisp, full-bodied audio in a surprisingly small-footprint, low cost, speaker. The sturdy, no-compromise design produces the consistent, high quality results you'd expect from Spirit – and at the ridiculous price point of around £200 including VAT.

Whatever the use, studio monitoring, installed sound systems or even with a hi-fi, play it cool with Absolute Zero.

Cool me down with more information on Absolute Zero.

# INTEGRATING SAMPLERS & YOUR PC VIA SCSI

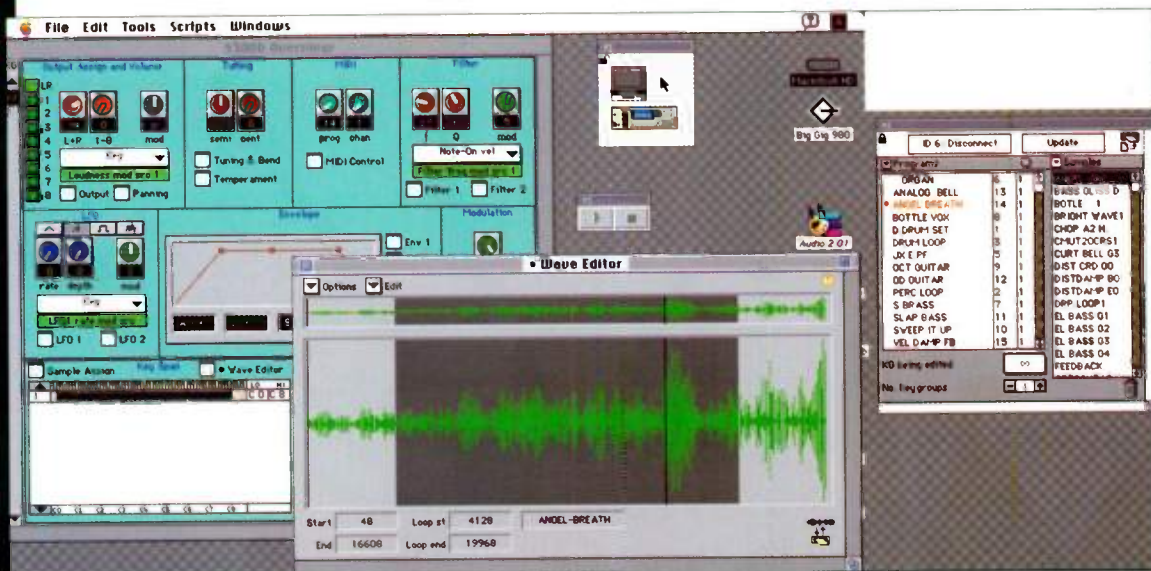

Figure 4: Akai's MESA (Mac version) — the Ultimate Solution?

"Once your samples are in a computer, you have access to a multitude of useful utilities that sampler manufacturers cannot provide."

► and both sample and program data can be loaded and saved to the onboard computer hard disk. A PC version is currently under development in this country by AL Digital, the company who, among many other things, have distributed the Akai sound library during the last few years. This is welcome news indeed for PC-owning Akai users, and means there's an end in sight to peering into that little LCD screen!

## COMPUTER AIDED DESIGN

All of this may seem like a lot of effort, simply to gain a large screen and centralised storage facilities, but once your samples are in a computer, you have access to a multitude of useful utilities that sampler manufacturers cannot provide in their own internal operating systems, either due to space limitations or lack of time. At a basic level, it's far easier to organise a large number of samples when viewing the contents on a computer monitor — not only can you see dozens of filenames simultaneously and sort them by name, but each will have a date stamp created when the file was saved. How many times have you found two samples with identical names on a hard disk, with no way of remembering which one had all those tweaks made to it? On a sampler the only way to find out is to load each in turn and listen — a daunting task if only one multisample of a dozen associated with that particular sound has had its loop point tweaked. With a computer, even if two samples have identical date stamps, you can use file-compare utilities which allow you to see whether identically named sounds actually contain different data. Using a sampler alone, it's normally easier just to leave these possible duplicates where they

are than to tidy things up.

Another frustration with many samplers is their insistence that you divide a hard disk into partitions (see 'Divide and Conquer' box). Even though there's still plenty of empty space left on the hard disk, if one partition becomes full, you have to select another partition to use. If, like me, you try to organise a large number of samples into suitably-named directories, to make looking for a particular type of sound easier, this task becomes increasingly difficult as the disk fills up. Once your samples are in the computer, even with partitions it's quick and easy to do large-scale moves and copies — unlike the sampler, where the only way to move sounds is to load them into sampler memory, delete the original on disk, and save them to a different location. In fact, once your samples are in your computer, you have total freedom from any sampler partition restrictions.

Defragmentation and disk-scanning utilities also allow you to perform regular housekeeping on your hard disk, speeding up access to data when the disk begins to get disorganised, and spotting any disk errors before problems get too serious.

## TOTAL RECALL

Unless it turns out that there are unseen disadvantages, as soon as the PC MESA software appears I intend to use it to store all my Akai samples in the computer. In storage terms, it will only mean that the data ends up on an identical Syquest cartridge, but formatted by the PC rather than the Akai. However, given all of the above advantages it would seem silly to do otherwise.

But the biggest advantage of all may be that if any of my sample data ever gets corrupted again, I can attempt to rescue it with one of the many salvage and recovery programs available for the PC. The last time it happened with my sampler, the technical support staff could only offer tea and sympathy.

# Studio Masterpiece?

*Panasonic's latest pro studio DAT is priced to compete with Tascam's established DA30 MkII.*

*PAUL WHITE gives his professional opinion on how it measures up.*

## PANASONIC SV3800 PROFESSIONAL DAT RECORDER

Panasonic are one of the leading lights in DAT manufacture, with a track record of building high-quality machines with professional features, and the SV3800 looks set to continue that tradition. Strangely, the machine comes as a free-standing, rather than a rackmounting, unit, though the rest of the feature set is obviously geared for professional use. The analogue inputs are on balanced XLRs only, and while this is correct for professional interconnections, I rather like the idea of having phono as well, so that an unbalanced-to-unbalanced connection can be made for taking cassette copies. On the digital side, however, you can take your pick from AES/EBU format on XLRs, or IEC Type II (S/PDIF compatible) on both phono and optical connectors. As you'd expect, recordings can be made at 44.1kHz or 48kHz, and you can also play back the less common 32kHz recordings if you need to.

The tiresome problem of SCMS (Serial Copy Management System), sometimes simply called 'copy code', doesn't apply to the AES/EBU connections, but can be set in three different ways for the IEC connectors. It's possible to set the value of the appropriate data flag (ID6) to 00, which means that unlimited digital copies can be made from the source tape and from its copies; to 11, which means that copies may still be made of the original tape, but these copies will not copy again

in the digital domain; or to 01, which produces copy-prohibited tapes that can't be cloned onto consumer DAT machines. Given that anyone with a professional DAT machine can tell SCMS to go swivel on its forefinger, I really don't see why the powers that be bother to implement it at all!

### REMOTELY POSSIBLE

Remote control of the SV3800 is possible either via a 'wired' control port on the rear, or from the supplied infra-red remote. All the usual play modes are provided, including the facility to write skip codes so that unwanted recordings are bypassed, and there's also the familiar music scan mode, repeat play, and programmable playback order. Additionally, there's a fade-in/fade-out option that could be useful if you have difficulty creating clean, even fades.

Providing you're careful not to leave any unrecorded tape between recordings, the real-time sub-code provides an accurate readout of elapsed run time, and there's a facility for recording subcode only, with no audio, if you need to generate a clean stretch of silence. Program numbers may be automatically recorded, and providing there's no break in the subcode, these will be contiguous. Irritatingly, the SV3800 generates an ID whenever you enter record — if machines must do this, there should be an option to disable the function, otherwise you can end

### pros & cons

#### PANASONIC SV3800 £1291

##### pros

- Shuttle search wheel.
- Range of digital I/O options.
- High sound quality.
- Supplied infra-red remote control.

##### cons

- No unbalanced ins and outs — balanced XLRs only.
- Insists on writing a start ID whenever you go into record.

##### summary

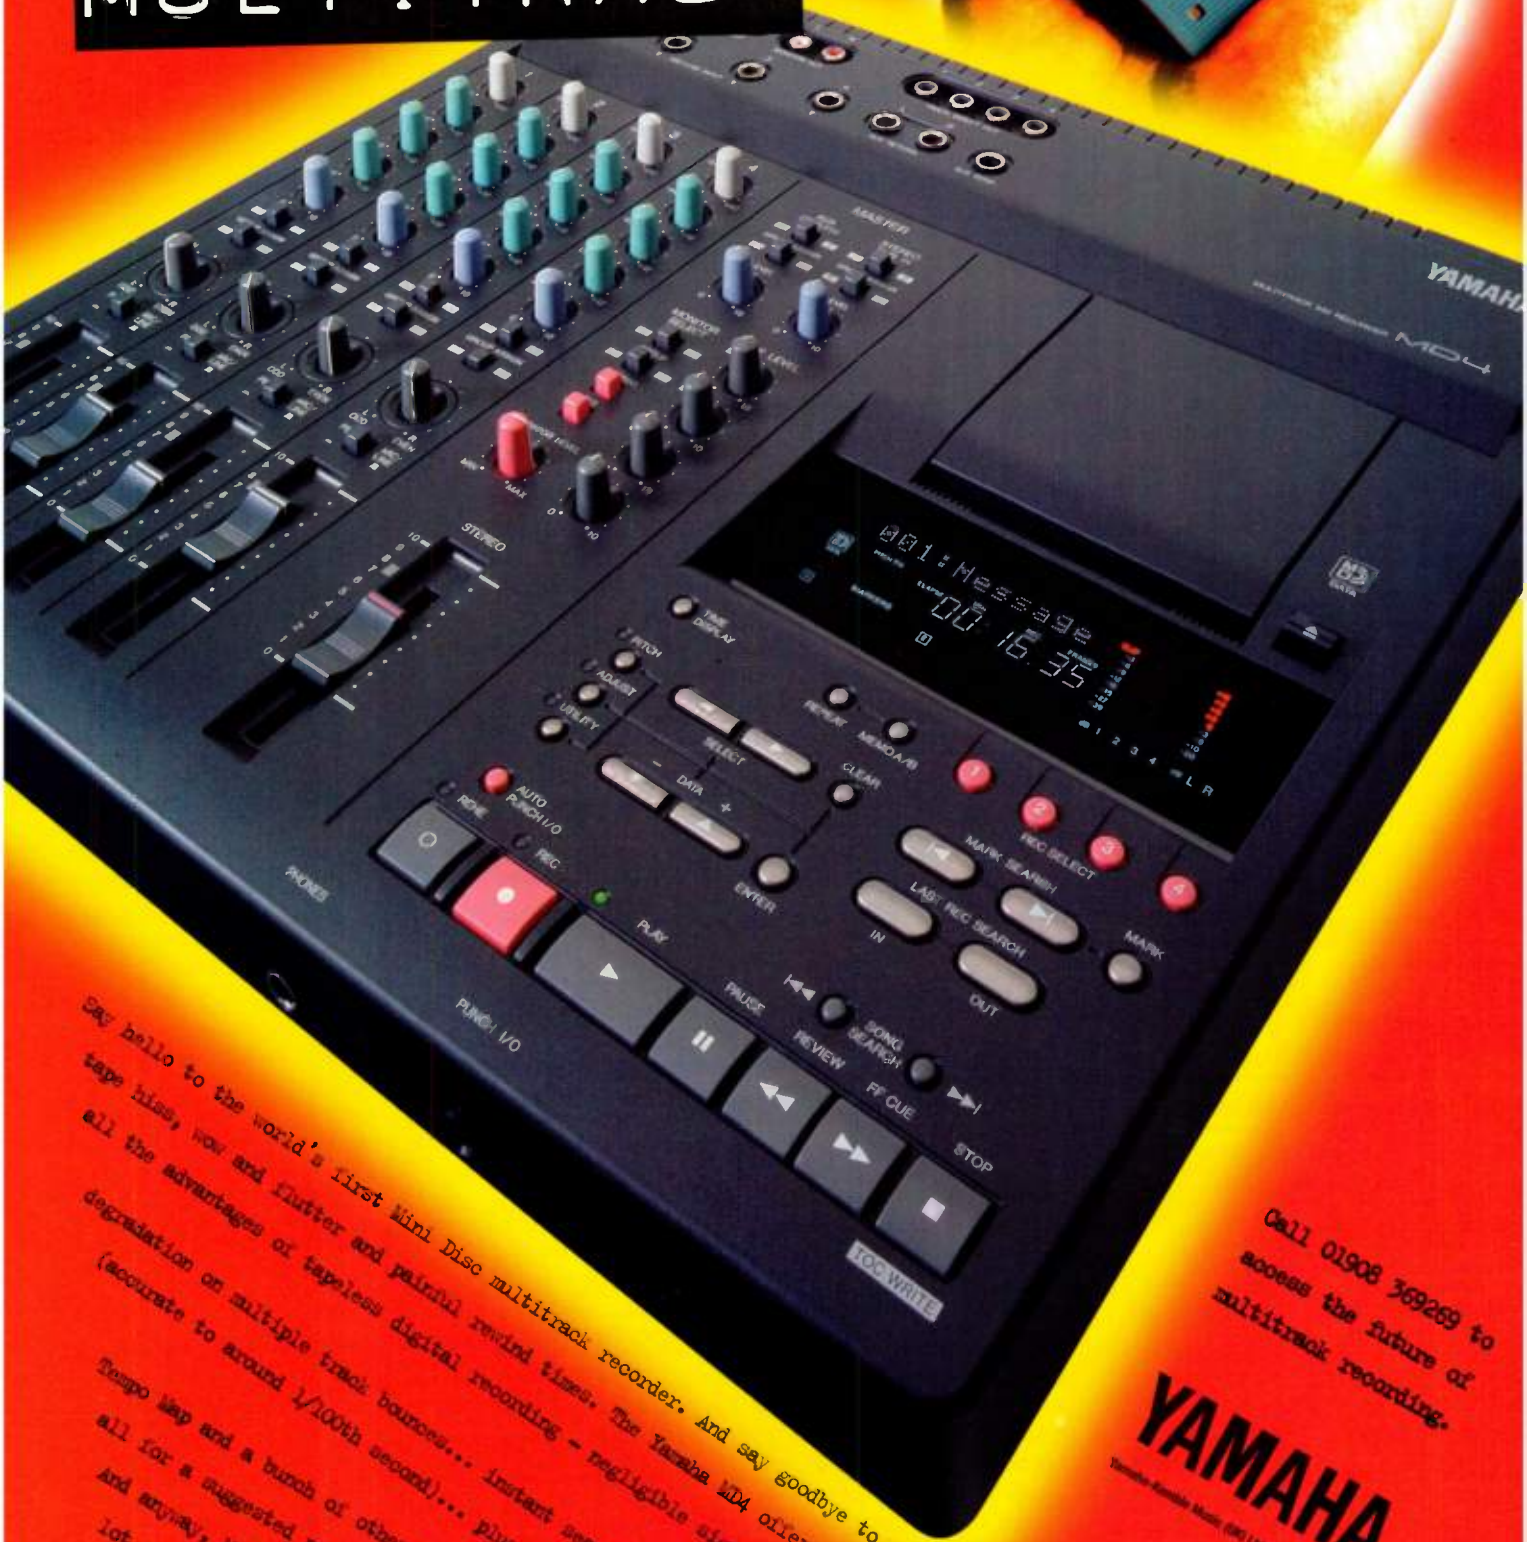

A well specified and sensibly priced pro-quality DAT machine.

**SOUND ON SOUND**

RANDOM

ACCESS

MULTITRACK

Say hello to the world's first Mini Disc multitrack recorder. And say goodbye to tape hiss, wow and flutter and painful rewind times. The Yamaha MD4 offers all the advantages of tapeless digital recording - negligible signal degradation on multiple track bounces... instant search and locate (accurate to around 1/100th second)... plus MIDI Time Code, MIDI Tempo Map and a bunch of other goodies all for a suggested price of £599. And anyway, Mini Discs are a whole lot chancier than tape.

# VR Trouper!

## AKAI DR4vr 4-TRACK HARD DISK RECORDER

**T**wo interesting statements: if you want to get into hard disk recording but finances are limited, the Akai DR4vr is probably your lowest-cost option, unless you already have a suitable computer for which you can buy appropriate software and hardware; if you want to get into *professional* hard disk recording, the Akai DR4vr is probably your lowest-cost option.

If you don't have a hard disk recorder already, you may be considering acquiring one — there's now quite a selection from which to choose, with models by Akai, Fostex, Roland, and Emu on the market. You might be considering the computer-based hard disk system route, which certainly is a viable option, but since the focus of this review is a stand-alone unit, I'll eliminate computer-based systems from comparison.

I have already reviewed Akai's DR8 and DR16 in these pages (see SOS August 1995 and May 1996), and they are indeed thoroughly professional machines. I recently visited London's De Lane Lea film sound studios, which are stacked up to the ceiling with modified DR8s, a testimony to their worth. Fostex and Roland, too, have interesting models in their catalogues, Fostex's D80 8-track machine showing the closest similarity to the Akai DR4vr. Compared to all of these alternatives, there is one inescapable fact about the DR4vr that you can't help feeling puts it one step behind the competition: it only has four tracks, rather than the eight or 16 that most users would undoubtedly prefer. I could spend the rest of this article saying

*The latest in Akai's line of stand-alone hard disk recorders, which also includes 8- and 16-track models, sticks with the 4-track format of its predecessor, the DR4d, but adds 250 'virtual' tracks to increase the flexibility it can offer. DAVID MELLOR checks out this low-cost entry into the world of disk recording.*

that the alternatives are better simply because they have more tracks. I'm not going to do this, of course, because it would become tremendously boring, and I guess you know already how many tracks you need for your own particular application. If you need to have eight individual tracks all playing at the same time, then the DR4vr is not for you. But if you don't need eight tracks, I think you might find my opening statements worthy of close consideration. Compare the options, and I think you'll find that the DR4vr offers more intrinsic capability and more possibilities for expansion at a very reasonable price.

### WHO NEEDS IT?

The Akai DR4vr is not a hard disk 'Portastudio', that's for sure. If you're a newcomer to recording, you should probably take a look at the Fostex DMT8 or Roland VS880, each of which incorporates a complete studio (bar amp, speakers, and mastering machine) in one compact box. The DR4vr is a stand-alone recorder, and although it can do some mixing

### pros & cons

#### AKAI DR4vr £1099

##### pros

- Functional and professional.
- Easy to operate.
- Uses SCSI disks.
- Syncs to MTC and SMPTE/EBU with additional cards.
- A reasonably low-cost entry to hard disk recording.

##### cons

- Cost per track not favourable compared to Fostex D80 and some other hard disk recorders.
- Like every other hard disk recorder, makes ticking noises while recording or playing back.

##### summary

With a MIDI or SMPTE/EBU card, the DR4vr is the ideal thing to have in a MIDI studio or tape-based multitrack studio. Adds versatility to multitrack recording and facilitates stereo mastering and editing. Buy one and you'll use it every day.

### The EV T-Series.

CONCERT SOUND, COMPACT FORMAT

Does your PA pass the listening test? Can your audience hear the hi-hats at the back of the room? Are the vocals clear and intelligible? Does the kick drum really kick them in the chest? Is the mid-range rich and full? Can your audience hear *every* instrument, loud and clear? Do they get the message?

If the answer to any of the above is 'no', then chuck out your old system and check out the Electro-Voice

T-series. Made in America, they're high quality, full-range, rugged, reliable and LOUD. We've packed nearly 70 years of expertise, and a host of concert sound components into enclosures that are just *made* for gigging. And we've made the price right for giggers.

Don't disappoint your public. Test drive the T-series at your EV dealer. You won't realise what you're missing till you hear them.

THE T-SERIES. MADE BY EV

# Akai DR4vr

## DR4vr: SON OF DR4D

You might be wondering whether the DR4vr is a totally new machine or whether it is simply an upgraded DR4d. The DR4vr cannot be considered a slimmed-down DR8 since the DR8 and DR16 were created by a different design team in the UK. To say that the DR4vr is 'only' an upgrade, however, might be to under-estimate its worth. The new features of virtual tracks and 'Ping Pong' (Akai's terminology) mixing are potentially useful, virtual tracks perhaps more so, but basically the DR4vr is a solid professional machine and it fully deserves its place in the Akai catalogue. The change from black — or was it very dark grey? — to traditional Akai beige is not unwelcome, but some of the panel screening is in yellow, which makes it difficult to read. Some features that might have been desirable, however, such as copy operations being performed without physically duplicating the data, and direct recording to magneto-optical disk, have not been incorporated.

► of already-recorded tracks internally, you really need an external mixing console to get signals into the unit, and mix them on the way out too. You could hook up something like a small Soundtracs Topaz to the DR4vr, but you'd then have brought up the cost to something similar to a DMT8 or VS880, and you'd have to wonder whether this was worth doing. I feel that the ideal customer for a DR4vr is someone with a complete studio setup already. If this is the case, the DR4vr has a number of applications:

- As a mastering machine. If you mix directly to DAT, almost inevitably there will be some editing left undone. It's a rare multitrack recording that starts completely cleanly with no hiss, hum or other noises before the music. With a DR4vr, you can edit the track to within milliseconds for a clean start and finish. Also, many engineers like to mix in sections if an automated console is not available. With a DAT you can't edit the sections together; with a DR4vr it's a doddle. When the mix is finished and edited, the result can be transferred via the digital output to DAT with no quality loss.
- As a tool for improving multitrack recordings. If you use an analogue multitrack, which the majority of professional music recording studios still do, you'll be aware that the punch-in performance of analogue machines is not nearly as good as digital multitracks. Some analogue multitracks punch in quite nicely, but leave a gap at the punch-out. By syncing a DR4vr to the analogue machine, using the optional SMPTE/EBU interface card, you can get perfect punch-ins — using a footswitch, if need be — and then transfer the finished track to the tape. Similarly, if you want to compile several vocal takes into one, the DR4vr is the machine for the job. You could even take it home with you and avoid spending expensive hours in the studio doing this time-consuming work.
- For working to picture. Music to picture composers enjoy working with MIDI-sequenced systems because they can sync the sequencer to the video quite easily and cheaply, and chop and change the music around to follow the whims of the director. But as soon as you want to incorporate even one traditional instrument, all of these advantages disappear. You need an complex and expensive synchroniser to sync analogue or digital tape to video (or use a basic synchroniser and work at a snail's pace), and editing becomes very difficult. With a DR4vr and the optional MIDI card, your audio recordings will be as malleable as your MIDI data, and as quick to respond to the video as your sequencer.
- As a substitute for analogue stereo tape. Believe it or not, this has been the toughest nut for digital audio to crack, and the DR4vr still hasn't quite cracked it — but it's halfway there. Analogue tape is still widely used in broadcasting because it's quick to edit, and you can record,

edit, and archive on the same piece of tape without having to wait for any copies to be made. You can certainly record and edit on a DR4vr; you can also copy the recording faster than real time, from the internal hard disk to an external removable disk, for long-term storage using the optional SCSI card. (Backup to DAT is also possible). The DR4vr isn't quite as simple as analogue tape, however, and I suspect it will be some time before any hard disk recording system is.

## PRO FEATURES

Serious users are usually most concerned with the basic details, rather than the fancy features that advertising copywriters often tend to home in on. In no particular order of importance, let me confirm a few points that will set your mind at ease:

- The Akai DR4vr has four inputs and four outputs and records full 16-bit digital audio (32, 44.1 or 48kHz) with no data compression. That certainly puts it ahead of models that don't have an input and output for every track, and models that have to compress the data to achieve their maximum quota of tracks!
- An internal hard disk is available as an option — one which most buyers will want to take up, I imagine. The DR4vr isn't limited to this one disk, however. It is supplied as standard with a SCSI connector, to which a further six disks can be connected. Note that there is a greater choice of SCSI drive types than there is IDE. An additional SCSI card can be fitted for backup to a fixed or removable disk.
- Digital input and output is provided as standard, both on consumer SP/DIF phono connectors and professional AES/EBU XLRs. If four channels of

"Amazingly enough, you can alter the level and pan of tracks mixed any number of digital generations ago — the DR4vr simply recalculates the data."

digital I/O are required, an additional card can be fitted. Analogue inputs and outputs are balanced, and can be switched to +4dBu or -10dBV standards.

- The DR4vr supports MIDI Machine Control (MMC). MMC is fast becoming a standard in the recording world, and the DR4vr can be operated via MIDI from sequencers such as *Cubase*, *Logic*, and *Performer*, and also external controlling devices such as, to give just one example, the Soundcraft Ghost mixing console.
- The DR4vr offers a total of 108(!) locate points, ►

# The process of elimination.

**TrueVerb - Virtual  
room/reverb processor  
for TDM systems.  
£599inc.**

Add Waves software FX to your Digidesign, Adobe Premiere or Macromedia Deck II system and plug-in to the best digital FX processors for your hard disk recording system.

Pictured above is the latest plug-in from Waves - TrueVerb - not just a state of the art reverb, but designed to simulate the actual sound of a good room. Adjust reverb time, room size, frequency response and even the distance of the sound from the listener.

#### Also new from Waves

Waves version 2.1 plug-ins are already 100% compatible with PCI based Digidesign systems. Version 2 also provides 'component' versions of the plug-ins for more efficient use of the available DSP and to allow more than one simultaneous process per DSP chip within both the Pro Tools TDM and SDII environments - a feature unique to Waves.

A new upgrade for WaveConvert (Macintosh/PowerMac 1.6, Windows 1.2) is now available. New features for the Macintosh include: audio conversion from within Quicktime, pre-processing for Real Audio encoding, custom Creator ID's, improved dithering, preservation of all regions, markers and loops in conversion (SDII, AIFF), and more. New features for Windows include: AIFF support, unlimited number of files, quantisation noise gate, arbitrary sample conversion rates, special dither for speech files, improved file naming conventions, Maximiser and audio quality. WaveConvert was used to prepare Real Audio files for the Metallica website ([www.metallica.com](http://www.metallica.com)) and by the band Nine Inch Nails for converting all the music and sound for the new video game Quake (the successor to Doom from ID software).

Waves' Audiotrack and L1 Ultramaximizer plug-ins are now available for Sonic Soundry's Sound Forge 3.0.

#### Coming soon-

PS22 Stereomaker - a dramatic stereo-from-mono plug-in for TDM, SDII and Powermac.

WaveConvert for Windows & Macintosh is an easy to use audio processing application for multimedia developers. It combines the well known peak limiting technology of the Waves L1 Ultramaximizer with other Waves processors into a powerful one step audio processor. Wave Convert easily converts Mac or Windows based high resolution audio files into lower resolution audio files while retaining optimal sound quality.

£229inc.

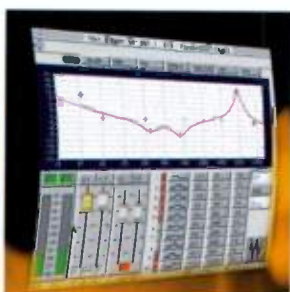

The C1 is a true frequency-selective dynamic processor with phase compensation. That simply means you could compress only the bass without colouring the sound. Or you could limit only the treble, and so forth. The C1 is an expert tool; there is no other dynamic processor like it in the world. Ideal for mastering, voice-over, or even frequency-selective keying, the C1 is supported by an extensive Setup library.

From £499inc.

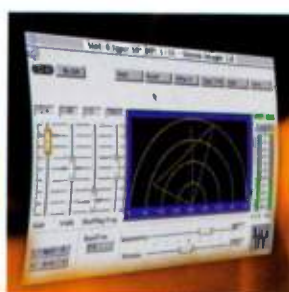

L1 Ultramaximizer is the world's best known digital peak limiter. The L1 features IDR processing - a better dithering noise-shaping system than others costing nearly 20 times the price. Ideal for mastering Compact Disc and multimedia audio as loud as the major labels and publishers. The L1 is industry standard for CD and multimedia mastering. Our users include Microsoft, Steve Miller, Sony, Sega, Nintendo, Korg and Tangerine Dream.

From £459inc.

The Q10 ParaGraphic EQ is one of the most powerful equalizers ever made, with 10 band stereo parametric EQ, whether for subtle or extreme adjustments. A 200-piece Setup Library provides pre-emphasis, pseudostereo, multimedia, mastering and many more pro-audio tools. The graphic interface has been called "the model for audio software interface design". The Graphical, numerical control, and the display are unmatched.

From £309inc.

The S1 Stereo Imager brings together a comprehensive set of stereo manipulation tools. Four distinct processes make the stereo image wider or narrower, increase space in the lower frequencies and rebalance the left-centre-right, independently! Three of these processes are phase-compensated, keeping mono compatibility. Beyond any stereo processor on the market, the S1 is excellent for stereo TDM subgroups, reverb returns, stereo mic recording and mastering.

From £339inc.

Audiotrack is a low cost entry point into the world of Waves plug-ins, combining the most needed audio processors into a single piece of software, mono or stereo mode including 4-band EQ, compression/expansion and gating. Ideal for project studios, digital sequencers, and desktop post. With setup library, TDM, SDII, Powermac, Sound Forge 3.0.

Only £229inc.

# Akai DR4vr

"The virtual tracks feature is certainly entirely usable and very valuable."

► even without the DL4d remote controller. Pre-roll is adjustable, and playback is immediate.

- Last but not least in my list of desirable pro features (maybe not unique, but certainly not ubiquitous in the disk recording world) — the Akai DR4vr has instant, on-the-fly as well as programmed, punch-in!

## OPERATION

Perhaps the easiest way to describe the operation of the DR4vr is to go through the process of what might be a typical application — producing a simple radio commercial with a voice-over and pre-recorded music bed. You could do all of this with the DR4vr, a CD player, mic and preamp, mastering machine and monitoring — no mixer involved. The first step would be to copy some music (taking out the necessary copyright clearances, of course!) from the CD to tracks 1 and 2. A domestic CD would probably give enough level to drive the inputs when set to -10dBV. Like most multitrack recorders, the DR4vr doesn't have any input or output level setting controls. Recording is as simple as pressing the record and play buttons simultaneously — no program to load, no files to open, no network, screen-saver or email software to shut down (and some people ask me why I have become cynical about computers in audio!). You can, of course, set the sampling rate, and which disk you want to record onto if you have more than one. If the commercial needs to fit into a certain time slot, as it almost certainly will, you'll need to edit the music to fit. You can't fade it within the DR4vr.

Let's suppose it's an easy edit and all you want to do is cut out a section from the middle of the track. Play to the start of the section, and as soon as you hear your edit point, hit stop. Carefully turn the jog

which will play the entire section for you, or the Play-to-Out button, which plays the last few seconds up to the out point. Since in this instance you want to cut out the section, press the Edit button repeatedly until the Delete function is indicated, and then press Enter. It's now done, and if you don't like what you have achieved, there's always the Undo button to turn to. In a similar fashion, you can move and copy segments to different time positions on the same tracks, or to different tracks. You have to specify which tracks you want to copy from and to; these are selected straight from the buttons on the front panel. An interesting point is that unlike the Akai DR8 and DR16, copies on the DR4vr are made by physically duplicating the data on the disk, rather than just pointing to the same blocks on the disk. This takes a little time, but it's faster than real time and in practice I didn't find it a problem.

Recording a voice-over should be quite simple, technically, but these things often need a lot of takes and sometimes the best performances come just a few words at a time, so you may need to edit between several takes. The original Akai DR4d was a 4-track recorder and that was it, so you would have had just two tracks for the voice-over — although you could have shunted takes further down the track as a temporary measure, to make more recordings. The DR4vr, however, offers up to 250 virtual tracks, of which up to four can record or play at any one time. This makes it far easier to go for lots of takes, up to the point where the disk is full. I would imagine that 250 virtual tracks would be enough for any user, unless you know different! Portions of takes, by the way, can easily be edited together to create the perfect voice-over.

The next step in our fictional commercial would be to mix the music and voice-over into stereo, which you can do internally in the DR4vr. In fact, you can mix together as many tracks, from the 250 virtual tracks, as you like, as long as you do it no more than two additional tracks at a time. You'll have control over level and pan.

You might be thinking that this sounds great as far as it goes, but what happens when you decide that a track you mixed ten layers ago now seems to be too loud? There's nothing you can do about it, apart from go back and do all that work again, is there? Well, amazingly enough, you can alter the level and pan of tracks mixed any number of digital generations ago —

the DR4vr simply recalculates the data. You can't add external signals to the mix, but there's no reason why you shouldn't record some reverb onto virtual tracks and mix it in as appropriate. This new mixing feature is certainly very clever, but to be blunt, I would find it too much bother, and I would rather have spent more money on a machine with more tracks. That's my personal view, however — you may see it differently. The virtual tracks feature is certainly entirely usable and very valuable.

The DR4vr's well-furnished back panel, including digital In and Out in both SP/DIF and AES/EBU formats. Two more channels of digital I/O can be added with an optional board.

wheel anti-clockwise to scrub the audio backwards. The audio quality of the scrub is pretty good — not as good as some high-end systems or analogue tape, but much better than a mouse, and certainly accurate. When you've located your edit point precisely, hit the Store button, then the In button. This marks the beginning of the section to be edited. Do the same to find the out point and store that in the Out location. You can easily check your edit points using the In and Out locators, the Play button,

## SUMMING UP

Right now I'm enjoying using the Akai DR4vr on a real project and I'm doing things with it that I wouldn't be able to do otherwise. In my home project studio, I have so far resisted buying more than eight tracks of digital multitrack because the right combination for my needs isn't yet available (since you ask, I want at least 16 tracks on a single machine, or *instant* synchronisation of multiple machines, and archivable media rather than fixed hard disks). I'm quite content for the moment making stereo premixes of backing tracks and adding additional tracks onto a new tape — in fact, there are certain advantages to working in this way that I might cover in a future article. But up until now, when I copy my stereo premix onto a new tape, I lose the ability to synchronise my sequencer accurately without much fiddling about, particularly if I have made the premix in sections and edited them together, which inevitably changes the duration slightly. The DR4vr, however, will synchronise perfectly to the multitrack (with the SMPTE/EBU card option), so that when I copy the premix to a new tape it will start at exactly the same timecode position. I can mix in sections, either dropping in on the DR4vr, or recording onto a different pair of tracks and editing, and the piece will stay the same length exactly. This way, I can continue to use my sequencer, and since any new tracks I record will be in sync with those on the original tape, I can hire or borrow another multitrack when I do the final mix if I feel the need to. In fact, I could make a recording of virtually any number of tracks, up to the limit of my mixing console, without having to own more than one multitrack recorder. The DR4vr also gives me the ability to lift guitar tracks off the tape, correct them where necessary for timing, and copy them back to tape again. With a digital interface for my multitrack I would be able to do this without any generation loss.

Are four tracks enough? Well, for multitrack music recording, other than simple demos, I would have to say no, so if this is your intention you should really be looking at a Fostex DMT8, Roland VS880 or Akai DR8. Four tracks, however, are great for stereo editing, multitrack manipulation, voice-over work, sound effects, adding to MIDI systems, and a potential multitude of other applications. Add 250 virtual tracks which can be assigned to the four outputs and you have a great deal of flexibility in a reasonably-priced package. If you had one of these in your studio, you'd use it all the time.

In conclusion, the DR4vr may not look too exciting on the surface, but there's a

lot to get your teeth into. Every studio should have one, or something with at least equivalent capability, and Akai deserve continuing success with this update of the DR4d for years to come.

### Monitoring Quality

*From The Orb & the Finnish National Opera....*

BM5

#### Introducing the BM Series

*It took 15 years, 100 Danes, a few million Kroner and an englishman with attitude to come up with the BM Series. Fortunately it was all worthwhile! We wanted to make a monitor which not only reproduced sound balances accurately but also enabled anyone to hear the difference between good and bad sources. Many low to mid priced systems simply do not reveal the subtle distortions and resonance's which creep into a multitrack recording because they are hidden by the coloration of the speaker itself.*

#### So how do we do it?

*Dynaudio Acoustics has produced monitor systems for some of the worlds finest studios and they have used the same uncompromising engineering standards in the BM Series*

*High volume cabinet production and the automation of component manufacture has produced massive cost reductions without compromising quality at all. In fact the BM Series could sell for twice the price, but don't worry, that's a job for our competitors.*

BM15

BM10

# It's a Family Affair

## KORG N364 WORKSTATION SYNTH

*Though Korg's new N-series keyboards aren't completely new on the inside, having much in common with the recent X-series synths, they still have plenty to offer as powerful workstations, with some neat and contemporary embellishments for '96. GORDON REID sketches out the Korg family tree...*

rackmount, the O3R/W, but this time there were no equivalents to the T-series. The big difference between the 'M's and the 'O's was a facility called 'wave-shaping'. In principle, this allowed you to distort the waveform, adding many high harmonics and, therefore, brightening the sound. And there was no doubt about it: the 'O's were noticeably brighter than their forebears, although (and few people seemed to notice this at the time) you could count on your fingers and toes alone the number of

factory programs that used wave-shaping. Clearly, the second-generation machines were definite improvements upon their predecessors.

The third generation, introduced in 1993, used another new method of synthesis. This lacked wave-shaping but, for reasons that Korg have never explained, was still called AI2. Nevertheless, the new AI2 retained much of the brightness of the O-series, and the basic model of this generation (the 32-voice X3 keyboard) leapt straight to the top of the best-selling lists, where it resided for the next couple of years. Other third-generation products included the inevitable X3R, the X2, and the O5R/W. Uh-oh, this is getting confusing...

Despite its 'O' prefix, the O5R/W was an X3 module, the only difference between this and the X3R being the omission of one bank of sounds and the lack of a sequencer. But now things get really crazy... The X5 was the next X-series keyboard, but this was an O5R/W with a keyboard — or, to put it another way, an X3 without a disk drive or sequencer. The X5D was a 64-voice version of the X5, and the X5DR was the rackmount of that.

Now, eight years down the line, we have the fourth generation, the N-series, comprising the N364 and the N264. Snappy names, aren't they? But here's the joke: while the '64' refers to the number of voices (no problem there) and the '3' and the '2' refer to the keyboard size, in time-honoured T3/T2 and X3/X2 fashion, rumour has it

that the 'N' refers to 'Next Generation'. Why's that funny? Because, while the 'T', 'O' and 'X' prefixes referred to derivatives of Korg's original synthesis, the sound generation in the N-series is identical to that of the latter X-series synths and modules. The N364 is the keyboard version of the X5DR, with the same amount of PCM ROM, and the same chip-set, but with the disk drive and sequencer reinstated from the X3. Indeed, the N364 sounds identical to an X5DR. 'N' stands for 'No changes', maybe?

Well, of course there are changes, but they are more subtle than the introduction of a new method of synthesis. So let's delve below the surface and discover whether Korg have struck gold again, or whether the enhancements embodied in the N364 are more along the lines of the Emperor's New Clothes...

## HARDWARE

Physically, the 61-key N364 is very reminiscent of the X3, with an almost identical body and end cheeks. Indeed, the top panel is the same aluminium extrusion, the only difference being the width of the screen cut-out. The colouring is different, however, and I rather like the gun-metal blue, which reminds me of the OASYS prototype I first saw 13 months ago, but which has yet to appear in public.

Other similarities to the X3 abound. The disk drive is mounted on the side (unlike the more user-friendly O1/W FD and Trinity, which have it facing

forwards) and, most unfortunately, the N364 shares the X3's major failing by offering a truly horrible keyboard. I hated the X3 and X2 keyboards, which I've previously described as black-striped marshmallows glued to the front of the synths. While I found the N364's keyboard much less spongy, I also found it to be over-light and extremely shallow. But maybe Korg are expecting users of the N-series to come from a less 'pianistic' mould than me? It's not an unreasonable perspective.

On a more positive note (oops, sorry), the N364 has one overwhelming advantage over the X3: it has four outputs. This is not trivial, because while the N-series share the same chip-set as the X3 and X5, they will be much more flexible in the studio. Funnily enough, the X2 also had four outputs, as did the X3R, and the more expensive Trinity, so Korg clearly understand that outputs are important. What's more, the inclusion of four on other X-series instruments shows that the hardware is capable of supporting them. What I still don't understand is why Roland should be able to offer us six or even eight outputs, while Korg never seem to exceed four, even on their flagship products.

## VOICES

Continuing in this mode of comparing the N364 to the X3, I can summarise the voicing of the N-series very easily. The N364 is simply two X3s bundled together, so it's got twice as much of everything. For

## pros & cons

### KORG N364 £1299

#### pros

- Huge range of classy Programs and Combis.
- The re-introduction of an arpeggiator.
- Continuity with previous Korg workstations.
- Good price/performance ratio.

#### cons

- Over-light keyboard.
- Badly-utilised screen.
- The name.

#### summary

Great-sounding, good value workstation. Though very similar to the X3, it has some valuable extras, while retaining a very competitive price.

**SOUND ON SOUND**

# Korg N364

► example, the X3 offered a maximum polyphony of 32 voices, so the N364 has 64. Likewise, where the X3 offered a single bank of GM Programs plus two non-GM banks of Programs and Combis, the N364 has four non-GM banks, though it retains the one GM bank. Furthermore, the N364's 8Mb of sample ROM is 1.33 times that of the X3 (OK, so most generalisations don't bear close examination) and, as already mentioned, there are twice the number of outputs as on the X3. If there's a subjective difference in sound (for example, I always felt that the X5DR sounded better than the X3) it's probably a consequence of better factory programming. Once you've worked with a synthesis engine for a year or two, you learn a few tricks which enable you to

step backward when compared to the M-series and T-series. While the screen will tell you how many Programs are inserted within a Combi, it can only give you the numbers of Programs 1-4 or 5-8 at one time. This is not a consequence of the size of the screen, but of the way in which the space has been (mis)used. And it's a pain. Before Korg jump on me, I'll admit that I'm aware that the higher cost of a larger screen would have to be passed on to the consumer. But better programming should have cost no more, and besides, if the M1 could do it...

## PATTERNS

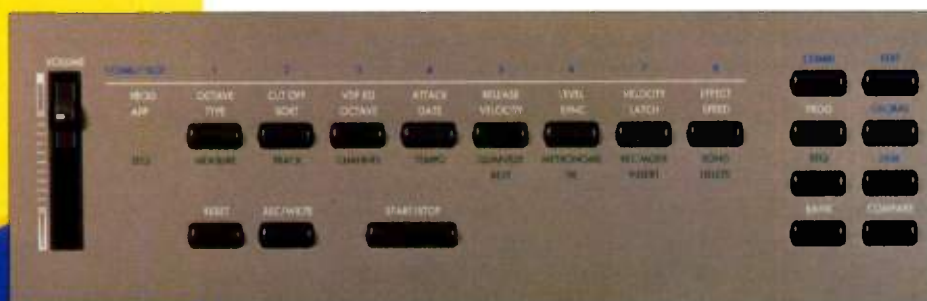

We now diverge from the N364's predecessors, because we come to the all-new, real-time Pattern-play function, part of the N364's onboard sequencer (see 'Sequencer Strengths' box for more sequencer details).

Patterns are phrases that you can assign to keys. They may contain drums, or basses, or organ, or guitar — or whatever you like — and different keys access different Patterns. So, for example, bottom C could trigger your basic bass and snare, while D and E access variations, and F and G access fills. Then, C# and D# could offer hi-hats, ride and

crashes, with other percussion under F# and G#. Above these notes, A, B and C could have bass riffs appropriate to the basic rhythm, with suitable fills on A# and C#... and so on. These phrases can then be played in real time from within the sequencer. The Roland XP50 has a similar feature, but the bonus of the N364 is its immediacy. The Roland demands that you decide which Patterns you wish to use and where, and then place them in the appropriate tracks. Then Korg simply invite you to put the sequencer into multitrack mode, initiate recording, then press the keys that relate to the desired Patterns and listen to the sequence develop as it's recorded. If you press a key a little early or a little late, there's no problem. Provided that you're deriving MIDI clock internally, the N364 doesn't allow you to record anything out of time, and quantises the Pattern 'on the fly'.

There are important constraints, however. The most important of these is the need to match the Patterns to the song in which they're being placed. Failure to do this will result in incorrect instrumentation and, in all likelihood, the wrong tempo. Serendipity isn't my chosen method for writing music, and I've discovered that playing funk patterns with a light jazz kit and double bass doesn't work. You have been warned.

Despite the fact that the N364 can store up to 100 Patterns, the nature of Pattern mode precludes a great deal of variation, and the tracks generated display a great deal of repetition. In other words, nobody is going to write a violin concerto in this fashion. On the other hand, the dance fraternity are going to love it. Programming bass and drums can be a mind-numbing operation for some people, and this is a very quick way of getting the basics recorded. ►

create better voices. This happened with the T-series (Korg's programmers were considerably better at voicing the T3 than they were the M1) and I'm sure that, out of the box, the N364 sounds a whole lot better than its ostensibly identical predecessors.

On that basis, there's not much point in lingering over the N364's programming capabilities, nor the quality of the results, in great detail. These have been covered in our reviews of the X3R (February '94) and the X5DR (May '95). Still, I should pause to give the GM bank special mention because it's one

“...I should pause to give the GM bank special mention because it's one of the best I've yet encountered.”

of the best I've yet encountered. What's more, it's editable, so full marks to Korg here. It's also worth pointing out that, while the N364 has lost the O1W's wave-shaping facility, it's brighter, cleaner, and offers extended parameters regarding the panning of the oscillators, and the way in which you can apply effects to individual parts. Finally, I should mention that the N364 retains Korg's traditional quick editing mode: just press one of the appropriate buttons on the top panel, then use the data slider or increment/decrement buttons to change primary values. It's hardly new — the M1 had it — but it's still a super feature.

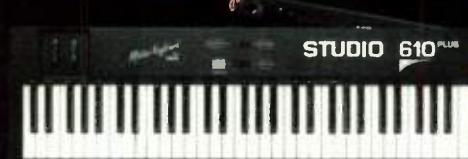

With regard to its Combis, the N364 takes a

# FATAR STUDIO SERIES

## MASTER KEYBOARDS

# "The closest to a real piano feel yet."

SOUND ON SOUND

### Studio 610 Specifications

- 61 full size velocity-sensitive keys
- Pitch Bend Wheel and Programmable Wheel
- Program change, MIDI channel change, Transpose

### Studio 610+ Specifications

As Studio 610 except with aftertouch and semi-weighted keys

### Studio 1176 Specifications

- 76 weighted keys, Hammer action
- Velocity Sensitive with Aftertouch
- Pitch/Mod. Wheels
- 4 Programmable Zones
- 32 Presets
- 2 control sliders
- Program and bank change

### Studio 1100 Specifications

- As 1176 but with 88 keys
- Also available with Integral flight-case

### Studio 900 Specifications

- 88 weighted keys with hammer action
- Pitch Bend Wheel and Programmable Wheel
- Program change, MIDI channel change, Transpose
- Also available with integral flight-case

### Studio 2001 Specifications

- Full-size 88 weighted keys with hammer action
- Four MIDI inputs may be used for additional keyboards, MIDI accessories, sequencers, etc.
- Four fully independent MIDI outputs,
- 64 MIDI output channels.
- Two programmable control wheels.
- Four programmable control slider.
- Preset increment and decrement input.
- Eight keyboard zones may be defined over local or external keyboard regions.
- Also available with integral flight-case

At an RRP of £649.95 **FATAR's Studio 900** makes the case for combining your favourite sound sources with a single, high-quality master keyboard even more persuasive.

With 88 piano hammer action keys at your disposal you simply won't want to play anything else, and a host of features means you won't need to either - like program change, MIDI channel change and transpose, plus the ability to assign parameters such as volume, pan and aftertouch to a programmable wheel.

All **FATAR** 88 note keyboards are equally at home, live and in the studio and each is available in standard or rugged, fully flight cased versions.

### STAB, MASSAGE & BOUNCE...

The secret of the **FATAR ACTION** lies in the patented hammer.

Whilst most 'piano

action' instruments rely on damped or weighted keys, **FATAR's** hammer is thrown up and forward on its pivot as the key is depressed, mimicking exactly the action of a traditional acoustic piano.

The combination of more mass moving through an arc means greater acceleration of the key and a remarkably increased dynamic range. You'll find you can put great power into chord stabs and loud passages whilst the natural inertia of the hammer provides exactly the right kind of counter-balance that lets you massage real piano keys for expressive pianissimo.

Equally important is the tiny bounce a hammer gives the key as it comes to rest. It's this bounce that lets you play those two-handed paradiddles - and while we are talking percussion it's worth remembering that keyboards are used for triggering all sorts of things these days.

## Soundcraft Spirit Studio LC Mixers

**M.V. EXCLUSIVE!**

- 16-8-2 design for up to 16 inputs at mid-level
- extremely quiet 120dB THX mic amp
- direct out on every channel • stepped level channels
- ruggedised output buffering from every channel
- 1 band EQ on every input, sweep mid and low bands
- HF shelf, EQ boost and high pass filter
- 4 auxiliary sends • stereo effects returns
- fully controllable submaster input
- stereo auto in place on every input channel
- auto mix of stereo and mono signals saving
- monitoring • high quality connections, cables and
- checkable switchgear for peace of mind

## Spirit Studio Mixers PLUS FREE Soundcraft Absolute 2 Monitors!!

These superb mixing consoles are available in 3 configurations: 16/8/2, 24/8/2 & 32/8/2 and feature:

- in line design • up to 72 inputs at mid-level (22ch)
- up to 32 discrete tape sends • 8 bus group section and stereo master • ladder flip to save repatching
- 3 versatile aux busses • 4 stereo FX returns with EQ
- 4 band EQ (2 sweep mid & EQ switchable between signal paths) • 2 band EQ on each group bus
- PFL monitoring on all channel and monitor inputs etc.

Legendary Soundcraft quality at a fraction of the original price!

► Then, once the rhythm track is in, you can use the sequencer to add transposition, variation, and changes in instrumentation. Mind you, it's hardly going to make software such as *Band in a Box*, or even Korg's i-series keyboards, obsolete. It might if it, for example, recognised chords played in the upper half of the keyboard (or something like that) and tracked them in real time. But it doesn't. You can play over the top of the Patterns, but that's all.

In addition to the Patterns pre-loaded in the N364, and the others that Korg supply on the factory disk, you can, of course, create your own. These can be edits of the factory data, or new Patterns programmed from scratch. You can even load sequences from elsewhere, select bits and pieces that you like, and allocate these to Pattern memories.

## ARPEGGIATOR

The final major facility, and another one 'new' for '96, is the N364's arpeggiator. This offers five modes: Up, Down, Alt1, Alt2, and Random. Of these, three are self-explanatory, but the alternate modes bear explanation. On most arpeggiators, the upper and lower notes are played once per cycle — for example, a C major triad would be played over a single octave as C E G E on the first cycle, followed by C E G E again on the next. This is the behaviour exhibited by Alt1. Alt2, on the other hand, plays the highest and lowest notes at the start and end of each half-cycle, so that our triad now becomes C E G G E C, followed by C E G G E C again. You may think it a fine distinction, but this allows you to keep arpeggios within time signatures, shifting between common and complex times at the touch of a button.

The parameters that you can then apply to the arpeggio are range (1-4 octaves); note sorting; gate time (to make arpeggios more 'choppy'); MIDI velocity (1 to 127, or the played velocity); sync; latch; and speed. Oddly, if you continue stepping sideways within the arpeggio parameters, you find yourself in the edit map of the program playing the arpeggio. Whether this is intentional or not, I don't know, but it could be very useful, allowing you to modify the sound as the arpeggio is playing.

Because at the time of the review there was no manual for the N364, I looked at a Prophecy manual (as the Prophecy is also a Korg synth with an arpeggiator) to see whether there were any hidden arpeggio functions. I found that most parameters were identical, although the N364 has lost a couple of features, such as gate modulation and velocity modulation. But I suspect that few players will feel the lack of these.

## CONCLUSIONS

It's time to sum up and, as is usual for a magazine review, space constraints mean that there are features we've ignored, and classic voices we've overlooked. Indeed, that last point is no throw-away line. The sheer range of sounds in the N364 is beyond review. With 936 Programs and Combis derived from a mind-numbing 430 multisamples and 215 percussion samples, there's no way I can

give you a flavour of what this synth can do. The best I can say is that, after a Trinity Pro or fully-populated JV1080, the X5DR was next on my list of sonic lusts. Since the N364 sounds no different, I see no reason to change this view. Notwithstanding a few minor niggles regarding less than perfectly mapped multisamples, it sounds great!

Another plus point is the consistency of the editing system. If you can program an M1, you can find your way around an N364 without recourse to a manual. You might miss a few bits and pieces, but all the major facilities are where you would expect them to be. Unfortunately, many players no longer program their own patches. Maybe they would if workstations had the immediacy and accessibility of analogue synths, but nowadays most people just want a bucketful of sounds. Here, again, the N364 scores well, and with obvious reason. Where it fails to score is in its lack of expandability. The Roland XP50 hosts expansion boards that include new PCM sounds and additional patch memory. Even the humble M1 accepted PCM data cards. In comparison, the N364 is a dead end. Whether you would ever reach its limit is another matter, but it's a point worth noting nonetheless.

With regard to the N364's enhancements over the X-series, the new Pattern mode is very easy to use, and I can see third-party companies dashing to be the first to offer extra Patterns. The arpeggiator is an even more welcome addition, which lifts the instrument above the level of a simple workhorse to something a bit more immediate and 'synthy'.

To sum up: with the N364 and the 76-note N264 costing just £1299 and £1499 respectively, Korg have possibly regained the top spot in price/performance terms, and it's very likely that we'll see no more of the X3. Indeed, I wouldn't be surprised to learn that Korg had already deleted it from their product lists.

Though N364 is, for all practical purposes, identical to an X5D, its extra bank of sounds, disk drive, sequencer, real-time pattern mode, and arpeggiator add up to an attractive bundle of facilities at an attractive price. I suspect that the N364 could be the keyboard buyers' Christmas Number One.

## SEQUENCER STRENGTHS

There are no real differences between the X3's and the N364's sequencers. Indeed, since the review unit was a pre-release model without documentation, Korg supplied an X3 manual with it, and this proved to be completely adequate. Whether this shows a lack of effort on Korg's part — it's been almost four years since they developed the X3 sequencer — or is a result of Korg deciding that if it ain't broke, there's no need to fix it, I'm not sure. What I mean is this...

One of the reasons that the X3 sold so well was its sequencer. The Instrument's major competition was, and remains, the Roland XP50 (see review in *SOS* June 1995), and this has a derivative of the now-revered MC500 sequencer built-in. However, the MCs were never the most intuitive of units. If you took the time and trouble to get to grips with them they were extremely fast in operation, well structured, and flexible. However, their screens were small, and the messages displayed on them were often cryptic, so relatively few players took the time and trouble to learn them, nor their XP50 progeny. Since the X3 sequencer was easier to learn and use (although, of course, not up to the standard of a computer-based sequencer) this became a selling point.

So, once again, there's little point in regurgitating a review of the N364's sequencer. It features all the normal facilities — cut, paste, delete, insert, event edit, and so on — and its capacity is also unchanged from the X3, at 32,000 events. However, there's one facility that warrants specific mention: the N364 holds its sequences in static RAM rather than dynamic RAM. This means that sequences are retained when you switch it off, and these become available again immediately upon power-up. Mucho brownie points for Korg.

If I have to criticise, 32,000 events is not a huge amount in 1996. It's not exactly mean, but RAM — even S-RAM — is relatively cheap, and if the Trinity can offer 80,000 events, surely Korg's latest workstation could show an increase over the 1993 model?

# Make room for Zoom

## ZOOM STUDIO 1204 EFFECTS UNIT

*The budget effects market's looking increasingly crowded, with £199 as the new entry-level price norm.*

*Does Zoom's 1204, which features unusual effects not normally found at this cost, stand out from the crowd?*

**DEREK JOHNSON finds out.**

(although the 1202 now costs £50 less — see the news pages in this issue).

But there are a few significant enhancements. First of all, the 1204 adds 100 user memories, a 2-digit LED display, effect category indicator LEDs, a simple but useful MIDI spec (program changes and access to a handful of parameters via MIDI controllers), and a modified selection of treatments. Alongside the expected reverb, delay and modulation effects is a welcome vocoder — which is unheard of at this price — a rotary speaker simulator, and the novel 'vocal distortion' effect.

### PANEL BEATING

The 1204's stylish, gold-finished front panel is refreshingly straightforward: basically, what you see is what you get. At the left, you'll find the power switch, and a mic input which is mixed with the main rear input, except when you use the vocoder. The input/output level controls (with peak LED) are followed by the effect selection and editing controls, with buttons for storing and managing user settings to the far right. The operating system, such as it is, is nicely user-friendly, and similar in some ways to that of the DOD unit reviewed elsewhere in this issue. Let's take the tour:

- **Effect:** use this knob to select your main effect type. There are 16 reverb, delay/echo, gated reverb, and reverse reverb options in Bank A, and 16 modulation, serial, parallel, and 'special' effects (vocoder, rotary simulator, vocal distortion and noise reduction) in Bank B. Check

### pros & cons

#### ZOOM STUDIO 1204 £199

##### pros

- Good value.
- Good selection of effects, including some unusual treatments.
- Easy to use.
- True stereo operation.
- Some dual-channel effects.

##### cons

- No MIDI Out.
- Reverbs not that exciting.

##### summary

The 1204 provides a varied selection of useful everyday effects — but you can also get weird if you want to, which is most unusual at this price, and a tribute to Zoom's design team.

**SOUND ON SOUND**

The world seems awash with multi-effects at the moment, and it's gratifying to note that the more affordable end of the market is actually the most congested. One of the results of the lowering of the effects-processing price floor has been the stripped-down processor — such as Alesis' venerable Microverb series, Yamaha's REV100, and Digitech's Studio Twin — offering preset studio treatments in affordable packages with limited (or sometimes no) control over the effects. Zoom followed this trend with their 1202 (reviewed back in February 1995), which was as simple as they come: 512 varied and useful effects, with control over two parameters plus EQ per effect, no MIDI, and a low price.

Now it's late 1996, and Zoom have released the true stereo Studio 1204. At first glance, the new processor's spec bares an uncanny similarity to the 1202, with the same number of presets and the same abbreviated editing system. It even retails for the same price as the 1202 originally did

\*Macintosh versions only

OK so you want the best music software out there. You want all the features, all the bells and all the whistles as well. And you want a great price.

Well now you have it all - and then some.

MCMXCIX, the first name in music software distribution can now offer, (for a limited period only) the world's best music software and hardware for the Macintosh and Wintel platforms at incredible savings.

For a limited period only you can buy Vision 3.0 Mac for just £199 ex vat (£234 inc). That's less than £200 and a cool £100 less than it's nearest rival, for a software package which offers stunning sequencing capabilities along

with digital hard disk recording on Power Macintosh with no extra hardware required. Studio Vision Pro v3 meanwhile can be had for a incredible £429 ex VAT and offers the massive feature-set of Vision plus intelligent features such as audio to MIDI, MIDI tempo control of audio, pitch shift, other DSP functions and full automated mixing.

But that's not all.

Buy Vision\* or StudioVision Pro\* before the end of July and get an 'Internet ready' 14.4bps Fax/Data modem absolutely FREE. - Perfect for checking out the new MCM home page packed with info and updates.

Call MCMXCIX for more information, or call into an Authorised Opcode stockist.

## SPECIFICATION

- 512 presets.
- 100 user memories.
- 18-bit, 128X oversampling AD/DA converters.
- 44.1kHz sampling frequency.
- 10Hz-20kHz frequency response.
- Stereo Jacks In, mono mic In, stereo Jacks out.
- MIDI In.
- 9V DC adaptor.

► out the 'Effect Types' box for details. The 1204 allows a maximum of two effects at once, and obviously the combinations are preset for you.

- Bank: this button switches between the A and B Bank of effects.
- Pattern: the function of this knob varies from effect to effect, but essentially selects variations of the main effect. For example, when you're fine-tuning a reverb, this knob alters the reverb time, in 16 steps; with delay/echo effects, it selects feedback values, and so on.
- Edit 1/Edit 2: as you'd expect, these knobs allow you to edit two parameters per effect, with the parameters varying according to the current effect. Some reverbs use the knobs to alter diffusion and attack, some to alter pre-delay and high-frequency cut, while with chorus effects, they alter modulation delay and modulation frequency.
- Low/High EQ: up to 12dB of cut or boost can be applied to the two bands of EQ. Centre frequencies vary according to the effect selected, although the majority are centred on 80Hz and 2kHz.
- Mix: simply, a wet/dry effect mix control. At 12 o'clock, the untreated and treated signal have equal levels.
- Manual/Memory: this button toggles between preset and user memory modes.
- Effect: Toggles between effect and bypass.
- Store: used to store edits in one of the 100 user memories: press once, choose a memory location with the memory up/down buttons next to the display, and press again.
- Cancel: cancels a 'Store' operation.
- MIDI: selects MIDI reception channel for program changes and MIDI controller messages.

## EDITING

Using the 1204 couldn't be simpler: choose an effect category, select the 'pattern' you want,

## THE 1204 & MIDI

One drawback of the 1204 is its lonely MIDI In socket (no MIDI Out). But this need not be as restricting as it first appears. In addition to receiving program changes, the 1204 can use MIDI Control Change messages to switch Effect Pattern, turn the effect on or off, and change the Edit 1, Edit 2, EQ Low, EQ High, and Mix Level parameters — in other words, affect all controls save the Effects knob, Bank A/B button, and In/out level knob. Provided you can generate these controllers in some way — from a master keyboard, a sophisticated MIDI pedal-equipped effects board, or from within a software sequencer's mixer map, for example — you'll essentially have real-time parameter control, to a limited degree. However, you can't send any MIDI data from the 1204 to an external device, and obviously the 1204's knobs don't transmit any data (no MIDI Out, remember).

The 100 user memories are filled with factory settings that can be restored at any time;

however, this will over-write any user settings.

With no MIDI out, you can't dump user settings over MIDI, or back them up in any other way. If I owned a 1204, my first move would be to arrange the first or last 32 user memories as un-tweaked versions of the main effects. Then, a base effect could be called up via a program change at the beginning of a song, and MIDI controllers used to select a variation and tweak its parameters during the song. The next time that song is loaded, the program change and controller messages would restore the effects exactly as you wanted them.

And now, those MIDI controller assignments in full:

	Effect Pattern
84	Edit 1
85	Edit 2
86	EQ High
87	EQ Low
88	Mix Level
8	Effect On/Off
80, 91	0-99
Program Change	

## EFFECT TYPES

The 1204's effects are quite varied, and different effects within any given category have different characteristics. For example, amongst the reverbs, the Room reverb time varies from 0.5-3.3 seconds, while the Solo reverb has a range of 2.3-55 seconds (yes, 55! Though the decay by then becomes masked in hiss). Both the Delay and the Echo have a maximum delay time of 370ms, but the left and right delays are truly independent in the case of the Echo; it is also possible to get a delay time of up to 740ms out of the Delay. Reverse and gated reverbs have an upper limit of 1152ms, and pitch shifting is +/- one octave, with

detuning.

- REVERB: Hall, Room, Plate, Vocal, Ambience, Orchestral, Studio, Session, Percussion, Drums, Solo, Delay, Echo, Gate, Power, Reverse.
- MODULATION: Chorus, Flanger, Pitch Shift, Tremolo.
- SERIAL: Delay+Reverb, Chorus+Reverb, Flange+Reverb, Pitch Shift+Reverb.
- PARALLEL: Chorus/Reverb, Flange/Reverb, Pitch Shift/Reverb, Tremolo/Reverb, Chorus/Echo, Flange/Echo, Pitch Shift/Echo.
- SPECIAL EFFECTS: Vocoder, Rotary, Vocal Distortion, Zoom Noise Reduction.

within the category, and tweak the two parameters and EQ till you're happy. This is a surprisingly flexible system considering that there's only two parameters per effect available — in most cases, the parameters chosen are the ones you'd most want access to anyway. Although the display does its best by showing you the number of the current effect, and the Pattern and Edit 1 and 2 values when you tweak them, it's still a good idea to have the manual around, since it's tricky to keep track of exactly what these knobs are controlling, at least in your early days with the 1204.

One slightly odd thing is that once you've saved an edited effect, in preset mode, you need to hit the mode button and go into 'Memory' mode to access your edits.

## LISTEN & LEARN

And how does it sound? Rather good, actually. Reverbs are generally perfectly usable for synths and instrumental material, though less ideal for percussion and vocals. Even treatments specifically designed for drums and percussion suffer from a little graininess, and the overall effect can be artificial. However, you can always indulge in some heavy tweaking of the EQ and selected parameters.

Other effects — delays, flanging, and chorusing, for example — are good on all kinds of material. Zoom's Vocal Distortion (which is provided in combination with a small selection of delays and choruses) is wicked: use liberally for instant Trent Reznor, or put a drum machine through it for an easy street-level jungle effect. As for the vocoder, while I really felt the need for a few extra controls (the ability to vary frequency bands, for example), this is good in its own way,

and I'm more than happy to see it implemented on a sub-£200 processor. Also welcome is the rotary speaker simulator, which features separate horn and rotor speed controls.

It seemed pretty strange to find ZNR (Zoom Noise Reduction) as a separate 'effect' on what is, after all, a budget processor. Personally, I'd like to have seen a basic ZNR included as part of every effect. As it is, if you want noise reduction, you can't have any other effect. But it has to be said that ZNR clamps down on noise, at the start or end of a track, for example, in a forgiving and unobtrusive manner.

The serial and parallel effects are useful, but the chosen pair of parameters for these can often seem odd. I also found the tremolo effect sounded more like a panned delay, although it's still very useable nonetheless. Pitch-shifting, as with most budget processors, is best left for special effects or small shifts.

Zoom deserve credit for providing an excellent feature set for less than £200, but there are one or two negative points worth noting. First of all, the sole MIDI socket means that the 1204 can't transmit MIDI data of any kind — see box 'The 1204 & MIDI' for further details. I also detected a little zipper noise when using the edit knobs or corresponding MIDI controllers. Lastly, the 1204

lacks a headphones socket and footpedal sockets (for selecting programs, for example).

## ZOOMING OFF

To sum up, Zoom have taken an easy-to-use processor containing a good collection of serviceable effects, and added a selection of the kind of off-the-wall treatments usually found on more up-market products. This fact alone could help give the 1204 the edge in an increasingly crowded marketplace — £199 has suddenly become a rather popular price point for entry-level processors! If you're after a unit exclusively to provide high-quality reverb, for vocals or acoustic guitar, for example, you probably won't find the 1204 fits the bill. If you're looking for a good all-rounder to have some fun with, however, Zoom on down to your local hi-tech music emporium and check one of these out.

When manufacturers first started to design consoles for the home and project studio market, they didn't seem to know how to make the equipment affordable enough without cutting corners. They threw out important features, loaded up the compromises — and then wasted all these savings by using clumsy, labour-intensive manufacturing techniques. We ended up with minimalised desks that didn't really perform as well as we wanted them to. But bit by bit, low-cost manufacturing techniques improved, and the features we need have returned — and more have been added besides. We asked for more, and we

# Phantom Power

*After months of curiosity-arousing, X-Files-style advertising, Soundcraft's Ghost is here, offering the project studio owner automated 8-buss mixing at a highly competitive price.*  
**DAVID MELLOR**  
*deliberately avoids all jokes about transparent EQ and haunting sound quality...*

## SOUNDCRAFT GHOST 8-BUSS AUTOMATED MIXING CONSOLE.

have got it. Enter Soundcraft's Ghost. I doubt such sound and build quality, and well-directed facilities have ever been available before at such a canny price.

### THERE'S NO SUCH THING!

When reviewing a desk with a name like this one, from the company which is also responsible for the Spirit range of mixers, there's an overwhelming temptation to indulge in a tirade of ectoplasmic puns — but that would be to divert your attention from what is actually a very serious, 8-buss mixing console. Available in both 24- and 32-channel frame sizes, and with the option of a 24-input expander module, the in-line Ghost is currently available in two different versions, depending on your automation requirements, or lack thereof: the straightforward, manual mixer with no automation (the so-called Ghost Le), and a version with mute automation and machine control (as reviewed here).

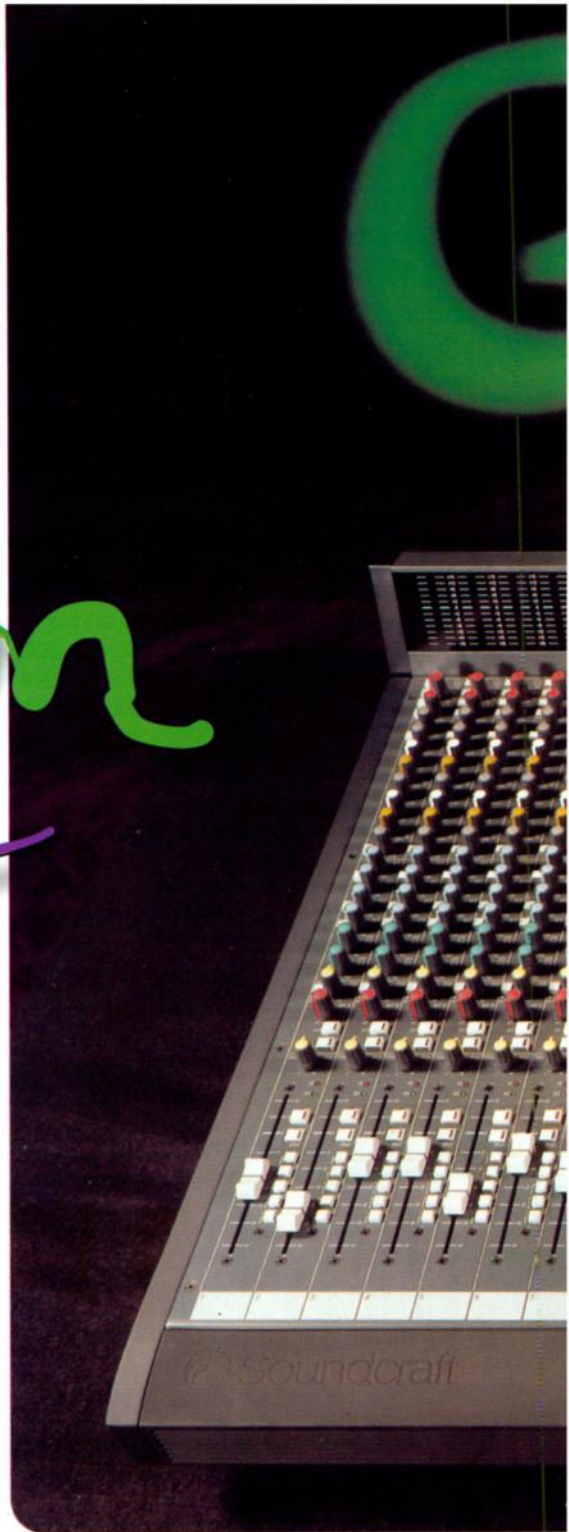

Despite the name, this console has few insubstantial qualities. I can see that it has been aimed at the top end of the home project studio market — there's nothing cut-down, cut-price, or anything less than professional about the look, feel and sound quality of the Ghost — and for those in this bracket aiming to sell studio time, the appearance of the console is very important.

