

NOW LET ME SEE

... there are four fifty-thousand watters covering Greater-New York. But WOR delivers a signal three times stronger than the signal delivered by any station anywhere. This, of course, gives me a greater chance of being heard by more people, more often, at more profit. Hm-mm, there's no choosing about it. WOR's the buy for me. Seems most of the country's biggest timebuyers agree on that,

our address is 1440 Broadway, in New York

The WLS market is big! It includes Chicago—a must market in itself—and the four great agricultural-industrial states of Illinois, Indiana, Wisconsin and Michigan.

WLS covers this entire market . . . and we honestly believe no other advertising medium does so more effectively. Furthermore, we have the proof to substantiate our belief. Our new coverage map, based on a breakdown of 1,117,956 letters received during 1939, shows exactly where WLS is listened to, county by county and how intensively it serves that area.

We will gladly send you a copy on request—or ask any John Blair man.

NEW ENGLAND HAS HER OWN 18 LEAGUE BOOTS

THEY cover the six states in giant strides, leaving clear-cut footprints on the sands of radio time in all of the key localities so completely covered by the 18 stations of The Yankee Network.

There's no magic in this. It's the development of an essential service to provide intensified local coverage of <u>every</u> area where there is the greatest concentration of population and buying power.

And because each of the 18 stations of The Yankee Network combines the twofold appeal of programs of community interest with blue-ribbon network shows, the local acceptance gives listener-value <u>double-plus</u> on <u>all</u> radio advertising, from cut-ins to live talent presentations. In radio, The Yankee Network IS New England.

"As Winchell might put it, Lotions of Listeners

"New Yorchids"...With "Kid Chocolate" putting the shine on his shoes, Jergens v. p. Bob Beucus put shine on Blue Network, to delight of NBC's Ken Dyke, precariously perched on air, mostly. Said Bob: "The Blue's the buy for me. It's done a swell job for Jergens—and gives us 'Money Market' coverage at a low cost nothing else can match!" Photogenic gent in back is Lennen & Mitchell's v. p. Bob Orr.

Sounds by the surf....On vacation in Florida, Midnighter Winchell caught these cuties cooing ... "I heard about this lotion on Winchell's program Sunday," cooed the beautnette, "and it's grand!"... "Bet it costs a million for that show," bet the blonde ... Her crack is coo-coo-and we're laffing. Because "you don't need a million bucks to do a national sales job."

the Blue gives us...

at Lowest Cost!"

V. P. in charge of Advertising, Andrew Jergens Co.

Blue Network helps Jergens attain overwhelming leadership in hand lotion field! Hooper study reveals 40% use of Jergens by Winchell tuner-inners! Moral: You don't need a million dollars to do a bang up sales job on the Blue! Here is "Money Market" coverage at lowest national cost!

WE HAD LUNCH the other day with Bob Orr, v. p. of potent Lennen & Mitchell. He told us a story we know you'll be interested in hearing. A story about Jergens Lotion—and how the Blue Network has helped it go places! Bob said Jergens ranked third in hand lotion sales before Walter Winchell said "Hello Mr. and Mrs. America" on the Blue. Today Jergens is so far out front "there isn't any second."

Last week, along came the results of an amazing survey. It was made by C. E. Hooper who calls it "the strongest sales story for any medium ever compiled." Of the 2356 people studied six out of ten proved to be Winchell-Blue listeners. and 40% of the regular tuner-inners are Jergens customers! While only 10% of the non-listeners use Jergens.

All of which is very significant, and in the words of Jergens v.p. Beucus, is "confirmed by our sales figures." It proves the Blue's ability to produce big sales—at the lowest national cost of *any* medium!

This low cost, the result of the famous Blue Network Discount Plan, is one reason why the Blue is now being used by America's smartest advertisers. They also consider it 1940's best advertising buy because it provides *concentrated coverage* of America's "Money Markets," where 72% of the country's effective buying power is located.

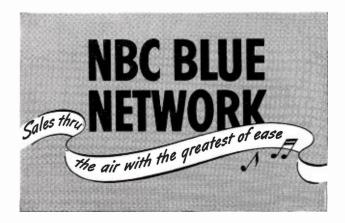

70% of the Blue's 1938 advertisers renewed in '39. 17 new clients joined up. Because they know that *sales* begin where the Blue begins—*at all-time low costs!* We'll be mighty glad to show you how this network can help you "up" *your* sales for less than \$5000* per nighttime half hour, coast to coast! ASCAP 70% Rate Boost Stirs Industry

Seeks to Split Broadcast Ranks With Preferential Bait; networks with performable music in sufficient volume to make capitu-Clearance at Source, 7½% Net Levy Are Proposed

CULMINATING a five-year buildup which has had repercussions in Congress, the courts and many State Legislatures, ASCAP on March 21 delivered its newest ultimatum to the broadcasting industry under which it asks about a 70% increase in royalties for the right to perform its music-practically all from the networks.

Stipulating clearance at the source, at 71/2% of the gross income of the networks, the proposal, while viewed merely as the "asking price", nevertheless was held to be wholly unacceptable on anything approaching an industrywide scale. There immediately developed an outbreak of charges and counter-charges which presaged bitter dealings before a solution, if any, is reached. Current contracts expire at the end of this year and ASCAP has notified broadcasters it will be ready to talk terms beginning April 15, hinting broadly that it is ready to accept 10year contracts to replace the expiring five-year arrangements.

Another 'Munich'

Within the industry, the general reaction was that, despite a sop to smaller stations offered by ASCAP along with readjustments downward to those in the middle brackets, the industry was not disposed to have another "Munich" paralleling the 1932 and 1935 situations. Generally, it was felt that ASCAP had simply changed the words but was using the same music, seeking to split the industry in order to force long-term contracts.

While the ASCAP proposition, delivered orally March 21 to a hand-picked group of broadcasters, caused a sensation, it did not occasion any surprise in broadcasting ranks. A plan of the nature submitted was foreseen. Moreover, the industry generally felt that it was better prepared to meet the ASCAP onslaught than in any previous crisis because of the status of Broadcast Music Inc., as a go-ing organization, designed to introduce competition in the copyrighted music field and to create an industry-owned music reservoir.

HOW RADIO FILLS ASCAP'S COFFERS

FOLLOWING is a tabulation, gleaned from various official and industry sources, indicating the rise in payments by the broadcasting industry to ASCAP from 1923 through 1939, in relation to ASCAP's total income during those years:

Year	Estimated Gross ASCAP Income Broadcasting Industry from Radio	ASCAP Total
	, , , , , , , , , , , , , , , , , , ,	
1923	\$ 9,750	\$ 448,468
1924		561,427
1925		772,336
1926		1.062.619
1927		1,359,766
1928		1,580,694
1929	00.000.000 000.000	1.803.164
1930	40 500 000 005 501	2.043.791
1931	#0.000 000 009 100	2.004.490
1932		2.013.787
		3.000.000
1933		3,550,000
1934		
1935		4,000,000
1936	107,551,000 3,280.000	4,450,000
1937		5.926.942
1938		6.087,351
1939		6,950,000

Due to the ambiguities in the ASCAP proposal, many stations, particularly those in the intermediate group, found themselves stumped in attempting to calculate ASCAP's demands. As a matter of fact, except for the smaller stations (\$50,000 annual gross or less) and the major networks, it was impossible to define precisely what ASCAP seeks in the way of per-

formance royalties. Based on 1937 industry statistics, as well as on anticipated 1941 income, it was generally concluded that the ASCAP demands are for at least a 70% boost. And in its own statement, ASCAP asserted it sought to place the burden on the networks by requiring clearance at the source at 71/2% of their revenue, at the same time relieving affiliated stations of payment on income from the networks.

Seeking a Split

While at first blush, it was thought affiliated stations might view the proposed shifting of this burden favorably, it soon became apparent to the industry that ASCAP's prime effort was to bring about a schism. Moreover, it was almost universally felt among affiliates that any such network fee as ASCAP proposed was not only impossible but could not be ab-

sorbed by the networks without some readjustment with affiliates.

Based on 1937 figures, it is calculated that, as against \$3,878,000 paid into ASCAP coffers under the 5% of gross license, plus sustaining fee, the industry would have been called upon under the new ASCAP formula to pay some \$6,-500,000 on the same income for that year. Projecting the same fig-ures for 1941, and basing them on a \$5,000,000 tribute to ASCAP under the present arrangement, it is concluded that the proposed plan would bring to ASCAP something like \$8,500,000, which represents about a 70% overall increase.

Miller Spurned

From NAB President Neville Miller and from the executive committee of Independent Radio Network Affiliates came pleas for a united front. While the major networks have refrained from formal comment and have referred all inquiries to BMI, it was readily apparent that they proposed to fight the ASCAP demands down the line. With a membership of some 380 stations, including networkmanaged and operated stations in BMI, the intention now is to put everything behind the industryowned music company in an effort to have it supplying stations and

in sufficient volume to make capitu-lation to ASCAP unnecessary when the year ends.

The clearance-at-the-source stipulation in the ASCAP contract caused some consternation, though it had been expected. The industry, at the last half-dozen NAB conventions, has gone on record in favor of both clearance at the source— but along with a "per-program" method of royalty payment—under which ASCAP would be compen-sated only for such programs as networks or stations use which employed its music. ASCAP, in its notice to the industry, dismissed the "per-program" basis with the as-sertion that after an exhaustive analysis it found it was "uneconomical and unscientific to adopt the same". But on behalf of the industry it was pointed out that ASCAP had held no conversations with the Copyright Negotiating Committee of the NAB in this connection. As a matter of fact, it had in effect refused to deal with NAB President Miller on a new contract arrangement.

Observers saw in the ASCAP tactics reenactment of what transpired in previous years. The refusal to deal with the NAB, plus an incident which developed at the ASCAP-industry session, when Edward Klauber, executive vice-president of CBS, walked out, indicated that stormy days are ahead in ASCAP-industry dealings.

ASCAP's Proposition

ASCAP's proposition, in brief, was that some 300 stations, with gross business in the neighborhood of \$50,000 or less, pay only 3% on their net income after agency and certain other industry-wide deductions, along with a sustaining fee of only \$1 per month. This, based on rough estimates calculated on 1937 industry figures, might result in a saving of about \$180,-000 for those stations.

For the second "intermediate" group, which ASCAP described as independents and otherwise, it was difficult to peg them for classifi-cation. It was thought, however, that this group probably would include stations doing gross business of \$50,000 to \$250,000 per year, utilizing the brackets employed by the FCC in its breakdown of 1937 business, which appeared to be the statistical basis for ASCAP's computations. If that is the case, some 227 stations might be affected. Usposes to tax them 4% of their "net" receipts along with a reduction of 25% in sustaining fees, it was concluded that they would get a reduction, over-all, amounting to possibly \$375,000.

In the third classification, made up of large stations, network-afup of large stations, network-ar-filiated and which "make substan-tial profits", ASCAP proposed to retain the 5% basis, along with the present sustaining fee. Based on the 1937 calculations, and taking into account that most of the newspaper-owned stations, which have had preferential contracts, would be forced to bear increases, it is estimated that payments of some 71 stations in this category (more than \$250,000 per year) probably would approximate royalties under the present formula even when clearance at the source is taken into account.

In all these rough computations, there is not taken into account possible readjustments of network arrangements with affiliates. Moreover, ASCAP stated that stations in the 4% and 5% categories would be in a position to recoup the payment of their sustaining fees after the "license fee paid reaches a cer-tain amount." No clue as to what that amount would be was given.

In the case of the networks, together with their managed and operated stations, 1937 figures indicate that they paid something like \$820,000 to ASCAP. Key stations have paid substantially higher sustaining fees than other stations of like power but the net-works as such have paid no fees. Again, based entirely on 1937 cal-culations and using the proposed 7½% demand of ASCAP, it is concluded that networks, major as well as the more important regionals, would be called upon to pay something like an increase of \$3,-250,000 over the present formula figure.

Hedges' Letter to Affiliates

William S. Hedges, NBC vicepresident, wrote all NBC affiliates March 26 that they study the ASCAP plan for the effect it will have upon them "in the absence of any agreement between ASCAP and the networks". Branding the plan as placing an "inordinately excessive" burden on the industry, he said, "This huge increase would have to come out of the pockets of the broadcasters and their adver-tising clients". He added that NBC is not opposed to clearance at the source "providing it can be done on a basis which is legally feasible and economically sound". He called the plan unconscionably burdensome.

Saying ASCAP obviously desires to accomplish a split in the indus-try, he declared NBC is prepared to assume its proper burden and is willing to join with other industry elements to negotiate to that end. He cited BMI as the answer, say-ing NBC already pledged \$250,000 toward its fund.

The Klauber walkout incident was a surprise. It was seen as the harbinger of a bitter-end fight, insofar as that network is concerned.

At the March 21 meeting called by ASCAP's general manager, John

WHAT WO HECHIUCI But Caesar Decries Industry Motives BROADCAST MUSIC Inc. was welcomed as an addition to the music publishing industry by Irv-

ing Caesar, president of the Songwriters Protective Assn., in an address March 26 to the SPA membership at the organization's annual meeting in the Hotel Astor, New York. Though he decried the mo-York. Inough he decried the mo-tives of the broadcasting industry in endeavoring to set up its own source of music instead of continu-ing to rely on ASCAP's "great res-ervoir of the best of American music", he said that any SPA mem-ber was free to write for BMI so long as the new publishing com-pany accepted the standard SPA contract conditions.

In answer to a question Mr. Caesar said although it is possible that in BMI the broadcasters inthat in BMI the broadcasters in-tend to set up their own licensing agency in competition to ASCAP, there are already other licensing groups in existence and SPA is not bound to any of them but is organized solely to protect songwriters in their dealings with publishers. He pointed out, however, that a writer assigning his rights to BMI cannot also assign them to ASCAP, or

vice versa. Stating he was a member of A S C A P's radio committee, Mr. Caesar said that he nevertheless did not agree with all their actions. In his opinion, he declared, only the

G. Paine, there were present seven representatives of ASCAP and 12 for the broadcasting industry. NAB President Miller was not invited. After Mr. Paine had read the ASCAP proposition, Mr. Klauber it is reported, asserted that the NAB would take care of CBS' music affairs and then simply walked out.

