# Looking for Someone?

You've found us! Boonton Electronics 4400A and 4500A Peak Power Meters and Analyzers assure your radar stays on target.

Boonton Electronics' 4400A and 4500A Peak Power Meters deliver the widest peak power bandwidth, fastest rise time, and most advanced triggering capabilities on the market today. They also provide automatic waveform capture, automatic Pulse parameter measurements, and Statistical measurements including PDF, CDF, and 1-CDF. The 4400A and 4500A bring superior measurement capabilities to all radar and avionics applications.

*When you're looking for someone who can meet the most demanding testing needs, set your sights on Boonton Electronics.*

# design ideas

*Edited by Bill Travis*

**Frequency comparator has status output**

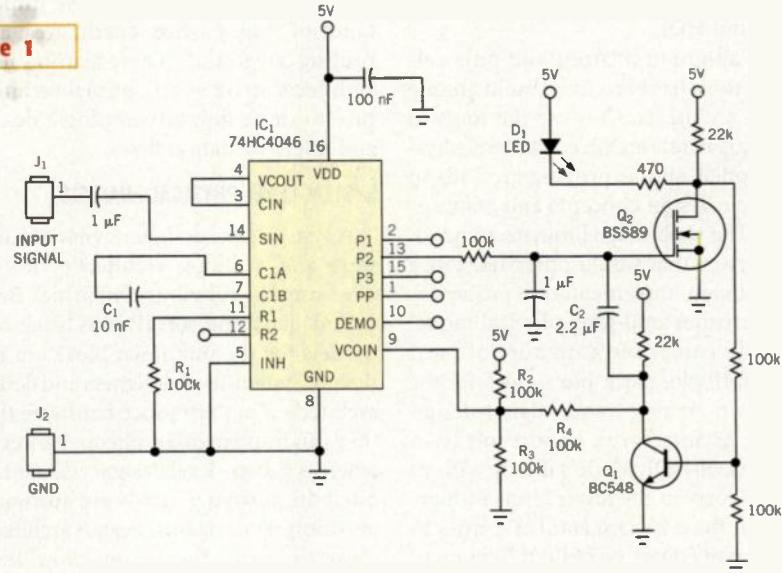

Susanne Nell, Breitenfurt, Austria

**T**HE ORIGINAL APPLICATION for the circuit in Figure 1 was to check the number of revolutions of an engine with only one LED as an indicator. The measurement of the number of revolutions usually involves sensors with a frequency output proportional to the number of revolutions. The circuit compares the frequency output of such a sensor with a lower and upper limit and gives a visual result, using one LED. If the frequency is below the lower limit, the LED remains unlit. If the frequency is between the limits, the LED blinks at a constant rate, and if the speed is higher than the upper limit, the LED stays permanently lit. Although a microcontroller can do this job, it is sometimes better to use an analog circuit—for example, if the frequency you want to check is too high for a simple controller. The circuit in Figure 1 uses one standard, inexpensive IC, and you need not write any software. It is also less costly than a comparable microcontroller-based circuit.

The main part is IC<sub>1</sub>, a 74HC4046 PLL chip. With a 12V supply, you can also use the CD4046 without an additional volt-

**Figure 1**

This analog frequency comparator uses an LED to indicate upper and lower frequency limits.

age regulator. The chip contains an oscillator, a phase comparator, and one amplifier for the input signal. The input signal connects to the input of the phase comparator with its integrated ac amplifier. The circuit compares this amplified signal with the VCO frequency. This frequency is adjustable, using  $C_1$ ,  $R_1$ , and the voltage on Pin 9. If the frequency of the input signal is lower than that of the VCO, the output of the phase comparator (Pin 13) is low. In this case,  $Q_2$  is off,  $Q_1$  is on, and the LED is off, indicating "low frequency." Resistors  $R_2$ ,  $R_3$ , and  $R_4$  determine the voltage on Pin 9 and the lower frequency limit switching point. If the frequency of the input signal increases and reaches the value of the VCO's frequency, the phase comparator's output switches high.

This high-level output turns  $Q_2$  on and  $Q_1$  off. With  $Q_1$  off, the voltage of the

VCO increases to a second higher value determined by  $R_2$  and  $R_3$ , and the VCO generates the frequency for the high-limit switching point. If the frequency of the input signal is between these two limits, the phase comparator generates a rectangular waveform. The feedback capacitor,  $C_2$ , determines the frequency of this waveform. With a value of  $2.2\ \mu F$  for  $C_2$ , you can achieve a frequency of approximately 1 Hz. This frequency is the blinking rate for the LED. If the frequency of the input signal increases to a point higher than the upper VCO frequency value, the phase comparator output stays high, and the LED turns on permanently. With the values shown in Figure 1, the lower and upper frequency limits are 3.81 and 7.35 kHz, respectively.

System-level design tools' final description of the hardware partition may comprise a mixture of library blocks, hard macros, and black-box models. Figure 1 shows that the hardware elements of the design may include a microprocessor and some RAM, or hard IP (intellectual property); some reusable elements from a previous-generation design, or soft IPs; RTL from system-level library elements; black-box models for analog blocks; and digital blocks that the designer has yet to describe in detail. The tools can typically output this information in the form of structural HDL.

The adoption of front-end physical-design tools has been most rapid among design architects, who use the tools to quickly generate architectural-level physical models and as proving grounds to test their design concepts and assumptions. The tools help eliminate architectural errors that would otherwise cause downstream implementation problems.

An architectural-level physical model typically comprises a mixture of hard and soft IP, plus black-box models for the unknown analog- and digital-design blocks. Architects can import soft IP in the form of HDL models if they wish to microfloorplan the lower levels of hierarchy in these blocks. Hard IP comes in the form of GDSII, or LEF/DEF (library-exchange format/design-exchange format), so the boundaries of these blocks are well-defined (Figure 2).

Black-box models are considerably more fluid. Architects can enter an estimated gate-count usage and aspect ratio for each block. They can add ports to these blocks and create connectivity to the rest of the blocks in the design. They can manipulate the hierarchy of the blocks and experiment with various placement options. The physical model is based on an accurate underlying description of the chosen process technology, so architects can evaluate alternative technologies and quickly assess the physical impact on their designs. Built-in analysis tools give instant feedback on the effects of placement on timing, routing congestion, area, and power. Architects can manually place critical hard macros and fix them in position. They can then use automatic-placement-optimization features to place the remainder of the

**Figure 2** An architectural-level floorplan helps implementers visualize the relationships among physical blocks.

blocks and control the relative importance of timing, wire length, area, and routing congestion. These features help architects arrive at an optimal architecture to drive downstream logic design and implementation flows.

### SYSTEM-LEVEL PHYSICAL ANALYSIS

A system-level designer's view of hardware and a design architect's view of hardware have obvious similarities. Both include hard and soft IP, plus black-box models for the unknown blocks in the design. System-level designers and design architects aim to produce hardware that they can implement in silicon. However, whereas system-level designers are interested in verifying hardware/software-partitioning decisions, design architects want to verify the architectural-level physical implementation.

Front-end physical-design tools support HDL input primarily to enable the importation of pre-existing IP. However, the same HDL-input features are ideal for importing structural HDL code that hardware/software codesign tools generate.

Importing structural Verilog or VHDL into front-end physical design tools is typically a fast process, so system-level designers can use these tools at any stage to gain a quick view of the physical implications of their hardware/software-partitioning decisions. This ability bridges the gap between the system level and the implementation level. The high-level physical model allows system-level designers to:

- assess area requirements,
- verify logical partitioning choices,
- establish high-level timing constraints and highlight timing violations,

- identify potential routing-congestion hot spots,
- conduct a quick power analysis, and
- optimize the physical hierarchy and regenerate structural HDL code.

Front-end physical-design tools give system-level designers an accurate evaluation platform to explore the physical implications of hardware/software-partitioning choices. The tools rapidly evaluate a design's performance against its physical constraints. This information allows designers to assess multiple what-if scenarios and adds confidence that partitioning choices will not cause downstream implementation problems.

The shift to higher levels of logical design abstraction that began in the late 1980s has continued unabated. But even the most abstract levels of description must consider the second- and third-order physical effects that dominate current generations of silicon-process technology. Front-end physical-design tools provide this link between system level and silicon.

Front-end physical-design tools give early feedback on the implications of hardware/software-partitioning choices in the physical domain and, hence, enhance predictability throughout the design flow. System-level designers immediately see the physical impact of high-level changes, so they can quickly evaluate many partitioning alternatives. An accurate underlying process-technology model delivers a clear representation of how the design will function in silicon. It allows system-level designers and downstream logic-design and -implementation teams to share a vision of how the design will perform, because the tool's analytical capability locates physical problems early in the design flow, when they are easiest to fix. □

### AUTHOR'S BIOGRAPHY

*Christopher Clee began his EDA career in 1988 at Praxis Electronic Design, a pioneer in language-based design and logic synthesis. Since then, he has run the gamut of the industry, with technical and product-marketing roles supporting tools in ASIC-, full-custom-, and pc-board-design flows. He is currently director of marketing for SOC architect, the front-end physical-design system from Icินergy Software.*

# Envelope follower combines fast response, low ripple

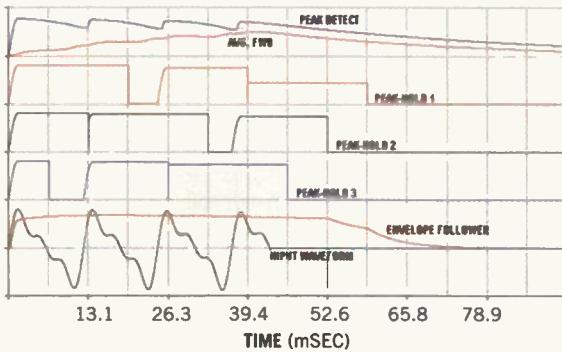

Harry Bissell, Royal Oak, MI

**E**NVELOPE FOLLOWERS EXTRACT amplitude information from complex audio waveforms. The resulting dc voltage often drives nonlinear stages, such as voltage-controlled amplifiers or filters. You must make a careful trade-off between the speed of response to a rapidly changing input signal and the amount of ripple in the dc output that you can tolerate. If the system is too slow, the output has low ripple but badly distorts the envelope shape. If it's too fast, ripple can modulate the nonlinear stages, causing audible distortion products. Audio sources, such as a guitar, pose special problems. The instrument has an attack of a few milliseconds and a long decay time. The musician may "mute" the strings at any time, causing the normal exponential decay to terminate abruptly. The waveform is sometimes unsymmetrical and may have multiple

zero crossings. The fundamental frequency range is typically from approximately 80 Hz to 1.5 kHz. Previous circuits have used a full-wave bridge and a large averaging filter. A filter time constant sufficient to reduce ripple makes the circuit unable to follow rapid changes in amplitude. Peak-detecting circuits can follow the rapid attack and provide low ripple during the exponential decay but cannot

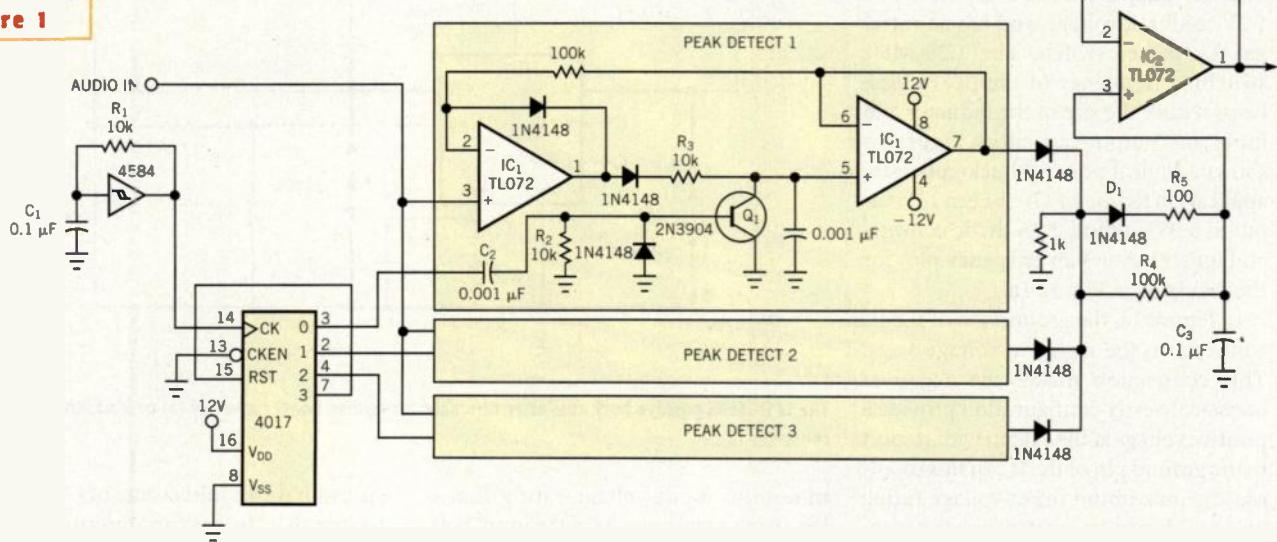

follow the rapid decay of a muted string. The design in Figure 1 features fast attack and low ripple with minimal filtering, and it can follow a rapid decrease in signal (mute).