This is a traditional analogue desk, and whereas digital recorders have certain sound quality advantages over analogue tape, in terms of low

noise and low distortion, even the top-end digital mixers are still hard pushed to rival the dynamic range and headroom of analogue mixers. In addition, there is no learning curve with a 'traditional' analogue console — you just sit down and start mixing. There is one knob or button per function — no menus, no shift keys.

### CONSTRUCTION & CONNECTORS

The construction quality of the Ghost, given its price, is impressive. Soundcraft have made a sensible compromise between a non-modular construction (which means that if a single channel fails, the whole console has to be taken out of service for repair), and fully modular construction, which, at the extreme, is frighteningly expensive, due to the more complex metalwork and robust connectors that are necessary. If a channel on the

# ghost

## FEELING SOLO: A WORD ON SOLO IN PLACE

Solo In Place, or SIP, is regarded as a professional feature, because it completely destroys your recording or mix if you use it at the wrong time! The Ghost has a button to select SIP or conventional PFL (Pre-Fade Listen). SIP works by killing all the other channels apart from those on which you press the solo

button, allowing you to audition them at their fader and pan settings.

Upmarket consoles often have a Solo Safe button on each channel, which means they are protected from the effect of SIPing another channel. This is useful for channels which are used as effects returns. Of course, this

means having an extra button, which, at the Ghost's price point, is probably unfeasible at present. As a workable compromise, all of the Ghost's effects returns are always solo safe. If you wanted to EQ your reverb returns by bringing them back through channels, you would have to SIP them at the same time as you SIPed any other channel using that effect.

Ghost gives up the, er, ghost, then apparently the console can be disassembled (though even the technical manual doesn't explain how), and the circuit board replaced or serviced.

In common with other budget-conscious consoles, the connectors are on the top panel, which is downright ugly, as well as an open invitation to meddlers. I think Soundcraft will sell the optional meter bridge with just about every Ghost ordered — and a lot of people may only use it to hide the connectors! Perhaps they could also consider selling a non-functioning version for 50 quid? But seriously, in the past it was considered very important to be able to meter directly from the console, rather than having to turn elsewhere to look. Nowadays, the unforgiving nature of digital recorders means that it is natural to look on the recorder's own meters as the primary, most

accurate reference, and meters on the console — even for the stereo output — have become more or less redundant for many. Perhaps the next development in consoles will be ADAT, TDIF or other digital inputs to drive the meters directly, with absolute accuracy, from the digital output of the multitrack? If anyone's working on this, AES/EBU and S/PDIF connectors would be nice too, please.

# Soundcraft Ghost

## pros & cons

### SOUNDCRAFT GHOST

#### pros

- No hints of amateurism about this budget-conscious professional console.
- Solo In Place as well as PFL.
- 2-band, fully parametric mid EQ.
- Mute groups and mute snapshot automation — and full mute automation is possible with a MIDI sequencer.

#### cons

- Routing, Cut and Solo buttons clutter fader area.
- Noisy power supply.
- No pre-fade foldback mix from monitors.
- Meter bridge is an expensive extra.

#### summary

If you want a console in your studio that looks the part, as well as does the work, then the Soundcraft Ghost is a must-see. As a cost-effective 8-buss console, Ghost wants for nothing.

**SOUND ON SOUND**

► The Ghost's input and output connections are on conventional TRS jacks, with XLRs for the mic inputs. The main outputs are ground-compensated, which in theory makes them compatible with both balanced and unbalanced inputs. Conventional electronically-balanced outputs need different wiring according to whether they are connected to a balanced or unbalanced input, which is inconvenient in the studio. The Ghost's inputs are all balanced, apart from the insert points, where the connector configuration does not permit it. In addition to the audio inputs and outputs, this console (but not the Le manual version) has a trio of MIDI sockets, and a timecode input and output, so there is rather more going on than simple mixing, as we shall see. But first, let's have a quick run down the channel strip — the pic on page 116 should help.

### CHANNEL FEATURES

A screaming vocalist into a high output-level mic? No problem for the Ghost, which will accept an input signal of up to +14dBu. When you consider that 8dBu is usually considered peak level (allowing for headroom) for line-level equipment, you realise you shouldn't have any distortion problems here. There is a phantom power switch for each mic

input, and a switch for line input, plus further switches for phase and a high-pass filter. The last of these has a cutoff frequency of 100Hz, and a slope of 18dB/octave, which is useful for cutting off the very low end of a bass boost applied with the EQ section proper. The filter is, of course, also useful for removing the standard problems of microphone pops and the results of vocalists kicking the mic stand during the best take!

Since this is an in-line console, the tape input appears in the channel strip, and there is a useful tape trim control. This comes in handy if you are using a particular sound very low in the mix, but you still want precise control over it on the fader. Just set the tape trim to a low value, and you will be able to operate the fader in a higher position. Tape trim is also useful when you have recorded a track at too low a level! A reverse button ('flip' on some other consoles) swaps the channel and monitor signal paths for mixdown. The insert point is pre-EQ, which is good for gating and not so good for compression, but you can always compress via the group insert point going onto tape. Every channel has an output to send signal to the multitrack, so the Ghost can handle as many tracks as it has channels. This output can be switched as a direct output from the channel, or routed through to the groups.

So far, everything is OK, but not exciting. The EQ section is where things hot up, almost literally. We have been asking for more, and Soundcraft have given it to us in the form of a 4-band EQ with two *fully* parametric mids. Fully parametric means that for each section, there are three controls, for gain, frequency and Q, Q being the sharpness of the filter. Generally speaking, a lowish Q (0.3 is low) is more useful musically, and a high Q (6 is fairly high) is good for picking out single instruments in a mix signal, or for correcting problems with the sound, such as mains hum. The

## SMALL THINGS MAKE THE DIFFERENCE: KNOB DESIGN

It may seem like a small point, but I think Soundcraft have designed the perfect knob. It has a distinctive pointer that extends all the way from the top of the knob to the bottom. This means that it is visible from whatever angle you look at the knob, and you can check precise settings without having to consider parallax. The gently curved surface of the knob is also perfect for marking with a wax pencil, which is useful

for live work, or for 'Chinagraph' mix automation.

I was a little irritated that the colour of the aux sends is very similar to the EQ level controls, meaning that I often grabbed the LF EQ when I wanted to adjust the reverb. However, the solution was simple — I just pulled off the white Q knobs and swapped them for the grey LF EQ level controls on all the channels!

## MOAN & WHINGE CORNER

I like to get my moans over in one go, because it's very boring and no-one likes a moaner. But if I tell you what I think the worst points are about this console, and you think, "Well, I can put up with those", then surely you will know that the rest of it is OK. For me, the Ghost's most annoying feature is the location of the routing, Cut and Solo buttons alongside the faders. A mixing console to me is a musical instrument, and if someone said I had to put up with a load of buttons in between the keys of my piano I certainly know what I would say back to them! Look at any top pro console, and you will see that the faders are either completely clear, or that only the low-profile automation buttons occupy the same space. Mixing is a process requiring care and precision, and clutter should be kept well out of the way. On a purely practical note, many engineers both in live sound and

recording mark fader positions with a wax pencil, and the room for manoeuvre here is very limited.

My other major moan is about the noisy external power supply. The only noise I want in my studio is the noise coming out of my speakers — that's my responsibility! All other studio equipment should be absolutely silent. Designers will insist that if the equipment doesn't have a fan, it will overheat. This may be true — but have they explored the limits that can be achieved by convection-cooled heat sinks? Have they tried to design quieter fans and perhaps employ the kind of noise reduction techniques that are used in studio air conditioning? Ticking hard disks are another contentious issue, but I am in no doubt where I stand. The Ghost's power supply cable is about seven metres long, which does facilitate mounting it remotely, but the manual warns against extending the cable further.

On a happier note, just as *SOS* was going to press, we heard that Soundcraft were already working on a replacement PSU after receiving some other comments similar to mine!

My third moan is directed not at the Ghost or Soundcraft *per se*, but the mixer industry in general, although the point was inspired by one of the Ghost's features: its insert points are wired with the ring of the jack as send and the tip as return. Many mixers now seem to be made this way (rather than having tip as send, which used to be more common), the idea being that you can use the insert point as an additional direct output by plugging in an ordinary jack halfway, rather than having to make up a special cable for the purpose. I'm not sure that I like the idea of plugging connectors only halfway, but since everyone seems to be doing it, we'll all have to get used to it!

Ghost's Q ranges from 0.7 to 6. I don't feel 0.7 is quite low enough to satisfy everyone, but this is a fairly minor point. A Q of 6 is about what you would get from a guitarist's wah-wah pedal, and I had a lot of fun simulating this effect on a track I was working on, by setting maximum Q and sweeping the frequency control rapidly up and down. I ended up with a sore wrist and the feeling that the controls were just a tiny bit too close together — but it was fun! Two mid sections like these are just what we need in a cost-conscious mixing console, but the high and low sections are quite standard filters at 60Hz and 12kHz, providing up to 12dB of boost or cut. Judging from the graphs in the manual, and what I can hear, these filters seem to have a gentle slope, which helps make them musical, but by the same token, it makes them less incisive in difficult situations.

Since this is an in-line console, the high and low sections can be split off into the multitrack monitor signal path. Quite often, the monitor mix can

benefit from a little bit of EQ to make it sound more like you know the final mix should. Also, when the monitor inputs are used as extra signal paths into the mix during mixdown, the versatility of being able to allocate your EQ resources as you wish, although not unusual, is certainly valuable. Finally in the EQ section, I'm happy to report that there is an EQ In/Out switch — something that's missing from too many budget consoles.

The Ghost is very well equipped with auxiliary sends; there's a total of 10 busses grouped as six mono and two stereo pairs. On each channel, you have to select whether to use busses 3 and 4, or 5 and 6, but that's fair. The way you handle foldback on the Ghost is unusual, and I'm not sure it suits my own way of working. Stereo foldback to musicians in the studio can be derived from three sources: the mixed stereo output (independent of the solo buttons), the monitor mix (Mix B), and Aux 1 (left) and 2 (right) — and these three sources can be mixed together. Although this offers a

# Soundcraft Ghost

► certain degree of flexibility, I don't think it is an ideal arrangement. For example, if you want to use the aux sends for foldback, you have to use both Aux 1 and Aux 2, otherwise the signal will only come out of one earpiece — unless you set up your headphone feeds to give you the same (mono) signal in each ear.

There are, actually, two foldback output sections in the console, but the fact that they have the same signal source options means that they are not as independent as they should be. I don't doubt there are workarounds, and that most engineers will find a method of using foldback that suits them, but I feel that a rethink is necessary here. I would also have liked to see at least one of the four effects returns route directly to the foldback for setting up quick and easy reverb in the headphones, which you can't do at present.

Moving on past the monitor section, which has level, pan, cut and pre-fade listen (PFL) in addition to the EQ and aux options mentioned earlier, we come to the fader section. The faders are nice and smooth for this class of console, and the solo and cut buttons are illuminated, which is an excellent feature. A Signal Present LED informs you when a channel has a signal at the input (great for live work), and a multi-point peak detector tells you whether the signal is approaching distortion at any point in the channel. Curiously, this LED will light if an extreme EQ boost is set but the EQ is switched out, so I assume it is connected to the EQ output. Perhaps it's good policy anyway to prevent distortion products buzzing around the console, even if they are not in the direct signal path.

Over on the output side, just to give you some brief information, the eight groups can be subgrouped to the masters either in mono or stereo (odd numbers for the left, even for the right). There are four stereo effects returns, with level and balance controls, PFL, and routing to all groups and masters. All the auxes have master level controls, of course, and PFL. The oscillator offers frequencies of 1kHz and 10kHz (what happened to 100Hz for analogue fans?). Talkback can be routed to tape, to the studio or to Aux 1 and 2. All that is pretty standard, but there's also a level control for PFL and a warning LED for Solo In Place (SIP) — both welcome after working with limited budget consoles (see the 'Solo In Place'

## CHANNEL STRIP KEY

1. XLR/Line switch.
2. Phase Reverse switch.
3. Input Gain control.
4. 100Hz high-pass filter.
5. Tape Input Trim control.
6. Channel/monitor flip button.
7. Shelving EQ channel/monitor switch.
8. HF and LF shelving EQ.
9. HMF/LMF EQ In/Out.
10. Parametric EQ (HMF & LMF).
11. Aux 1 & Aux 2 (and pre/post-fade button).
12. Aux 3 & Aux 4 (and channel/monitor switch).

13. Aux 3-4/5-6 switch.
14. Aux 7 control.
15. Aux 8 control.
16. Mix B monitor/channel switch.
17. Mix B level rotary fader.
18. Post-fade monitor mute.
19. Post-mute monitor pan.
20. Monitor PFL switch.
21. 100mm channel fader.
22. Post-fade channel mute.
23. Post-mute channel pan.

25. Solo switch.
26. Multi-point Peak LED.
27. Signal Present LED.

box for more information). Also welcome are the four mixable control room monitor sources — channel and monitor mixes plus two stereo sources. The control room output has a button for an alternate set of power amp and speakers, and there's the essential mono-check button, which won't cure your stereo phase problems, but will at least let you know when you have them!

## AUTOMATION & MACHINE CONTROL

This is the aspect of the Ghost that many people reading this review will find particularly interesting. Taking the machine control first, this is definitely a pro feature — the mighty SSL company was virtually built on it. Having machine control incorporated into the console means that you don't have to mess about with the controls on the multitrack itself, or have an autolocator box lurking inconveniently around the mix position — you can do everything, in theory, from the mixer. Soundcraft have taken advantage of MIDI Machine Control (MMC), which is rapidly gaining ground in audio circles at all levels of professionalism. Having said that, on some products, MMC just isn't

The Ghost's Foldback and Aux Return level controls, MMC control panel, and Group faders.

# Soundcraft Ghost

## TOGETHER IN SILENCE: MUTE GROUPS

Mute groups are the unloved, unappreciated and seldom understood feature of a number of mixing consoles. Put simply, mute groups allow you to select a number of channels and assign them to a button so that when this button is pressed, all those channels are muted. Two or four mute groups are common (the Ghost has four). Mute groups are a rudimentary form of automation, since you can carry out many more mute operations during a mix than you could possibly do individually, and you don't have to go to the trouble of programming a sequence of mutes — you just do it manually as the tape runs.

## MUTE AUTOMATION

Mute automation does half the work of full automation. If you record real instruments and voices, as opposed to synths and samplers, you will inevitably end up with a lot of rubbish on the multitrack tape — guitar amp hiss, singers humming and making other strange noises when they are not actually singing,

and sundry clicks, thumps and things that go bump in the night. If you are a connoisseur of all things analogue then you'll have tape hiss to contend with as well. Twenty-four tracks of tape hiss mixed together sounds like ocean surf! With mute automation, you can get rid of all these unwanted sounds without having to have lots of noise gates, and without all the time it takes to

set these up correctly.

An additional bonus of having mute automation is that it allows you to record more material than you need — particularly textural parts — and then mute out the bits that you don't want in the mix. When you have mute automation, and you become accustomed to using it, it is surprising how useful and effective this technique can be.

► implemented in a well-thought-out way. How about the sequencer, where once you activate MMC, you can only record on the multitrack, and not on the sequencer (which is precisely what you would most want to do)? Oh well, it's a learning curve for manufacturers too.

I was able to use the Ghost's machine control with both my Fostex RD8, and ADAT plus BRC. First of all, I had to hook up two MIDI cables between the multitrack and the console, and also a third cable for timecode (this machine stripes its own timecode,

software updates, a lot more might become possible.

The Ghost's mute automation is quite easy to use, even without the manual. To perform simple manual mute grouping, all you do is set up the mutes on the faders, then allocate that setting to one of the four buttons. That setting will be recalled simply by pressing the button. If you want to go further, up to 128 mute snapshots can be set up and automated against timecode. This isn't actually what you would call mute automation (which works on an individual channel basis), but it is certainly extremely useful, if slightly more complicated to set up than the mute groups. Full mute automation is available if you use a MIDI sequencer — the mute on/mute off messages are then transmitted as MIDI Note On and Note Off messages. Ease of mute

information editing, therefore, depends on which sequencer you're using — and some sequencers also have a limit on the note lengths they can record, which could pose a problem. Finally, for committed MIDI users, four of the group faders can be designated as MIDI controllers. This is great, but of course you lose four group faders, so maybe separate MIDI faders would have made more sense.

## VERDICT

Of the consoles I've looked at recently, the Soundcraft Ghost has come closest to replacing my 1988 vintage crosstalk generator — sorry, mixer — and I think that it is only my finickiness about the buttons around the Ghost's faders that might put me off. I found the sound quality and overall usability of the Ghost to be excellent, and superb value for money. What's more, people don't come to my studio any more and say, "Where's the mixer?". They know a professional piece of kit when they see it. 'Nuff said!

SOS

*The Ghost's connectors and back panel, including MIDI sockets.*

## GHOST COSTING: THE PRICES IN FULL

As mentioned elsewhere in this review, the Ghost is available as two different models; the Ghost Le (with no automation), and the automated standard version under review here. Both these models come in either a 24-channel or 32-channel format, resulting in complex pricing arrangements. All prices given here include VAT, and the cost of the power supply.

### GHOST Le

- 24-channel version £3877.50.
- 32-channel version £4700.

### STANDARD GHOST

- 24-channel version £4465.
- 32-channel version £5287.50.

### OPTIONAL ACCESSORIES

- 24-input expander module £TBA.
- Meter Bridge: 24-channel version £634.50; 32-channel version £740.25.
- Stand: 24-channel version £428.88; 32-channel version £440.63.

but the Ghost has a timecode generator, should you need it). I followed the instructions carefully, and set the machine type from a longer list of machines than I would have expected (including Alesis ADAT with AI-2 or BRC, Tascam DA88, and Sony 9-pin for video machines) — and then I was ready to go. If I point out what actually happened in my situation, bear in mind that with other multitracks, you might get different results. I found that I was certainly able to play, wind and record as normal, and I could see the timecode coming back from the machine in the Ghost's display (even in fast wind, since the RD8 can throw out timecode when winding). I could arm tracks (the Ghost can control the arming of up to 48 tracks!) and drop in and out of record. However, the one thing I couldn't do was shuttle with audio. If you have a hard disk-based multitrack, you should be able to use the Ghost's scrub wheel, but do check out features that you think will be important to you. The Ghost has four locate positions, which can, like other data, be stored via MIDI dump (unfortunately, there is no floppy disk drive). A 4-position locator doesn't sound like much, but it's certainly enough for me — I have 100 positions available on my RD8 and I never use more than two! My own eventual conclusion, based more on hands-on use than analysis, was that I was better off with the RD8's remote. You might feel differently, and since the Ghost has a port to attach a PC for

SUGGESTED RETAIL

**I**f you're already familiar with the Internet, you'll know that using it is often rather more like wading through treacle than shooting the curls off Malibu. Still, for musicians, it's an incredible source of information, help and advice, from basic manufacturer promotional pages featuring product information and prices, to newsgroups dealing with the nitty-gritty of modifying vintage synths and tube amps. This is not to mention the numerous band and artist home pages, both unofficial and band-maintained, which can make a diverting read. Finding all this stuff can be a bit of a pain, though, especially at the wrong time of day — during the evening, when

telephone calls are cheap in the UK and most people are home from work, it's lunchtime or early afternoon in the States, and busy enough to really clog up the Internet, reducing the rate at which you can access and download information. A list of relevant sites can speed up the process considerably, saving you the trouble of having to scrabble around with a search engine. What follows is the result of *us* scrabbling around with a search engine, looking for pages we found interesting or useful, with lots of links wherever possible. Happy wading!

#### ROLAND US

<http://www.rolandus.com/>

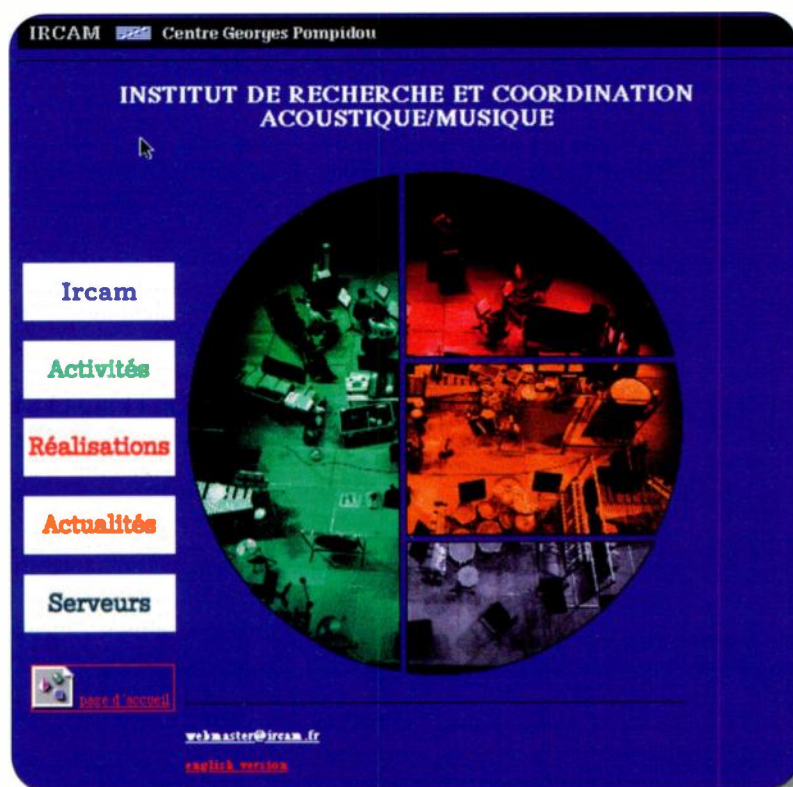

At the time of writing, the Roland UK web site (<http://www.roland.co.uk>) was under construction. If it's still unfinished by the time you read this, check out the American Roland page in the meantime. This is a well-designed, comprehensive resource, with a full Roland product index, and specifications and features lists for the latest in Roland gear. *RUG Online*, also featured here, is the electronic version of the American Roland User Group magazine, which isn't bad as this type of mag goes, and lots of its articles are up here. There's

not much in the way of 'how to' features, which is what we all want, but it's still a fairly good read. Worth a mention is the useful Web Toolkit area, which features browsers, audio compression utilities, and audio/video playback applications, all available for downloading. There's also a whole list of Netscape

*The Internet contains far more information than you could hope to assimilate in one lifetime — the problem is finding things you actually want to know about! In the first of a two-part series, DEREK JOHNSON & DEBBIE POYSER don their Tour Guide badges and present a musician's guide to interesting World Wide Web sites...*

# Surfin' Safari

## Music & Audio Sites On The Internet

IRCAM: it's French, but it's fun...

plug-ins, and in a real spirit of impartiality, Roland US even provide a link to Yamaha's *MIDPlug* software synth plug-in for Netscape Navigator!

#### STIRLING AUDIO

<http://www.stirlingaudio.com>

Leading hi-tech retailer and distributor Stirling Audio's site is one of many on-line catalogues available on the net. It's clear and easy to navigate, featuring a full product guide for gear available through Stirling, with features lists and prices. The really neat thing, however, is their list of ex-demo gear and asking prices — recently, an Alesis ADAT digital 8-track was going for £1200 plus VAT, while an Emu ESI32 sampler was up for grabs at £750 plus VAT. The list changes regularly, and if you want to declare an interest, or simply get more info about a particular item, you just leave your details and Stirling will respond.

#### ANALOGUE SOLUTIONS

<http://www.channel.co.uk/analogues/>

Vintage gear MIDI retrofit specialists Analogue Solutions accompany their on-line catalogue of what they can supply and what they can modify with hints and tips, and an extensive list of gear manuals they will photocopy for you. So if you've lost an essential manual, or bought a synth without one,

this is a quick way to remedy the deficiency for between £5 and £15. For the more ambitious, service notes or manuals for various machines are also on offer, though these can cost up to £35. If you're prepared to poke around a bit, this is a useful site, with explanations of analogue synth terminology, the whys and wherefores of MIDI interfacing, and prices for many different mods — for example, adding a CV input for the VCF, an audio input, and a pulse output for the ring modulator of a Roland SH101 will cost you around £20 for a kit, or £39 fitted.

## KENTON ELECTRONICS

<http://www.kenton.co.uk/>

Kenton are well known in synth circles for their respected MIDI retrofits and their Pro Solo, Pro 2, and Pro 4 MIDI-CV converter boxes. From their web site, you can download a comprehensive Kenton info pack, and if you've bought one of their interfaces second-hand without a manual, you can even download one of these! The site gives full info about their MIDI-CV interfaces, including colour pics, plus a list of possible MIDI retrofits and their prices. There's also a fun page full of quotes from famous Kenton users, with pics, a Kenton dealer locator, and a page of links. If you've just bought (or are about to buy) a pre-MIDI instrument, this is a good place to check out the likely cost of bringing it into the all-MIDI '90s, and even if you're sorted on the MIDI front, it's still worth a browse.

## THE TB303 HOME PAGE

<http://www.infomaniak.ch/~trz/TB-303/tb303.htm>

Billed as the "reference pages for all silver box freaks", this beautifully-presented site is personally designed and maintained by a Geneva-based Bassline nut. This is *the* place for all things 303 — including full descriptions and reviews of all the TB303 clones on the market (and there are more of these than are dreamt of in your philosophy, Horatio...), reviews of synths featuring 303 sounds, patches for making 303-style sounds on other synths, 303 mods and tips, info on backing up the Bassline, and schematics and service notes to download. You can even vote for your fave 303 track and artist, if you're that sad... And did you know that a chap called Woody McBride is currently touring the US with a 303 'orchestra' featuring 12 TB303s playing together? Stranger still, there's a link for a group of Slovenian bassheads who are intent on inducing Roland to rebuild the original TB303 by getting up a petition (or using whatever means become necessary...)

## MUSIC SEARCH

<http://musicsearch.com/>

This site is basically an on-line reference for all things musical. There's a huge MIDI resource list here, including stuff like a complete SDS (Sample Dump Standard) specification, and worldwide instrumental archives: all sorts of hi-tech instruments are listed, with links to other sites. Also on offer are CD reviews, genre and artist areas, and a Music Reference section that lists sites or groups that have educational or technical materials available — schools, institutions, theory, technology

and music history are just some of the fields covered on this excellent site. The Music Commerce area covers goods and services related to music, including record labels, distribution, management, mail order, promotion, production, and studios.

*Whip it into shape: check out Devo mainman Mark Mothersbaugh's home page.*

## IRCAM

<http://www.ircam.fr/>

This site is the virtual alter-ego of its illustrious parent, the French electro-acoustic music research institution housed beneath the Georges Pompidou centre in Paris. As you'd expect, it's well-designed and nicely interactive. However, as you'd also expect, it's French. There are English pages, but these are being revised at present. Still, the virtual tour of IRCAM (featuring a map of its various rooms and studios, which you click on to go to a photo and text) is intriguing enough to get you wrestling with that rusty school French... Visit the Synthesis Analysis room, for example, and you can read the story of how IRCAM helped the producers of the film *Farinelli: Il Castrato* to reconstruct the voice of a castrato singer. Since castration is now fortunately illegal and the last western castrato died in 1902, they didn't have a lot to go on. Still, by cleverly blending the voices of a counter tenor and a coloratura soprano, as only IRCAM know how, they produced something which is believed to be pretty close. ▶

## THE SEARCHERS: FINDING WHAT YOU WANT ON THE WEB

Although this article will hopefully save you from searching around for useful music sites for a while, you'll probably have other interests which you'll also want to explore on the 'net. With millions of pages on the World Wide Web, you'll soon be glad of the various Internet 'search engines' that are available. These are central registries of web pages, which allow you to search — for free! — via keywords; the engine then gives you a list of URLs (Uniform Resource Locators — in other words, web addresses) that correspond to your search terms. This can be a

list many hundreds long, although the most likely choices are usually near the top of the list, and most engines give you the option to refine your search in some way so that really irrelevant pages are filtered out. The most popular search engines are *Alta Vista* (<http://www.altavista.digital.com/>), *Yahoo* (<http://www.yahoo.com/>) and *Lycos* (<http://www.lycos.com/>), although there are others — you could search for 'search engine', if you like. Try them all out: they each work in different ways, and can produce different results.

When using a search engine, you'll often come across links for pages that are no longer active, or which have moved or changed their name. In the case of moved sites, webmasters sometimes leave notices at old URLs pointing you to a new location, but not always. One useful tactic that may help when a URL comes up as not available is to progressively remove sections of the URL, between slashes, from the end of the address, until you're left with a URL that downloads a page. If you're fortunate, there will be some indication of where the page you're looking for is now located. If not, it's back to the search engine.

# Music & Audio Sites On The Internet

## BAND BOX

Some of the sites mentioned here are official band pages, while others are decent fan home pages. Some have been listed mainly because they feature good links to other relevant band/artist sites.

## MUTATO MUZIKA

<http://www.mutato.com/mutato/>

Devo are perhaps best known in this country for *Whipit*, their freak hit in the early '80s. However, the band made a lasting, if cultish, impression, with many current dance and techno artists citing them as an influence. No surprise, then, that the band have quite a presence on the Internet. A trawl through various Devo fan-run web pages (Devopolis, at <http://www.unix.oit.umass.edu/~vndibere/devo.html>, and Spudland, at <http://www.nfinity.com/~nutra/spudland.html>, for example) always leads to Mutato Muzika, the page

run by Devo mainman and *Rugrats* animation theme composer Mark Mothersbaugh. This site looks good, but its graphics-heavy nature means that it can be a bit slow to load. The wait is worth it, though, with the end result of a tour of the Mutato studio, loads of Mark's pictures, details of Mark's label, MutMuz, plus audio samples to listen to. There's also info on Devo activity — including recent reunion gigs. The spuds appeared on five dates on the latest Lollapalooza US tour at the end of July, and performed at the Sundance Film Festival (this gig may be released on video). The site also features the Mutato store, where you can buy Mark's latest music, plus Devo CDs and merchandise.

## MUSIC MACHINES

<http://www.hyperreal.com/music/machines/>

This site was originally an ftp (file transfer protocol) archive for the Analogue Heaven mailing list, and to an extent still feels like it, but it's evolved far beyond its original purpose, featuring loads of synth info and pics. Instruments past and present, from ARP to Yamaha, manufacturer and distributor lists, and famous name gear lists (including some past *SOS* interviewees) are all there, and there are specs and features lists, details of DIY mods, and info of all kinds for synth bods. One especially fun feature is a 'what synth is right for you' questionnaire. The associated Analogue Heaven mailing list is well worth a trawl — you can read postings and replies on all aspects of analogue, including some pretty mad stuff — we quote: "Now sit still and I'll explain it to you. Analogue is *good*. Digital is *bad*. People who use analogue are *good*. People who use digital are *bad*. People who use digital to emulate analogue are *very bad*. People who use both analogue and digital are *bad*. People who use analogue but speak of digital are *moderately bad*. People who switch from digital to analogue are *glad*. People who switch from analogue to digital are *mad*. People who yearn for digital are *sad*. People who construct digital are *bad*. People who construct analogue are *rad*." If you think you can take it, the mailing list is full and well-organised, with a keyword search engine. Search on 'modular', for example, and you can discover the astonishing fact that Batman invented modular synthesis, find out about building your own modular, and so on. Loads of stuff!

## THE WENDY CARLOS HOME PAGE

<http://www.apocalypse.org/pub/u/wendy/>

Fans of early electronic music should not miss out on this site, which features a biography and discography of pioneering composer and synthesist Wendy Carlos, whose works include *Switched-on Bach* and the soundtrack to the early computer-animated movie *Tron*. But there's more on these detailed and great-looking pages, including a photo archive, examples of Wendy's artworks, and an open letter from Wendy in which she talks about

<b>£295</b> EX VAT 300 P&H	VI-S 8 Channel Switching Unit

## TWO SERIES ONE PHILOSOPHY

Choose a valve signal processor from TL Audio and you're assured outstanding quality and the acclaimed warmth which only TL Audio Valve Technology can deliver.

The question is, which series to pick - Indigo or Classic?

Not an easy choice, as they both offer a combination of superb design, quality manufacture and unique sound.

It's more a question of application.

The Indigo range offers intuitive, easy-to-use valve processing at an incredibly affordable price, whilst the Classic products feature superb on-board mic pre amps and unparalleled control of all signal parameters.

The choice is yours!

**Alex Marcou** - Abbey Road Studios (House recording engineer) - "The VI-1 makes hard sounding digital sound like cosy, rounded analogue - a joy to listen to. The control that the EQs, Pre Amps & Compressors give is excellent."

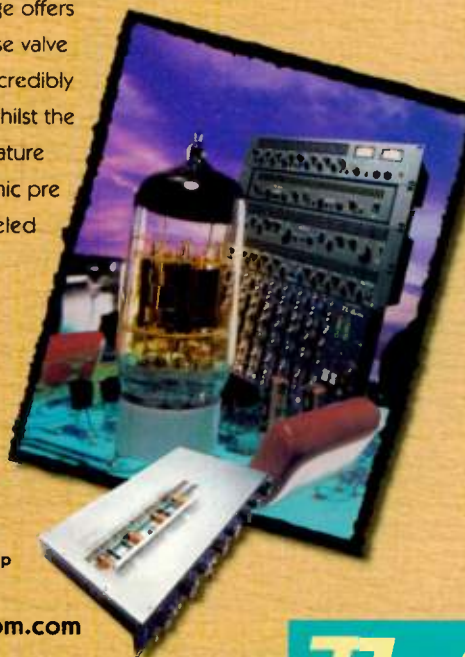

**Andy Jackson** - Pink Floyd (Sound engineer) - "All the lead vocals on the 'Division Bell' album mix were run through the EQ-1 - I certainly prefer the EQ-1 to other Valve Equalisers for vocals. The new EQ-2 is probably the best all-round EQ I've ever used."

**Chris Porter** (Producer - Take That) - "I bought one of the first EQ-1s and I've enjoyed using it immensely. It gives a unique quality to the vocals in particular - Take That's 'Back For Good' is a typical example of the EQ-1 adding depth and presence to a vocal track."

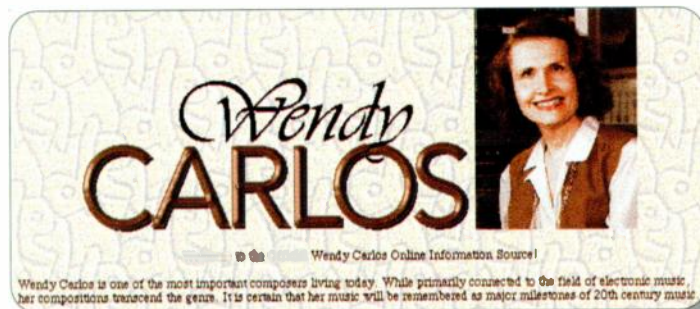

**Tom Lord-Alge** (Dual Grammy Award Winning Engineer) - "The Indigo 2011 EQ has given me the ability to EQ with clarity, rather than just tone. I find it to be very musical. Any problem sound I have come across, I patch in the 2011 and it allows me to add depth and clarity."

**Stephen Croes** (Producer, Arranger, Engineer, Fleetwood Mac, Kenny Loggins, Jennifer Warnes) - "The Indigo 2011 EQ and 2021 Compressor are exceptional - both responsive and flexible. I can stomp or be subtle, hype a sound or just detail it. These are real tools for any level of music production."

# TL Audio

# Music & Audio Sites On The Internet

Read an open letter from this influential electronic music pioneer on the Wendy Carlos home page.

- the nature of sound and composition, musical equipment both analogue and digital, and her past and present work. You can even email Wendy, though you probably won't get a reply... Still, here are all those little things you probably didn't know, such as the fact that Wendy develops sounds for Kurzweil instruments and prefers MOTU's *Digital Performer* for sequencing. Well, we thought it was pretty neat...

## AUDIO & MIDI SITES

### • PRO AUDIO WEB

<http://soundwave.com/>

This site is aimed squarely at pro audio users, featuring professional gear news, a diary of worldwide audio exhibitions, product information, a list of industry organisations and commercial studios, and an online shop. The best section is probably the news, since as well as the up-to-date info, there's an archive featuring releases from recent months. These are in the form of shortish, spec-heavy items, which can be useful. The site still wants work, as some of the listings are rather incomplete, but it looks good, is easy to navigate, and has potential.

### • AMPAGE

<http://www.aros.net/~tboy/ampage/ampage.html>

Tube amp nuts should head here for a fix of all things valve guitar amp-related. There are tech

This "tiny corner of the web is devoted to the design, construction and use of music electronics." Jack provides loads of schematics, of both commercial devices and circuits of his own designing, and again, links to other sites.

### • HARDWARE WEB:

#### MIDI HARDWARE PROJECTS PAGE

<http://homepage.cision.nl/~nctnico/midi.htm>

This is an excellent page featuring loads of DIY MIDI projects with full diagrams, PCB layouts, and instructional text. Projects there for the making include an Amiga MIDI interface, an ultra-cheap PC MIDI interface, a MIDI merger, MIDI keyboard, MIDI tester, MIDI switcher, and various interface cables.

### • SURREAL TO REAL HOME PAGE

<http://www.netlink.co.uk/users/surreal/index.html>

SOS contributor Paul Ward has two albums on the British Surreal to Real label, which is devoted to electronic music. Their home page, as well as featuring full label and artist info, has some useful links and even better, an extensive used equipment for sale/wanted section.

### • CHRIS KENNEDY'S AUDIO LINKS

<http://www.egr.msu.edu/~kenned11/Dig-Aud.html>

This page is worth mentioning because of its good, straightforward selection of links to digital audio and recording sites.

### • MIDIFARM

<http://www.midifarm.com/>

Midifarm looks great, navigates easily, is updated regularly, and is stuffed with useful information on all kinds of MIDI and audio-related subjects; there are synth resources and loads of sounds for different instruments. There's also a good 'For Sale' section, but since the site is American, this may be of little use to UK musicians.

## AMPAGE

tube amps / music electronics

Comments	Annex

Get all warm and fuzzy on Ampage.

tips, resources, tube gear questions and answers, schematics, DIY stuff, and loads of links to other similar music and electronics sites, with the emphasis on guitar amps/tubes.

### • JACK ORMAN'S DIGITAL MUSIC ZONE

<http://members.aol.com/jorman/index2.html>

## THE THEREMIN HOME PAGE

<http://www.telalink.net/~theremin/>

Fans of even earlier electronic music will be jumping straight to this page, dedicated to that 1930s eerie noise-maker, the theremin. Against all odds, this unusual instrument is undergoing something of a renaissance: not only is synth pioneer Bob Moog concentrating on the instrument with his current company Big Briar, but the BBC even featured a theremin performance in this year's Proms. For sheer weight of useful information, it would take a lot to beat this site. It features a

## The Theremin Home Page

**The Theremin**  
Invented in 1919 by Leon Theremin (1894-1993), this unique instrument is still popular today in experimental music circles. The theremin is played by waving one's hands near two metal antennas: one for pitch and the other for volume. The antennas vary the frequency of two continuous tones. To create the sound, a third oscillator is mixed with the variable pitch oscillator and their difference (or beat frequency) is amplified.

This page is dedicated to the Leon Theremin and his wonderful contributions to electronic music.

**Table of Contents:**

- [Frequently Asked Questions](#) - Learn more about the virtuoso!

Good vibrations: check out all things Theremin here.

comprehensive history, availability, build-it-yourself instructions with details of parts sources, a theremin bibliography, known recordings, bands currently using the instrument, where you can see them, classifieds and photos. One ongoing project is the location and documentation of all extant original RCA theremins from the '30s, whether in museums or private hands. There is also an associated newsgroup ([alt.music.makers.theremin](mailto:alt.music.makers.theremin)) and links to other sites on the Internet. This is how a Home Page should be done, and the 27,000 surfers who have visited the site in the last year will probably agree.

## AKAI

<http://www.akai.com/akaipro/index.html>

Although based in the States, this site has a welcome international feel. Not only are comprehensive details on the Akai product range provided, along with spec, latest software versions, news, reviews, tips and customer support, but a nifty worldwide dealer locator tells you in an instant where you can audition or buy Akai products in your territory. A selection of free

# Music & Audio Sites On The Internet

- samples, which changes regularly, is available to download.

## SYNTHZONE

<http://www.synthzone.com/>

This is a handy synth resource offering a central jumping-off point for links to, and useful information on, anything to do with synths, old or new. If you're looking for sounds, info, or PD/shareware editors, this is a good place to start.

One great link, of special interest to Mac users, is the Twin Cities MIDI Home page (<http://www.cs.umn.edu/~fischer/Midi/index.html>). This features lots of Mac-specific MIDI stuff, including utilities that allow you to translate SysEx files in arcane PC formats to something you can use with your Mac software — invaluable if you're downloading banks of sounds for your synth, or samples for your sampler, and can't get anything to recognise them.

## MANUFACTURERS/DISTRIBUTORS

We're sure that we haven't managed to include every manufacturer or distributor who currently has a web site, though we did try. If you're one who's been left out, we apologise in advance. Send us your details and they'll be included in a future issue of SOS.

### NINJA TUNES HOME PAGE

<http://www.southern.com/PIPE/coldcutthp.html>

The Ninja Tunes record label is the brainchild of pop partnership Coldcut, who began releasing their own and other artists' material through it when their former label allegedly declined to promote their then-current album (see the home page for more). This funny, informal site features full info on all NT artists, including a Coldcut biog and production credits, plus the pair's forthcoming DJ-ing dates. Coldcut's '10 Classix Cuts' tell you what you should be listening to, and there are lots of other selections of funky stuff to seek out, picked for you by a wide variety of artists. In the spirit of Kleptomaniac (Coldcut's own sample collection) there's also a list of downloadable 8-bit, 22kHz samples. Be careful what you do with these, though — they don't appear to be cleared for commercial use.

### THE SIMILARITIES ENGINE

<http://www.ari.net/se/>

This site is at least good for a laugh, and might actually yield something useful if you're on the lookout for more fodder for your CD player. The idea is that you key in the name of a band or artist whose music you like. Using information based on a survey of 18,000 music fans on the net, the Similarities Engine then comes up with a list of other bands or artists you might also like, with a

You'll like this...

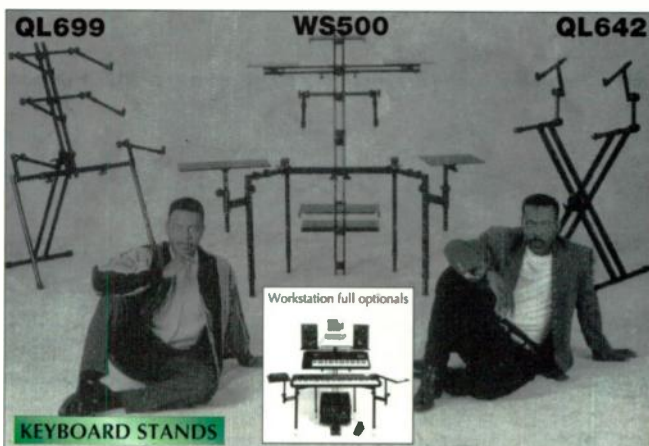

'Confidence' rating of low, medium, high, or very high, for each. Sometimes the results are quite accurate and plausible — keying in Erasure, for example, brings up a list of choices which includes Electronic, Pet Shop Boys, Alison Moyet, New Order, Depeche Mode, and OMD. Sometimes, though, the suggestions are head-scratchingly bizarre: offering the name of American songstress Aimee Mann, for instance, brings up 'Rush', with a high Confidence rating. Mmmm... Still, it's a fun way to spend 10 minutes.

SOS

Next month, in the second part of this feature, we'll continue our trawl across the Web, bringing you more music-related site info, including the addresses for record labels and music industry organisations. But for now, it's back to the virtual surfboard...

### BLACK II BLACK KILLER VOCALS

A double CD set from AMG rammed full of Murderously, Deadly digitally recorded vocals.

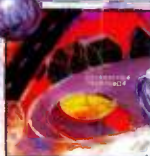

Created by McIntosh & Charles of 'Black 2 Black' fame, these CDs contain all the vocals you'll need to make slamin' tracks. Unlike ALL other Time+Space sample CDs 'Killer Vocals' is NOT license free for commercial use (call for details). However like Black II Black 1 & 2 this is a truly inspiring collection. Double Audio CD £59.95

### JUNK PERCUSSION

To the percussionist the world is a different place. Everything can be used to make a sound, and renowned percussionist

Roger Turner has the vision to play instruments and objects from the everyday and throwaway, creating exciting sound and rhythm. This highly respected Junkyard Shaman has played a superb collage of rhythms, textures & fills which will inspire and prove invaluable in all areas of music production. 'Oddly wonderful' (FutureMusic Aug96) Audio CD £59.95

### CUCKOOLAND UNHINGED

Are CuckooLand Insane? Reality is strange and this incredible selection of rhythms, textures and FX will have you making

music in very new ways. Grooves from 67 to 170 bpm provide rhythmic backing unlike anything you have heard before, the textures and FX are not of this world. This collection is ideal for all - from Trip Hop to Film - new styles of music will definitely evolve from this great CD! CuckooLand is our state of mind. Audio CD £59.95

### THE ULTIMATE PIANO COLLECTION

New from East-West: Four of the finest pianos ever built. Steinway D, Steinway C, Fazioli F228, and Bosendorfer 225. Every key sampled in various attacks, with and without sustain pedal. The best Piano

CD-ROM available - and the best possible with today's memory capabilities. \$260,000 worth of grand pianos ready to play - on a silver disc. Come and demo this amazing disc and we're sure you'll be convinced it's the best. ★★★★★ 5 stars "This is undoubtedly a true professional's product" (Sound on Sound magazine). Available on AKAI CD-ROM: Vol.1 (all 4 pianos): £249.00. Vol.2 (Fazioli & Steinway C): £149.00. Vol.3 (Bosendorfer & Steinway D): £149.00

### SAMPLE MATERIAL

Sample Material is a sonic collage from the sound libraries of visionary New York producer Bill Laswell and the 'Material' cadre

containing Loops, Textures, Riffs, and Single Sounds. Atmospheric Ambiences, TranceScapes, Ethnic Loops & Riffs, Metaphorical Grooves & Kaos. A Sampling Product covering the broadest spectrum of musical genres. Ammunition for all Sonic Wizards who want to create music with no boundaries. "EVERYTHING IS PERMITTED. NOTHING IS TRUE." Audio CD £59.95, AKAI CD-ROM £149.00

### BURNING GROOVES

Finally, an entire library devoted to raw, aggressive, in-your-face energy. Blazing, all-original live drum grooves laid down by L.A. slammer

Albe Labriola Jr. (Seal, The Raging Honkies) with extreme remixes by producer Eric Persing (Distorted Reality, Bass Legends). The CD-ROM version is tremendous value. It includes the Audio CD for instant groove auditioning, and the incredible SMOKIN' KITS drum library. If you're looking for attitude, search no further. Where there's smoke, there's fire! Audio CD £59.95, CD-ROM (Akai/EMU ASR, Roland, Kurzweil, Samplecell) £149

### DRUM DOCTOR II

With over 1500 new samples, Ross Garfield has dramatically

raised the standard even higher for this sequel to "The best drums on Earth". Even better sounds, more takes per instrument, 5 dynamic levels and more programs. Audio CD £59.95; Samplecell & Kurzweil £199.00

### THAT JUNGLE FLAVOUR

New from Zero-G and EXTREMELY HOT! Flavours from every tree in the Jungle - Intelligent, rough, hard, steppin'

breaks and FX for today's Drum'n'Bass samplers. Over 350 new transformed breakbeats and 600 of the latest stabs, pads, noises and FX make this library the most extensive Jungle collection to date! "That Jungle Flavour sure tastes good to me" THE MIX JULY 1996 Audio CD: £59.95

### XX LARGE MOST WANTED

The Rhythm Box is back with a vengeance! Over 2500 of the original preset drumloops from 37 classic analogue

drumboxes including Roland, Korg, Elka, Farfisa, Hammond, Casio, Univox, Wersi and many more..... All loops are tuned exactly and bundled in speeds of 80 to 160 bpm. Double Audio CD £59.95 CD-ROM (Akai/Emu, Roland, Samplecell) £149.00

### TRAVELOGUE 1

1000+ samples of ceremonial drumming, male & female chants, musical bows, hand

clapping, funeral xylophones, royal horns, choirs, grinding songs, crying widows, village noises & much more. A trip to Africa? - Pack your bags! Audio CD £59.95

### LOOPZILLA 2

This new sequel features over 2 hours of Hip-hop, R&B, and Funk samples. "Loopzilla 2" combines the best

elements of programmed grooves & live playing with new melodic and funk elements. Tons of Slo' Jamz, R&B and Hip-hop from Atlanta, Miami, New York & Oakland. £69.95 for this red hot 2-CD package.

### Deep Inside - Tim Farris

From world famous INXS guitarist Tim Farris comes an awesome collection of guitar samples, drum

loops, dialogue, fx, Hitz and more. This has taken over four years to compile and has many of the most treasured samples from his personal collection. Brilliantly produced, this CD is packed with goodies for all sorts of compositions. Audio CD £59.95

### LOOPMATIC

This superb tool is specifically designed to provide a fast and flexible working environment for analogue sweeps, effect loops, digital sweeps, RND loops & drum sweeps. Each sound

has been sampled with it's filter cutoff set at 32 different levels, so there are literally thousands of ways the sounds can be used, from creating smooth sweep effects in random choppy sequences. 320 different categorised sounds are included on this mixed-mode CD, containing an Akai CD-ROM section with over 10,000 samples!! Mixed-mode Audio/Akai CD £59.95

### ALI-BABA & THE 40 RAVERS

The Orient offers a massive range of beautiful instruments and percussion that can be used in many styles of

music, and this new library captures just about all of them from Tunisia, Iran, Iraq and Turkey! Hot off the press, this double CD contains phrases, individual notes and hits of instruments, percussion, turkish orchestras, moving atmospheres and oriental choirs. Call for more details!! Double Audio CD £59.95

### MEGATON BOMB

Five star review - "An almost ridiculously complete 2-CD package of loops, drum hits and other assorted goodies -

everything from construction kits containing multi-layered arrangements to drop-the-needle turntable noise, from TB303 Bass riffs to Sci-fi dialogue. If they let us give 6 stars for selection, this package would have scored even better. ★★★★★ (Keyboard USA). The collection features ambient, hardcore, trance and techno on a 2 disc set for only £69.95

### DANCE MEGADRUMS

4500 well-organised samples, 90 complete and different Drum machines as well as ultra rare analogue Rhythm-boxes

with several sound variations. Also 1500 latest dance Drumsounds (BDs, SDs, Hats, Percs, Analogue Drums and Perc). 400 Mb ROM part. All Drum machines laid out in keygroups, ready to play. Available as Double-CDs mixed mode Audio/Akai CD-ROM. Only £59.95 !!

### TOTAL CONTROL

The worlds first sample-CD with realtime-filtered & arpeggiated analogue sounds. Total Control

makes a brand new analogue synth out of your sampler with 4500 spanning new sounds, fractal loops & inspiration sets, all on a mixed-mode double CD-ROM including a 500mb Akai section!! Mixed-mode Audio/Akai double-CD £59.95

### FLAMENCO SOUNDS

Recorded exclusively in Spain. A wealth of rhythms and flavours in true Catalonian style by original, respected, Flamenco musicians (inc

Ketama, Tino De Geraldo and Pedro Andrea). Guitar rhythms, Male & Female vocals, tapping feet, castanets, & Cajon rhythms. BPMs and key references are included where necessary. fabulous Flamenco guitar patterns thoughtfully arranged and exquisitely produced. (The Mix June 96) Double Audio CD £59.95

### DEF HOUSE

Brand New! Dedicated specifically to House music production, this high-profile storm from Universal Sound Bank in

France hits its target squarely, focussing mainly on loops, you'll find it delivers tons of top-class material for all kinds of house music. We expect this one to enter the hall of fame! Definitely not to be missed. Available NOW in four formats. Audio CD: £59.95, or choose a version formatted specifically for Akai, Roland, or Ensoniq samplers - £149.00

### ABRACATEBLA

New from AMG: produced by Talvin Singh (one of the leading exponents of UK ethnic fusion, who works with top acts like Massive Attack & Bomb The Bass). A huge selection of mostly ethnic percussion. Highly contemporary ensemble

grooves with extremely intricate, tight performances, broken into various mixes/combinations/sounds. There is also a section of solo patterns complete with very comprehensive sets of single hits. "It's not surprising that Abracatabela took three years to complete. This is one inspirational CD from one very talented geezer." Future Music April 96 Audio CD: £59.95

### VINYLISTICS 2

R&B/Jungle/Trip Hop - whatever the trendmakers call it - it all comes down to the Right Flavor of the Grooves. Many future

styles will probably rely on breaks like this. Tons of Grooves, Hits & Loops to give you a unique feel for Raregrooves. Produced by PHAT FABE aka Fabian Thorsson (Nene Cherry & Shabba Ranks). Tempo-maps provided (plus MIDI-files on CD-ROM version). Audio CD: £59.95. CD-ROM (incl audio CD): £149.

### ALPHADANCE II

2 CDs featuring 90 minutes of audio & 300Mb CD-ROM section - all for only £59.95. House & techno organs, Strings, Sequencer lines,

Combination Pads, Attack Banks, Vocals. Acoustic Percussion Loops & Drumloops, Rave Bases (multisampled, with short demos), Dirty Loops, Lead & Hook Synths, Transformer sounds, Synth Drums. The CD-ROM section has everything mapped, in keygroups, ready looped, ready for takeoff. 2 CD set including 300Mb Akai CD-ROM: £59.95

### SYMPHONIC ADVENTURES

New library of orchestral samples from Everglades in France. As soon as we heard this superlative disc we knew it was a winner. Explores the

darker side of the orchestra. Perfect for film composers or for any music that needs powerful stings, effects, phrases, suspense, moods, etc. A truly huge set of immaculately performed and immaculately recorded stereo samples. This tremendously versatile orchestral library will not disappoint and we recommend it highly! Audio CD: £59.95, CD-ROMs (coming soon): £149

### 96th Street by BLACKBEAT

O.D. Hunt's sequel to his successful 'Freekee Jack Swing' CD. This CD follows a similar format, but concentrates on the split loops and adds a large

selection of individual sounds on top of these. The loops are divided into three styles - Rap Street Loops, Future Funk Street Loops, and Caribbean Street Loops. Each loop features four alternate versions, a standard drum loop, one with bass, another with vocal fx, and lastly with everything together. This sequel will not disappoint. "Swingers, jammers, funksters and slammers should find hard to resist" - Future Music APRIL 1996 Audio CD: £59.95

The XXXX-Largest CD ever?? 4800 samples from the now deleted X-STATIC GOLDMINE 1 and XL-1. If you don't own these two classics then this new CD is essential! All of the 600+ loops are now tempo-mapped for ease of use. Choose either format at the same price!!! - Audio CD, or Akai S1000 CD-ROM. At £59.95 it's got to be one of the best value dance CD-ROMs ever. "In the 'pound per sample' challenge, nothing else comes close" Audio CD: £59.95. CD-ROMs: only £59.95 !!!

**HEART OF ASIA**  
This product got a 5 star review in every magazine in UK, US & Germany. One of the most comprehensive collections of Asian instruments & phrases. Digitally recorded in the field, this remarkable 2-disc set includes over 1 gigabyte of ethnic Chinese, Malay, Nepalese, Tibetan, Javanese, Hindi, Sanskrit, Mandarin, Thai & Indian samples, including instruments, phrases, opera drams, chants, speech, gamelan orchestra, monks. Perfect for your next film score, album or remix project. "Save plane tickets and DAT usage with the Heart of Asia double CD collection" (Future Music APRIL 95) Audio 2-CD set: £79.95. CD-ROM 2CD set: £299.00

**DRUM TOOLKIT**  
LIVE Rock & Pop loops. Very flexible. Tempo Sets. Inspiration Grooves & Individual Hits to allow flow and natural feel. 4/4 Straight, 4/4 Shuffled, 6/8, Blues, Brush and a Big Section of Inspiration Grooves. Full Loops (80, 90 & 100 BPM). Fills, Separate Hat & Ride Loops, Perc Loops & Flams. Produced by the Roxette team. Audio CD: £59.95. Akai CD-ROM: £149.00

**LA RIOT 3**  
2-CD Set. 1000's of Hip Hop & R&B samples. • Mad-hard construction kits • Bomb-ass breaks • Bases • Loops • Horns • Scratches • Dope FX & Sequelies • Crazy guitars • Vocals • Synths • Piano • Rare groove elements. Every 5 construction kits are same BPM & key for mixing & matching. Fresh, well-organised and a true goldmine for the serious producer. "Sheer authenticity & attitude. An all-American urban soundscape of immense realism... A hard act to follow. Quite simply a classic. ★★★★★ 5 Stars" (Sound on Sound, UK). 2-CD audio set, £59.95

**INTERFACE DANCE**  
Superb all-round dance collection - NOW ONLY AVAILABLE FROM TIME+SPACE (exclusive worldwide distribution). INTERFACE DANCE has definitely cracked it. Extremely well-organised, this CD encompasses many areas of production including Nu-NRG/Euro, Techno/Industrial, House/Garage, R&B/HipHop, Jungle and Hardcore. Drum Loops, Hits, Synth & Bass multisamples. Vocal Shouts/Ad-libs & FX. TB303 basslines, Horn hits & stabs, Piano Sax & Hammond, Guitar riffs, MC/Ragga vocals and more... fantastic reviews in the press! Audio CD: £59.95

**HEART OF AFRICA VOLUMES 1 & 2**  
Vol. 1 is a 2-CD set of phrases & instruments from all over African continent. Following the success of Heart of Asia, this sequel was a smash hit even before it was released. "It's quite simply the most fantastic collection of ethnic sounds I've heard from a single source" (SOS MARCH 1996) Audio CDs: £79.95. CD-ROMs: £199. Heart of Africa Vol. 2 has all new tribal phrases, vocals, performances & SFX from a huge tribal competition in Kenya. This material is very primitive & really enhances the volume 1 samples. Audio CD: £59.95. CD-ROMs: £149

**GARMICHAEL'S CRUNCHY NUT LOOPS**  
Crunchy Nut Loops - A collection of Phatting Grooves from Drummer Jim Carmichael (Freak Power, K-Creative etc.), played with vibe in mind, these loops are encrusted with funky substance and fortified with extra compression to start your day in the positive way. "Damn fine drum loops played by the future of Brit funk." (Future Music) JUNE 1996 Audio CD: £59.95

**JUNGLE WARFARE**  
If you need Jungle this is unmissable. • Loops • Riffs & fills • Perc Kits • Pads & Chords • Bass • FX • Vocals. "Excellent fidelity, balance & punch, & variation in feel & sound... there's no serious competition. Rated 5 stars out of 5 ★★★★★" (Sound on Sound, UK). "Kicking grooves... a wide range of styles... highly useful... AS UP-FRONT AS YOU CAN GET." (The Mix, UK). Audio CD: £59.95

**EUROTECH**  
★★★★★ "5 stars. A hit release" (Sound on Sound magazine). Specialising in Euro-dance/Europop. This style of music has dominated the charts all over Europe over the last few years & seems set to continue to. A very commercially attractive set of sounds, and all original. The loops are fast (192 of them are over 140bpm). A nice balance of experimental & straight. All bpm's given. A hot & hard techno resource. Audio CD: £59.95. Akai CD-ROM: £149.00

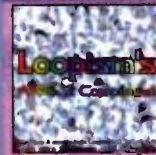

**SUPREME BEATS**  
The most comprehensive library of percussion grooves & instruments ever developed, featuring percussionists from all over the world. This highly acclaimed library is now available on 2 CD-ROMs: 1: AFRICAN/ CONTEMPORARY & 2: WORLD/DANCE. "A feast of human feel, energy & emotion... a knockout... Supreme Beats is a winner. 20 stars out of 20." (Keyboard, USA) Audio Vols 1-4 (4-CD boxed set), £199. Audio Vol 5 (NEW!) £59.95. CD-ROM Vol.1: £149. Vol.2: £149 (CD-ROM versions include all the sounds from Vols 1-5 audio CDs)

**GOTA YASHIKI'S GROOVE ACTIVATOR**  
Drum & Percussion grooves, chops & fills. Gota's work with the likes of Soul II Soul, Bomb The Bass, & Simply Red is already part of pop folklore. His ability to make machines groove is legendary. This CD is very different, and a guaranteed source of inspiration. Quality, originality and creativity of the first order. Audio CD: £59.95

**PHAT & PHUNKY**  
Another dynamite set from East-West. Over 2000 samples on 2 CDs: 165 grooves, each with its component samples given separately (drums & instruments) together with the sequence data for each loop on a separate MIDI-file floppy disc (PLEASE STATE ATARI/IBM or MAC version when ordering). This arrangement gives you complete flexibility to customize all loops to any tempo or content you like. One of the freshest samples I've heard all year. This one is definitely not to be missed. - THE MIX ISSUE 19 2-CD audio set, £59.95

**LOOPISMS AWE-32 COMPILATION**  
Every loop & sample from D-Zone's Loopisms series volumes 1 to 6. (850 loops & samples for Jungle/house/rap). PC CD-ROM for use with AWE-32 Soundblaster soundcard: £29.95. Also available: "LOOPISMS WAV COMPILATION" - the same but in straight WAV format for use with any PC software or soundcards: £29.95. Many other D-Zone titles available - call for details! N.B. D-Zone have asked us to point out that the samples on D-Zone titles are not all licensed for use in your commercial music releases.

**NEW WORLD ORDER 1 & 2**  
Journey #1: Fantastic Collection of Ethnic & Percussion loops, Tribal Rhythms, Ritual, Djembe, Talking Drums, Calypso, Reggae, Haitian Vodoo, Afro-Cuban, Latin Funk, Tabla Loops, Indian Ensemble, Rhythms from Japan, Ireland, Texas & New Orleans. Journey #2: Extensive performances on a multitude of acoustic instruments from all over the world. Loads of seldom heard Folk/Historical Instruments, plus vocals. Loops, Riffs, Slides, Chords, Scales etc. All sounds are original recordings there isn't any other disc quite like this one. (THE MIX FEB 1995) Audio CDs: £59.95 each. CD-ROM (Akai): £149 each.

**SMOKIN' BY TONY MASON**  
New from AMG... three minutes of specially recorded grooves with a strong dance flavour. All samples have undergone analogue processing to give an authentic 'rare' valve sound. 'Smokin' was recorded in Trinidad and the UK by much sought after session drummer, Tony Mason (Tony has taken care of drums for Al Green, Incognito, Fine Young Cannibals and George Michael). The ideal drum loop CD for anyone looking for great sounding beats with attitude. STRONG DANCE FLAVOUR with a LAID BACK RHYTHM AND BLUES ATTITUDE. Audio CD: £59.95

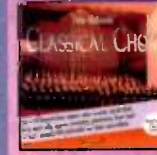

**BEATS 'N' THE HOOD**  
The ultimate beats collection for serious Hip Hop, Swing and R&B production. Grooves with attitude and altitude to lift your music into a new dimension. "I MUST HAVE ADDITIONED WELL OVER 10,000 DRUM LOOPS DURING MY TIME, BUT NONE AS COOL OR EFFORTLESS AS THESE" (Sound on Sound, UK - April 96). Audio CD: £59.95

**ON A JAZZ TIP**  
Hip Hop In Full Swing! Stomping grooves, licks and loops, played in predetermined keys and tempos to be used interactively. Bass, Guitar, Keys, Horns, Drums and Perc., Jazz pads, riffs and chords. Perfect for all HipHop, Rap, Soul, TripHop, Acid Jazz and Funky flavors. For any music project that needs a swing, swing or that Jazz Thing. Produced and played by musicians who love and respect music. "The first mainstream Sampling CD products to dip its toes into the wide world of popular Jazz" (SOS Mar 96) Audio CD: £59.95

**ZERO-G ETHNIC 1 & 2**  
Another exotic set of samples, by the Paradise Organisation who roamed Africa, India and the far east for 2 years in pursuit of material for these two discs. All samples are recorded 'in the field', and it's a dynamite collection. An enormous collection of ethnic vocals, rhythms and instrument riffs. Well suited to dance music production. Audio CDs (vols 1 & 2): £59.95 each. Akai CD-ROM (includes both volumes 1 & 2): £149. (Volume 1 is also available formatted specifically for Roland 700 Series: £99).

**PETER SIEDLACZEK'S CLASSICAL CHOIRS**  
From Czechoslovakia comes an incredibly haunting and inspiring set of vocal sounds. Awesome vocal power. Truly an absolute masterpiece. "★★★★★ Five Stars" (Sound on Sound magazine). Audio CD: £59.95. CD-ROM: £149.00

**XX-LARGE EXTREME**  
With its latest production, the XX-Large Team presents the biggest Dance Drumloops collection worldwide! 1750 absolute new Stereo Drumloops. House, Jungle, Rap, Hip-Hop. All of the loops are tuned accurately on beats per minute and arranged in groups from 80 - 180 bpm. In addition, more than 100 current Dance Sounds: House Organs, Jungle Bases. "It will take countless late nights to exhaust this sumptuous selection of grooves. In short, it's stompin', mate!" - MIX APRIL 1996 Audio CD: £59.95. CD-ROM: £149.00

**SLY DUNBAR**  
Reggae Drumloop... The World's No.1 Reggae drummer & Producer (half of Riddim Twins Sly and Robbie). There's nothing else like this on the market! • Reggae • Ska • Dancehall • Bhanga. Comes with MIDI-files on floppy disk for the loops. READ THE FANTASTIC REVIEWS - undisputably the NUMBER ONE sample CD on the market for reggae production. Audio CD plus MIDI-file floppy disk (please state Mac, Atari or PC): £59.95

**VINDALOOPS**  
By Hoggie & The Turbinator at Nu-Groove Productions. The definitive Bhanga Sample CD. A spicy concoction of Indian percussion loops, single shot hits and authentic Bhanga instrumentation/FX. Mostly in stereo. Loops grouped in 'kits' of similar sounds and tempos. "Never before have so many Bhanga ingredients been so accessible... Feel the feel!" ★★★★★ 1/2 (Sound on Sound). Audio CD: £59.95

**PETER SIEDLACZEK'S ADVANCED ORCHESTRA**  
Introducing a new generation of Orchestral samples for the electronic musician. Short & Long notes, played in two dynamic degrees for every instrument... trills, grace notes, quick runs, arpeggios, crescendos, glissandi and more! The complete Symphony Orchestra at your fingertips? Peter Siedlaczek's Advanced Orchestra gives you the touch! Available late June. Call for more details.

TIME+SPACE - THE WORLD'S FINEST COLLECTION OF PROFESSIONAL SOUND LIBRARIES ON CD & CD-ROM

e-Mail: sales@timespace.com

LISTEN BEFORE YOU BUY

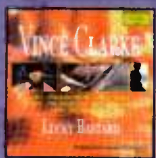

## SYNTH & FX

### AMBIENT VOLUMES 1 & 2

By Ian Moody. This collection achieved a 5-star review in both Sound on Sound (UK) & Keyboard (USA). The majority of sounds on the CD are multi-sampled and have been thoroughly tested for playability on a keyboard.

Synth FX, atmospheres, instruments & textures from one of the UK's leading synthesists. Audio CDs: £59.95 each. PC WAV CD-ROMs: £29.95 each. Akai CD-ROM (Both vols. on one CD-ROM/500Mb): only £149.00

### VINCE CLARKE

'Lucky Bastard'  
"One hell of a useful CD. 9 out of 10" (Future Music)

A huge set of sequences specially created by Vince Clarke using his massive collection of classic analogue synths. Fast creative sampling. Audio CD: £59.95

### ANALOGUE DREAMS

There are over 3000 analogue synthesized samples on this 2-CD package. The list of rare synths & analog drum machines used looks like a museum inventory. Dreams, squelches, or mind-blowing effects, there's a synth sound here to fit the bill. Get the CD-ROM version and you'll have everything sampled, looped and laid out into superb performance patches. Audio 2-CD set: £59.95. CD-ROM versions: £149.00

### DISTORTED REALITY

NEW RELEASE - but already getting 5-star reviews!! Cutting Edge Textures, FX and Loops exploring an experimental world of extraordinary colours. From 3-dimensional Harmonic Sound Morphing, to trance-inducing ambiences, enormous modular drones & astonishing timbral

contortions. An essential resource for the producer, composer or sound designer in search of unique sound. You simply have to hear these sounds to believe them, and we can't praise this product highly enough. Audio CD: £59.95. CD-ROMs: £149

### ANALOG TO DIGITAL AND A202

Unique sounds, layers, textures, FX, from the worlds classic vintage synths. Ambient, techno, film, rock, whatever - these 2 discs will inspire you with fresh sounds of immense power or subtlety. Raved about by Dance

producers for their usability and versatility for everything from Ambient/Trance to the hardest of Hardcore Techno. Audio CDs: £59.95 each. PC WAV CD-ROMs: £29.95 each. Akai CD-ROM coming soon: £149.00. Includes both volumes!