Paine Writes to Paley

On the same day Mr. Paine wrote CBS President Paley, accusing Mr. Klauber of discourteous conduct and asked that in the future CBS be represented by some person other than the executive vice-president. In his letter, Mr. Paine said that after the meeting got under way, he read the prepared stateright to use music on sustaining programs should be sold to the broadcasters, and the writers and publishers should deal directly with the sponsors of commercial pro-grams in allowing their music to be broadcast under sponsorship. But the broadcasters do not want that, he stated, as they prefer the blanket arrangement that enables them to act as middlemen and to sell "package shows" to the adver-

"ASCAP has no fight with the advertiser," he said. "He pays and pays well. If the broadcasters don't

pays well. If the broadcasters don't like the ASCAP charges, let them step aside and we'll deal directly with the advertisers. They don't want something for nothing." The new ASCAP plan, Mr. Caesar averred, will correct a seri-ous abuse in the current contract. The 5% payment from the sale of time he said has turned out to be time, he said, has turned out to be only $1\frac{1}{2}$ %, since the networks sell their affiliates to an advertiser at card rates but pass along to these affiliates only 25% to 30% of card rates, so that when ASCAP came to collect its 5% from the stations it found it was getting only 5% of 30%, or $1\frac{1}{2}\%$, of what the advertiser paid the networks. But from now on, he said, ASCAP will clear at the source and the network will pay on the whole amount and the station will pay nothing for network programs.

ment giving the details of the plan and then invited discussion.

"Without any further a do," wrote the ASCAP official, "Mr. Klauber arose and after delivering himself a few mumbled remarks, indistinct and unclear, peremptorily left the room. The committee feels that this man's conduct was unbecoming a gentleman and completely discourteous and certainly an abuse of the invitation extended to your company. We are cer-tainly reluctant to believe that this discourtesy reflects in any degree the spirit of your company."

Mr. Paine concluded that he would be "personally grateful" if CBS will be represented "by some person other than Klauber in any

Coming stoutly to Mr. Klauber defense, Mr. Paley wrote th ASCAP general manager the fo lowing day that he had known hi executive vice-president for man years and knew "that it is impos sible for him to behave in the man ner interpreted by you in your let ter."

Has Full Power

Declaring he had heard account of the meeting not only from Mr Klauber but from Joseph Ream CBS counsel, he retorted to Mr

Paine: "I am amazed that you should write such a letter or try to tell one of your largest customers who shall or shall not be delegated to have business dealings with you. Mr. Klauber was very much disturbed at the obvious attempt to eliminate the NAB from the discussions with you, and stated clearly that so far as his company was concerned, your proposals would be referred to the Negotiating Com-mittee of the NAB. I am heartily in accord with the determination to resist all attempts to split our industry into hostile camps.

"Mr. Klauber, as executive vicepresident of this company, has complete charge of such business matters as may arise between your Society and this company. If at any time he chooses to delegate this function to someone else, that is wholly a matter for his own decision."

Present at the March 21 session were Lenox Lohr, president, and Niles Trammell, executive vice-president, for NBC; Alfred J. Mc-Cosker, president of WOR and cosker, president of WOR and chairman of the board of Mutual; Julius F. Seebach, vice-president of WOR; Fred Weber, general manager of MBS; E. M. Antrim, secretary of WGN and MBS; Messrs. Klauber and Ream for CBS; Walter J. Damm, general manager of WTMJ, Milwaukee; William Weisman, vice-president and counsel for WMCA, New York; And counsel for WMCA, New Fork; P. W. Morency, general manager of WTIC, Hartford, and Clair R. McCollough, general manager of Mason-Dixon Group. Present for ASCAP were Mr. Paine; Walter Fischer; Irving Caesar; Oscar Hammerstein II;

Herman Starr, Warner Bros. exec-utive; Charles Schwartz, ASCAP general counsel, and Herman Fin-kelstein, ASCAP attorney. Strangely absent was E. C. Mills, chair-man of the ASCAP Administrative Committee, who had carried on all previous contractual negotiations. President Gene Buck was in Arizona.

Miller's Statement

Following the ASCAP session and the snubbing of NAB, Presi-dent Miller made public a statement in which he berated the ASCAP demands. Asserting that a 100% increase was sought, he said the demand was made in spite of the fact that the broadcasting industry pays five times as much money into ASCAP as any other industry and represents over twothirds of ASCAP's total revenue. He added:

"Although most of ASCAP's

Drawn for BROADCASTING by Sid Hix "Honey, Aren't You Taking the 'Bucket O' Kale' Program Too Seriously?"

statement talks about the alleviation of certain abuses which ASCAP itself admits exist in its present licensing system, when the camouflage is stripped away the proposal boils down to a demand that the broadcasting industry should double its payments for the radio performing rights in the compositions controlled by ASCAP's publisher and composer members.

"ASCAP's demand was put forward without previous negotiation with broadcasters and after a refusal to meet with the Negotiating Committee appointed by the NAB. Although ASCAP attempts to divide the broadcasting industry by making concessions to certain groups, the total amount of the reductions which it suggests is inconsiderable compared to the total amount involved.

"Moreover, ASCAP's new plan perpetuates the major abuse about which broadcasters have always complained, and requires broad-casters to pay to ASCAP a per-centage of all broadcasting revenue, even that obtained for pro-grams which do not utilize ASCAP music, such as news broadcasts, sports events and programs of classical music. The broadcasting industry will be unified in resisting demands, the effect of which would be to impose charges wholly destructive of the American system of broadcasting. "ASCAP is again attempting to

take advantage of its monopoly of popular music to impose an unfair method and rate of payment upon broadcasters, but ASCAP has this time overreached itself and has made demands which the broadcasting industry must resist as a matter of life and death.

"These demands will strengthen Broadcast Music Inc., the organization recently created by the broadcasting industry to foster new creative talent by increasing the already widespread support of its aims.'

Rosenbaum's Letter

In behalf of IRNA, acting for all network affiliates, its executive committee March 23 sent to all of the some 350 affiliated stations a plea and a warning. Authored by Chairman Samuel R. Rosenbaum, WFIL, Philadelphia, the notice said that the evident object of ASCAP is now, as it was before, to split and separate the industry by of-fering "painted candy to the little fellows."

The whole proposition was de-scribed as a "composition for male chorus to the tune of 'Soak the Networks' in the hope everybody will join in." Asserting that affiliates have no intention of pulling chestnuts out of the fire for the networks, IRNA said that common sense dictates that affiliates are part of the networks and there is a point at which network operation becomes unprofitable.

"If it does", he said, "the net-work system of broadcasting, as we know it, will become a thing of the past and we know that if that happens we will all be the losers.'

Pointing out that acceptability of ASCAP's offer to affiliates is entirely dependent upon its acceptance by the networks, IRNA stated that independent non-network

Terms Offered in Latest ASCAP License Proposal . . .

THE SOCIETY recognizes in its li-censing program four distinct and sep-arate groups within the radio industry. 1. The small independent station whose annual gross is in the neighbor-hood of \$50,000 or less. 2. An intermediate group of sta-tions independent and otherwise, each of which by virtue of location, type of program. service to the community

of which by virtue of location, type of program, service to the community, general radio policy, and amount of business done is in a different cate-gory from the small station. 3. The large station which by affilia-tion, by pressige, by virtue of location and territory it serves has an oppor-tunity to make substantial profits out of its business

of its business. 4. The chain which does not oper-

4. The chain which does not oper-ate any radio station as such (it may own stations, it may have a controlling interest in stations), but its primary business is not the operation of a sta-tion but the sale of advertising, "time on the air," and supply of programs. commonly known as "networks".

License Provisions

The license will contain the fol-

1. Limited to non-visual broadcast-ing (television is excluded). 2. Network programs must be

cleared at the source. 3. Radio stations are divided into

 3. Radio stations are divided into three groups, paying license fees of 3%, 4% and 5% respectively.
 4. The percentages paid by licensees are computed upon the gross amount paid by the advertiser for use of the station's broadcasting facilities with only the following deductions per-mitted: mitted :

(a) 15% agency discount, if actually paid.
(b) Amounts received from political broadcasts, from religious broadcasts

stations also should view it with caution. The basic reason all affiliates are holding out for "clear-ance at the source", the notice said, is that network programs contain all the popular numbers and many operators feel they can operate locally without ASCAP music as long as the networks continue to feed them. Insofar as the independents are concerned, it was stated the popular network programs which promote popularity for music es-tablish audience for independents who operate largely with recordings and transcriptions. They, it was said, "would find ASCAP tunes falling upon deaf ears in their own localities unless the networks were making them familiar and popular."

It is common sense, IRNA added, that anyone who accepts or signs up the ASCAP proposition in its present form without knowing what the networks will do "is buying a pig in a poke". IRNA cau-tioned that if the networks accepted the ASCAP deal it should be expected that they would try to find a way to "back-charge" against the affiliates the extra cost at the source. Beyond that it said that the ASCAP position perpetuates a tax on gross receipts of every station and shuts out the possibility of paying only on programs or for music as used.

Argument for BMI

As an alternative, IRNA pointed to Broadcast Music. ASCAP published its terms for a new deal now instead of December in order to discourage the growth of BMI, it was contended. "Now, if ever, is the time for the broadcasting where the amount paid is solely in payment for cost of lines, wire charges,

etc. (c) Certain costs of artists espe-cially employed for a particular pro-gram and certain costs for news pro-grams, athletic events and similar events, provided that the minimum sum ellocated to recorder and the second allocated to percentage must not be less than the highest rate charged for a similar period of time over licensee's station. (d) Amounts received from network

(d) Amounts received from network for re-broadcasting programs which have been cleared at the source. 5. The sustaining fee of stations in the 3% group is made nominal (\$12 per year). The amounts to be charged as sustaining fees to the 4% class will be approximately 25% less than pres-ently charged. The sustaining fees for the 5% class are about the same as presently charged. Stations in the 4% and 5% groups are given an oppor-tunity to recoup the payment of the sustaining fee after the license paid reaches a certain amount.

Network Contract

6. There is a separate contract for 6. There is a separate contract for networks in which the network broad-caster agrees to clear all programs at the source and to pay $7\frac{1}{2}$ % of the amount received by it from advertisers. The license will permit the deductions from the gross which are enjoyed by the individual station and will con-tain the protective cleaves for the the individual station and will con-tain the protective clauses for the Society that are required by it from the individual station. This rate may be reduced to 5% in the case of such network operations as are made nec-essary because of local conditions. 7. The license to individual stations does not give them the right to rebroad-cast programs containing ASCAP com-positions which have not been cleared

ASCAP at Colleges

ANOTHER facet of the ASCAP "goodwill tour" program is re-flected in the lecture tour being made by S. Stephenson Smith, ASCAP educational counselor, to various club and college audiences over the country. Recently Prof. Smith addressed students of Colo-Smith addressed students of Colo-rado College, Colorado Springs, at a regular college convocation, speaking on "The Fire Arts in a Democracy". In addition to his lec-tures, he is reported to be making a first-hand inquiry into regional and campus activities in creative and interpretive arts. Previously several other ASCAP officials have made "g o o d will appearances", speaking before civic and service clubs over the country.

industry to stand together and act as a unit," it was stated. IRNA's advice was "Don't get up a high blood pressure over the ASCAP proposition. It is to your advan-tage to stand by BMI."

IRNA's estimate of ASCAP demands was that it seeks a 50% increase, or about \$2,500,000 additional, based on 1940 returns. "Probably it is perfectly human for ASCAP to try to add 50% to its take in one year," IRNA stated. "If it is strong enough to succeed, that will only mean we are weak enough to let it. If we are, it is our own fault and we deserve no sympathy."

With ASCAP President Buck and his board prepared to start negotiations about April 15 to formulate the new contracts, many group huddles were in progress among broadcasters. That the preponderant opinion in the industry

at the source. If such programs are broadcast, the sum equal to 10% of the station's highest card rate for such a program is to be paid ASCAP in lieu of treating the broadcast as an in-

a program is to be paid ASCAP in lieu of treating the broadcast as an in-fringement of copyright. 8. If a licensee having "a single sta-tion contract" engages in network broadcasting, such licensee and the So-city will agree to enter into the Chain Broadcast License agreement.

9. The Society has the right to re-strict not more than 1,000 composi-tions at any one time. Licensee has the right to cancel if on 60 days notice the number of compositions on the re-stricted list exceeds 1,000 and is not reduced to 1,000 or less during the 60-

reduced to 1,000 or less during the ou-day period. 10. If anti-ASCAP laws are passed iny any State, which in the opinion of ASCAP impede or prevent the full performance of the license agreement, the Society may terminate the agree-ment as to the stations in such State. 11. The Society gives the licensee the same indemnity as in previous contracts.

contracts. 12. The duration of the contract has not yet been decided. This will de-pend on the definite terms of the final agreement and the wishes of the broadcasters in the matter. In the opinion of the Society this plan will bring substantially increased benefits to the radio broadcasting sta-tion. As heretofore each station will have available a large and varied res-

have available a large and varied res-ervoir of music assisting it to meet its ervoir of music assisting it to meet its primary purpose of serving the inti-mate needs of the locality in which it is situated. At the same time it will help to make the income of the So-ciety from radio more nearly com-mensurate with the value of the So-ciety's contribution to the radio in-dustry. dustry.

was to hold together and to avoid haste, was apparent. Moreover, it appeared evident that not only the networks but many formidable groups would rally behind BMI. At a meeting March 22, BMI elected Merritt E. Tompkins as vice-president in addition to his duties as general manager. While no statement was forthcoming, it was indicated BMI is negotiating for the acquisition of several catalogs regarded as basic, which might go a long way toward filling the industry's requirements should a break finally result with ASCAP.

Different Kinds of Nets

ASCAP general manager Paine was asked by BROADCASTING how much he believed the Society would receive under the proposed plan. He said the amount could not be estimated now because it is impossible to figure the revenue to be derived from network broadcasts. Defining a network program as one originated by one station and rebroadcast on one or more additional stations, he said that each such broadcast must be cleared at the source and covered by a network contract with ASCAP for which varying rates will be charged according to the type of network.

"ASCAP," he stated, "reserves the right to distinguish between networks the same as it does between individual stations, and all rates will be worked out in accordance to the competitive situation." Taking the Michigan Network as an example, he said this group was designed to compete with individual high-powered Detroit stations and that its ASCAP rate would prob-(Continued on page 97)

Highest Court Upholds Free Competition

Business, Program Control Taken From FCC By SOL TAISHOFF

ABSOLUTE POWER to license new broadcast stations, without regard for the economic injury which may be suffered by existing stations, was won by the FCC in the Supreme Court of the United States March 25 in a unanimous opinion which at the same time clearly strips the Commission of supervisory control of programs, business management or policy of broadcast stations.

In the most important ruling yet rendered by the highest tribunal in the dozen years that have elapsed since radio regulation began, the court sustained the Commission's contention that the "survival of the fittes!" theory should prevail. In the same opinion, however, the court pegged the FCC as a sort of super-traffic cop of radio and pointed out that regulation of rates and charges and other measures which are necessary if free competition is to be permitted were specifically forbidden the FCC by Congress.

The court held that the broadcasting field is open to anyone, provided there be an available frequency over which he can broadcast without interference to others, if he shows his competency, the adequacy of his equipment and financial ability to make good use of the assigned channel.