The circuit uses three identical peak-hold circuits in parallel that reset in a round-robin fashion. The circuit applies the input signal to all three stages simultaneously. As each stage resets in turn, the two remaining stages still hold the last peak voltage. Diodes select the highest held voltage at the output of each peak-hold stage. A small RC filter smoothes the step response as the peak-hold circuits reset, so a lower output voltage results. To ensure that one of the detectors holds the highest peak value for the entire input period, the reset clock period is slightly longer than one-half the period of the lowest input frequency. Figure 2 illustrates typical circuit operation and

**Figure 2** Waveforms of typical circuit operation show the improvement over full-wave average and peak-detecting circuits with similar time constants.

**Figure 1**

This envelope detector provides the seemingly contradictory features of fast response and low ripple.

shows the improvement over full-wave average and peak-detecting circuits with similar time constants. CMOS Schmitt inverter IC<sub>1</sub> forms the master reset clock, and C<sub>1</sub> and R<sub>1</sub> produce the desired period. CMOS counter IC<sub>2</sub> is a ring counter that provides the sequential reset pulses.

The peak-hold circuit is a classic configuration with the addition of the reset circuit. R<sub>2</sub> and C<sub>2</sub> differentiate the rising edge of the reset pulse; this edge drives the base of Q<sub>1</sub>. Series resistor R<sub>3</sub> prevents excessive op-amp current while Q<sub>1</sub> is conducting. The filter network comprising R<sub>4</sub>, R<sub>5</sub>, C<sub>3</sub>, and D<sub>1</sub> provides minimal filtering to reduce the step changes in the output during unusually fast decay times.

## Positive regulator makes negative dc/dc converter

Keith Szolusha, Linear Technology Corp, Milpitas, CA

POWER-SUPPLY designers can choose from a plethora of available positive buck regulators that can also serve as negative boost dc/dc converters. Some buck regulators have a negative-feedback reference voltage expressly for this purpose, but ICs that have positive-reference feedback voltages far outnumber these negative-feedback regulators. You can take advantage of this greater variety of devices by using a positive buck switch-mode regulator to create an excellent negative boost converter. All you need are a few small modifications to the typical buck-converter configuration. Figure 1a shows a -5V-input to -9V-output, 1.4A negative boost converter using the LT1765EFE positive-buck-converter, switch-mode regulator. This IC accepts 3 to 25V input, uses a 1.2V feedback voltage, and has an internal 3A power switch. The 1.25-MHz switching frequency of the LT1765EFE helps reduce the size of the inductor and input and output capacitors. Figure 1b shows a typical positive-buck-converter application for the LT1765EFE: a 12V-input to 3.3V-output, 2.2A dc/dc converter. Figure 2 shows an efficiency plot for the regulator in Figure 1a.

In Figure 1a, the ground pin of the IC connects to the negative voltage V<sub>OUT</sub>. This connection makes the negative-boost-converter configuration provide a positive voltage at the FB pin with respect to the ground pin of the IC. In this topology, the maximum input voltage rating of the IC has to be greater than the magnitude of output voltage for the negative boost converter. The IC must also have a

Figure 1

The LT1765EFE positive buck converter can make a negative boost converter (a) or a positive buck converter (b).

minimum input-voltage rating that is less than the magnitude of the input voltage, to ensure that the circuit turns on upon power-up, because the output volt-

age can have an initial state of 0V.

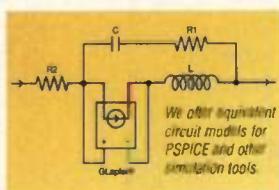

Note that the maximum output current for the negative boost converter in Figure 1a is much lower than the maxi-

# These models will get you simulated

For an exciting collection of models with great curves, check out the Coilcraft web site.

You'll find equivalent circuits for all of our surface mount RF inductors, LC filters and power magnetics.

Choose PSPICE models that describe performance from DC up to 1.8 GHz, models for non-PSPICE software packages, or S-parameter

files with data from 30 kHz up to 6 GHz.

Unlike the "ideal" or theoretical models published by most other manufacturers, ours are based on empirical measurements.

So they're as close as you can get to a component's true performance without actually building the circuit.

Start simulating yourself. Ask for our CD catalog with all of the models. Or download them at [www.coilcraft.com/models](http://www.coilcraft.com/models).

WORLD'S WIDEST SELECTION

# VCOs

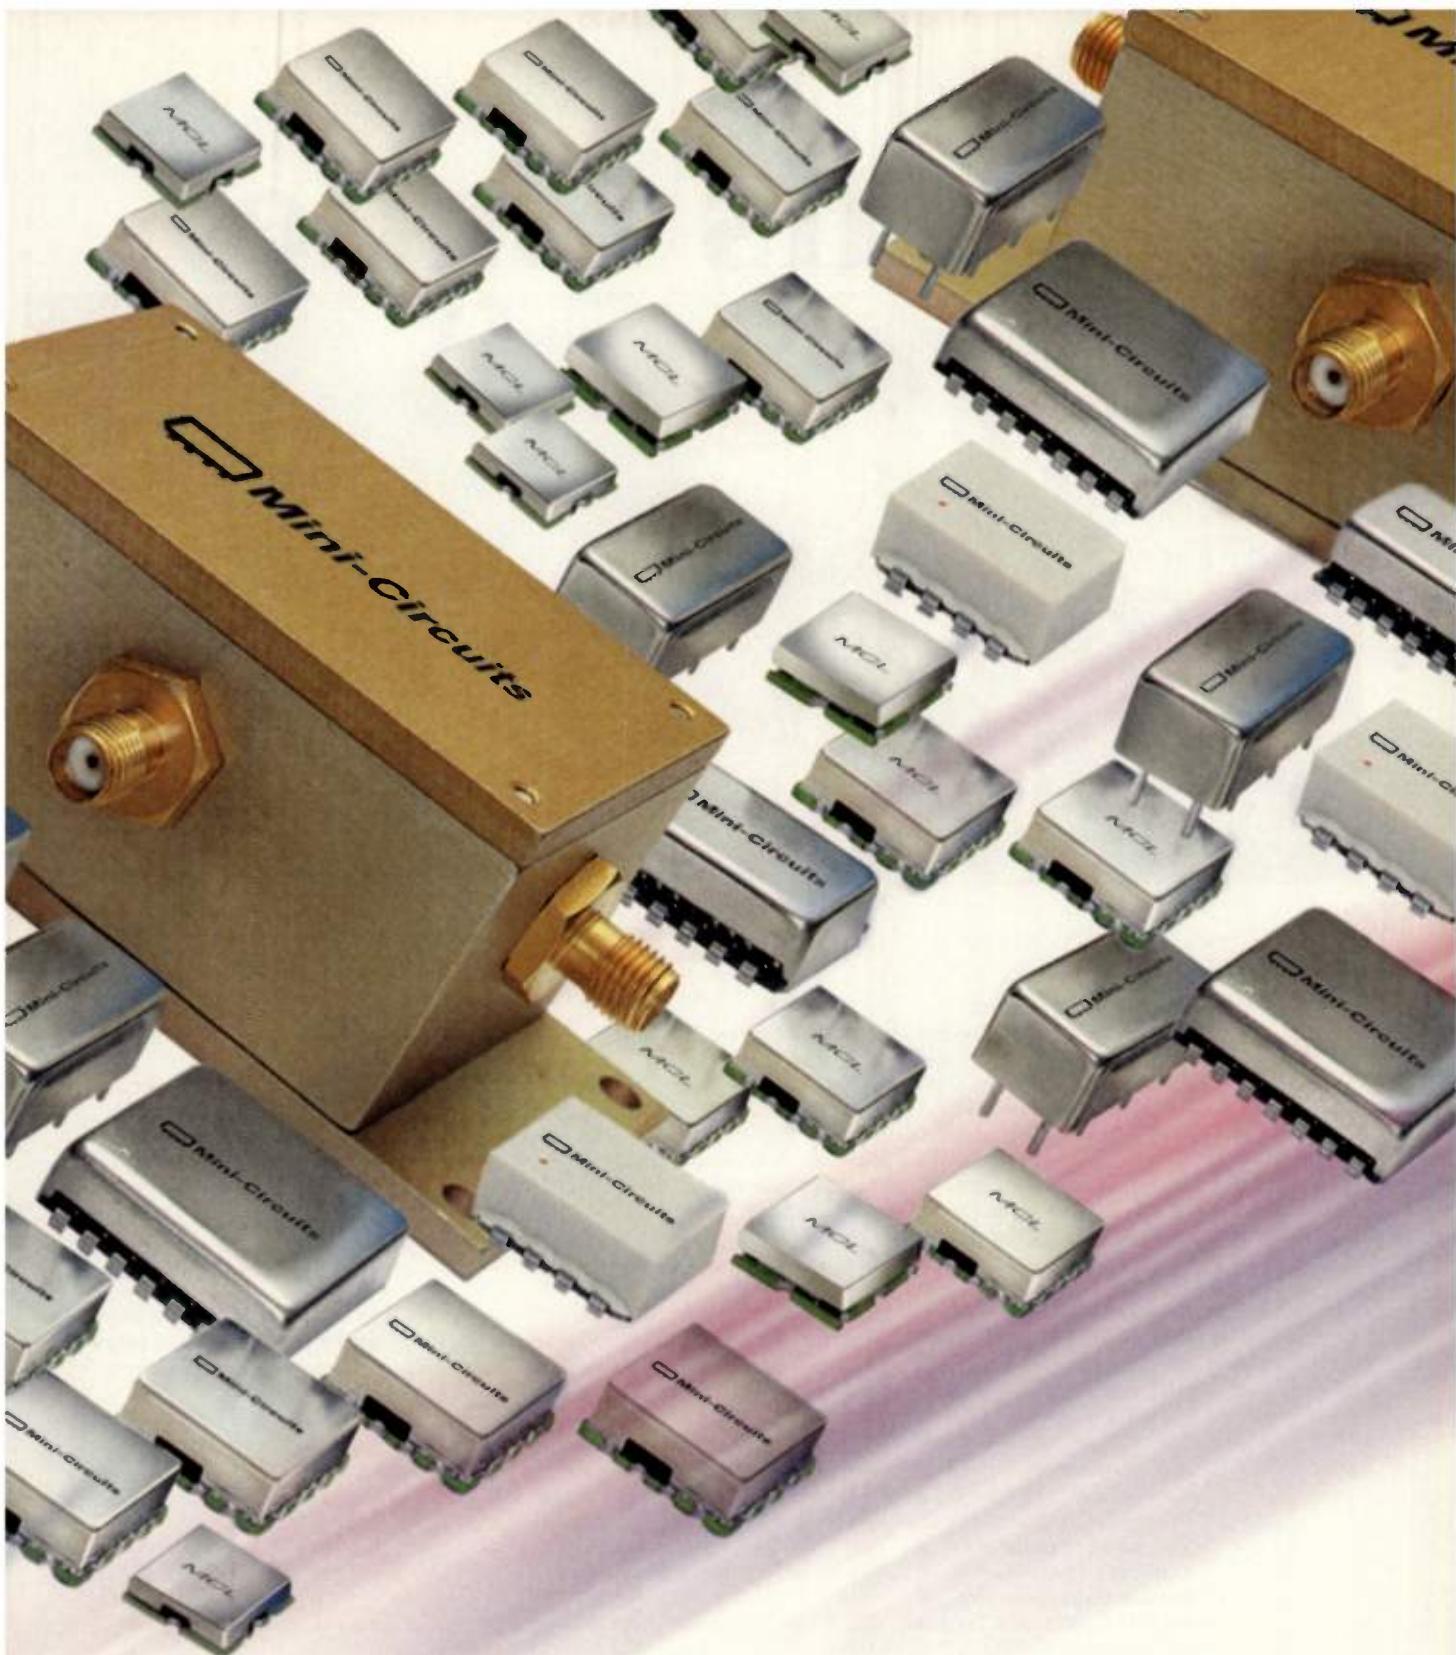

12.5 to 4000MHz from \$11<sup>95</sup>  
ea. (qty. 5)

Want a miniature surface mount, shielded plug-in, or rugged coaxial voltage controlled oscillator with the right stuff for your project? Contact Mini-Circuits! From custom designs to standard catalog models *always in stock*, we'll supply extra robust, 100% tested VCO solutions you need at a price you can afford. Choose from narrow to broad to octave band widths. Select linear tuning, low phase noise, and 5V models optimized for PLLs and synthesizers. And pick from an innovative array of miniature SM packages as small as 0.370" square for a variety of designs and applications. You can quickly find the model you need using "The YONI Search Engine" at the Mini-Circuits web site. Just enter your specs...click...and immediately start evaluating suggested VCO solutions using the *actual measured performance data* displayed. But perhaps you need a custom design. Not a problem! Contact us for our lightning fast response, low prices, and quick turnaround. Give the competition *real competition*...specify Mini-Circuits VCOs!