### METHODS OF MAYHEM

Brutal & sweet sampling for Industrial/Intelli-gent Techno, Goth Techno or anything in need of an Experimental Edge. Uniquely twisted, bizarre and savage stuff. Drum-, Bass-,

Synth-, FX-, Vocoder-, Feedback- & Noise-loops, Grinding Guitar Riffs & Feedback. Synth FXs, Sweeps, Basses, etc. Creepy & Cheesy Sound FX, Music FX & Voices. Over 1000 Samples. A unique collection. Audio CD: £59.95

### ROBOTS & COMPUTERS

The electronic invasion of machines & computer. Unique starting material for any fan of electronic and Kraftwerk. Fantastic studio production tool. Hundreds of electric Synthesizer & Drumsounds coming from collector's stock.

Rhythm-sequences and Drumloops, extensive Vocoder section, language computer-rarities. A real treasure trove. 1500 analogue & digital specialities. From the past to the future. Audio CD: £59.95. CD-ROM: £149.00

### Drum Loops

1 and 2 from Big Fish audio were among the best-selling loop discs. Now introducing Drum Loops 3 with 500 all-new original loops allowing the user to base new tracks on a powerful rhythm foundation. After each loop the individual drum sounds featured in the loop are broken out separately. You'll find custom fills and breaks are a breeze to create. Emphasizing street styles, hip-hop and rap. Drum Loops 3 also features deep house and trance. Audio CD: £59.95

## INSTRUMENTS

### STEVE STEVENS

Renowned for his guitar work with Billy Idol, Steve delivers here all his famous trademark sounds, plus awesome FX. The majority of sounds on the CD are multi-sampled and have been thoroughly tested for playability on a keyboard.

"Raw textures that cut, punch and snare. Even the acoustic samples have attitude. The effects are killer." (Keyboard, USA). "A beautifully recorded and very complete package" (The Mix, UK). Audio CD: £59.95. CD-ROM: £149.00

### BASS LEGENDS

Earth-shaking base grooves & samples from 3 of the world's greatest bassists: Marcus Miller, John Paulucci & Abe Laboriel. All grooves are given in every key & in multiple tempos. CD-ROM versions also

include an extravagant variety of multisamples of instruments from the players' private collections. Audio CD: £59.95. CD-ROM: £199.00

### HANS ZIMMER

Released by SPECTRASONICS in the USA. Internationally acclaimed film composer Hans Zimmer releases sounds from his private sample library. Powerful guitar textures, incredibly detailed and expressive, using up to 72-way velocity switching. Also includes massive kick & snare grooves each presented in Spectrasonics' new

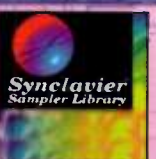

Chromazones - concept that works in every key and at various tempos. This library contributed to Hans' rich sonic approach in many films incl. The Lion King, Cool Runnings, True Romance, etc. A must-have for any serious sample collector. Audio CD: £59.95. CD-ROMs: £149

### PHANTOM HORNS

"5 stars" (Sound on Sound magazine). The world's best and classiest horn sample library featuring the dynamic sounds of the UK's most in-demand horn section, John Thirkell & Gary Barnacle

(whose album credits read like a who's who of megastars). Packed with riffs, hits, swells and all the other horn elements you'll need to add real brass impact to your tracks. Audio CD: £59.95

### Synclavier Library

Highly coveted collection previously only available to Synclavier owners. A series of 5 CD-ROMs:

Vol.1: Strings (£169); Vol.2: Essential Percussion (£129); Vol.3: World & Orchestral Percussion (£129); Vol.4: Keys

& Guitars (£169); Vol.5: Brass & Winds (£169). We rate these discs very highly. Impeccable reviews in the press. Definitely recommended.

### FUNK GUITAR

by VLAD NASLAS.

The Definitive Sample CD for Classic Dance Guitar Rhythms and FX. ☆☆☆☆ "5 stars" (Sound on Sound magazine).

• Styles from cool & slinky to hot & bothered • ALL ORIGINAL • 1700 SAMPLES • Raw & authentic • Quite simply ESSENTIAL for anyone in a funk groove. Audio CD: £59.95. CD-ROMs: £149.00

## MISC.

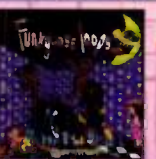

### OVERDUB SENSATION

House & Acid Jazz library. 1200 sounds from the private library of DJ and producer 'MOUSSE' T. remixer for such

artists as Shabba Ranks and Inner Circle.

Several versions of each loop, etc. An extremely flexible tool for remix work. Audio CD: £59.95

### FUNKY ASS LOOPS

Produced by the New Power Generation (who do all the drums & programming for Prince). Seriously HOT! 5 stars for content, value and sound quality! (Keyboard, USA). This super-funky disc will prove to be the inspiration for many hits. All grooves played live - but not just with traditional drums - you won't believe the sounds used, and you get all the separate component samples as well. Audio CD: £59.95. CD-ROM: £149

## Sample CD Jukeboxes! Listen to our CDs at Pro-Audio dealers nationwide...

The dealers listed below have demonstrated their commitment to keep your sampler fuelled with inspiring new sounds! Time+Space distribute only the highest quality products available, from the world's best developers, and we offer UN-BIASED and helpful advice to mail-order customers. However, you have the opportunity to visit one of the following locations and listen to the entire contents of the products that interest you most - there you'll find the world's top 100 audio sampling CDs in one of our Sony 100-CD Sample-CD Jukeboxes.

### JUKEBOXES already installed at:

# Let's get Physical!

YAMAHA VL70m VIRTUAL ACOUSTIC SYNTH MODULE

**At under £500 — less than an eighth of the original price of its VL1 predecessor — Yamaha's VL70m constitutes a brave attempt to bring physical modelling synthesis within the reach of all musicians. MARTIN RUSS joyfully welcomes this monophonic modelling module...**

*I can live without a VL70m. I can, definitely. No problem. I've managed for a couple of years with only minor withdrawal symptoms from the VL1. Spending a few weeks learning about the VL70m won't affect me at all. No sweat. And then I just send it back to Yamaha... NYAAAARGH!*

Technology has a nasty habit of becoming affordable. If you bought one of the first CD players, you would have had very little change from a grand, and CD-ROMs also used to cost thousands of pounds. In these technologically-aware days, it's hard to imagine (or remember) what it was like when all TVs were black and white, and when a scratch could ruin a treasured LP. The pace of progress continues to increase — in five years, CD-ROM prices have changed so dramatically that the disks have gone from being major purchases made only by multi-national corporations to being virtually given away on the front cover of magazines.

The plummeting cost of physical modelling synths provides another fine example of the benefit of developing technology to the end-user. The Yamaha VL1 (which I reviewed in *SOS* July '94) was the first synthesizer to bring the computationally-intensive technology of physical modelling out of the world of academics and researchers, and into the hands of musicians. It was crammed full of DSPs, and cost £4000. Two years later, the first of the second generation of Yamaha physical modelling synths costs less than £500, and there's a deceptively simple circuit board inside, with only a few chips on it. It is much harder to try and say that you can't afford a VL70m.

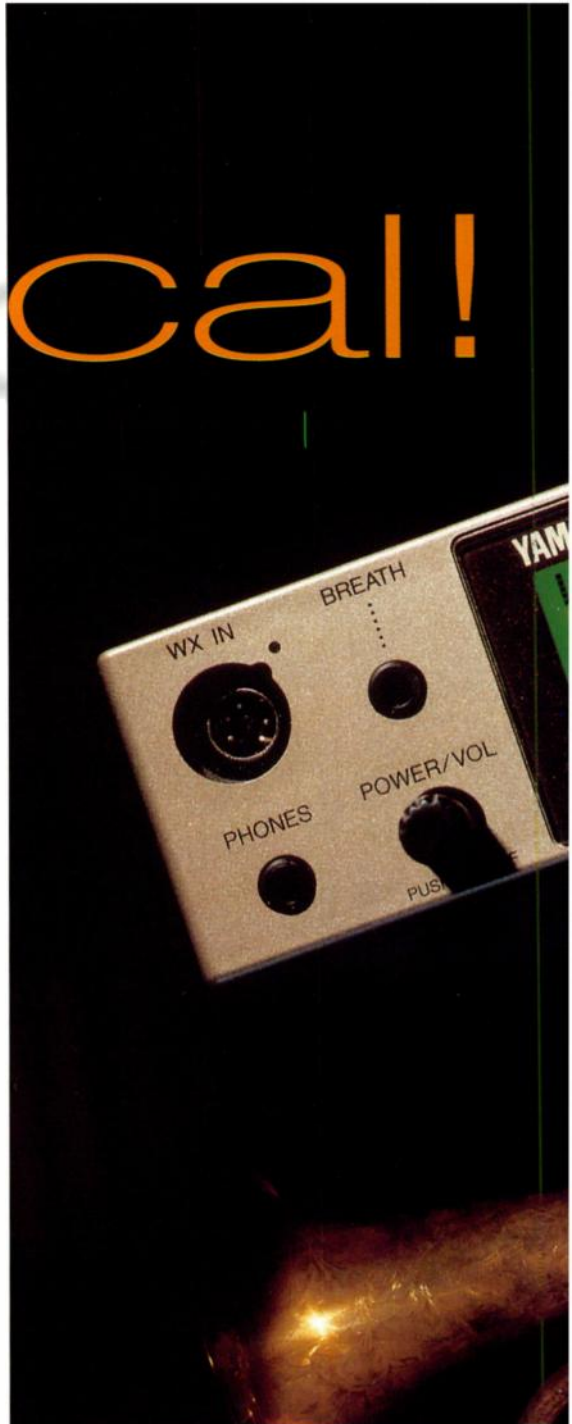

## APPEARANCE & USER INTERFACE

The VL70m is a synthesizer expander module. 1U half-rack cases all look much the same unless you really work hard, and Yamaha have striven to echo the gold, cream and dark brown colouring of the original VL1 by reworking an MU80 case. The result is that the large, backlit green custom LCD display dominates a front panel which looks rather like a top-end hi-fi separate. It's by far the classiest-looking module I've ever seen. OK, so it isn't quite up to the real wood veneer of the VL1 — but then there's not much room for any wood!

There is no skimping on buttons: there are six for the different modes, and nine control/editing buttons. As with many modules, the 4x17-character display tries to squeeze in as much information about the basic configuration as possible. The VL70m's display uses some custom icons and a bit-

mapped graphics block to make this possible. The latter is put to good use when you first press the combined power switch and rotary volume control to switch it on — the 16x16-pixel graphics block shows a lighthouse with its searchlight beam sweeping across towards you. Other icons include a finger, someone blowing, a speaker, a suitcase, and an accordion. I couldn't figure out what the icon on the main page was, and had to resort to asking Yamaha — not quite the deep, probing type of question they normally expect from me! I'll save you from the embarrassment by revealing that it is someone playing a keyboard.

Despite all those buttons, and the large display, changing the parameters displayed on the main screen involves moving around with just a couple of cursor buttons, and changing the values with another pair. Beyond that, there's a similar 'scrolling and changing' user interface for all the other settings — and there are plenty of things to alter, even though there are no built-in editing facilities for the physical modelling synthesis engine itself.

**pros & cons**

**YAMAHA VL70m £499**

**pros**

- Affordable physical modelling synthesis.
- Superb sounds.
- Expressive and versatile.

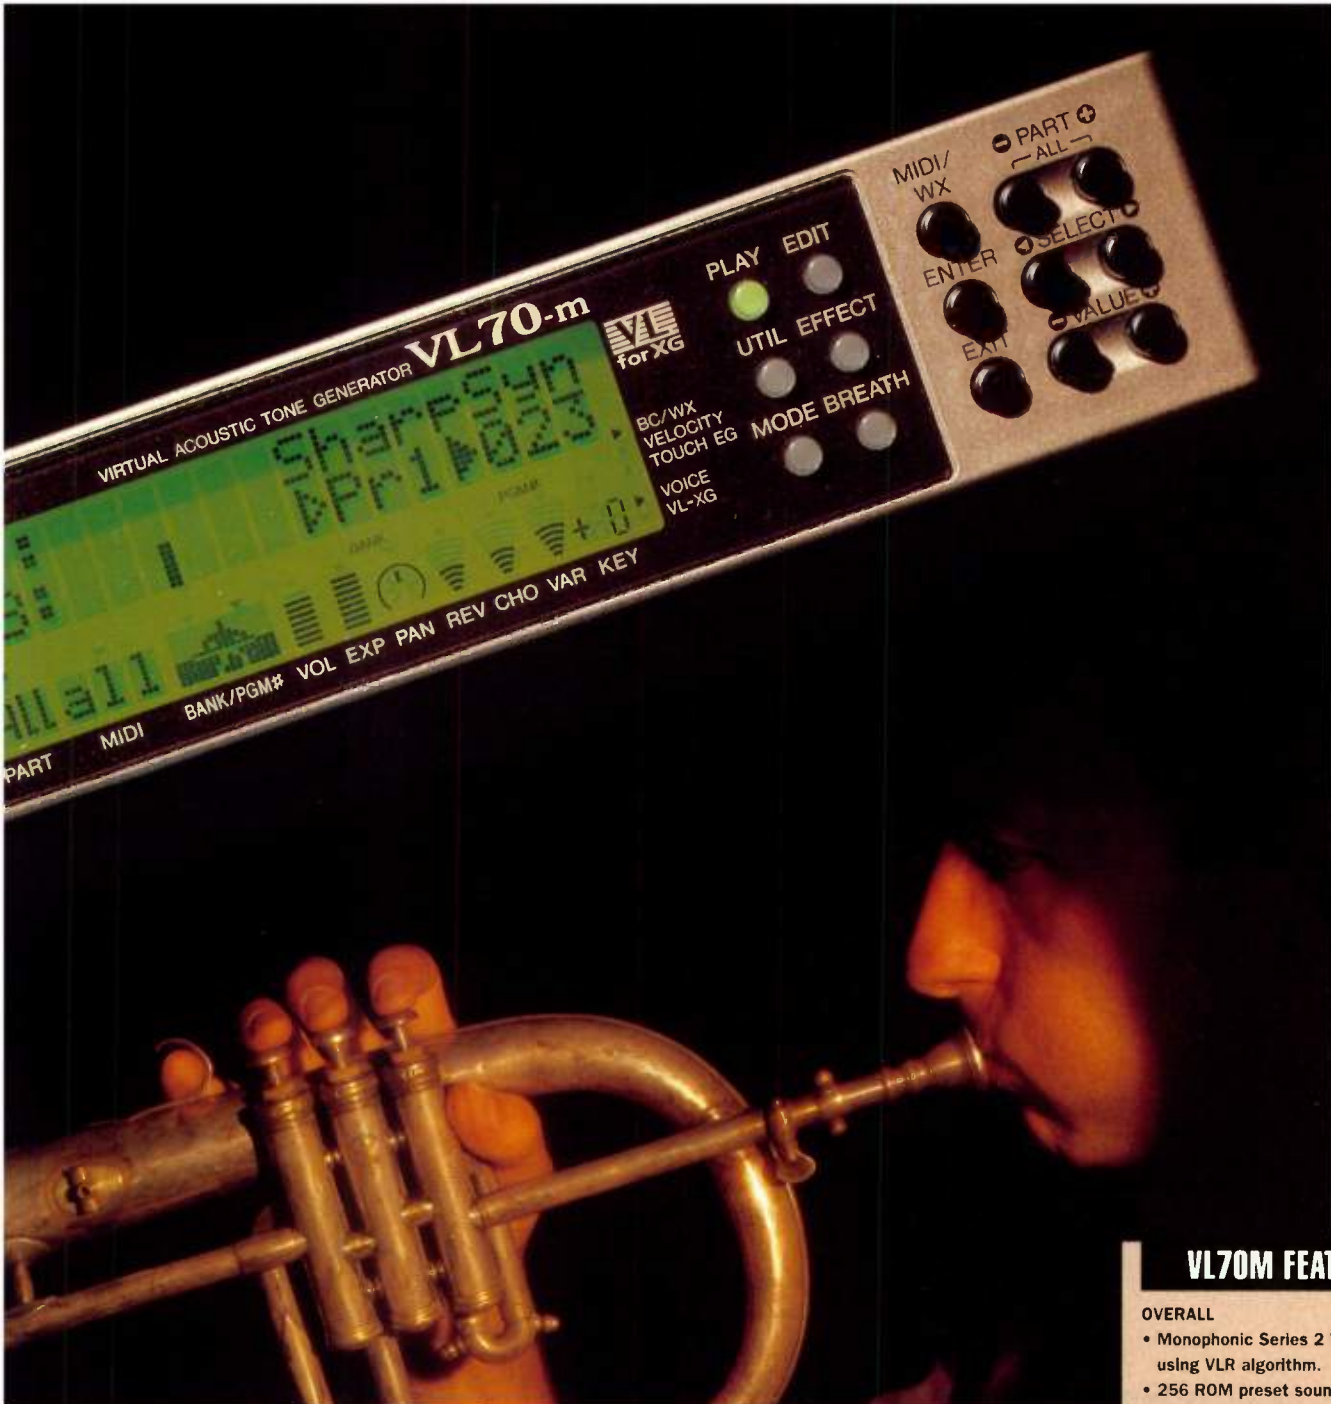

**cons**

- Monophonic.
- Not as rich a sound as the VL1 series (although at this price, who can complain?).

**summary**

The price of the VL1 restricted its users to a select, exclusive circle, but the VL70m offers the realistic sounds of physical modelling in a package that permits the user a striking degree of expressive control — and all at a price the rest of us can afford. My only quandary now is how to justify *not* buying one!

**SOUND ON SOUND**

Incidentally, although all the main screen parameters can be edited at all times, some of the deeper edits can't be made whilst the VL70m is playing notes.

I'm pleased to report that Yamaha have included their 'double-click' shortcut for showing MIDI messages: press the 'Enter' button twice quickly and you see either the controller message or the SysEx message for the currently-selected parameter. This isn't just for people who like to write their own editors or mixer maps — it's actually very useful for typing those messages directly into sequencers, and saves all that messing about trying to record MIDI messages.

Yamaha include a 3.5mm stereo headphone socket jack on the front panel, as well as inputs for a breath controller and a WX wind controller. Putting these inputs on the front panel brings these often-overlooked MIDI controllers into sharp focus — remember that a keyboard is not the only way to play a module. Yamaha's breath controllers have improved incrementally with each generation, and the third-generation BC3 (which Yamaha sent along

with the VL70m to help with the review) is the best yet, but still not quite perfect — see the 'Breath Control' box elsewhere in this review. WX-series wind controllers are something else entirely: the WX7 (reviewed way back in *SOS* December '87) and WX11 look like alien clarinets or oboes, and when they were used to control TX81Z-type FM sounds, they sounded just a little too synthetic. But when you combine the formidable range of control they provide with a physical modelling synthesizer like the VL70m, then you are talking expression in its most interactive sense. My second-greatest regret is that I was never taught to play the piano as a child — but my *greatest* regret is that I can't play a wind controller properly.

The rear panel has MIDI In, Out and Thru sockets, stereo audio quarter-inch jacks and a DC In socket for the external power supply. There is also a mini-DIN 8 socket for connecting the module to a computer serial port, and a 4-position switch for choosing MIDI, Macintosh, or two varieties of PC (IBM-compatible and NEC PC).

## VL70M FEATURES

### OVERALL

- Monophonic Series 2 VA Synthesis using VLR algorithm.
- 256 ROM preset sounds.
- 137 XG sounds.
- 6 full user memories.
- 64 user memories for edited presets.

### MODIFIERS (4)

- Harmonic Enhancer.
- Dynamic Filter.
- Equaliser.
- Resonator.

### EFFECTS

- 12 Reverb effects.
- 10 Chorus effects.
- 44 Variation effects.
- 3 Distortion types.

### REAR PANEL

- Stereo Outputs.
- Computer host interface.
- MIDI In, Out and Thru.

### FRONT PANEL

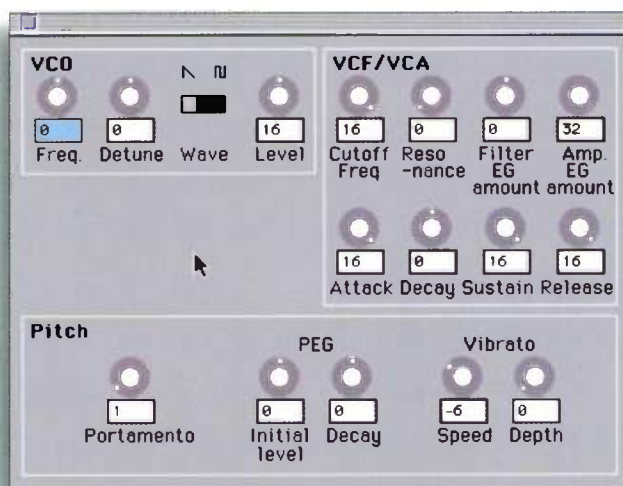

- Headphone socket.
- Breath Controller Input.
- WX wind controller Input.

# Yamaha VL70m

- Having a combined MIDI interface and monophonic synthesizer is an intriguing concept; you normally need a little more polyphony than one note to make best use of a computer-based MIDI sequencer, and so it is reasonable to assume that you would need a polyphonic expander module in addition to the VL70m. I suspect that adapting the MU80 case meant that it was easier to include a MIDI interface than remove it.

## HOW IT WORKS & EDITING

The VL70m utilises Yamaha's proprietary technology, Virtual Acoustics (VA), to make sounds. VA in turn makes use of a technique called physical modelling to produce the sounds —

The Analogue Editor.

it literally uses a mathematical 'model' of the instrument, and calculates from this what would happen acoustically if you were playing the instrument in real life. As a result, VA sounds can exhibit the characteristics of real-world

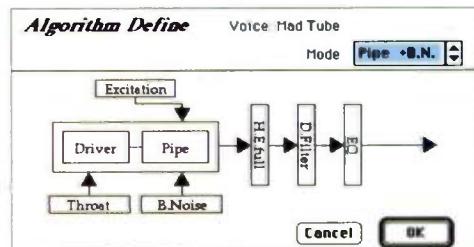

Figure 1: a typical VA patch.

instruments, because the sounds are produced from an analysis of how the real instrument works, and not because someone has programmed a synthesis algorithm to try and emulate them. Even the transitions between notes sound real! The disadvantage used to be the huge computing power necessary to make all the calculations, but in the VL70m, a single custom chip does almost all the hard work. And what hard work it is: in a Sample + Synthesis (S+S) synth, this sort of chip might be producing multitimbral sounds with 32- or 64-note polyphony — but in the VL70m, it only produces monophonic sounds.

VA synthesis uses three basic elements: a driver, a resonator, and a modifier (see Figure 1 above).

- The driver is the part that puts energy into the instrument — so it is the bit that you blow, pluck or bow, for example.
- The resonator is the timbre-shaping part of the instrument — for example, the tube with holes in it, in the case of a woodwind instrument, the body and struts of a stringed instrument, or the tubing and flare of a brass instrument.
- The modifier is a special-purpose set of effects, which are actually linked to the driver and resonator parts of the model. This includes a harmonic enhancer to change the harmonic structure of the sound, a dynamic filter for producing analogue synth-type filter sweeps, a 5-band parametric equaliser to tailor the overall tone, and a special resonator intended to produce a 'woody' type of resonance. You control these elements via a large number of parameters which determine how MIDI values (like velocity or information from a breath controller, pitch or mod wheel) are mapped to the physical model. The control parameters themselves have descriptive names which try to indicate their effect on the sound (some examples are Embouchure, Tonguing, Scream, Growl and Damping).

Two years of work on VA synthesis has improved the repertoire of the Yamaha programmers — the VL70m has a much more cultured and mature-feeling set of sounds than the ones that I drooled over (or drooled into; breath controllers do that) in the VL1 when I reviewed it. There are two banks of 128 preset ROM sounds: the first is designed for optimal playing via keyboard, whilst the second is aimed at making the most of a breath controller or wind controller. Edited versions of these 256 sounds can be stored in the 64 user RAM memories, but the edits are restricted to the controller settings, and do not allow full user editing of the sounds.

## EVERY BREATH YOU TAKE: THE BC3 CONTROLLER

The BC3 breath controller is an optional extra for the VL70m, but I would class it more as an essential purchase. Yamaha have now reworked the BC2 breath controller which was supplied with the VL1 (see my VL1 review for comments on this), and the BC3 is a great improvement in many areas. The adjusters are better: one is tiny and one merely small, but you no longer require a screwdriver to make

adjustments. The tubing is now inside a miniature gooseneck-type structure, which is much better than the BC2's flimsy bit of wire. The adjustment for breath leakage has been vastly improved: Instead of a floppy plastic cover, it is now a little rotary knob which works rather like the similar device on a vacuum cleaner hose — the pressure adjuster that you never use because the vacuum cleaner's always set to maximum suck anyway! However, the plastic mouthpiece does tend to fall off the end of the tube — the interference fit that holds it in place is only just enough to hold it on. I suspect that with wear, it may need taping in place — and gaffer tape tastes terrible! Generally, though, the BC3 seems to have been designed rather more carefully than the utilitarian BC2 — or the embarrassing BC1. Perhaps a bit of Blu-Tak or sticky tape will hold that errant mouthpiece in place...

If you have to use a keyboard, then by setting a pedal or wheel to control Expression (MIDI Controller number 11) you can explore both banks of the VL70m's preset sounds and still have the feeling of interaction with them.

## ANALOG WARNING

For Your Future Protection Call

# Yamaha VL70m

The Visual Editor.

## THE VIEW FROM WITHIN

The inside of the VL70m is not as cramped as you might imagine. There is a single printed circuit board (PCB) which is more or less the size of the top of the case. It uses a mixture of double-sided surfacemount technology for the digital and most of the analogue circuitry, and conventional thru-hole mounting for the power supply. The standard of construction is very high.

## IMPRESSIVE & EXPRESSIVE: THE SOUNDS

The hallmark of physical modelling is the synthesis of sounds which have that elusive 'real' quality, regardless of the fact that it may not be physically possible to construct the instrument. In the real world, you can't use a bow to play a clarinet, but the VL70m can give you a sound which 'feels' and behaves as if a 'claricello' did exist — and the way the module responds to controllers permits a huge degree of expression.

With the current interest in old monophonic analogue instruments still going strong, the VL70m provides a viable

alternative to clichéd analogue sounds: a digital instrument which offers far more expression than just the filter cutoff or resonance tweaking over-used by retro enthusiasts. As well as a wealth of detailed control over the sound, the VL70m can exploit the same portamento and damping techniques that you find used by TB303 programmers — and of course the VL70m has a much wider initial palette of sounds to work from than the ubiquitous squdgy ones from that silver box.

The VL70m presets include both instrumental emulations and special-purpose sounds. The

emulations include some superb bass sounds, classic lead-line synth sounds, feedback guitars (with distortion ranging from nasty to merely gross), some curiously lifeless acoustic guitars (which suffer hugely from being only monophonic), and then there are the woodwinds, brass and bowed strings that you would have expected. There are no pianos at all, and just a few weak clavinet and percussive sounds. There's plenty to explore, and the controllers really can make major changes to the preset sounds. The more you learn how to play it, the better the VL70m sounds — it's just like learning an orchestral instrument!

may be better. The programs should be available from Yamaha dealers who stock the VL70m, or via the Internet. I got them from <http://www.yamaha.co.jp/english/xg/html/vleditor.html>, but some of the files are almost 1Mb in size, and will take a long time to download using a 28.8kbps modem. The Mac Visual Editor file exploded from 936K to a 3Mb folder, and all the Mac programs use the MIDI Manager. Not having a PC, I was unable to test the Windows Visual Editor.

If you find FM synths easy to program, editing VA using the Expert Editor may present rather more of an intellectual challenge — but if you found FM hard to grasp, you may prefer to use Visual Editor or Analogue Editor.

## PLAYING & MIDI

There are two different playing modes. The default is called 'Voice' mode, and this is intended for use with other modules, especially non-XG ones. Each voice has its own effects setting — which means that they are all swamped in reverb and chorus. In the other, 'XL for XG', mode, the VL70m is intended to be used as an additional XG sound source in an XG system. In this mode, editing of sounds in the internal memory bank is not possible, and only one set of effects settings is available.

Although the VL70m is monophonic, it is possible to chain several units together and thus increase the available polyphony, although this affects some of the performance controls you can use, like the monophonic portamento and bottom or top key assignment.

The VL70m uses an extension to Yamaha's XG sound set, called 'VL for XG'. The XG GM super-set provides extra sounds, effects and editing capability, whilst VL for XG defines lots of additional NRPN controllers (Non-Registered Parameter Numbers) and uses the Sound Controllers (46H to 4AH). Complete GM or XG compatibility are not provided, because VA synthesis is restricted to particular types of sounds — although I can't say I particularly missed having GM's telephone, helicopter and canned applause!

In common with almost all GM-type instruments these days, there is a Bank Change map showing how to access the variations on the preset sounds using bank change messages. Some of the variations seem rather sparsely populated: I'm not convinced that it is a good idea, for example, to have two banks which are identical except for one saxophone sound.

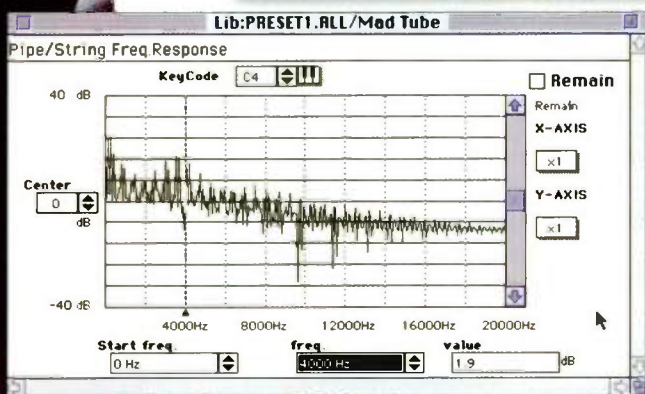

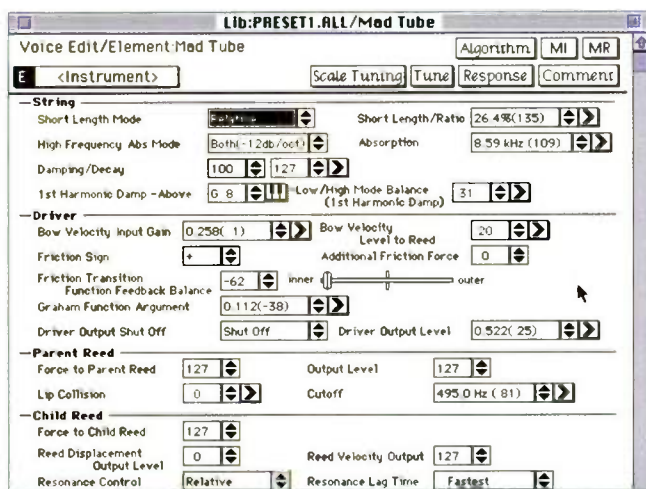

One peculiar feature is way the MIDI Out socket re-transmits any MIDI messages which arrive at the MIDI In socket of VL70m, except for those messages which match the channel setting given by the 'Note Filter' parameter. This is intended to make it easy for the VL70m to be used with other modules, but carries the potential for all sorts of MIDI mayhem. The time delay for this 'Out as Thru' socket is about five milliseconds, which might become significant if it is used to drive another module with an equally slow MIDI response time.

# Yamaha VL70m

## DIFFERENCES

As I spent time with the VL70m, I started to notice the differences between the 'series 2' VLR variant of VA synthesis that it uses, and the original 'series 1' VA synthesis of the VL1 family. The most

*The Expert Editor: (above) edit parameters and (below) editing the frequency response curve.*

important difference is that the VL70m only has one sound-producing element, whereas the VL1 has two — although not all VL1 sounds use the 'dual' mode. This means that some of the subtler VL1 effects are not available on the VL70m, like having portamento on one element and not the other (this feature was used to great effect in the VL1's '50/50' preset sound). More importantly, the depth of detail which is available to the programmer on the VL70m is reduced — so the 'C Flute' sound on the VL70m does not have the same 'chiff' at the start of the notes as the VL1 version, because the VL70m is fully occupied producing the note itself, whereas the VL1 uses two elements: one for the note, the other for the chiff sound.

The underlying sounds in the VL70m are similar to those in the VL1, but not identical, and I suspect that there may be a difference in the sample rate — in certain sounds, some of the aliasing components sounded different on the VL1 and VL70m. The VL1 sounds are richer, more polished and sophisticated, whilst the VL70m has a slightly rougher, harsher feel — presumably the algorithm used is not as complex, and uses less processing power. The two actually complement each other

very nicely — the VL1 has a smooth, rounded feel, whilst the VL70m is brighter and thinner.

The built-in effects processing is also markedly different. The VL70m uses a 24-bit effects chip which feels and sounds very GM in character: distortion is the first effect in the chain, and this is then followed by either the Variation effect (Reverb, Chorus and Echo, plus miscellaneous effects like rotary speaker and auto-wah) and then the Reverb and Chorus in parallel; or the Variation, Reverb and Chorus *all* in parallel. It sounded just a little rough and grainy on the VL70m to my ears — but then I was comparing it to something much more expensive. The VL1 has a 32-bit effects processor with less options (you can't have distortion and flanging together, for example), but it sounds much cleaner, crisper and smoother — especially the reverb.

The VL70m does not have a disk drive, which means that you have to use an external sequencer to store or load edited sounds via MIDI. But if you use the computer editors, then you don't need a disk drive in the module itself. Given the complexity of the editing process, the six custom memories seem perfectly adequate — none of my exploratory editing produced anything even faintly interesting. I wonder how many VL1 owners have used the user memories for their own custom sounds, rather than merely for edits to the controllers?

## CONCLUSION

Very, very nice. For a price which would buy you an ordinary S+S GM module, the VL70m is an entirely different source of sounds. Words like flexible, versatile, striking, expressive and compelling don't often appear in reviews of synths, but they all apply to VA synthesis (see the 'Sounds' box for more on this). Physical modelling may mark a closing of the retro circle: much of the attraction of analogue synthesizers derives from the combination of the interesting timbres they offer and the expression and degree of control over these sounds that is available from the front panel of an analogue synth. The VL70m offers the same kind of focus on control and personal expression. This is not a module where you listen to the presets and then know everything that it can do — instead, you need to work with it, to coax it into producing your personal sound. Just as a musician can produce a distinctive sound from an real instrument, you can do the same with the music you make with the VL70m: but remember that you will need to invest the time and effort in learning how to use it.

# THE NEW STANDARD IN DIGITAL RECORDING MEDIA

If you work with digital audio, video or  
multimedia, you already know the  
importance of reliable, high quality recording  
media. At HHB, we've drawn on 20 years  
of professional recording

experience to specify the highest possible levels

of performance and long term security across the entire HHB

Advanced Media Products range. It's therefore no surprise that HHB DAT Tape is

independently proven to be the best that money can buy\*. Or that the archival security of our new improved CDR74

recordable CD is unsurpassed, thanks to an uprated Phthalocyanine Gold

recording layer and a revolutionary matt coated protection layer. Or

that our ADAT<sup>®</sup> tape is fully approved and recommended by the Alesis Corporation.

And as the random access formats of the future emerge, HHB is there already with a MiniDisc that

sets new standards of performance and a range of MO disks so reliable, that we're confident to

back them with a lifetime warranty.

Don't take chances with digital recording media. Make sure it's HHB.

ADAT<sup>®</sup> is a registered trademark of Alesis Corporation

**One-time lords of synth-pop, OMD have had a chequered 18-year history, but frontman Andy McCluskey genuinely believes their 10th and latest album ranks among the band's best work. NIGEL HUMBERSTONE talks to McCluskey and producer Matthew Vaughan about the making of Universal.**

**O**rchestral Manoeuvres In The Dark were a truly '80s pop success story — an electronic duo (Andy McCluskey and Paul Humphreys) who had the knack of writing killer melodies. From their low-key 1979 eponymous debut album through to 1981's superb *Architecture & Morality*, they balanced their love of Kraftwerk with epic Vangelis-like synthscapes, and had a healthy tendency to encapsulate both of these influences in three-minute pop songs. Singles like 'Electricity',

band in The Listening Pool, Andy McCluskey had to pick up the pieces. "I was traumatised when he left," McCluskey admits today, "because he was the guy I'd written songs with since I was 16. But looking back, I realise that it had to happen. I think we both decided that OMD, as it was, could not have continued — it would have completely self-destructed. I'm glad it ended when it did."

Following Humphreys' departure, McCluskey soldiered on with the OMD name and an ever-changing round of production and songwriting collaborators, triumphantly returning in 1991 with the 2-million selling *Sugar Tax* album. Like *Architecture and Morality*, it was another high point in what McCluskey freely refers to as his "zig-zagging" career: the pattern then continued with 1993's poorly-produced (and poorly-received) follow-up *Liberator*. "The trick is to learn from mistakes or problems," recounts McCluskey philosophically, "and try to rectify what you did wrong. I've now had three really bad patches, which should have ended my career.

# Universal Appeal

ANDY McCLUSKEY • OMD • RECORDING UNIVERSAL

'Messages', 'Enola Gay' and 'Maid Of Orleans' met with enormous chart success as a result, and were guaranteed places on all future synth-pop compilation albums.

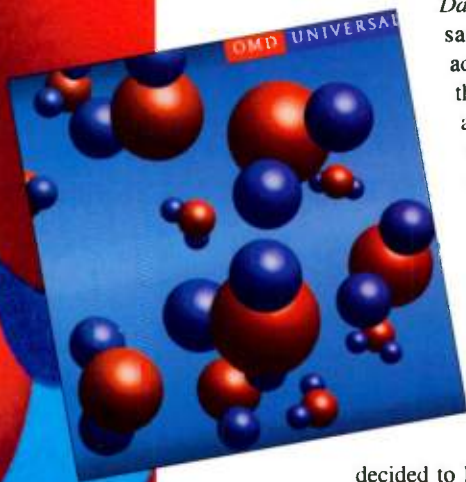

Like many predominantly synth-based groups of the early '80s, OMD hit a rocky patch in 1983. With the expectations placed on them by the public following the triumph of *Architecture & Morality*, the subsequent album *Dazzle Ships* was a commercial disappointment, although the duo were in fact continuing in the experimental vein that had led them to discover the successful Mellotron-and-Gregorian chant-based *Architecture* sound in the first place; but this time their experiments used early sampling technology such as the Emu Emulator. After the relative failure of *Dazzle Ships*, OMD were never quite the same again, despite the continued adoption of then-new technology, like the Fairlight CMI. The group embraced a much more obviously pop-based approach on subsequent albums, but curiously this yielded a reduced success rate for their singles and albums overall, with occasional exceptions, such as the 1986 worldwide smash hit 'Forever Live And Die'.

As the duo's fluctuating fortunes continued and the decade wore on, conflicting interests within the partnership began to surface, and when, in 1989, Paul Humphreys decided to leave and pursue a career outside the

but I'm still standing, and I like to think that I've now made an album which is as good as any of my peaks. But I would say that, wouldn't I?"

## UNIVERSAL TRAVELLER

The new peak in question is *Universal*, OMD's latest offering and an album for whose recording McCluskey felt the need to depart the confines of his home city Liverpool, specifically the Ministry, OMD's former rehearsal and studio space [see OMD feature in SOS August '93 — Ed]. Andy had three years to work on this album, so before commencing work, he went travelling around the world, took trains across Asia, and drove across America. During this time, he made some major changes to the way he wanted OMD to sound: "I made a conscious decision, both style-wise and sound-wise, to change. It was important for me to abandon some of the electronic stuff: nobody in the mid-1990s really wanted '80s synth-pop any more, which is essentially how OMD were perceived, whether correctly or not. But the current alternative to synth-pop is ambient, which is not challenging enough for me, much as I like some of it. It hasn't got enough personality or interest factor for me. Call me old-fashioned and traditionalist, but I like songs that have beginnings, ends and choruses!". The other synth-based alternative was hardcore dance, but McCluskey felt no more comfortable with this style after the *Liberator* debacle: "On the last album, I made the mistake of trying to marry my pop sensibility with dance stuff, and ended up falling down the hole in the middle. In the end, I felt I had

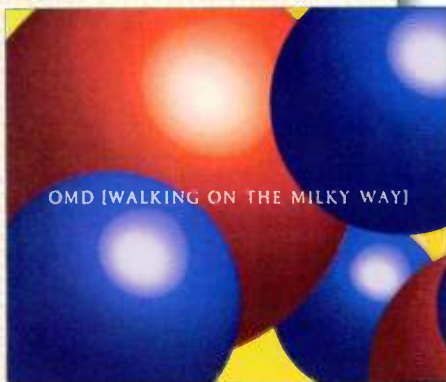

## OMD • Recording Universal

### ELGAMS & ENO

The track 'The New Dark Age' on the B-side of the first single from Universal, 'Walking On The Milky Way' makes use of an old Elgam organ.

'Walking On The Milky Way', the first single from Universal.

McCluskey: "It's like one of those Bontempi home organs, with a drum box and bass and chord accompaniment. I used it in this song, and there was no way I could MIDI it up, so I bunged it in the Akai S1000, with the drums, bass and chords just as one mono sample — and I don't care! Sometimes, when you play to the weaknesses of your machinery, you cut down on lots of wasted questioning and attempted discovery, and you're much more efficient. When I was a kid, and had really crap gear, I read this article where Brian Eno said that you should play to the weaknesses of your own ability and instruments — that is your sound, and that's what makes you unique. Having no money at the time, that seemed like a great idea to me! So with the first OMD album, we had an organ, two cheap synths, one drum box and my bass guitar — and that was our sound, because that was all we could afford".

### IT'S LOGICAL: MATTHEW VAUGHAN ON LOGIC AUDIO

During the Universal sessions, Matthew Vaughan was beta-testing Emagic's *Logic Audio* version 2.5.3: "As someone who switched from *Cubase* on the Atari to *Logic* on the Mac, I found *Logic* very difficult to understand at first, the main hurdle being the Environment. I've gradually learned more and more about it, and there's no doubt it's one of the most powerful aspects of the program, although it's not documented well enough to give new users much of a break. For me, version 2.5.3 of *Logic Audio* is a great improvement, because of things like track names, which I've been asking for for a long time. But one thing I'd still love to see is multi-record from different instruments, because I often set up lots of different master keyboards or devices. I'd also like to be able to set up one device as a dedicated transport controller. You can have 32 input devices with *Logic* at present, but the

► to be true to myself — I *didn't* take Ecstasy or stay up to eight in the morning, so why was I trying to 'techno-up' some of these songs? It was important for me to ask myself what the new album should be like, and what would appeal to me and make sense for a band that is essentially 18 years old. And I didn't want it all to be electronic — I wanted to use real drums, and less synths".

Having taken these far-reaching decisions, McCluskey commenced work on the album. But this didn't mark the end of his travels. First, he went to Eire for a year to write and demo material. "I rented a room at The Factory in Dublin, and took my gear over from Liverpool. It doesn't matter where I am — I take my desk, my speakers, my rig, and computer [see the 'Making Demos' box for more on the OMD demo rig]. There's a great vibe at The Factory, with good technical people downstairs working for Litton Lane [local PA company — Ed], so if something broke down, I could get some help."

After a fruitful but lengthy period in Dublin, McCluskey uprooted again, this time moving to Los Angeles to work there for seven months. The move obviously had the desired effect of raising the rate of progress (McCluskey: "My concern was that I was getting a bit laid back in Ireland") and the album demos were more or less completed there.

The final move in OMD's globetrotting recording tour was back from LA to the UK — not to Liverpool, where much of OMD's post-Humphreys material was recorded, but to The Townhouse in London, selected for its SSL desk and 48-track Sony 3348 digital recorder. As McCluskey goes on to explain, he changed his production team as well as his final choice of studio for the actual recording

trouble is that when you record, everything goes onto one track, and the only way to configure it is to have every single master transmitting on a different MIDI channel — which isn't always practical. I've got all sorts of editors set up within *Logic*, like one for my JX8P, so that I can manipulate it easily. But if you change the MIDI channel of your JX8P, you've got major problems.

"I had *Logic Audio* set up with a program called *Now Save*, which saves automatically at regular intervals, so that you never lose very much when the computer crashes. It was handy when I worked on the Pulp album, because Chris Thomas would often say 'I want to hear it the way it was 15 minutes ago' — and it was good to be able to look in the Mac's Finder and say 'here it is!'. Overall, though, we had very few crashes with *Logic* — I suppose it's only when you set up something like *Now Save* that the crashes stop!"

### HOW TO ORDER...

MAIL ORDER FROM SOUND CONTROL COULDN'T BE EASIER. WITH PLEASANT, KNOWLEDGEABLE STAFF ON HAND 6 DAYS A WEEK TO TAKE ALL YOUR ORDERS IN OUR DEDICATED MAIL ORDER DEPARTMENT. CALL IN AT YOUR NEAREST STORE OR CALL OUR MAIL ORDER LINE - NOW...

► of the album: "When I got back from America, I had everything pretty much demo'd, and having changed the way I wrote the album, I wanted to change the way I was going to record the album; it was quite important for me to find the right people to work with. I loathe making records — I love the writing, and touring I really enjoy, but committing to that final product is really traumatic. Essentially, it's me programming and arranging, so I have a lot of trouble objectively balancing in the studio. I need a good engineer, somebody that I really trust, so that I can say, 'look, you do this, and I'll fine-tune it'. When you spend all your time doing the programming, you can get so bogged down in the minutiae of pitching the vocal, or making sure that a rhythm sample is looping correctly, that you lose the overall picture. The songs were 80 to 90 percent there — it was the last 15 to 20 percent, which is always the hard bit, converting the good-sounding demo into the great-sounding finished record."

In the end, McCluskey chose two collaborators, producer/programmer Matthew Vaughan (see the 'Producer & Programmer' box), and engineer David 'Chip' Nicholas, both noted for their work with legendary producer Chris Thomas on Pulp's 1995 hit

album *Different Class*. "They were like the right and left-hand men for that record, with Chris Thomas sitting on the couch doing the crossword — and I thought, 'that's the way I want to do it!'. So I spent three months in The Townhouse doing the crossword on the couch! It took a lot of the pressure off me, because I could just delegate things to them and trust that they would do things I would be happy with — they were very much on my wavelength."

## ORGANIC AND DIGITAL

Matthew Vaughan certainly paid his way as the project's Pro Tools and Logic Audio operator: as Andy McCluskey explains, hard disk recording proved invaluable during the making of the album, for example when positioning vocals in the final mix. "That's where Mr. Vaughan came into his own, because not only have you got to spin the vocals in, but nine times out of 10, the final version is sped up a few bpm, so you have to time-stretch them. Pro Tools was incredible — it allowed me to be more objective than I've ever been about making a record. It was also great to have somebody do all that spade work, but also add his own creative touches."

## MATTHEW VAUGHAN: PRODUCER & PROGRAMMER

Matthew Vaughan is a producer and programmer who has often worked with producer Chris Thomas. For the *Universal* sessions, Vaughan worked alongside engineer David Nicholas. Vaughan: "David and I started on two tracks, 'The Chosen One' and 'Very Close To Far Away'. Only 'Very Close' made it on to the album in the end; 'Chosen One' didn't seem to fit properly. I feel a bit sad about that; it's a huge sprawling Roy Orbison tribute which suited Andy's voice perfectly, but it was one of the tracks we had to lose in the final running order."

"After a long break, we went in to start the album. At first, it was just me and David sifting through Andy's demos, sampling, putting stuff into Logic Audio, and generally getting the songs to a stage where we could go into The Townhouse, hit Play on Logic Audio, and we'd have the songs as they were when the demos went down to DAT. Then Chuck Sabo and sometimes Phil Spalding [session drummer and bass player used on *Universal* — Ed] would play their tracks straight on top of that. We'd edit the drum and bass tracks if necessary — which with Chuck isn't often — on the Sony 3348 digital multitrack at The Townhouse. It would have been nice to be able to do this in Pro Tools, but I haven't got Pro Tools III, so I'm restricted at the moment to four tracks of playback. David is incredibly fast at

editing drums on the 3348 anyway.

"We kept very large amounts of the original demos. We were generally tweaking Andy's original sequences, changing sounds, bumping up octaves, altering the melodies here and there, and just trying to make the whole thing sit a bit better. Andy had initially recorded vocals at another studio, all on the same piece of multitrack tape (see the 'Making Demos' box). I put all these into Pro Tools, so we always had the original vocals, and Andy would re-vocal some extra bits. In a lot of cases, the original vocals were used, but they were treated quite a bit, with bits of tuning here and there. With Logic Audio hooked up to the Sony 3348 digital multitrack [see separate 'It's Logical' box], it was so easy pulling bits off the tape, adjusting them, and putting them back on, all in the digital domain. Logic's Time Machine digital time-stretching is invaluable

for this sort of work."

Although highly motivated and assisted by the latest technology, Vaughan is not adverse to resorting to more traditional production methods. "If it was possible to tune vocals effectively on the fly with something like an Eventide HE3000, I'd do it that way. I'd use whatever was the quickest way to get a result: there's always got someone sitting around waiting to do something else. If it was time to really sit down and get the microscope out on the lead vocal, then we'd send everybody else home. Most of the time, we'd do something like a drum track first thing in the day, nail that, and then start flying everything else in on top of it. Once everything was roughly down on tape, we'd take it back off tape to tweak it digitally; that way we had the big picture there on tape all the time. That was the idea behind working from Andy's demos."

The Townhouse, where *Universal* was recorded.

## MAKING DEMOS WITH THE OMD SETUP

McCluskey's personal setup is still very similar to the one he was using when he last spoke to *SOS*, and is centred around a Falcon computer

running *Cubase*. This drives a Yamaha TX81Z, Emu Proteus, Korg M1 and Roland JD800, which are in turn all routed through a Studiomaster desk

and Yamaha NS40M monitors. There's also an Akai S1000, which is fitted with the maximum 32Mb of sample RAM for the dual purposes of touring and memory-hungry CD-ROM usage. Despite being several years old, the S1000 hasn't been troubled by the threat of replacement yet, as McCluskey candidly confesses: "I used an S3000 once, but being a complete Luddite and impatient with technology, I couldn't be bothered to learn how the new buttons worked. I kept trying to do it the old way, and ending up on the wrong page. Next year, I'll probably get round to buying whatever the new version is, but I'm not really a great lover of technology in the sense that I don't really get off on new toys. My

system is in many ways out of date, but it works for me".

McCluskey uses this setup for OMD demos: after working up a sequenced backing track, he dumps it all down to a DAT, and takes it to a studio so that he has something to respond to as he works on his vocal parts. His procedure for recording vocals on 2-inch tape is perhaps quirky, but at the same time effective and economical. "I actually divide the 24-track tape up into three, put the DAT backing for three different songs down onto tracks 1 and 2, 9 and 10, 17 and 18 — and use it as three 8-tracks running simultaneously. In that way, you can actually end up getting nine songs on a piece of 2-inch tape. And I can knock off a whole album's worth of demos, maybe eight or nine songs, in two days like that."

Andy McCluskey at The Pink Museum, Liverpool, where Universal's vocals were recorded.

► "The making of this album went in two opposite directions. Matt's programming with Pro Tools and Logic Audio was beyond anything I've done. But that kind of technology took some of the pain out of the work, and allowed some of the other things on the album to be more organic; trying to combine live drums and bass with a lot of programming is quite hard, and used to be very hard. But the best stuff I've ever done has *not* been completely electronic, it's been half and half, and I like to believe it has a certain humanity and emotional content. So in terms of instruments for the new album, there are a few old organs that I've used, like Farfisas and Elgams [see the 'Elgams & Eno' box].

"Interestingly, with all the fabulous samples you can get from things like the Emu Classic Keys, you often don't actually have to go out and dust down your real Mellotron, or get out your Hammond organ and lob it through the Leslie. For example the 'pipe organ' on 'Walking On The Milky Way' was from a Yamaha TX81Z. And the big organ sound is from an Emu Proteus — but it was put through a real Leslie. There are

lots of strings on the album, and most of those are samples, but 'If You're Still In Love With Me' has a real 10-piece string section [arranged by none other than strings superwoman Anne Dudley — Ed]. CD-ROMs are also great — you can now get things like a choir of nuns singing block chords [from the *Best Service CD-ROM Hallelujah* — Ed], which we used on the middle eight of 'Walking On The Milky Way'. Once again, you're using real organic sounds, but you're using technology to access them. I think we struck a really effective balance."

## FROM PULP TO AMBIENT

Recording at The Townhouse took the form of a three-month block session, with the majority finished before Christmas 1995 — but then there were two last-minute additions. McCluskey explains why this happened: "We set out to — and did — record 16 songs, but I had so many that we first had to wade through what we were and weren't going to do for the album. 'Too Late' was one of the first songs I wrote in Ireland, and Chip and Matt ganged up on me and said they didn't want to record that — neither of them happened to get off on that song. Once we finished the album, though, I was adamant that something was missing, and that that track needed to be on too."

The other track added was 'The Boy From The Chemist Is Here To See You', which McCluskey wrote on holiday over Christmas 1995. "I just fancied doing another up-tempo one. Strangely, of all the songs, it's the one that sounds the most analogue and old-fashioned OMD." The track also seems strongly reminiscent of both Pulp's 'Common People' and 'Disco 2000' from *Different Class*. McCluskey doesn't wholly dispute the similarity: "With Pulp's mentality, and with Chris Thomas adding bits on that record as well, they do have this kind of cheesy pop '70s sound. I'm returning the compliment, quite frankly, because as far as I'm concerned, some of Pulp's stuff sounds like late Pulp playing OMD doing early Roxy

Music. So this is late OMD, doing late Pulp, doing early Roxy Music! 'Boy From The Chemist' — and a lot of Pulp stuff — has that two-chord piano, much the same as Roxy's 'Virginia Plain'."

The title track from the album had completely different origins, with its roots in the extended, proto-ambient synth tracks OMD specialised in until *Dazzle Ships*, like 'Stanlow' from 1980's *Organisation* album, or 'Sealand' from *Architecture & Morality*. McCluskey explains the return to this style: "When *Liberator* came out, a journalist said to me, 'One thing that disturbs me — when you were 21 you were doing these epic music landscapes, and now you're in your mid-30s, you're doing three-minute pop songs. You're almost growing up the wrong way round'. He was right — I used to throw a lot more caution to the wind when I was younger, and did things that in essence sound more mature than what I'm doing now. 'Universal' was a conscious decision to do a big, ambient soundscape". The first section of the track features a typically old-style OMD, analogue-sounding synth line — but as McCluskey reveals, it's not as analogue as you think: "It's actually a JD800 card sound called 'Korean Lead', but with its bell attack sound taken off. Essentially, it's a JD800 mimicking a Minimoog; and then, of course, it's been lobbed through loads of long repeats to give it that grandiose synth rock feel. You can imagine Rick Wakeman or Keith Emerson playing it in a stadium. I was having fun, basically, and trying to knock down some of my own personally-imposed boundaries with a prog-rock intro — but I always knew it would finish with a song somehow." The intro nevertheless hung around unconnected to anything for a long time, being one of the first pieces McCluskey wrote for the album. The main song eventually appeared nine months later. "In the end, we cut down the five-minute intro to two minutes, and added the song. The second part is in the key of C and the intro's in D sharp — it was really difficult to get one to slide into the other."

### THE UNIVERSAL LOTTERY

Reasonably enough, McCluskey made no presumptions about how *Universal* would fare commercially (it was yet to be released at the time of our interview) — although as our conversation ended, he was confident that he had at least satisfied his personal standards, as he had intended. "I have a good feeling that I've done the right thing, and for the right reason. But as to whether the album will sell — that's still a lottery. It's 15 years now since *Architecture & Morality*, which a lot of people tend to regard as our *pièce de résistance*, never

## PROPELLER ISLAND: NICE & MELLO (TRON)

**Andy McCluskey:** "I really enjoy getting CD-ROMs like Propeller Island's Mellotron one, which is brilliant. Some poor sad bastard has spent months sampling every single note from all the different Mellotron tapes he could find —

and then he's gone to the trouble of trying to do condensed versions with nice loops in! I've never heard anything sound so like the real thing. Most samples have sounded either too thin because they're not multi-sampled

enough, or they're too nice and clean — you know they've been digitised. A real Mellotron is nasty and has a distinct sound. It's great that finally, somebody has taken the time to sample it properly."

bettered since. I think that maybe in 15 years' time I could still listen to this and think of it being as good as *Architecture & Morality*. That's the real benchmark test."

Universal and the single 'Walking on the Milky Way' are out now on Virgin Records.

# MŌJO

## WORKING

**R**ane Corporation is shipping brand new technology at brand new prices. For more than 15 years Rane has been producing the world's finest signal processing. Yet many of you have been asking for Rane quality

that's even more affordable. We give you Mojo. The new Mojo SERIES is American made, inexpensive, and built to outperform "bargain" brands in every respect. Why wait?... Get your Mojo working now!

### WORKING FOR YOU

**MQ 302 MOJO FILTERS**  
A fresh twist using Constant Q technology. A stereo 1/3rd octave EQ with a single set of faders to control both channels! A ground breaking idea in true stereo applications. **The MQ302. Get hip.**

**MC 22 MOJO SQUEEZE**  
In a word, innovative! Rane's own Acousticlear technology will improve your system's overall performance. No compressor/limiter can compete with the MC 22's superior design and sonic qualities. **No.1 choice, the MC 22.**

**MX 22 MOJO DIVIDER**  
Easy-to-use, very accurate, the MX 22 stereo 2-way, 24 dB/octave crossover incorporates an additional mono sub output and out-performs other brands that cost much more! **The MX 22 will work for you.**

**MX 23 MOJO DIVIDER**  
You'll find no other stereo 3-way crossover can outperform this gem. Like the MX 22, the MX 23 has a mono sub output, and Rane's 24dB/octave technology to ensure your system stays in phase! **Cross over to the MX 23.**

**MH 4 MOJO CANS AMP**  
You won't believe the performance you'll get from the MH 4, designed by the company that pioneered headphone amplifier technology. You will agree that this is the finest 4-channel cans amp out there. Play it loud! **Hear the MH 4 now.**

**MADE IN USA**

**MORE THAN MUSIC... IT'S AN ATTITUDE!**

# Welcome to the Premier

Since its introduction, Tascam's DA-88 has become the **number one** digital multitrack format for professional studios and producers around the world. With the launch of the DA-38 this same **advanced digital recording technology** hits a new price point.

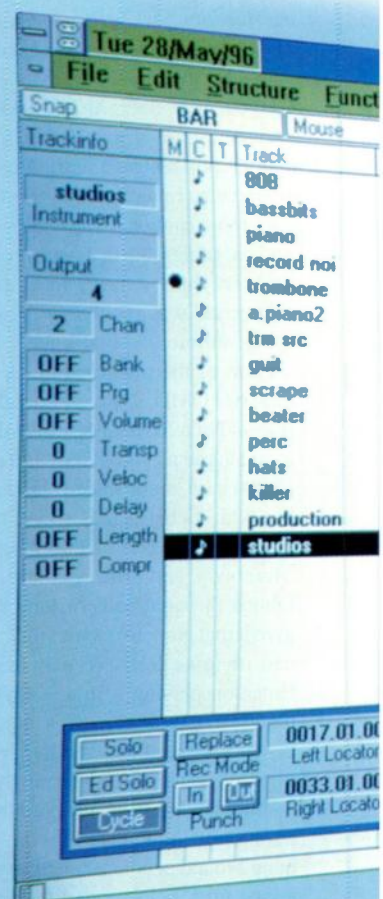

With the same high operational standards and a host of **new recording features**, the DA-38 is fully compatible with the DA-88.

For recording studios, MIDI project studios, live recording rigs and home recording studios, in fact any situation that demands **premier digital recording - the Tascam DA-38.**

- industry standard professional digital multitrack tape format; up to 115 minutes recording time
- unique internal digital patchbay: allows any digital/analogue input to be routed to any track; any track to be routed to any digital/analogue output; any track to be digitally bounced to any other track; any track on one DA-38 to be digitally bounced to any track on another DA-38
- up to 16 DA-38s can be synchronized to provide up to 128 track recording
- advanced digital cross-fading and shuttle-wheel provides seamless punch-in/punch-out capability
- analogue inputs and outputs equipped with high performance 18 bit analogue to digital converters and 20 bit digital to analogue converters
- 16 bit linear PCM recording at both 44.1 and 48kHz sampling rates
- 24 bit capable digital i/o with proper dithering to 16 bit signal onto tape
- sample accurate synchronization capability and internal digital patchbay, enables an infinite tracking capability, using just two units and the required number of tapes (the process is non destructive as anything recorded on one tape will remain entirely in sync with anything recorded or bounced onto another)
- frame accurate search capability
- optional MMC-38 time code/synchronizer unit provides MIDI and SMPTE Time Code outputs and MIDI Machine Control capability, enabling synchronization of or to sequencers and other MIDI based automation devices

## DA-38

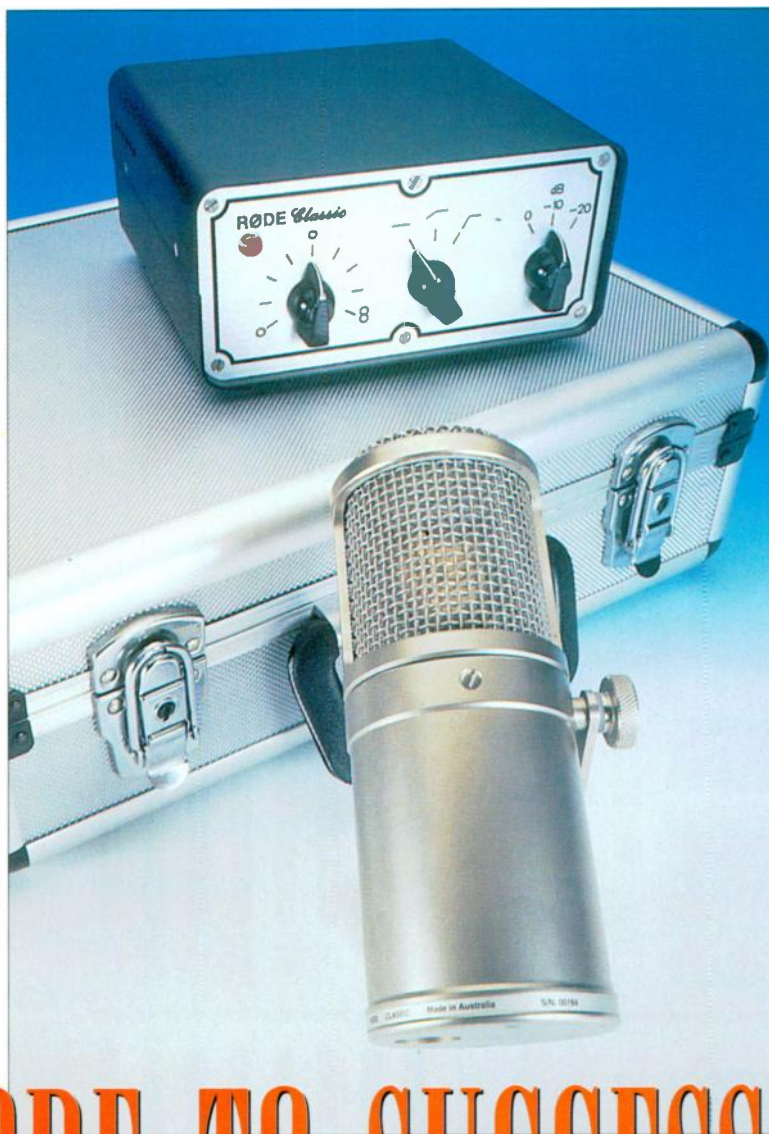

**One Professional  
Digital Multitrack Format  
for all.**

# RODE TO SUCCESS

## RODE CLASSIC VALVE MICROPHONE

*This imposing valve mic from Australian newcomers Rode looks and sounds expensive, but costs a lot less than comparable models from more familiar manufacturers.*

*Jolly swagman PAUL 'BRUCE' WHITE looks down under, on top, and inside...*

Australians have a reputation for saying what they think and for taking a no-nonsense approach to life. Likewise, the Aussie-designed and built Rode Classic mic pulls no punches. Rather than setting out to copy either the look or sound of an existing classic mic, Rode have taken the same approach as Groove Tubes and have created their own tube classic — the only concession to tradition is that the mic uses the same GE6072 twin triode valve as found in some other vintage mics. Apparently, this particular valve has been out of production for 15 years, but Rode somehow managed to stumble upon, then buy up, a previously undiscovered hoard of the things.

### THINKING BIG

Essentially, the Rode Classic is a large-diaphragm capacitor microphone incorporating a dual-element, pressure-gradient transducer, allowing any

## SECOND OPINION

When we first plugged in this mic, we were mystified as to why we couldn't get much level out of it — until we figured out that I was singing into the wrong side. Do watch out for the gold-plated screw Paul mentions, which is the only way to quickly differentiate between the two sides.

Many people expect valve mics to sound conspicuously 'warm' in use — and some do, giving an almost 'fuzzy' effect to a vocal. The valve in the Rode Classic, however, lends such a natural warmth to its sound that you soon forget that it's a valve mic at all when singing through it. If you're at all competent as a vocalist, the Rode simply makes you sound as though you always thought you *should* sound, with a wonderful transparency and presence. Even switching off the reverb, which makes the average singer cringe, doesn't take the shine off the sound of this mic. Plugging in my usual mic, which I've always been very happy with, was a bit of a let-down after this! **Debbie Poyser**

traditional polar pattern to be reproduced under remote control. Because of the non-standard power requirements of valves, the mic has its own mains power supply, which also doubles as a remote control for adjusting the polar pattern, selecting the high-pass filter (bass roll-off) characteristics, and switching in either a 10dB or 20dB pad.

Everything about this microphone is big. The mic itself looks as though it's been built in a shell case — any bigger and it could be mistaken for a Thermos flask! The power supply also features huge front panel graphics, and Vox AC30-style, bakelite pointer knobs. A special multi-pin cable is included for connecting the mic to the power supply, and a standard XLR socket on the power supply is used to feed the signal to its eventual destination. No shockmount is provided, but a simple swivel bracket with threaded stand adaptor is built onto the mic body. Everything comes in a neat aluminium flightcase.

### HARDWARE

Looking more closely at the microphone, the case is machined from solid brass, which has been hand polished and bead blasted before being nickel plated. Only the presence of a gold-plated screw on one side of the mic gives any real clue as to which end you should sing into. Via the remote control box, the mic's polar pattern can be set in nine discrete steps to provide omni, cardioid, or figure-of-eight patterns, as well as several in-between positions. The diaphragm assembly uses a 6-micron, gold-sputtered mylar film, and the entire capsule is hand assembled.

Unusually, there are no pad or filter switches on the mic — the remote control box operates tiny relays in the mic body to allow these functions to be controlled at a distance. Though two different low-cut filter settings are provided, in addition to a flat position, I couldn't find any reference in the documentation as to their characteristics.

### WHAT THE SPEC

On the technical front, the Classic has a sensitivity of 13mV/Pa, which is not untypical for this kind of microphone. The frequency response is nominally flat (within +/-3dB) from 20Hz to 20kHz, but like most large-diaphragm mics, there are little bumps

and dips in the response, which are part of the mic's character. The flattest response is achieved in figure-of-eight mode, where there is just a hint of a presence rise above 5kHz, whereas in cardioid and omni mode, there's a definite peak centred between 10 and 12kHz. At this frequency, the peak is more likely to give a sense of 'air' than traditional presence. Music is art, and the purpose of art is to interpret life, not mimic it perfectly — otherwise Picasso would only have needed a camera and some odd-looking models with rare skin conditions! So it is with mics: some models are bought for their accuracy, others for the way they interpret sound. The Rode Classic falls squarely into the latter category.

The maximum SPL this mic can take without succumbing to excessive distortion is 130dB, which means that you can use it on drums and percussion if the mood takes you. However, I wouldn't dream of placing this mic where a drummer might accidentally hit it! The quoted noise figure is 32dB, and though there are quieter mics around, the chances are that this one is going to be used fairly close to the sound source, so noise should never really become an issue. Slightly higher noise tends to be the penalty you have to pay for any kind of tube circuitry.

### THE VERDICT

Though this mic is in no way technically accurate, it has a seductive quality that leads you to believe that this is the way real life would sound if the world were in some way better than it is. The sound is intimate and warm, yet the top end creates such a sense of openness that perfectly respectable studio mics can sound quite nasal in direct comparison. The nearest I could get to matching the sound of this mic was an Audio Technica 4033A, though the Rode sounds just a hint 'thicker', no doubt because of benign valve distortions. I would imagine that most people would use this mic mainly for vocals — it sure flatters the hell out of most singers — but it also sounds stunningly good on acoustic guitar. Most of the tests were done in cardioid mode, but switching to omni reveals an extra degree of openness — an expected characteristic of omni mics.

When this mic first arrived at the office, we were under the impression that it cost around £1800 plus VAT, which would have made it comparable in price to other 'industry standard' studio mics. If this had been the case, I was prepared to say fair enough — it's expensive, but a serious studio could really get results from a mic like this. However, as we later discovered, the Rode Classic doesn't cost anything like that kind of money — in fact, it weighs in at a little under £1000, plus the inevitable VAT. This puts an entirely different light on what was already going to be a very positive review. It's still a lot of money for the semi-pro studio owner, but this is a dream of a mic, both to use

and to look at, and given that good mics seem to go on forever, the weekly cost of owning one is actually quite small if you spread it over a 10-year period.

Several of us have taken the mic home and tried it in our own studios, and the phrase, "I must possess it!" has been bandied around rather a lot. Indeed, the effect the Rode Classic has had on the SOS editorial staff makes Golum's ring fixation seem like a minor affectation! I can't afford one — I can't justify having one — I don't do enough work to warrant one — I have enough good mics already — how much did you say it was again? Hmmm!

info

### pros & cons

#### RODE CLASSIC £1174

##### pros

- Sounds like a dream.
- Looks like a dream.
- More patterns than a Laura Ashley catalogue.
- Very reasonable price for what it offers.

##### cons

- May have a devastating effect on the life of anyone who tries one and can't afford it!
- No 'bundled' shockmount.