Right of Appeal

While winning its main contention of unlimited competition, the FCC lost its argument that existing stations have no appealable interest and therefore cannot properly seek a review of the Commission's decision. To the contrary the court broadened the scope of appealable actions in deciding the socalled Sanders case, in which the new fundamental law was written.

Because of the wide scope of the opinion, the FCC did not regard it as a smashing victory. As a matter of fact, it was felt that many points remain to be clarified, and the view was expressed in some quarters that the industry "lost the battle but won the war".

The unanimous opinion was delivered by Associate Justice Owen J. Roberts. Associate Justice James C. McReynolds did not participate. The appeal was on certiorari by the FCC from the decision of the Court of Appeals for the District of Columbia which had reversed the Commission on the ground that its action in granting the application of the Dubuque (Ia.) Telegraph-Herald for a new station in that city was arbitrary and capricious, since WKBB, the existing station, had held that it would suffer ruinous competition and that the city could not support both stations.

The opinion, coming on the heels of the Supreme Court's ruling Jan. 29 in the so-called Pottsville case [BROADCASTING, Feb. 1], in which it gave the Commission a freer

Excerpts from the Supreme Court Decision

THE ACT contains no express command that in passing upon an application the Commission must consider the effect of competition with an existing station.

The Act does not essay to regulate the business of the licensee. The Commission is given no supervisory control of the programs, of business management or of policy.

The broadcasting field is open to anyone, provided there be an available frequency over which he can broadcast without interference to others, if he shows his competency, the adequacy of his equipment, and financial ability to make good use of the assigned channel.

No person is to have anything in the nature of a property right as a result of the granting of a license.

Licenses are limited to a maximum of three years' duration, may be revoked, and need not be renewed. Thus the channels presently occupied remain free for new assignment to another licensee in the interest of the listening public.

Economic injury to an existing station is not a separate and independent element to be taken into consideration by the Commission in determining whether it shall grant or withhold a license.

It does not follow that, because the licensee of a station cannot resist the grant of a license to another, on the ground that the resulting competition may work economic injury to him, he has no standing to appeal from an order of the Commission granting the application.

See page 48 for comments by Washington radio attorneys on significance of Supreme Court decision.

hand in dealing with applications for new stations and eliminated all questions of priority of filing, was seen as one which may have a farreaching effect on future administration of broadcasting by the FCC. Like the Pottsville case, it was a victory for the philosophies espoused by William J. Dempsey, 34year-old FCC general counsel, and his associate, William C. Koplovitz, assistant general counsel.

One immediate repercussion, it was thought, might be the wholesale filing of applications for new stations in major markets. Since the decision gives the FCC virtually unlimited authority to license new stations, it is expected that applicants will flock to the more important centers in the hope of acquiring licenses. The only limitation on the Commission's authority appears to be that of undue technical interference, though, as the opinion was phrased, existing licensees who feel they are aggrieved will have almost an automatic appeal to the lower court.

Property Right Issue

The court went beyond the scope of the issue in the Sanders case and wrote new law which may be even more significant than the free competition issue. Justice Roberts said that the policy of the Act is clear that "no person is to have anything in the nature of a property right" as the result of the granting of a license. This appeared to negative a previous Supreme Court judgment that something in the nature of an expectancy of renewal existed. But the court even went beyond that and stated that licenses are limited to a maximum of three years' duration and "may be revoked and need not be renewed". It added that the channels presently occupied "remain free for a new assignment to another licensee in the interest of the listening public."

On this score, observers saw delegation to the Commission of farreaching new powers transcending anything it has ever before possessed. This section of the dictum might be interpreted as meaning that the Commission can reallocate at will. This point was viewed as particularly timely, in the light of the impending revision of allocations under the Havana Treaty, in which all stations above 720 kc. are slated for changed assignments. Whereas it has generally been accepted that this reallocation would be virtually automatic as provided under the treaty terms, the socalled rigid regulation majority of the Commission might use the new

'Survival' Theory Upheld

WILLIAM J. DEMPSEY

Supreme Court ruling as a basis for something far more drastic. This has been rumored around the Commission but hardly above a whisner.

Moreover, the long-awaited Network Monopoly Report may conceivably fit into the Commission's future operations in the light of this phase of the Supreme Court rulings. With a strong anti-network sentiment existing in some Commission quarters, it would not surprise close observers to see the epochal Supreme Court opinion used as a basis for changes in the broadcast structure on a wide scale. Multiple ownership of stations, by networks and other non-network groups, particularly in the same cities, has been under fire within the Commission for some time.

Capital Reactions

Reactions among Washington radio counsel and broadcast observ-ers were varied in analyzing the opinion. Some viewed it as a distinct victory for the American system of broadcasting, since it clearly establishes radio as a non-public utility, reaffirms the Congressional mandate against rate regulation, and specifically alludes to the fact that the Commission has nothing to do with programs, business management or policy of stations. Moreover, they pointed out that the liberal interpretation of the appellate provisions means aggrieved broadcasters are assured of a day in court and that, by the same token, the Commission's iron-clad policy of preventing interventions in proceedings is opened.

Others, however, found the opinion disquieting because of the feeling that the Commission can be judged only by its past actions. They foresee that it can license new stations without regard to public interest considerations though the court pointed out that the Commission should not entirely disregard the question of competition. Moreover, they found in the conclusion that the Commission can revoke or refuse to renew a license at any time—a weapon it might use with devastating effect.

Practically all observers felt that by virtue of the Supreme Court ruling the Commission must forego its forays into programs, station policies and fiscal operations. Such things as voluminous questionnaires invading innermost phases of station operation, inquiries into programs whatever their nature (unless they are obscene, profane or indecent) and certain other FCC activities presumably would go by the boards, under these interpretations. Whether the Commission will follow that course, or devise some way of continuing the practices, remained conjectural.

Plan New Appeal

On the heels of its technical victories in both the Pottsville and Sanders cases, the Dempsey-Koplovitz team was preparing March 28 to seek a Supreme Court review of a third basic issue, embracing the question whether the lower court (Continued on page 58)

After the Supreme Court Victory, What? - An Editorial

IT'S THE "survival of the fittest" henceforth. The U. S. Supreme Court has held that the FCC can license stations indiscriminately, insofar as competition with existing licensees is concerned, so long as the public interest is served. A licensee, to use the court's language, will "survive or succumb according to his ability to make his programs attractive to the public".

While many broadcasters may not like the opinion, it may prove a blessing, depending upon its administration by the FCC. In holding that free competition should prevail, the court at the same time restated unequivocally that broadcasting is not a public utility and cannot be subjected to rate regulation. More than that, it stated without mincing words that the Commission is given no supervisory control of programs, business management or station policy.

From that standpoint, the decision can only be viewed as a victory for the American system of broadcasting. It means that the FCC itself must mend its ways. The court has ruled that scrutiny of programs, unnecessary snooping into fiscal operation of stations, voluminous questionnaires seeking information on profits, losses, salaries, nepotism, and other operations of stations are no concern of the licensing authority.

A good station, well-managed, does not fear legitimate competition. But broadcasters have had ample reason to dread the kind of regulatory tactics indulged in by the FCC. The Supreme Court's opinion spells out the limitations of the FCC's authority over broadcasting. If the Commission adheres to the letter and the intent of what henceforth will be known as the Dubuque case, many of broadcasters' worries will be over. The court admonished the FCC not to disregard competition where both the new and the existing station might "go under" or where the public might be deprived of service. That is a safety valve which, it is to be hoped, the Commission will observe.

Should the FCC flout the new opinion and continue its rampages into programs, as well as figuratively search the file cabinets of stations, it seems to us recourse can be taken to the court under the new law. It is true that the Supreme Court's ruling, except for the technical right of appeal by licensees (which the court broadens) follows closely the philosophy of the FCC's general counsel, William J. Dempsey. For him it is a brilliant victory. But it is also true that while the Law Department espoused the "free competition" theory, with "traffic cop" duties as a primary FCC function, the Commission itself has followed an unbridled course of regulation of anything and everything it pleases to take within purview.

Thus it becomes a question of man-power and follow-through. If the FCC adheres to the letter of the Supreme Court ruling and contents itself with technical regulation, all should be well. But if, as many suspect it intends, it persists in traveling in its present groove, the only anwer will be new court tests and new legislation. "Survival of the fittest" is a laudatory democratic principle just so long as it isn't used as a device to hamstring the very service Congress intended to provide-public service.

Full Text of The Supreme Court's Decision in 'Economic Injury' Case

Mr. Justice ROBERTS delivered the opinion of the Court. We took this case to resolve impor-

We took this case to resolve impor-tant issues of substance and proced-ure arising under the Communications Act of 1934, as amended.³ Jan. 20, 1936, the *Telegraph Herald*, a newspaper published in Dubuque, La., filed with the petitioner an applica-tion for a construction permit to erect a broadcasting station in that city. May 14, 1936, the respondent, who had for some years held a broadcasting license for, and had operated, Station WKBB at East Dubuque. Ill., directly across the Mississippi River from Du-buque, I.a., applied for a permit to buque, Ia., applied for a permit to move its transmitter and studios to the last named city and to install its

the last named city and to install its station there. Aug. 18, 1936, respondent asked leave to intervene in the *Telegraph Herald* proceeding, alleging in its pe-tition, *inter alia*, that there was an in-sufficiency of advertising revenue to support an additional station in Dubu-que and insufficient talent to furnish programs for un additional station. programs for an additional station; that adequate service was being ren-dered to the community by Station WKBB and there was no need for any additional radio outlet in Dubuque and that the granting of the *Telegraph Herald* application would not serve the public interest, convenience, and ne-cessity. Intervention was permitted and both applications were set for con-solidated hearing.

Examiner Favored Denial

Examiner Favored Denial The respondent and the Telegraph Herald offered evidence in support of their respective applications. The re-spondent's proof showed that its sta-tion had operated at a loss; that the area proposed to be served by the Telegraph Herald was substantially the same as that served by the respon-dent and that, of the advertisers re-lied on to support the Telegraph Her-ald station, more than half had used the respondent's station for advertisthe respondent's station for advertis-

An examiner reported that the ap An examiner reported that the ap-plication of the *Telegraph Herald* should be denied and that of the re-spondent granted. On exceptions of the *Telegraph Herald*, and after oral ar-gument, the broadcasting division of patitioner made are noted graving both petitioner made an order granting both applications, reciting that "public in-

¹Act of June 19, 1934, c. 652. 48 Stat. 1064: Act of June 5, 1936, c. 511, 49 Stat. 1475: Act of May 20. 1937, c. 229, 50 Stat. 189, 47 U. S. C. 151, et seq.

terest, convenience, and necessity would be served" by such action. The division promulgated a statement of the facts and of the grounds of de-cision, reciting that both applicants were legally, technically, and financi-ally qualified to undertake the pro-posed construction and operation; that there was need in Dubuque and the surrounding territory for the services of both stations, and that no question of electrical interference between the two stations was involved.

A rehearing was involved. A rehearing was denied and respon-dent appealed to the Court of Appeals for the District of Columbia. That court entertained the appeal and held that one of the issues which the Com-mission should have tried was that of alleged economic injury to the respon-dent's station hy the establishment of an additional station and that the Commission had erred in failing to make findings on that issue. It decided that, in the absence of such findings, the Commission's action in granting the Telegraph Herald permit must be set aside as arbitrary and capricious.³ Economic Injury

Economic Injury

The petitioner's contentions are that under the Communications Act economic injury to a competitor is not a ground for refusing a broadcasting license and that, since this is so, the respondent was not a person aggrieved, respondent was not a person aggreed, or whose interests were adversely af-fected, by the Commission's action, within the meaning of Section 402 (b) of the Act which anthorizes appeals from the Commission's orders.

tron the Commission's orders. The respondent asserts that the pe-titioner in argument below contented itself with the contention that the re-spondent had failed to produce evi-dence requiring a finding of probable economic injury to it. It is conse-quently insisted that the petitioner is not in a position here to defend its quenty insisted that the pertubiter is not in a position here to defend its fuilner to make such findings on the ground that it is not required by the Act to consider any such issue. By its petition for rehearing in the court he-low, the Commission made clear its bettion for the commission made clear its position as now advanced. The deci-sion of the court below, and the chal-lenge made in petition for rehearing and here by the Commission, raise a fundamental question as to the func-tion and powers of the Commission and we think that, on the record it is open here.

² Sanders Brothers Radio Station v. Fed-eral Communications Commission, 106 F. (2d) 321.

First. We hold that resulting eco-nomic injury to a rival station is not in and of itself, and apart from con-siderations of public convenience, in-terest, or necessity, an element the pe-titiouer must weigh and as to which it must make findings in passing on an application for a broadcasting li-cence cense

\$ 307(a) of the Communications Act directs that "the Commission, if Act directs that "the Commission, if public convenience, interest, or neces-sity will be served thereby, subject to the limitations of this Act, shall grant to any applicant therefor a station li-cense provided for by this Act." This mandate is given meaning and contour by the other provisions of the statute and the subject matter with which it deals.³ The Act contains no express command that in passing upon an ap-plication the Commission must con-sider the effect of competition with an sider the effect of competition with an existing station. Whether the Commis-sion should consider the subject must depend upon the purpose of the Act and the specific provisions intended to effectuate that purpose.

The genesis of the Communications Act and the necessity for the adoption of some such regulatory measure is a matter of history. The number of avail-able radio frequencies is limited. The able radio frequencies is limited. The attempt by a broadcaster to use a given frequency in disregard of its prior use by others, thus creating con-fusion and interference, deprives the public of the full benefit of radio au-dition. Unless Congress had exercised its power over interstate commerce to bring about allocation of available fre-quencies and to regulate the employ-ment of transmission equipment the result would have been an impairment of the effective use of these facilities by anyone. The fundamental purpose of Congress in respect of broadcasting was the allocation and regulation of was the allocation and regulation of the use of radio frequencies by pro-hibiting such use except under license.

Not a Common Carrier

In contradistinction to communication by telephone and telegraph, which the Communications Act recognizes as a common carrier activity and regu-lates accordingly in analogy to the reg-ulation of rail and other carriers by the Interstate Commerce Commission⁴, the Act recognizes that broadcasters

^ARadio Commission v. Nelson Bros. Co.. 289 U. S. 266. 285. ⁴ See Title II, §§ 201-221. 47 U. S. C. §§ 201-221.

are not common carriers and are not to be dealt with as such.³ Thus the Act recognizes that the field of broad-casting is one of free competition. The sections dealing with broadcasting demonstrate that Congress has not, in it recurs the compensation of the section of the section of the termination of the section of demonstrate that Congress has not, in its regulatory scheme, abandoned the principle of free competition, as it has done in the case of railroads,⁶ in re-spect of which regulation involves the suppression of wasteful practices due to competition, the regulation of rates and charges, and other measures which are unnecessary if free competition is to he permitted.