# 15 MILLION CYCLE SWITCHES

DC-18GHz from \$119<sup>95</sup> **IN STOCK**

You've been wanting this technology, now it's here. SPDT and transfer switches that almost never wear out! The key is Mini-Circuits exclusive patent pending technology that uses magnetics instead of springs to enable unbeatable reliability and industry-topping **15 million cycle typical lifetime performance**. So reliable, so long-life, they're guaranteed for 5 years! It's an industry breakthrough that translates to reduced periodic maintenance and downtime in your system, and tremendous cost savings to you. So save time, money, and headaches all around. Replace your traditional mechanical switches with Mini-Circuits new generation switches, and you may never have to replace a switch again!

Mini-Circuits...we're redefining what VALUE is all about!

# Introducing Wideband VCOs for a wireless world.

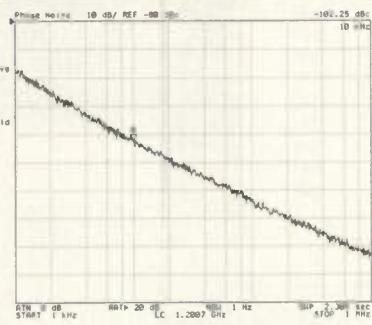

A broadband world requires broadband signal sources that offer low noise, linear tuning and load-insensitive performance. At Vari-L, we apply the same precision engineering and manufacturing to our Wideband VCOs as you have come to experience in our Narrow band VCOs. Excellent phase noise performance and tuning linearity enable consistent PLL loop bandwidths, settling time and low integrated noise. And, our wideband VCOs low frequency pulling will minimize your system phase error.

To find out how Vari-L's Wideband VCOs can be "a part in your future," please visit our website at [www.vari-l.com](http://www.vari-l.com), or send an email to [sales@vari-l.com](mailto:sales@vari-l.com).

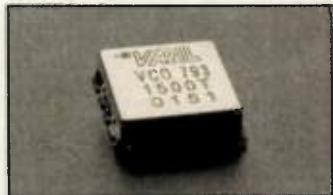

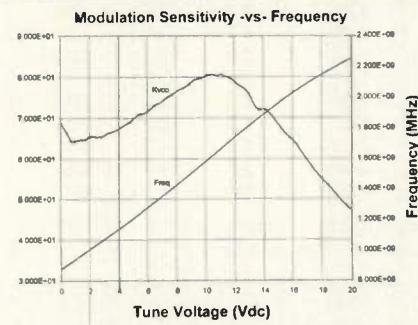

Part Number	Frequency Range(MHz)	Tuning Voltage	Typical 10 kHz Phase Noise	Supply Voltage	Output Power	Package Size
VC0790-600T	400-800	0.0 - 20.0	-102 dBc/Hz	+5 V	+3 dBm	0.5 x 0.5 x 0.18 in.
VC0790-1500T	1000-2000	0.0 - 20.0	-98 dBc/Hz	+5 V	+2 dBm	0.5 x 0.5 x 0.18 in.
VC0790-2300T	2100-2500	1.0 - 4.0	-89 dBc/Hz	+5 V	+3 dBm	0.5 x 0.5 x 0.18 in.
VC0793-600T	400-800	0.0 - 20.0	-104 dBc/Hz	+12 V	+7 dBm	0.5 x 0.5 x 0.18 in.
VC0793-1500T	1000-2000	0.0 - 20.0	-99 dBc/Hz	+12 V	+7 dBm	0.5 x 0.5 x 0.18 in.

## Actual data for VC0793-1500T

Phase noise from HP3852 for 1000-2000 MHz VCO

Tuning Sensitivity from HP3852 for 1000-2000 MHz VCO

\*Noise figure degrades below 100 MHz. Please consult factory for details.

Note: Noise figures increase below 500 MHz in bands wider than .1-10 GHz.

## OPTIONS:

- CRYOGENIC
- LIMITING
- VARIABLE GAIN
- LIMITER INPUT
- TTL CONTROLLED
- HIGH DYNAMIC RANGE
- EQUALIZED GAIN
- BUILT-IN TEST
- DETECTED OUTPUT
- MILITARY VERSIONS
- SPACE QUALIFIED

This is only a small sample of our extensive list of standard catalog items.

# LTCC BLUE CELL™ MIXERS

**Commercial, Military, and Industrial Use**

Mini-Circuits proudly introduces MCA1, the world's first commercially available line of *low temperature cofired ceramic (LTCC)* frequency mixers! Highly reliable, extremely broad band, and very low in cost, these patent pending double balanced mixers have excellent electrical performance and are available in level 7, 10, and 13 (LO) models for your 300MHz to 6GHz designs. As for ruggedness and reliability, MCA1 mixers have all circuitry hermetically embedded inside the ceramic making them impervious to most environmental conditions. The process also gives you superior stability under temperature, high repeatability, and compact 0.065" profile. They're ideal for the COTS program, as well as your commercial and industrial applications. So contact Mini-Circuits now. Our team is ready to handle your needs worldwide with quick shipments, custom designs, high volume production capability, and fast turn-around.

Mini-Circuits...we're redefining what **VALUE** is all about!

\$5.95 **IN STOCK**  
from \$5 ea. (Qty. 10)

Actual Size

#### Typical Specifications

Model	LO Level (dBm)	Freq. (MHz)	Conv. Loss (dB)	LO-RF Isol. (dB)	Price \$ ea. (Qty. 10)
MCA1-24	7	300-2400	6.1	40	5.95
MCA1-42	7	1000-4200	6.1	35	6.95
MCA1-60	7	1600-6000	6.2	30	7.95

## Transistors

### Advanced Power Technology

**Advanced Power Technology**  
 RF provides a full range of RF Transistors including Bipolar, VDMOS, and LDMOS technologies. Our unique benefits include: "One stop shopping" with a full lineup for your amplifier, highest operating voltage, highest  $P_{out}$ , and lowest cost of ownership...performance guaranteed in your circuit.

# Drives you crazy frequently.

## Drives your ADCs at high frequency.

Only from Analog Devices

### Features

- 2.2 GHz bandwidth ( $-3$  dB gain 12 dB)
- Lowest distortion  $-80$  dBc @ 70 MHz
- Low input noise  $2.3$  nV/ $\sqrt{\text{Hz}}$
- Adjustable output common-mode voltage
- Excellent settling and overdrive recovery
- A single 3 V to 5 V supply drawing only 27 mA

### Benefits

- Improve performance
- Lower chip count
- Use less board space
- Consume less power
- Simplify designs
- No tweaking required

### AD8351 RF/IF Amplifier

Don't settle for cumbersome single-ended to differential solutions. The AD8351 is a low distortion amplifier optimized for driving high speed and high resolution sampling converters up to 240 MHz. And, unlike other discrete solutions, this single chip makes it easy to set the gain (from 0 dB to 30 dB) with a single resistor, match the common mode to the ADC, and at the same time provide the lowest distortion and noise to maximize ADC dynamic range.

*For more information on the AD8351 and the rest of our high performance RF IC portfolio, visit our website.*

# Baseband-to-RF in a few chips.

## Baseband-to-RF in two chips.

**Only from Analog Devices**

### AD9777 Tx DAC+®, AD8349 Quadrature Modulator

Whether you're designing a base station to meet today's standards or planning a network to meet the challenges of tomorrow's wide-band standards, only ADI has the complete transmit solution in two chips. The AD9777 is the 16-bit member of the AD977x Tx DAC+ family of pin-compatible, high performance, programmable 2x/4x/8x interpolating D/A converters. The AD8349 is the next-generation quadrature modulator with the lowest noise floor and improved output power to provide the necessary dynamic range for direct conversion, thus eliminating an intermediate mixing stage and the many associated components. *For more information on these and the rest of our high performance RF IC portfolio, call 1-800-ANALOGD or visit our website.*

#### AD9777 Dual Tx DAC+

- 16 bits, 160,400 MSPS
- Selectable 2x/4x/8x interpolating filter
- Digital complex mixer supports single sideband upconversion
- Programmable channel gain and offset adjustment
- Direct IF transmission mode for 70+ MHz IFs

#### AD8349 Quadrature Modulator

- Output frequency range 800 MHz to 2.7 GHz
- Baseband I/Q bandwidth dc to 200 MHz
- Output level P1dB +5 dBm
- Sideband suppression -42 dBm
- Noise floor -156 dBm/Hz

# HERMETIC ALUMINUM PACKAGING

## From Design to Delivery!

### Solder Free!

Pacific Aerospace & Electronics-Interconnect Divisions' laser weldable connectors provide a means to produce hermetic aluminum packaging without traditional solder interfaces. These connectors are designed to laser weld directly into the aluminum package thus eliminating hermetic failure due to solder joint fatigue.

### Kryoflex® & EWS™

Kryoflex® is a family of polycrystalline ceramics developed for the purpose of hermetically sealing materials with high expansion rates. Kryoflex® takes up where glass leaves off, at about 10ppm/C. Pacific Aerospace & Electronics - Interconnect Divisions' EWS™ (Explosively Welded Stack) is a process used to permanently fuse, at the molecular level, otherwise incompatible metals. These multilayered "stacks" are then machined into the laser weldable connector bodies that have the right material in the right place. Using Kryoflex® in conjunction with the EWS™ process allows Pacific Aerospace & Electronics - Interconnect Division to produce aluminum connectors that are easily interfaced into an aluminum package via a laser weld.

### Vertical Integration

State-of-the-art Computer Aided

Design, CNC machining, complete plating facilities, and total laser weld capability. It's all right here!

Pacific Aerospace & Electronics - Interconnect Division has the highly trained personnel and equipment needed to produce hermetic aluminum packaging. Having the entire manufacturing process in-house allows us to maintain our exacting process and quality control standards through every step of production. To our customers, this means cost savings and shorter delivery times.

### Fast Turnaround

An existing inventory of proven laser weldable connector designs allows for faster turnaround. Choose from many different DC feed-throughs including MIL-83513 Micro Ds, MIL-C-28748 Rack and Panel, and a host of RF connectors, including LWP™, SMA, SSMA, BMAs, etc....In addition, we have a large inventory of EWS™ material that can be used to quickly fill orders with special requirements.

### One Source

Pacific Aerospace & Electronics - Interconnect Division....One source. One phone call. That's about as simple as it gets. Call us or come visit our facilities to see how we can make your next project more reliable, and more cost efficient.

Pacific Aerospace & Electronics...At the Leading Edge of Progress.