##### summary

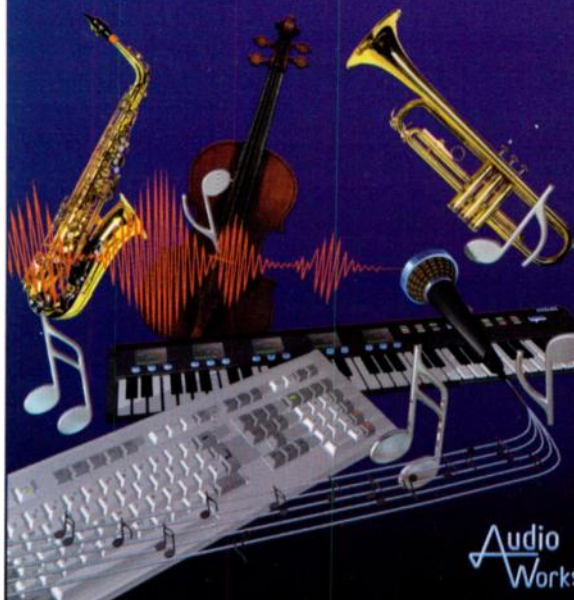

As you can probably tell, I quite like it!

SOUND ON SOUND

## Unleash your creativity with .....

# SOUND 2 MIDI

NOW YOU CAN  
TRANSCRIBE YOUR AUDIO  
PERFORMANCE INTO MIDI-  
USING ANY PC SEQUENCER OR  
SCORING SOFTWARE !

If you sing, whistle, scat, play brass, woodwind or strings; for professional, entertainment or educational reasons, Sound2Midi is your gateway to a new and exciting way of making music !

Accurately converts audio from the PC microphone into MIDI data.

Sends MIDI notes straight to any PC based Sequencer supporting external MIDI input.

Converts WAV files into MIDI.

Variable or Fixed Note Velocity options.

Two modes to ensure compatibility with all PC based Sequencers.

Change recognition parameters on the fly.

Expand or reduce range of pitch detection to suit your instrument.

Lock to scale - quantise singing to any major or minor scale for greater accuracy.

Rhythm mode - for creating drum sequences.

Automatic tuning - to compensate for instruments tuned sharp or flat.

Create presets of selected parameters for different setups or instruments.

Sound2Midi works with all Windows MIDI products supporting external MIDI input .....

Cakewalk, Cakewalk Pro Audio, Cakewalk Express, Cakewalk Home Studio, Cakewalk lite, Cappella, Concertware, Cubase, Cubase Score, Cubase Audio, Cubase lite, Encore, Finale, MidiSoft Recording Session, Midisoft Studio, Music Time, Musicator For Windows, Power Chords Pro, WinJammer and many more.....

# Looping the Loop

*Does looping drive you loopy? If you have a hard disk recording system, and currently spend hours hunched over your sampler trying to find perfect loop points, this article could be for you. SIMON JAMES supplies the foolproof method...*

## MAKING SEAMLESS SAMPLE LOOPS WITH YOUR HARD DISK RECORDER

I was recently approached by a couple of CD-ROM houses to come up with short loops of my own ambient music. My remit was to produce loops of no more than 16 seconds that would cycle seamlessly, with no obvious start or stop points. The idea was that when the loops were triggered by users entering a particular environment in the CD-ROM, the users would be encouraged to stay there, rather than leave as fast as possible to escape an obviously repetitive and irritating musical loop. I had two options for making the loops: one was to use my Ensoniq EPS16+ sampler, and the other was to use my Soundscape hard disk recorder.

For some people, looping on samplers comes as second nature, but for many, the results can be very hit and miss. Looping simple drum grooves usually presents no problem, but what about sounds that evolve over long periods, where the timbre and volume at the end of the sample can be radically different from the start? Conventional looping (whereby a section of the sample is looped

to conserve memory after the initial attack of the sound has passed) is not appropriate here. The aim is to provide a loop that uses the entire sample and cycles to infinity without sounding like a broken record — so some sort of crossfading between the beginning and end of the sample is called for. Although my trusty Ensoniq has various crossfade options, the parameters are entered numerically, not graphically, making for a potentially long-winded trial and error process. With a tight deadline, I needed a process that was quick, efficient, and guaranteed to work every time. Enter Soundscape.

Although Soundscape is my system of choice, you should be able to adapt the instructions below to all the current computer-based hard disk systems (and with a little lateral thinking, to the stand-alone units too), since they all have the tools to do the job.

### LOOPING TEXTURES

- Once you have loaded the source material onto your hard disk, the first thing to do is locate the region you would like to loop and then cut around it, giving yourself a few extra seconds either side. Make sure that the time axis of your display is measuring bars and beats, as opposed to SMPTE time. For textures, the actual tempo and time signature is not critical — the bar lines merely serve as an accurate scale to help you cut segments of equal length. In my case, 120bpm in 4/4 was the optimum setting, since eight bars then gives exactly 16 seconds, the length of my required loop.
- If the loop start point is critical, locate it and make a cut here. Now set the snap value for your move tools to 'bar' and move the cut segment to the start of a bar line, so that your sample starts exactly on the bar. Figure 1 (left) shows the source material cut in this way, with the loop start moved to the beginning of bar 9.
- Now turn the snap value to 'off', move the section preceding the cut right up to the cut, and glue the two parts back together. Switch the snap

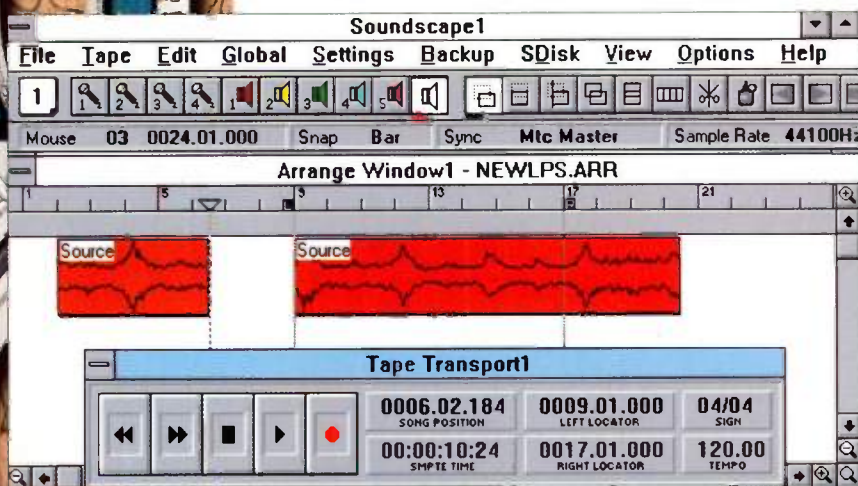

Figure 1.

**OPEN SEVEN DAYS 9am to 9pm**  
**MAIL ORDER SPECIALIST UK/EUROPE/THE WORLD**

## MAKING SEAMLESS SAMPLE LOOPS

- ▶ value back to 'bar', and indicate the segment you wish to loop (in my case, eight bars) with left and right markers. If there is no specific place you'd like the loop to start, there is no need to perform the cut and move operation — simply place markers on the bar lines that delineate the loop.

- Here's where the fun starts: you need to create a linear fade-in from silence to full volume near the beginning of the section you wish to loop, and a linear fade-out from full volume to silence near the end of the section. How rapid you make these fades depends on the nature of the material you are looping, as we shall see later (see 'Fine Tuning' below). However, there are two important points to note: firstly, the fades must be of the same duration at either end; and secondly, the start and end of the section you wish to loop must come *exactly* halfway through the fades you make, however long you decide the fades should be. You first cut the audio up into three chunks, so that you can impose the fades in the chunks at either end without affecting the middle section. (In my example, I decided the fades should be two bars long at either end, and therefore cut the audio into the following three parts: a 2-bar section at the beginning, cut so that the start of the eight bars I wanted to loop was halfway through this chunk; a 6-bar section in the middle; and a 2-bar section at the end, with the end of the eight bars I wanted to loop falling in the middle of this third chunk). You then place a linear fade-in on the first chunk, leave the central chunk as it is, and place a linear fade-out over the third chunk.

- Copy the set of all three chunks onto another track, and move the copied set of chunks so that

audition the crossfades to see if there's a smooth, inaudible transition from the end of one set of the three chunks to the start of the next.

- If you're happy with the result, place the left and right markers so that the left marker falls halfway through the fade-in on the second set of the three chunks, and the right marker falls halfway through the fade-out on the same set. In other words, the

"People spend years perfecting their looping techniques, but with this method, you can obtain perfect results in a couple of minutes."

markers should delineate the section you wish to loop in the middle set of the three chunks. This sounds confusing, but don't panic — just take a look at Figure 2. The middle set of three chunks has been copied to another track, and all three chunks are marked 'Copy 1'.

As described above, the dotted marker lines are positioned exactly halfway through Copy 1's fade-in and fade-out, giving in this case eight bars between the markers; the length of loop I wanted.

- Providing all the pan, volume and EQ settings are the same for both tracks, the way the material has been copied ensures that the audio to the right of the left marker sounds exactly the same as everything to the right of the right locator. So, if you now digitally merge the material from both tracks between the two markers, you will have a section that will play seamlessly to a copy of itself — since the beginning is an exact copy of what followed the end. In other words, it will loop perfectly.

- All that remains now is to export the section between the markers to your sampler. There are a couple of ways of achieving this. If you have a sample editor such as *Recycle* or *SampleCell II*, save your loop on your computer's hard disk as a WAV file (on PCs) or an AIFF file (on a Mac), import it into your sample editor, and do a standard sample dump via SCSI to your sampler. The new Akai samplers have their own sample editing software for the Mac (and soon for PC), *MESA*. This reads AIFF files, which can then be

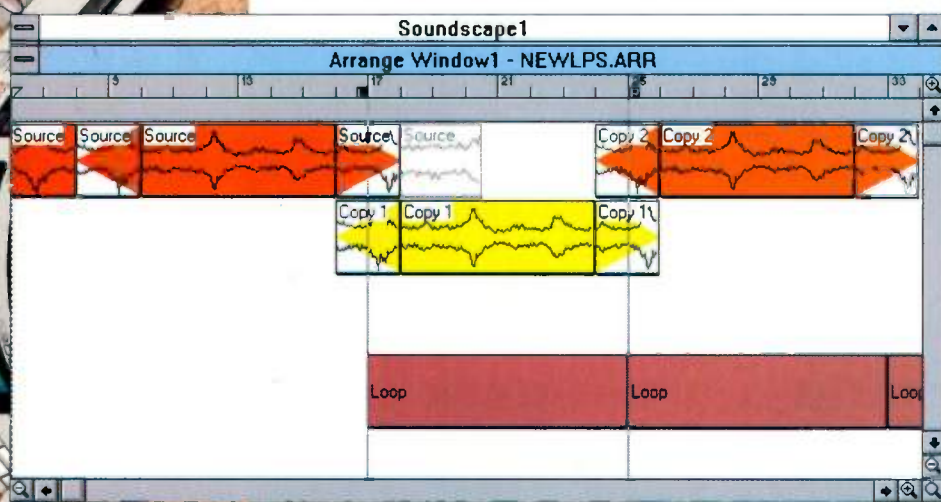

Figure 2.

its fade-in chunk exactly overlaps the fade-out chunk of the original set (remember, the fade-in has to be the same length as the fade-out, so this shouldn't be too difficult). Repeat the process a third time, so that the result looks something like the top section of Figure 2 (above). You now have three sets of three chunks each, and each set crossfades into the next. At this point, you can

## I GOT RHYTHM: LOOPING RHYTHMIC SAMPLES

Using crossfades to loop samples with rhythmic elements is much more hazardous than trying to loop non-rhythmic drones; if you try to loop sections without paying attention to the tempo of the source material, eight bars (say) on the grid will almost certainly not be eight bars of your music. You might get a result that seems to stay in time with itself, but more than likely, it will create a loop with an incomplete bar at the end, or there will be interference at the

crossfade, with completely mismatched beats. In this situation, performing a 'compute tempo' operation as described elsewhere in this article (see 'Fine Tuning') is the only solution. Even then, if the rhythm hasn't been played with metronomic accuracy, you may get flams in the crossfades. If this happens, reduce the crossfade size to as little as a crotchet's worth (quarter note). As long as you use a small amount of overlap, you'll still retain some of the sound's natural decay and reverb at the end of the sample, avoiding the abrupt changes that can occur when you make loops without employing crossfades.

dumped to the sampler. Alternatively, simply record the merged section between the markers onto your sampler, then truncate it with the aid of your waveform display, so that there is no dead space either side of the sample, and set the loop start and end points to the start and end of the sample. If your sampler has no display, you will have to scrub through the sample numbers to listen out for the start and stop points before truncating.

### FINE TUNING

As hinted earlier, there is no reason why the fade-in/fade-out chunks need to be two bars long, as in my example; they can be any length you like, provided they are equal. Depending on the material you are trying to loop, if the transition between loops sounds too abrupt, make the fades longer, ensuring above all that you keep the left and right markers in the middle of their respective fades. The longer the fade chunks are, the more material either side of the left and right markers will be incorporated into the final sample, so the resulting loop will sound less like the original source material. If the volume still seems uneven across the loops, try experimenting with different fade-in/out curves, using a convex curve for the fade-in and its inverse shape on the fade-out, for example.

You may wish to loop a section of music which is not a whole number of seconds long, so using 120bpm as a grid will not give an accurate stop point. By increasing the bpm of your time axis, you can home in on the source material with more accuracy, since you have more bar lines over a given period. Better still, if you have a 'compute tempo' facility, place the markers at the start and end of the section you want to loop, and tell the program that this section is (for example) eight bars long. Next, cut and move the section to the start of one of the new bar lines, re-glue the preceding section as before, and you are now ready to make your bar-accurate cuts.

Once you've got into the swing of making loops in the way I've described, you may find it difficult to go back to looping on the sampler. Besides providing seamless loops for CD-ROM environments, you could use the results to make complex drones and animated ambient washes for your compositions. If you are sampling wholesale from a track, looping in this way will stop your loops from sounding stilted, without the abrupt change as the sample jumps from the end to the beginning of the loop. By using a suitable Java program, you could even set up your web page to automatically trigger and loop your sample, so that every time someone visits your Internet site, they get a memory-friendly taster of your music.

People spend years perfecting their looping techniques on a sampler, but with this method, your loops need never go near a sampler, and you can obtain perfect results in a couple of minutes.

# Just Arrived! SOS Binders

**This month, BRIAN HEYWOOD explores the delights of 'generative' music with Koan Pro, and checks out a new, easy-to-use soundcard...**

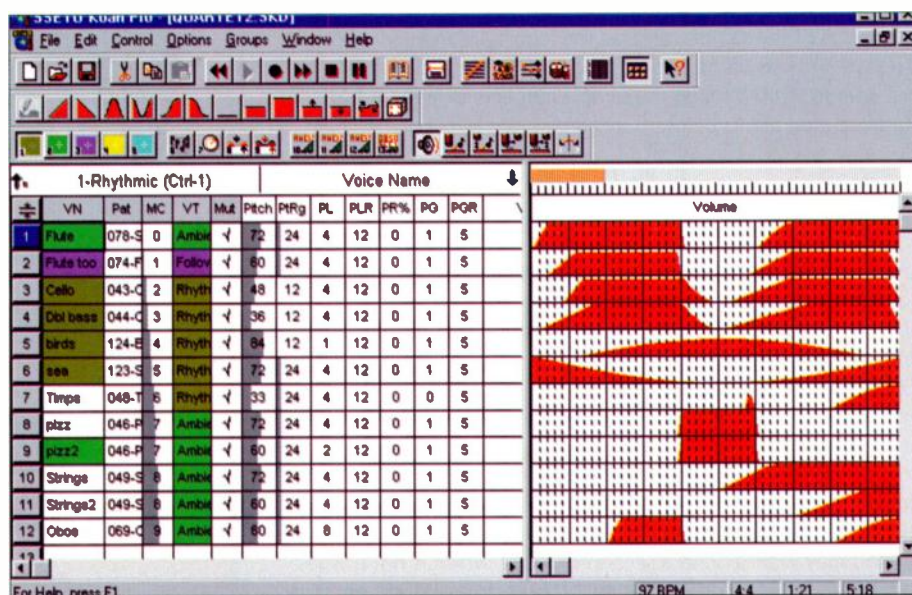

**Y**ou may remember me mentioning Brian Eno's latest project — *Generative Music 1* — back in June's PC Notes. This work, which builds on Eno's philosophy of self-generating compositions, was created using a Windows application from UK-based company SSEYO called *Koan Pro*. I've been experimenting with this package recently, and found it most interesting. It looks a little like a traditional sequencer when you start it up, boasting a vertical arrangement of tracks all outputting MIDI data to your soundcard or other synths — but there the resemblance ends. You can think of each 'track' as instructions to virtual musicians explaining how each monophonic 'melody' line should be played. The instructions can either be very loose (one example could be 'play something ambient in a C scale using the Dorian mode for five minutes') or very specific, and thus more traditionally like a sequencer (for example 'play this defined note pattern at 120bpm until I tell you to stop'). The virtual musicians can even be told to harmonise in real time with each other, or follow one another. This makes the resulting musical output contrapuntal rather than chord-based, and it also tends to be based around a single chord — or rather a scale — instead of a chord sequence. Rhythms can be set up by defining a pattern for each percussive instrument, and you can assign probabilities to whether a certain pattern will play at a given time, so that patterns don't necessarily repeat predictably. You can also allow the patterns to mutate, so that the

overall output changes as time goes on, though due to the semi-random nature of the process involved, the rhythms tend to get more chaotic with time. There is a lot of depth in this package, since you can define virtually every relationship — for example the scales, how the next note in a pattern is selected, the harmonisation rules used, and so on. This approach seems to be particularly effective for producing ambient and modern classical-sounding music, and — perhaps strangely — techno as well.

There are actually two ways you can make use of *Koan Pro*; either as a compositional tool, or as a stand-alone random music generator. In

*Koan* player rather than to output the results as a MIDI file, you can take advantage of the random elements to produce a 'unique' performance each time the piece is played. This latter point could be particularly important if the music is going to be used for 'Muzak'-type applications: for example to generate a looping music track to add to a web page. The non-repeating nature of a *Koan* 'performance' is what Brian Eno finds especially attractive in what he has called 'generative' music.

*Koan Pro* is a very interesting application, and could be a very useful tool, either to fill in the gaps in your musical armoury or to help you break out of a musical rut. The package costs

**Koan Pro — it may look like a sequencer, but don't be fooled!**

the first case, you use the program to generate one or more MIDI files that you can then incorporate into your own MIDI compositions, while in the second case you target your piece at people who want to listen to the music on their PC directly using the *Koan Plus* player.

As a compositional aid, the software is fun to use, due to the number of parameters on offer, but what is difficult is creating pieces with a coherent feel. Some basic templates are provided, which you can either use directly or study to find out how they tick. You can then use the 'meta' design properties of *Koan Pro* to outline the basic parameters governing a musical segment, hit the go button and see what is churned out.

It is simple to produce a pleasing noise using this package, but its forte is slowly-evolving 'ambient' sequences. If you are writing for the

£163.33 (inc VAT) — to find out more, contact SSEYO on 01344 712017. Alternatively, you can download demo versions of the company's software from their World Wide Web site, located at: <http://www.sseyo.com/>

### NEW SOUND CARD FROM TERRATEC

There are many wavetable-based soundcards available at the moment, but most tend to be marketed by computer types, and are aimed at the multimedia or games markets. This means if you are more at home with a musical instrument than a computer, you can quite often be confused by the techno-speak associated with soundcards and have problems working out what you really need, as opposed to what card vendors want to sell you. This is particularly true of musicians who have decided

# THE Sample Editor For Windows™ - And More

## SONIC FOUNDRY'S™ SOUND FORGE™ 3.0

is a full-featured  
Windows based  
sound editor  
intended for musicians, sound  
designers and multi-media  
developers.  
Sound Forge offers advanced  
editing, audio-processing effects,  
creation of loops  
and regions and  
generation of

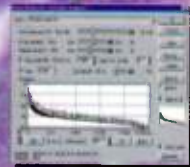

playlists. An expandable plug-in  
architecture tailors Sound  
Forge to any application.

## SOUND FORGE XP

Sound Forge XP, a general purpose sound  
editor, provides the same, easy to use interface  
found in the professional edition, and is  
intended for sound designers, multimedia  
developers and hobbyists requiring a powerful  
yet affordable sound editor.

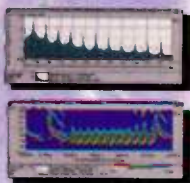

## NOISE REDUCTION PLUG-IN

Now there's no need to slave away  
filtering noisy recordings. Sonic  
Foundry's Noise Reduction plug-in is  
designed to automatically remove  
background noise such as tape hiss and  
electrical hum. Click Removal is also included, allowing  
you to eliminate clicks and pops automatically.

## SPECTRUM ANALYSIS PLUG-IN

If you need to identify that  
particular frequency component,  
you'll find the Spectrum Analysis  
plug-in a great addition. Spectrum  
analysis includes Spectrum Graph  
and Sonogram display for easy  
frequency (or pitch) identification.

## BATCH CONVERTER PLUG-IN

The Batch Converter plug-in is a time  
saving utility for those needing to convert  
tens, hundreds or even thousands of sound  
files to different formats automatically. All  
plug-ins require Sound Forge 3.0.

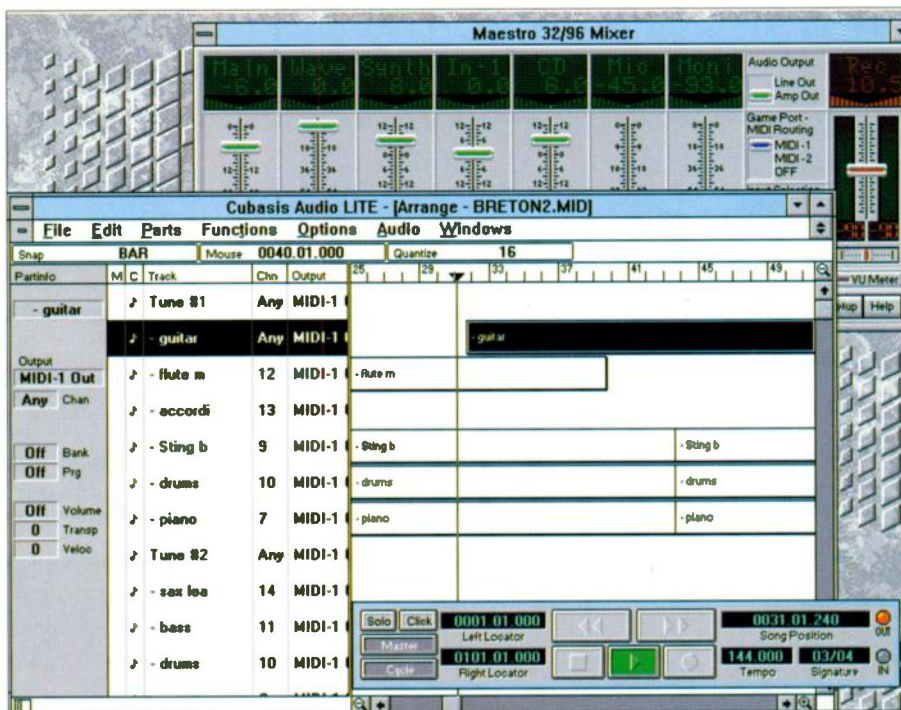

Call 0181 202 1199 for a FREE demo disk.

EDITORS  
CHOICE

► to change from Atari STs to PCs, as the latter has rather more configuration options than the former. German-based company Terratec have designed their new Maestro 32/96 soundcard to make life easy for exactly this kind of person. The card is a 16-bit ISA buss (or AT buss) wavetable-based soundcard with a Plug & Play BIOS to simplify installation under Windows 95. The Maestro is based on the SoundBlaster specification, with connectors for a CD-ROM (Mitsumi/Panasonic IDE/Sony) and a daughter board, and a combined MIDI and joystick port with an additional internal connector for a second MIDI port. The audio side of the card is based on the Dream chip-set, and has simultaneous record and playback at sample rates up to 48kHz — and Terratec say that they've taken special care with the design of the converters to ensure a high signal-to-noise ratio. The wavetable side comes with 4Mb of ROM for the sound samples, which is comparable to the better-quality soundcards on the market, and the sounds are compatible with the Roland GS standard as well as General MIDI (GM). The card also has an internal 4W amplifier which can be disabled via software, a useful facility, as you don't need to open up the computer if you decide to switch between using speakers and an amplifier or a mixing desk.

The Maestro 32/96 has three external audio inputs rather than the usual two, in addition to an internal connector for the audio output of

Two of the bundled software packages supplied with the Terratec Maestro 32/96 soundcard.

the CD-ROM drive. The card package includes *Cubasis Audio* or *Cubasis Audio Lite*, in versions modified by the chaps at Steinberg to take advantage of some of the features found on the Maestro. This means that a *Cubase* user swapping from the Atari will feel at home

immediately, and get the additional audio features if they want them. The usual bunch of utilities are also included — for example, mixer applications, and .WAV file editors. The Maestro with *Cubasis Audio Lite* costs £249, but if you want the full version of *Cubasis Audio*, you'll need to raid your piggy bank for £349 (these prices include VAT). Both packages come with a stereo condenser microphone and a MIDI interface cable. To find out more, contact Digital Media on 0171 607 2727.

SOS

The Ark web site aims to be a valuable resource for musicians of all types and abilities.

## CYBERSPACE CORNER

Kevin De Souza from Arksoft emailed me recently about his company's new music web site, called The Ark. There are a number of different sections to The Ark (which is accessible at: <http://www.arkangel.com/>), each of which is a mine of useful information for musicians: for example, the Bureau Law Scrolls (<http://www.arkangel.com/law/>) offer legal advice from one of London's top law firms for artists entering into record, publishing and management contracts, to help prevent them being ripped off (as is often the case).

The heart of the site is the Music Session Bureau (MSB) which is an interactive site for musicians, producers, programmers, songwriters, engineers, DJs and vocalists. According to Arksoft, various famous people have visited the site (at <http://www.arkangel.com/MSB/>), including DJ Paul Oakenfold. Also part of the site are the rapidly-expanding WebSTAGE, a place for happening bands and artists, and a section for record labels and production companies (<http://www.arkangel.com/labels/>). Arksoft are planning to expand the site, and other sections will open soon, including:

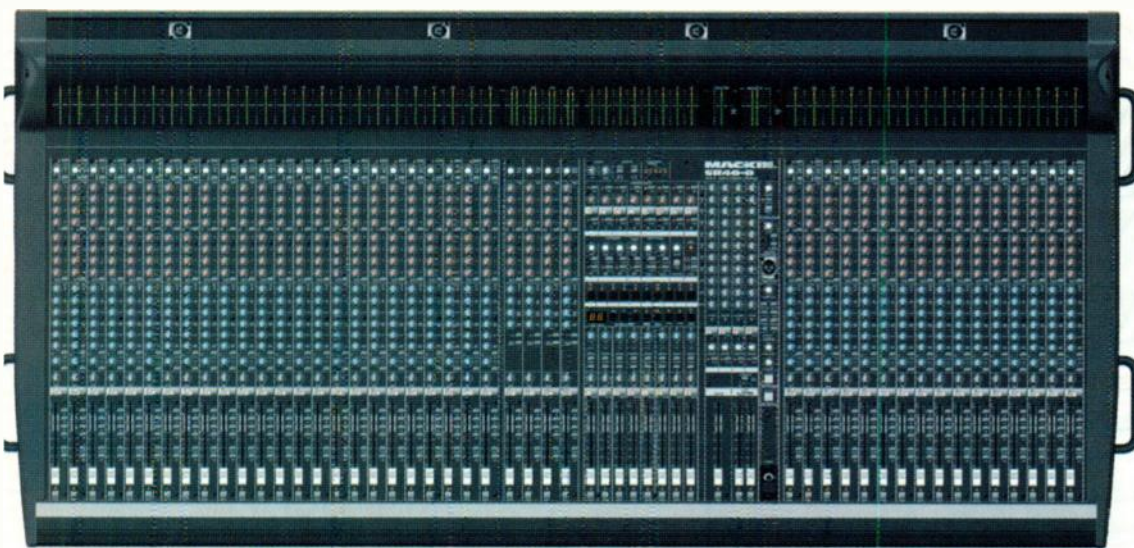

- The Curve, a tutorial area (<http://www.arkangel.com/curve/>).
- The Music Mall, a section for vendors and retailer

adverts (<http://www.arkangel.com/musicmall/>).  
• A studio brochure area (<http://www.arkangel.com/studio/>).  
Ark's help pages also have various useful resources (for example, GM/GS MIDI tables). This site's definitely worth checking out!

# SR40•8

**NEW!** Large-format  
40x8x3 SR console.  
If you're impressed  
with its features...

...you'll be downright amazed at its price.

Never before has so much been so affordable. Using the automated manufacturing processes and design expertise that established our 8•Bus and SR Series, we've created a no-compromise, 40x8x3\* LARGE-format live sound console.

With features like built-in digital muting automation, Left/Right/Center outputs, 12x4 matrix, 4-band EQ with swept Hi & Lo Mids and built-in meter bridge.

- Center-mounted Master section with 4 full-length "aux strips" including 4-band EQ, pan & trim controls
- Independent L/R/center bus assignment
- On-board snapshot group muting with external computer control capabilities
- 12x4 matrix w/center, L & R input controls, matrix mute button + LED, matrix master level control and matrix solo + LED
- All inputs & outputs fully balanced (except RCA tape inputs & outputs)
- Master section includes fader link L/R switch, center master fader, center solo + LED, L&R/L-R master level faders, L&R solo switches + LED indicators
- 8 Submix section bus strips each feature 100mm log-taper faders, "Air" EQ controls, center & L-R assign switches, pan controls, mute & solo switches with LEDs

- Stereo Aux/Tape Return section includes level control, mute switch, solo switch + LED, monitor line out level control, monitor mute switch, global PFL/AFL solo switch & Mackie's famous Rude Solo Light LED
- 40\* mono channel strips with Mackie's renowned high-headroom/low noise discrete mic preamps, polarity switches & sweepable 30-800Hz Low Cut (high pass) filters at 12dB/octave
- Mono channel strips include: 60 dB range gain trim, individual phantom power switch and status LED, 8 individual aux sends, Aux 1-4 & 5-8 pre/post switches, 4-band equalization with 12kHz Hi shelving EQ, sweepable (500Hz-15kHz) Hi Mid EQ, sweepable (45Hz-3kHz) Lo Mid EQ, 80Hz shelving EQ, EQ In switch, 30-800Hz sweepable Low Cut (high pass) filter at 12 dB/octave and In/Out switch, constant

power pan control, mute switch + LED, Submix 1-8 assign switches, L/R /center assign switches, 100mm log-taper fader, solo switch + LED indicators

- 4 extra stereo line channel strips for aux returns, which include: 4-band equalization with 12kHz Hi shelving EQ, 3.5kHz Hi Mid EQ, 800Hz Lo Mid EQ and 80Hz shelving EQ, plus 150Hz fixed Low Cut (high pass) filter at 18dB/octave, Low Cut In/Out switch, other features same as mono channels

• Flip switch for stage monitor applications: Exchanges the master control of any selected aux send with the corresponding subgroup fader routing the aux send to the sub insert jacks, slide master fader, air EQ, and balanced output connectors

- UltraMute section has 99 mute groups and 99 snapshot capability, mute select switch + LED indicators, Store/Preview/Snapshot/Clear/Enable switches + LEDs, 10-unit snapshot indicator, group indicator, Mode/Up/Down switches

• Talkback section includes talkback mic input (phantom powered), assign switches for Matrices A-B-C-D/Aux 1-4/Aux 5-8/Ext./L-R, talkback level control, solo level control, program level control, talk button, recessed phones jack (there's one on the rear panel too) 400 Hz/pink noise source with separate level control (uses talkback routing switches)

• The non-optional Meter bridge includes individual 12 segment bargraph displays for each channel, dual bargraphs for the stereo channels, eight additional bargraphs for the subgroups, and three more for Left/Right/Center outputs. The input meters may be globally switched to read prefader or postfader, and so may the output meters. The meters are dimmable

• Rear panel includes RS232 data port & MIDI In and Out jacks, L&R outputs, L&R monitor outputs (engineer's wedge), L/R/center XLR outputs, talkback output, XLR Matrix A-B-C-D & sub outputs, Aux Return B inputs (4 stereo pairs), Tape A & B inputs & outputs, main L & R inserts, Center insert, subgroup inserts, Clear-Com input, & main power supply input

• Each channel has rear panel XLR mic & TRS line in jacks, insert with separate send & return (balanced), & direct out

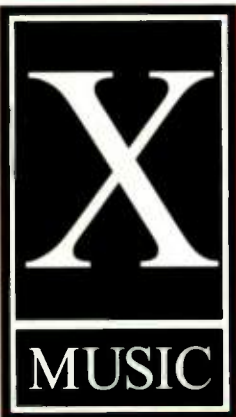

• Built-in Clear-Com™ interface: ties the SR40•8 into any Clear-Com party-line intercom system, with ground isolation, ignore switch, call button + LED, and a trick or two that even Clear-Com doesn't have

• External 400-watt power supply with redundant power capability

• 4-pin XLR lamp sockets and dimmer

# WaveCraft for PC

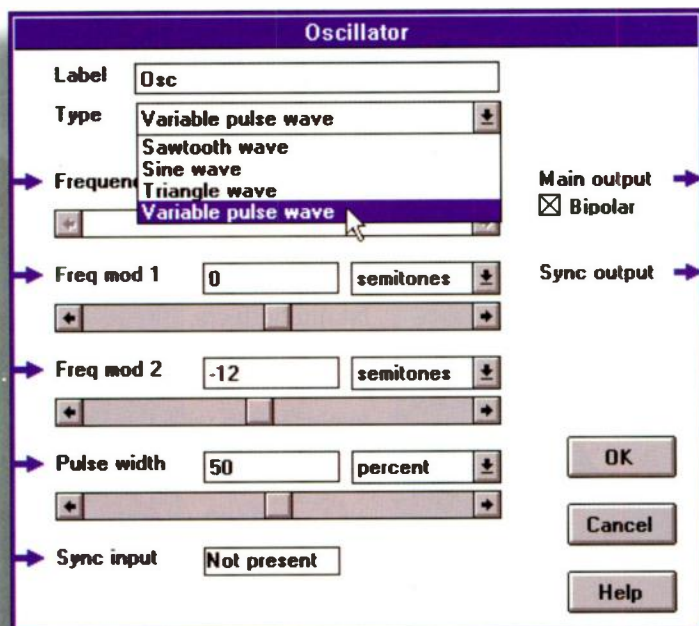

*"WaveCraft can give you almost total control of the sound generation 'hardware', effectively letting you design your own instrument."*

- create a wave file using the VSE compiler, so that you can hear the results. Finally, you use a sample-editing application (soundcards are generally supplied with one) to forge one or more of these audio files into a musical instrument that can be downloaded into your sample replay device (ie. your soundcard).

You don't have the instant gratification that you get with a physical instrument — it's not possible to just twiddle a knob and see what happens, so the whole process is far more cerebral. Consequently, you need to have a fairly good understanding of what you're doing, as well as plenty of time if you want to experiment. The pay-off for this effort, though, could be quite substantial, as *WaveCraft* can give you almost total control of the sound generation 'hardware', effectively letting you design your own instrument.

## GRAPHICAL EDITOR

The 'front line' of the application is its graphical editor. This is laid out in a grid — rather like a spreadsheet program — with each cell containing an individual processing module. To select (or place) a module, click on an empty cell to get a list of those available and select an option. Modules

*Expanding a module (an oscillator in this example) allows you to define how it will perform.*

can be moved around by dragging an existing module to an empty cell and then dropping it. Clicking on an existing module brings up a small menu that allows you to delete it, disconnect an input, or expand it to access the individual programming controls.

## THE BASICS OF ANALOGUE SYNTHESIS

The distinctive sound we most usually associate with analogue instruments is generated by what's known as 'subtractive' synthesis. In principle, you take a harmonically-rich sound source — say a sawtooth wave — and then remove the frequencies you don't want. The alternative to this method is additive synthesis, wherein you add together sine waves of different frequencies to create the required sound.

The basic unit of frequency manipulation on an analogue synthesizer is the Voltage Controlled Filter (VCF), which can be used to remove certain portions of the frequency spectrum. The voltage control element is important on a performance synthesizer, in order that the filter can track the notes being played. Other control elements include Low Frequency Oscillators (LFOs), Sample and Hold circuits, ADSR (Attack-Decay-Sustain-Release) envelope generators,

noise sources, and both audio and voltage mixers. By selectively combining these elements, you can create a sound program — known as a 'patch', since early modular synthesizers required that you physically connect the various elements with patch cables.

While the original synthesizers used electronic circuits to create and modify sounds, there is no reason why their operation can't be modelled mathematically, using a computer program — such as *WaveCraft*.

If you'd like to know more about analogue synthesis terminology and methods, take a look at two short series *SOS* ran in 1994. 'Sound Foundation', which aimed to give a basic grounding in the subject, appeared in the February and March issues, while 'Exploring Analogue', which went into more detail and also covered modular synths, ran in the May-July issues.

There's a choice of 16 module types, which range in complexity from a simple control voltage source to a mini-sequencer. Each module has one or more inputs, according to its function — for instance, the oscillator has two CV inputs for controlling the frequency of its output waveform. It's very easy to link up various modules: just drag the source module's icon to the destination module and drop it. A small dialogue will pop up to allow you to select the input you want. Any inputs already in use are 'greyed out', and therefore not available. To remove an input that is already in use, simply click on the destination module's icon and use the 'Remove Input' option on the dialogue that appears.

The modules fall into a number of basic categories: control voltage sources, waveform generators, and signal processors, plus an extra module for actually creating the finished sound file on disk.

## CONTROL VOLTAGE SOURCES

The control voltage sources are — in the main — used to generate movement in the output waveform. The exception to this rule is the Master control voltage source, which is simply used to ►

# WaveCraft for PC

- synchronise the pitches of multiple oscillators and/or filters. The other control voltage sources include Envelope and Glide generators, a Sample and Hold module, and a 16-note Sequencer, all of which can be used to control other modules.

*Run a genuine '70s 16-note analogue-style sequencer on your Pentium!*

These control elements are probably the most important part of the analogue synthesist's arsenal, in that they can be used to create movement in the sound. The dynamic control voltages can be used throughout the synthesizer, from the creation of the amplitude envelope of a sound, through to real-time modification of its frequency characteristic.

## WAVEFORM GENERATORS

WaveCraft has five signal generation modules in all, with two of these being intended for control purposes. The main musical waveform source is the oscillator module, which can generate sawtooth, sine, triangle and variable-pulse (square) waves. The 'centre' frequency of the waveform can vary from 8.176Hz (semitone value of 0) to 8372.018Hz (semitone value of 120), with the pitch being displayed using the MIDI note-numbering scheme (ie. 60 = middle C). The frequency can be modulated using two control voltage inputs (say, for pitch modulation effects using the output from the envelope generator), and the oscillators can be synchronised with each other.

The Noise Generator produces white noise for percussive effects, or to provide a random element to the Sample and Hold module. You can select either a Pre-determined noise sequence, or a Random sequence which will be different each time. The Pre-determined option will allow you to reproduce a particular output sound for sample after sample, despite the fact that the output is always 'random' white noise.

WaveCraft offers the interesting option to pass an existing waveform file, from another source, through the program's virtual 'analogue' circuitry. A WAV sample input module allows you to use 16-bit, 44.1kHz mono samples as input waveforms. The sample can be looped, so you could generate quite complicated developing breakbeats from relatively short samples. You're limited to mono samples, but it would be feasible to process each side of a stereo sample independently.

The remaining two signal generators — the LFO and the clock generator — are meant to be used to control other modules. The LFO, for instance, could be used to provide continuously-varying control over the modulation input of an oscillator module, or over the depth input of an amplitude modulator, for vibrato or tremolo effects. The clock generator would be used in conjunction with the Sequencer module to create rhythmic patterns of notes.

## SIGNAL PROCESSORS

There are six signal processing modules: Low-pass Filter; High-pass Filter; Amplitude Modulator; Voltage-Controlled Amplifier; Mixer; and Inverter.

The high-pass filter removes frequencies below the cutoff frequency, and the low-pass filter removes frequencies above the cutoff. Apart from this, they both behave in the same way and use the same controls. The Cutoff Freq control sets the master cutoff frequency for the filter, from around 8Hz to just over 8kHz. You can use either or both of the two cutoff mod inputs to offset the master cutoff frequency, or provide filter sweep effects. The filter

## HOW DOES IT SOUND?

The retro synth craze probably has as much to do with fashion as art, but there is an essential idea at the core of the matter. Sounds generated by creaky old hardware with famous names on the front panels do have a unique quality that can't be recreated by digital means. To be honest, the reason for this is that the original analogue synths were less than ideal and the quirkiness that makes them sound individual was due to design compromises and the electronics available at the time.

WaveCraft uses mathematics rather than crusty old electronics to create sounds. So while the PC version doesn't sound like any particular flavour of synthesizer, it actually creates the sounds that all analogue synths try to achieve. This means that the resulting sound files have a family resemblance to all synths, without any of the built-in character of any particular hardware. So the generated WAV files are recognisably the result of an analogue process, but without the baggage — or the buzz — of any particular brand name.

## SYSTEM REQUIREMENTS

- 486DX2/Pentium PC (386SX minimum).
- Windows 3.1 or 95.
- CD-ROM drive.
- Sound Blaster AWE32 or other wavetable sound card with at least 512K user RAM (or hardware sample playback device and sample management software).
- 4Mb main memory (8Mb recommended under Windows 95).
- 50Mb free hard disk space (suggested for generated samples).

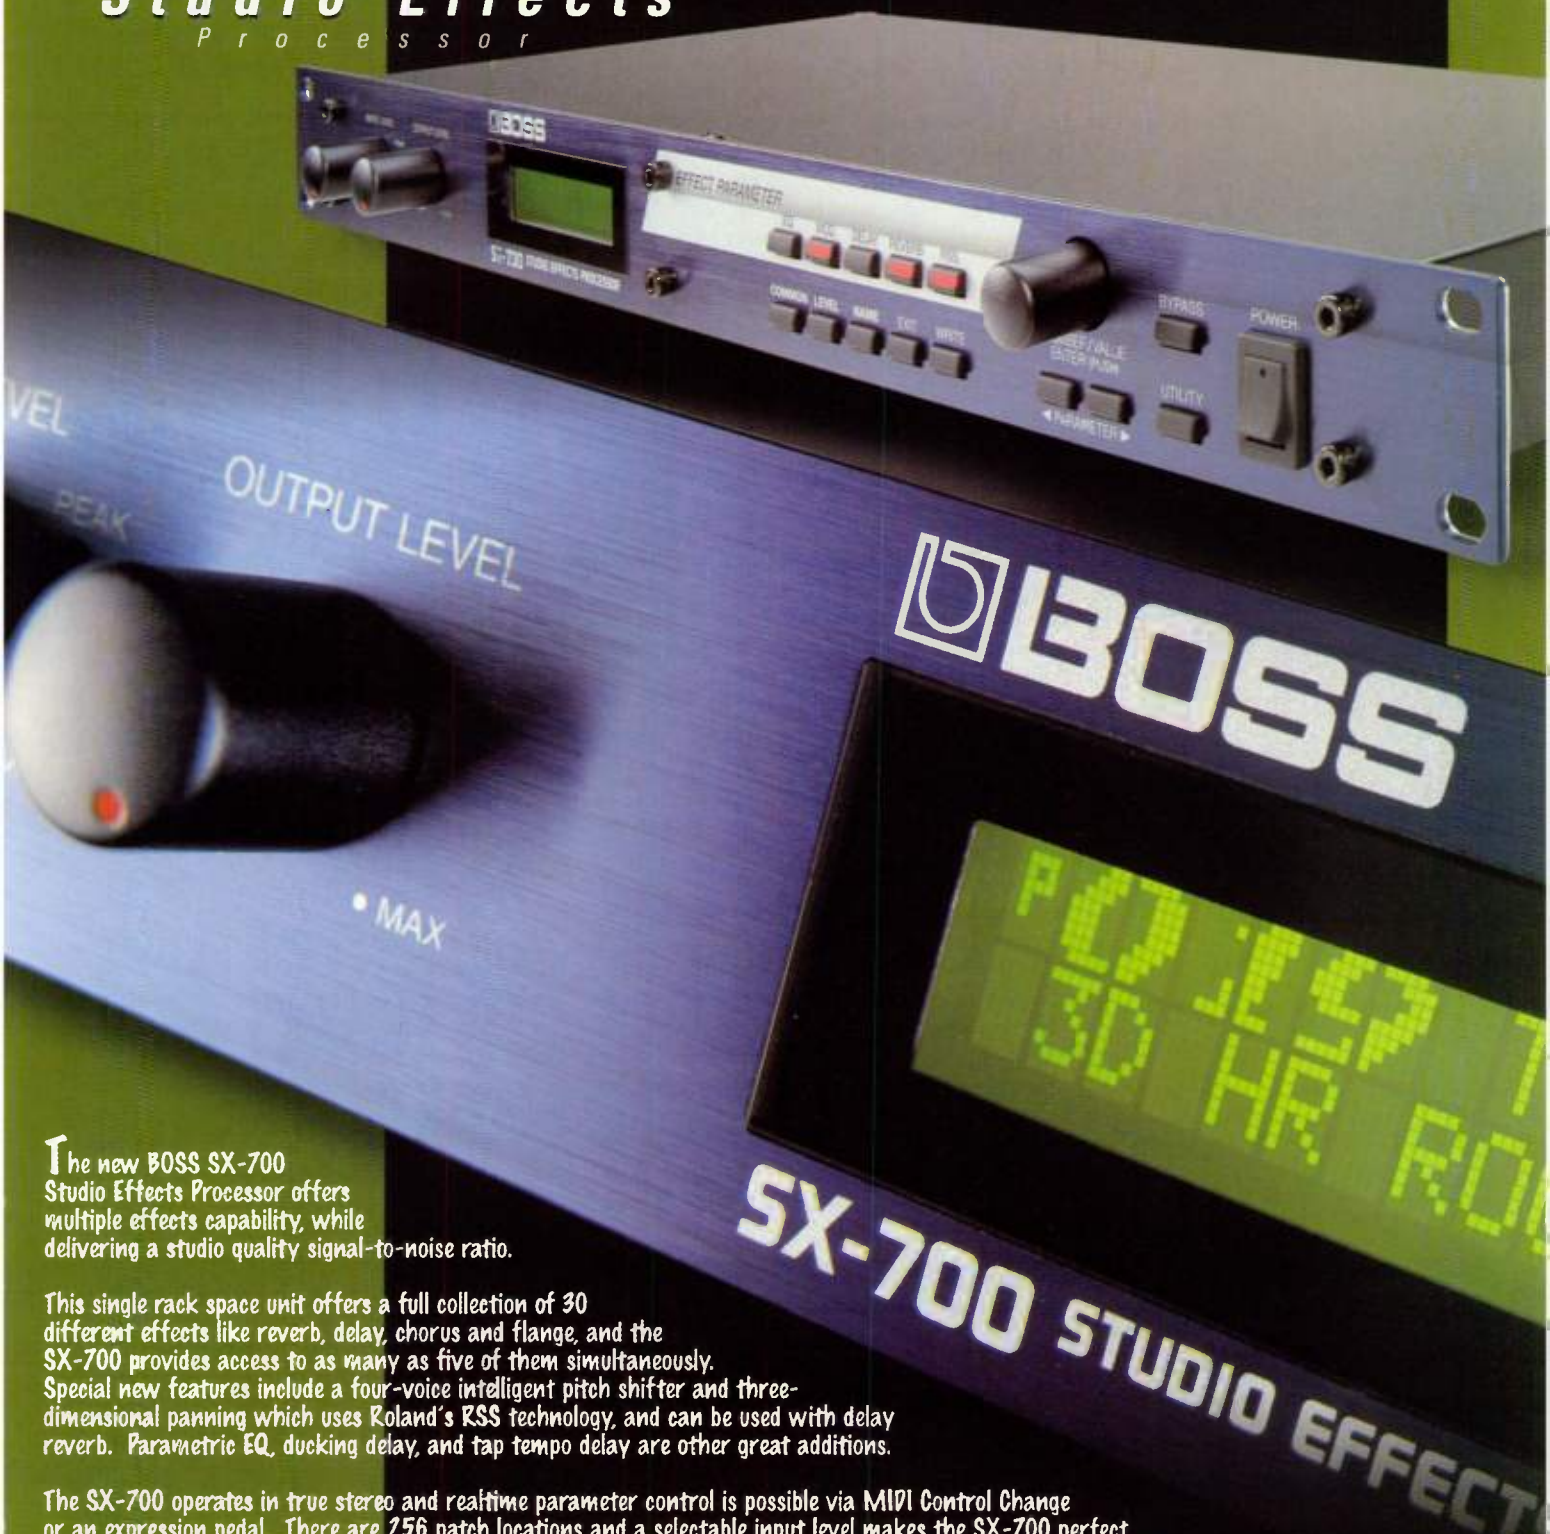

Resonance control sets the resonant quality (or Q) of the filter: a value of 0% corresponds to minimum resonance, while 100% corresponds to maximum resonance — which can result in continuous oscillation in some cases. One interesting effect can be obtained by connecting the output of the Sample and Hold module to a filter with a fairly high resonance, to give a rhythmic output.

The Amplitude Modulator is like a volume control that can set the output level of the module to any value, up to the level of the input set by the Depth control. If the depth is 100%, the output follows the input exactly; if the depth is 50%, the output is half the input, and so on.

The Voltage-Controlled Amplifier has a similar effect, except that it can be used to boost the

# SX-700

## Studio Effects Processor

The new BOSS SX-700 Studio Effects Processor offers multiple effects capability, while delivering a studio quality signal-to-noise ratio.

This single rack space unit offers a full collection of 30 different effects like reverb, delay, chorus and flange, and the SX-700 provides access to as many as five of them simultaneously. Special new features include a four-voice intelligent pitch shifter and three-dimensional panning which uses Roland's RSS technology, and can be used with delay reverb. Parametric EQ, ducking delay, and tap tempo delay are other great additions.

The SX-700 operates in true stereo and realtime parameter control is possible via MIDI Control Change or an expression pedal. There are 256 patch locations and a selectable input level makes the SX-700 perfect for live sound reinforcement, as well as for studio work. Add an intuitive user interface, MIDI implementation and superior signal-to-noise ratio and you've got one great unit. The SX-700 Studio Effects Processor: setting a new standard for studio quality multi-effects.

# WaveCraft for PC

"At just over £100, WaveCraft offers quite a bit of sophistication for the money..."

- input signal. Using the Amp Factor control, you can set the amplifier gain to up to 100 to boost the main input, or you can attenuate the signal. With both modules, the output signal can be inverted by setting the gain control to a negative value.

The Mixer module is used to combine up to four signals or control voltages into a single output. The input signals are simply added together — and like any audio mixer, if the output is too high, clipping will occur. To help prevent this, you can use the Attenuation control.

Finally, the Inverter turns the signal 'upside down', either around the zero point (Bipolar), or so that any value less than 0V will be clipped to 12V once inverted. Both the Mixer and the Inverter can be used to handle control voltages as well as audio signals.

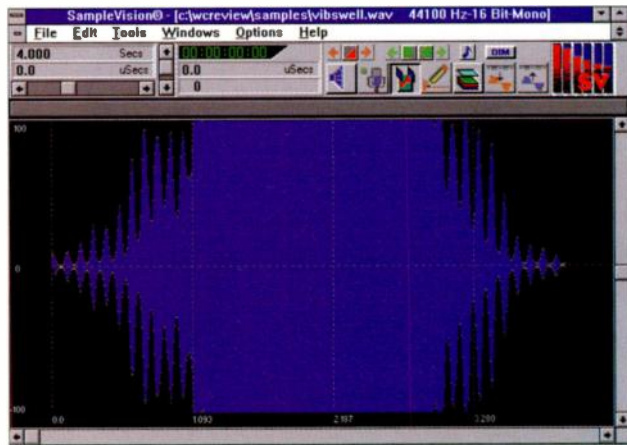

## CREATING THE FINAL PRODUCT

Once you've created your virtual analogue synthesizer on screen, you have to produce a wave file in order to hear it. To do this, you must add a File Dump Module, which allows you to define both the length and the location of the file on your hard disk. WaveCraft can generate Windows WAV files or headerless RAW files, according to how you set the 'Type' option. All files are 44.1kHz, 16-bit mono, which should be compatible with all wavetable soundcards with download memory, or current sampling instruments.

Hitting the Generate button causes the program to ask you to enter the length of the sample to be generated, in seconds, or as a number of samples. If the design incorporates any envelope modules, the default time will be the length of the longest envelope, but this can be overridden if required. Once you've sorted this out, the program starts up a DOS-based compiler, which takes the module design you've defined

and creates a wave file from it. The time taken will depend on the length of the sample, as well as on the power of your PC.

You can then audition the sample by playing it back off the hard disk. If you need to make any changes, you have to go through the 'generation' cycle again. This could be quite time-consuming if the sample is long or you need to make a lot of changes. It's also necessary to repeat the process for different pitches if you're creating a multisample.

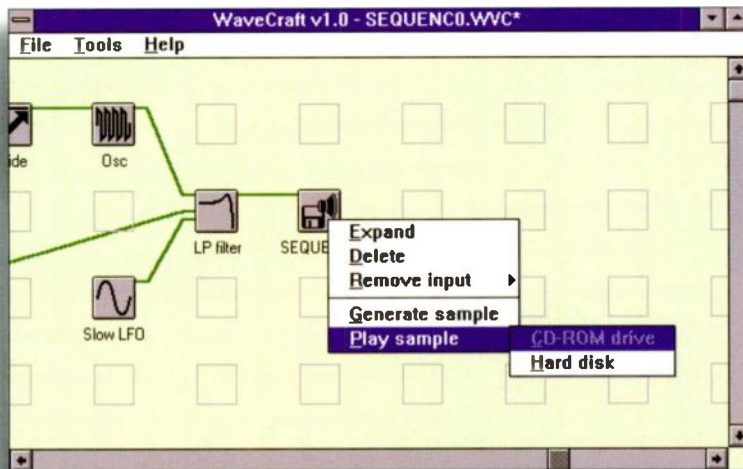

Once the sound file is created, you have to program it into your sampler or RAM-based wavetable soundcard using a program like SampleVision, especially if you need to add loop points.

## CONCLUSION

At just over £100, WaveCraft offers quite a bit of sophistication for the money, but remember that the program is only one element of the 'analogue synthesizer construction kit'. In addition to the software, you need a RAM-based wavetable soundcard (or stand-alone sample player) and software that allows you to create multisamples for it. The latter wouldn't be so necessary if you were only using WaveCraft to generate rhythm tracks, but you'd still need a playback device of some sort. On the plus side, the alternatives — buying an analogue synthesizer or commercial sample CDs — would be far more expensive in terms of money or time.

To sum up, if you want to produce a sound that's unique and you have a sample replay device of some kind, you should definitely have a look at WaveCraft. There's a demo version available, called WaveCraft Lite, which should be available from a bulletin board near you by the time you read this.

When you've finished editing your synth design, you can actually hear what it sounds like.

**MARTIN RUSS** investigates OMS and FreeMIDI compatibility, explains how you can protect yourself from copy protection, and rounds up more Mac news and useful 'net addresses...

While I was looking at Mark of the Unicorn's (MOTU) *Digital Performer* 1.7 for my *SOS* review (see the September issue) I used their FreeMIDI system to make the connection between the sequencer and my MIDI interface. This prompted me to look into what would happen if I had both MOTU's FreeMIDI and Opcode's OMS (Opcode MIDI System/Open Music System) in my system, so that I could use both programs — or even if I didn't have OMS and wanted to use FreeMIDI. This is what happened...

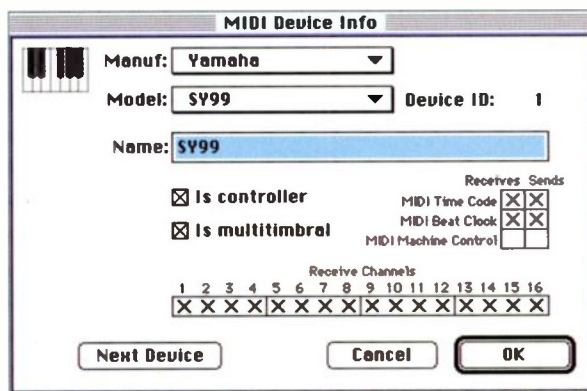

### FREE & EASY?

The FreeMIDI documentation explains that it and OMS can co-exist, and that you can use the *OMS Emulator* to run OMS applications

with FreeMIDI. This all sounds reasonable; in fact, I had no problems installing FreeMIDI with my standard MIDI interface, and I felt at home quite quickly. The auto-configuration routine detected some of my eclectic collection of equipment (about the same amount as OMS, actually!) and provided almost exactly the same

Opcode's OMS in the Extensions folder inside the System folder at the same time as FreeMIDI's *OMS Emulator* — OMS detects this and complains that there are two copies of OMS present. This is because the *OMS Emulator* replaces OMS, and so you need to disable the OMS extension.

I would normally try compatibility tests with the latest versions of software that I could obtain, but the current *Vision* version (3.0) requires OMS 2.0, and it does not recognise the *OMS Emulator* provided in FreeMIDI 1.2.4. In fact, version 1.2.4 of FreeMIDI does not recognise OMS 2.0 *Studio Setup* files either, which suggests that FreeMIDI is still working towards OMS 2.0

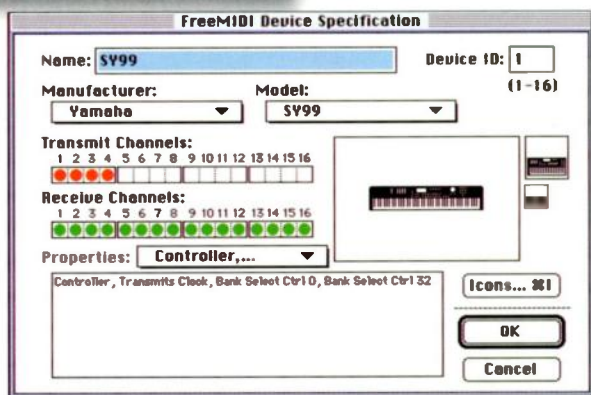

Opcode's OMS (above) and MOTU's FreeMIDI (right) device setups.

sort of visual mapping of my MIDI system. Apparently, the automatic detection of the equipment in your MIDI system is improved if you disable the transmission of MIDI clocks — it makes all those test SysEx messages easier to decode.

But things became more complex when I tried the same thing with my Studio 5. The Studio 5 (and its smaller cousin, the Studio 4) is rather more than just a MIDI patchbay — it functions as a sophisticated MIDI processing device too. In order to be used with FreeMIDI, it needs to be in 'MTP emulation mode', which also disables its MIDI processing, since it is now emulating a MOTU MIDI Time Piece (MTP), which is an 8-port MIDI interface dedicated to providing patching and synchronisation facilities only.

In order to put the Studio 5 into emulation mode, you need OMS, since the *Studio Setup* application provides the only way to configure the emulation, and this application only works when OMS is running. There is an *OMS Emulator* system extension provided with FreeMIDI, but the *Studio Setup* application does not work with it. It is not possible to have

compatibility — and it highlights the perils of using non-Opcode software with Opcode hardware! So I removed OMS 2.0, installed an old *Vision* 2.08 and OMS 1.2.3, and then restarted the Mac. I then used the *Studio 5 Setup Application* to put the Studio 5 into MTP emulation mode — taking care to assign my MIDI devices to the ports (otherwise no MIDI input or output occurs — and you can't change the emulation configuration without reloading OMS!). Inside *Vision*, this gave me a Studio 5 which appeared as normal, since when OMS is running, the Studio 5 still behaves like a Studio 5.

I then removed OMS from the Extensions folder, replaced it with the *OMS Emulator*, and restarted the Mac again. This time *Vision* saw what appeared to be a MIDI Time Piece, as expected. When it does not receive OMS messages, the Studio 5 goes into MTP emulation mode. Within MOTU's *FreeStyle* sequencer, the Studio 5 also behaved like an MTP, and so now I had replaced OMS with FreeMIDI (but I still needed OMS in order to achieve it!). The price of this was the loss of the MIDI processing in the Studio 5, and no way of patching things from port to port on the emulated MTP — or was there?

I went to MOTU's web pages and got the latest version of the *MTP Console*, version 1.1, from:

<http://www.motu.com/pages/DownloadMacConsoles.html>

### APPLE NEWS IN BRIEF

#### • A MAC FOR ALL SEASONS

You can already run MacOS on Windows and UNIX systems. And there are strong rumours that the next full release of the MacOS will be able to act as a front end to other operating systems. This could mean that MacOS 8 may turn out to be exactly what people have long been asking for: a mature and consistent user interface for any operating system.

#### • MISSING TIME

QuickTime 2.5 is out, but may be suffering from the same sort of distribution problems that affected QuickTime 2.1 — where the important bits for MIDI

aren't included by default. I'm looking into this and will try to report back in a future Apple Notes.

#### • THE NEXT GENERATION?

Apple's headlong rush towards models which are outdated as soon as they are released is having an interesting effect. With some models coming with clock speeds of 200MHz, the 'Performa' name is fast losing its low-cost, cut-down image, and is changing to one of 'home power'. Mac musicians may not be too interested in the bundled *Cubasis* sequencer, but at under two grand, the 6400, with its mix of raw speed, 3D sound, and a curiously housed sub-woofer, may well be the machine to short-list.

# STUDIO Quad

# 4 Inputs/4 Outputs.

## Multi-Effects Redefined.

What does multi-effects mean to you? Plugging in multiple signal processors to achieve the perfect blend of effects? That isn't DigiTech's idea of multi-effects and it shouldn't be yours. How many times have you only imagined the ease of a single rack unit capable of true multi-effects? Check out the Studio Quad. With its ingenious user interface, large custom display, and potent S-DISC™ technology at its heart, the Studio Quad is capable of not just replacing, but thoroughly eliminating the need for multiple, expensive, single-purpose processing units.

The Studio Quad features 4 completely independent inputs and outputs that gives you the power of two true stereo processors or 4 independent mono processors. But true stereo is only the beginning. Imagine a quad drum gate where each signal path is optimized specifically to achieve the best audio performance from each drum. Imagine the power to process two true stereo sources simultaneously without sacrificing control. You can even use the Studio Quad as four mono-in/stereo-out processors.

Is the Studio Quad complex to operate? Not at all! The front panel of the Studio Quad is ergonomically designed, and features a simple yet remarkably powerful interface that gives you effortless control over this vast array of sonic textures.

Finally, a product that is everything a Multi-Effects Processor should be.

Call for a brochure or visit your local DigiTech dealer for a comprehensive demonstration. Four ins, four outs for £499.<sup>95</sup>.

*New, large, custom display with easy-to-use interface.*

- 4 independent ins and outs
- Multiple input/output signal path
- S-DISC™ powered
- The equivalent of 4 signal processors in 1!
- Automatic input leveling
- Dynamic parameter modifiers
- Full MIDI implementation
- Multi-function effect modules
- Full bandwidth effects
- True stereo effects

# Apple NOTES

► This is the application which allows the setup of a real MTP to be configured. Of course, expecting a Studio 5 which is emulating an MTP to respond in the same way as asking a lot, and it didn't work.

If you're not completely confused by this point, let's see what I've learned. Firstly, FreeMIDI and OMS 2.0 compatibility seems to be flawed — although this will no doubt be 'fixed in the next update' from MOTU. Secondly, you appear to need OMS in order to be able to *not* use it, if you want to use a Studio 5 (or 4). Thirdly, both MIDI systems seem to peacefully co-exist if you do not use the *OMS Emulator* — and then you can change from one to the other as needed. I also discovered that this sort of investigation takes lots of time — and I didn't even try using the inter-application communication, or any of the more sophisticated features of FreeMIDI or OMS. And finally, after all this fiddling about, I discovered that the Studio 5 patches no longer worked when I returned to OMS. Don't panic if this happens: you just need to use the 'Rebuild All' option to restore normal working.

## HOW IT WORKS: COPY PROTECTION

Or rather, how to help it work. My recent transfer from one Mac to another required me to de-authorise lots of programs, and then re-

authorise them on the new machine. Now you're probably expecting me to say that I maintain a detailed database of my installs and where the master disks are — and consequently I can blithely say that everything went smoothly.

Not quite. Isn't over-confidence wonderful! For my major bits of music software, I keep the disks separate from all my working files and backups. So it was relatively easy to find the disks and do the de-authorise/re-authorise process. But there are several shareware utilities I use which were not quite so well organised. It took quite some time to find the postcard that told me the password for one program, and the sheet of paper containing the vital instructions only turned up when I was preparing my accounts for the taxman — it was stapled to the receipt for the Eurocheque which I used to pay the software registration fee!

In the course of sorting out my hard disks before I transferred things from the remains of the old machine to the replacement, I took a detailed low-level look at the contents, and found quite a few hidden files on the boot drive, with names which indicated that they were the keys for the authorised programs. Some of these were in the System folder, others were in the root (highest or top)

<http://www.devworld.apple.com>

directory of the drive where the application was stored, and yet others were in the folder with the application itself. With any software copy-protection scheme, these files usually contain some sort of record about where and when they were placed on the disk, so you should leave them well alone — which means that any sort of disk optimisation or defragmenting might upset them. And any attempt to move a folder around between

drives may also cause problems. The trouble is that speeding up your hard drive, or moving a folder from a dying computer to a new one, is not the sort of thing that makes you think about de-authorising and then re-authorising later.

So here's the Apple Notes quick guide to maintaining your

sanity about copy protection.

1. Keep your master or key disks in a place where you can find them easily and quickly.
2. Keep any passwords, registration or de-crippling documentation in a safe place, preferably with the master or key disks.
3. Keep a list of everything that requires anything other than a simple install from disks — ie. anything that is protected. Stick this list to your computer monitor.
4. Get into the habit of pausing before you rush ahead with major changes to your computer hardware, especially disk drive upgrades (I changed my boot drive from a 40Mb to a 540Mb, and then discovered that I needed to put the 40Mb back, de-authorise, and then re-install the 540Mb and re-authorise to that!), or optimisation and defragmenting. That pause is where you remember that you have loads of de-authorising to do — and you reach for that list!

## TIP OF THE MONTH

There's a bottleneck in the hardware architecture of the Macintosh — the serial ports. With the exception of a few PowerBooks, all Macs give you a pair of ports intended for use with a printer and a modem: in fact, that's how they are named and iconised. This is adequate if you only need to connect a printer and a modem, but if you need to connect anything else, it is less than perfect.

If you're reading this, you probably already know about connecting MIDI interfaces to Macs — about the switches that turn the MIDI interface into a 'Thru', so that the printer still works, and how, if you forget to select it correctly, the printer doesn't work because you're trying to print to your MIDI equipment! In my case, because I use both serial ports to connect to my Studio 5 LX, I need to remember to change over if I use either my printer or my modem. And trying to use the modem when it's really a MIDI interface means that I need to reboot the Mac!

To make matters worse, if you've got network printing or use file sharing via AppleTalk (aka LocalTalk), this can require reboots every time you need to restart AppleTalk after using MIDI. And I've had problems with *MacTCP* conflicting with Opcode's *Galaxy* universal librarian software too.

So this month's tip is really just an expansion of my old recommendation about not bloating your Mac System folder with non-essential fonts, extensions, Control Panels, INITs and other 'fun' add-ons. I now recommend that you should try not to mix music/MIDI and Internet/comms on the same Mac. Music and MIDI can make such high demands on your computer's processing power that expecting it

The OMS AppleTalk dialogue.

to become a telecommunications machine as well may make it schizophrenic. Which prompts the question: so which of those files in the System folder aren't needed? As usual, I seem to have committed myself to finding out — more later.

Of course, what we really needed is extra serial ports. If this was the PC Notes page, this might be just a question of adding in another EISA or PCI card — but then there's the interesting problem of persuading the MIDI drivers to work with it. Did anyone mention 'Plug & Play'? Of course, in these PCI days, you might expect that plug-in extra serial port cards for the Mac could solve the problem — but you'd be wrong. You can buy the cards, but I've not found any that allow MIDI interfaces to work over them. One example of an extra serial card is the six-port SmartSerial card for PCI PowerMacs from AM Micro (01392 426473): a card plus connectors will cost about £700. At this sort of price, it is almost worth getting a second-hand Mac and using that — which I think I've mentioned previously...

**Cubase Audio for the Falcon gets an upgrade, there's a new shareware editor for Sound Canvas users just out, and controversy rages on the net about the place of the Atari ST. OFIR GAL presides...**

I actually mentioned some of this month's news in my last Atari Notes column — a new version of *Cubase Audio* for the Falcon has been released. This month, I've space for a few more details.

*Cubase Audio* Version 2.06 incorporates various undocumented bug fixes, and, significantly, the ability to record up to eight tracks simultaneously using a separate utility program and optional hardware, such as the SoundPool ADAT interface. The update is available freely on the Internet or from Harman Audio (0181 207 5050). There is no mention in the short 'read me' file of if and when the 8-track support will be added directly into *Cubase*, but at least Steinberg have managed to provide this facility.

Still on the software news front, owners of the Roland Sound Canvas or any of its variations can make use of a new shareware editor from France, called *SC Pilot*. The program is very comprehensive and allows full access to the complete range of parameters available on the synth for a minimal shareware fee of 100 Ff (about £15). You can download it from <http://www.compulink.co.uk/~gal/ccd/main.html>. I've placed it on my own page since it's only available otherwise via CIX.

Moving on to hardware, System Solutions (0181 693 3355) have several new items of interest to musicians, including the new

SoundPool Digital Patchbay (£295). The device features four digital inputs and two outputs, and any input can be patched to any output, giving the digital musician or sound engineer the ability to connect all their digital equipment quickly and easily. The unit comes in a 1U rack package and includes a send/return facility, allowing you to patch additional devices into the system. Although it's not Atari-specific, it works well with the Falcon and the rest of the SoundPool range.