An important element of public in-An important element of public in-terest and convenience affecting the issue of a license is the ability of the licensee to render the best practicable service to the comunity reached by his broadcasts. That such ability may be assured the Act contemplates in-quiry by the Commission, *inter alia*, into an applicant's financial qualifica-tions to operate the proposed station."

Open to Anyone

But the Act does not essay to regu-late the business of the licensee. The Commission is given no supervisory control of the programs, of business management or of policy. In short, the broadcasting field is open to anyone, provided there be an available fre-quency over which he can broadcast without interference, the edgencey of shows his competency, the adequacy of his equipment, and financial ability to make good use of the assigned channeL

The policy of the Act is clear that The policy of the Act is clear that no person is to have anything in the nature of a property right as a result of the granting of a license. Licenses are limited to a maximum of three years' duration, may be revoked, and need not be renewed. Thus the chan-nels presently occupied remain free for a new sectore to enchan licenses

a new assignment to another licensee in the interest of the listening public. Plainly it is not the purpose of the Act to protect a licensee against com-petition but to protect the public. Con-gress intended to leave competition in the husiness of broadcasting where it found it, to permit a licensee who was not interfering electrically with other (Continued on page 62)

Spence Resigning From NAB Post C. E. Arney Is Named as

Neville Miller's Assistant

WITH the long-expected resigna-tion of Edwin M. Spence as secre-tary-treasurer of the NAB, Presi-

dent Neville Miller announced ap-pointment of C. E. Arney Jr., public relations director of KMO-KJR, Seattle to the new-ly-created post of assistant to the president. It is expected Mr. Arney also will be appointed secretary-treasurer at

the next meeting

Mr. Spence of the NAB board.

Mr. Spence, whose resignation become effective May 1, has been on the executive staff of the NAB since its reorganization two years ago. A veteran broadcaster, he was one of the oldest members of the NAB and had served for several years as a member of its board and as its vice-president in 1930-1931. He has been chairman of the annual convention committee for the last 14 years.

Seeks New Station

Interested in other broadcast ac-tivities, Mr. Spence is associated with Capital Broadcasting Co., which reently filed an application for a new local station in Washington. It is understood he desired to pursue this application and engage in other activities. His associates in the Was ington station venture are Stanley Horner and Dyke Cum-mum, well-known Washington busi-ness men. Mr. Spence would become

general manager of the station. Mr. Arney, who is 49, was to leave Seattle April 1 and report to NAB headquarters about April 15. Under instructions from Mr. Miller Under instructions from Mr. Miller he is to visit Portland, San Fran-cisco, Los Angeles, Salt Lake City, Denver, Kansas City, Chicago and other cities to contact stations prior to taking up his official duties here. A lawyer, Mr. Arney was gradu-ated from Washington State U in 1915 and grant the next three years

1915 and spent the next three years in the Attorney General's office in Washing on He returned to the Northwest where he engaged in associate work with various organiza-tions un 11 1932. At that time he became citorial commentator and reporter at KOL, Seattle, and af-terward engaged in numerous radio activities and conducted programs from Olympia on legislative activi-ties. He has been public relations director of KOMO-KJR for several years. He is the father of twin daughters

Cigar Participations

WEBSTER - EISENLOHR, New York, on April 1 will start a spring campaign for Henrietta and Cinco cigars using six-weekly participa-tions on *Musical Clock* programs on KYW, Philadelphia, and 18 spots weekly on Tony Wakeman's Sports Page of the Air daily program on WOL, Washington. N. W. Ayer & Son, New York, handles the ac-count.

THE international executive board of the American Communications Assn. has arranged for its fifth national convention, opening April 8 in the Hotel LaS Ile Chicago.

CBS Aids Press

REPORTS of shortwave broadcasts from Europe are now given to press associa-tions, newspapers and maga-zines by CBS, which started this service in March. The reports particularly cover governmental broadcasts over European stations. The new service is described as more rapid than any other avail-able to publications and is frequently quoted in the news columns.

Fagan Returns to CBS As Asst. Sales Manager WILLIAM J. FAGAN, formerly business manager of the radio de-partment of Benton & Bowles, New

York, on April 1 rejoins the CBS network sales de-partment as assistant sales manager, according to William C. Git-tinger, CBS vice-president in charge of sales. Mr. Fagan had been with CBS

Mr. Fagan from December 1929 to July 1937, first in the sales promotion department and later as sales service manager and account

representative. Mr. Fagan will specialize in the Mr. ragan will specialize in the development and extension of the service end of CBS operations, while Allyn Jay Marsh, recently appointed assistant sales manager, specializes in the solicitation of new business.

'Good Will Hour' to Blue STERLING PRODUCTS Co., New York, on April 21 will transfer the Ironized Yeast Good Will Hour, which has been heard on MBS for the last two years, to an NBC-Blue network of about 50 stations Sun-days, 10-11 p.m. The program also will be heard on WMCA, New York, at the same hour, that station having created the program and hav-ing continued to carry it with Mutual. Donald Flamm, president of WMCA, is at present in Holly-wood negotiating with film com-panies for a motion picture to be based on the program Buttheouff & based on the program. Ruthrauff & Ryan, New York, is the agency.

Sterling Buys Cummer

STERLING PRODUCTS Co., New Y ork, which recently purchased Ironized Yeast from J. G. Dodson Proprietaries, has bought from the Amstar Brose full rights to the Amster Bros. full rights to the Cummer Products Co., Bedford, O., Which controls Energine products, Molle shaving cream and Kling dental powder. Reported price was \$6,000,000. Cummer Products currently sponsors Battle of the Sezes for Molle on NBC-Red, and What Would You Have Done? for Ener-gine on NBC-Blue. Stack-Goble Adv. Agency, Chicago, handles the Cummer account.

Hamilton Watch Test

HAMILTON WATCH Co., Lancaster, Pa., on April 1 started 100 one-minute transcribed announce-ments on WOW, Omaha, and WHO, Des Moines. H. W. Kastor & Sons, Chicago, is agency.

AP Meets on Radio

ANALYSIS of the replies of Associated Press members to the questionnaire on further commercializa-tion of AP news on the air [BROAD-CASTING, March 15] has been post-poned until the AP board of directors meets in New York April 17 to 19, preceding the annual member-ship meeting April 22. The radio question was to have been consid-ered by the AP board's executive ered by the AP board's executive committee at a meeting late in March, but that meeting was can-celed because of the loss of two members,--- Frederick E. Murphy, Minneapolis Times - Tribune, who died Feb. 14, and Frank Gannett, who resigned from the AP board when he announced his candidacy for the presidential nomination for the presidential nomination.

Congress Slates Two Radio Bills Administrative Court, Liquor **Measure Due For Action**

DESPITE a jam of general legis-lation crowding out most radio matters, a Congressional path apmatters, a Congressional path ap-pears to be opening for two legisla-tive proposals directly affecting the broadcasting industry—the John-son Bill (S-517) prohibiting the broadcast of alcoholic beverage ad-vertising and the Logan-Walter Bill (HR-6324) for reorganizing administrative court precedure Ac administrative court procedure. Action on the latter measure the first week in April was predicted by House Rules Committee leaders and it is reported the measure has strong House backing.

When the Senate Judiciary Com-mittee on March 25 reported out the controversial Wagner-Van Nuys anti-lynching bil, voting to put the measure in the Senate calendar, it opened the gate for the Johnson proposal. The anti-liquor advertising measure had been sty-mied in mid-February when Sen. Clark (D-Mo.) threatened to at-tach the anti-lynch bill as an amend-ment [BROADCASTING, March 1].

Lynching Stymie

Though it is still problematical when the anti-lynching measure may reach the floor of the Senate, may reach the floor of the Senate, its chances of coming up at this session are considered good, despite the certainty of a long filibuster by Southern Senators. In any event, Sen. Johnson (D-Col.) told BROAD-CASTING March 28, he will call up his measure for consideration as soon as the stymie is broken.

With the return of Chairman Bone (D-Wash.) of the Senate Patents Committee after a long absence due to a fractured hip, the committee on March 25 considered the Thomas Copyright Bill (Sthe Thomas Copyright Bill (S-3043) and decided to take no action. The measure was introduced early in the session, but committee consideration was postponed pending the arrival of Chairman Bone. The committee, in announcing its deci-sion, explained that the proposal was too long and involved to be given consideration at this session. It was also pointed out that the matter would require extensive hearings, for which there would not be time in view of the prospects for an early adjournment.

Although the prospects for com mittee action on the Ditter Bill (HR-8509) continues problematical in the House, earlier action may come in the Senate on the coni-

HAPPY birthday to Ben Hadfield (center), dean of Yankee-Colonial announcers, was wished by staff members, who held a party in his honor. Cake and flowers were pro-vided. Bill O'Connell (left), anwatch to Hadfield, who has been with the firm 15 years. The watch was inscribed "To Ben Hadfield from his friends of the Yankee Network, March 13, 1940". Cake was baked by Yankee's home econ-omist, Gretchen McMullen.

Mason-Dixon Stations **To Join Mutual April 1**

SIX STATIONS of the Mason-Dixon Radio Group, regional net-work of stations in the Pennsyl-vania - Delaware area, will join MBS on April 1, bring the total of Mutual affiliates to 130. Nego-tiations were completed April 28 by Fred Weber, general manager of MBS, and Clair R. McCollough, general manager of the Group.

of MBS, and Clair R. McCollough, general manager of the Group. Stations joining MBS are WILM, Wilmington; WGAL, Lancaster; WAZL, Hazelton; WKBO, Harris-burg; WEST, Easton; WORK, York. WDEL, Wilmington, is the only member of the Mason-Dixon group not joining MBS. Of the new affiliates, WGAL, WKBO and WORK are also affiliated with NBC as supplementary stations availas supplementary stations avail-able with either the Red or Blue basic network. MBS is to broadcast a salute program to the Group April 1, originating in New York and Chicago.

WARNER BROTHERS, Hollywood WARNER BROTHERS, Hollywood motion picture producers. has bought the title rights to the NBC Sunday afternoon series I Want a Divorce, sponsored by Food & Beverage Broad-casters Assn., San Francisco. An orig-inal story will be written for a film starring Joan Blondell and Dick Pow-oll ell

LATEST of the several applicants for new stations in Miami and envi-rons [BROADCASTING, March 1] is Leonard L. Abess, certified public ac-countant, seeking 250 watts on 1500 kc. in Miami Beach, contingent upon WKAT being granted its requested change in frequency.

panion measure (S-3515) intro-duced by Sen. Bailey (D-N.C.). The House Interstate & Foreign Com-merce Committee is snowed under with other legislation, and it is not believed it will consider any radio legislation at this session. In connection with his proposal to amend the Communications Act of 1934 [BROADCASTING, March 1], Rep. Ditter is planning to make a nationwide broadcast in the near future on the subject of freedom of speech on the air.

Baseball Sponsors to Use 100 Stations

General Mills, Atlantic Refining Schedules Are Announced

AGAIN making baseball broadcasting a major part of its summer advertising for Wheaties, General Mills is sponsoring alone or in cooperation with other advertisers, play-by-play descriptions of the 1940 baseball season on more than 50 stations.

Atlantic Refining Co., Philadelphia, also will carry an active baseball schedule this season, including more than 2,300 major and minor league baseball games covering in whole or part of the games of 23 professional clubs. N. W. Ayer & Son, Philadelphia, is the Atlantic agency.

'Welcome Back' Campaign

General Mills, as in former years, will extensively merchandise its baseball broadcasts to the trade and public. First promotion activity is a "Welcome Back" campaign announcing the return of the baseball season, the home team and the broadcasts, in addition to display material in grocery stores, this initial campaign will entail special broadcasts and other ceremonies welcoming the teams home for another season. The Welcome Back drive will cover all cities in which games are to be broadcast.

This year for the first time General Mills and Procter & Gamble, co-sponsor of the Brooklyn Dodgers games on WOR, Newark, are broadcasting a full series of preseason games of the team, reconstructed in the studio from wire reports, as an audience-building stunt. Games of the Yankees and Giants, New York teams of the American and National Leagues respectively, are being exclusive-ly sponsored by the R. J. Reynolds Tobacco Co. for Camel cigarettes on WABC, New York, so the Dodgers sponsors are using the pre-season games to get the metropolitan audience accustomed to listening to baseball on WOR. Last year General Mills, Procter & Gamble and Socony-Vacuum Oil Co. shared sponsorship of the Giants and Yankees broadcasts on WABC as well as the Dodgers contests on WOR and WHN, New York. Mel Allen will announce the WABC games.

General Mills lineup for this year, with a few more deals still in negotiation, includes three cities in which this company is sponsoring baseball broadcasts alone, 22 in which Sonony-Vacuum Oil Co. is co-sponsor, 12 with B. F. Goodrich Co. co-sponsoring, six with Atlantic Refining, two with Procter & Gamble Co., one with Coca-Cola Co., one with Sperry Flour Co. and six cities in which the co-sponsors are not set.

Atlantic's Success

The Atlantic Refining baseball campaign is the largest since the firm started sports broadcasting in 1936, utilizing 48 stations from New England to Florida, with 25 COMPLETE schedules of General Mills and Atlantic Refining baseball games, with co-sponsors, names of announcers and stations will be found on page 95.

play-by-play announcers handling games of three National, two American, five International, eight Eastern, three South Atlantic and two Piedmont league teams.

Atlantic's advertising manager, Joseph R. Rollins, in announcing the campaign said sports broad-

casting has been one of the most successful advertising promotions ever undertaken for his company. "This is the

American game of baseball," Mr. Rollins

Rollins said. "In addition, we have also sponsored each fall an extensive and representative list of college football games. The returns from both baseball and football have been most impressive, both from the standpoint of sales and dealer enthusiasm. Last year, in fact, we had the greatest sales record in the history of the company and I am sure that a substantial share of the credit belongs to the interest and enthusiasm created by our broadcast advertising.

"Besides the commercial effectiveness of sports broadcasting, we know from the thousands of letters we receive each year that these broadcasts are also contributing to the happiness of many, who are unable, because of illness or other reasons, to go out and see the games themselves. We also know that these broadcasts have intensified interest in the games with the result that attendance in many parks has been consistently better than it was prior to the time that the daily games were put on the air." In New England, a hookup of 15 stations will carry about 65 home games of the Boston Bees and Red Sox. All home games of the Athletics and Phillies will be heard on a special hook-up of 10 stations in Pennsylvania, New Jersey and Delaware.