# Microwave Tuning Solutions

Sprague-Goodman has passive and active tuning devices to meet microwave designers' needs. A wide variety of tuning elements is offered to work with waveguides, cavities, and dielectric resonators at frequencies too high to use variable capacitors and inductors.

## Sapphire PISTONCAP®

- Q to 4000 at 250 MHz
- 2 configurations and 6 mounting styles suitable for all RF structures
- Operating temp: -55° to +125°C
- Cap ranges: 0.3-1.2 pF to 0.8-8.0 pF

## AIRTRIM® Air Dielectric Multiturn Trimmers

- Q: > 5000 at 100 MHz
- 9 mounting styles including surface mount
- Operating temp: -65° to +125°C
- Cap ranges: 0.35-3.5 pF to 2.0-16.0 pF

## Microwave Tuning Elements

### Metallic tuning elements

- 2 to 33 GHz

### Dielectric tuning elements

- Alumina, quartz, sapphire

- 6 to 100 GHz

### Dielectric resonator tuners

- 2 to 18 GHz

### LC tuning elements

- 5 to 11 GHz

### Resistive tuning elements

- 1 to 18 GHz

## Silicon Tuning Varactors

### Super Hyperabrupt

- UHF - Wireless (4V, 6V, 8V)

### Hyperabrupt

- Microwave (20V)

### Abrupt (20V)

Economical SOT-23 and High Performance Surface Mount Packages

**MwT**

Microwave Technology is a leading supplier of GaAs-based products, offering high-linearity, low phase noise dynamic range and wide bandwidth. MwT offers hybrid modules/connectorized amplifiers for military/defense and wireless communications. MwT's proprietary GaAs process provides the best IP3 ACPR performance. The devices are ideally suited for frequency sources above 10 GHz.

# THE GLOBAL SOLUTION... AND BEYOND!

**10MHz to 7GHz AMPLIFIERS** from **\$99.95**  
(1-9 qty.)

From amateur radio to cellular to satellite applications, with medium output power up to 17dBm, Mini-Circuits versatile ZJL and ZKL connectorized amplifiers offer the broad range of choices designers demand for achieving high system performance goals. Ultra-wideband models deliver gain ranging from 9 to 40dB and IP3 up to +32dBm. But beyond the performance and reliability built into these miniature 12V amplifiers lies another important feature, the low price...from only \$99.95! Call now for fast delivery.

*Mini-Circuits...we're redefining what VALUE is all about!*

#### SPECIFICATIONS

Model	Freq (MHz)	Gain (typ) (dB)	Midband (dB)	Flat (±dB)	Max. $P_{out}$ <sup>1</sup> (dBm)	Dynamic Range (Typ @2GHz <sup>2</sup> ) NF(dB) IP3(dBm)	Price \$/ea. (1-9)
ZJL-5G	20-5000	9.0	±0.55		15.0	8.5 32.0	80 129.95
ZJL-7G	20-7000	10.0	±1.0		8.0	5.0 24.0	50 99.95
ZJL-4G	20-4000	12.4	±0.25		13.5	5.5 30.5	75 129.95

# EIGHT WAYS TO JUMP START YOUR DESIGN

WITH GENESYS V8 SYNTHESIS

MATCH synthesizes networks

T/LINE transforms into stripline, microstrip, coplanar and others

**From Start To Finish.** You're in the driver's seat with GENESYS V8's winning synthesis modules for amplifiers, oscillators, PLLs, filters and more. Need to design an x-band amplifier for example? Choose your transistor and start your engines.

## The First Two Ways Make It Easy!

1. Use our MATCH module to synthesize your amplifier matching circuit. Simply enter your device models and matching network topologies and MATCH calculates the network parameters needed for an optimal match between source and load.

2. Then use ADVANCED T/LINE to automatically convert schematics between ideal, microstrip, stripline, coplanar and transmission line types. You'll jump start your design without even switching gears.

**So Grab a Seat and Hold On!** And get the extra power, speed and accuracy you need. With synthesis packages starting under \$3,000 US, you'll land the pole position every time.

# 0.5 to 2000MHz MIXERS

\$ 1.69

(ea. qty. 1000)

**IN STOCK**

You can pay more for IF, RF, and microwave surface mount frequency mixers...but why? Mini-Circuits patented ADE-1, ADE-2, and ADE-11X mixers are your *total solutions* for high performance, reliability, and value...and they cost only \$1.69 each (quantity 1000), with prices even lower at higher quantities! Right from the start, we've embedded premium advantages into these level 7(LO) mixers such as broad bandwidths within 0.5 to 2000MHz, low conversion loss, excellent L-R isolation, and IP3 as high as +20dBm typical. Then there's our low profile surface mount friendly package with open cover to allow water wash to drain, solder plated leads for excellent solderability, and all-welded connections which reduce parasitic inductance and improve reliability. In fact, a 2 year reliability guarantee is included! Be sure to specify Mini-Circuits ADE-1, ADE-2, and ADE-11X. The frequency mixers that make you more competitive!

*Mini-Circuits...we're redefining what VALUE is all about!*

*Typical Specifications:	ADE-1	ADE-2	ADE-11X
Frequency LO/RF (MHz)	0.5-500	5-1000	10-2000
Frequency LO/IF (MHz)	DC-500	DC-1000	5-1000
LO Level (dBm)	7	7	7
IP3 (dBm)	15	20	9
Conv. Loss (dB)	5.0	6.67	7.1
L-R Isolation (dB)	55	47	36
L-I Isolation (dB)	40	45	37
Price \$ea. (Qty. 25)	2.49	2.49	2.49
Dimensions: L.310"xW.220"xH	.162"	.112"	.112"

**2 year reliability guarantee.**

\*Specified midband unless otherwise noted.  
Protected by U.S. patent 6133525.

**Microwave Technology, Inc.**

Microwave Technology is a leading supplier of GaAs-based products, offering high-linearity, low phase noise dynamic range and wide bandwidth. MwT offers hybrid modules/connectorized amplifiers for military/defense and wireless communications. MwT's proprietary GaAs process provides the best IP3 ACPR performance. The devices are ideally suited for frequency sources above 10 GHz.

Mimix Broadband  
**Mini-Circuits**  
Mitec Telecom  
**MITEQ**

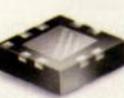

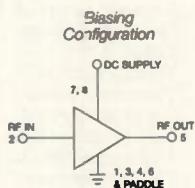

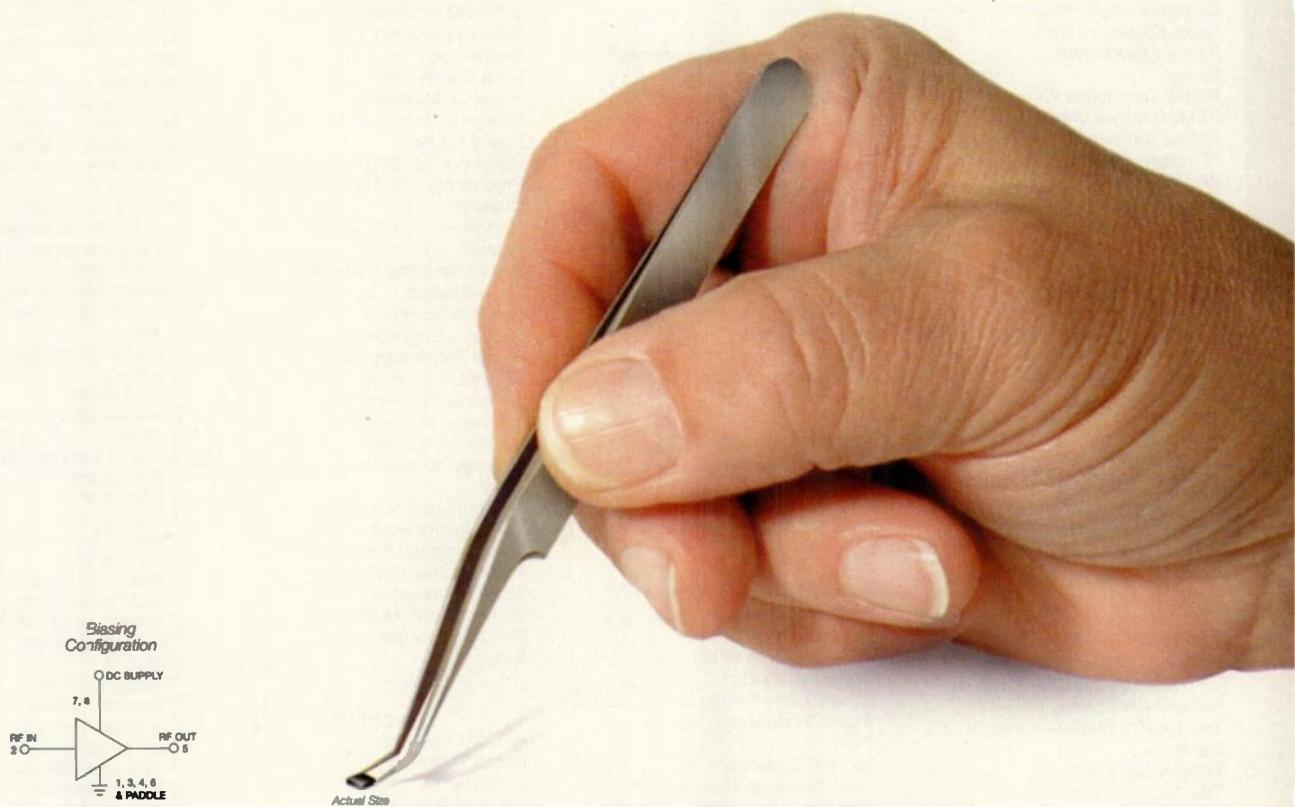

MITEQ designs and manufactures state-of-the-art microwave components and satellite communications earth station equipment. Products include UHF to millimeter wave low-noise and medium power amplifiers, mixers, multipliers, switches, frequency sources, IF signal processing equipment, integrated microwave subsystems, satellite up down converters and modems. Emphasis is on high-performance, custom engineering driven applications.

# MNA AMPLIFIERS

MMICs from 500MHz to 5.9GHz \$135

as low as \$1 ea. (qty. 1000)

## Built-In RF Choke, Resistors, Bypass & Coupling Capacitors

Simplify your 500MHz to 5.9GHz designs with Mini-Circuits easy to use MNA amplifiers. With DC blocking capacitors and a biasing network built-in, all you do is drop the amplifier in place on your PC board, connect, and the job is done! There's no biasing to figure out and no external components to connect. Broadband, low and high power models offer 10 to 23dB (typ) gain, 7 to 18dBm (typ) power output, and more than 40dB isolation, which makes them terrific for use as an isolator. But these

amplifiers go on to feature a minuscule 3x3mm MCLP™ SM package with exposed metal bottom for excellent grounding and heat dissipation. If you're looking for versatility, MNAs operate from a +5V to 2.8V DC supply, making them indispensable for use in today's miniature battery operated hand-held devices. And if you're looking for value, prices start from only \$1.60 ea. (qty. 30). So simplify your design, your manufacturing, and your life with Mini-Circuits all-in-one MNAs!

Detailed Performance Data Online at: [www.minicircuits.com/amplifier.html](http://www.minicircuits.com/amplifier.html)

MODEL	Freq. (GHz)	DC Volts (V)	Gain Midband (dB) Typ.	Pwr. Out 1dB Comp. (dBm) Typ.	Price Skt. (qty. 30)
MNA-2	0.5-2.5	5.0	12.8	17.7	1.90
		2.8	11.5	12.9	
MNA-3	0.5-2.5	5.0	16.2	11.4	1.60
		2.8	15.2	9.7	
MNA-4	0.5-2.5	5.0	16.6	17.0	1.90
		2.8	14.6	13.4	
MNA-5	0.5-2.5	5.0	22.8	12.2	1.60
		2.8	21.4	10.1	
MNA-6	0.5-2.5	5.0	23.5	18.0	2.25
		2.8	21.5	14.1

# Kicking The Competition's Tail For 200 Watt Testing.

The 200S1G4

The world's only 200-watt, 0.8 to 4.2 GHz, all-solid-state amplifier. Exceptional linearity. Unequaled harmonic performance. 100% mismatch tolerant. Unbeatable technology and design. An advanced instrument for 200-watt testing, this is the amplifier of choice for EMC and linear wireless applications, with digital front panel displays and AR's famous three-year warranty. And remember, every AR product and system is backed by our world class "Mark of Performance." Look for the 200TS1G4 and our new 240-watt, .8 to 3 GHz 240S1G3 at [www.amplifiers.com/microwave.asp](http://www.amplifiers.com/microwave.asp).