## NEW ATARI MAGAZINE

The closure of *Atari World* and *ST Format* shocked many Atari users, and for several months discussions have been going on about reviving *Atari World* or starting a new enthusiast magazine. Finally, ex-radio DJ Mike Kerslake, former *ST Format* technical editor Frank Charlton and *Atari World* journalist Joe Connor have taken the plunge and announced the first issue of *Atari Computing* — a new subscription-based Atari magazine, written by users, for users. The first issue will boast 60 A4 pages including contributions from the likes of Graeme Rutt, Jon Ellis, Denesh Bhabuta and Kev Beardsworth. The launch issue will be on sale at the forthcoming Atari shows, which will be held on Saturday, September 28 in Birmingham and

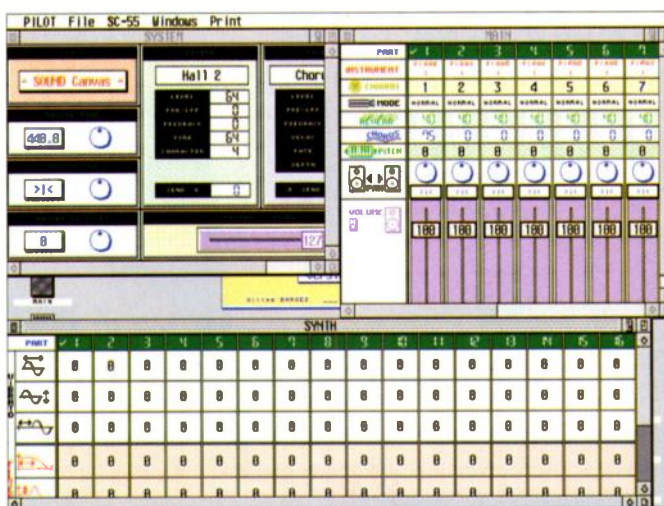

and NVDI, and uses a modern GEM interface. The program requires an 030 processor and an FPU, and therefore only works on the TT and Falcon, or an upgraded ST. The retail price is £169. Also new from System Solutions is *Infopedia*, the first CD-ROM encyclopaedia to hit the Atari market. The product is based on *Infopedia 2.0*, which includes the complete *Funk & Wagnalls New Encyclopaedia*, with almost 27,000 entries and 8000 photos and sound clips and retails at £49.95.

*Positive Image*, the image-editing package (see Atari Notes August '96) from Floppyshop (01224 586208) has just been updated to version 1.1. Among the many enhancements are speed improvements in both display and print times, and support for multiple masks. Various bugs have also been fixed, and the upgrade price is only £6 including postage and packing.

## AND FINALLY...

My Atari Notes column about Atari emulation on the Mac and PC has managed to stir the emotions of many Atari users and has sparked a discussion on the *Cubase* users on-line conference on CIX. I also had several conversations with Atari dealers about the column and the general state of the Atari

scene. It appears to me — and this may well be just a personal opinion rather than an objective truth — that some people get an attack of religious fanaticism whenever they feel their beloved machine is being criticised. The logic behind this behaviour is their belief that such public criticism automatically affects the support and development of products for said machine. This may

**The SC Pilot is a fully featured Sound Canvas editor, available for download from the Internet.**

Sunday, September 29 in London. For more details about the shows, contact the organisers Goodman International (01782 335650). *Atari Computing* is aimed at all Atari users, including musicians, and you can order an evaluation copy from Mike Kerslake, 42 Larch Hill, Handsworth, Sheffield S9 4AJ (0114 2618940) for £3 including postage in the UK.

## OTHER GOODIES

*PhotoLine* is a new graphics- and image-editing package from System Solutions (contact number elsewhere in this column). Aimed at high-end users, it features both paint and vector-based drawing, and includes a host of options for colour correction. The various tools are fully configurable, and the application supports GDOS

have been true in the past, but the reality is that no major software or hardware developer is going to be greatly influenced by what I write in these pages. The moral of this story: make music with your Atari while it does what you want. Until then it's the music that counts, not the computer chips used to make it.

SOS

*Atari users should take a look at our three-page ST feature, starting on page 50, for the story behind one man's decision to stick with his Atari, and upgrade its capabilities, rather than changing platforms. There's also a roundup of useful Atari PD/Shareware contacts and Internet addresses.*

# THE RAVEN

The RAVEN gets even better now !!!\*

To believe how fantastic the RAVEN is, you can read the reviews in some of the leading English music magazines.

The Mix, March '96:

"As a synthesiser it has a very appealing sound which convincingly combines analogue fullness and warmth with digital precision and clarity, and it provides a wealth of high-quality preset Sounds and Performances. At the same time, if you're into electronic dance music then the wealth of authentic Patterns and Motives, the ease with which you can create new Patterns by mixing'n'matching Motives and changing Part sound as-

signments, and the ease which you can create songs live using Part muting and Pattern chaining will have you drooling at the mouth."

Sound on Sound, March '96:

"At the moment, I can think of no other machine that will produce anything like these results for the amount of effort expended."

"And while your friend with the computer and a couple of multitimbral synths is still digging around the edit pages of his sequencer, your tune will be shaking the speaker cabinets."

Future Music, April '96:

"An excellent toy for the techno boys"

## ANALOG-CONTROL

Right away the RAVEN offers you three wheels to control filters, Loop-Pitch, Gate-time, Sound Muting, Feedbacks, Modulations and much more. Everything in real time. Right now. You're the boss and you'll control the groove!

You want realtime knobs? No problem! Use the four realtime knobs to let filters sweep and scream. Get real-time control over Attack, Decay, Release, CutOff, Resonance, Coarse & Fine Tune, Portamento-Time (GLIDE), FX-sends 1 & 2, Modulation depth, Rate, Feedback, Mix (Cross-fades) ....

Even if you don't know some of these parameters yet - try out the realtime controllers of the RAVEN and you'll hear what we're talking about. It's really amazing.

\*With the new Synthesis-Upgrade-Expansion RAVEN-MAX, the RAVEN will once again be one of the leading instruments in Techno- and Electronic-music. The expansion includes: 1000 new sounds and drumsets (without loading!), masses of new loops, patterns, tracks and 64 Mb of brandnew waveforms and samples. New WAVEFIELD-algorithms and even more new functions for the built in realtime pattern-sequencer. Add more power with the RAVEN's 500 eight-track patterns to your music. Loads of killer bassdrums, crazy electronic-percussion, vocal-hooks, pumping basses, brilliant leads, House-chords, splendid pads, new 303-, 808-, 909-sounds. It's a must for any serious musician. Call now for more information about QUASIMIDI-Synthesizers.

\*ALL PRICES INCLUDE VAT

## ANALOGUE TAPE COMPRESSION FOR DIGITAL RECORDING

*The flexibility of digital multitrack and hard disk recording is undeniable. But what if you yearn for the warm sound of your old analogue machine? CRAIG ANDERTON explains a trick which uses the playback head of a three-head analogue deck to give you the best of both worlds.*

**I**f you've been trying to get true analogue tape sound, with its warmth and tape compression, out of your modular digital multitrack (MDM) or hard disk recording (HDR) system, you're going to laugh when you read this article. You can get a true analogue sound more easily than you think — and no, it doesn't involve the messy process of syncing a digital deck with an analogue tape deck. Before I reveal The Big Secret, here are some specifics to whet your appetite:

- True analogue tape sound — not a simulation.
- Comparatively inexpensive.
- Ability to provide the sound associated with different tape types.
- Variable tape compression effects, from light to extreme.
- Unlimited undo if you decide you didn't get it right the first time.
- True stereo processing.

What would you pay for a signal processor that does all this? Well, read on.

### THE SECRET SIGNAL PROCESSOR

The secret ingredient is a three-head analogue tape deck. This can be anything from a cassette deck to a smart Otari 2-track. I use a Tascam Model 32 open-reel recorder, which you can pick up used for a reasonable price (ever since DAT hit, the price of used 2-track reel-to-reel decks has plummeted in musical circles, although I'm told reel-to-reel remains popular in the broadcast industry). Of course, you might already own a suitable machine you can use.

### THE CRUNCH FACTOR

Figure 1 shows how to patch the analogue deck into your system (I've used a picture of a reel-to-reel machine in this example). Here's the step-by-step procedure:

1. Feed the already-recorded tracks from your MDM or hard disk recorder, which you want to 'analoguefy', into the reel-to-reel recorder inputs.
2. Send the reel-to-reel outputs (monitor from the playback head) to two open MDM or HDR tracks. Set these to record.
3. Load a reel of tape with the preferred sonic characteristics.
4. Put the reel-to-reel into record mode, and roll tape.
5. Start recording with the MDM or HDR. The tracks to be processed play into the reel-to-reel, through the record head, and onto the tape, which imbues them with the required analogue sound and/or tape saturation effect. Milliseconds later, the thus-processed signals are picked up as the tape passes over the playback head, which then outputs the signals to the eagerly-waiting tracks of your MDM or HDR.
6. Do a trial run and adjust the reel-to-reel input level for the desired amount of 'crunch'. Remember, you have to monitor from the playback head for this to work.
7. After getting the sound you want, rewind to the beginning and transfer the tracks for real.

### AVOIDABLY DELAYED

We're not done yet, because the crunched signal will be delayed compared to the original, non-crunched track. No problem: use the MDM or HDR track shift function to compensate. MDMs can delay but not advance tracks, so you have to delay the straight tracks to line up with the crunched tracks. With HDR, you have the option of advancing the crunched tracks in time rather than delaying all the straight tracks.

Monitor the crunched and non-crunched versions mixed together, then offset the original tracks until they line up with the crunched tracks

(you'll hear a flanging sound as you get closer; go for the flanging 'null' point). Now mute the original tracks, and you'll be left with pure analogue tape sound. You need to figure out the appropriate offset only once, unless you change speeds on the reel-to-reel.

I did this with an ADAT/BRC combination and found that the right delay time for a Tascam Model 32 was about 75.3ms at 15ips (inches per second). I also discovered the wonders of flanging via track delay, but that's another story for another time.

One more tip: delay effects obtained by mixing the straight and processed sounds together can sometimes sound very interesting. I generally prefer having the straight sound hit late compared to the processed sound.

### 2-TRACK MINED

Not only is this technique simple, it allows your 2-track to once more be a productive member of your increasingly digitised studio. As a bonus, as long as you keep your original tracks, you can always go back and re-crunch, should you decide you crunched too much or too little (this is what I meant in the beginning by 'unlimited undo').

And that's all there is to it. Now you don't have to give up

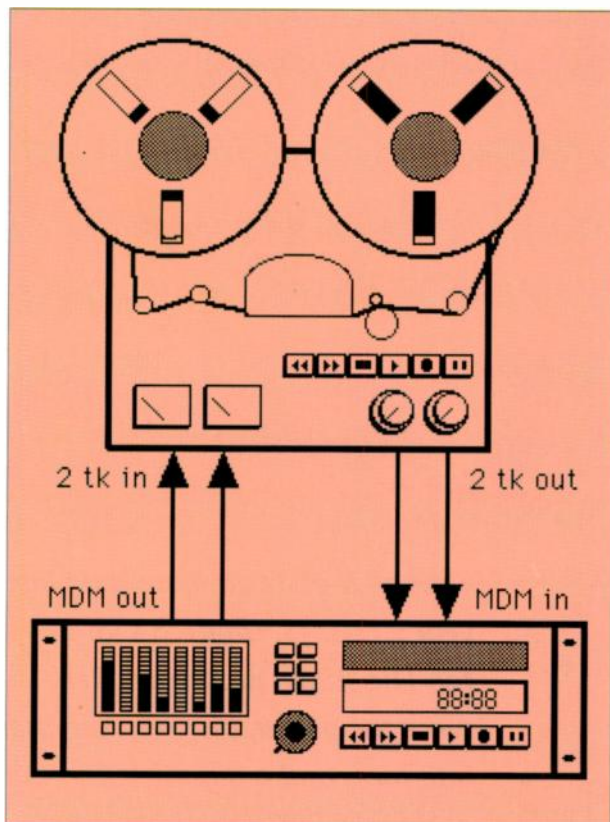

Figure 1: Connections between the analogue recorder and the digital system for the tape compression technique.

that analogue tape sound, and best of all, you won't erase some high frequencies every time you play it — and you can create as many digital safety 'clones' as you want.

Product opportunity alert: some enterprising manufacturer could come up with a cut-down, less intelligent tape loop-based transport for just this function. It may sound pretty wacky, but just think of it as an Echoplex for the '90s.

## DIGITECH STUDIO 400 EFFECTS PROCESSOR

### pros & cons

#### DIGITECH STUDIO 400 £800

##### pros

- Four independent effect processors.
- Up to eight effects available at once.
- Balanced XLR connectors.
- Imaginative presets, classy sound.
- Versatile.
- Digital connections option.

##### cons

- Operating system may confuse some, and the manual doesn't help much..
- Otherwise useful display has some rather small text.

##### summary

A high-class processor at a mid-market price. Highly recommended, because of its flexibility and sound quality, for serious project studio owners and professionals.

**SOUND ON SOUND**

It's now an established fact that anything based on digital technology has an evolutionary pattern that means you get more — often a lot more — for your money with each successive generation. It's true for PCs, it's true for sample-based synths, and it's true for digital multi-effects. This fact came particularly into focus for me with the release, in 1995, of Digitech's TSR24S, an enhanced version of their 1993-vintage TSR24, offering a better feature set for £100 less than the original. Most attractively, it also offered expandability — an extra couple of hundred pounds added a board that essentially doubled its processing power.

Now we're getting towards the end of 1996, and there's yet another generation of Digitech to examine. At first look, it's certainly fitting in with the trend, offering the power of two S-DISC (Static/Dynamic Instruction Set Computer) processors — as opposed to the TSR24S's one — for the same price as the latter unit, £799. There's more too: a host of new effects, and extra features such as four sets of inputs and outputs, on both balanced jacks and XLRs. That added processor

*Though it costs no more than last year's TSR24S, Digitech's latest top-line studio processor offers twice the power, an improved user interface, and a digital connections option. DEREK JOHNSON leaps into action.*

power gives the Studio 400 the ability to behave as up to four separate multi-effects processors at once, utilising a maximum of eight effects simultaneously (the cheaper Digitech Studio Quad, reviewed back in February, also manages four independent processors, but with a maximum of four effects at a time). The 400 can be used as a single super-processor, as four separate processors (patched

# DIGITECH STUDIO 400

► into four auxiliary sends of a mixer), in-line with a stereo synth, or any combination of these. The choice is yours. It can also be upgraded to include digital connections, should you require them.

One of the really excellent features offered by the TSR24/TSR24S was the ability to freely create custom effects algorithms; this is missing from the new unit, Digitech instead choosing to provide a collection of preset 'Configurations' that almost approach this ideal — but I'm jumping ahead of myself.

## LOOK & FEEL

In order to cram in a serious collection of connectors — eight XLRs and eight jack sockets require a certain amount of space for comfortable use — and to make room for the optional digital interface board, Digitech have chosen to package their new baby in a 2U-high box. This gives the Studio 400 a solid, imposing feel. Cosmetically, it reminds one of an older generation of rock-solid professional studio processors that cost many pesos more than this one. It also looks a little

"If proof was needed that Digitech are a force to be reckoned with in affordable digital effects, the Studio 400 is it."

square, for my taste anyway. But looks aren't everything when it comes to signal processing — and inside the Studio 400 is a throbbing effects-processing powerhouse.

Upon switching on, your eye is quickly caught by the large, custom, backlit liquid crystal display. It immediately gives the appearance of being immensely informative, and so it proves to be. System navigation is undertaken by a small collection of large buttons and a big parameter-access knob, which offers a reassuring click every time you move it. This is a change from the multitude of buttons found on the TSR units, and is a similar approach to the Studio Quad's.

The 400 fires up in Program mode, wherein the chunky knob selects from the 191 preset Factory and 100 User Programs (the 100 User Programs are initially filled with duplicates of the first 100 presets). As you scroll through the Programs, you notice a number of things about the display, most significantly the miniature routing graphic in the lower right-hand corner — it shows you exactly how the various effects components are linked together. Excellent.

Editing a Program is simply a matter of hitting the FX Edit button to cycle through each of the effects (up to eight) in a Program, plus a few routing parameters. You then access the editing parameters for the effect you want to edit, using the Previous and Next Page buttons; these cycle through the

## DIGITAL OPTIONS

It is possible, for £199.95, to add full digital connections to the Studio 400. The interface is user-installable, and allows the 400 to process entirely in the digital domain, providing you have suitable hardware (a digital desk, for example) with digital ins and outs. The board offers both XLR AES/EBU connections and S/PDIF phono sockets — you can switch between the two formats, but not convert between them. Sample rate is selectable, using a switch in the Utilities Menu on the 400, and the unit will automatically sync to external sample rates.

several pages available (there can be up to 10) for each effect. Each page features up to four parameters, and these are selected via the four soft keys, labelled 1-4, in the middle of the button field. This is an odd place to put these keys, given that they would more sensibly be situated under the display — it's not as though there's no room there.

The remaining buttons are pretty self-explanatory: press the Store button when you're happy with an edit, and would like to name it and save it in a User Program position; press the Utility button to access a range of global functions, such as display contrast, MIDI channel, and SysEx dump; and use the Bypass button to turn the effects off. Finally, the In Levels button allows you to manually set an input level, or tell the Studio 400 to 'intelligently' choose the optimum level for you.

The back panel is almost more interesting than the front, for a change. In addition to the sea of balanced audio connectors, there's a switch that chooses between +4dB and -10dB (pro or line-level) operation, a pair of MIDI sockets, and a footswitch socket. As mentioned, one thing you do *not* get for the money — but which is available as an option — is a set of digital connections.

## INSIDE STORY

Those of you familiar with Digitech products will be on fairly safe ground here, because although the Studio 400 is in many ways the most powerful processor yet made by the company, they have stuck to familiar ground when it comes to effects and routing. Accessing those effects is, however, a little different. The effects hierarchy can be tricky to get into at first, and is trickier to describe. This is one point where the manual lets the user down — the explanations are all over the place.

The heart of each Program is a so-called Configuration, one of 23 preset arrangements of 1-8 effects 'Modules', arranged in a simple chain, or in several parallel paths. The Modules are individual effects, and it's for you to decide which ones you want in a Configuration — as long as you stick to certain rules. A Configuration isn't the end of the routing story, since there are several input/output modes — from single or dual mono, to stereo and quad mono input — with a similar

## SPECIFICATION

- 18-bit, 128x oversampled ADC
- 20-bit, 64x oversampled DAC.
- 44.1kHz sampling frequency.
- Balanced Jack and XLR connectors.
- MIDI In and Out/Thru.
- Operating level switchable -10dBV/ +4dBu.
- 20Hz-20kHz frequency response.
- 191 Factory Programs, 100 User Programs.

# DIGITECH STUDIO 400

- collection of output modes. Not all options are available (or would be valid) for every Configuration, but they do help to stretch the preset nature of the Configurations.

The flexibility continues with the individual effect Modules. There are 50 altogether (plus bypass and through Modules), offering a variety of graphic and parametric EQs, compressors, delays, reverbs, flangers, and so on. And the choice doesn't stop there. When assembling custom algorithms with the TRS24S, it was necessary to keep juggling available processor power and RAM,

if a given effect is available in the desired power. The maximum available power adds up to two full-power effects, which means a maximum of four half-power or eight quarter-power effects, with loads of variations in between — one full, one half and two quarter, for example, would equal two full-power effects.

That's just about it, except that once you've slotted a Module into position in a Configuration, there are some more decisions to be made. Digitech have provided each effect with a collection of 'Defaults' — sets of parameters that give you good starting points for your own experimentation. All Factory Programs use these Defaults, so if you hear something you like and want to use in the Factory Programs, you can easily figure out which Default is being used and copy it to your own Program. Note that there are two banks of Defaults; Bank A is suitable for in-line applications, while Bank B is suitable for use with a mixer's auxiliary send loop.

Some of the Studio 400's

reverbs have one further level of choice: a Type parameter allows you to choose from one of 10 different reverb types (Studio Room; Wood Room; Vocal Plate; Concert Hall; Plate Reverb; Chamber; Cathedral; Arena; Cement Shelter; or Infinite Spring), each of which offers a different decay range. Gated reverbs also have a choice, of 12 Types in this case. Matters are further confused by a pair of dual-effect Modules (chorus/delay and flange/delay), which are available in full, medium and economical versions — so when we say the Studio 400 can use a maximum of eight effects Modules, any or all of those Modules could be made up of a dual effect.

Easier to explain is the way in which up to eight parameters per effect can be controlled by 'Modifier' links. A Modifier can be a MIDI Continuous Controller, one of two LFOs (Low Frequency Oscillators), or 'Dynamic' Modifiers. This latter choice uses the level of the input signal to control the assigned parameter — the decay time of a reverb could change depending on the level of the input signal, for example.

In addition to the eight MIDI controllers that can be assigned to each Program, the Studio 400 offers a full MIDI spec: patches can be changed remotely, and the unit's memory contents can be dumped or retrieved via System Exclusive. It is also possible to fully edit the 400 using an external SysEx editor, although details weren't provided with the review unit — full SysEx data is available in a separate document.

## THE EFFECTS

Describing the operation of the Studio 400 is not quite as easy as using it. A little breaking-in period may be necessary for some, since the display,

choosing from a collection of effects Modules of varying power. This process is essentially invisible on the Studio 400. It works like this: Configurations make use of three different types of Module — full-, half-, or quarter-power (just like the Studio Quad). This means that many of the 50 available Modules come in full-, half-, or quarter-power versions, with differences in the range or variety of their parameters. A delay may have a longer or shorter delay time depending on what 'power' it is, for example. Some effects, such as the processor-hungry Dual Stereo Reverb and Stereo Quad Delay, are understandably available only in full-power versions.

Since Configurations are composed of slots which are pre-defined for certain Module types, you can't just shove in any Module type you want — if the Configuration is for eight quarter-power Modules, you can only use quarter-power Modules. So choose a Configuration with a collection of Module types that best suits your needs, and refer to the charts in the manual to see

## THOSE EFFECTS IN FULL

This is a list of all the effects Modules available on the Studio 400; not all are accessible in all Configurations, and some are available in various 'strengths'.

- **REVERBS:** Reverb, stereo reverb, dual reverb, stereo dual reverb, gated reverb, stereo gated reverb, room echo.
- **CHORUS:** Dual chorus, stereo dual chorus, quad chorus, octal chorus.
- **FLANGERS:** Dual flange, stereo flange.
- **PHASERS:** Dual phase, stereo phase.
- **OTHER MODULATION EFFECTS:** Rotary speaker simulator, stereo tremolo, auto panner.

- **DETUNING:** Detune, dual detune, stereo dual detune, quad detune, octal detune.
- **PITCH-SHIFTER:** Dual pitch, stereo pitch, stereo dual pitch, quad pitch, octal pitch, smooth pitch, harmony.
- **DELAYS:** Mono delay, dual delay, quad delay, stereo delay, stereo dual delay, stereo quad delay, analogue delay, stereo analogue delay, pre delay.
- **EQUALISERS:** Mono PEQ6 (Parametric), stereo PEQ3, Stereo PEQ6, mono GEQ8 (Graphic), stereo GEQ8, mono GEQ15, stereo GEQ15, mono GEQ31.
- **SIGNAL PROCESSING:** Noise gate, compressor.
- **DUAL EFFECTS:** Chorus/delay, flange/delay.

while generally clear, does contain some tiny text, and moving about the system with the FX Edit, Parameter and Page buttons may be initially confusing.

Once you're past this, and diving into the treatments offered by the 400, you'll be glad you persevered. Just running through the Factory Programs gives you an idea of what the unit is capable of — anything from big, realistic reverbs to outlandish, swirly textures come pouring out. Unfortunately, the manual declines to actually describe what the designers were after when developing the different effects Modules for the Studio 400, so this period of testing the water will help you familiarise yourself with what's available.

For some people, a multi-effects processor lives or dies on the quality of its reverb. The Studio 400's reverb algorithms have a natural feel to them that doesn't colour the input signal in an unpleasant manner, with none of the metallic edge detected on many cheaper units. Springiness and coarseness are also generally absent, which is good news for drum machine users. As for vocals, in my opinion it doesn't get any better than this until you start shopping in the £1500+ price bracket. Even the half- and quarter-power reverb Modules offer a feeling of quality and space.

Other effects are also of a high quality: the long delays are eerily exact copies of the input signal, flanges and choruses are rich and full, and the rotary speaker simulator is a welcome bonus. Pitch-shifting is also available in several interesting flavours, and is rather less crunchy than you'd normally expect from an affordable processor. It's still not up there with Eventide, but it's as close as most of us will get — as you'd expect, perhaps, given Digitech's acclaimed range of pitch-shifter/harmoniser machines. Most interesting is the Harmony effect, which provides harmonies depending on what key you're playing in.

In combination, the effects get even better: flanged reverbs, reverbed delays, autopanned pitch-shifting, and much more, are all possible, and sound excellent. Amongst the Factory Programs, I found a number of favourites: '20 So Many Effects' produces a wonderful melange of sound, no matter what the input signal; '81 Centerless Delay' and '82 Centerless Reverb' both offer a similar feeling of space without drowning the input signal or providing any clues as to where the effect is coming from — it just washes around the speakers; '173 Stereo Big Cathedral' seems to go on for ever; and '21 Leslified Room' gives you vertigo. An excellent set all round.

## THE BAD STUFF

There is so much that is good about the Studio 400 that it seems a shame to point out any shortcomings. Luckily, they are few, relatively insignificant, and mostly in the 'missing' category. The Studio 400 lacks: a headphone socket; a sampler (a hold function on some delays is as close as you get); and front-panel input or output level controls. I found the contrast control for the LCD didn't have enough range — it's tricky to adjust it to be readable from all angles, and I missed true algorithm creation slightly — though the variety of Configurations and flexible input/output options amount to just about the same thing. The user gets lost as to on which effects Modules go where, after all.

## CONCLUSION

While I wouldn't necessarily sell my house and all its contents in order to obtain a Studio 400, I might consider thinning out my effects rack to make a little spatial and financial room for it. And that's something I haven't been seriously tempted to do for quite some time by an effects unit. Some of you may find just under £800 to be a bit steep when you can take your pick of sub-£400 processors. However, if you think of the Studio 400 as four processors in a box — if you've got four auxiliary sends on your mixer, the 400 will take them — that works out as £200 per processor, which is pretty good going.

Digitech have been producing fine effects units for years, and the Studio 400 is arguably their best and most powerful studio-biased box yet. I can't recommend it highly enough. If proof was needed that Digitech are a force to be reckoned with in affordable digital effects, the 400 is it. There is little in this price range that offers such a range of exciting, musical and natural reverbs alongside potentially outlandish and unreal effects. The balanced XLR connectors may well cause pros in search of something different to check it out, and home and semi-pro studios should definitely pay attention. If your budget can stretch to anywhere near the £800 asking price, you owe it to yourself to have a listen.

# Imagine...

Imagine starting with the synth so powerful "It's dragged the high-tech music industry into the future".\*

Then consider the possibilities of physically modelling *Real Acoustic* instruments and *Classic* synths of the past, playing back your favourite *Samples* of instruments and loops then recording several *Tracks* of Vocals and Guitar, *Mastering Digitally* using a built-in *Mixer* and then *Interfacing* everything to your Computer and other Digital equipment.

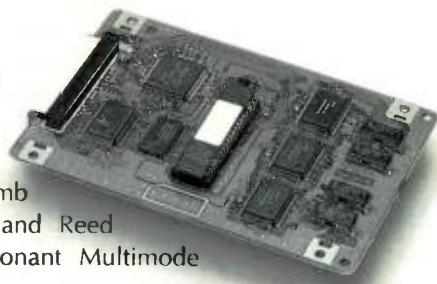

You have just imagined your options with the Korg Trinity.

\* As predicted by Sound on Sound Magazine, Jan. 1996.

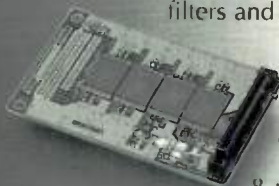

## Solo TRI Option

This is a complete Prophecy sound engine. Analogue, Ring, Cross, Sync, VPM and Comb synthesis plus Picked, Horn and Reed physical modelling. Two Resonant Multimode filters and 7 extra effects.

## PBS TRI Option (Playback sampler)

8 megabytes of memory that allows you to load samples in KORG or AKAI S1000 format. Being Flash ROM means that samples are not lost when power is disconnected. Adding this board also adds 2 extra banks of Programs and Combinations and adds 64 extra program locations to the Solo Board Bank if fitted.

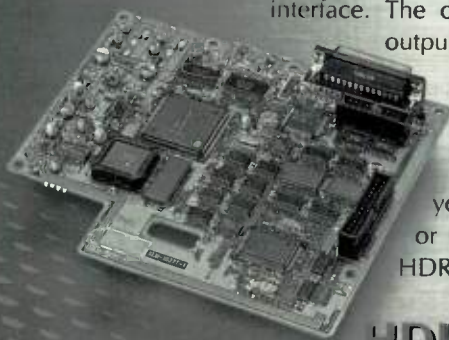

## Digital I/O TRI Option

This enables you to connect Trinity digitally to any device with an ADAT Format digital interface. The option features an ADAT Digital output and a Wordclock input.

## SCSI TRI Option

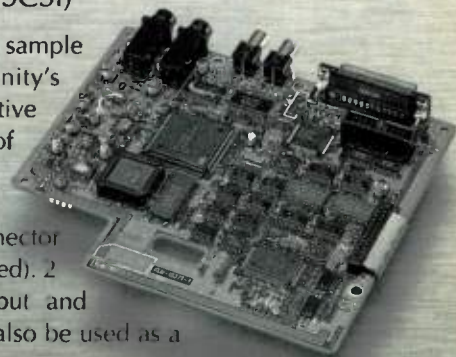

This board adds a SCSI port to the Trinity enabling you to connect the Trinity to an external hard drive or CD ROM drive. (This option is included in the HDR TRI Option.)

## HDR TRI Option

(Hard Disk Recorder with SCSI)

16 bit Hard Disk Recorder @ 48K sample rate. Synchronised to the Trinity's internal Sequencer. Non-destructive editing and automated control of Volume, Panning, EQs and effects sends. 2 track record and 4 track playback. SCSI connector for external hard drive (not supplied). 2 analogue inputs and SPDIF input and output. The SPDIF interface can also be used as a Backup Utility.

# Changing Channels

ROGER ENO • CHANNEL LIGHT VESSEL

*In addition to his respected solo work, Roger Eno has been involved in collaborations with brother Brian and other musicians, and is now part of Channel Light Vessel, also featuring the talents of Bill Nelson, wind player Kate St John, and zither player Laraaji. PAUL TINGEN talks to him about all his musical facets.*

**I**t's interesting to note how negatively we often judge those who become famous or successful by association — Yoko Ono and Linda McCartney, for example. People with a famous relation are apt to be unfairly treated even if their work is perfectly competent and successful in its own right. Comparison will always be made with the achievements of the better-known relative, which will usually be seen as superior.

Still, there *are* examples of famous relations respected in their own right, and not dismissed as having ridden to success on someone else's coat-tails — Tim and Neil Finn, for example, or Michael and LaToya Jackson. Or Brian and Roger Eno.

Roger has been living his career as a recording artist in the gigantic shadow of brother Brian for well over a decade now. Yet despite the fact that he

came to prominence much later than Brian (he's 11 years younger), was undoubtedly helped by the association with his brother, and has enjoyed no more than a fraction of Brian's success, he has generally reaped critical acclaim. He may still be identified first and foremost as his brother's brother, but he's nevertheless respected for what he does in his own right. This is no mean feat, and what makes it even more amazing is that the two brothers have for a long time been associated with the same area of the musical spectrum, making what Brian Eno christened 'ambient music'. This makes it even harder to define the distinction between the music of the two brothers, and for

# Roger Eno

Channel Light Vessel's second album, *Excellent Spirits*, out now.

- Roger to forge a public image and musical identity of his own. Moreover, Roger Eno's recording career was launched by two ambient projects on which he collaborated with Brian: the *Apollo: Music and Atmospheres* soundtrack (1983), and his first solo album, *Voices* (1985), an instrumental affair influenced by impressionistic classical music and featuring treatments by Brian Eno.

Soon afterwards, however, Roger Eno's work started to diverge from Brian's, when Roger began to put his classical music education (at Colchester Music College, where he studied euphonium and piano), to more extensive use on solo albums such as *Between Tides* (1988, produced by Michael Brook), *The Familiar* (1992, with Kate St John and produced by Bill Nelson), and *Lost In Translation* (1994). They all feature different forms of acoustic chamber music, occasionally enhanced by subtle electronic instruments and treatments.

## SPONTANEOUS

During the last two years, there's been a further move away from ambient and semi-classical music. Firstly, there's his participation in Channel Light Vessel, a collaboration between Roger, guitarist Bill Nelson, Kate St John on wind instruments, zitherist Laraaji, and cellist Mayumi Tachibana. Their largely instrumental debut album *Automatic* (1994) is a bizarre cocktail of pastiche musical styles, held together by Nelson's busy drum programming and weird electric guitars, Laraaji's zither, and Eno's elegant, unhurried piano, accordion and horn playing. Early 1996 saw the release of a second Channel Light Vessel album, the excellent *Excellent Spirits*. More song-based and high energy than *Automatic*, it's a highly entertaining concoction of original musical ideas that has to be heard to be believed.

And then, this September, there's the release of Roger Eno's fifth solo album, *Swimming*. For the first time laying the emphasis on his voice, and playing all instruments himself, Eno opens the album with an uncharacteristic up-tempo folk dance on accordion, piano, banjo, mandolin, piano and drums, before moving into introverted, folk-influenced and acoustic guitar-based song territory, with the odd bit of synthesizer enhancement.

The pending release of *Swimming* resulted in Roger Eno and yours truly sitting themselves down at either end of a table in a North London pub, tape recorder and some drinks in the middle, for one of the inevitable round of promotional interviews that comes with a record release. Eno is in a cheerful, jovial mood. His dark hair tightly cropped, with a slightly rounder face than brother Brian, and eyes bright and alive, he comes across as younger than his 36 years. My first question concerns the striking transformation his music has undergone recently. Eno: "I felt it was about time that I delved into my

love of English folk music. You know, it's easy to continually do what you're comfortable with, and in my case that would be simple, curious little piano pieces. So I was toying with the idea of doing another record like that, and thought, 'oh really, this is just boring, going over the same ground again.' Folk music has influenced me for ages, and I've never really exploited it very explicitly. I've always used folk music modes and scales, and early music has also been a big influence, so I decided to make those influences the basis of a whole album. And I also wanted to sing this time, which I'd only done a little bit on record so far, on *Lost In Translation* and with Channel Light Vessel."

As far as his involvement with the latter is concerned, Eno explains that the band came together "by pure chance. I was doing concerts promoting *The Familiar* with Kate St John in Japan. Laraaji, Bill Nelson, and cellist Mayumi Tachibana were on tour with us, and we'd all play our solo spots. As an encore, we started to jam spontaneous pieces with all kinds of different influences thrown in. To our surprise, these were the bits that the audiences liked most. Things somehow melted together, and because they were encores we weren't over-extending ourselves. It was suggested to us that we make a record on that basis, and that was exactly how *Automatic* came into being, with everyone throwing in their influences: Bill's hi-tech electric stuff and serious guitar playing, Kate St John's love of French *chansons*, Laraaji and his spiritual zither, and so on. We put it all spontaneously together in the studio in about three weeks. The second album was also made like that, and with the same speed, though for that a few ideas had been prepared, like some

"I'm not sure what attracted me to the M1, really. I think it was simply the first real synth I bought, and I never felt like getting another one."

rhythm tracks and tape loops, and a couple of songs. It's easy for me to depart from my own style in a situation like that, because the whole point is to be open to other people's ways of working and other people's influences. I think that's very valuable."

## SANDPIT FRUSTRATION

Channel Light Vessel's *Excellent Spirits*, which was made without Tachibana for logistical reasons, is an unexpected delight, made all the more amazing because of the incredibly short time span over which it was recorded and mixed (Eno: "Four weeks maximum"). It's also an interesting departure from Eno's own style. Though with such

# Nord Lead V 2.0

Nord Lead is the first digital synthesizer to use "Virtual Analog Synthesis". Clavia has analysed analog synthesizer design in detail and implemented the research in a digital model. Nord Lead employs mathematical simulations of the electronic signal generated by analog oscillators, instead of using waveform tables. This makes it possible, for example, to sweep the pitch smoothly over a very wide range and allowing for true pulse-width modulation. In other words it sounds amazing!

## New Version 2.0 features:

### Analog Drumsounds!

Looking for that good old analog drumsound? Look no further.

Go down to your music store and check out the new Nord 2.0.

It's loaded with exciting percussion sounds, the sounds you have been looking for. The Nord Lead/Rack 4-voice version comes with 10 analog percussion kits in ROM right from the start. The Percussion kits are editable, you save them via SYS EX Dump. An expanded Nord can hold an additional 30 programmable percussion kits on a PCMCIA S-RAM card.

It's a breeze to work with percussion sounds in the Nord. You can use up to 4 different percussion kits of totally 32 sounds simultaneously on 4 MIDI channels. The percussion sounds are configured in 8 different zones on the keyboard. The 8 different sounds can easily be edited in real time. When you use the Nord in a multi-timbral set up, you can assign a percussion kit to one MIDI channel and use the other three channels for basses, leads or pads sounds.

### A lot of sounds to start with!

The Nord 2.0 comes with several great analog single sounds and exciting "Layers" saved in 100 new Performance factory programs. You'll find great sounds from the past, today and for the future programmed by international sound designers. By using the unique features of the Nord, the 4 slot configuration and the "Morph" function, they have created exciting pads sounds, awesome leads and monster basses.

### Try the Echo!

A new feature in the Nord is the Echo effect. The Echo will be influenced by the unique "velocity programming" (morphing) feature of the Nord.

### More arpeggiator effects!

It's now possible to run the arpeggiator notes randomly.

### New Filter option!

A new filter is implemented into the Filter section. A Notch Filter in series with a Lowpass filter.

### Additional MIDI features!

The Octave Shift button is now being transmitted and received making it possible to play other octaves on sound modules from the Nord keyboard.

"After Touch" is now being received. It can be assigned to LFO 1, LFO 2, OSC 2, FM or Filter.

Arpeggiator notes can now be transmitted via MIDI.

### Additional Pedal functions!

An expression pedal can now be assigned to LFO 1, LFO 2, OSC 2, FM or Filter working independently of the modulation wheel.

Expand your Nord to 12 voice with the Expansion kit. Also make sure you get hold of a S-RAM card and you'll be able to download thousands of sounds free of charge from our WEB site!

### Several sound cards are now available for the Nord!

Buy a Nord PCMCIA S-RAM card and you'll get 297 single sounds and 100 Performances!

### Attention Existing Owners!

Upgrade your Nord today to V2.0 - available from your dealer only £95!

### Coming soon!

New 12 Voice 'Extender' Rack mount unit for your Nord - double your Nord power!

## World Wide Web Site!

### World Wide Web!

On our homepage,

<http://www.clavia.se/> you'll find thousands of sounds, both single sounds and performances.

Expand your Nord to 12 voice, get hold of a S-RAM card and you'll be able to download thousands of sounds free of charge from our WEB site!

# Roger Eno

"I always felt it was better to get to know an instrument really well, rather than jump from one instrument to another."

► disparate influences as folk, medieval, impressionistic, chamber, classical, rock, ambient, and electronic music present in his solo work, one wonders how Roger Eno himself defines his 'own style'. He happily agrees that a lot of his solo work has many elements of pastiche, and partly consists of near-collages of other styles, interpreted in his own personal way, with added radical twists that enhance its Eno-esque identity. So *Voices* was "unashamedly influenced by my favourite composer, Eric Satie", whilst Roger Eno's sense of melody and Brian Eno's electronic treatments gave the album its identity. And *The Familiar*, for example, drew strongly from the works of Vaughan Williams and Delius. Roger comments: "When I started out with my recording career, I was strongly influenced by the music and ideas of Eric Satie. He wrote and coined the phrase 'furniture music', which is music that you don't really need to listen to, that you're not really supposed to notice. Brian had been developing ambient music, which was rooted in a similar philosophy. So when we worked together on *Voices*, our ideas were quite similar. But since then, our ideas have gone in opposite directions. I still like the idea of furniture music, but I've become more interested in music that you can listen to if you want to, that's not just designed to be in the background, but that does have a melodic content and curious harmonies and all that sort of thing. That's what I've tried to achieve with *Swimming*. It's quite a difficult balance to get."

*Apollo* and *Voices* are the two main musical projects that the Eno brothers have worked on together, and Roger has also appeared on some of Brian's records. Mention of his famous older brother does prompt the inevitable question, the one everyone wants answered, but usually is reluctant to ask: what's it like to have a brother

who's that famous? Roger Eno laughs out loud: "Well, it's a real problem sometimes. You're always first and foremost 'brother of...' But I guess it's also opened doors for me. Ever since picking up a cornet at secondary school, I knew I wanted to make a living from music, but it took a long time before I found out what form that would be in. After music college I busked for a few months in London, and I played in restaurants and clubs as well. I also had a job for over two years as a music therapist in a hospital for the mentally handicapped. And then with *Voices* I became a recording artist and have made a living from that ever since, with the addition of doing concerts and composition for TV, theatre and advertising."

"I think my connection with Brian did help, because I don't know whether EG Records would have been interested in putting out *Voices* had it not been for that connection. But I knew that I would somehow be a professional musician one day, and this just happened to be the way it turned out. So I'm grateful. The other side of it is that he's so successful

that, to be honest, I sometimes get quite envious. I don't like that in myself, being envious of anything. But Brian is in the remarkable position that he's wanted for everything that he does, whereas I get these short periods of people being interested in what I do, when a record comes out and I'm doing some interviews, for example, and then I'm left alone again for a year or so. And finances and your own enjoyment aside, the reason you make music is to communicate, to relate to other people. So there are also times of frustration during which I think: 'Oh, God, what am I doing, I'm playing in a sandpit'."

## MORE THAN 8 TRACKS? WHAT'S THE POINT?

Eno's last remark, though obviously a figure of speech, does have some ironic relevance to reality, for the place where he records most of his solo music is the back garden of his house in Woodbridge, Suffolk, the village where both he and Brian were born. Roger Eno's home studio is affectionately called The Shed, and exemplifies his whole low-tech approach to music recording and composing. Inside this "tiny little place" are almost all Eno's musical instruments: lots of guitars — classical, acoustic, semi-acoustic — all his brass, accordions, piano, mandolins, harmonicas, whistles, and so on. Modern technology is represented by a Korg M1 and an Emu Proteus orchestral module, which, remarks Eno, is "fantastic. If you know how the actual instruments work, you can make it sound exactly like a real player. For example, if you're playing a flute with it, you can simulate the taking of breaths and get a really accurate sound. I program sounds on it as well, and use it for the harsher electronic noises, things that sounds like demented bagpipes or something."

Gentler electronic noises come from Eno's M1. It's an interesting parallel between the Eno brothers that they have both decided to focus most of their programming attention on one synth only — in the case of Brian, it's the DX7, while Roger favours the M1. The latter explains his involvement with the Korg: "I'm not sure what attracted me to the M1, really. I think it was simply the first real synth I bought, and I never felt like getting another one. A lot of what I do is acoustic-based anyway, so what I need is something that's good for atmospheres and beds, and these are quite easy to make on the M1. Just like Brian with the DX7, I've re-programmed almost all the noises on the M1. Some of my favourite noises appear on virtually every record of mine. I always felt it was better to get to know an instrument really well, rather than jump from one instrument to another. Bill Nelson thinks the same way, and it's partly why the Channel Light Vessel albums were so quick to make. He also only uses instruments he knows well. It cuts down on time. He often says: 'if you have anything that you know how to use, bring it'."

According to Eno, the most crucial piece of gear for the making of *Swimming* was a Roland VS880 digital hard disk recorder with effects. A recent addition to The Shed, it replaced a Fostex 8-track reel-to-reel and a mixing desk that had

# Roger Eno

► been the heart of his setup ever since he bought it from the royalties of *Voices*. Eno: "It just wore out, so I got the VS880 instead. It has eight digital tracks and 64 virtual tracks, so Jon Goddard (the producer), and I could do a lot of different mixes. The effects are some of the best I've ever heard. It's a truly astonishing piece of gear. We didn't actually use the virtual tracks much to do vocals, comps and stuff. We actually used the VS880 very crudely. I generally found eight tracks to be enough. I thought: 'what's the point of more?' I mean, if eight tracks aren't enough to record these fairly simple songs on, there must be something wrong with the songs!"

## BACKWARDS VOCALS

Roger is nevertheless planning to buy an Atari ST with sequencing software, for recording M1 and Proteus parts, keeping his eight tape tracks free for acoustic instruments. No sequencers were used on *Swimming*, with the exception of the internal M1 sequencer, just occasionally. Other than the VS880, there's remarkably little high technology in Eno's shed — a couple of DAT players, an Alesis Microverb ("noisy, and not half as good as the effects in the VS880"), a never-used Portastudio, and a few good microphones, such as an AKG C3000. And that's about it. Eno: "Modern music technology doesn't really interest me; the music I'm making doesn't demand it. I generally try to strip things away, rather than add things. I think a lot about what makes a piece, about what's essential, and what's not. The trap that you can fall into with technology is that the more things that are available to you, the more things you're going to use. So I restrict what I have in The Shed, and if I need something I'd rather make a phone call. But usually it's more a live instrumentalist or an instrument than a piece of gear."

Eno is clearly very proud of the spartan simplicity of his home setup: "If you saw where the album was recorded, you would not think it possible", but insists that this is not the result of some deep-rooted Luddite tendencies, or fear of technology. An illustration of this is his readiness to embrace digital technology, and his bewilderment with the analogue lobby, who keep insisting that our current digital systems are inferior to analogue, because the resolution is too low and the frequency spectrum too narrow, and the sound quality cold — and so on, and so on. When I put these points to Eno, he shakes his head: "I have pretty good ears, and I can't tell whether something has been recorded on digital or analogue. I don't really understand these analogue people... they're forever working at improving the quality of analogue, with bigger tapes and faster speeds, all to get more clarity. And then when something like digital comes along, that's clearly better, they don't trust it. It's ridiculous. I'm not inherently interested in technology, but I'm also not anti-technology. But

their arguments are *really* anti-technology."

Eno's relaxed attitude towards technology is also indicated by some of the technical tricks that went into the making of *Swimming*, such as on the beautiful, short accapella tracks 'Amukidi' and 'Hewendaway'. Eno: "'Hewendaway' sounds like a Hebridean folk song, with fictional words. I suddenly got the idea that it might sound good reversed. So Jon Goddard digitally reversed it, and it came out as 'Amukidi'. It's exactly the same piece, with a slightly different mix and a slightly different vocal arrangement."

The two Channel Light Vessel albums also feature an abundance of technological trickery, mainly due to Bill Nelson's busy drum sequences and weird tape loops. Eno remembered that there were computers used, but couldn't say which ones. Laughing: "I have no idea. It's not the sort of thing that interests me, so I'm afraid I'm not very helpful here..."

## HEAVENLY ASPIRATIONS

Eno does nevertheless shed light on some aspects of the magic ingredients that went into *Excellent Spirits*. Bizarre instrument credits on the inlay, like 'spookshow keyboards', 'falling stars', 'space birds', 'lickety loops' and 'bagpipes from Venus' were the product of Bill Nelson's fertile imagination, while some of the wackier repeated vocal samples on the album, like "make your vision your mission", or "accordion night" were all courtesy of Laraaji, who apparently is heavily into spiritual things. The track 'Accordion Night', which features the aforementioned Laraaji sample, and is made up of Spanish and dance hall music elements, serves as a good example of how the four members drew all these disparate elements together: "Laraaji had to leave before the end, so we tried to get everything off him that we needed before he left, including several vocal samples. We took the "accordion night" one, then Bill would have a tape loop, I may have given a chord sequence, and Kate a melody."

"After that, one thing sparks off another. The pieces write themselves really, although I know that sounds a bit stupid. But we're really making it up as we go along. It's like knitting without a pattern, and then suddenly you realise it starts to look like a glove." [Laughs out loud.]

One last question. What's the significance of the name Channel Light Vessel, then? Eno grinningly reveals that it's the name of an automatic weather station in the English Channel, called Channel Light Vessel Automatic, which is read out during the shipping forecasts on Radio 4. This explains the title of their first album, *Automatic*. Eno adds that the shipping forecast is "one of the last traditional things on British radio" and with that, neatly ties Channel Light Vessel and his own solo music together, for the latter is inspired by "a kind of natural spirituality. I like country walks and quiet evenings, and in the town where I live is a lovely river. My music is closely related to the inspiration that the British landscape or weather patterns can give you." **SOS**

"The trap that you can fall into with technology is that the more things that are available to you, the more things you're going to use."

Five new ways to increase the quality of your performance

For decades Shure microphones have helped amateur musicians become professionals. During that time, Shure has become the world's leading microphone manufacturer.

The simple truth is that nobody offers a wider selection nor better quality. The Beta Green Series is an excellent example: Five microphones, each one designed for a specific use and offering a performance that belies their low cost.

To demonstrate the Beta Green's and other models from the world's most respected microphone company, visit your local music dealer. You'll appreciate the difference Shure can make to your career.

# Happiness

with Philips DCC

★ ★ ★ ★ ★ 18-BIT digital quality

Oh how they panicked when DCC was launched in the musical instrument industry. 'It's not a standard format!' they cried (it is now). 'It's not true 16 bit!' they yelped (actually it's 18 bit). 'It doesn't sound the same as DAT' sneered the Luddite know-it-alls with their hearing deficiencies. If you want to know the truth, read what the press say about DCC in the extracts printed opposite. And if you want to hear the truth - just buy one.

...there's no denying that 18-bit fidelity has won the day with its superior dynamic range and mirror-image reproduction...DCC users know the system sounds every bit as good as DAT, some say 2-bits better...when all £800 buys you is a 'bottom-of-the-range' DAT the intelligent choice has to be DCC.'

18 bit recorder with digital I/O, infra-red remote, track-titling, turbo transport, analogue cassette compatibility, traditional 700 series black-box styling. The world's best selling DCC machine.

**DCC730**  
**£249** INC. VAT  
INCLUDES 5 X 90 MINUTE  
BLANK TAPES SAVING £35

- Buy any of these four outstanding DCC recording systems together with a DCC134 portable playback unit and save an extra £75.
- All DCC products and packages advertised here are available through a nationwide dealer network. Call **SRTL on 01243-379834** to place your order, request literature or locate your nearest stockist.

INCLUDES 10 X 90 MINUTE  
BLANK TAPES SAVING £70

### Happiness is purity of sound

'the recording quality is to all intents and purposes indistinguishable from DAT or CD. Indeed, if you're using the analogue input, you'll actually get a little more dynamic range than you would with a DAT machine.' **Sound On Sound**

'... it's easy to forget you're listening to tape and not a silver disc... the improved dynamics of the 18 bit system are again apparent... certainly there's no feeling that this is CD's poor relation.' **What Hi-Fi**

'...the Philips exhibited excellent dynamics and a beautifully seamless sound that caught the air and space of the hall, subjectively far superior to when it was recorded from either analogue or 16 bit CD. ...All in all, I was seriously impressed with the DCC's'. **Hi-Fi World**

'In contrast to the two MiniDisc (MD) machines, the DCC sounded bold and vital, and ultimately more engaging... there was more going on, giving the aural senses more of a workout. The treble sounded clean and crisp, without the fried-eggs quality of the MD recorders, but with plenty of detail and a more palpable sense of presence. ...the mid-band was similarly more vital and engaging. The Philips was much more consistent than the others, with none of the rather crudely-drawn quality that becomes apparent on MD when the music turns stressful...by far the best sounding of the three'. **Hi-Fi Choice**

### Happiness is picking winners

'These new generation DCC machines start out by sampling the incoming signal not at 16 bits but at 18 bits which gives rise to a potential improvement in both dynamic range and residual noise of around 12 dB... DCC sounds just the same as DAT...The way DAT keeps going up in price, DCC could well become the home recording standard of the latter half of the nineties.'

**Sound On Sound**

'...DAT is starting to get out of reach with its escalating, almost elitist price range...The DCC730 is much better and cheaper than the recordable MiniDisc; it even makes a handsome partner for a direct-to-disk system. If only you could use it to back-up data I'd give up on DAT altogether. Go out and buy one...'

**The Mix**

'Philips allegedly invested £500 million in the research and design of DCC... the low-cost DCC730 could seriously challenge DAT's hold on the high-tech market. ...could encourage small studios to adopt the format over the increasingly expensive DAT alternative. **Future Music**

'I've used a good quality DAT machine for years and am no stranger to the way digital tape can render analogue sound dry and antiseptic. But the Philips simply wouldn't entertain the possibility, giving a surprisingly warm and fulsome rendition. The bass was particularly well-rounded and lacked the sense of sterility so common with digital. There was no trace of hardness higher up the frequency range.' **Hi-Fi World**

'All DCC recorders will accept a digital input at 32, 44.1 & 48khz, which is good news for anyone who wants to transfer a DAT collection to DCC. DCC's ability to handle any sampling rate you can throw at it might even precipitate a glut of second-hand DAT machines!' **The Mix**

★★★★★ 18-BIT

# sound *on*stage

The Performance Audio Magazine

From the local pub gig to Wembley stadium, from theatre sound to international concert tour, **Sound On Stage** will focus on all aspects of the live sound arena.

Each month, **Sound On Stage** will be reporting on all levels of gear, from compact portable PA systems to full-blown concert rigs; sound reinforcement mixers; amplification; loudspeaker enclosures; radio microphone/guitar systems; backline; all types of live sound signal processors (effects, equalisers, crossovers, compressor/limiters and more); power amps, microphones, cables, connectors and accessories...

In fact, if it concerns performance audio, you'll find it in the beautifully presented pages of **Sound On Stage**.

Need help choosing gear? Each month, we'll submit the latest products to in-depth tests and bring you the same recipe of highly informed, quality reviews that have made our sister publication *Sound On Sound* the undisputed bible for all things hi-tech and recording. **Sound On Stage** will continue this tradition of excellence, to become the one-stop resource for everyone involved or just plain interested in the fascinating world of live sound and performance audio. Through interviews with live sound engineers, tour personnel, lighting engineers and concert promoters, you'll discover how the professionals approach live sound, across all manner of venues and at all levels of budget.

Issue by issue, **Sound On Stage's** respected editorial team (headed by Paul White) and top-name professionals will deliver no-nonsense practical advice to guide readers through such topics as:

- Setting up and using PA systems.
- How to deliver the best stage sound.
- Monitoring techniques and in-ear systems.
- How to get the best from effects and processors live.
- Pros and cons of powered mixers/speakers.

## Our regular look at the hottest new sample CDs and CD-ROMs.

### NEW WORLD ORDER JOURNEY 2

(DOUBLE AUDIO CD)

Following on logically enough from *New World Order Journey 1* (reviewed in last month's *SOS*) is *New World Order Journey 2*, available on audio CD only at the moment. This is a double CD set, following the '12 examples per track' format of its predecessor. Again, we're treated to a round-the-world trip, but this time the tracks are instrumental snatches and loops, rather than the percussive rhythms of the first CD.

The collection kicks off in fine style, with almost 100 excellent didgeridoo drones, squeals, and puffing, pulsating loops, followed by 120 gamelan loops from Indonesia. From the same country come moon lutes, sheng and shawms, while India offers us sabahars, sarods, and 96 examples of the inevitable sitar. These are mainly short loops or phrases which can be rearranged to form a well-known raga of your choice.

The middle east yields more buzzy stringed instruments, with names like oud, saz, tar, kamanche and santoor, but on one or two examples of these somebody was definitely trying it on. Though most of the sequences sound authentic enough, one or two included snatches from some well-known rock classics — I didn't actually hear 'House of the Rising Sun', 'Sunshine of your Love' or 'Smoke on the Water' (all Saturday morning at the guitar shop

favourites), but it came pretty close!

Back in the Middle East, we're greeted by more plucked and bowed strings, as well as the strident shawm, after which there's a mixed selection of world flutes and two tracks of what sound like out-takes from the post-recording party. The flutes were, to my ear, rather disappointing — there are some wonderful world flute sounds, but so few seem to get onto sample CDs, and because of the nature of the phrasing, it's very hard to make anything very different out of what you do get.

The second disc jumps in with 'A' for Africa, and a nice selection of kora and riti loops, followed by a few riti licks. These all have the distinctive African metallic sound, whereas the galician bagpipe that follows can only be described as — too close! There's a nice selection of French hurdy-gurdy loops and effects, followed by penny whistle and innumerable mandocello loops and licks. For the non-folkies out there, this instrument uses paired strings and sounds not unlike a 12-string guitar, but with its own distinct tonality. Irish banjo and highland pipes are obvious enough, but what on earth is a cauldwind pip, a rommelpot, or a dudelsak? I couldn't tell whether the rommelpot was being played or whether someone was throwing up in it, but I guess it fits into the overall scheme of things somewhere!

The UK is credited with the Jew's harp, which I always associated with American westerns, then it's off to Scandinavia for another pluckfest. Did you know that even the Scandinavians have bagpipes — and they're on this disk! Russia volunteers the balalaika — just the thing for *Dr Zhivago* hip hop remixes — and they also introduce us to the zjaleika, dudka, and Russian flute, before a return trip to down-home USA, where the Banjo rules supreme.

Tracks 59 to 72 comprise world vocals; the extensive Russian monk collection is stunningly good. Kurdish vocals have the advantage that you can claim they belong to just about anywhere — and nobody but a Kurd would know the difference — while the Senegalese, Sudanese and Rai examples are all hauntingly cosmopolitan. That leaves only aero blasts, effects, a short but useful selection of hurdy

gurdy and bagpipe drones, and 24 charming, but sadly not identified, bird calls.

The problem with this kind of disc is that you're bound to work with the phrases you're given, and there are few straight notes to sample, so there's little chance of improvising your own 'link' pieces. Some of the examples, however, are truly excellent, especially the didgeridoos, the Indian instruments, and the vocal sounds. The samples are consistently well recorded, and most will be easy to loop where appropriate. *Paul White*

£ £59.95 including VAT & UK p&p.

### LOOPZILLA 2

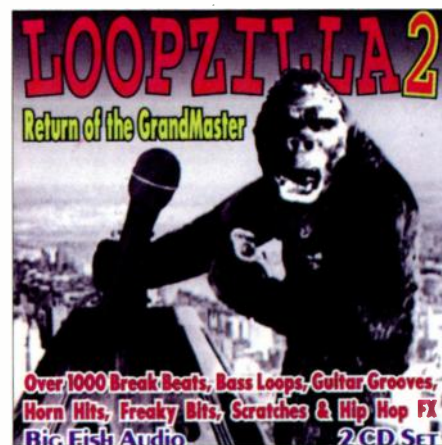

(DOUBLE AUDIO CD)

This is a two-CD set from Big Fish Audio, a Stateside outfit. It seems that a group (or groups) of highly competent (if not exactly household name) session players/DJs have been assembled for a marathon jam session in a studio. Whenever they have a hot groove thang going, it goes down onto digital multitrack.

Instruments featured include synths and pianos, programmed and live drums, electric, synth, and acoustic basses, guitars, occasional vocals, and turntable effects. The mood is cool, credible, licence-free jazz/funk/soul.

Side 1 opens with 46 'Construction Kit' tracks, with tempos mostly in the 90s. Heading each track are one or two ensemble examples, followed by the individual instrument tracks and, in some cases, drum hits. Mono substrates are left panned where they were in the ensemble mix, an annoying US habit that assumes you can afford to stereo sample everything. If you want to sample mono voices in mono and apply your own panning from the sampler or an external mixer, you might find yourself selecting between left, right and both channels during the sampling process. There is absolutely no crosstalk between voices (with one or two weird exceptions), nor are the sounds

MUCH, MUCH MORE IN STORE

► anything but immaculately clean and warm. Most pieces manage to combine two highly desirable (and, one would have thought, mutually exclusive) properties, each having their own distinctive character, yet being capable of sliding in seamlessly behind a new composition.

Next up are some 21 programmed/played, totally original stereo drum loops. Feel, playing, and programming is excellent, though I heard rather too much reverb for my taste. A good cross-section of beats are featured, vaguely centred on funk-hop, but no tempos are given. Hrrumph!

Some 42 virtuosos scratching effects follow. These work well within the musical style, adding drama and colour to a laid-back, squelchy beat. Then come 13 conga and 18 percussion loops, uncluttered affairs designed to colour rather than propel a rhythm track, and again well recorded, in stereo. Once more, though, no BPMs are provided.

No funk workstation would be complete without some horn hits, and here you'll find 28, carefully lifted from antique recordings for your edification. Even better are the few filthy old jazz piano cuts, and there's also a smattering of new piano and organ licks, plus 20 interesting retro-esque synth lines. The latter are well worth taking out of their jazz/funk/soul context to mess about with.

The second disc opens in the same vein as the first, with 45 construction sets, followed by 30 more loops, then more scratching. At the end of this double CD come 39 bass and 30 guitar loops. At last, I can hear crosstalk — drums, way in the background of some simple but classy funky guitar chops, wahs, and chord patterns. I'd guess we're talking mic'd-up amps here, and a thick-pickup guitar like a Les Paul. The bass is deep — very deep. You can hear sub-fundamental frequencies in the attack of some notes. Finger-style pick and slap playing is in evidence, and a classic pedal effect sometimes adds a touch of vintage glamour. My only complaint is that the guitar and bass loops,

together with some tones, would have justified a CD on their own — you're left wanting more. The synth bass loops, too, are a revelation — unexpectedly good and fresh.

To sum up, I loved the drum loops: some of the cut-ups of old favourites were among the best and most authentic sounding I've heard, and I have already sampled many and used some. I could moan about the applied reverb, but at least it's only used where appropriate. The cool funk on *Loopzilla 2* leaves plenty of room for your imagination, and the performers are doing what session musicians do best: playing a supporting role for your music. After all, you are the star, aren't you? And talking of stars, Big Fish Audio can count themselves lucky that I didn't dock one for the paucity of sleeve info (no keys, and no BPMs in the loop sections). *Wilf Smarties*

**E £69.95 including VAT & UK p&p.**

## JUNK PERCUSSION

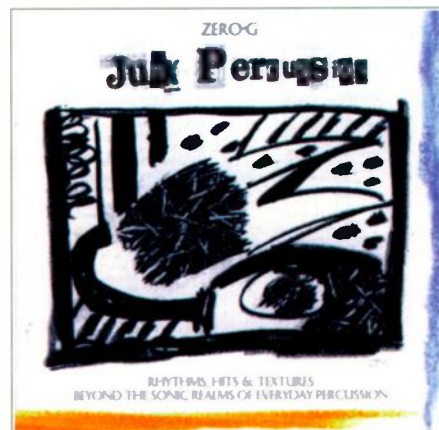

(AUDIO CD)

This 96-track audio CD is a collection of samples taken from performances by Roger Turner, the renowned percussionist. Your idea of what a percussionist is, however, probably doesn't apply to the kind of stuff Mr Turner gets up to. There isn't a conga or bongo in sight. Tambourines, shakers, and most other kinds of conventional percussive instrument, have all been ditched in favour of the loudest, strangest, and most brutal-sounding bits of wood, plastic and metal that your local scrapyard could possibly provide.

The CD begins with a section called 'Long Ambiances'. These usually last about a minute, and the 23 tracks provided cover all types of sonic emotion, from painful, dentist's drill-type screeching, to more mellow and almost new-age ambiances. The fact that all of these performances are recorded 'live' really shows off not only Roger's obvious talents, but also his visionary way of banging, scraping, dropping and mutilating every conceivable piece of scrap.

The second section, entitled 'Grooves', is, for my money, by far the strongest on the CD. These 42 tracks are the percussive equivalent of the conventional drum loop, the kind of thing that you'd normally sample a bar or two of, and use as a backbone for the rhythm section of your track. Metal bars, tin cans, sheets of iron, bits of plastic, and perspex tubes are the kind of building blocks from which these percussive loops are constructed. They absolutely sizzle with movement, energy and bite, and are very reminiscent of the South American 'street

drumming' which inspired Paul Simon's *Rhythm of the Saints* album.

When using these loops, it becomes very apparent just how much most of us are stuck into the clichéd 'bass, drum and snare' approach to rhythm construction; the more I heard these grooves, the more I wanted to throw away my drum machine and wander round the house looking for things that I could beat with sticks and then sample.

'Single Ambiances' is the next section, and rather like the first, it utilises more sustained percussive sounds, such as bell and chime effects. These seem to have a much more atonal and harsh feel to them, and sensible mixing by Hamish Hutchison has added just the right amount of reverb or echo to enhance the overall effect, which is unmistakably one of atmospheric weirdness. The last section gives us a decent bunch of the single samples themselves. Most seem to be easily edited and chopped up for creating your own percussion loops and programmes.

Zero-G have obviously set out to give us a product the likes of which we haven't yet heard, and overall they have succeeded with flying colours. *Junk Percussion* is like a breath of fresh air to anyone looking for a new twist to their drum tracks. The performances are full of vigour, and the recording quality is good throughout. Whilst this CD may, in some sections, be a little too way-out or esoteric for some users, you have to applaud the originality and musicianship of the producers in bringing us such an exciting and unique CD. *Paul Farrer*

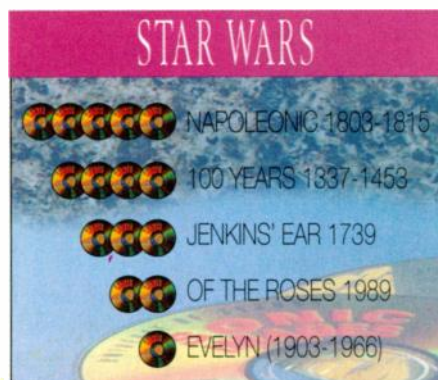

**E £59.95 including VAT & UK p&p.**

## TRAVELOGUE: OUT OF AFRICA 1

(AUDIO CD)

This audio CD is based on the recorded archives of one Bengt Berger, a Swedish professor of

# THE ONLY PROFESSIONAL MIXER THAT SITS IN THE PALM OF YOUR HAND.

## MIXPAD™ 9 ULTRA-COMPACT MIXER

- 3 balanced mono mic/line inputs and 3 stereo inputs to mix a maximum amount of sources in a minimal space.
- On-board phantom powering for use with condenser microphones.
- Low-noise, high-headroom mic preamps for exceptional audio performance.
- Balanced stereo outputs.
- 2 stereo effects returns to accommodate today's stereo processors.
- CD/tape input to bring in external signals.
- Peak output overload LEDs.
- 2 stereo aux sends.
- Headphone output.
- Mic and line input trim control 54 dB control range.
- AC power supply and optional battery powering.
- 2-band EQ ( $\pm 15$  dB shelving type — low 100 Hz, high 10 kHz) on each channel.
- 2 aux sends per channel; 1 pre for monitor and cue, 1 post for effects.
- Constant-level pan controls on mono channels to pan mono signal left/right in the mix.
- Balance controls on stereo channels to adjust left/right level.
- 9-channel mixer measuring only 9" by 9.6" by 2.5" — an ideal fit for a wide range of applications.
- Extruded one-piece aluminum construction.
- Channel volume +10 dB gain.
- £199 including VAT.

# SAMSON®

► African and Indian music who spent two years in Africa, recording local musicians and — by all accounts — jamming with them. Virtually all the material in this collection comprises snatches taken from actual performances, often by ensembles rather than individuals, and the recording quality varies from slightly noisy on some passages to exceptionally clean on others. In comparison with some other sample CDs, these samples aren't particularly bright, but this is probably a more accurate reflection of the way things actually sounded.

The first half of the CD is taken up by percussion, with and without vocal accompaniment, and the instruments vary from recognisable drums to improvised metal instruments bearing the acoustic signature of a car salvage yard. All tempi are listed where appropriate. We're also treated to the distinctive twanging of musical bows (which sound rather like a Jew's harp being played by a Cylon).

The 'Groovin' Drummers' section comprises 17 tracks of rhythms with a swing feel, while 'Dense Drums' showcases a more complex style of ceremonial drumming. Following are several examples of singing, including some very sad stuff recorded at funerals, though there are some nice work songs to help brighten the mood, including women singing as they

operate grindstones. At this point, the musical bows make a brief reappearance, leading into the final round of xylophones. These don't sound like orchestral xylophones, though — they're more like buzzy kalimbas or thumb pianos, and some of the phrases show a lot of creative potential.

According to the sleeve notes, a certain amount of editing and processing has been done to even out wandering tempo, and some of the apparently stereo tracks actually comprise different but complementary loops in the left and right channels. The loops are also said to be tempo-mapped to a system devised

by X-Static Goldmine, so that you can tune any loop up or down by 50 cents to make it match the next tempo up or down.

As the title suggests, much of this CD is reminiscent of a travel documentary, and it would be difficult to use some of it far outside its original context. The high spots are the drum rhythms and the xylophones; the choirs are too obviously a part of a complete performance to be very flexible. In all, this is a mixed bag, and as it was derived from archive footage rather than material specifically commissioned for sampling, perhaps we shouldn't be too surprised. It's worth a three, nevertheless. *Paul White*

## BIG BAD SOUNDS (AUDIO CD)

*Big Bad Sounds* is a 73-track audio CD stuffed to the brim with hardcore dance and techno sounds. The CD kicks off with nine tracks of classic TR909, 808 and other drum machine sounds, perfect for adding that all-important 'thump-thud' to any techno track. Although there can't be many sample CD owners who haven't got at least one set of these drum sounds, the samples provided here are equally as varied and just as powerful as any I've heard, and the inclusion of a sensible selection of cymbals and percussion makes it all the more impressive.

The main body of the CD, however, falls totally into the 'large weird noises' category, starting with a good collection of analogue sweeps, whooshes, and wind effects, and moving across almost the entire gamut of analogue heaven, right through to drones, vox sweeps, jet noises, and stabs.

The sound quality of the samples is very good, and nearly all of them, if not already in stereo, have been greatly enhanced with clever use of external effects such as phasing, chorus, and echos. However, though there's a wide selection of these sounds, they're not always categorised and listed as well as they could be, leaving the user with quite a trek before finding the required sound.