The commercial announcements this year will deal extensively with results of the Florida Road Test, now being conducted by Atlantic over a 171-mile course between West Palm Beach and a point eight miles north of Okeechobee, Fla. To familiarize both play-by-play and commercial announcers with details of the test, the pre-season meeting of announcers will be held in West Palm Beach, April 11-13. Officials of Atlantic will be on hand to explain all phases of the tests which are being run under actual road conditions to obtain data on gasoline performance.

Sterling, American Home To Place New Campaigns

AMERICAN HOME PRODUCTS Co. and Sterling Products are expected to announce additional radio advertising campaigns within the next few days. No details of the plans were forthcoming from Blackett-Sample-Hummert, agency for these accounts, but it is reported that a transcription campaign on the West Coast and an expansion of the present broadcasting on the Texas State Network from 1 to 1½ hours daily will be included in the announcement. Th e se companies had approved expenditures of several million dollars last fall for programs on the proposed Transcontinental Broadcasting System but held in abeyance following the breakdown of negotiations between TBS and BSH.

La Palina Cigar Test

CONGRESS CIGAR Co., New York, is testing one-minute musical transcriptions for La Palina cigars in three unannounced midwestern cities. If salesman and dealer reaction is favorable, the series will be expanded. Marschalk & Pratt, New York, is agency.

A FLYING trip to the West Coast by Ed Plaut (right), president of Lehn & Fink, set off fireworks for the Gracie Allen (center) for President campaign, which has reached nationwide proportions. George Burns (left) and Gracie have been touring the country and appearing as guests on other programs. Here Mr. Plaut gets his first taste of Gracie's oratory. Dick Marvin, Wm. Esty & Co. radio director, flew with Mr. Plaut.

Squibb Abandons Plan For Washington Forum; Offered Other Sponsors

PUBLIC forum type of program tentatively scheduled to start soon on NBC under the sponsorship of E. R. Squibb & Sons [BROADCAST-ING, March 15], has been shelved, according to Cecil & Presbrey, New York, agency handling the Squibb account. Meanwhile, David Hale of the Henry Souvaine organization is working with Cecil & Presbrey in offering to other prospective sponsors a more or less revised edition of the Squibb Calling Washington program, which places more emphasis on listeners sending in questions on public events for discussion on the program. Titled What Do You Think?, the program would award cash prizes for questions used.

Thedore Granik, director of the American Forum of the Air, who conceived and originated the program, will act as moderator. Under consideration as regular members of the board of experts, with weekly guest stars, are Raymond Moley, Robert LaFollette, Gen. Hugh Johnson, John Gunther, Sullivan, Jay Franklin, Pierre Van Paassen and others. Outhgrowth of the idea of the American Forum on the Air series,

Outhgrowth of the idea of the American Forum on the Air series, now heard sustaining Sunday evenings on MBS, a newspaper feature, The American Forum, is being syndicated by United Features Syndicate, adjunct of United Press. The newspaper like the radio feature is handled by Mr. Granik. The newspaper feature presents interview discussions of current problems with well-known public figures, as does the radio series, although each is a separate entity. The syndicated feature also includes a reader poll of opinions presented in the discussions.

Three Stations Granted Better Facilities by FCC KMJ, Fresno, Cal., operated by the McClatchy Newspapers, on March 29 was authorized by the FCC to increase its night power from 1,000 to 5,000 watts on its regional channel of 580 kc. The action was taken pursuant to the new allocation rules permitting 5,000watt fulltime regionals where engineeringly feasible.

watt fulltime regionals where engineeringly feasible. KWLK, Longview, Wash., was granted a modification of license to change its frequency from 780 to 1370 kc., and increase its hours from daytime to fulltime, using 250 watts. WSGN, Birmingham, was authorized to increase its power from 100 watts night and 250 day to 250 fulltime on 1310 kc., also pursuant to the new rules.

Transformer Firm Tests

GENERAL TRANSFORMER Corp., Chicago, new to radio, has started a schedule of six-weekly tie-in announcements on WDZ, Tuscola, Ill., promoting its Porta-Power equipment which transforms battery sets to all-electric. Campaign will be expanded to other rural areas if test is successful according to Walter Zivi, account executive of Newby, Peron & Flitcraft, Chicago, the agency handling the account.

SEVEN-UP BOTTLING Co. will sponsor Taylor Grant in a series of Dugout Interviews on WCAU, Phila delphia.

Havana Treaty Now Effective; FCC Drawing Up Reallocations

Mexico Deposits Its Ratification Without Any Reservations; Border Stations Seem Doomed

THE HAVANA Treaty became an accomplished fact March 29 when Mexico formally filed with the Cuban Government its ratification of the North American Broadcasting Agreement, without reservations, thereby clearing the way for what is destined to become "the reallocation of 1940".

Word was received with satisfaction by the State Department March 29, after weeks of delay, that Mexico's Ambassador to Cuba, Ruben Romero, had deposited the ratification papers with the Havana Government, as the repository nation, and that the final essential act had been taken preliminary to the development of the North American reallocation.

The FCC was notified of the action at its broadcast meeting March 29 and its engineering department immediately was set to the task of completing all preliminary allocation lists for Commission action as quickly as possible. Because the engineering staff has been occupied with matters relating to both frequency modulation and television allocations during the last few weeks, work on preparation of the Havana lists had been delayed.

May Take Several Weeks

It was expected, however, that the lists might be completed within several weeks. Necessary procedure will require detailed staff consideration and evolving of means to notify all stations of their new assignments at the time the lists are deposited, through the State Department, at Havana. FCC sanction, of course, is required and there is no forecasting what exigencies may be involved in final approval of the changeovers. While the FCC has renewed all licenses of standard broadcast stations to expire as of Aug. 1, it was expected that because of the many variables involved this deadline could not be met. More than likely, it was thought, the date might be postponed until fall or toward the end of the year.

All of the nations parties to the Havana agreement. worked out in 1937, must submit their revised allocations to the Cuban Government before any final changeover steps can be made. It is naturally presumed there will be conflicts in allocations, and it is anticipated that an engineering conference on these will be held shortly after filing of their lists by Canada. Mexico. Cuba and the United States. With that accomplished, the nations can mutually agree upon an identical effective date, or time when all stations will assume their new assignments.

End of Border Stations

While the treaty is designed to spell the swan song for Mexican border stations, such as those operated by Dr. John R. Brinkley and Norman T. Baker, recent visitors to the border report these operators have evinced no serious concern. It is reported that Dr. Brinkley in particular does not appear worried. As far as could be ascertained in official quarters, however, these stations must go off the air, or content themselves with regional or local assignments, as against their present high-power beamed operations aimed to serve American tather than Mexican listeners.

Precisely what procedure the FCC will follow in notifying stations of their new assignments remains to be worked out. Consider-

T H E Y'R E from Missouri and they're showing the call-letter plates used by employes of the staffs of the St. Louis Star-Times stations. The plates are made of the same material, design and size as the Missouri auto tags and are helpful in driving through crowds to cover special events. Salesmen like their identification value. Oh yes, the names of these plate holders: Miss W9XOK, the one in plaid, is Receptionist Carleen Davis; Miss KYRU is Ruth Mahler, secretary to the program director; Miss KXOK is Ann Hastey, music librarian.

able sentiment exists, it is understood, for following the "show cause" procedure. under which stations would be advised of their new assignments and asked to show cause why they should not be made effective on whatever date the Commission sets for the allocation. The majority of the stations affected already know their new assign-ments, since they shift only from 10 to 40 kc. in the standard broadcast band. A score of others, however, largely daytime or time-sharing stations, do not know what their assignments will be and as a consequence must await the formal allocation order. All this presup-poses that the FCC will authorize a "treaty allocation" and will not seek to bring about a far-reaching revamping of the brodacast hand

of conducting the agency's radio activities as "primarily a relief project" under auspices of the Office of Education, and pointed out that a point of order probably would be raised against the appropriation since the radio activities were not directly provided in the act creating the office.

In describing the functions of the radio service, Dr. Studebaker and Mr. Boutwell stated that its activities extended to the national networks and local stations, schools and colleges. In four years some 700 programs have been carried by NBC and CBS, he esimated, and the networks have donated about \$3,500,000 worth of time.

Mostly Relief Funds

While \$278,799 in relief funds were made available for operations this year, the 1941 plan encompasses, in addition to the \$40,000 requested as an outright appropriation, \$200,000 from relief funds. Aside from \$5,600 included in the departmental salary item of the Office of Education, covering the work of Mr. Boutwell, all other money made available to the radio department has come from relief funds, it was stated. This \$5,600 item was to be included in the \$40,000 appropriation, which would provide funds for a basic skeleton organization to engage in various types of work related to education by radio. Chairman Tarver questioned the reasoning of expecting a larger staff to increase the scope of the radio department's activities with less money, a total of \$240,000 as against this year's \$278,799.

Answering this query, Dr. Studebaker declared, "The real problem, that we might as well face frankly, is whether it is your judgment that we ought to begin now to create through regular civil-service procedures a small personnel to carry forward some of the activities in which we have been engaged for several years on emergency funds."

The subcommittee also took issue with the right of the Office of Education to carry its educational activities over State boundaries directly to the people. Maintaining that his agency does have this right, Dr. Studebaker pointed out that although the office is not "in the general textbook business", if it can write a document covering education and make it available to the general public, it also can broadcast similar material. "I think it is perfectly logical that we might, with the necessary adjustments as to form and technique, utilize another medium of communication in transmitting to people the same ideas that we would put in written documents," he declared.

Big Ice Dealer Drive

NATIONAL ICE ADVERTISERS, Chicago, cooperative association of ice manufacturers and distributors, will sponsor a transcription series during the spring and summer on 80 stations. Discs, cut by NBC, will be titled *Time Out With Allen Pres*cott and will be backed by other advertising and merchandising placed by local ice dealers. Fortyfive stations will start the series the first week in April, ten the following week, with others added until the list is complete in late spring. Agency is Donahue & Coe, New York.

JAMES D. SHOUSE, vice-president of the Crosley Corp. in charge of its broadcasting stations, WLW and WSAI, Cincinnati, has been elected to the board of directors of the company, along with Raymond C. Cosgrove, recently named vicepresident in charge of manufacturing. They were chosen at the annual stockholders meeting March 26. Mr. Shouse (right) is here shown being congratulated by Lewis Crosley, executive vice-president of the Crosley Corp.

House Deletes Radio Education Fund; Studebaker May Ask Revival in Senate

RADIO services of the Office of Education appeared likely to continue on an emergency rather than a permanent basis following action of the House Appropriations Committee in refusing an item of \$40, 000 earmarked for setting up a permanent staff for the radio activities of the agency. The item was offered in budget estimates for the Office of Education considered by an appropriations subcommittee Feb. 20, and on recommendation of the subcommittee was deleted by the full committee in the Federal Security Agency supply bill passed by the House March 28.

The proposition of setting up the Office of Education's radio department with a regular staff having civil service status, rather than operating substantially as an emergency project with relief funds, met pointed opposition from subcommittee members. The move was termed by Rep. Engel (R-Mich.) "the first step for the camel to get its nose out of the tent". It was also brought out that if the appropriations were made, the committee likely would be confronted with continually increasing appropriations for such activities.

Although the Office of Education made no statement about the House action in throwing out the proposal, it is believed U. S. Commissioner of Education John W. Studebaker will present the proposition to the Senate Appropriations Committee when the bill comes before that group. If the Senate bill included the item, the matter will be finally decided in conference. The measure probably will be brought before the Senate in a short time.

The subcommittee hearings, at which Commissioner Studebaker and William D. Boutwell, director of radio publications and exhibits of the Office of Education, testified, mirrored a Congressional reluctance to establish the unit on a permanent basis. Subcommittee members, led by Chairman Tarver (D-Ga.) questioned the "propriety"

FCC Renews Prize Contest Onslaught

Five More Programs Are Sent Justice Dept. For Rulings

AGAIN SWINGING into action on programs construed as possible violation of the lottery laws, the FCC March 29 referred to the Department of Justice for scrutiny a new batch of five prize contest programs. Already pending before the Department by reference last Feb. 8 are the NBC Pot o' Gold program and a local bakery prize contest on a station in Texas. [BROADCAST-ING, Feb. 15].

The new citations are against programs broadcast over individual stations, ranging from locals to 50,000-watt outlets. Cited were *Musico*, on WGN, Chicago; Songo on WIP, Philadelphia; *Especially* for You, on WFIL, Philadelphia; Sears' Grab-Bag, on WISE, Asheville; Dixie Treasure Chest, on KRLD, Dallas.

Ruling in Illinois Case

The FCC, in referring these prize contests to the Department of Justice, seeks a ruling as to whether they violate Section 316 of the Communications Act which bans the broadcast of "any advertisement or information concerning any lottery, gift enterprise or similar scheme." It is known that in the case of one of the programs (Mu\$ico) a Federal court already has held it does not violate lottery statutes [BROADCASTING Dec. 1, 1939]. In this case, Federal Judge Joseph E. Daly, of Peoria, in a test case brought by Clef Inc., owner of the program idea, held that the prize contests sponsored over WGN, Chicago, and WMBD, Peoria, did not violate any statutes or laws dealing with lottery.

This ruling was regarded as one which legally sanctioned prize contest programs of this character. The decree was made even stronger by the court several days following its judgment, when it added a provision that *Muŝico* does not involve any consideration, directly or indirectly, from any participant and that the game is one of "skill and not a game of chance". The program had been sponsored over WMBD by Kroger Grocery & Baking Co.

In the case of *Pot* o' *Gold*, it was learned that the Post Office Department late last year advised the postmaster in St. Louis that newspapers carrying advertising on this program could be accepted under the second class rules. This was regarded as tantamount to a ruling that there was no violation of the lottery statutes insofar as the postal laws are concerned. Section 316 in the Communications Act was picked virtually bodily from the postal laws.

At the Department of Justice it was reported March 29 that staff attorneys were still working on the *Pot o' Gold* [NBC] and Mead's Bakery [KBST, Big Spring, Tex.] references from the FCC and soon would reach an opinion. The opinion will be given to the FCC and will not be made public by the Department. Attorneys have held that programs similar to *Pot o' Gold* do not contain an element of consideration, as the lottery laws are now construed, but it is conceivable that the Department, at the instance of the FCC, might deem it advisable to have a court test to see if a new decision would hold that a "consideration" is involved, since the recipient of an award, under certain circumstances, must be listening.

Fly Critical

Whether or not the programs constitute a technical violation of the lottery statutes, Chairman James Lawrence Fly of the FCC has stated informally that he did not consider them as in the public interest, since in effect radio is in the position of "buying" its audience. He recently expressed that view to a group of broadcasters [see page 28].

In the new citations, the FCC did not issue temporary licenses to the stations, as was its former custom. Instead, by referring the matters to the Department, it circumvents a procedure against which there had been serious complaint. Presumably, should the Department hold the programs to be violations of the lottery laws, the FCC then would be in a position to take punitive action.