# High Gain, High IP3 1/2 Watt Amplifier

- Frequency 700 - 2200 MHz
- 29 dB Gain
- +45 dBm High OIP3
- +27 dBm P1dB
- 2.9 dB Noise Figure

WJ Communications Inc. is a leading RF semiconductor company focusing on the design and manufacture of high-quality devices and multi-chip modules (MCMs) for telecommunications systems worldwide. WJ's highly reliable amplifier, mixer, RF IC and MCM products are used to transmit and receive signals that enable current and next generation wireless and wireline services. For more information visit [www.wj.com](http://www.wj.com) or call (408) 577-6200.

1960 MHz ACPR vs Channel Power  
Single Carrier and 4-Carrier IS-95

Single Carrier Signal:  
IS-95, 9 Channels Forward  
Pk/Avg Ratio = 11.5 dB @ .001%  
885 kHz offset, 30 kHz bandwidth  
Channel BW = 1.23 MHz

Four-Carrier Signal:  
IS-95, 9 Channels Forward  
Pk/Avg Ratio = 10.2 dB @ .001%  
2.76 MHz offset, 30 kHz bandwidth  
Channel BW = 4.98 MHz

# WORLD'S FIRST 8-CHANNEL LEVEL TRANSLATORS IN UCSP

Translate Data Bidirectionally from +1.2V to +5.5V at Guaranteed Speeds Up to 35Mbps

- Ideal For:
- Cell Phones
  - SPI™, I<sup>2</sup>C, MICROWIRE™ Level Translation
  - SIM Card, Smart Card Applications
  - Cell-Phone Cradles
  - Parallel-Bus Level Translation

- ◆ Large Voltage Range
  - ◆ V<sub>L</sub>: +1.2V to +5.5V
  - ◆ V<sub>CC</sub>: +1.65V to +5.5V
- ◆ Low-Power Shutdown (MAX3000E/MAX3001E/MAX3002)  
0.1μA Shutdown Mode Saves System Power
- ◆ ±15kV ESD Protection (MAX3000E/MAX3001E)  
V<sub>CC</sub>-Side I/Os Feature Enhanced ESD Structures to Protect Pins Open to the Outside

- ◆ Fast Data Rates
  - ◆ 35Mbps Bidirectional (MAX3002/MAX3003)
  - ◆ 35Mbps Unidirectional (MAX3004–MAX3012)
- ◆ Save Board Space:
  - ◆ Available in Tiny 4 x 5 UCSP™ (2mm x 2.5mm)
  - ◆ Replaces 10 Discrete Components
- ◆ Noninverting Outputs and Inputs

UCSP is a trademark of Motorola, Inc. SPI is a trademark of Motorola, Inc. MICROWIRE is a trademark of National Semiconductor Corp.

Bluetooth ZMB110-987

# OUR CUSTOMER WANTED A BLUETOOTH MODULE THE SIZE OF HIS THUMBNAIL.

## JUST OUR LUCK, HE HAD REALLY SMALL THUMBS.

Historical Figures With Small Hands

1.) Napoleon  
The Conqueror

2.) Tom  
Thumb

3.) Three  
Blind Mice

4.) Napoleon  
The Conqueror's  
second cousin

5.) Goliath  
(Surprisingly)

6.) Tyrannosaurus Rex

Using LTCC technology, we're pioneering the development of ultra-small Bluetooth modules. Are you ultra-impressed?

Of course, if his hands were bigger, we never would have created the Blue Module, the world's smallest Bluetooth® module. Nearly 60 components embedded in an excruciatingly small space. To achieve such diminutive proportions, we used advanced high-frequency design technologies to integrate the passive components and matching circuits inside the LTCC substrate. It gives Bluetooth engineers more freedom to design. And it gave our customer exactly what he needed. The Blue Module is just one of the ways we're innovating for Bluetooth. So call Murata the next time you've got a problem on your hands. No matter how small they are. For more information, visit us at [www.muratainnovations.com/smallthumbs](http://www.muratainnovations.com/smallthumbs).

# WORLD'S SMALLEST DIRECTIONAL COUPLERS

9 to 20dB... Immediate Delivery

\$199  
only each (qty. 25)

The DBTC series from Mini-Circuits is quite simply the smallest, **lowest priced** 5 to 2000MHz directional coupler series on Earth! Available in 9 to 20dB nominal coupling values, these patented 50 & 75 ohm couplers integrate Blue Cell™ LTCC design techniques for **very flat coupling**, low insertion loss, and multi-decade **broad bandwidths**. All-welded connections improve reliability, and automated production delivers high unit-to-unit performance repeatability. Plus, Mini-Circuits low price of only \$1.99 each (qty. 25) gets even lower with higher quantities! So, preserve precious board space, and capital as well. Specify Mini-Circuits DBTC directional couplers.

CUSTOM PRODUCT NEEDS...Let Our Experience Work For You.

BLUE CELL™ TECHNOLOGY

Protected by U.S. Patent 6140887. Additional patents pending.

#### DBTC SPECIFICATIONS

Coupling	Model	Freq. (MHz)	Ins. Loss (dB) Midband Typ	Directivity (dB) Midband Typ
9dB	DBTC-9-4	5-1000	1.2	18
10dB	DBTC-10-4-75	5-1000	1.4	20
12dB	DBTC-12-4	5-1000	0.7	21
13dB	DBTC-13-4	5-1000	0.7	18
13dB	DBTC-13-5-75	5-1000 1000-1500	1.0 1.4	19 17
16dB	DBTC-16-5-75	5-1000 1000-1500	1.0 1.3	21 19
17dB	DBTC-17-5	50-1000 1000-1500 1500-2000	0.9 1.0 1.1	20 20 14
18dB	DBTC-18-4-75	5-1000	0.8	21
20dB	DBTC-20-4	20-1000	0.4	21

Dimensions 0.15" square.

#### DESIGNER'S KITS

K1-DBTC (50 Ohms) 5 of ea. DBTC-9-4, 12-4, 13-4, 17-5, 20-4.

Total 25 Units \$49.95

K2-DBTC (75 Ohms) 5 of ea. DBTC-10-4-75, 13-5-75, 16-5-75, 18-4-75. Total 20 Units \$39.95

**APLAC 7.80 Release**

**What's new in APLAC 7.80?**

- Full scale MEMS library
- Usability enhanced
- Faster HB-analysis
- And much more...

For more information visit  
[www.aplac.com](http://www.aplac.com)

**"You may  
kiss the software."**

**APLAC - sophisticated RF circuit simulation and analysis as you like it.**

Funny how committing to design software seems increasingly like a commitment to marriage. Once you say, "I do," you are locked into huge time investments and hard work as you learn to make the most of the resource. You also run costly risks of long-term incompatibility and possibly having to look elsewhere for satisfaction.

Fortunately, when all goes right, the long-term benefits of commitment can be quite impressive – as our world-leading customers will testify. Backed by three decades of development, the APLAC® family of simulation and design tools provides the most robust and accurate RF simulations in the industry – at IC, board, and system levels.

To make your honeymoon with APLAC as pleasant as possible, we provide extensive support options and great training opportunities.

Learn more about the newest APLAC products and services at

## Shut out the noise not the technicians

Leader Tech's removable cover design makes superior quality circuit board shielding a perfect fit for every application, protecting sensitive components from noise while providing access for adjustments and repairs. Leader Tech stocks a variety of standard fence options that can be formed and combined with a cover to create a fully custom design.

Learn more about our complete line of CBS design options: thru-hole or surface mounting with a variety of raw materials, pin lengths, spacing, vent holes, and notches. Plus, NEW products like our **Knife-edge Surface Mount fence**, **5mm fence**, and **Multicavity shields**. Avoid long lead-times and expensive custom tooling, contact Leader Tech for a **FREE CBS Design Guide** at [www.leadertechinc.com](http://www.leadertechinc.com) or phone 813-855-6921 or fax 813-855-3291.

# PASSIVE MICROWAVE COMPONENTS

## Flange-Mounted High Power Terminations, Resistors and Attenuators

- 1 to 1000 Watts
- All Brazed Construction
- Low VSWR
- DC - 18 GHz
- All Devices Available with Leads only

## High Power Surface Mount Chip Resistors, Terminations and Attenuators

- 5 to 50 Watts
- Package Sizes from .080" x .050" to .375" x .375"
- Solderable Devices

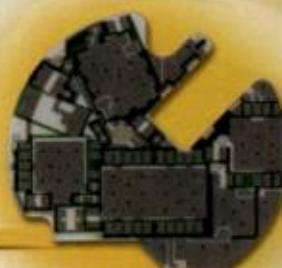

## Power Sensors

- Low Power Consumption
- Compact
- Dynamic Range of 25 dB
- Minimum Frequency Response of DC - 3 GHz

## Thick Film Circuits

- Up to 12 Metal Layers
- Diffusion Patterning
- Photo Patterning
- Laser Drilling and Machining
- Etched Thick Film
- Line Width Spacing .005"/.005" to .002"/.002"

## Complete ALN & BeO Free Product Line

- New Robust Metallization System; no peeling, no drift, no problems!
- Brazed Construction
- Life Tested, Proven Reliability
- BeO and Lead Free, Nickel Barrier Available

## LTCC Multilayer Circuit Capability

- Turnkey Foundry
- Library of Circuits and Transitions
- Multi-Function Circuit Design
- Integrated Active and Passive Elements
- DC Through 110 GHz Test Capability

## 60 to 150 Watt Cable Load Assemblies

- Low Thermal Impedance
- Low Radiated Leakage
- Broadband Operation
- Low VSWR

## Precision Chips

- Resistors, Terminations and Attenuators
- Up to 40 GHz
- Packages Ranging from .020" x .020" to .375" x .375"
- Various Metallization Schemes Available

We can design and manufacture to your specifications. Our production facility is geared to handle single piece, to high volume production and when it comes to size or shape we are confident we can meet your requirements.

When time constraints are an issue, we can usually build and expedite your order to fit your needs. And our pricing is more economical than our competition, without comprising quality.

Whether it's a portable unit used in the field or a fixed station, give us a call. Our files are filled with hundreds of antenna designs for every conceivable use.

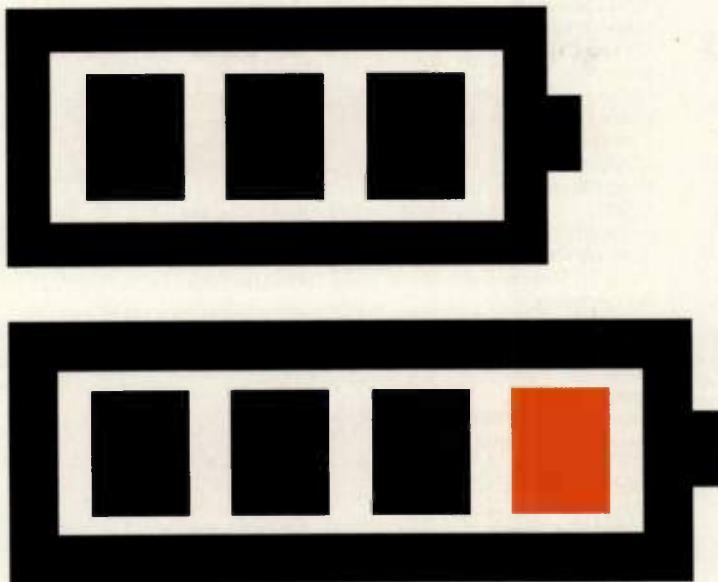

We are NATO and Cage Cod certified and have worked with the following customers:

ARMY NAVY AIRFORCE NASA DOD DIA  
 FBI BOEING LOCKHEED MIT SRI WOODSBROKE

## With up to 25% longer talk time, there's a new icon in handset PAs.

Today's consumers demand extended battery life from their handsets. Now you can give it to them with Raytheon RF Components' PowerEdge power amplifiers, our latest HBT amplifiers with intelligent bias-control technology.