The next section, cunningly entitled *More*

*Big Bad Noises*, gives the TB303 a jolly good airing. As if we hadn't heard enough of this powerful little synth already, here are another 28 tracks filled with acid riffs, licks, bass lines, and effects. This excellent collection goes to show that even after all this time there's life in the old TB yet! With an obvious bias towards hardcore and techno, and very reminiscent of bands like Underworld, The Prodigy, and Kraftwerk, all the riffs are listed, with not only their appropriate BPMs and key signatures but, very usefully, the bar length of each sample.

Moving on from the TB303 samples, there's another equally interesting selection of organ, bass and string riffs. Nearly all of these absolutely sparkle with originality and movement. The last few tracks feature a massive number of 'classic' bass sounds from the likes of the Bass Station, Juno, DX, and Moog synths. Unlike most sample CDs, however, these are very usefully given as three-note multisamples (F#2, C3 and F#3), and this, coupled with the sheer number of different noises you get for your money, makes *Big Bad Sounds* a very serious product indeed.

This is the debut sample CD from Ample Sounds UK. Retailing at the very attractive price of under £30, it gives the potential user a highly professional product for little more than half the price of some lesser releases. Of course, a single CD like this can't hope to cover all the areas of current dance music, but with a first disc of this quality we can expect great things from this company in the future. At this price you'd be totally mad to miss it!

## have a DP/2!

With the resounding success of the DP/4+, you're probably wondering, "why doesn't ENSONIQ make a smaller DP for the home studio user (*like me*) on a budget?"

Well, enough of you asked, and we're happy to oblige – with the DP/2. A two-processor version of the DP/4+, for about half the price. (*Now you're talking!*)

The DP/2 can process one true stereo or two discrete mono sources, through two of the same custom DSP chips we use in its big brother. It offers the same unequalled range and quality of algorithms as the DP/4+, plus new combinations designed specifically for the home/project studio. And we've built them into a whopping 600 Presets, ready for any challenge.

Both DP's feature balanced I/O, total programmability, advanced MIDI control, and even a headphone jack.

ENSONIQ's digital effects deserve the reputation they've gained – from studios, musicians, and the music press. For those who need the ultimate parallel effects processor, the DP/4+ is your best choice. But if you want that power in a smaller package, there's now a DP for you, too. (*Thanks!*)

# Doctoring the

TASCAM DA88 CARE AND MAINTENANCE

*Getting the best performance from a digital tape recorder such as the DA88 depends largely on conscientious maintenance and cleaning. Tascam's chief service manager, Joe Fialho, tells PAUL WHITE what can safely be done by the user — and when it's necessary to call in the professionals.*

# DA

DAT machine, but with the DA88, which uses 8mm tapes, there's a wide variation in performance, so there are only certain tapes we recommend. When the DA88 was launched, tapes were available from both Sony and 3M, but neither of them had been conceived specifically for digital audio use and I don't think many people realise the demands made of tape in a digital recording environment. Now there are two tapes designed to meet our needs, which we specifically recommend; the Maxell HMBQ metal-particle tape, and a new tape from Sony. The original Sony tape we recommended was an HMEX formulation, but although it works perfectly, it is a metal-evaporated

tape. Metal-evaporated tapes give you a

higher signal back off the tape, but the coating is incredibly thin (around a quarter of a micron) and therefore more prone to wear and damage than the metal particle types. In situations when there's a lot of shuttling and scrubbing, there could be problems. A metal-particle tape should be good for at least 1000 passes, whereas metal-evaporated tape is only good for around 300 passes. The Maxell tape has proven to be very reliable.

"The differences in the composition of metal-evaporated tape and metal-particle tape also influence the head life of a machine. Metal-particle tapes are generally more abrasive than their evaporated counterparts — typically by around 20%. This element has been designed into the tape formulation to reduce the likely effect of head clogging, so as to maintain consistent recording fidelity and performance. To balance this, they are usually cheaper than metal-evaporated tapes. Sony

**A**lmost everyone who has owned even the simplest analogue tape recorder knows how to undertake the simple cleaning and maintenance required to keep it up to scratch. When an analogue tape machine gets dirty, you simply scrub the heads and guides clean with an alcohol-soaked cotton bud, and if its alignment starts to drift, a deteriorating top-end response gives you plenty of warning. The situation isn't so simple with the digital tape machines which increasingly form part of studios at all levels. Just what can the typical user do towards maintaining a digital tape machine? According to Joe Fialho, chief service manager for leading studio equipment manufacturer Tascam, if you're working with a machine such as Tascam's own DA88 digital 8-track, good working practice starts with the choice of tape.

"Most reputable DAT tapes will work OK in a

# DA88 Care & Maintenance

## WHEN TO SERVICE

Because of the error correction systems used in digital tape machines, there's usually very little warning that something is wrong, so preventative maintenance is essential. Manual wet cleaning can be carried out every 50 hours or so, while dry cleaning tapes should be used no more frequently than every couple of hundred hours or so, because of their abrasive nature.

After 500 hours, the machine should be returned to an authorised service centre, where it can be professionally cleaned, lined up, and any worn parts (such as pinch rollers) replaced. Tascam offer a particularly fast turnaround (between 24 and 48 hours), with labour charges of £35 per hour for servicing. Heads should last around 1000 hours, for both DA88s and DAT machines. This figure is comparable to the life of analogue tape heads, and on a multitrack digital machine, they're cheaper to replace than analogue heads. Again, a full line-up is needed whenever a head is changed so it's not a job the studio technician can do without specialised equipment and training. Cleaning the machine on a regular basis, which is something you can do for yourself, will make it more reliable, as well as reducing the rate of head wear.

*The DA88's transport is quite accessible once the top cover has been removed. See overleaf for the correct cleaning method.*

► now have a new DARS dual-layer tape, which is a metal-particle tape with a special surface coating. It's claimed that this combines the mechanical benefits of metal-particle and metal-evaporated tapes. Fuji are also now making a dual-layer tape.

"Once you've bought the right tapes to use, you have to look after them. Because DAT and DA88 tapes are small, they tend not to get treated with the respect they deserve — I've seen tapes just lying around in studios. They really need to be put into their storage boxes when not in use, otherwise dust will get in. With an analogue cassette, a dusty tape will usually still play, but in digital systems, the dust can get between the tape and the head, which causes increased wear and dropouts. The DA88 has mechanical tape and head cleaners built in, but that doesn't mean you can neglect your tapes. These cleaners were not fitted to early machines but we fit them whenever a machine comes in for service or for a software upgrade.

"It's also important to wind the tape to the start and remove the tape from the machine at the end of a session — if you leave it threaded in the machine, once again dust can get in. Another recommendation is to wind a new tape through to the end and back again before use, because this

can help to loosen it up and it also cleans the tape to some extent. With the DA88, you also have to ensure the tape is wound right back to the start before you format it, otherwise you can end up with a short piece of unformatted tape at the start, which the machine won't recognise.

"Only stick labels where they are intended to be fixed. If you put them somewhere else, you could foul the opening tape flap, or a label could curl up, allowing some of the adhesive to get onto a moving part. The cassette tolerances are also very tight, so a label in the wrong place could make the cassette too thick to fit in the mechanism.

"In the longer term, metal-particle tape holds the recorded signal better than metal-evaporated tape, so for long-term use, we'd recommend you use a metal-particle tape or a dual-layer tape. It's also wise to clone important recordings, even if you don't envisage any problems, because faults can occasionally occur in both tape cassettes and machines; the last thing you want is for your only copy of a DAT or multitrack master to get chewed up. Digital tape should be treated in the same way as you treat floppy disks — the data isn't completely safe until you have a backup."

## DIGITAL ALIGNMENT: THE THREE STEPS

- When a digital tape machine is aligned, a test tape is used to check the high-frequency carrier signal, and the tape guides are then adjusted to produce a maximum output level. The level of the data bursts from the heads must also be reasonably even in amplitude, especially at the leading edge where the sync and ABS data is recorded. An error meter is connected at all times and the error count checked at every stage of the adjustment.
- Once the tape path has been mechanically optimised, the playback EQ circuits are adjusted. These circuits are not concerned with the audio EQ, but determine the shape of the waveforms being replayed. In the case of the DA88, separate adjustments are used for metal particle and metal evaporated tape types, and

the machine automatically switches to the right one when a cassette is inserted. While the EQ is being adjusted, the waveform pattern of individual cycles is closely monitored on an oscilloscope, and the error counter is checked. When properly set up, the error rate on both playback heads should be virtually zero, and certainly within single figures.

- The third main setup check is the head current, which involves the use of a calibrated current probe. This current must be set to an accuracy of around 5%, so a very good oscilloscope is required. An experienced engineer should be able to complete these adjustments in less than an hour, and Tascam routinely check all these parameters whenever a DA88 is returned for service.

## SMOOTH RUNNINGS

There are quite a lot of moving parts in a rotary-head, digital tape machine. Is it possible for the user to lubricate these parts?

"It is essential that the user does *not* attempt to lubricate any part of the machine, because of the danger of oil getting onto the tape path and being carried by the tape to the heads. There's a special molybdenum lubricant used for the cam gears, and specialist greases for the various pivots and slides. We recommend a 500-hour service on all digital machines and we'd lubricate the machine at that point. We've seen a few horrors where people have tried to oil the machines themselves, and oil has got straight onto the tape."

Which parts of a digital machine can go out of alignment?

"The tape guides, in the main, because the ►

# DA88 Care & Maintenance

▶ rotating head is fixed, as is the capstan guide, which is set from manufacture. The pinch roller may need changing periodically, though. While almost anyone can line up an analogue machine using only a test tape, setting up a digital machine requires quite a lot of specialist equipment, including a very good oscilloscope and an error rate counter, as well as factory test tapes. You also need a current probe to verify the head current, which must be set up very accurately.

"Even the apparently simple mechanical servicing tasks, such as changing a pinch roller, are not as simple as on analogue machines, because the parts are so small and quite easy to bend. With the machine I'm working on now, the pinch roller has been changed, and the arm holding it has been bent slightly because it wasn't supported properly while the job was being done. This causes the tape

## CLEAN MACHINES

Having explained what we *shouldn't* do, could you tell us about the preventative maintenance tasks that *can* be carried out, with a little care?

"Cleaning can be carried out relatively easily and will go a long way towards maintaining performance. Dry cleaning tapes are only partially successful and are abrasive, so you don't want to use them very often. The most important task is cleaning the head drum. Once you've taken the top off a DAT machine or a DA88, it should be fairly accessible, and with the DA88, you can improve the access further by removing the loading cage from above the transport; this is fixed by only four screws and all the wiring is on connectors.

"We have a special cleaning cloth which is lint-free, and we can supply it to end-users if necessary

## HEAD MASTER: CLEANING THE DA88

Joe Fialho demonstrated the correct DA88 head-cleaning procedure for the benefit of SOS readers.

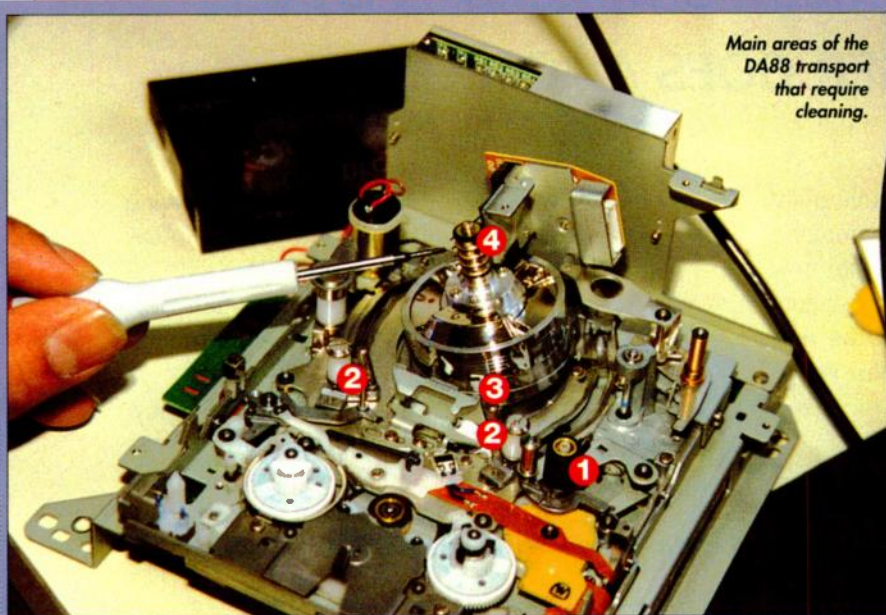

• **HEADS:** Joe first wrapped a piece of the special cleaning cloth recommended by Tascam around his finger and dampened it with the cleaning fluid. The cloth-wrapped finger was then held lightly against each head in turn (the heads are identifiable as tiny dark windows about midway between the top and bottom of the drum), while the other hand was used to rock the drum gently back and forth by touching

it on the upper edge, not on the face. About a dozen rocking motions per head is enough, finished off by a gentle wipe around the whole drum surface, and the whole procedure only takes a couple of minutes. Note that though the DA88 has four heads on the drum, DAT machines usually have only two.

• **GUIDES:** To clean the guides, Joe recommends cutting a thin strip (around 10mm wide) of the cleaning cloth mentioned earlier, moistening it with cleaning fluid, then passing it around the guide and

gently rocking the cloth back and forth. The cleaner used by Tascam is also safe on rubber parts, whereas isopropyl alcohol will cause deterioration of rubber rollers in the long term.

• **BRUSH SYSTEM:** The third area that needs cleaning is the sliding brush system which transfers the signal to and from the rotating head. Joe: "There is a system of slip rings above the head, and fine, sprung-wire contacts touch these to carry the current. Over a period of time, they tend to accumulate a thin layer of oxide, and it's quite easy to remove the whole mechanism (which is held in by just four screws) for cleaning, if you wish. While you can dismantle the brush assembly to gain access to the slip rings, it may be safer (the brushes are easily bent), just to hold a moistened piece of cleaning cloth against the slip ring on the side opposite the brushes, and rotate the head by hand to clean it. Obviously, the machine should be disconnected from the mains before any cleaning or disassembly is attempted."

Main areas of the DA88 transport that require cleaning.

### KEY

1. Pinch roller.
2. Guides.
3. Head (one of four).
4. Slip rings.

to wander over the heads, and the error rate has increased because of that. We've had worse cases, where people have bent something without knowing it, then they've gone around and adjusted all the other guides to try to put things right. One was a nightmare to fix — we had to start right from scratch! Rotating-head digital machines are definitely not serviceable by your average studio engineer, even though he may be perfectly competent at fixing analogue machines."

— this is an alternative to the chamois leather pads sometimes used to clean video machines. This cloth is a fine material, almost like silk, which cleans and polishes at the same time. It should be used with a good quality head cleaning fluid: although you *can* use isopropyl alcohol, we have found a better commercial alternative made by EMMARC, which is far more effective, and we can supply this as well. Never, ever use cotton buds, as the fibres can clog up the gaps around the head. Don't even use them to clean the guides, as the tape can carry the fibres back onto the head." (See 'Cleaning the DA88' box for a full explanation of the correct cleaning procedure.)

**Is there anything users can do about the environment in which their machine is used, which may prevent trouble?**

"Nicotine and tar from cigarettes poses a great danger to digital tape machines, because it coats the head drum and then abrasive particles of oxide and dust stick to it. In a professional broadcast environment, smoking near a tape machine would be a sackable offence, yet we still have users who

are indignant when we tell them they shouldn't allow smoking in their control room. Atmospheric dust is also an important factor, because you can't have a hermetically-sealed tape machine — there has to be a door for the tape to get in and out, and there are slots for ventilation. If dust does settle on the machine, particularly near the tape door, it should be removed using an anti-static brush, preferably in conjunction with a portable vacuum cleaner. Don't use a brush on the transport, though, as bristle fibres can get onto the head and guides.

"Obviously, the room should be kept as clean as possible, but it would help to cover the machines with a clean cloth when not in use. In recent months, we've devised a thin plastic shield which fits over the DA88's transport to help keep the dust off — but that doesn't mean you can work in dirty conditions."

### RECORDING ON THE MOVE

**I would imagine that taking a DA88 on the road is more likely to cause problems than using one in a fixed studio location.**

"The main problem in a live situation is people taking a cold machine out of a vehicle and then using it in a warm room before the machine has had a chance to warm up properly. Under these conditions, condensation can form on the metal

"In a professional broadcast environment, smoking near a tape machine would be a sackable offence, yet we still have users who are indignant when we tell them they shouldn't allow smoking in their control room."

parts in the tape path, which is obviously undesirable. It's important that both the machine and the tapes be allowed to attain a stable room temperature before the tape is put into the machine.

"Physical vibration during transit can cause the mechanical alignment of the machine to drift, so proper packaging is important. A conventional flightcase transmits all the shock to its contents: the type we've found best is the type where an inner rack is mounted in solid foam rubber inside an outer case."

SOS

# Blue Proudly Presents...

## BLUE SYSTEMS

### SYNTECHNO

**The Syntecno TeeBee, TB303 reborn? Maybe.**

A chunk of 'super-funky' technology

Features Include:

- Monophonic bass synthesizer
- 4 Channel MIDI to CV converter
- Five rotary controls act as MIDI controllers.
- MTC to Roland Sync24 converter
- Simple real-time sequencer
- Auto-wah filter

### Mutator

The Mutator is a stereo analogue effects unit based on technology developed for synthesis in the late sixties. Quite unlike your standard reverb, delay, chorus and flanger type effects the effects achievable with the Mutator are unique and simply defy description.

**What People Say..**

"...The thing about the Mutator is that it is actually alive."

"..... I can't stop playing with it."

".....The Mutator sits in my rack like an Arnie in a row of Shirley Temples, probably the most potent zU rack on the planet"

D80 + SX PACKAGE

This great Value For Money  
package features:  
FOSTEX D80 MULTITRACKER

- 8 tracks of uncompressed digital recording • CD quality recording at 44.1kHz
- Comprehensive digital audio editing

SPIRIT FOLIO SX MIXER

- Quality 20 input mixer with 8 direct outputs • 3 Band EQ with sweepable mid control • 3 Aux sends (2 can be post or pre fader) • 100mm faders
- INCLUDES LOOM

ONLY £1999 INC VAT

DRUM 'n' BASS

NOVATION DRUM STATION

- "Perfect" sounds of the Roland TR808 & TR909 drum machines • Full midi control • Rotary control editing • Stereo • 6 individual outputs
- DIN sync output • Factory / user kits

ONLY £449 INC VAT

NOVATION BASS STATION

- FAT twin oscillator programmable mono synthesizer with rotary control editing • Full midi control

*SPL's Vitalizers work in mysterious ways to give added life even to good recordings. Now a new model incorporates valves, compressors, filters, and extra controllability, for yet more audio magic. PAUL WHITE opens a box of tricks.*

**W**e may claim to strive for accuracy when recording, but if there's a box we can plug in to make things sound even better, we tend to use it. In fact, it may be part of the human condition that we tend to be dissatisfied with real life, preferring instead the blue whiteners in our washing powder, the rose tint in our spectacles, or the holiday snaps with vibrant, oversaturated colours.

#### EXCITING BACKGROUND

Nobody has really got to the bottom of psychoacoustics, as yet, and it's still not fully explained why taking a perfectly good recording and enhancing it using various processes (such as harmonic excitement or dynamic EQ) makes it sound somehow more real and alive. Perhaps it's a limitation of the stereo loudspeaker reproduction system that's being compensated for by the enhancement process, or maybe the lack of visual clues to reinforce what is going on in music makes

which is added to the original to produce both summation and cancellation effects in frequency and phase. I've tried to get the German designer to explain the process to me on several occasions, but I still come away little the wiser.

#### WHAT'S NEW?

Before looking at the new Tube Vitalizer under review, it's probably worth outlining a couple of the features of the original solid-state model. Enhancement is applied right across the audio spectrum, rather than just at the top (as was the case with most early enhancers), and a unique bass control provides a deep, rounded bass boost when moved in one direction, and a tight, punchy bass when moved in the other, making it very flexible on all types of music. I believe that when the bass end is being boosted, phase cancellation occurs in the lower-mid range to prevent the effects of the bass boost spreading higher up the spectrum, where you don't want them.

# Magical Mystery Tour

The middle part of the spectrum is controlled using a Mid/High tuneable filter, but again, the operation of this isn't at all straightforward, as the effect depends both on signal intensity and on the setting of the Process control. A further stage of processing, based on a mix of the Mid/High filtered signal and the original input, is then filtered again to produce the necessary high-end sizzle.

As far as I can see, all these features have been retained in the Tube Vitalizer, but in addition to the tube output circuitry, several other new features have been added. Now there are two compressors in each channel, one for the high end and one for the bass end (but affecting only the side-chain portion of the audio signal), and the output stage includes limiters. There's also a pair of switchable LC (inductor/capacitor) filters, one for the high end and one for the low end, as well as a bypass switch for the tube circuitry. If all this sounds confusing at the moment, don't worry — there's a lot going on in this unit.

#### VITAL SIGNS

The Tube Vitalizer is a beautifully styled, 2U box dedicated to processing stereo signals — settings for both channels are made by the same set of controls. Behind the pale gold front panel glow three valves (6CC83s), which are clearly visible through black mesh windows. Rear panel connections provide balanced inputs and outputs, both on conventionally wired XLRs and balanced

## SPL TUBE VITALIZER PSYCHOACOUSTIC ENHANCER

it necessary to provide more audio clues. Whatever the reason for the effect of psychoacoustic enhancement, the original recording usually sounds quite flat and disappointing once the effect is turned off.

The first box to enhance audio in this way was the Aphex Aural Exciter, which was not originally available to buy, but had to be rented from Aphex and credited on any commercial releases on which it featured! The Aphex range has gone from strength to strength, but now there are lots of different makes and models to choose from, all working on different principles. Regular readers will have noticed my occasional references to a device called the SPL Vitalizer, which I use in my own studio. This works on a principle quite different to that of other enhancers — it doesn't generate new high-frequency harmonics in the way that the Aphex process does, and unlike other dynamic EQ-based approaches, the Vitalizer appears to produce an equalised side-chain signal

#### pros & cons

##### SPL TUBE VITALIZER £2349

#### pros

- Sounds wonderful
- Great price value.
- Very flexible.

#### cons

- Expensive.
- Controls initially confusing.

#### summary

So far, this is the most effective 'make everything sound better' box I've heard to date, but it's priced accordingly. It's also less than intuitive to operate.

**SOUND ON SOUND**

# VS-880

## DIGITAL STUDIO WORKSTATION

How much?  
For Digital?

64 Tracks

SCSI

Digital Mixer incorporating 14 input channels, digital EQ, 2 stereo busses and 8 recording busses.

Having a digital studio in your home has been the dream of many musicians for years. Now Roland has fulfilled that dream with the VS-880 Digital Studio Workstation.

**64 TRACKS** (8 tracks x 8 virtual tracks) of 16 Bit CD quality 44.1kHz direct to disk recording technology with full digital mixing and editing...

...capability, automation via external sequencer, optional built-in digital FX processing, storage to either internal IDE (extra), or optional external SCSI drive, and back-up to DAT in only 1.5 times total recording time.

£1499 inc VAT

All fader movements, pan and mixer parameters can be controlled and automated by MIDI.

Large music friendly transport controls including locator, marker and tempo map options

Comprehensive cut, copy, paste, exchange, insert, erase and scrub preview for fast non-destructive editing.

### Data Stream...

8 Physical Tracks x 8 Virtual Tracks (Total 64 tracks). Sample Rates of 48kHz, 44.1kHz and 32kHz. R-DAC A/D 16 bit Bit Stream D/A 16 bit 8 times oversampling. Typical recording time is 35.6 minutes (all 8 tracks) on a 540MB HD at 44.1kHz. (Non-destructive).

Digital Mixer with 14 channels, 2 AUX, 2 Master, 8 Recording Buses, 2-point digital EQ (High + Low) or 3 point digital EQ configuration, with only 8 channels, 4 Analogue and 4 Digital inputs (SPDIF), 2 Analogue outputs, 1 Digital Output, 24 bit internal processing (EQ, Fader, etc).

Internal IDE interface for 2.5inch HD as well as external SCSI I/O for up to 7 devices such as suitable HDs for recording, or M.D. Iomega Zip or Syquest drives for back-up and storage. In addition back-up to audio DAT in only 1.5 times total recording time. Full synchronisation to MIDI Time Code and MIDI Machine Control as either Master or Slave.

Optional Effects Expansion Board (E349) incorporating 100 patches of Stereo Compression/Limiter, Reverb, Delay, Chorus, Pitch Shifter, RSS 3D, Vocoder, Rotary, Gated Reverb, Multi Tap Delay, etc... (20 different algorithms in total).

# SPL Tube Vitalizer

► jacks. The Vitalizer would normally be connected via console insert points or placed in-line between one piece of equipment and the next. If you decide to use it unbalanced, you don't lose half your signal, and since most consoles have unbalanced insert points, this can only be a good thing.

The main controls are located to the left of the machine, but until you've figured out what does what, they can appear rather confusing. The top three knobs relate specifically to high frequency enhancement, while the knobs on the bottom row relate mainly to low frequency enhancement and Hi-Mid tuning. To the right, there are separate attenuators for the two output channels, both fitted with lovely bakelite knobs, and switches to select between attenuation or limiting. The twin VU meters can be switched to monitor the input or output signal, and there's a button to bypass the tube part of the circuit if necessary.

After the unit is switched on, the power to the valves increases, in order to prolong their useful life, so you need to wait a minute or so before you can start work. To turn the effect on, you have to switch in the Process button, after which the controls need to be set up in a logical order to make sense. The Tube Vitalizer process is, to some extent, level dependent, so an input Drive control is used to match the unit to the device driving it. There's no absolute setting that you need to adhere to — the more drive you use, the more pronounced the effect. To start with, a setting near the centre is usually best. Turning the Bass control either way from centre will introduce either the Soft or Hard bass enhancement, but you'll only hear this if the Process Level is turned up. This control acts an overall 'effect amount' for the lower and mid frequencies, while the Intensity knob directly above it serves a similar function for high frequency enhancement — though, as with all aspects of the Vitalizer, not everything is quite as it seems. In addition to providing an 'effect amount' control, Process Level also affects the way in which mid-band frequencies are damped, so there's quite a high degree of interactivity between the various controls.

The Mid-High tune knob controls a broad-band shelving filter, which boosts frequencies above the filter point, while attenuating those below it. Much of how this works is tied up with phase relationships but, unlike the original Vitalizer, the Tube Vitalizer has a separate High Frequency knob, to give more precise control over the frequency range in which high frequency enhancement occurs.

The Process button acts as a bypass, and uses relay switching to route the input directly to the output, either when the effect is bypassed or in the event of a power failure. When the valves are switched in, they take over from the solid-state output driver circuitry, but from what I can understand from the manual, they also introduce a subtle amount of stereo width expansion. A limiter

can be switched in, which gently holds down any signals that attempt to exceed the 0dB level.

As touched upon earlier, there are two compressors, which act separately on the bass and top-end components of the processed signal, without affecting the direct component. These are each controlled by a single knob, and an adjacent blue LED lights when gain reduction is taking place. The effect is to enrich the sound, making it seem smoother and more dense. The other newcomers are the LC filters, though the manual provides little information as to the filter characteristics. When these are switched in, there

"When the full Vitalizer controls are brought into play, it's as though everything becomes warmer and brighter at the same time."

is a subtle difference in sound, but not so subtle that you don't hear it. At the top end, the sound becomes slightly more focused and open, whereas the bottom-end LC filter somehow conspires to round out the bass end a little more. Many old classic equalisers use LC circuitry, but because of the high cost of the wound inductors, most modern designs try to manage without them.

## IN USE

Having used a conventional Vitalizer for some years now, I felt I should have been able to jump straight in and use this box, but it still took me a few minutes to get used to the new controls. Because of the interactive nature of the controls, you really need to set them up in a logical order, and fortunately, an example is provided in the manual. However, the manual is pretty thin on practical information otherwise, preferring, rather, to present graphs of frequency response. Having said that, it's worth persevering, because every control on this box makes a positive contribution to the overall sound which, with a little practice, can be very finely crafted. For example, the tube output stage used on its own adds a noticeable amount of warmth.

When the full Vitalizer controls are brought into play, it's as though everything becomes warmer and brighter at the same time — it's a very comfortable effect, and if you switch the process out again, the original sound can seem very boxy or nasal. The compressors also help control the effect on signal peaks, while making sure that lower levels receive adequate amounts of treatment. If you can imagine all the best

## DOES IT WASH WHITER?

One thing potential users will want to know is whether the Tube Vitalizer is noticeably better than the original solid-state model. They both produce the same type of effect, but the extra controls provided on the Tube Vitalizer do make it more flexible, and the inclusion of LC filters and a tube output stage results in a noticeable degree of tonal enhancement not provided by the original. Similarly, the compressors (based around the THAT 4301 VCA), provide a lot more scope for controlling how the process changes with signal level. Having experimented with the excellent BSS dynamic equaliser, I know what a huge range of effects can be squeezed out of such devices, and to have, in effect, elements of that process combined with the power of the original Vitalizer and the warmth of tube circuitry, makes this a very magical box of tricks indeed.

attributes of a really good tube EQ combined with a more conventional enhancer and a dynamic equaliser, you'll come some way to understanding what the Tube Vitalizer is all about. Where this unit scores is that as you increase one frequency, any others that might conflict with it are automatically decreased, making the whole procedure less hit and miss. Much of the process is linked to the way in which the human hearing response changes with signal level, but I think I'm also right in saying a lot of the Vitalizer principles were discovered almost by accident as designer Wolfgang Neumann experimented with some of his more radical EQ circuits.

## SUMMARY

The Tube Vitalizer isn't something you can just pick up and expect to use immediately — it's essential to experiment for an hour or so to get a feel for what controls produce what effects. I feel the controls could have been better explained in the manual (indeed, they could have been given more logical titles in some cases), and it would also have been easy to use front-panel graphics to divide them into more logical sections, but even so, it doesn't take long to figure out what does what. And when you do get the hang of it, what a powerful tool this is! The amount of control

you have over the tonality, weight, and balance of your signal is just wonderful.

If you want the Vitalizer effect at a bargain price, check out the dedicated stereo Vitalizer. If you really want the full works, however, this is the box to go for. It does sound smoother and richer than the solid-state models, as well offering far more control, but the trade-off is that you have more controls to juggle — and more figures to juggle when it comes to paying for it. This isn't a budget box, nor would I expect it to be. It's priced on a par with other esoteric equalisers, but for those doing serious recording, mastering or post-pro sweetening, it's well worth the cost. I'd happily upgrade my old model tomorrow, but as I'm in a similar fiscal position to most of you, I guess it's not going to happen. To those lucky ones who can justify a Tube Vitalizer, all I can say is that I think you'll like what you hear.

USING THE OPCODE STUDIO 5LX  
MULTI-PORT MIDI INTERFACE & PATCHBAY

**PART 1: MARTIN RUSS's Studio 5LX has changed the way he runs his studio. In the first of this two-part series, he explains how to set up a multi-port MIDI interface, and reveals some of the ways in which these useful devices can simplify your life.**

Some time ago, I took my Opcode Studio 5 Mac MIDI interface to MCMXCIX in London to have it upgraded to the 'LX' version. While I was there, I chatted with a customer who had recently moved from Atari to Macintosh. He commented on the poor resale value of Atari computers, at which point I said that he should keep the Atari, and use it in his MIDI system. He replied that he now had a Mac

again, it may not. You'd be surprised at how many people call me to sort out problems which are caused by not having a multi-port MIDI interface and MIDI patchbay. I reckon that once you have more than four pieces of MIDI equipment, you should buy at least an 8x8 MIDI interface/MIDI patchbay before you buy anything else, for several reasons:

- Multi-port MIDI interfaces free you from having to map out the allocation of MIDI equipment to MIDI channels.
- You no longer need to worry about not being able to make the most of multitimbrality because you don't have enough free MIDI channels.
- Manual switch boxes are such a pain to keep track of (and use) that a patchbay repays its cost in increased productivity very quickly.

and did not need the Atari any longer. An 'Atari Notes' column which I wrote in the June 1993 issue of SOS advises you *not* to sell your old Atari, but to use it with whatever you buy to replace it. This is what I do in my studio, making full use of the aforementioned Studio 5LX to fully integrate the ST with my Mac and the rest of my studio gear. In fact, my multi-port Studio 5LX is now the heart of my MIDI system. I use it so much that now I literally could not work without it. This feature aims to explore some of what is possible using a multi-port MIDI interface such as the Studio 5LX. Part 1 deals with the basic concepts involved in using it to organise a studio; Part 2, coming next month, goes into more detail and also explains how the Studio 5LX can help integrate an Atari into a studio running with a different make of main computer.

## MULTI-PORT MIDI

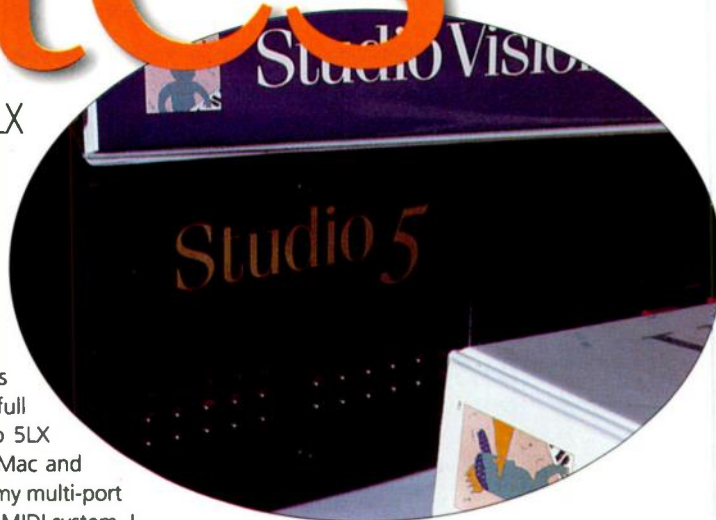

The only major required purchase for what I'm about to explain is a combined multi-port MIDI interface and MIDI patchbay. I chose the Opcode Studio 5 because it has just enough Ins and Outs to cope with my MIDI equipment, and some very powerful MIDI processing capabilities as well. Although it's expensive, I've been very pleased with it right from the beginning, and it's saved me lots of cable changing and rewiring effort. I say this because many MIDI musicians still use combinations of low-cost switching boxes and careful allocation of channels on a single-port MIDI interface, which may work — but there

The problem is that most manufacturers are quite happy to sell you the hardware and software, but never really explain how to use them. You really can do a huge amount with a patchbay — it can make things much, much easier. Cue the rest of this article.

## SETTING UP

The first thing to do when you start to use a patchbay is connect everything through it. This gives you a chance to sort out all those cables that you aren't sure about — and you might even label them clearly while you're at it. The software with most patchbays will give you a graphical 'picture' of how all your equipment is wired, but it's a good idea to check that this is how things really are — the Studio 5 LX lets you interrogate each port to confirm that reality matches the picture.

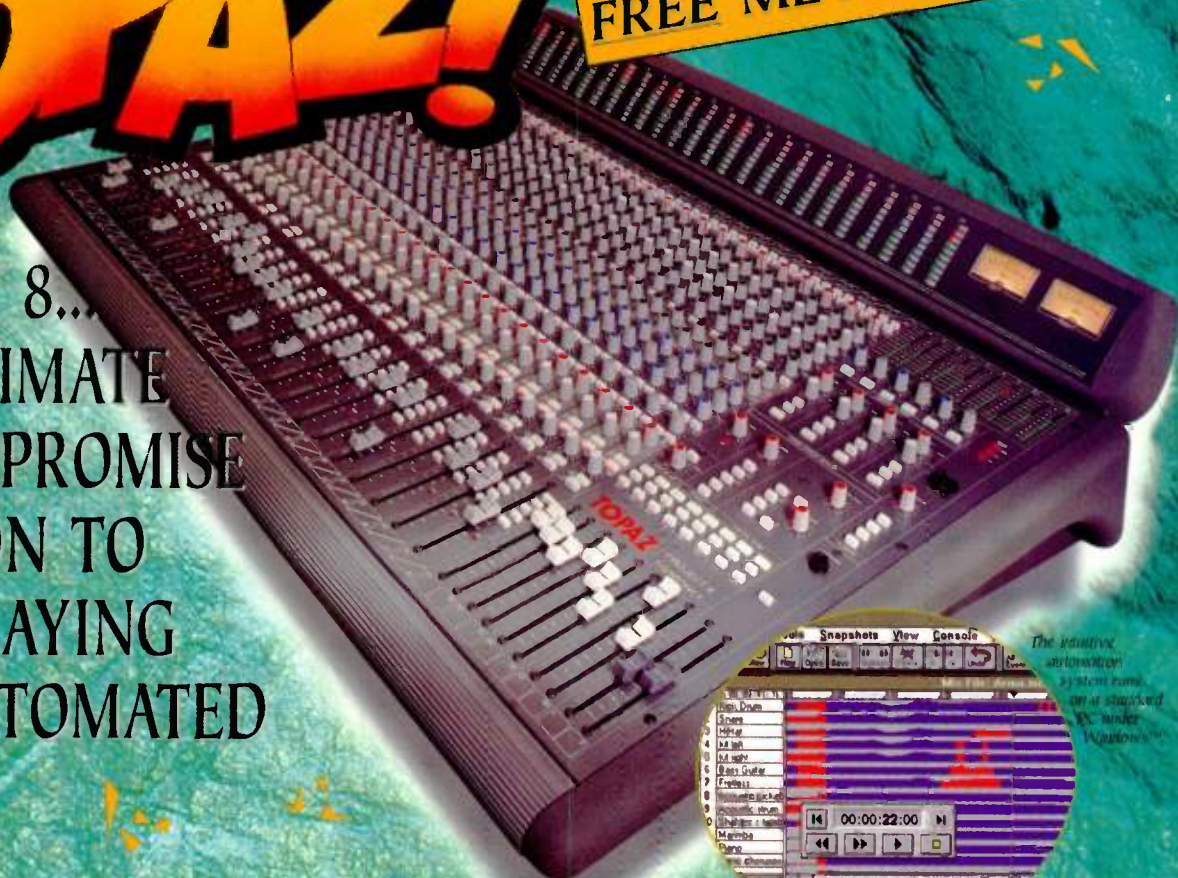

The MIDI setup of AYS Studios, the example used in the diagrams in this feature, is best described using the Studio Setup display from within OMS. This is a graphical version of the

# Using Opcode Studio 5LX

- wiring, and can be saved as a Studio Setup file (see Figure 1). On the left-hand side are numbered boxes for the MIDI port numbers — the Studio 5LX provides 15 separate MIDI In and Out ports. On the right-hand side are the instruments, modules, drum machines, and so on. When a second or third unit is shown connected to a port, this uses the Thru on the first unit — and for

these additional units there is a small MIDI switch which selects which MIDI Out is connected to the Studio 5LX. These could be connected directly to a MIDI In port if a second Studio 5LX was networked to the first.

Because a Studio Setup file lets you set which channels your devices are assigned to, you can create different Setup files for different purposes. This can help to keep stuff like pop-up menus under control — if you have lots of multitimbral devices and you give each one 16 MIDI channels, you're going to get 16 numbered versions of each devices, which produces huge pop-up menus. A simple studio setup made from monotimbral instruments would produce only one entry per instrument in a pop-up 'instrument select' menu, whereas a studio setup with lots of 16-part multitimbral instruments could be up to 16 times as long! Why? It would be full of entries like TG77-1, TG77-2, TG77-3, TG77-4... (See Figure 2.)

Instead of defining everything to its maximum multitimbrality, I have two major setup documents:

- One is a 'monotimbral' studio, where each MIDI device is set up to receive on just one MIDI channel — that is, it produces only one part. I use this setup for orchestration and arranging of music, where I want to be able to quickly change sounds and adjust volumes on individual parts. Having one part/sound per channel/device makes this easy — even if it often wastes polyphony. The catch is that you need lots of instruments — which makes a good excuse to buy lots of expander modules.

- In contrast, for squeezing the maximum out of one MIDI device, I use the 'multitimbral' studio setup, where each device is allocated a realistic number of MIDI channels — typically the polyphony divided by four. Sixteen different monophonic

## RULES

I'm afraid there are some rules:

- One port per multitimbral device. Thrus are only allowed for chains of monotimbral devices.
- Use the MIDI processing inside the interface (except if you're using Emagic's Logic).
- Never rewire or move your devices from port to port once you are set up. Leave them alone and use the patchbay to do the wiring changes.
- Label cables, and make a note of the wiring arrangement. If you ever do need to re-connect all your equipment (after upgrading a Studio 5, for example), this can save you lots of work.

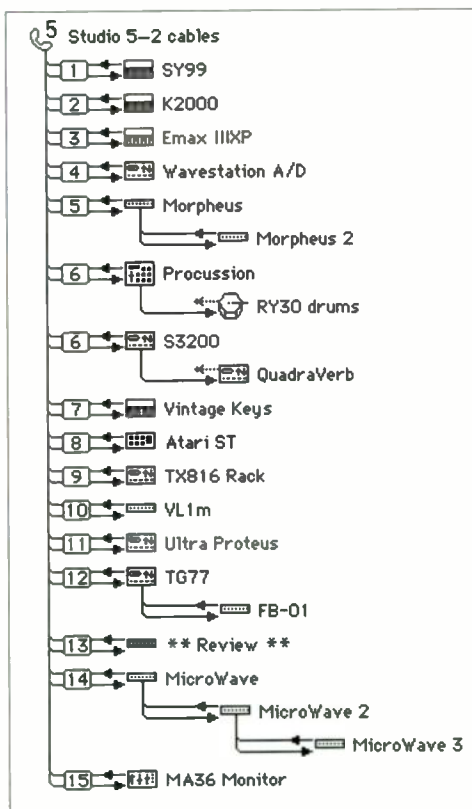

Figure 1: The MIDI setup of AYS Studios. The numbered boxes on the left are MIDI port numbers.

# Thermal Underwear

featuring

Tubessence™ Valve Circuitry

by

# APHEX

The Tubessence™ valve circuitry in the Aphex 107 Mic Pre-Amp and 109 Parametric EQ is like thermal underwear for your recordings, adding a 'warm' glow to your sound.

synthesizers may sound exciting, but it is a pain to try and avoid any overlapping notes which then steal notes from elsewhere. So a 16-note polyphonic module gets four channels, which keeps the pop-up menus reasonably short but provides enough scope for exploiting multitimbrality.

Initially, I used just one studio setup for my Studio 5LX — with lots of multitimbrality and huge numbers of patches to connect everything together. After several rationalisations, I now have a few specialist setups for doing the ubiquitous 'half a dozen impossible things before breakfast', but they are another story. For the rest of the time I use just the above two setups.

**STUDIO SETUP HINT:** I use the '≈' symbol to indicate Studio Setup files and make them easier to find in a list of files on the computer's disk.

PATCHES

Patches are the key to using a patchbay. A patch sets the connections between the MIDI Ins and the MIDI Outs — but instead of real patch cables, you use 'virtual' ones, drawn on the computer screen. My Studio 5LX patches are organised into easy-to-remember groups, so that I can quickly select the

patch I want without having to think too hard. This is especially useful when I'm using the MIDI system without my Mac turned on, because then the Studio 5LX only displays a two-digit patch number.

Because I tend to focus on specific manufacturers when I buy equipment, I have a fairly restricted set of MIDI devices. I have some Emu expanders, some Yamaha gear, and some

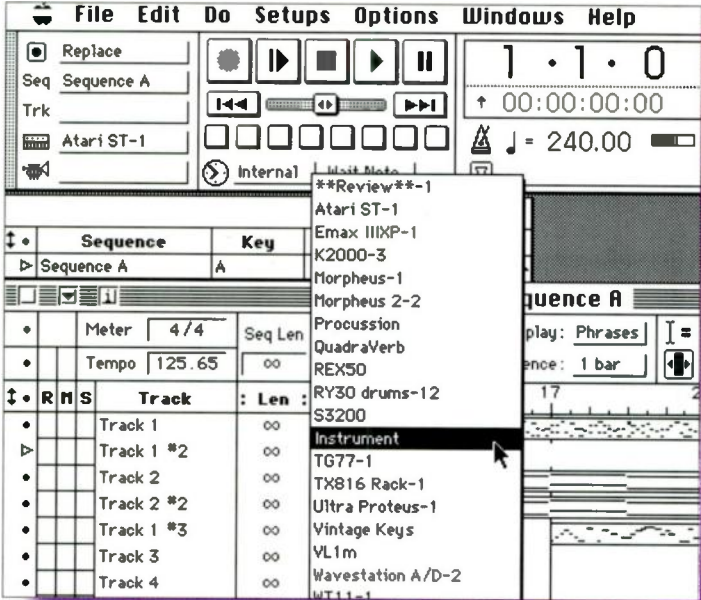

Figure 2: A pop-up menu in Opcode's Vision sequencer, showing how a monotimbral studio setup produces only one entry per instrument.

The Studio 5's back panel.

# Using Opcode Studio 5LX

► miscellaneous items from an intentionally wide range of manufacturers. Not surprisingly, these are separated into four groups to keep them manageable:

- All (This group contains all the equipment.)
- Emu
- Yamaha
- Others

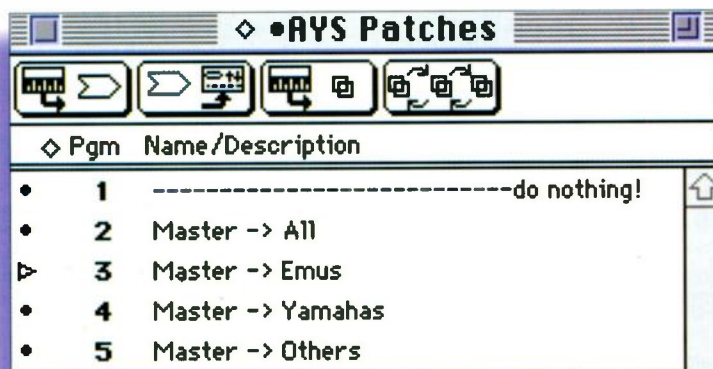

Figure 3: Basic Studio 5LX patches. Patch number 1 is deliberately set to do nothing.

The patches I use on the MIDI patchbay part of the Studio 5LX reflect this organisation (see Figure 3). If I want to send the output of my master keyboard to all the equipment, I use a virtual instrument called 'All' — and I just connect from the master keyboard to 'All'. This one simple patch is equivalent to about 20 real MIDI cables.

My basic Studio 5 patches are simple and easy to remember. Patch number 1 is deliberately set to do nothing: although this sounds crazy, it actually enables the playing of keyboards individually without any stacking, which can be very useful sometimes. Too much layering can be distracting!

All of the 'All' patches have '2' as their units digit (remember tens and units from school maths?) — Patch '1' is reserved for sequencer use, and so I never use numbers ending in 1. For just trying out ideas (and keyboard practice), I tend to select either the Emu or Yamaha setting, then use the sliders on my mixing desk to choose which of the sound sources are actually heard on the monitor speakers. This gives a large palette of timbres to work with, and makes layering a standard function instead of something which has to be specially set up. I find

## STUDIO 5 LX UPGRADE

Quite a lot of the new features of the Studio 5LX (you can upgrade to this from the original Studio 5) make the techniques described in this article lots easier (such as debugging and testing using Source or Destination Muting, and especially the increased internal patch storage). So here's a quick recap on the new features:

- Up to six Studio 5LXs can be networked together, which offers the potential for up to 90 MIDI Ins and Outs (or 1440 independent MIDI channels). Four Studio 4s can be similarly networked, which gives up to 512 independent MIDI channels.
- Four times the RAM (256Kb) as on the Studio 5 is now provided for internal patch storage. (If you start to use the ideas in this article seriously, you may soon need the extra space!)
- Muting of any MIDI Source or Destination in a Patch Edit Window.
- MIDI Controllers can be used to set note or velocity splits.
- User-definable Transposition maps.
- Pitch Bend module.
- Modifier modules now have an invert function.
- Improved communication speeds between the Studio 5LX and the Macintosh.
- Improved MIDI throughput.

The upgrade from Studio 5 to 5LX costs £129.95. Contact MCMXCIX on 0171 723 7221 for more details.

that the easier it is to use something, the less it gets in the way of creating music. For example, have you ever seen a guitarist pick up a guitar, check the tone and volume knobs, adjust the tuning, check the whammy bar, clean the fluff from the nut, polish the frets, set up the controls on their amplifier, adjust the pedal board, dig out a plectrum or two, do some warm-up exercises, and then get on with playing? I suspect you're more likely to have observed that most guitarists just pick up the guitar, wazz the volume up to 'loud', and get widdling...

Patches ending in '3' are used to connect to Emu equipment, whilst Yamahas end in '4', and Others end in '5' (see Figure 4). Not only can I remember this without much effort, but I don't need to put any major effort into reading the display on the Studio 5LX. I can cope with four things to remember, and if I'm unsure, the MIDI

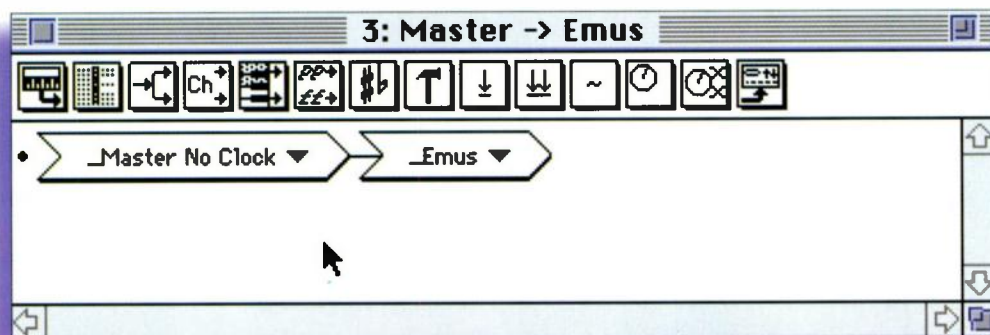

Figure 4: Patch number 3 connects the master keyboard to the Emu equipment.

► activity LEDs on the front panels of most of my equipment soon show me what's playing.

Patches can also include clock routing. I use the 'tens' digit on the display to indicate what sort of patch is used: a '0' indicates a direct connection from the master keyboard to the destination, while

circumstances. I have the lower patch numbers allocated in a formalised way, but higher numbers are left as temporary memories — just give them a number in the 80s or 90s and a descriptive name. And remember to always make backups of your patch files!

## PATCH CHANGES

If you play live using hi-tech instruments and you've never thought about automating your patchbay changes, you must be one of those busy people who spends lots of time pressing buttons in between songs — and who often misses their first cue!

The idea is that you configure your performance patches to suit the songs in your set, with suitable controllers and destinations (master keyboard to one set of expander modules, second/melody/lead-line keyboard to another set of expander modules, and so on), as well as program changes and volume controller settings, all stored away and retrievable with a single patch selection on the patchbay.

If you watch well-prepared keyboard players on stage, you'll notice that they often just press one or two buttons in between songs — and now you should know why! What automation does is allow you to make complex changes with minimum effort.

A basic patch chain might start with the master keyboard connected to all the expander modules for setting up and testing purposes during a sound check (see Figure 6). Subsequent patches might select just the Emu equipment for one song, then just the Yamaha... Moving through the patch chain can be done by any MIDI controller. In my case, two footswitches are connected to the Studio 5 LX (see Figure 7). Pressing the first of these will step through the performance patches one by one. (The other footswitch is used for controlling my

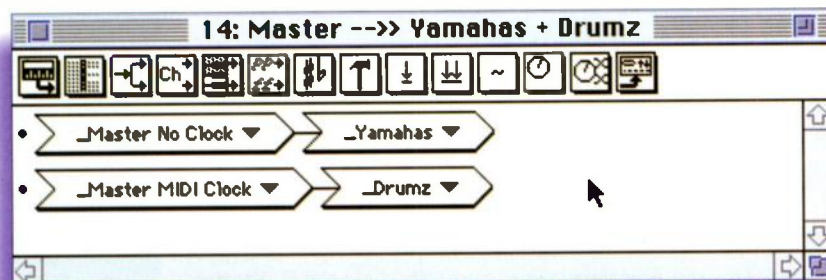

Figure 5: The master keyboard is connected to the Yamaha equipment, while the MIDI Clock source (usually the SY99 on-board sequencer clock) is connected to all the drum machines.

a '1' shows that the MIDI Clock is also routed from the master keyboard to the drums and other devices which receive sync. Of course, clock routing can be different from the routing of notes. For example, in patch 14 (see Figure 5), the master keyboard is connected to all the Yamaha equipment (shown by the '4'), while the MIDI Clock source (usually the SY99 on-board sequencer clock) is connected to all the drum machines (shown by the '1'). You can extend this numbering system to cover any other requirements particular to your system. For example, all patches with a '9' as the tens digit could be set up to run via a MIDI analyser for troubleshooting.

I deliberately use different types of arrows in patch descriptions, to show single and double patch leads. A '->' shows one connection, while a '-->>' shows a double connection. Visual clues like this help to avoid the need to open up the patches for editing all the time. Double-clicking and waiting wastes time even on a fast Mac — so the more information you can get into the text description of the patch, the better. Because I do the pruning at the audio level using my mixer, I don't have to think too hard about selecting patches on the patchbay.

Organising patches in this way not only keeps things neat and tidy — it also forces you to plan out what sort of connections you'll make. Just connecting devices together when the need arises will produce a random and confusing set of patches which you will later want to reorganise. And if you've already used the patches to automate the changes in a live set for performance, you can't change the order of patches without also editing the set plan as well. It really does pay to plan ahead when you're designing patches for patchbays.

**PATCH HINT:** Don't worry about those one-off special patches you create for unusual

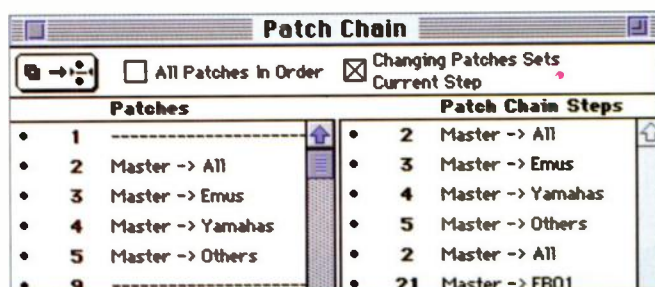

Figure 6: The patch chain, starting with the master keyboard connected to all the expander modules.

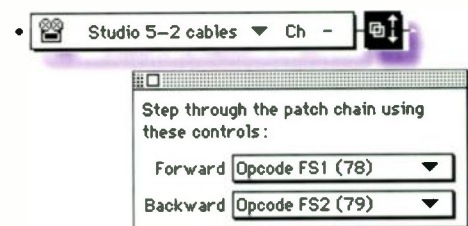

Figure 7: You can move through the patch chain with any MIDI controller. In this case, two footswitches are connected to the Studio 5LX.

## OPCODE MIDI INTERFACES

Here are the current prices of the Opcode range of interfaces:

# Using Opcode Studio 5LX

► sequencer from the master keyboard.) Manual selection of patch changes needs to be set in such a way that accidental changes are avoided. Using the Studio 5LX control software, it is easy to specify that, for example, the patch changes from the SY99 will only happen if the portamento pedal is also held down.

Figure 8: When a patchbay patch is selected, the Studio 5LX can output a short sequence of program changes. Patch number 2, above, sets the program and volume for the Yamaha TX816, Kurzweil K2000, Waldorf MicroWave, and Yamaha SY99.

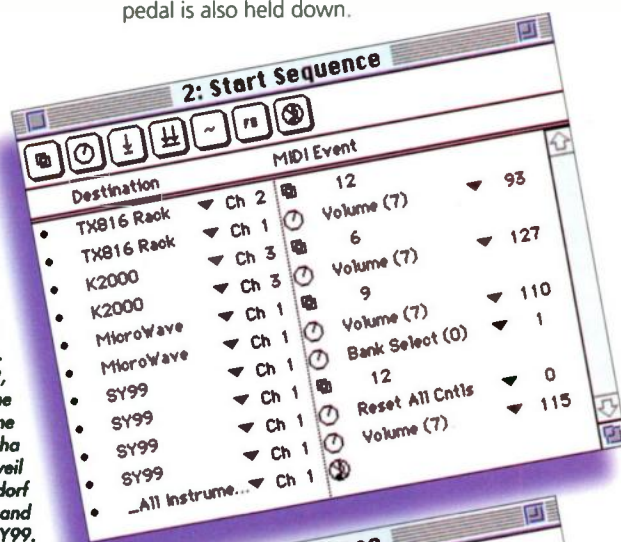

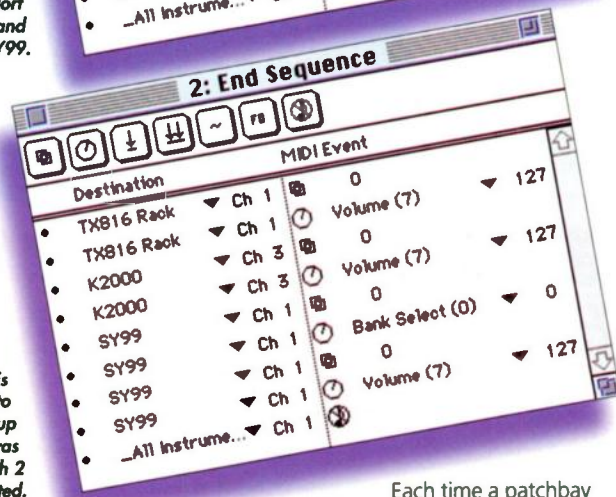

Figure 9: This patch aims to restore the setup to where it was before patch 2 was selected.

Each time a patchbay patch is selected, the Studio 5 LX can output a short sequence of program changes, controller values, and other useful 'housekeeping' settings. For example, selecting patch number 2 (see Figure 8) might set the program and volume for the Yamaha TX816 rack, the Kurzweil K2000, the Waldorf MicroWave, and the SY99 (including a Bank Change and Reset All Controllers, too). Finally, an All Notes Off is sent to All Instruments — this is Opcode's 'every note on every channel' variation on the real MIDI ANO message; whilst some instruments do not support the official ANO message, most support Note Off messages.

Finally, the last patch in the chain has but one purpose: it aims to restore everything to as neutral or 'default' a state as possible (see Figure 9).

**PATCH/SETUP HINT:** Is that file a Patch or a Setup? I use a 'bullet' point '•' in front of the filename of patches so that they are easy to see in

file lists. They all stay grouped together, and they are separate from my studio setup files, which start with '≈'.

## REVIEWS

As you may have noticed, I've done one or two reviews of synthesizers and expander modules during the first 10 years of SOS. After doing major surgery on my studio for the first couple, I decided that I needed to be more organised, so I produced a patch specifically for doing reviews. The first available tens digit was 2, and 22 seemed to be memorable, so Patch 22 became my 'Review' patch.

When a synthesizer or expander module arrives for review, I connect it up to Port 13 on the Studio 5LX, and select Patch 22. I hope none of the review equipment is superstitious! My 'Review' patch incorporates filtering and velocity mapping so that I can adjust any new arrivals to my own tastes (see Figure 10). The master keyboard is connected to the review instrument, so that I can play it initially from a familiar keyboard. I put two asterisks in front of the device name — this automatically makes the review instrument appear near the top of the pop-up menus (which are sorted alphabetically).

Installing a review instrument in my studio involves connecting the audio leads, MIDI leads, and the power supply — it takes about two minutes. No rewiring. No figuring out how to connect it to a suitable Thru socket. No problem with examining System Exclusive information (I just patch it to a special SysEx analyser I wrote in Max). No hassle. And it's all down to having a combined MIDI interface and MIDI patchbay. Probably one of the best MIDI investments I ever made.

**REVIEWING HINT:** Many studios also have a need to be able to quickly accommodate a new or hired-in instrument for a session, and this is one way of doing it with ease.

## MONITORING

Some sequencers have MIDI output monitors which can show activity on the 16 MIDI channels. With a multi-port MIDI interface, things are a little more complicated, since you can have lots more MIDI channels. I use the Studio 5LX to patch in my MIDI monitoring gadget wherever I need to see what is happening. Normally, patching cables so that the MIDI data passes through a MIDI monitor gadget, or even getting at the Thru socket, can be quite a problem, but because port 15 has the MIDI monitor gadget connected up, it is easy to patch it anywhere. This can be very useful for troubleshooting problems — especially because it is very quick to connect the monitor to different places and see what is going on.

SOS

Figure 10: My 'Review' patch, with built-in filtering and velocity mapping so that any new arrivals in the studio can easily be adjusted.

Next month, Martin deals with the Atari ST, master keyboards, and more...

## GUY JACKSON

**Recording Venue:** Home.

**Recording Equipment:** Steinberg Cubase Audio XT running on an Apple Mac Quadra, Digidesign Session 8 and Sound Designer software, Seck 18:8:2 mixer, KRR monitors, AKG C1000 microphones, Alesis Quadraverb effects, Lexicon LXP1 effects, Drawmer gate and compressor, Analogue Systems filter bank, SPL Vitalizer enhancer.

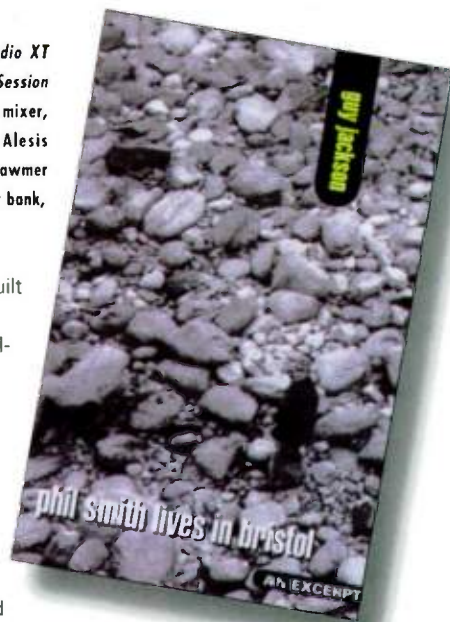

An amusing first title, 'Rome was Built in a Daze', grabs my attention and proves to be a welcome slice of well-played, well-recorded jazz. Soprano sax and voice are provided effortlessly by Vivienne Soan. The sax is liquid, and the voice has been heavily treated with EQ, in the fashion probably made popular by Portishead. Occasionally, it might have been a nice idea to revert to an untreated

voice, but the theme is set at the start of the piece by a child's voice with a telephonic quality, and continued from there. 'She is my Favourite Kolor' is a long but never boring song — or should I say 'composition'? The track is reminiscent in many ways of the earlier Thomas Dolby epics, with beautiful sound textures and a shifting focus in the arrangement. Lush strings start the piece,

with a child's voice-over saying the names of different colours. This breaks into chorused, picked guitar over the strings, and a synthesized sea-wave sound which is rather beautiful. The piece then builds into a heavier section, complete with a '70s-style jazz rock guitar solo, joined by operatic singing. The vocals, from Kate McKenzie, sound suspiciously like Kate Bush, down to the severe telephonic EQ effect and the wailing low in the mix — a mix which must have been quite difficult and time-consuming to achieve, even with the aid

of the technology! My only criticism of an otherwise excellent job is that there's just a bit too much echo on the lead guitar.

The standard of the musicianship and recording on all these compositions is extremely high, and when you've got a player of the standard of BJ Cole playing pedal steel, you've either got some very good friends or some money behind you. Special effects using the pedal steel and echo abound, from bowed-in notes to the sound of frenzied string and bar with loads of echo. Again, the composition leads effortlessly from one section to another, whether it's a string quartet or a slice of electro-acoustic music, always giving time for you to hear and enjoy both the sounds and the playing. Brilliant. ◻ ▶

## SKINTONE

**Recording Venue:** Home.

**Recording Equipment:** Akai S900 sampler, Korg M3R synth module, Roland Juno 1 keyboard, Novation Bass Station bass synth, Yamaha DX100 synth, Emu Emax 1 sampler, Digitech TSR12 effects, Studiomaster 16:4:2 mixing desk.

Skintone are an Irish band from Bray, who I've reviewed before in these pages and thought were pretty good. Their influences are there for all to hear, and they don't attempt to hide them. Yes, there are shades of This Mortal Coil, Orbital, and Ultramarine here, but there's also some character of their own. This is found in the soft analogue synth sounds used to set up the groove and backing. The Novation Bass

Station is a wonderfully warm and fat-sounding machine, and on the opening song, 'Lennox Avenue Butterfly', it really holds the groove together — and it does this while being high in the mix, too, without ever proving overpowering!

Ann Carroll's ambient vocals also have a lot to do with the general vibe of the band. These are invariably softly sung, placed low in the mix, and given a glassy reverb treatment. The production sound of the first two tracks, in fact, suggests late-night sessions when the rest of the world is asleep — the time of night where you can't bear to hear anything nasty and digital-sounding jump out of the speakers and assault

the senses!.

In engineering terms, the pieces on this demo work because they have deceptively simple parts and the production is deliberately kept sparse. I say 'deceptively' because a lot of time has obviously gone into choosing the sounds, from the low bass synth and woolly kick, to the lazy upper-mid of snare and hat, and the warm pad filling the frequencies above the bass where necessary. Space for the vocals has been achieved using the ambient reverb. A sparse track, if the right sounds are chosen, also gives the illusion that all the sounds are big, because none of them have to fight for space in the sound 'picture'. ◻

# DigiTech VOCAL POWER

Backing vocals without the dropped notes; without the tantrums; always in time (and always on time) and truly affordable - for musicians and bands of all levels. DigiTech have brought harmonisation a long way since the early 'Pinky & Perky' sounding units on the market a few years ago. Now any act can benefit from classy, complex harmonies of stunning realism and accuracy, giving the sound width without the usual associated wagebill. However, impressive specifications only tell half the story. For only £9.95 (inc. P&P) our demo CD and Video will reveal the Vocalist's amazing musicality.

## 2-5 PART HARMONIES

triggered by one voice.  
Uses: Live and Studio.

## LUSH VOCAL THICKENING

Add 4-voice detuning to give your lead vocal that big double-tracking sound for live or recorded use.

## PITCH CORRECTION

Save an otherwise great recorded vocal take by fixing a bad note.

## GENDER BENDER™

Apply male or female tonalities to your harmonies. Make your voice sound skinny or fat, more human!

## SEQUENCE YOUR HARMONIES

If you are using virtual tracks, you can build your harmonies and edit them like any other sequence data.

## BIG, BRIGHT DISPLAY

Easy to read, easy to edit. Soft keys let you zoom in on editing parameters quickly and simply.

## BUILT IN KEYBOARD

For quick and easy commands. Also includes a tone generator for cueing singers.

**NEW**

## VOCALIST WORKSTATION

## 100 HARMONY PRESETS

50 Presets and 50 User Presets with up to 8 variations on each.

## FOOTSWITCH

Optional FS-300 For live use - programs up/down/bypass.

## STUDIO VOCALIST

The Ultimate Vocal Production tool. Total programmability and a host of features such as individual voice outputs and "Gender Bender" technology. The Studio Vocalist boasts full bandwidth to capture more of the voice's natural overtones.

- Natural harmonies & pitch correction
- Full frequency response (20Hz - 20kHz)
- Separate outs for each voice
- XLR & 1/4" jack ins & outs

- Gender Bender™ technology
- 48v phantom power
- Effects loop
- Optional digital I/O

## MIDI VOCALIST

The simple-to-use and affordable MIDI Vocalist has been designed for musicians who want instant vocal harmonies without programming. Perfect to use with pre-programmed MIDI files.

- 4 voice detune for vocal thickening
- Vocoder mode for triggering harmonies via MIDI notes
- Chordal mode for automatic vocal harmonies

- Scalic mode for dynamic harmony motion
- Front panel XLR/mic. connection
- 48v Phantom Power
- 1/4" line level input
- Bypass activation (external f/switch)

Jon Anderson of YES:

"The Studio Vocalist has enabled YES to perform multi-part vocals in live performance as well as adding a creative edge in the studio."

Warren Cuccurullo and Nick Rhodes of Duran Duran:

"We used the Studio Vocalist intensely on our TV Mania project 'Bored with Prozac and the internet.'"

## STANDARD MIDI FILES: THE REVOLUTION

Standard MIDI files (SMF) discs contain MIDI data for complete backing tracks of popular songs when used with MIDI sound sources such as synthesizers and drum machines.

The Tune-1000 and Heavenly Music ranges of Standard MIDI Files pre-programmed harmonies, fully compatible (via Vocoder mode) with the DigiTech Vocalist range.

# demo DOCTOR

## MINTOBAG

**Recording Venue:** Home.

**Recording Equipment:** Apple Mac Performa 630, Emagic Logic, JL Cooper MacNexus MIDI interface, Fostex A8 8-track recorder, JL Cooper PPS2 synchroniser, Mackie 1604 mixer, Alesis Quadraverb GT effects, Shure SM58 mic, Phillips DCC730 DAT machine, Technics hi-fi amp, Sony SSG3 speakers.

Alan Waterfall

recorded the tracks on this demo just after converting his garage to a home studio. He's also a recent convert to MIDI, realising that it can be a way to collaborate with the other musicians working on the same project at a distance. His working method involves starting, like many of us, with a basic drum rhythm, leaving fills and cymbals to the end. Unusually, he then works on a rhythm guitar part, as opposed to a bass part. Perhaps this is because he's still a novice on the keyboard when it comes to playing bass lines into the sequencer, and more confident on the guitar?

Alan was worried about noise on the cassette copy that was sent to SOS, but it's not really a problem, in my opinion. He does, however, need

to pay attention to a few points on the mix of the first track on the demo. Firstly, the bass end of the mix is too heavy, which indicates either that the speakers he's using are small and bass-light, or that he's hearing a lot of treble in the converted garage and adding bass to balance the 'apparent' mix. Secondly, the guitar sound is pretty crunchy, and it actually sounds as if the Quad GT's input stage has been overloaded. This is certainly easy to do (being a Quad owner myself, I know) if you don't keep an eye on the level, as the Quad has very little headroom. It could also have been overloaded to tape, but this seems unlikely given the quality of the other sounds.