From New York came word that, despite the fact that the *Pot* o' *Gold* program has been referred to the Department, the Lewis-Howe Co., St. Louis (*Tums*), the sponsor, is considering a similar series on MBS. Executives of the sponsor company and of Stack-Goble Advertising Agency, in charge of the account, were said to be discussing the matter with MBS executives who were represented as reluctant to clear time for the program until an adjudication from Washington is procured. The new series is reported to have been tentatively titled Rainbow's End, and would follow closely the money award formula of Pot o' Gold. Meanwhile, WWJ, Detroit, is understood to have given NBC notice it will drop the program, following the examples of WFBR, Baltimore, and WDAF, Kansas City.

Cited Programs Described

The FCC, in its announcement regarding the five program references to the Department of Justice, described them as follows in a press release March 29:

press release March 29: "Mu\$ico [WGN] is sponsored by the National Tea Co., Chicago. Cards are supplied by National Food Stores and other sources. Each card has five rows of squares and five squares in each row. Names of songs are involved. To win a cash prize in this 'game' one must be lucky enough to get a card with the songs listed that are broadcast, must listen to the program broadcast, must listen to the program broadcast, and must fill out or check the correct names of the songs or musical selections broadcast, and must be the first to telephone the answer to the radio station.

"Songo [WIP] has similar characteristics, employing cards furnished by the Nevins Drug Co., Philadelphia.

by the Nevins Drug Co., Philadelphia. "In Especially for You [WFIL] a wheel is spun to determine from Philadelphia and suburban directories the person who is to be given a chance to win a Farnsworth radio. If the party selected has a telephone he is called. If he answers the phone and answers two questions satisfactorily he receives a radio. If he does not respond correctly, he is given two tickets to Mystery History, a network show. "Sear? Grab Rag [WISE] involves

Mystery History, a network show. "Sears' Grab Bag [WISE] involves a box of numbered slips of paper placed in front of the Sears' store in Asheville. The advertising manager of the store selects the numbers. If the bolders of the numbers are in the broadcast audience they receive prizes. If they are not listening in the nearest numbers get the prizes.

"In the Dixie Treasure Chest (KRLD) program the announcer selects a number from the Dallas telephone directory. If the party called answers the telephone he or she is asked, 'What is the color of the border of the Dixie Margerine package?' If the party answers correctly, a prize of \$50 is the stake."

First Texas Citations Heard; Others Slated for April

HEARINGS on five of the seven Texas station revocation citations, involving purported "hidden ownership" by Dr. J. G. Ulmer, of Tyler, Tex., were closed in Dallas March 21 by the FCC, after the pastor-broadcaster admitted that sworn reports he had made to the Commission were in error. Yet to be heard, probably in latter April, are citations for revocation against KAND, Corsicana, which was continued, and KGBI, Brownsville, cited March 22 in an order alleging an unauthorized transfer of management. control and operation.

cited March 22 in an order alleging an unauthorized transfer of management, control and operation. The hearings began March 5 and were held through March 21 in Austin, Dallas, Tyler and again in Dallas [BROADCASTING March 15]. Testimony was completed in the cases of KTBC, Austin; KGKB, Tyler; KNET, Palestine; KRBA, Lufkin, and KSAM, Huntsville. Prosecution was handled by George B. Porter, FCC assistant general counsel, and Hugh B. Hutchison, FCC attorney, with DeQuincy V. Sutton, FCC head accountant, testifying in connection with financial and other fiscal factors. Commissioner George H. Payne presided.

tifying in connection with financial and other fiscal factors. Commissioner George H. Payne presided. Each of the five cases heard was closed individually and it is presumed proposed findings shortly will be issued by the Commission. In the light of the admissions of Dr. Ulmer and the testimony of other principals, it was thought drastic action would be recommended.

At the hearings in Tyler, Dr. Ulmer's home town, the broadcaster testified he was in error in connection with reports made to the FCC regard his voting of his wife's stock and the amounts of stock he owned, and in connection with other data required by FCC license forms. He said he had voted his wife's stock by proxy in several.

owned, and in connection with other data required by FCC license forms. He said he had voted his wife's stock by proxy in several. The FCC in its March 22 order revoking the license of the Brownsville station, alleged that Ewol Wilson and Ernest E. Wilson, of Corpus Christie, by contract had transferred to Dr. Ulmer and M. D. Gallagher, of Brownsville, possession and control of the station without having first procured the FCC's consent. The order also alleged that Lawrence D. Yates had contracted with Ulmer and Gallagher to acquire the station without procuring FCC authority in violation of the law. Under FCC procedure, the parties involved have 15 days in which to request hearing.

WSAL Loses License

FOLLOWING a brief oral argument March 28, heard by the Commission en banc, the FCC on March 29 affirmed its order revoking the license of WSAL, Salisbury, Md., as of March 31. The action climaxed a long-drawn-out inquiry, which started in mid-December, into the financial background f the station. The order, originally issued Oct. 24, 1939, was premised on grounds of false statements as to his financial responsibility made by Frank M. Stearns, WSAL licensee, in his application for a construction permit in 1937 [BROAD-CASTING, March 1].

GROWTH OF amateur radio is traced in a series of eight half-hour programs, 200 Meters & Down, broadcast on WGAN, Portland, Me., in cooperation with the American Radio Relay League and the local amateur group. This rehearsal shot was taken just prior to the opening broadcast in mid-March. Standing (1 to r) are Dick Bates, director, narrator and actor; Gwen Graves; Arthur Owens; Howard Stanley, writer and actor; Russell Dorr, Carl deSuze and Dorothy Beyer. Kneeling are Ken Woodbury, technical advisor, and Raymond Brown Jr.

DIFUI OF COMMERICAL FM This Year Seen

Opposition Dwindles at FCC Hearing; Expect Gradual Transition

By SOL TAISHOFF and LEWIE V. GILPIN

THE BIRTH of a new system of broadcasting—likely to have its commercial onset this year—was foreseen after eight days of hearings March 18-28 before the FCC during which a solid phalanx of advocates testified in favor of opening up the ultrahigh frequency bands for frequency modulation or "staticfree" broadcasting.

If there is any real opposition to FM as a new commercial service to supplement rather than supplant the present standard broadcast structure employing amplitude modulation, it was not evident during the proceedings. There were allocation conflicts, however, with advo-

cates of television, notably RCA, resisting strongly the efforts of organized FM proponents to have assigned to wide-band FM the No. 1 television channel, covering the range from 44 to 50 mc., which, together with the 42-44 mc. range presently earmarked for FM, would provide a sweep of 8,000 kc., or a total of 40 channels of 200-kc.

Victory for Armstrong

What was expected to be a battle royal between opponents and proponents of wide-band FM turned out to be almost a cakewalk for the disciples of Maj. Edwin H. Armstrong, noted inventor whose basic patent position in wide-band FM made him the key figure in the proceedings. With a personal investment of more than \$750,000 in FM development, Maj. Armstrong carried the five FCC members through more than a decade of FM development and predicted the day when listeners voluntarily will tune FM receivers in preference to AM because of its interference-free, highfidelity characterics. He stoutly supported FM as a "perfect" broadcast medium.

A gradual transition to FM, covering a period of from seven to ten years, was seen by key witnesses. From John Shepard 3d, president of the Yankee and Colonial networks, organizer and president of FM Broadcasters Inc., and the industry's foremost proponent of FM, the Commission heard of experimental operations in which he personally has invested some \$250,000 over the last two years.

There were no far-fetched predictions that FM would supplant standard broadcasting overnight. Moreover, the preponderant opinion was that standard broadcasting would never be entirely replaced because FM affords no secondary coverage. The prevailing idea was that there should be a dual system-AM and FM. Insofar as FM is concerned, it also should be broken down into two systems, witnesses suggested, one of highpower stations serving areas of perhaps 100 miles, with limited duplication on channels, and then a multiplicity of stations, as many as 100, on other "local" channels, serving small areas of perhaps 15 to 30 miles.

RCA Favors FM

FM networks were foreseen through use of ultra-high frequency relays (above 100 mc.) with automatic unattended repeaters carrying the same program and spaced at specified d istances. Therein witnesses predicted substantial savings in the future, since radio today is estimated to be paying to AT&T and other wire companies some \$8,000,000 a year. The big surprise came when RCA itself plumped for commercial FM, though it appeared to favor narrow-band rather than the Armstrong system of wide-band FM. The RCA case was premised largely on the contention that television should not move aside for FM (as FM Broadcasters, Armstrong, et al proposed) and that it should be recognized that it will always be necessary for those in outlying and rural areaes to be served by standard broadcasting. Expert witnesses likewise agreed that FM receivers will cost more

than standard sets but, based on past radio history, they predicted that under mass production the price would decrease substantially. The round figure for an FM receiver was given at about \$100. At the outset, it was felt that receivers would have two chassis and one speaker, so that with the flick of a switch either FM or AM bands could be tuned.

Favorably Inclined

The effort was made to convince the Commission, which had only five of its seven members sitting throughout the hearings, that present broadcast licenses generally should be the FM licenses, operating with full commercial status. There were differences in viewpoints, however, as to whether the same programs should be transmitted over both FM and AM.

Reaction from the bench could only be regarded as favorable, though Chairman James Lawrence Fly and Commissioner T. A. M. Craven ran practically every witness through rigid questioning aimed largely at the virtues of wide-band vs. narrow-band and the elbow room required by television. Other commissioners who sat (Thad H. Brown, Paul A. Walker and F. I. Thompson) participated only intermittently in the questioning. Chairman Fly cracked the whip with many witnesses, determined to cut the hearings as short as possible, and during the very last hour of the hearing clashed with RCA's general solicitor, Frank W. Wozencraft, when the latter made a plea that the Com-

FOSTERERS of FM during the FCC proceedings were (1 to r) J. R. Poppele, chief engineer of WOR and chairman of the FM Broadcasters Inc., engineering committee; Paul W. Morency, WTIC, Hartford; Walter J. Damm. WTMJ, Milwaukee; Dr. Franklin Doolittle, WDRC, Hartford; John Shepard 3d, president of FM Broadcasters Inc.; Dr. C. M. Jansky Jr., consulting engineer; John V. L. Hogan, consulting engineer; Paul A. deMars, technical director of the Yankee Network, which already has an FM station in operation.

mission not indulge in "snap judgment" in deciding the fundamental FM-television allocation issue.

This phrase set off pyrotechnics of a character seldom if ever seen at an FCC hearing. Berating the counsel, the chairman said the Commission always gives "thorough consideration" and that it was the industry that should be cautious.

Despite the many engineering comparisons of narrow-band and wide-band, there appeared to be strong sentiment for the Armstrong wide-swing proposal. An impression was made by Judge E. O. Sykes, as counsel for W. G. H. Finch Laboratories, when he observed, based on a dozen years experience as a radio and communications commissioner, that it was virtually impossible to widen a wave band once the tolerance is set, but that it is a simple matter to cut it down if that becomes technically expedient. Witnesses had testified that if FM receivers are produced for wide-band reception of 200 kc., as proposed by the Armstrong system, they would not be rendered obsolete if the band is subsequently cut in half.

The case for commercial FM was carried largely by FM Broadcasters, through President Shepard, Paul A. deMars, technical director, and Philip G. Loucks, FM general counsel and former managing director of the NAB.

Must Build Audiences

Mr. Shepard said it would take some time for commercial programs to reach FM station schedules, since an audience must be built to attract advertisers. But he saw FM replacing AM and operators using only FM transmitters in many areas after a transition of "roughly 10 years", during which the AM audience would tend to shrink as the FM audience increased. At the end of that time the advertisers would be reaching the same markets as at present, he predicted.

During the transition period, said Mr. Shepard, the station operator probably would use both AM and FM to maintain an aggregate audience attractive to advertisers until almost a 100% replacement of AM sets is achieved. He pointed out that in the normal course of events about 10% of the receivers are replaced annually and, where FM is available, replacements of these and others probably will be FM or combination sets.

Regarding network operation of FM, Mr. Shepard said he thought NBC or CBS, if relieved of the payment of line charges, could pay the construction and operating costs of a relay system, while a mutual organization such as MBS could apportion the cost as it does at present with line charges. Though no such plan has been worked out beyond the "conversation point", Mr. Shepard said the relay system would develop if the FCC granted facilities.

When the hearings concluded March 28, Chairman Fly asked all participants to submit briefs by April 15.

Page 18 • April 1, 1940

BROADCASTING • Broadcast Advertising

While there was no indication when the FCC would pitch into actual staking off of the ultra-high range, it was hardly anticipated that the action would be swift. Because of the inter-relation of television allocations, both problems must be tackled together. The fact that the television issue has been reopened, with hearings scheduled April 8, portends a delay of at least several weeks beyond that date.

Based on the questions from the bench, it was apparent that FM proponents made a deep impression. But it was pointed out that, totally aside from the considerations involved on television-FM allocations, the Commission must take into account the requirements of so-called safety-of-life services and even of Government services. Aviation, ship, police, forestry and other nonpublic services have allocation problems. Since the hearing issue was restricted largely to a "day in court" for FM, it is conceivable that the FCC may deem it advisable to hold a hearing or perhaps a conference with other users or licensees to assure an orderly allocation.

No Strong Dissenters

Melting of RCA's anticipated opposition left virtually no strong dissenters to the proposed Armstrong-Shepard project. As for the FCC itself, it appeared that several members see in the projected new service a means of diffusing service and perhaps distributing station ownership in such fashion as to relieve what they have regarded as a tendency toward concentration of control of broadcasting.

Many of the observers and participants were intrigued by the questions of Chairman Fly, a comparative newcomer to the FCC who began his service only last fall. His display of technical knowledge and understanding of the issues surprised engineers particularly. Like Commissioner Craven, himself former FCC chief engineer, Mr. Fly is a graduate of the U. S. Naval Academy, where he learned the rudiments of radio. As a Government lawyer during the last decade, specializing much of the time in power matters, he added to his background on electricity and related sciences.

Many of the 400-odd broadcasters, engineers, attorneys and observers who attended the sessions had preconceived notions about FM. A substantial portion viewed FM as a prospective Frankenstein that might turn on their established station operations and introduce new competition of a character that might prove ruinous. As the story of FM unfolded, however, principally the theory of a dual system of operation, with a transition period of seven to ten years, this viewpoint appeared to subside.

RCA Attitude a Surprise

RCA's cryptic pronouncement, through Chief Counsel Wozencraft, that it believes ultra-high frequency brodacasting is ready for commercial use, and that the public interest would best be served by Commission action giving FM the green light, took the FCC and the assembled audience by surprise. Coming toward the conclusion of the hearings, on March 27, the pronouncement was viewed as somewhat of a change in attitude.