PowerEdge PAs give you up to 25 percent more talk time per battery recharge...as well as greater functionality. These small-outline power amplifier modules feature advanced DC power management to optimize transmitter

**Product Search**  
Select from any or all criteria below and click search.

Classification:	All Components
Frequency:	to <input type="text"/> GHz
Keyword or product number <input type="text"/>	

Our Web site features a powerful search engine to help you find the right component...right now.

performance—without sacrificing linearity—while operating at backed-off output levels. In concert with power-sensing and baseband controllers in handsets, PowerEdge PAs automatically adjust amplifier bias in accordance with input signal requirements. This ability to reduce current consumption under certain conditions is critical to extending battery life in the next-generation handsets.

And PowerEdge PAs cover the four CDMA bands around the world.

# INTELLIGENCE *in time and frequency*

### INTRODUCING THE INTELLIGENT REFERENCE/TM-4™ FROM SPECTRUM INSTRUMENTS

Spectrum proudly presents its newest GPS time and frequency reference, incorporating our latest advances. Intelligent Holdover™ provides Rubidium-like stability during periods of GPS unavailability while providing all the benefits of a quartz oscillator. And FastStart™ technology gets you to high precision within minutes of start-up. Built to beat MTIE Stratum-1 and CDMA clock specifications, the TM-4 is ideally suited as a precise reference for wireless base stations, cellular telephone and E911 positioning infrastructure, analog and digital transmitters, network time synchronization and limitless custom applications. With Spectrum's GPS time and frequency references, you can improve the precision of your products, maximize bandwidth, eliminate calibration and maintenance requirements, and best of all- increase your bottom line. We offer a virtually unlimited customization capability and can design a solution that is *precisely* what you need. Contact us, and see.

# High Performance EM Simulation and Optimization and Electronic Design Automation

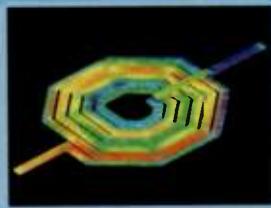

Zeland Software has been recognized as a leading developer to provide unparalleled high frequency electromagnetic simulation and design tools for microwave, semiconductor, wireless, and telecom industries, government laboratories, and universities around the world.

Applications of Zeland's Software include MMICs, RF ICs, LTCC circuits, 3D IC interconnects and packages, high-speed digital circuits, multilayer PCBs, MCMs, HTS circuits and filters, microstrip antennas, wire antennas, conical and cylindrical helix antennas, inverted-F antennas, antennas on finite ground planes, other RF antennas, waveguides, EMC/EMI, biomedical effects of electromagnetic waves, and many more.

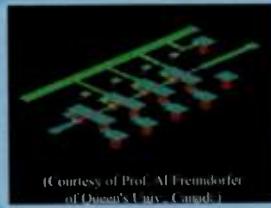

We are committed to satisfying our customers with high performance software and quality technical support. We love to discuss design challenges with customers and provide our input. We welcome any feedbacks or tough EM simulation and design problems from customers.

## IE3D

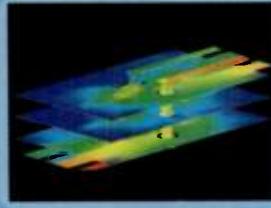

Planar and 3D Electromagnetic Simulation and Optimization Package

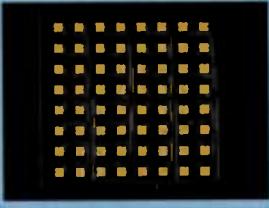

A Spiral Inductor with Thickness on a Semiconductor Substrate

IE3D Simulation of an Entire Low-Noise Amplifier

A Multilayer PCB with Vias in High-Speed Circuits

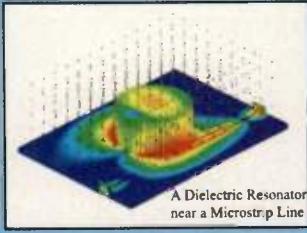

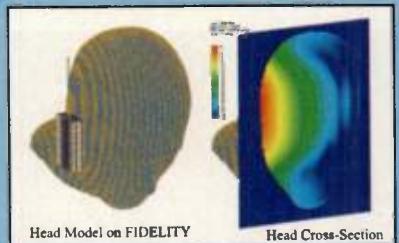

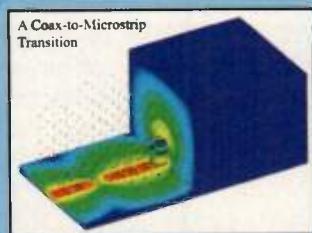

An 8-by-8 Patch Antenna

## PRODUCTS

## LOW PHASE TRACKING. CUSTOM DESIGN.

Two reasons the SMD isolator from TEMEX is ideal for inter-stage amplifiers. When different transistors have to be combined, the TEMEX isolator phase tracking from piece to piece is an exceptionally low 5 degrees. And TEMEX is the only supplier providing affordable prototyping of custom products. Delivered in tape and reel of 500 pieces, TEMEX offers high power (10 WATT), wide band (20%) products in VHF, UHF, GSM, PCS and UMTS frequency band.

TEMEX

# BRINGING BROADBAND CABLE HOME

Today's cable broadband services depend on Sawtek's broad range of SAW filter products --- whether it be the linear, highly-selective filtering demanded from the headend, or the small size and cost-effectiveness required in the settop box. For end-to-end cable connectivity, Sawtek SAW filters offer the heightened sensitivity and flat passbands you need. From the steep skirts of our headend filters to the high IF attenuation levels designed into our cable tuner filters, Sawtek provides the broadest range of filtering solutions. Call today or visit our website to see why Sawtek is *the* choice for all your broadband filtering needs.

Sawtek... Your Supplier of Choice!

## SAWTEK'S BROADBAND CABLE FILTER FAMILY

Frequency (MHz)	Bandwidth (MHz)	Package Size	Part Number
36.15	8.0	6/18 DIP	855748
44.0	6.0	6/18 DIP	855079
70.0	3.5	6/14 DIP	851549
70.0	3.5	15.3x6.5mm	855742
499.25	1.0	9.0x7.0mm	855104
549.25	1.0	9.0x7.0mm	854707
1086.0	10.0	3.0x3.0mm	855964
1090.0	10.0	3.0x3.0mm	855989
1090.0	10.0	3.8x3.8mm	856096
1220.0	10.0	3.0x3.0mm	856176
1220.0	10.0	3.8x3.8mm	856182

## CRYSTALS For Critical Data Transmission

Need crystals that will work for critical data transmissions? Try our LFN1000 series crystal, customers say it is an exceptional product for critical data transmission and microwave applications.

Today's wireless technology requires uninterrupted data flow. Our LFN 1000 series crystal, manufactured in the TO-5 package meets the ever-changing needs of the wireless marketplace.

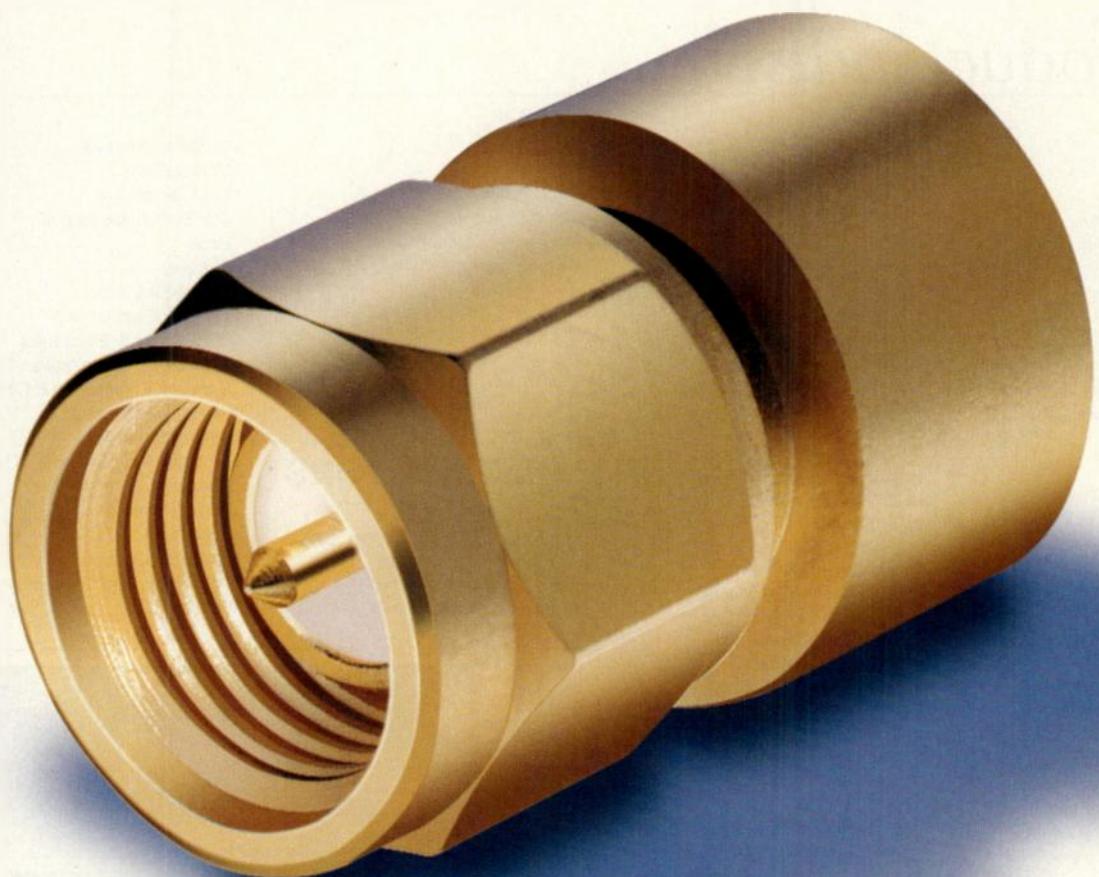

We've been in business for 50 years, manufacturing quality crystal products and meeting or exceeding the expectations of our customers. So if you need high quality crystals, give us a call. We look forward to doing business with you.

Exceptional service...

## DC up to 20GHz TERMINATIONS

**\$9.95**

from (qty.1-9)

From FM to cellular to satellite communication circuits, these terminations end all...the broadband KARN-50, ANNE-50, and ROSE-50 terminations from Mini-Circuits. Until now, microwave terminations were usually very expensive, especially custom designs for higher frequencies. But thanks to quantum leaps in design and manufacturing techniques by Mini-Circuits, you could replace high

priced units with these versatile 50 ohm solutions and obtain features such as low VSWR, usability to 20GHz, and rugged construction to withstand severe mechanical vibration and shock, from the low price of only \$9.95 each (qty.1-9). And high quantity pricing is even more amazing! Finally! Cost effective, high performance microwave terminations...off-the-shelf! Call Mini-Circuits today.

*Mini-Circuits...we're redefining what VALUE is all about!*

# RF TRANSFORMERS

.3-2500MHz as low as **99¢** each (qty. 100) **IN STOCK**

It used to be that small RF transformers with high end performance cost a lot, but not since Mini-Circuits introduced the all ceramic leadless TC and high strength plastic leaded TCM families. Now you can get impedance ratios from 0.1:1 to 16:1 ohms with good return loss and broad bandwidths from 0.3 to 2500MHz at price buster values. Plus, these ultra-small performers are all-welded and have solder plated leads for high reliability and solderability, excellently suited for your automated pick-and-place assembly operations. So have it both ways; high performance AND low price with Mini-Circuits TC and TCM surface mount transformers.