I like the vocals, which will probably surprise Alan, because he found them so hard to

record! The performance shines through the layers of reverb, despite the relatively low vocal level in the mix on the first song. This is rectified on the second song, where the vocals are right up there, but it does expose the double-tracking, always a ploy for the vocalist who's not confident about his or her voice when recording. I notice a bit of a Peter Gabriel influence on the second song too, especially in the high vocal ad libs. This is pulled off rather well, and is probably worth pursuing in other tracks.

My favourite song is the next one on the demo, '2 of Us'. This has a good mood and a relatively straightforward production. The backing, following the sung melody line, works well, and the mix (with the exception of the bass end) is well balanced. □

## COLIN JONES

**Recording Venue:** Home.

**Recording Equipment:** PC running Cubasis and Cooleedit, Amiga 4000 computer with 8-track hard disk recorder/sampler, and sample CDs.

this instrument in this context.

Ensuring that your mix levels are very dynamically even is a pre-requisite of mixing for TV and radio, and Colin's achieved a TV-friendly sound for his

Colin Jones is a Welsh composer who produced his demo as a promo for TV and multimedia work. After recording, the original mixes were post-produced using Soundscape, at which point EQ and reverb was added where necessary.

Track one is a *Double Deckers*-type TV show theme from when "the world was a better place". This puts Colin firmly in my age group and makes me think of all those wasted summers watching morning TV! The theme is catchy enough and builds nicely, with toms being added to the rhythm section as a dynamic extra before the repetition of the theme. However, the rough mix makes it sound more like an idea than a finished piece. For example, the synth saxophone that plays the main theme is right out there on its own and really needs reinforcing with some other instrumentation — flute, for example. After the main theme has been stated, the backing track rambles a little before returning to the theme, and this is something which even the addition of toms can't help. Finally, it seems to me that the wrong type of reverb — around two seconds, with a long pre-delay — has been used for the sax. The pre-delayed reverb is swamped by the backing and the sax itself stands out very 'dryly'. A room reverb would have been better for

second composition, which the first, incidentally, lacks. Entitled 'The Sin Eater', it attempts to musically illustrate the theme of the legendary Welsh figure who would be invited to Welsh funerals to eat bread placed on the body of the deceased, and hence his sins. Starting with a creaking door and followed by pizzicato strings, the additional oboe and spiky melody create a slightly whimsical feel for what I thought would have been quite a sombre piece. Colin obviously sees it differently, as the hammy Church organ chords in a major key on the play-out reveal. Still, it's a good-quality recording which, along with the final track, shows versatility. □

## WIN AMPEX TAPES

As an incentive to send in your best demos, Quantegy, makers of Ampex tapes, are kindly providing prizes for the best demo tape submitted

each month. The lucky winner has a choice of: 20 x Ampex 472 90-minute chrome audio cassettes, 10 x Ampex 467 DAT 90-minute cassettes, 5 x 456, 457 or 499 quarter-inch open-reel tapes, or 5 x 489 40-minute SVHS ADAT cassettes.

## Handbook of MIDI Sequencing

**NEW!**

Dave Clackett (Hands On MIDI Software)

**£13.95**

244 pp • illustrated • ISBN 1870775 38 4

If you want better results from your sequencer you need this book. It introduces the basics of sequencing and music notation, explains how to program drums, keyboard, guitar and bass, as well as 'real' instruments' - woodwind, brass, strings etc., and shows how effects, controllers, SysEx and quantising can be used to fine tune your song files. There are sections on sync to tape, standard MIDI files, copyright, transcribing from record, and a using MIDI files live. Of particular interest to musicians using GM/GS/XG equipment, but it's relevant whether you use a hardware based sequencer or an Atari, PC, Mac or Amiga. With a help section, a glossary and appendices on General MIDI data, its a book no MIDI musician can afford to be without.

And don't forget our other books on MIDI and recording

PC Music Handbook - tune up your PC - just out!!	£10.95
Music Technology Reference Book - facts, data, info, charts	£12.95
Set up a Home Recording Studio - patchbays, wiring, equipment	£8.95
Tips for Recording Musicians - invaluable hints for the studio	£8.50
Advanced MIDI User's Guide 2nd ed - sysex, programming, MTC	£10.95
Practical MIDI Handbook - bestselling intro to MIDI	£8.95
Sequencer Secrets - sequencing tips and tricks from Ian Waugh	£6.95
Recording Techniques for Small Studios - get that pro sound	£9.95
Multimedia on the PC - install a CD ROM drive, soundcard, etc.	£11.95
Electronic Music and MIDI Projects - save a packet with DIY	£9.95

## ▶ QUICKIES

This band's name, **SECRET ARCHIVES OF THE VATICAN**, is a bit of a mouthful, but they certainly give the listener a few things to chew on, musically speaking. The first composition is a lazy effort which lacks form, though some nice backwards effects on the breakbeat add sporadic interest. The bass sound, a hard, digital synthesized bass, doesn't sit well with

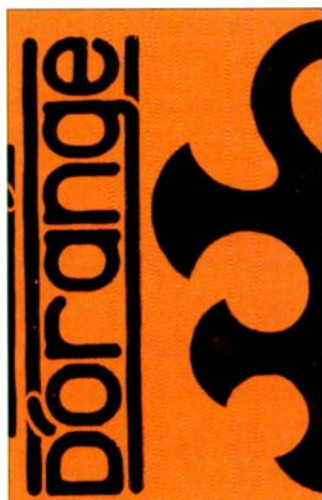

the softer mid frequencies of the breakbeat, however. On the second track, the sampled bass guitar is heavily treated with modulation, and works better with the harder sounds of the percussion. There are some nice touches from the guitar synthesizer, doing a lot of what it does best — pad strings and other slow-attack sounds layered with bells. All in all, this recording has a mellow sound with some nice Eastern flourishes in the melodies — it all just needs tightening up thematically. The best track is the third, featuring the Er Hu (from the Proteus World Module?) a Chinese bowed instrument that works beautifully with a touch of echo.

**SPANGLY PEOPLE FROM THE LAND OF DUB** probably thought the name was a good idea one night while completely stoned in University

accommodation — which is enough to turn anyone to drugs. The tape is well-recorded dub, and from the opening bars we're into familiar territory. The bass is recorded correctly for this style, being all low-frequency with barely anything above 800Hz, the guitar skanks along, and the keyboards provide the main interest in the backing, adding some of the ethnic sounds that have crept into dub over the last 10 years. Here, the didgeridoo works well (and is thankfully not overdone), as does the ethnic flute. The band have asked me for some suggestions on improving their rather hurried mix. Well, the guitar is too loud in the mix, jabbling the listener awake rather than settling him or her into the rhythm; the female and male vocals are a good idea — keep working on that; the bass sounds as though some of the lower frequencies have been cut out to avoid boom — not necessarily what's required for dub; and the drum programming, though excellently lazy, has just a bit too much sloppy reverb.

Styling themselves "Dance Mutant Musik", **D'ORANGE** are a Birmingham-based band currently gigging in that city. If machine-generated music, circa early '80s, featuring semi-spoken vocals

and loads of attitude, is your bag, catch a gig. Technically, the recording is a fairly straightforward affair, highlighting the dry drum machine mix so favoured in the early '80s before the mass availability of decent reverb. Drum programming is well handled, with some complex little rolls and occasional flams on the first track, the whole thing held together by broken sixteenths on the hi-hat. Bells and pad strings with a choral mix feature heavily in the backing, and the fairly dry vocals of Rez are a serious, dark study in the art of emphasis across the instruments. Sadly, the vocals get lost a couple of times on the opening track, as extra keys are added to the mix in certain sections. Always remember to leave a hole for the vocal — fairly easy in this case, as the vocal sound is quite hard, and the key sounds chosen when Rez is singing can therefore be of the more mellow variety. The mix also sounds a bit monophonic; some of the keyboard sounds, being run live on the mix from an Atari-based sequencer, could have been panned hard left and right.

**PAUL COOK** is in the same boat as many musicians — he's looking to get a release for his music, or some kind of support. It's a tall order these days! Really, he's got to get his garage- and house-orientated music played at the right venues, by making contacts and maybe getting a one-off CD of his mixes blown. This isn't so expensive these days, costing between £15 and £25, and is the same kind of approach as the old acetate idea, without the deterioration problems! To tackle the recording, there are plenty of good ideas here, particularly on the second song. The kick and hat sounds work well, but the snare sounds as though there's too much bass in it. Some low-frequency cut should do the trick, using the Spirit Folio's high-pass filter (set at 100Hz). The rest of the mix has some good use of keyboard stereo panning, and a decent arrangement. My major criticism is that the vocal sample needs to be made more expansive, using more reverb and delay effects to give the mix a classier sound. This would also increase the separation between the largely dry backing and the vocal in the mix.

**YO YO** are an Essex duo playing electro-ambient pop, and are currently looking for small venues to play in their area. On the evidence of the first song on their tape, it seems to me that the band would be suitable for smoky clubs and wine bars, with their sultry late-night sound. This is created by singer Suzy and a minimalistic backing. A low synthesizer bubbles and coils under the congas and pad strings, to add to the chill-out feel,

and wah guitar joins in for the end of the song. We're into more familiar territory for the second song, but the four-on-the-floor kick is placed too low in the mix to be effective; the panning is also a bit erratic and so doesn't have quite the desired effect. Overall, the

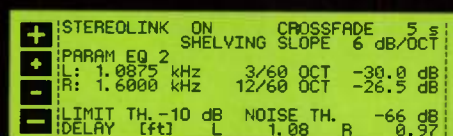

band have good ideas, but are having a little trouble with the recording process, as the distortion on the first track shows. The cassette isn't recorded at too high a level, so it must have been in the copying process that the tape deteriorated. It really pays to check the quality before you send off your demo for a recording magazine review.

**RAY PALFREYMAN's** letter was a bit too short and to the point, with no information at all about his demo. Still, I dutifully put the DAT tape into the machine and was treated to some well-programmed, well-played jazz compositions. The saxophone playing on this tape is excellent, with the (unnamed) musician wringing out some really emotive screeching notes, and providing some stunning improvisational moments. The synthesized mute trumpet is pretty tame in comparison, but the programmed drums and bass made up for it. 'Cobra' is the title of the second composition, again featuring good programming, even if the mix is a bit drum heavy. Moving on, the third composition employs an up-tempo shuffle groove that works as the perfect foil for sax improvisation. This time the improvisation is shared, with clean, modulated electric guitar over a cool electric piano and synthesized bass backing. In general, the mix balances are good, with some useful keyboard panning when two keyboard parts are playing. This serves as a rhythmic stereo foil between the two and leaves space in the centre image for the commendable improvisational work. □

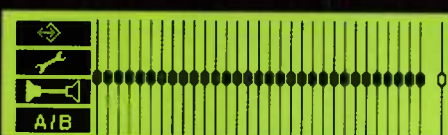

# EVERY PICTURE TELLS A STORY

**ULTRA-CURVE** A 64-Bit Dual-DSP Processor Mainframe With Auto Graphic EQ, Real Time Analyzer, Parametric EQ/Notch Filter, Feedback Eliminator, Limiter, Gate, Input/Output Level Meter, MIDI Implementation, Delay Option And More.

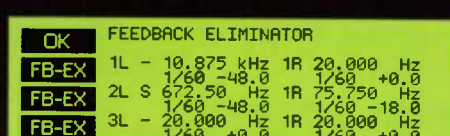

## PARAMETRIC EQ/NOTCH FILTER

3 bands per side of parametric equalization with +16 to -48 dB of gain, fine-tunable down to 1/60th of an octave.

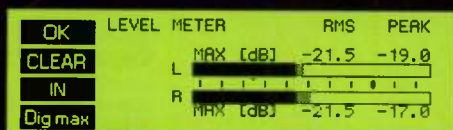

## DIGITAL STEREO 31-BAND TRUE RESPONSE AUTO Q GRAPHIC EQUALIZER

Up to 100 EQ curves can be stored, copied, inverted, compared, added and subtracted.

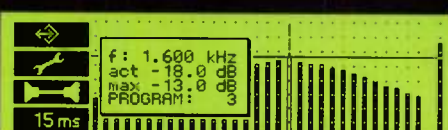

## FEEDBACK ELIMINATOR

Any of 6 parametric EQ bands can "seek and destroy" unwanted feedback frequencies dynamically.

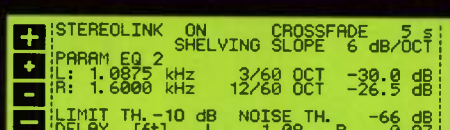

## INPUT/OUTPUT METERING

The ULTRA-CURVE offers full input/output high precision metering capability.

## REAL TIME ANALYZER

High-resolution RTA with Peak, Hold, Variable integration time and 10 user memories. A noise & sinewave generator enables for automatic room-equalization

## MULTIBAND LIMITER, NOISE GATE

Multiband Limiter with variable threshold and IGC\* protects against overload without distortion. Digital Noise Gate with IRC\*\* provides a level-dependent expansion ratio for "jitter-free" performance.

These pictures only tell part of the story. If you're involved in sound installation, touring sound or simply looking for the ultimate digital signal processing "tool kit" for your musical suite, audition the ULTRA-CURVE.

- ▲ NOW FEATURING NEW 20-BIT CONVERTERS!
- ▲ 10 dB MORE DYNAMIC RANGE (SNR 103 dB)!!
- ▲ NEW OPERATING SYSTEM V 1.3!
- ▲ AES/EBU- AND DELAY-OPTION NOW AVAILABLE!

Your Ear Is Our Judge

MSRP for the ULTRA-CURVE DSP 8000 is £ 649.00  
 Delay Option £ 189.00  
 AES/EBU Option £ 139.00

# DAWSONS

## New Demo Facilities

Dawsons Warrington has recently undergone a major rebuild of all its Hi-Tech and Pro-audio demo facilities. All demo rooms are now air-conditioned and sound-proofed. A fully equipped recording studio (pic. below) allows pro gear to be

auditioned in its true environment. A keyboard room features the latest keyboards and modules. A computer room is equipped with all the latest major software. A Vocal booth allows microphones to be tested on site. Car parking is available for over 1000 cars.

1. AVX Big by Langley, featuring superb automation software and virtual dynamics plus recall
2. Digideign Pro-Tools III PG with Emagic Logic Audio, MOTU Digital Performer & Steinberg Cubase VST Multitrack 4V Hard Disk system and Yamaha 01R mixing
3. Genielec Monitoring featuring 10MPA & 1030A Active Systems. Available for the first time on 0% finance. See below for details
4. Tannoy Monitoring with Dual Continents 16M range. Also available are the PB range. Please ask for details
5. Aphex range featuring 104 (Equal), 108 Compressor, 109 Parametric and 601 Valve Compressor Limiter
6. Lexicon Reflex, Atmos, Vortex, Jamman and also the Lexicon PCM400 and PC400 all on demonstration
7. Akai Hard Disk recording systems including D16, D88 and D116. (Prices on a)
8. Akai Samplers - Akai S3000, S3000XL and S8000 with an Akai CD3000 set up permanently for copying library
9. Enu Sampler. The immense EN is here on demo with 188 voice polyphony and expandability up to 198 Akai!

**E-MU** Orbit the Dance Planet  
has landed and is ready  
to Groove Your World.

# Orbit

The Dance Planet

LaunchPad is Emu's new performance controller, ideal for live performance and sequencing. It provides real time controllers and a one octave keyboard suitable with any MIDI system, including Emu's new Orbit sound module. The LaunchPad is compatible with and can be used to control ANY MIDI instrument including Roland JV1080, Novation Drum Station, Roland MC303 and many more. One octave velocity sensitive drum pad keyboard 5 octaves, 4 octaves Transposition range, 19 semitone fine tuning range, 5 real time programmable sliders, Pitch knob, Thumbby button TM, Foot switch and Expression pedal input, 6 trigger buttons with independent MIDI channels, MIDI machine clock, Send MIDI clock, Send Preset, Bank and Song change commands, MIDI Input Merge Function. Setups can be saved or restored via SYSEX.

With over 600 of the earth's most cutting edge samples and the introduction of new rhythmic features, Orbit takes its way to the forefront as the dance music machine. Orbit features 39 voices of polyphony, 519 presets (256 ROM, 256 RAM), is 16 part Multitimbral and has 6 analog outputs. Edit and tweak Orbit's sounds to express your unique creative vision by using its powerful filters, MIDI synchronized LFOs, and MIDIPatch Modulation System. If that's not enough, Orbit is also equipped with plenty of user editable "beats". With its unique sounds and flexibility, you can alter Orbit's "beats" to fit your innovative style.

## The Package

**ORBIT**  
including  
**LAUNCHPAD**  
**£1149**

The ESI32 Professional Digital Sampler is a powerful musical instrument audio production tool featuring Emulator IIIix audio quality and functionality at 1/3 the price. While ESI32's incredibly low price makes it the perfect choice as a first sampler, its expandability and power could very well make it the last sampler you'll need. Right out of the box, ESI32's professional features, stellar audio quality and incredible ease of use make it a great value at any price. But ESI32 also offers expandability (through optional upgrades) so you can customize your unit as your needs grow.

**ESI32(8Meg) & Zip Drive complete**  
with 100Meg of Dawsons Library

**£1249**

## ESI-32

100  
MEG  
of Free  
Samples

- ESI 32 Standard Features
- 39 voice polyphony
- Up to 32 M8 sample memory
- 4 polyphonic outputs
- Emulator IV, Emulator IIIix, Emu II and Akai S1000/1100 library compatibility
- Fast, easy to use interface
- Powerful DSP functions
- Virtually distortionless pitch transposition over a 10 octave range
- Discrete 18 bit digital to analog converters (DACs) per channel
- 128x oversampling sigma delta analog to digital conversion
- 39 4th order digital resonant filters
- Audition sample from disc (SCSI device)
- Audition sample from disc (SCSI device)

**ESI32(32Meg) & Zip Drive complete**  
with 100Meg of Dawsons Library

**£1499**

## e64

48 VOICE DIGITAL SAMPLING SYSTEM

e64 is a powerful digital sampling system that delivers superb audio quality and professional functionality at a price competitive with samplers featuring only half the power. Boasting a solid 64 voices of polyphony and up to 64 megabytes (MB) of sample memory, e-64 shares many of the innovative features made popular in E-mu's Emulator IV Professional Digital Sampling System. A new icon-based graphic user interface provides a level of ease-of-use and speed previously available only on computer platforms. e-64 maximizes productivity for users in a variety of performance and production environments.

- 64 voice polyphony
- 64 6th order digital resonant filters/EQ
- On-board library "search" function
- On-board graphic waveform editing
- Load while play
- Virtually distortionless pitch transposition over a 10 octave range
- Discrete 16-bit digital to analog converter (DACs) per channel
- 128x oversampling sigma delta analog-to-digital conversion
- ASCII alpha numeric keyboard interface
- Emulator IV, Emulator IIIix, Emu II and Akai S1000/1100 library compatibility
- Up to 64 MB sample memory
- 8 polyphonic outputs
- Fast, intuitive operating system
- Re-sample while play
- Audition sample from disc (including CD-ROMs)

**E64 complete with 32Meg**  
**Version 2 software and Zip**  
**Drive with 100Meg of Emu**  
**sounds**

**£2579**

**Version**  
**2.0**

**What's new for Version 2.0**  
**Software**

The Version 2.0 software is available for ENV, e64 and the EMK. Version 2.0 includes features like: Real-time Import, four new Z-plane filters (providing over 90 different filter types including high pass, low pass and morphing types), SoundPrint™, a 16 Track sequencer, numerous edit and DSP enhancements. Trigger sampling via MIDI note event, and 19 dB output boost. Version 2.0 also supports Iomega Jaz Drive and many popular programs such as Recycle™ from Steinberg.

Now Roland CD load with the same ease as native E-mu or Akai volumes. Expressive Z-plane filters add much more user control over beginning and end Morph frames. Time Compression can be adjusted in either percentage or BPM and is phase locked when processing stereo loops.

The sequencer allows standard MIDI files (type I or II) to be played back direct from a DOS disk as well as from the internal drive. Ideal for a gigging musician.

Based on the ENV Sampler, the EMK provides a 76 note velocity and pressure sensitive keyboard. Realtime control has been increased to four faders and a Thumbby Button™.

An internal 970 Meg Hard drive complete with 150 Meg of brand new Emu library provides a huge variety of sounds ready to be loaded in and played.

Sampling straight into the EMK is possible through analogue jacks, S/P DIF Digital or even internal resampling. Timestretch, Parametric EQ, Gain Compression, Doppler, Reverse, exciter and transform multiplication are all present in addition to the usual Cut, Loop and Truncate. Any sound produced by the EMK be it a single note, a sequence (even with internal FX) can be recaptured as a single wave.

A built in effects processor allows high quality 18 bit effects to be added digitally inside the keyboard with faders for each voice allowing complete control and expression.

A sequencer capable of reading Standard MIDI Files (type I & II) direct from a DOS floppy disk and also saving them to the internal drive (SCSI is provided for external drive transfers and storage).

SoundPrint™ allows you to browse through and play sounds from your hard drive just as if they were sitting in a virtual ROM bank. The big difference being that this ROM bank is nearly 200MB wide!

An optional expansion board allows an additional 64 voices to be played providing 128 voice polyphony.

Z-Plane filters™, 2 LFO's, 32 sample layers with individual access to variable loop and start points, tuning functions, and three fully independent six segment envelope generators provide the basic synth elements which are the targets for the patchbay cords. Control sources can be derived from some of these tools, or from realtime inputs such as the faders and wheels on the keyboard front panel.

64 Voice Expansion Option Card

### 15 Days Satisfaction

If you are not completely satisfied with your purchase, simply return it in its original condition within 15 days, and we'll give you your money back. Just send it back to the store where you made your purchase, along with your receipt, manuals and all original packaging. We'll gladly exchange it, offer you a different product of equal value, or give you a full refund. Please keep your boxes, as missing accessories are subject to replacement fees. Due to certain legal restrictions, computers and computer software are exempt from this policy. Additionally, certain Pro-audio and recording systems may also be exempt, however this will be fully explained to you before you make your purchase.

### Package Deals and 0% Finance

Dawsons specialises in Pro-Audio packages. We can supply desks, outboard, amplification and cabling (we even sell MACs and PCs). The more items you buy, the greater the discount. We believe our buying power allows you to get the best deal, all from one shop. Call us now on 01925 245422 and find out how you can benefit.

# Prophet or loss?

## SEQUENTIAL PROPHET T8 ANALOGUE POLYSYNTH

*The radical keyboard design of the Prophet T8, thought by some to provide the best feel and response of any synth yet made, had a heavy cost for manufacturers Sequential, delaying the T8's launch by two years and stunting potential sales.*

**ROBERT ALEXANDER** reflects on a synth which was ahead of its time.

It's the beginning of 1981. Sequential Circuits Inc are planning to launch a new synthesizer that they believe will push further forward the boundaries of analogue synthesis development. At the same time, they hope to continue to keep the company at the forefront of the electronic

musical instrument industry.

The synthesizer that Sequential are pinning so much hope on is the Prophet T8, intended to be the successor to the very popular Prophet 5 series, nearing the end of its production run (of approximately 7200 keyboards, over three revisions between 1978 and 1984). The essential difference for the Prophet 5 is to be the addition of a touch-sensitive keyboard, which at this time is a rare feature indeed.

Unfortunately for Sequential, development problems mean that the keyboard is not to appear until 1983, and by this time, Yamaha's alternative plans for the domination of the market have taken off, with the release of what was (and still is), one of the most revolutionary electronic musical instruments of all time — the DX7.

### PIANISSIMO

It was Sequential's commitment to excellence, along with several exhaustive technical problems with the keyboard itself, that brought the T8 to market some two years late. The company thus forfeited the considerable advantage that they would have gained had it been commercially available in

1981. What was so important to Sequential about the touch-sensitive keyboard? Why did they strive to make it so good?

With a touch-sensitive keyboard — a piano, for example — the force used in the initial

"Some of its deep, distinctive bass synth sounds have become classics in their own right."

keystroke determines the amplitude of the note produced. A synthesizer cannot normally hope to match all the nuances possible from a system as complex as a piano keyboard, yet this is what the R&D team at Sequential set out to achieve with the Prophet T8.

Sequential found themselves faced with a series of technical problems that dogged them throughout the development of the keyboard system. It soon became apparent that using force or pressure alone to dictate amplitude would not result in a sufficiently sensitive keyboard for the T8, and rather than compromise the flexibility of the instrument, the development team decided to design a completely new system based around optical sensors. This was a daring and expensive undertaking. Optical sensors were micro-processor controlled — cutting-edge technology in 1981. This adventurous attitude to design and development typified the kind of approach that the American musical instrument manufacturers had in the '70s and early '80s.

The reason optical sensors were chosen for the keyboard was that they would give a far more accurate indication of the travel of a key and the duration

The Sequential Prophet T8 shown is serial No.000388 (numbers did not begin at 000001, but more unusually at 000100). It dates from July 1983 and is fitted with Rev 3.8 software. It is jointly owned by Robert and Simon Alexander.

# SEQUENTIAL PROPHET T8

► of a keystroke for the T8's central processor unit (Z80) to compute. Unfortunately for Sequential, putting all this into practice would prove to be easier said than done — hence the long delay. However, they did eventually iron out the development problems and get it right for the T8. It consequently has probably the most realistic pressure-sensitive keyboard feel of any synthesizer ever made — so good, in fact, that New England Digital decided to use it on the Synclavier, possibly the most elaborate, and certainly the most expensive, electronic musical instrument ever produced.

Curiously, the keyboard on the T8 is of the 76-note variety, rather than the full 88 notes of a piano. The keys themselves are made of wood, like a piano's, and are almost fifteen inches long — twice the length of the normal plastic keys found on most synthesizers. This was to help with the 'action' of the keyboard, giving an automatic feeling of weight due to size alone. The keystroke action is very similar to that of a piano, on which it is based, but perhaps just a bit lighter in the downstroke, and shorter in the return.

The initial pressing-down of a key initiates a levering action which moves the far end upwards to strike a second padded lever. This, in turn, registers with the optical sensor the amount of depression and the velocity of the keystroke, thereby indicating the amplitude

flexible 'feel' when you play it, as each note can be fine-tuned to the kind of response the individual player wants.

## SYNTHESIS FEATURES

Sequential had put so much effort into the design and construction of the keyboard itself that it's hardly surprising if the rest of the T8 bears a remarkable similarity to the Prophet 5 it was intended to replace. The same VCO configuration and filtering as found on the earlier Prophet is implemented on the T8, though the T8 is 8-note, rather than 5-note, polyphonic.

The features which made the 'Sequential sound' so popular are still there to be found on the Prophet T8, particularly the Sync function, which allows oscillator B to modulate the filter, frequency or modulation width of oscillator A. Oscillator B was also now able to offer the elusive triangle waveform that was so obviously lacking in the Prophet 5 (oscillator A on both synths already had the triangle waveform). The filter panel would now allow fully variable keyboard tracking, and an additional rotary knob in the LFO mod section gave control of the initial LFO modulation amounts.

Some brand new features were also added, namely: polyphonic glide; programmable volume (which allowed a patch to be stored at a pre-settable amplitude); and digitised

"Sequential had put so much effort into the design and construction of the keyboard itself that it's hardly surprising if the rest of the T8 bears a remarkable similarity to the Prophet 5 it was intended to replace."

of the note. It's a very complex system, with each individual note being independently sprung. One advantage of this, however, is that the T8 has individually pressure-sensitive keys — this sensitivity is programmable — a very rare feature indeed, only found on a couple of the very best synthesizers ever made, because of the incredibly high manufacturing cost.

The velocity sensitivity of the T8 is linked to the front control panel of the instrument by four rotary pots. The first two are for envelope rate control, and individually labelled Attack/Decay and Release. The second pair of pots are for envelope peak control, and are labelled Filter and Amp. These seemingly simple controls give the T8 an enormously

envelopes, to allow more flexibility. (The essential sound-generation components — the oscillators and filters — remained analogue.) In fact, the T8 was given two central processors to cope with all the functions it offered. As mentioned, the keyboard scanning was taken care of by a Z80 CPU, while the remainder of the synth's functions (routings, presets, envelope generation, and sequencing) were handled by the newer Z8000 CPU.

## SEQUENCER

A rudimentary sequencer (even by 1983 standards) was included. This allowed 670 notes to be programmed, though unfortunately only in real time. (Sequential were, for reasons known best to them, not

## OPTICAL ALLUSION

A word of warning here to the prospective T8 owner: the optical sensors on the T8's keyboard are prone to faults. If the keyboard doesn't work properly (press every key, and listen to the note produced), you have a potentially very expensive repair on your hands — beware. Luckily, in the UK we are blessed with a small band of genius repair people who lavish time and effort on making what was old and knackered, new and working once again. If you need really expert help, however, Dave Sznak at Wine Country in California is the Sequential specialist that everyone goes to for advice.

Wine Country can be contacted at: 1572 Park Crest Court, Suite #505, San Jose, CA 95118, USA. Tel: 001 408 265 2008, fax 001 408 266 6591, email winecntry@aol.com.

very keen on step-time recording until later on in their history). One of the most significant drawbacks of the sequencer was its inability to be clocked externally, especially in early software revisions of the T8. However, before Yamaha took over at Sequential on January 1st, 1988, the last software revision for the synth was released (Rev 3.8 upgrade) and this did, finally, offer full external sequencer control via MIDI.

The sequencer does have its redeeming factors, though. The notes stored include program information, as you would expect, but significantly they also contain the velocity information of each event — such an important part of the T8's design. This is vital to the use of the sequencer as a 'scratch pad' for songwriting (its only practical use), as without the ability to save the nuances of the work, when played back each sequence would sound totally different to how it was originally played. Once written, sequences can be saved into one of eight different sequence locations, or 'songs'.

## SOUNDS

The Prophet 5, in its many revisions, went from an original 32-sound instrument, to 40 sounds, and lastly to 120 sounds. The T8 goes a little beyond this, with 128 factory presets, which can certainly be described as typically 'Sequential' in nature.

First impressions of the T8 sound is that it is warmer and, in some subtle way, *different* to a Prophet 5. The same Curtis 3340 oscillators and 3372 VCFs (Voltage Controlled Filters) were used, but Sequential upgraded the VCAs from 3280s to the newer 3360s. The T8 standard sound set consisted of the usual electric and acoustic pianos, strings, harps and wonderful Prophet brass sounds. There are percussive sounds too — marimbas, bells, and a passing attempt at Simmons electronic drums.

As ever, though, the best sounds that

Sequential instruments produced were those that only a Prophet synthesizer could make, and the T8 carries on this fine tradition in style. Some of its deep, distinctive bass synth sounds have become classics in their own right (listen to The Thompson Twins, Swing Out Sister, and some of the later Human League from the mid '80s). While all the preset sounds are mostly quite usable, it is in the hands of a good programmer that the T8 really comes to life, with the power and flexibility to create enormous, fat analogue sounds that growl when the oscillators all kick in.

## CONCLUSION

In the end, sales of the Prophet T8 (or rather the lack of them), meant that it did not equal the success of the Prophet 5, as had been envisaged. Nor did it restore the market supremacy that Sequential had enjoyed earlier in the decade. However, this was in no way due to the quality of the instrument, which is without doubt one of the finest ever constructed. Sequential's problem with the T8 was due to the extraordinary amount of money that had been invested in its research and development, and this, of course, had

to be carried across to the customer. In 1983, a Prophet T8 would set you back the quite staggering sum of £4727! You could buy three flightcased DX7s for that and still get a MacDonald's lunch and a taxi home!

While the DX7 did represent better value for money and was a remarkable instrument in its own right, did you long for one? Would you have considered a second mortgage for a DX7? Probably not. For me, there's no nostalgia in owning a DX7 (even though I did buy one in January 1985 and still have it to this day). But the T8? That's made of different stuff — it has wood, it has style, it has a monster sound, and very, very few people own one.

As part of the research for this article I contacted much of the original development team at Sequential in the United States (who incidentally, to a person, all said they felt it was the best synth Sequential ever made), and they tell me that there were only around 350 Prophet T8s ever made. That makes them amongst the rarest, and therefore most collectable, of the large analogue synthesizers of the early '80s. They rarely come up for sale in good condition now, but if you did want to buy one, a couple of years ago (like so much of the analogue gear) you could pick one up for

"...it is in the hands of a good programmer that the T8 really comes to life..."

£1000. Today, you'd better be prepared to pay £2000 to £2500 for one in reasonable condition, and perhaps as much as £3000 for a T8 in mint condition.

Sequential have long gone, but the legacy of the musical instruments they built remains with us to this day, and through a small number of determined collectors, these masterpieces of analogue circuitry will be kept safe forever.

SO5

*My thanks to Bruce Wismer, John Bowen, Dave Sesnak, and Dave Smith for their invaluable help and expertise during the research for this article.*

**Time & Space** before. Distributor of the UK's top-selling sample CDs and CD-ROMs, Time & Space are the people to go to if you're in need of extra aural inspiration to spice up your compositions. Now they're coming to you, with an amazing competition offer exclusive to SOS readers: they're giving away a pile of sample CDs worth over £4000 in total! The prizes come from the group of international sound developers represented in the UK by Time & Space, including Zero-G (UK), Spectrasonics (USA), E Lab (Sweden), Best Service (Germany), Ilio (USA), Sounds Good (Sweden), and Invision (USA).

- If you win first prize, you'll net an enormous collection of CDs, including *CuckooLand*, *Jungle Warfare*, *Heart of Asia* and *Heart of Africa*, the *X-Static* series, *Double Platinum Drums*, Bill Laswell's *Sample Material*, *Percussion Slam*, The *Creative Essentials* series, *On a Jazz Tip*, *40oz of Phat Slamm'n Hip-Hop*, *Vinylistics Vols 1 & 2*, *Distorted Reality*, *Phantom Horns*, *Interface Dance*, and many, many more besides!
- The second prize will consist of 20 titles of the winner's choice from the *Creative Essentials* series, along with two Zero-G titles of their choosing.
- And last but not least, the third-prize winner will be

- Only one entry per person is permitted.
- Employees of Sound On Sound Inc., Time & Talent, and their immediate families are ineligible for entry.
- No cash alternative is available in lieu of the stated prize.
- The competition organizers reserve the right to change the specification of the prizes offered.
- The judge's decision is final and legally binding, and no correspondence will be entered into.
- No other correspondence is to be included with competition entries.
- Please ensure that you give your DAYTIME telephone number on your entry form.
- Prizes must be prepared to make themselves available in the event that the competition organizers wish to make a personal presentation.

# FREE ADS

## HOW TO BOOK YOUR FREE ADS

Fill in the form below, up to 28 words (one per box) and post to:

**Free Ads, Sound On Sound, Media House, Burrell Road, St Ives, Cambs PE17 4LE**  
Your ad will appear in the next available issue after receipt.

## PLEASE NOTE

We are inundated with Free Ads, and whilst we endeavour to publish ads in the next available edition of the magazine, space restrictions mean that this is not always possible, and there may be a one or two month delay. Therefore, if you wish to guarantee that your advert appears in the next available issue, may we suggest that you call our Hotline on 01480 461786 and use your credit card to book yourself a Classified Lineage advert — your ad will then appear in the Classified Ad pages, and not in Reader Ads. This costs a mere 80 pence per word (inc. VAT), and the minimum number of words is 12 (£9.60 in total).

01480 461244 (office hours) 01480 461786 (24 hr answerphone)

Fill in the form below  
(up to 28 words, one per box) and send to:  
**Free Ads, Sound On Sound, Media House, Burrell Road, St Ives, Cambs PE17 4LE.**

**WARNING:** Always check when buying secondhand music software that you are not buying a pirate copy; ensure that all disks and manuals are included. We reserve the right to refuse or amend ads, especially if we believe they offer pirated software, pirated MIDI files or pirated sounds. We accept no responsibility for typographical errors or losses arising from the use of this service. Trade Ads will not be accepted.

## PLEASE NOTE

Please indicate which one classification you would like your ad to appear in.

- ☐ KEYBOARDS ☐ SAMPLERS ☐ DRUM MACHINES ☐ WANTED ☐ MISCELLANEOUS

# Anatek Pocket Products to

At *SOS*, we have regularly found ourselves referring readers to one or other of the Anatek Pocket range of MIDI accessories to solve their all too common MIDI interconnection and transmission problems. Trouble was, Pocket Products were previously hard to find... until now!

## POCKET SYNC

- 'Smart' FSK Tape-to-MIDI synchroniser • Starts anywhere in song • MIDI In to Out merging • Automatic read/write switching • 'Jam Sync' protects against tape dropouts • Records tempo changes • MIDI and FSK status LEDs

POCKET SYNC is the way to expand the capabilities of any multitrack studio. No longer is it necessary to allocate more than one tape track for sequenced parts. Now, shuttling to different points in the song is quick and effortless. POCKET SYNC writes a special FSK sync tone on one track of tape that is converted to MIDI Clock and Song Position Pointer on playback. Merging of data from the MIDI input to the output allows new sequencer tracks to be added while remaining synchronised to tape.

Automatic switching between write (recording FSK) and read (playback FSK) cuts downs on confusing switches and buttons. Tape oxide dropouts are no longer a problem with POCKET SYNC's variable dropout protection. The sequencer can continue playing over a dropout for a short time, even if FSK code is completely lost!

Order Code: PP003

**£69 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## POCKET MAC

- Economical Macintosh MIDI interface • No external power supply required • 1 MIDI In, 2 MIDI Outs • LEDs indicate MIDI In/Out data • Uses serial or modem port • High speed CMOS design • Improves signal to minimise data errors.

POCKET MAC opens up a whole new world of MIDI programs for the Macintosh computer user. With many Macintosh programs simultaneously supporting both the serial port and the modem port, one POCKET MAC could be connected to each allowing access to twice as many MIDI devices.

Order Code: PP004

**£39 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## POCKET CURVE

- Modifies MIDI velocity response • Controls keyboard sensitivity • 6 tapered curves • 6 velocity increase curves • 6 velocity decrease curves • 6 constant levels • Special DX7 velocity curve

POCKET CURVE is a necessity for master keyboards that require velocity scaling control. With it, a keyboard's response to harder or softer playing styles can be modified to suit the player and their MIDI setup. DX7 owners can especially benefit from POCKET CURVE! A special curve is available to boost the DX7's low velocity output, so that missing dynamic potential can be recovered. Use POCKET CURVE to allow a lighter touch during performance on a heavily weighted keyboard controller. For ease of programming, a quick reference to the many curve possibilities is permanently printed on the sides of the unit.

Order Code: PP005

**£69 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## POCKET MAPPER

- Remaps MIDI controllers • Maps Pitch Bend to Aftertouch • 'Set and forget' programming • Supports 15 controllers • Allows unconventional routings • Updates older keyboards.

POCKET MAPPER allows modulation routings to be customised to suit a particular need. Controller data such as Pitch Bend, Aftertouch, Breath Control and others is received and can be retransmitted as a different controller. For instance, DX7 Breath Control modulation can be rerouted to MIDI Volume to modulate synths that do not accept Breath Control. POCKET MAPPER is the most convenient and cost effective way of rerouting MIDI modulation. Now, MIDI wind instruments can remap mouthpiece Breath Control to Aftertouch quickly and easily.

Order Code: PP006

**£69 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## POCKET MERGE

- Merges 2 MIDI signals into 1 • Handles System Exclusive • Merges on all 16 MIDI channels • Merges Clock and MIDI Time Code • Merges all controllers • Handles large volumes of data • Stackable for 3 or more inputs

POCKET MERGE is an essential tool for sequencing or live use. Operating as a 2-In, 1-Out MIDI Merger, several Pocket Merges can be stacked to merge more than 2 inputs. Now any controller can be a 'master'. In live setups, POCKET MERGE allows any two controllers (keyboard, drum pads, guitar synth, etc) to share a sampler or sound module. Use one keyboard as a master, while using a favourite pitch bender from another, or combine two keyboards for a multi-tiered, organ-style controller. In the studio, POCKET MERGE is a must for sample dump editors, allowing a keyboard and a computer to be connected to the sampler at the same time. POCKET MERGE handles data very quickly, making buffer overflows a thing of the past.

Order Code: PP007

**£59 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## POCKET FILTER

- Filter on all MIDI channels • Filter controllers, System Exclusive and real-time data • Combine data types/channels • DIP switch selectable filtering • Select channel from any keyboard • Filter all data on selected channels

POCKET FILTER is a vital tool for problematic setups. With MIDI data becoming increasingly complex, POCKET FILTER can undo the MIDI data stream, sending only the most useful info. Use it to remove unwanted clock messages or System Exclusive data or memory-intensive aftertouch and controller information. POCKET FILTER frees-up unused MIDI Channels from multitimbral synths, making them available for other modules. In addition, it can be used to channelise older synths that only receive in Omni mode.

Order Code: PP008

**£69 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

## LONG DISTANCE MIDI

- Enables extra-long MIDI cable runs • Easy to connect to existing 3 conductor wiring • 4,000 feet capability • Balanced XLR connectors • Dual transceivers allow 2-way MIDI communication • Handy data input and output LEDs confirm presence of MIDI signal

The problem with MIDI is that you are likely to encounter data errors when running more than 50 feet of MIDI cable. These can be embarrassing errors such as hung notes, mysterious program changes or worse in the middle of a performance.

The cost-effective solution is MIDIMATCH by Anatek. Two identical units convert MIDI data to balanced signals that can be transmitted through up to 4,000 feet of

cable. The balanced MIDI signal is virtually immune to the problems that have previously plagued studio owners and sound contractors over long MIDI runs.

MIDIMATCH works through ordinary balanced microphone cable so you can connect keyboard controllers to MIDI sequencers or lighting controllers to dimmer packs through your existing snake! Studios already wired for audio can connect MIDI through the cabling already in place. MIDI signals could even be run through a balanced patchbay!

The price includes transmitter and receiver. (Please note: requires two 9V AC adaptors.)

Order Code: PP001

**£115 inc VAT.**

Postage: UK £2.50 Europe £4.95 ROW £8.95

# solve your MIDI headaches!!

## USE YOUR YAMAHA BREATH CONTROLLER WITH NEARLY ANY MIDI SYNTH!

Anatek's WIND MACHINE and your Yamaha BCI or BC2 Breath Controller (not provided) will add woodwind-like expression to keyboard performances. Brass patches can punctuate or pad according to your whim, not to some pre-programmed attack setting. Sax solos will turn heads with their authenticity. And layered string sounds can fade in precisely where they're needed, while your hands and feet are free to control wheels and pedals. (Will not work with Yamaha WX7/11.)

Compatible with everything, WIND MACHINE interfaces to Korg, Roland, Yamaha, Ensoniq and the rest! No longer are you forced to use your Yamaha breath controller with only one brand of MIDI synth. Any MIDI keyboard that will respond to MIDI Volume, Aftertouch, Modulation, Breath Control, Pitch Bend, Expression, Foot Controller, or Pan can be controlled via your breath controller and WIND MACHINE.

Blowing into a mouthpiece is the most natural way to enhance keyboard performance. Wind instruments have been designed around this principle for centuries. Alone, keyboard Aftertouch isn't as effective because when you release the keys, the effect goes away. Modulation and Pitch wheels alone aren't as effective because they don't allow you to play chords. But when combined with WIND MACHINE, all of these can be used to create vastly improved expression capability.

A flexible input/output configuration means that WIND MACHINE can fit seamlessly into any setup. The simplest way is to use it to send control signals to the MIDI In of a keyboard synthesizer. If the MIDI setup involves a master keyboard and external modules, WIND MACHINE can combine incoming signals from the master with its control signals and then pass them on to a sequencer or sound modules. WIND MACHINE can transmit the most popular

control parameters to keep it simple. Most MIDI keyboards respond to Modulation, Aftertouch or Volume so you won't have any problem finding one compatible with your synth. Any one of the 16 MIDI channels can be selected as well. All control parameters are set by switches on the lid that retain settings even when power is disconnected.

Order Code: PP002 **£85 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POCKET PEDAL

- Sends on multiple MIDI channels • Supports 1 continuous controller • Supports 1 momentary footswitch • Sends pitch-bend, modulation, portamento time, and MIDI Volume • Sends sustain, portamento on/off, sustenuto, and start/stop • Auto pedal/footswitch calibration • Forward/Reverse pedal operation • 3 mode pitch-bend operation • Combine data types

POCKET PEDAL is an indispensable controller for the performing musician. Use it with an ordinary volume pedal and footswitch to send MIDI volume, modulation, and sustain controls on all 16 MIDI channels simultaneously. For owners of multi-effects processors, POCKET PEDAL provides a convenient cost-effective way of providing dynamic control over effects parameters. It is also a handy controller for automated mixdowns, converting any resistive input into MIDI Controller messages for VCAs. Connect a photocell to POCKET PEDAL and control MIDI parameters with a light source!

Order Code: PP009 **£69 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POWER PACK

- 'Phantom' powers all Pocket Products • Functions in-line with MIDI signal • Powered by most AC adaptors • Automatic polarity switching • Fully regulated supply • Passes all MIDI data

POWER PACK provides power to Pocket Products in instances where upstream devices from other manufacturers have neglected to meet MIDI specifications, or in any instance where power is unavailable. POWER PACK can be placed anywhere in the MIDI chain and accepts power from a standard AC adaptor (not included). It provides additional power when more than 4 Pocket Products are used in a row or allows POCKET PEDAL and POCKET FILTER to retain their channel settings when the master device is turned off. What's more, POWER PACK can be used to boost the MIDI signal and extend the maximum distance between two devices.

Order Code: PP012 **£29 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POCKET SPLIT

- 8-Zone Keyboard Splitter • Range from 1 to 127 notes • Fixed boundaries • MIDI Channel/Zone assignment • Footswitch controllable • Floating split point

POCKET SPLIT is an 8-zone keyboard splitter. Each zone has its own MIDI Channel, and has a range of 1 to 127 keys wide. Zone boundaries can be set for hard or soft (overlap or splits). Use POCKET SPLIT to maximise the performance of your master keyboard, or create interesting performance possibilities with your guitar controller. An added feature is an 'intelligent' 2-way floating split that automatically tracks the keyboard player's left and right hands. Now any MIDI device can have the features of a sophisticated MIDI controller at a fraction of the cost!

Order Code: PP013 **£69 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POCKET TRANSPOSE

- In-line 16 Channel transposer • +/- 5 Octave transpose range • Switch between normal and transposed modes • Separate intervals for each channel • Transpose key signature and octave simultaneously • All non-transposed MIDI data is passed • Harmonisation mode • Footswitch controllable

POCKET TRANSPOSE is a performance-orientated transposer that supports separate transpose intervals for each MIDI channel. Although many keyboards have a transpose function, it's usually too cumbersome for live use. POCKET TRANSPOSE makes transposing easy. Intervals can be set while playing, and the user can select the normal or the transposed setting from a footswitch. Guitar synth players can use the POCKET TRANSPOSE to set intervals on 6 separate MIDI channels, or use it to transpose all strings by a certain amount. POCKET TRANSPOSE provides an easy way to try different arrangements without altering sequencer data. You can even set it so that the drum machine channel remains intact.

Order Code: PP011 **£69 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POCKET CHANNEL

- Remaps Receive channel • Remaps Transmit channel • Sends multiple MIDI channels • Velocity-switch mode • Footswitch controllable

POCKET CHANNEL takes data from any MIDI channel and remaps it on to one, several, or all 16 MIDI channels. Up to 16 different channel assignments are possible. A unique velocity-switch feature allows automatic switching between two different sound modules depending on the key velocity. Use POCKET CHANNEL to organise channel assignments for a multitimbral sound module, or send a controller's output to two or more MIDI channels. With POCKET CHANNEL, for example, two drum machines or two samplers can share the same note assignments and be set to two separate MIDI channels.

Order Code: PP014 **£69 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

### POCKET THRU

- 1-In, 3-Out MIDI Thru box • High-speed CMOS design • Very low power requirements • Buffered outputs clean up data • Handles all MIDI data • Stackable for more outputs

POCKET THRU is an essential building block for any MIDI setup and an excellent companion product for all Pocket Products. POCKET THRU provides 3 buffered outputs from a single MIDI input. Use POCKET THRU to minimise MIDI delays, or expand the outputs of a POCKET MERGE unit. POCKET THRU also allows POCKET FILTER to be placed anywhere in the MIDI chain, when using it to channelise older synths. Up to 4 POCKET THRU's can be combined to provide a total of 9 outputs.

Order Code: PP010 **£35 inc. VAT.**  
Postage: UK £2.50 Europe £4.95 ROW £8.95

## HOW TO ORDER

Join the group of satisfied customers worldwide who have found the solution to their MIDI problems with Pocket Products from Anatek, now available direct from SOS.

To order, just fill out the Order Coupon at the back of the Mail Order section (remember to add postage for each product) or simply call our Mail Order hotline on 01954 789888.

**DON'T DELAY ORDER TODAY!**

Please allow up to 26 days delivery on Pocket Products.

## ABOUT POCKET PRODUCTS

Pocket Products are handy MIDI accessories designed to solve the problems arising from incompatibilities between MIDI products from different manufacturers. Compact and sturdy, Pocket Products can be placed anywhere in the MIDI signal chain.

### THE COMPLETE CUBASE

#### HANDBOOK

2nd Edition

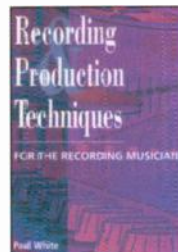

by Udo Weyers  
After a short break, the definitive Steinberg Cubase Handbook is back in print. This new edition is once again filled with real world applications and down to earth explanations of how to use all the

powerful features offered by Cubase in all its many forms. The book is now relevant to all three platforms (Atari, Mac and PC), and the main attraction of the revised text is its focus on Cubase Score. The Complete Cubase Handbook is a not-to-be-missed purchase for users of Steinberg's highly popular software.

**CODE B195 £29.95**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

### RECORDING & PRODUCTION TECHNIQUES

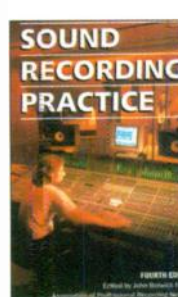

by Paul White.  
This highly informative book by SOS's own Editor demystifies the techniques used by professionals in the recording of contemporary music.

It reveals how to make full creative use of all manner of studio effects and signal processors. These techniques can be utilised both in the home and commercial studio. The book concludes with an invaluable section on master tape formats and an overview of the various processes and vinyl records.

**CODE B200 £11.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### SOUND RECORDING PRACTICE (4th Edition)

by John Borwick  
This now classic text reaches its fourth Edition, and has been enlarged and revised to cover up to date developments in the recording industry. The contents of this 600+ page is too diverse to summarise in such a short space. Suffice to say that every

serious recordist, whether amateur, semi-pro or professional should have a copy of this book.

**CODE B107 £19.99**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

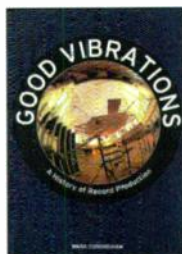

## RECOMMENDED READING

### INTRODUCING DIGITAL AUDIO 2ND EDITION

by Ian R Sinclair  
Explains digital audio - CD, DAT and sampling - non-mathematically. The updated 2nd edition adds information on oversampling and bitstream techniques, plus a glossary of technical terms.

**CODE B274 £7.95**  
Postage: UK £1.50, Europe £4.50, R.O.W. £6.50

### GOOD VIBRATIONS

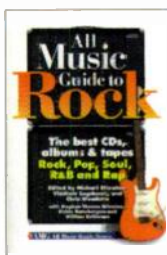

by Mark Cunningham  
Good Vibrations - A History of Record Production features a foreword by BRIT award-winning Best Producer of 1996, Brian Eno. The book chronicles the development of recording techniques and music technology, from the

invention of sound-on-sound (multitrack) tape recording in 1949, to the current dramatic advances in digital technology. Also highlights the changing role of the producer and engineer, with quotes from George Martin, Brian Wilson, Tony Visconti, Trevor Horn, Hugh Padgham and Pete Waterman. Recordings discussed in detail include The Beach Boys' *Pet Sounds*, The Beatles' *Sgt Pepper's Lonely Hearts Club Band*, Pink Floyd's *Dark Side Of The Moon*, Queen's *Bohemian Rhapsody*, David Bowie's *Heroes*, and U2's *Rattle and Roll*. Includes around 100 photos and illustrations, many previously unseen, plus extensive reference section.

**CODE B331 £9.99**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### ALL MUSIC GUIDE TO ROCK

From doo-wop to hip-hop, this is the most complete guide to the best CDs, albums and tapes in all genres of this music, both mainstream and alternative. Compiled by dozens of top music critics, 15,000 recordings by 2,500 performers are listed, rated and reviewed - including bootlegs, imports,

out-of-print albums, and "cult" artists.

Easy to use and fun to explore, the All Music Guide to Rock also gives you major artist bios and discographies, essays exploring dozens of rock styles and influences, music maps, and more.

**CODE B318 £18.50**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

### PIANO - Evolution, Design & Performance

By David Crombie  
This is the most spectacular and informative book ever assembled on the history of the piano. At its heart is a stunning collection of more than 150 pianos ranging from the instrument's earliest roots to today's magnificent upright and grand pianos.

This important new book is an essential purchase for every piano player and every musical instrument enthusiast, bringing alive the most fascinating and wide-ranging collection of pianos ever seen in one book.

### THE SECRETS OF MUSICAL CONFIDENCE - How to Maximise Your Performance Potential

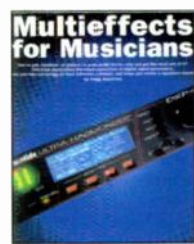

By Andrew Evans

Written by a musician and psychologist, this is claimed to be a first for musicians: a book aimed at maximising performance potential and increasing confidence. A series of questionnaires and exercises allow you to analyse your abilities and needs and allow

you to deal with stress, creativity and career management, amongst other topics.

**CODE B240 £7.99**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

### MULTI-EFFECTS FOR MUSICIANS

by Craig Anderton

Occasional SOS contributor Craig Anderton adds to his long list of music technology-based books with this comprehensive look at multi-effects units. The book helps you with what to look for when buying

a new unit, how to use it when you've got it home, and provides a collection of tips to help you get the most out of your device. 137 Pages.

**CODE B306 £10.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

### TAPELESS AUDIO DIRECTORY

(5th Edition) By Yasmin Hashmi  
Completely updated, this 4th edition is the only international buyers guide to over 200 professional digital audio workstations and systems aimed at cart replacement and broadcast automation.

The comprehensive listings include target markets, hardware and software specifications, operational features, networking and file translation, future development plans, training and customer support, costs and suppliers details for USA, Europe and Far East. The Directory not only covers all existing systems, but those soon to be launched and those on which development has been halted. It also provides a comprehensive explanation of the terminology, with useful tips for potential purchasers.

**CODE B304 £14.95**  
Postage: UK £2.50, Overseas £4.50

### TECH TERMS - A Practical Dictionary for Audio and Music Production

by George Petersen and Steve Oppenheimer

This is a concise collection of definitions of electronic music and recording terms; 300 words and phrases are given quick accurate definitions in plain English. So if you're new to recording, synths, samplers and MIDI, this book could be a

big help in getting your mind into the terminology.

**CODE B230 £7.95**  
Postage: UK £1.50, Europe £3.75, R.O.W. £4.95

### HARD DISK RECORDING FOR MUSICIANS

by David Miles Huber

More of a digital recording overview, this book looks at digital audio in all its forms. Huber discusses the equipment, the techniques and processes of digital audio. Computer-based sound editing, digital audio workstations, digital signal processing techniques, sampling and real-world applications in music, film, video and broadcast environments are covered plus multimedia. The text is designed to be understood by newcomers, while delivering information of value to professionals. 182 pages.

**CODE B307 £15.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

### SOUND FOR PICTURE

Edited by Jeff Fortenza and Terri Stone

Covers all aspects of film and TV sound, dialogue, music, effects recording, and editing and assembling the result into a final soundtrack. Technical and creative aspects are all covered, and a comprehensive glossary is provided. A

good proportion of the book is also taken up with a selection of case studies (including Malcolm X, The Abyss, Northern Exposure and Twin Peaks) that provide hands on information.

**CODE B237 £9.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

### STUDIO MUSICIAN'S JARGONBUSTER

by Godric Wilkie

If the terminology of musical technology and recording leaves you gasping, then this is the book for you! With clear explanations of 1500 terms and concepts, amidst illustrative graphics, the whole work is extensively cross-referenced, and worth its weight in gold.

**CODE MX30045 £12.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### THE COMPOSER'S GUIDE TO MUSIC PUBLISHING (2ND EDITION)

written & compiled by Annie Cunningham

This book has been produced by the Association of Professional Composers and examines the business of musical copyright and music publishing from the composer's point of view. It aims to educate composers of all kinds of music in the operation of the music publishing business to help them obtain, negotiate and benefit from publishing agreements and avoid expensive mistakes. Apart from publishing, the book also covers copyright legislation, performing and mechanical rights, the royalty administration societies, music in film, broadcasting, theatre and ballet and commissioning agreements. There is also advice for composers setting up their own publishing companies. An exhaustive and useful book.

**CODE B297 £18.95**  
Postage: UK £2.50 Europe £6.95 R.O.W. £9.50

### PROFESSIONAL COMPOSING

**CODE B298 £3.95**  
Postage: UK £1.95 Europe £5.50 R.O.W. £8.50

## HIGHLY RECOMMENDED

### CREATIVE RECORDING EFFECTS & PROCESSORS

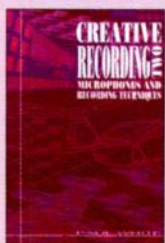

**by Paul White**  
The first in this major series, Effects and Processors is a complete guide to the outboard equipment which has today become an integral part of popular music.

A comprehensive analysis of studio effects and signal processors, it provides detailed coverage of each piece of equipment: how it performs its respective task, what effect it has on the sound, and its role in creative music production.

**CODE B315 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### CREATIVE RECORDING TWO MICROPHONES & RECORDING TECHNIQUES

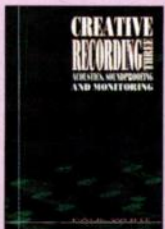

**by Paul White**  
A complete guide to understanding and using microphones in a recording environment.

In plain English, it explains how the different types of microphone work, discusses the advantages of how they can be used to get the sound you want onto tape.

**CODE B316 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### CREATIVE RECORDING THREE ACOUSTICS, SOUNDPROOFING & MONITORING

**By Paul White**  
Soundproofing, Acoustics and Monitoring is designed to take the mystery out of studio design, whether you run a bedroom studio or a commercial recording facility.

In plain English, it explains: how soundproofing works, how you can change your room acoustics to give the optimum monitoring environment and how to choose and use your monitor system.

**CODE B317 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## NON LINEAR BUYERS GUIDE

### 1st Edition

New from Sypha is the Nonlinear Buyers Guide. Known especially for their definitive digital audio-focused Tapeless Directory (look out for the 4th edition in the future), Sypha have applied the same comprehensive approach to digital video systems.

The first edition of The Nonlinear Buyers Guide is the only international source of information on over 150 nonlinear video systems. Products included in the Guide are nonlinear editing systems, mixed mode editing systems, plug in cards and software for editing, disk recorders and servers. The information is provided in an easily accessible format and includes operational and technical specifications, future developments, costs and suppliers details. The Guide also gives useful pointers to those considering investing in a system.

**CODE B270 £19.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## AUDIO

**by F.A. Wilson**

Volume 6 of the Elements of Electronics series, Audio offers a comprehensive guide to the physics of sound, its recording and its reproduction. There is a lot of physics used in the book - in fact, this aspect makes the book a good basic text for those with a serious interest - but the text in between the formulae is clear and informative. Not bad value for £3.95 - a total of 308 pages.

**CODE B277 £3.95**  
Postage: UK £1.50, Europe £4.50, R.O.W. £6.50

## SAMPLERS

### WHAT'S A SAMPLER?

**By Freff**

Ideal starter book for sampling novices. Whether you are serious about sampling or merely curious, this book is for you.

**CODE B104 £4.50**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## RECORDING

### HOT TIPS FOR THE HOME RECORDING STUDIO

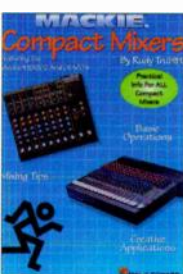

**by Hank Linderman**  
Learn how to lay down music the way you want it to sound, with advice for getting the best from your mixer, multitrack, compressor etc. Discover tricks and what traps to avoid, unlock the mysteries of timecode,

prevent noise problems. Packed with sound advice.

**CODE B326 £12.99**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### MACKIE COMPACT MIXERS

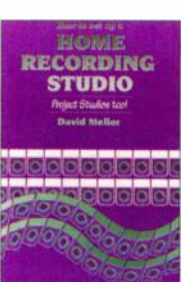

**by Rudy Trubitt**  
Journey through the design and features of mixers so you can maximise the use of this essential and very flexible audio component. Using Mackie's wildly popular MS1202 and CR1604 mixing desks as a foundation, the

book explains general concepts as well as model specific operating tips. Topics include: mixing basics, real world applications, hooking things up, mixing tips, block diagrams and a glossary.

**CODE B330 £14.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### HOW TO SET UP A HOME

### RECORDING STUDIO

**UPDATED & EXPANDED**

**By David Mellor**  
If you are thinking of setting up a home studio, a project studio or a DJ studio, this book is the place to start. It takes a highly practical

'nuts and bolts' type of approach to help you produce an efficient and productive studio. It covers soundproofing, keeping the sound in and the noise out, acoustics, studio layout, and studio equipment, and advice on the kit you are likely to need. The book ends with an invaluable questions and answers section, a glossary of terms and a list of contacts.

**CODE B116 £8.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## THE MUSICIANS GUIDE TO HOME RECORDING

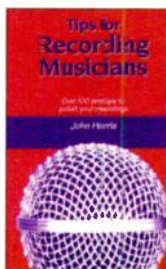

**by Peter McLean & Larry Wichman**  
(Revised and Updated)

This is the book every serious songwriter, musician, and home recordist needs, with a new chapter on MIDI and the latest digital recording technologies. A problem-solving guide as well as an instructional text,

it is designed to explain in simple terms how professional recording techniques can be applied at home.

**CODE B314 £16.95**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

### TIPS FOR RECORDING

### MUSICIANS

**by John Harris**  
Today's studio equipment is affordable but sophisticated, and it takes a lot of know-how to use all this technology effectively. This book details the equipment you need - mics, effects, tape machines, etc. It has separate sections on recording of vocals,

electric guitar, drums and acoustic instruments, as well as the use of MIDI in the recording process. You will learn how to get the best from delay and reverb, as well as effects like compression and gating. There are some useful tips on using the mixing desk and post production work. All in all it's a handy guide that will improve your recording techniques at a stroke.

**CODE B309 £8.50**  
Postage: UK £1.50, Europe £3.95, R.O.W. £3.50

### PRACTICAL STUDIO TECHNIQUES

**by Tom Misner**

This book and audio CD package comes from the School of Audio Engineering's Tom Misner. It's an excellent source of basic recording facts and figures, and if you want concrete examples of the subjects discussed, then listen to the free mixdown demonstration CD.

**CODE B301 £15.00**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

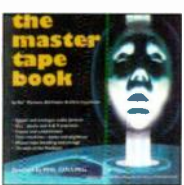

### RECORDING TECHNIQUES FOR SMALL STUDIOS

**by David Mellor**

This well written, user-friendly book is designed to offer accessible and helpful tips on how to get the most out of the equipment in your studio. Chapters cover: mic techniques; musical arranging for recording; 4-track recording; the mixer; preparing for an running a session; recording drums; recording vocals; integrating MIDI; using effects and signal processing; location recording, and digital recording. The book is rounded off with an "any questions" section, a glossary and a list of recording studios in the UK. As you would expect from a book based on an SOS series, this is a *must have*!

**CODE B198 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### THE MASTER TAPE BOOK

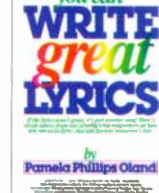

**Alan Parsons, Bill Foster & Chris Hollebone**  
The definitive guide to the creation and management of audio master tapes. With 'Master Tapes' literally flying around the

world being copied, cloned or re-cut for seemingly endless variations of compilation albums, it is terrifying to think that there is no standard set of procedures for labelling and maintaining master tapes. Until now, that is.

**CODE B194 £15.00**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

## MUSIC BUSINESS

### YOU CAN WRITE GREAT LYRICS

**by Pamela Phillips Oland**  
This book helps you develop your own philosophy and style. Its plentiful techniques, combined with practical advice and exercises, will have you writing great lyrics before you know it!

**CODE B329 £11.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### MUSIC PUBLISHING

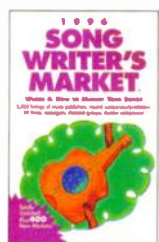

**by Randy Poe**  
This book demystifies music publishing, explaining what it's all about and what it means to a songwriter. Learn what your publishing options are, from a single song contract to a staff writer to a self-publishing operation. By the

time you have finished this book you will never make an uninformed decision about publishing your songs that you will later regret.

**CODE B328 £12.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### SONGWRITERS MARKET

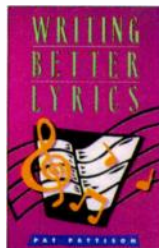

**1996**  
To get your songs published and produced, you must know who the music industry's players are and how to approach them. This directory identifies those seeking the work of songwriters. Lists 2500 lyric and music markets, clubs, associations, contests, workshops and

songwriters publications. Includes 'The A & R Roundtable', where pros discuss their role in a songwriter's career, business side of songwriting, music industry trend report, and interviews with music industry professionals.

**CODE B324 £12.99**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

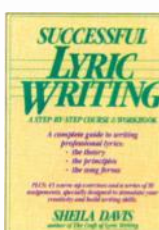

### WRITING BETTER LYRICS

**by Pat Pattison**  
In-depth approach to lyric writing examines 17 songs to discover what makes them so effective. Learn a warm-up exercise that will revolutionise your songwriting imagery, how to use a rhyming dictionary to unlock fresh, unexpected rhymes, avoid clichés and create imaginative

metaphors and similes.  
**CODE B325 £12.99**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### SUCCESSFUL LYRIC

**WRITING**  
**by Sheila Davis**  
Superb guide to the art of writing words to music. Learn how to create a memorable song title, choose the best music form for each idea, apply writing principles and avoid common pitfalls, write with both sides of your brain, find

your voice. Includes songwriter's bibliography and lists over 60 songwriting organisations to help you connect with your chosen marketplace.

**CODE B327 £12.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

# SOS Book Shop

## THE SONGWRITER'S GUIDE TO COLLABORATION

by Walter Carter

This book describes what to expect when entering into a co-writing situation and how to make the arrangement work. Covers the pros and cons, how to find a partner, publishing your songs, who writes what, money matters, sharing success and rejection, growing together or apart plus co-producing and pitching.

**CODE B323 £8.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

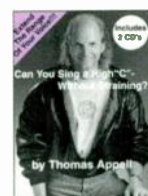

## CREATING MELODIES

by Dick Weissman

Learn how to create memorable melodies, from love ballads to film scores and jingles. Using lots of examples of popular songs and styles by top-name musicians, Weissman covers the full range of melody writing. Learn how to marry music to lyrics, relate rhythm to the message of your song, read and write musical notation, write instrumentals for films, TV, commercials and theatre, and put together a demo tape.

**CODE B322 £12.99**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## CAN YOU SING A HIGH "C" WITHOUT STRAINING

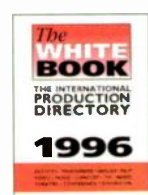

by Thomas Appell

This book features extensive coverage of the vocal cords and explains clearly how to sing high notes without going into falsetto, and without straining. You'll learn how to extend the range of your voice, and why most singers either strain or "break" into falsetto when attempting to sing above their normal range. It comes with 2 CD's jam-packed with over 2 hours of vocal examples and exercises that you can practice with. Many singers have increased their range by several notes after the first week of practice. If you can't sing high notes without straining, but would like to know how, then this book is for you. 122 pages.

**CODE B319 £24.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## THE WHITE BOOK INTERNATIONAL PRODUCTION DIRECTORY

**DIRECTORY 1996**

This is the latest edition of the essential source of contacts for artists, performers, venues, services and facilities associated with music, concerts, shows, festivals, film, TV, video, conferences, exhibitions and corporate hospitality.

- there's even a comprehensive international section. The layout is logical and an index makes fact finding an easy task - altogether an indispensable 864 pages. The new edition once again comes with a complementary copy of The Little White Book, which distils the contents of the larger volume to a pocket-sized list of names and phone numbers.

**CODE B259 £46.00**  
Postage: UK £4.75, Europe £8.50, R.O.W. £16.95

## THE MUSICIAN'S GUIDE TO READING & WRITING MUSIC

It's an entertaining but practical introduction, well, to reading and writing music. This is as friendly as it comes. Learning to read and write music isn't easy, but at least the process is lightened up with considerable doses of wit.

**CODE B224 £8.99**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

## THE ARC MUSICIANS' DIRECTORY

The new Musicians' Directory from Arc Publishing aims to provide all things to all musicians: whatever your style of music, the comprehensive listings offer you the contacts you need, whether it's labels, studios, venues, music shops or

management - and that just scratches the surface of the dozens of topics covered by the book. Apart from being a directory proper, the Handbook also includes a selection of useful articles, including subjects such as how to be a session player (by SOS's very own Paul White), music publishing, releasing your own record, copyright protection, accounting, legal advice and more. The Musicians' Directory offers over 380 information-packed pages for little more the price of a new CD.

**CODE B219 £14.99**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

## NETWORKING IN THE MUSIC BUSINESS

by Dan Kimpel

Think of this book as a popular psychology course for musicians. If you feel you could benefit from developing a positive attitude to getting ahead in your area of the music business, then *Networking* is for you. There's nothing like it for good, sensible advice: it's often not

enough to have talent. To be successful, you'll need to persevere, have good "people skills", and exercise good networking skills. Success depends on what you know, who you know, and perhaps most importantly, who knows you. An essential book, and a snip at £11.95. Hardback.

**CODE B251 £11.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

## THE SONGWRITER'S MARKET GUIDE TO SONG & DEMO SUBMISSION FORMATS

From the Editors of Songwriter's Market

If you've got the songs and you've got the contacts, this book will help you to choose a format that will get your demo heard as well as overall packaging and presentation and dealing professionally

with publishers, A&R reps and other industry people. Plenty of example documents (lyric sheets and letters) are given, and the book is nicely rounded off with a glossary and index. Hardback.