Mr. Wozencraft said RCA has concluded that u.h.f. broadcasting, when sound alone is employed, should use FM because of technical advantages and that the time has come when it should be presented to the public as a regular service. He added, however, that it seems certain there will never be a time when the entire country can be served by u.h.f. broadcasting, and that it will always be necessary for people in small cities, towns and remote rural areas to be served by stations operating in the present standard band.

Patents Not Discussed

Taking FM proponents wholly by surprise, the RCA position was seen as one which eliminated the greatest non-official obstacle to development of the projected service. At the outset of the hearings, observers anticipated a rather bitter contest with the Armstrong-Shepard group on the one side and RCA on the other. During the hearings, RCA questioning of FM Broadcasiers witnesses tended to indicate stern opposition.

A dispute over patent holdings also failed to materialize at the hearing. While Maj. Armstrong alluded to his patent position on wide band FM and claimed that RCA's narrow-band position was antiquated, he did not directly assail the company. RCA in its testimony said that its research engineers have experimented with FM for many years. In laboratory and field tests, it was stated, RCA engineers have "sought facts" and "the patent situation has been subordinated to the desire to obtain these facts".

With Chairman Fly anxious to conclude the hearings as rapidly as possible, many witnesses originally scheduled to appear simply filed statements for the record. The RCA case, it had been anticipated, might consume several days, particularly in the light of the time consumed by Maj. Armstrong and FM. RCA Counsel Wozencraft, however, ran his witnesses through a swift presentation in an effort to comply with the Commission's request. Westinghouse, which had prepared an elaborate presentation, likewise submitted its case in exhibit form. It became apparent too, as the second week of the hearings got underway, that in deference to the Commission's desire, cross-examination of witnesses all down the line was cut appreciably.

NEW APPLICATIONS ARE FILED FOR FM

APPLICATIONS for FM construction permits continue to pour into the FCC at the rate of about one a day, among the latest being five from NBC seeking FM adjuncts to its stations in Washington, Cleveland, Chicago, Denver and San Francisco. Except for Cleveland, where the 43.4 mc. band is requested with 1,000 watts, all of the applications are for 1,000 watts on 43 mc. The NBC applications leave it to the Commission to determine, after its hearings, whether it shall assign wide- or narrow-band FM.

To the list of FM applicants published in the March 15 BROADCAST-ING should also be added new applications received since that date, all for 1,000 watts, from the operators of WELI, New Haven, Conn., 42.6 mc.; WNBH, New Bedford, Mass., 43.4; WMBC, Detroit, 43.2; WGAR, Cleveland, 43.2; WHDH, Boston, 42.6; WLVA, Lynchburg, Va., 42.8; WJAS, Pittsburgh, 43; WSJS, Winston-Salem, N. C., 42.8; KROC, Rochester, Minn., 43.2; KPRC, Houston, 43.

Fly Promises Fair But Thorough Hearing

With an estimated 300 participants and spectators overflowing the large hearing room in the Interstate Commerce Building, and another 100 standing in the corridor, Chairman Fly opened the hearing March 18 with a synopsis of the purposes of the proceeding, promising an "expeditious, fair but thorough-going" hearing for FM's "day in court". In addition to C h a irm an Fly, Commissioners Brown, Craven, Walker and Thompson attended the proceeding on the opening day. At the FCC counsel table were General Counsel William H. Bauer, Chief Engineer E. K. Jett and Assistant Chief Engineer Andrew D. Ring.

Scheduled for a two-hour appearance, Maj. Armstrong in presenting his case as inventor of the Armstrong FM system accounted for all the 4½ hours hearing time March 18 and did not complete his testimony until well into March 19. Under questioning by his counsel, Horace L. Lohnes, Maj. Armstrong traced the history of his radio experience from 1906, when he built his first amateur outfit, through his development of the regenerative circuit in 1912, the superheterodyne circuit in 1917-18, the super-regenerative circuit in 1920, and finally his patenting of an FM system in 1933. His work on the elimination of static in radio reception dated from 1914, he stated, after he had been graduated from the Columbia U engineering school and joined Michael Pupin, the noted scientist.

been graduated from the Columbia U engineering school and joined Michael Pupin, the noted scientist. Citing the various approaches taken to the static problem during this 25-year period, he commented that a l th o u g h both modulation based on power (AM) and "wavelength modulation" (now known as FM) had been considered, neither amounted to much until 1913, with development of the vacuum tube modulator. After that attention was concentrated on amplitude modulation and the present regular broadcast system developed.

Problem of Splitting

Signal and Static

About 1920 FM turned up again, Maj. Armstrong related, when it was discovered that, with the regenerative circuit amplifying both the broadcast signal and static, researchers were trying to Separate two things—the broadcast signal and static—that really were the same. With attention still concentrated on AM, it had been decided by 1923 that about all that could be done with circuits to eliminate static was to make them shallow as possible to still pick up the broadcast signal—"and what static trickled in had to be"—he continued, pointing out that the components of static correspond in effect to a series of AM signals.

In the interest of high-fidelity reception, to achieve the greatest differentiation between signal and noise, it is necessary to make the receivable band width as large as possible at the receiver, rather than narrow, Maj. Armstrong declared. He pointed out that it was "very difficult" to develop a transmitter that would allow this, swinging between two distant limits and still "hold fast" in the center to escape distortion.

In June, 1934, Armstrong FM apparatus for experimental operation was installed on RCA's 2 kw. television transmitter in the Empire State Bldg. in New York. Experiments started there immediately,

Five Commissioners Hear Major Armstrong's Testimony

April 1, 1940 • Page 19

but in April, 1935, when RCA de-clined to increase the power of the transmitter apparatus, Maj. Armtransmitter apparatus, Maj. Arm-strong said he undertook to con-struct his own transmitter, result-ing in his present FM experimental station, W2XMN, at Alpine, N. J. Experiments with the RCA transmitter ceased in October, 1935, he said, after a series of demonstra-tions of FM's and AM's relative re-ception and adaptability to multiplex operation.

To illustrate FM development at the time of these 1935 tests, Maj. Armstrong presented a sound film recording of the relative AM and FM signals of the 50 kw. WEAF and the 500-watt WMCA, recorded and the bow-wait winCA, recorded at that time during a severe thun-derstorm. The audible demonstra-tion indicated the static effect in AM transmission, reflected in a partial drowning of the WEAF signal and the almost complete drowning of the WMCA signal, and on the other hand the relatively in-terference-free reception of the frequency modulated signal for the same programs. To supplement this evidence Chairman Fly requested Counsel Lohnes to furnish the exact date of the broadcasts, along with prevailing U. S. weather reports for that day in the vicinity.

Height a Vital Factor In FM Operation

Describing the W2XMN plant at Alpine, Maj. Armstrong stated that although it was constructed for 50 kw. operation and licensed for 40 kw., it is actually operating at 30 kw. during present experimenta-tion, which started in the summer of 1938. Its location on a high bluff of the Palisades overlooking the Hudson River is advantageous, he declared, since height is a ruling factor in FM transmission. Conductivity, on the other hand, is a relat vely slight factor in FM, he added.

Due to the increasing number of spectators, Chairman Fly in recess-ing the opening morning session announced that the hearing would move to the large departmental auditorium. As the afternoon ses-sion started, an estimated 450 persons were present.

Resuming the stand, Maj. Arm-

PRESIDENT, prime mover and key witness for FM Broadcasters Inc. at the epochal hearings was John Shepard 3d, energetic head of the Yankee and Colonial net-works, who has already spent some \$250,000 in FM station construction. His luxuriant mustachio, carefully cultivated during recent months, proved the tonsorial high-light of the hearings. strong stated that FM was first brought to public attention in No-vember, 1935, when he presented a paper covering the results of his FM experiments at a New York meeting of the Institute of Radio Engineers. Since then developments have fulfilled the predictions he made at the FCC hearings on highfrequency allocations, in June, 1936,

Maj. Armstrong declared. The regular service performance of FM stations now operating jus-tifies "from any angle" aural broad-cast operations on frequencies above 25,000 kc, he declared in re-sponse to a ourstion So for es sponse to a question. So far as transmitting and receiving equipment goes, he continued, 10 firms already are licensed and ready to produce the necessary apparatus, with three makes of transmitters and three receivers now on the market. Citing W2XMN as one of the successfully operating trans-mitters, he stated that during 900 hours on the air, it had been forced off the air for only a total of 70 minutes. That was because of diffi-culties with the 200 and 250-watt tubes and power lines which have

tubes and power lines which have since been largely overcome, he said. No failure had resulted from deficiencies in the high-frequency or FM apparatus, he added. A report on the operation of W2XMN from July 18, 1939, to date, entered as an exhibit by Maj. Armstrong, showed that the sta-tion since that day has operated with a regular program schedula tion since that day has operated with a regular program schedule, 5-days-weekly 7-hours-daily, to de-termine the reliability of high-power operation and coverage ob-tainable. Program material includ-ed transcriptions; pickups via a special 15,000-cycle line of WQXR and CRS programs and mean pick special 15,000-cycle line of WQXR and CBS programs, and relay pick-ups from W2XAG, Yonkers. Ar-rangements also have been made for relayed rebroadcasts of W2XMN programs by other FM transmitters.

Claims Superiority In Signal Quality

Responding to queries by Com-missioner Craven, Maj. Armstrong stated that although there are spots of high signal intensity.... within five miles of a 50 kw. transmitter-where there is little difference between an AM and an FM signal from the standpoint of noise, the FM signal at points well within a 10-mile radius of the transmitter and beyond is superior both in quality and range. Asked for an estimate of the superiority limits of FM broadcasting, he explained that although FM reception extends that although r M reception extends beyond usual primary service areas, there is no secondary service area for FM. Within this general range he estimated that 50 kw. service would extend about 100 miles; 1 kw., 30 miles. The conflict between wide-band

and narrow-band transmission, regarded as a major bone of conten-tion before the hearings, was broached by Chairman Fly when he asked Maj. Armstrong flatly which he thought more satisfactory, "My experience has been in all the experiments I have made that the wider band does the better job-and the wider the better," the inventor declared.

Confronted with queries on the relative merits of AM and FM transmission in frequencies above 25 mc., Maj. Armstrong declared that in tests through his many years of experimenting "FM transmission was incomparably better". The ability of FM transmission to

THOUGH SOVIET Russia frowns upon "capitalistic America" it is not adverse to gleaning knowledge of American inventive genius in radio. Seated here (l to r) are V. P. Doro-nin, V. A. Smirnon and S. I. Rasnin, V. A. Smirnon and S. I. Assessed and representatives of the Glaves-prom Commission, division of Am-Trading Co., who procured FCC permission to attend the FM hearing as observers. The Canadian government also had representatives present.

Oyez! Oyez!

THE NATION'S highest courts have nothing on the FCC in the way of "court-room" dignity and procedure, it became evident to the 400-odd broadcasters, engineers, attorneys and others who at-tended the FM hearings the very first day. Introduced by Chairman James Lawrence Fly some weeks ago, the new procedure includes the en masse arising of all in the hearing room and standing at attention when each ses-sion is opened and the mem-bers of the Commission file in. Not a soul, however weary, dare sit until Chair-man Fly raps the gavel.

discriminate against noise has the

practical effect of increasing the reception range, he pointed out. Pursuing further the disparities between AM and FM operation, he explained that because of reception of only the strength of two or of only the stronger of two or more signals on the same frequenfrom a signal so the same frequen-cy in FM transmission, more sta-tions can operate with freedom from interference, thus increasing the service areas. In addition, he said FM lends itself to better reproduction service than does AM transmission, while under the FM system distortion is dependent on circuits rather than tubes, as in AM operation.

From every standpoint of trans-mitter design the FM transmitter is "the ideal", he declared, explaining that it employs only receiving tubes and the FM circuit, along with simple Class C amplification. W2XMN's high-power amplifying tubes have operated 2,000 hours, he stated, observing that this would not have been possible under AM.

Predicts Network

Using Radio Links

Asked for some predictions on FM's future service, Maj. Arm-strong said that although a wire network of FM stations is readily possible, "the bottleneck of the wires" will allow only one FM ad-Therefore, he continued, he fore-sees stations "linked by radio", sees stations "inked by radio", citing the relay hookups successful-ly operated during joint experi-ments by FM stations in the New York-New England area. Due to the fault of "eight wise men, of whom I was one", high-fidelity reception in the standard AM broadcast band is "hopeless", he declared, explaining that the 10 kc. separation decided upon at a Hoover radio conference years ago is not enough to allow a substantial interference reduction. In the ultra-high frequencies, high-fidelity AM transmission is not subject to the same disadvantage, but FM still yields higher fidelity, not only in freedom from noise but also in range and other charac-

also in range and other charac-teristics, he declared. Speaking of the success of relay experiments, Maj. Armstrong said there was "very slight if any" difference in relayed FM signals, and that difference has been elim-inated by arranging a new relay that cuts effects of remodulation and demodulation. Automatic re-lays also have been developed and lays also have been developed and can be used, he added. As for serv-ice in sparsely populated regions, he said that although he couldn't at this time go into the economic pos-sibilities of extending relays to all sections, he saw the development eventually.

Discounting any attempt to in-terpret his championing of FM as an intent to bring about the drop-ping of all AM activities and experimentation in the ultra-high frequencies, he commented that he only wanted FM to be allowed to go ahead. Amplitude modulation "is certainly the long way to go" in developing the ultra-highs, he added.

Discusses Advantages Of Wide-Band Service

In a technical discussion with E. K. Jett, FCC chief engineer, on the wide-band vs. narrow-band contro-versy, he declared the wider the band, within the capabilities of the equipment, "the better off you are". In the 200 kc. separation employed in the Armstrong FM system, only about 150 kc. actually is used in about 150 kc. actually is used in the frequency swing, he stated, the remaining 50 kc. serving as a "guard band". After experimenta-tion he said he had decided on a

tion he said he had decided on a 200 kc. separation as a "compro-mise limit", with peak operating limits extending from 120-150 kc. Cutting the 200 kc. swing in half, to 100 kc., he said four times the power would be necessary to get the same results, on a basis of signal to noise ratio at any one point. Cut the swing to 30 kc. and the power iump must be 25 times the power jump must be 25 times, he added. With a 30 kc. separation, only three stations could actually operate within the 200 kc. space, be station and three within the 200 kc. he stated, and these not in the same area. Using narrow-band transmission, the inter-station ratio of interference will be such as to cause a larger "no man's land" from the listeners' standpoint, he said. In short, he declared, one does not get the same immunity in narrow-band as in wide-band system. Continuing on this tack, Maj.