Detailed Performance Data & Specs Online at: [www.minicircuits.com/model](http://www.minicircuits.com/model)

#### LEADLESS Ceramic Base

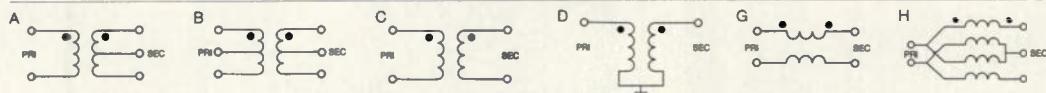

(actual size)	$\Omega$ Ratio	Freq.	Ins. Loss <sup>a</sup>	Price \$ea.
MODEL & Config.	(MHz)	1dB (MHz)	(qty. 100)	
TC1-1T	1A	0.4-500	1-100	1.19
TC1-1	1C	1.5-500	5-350	1.19
TC1-15	1C	800-1500	800-1500	1.29
TC1.5-1	1.5D	5-2200	2-1100	1.59
TC2-1T	2A	3-300	3-300	1.29
TC3-1T	3A	5-300	5-300	1.29
TC4-1T	4A	5-300	1.5-100	1.19
TC4-1W	4A	3-800	10-100	1.19
TC4-14	4A	200-1400	800-1100	1.29
TC8-1	8A	2-500	10-100	1.19
TC9-1	9A	2-200	5-40	1.29
TC16-1T	16A	20-300	50-150	1.59
TC4-11	50/12.5D	2-1100	5-700	1.59
TC9-1-75	75/8D	0.3-475	0.9-370	1.59

#### LEADS Plastic Base

(actual size)	$\Omega$ Ratio	Freq.	Ins. Loss <sup>a</sup>	Price \$ea.
MODEL & Config.	(MHz)	1dB (MHz)	(qty. 100)	
TCM1-1	1C	1.5-500	5-350	.99
TCML1-11	1G	600-1100	700-1000	1.09
TCML1-19	1G	800-1900	900-1400	1.09
TCM2-1T	2A	3-300	3-300	1.09
TCM3-1T	3A	2-500	5-300	1.09
TTCM4-4	4B	0.5-400	5-100	1.29
TCM4-1W	4A	3-800	10-100	.99
TCM4-6T	4A	1.5-600	3-350	1.19
TCM4-14	4A	200-1400	800-1000	1.09
TCM4-19	4H	10-1900	30-700	1.09
TCM4-25	4H	500-2500	750-1200	1.09
TCM8-1	8A	2-500	10-100	.99
TCM9-1	9A	2-280	5-100	1.19

Dimensions (LxW): TC .15" x .15" TCM .15" x .16" <sup>a</sup>Referenced to midband loss.

## With GaAs & InP MMICs to 100GHz, you've got wireless wired.

It's Category 5 out there, with winds of more than 150 miles per hour. And that car that just flew by doesn't look like it's going much slower. It's performance so scary it will make the hair on the back of your neck stand on end.

Which, if you're a wireless systems designer, is good preparation to experience our GaAs and InP technology.

Like GaAs amplifiers, mixers and multipliers for point-to-point and point-to-multipoint, 18GHz to 100GHz applications. HBT and HEMT MMICs. And the world's most efficient handheld power amplifiers. Because they're the world's only InP power amplifiers. Which makes them perfect to realize the power of 2.5G and 3G handset performance.

Hit our website to find everything you need to ride the storm of wireless innovation. And don't worry, no one will hear you scream.

### Foundry Services

#### GaAs HEMT Process Technology

- ▼ 0.15 µm, 2 and 4 mil
- ▼ 0.10 µm, 4 mil

# BMA Blindmate

Not just  
your typical  
RF Connectors...

Featuring

Frequency  
DC to 18 GHz

Blindmate

Connector mate without visual contact

Hot Mateable

Connector mating while power is on

Rugged Design

Applications requiring high stress forces

Superior Performance

>18 GHz with VSWR 1.03 @ 6 GHz

## We have your next GSM power amplifier solution.

RFMD sets the standard when it comes to providing handset designers exactly what they need – highly integrated power amplifier solutions. That's why our engineers used our advanced third-generation GaAs HBT and silicon CMOS process technologies to design the RF3140 – RFMD's highest performing quad-band power amplifier module with integrated power control circuitry. The RF3140 is part of RFMD's second-generation PowerStar™ family of power amplifier modules with integrated power control. Our PowerStar™ solutions provide handset manufacturers reduced component count, improved production yield, simplified phone calibration and faster time-to-market.

RF Micro Devices – leader in wireless technology and proven world-class component supplier.

### The RF3140 Features

- Integrated Power Control
  - Optimized Integrated Power Control
  - Power Ramping Utility Calculates Required Ramps
  - External Control Loop Components Eliminated
- Over 60% System Efficiency for GSM
- Over 55% System Efficiency for DCS
- 0 dBm Drive Level
- Superior Forward Isolation
- +35 dBm GSM Output Power at 3.5V
- +33 dBm DCS/PCS Output Power at 3.5V
- 10mm x 10mm x 1.4mm Leadless Package

### Typical Applications

- 3V Quad-Band GSM Handsets
- Commercial and Consumer Systems
- Portable Battery-Powered Equipment
- GSM850/EGSM900/DCS/PCS Products
- GPRS Class 12 Capable
- Part of the POLARIS™ TOTAL RADIO SOLUTION™

A DOVER COMPANY

# Mini-Pack™

## Minimum Size — Complete Package

K&L Microwave introduces its new **Mini-Pack™**. Compared to standard combline or interdigitals this new cavity filter offers considerable reductions in volume and weight. The **Mini-Pack™** is available in a wide range of frequencies from 6 GHz to 18 GHz with up to 10 sections, making it ideal for military applications. By meeting and exceeding the requirements of most military filters, K&L is offering maximum performance in a complete package.

## Sometimes SIZE Is Everything

Still doing tomorrow's designs  
with yesterday's layout tools?

Are you toying around with outdated layout tools that make you anything but agile? Have you considered switching to **Microwave Office™ 2002**? It was designed from the ground up to support complex layout problems like LTCCs, MMICs and RFICs, not to mention dense PCBs—with advanced capabilities like design rule checking, 3D views, and the industry's only truly unified database. Which means you'll never have to deal with those problematic design synchronization steps or back annotations that can ruin your day.

It also comes with manufacturing interfaces like Gerber, DXF and GDSII that actually work! Stop playing around, and start getting your designs out in no time flat. Make the switch to **Microwave Office 2002**. Download a 30-day evaluation from [www.mwoffice.com](http://www.mwoffice.com) or call us at 310-726-3000 for more information.

# New RF IC & PA Solutions for Global Infrastructure Demands

Direct Conversion Mixer (+3 VDC, LO = 0 dBm, Si BiCMOS)						
Part Number	RF Frequency (MHz)	P <sub>1dB</sub> (dBm)	Input IP3 (dBm)	Input IP2 (dBm)	Conv. Gain (dBV)	Package Type
SKY73001-11	2-3500	+15	+26	+67	-1	32 Pin RF LGA
Ultra-Linear PA Drivers and High Gain 50 Ohm Modules (GaAs HBT)						
Part Number	RF Frequency (MHz)	P <sub>1dB</sub> (dBm)	Gain (dB)	Output IP3 (dBm)	Supply Voltage	Package Type
CX65001-12	160-700	24	22	45	5.0	SOIC 8-Lead
CX65002-12	700-1400	24	18	47	5.0	SOIC 8-Lead
CX65003-12	1400-2500	24.5	11.5	48	5.0	SOIC 8-Lead
CX65100-11	700-1300	29.5	29.5	39	3.4	8x8 mm 8L LCC
CX65101-11	1700-2200	28.5	21.5	40	3.4	8x8 mm 8L LCC
CX65102-11	1700-2200	28	22	39	3.4	6x6 mm 6L LCC
CX65104-11	700-1300	31	28	40	5.0	8x8 mm 8L LCC
CX65105-11	1700-2200	27	24	40	5.0	8x8 mm 8L LCC
Diversity Receiver Front Ends / Downconverters (+/- 5 V <sub>DC</sub> , GaAs MESFET)						
Part Number	RF Frequency (MHz)	Frequency (MHz)	Gain (dB)	Input IP3 (dBm) Full / Mixer	NF (dB) Full / LNA	Package Type
CX42053-11	700-1300	10-250	15	13 / 27	3.0 / 1.8	24 Pin PQFP
CX42054-11	1700-2200	10-250	11	10 / 24	4.6 / 2.6	24 Pin PQFP
Dual Fractional-N Synthesizers / PLLs (+3 V <sub>DC</sub> , SiGe BiCMOS)						
Part Number	Main / RF Frequency (MHz)	Aux / IF Frequency (MHz)	Current @ 3 V (mA)	Main / RF Step Size (Hz)	Phase Noise @ 10 kHz Offset (dBc/Hz)	Package Type
CX72300-11	100-2100	500	13	< 100	-89 @ 2 GHz	28 Pin TSSOP
CX72301-11	100-1000	500	11	< 100	-95 @ 850 MHz	28 Pin TSSOP
CX72302-11	100-6100	1000	17	< 400	-80 @ 6 GHz	28 Pin TSSOP
CX74038-12*	100-2600	800	7	< 10	-85 @ 2.4 GHz	20 Pin TSSOP
CX74038-71**	100-2600	800	7	< 10	-85 @ 2.4 GHz	24 Pin CSP

\*CX74038 series are Fractional-N / Integer-N synthesizers.

Large step frequency settling time is 10/Loop BW  $\mu$ s

## Base Station Transceiver Front End with Diversity Receiver

Authorized Distributor for All Skyworks Products

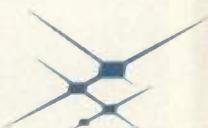

Contact Avnet RF & Microwave at 1.866.Avnet.RF (286-3873)  
to qualify for front end receiver or synthesizer samples/evaluation kits.

## Wireless Infrastructure RF Components

Skyworks Solutions, Inc. is the world's leading provider of semiconductor solutions for wireless transceiver applications. Skyworks produces components and systems for the world's top terminal manufacturers, offering a variety of solutions to satisfy global infrastructure demands.

## Applications

- CDMA/GSM/TDMA, 2.5G and 3G base transceiver stations (BTS)
- PA drivers exceed ACLR/ACPR requirements WLAN (802.11b/g), WCDMA/Umts, EDGE, GPRS
- Wireless local loop and wireless routers
- Synthesizers ideal for telecom, SATCOM, precision test equipment
- Mobile radio, SMR, TETRA, paging base stations

**SKYWORKS™**

**RAKON**  
 PRECISION QUARTZ PRODUCTS

**Rakon are specialists in custom-made oscillators, providing you with unmatched specifications for industrial and challenging applications.**

**Rakon TCXOs offer you:**

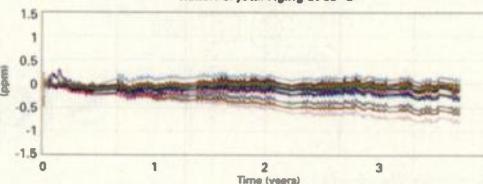

- Outstanding quality and performance Sub ppm stability
- Industrial temperature range operation -40 - 85°C
- No frequency perturbations under dynamic temperature conditions

- Excellent phase noise performance under vibration
- G-Sensitivity of less than 1ppb/G

- Exceptionally low aging

## For Split-Second Swiss Timing Just Pick Your Package and Go!

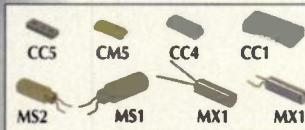

Don't accept anything less than a Micro Crystal Swiss clock crystal for your next generation device.

These quartz tuning-fork resonators are manufactured with a unique photo lithographic process for precise 32.768kHz nominal fundamental frequencies.

- Micro ceramic or metal package styles
- SMD or radial leaded
- High stability and low aging
- Low power consumption
- High shock and vibration resistance

With eight package options, top specs and aggressive pricing, there's no need for second best.

Actual Size

## The Reliability Of The Network Depends On The Right Antenna

Centurion Offers the Right  
Antennas and Power  
Products for:

- Telematics • Mobile Phone
- In-Building • Bluetooth/802.11

Centurion aims to improve wireless communication by employing superior technological innovation to create antennas and power products that strengthen the quality and reliability of wireless communications in handheld devices, automotive, in-building and local area networks. Our technological and engineering innovation ensure speed to market, the highest quality assurance, and the scale to meet any production volumes.

# NEW PRODUCTS

High performance components perfect for all industrial, military and space applications!