**CODE B258 £12.95**  
Postage: UK £2.50, Europe £5.95, R.O.W. £9.95

## SONGWRITER'S WORKSHOP

Edited by Harvey Rachlin

If you want to work systematically at improving your songwriting skills, then try this book: it's divided into four individual "lessons", each of which is backed up by audio material on cassette. This allows you to listen in the car or walk around with your personal stereo and still absorb useful information. The four sections are: On Songwriting by Janis Ian (yes, the Janis Ian); Making Demos by John Barilla; Understanding MIDI by James Becher; and The Art of Pitching Songs by Teri Muench (ex-A&R director with RCA and publisher). Also included is an intro, a quick and breezy glossary and an index. Includes two cassettes.

**CODE B280 £15.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## MUSIC BUSINESS AGREEMENTS

by Richard Bagehot

Written by a practising music business solicitor, "Music Business Agreements" can be seen as a legal textbook for the UK music industry. Don't let the formal tone put you off: this book is a mine of information with reference to real-life problems and examples, and a helpful question and answer appendix. Expensive, but invaluable. 522 Pages.

**CODE B303 £58.00**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## SONGWRITERS IDEA BOOK

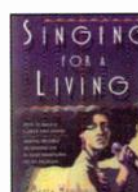

by Sheila Davis

If you want a textbook, this is it: 250 pages of serious, intelligent insight into songwriting. Loads of good advice and a friendly tone make this a useful read to anyone, whether beginner or seasoned pro. The focus is firmly on lyrics rather than music, and the

prominent references to poetry terminology shouldn't really be a surprise. Use Davis' 40 strategies and you to could soon be "designing distinctive songs". Hardback.

**CODE B250 £9.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## SINGING FOR A LIVING

by Marta Woodhull

The title says it all. If you're already a singer, this book gives you everything you need to know in order to exploit your talent further: looking after your voice and voice exercises, business advice and marketing and audience interaction

are all covered in this straightforward book.

**CODE B252 £12.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## SHOWCASE INTERNATIONAL MUSIC BOOK 1996

The music industry equivalent of *Yellow Pages*: over 500 pages crammed with all the latest information, including new phone and fax codes for record companies, recording studios, music publishers, equipment manufacturers, artist management,

producers, PA and lighting hire, and more. Plus a USA section.

**CODE B192 £32.00**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

## ALL YOU NEED TO KNOW ABOUT THE MUSIC BUSINESS

by Donald S. Passman

This book is a must: the author manages a portfolio of high profile clients and teaches music business law at the University of Southern California, and has produced a clear overview of the music business. He starts at the beginning of your career, with advice on choosing a manager, lawyer and agent, and moves through getting a record deal, songwriting and music publishing and finishes with details of copyright, mechanical royalties, songwriter deals, films and more. An exhaustive and entertaining read. 415 Pages.

**CODE B302 £19.99**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## THE BROADWAY QY10

by Peter L. Alexander with Bobby Maestas  
Charts and musical examples for recreating Broadway songs with your QY10 using only the internal patterns. Includes useful set-up information. 77 pages.

**CODE B263 £3.95**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

## TG33 QUICK OPERATIONS

by Bobby Maestas

Instant access to Yamaha's neat little Vector Synthesis sound module. Loads of examples, well illustrated. 115 pages.

**CODE B264 £8.95**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

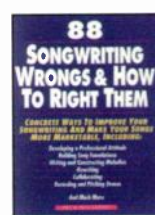

## YAMAHA SY55 GUIDE

by Bobby Maestas

A good helpful look at this arguably overlooked instrument; technicalities are explained in context of music throughout. 153 pages.

**CODE B268 £9.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## 88 SONGWRITING WRONGS & HOW TO RIGHT THEM

by Pat & Pete Luboff

This is a real workbook for songwriters, dealing with both the craft and art of songwriting. Song structure, rewriting, matching lyrics to music, collaboration, making the right demo, pitching the final result, and business

matters.

**CODE B254 £11.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## BEGINNING SONGWRITER'S ANSWER BOOK

by Paul Zollo

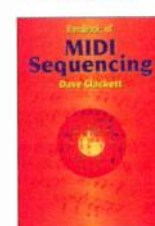

If you're just starting out as a songwriter or haven't progressed very far, perhaps you have questions about the art and business of songwriting that you can't find answers for. Chances are, they're covered in this book. Over 200 of the questions songwriters most often ask

answered in this book. There are 11 chapters, covering subjects such as lyrics, theory, song structure, collaboration, demos, publishing and the music business. Some answers - such as "What makes a professional-sounding demo?" are actually mini-articles - and an index allows you to target subjects without wading through the text. A friendly, informative read.

**CODE B253 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## MIDI INFORMATION

### HANDBOOK OF MIDI

**SEQUENCING**

by Dave Clackett  
Hands On MIDI! Software's Dave Clackett has boiled his knowledge into a collection of tips for getting the best out of hardware or software sequencers. Dave covers the hardware and software you need to get sequencing, and introduces the basics

of sequencing and notation, with particular emphasis placed on using General MIDI/GX/XG sound sources.

**CODE B333 £13.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

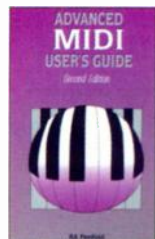

## MUSIC TECHNOLOGY REFERENCE BOOK

**by Peter Buick & Vic Lennard**  
Written by Peter Buick and Vic Lennard (author of SOS's Atari Notes column), this book offers information at your fingertips and is an indispensable reference source for the musician or sound professional in the recording, broadcast, live, video, computer, multimedia, post production and theatre industries. It includes comprehensive MIDI spec, General MIDI, MTC, MSC, and SysEx information. It also includes charts, check lists, useful hints, tips, and ideas, plus a glossary, list of contacts and a comprehensive indexed, it is also organised into convenient sections. 150 Pages.

**CODE B305 £12.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## ADVANCED MIDI USER'S GUIDE (2nd Edition)

**by R.A. Penfold**  
Most MIDI users do no more than scratch the surface of MIDI's potentialities. But dare to dig a bit deeper and you'll find a whole new world of creative possibilities. With the Advanced MIDI User's Guide, you'll learn how to optimise your MIDI

system to get the best results from your particular setup, and you'll find out how to use gadgets like switchers and mergers to enhance your system. If you want to incorporate a multitrack tape recorder into your MIDI system there's a section on synchronisers, SMPTE and MIDI time code, and retro freaks will learn how to hook up that dusty old analogue synth to their MIDI systems.

**CODE B152 £10.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## MAKING THE MOST OF MIDI

**By Paul Overaa**  
This is a MIDI book unlike any other. It explains the fundamentals of MIDI and MIDI sequencing for the beginner, and it goes much further, dealing with issues that will be of help to more established users. Advice on MIDI fault finding, help for musicians using sequencers with live bands, MIDI messages and MIDI files, plus programming material. So if you are a keen first time user or a MIDI veteran, there will be something in this book to interest you.

**CODE B321 £14.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## A BEGINNERS GUIDE TO MIDI

**by R.A. Penfold**

The title says it all: all aspects of MIDI are explained, and many common beginner's problems are discussed.

**CODE B287 £4.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## MIDI FOR THE PROFESSIONAL

**by Paul D. Lehrman and Tim Tully**  
Co-written by SOS contributor Paul D. Lehrman, this substantial, exhaustive work covers pretty well any aspect of MIDI that you could think of. As an overview of what MIDI is and does in 1994, this

259 page book couldn't be better.  
**CODE B227 £11.95**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

## MIDI SURVIVAL GUIDE

**by Vic Lennard**  
Whether you're a beginner or a seasoned pro, the 'MIDI Survival Guide' shows you the way. No maths, no MIDI theory - just practical advice on starting up, setting up and ending up with a working MIDI system. Contains over 40 cabling diagrams, and how to: connect synths, sound modules, sequencers, drum machines and multitracks; how to budget and buy secondhand; using switch, thru and merger boxes; transfer songs between different sequencers, get the best out of general MIDI, and understand MIDI implementation charts.

**CODE B196 £7.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## PRACTICAL MIDI HANDBOOK (3rd Edition)

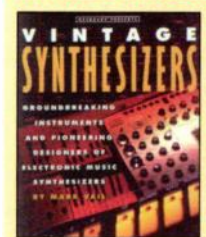

**by R.A. Penfold**

This book is completely updated, and features a section on General MIDI. It provides a "straightforward, non-mathematical introduction to MIDI", and features a full glossary of MIDI terms.

**CODE B273 £8.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## SYNTHESIZERS

### VINTAGE SYNTHESIZERS

**By Mark Vail**  
This well-illustrated, 300 page book covers synth history, interviews with designers and overviews of important instruments. Mark Vail's book could be the most entertaining

and useful synth book yet - check out the definitive history of the Minimoog, complete with pre-production designers' sketches. While not strictly a buyers' guide, there is a comprehensive section on sourcing, valuing, upgrading and servicing classic instruments.

**CODE B199 ONLY £16.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

## KEYFAX 2

**by Julian Colbeck**

1989 version of Keyfax provides individual summaries and specifications of the last of the great mono synths, digital pianos, and classic polysynths like the Roland JX10 and Prophet VS - forerunner of the SY22 and Wave Station. Early Keyboard and rack-mount samplers are covered in this indispensable guide. Still a great buy.

**CODE B096 ONLY £5.99**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## THE MUSEUM OF SYNTHESIZER TECHNOLOGY

**by Martin J. Newcomb**  
If you liked our feature on the opening of the Museum of Synthesizer Technology in October, but haven't got the time or the cash to visit in person, then the next best thing has to be the museum's guide book. This 118 book is printed on glossy

paper and contains full-colour pictures of a large selection of exhibits from the museum, together with some descriptive text and company backgrounders. The text reads a little like a fanzine, but the hardcore synth fanatic will want this book for the pictures. In these pages you will glimpse instruments that you are unlikely ever to experience in the flesh: an exceedingly large Roland System 100 modular set-up, an EMS Synthi 100, an ARP 2500, a large Emu modular and what must be the comprehensive collection of Moog equipment anywhere.

**CODE B291 £12.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

## KEYFAX 5

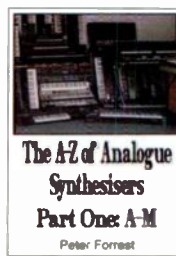

**by Julian Colbeck**

The latest instalment in the intrepid Keyfax series offers potted specifications and concise mini-overviews of digital pianos, home keyboards, General MIDI modules, stage organs and computer sound cards. Look out for company

backgrounders, contact details and cross-references to earlier Keyfaxes.

**CODE B231 £12.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## THE A-Z OF ANALOGUE SYNTHS PART ONE: A-M

**by Peter Forrest**

The author has aimed to make his book a complete rundown of all the major analogue synths and keyboards ever made, and on the evidence of this first volume, he seems to have succeeded. The book is useful and detailed, and shows evidence of

the massive amount of research and effort put in by Peter. He gives pocket company histories and detailed data on the instruments produced - but note that a few entries for a few particularly obscure instruments and companies are limited due to lack of data. The book also provides a comprehensive overview of the qualities of various instruments; charts and tables assess second hand values and maintenance levels necessary to keep a given instrument playable as well as such intangibles as sound quality, collectability and user interface. The A-Z of Analogue Part One, which is limited to 8000 copies worldwide, also features 96 colour pictures of classic instruments.

**CODE B294 £14.00**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## DRUM MACHINES

### DRUM PROGRAMMING — A Complete Guide to Program and Think Like a Drummer

**By Ray F. Badness**

Coming from a publisher that has a good range of real drum texts, we'd expect this book to be a little different. And it is: it gives plenty of insights into how real drummers approach their job, and there are plenty of example patterns to help translate these

ideas to a drum machine.

**CODE B235 £6.95**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

## DRUM MACHINE RHYTHM DICTIONARY

**By Sandy Feldstein**

For use with Roland drum machines or any grid-based pattern system. First 75 pages on programming huge range of rhythms in rock, latin, jazz and funk styles. Remainder analyses styles and patterns of world's top drummers - Phil Collins, Billy Cobham, Steve Gadd, Stewart Copeland, etc. Highly recommended.

**CODE B110 £16.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## RHYTHMICAL GROOVES & PATTERNS

**By Siegfried Hoffman**

Looks at how drummers compose rhythm patterns to add emotion, swing or groove. Contains examples for you to programme into your drum machine or sequencer.

**CODE B115 £11.50**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

## 260 DRUM MACHINE PATTERNS

**By Rene-Pierre Bardet**

Even more drum pattern styles (paso doble, charleston, etc)

**CODE B019 £7.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

## DRUM MACHINE PATTERNS

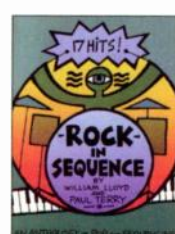

**By Rene-Pierre Bardet**

200 drum patterns and breaks presented in one-measure grid notation. Funk, R'n'B, ballad, pop, reggae, afro-cuban and many other styles.

**CODE B018 £7.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

## PLAYING TECHNIQUES

### ROCK IN SEQUENCE

**by William Lloyd & Paul Terry**

The latest book from the authors of Music In Sequence and Classics In Sequence is now available: Rock In Sequence offers detailed scores of 17 rock and pop hits from the '50s to the present day, alongside a collection of helpful

sequencing tips. Songs are included from the likes of the Beatles, Led Zeppelin, Abba, Eurythmics, Blur and more. Rock In Sequence 112 pages.

**CODE B320 £14.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## CLASSICS IN SEQUENCE

**by William Lloyd & Paul Terry**

Takes concepts behind Music In Sequence and applies them to all-time favourite classical music scores. Authors show how to make fresh, exciting interpretations of classic scores. Info on reverb and effects, interpreting scores, editing synth voices. Highly creative - an ideal workbook for the music classroom. Covers Medieval, Renaissance dance music, Bach's Toccata in D minor; Vivaldi, Purcell, Handel; opera excerpts from Rossini, Verdi, Borodin; Mozart, Schubert, Tchaikovsky, music from Carmina Burana; Debussy, Satie, Steve Reich's Piano Phase and more. Highly recommended.

**CODE B193 £12.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

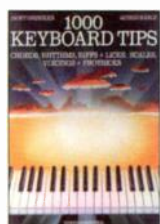

## MUSIC IN SEQUENCE

**by William Lloyd & Paul Terry**

Still one of our best-selling books. Easy to follow, practical guide to making real use of your sequencer, written by people who really understand music and how to create it using today's technology. This brilliant, unique book carries the SOS seal of approval.

**CODE B155 £12.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

## 1000 KEYBOARD TIPS

**by J. Dreksler & Q. Harle**

The hi-tech musician's guide to the basics of music, scales, chords and harmonies. 256 pages covering chord relationships, improvisation, suggested drum machine patterns, plus comprehensive chord table. Too good

to miss!

**CODE B113 £13.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

## SOLID GROOVES

**By Dieter Peteret & Herb Quick**

128 pages dealing with both bass and drums, the 'heart' of the pop group, together. Although written primarily for drummers and bass players, anyone interested in understanding rhythmical music in popular styles will find this book invaluable.

**CODE B172 £11.50**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

# SOS Book Shop

## COMPUTERS & MUSIC

### THE COMPLETE SOUND

#### BLASTER

by Howard Massey  
Explains in simple, non-technical terms: how to install the Sound Blaster hardware and software for use in both the DOS and Windows environments, the two sound processes used by the card, MIDI, the Sound Blaster's MIDI

capabilities, and the many different applications for the Sound Blaster, including the various software utilities provided with the card, and many of the third party support products that enhance its operation.

**CODE B313 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### MULTIMEDIA ON THE PC

by Ian R Sinclair  
If you want to know what multimedia is and what it can offer you, then this is the book for you. Much of the information is general enough for everybody, but as the title suggests, the book is aimed at PC users.

The book explains the installation and use of a CD ROM drive and a sound card and covers all key concepts behind multimedia. As an added incentive, if you buy this book, you can send away for a free copy of Picturebook, a multimedia authoring package.

**CODE B272 £11.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

### PC MUSIC HANDBOOK 2nd Edition

NEW

by Brian Heywood & Roger Evans  
This book will show you how to turn your PC into a creative music making machine. It explains how you can create very sophisticated music on your PC by running sequencing software, how to create your own sounds with a soundcard, how to use your PC as a sound librarian, or a sample editor, or even use it as a hard disk recorder or a sound sampler. All these things are possible with today's sophisticated PC.

The use of sound in multimedia applications is also covered, and there is a chapter on PC hardware with advice on which type of PC is best for your particular needs.

There's advice too on getting connected to the Internet, where you can contact other PC music aficionados world wide!

**CODE B332 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### COMPUTERS AND MUSIC

By R A Penfold  
2nd edition. Covers hardware and software applications. Excellent glossary of jargon, and now bang up to date.

**CODE B098 £8.95**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

### SEQUENCER SECRETS

Ian Waugh  
Ian's book aims to "go beyond the manual" in telling you how to get the best from your sequencer. The book features 29 hands-on sequencing projects and is suitable for use with all software sequencers. The book hopes to help you optimise your MIDI

system and use your sequencer to create all sorts of useful effects. A troubleshooting section helps you track down stuck notes, double notes and so on.

**CODE B299 £6.95**  
Postage: UK £1.50, Europe £4.50, R.O.W. £6.50

### MUSICAL APPLICATIONS OF THE ATARI ST's

By R A Penfold  
Includes a general introduction to MIDI, a handful of MIDI add-on circuits (Thru box, MIDI switcher and so on), plus a collection of programs, in Fast BASIC, that allows you to use the ST's internal sound generator and create little MIDI applications.

**CODE B280 £5.95**  
Postage: UK £1.50, Europe £4.95, R.O.W. £7.50

### MULTIMEDIA ON YOUR PC

by Francis Botto

A practical guide to multimedia specifically on the PC. Botto's book is once aimed at users, educators and developers, and comprehensively discusses the hardware required to take advantage of multimedia in a PC environment as well as the hardware and software necessary in a multimedia authoring situation. The book is provided with comprehensive appendices covering a glossary and comprehensive product and manufacturer lists.

**CODE B296 £10.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### LIVE SOUND

### SOUND REINFORCEMENT HANDBOOK

by Gary Davis and Ralph Jones

From recording to broadcast, fixed installations to touring, this 400 page reference covers live sound setups, equipment, techniques and jargon.

**CODE B105 £27.95**  
Postage: UK £3.95, Europe £7.50, R.O.W. £14.50

### CONCERT SOUND AND LIGHTING SYSTEMS

Written by John Vasey

How to set up and operate sound / lighting equipment for the performance of amplified music or any kind of touring production.

**CODE B247 £14.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

### LOUDSPEAKERS FOR MUSICIANS

**CODE B284 £3.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £4.50

### LIVE SOUND MIXING

by Duncan R Fry

This is a hands on, friendly introduction to all aspects of mixing live. It hails from Australia, and is an SOS Bookshop exclusive. The author is an experienced live sound engineer and has packed his book with loads of information, diagrams and hints

to take you from basic principles through to trouble shooting when things go wrong.

**CODE B256 £19.95**  
Postage: UK £1.95, Europe £5.50, R.O.W. £8.50

### INTRO TO LOUDSPEAKER & ENCLOSURE DESIGN

by V Capel

The book provides both useful background to speakers and enclosures in general, plus practical information on crossovers and full details on constructing the so-called "Kapellmeister" design of speakers.

**CODE B281 £2.95**  
Postage: UK £1.50, Europe £6.95, R.O.W. £9.50

### THE FOCAL GUIDE TO SAFETY IN LIVE PERFORMANCE

Edited by George Thompson

This book provides an authoritative look at safety matters for workers in the live entertainment industry. It is edited by the Standards Officer of PLASA (Professional Lighting and Sound Association), and provides good solid information in an easily digestible, well-illustrated form. Topics covered include audience and crowd control, fire safety precautions and engineering, electrical safety, laser safety, sound levels and noise control and much more.

**CODE B271 £19.95**  
Postage: UK £2.50, Europe £5.50, R.O.W. £8.50

### PUBLIC ADDRESS LOUDSPEAKER SYSTEMS

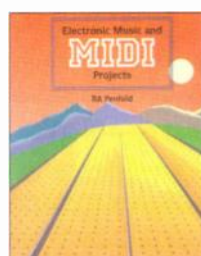

by V Capel

All aspects of PA speaker systems are covered in this book, including low-impedance matching, 100V systems, transmission lines and how to install inductive hearing aid loops. At the heart of the book is the Line-Source Ceiling Array, a system that is claimed to improve clarity, even coverage and reduce feedback. Full step-by-step construction and installation details are given.

**CODE B283 £3.95**  
Postage: UK £1.50, Europe £5.50, R.O.W. £8.50

## ELECTRONIC PROJECTS

### ELECTRONIC MUSIC AND MIDI

by R A Penfold  
Want a MIDI THRU box, patchbay or switcher? Well they're all here. And you don't need a degree in electronics either. All the projects are explained in detail, with full

instructions on assembly. So if you into MIDI and you want to expand your system without taking out a second mortgage, fear not. Here's the book to help you build up your MIDI system without laying out thousands on hardware.

**CODE B203 £9.95**  
Postage: UK £1.95, Europe £4.95, R.O.W. £7.50

### DIGITAL AUDIO PROJECTS

by R A Penfold

A two part book, with the first section looking at the basic principles involved including converting an audio signal into digital form and then converting it back to an analogue signal. The second part contains some circuits - for the moderately experienced only.

**CODE B279 £2.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £4.50

### HIGH POWER AUDIO AMPLIFIER CONSTRUCTION

By R A Penfold

Much useful background to amplifier design, speaker matching and more is included in the first couple of chapters, while the last section contains a selection of high power amp circuits plus suitable PSU circuits. Copper track patterns are also provided to allow you to make your own PCBs. While the circuits aren't too difficult as such, those with limited constructional experience should note that due to the high supply currents and voltages involved, even minor mistakes could be extremely dangerous.

**CODE B282 £3.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

### ELECTRONIC PROJECTS FOR MUSICIANS

**CODE B068 £10.95**  
Postage: UK £2.50, Europe £6.95, R.O.W. £9.50

### MIDI PROJECTS

by R A Penfold

A comprehensive collection of simple MIDI projects, including CV and gate converters and a MIDI Thru box. A lot of the book is taken up with interface various obsolete computers to MIDI (Spectrum, CPC464, Commodore 64, BBC B, ZX81 and so on), but the general information is basically sound. Could prove a boon to musicians who are really broke!

**CODE B278 £2.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

### PRACTICAL ELECTRONIC MUSIC EFFECTS UNITS

by R A Penfold

Another selection of musical effects, with more of a guitar angle. Projects include distortion, sustain, parametric EQ, graphic EQ, treble and bass booster, envelope modifier, wah wah effects and more.

**CODE B290 £4.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

### ELECTRONIC PROJECTS FOR VIDEO ENTHUSIASTS

by R A Penfold

Projects for the video and camcorder user, including dynamic noise limiter, automatic audio fader, video faders, video wipe and video crispener.

**CODE B288 £4.95**  
Postage: UK £1.50, Europe £6.95, R.O.W. £9.50

### PRACTICAL ELECTRONIC MUSIC PROJECTS

**CODE B289 £4.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

### ELECTRONIC MUSIC LEARNING PROJECTS

**CODE B286 £4.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

NEW

## VOICE TRAINING

NEW

### VOCAL WORKOUT Video

by Sam West  
Singers of varying abilities will find this video a great aid in assisting their vocal efforts. It begins by explaining the principles of voice production. Breath control exercises plus general vocal techniques are all explained and visually demonstrated. All the exercises are written out in an accompanying booklet, with piano accompaniment.

**VIDEO CODE V067 £22.95**  
Running time approx 59 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### VOICE BUILDING Cassette/CD

by Sam West

Although geared towards singers of varying abilities, voices and styles, the contents of this recording are often challenging even to the professional singer! The video (code V067) goes into more technical detail, whereas the CD or Cassette concentrate on more intensive practising. First of all the exercises are sung, in various keys and then with musical accompaniment and melody line, so you can concentrate more on your voice while practising (karaoke style).

Vocal exercises can be boring, but this studio recording has been produced and presented to a very high standard, with interesting musical accompaniments to the exercises.

**CASSETTE CODE MC001 £6.95**  
**CD CODE CD037 £9.95**  
Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## ROLAND MS-1 VIDEO

### MANUAL

This video manual has been produced by Roland Corporation USA, and has been designed to provide the user with tuition, and examples of how to apply your new found knowledge in various applications. There is also a comprehensive "Tips & Tricks" section to give you that extra edge!

**CODE V047 £24.99**  
Running time: 50 minutes (approx)  
Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND GP100

Presented once again by Nick Cooper, this video manual for the Roland GP100 covers every aspect in detail with many practical demonstrations. Everything you need to know is covered; topics include: an explanation of COSM, layout, typical setups, initialisation, global settings, use of the tuner, selection and editing of patches, and use of the FX loop and harmoniser.

**CODE V062 £19.99**  
Running Time: 45 Minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND TDE-7K DRUM SYSTEM

Roland's TDE-7K Compact Drum System Comprises the TD-7 Percussion Sound Module, MDY-7 Cymbal Pad Holder, FD-7 Hi-Hat Control Pedal, MDS-7 Drum System Stand, PD-7 Drum Pads & KD-7 Kick trigger. You may have a different configuration to what is shown in the video,

but no matter!, Roland Product Specialist Gary O'Toole shows you how the complete kit is put together. Gary concentrates on the TD-7 in detail, showing how the parameters are set up, and giving demonstrations of how the sounds are derived and altered. Good use is made of the visual side in this video with multi-camera shots, a 'birds eye' view of the entire kit shows Gary's playing abilities to the full. As you would expect from a production aided by Roland UK & USA, this video shows you everything you need to know.

**CODE V045 £19.99**  
Running time: 65 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## YAMAHA PSR6000 ELECTRONIC KEYBOARD VIDEO MANUAL

Yamaha's PSR6000 is a home keyboard with a difference, and offers many professional features plus excellent sound quality. Tim Walter starts at the beginning and makes the instrument look easy and fun. His enthusiasm is catching, and, yes, the PSR6000 is a very capable instrument. The tape runs to 75

minutes, which makes for excellent value.  
**CODE V029 £19.99**  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND GR-1 GUITAR SYNTH

These two video manuals have been produced to help the user get the most out of Roland's sophisticated GR-1 guitar synth, the first covering all the basics from mounting the pickup and getting tuned up to selecting sounds and using the on-board sequencer. Each step is patiently explained and demonstrated by Roland's guitar synth specialist, Jay Stapley.

The Advanced tape takes the mystery out of sound editing, custom tuning, advanced sequencer applications, external sequencer hookups, using other MIDI sound modules, indeed virtually everything the GR-1 is capable of doing. If you own a GR-1 or are thinking of buying one, do yourself a favour and order these indispensable videos.

**CODE V014 ONLY £29.99 FOR 2 VIDEOS**  
Total Running time: 4 hours. Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## STEINBERG CUBASE

This manual is presented by Chris West, Steinberg expert. It's very much a practical, 'get up and running' video, showing the novice user exactly how to install and begin using Cubase, whether they're running the program on an ST, Mac or PC computer — there's even a basic background on using the computers themselves! All of Cubase's controls are shown, explained and demonstrated in depth. Once you're familiar with the basic controls, Chris takes you slowly through recording your first session, followed by overviews of the various edit screens. It's rather like having an expert tutorial that you can run again and again in the comfort of your home, until you can use Cubase like a true pro.

Topics covered include; the main screen, customising names and outputs, copying and pasting between arrangements, MIDI filter, cycle mode recording, the tool box, all edit screens.  
**CODE V011 £29.99**  
Run time: 1 hour 30 minutes Format VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## KORG AX30G TONEWORKS

### VIDEO MANUAL

The Toneworks series of guitar processors from Korg gets a real work out on this 55 minute tape. Korg's guitar demonstrator Steve Fairclough whizzes through the G1, G2, G3 and the flagship AX30G and provides clear explanations of how each unit works. And to put the units into context, there's lots of footage of Steve showing off the sonic capabilities of each processor (not to mention his prowess as a guitarist).

**ORDER CODE V028 £19.99**  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## BAND IN A BOX 6.0 BASICS FOR WINDOWS

Designed to get the new user, and those less familiar with Band In A Box, up and running quickly and easily. Experienced users can also benefit from the in-depth tutorials which cover Basic MIDI, MIDI Connections, Custom Patch Maps, Screen Layout, Juke Box, Printing, Recording & Editing Melodies, Importing & Editing Styles, Drum Editing, Masks, Assigning Instruments.

**CODE V031 £34.99**  
Running time: 88 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## 3 CAKEWALK 3.0 VIDEO MANUALS

### CAKEWALK 3.0

#### For Windows

A collection of three videos on the Cakewalk Professional system for Windows, covering just about everything you would need to know to become totally proficient with Cakewalk. If you own Cakewalk Home Studio — no problem! The videos cover everything Cakewalk Home Studio is capable of and more...

### BASICS

Basic MIDI, Step & Realtime Recording, Playback Features (on the fly), Editing Features, Graphic Views, The Inspector Menu, Menu Overview, The Control Bar.

**CODE V032 £34.99**  
Running time: 120 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### BEYOND BASICS

This video explains Customising Cakewalk, Extract Merge, more graphic Views, Advanced Editing, the Settings Menu, Synchronisation, Embedding Wav Files and more...

**CODE V033 £34.99**  
Running time: 113 mins  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### CAL

Programming Fundamentals, Creating a Program, Creating a CAL Program, How to use CAL Programs, CAL Examples, Automating Tasks, Tips on working with CAL, Creating Computer Music, Troubleshooting.

**CODE V034 £34.99**  
Running time: 90 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## JUST ARRIVED!

### MACKIE 8-BUS

### VIDEO MANUAL

Almost 60 minutes of fun-packed, detailed explanation of the various features of Mackie's popular range of 8 buss mixing consoles (16•8, 24•8, 32•8, 24•E) and how best to utilise them. Onscreen numbers allow quick searching to desired topics.

**CODE V068 £9.95**  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND G800

Presented by Roland UK's product demonstrator Sara Keybould, this video covers every essential feature and function of the Roland G800. Sara provides the user with a wealth of knowledge on this sophisticated instrument, with recourse to many practical examples and close-up shots of the LCD screen. The video was produced

in association with Roland UK & USA and Roland UK to ensure that the content is accurate and informative.

**CODE V060 £19.99**  
Running Time 92 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND GR09

Presented by Roland UK product demonstrator Nick Cooper, this application-based tutorial video for the Roland GR09, produced in association with Roland USA, covers every function completely. Covered topics include the GK2A Synthesizer Driver, pickup sensitivity, use of the tuner, what a patch consists of, use of the pedals, patch edit 1 & 2 (including layering and detune, chromatic function, reverb & chorus, edit target, pitch shift), the use of external midi devices, saving to an external sequencer & more.

**CODE V061 £19.99**  
Running Time 57 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND JV-1080

### VIDEO MANUAL

Roland's amazing JV-1080 synthesizer module is covered in detail in this informative video. Presented by Tim Walter the video guides you through the basics, and leads you painlessly onto the advanced features. The video even shows you how to

fit the expansion boards & gives demonstrations of some of the wonderful sounds they contain. Once again this video has been produced in association with Roland UK & USA to ensure that everything it contains is accurate, and relevant to the new and more experienced users alike.

**CODE V046 £19.99**  
Running time: 80 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND XP-50

This XP-50 video owners manual is produced by Roland Corporation USA and covers all the major features of the instrument in detail. This is an application based video that provides many examples of how your new found knowledge can be applied. Just a few of the 30 separate topic areas covered are: Effects, Chooing Sounds, Loading a Song, Loop Recording, Copying a Track to Pattern, Making an RPS Set, Track Editing, Multitrack Recording, Patch Editing, Creating Splits & Layers in a Patch.

**CODE V063 £24.99**  
Running time: 63 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## WINDOWS 95: WHAT WILL YOU LEARN TODAY?

This video is aimed at new Windows 95 users and goes from basic to in-depth advice, covering topics such as minimum hardware requirements and common problems, and providing useful tips and tuition. The video also features Labyrinth's Video Index System to help the user locate particular topics, by means of on-screen timecode and an index booklet.

The video is written by computer journalist Ian Waugh.

**CODE V065 £19.99**

Running time: 74 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## EVERYTHING YOU

### WANTED TO KNOW ABOUT PCs BUT WERE AFRAID TO ASK!

Written by Ian Waugh

This video has been produced in response to the number of potential PC buyers and existing new users who do not fully understand the jargon

and basic operating procedures associated with PCs.

It covers everything from 'What is a PC?' to the 'Internet'. There is even a Windows tutorial, and a DOS basics section. (Over 120 different sections.)

It includes a booklet listing all the main and sub sections along with their respective TimeCode number for easy access when used as a reference tool.

**CODE V048 £19.99**  
Running time 91 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## KORG PROPHECY VIDEO MANUAL

Written by Phil MacDonald

Korg's new Prophecy Synthesizer now has its own video manual!

The video covers all the major features over 6 sections, with lots of examples of the amazing effects that are available using the 'log' and 'mod' wheels. The video's visual interest is maintained by the extensive use of Chroma Key and multi camera effects. This is a video that is ideal for new owners, and those who want to know more about the Prophecy before they make a purchase.

**CODE V049 £14.99**  
Running time: 36 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## MACKIE ULTRA MIX VIDEO GUIDE

This highly informative video for the Ultramix automation system, clearly demonstrates how to set up and use Ultramix's many time-saving features to get the best from your system. The cost of the video may be redeemed against the purchase price of an Ultramix system, making the video a good way to try before you buy!

**CODE V066 £9.99**  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## BOSS ME-8

Nick Cooper (Roland UK product demonstrator) explains every single feature and function of the ME-8 in detail. The unit is clearly explained in a logical sequence with examples given of how the functions effect the available sounds, a perfect aid to new users of the ME-8 and those who would like to get that little bit more from it. Just some of the main points covered are: What is a Patch?, Selecting a Patch, Copying a Patch, Edit Mode, Using The Effects, Control Effects, The Tempo Function, Manual Mode, and lots more.

**CODE V064 £19.99**  
Running time: 72 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

# SOS Videos

## EMAGIC NOTATOR VIDEO TRAINING MANUAL

This video manual is detailed and helpful, and is presented in a most friendly and approachable manner by session musician Tim Walter, whose tone throughout the video encourages and inspires confidence. If you are new to Notator and are still in awe of its power, this is the video to bring you down to earth. An introduction and 28 tutorials take the user from the absolute basics - including plugging in the dongle - to working with Unitor and SMPTE, and synchronising to video. As well as actual recording of MIDI data and sequencing, comprehensive coverage is given to using the score layout and printing facilities that are so much a part of Notator. Topics covered include; sequencing page, score editing, lyrics and text, graphic arranger mode, hyper edit, the printer page, using the part box.

**CODE V012 ONLY £19.99**  
Running time: 2 hours 20 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## KORG X3

This video offers an easy way in to this powerful workstation. It starts from absolute basics, including audio connections and volume levels, and the clear and helpful script covers all basic facilities of the X3. The video features a sophisticated use of picture in picture, with the X3's display cut into the main image to show you clearly what Phil is actually doing, and main points are reinforced with on screen text and graphics. The main section headings are:

- X3 Audio Connections • Getting Around the X3
- Factory Disk • Disk Drive Modes
- Selecting Sounds • Global Modes • Sequencer Mode • Quick Sound Editing
- Playing MIDI Files on the X3 • Using the X3 with an external sequencer

Note that these are loose headings, with each section also containing information on connected subjects in varying amounts of detail. A lot of ground is covered, and we can recommend the tape to any X3 owner.

**CODE V018 £19.99**  
Running time: 55 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## HOW TO GET A RECORD DEAL

The facts you need from the people who know. How To Get A Record Deal contains vital information and insight that you will not find anywhere else, from artists and executives who have made it and know what it takes.

On this video music industry pros give you the straight facts on how to break into this extremely competitive business. Because sometimes the difference between success and failure is information.

Presented by the National Academy Of Songwriters

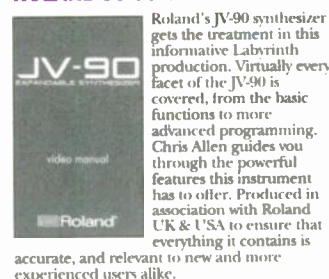

**CODE V003 £14.95**  
Running time: 1 hour 7 minutes  
Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## BOSS DR-5 DRUM MACHINE

Presented by Nick Cooper (Roland UK Product Specialist) this video covers all the functions of the DR-5 in a clear and concise manner. Produced in association with Roland UK & USA. By using the information gathered from Roland 'helplines', particular attention has been paid to the areas that many users find most difficulty in. This makes it of interest to beginners and experienced users alike. Nick imparts the information with ease and a professional manner, making it enjoyable and entertaining.

**CODE V043 £19.99**  
Running time: 57 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ROLAND JV-90 SYNTH

**CODE V044 £19.99**  
Running time: 70 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ANALOGUE HEAVEN

Remember our feature on the opening day of the Museum of Synthesizer Technology which we ran back in October 1994? Wish you'd actually been able to attend? Well, now you can have the next best thing: the museum has released a fascinating 50 minute promo video that features footage shot on the day as well as a lightning tour of the

facility. The program is hosted by SOS contributor Julian Colbeck. The tape opens with synth pioneer Bob Moog making the inaugural speech and officially opening the museum, followed by a nostalgic run through one of his old modular systems. Analogue Heaven makes diverting viewing for anyone interested in vintage synths, represents good value, and offers the perfect companion to the Museum's guide book, also available from SOS Bookshop.

**CODE V026 £12.95**  
Running time: 50 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## MASTER TRACKS PRO 4/5

### BASICS

#### FOR WINDOWS & MACINTOSH

All the basic functions of Master Tracks, from installing the software to advanced editing. Everything you need to know to get you started and beyond in easy to understand step-by-step instructions.

Basic MIDI, Track Editor Window, MIDI Settings, Screen Layout, Conductor Window, Transport Controls Window, Inserting Measures, Step & Real Time Recording, Event List Editor, Piano Roll Editor, Quantising, and much more.

Running time: 57 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## KORG X5 SYNTH

Korg's new X5 synthesizer, reviewed in SOS' January 1995 issue, now has its own video manual. Presented by Tim Walter in an entertaining and lighthearted manner, and explains all basic aspects of Korg's highly affordable instrument in very clear terms. If you're in any way daunted by your new purchase, or want to get a feel for the instrument before laying out your cash, this is the video for you.

**CODE V027 £19.99**  
Running time: 55 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## YAMAHA QY20 MUSIC SEQUENCER VIDEO MANUAL

by Tom Robinson  
Yamaha's popular QY20 portable sequencer/ sound source is a deceptively simple device to use; if you think you might like some insight into getting that little bit extra out of the device, then look no further. Produced in co-operation with Yamaha, the video

features mobile musician Tom Robinson showing you how to get the best from this portable marvel. Tom, who has used the QY20 extensively as a writing tool on the road, says: "I never leave home without it".

**CODE V016 £19.99**  
Running time: 90 minutes Format: VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## HOW TO GET THE MOST OUT OF HOME RECORDING

**3 TOP CLASS VIDEOS**

A superbly presented set of videos which no home recordist should be without. Have you got your set yet?!

### LEVEL ONE

This well presented video explains how to set up and operate a simple cassette-based multitrack home studio. It clarifies all the basic terminology and demonstrates the recording of a song from beginning to end, covering how to record

guitars, keyboards, vocals and drum machines; which microphones to choose; how to patch in effects units and use them well; what makes a good mix; plus what to master on to and why. Full of professional tips and clear examples, this superb video offers the musician with no recording experience a fast route to successful operation of a simple home studio.

**CODE V005 £24.95**  
Running time: 1 hour 10 minutes  
Format: VHS (PAL) HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### LEVEL TWO

This is, in our opinion, the best ever guide to the equipment and skills needed to produce high quality results from a home studio. Full of clear examples and graphic information, the video majors on effects and how to use them well. It also covers the do's and don'ts of track bouncing;

microphones and mic techniques for different applications; getting the most out of multi effects units; plus an analysis of guitar effects with top session guitarist Milton MacDonald and an enlightening interview with ace producer Alan Parsons. Writer/presenter Julian Colbeck packs the programme with professional tips, allowing musicians of all kinds to get the most out of their home studio.

**CODE V006 £24.95**  
Running time: 1 hour 45 minutes  
Format: VHS (PAL) HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

### LEVEL THREE

This video is packed with information and professional tips on advanced MIDI applications in the home studio, including interfacing with sequencers, which sync code is best for which application and why. Hit producer Martyn Phillips (Erasure,

London Beat) discusses modern recording techniques, and top programmer Paul Wiffen examines the opportunities and benefits offered by hard disk recording. It offers practical advice on sampling - how to save time and tracks; plus professional tips on advanced arranging and mixing techniques, including spectrum mixing.

**CODE V007 £24.95**  
Running time: 1 hour 30 minutes  
Format: VHS (PAL) HiFi Stereo  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## GETTING THE MOST OUT

### OF THE KORG M1

Written and presented by Julian Colbeck

The Korg M1 is a classic instrument. The range and quality of its sounds has made it one of the most successful synthesizers of all time. But because the M1 is so immediate, it's too easy just to scratch the surface, leaving many of its exciting capabilities undiscovered. This highly informative video enables M1 owners to unleash the full creative potential of this enormously powerful workstation. With plenty of musical examples, tips and inside information, the video offers clear, concise explanations of the instruments features and operating procedures, helping you to greatly expand your dexterity and creativity across the whole range of this world-beating instrument.

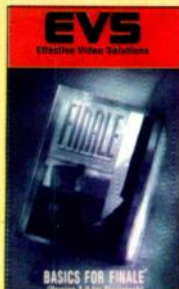

Comes with a FREE exclusive custom library of fabulous new M1 sounds on Atari format floppy disk (100 Programs, 100 Combinations) created by ABWH/Yes programmer Chris Macleod.

## THE EMAGIC LOGIC

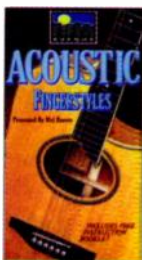

### TUTORIAL VIDEO VOLUME 1

Produced by Emagic themselves, this video once again sees Tim Walter (featured on the excellent Notator video) in the tutor's chair. There are plans for a series of videos which become ever more detailed and informative, but for now Volume 1 takes you through the first steps of getting the software up and running, and covers virtually all the controls you'll need. This video is valid for all versions of Logic, whether being run on an ST, Mac or PC. Presentation is rather intriguing, with a mobile camera that helps to hold the interest more than the average training video and some interesting graphics that aid comprehension and help to quickly find specific tutorials and bits inside tutorials. Contents as follows:

- Tutorial 1: The Arrange window and basic sequencing
- Tutorial 2: Playback parameters & Toolbox
- Tutorial 3: Controlling MIDI data flow
- Tutorial 4: Manipulating sequence data
- Tutorial 5: Moving around in Logic
- Tutorial 6: Windows and key commands
- Tutorial 7: More sequencing
- Tutorial 8: Score
- Tutorial 9: Looking at the Event List
- Tutorial 10: Editing the Event List
- Tutorial 11: Using the Environment
- Tutorial 12: The best of the rest (HyperEdit, Matrix Editor, Cycle Mode and more).

**CODE V023 £29.99**

## ACOUSTIC FINGERSTYLES

*Presented by Mel Reeves*  
In this video there are 5 major instrumental studies to work through including country, classical and blues. Each style is broken down into small sections allowing you to learn more quickly and efficiently. Each piece is demanding, but great fun to play. The final section looks at styles and techniques used by players such as R.E.M., and provides an insight into creating new and interesting fingerstyles of your own.

**CODE V059 £12.99**  
Running time approx 90 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ACOUSTIC BLUES GUITAR

*Presented by Mel Reeves*  
Whether you can already play fingerstyle guitar, or are simply familiar with basic chords, this programme will show you all of the necessary techniques to play great blues guitar. All of the technical aspects are explained in the clearest possible way before getting down to the real business of learning 5 real blues that are great to listen to and terrific to play.

**CODE V058 £12.99**  
Running time approx 63 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## PLAY KEYBOARDS NOW! MELODIES

*Presented by Mel Reeves*  
This programme will not only teach you note reading, rhythm, rests, ties and how to move up and down the keyboard with ease, but will also teach you 6 complete melodies familiar to lovers of rock, pop and classical music. In addition, there is a further look at improvising, making use of melody and scales combined.

Clear computer graphics and the booklet enclosed will mean you won't miss a thing.

**CODE V057 £12.99**  
Running time approx 55 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## YAMAHA QY300 VIDEO MANUAL

Complete overview of Yamaha's new QY300 sequencer/sound source. Presented by Joe Ortiz of Heavenly Music, the video offers a hands-on tutorial on what is potentially a very powerful piece of hardware. Starts off with a walkthrough of QY300 features, followed by a clear, step-by-step tutorial that introduces you to creating your own sequences and styles. As a bonus, the video comes with a free disk loaded with 6 new QY300 styles and 6 demo sequences.

**CODE V025 £19.99**  
Running time 69 minutes Format VHS (PAL)  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## ENCORE 3.0 FOR WINDOWS

The basics of Encore for Windows is covered, with in-depth tuition over 83 minutes. Everything you need to get up & running is here. Basic MIDI, Score Layout, Accidentals, Key Signatures, Note Editing, Step Time Entry, Adding Staves, Click Setup, Record Setup, Linear View, Quantisation, Editing, Printing, Staff Position & Spacing, and much more...

**CODE V036 £34.99**  
Running time 83 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

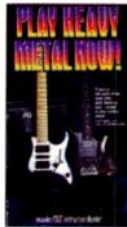

## CUBASE 2.6 BASICS FOR WINDOWS

Practical guide to Cubase for Windows covers all the basic functions, ideal for the new user and those who need added insight into this complex system.

Contents: Basic MIDI, Value Selection, Arrangements, Arrange Window, Transport Functions, The Inspector, The Toolbox, Quantisation, Grid Editor, Step Recording, and much more.

**CODE V035 £34.99**  
Running time 85 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## PLAY HEAVY METAL NOW!

A concise, easy to follow video guide to real heavy metal playing for guitarists of all levels. A guide to hard rock/heavy metal techniques for guitarists of all levels. The programme covers RHYTHM, SOLOING, and TECHNIQUE. All of the techniques, solos, etc are clearly demonstrated. No need to read music. Free booklet contains

tab, chord and scale diagrams.  
**CODE V052 £12.99**  
Running time approx 65 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## START HOME RECORDING NOW!

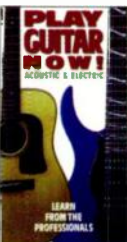

This is the ideal volume one guide to the use of home recording equipment. From the set up of basic 4-track cassette machines to sub-mixing Mel Reeves uses straight-forward language to talk to fellow musicians about the methods used to get the sounds in their

heads onto tape. Includes free instruction booklet.

**CODE V055 £12.99**  
Running time approx 55 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## PLAY GUITAR NOW!

### ACOUSTIC & ELECTRIC

An easy-to-follow video to take you from the basics to a full rock solo.

The programme covers TUNING, CHORDS, FINGERSTYLE, 12 BAR BLUES, BARRE CHORDS and ROCK SOLOING for both electric and

acoustic guitars. Includes free chord/tab booklet.

It is not necessary to be able to read music to learn from this video.

**CODE V053 £12.99**  
Running time approx 51 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## PLAY BLUES NOW!

A complete guide to blues guitar playing that shows a variety of blues rhythm and soloing styles — for both beginners and advanced players alike.

Learn the blues style of Eric Clapton, Stevie Ray Vaughan, Peter Green, etc. The programme not only covers the usual blues shuffles and scales but gives you the resources and techniques to create professional blues parts and solos in a wide variety of blues styles.

**CODE V051 £12.99**  
Running time approx 50 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## PLAY KEYBOARDS NOW!

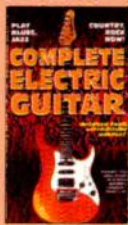

*Presented by Mel Reeves*  
An up-to-date video/booklet that gets to the heart of modern keyboard playing with no need to read music!

All you need to be able to create pop, rock and even jazz chord accompaniments using major, minor, seventh, sus 4th and added 9th chords. Learn arpeggios, random arpeggios, chord 'splitting', crushed tones, boogie blues, inversions and much more.

Free instruction booklet and stickers included.

**CODE V054 £12.99**  
Running time approx 60 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## COMPLETE ELECTRIC GUITAR

*Presented by Mel Reeves*  
Learn how to create solos and rhythm parts in any style! The programme covers ROCK 'n' ROLL, BLUES, JAZZ, COUNTRY, ROCK and FUSION and much, much more. Plus the clearest possible guide to chord and scale construction, tonal centres and working out parts for yourself. Includes free construction booklet.

**CODE V050 £12.99**  
Running time approx 65 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

## COMPLETE ACOUSTIC GUITAR

*Presented by Mel Reeves*  
Whether you only know a few chords, or are already proficient, this easy-to-follow programme will show you all of the main guitar styles, as performed on the acoustic guitar. As well as learning tips and 'tricks of the trade' Mel Reeves will show you 6 great instruments, step-by-step and take your playing to new heights. Plus, open tuning, the capo, high-string guitar, reading music and more!

Styles include: Guns 'n' Roses, Bon Jovi, Hendrix Blues, Mississippi Blues, Django Style Jazz, Nuits En Moscow, Classical, Romance, Carter Style, Buffalo Gals and Bottleneck/Slide Style.

**CODE V056 £12.99**  
Running time approx 78 minutes  
Postage: UK £1.75, Europe £4.95, R.O.W. £6.95

# SOS CDs

## SOUND CHECK CD II

*Recorded & compiled by Stephen Court & Alan Parsons*  
Sound Check has become an international reference for producers, musicians and sound designers. The new version features all the test

signals and reference recordings (made at Abbey Road Studios) of the original — including pink noise bands, 1/3rd octave bands, sine and square wave spot frequencies, sweep tones and SMPTE timecode utility tracks — plus some new operatic vocal and music items, to a total of 99 tracks. The major innovation offered by Sound Check II is that it is available in a special package that features a built in mic and spectrum analyser, for use with the CD's 1/3rd octave tracks. The package is thus a compact and convenient method of measuring frequency response, whenever and wherever you may need to.

**CODE CD038 £28.99**  
**SOUND CHECK II**  
**CODE CD038S £73.50**  
**PLUS SPECTRUM**

Postage: UK £1.50, Europe £3.95, R.O.W. £5.50

## SYNTHESIZER TECHNOLOGY

### ASTRAL AMBIENCE CD

Hours of research and endeavour in the raw timbral archives of the largest collection of analogue synthesizer

systems in the world have resulted in the release of the first in a long awaited series of creative resource CDs.

The vast psycho-acoustic spectrum of the Museum of Synthesizer Technology has now been opened up to the music-making populace — Over 1500 samples.

# IT'S HERE!

THE BOOK YOU'VE ALL BEEN ASKING FOR...

## Recording & Production Techniques

BY PAUL WHITE

Aimed at the recording musician, this highly informative book from Paul White demystifies the techniques used by professionals in the recording of contemporary music.

In logical order, it takes you through the planning stages of a recording session, explains how to gain the best performance from artists, how to produce the best possible mix, and reveals how to make full creative use of all manner of studio effects and signal processors.

Packed with hints, tips and meaningful explanatory diagrams, the techniques can be utilised both in the home and commercial studio.

The book concludes with an invaluable section on master tape formats and an overview of the various processes involved in duplicating CDs, cassettes and vinyl records.

## Roland

STANDARD MIDI FILES

We have a large selection of genuine Roland midi files albums in stock.  
Programmed by Roland, this collection is essential for Roland GS users.  
Over 20 albums are currently available, ranging from Classical thru Jazz to  
Rock and Reggae with lots more categories in between.

- Price: £11.99 Per Album
- Free Catalogue available featuring the entire range. Phone for your copy.

### POWER BYTES

#### NOW AVAILABLE IN KG FORMAT

Power Bytes is a song construction package which offers  
the user a wide range of usable Drum, Bass, Guitar and  
other instrument patterns, including Wah guitar licks and  
Bass riffs in various styles, this product is designed to  
help you compose your own song sequences or Midi  
Files. Get an instant idea of what your compositions will  
sound like without having to spend hours sequencing the  
parts yourself. Power Bytes has recently received  
excellent reviews in the Music Press.

PRICE: £14.99 + P&P

### STYLES FOR KORG

New I-series style disks available.  
Programmed by the team at Labyrinth.  
These currently available are:

- Pop Styles 1
- Big Band Volume 1
- Big Band Volume 2
- Dance/Rave Styles 1
- Rock Styles 1
- "E.P. Ballads" Vol 1

£7.95 per style disk!

### A NEW CONCEPT IN STANDARD MIDI FILES

#### SMF's with Encoded Lyrics

The latest addition to our product catalogue is a collection of SMF  
compositions containing encoded lyrics which when used with the correct  
equipment will be displayed visually in synchronization with the  
music. This collection will be particularly interesting to Roland G-800  
and Roland E-96 users as the lyrics will display on the LCD screen of  
they keyboard. In addition, software programs such as the Tune  
1000 "Soft Concert" or Cakewalk Professional packages will also  
display lyrics on your computer screen in this fashion. Apart from the  
Motown & Soul Greats, the remaining Album titles shown above are  
available with encoded lyrics at the price of £14.95 Per Album

### STYLES FOR Roland

Labyrinth are now able to offer a range of  
new style disks for the Roland E-86 and  
G-800 keyboards. There are currently 4  
disks available for each keyboard with  
new styles ranging from Country through  
to Waltzes and everything in between.  
Each disk is priced at £14.99  
Please phone for your FREE LIST of what  
is available.

### Labyrinth midi file Albums

#### NEW ADDITIONS

#### NOW AVAILABLE WITH ENCODED LYRICS (SEE BELOW)

We have increased our collection to 7 compilation albums. There are lots  
more on the way. Stay tuned!

- Madness Album ♦ Roxette Album ♦ Beatles Hits Volume 1
- Beatles Hits Volume 2 ♦ Queen Greatest Hits Album
- Cliff Richard Album ♦ Motown & Soul Greats

All above are priced at just £11.99 each

### FREE INFO PACK

**NEW...Twiddly Bits Volume Seven - Programmers Toolkit - Techno & Beyond...NEW**

This disk contains essential data for the creation of synth based dance music. Dazzling selections of Basslines, Drumbeats, Arpeggios, Riffs and NRPN Templates for the use with GS/XG synths that will give you a stunning range of analogue effects - Resonance / Cut Off filter sweeps and amazing Riffs etc. If you own a GS/XG synth and write dance music...this disk is awesome.

**Only ...£19.95**

<p><b>Volume One-General Instruments</b> £19.95 Brass, Bass, Drums, Clav, Strings, Woodwind and more. "If you only buy one MIDI File disk, buy this" The Mix</p> <p><b>Volume Two-Gate Effects</b> £12.95 A must for dance producers. "I was basically amazed by not only the simplicity of operation but also by the transformation of a mundane synth sound" The Mix</p> <p><b>Volume Three-Elec &amp; Ac Guitars</b> £19.95 The big one. "Stunning, pushing the fluency of MIDI to a new high" FM 93% Platinum Award</p> <p><b>Volume Four-Drums &amp; Percussion</b> £19.95 Over 750 "Bits" in almost every style. "If you use drum patterns, buy this" Keyboard Player</p>	<p><b>Volume Five-Country</b> £19.95 "So good are the examples on this disk that it's hard to believe the performance is coming out of a GM module" Sound On Sound</p> <p><b>Volume Six-The Funk</b> £19.95 All you need for credible funk tracks, Rhodes, Clavi, Bass, Guitar, Brass &amp; Drum from the hippest and hottest players around</p> <p><b>Master Series-John "Rabbit" Bundrick</b> £24.95 Country and Rock Piano "Imbued with a special quality that only comes from years of playing experience. A delightful collection" Keyboard Review</p> <p><b>Twiddly Beats-Brazilian Rhythms</b> £19.95 Recorded in Rio by Alfredo Dias Gomes. The real thing!</p>

Bob Moog says

"THEREMINS are  
BACK" ..from £269!!

At last... an affordable THEREMIN!

35 Happy UK & European customers so far!!!!!!

Kit version (model ETK) ...£269

Assembled / Calibrated (model ETLB) ...£299

Assembled + Turbo PCB (for midi) ...£329

Phone for MIDI / CV / Theremin details...

Is £269 still too expensive? Why not try the  
POCKETWAVE theremin first?...a basic  
self-contained instrument for £99!!...£69  
allowance if returned within 4 weeks against  
an Etherwave...what have you got to lose?

### SECOND GEAR

2nd Floor Business Centre

Forest Mills,

Highurst Street

NOTTINGHAM NG7 3QA

0115-978-0582 (6 days 11-late) Fax at night

"...It's a pleasant surprise to find the UK price at £269 inc  
delivery... (the Etherwave) is an improvising instrument... it puts  
out the sort of signal FX boxes love... a wonderfully cost-effective  
way to own a unique-sounding instrument you can PLAY WITH-  
OUT TOUCHING... extra £30 for assembly a definite bargain... free  
tuition video... free CD... MIDI-able... well designed, quite remark-  
able quality hardware, excellent instructions... sonically flexible...  
mounts on a mic stand... and made by the most famous theremin  
manufacturer living!..... The Mix June '96

### 40 Clarendon Rd West, Chorlton, Manchester, M21 0PL A New Control Room?

- Whatever the scale of your project, almost any control room can benefit from the design principles of the Early Sound Scattering room.
- Instead of relying on creating a reflection free zone, in this new configuration of room the unwanted reflections are masked by many randomized low level reflections from the front of the room, allowing consistently accurate response and imaging throughout the room regardless of equipment layout.
- This means that very different rooms can be made subjectively identical, providing the closest thing yet to absolute reference monitoring.

If you're serious about your new control room, you should be talking to **Andrew J. Parry** on 0161 861 0857

**ELECTROACOUSTIC SYSTEM SPECIALISTS**

## SITUATIONS VACANT

Send your application in writing to 114 Charring Cross Road, London WC2H 0DT, by fax to 0171 379 0093, or e-mail to [jobs@turnkey.demon.co.uk](mailto:jobs@turnkey.demon.co.uk). Include phone no & 2 references

As part of Arbitr Group plc, and as the UK's largest outlet for MIDI and Multi-track, we offer first class training, unrivalled salary, good prospects and real job security. We are an equal opportunities employer.

# YAMAHA

## PRO AUDIO SPECIALIST

Following internal promotion, we are looking to recruit a salesperson to service our existing Pro Audio Specialist accounts and to contribute to our resounding growth in this area.

The successful candidate should have a knowledge of the Pro Audio Industry which could have been gained through experience from retail or territory sales and we especially want to hear from people with experience in computer and/or hardware-based hard disk recording systems. As the job includes close liaison with the Marketing and Specialist Sales Manager the ideal candidate should live within commuting distance of our Head Office in Milton Keynes and would be aged 25-35.

Good salary, commensurate with experience, including bonus scheme, Company Car and usual benefits associated with a top musical instrument company.

Applications with CV to:

Mr Alan Johnson, Pro Audio Marketing Manager  
Pro Music Division  
Yamaha-Kemble Music (UK) Limited  
Sherbourne Drive, Tilbrook  
Milton Keynes MK7 8BL

# sounding Off

**Equipment manufacturers frequently boast that with their gear, your creativity will be limited only by your imagination. Electronic musician IAN BODDY explains how *increasing* his limitations actually enhanced his work.**

**W**hile on holiday in Canada recently, I checked out a store advertised as 'The Biggest Book Shop in the World'. As a keen reader, I expected to find much to excite my interest, but after about an hour wandering up and down great avenues of books, I grew disillusioned — there was simply too much to choose from. In the end, I left, credit card balance significantly unchanged, and convinced that I could have spent a far more interesting time in a pokey old sci-fi bookshop.

I think the lesson I learnt from this can be applied equally to the process of hi-tech music making: very often your music can suffer as a result of you being presented with too many options. Consider, as modern musicians, the bewildering variety of sounds and samples available to you these days, and all the equipment and software crammed with features, many of which you will simply never use. This degree of choice isn't a bad thing in itself — but you have to discipline yourself to use just those functions or sounds that are needed if you are ever to finish a particular job.

In my own studio, I use a sequencer and a hard disk recorder, but I purposely restrict my use of this technology to enable me to work faster. The sequencer I use most of the time is an Akai MPC3000, and whilst this doesn't have all the bells and whistles that my version of Cubase does, it's actually quicker to use because it doesn't afford me as many opportunities to fiddle with things. If tracks sound OK to me, then they're finished, and if I make a mistake when playing, I just play it again. In a similar vein, I've decided I'm not bothered about seeing loads of waveforms whilst I'm recording to hard disk: it's not until I actually come to edit a track or CD together that I want to indulge in squinting at the waveforms on a computer screen — particularly as I'm only using the HDR like a tape recorder for my

analogue gear anyway. This leaves me with more time for actually making music, which is after all, the idea behind having all this equipment!

I recently made use of this deliberately restrictive approach at an unusual concert in an art gallery, where I was asked to play continuously for eight hours, as part of a Comic Art festival. Obviously, there was no way I could play a 'normal' gig for that length of time — after all, I would need food, drink and the loo at some point! With this in mind, I restricted the number of sounds I had available for the day, and decided on an improvised ambient-style approach to the music. I set up a bank of about 20 to 30 sounds in each of the synths I was using, plus a couple of volumes of sounds on my sampler's hard disk drive. Together with just a few pre-prepared sequence lines and a couple of drum kits on the MPC3000, I had a reasonably manageable amount of data that I could grab off the various bits of gear as the fancy took me, and it then simply fell to me to play, compose and improvise throughout the day. The eight hours went surprisingly fast, because I had a great time — I was primarily playing music, and not having to worry about the technology.

After this gig, I have tried more and more to work this way in my studio. Rather than work on a track piecemeal, synth by synth, I've been using all the equipment together live as one big instrument. I have to admit it beats step editing and staring at waveforms, and I can always go back and tidy up a track later — if it's necessary.

I've found this self-disciplined approach to technology liberating, and it could work for you too. Try restricting the sounds and features you use at any one time, and it may enable you, as it did me, to produce music faster and have fun doing so. After all, if you can't achieve that, what's the point?

# SO WHAT COULD YOU DO WITH A MARANTZ RECORDABLE CD?

## A FEW SUGGESTIONS

-  **RECORDING ENGINEER**  
Master a CD ready for pressing
-  **LIVE-SOUND ENGINEER**  
Record a band's live performance
-  **RECORDING ARTIST**  
Record high quality demos to CD
-  **COMPUTER USER**  
Archive and back-up HDR sessions
-  **MULTIMEDIA AUTHOR**  
Create multimedia CD titles
-  **DJ**  
Create CD's of favourite mixes

Auto track numbering from DAT S-ID's and auto track increments from DAT, CD & DCC.

Balanced analogue XLR I/O's plus AES/EBU & coaxial digital inputs and outputs.

Record CD ROM (XA), Photo-CD, CDi, Video-CD and CD-DA formats.

Use 2 CDR-620 units to high-speed copy any CD via in-built SCSI II interface.

Variable 1Mb digital delay plus programmable fade-in/out.

Wired remote control with large visual display provides index & ISRC code recording and catalogue numbering. Included as standard.

IN 1991, MARANTZ LAUNCHED PROFESSIONAL CD-R AND NOW, WITH THE INTRODUCTION OF THE CDR-620, A NEW PROFESSIONAL STANDARD HAS BEEN SET. EVERY FACILITY YOU REQUIRE IS PRESENT IN THIS RUGGED 19" RACK MOUNTABLE UNIT.

FOR AUDIO CD RECORDING, A FULL COMPLEMENT OF BALANCED ANALOGUE, AES/EBU & COAXIAL DIGITAL INPUTS AND OUTPUTS ARE PROVIDED. FOR USE WITH MACINTOSH™ & IBM-PC™ COMPATIBLE COMPUTERS THE IN-BUILT SCSI-II INTERFACE PROVIDES HIGH-SPEED COPYING AND PRODUCTION OF PHOTO CD, VIDEO CD, CD-I, CDi/DV AND ALL MAJOR CD-ROM FORMATS, ALL CONFORMING TO ORANGE BOOK STANDARD.

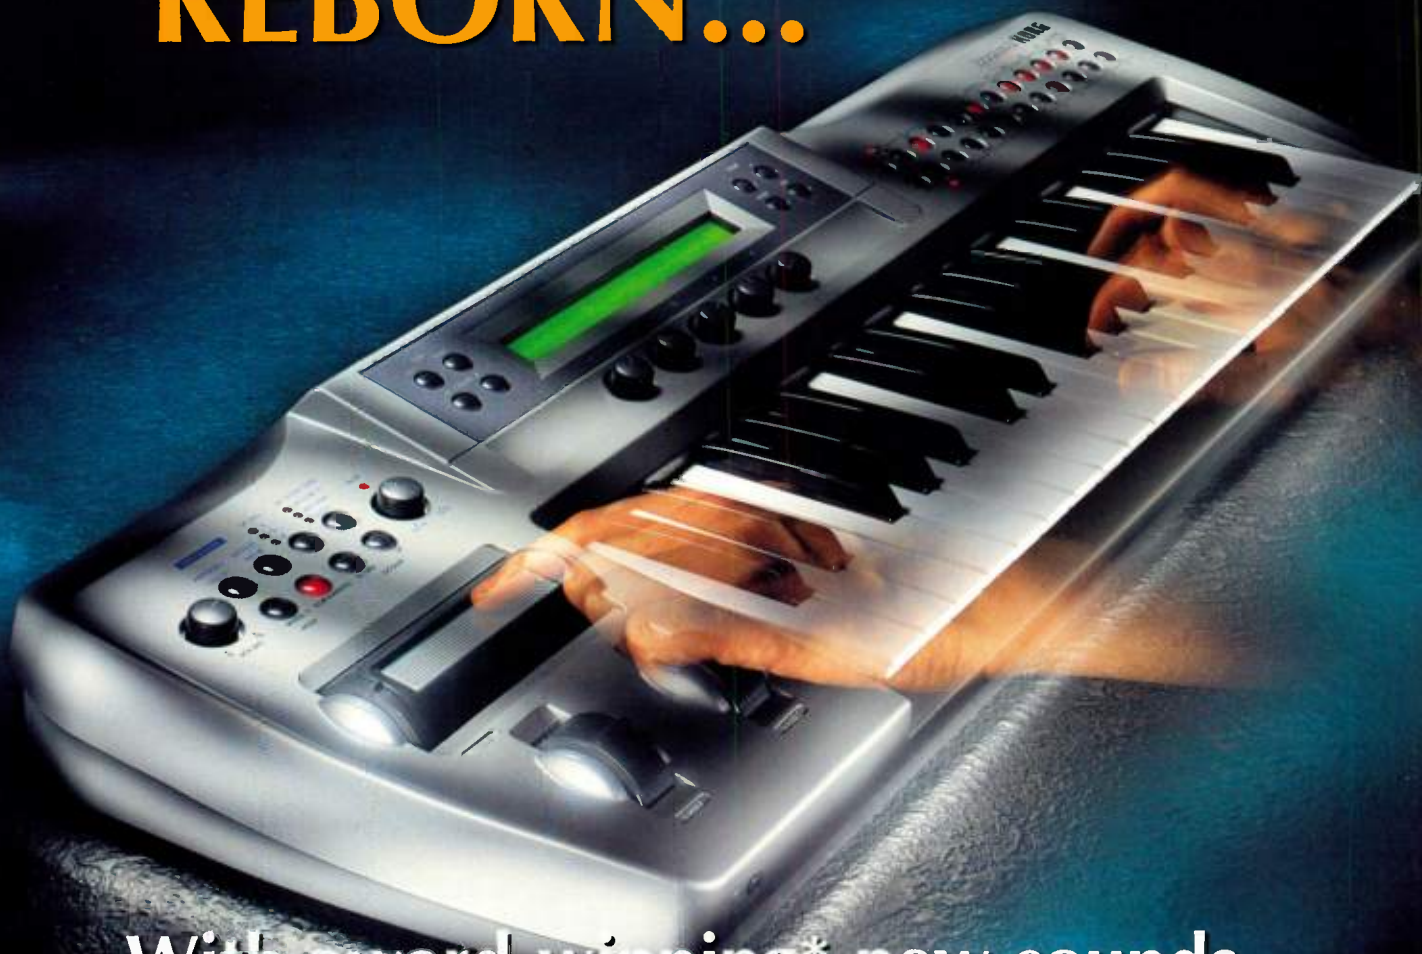

WHETHER YOU'RE A RECORDING ENGINEER, DJ, LIVE-SOUND ENGINEER, MULTIMEDIA AUTHOR OR COMPUTER USER, THE MARANTZ CDR-620 OFFERS IT ALL. JUST THINK WHAT YOU COULD DO WITH IT.

# Prophecy

SOLO SYNTHESIZER

## REBORN...

### With award-winning\* new sounds.

KORG introduce 2 Prophecy sound cards. Here's what Future Music says:

*"The KORG Prophecy is probably the most popular synth of the moment... the sounds have already graced some of the great tracks of 1996."\**

#### Modern Models Card

*"Uses 'real' instruments as the basis... then stretches them into other dimensions... inspiration city."\**

#### Analogue and Vintage Card

*"Great mix of grungy leads and deep basses... classic synth imitations... pads and sweeps are breathtaking... techno heaven."\**

\* Future Music, August '96.

**KORG PROPHECY – REBORN WITH 3 TIMES THE SOUNDS, 3 TIMES THE INSPIRATION.**

For a limited period both sets of sounds are available to you **FREE** on disk when you purchase Prophecy.

Free sounds available in Mac, PC and Atari format.

#### Offer ends:

31st October 1996.

To obtain your free disk please return your completed Prophecy Warranty Card to:

KORG (UK) Ltd, 9 Newmarket Court, Kingston, Milton Keynes MK10 0AU.