**ANALOG DETECTORS**

Model	Frequency Range	Input Power Range	Power Flatness	Power Temperature Stability	Sensitivity Vout @ Pref	Sq. Law Dep.	VSWR Input	DC Volt.	Sup. Cur. no RF
	GHz	dBm	±dB	±dB	mV	dBm	±V	±mA	
DAC4101	0.01-4.0	-30 to 5	0.60	0.25	120	-10	1.5	5	2
DAQ6101	0.1-6.0	-30 to 5	0.50	0.25	120	-10	1.5	5	2
DAQ10501	0.05-10.0	-30 to 5	0.75	0.25	120	-10	1.5	5	2

**THRESHOLD DETECTORS**

Model	Frequency Range	Input Power Range	Power Flatness	Power Temperature Stability	Hysteresis	Pulse Response	VSWR Input	Volt.	Cur.
	GHz	dBm	±dB	±dB	dB	μsec	Input	V	mA
DTC4003	0.01-4.0	-10 to 20	0.30	0.20	0.2	15	1.2	5	3
DTO6001	0.1-6.0	-30 to -5	0.50	0.25	0.2	15	1.5	5	2.5
DTG6015	0.1-6.0	-30 to -5	0.50	0.25	0.2	15	1.5	5	2.5

Specifications are typical.

**VCOS**

Model	Freq. Range	Tuning Voltage Range	Output Power/ Variation	Typical Phase Noise Offset at 10kHz/100kHz	Nominal Modulation Sensitivity	Typical Harmonic Suppression	D.C. Bias
	(MHz)	(Volts)	(dBm/ ±dB)	(dBc/Hz)	(MHz/V)	(dBc)	Voltage (Volts) Current (mA)
Oscillator with internal MMIC amplifier available in SMTO-8 or CougarPak™.							
OAS5100	4600-5100	0-15	10/2.0	-70/-100	30	-25	5.0 100
OAS7700	5700-7700	0-15	10/2.0	-68/-98	150	-25	5.0 100
Straight Oscillator available in SMTO-8 or CougarPak™.							
OS6100	4700-6100	0-15	0/3.0	-70/-100	100	-5	5.0 30
OS8600	7000-8600	0-15	0/3.0	-65/-95	200	-5	5.0 30

Specifications are typical.

Contact Cougar's sales and application engineering staff at 408-522-3838 to discuss your specific application and our solution.

ISO 9001 & MIL-PRF-38534  
CERTIFIED

## WORLD'S MOST INTEGRATED LOW-POWER R F T R A N S C E I V E R

**XE1202**  
**XE1200** SERIES

**433/868/915MHz · -113/+15dBm · 76.8kbps**

XEMICS introduces its latest short range transceiver, the XE1202. With its highly integrated architecture, the XE1202 is optimised for system cost: your complete RF front-end requires only a few low cost external components. On-chip programmable baseband filters allow for both wide band or narrow band operation, for optimised data throughput and reception sensitivity at all times. The unique Bit-Synchroniser recovers the data clock at reception and permits data transfer at the full throughput rate without the need for baseband coding.

Data Rates	Output Pwr	Filter	RX Current	TX Current	Supply Voltage
4.8kbps	0dBm	10kHz			
9.6kbps	+5dBm	20kHz			
19.2kbps	+10dBm	40kHz	12mA	33mA @ +5dBm	2.7V ~ 3.6V
38.4kbps	+15dBm	200kHz		48mA @ +15dBm	
76.8kbps

MITEQ designs and manufactures state-of-the-art microwave components and satellite communications earth station equipment. Products include UHF to millimeter wave low-noise and medium power amplifiers, mixers, multipliers, switches, frequency sources, IF signal processing equipment, integrated microwave subsystems, satellite up down converters and modems. Emphasis is on high-performance, custom engineering driven applications.

**SUPER FAST  
VERY HIGH ISOLATION**

# SWITCHES

**SPDT, DC-4.5GHz** From **\$195\*** ea. (10,000) **In Stock**

Very high isolation up to 65dB at 1GHz typical. Integral TTL driver with blazing fast 10nsec switching speed. The ability to withstand severe operating temperatures ranging from -40°C to +85°C. That's what's great about Mini-Circuits wideband DC to 4.5GHz SPDT switches. But that's not all! Reflective and absorptive configurations come in two different low profile plastic packages to suit your design layout requirements; the 3x3mm MCPL™ package with exposed metal bottom for excellent grounding and heat dissipation, and the industry standard SOIC-8. No matter which model you choose, you'll get strong performance and rugged reliability at a price that crushes the competition. Just check the specs, then contact Mini-Circuits today for our fast response!

Mini-Circuits...we're redefining what VALUE is all about!

**SPECIFICATIONS (@ 1GHz)**

Model	Freq. (GHz)	In-Out Isol. dB(typ)	Ins. Loss dB(typ)	1dB Comp. dBm(typ)	Price \$ea. (Qty. 10)

# Write for RF Design

# Write for RF Design

**RF Design** cannot exist without the help of you sharing design information with your fellow readers. Writing an article for a worldwide publication such as *RF Design* can help advance your professional standing, increase your professional network of colleagues and bring attention from possible new employers. Along with the prestige of being published, worldwide, in a respected technical journal, your work will help keep your colleagues up to date on emerging technology as well as present the cutting-edge of today's design advancements.

If you have expertise in any of the following areas, please submit an abstract or completed works to us for consideration

- Military
- Satellite Communications
- Wireless Security
- 802.1x/Bluetooth
- Filters
- Mixed Signal
- EMC
- Frequency Synthesis
- Power Amplifier Design/Application
- Broadband
- Microwave Applications

- Software Defined Radio
- Embedded Systems
- SoI
- SeC
- Oscillators
- Analog/Digital Modulation
- A-to-D, D-to-A
- CAD Modeling and Use
- Active/Passive Components
- Fiber Optics
- Wireless Data

Please send abstracts to: Ernest Worthman, Technology Editor • RF Design  
5680 Greenwood Plaza Blvd. Suite 100 • Greenwood Village, CO 80111

# RFdesign®

# A Critical Element of Business Effectiveness, Efficiency and Overall Safety is a Reliable and Powerful Wireless Communications System

► BASE STATION WORKSHOPS: MARCH 10-11 ► CONFERENCE AND EXHIBITS: MARCH 12-14

► LAS VEGAS CONVENTION CENTER, LAS VEGAS

- Completely revamped powerhouse conference program is devoted to the concerns of professionals seeking to improve business efficiency and safety through improved wireless communications technologies.
- Get critical regulatory updates, spectrum management, RF Safety, and business management.
- See products and services of over 350 exhibitors on the show floor including mobile radio, cellular, pagers, mobile data, GPS, ITS, RF equipment, Base Station Equipment, Systems Integration and Satellites.

## DON'T MISS THIS OPPORTUNITY!

- Unsurpassed Keynote Speaker Richard Butler, Influential World Leader in UN Arms Inspection Open to All Badged Participants! Wednesday, March 12, 9:00am-10:00am

IWCE 2003 is pleased to offer IWCE participants the opportunity to experience one of the world's most sought after keynote speakers—Richard Butler, Diplomat in Residence at the Council on Foreign Relations, New York. Mr. Butler has been directly involved in the Iraq weapons inspection process and offers a unique and informed perspective on external threats to world stability.

- Discover Practical Ways to Improve Your Business. Attend IWCE 2003 Professional Education Sessions in the Following Tracks:

Homeland Security  
Public Safety  
Interoperability  
Business  
Transportation and Utility Applications  
Regulatory/Policy  
Plus, Base station workshops

For a complete list of conference sessions, for more information about IWCE 2003 or to register, go to [www.iwce-mrt.com](http://www.iwce-mrt.com) or call 1-800-288-8606.

For information on exhibiting at IWCE 2003, please contact:

# 800-522-2253

This Number  
May Not Save  
Your Life...

But it could make it a lot easier!  
Especially when it comes to  
ordering non-standard connectors.

#### RF/MICROWAVE CONNECTORS

- Specials our specialty virtually any SMA, N, TNC, BNC, SMB, or SMC delivered in 2-4 weeks
- Cross reference library to all major manufacturers.
- Large inventory of piece parts for all types of coaxial connectors.
- Experts in supplying "hard to get" RF connectors.
- Connectors supplied to your drawings and specs.
- Our 56 Standard adapters can satisfy virtually any combination of requirements, between SMA, TNC, N, 7mm, BNC and others.
- Extensive inventory of passive RF/Microwave components including attenuators, terminations and dividers.

# SAW FOR DEFENSE AND SPACE

SAW components and  
subsystems for IF signal  
processing in military  
and professional  
OEM equipment.

Engineering support and unique  
design capabilities enable  
prototype development allowing  
more competitive NRE pricing and  
quick delivery.

**PHONON**  
CORPORATION

**COMMUNICATIONS:** IF bandpass filtering  
for: cellular base stations, microwave links,  
mobile digital radio, MSK matched filters.

**RADAR:** Wide band matched filters, pulse  
compression using bi-phase, linear and  
non-linear frequency modulations.

**ELECTRONIC WARFARE:** Real time spec-  
trum analysis, channelized filter banks,  
delay lines.

**SPACE:** High reliability SAW components  
for satellite use.

## Advanced Digital Broadcast Polska

We are an international corporation delivering solutions in the state-of-the-art electronics design including high-speed digital circuits, RF tuners for digital satellite, cable and terrestrial TV, and ASICs for real-time-data processing.

We offer our employees excellent working environment, work with the cutting-edge test equipment, overseas opportunities to work on projects together with leading companies in the electronics industry such as ST Microelectronics, Philips, and IBM. Our employees can develop within the frame of ADB University and shape their career path on both the technical and managerial ladder.

The research and development centre in Zielona Góra, Poland is seeking experienced professionals:

- **RF Specialists**
- **Electronics Engineers**
- **ASICs Designers**

If researcher's blood circulates in your veins visit us at  
**[www.adbglobal.com](http://www.adbglobal.com)**

to get further particulars regarding the requirements, recruitment procedure, necessary documents and other available opportunities.

### LEAD SPACECRAFT ENGINEER

(Job site/interview: Ashburn, VA).

AeroAstro, Inc. is seeking an individual to design and develop components, power systems and other devices for use on spacecraft. Will develop spacecraft radios including digital radios, band-pass filters and frequency synthesizers; design and implement demodulators using phase locked loops and other techniques; identify and procure spacecraft components and systems. Min. Master's degree in Electrical Engineering or equivalent plus 8 years experience in the satellite communications industry.

Salary commensurate with education and experience. Submit your resume to Valerie Whitfield at [jobs@aeroastro.com](mailto:jobs@aeroastro.com). AeroAstro, Inc. 20145 Ashbrook Place, Ashburn, VA 20147.

Internet [www.aeroastro.com](http://www.aeroastro.com).

# 2W & 5W DC to 18GHz ATTENUATORS

**IN STOCK**

**\$2995**  
from ea. (1-49)

Rugged Stainless Steel Construction, High Repeatability, Miniature Size, Low Cost, and Off-The-Shelf Availability are some of the features that make Mini-Circuits "BW" family of precision fixed attenuators stand above the crowd! This extremely broad band DC to 18GHz series is available in 5 watt Type-N and 2&5 watt SMA coaxial designs, each containing 15 models with nominal attenuation values from 1 to 40dB. Built tough to handle 125 watts maximum peak power, these high performance attenuators exhibit excellent temperature stability, 1.15:1 VSWR typical, and cover a wealth of applications. So contact Mini-Circuits today, and capture this next generation of performance and value!

Mini-Circuits...we're redefining what VALUE is all about!

MODELS (Add Prefix BW-)				Attenuation (dB)
2W SMA	5W SMA	5W Type-N	Nominal	
\$29.95	\$44.95	\$54.95		
S1W2	S1W5	N1W5	1	±0.40

CIRCLE READER SERVICE CARD

# NEW GaAs MMIC SWITCHES.

ONCE YOU'VE SEEN THEM, YOU MAY  
WANT to RETHINK  
YOUR DESIGN.

- Bandwidth to 6 GHz for 802.11 a, b, g
- Low Height Profile Packages, as low as 0.55 mm
- Low Voltage Operation, as low as 1.8 Volt
- High Power Handling Capability, to +36 dBm
- Embedded Converters for Single Pin Control
- Multiple Throw Architectures

For information and data sheets, visit