Armstrong explained that the narrower the band the more complex becomes the receiver design. Any set designed for 30 kc. operation he termed "an electrical misfit". He cited the conclusions presented at the time by RCA engineers after the 1934-35 measurements and tests in which it was stated that narrow-band FM operation increased the service radius 2 to 2.6 over AM, while increasing the swing from 20 to 100 kc. further added 1.4 to 2 over AM.

Reviewing frequency assign-

ments for aural broadcasting above ments for aural broadcasting above 25 mc., Maj. Armstrong stated that FM operations had been assigned to 42.5-43.5 mc., 117-118 mc., and .8 mc. in the vicinity of 26 mc. Thus, he said, about five channels are provided for FM from a prac-tical standpoint. But, he added, sky-wave interference in frequencies below 30 mc. is too pronounced for below 30 mc. is too pronounced for practical purposes, and the 117-118 mc. bands are too high. Among other adjoining assignments are 42-42.5 for AM; 43.5-44, facsimile; 41-42, educational. If the 42-44 mc. channels were turned over to FM, it would afford ten 200 kc. channels, he then observed.

Service Problem in **Densely** Populated East

Using bands in the 42-44 mc. as-signment, it would be possible to furnish satisfactory service to lurge parts of the country, he pre-dicted — enough channels "prob-ably for years to come" in sparsely populated sections, but only enough for "service of a sort" in the densefor "service of a sort" in the dense-ly populated East. Pressed for his estimates of what could be accom-plished on 10 channels, Maj. Arm-strong said he thought "a pretty good job could be done" in the North Atlantic and New England States if there were no duplications on the 10 channels among New York stations. York stations.

York stations. He pointed out also that in June, 1936, he had suggested setting aside 5 mc. for FM operation, in the 40 and 80-100 mc. bands, and that recently he advocated a 6 mc. band, taking up the equivalent of one television channel, in view of the rapidly expanding interest in FM development. Questioned on the advisability of taking up one of the channels assigned for tele-vision operation, he remarked that "as FM develops, television may find it is in the wrong place and should have started higher" in the frequency spectrum. frequency spectrum.

Balancing the relative services of FM as staticless radio, and tele-vision, he declared that FM service in the lower frequencies yields greater possibilities for public service and will make better use of the frequencies than television, since

television is neither as available nor as dependable at such distances as 80 miles from the transmitter. He estimated that with 10 channels available, FM could serve about 50% of the potential listeners over

the country. Pressed by Commissioner Craven Pressed by Commissioner Graven for further comment on the poten-tial New England service situation with 10-channel operation, Maj. Armstrong stated that two such stations as W2XMN at Alpine and the Yankee transmitter W1XOJ on Wt Assochumekit acab with the Mt. Asnebumskit, each with the same frequency assignment, would "build walls against each other", "build walls against each other", cutting down the respective service areas. He pointed to the need for two types of stations—hundreds of local outlets with "definitely cir-cumscribed" service areas on a single frequency, and others to serve larger areas. In the ultra-high frequencies, AM service cannot be extended far enough for completely satisfactory service he declared hereuse of in-

service, he declared, because of in-terference, coverage characteristics and allocation limitations.

Gradual Transition

Would Be Necessary

Maj. Armstrong was rather closely questioned by Chairman Fly as well as Commissioner Craven, particularly on service and cover-age aspects. While he sought to em-phasize the superiority of FM over AM, he nevertheless asserted there was no doubt that the present broadcast system will continue for many years and that the transition to FM, particularly insofar as rural and remote coverage is concerned,

and remote coverage is concerned, would have to be gradual. Asked to discuss the relative ad-vantages of wide-band FM vs. the 40 kc. narrow-band operation, Maj. Armstrong said that it would be impossible, among other things, to multiplex other services on narrow-band. For example, he pointed out that regular facsimile transmission can be carried on the 200 kc. wide-band operation without disturbing the aural transmission.

Pressed for data on the necessary contiguous band desired for nationwide FM coverage, Maj. Armstrong said that if the band 42-44 mc., embracing ten 200 kc. channels were set aside, it would be possible to supply a satisfactory service "for a large part of the country". This

supply a satisfactory service for a large part of the country". This is particularly true in the North-east, he said, where coverage of standard broadcast stations is poor, particularly during the "summer static" season. Maj. Armstrong said he assumed that the present non-commercial educational band of 41-42 mc. would use FM rather than AM, and that this would tend to give FM a "clean sweep" from 41-44 mc. if the FCC followed the recommendations of the FM group. When Commissioner Brown asked about using FM as a supplement to standard broadcasting, Maj. Arm-strong said he felt that a very sub-stantial portion of the population

strong said he felt that a very sub-stantial portion of the population could be given service by FM "ex-cluding the wide open spaces". The ten channels to which he had pre-viously referred, Maj. Armstrong asserted, should "start a good serv-ice of a sort" in the Northeast. He again predicted that more than 50% of the public could procure adequate service from FM. Asserting that difficulties would

Adequate service from FM. Asserting that difficulties would be encountered if stations were placed closer than 300-400 miles apart—since each would limit the other—Maj. Armstrong declared that he had not made a complete enclusio of the allocations situation analysis of the allocations situation and that subsequent witnesses would cover it.

Tells of Interference

On Same Frequency

Commissioner Craven specific-ly inquired whether ten channels with 50 kw. stations could cover the New England area alone, and Maj. Armstrong said he thought 10 chan-nels could do the job. Responding to Chairman Fly, Maj. Armstrong asserted that two stations of 1 kw. each could be placed on the same frequency in Washington and Baltimore, 40 miles distant, and each could render a satisfactory service over its metro-politan area without serious interpolitan area without serious interference and with no mush area. By the same token, if the 1 kw. FM station operated in Washington and an AM station operated on the same

frequency in Baltimore, there would be no greater interference than if the two FM stations operated on

the two FM stations operated on the same wave, he said. Observing that the industry is strongly supporting FM, Maj. Arm-strong pointed out that the number of applications pending has passed the 100 mark. All of the applicants, he said, hope to be authorized to set up stations. He added he was not so sure all applicants for television stations have the same purpose. stations have the same purpose.

stations have the same purpose. Summing up, Maj. Armstrong contended that if the Commission grants FM full commercial status, broadcast stations in urban centers will discard their present "imper-fect medium" in favor of "a per-fect medium". The substance of his testimony was that at the outset, in any event, rural areas will have to depend upon AM stations of today unless networking of FM on a reunless networking of FM on a re-peater station basis is developed.

Sees Gradual Shift

To FM Receivers

Continuing to explain the attri-butes of FM operation through a major share of the March 19 ses-sion, Maj. Armstrong made it clear he did not expect FM to displace regular AM broadcast service overregular AM broadcast service over-night. He looked for AM broadcast-ing to continue "for a long time", commenting that it was just as foolish to believe AM operations would stop with the introduction of FM as it would be to believe that Model-T Ford cars would stop operating as soon as Henry Ford brought out his modern models.

However, in the normal course of events FM will replace AM, he de-clared, although it will take years even if all present operators and set owners were to decide to make set owners were to decide to make the switch at once. In the process of evolution, he forecast, "the lis-tener will be the judge", and he probably will start out buying combination AM-FM sets, finally buying only FM receivers as the FM service develops.

Questioned about manufacturing costs, Maj. Armstrong estimated the present experimental FM transmitter cost is comparable to that (Continued on page 80)

A Segment of the Audience Crowding the Opening Session of FM Hearings

BROADCASTING • Broadcast Advertising

April 1, 1940 • Page 21

FCC Reopens Television Hearings April 8

RCA Is Called to Task for Video Activity

ORDERING suspension of its new rules which would permit "limited commercial" operation of television Sept. 1, the FCC March 23 in an unexpected action hailed RCA to the carpet because of its television merchandising and sales efforts which the Commission said might "deadlock" development.

The Commission set April 8 for reopening of hearings to determine whether "research and experimentation and the achievement of higher standards" for television are being "unduly retarded" by RCA's intensive merchanising and sales campaign in New York. The FCC's action came without warning. The immediate effect was to bring to a dead stop all of RCA's promotional activity. The action of the FCC was g r e t e d with "amazement" by David Sarnoff, RCA president.

It was even reported that RCA, with a \$10,000,000 investment in television research and equipment, might be disposed to consider dropping |visual radio altogether. A \$2,000,000 budget appropriated for the current year to bring television into practical public operation likewise may be cancelled.

Extent of FCC Power

The FCC's summary action occasioned surprise in other quarters, too. It was clear that there would be repercussions on a number of fronts, particularly since the Commission's authority to move into the field of sales competition and merchandising is questionable. The action was the result of a 4 to 1 vote.

Commissioner T. A. M. Craven dissented strongly, while Chairman James Lawrence Fly and Commissioners Brown, Walker and Thompson voted to reopen the hearings. The two other members, Case and Paynel, were absent. In the New York metropolitan

In the New York metropolitan area, where merchandising of television receivers was being concentrated, the action stunned dealers as well as manufacturers. Cancellations of orders for television receivers, both from RCA and GE, were reported. The dealers group of the Electrical & Gas Association took public exception to the Commission's action and petitioned the Commission to rescind its action.

Little Fellows Protest

In protesting the FCC action, Robert Robbins, president of Cath-Ray Television Corp., New York, said it had been "very damaging" to his business, and that he is "studying with counsel the possibility of instituting suits against individual FCC members for damages resulting from their action". He said that when the FCC cracks down "RCA can take it but we little fellows can't".

John E. Milliken, president of

United States Television Mfg. Corp. in protesting the action, said it affects not only large strong companies which have spent enormous sums on television with no return, but it harms small companies who have been working to launch the art. Asserting the public wants television now, he said if the new ruling is put into final affect, it will harm smaller operators more than the "big fellows".

Aside from the brief "amazement" statement by Mr. Sarnoff, no further formal comment was made by RCA. It appeared it would hold its fire until the April 8 hearings.

More Rigid Regulation

To the industry as a whole the action was indicative of the new era of rigid regulation launched by the FCC over radio generally.

It marked the first time Commissioner Brown has joined the rigid regulationists. Commissioner Case, who has usually been aligned with Craven and Brown, is seriously ill at his home. The seventh member, Payne, who usually votes with the crack-downers, is in Texas holding revocation hearings.

In its formal order (No. 65) suspending the "limited commercial" For editorial comments and reactions to the FCC rehearing order, turn to page 102.

rule and ordering the hearing, the Commission recited that when it adopted its television report Feb. 29, it emphasized that nothing should be done which will "encourage a large public investment in receivers" which by reason of technical advances may become obsolete in a relatively short time. It is this provision which the majority feels RCA is violating with its newspaper and trade-paper promotion fostering visual receiver purchases, along with price cuts in all models of RCA receivers [BROAD-CASTING, March 15].

Referring specifically to RCA and its subsidiary company activites, including NBC and RCA Mfg. Co., the Commission said these promotional activities may be detrimental to the public interest by "unduly retarding research and experimentation and the achievement of higher standards for television". It stated that additional rules or revisions of the rules adopted Feb. 29 may be necessary to promote experimental use of frequencies for television service.

Freezing of Television Feared By FCC, Says Chairman Fly

WHY THE FCC has switched the television signal from amber to red-until it can reappraise the situation-was revealed March 26 by FCC Chairman James Lawrence Fly.

Amplifying the formal order of March 23 reopening the television hearings on April 8, Mr. Fly told BROADCASTING the FCC was anxious that no false start be made. Without reviewing the basis for the FCC's order [see page 51] he said the majority felt it was more important to have the public interest protected at the outset than to risk a situation that might cause permanent injury to a service destined to become of lasting benefit to the public.

The whole purpose of the FCC's report on television of Feb. 29 was to inform manufacturers and experimental television licenses that caution should be exercised and research continued, the chairman asserted. The FCC proposes to fix transmission standards, he declared, but not until it feel an adequate service is available.

Public Reaction

Commissioner T. A. M. Craven, former chief engineer, and lone dissenter among the five voting members, said he believed the majority's action retards development of television. While he declared there was an honest difference of opinion on reopening of the hearings, he felt constrained to vote against such action, particularly since he, as Chairman of the FCC Television Committee which proposed practical operations, had taken the position that only by such operation in an area like New York could public reaction to visual radio be gauged.

Answering allegations that the FCC is seeking to control what the public should see or hear via radio, Chairman Fly branded such accusations as irresponsible. Television is a synchronous operation in which the transmitting and receiving must be standardized, he said. If a substantial portion of the public is stampeded into buying receivers capable of reproducing images of only one type of transmitter, the result is to "deadlock" development and "freeze" standards, he declared. Thus that portion of the public would be deprived of improved television, and other manufacturers, rather than foster research and experimentation, would find themselves forced to produce receivers using the present standards and experimental broadcasters likewise might find themselves in the same position.

The substance of Mr. Fly's observations was that the Commission under such circumstances might find that the fixing of standards had been preempted and that the public would suffer by being forced to content itself with inferior television, with new research and development deadlocked. In the light of this, he said, the FCC could not sit quietly while it feels that its note of caution has been disregarded. In a press release accompanying the order, the Commission said the current marketing campaign of RCA is at variance with the intent of its report, and construed it as a disregard of its findings and recommendations for further improvement in the technique and quality sets are widely sold to the public.

Need for Improvement

Pointing out that the Commission declined to establish television transmission standards because of the fluid state of the art, of television transmission before the majority concluded that RCA's intensive drive for set sales, since it is the biggest single entity in radio, would tend to freeze standards at the 441-line 30-frame level which it espoused along with the Radio Manufacturers Assn., in the face of strong opposition from the Paramount-affiliated DuMont Laboratories and several other manufacturers. In its Feb. 29 report the Commission stressed the need for further improvement in the technical quality of television.

In its press release the Commission said that not all types of television transmision can be received by any receiver. It is impossible now to decide what type of transmitter will be made standard, it said. It reiterated that receiving sets constructed or on the market today may not be capable of receiving television programs from standardized television transmitters when the art has sufficiently advanced to permit such standardization.

While not mentioned in the Commission release, it was evident the majority felt that RCA in its sales promotion did not advise the public that the receivers might become obsolete, and that there was no assurance of continued service. It was for this reason that Commissioner Craven raised the question of the Commission's jurisdiction, apparently feeling that the Federal Trade Commission and not the FCC is charged with regulation of unfair competition.

Fears Crystallized Standards

The Commission said in its release, however, that public participation in television experimentation "is desirable only if the public understands that it is experimenting in reception and not necessarily investing in receiving equipment with a guarantee of its continued usefulness." It added that "television is here to stay, but conceivably present day receivers may for practical purposes be gone tomorrow".

"Promotion activities directed to the sale of receivers," the release said, "not only intensifies the danger of these instruments being left on the hands of the public, but may react in the crystallizing of transmission standards at present levels. Moreover, the possibility of one manufacturers gaining an unfair advantage over competitors may cause them to abandon the further research and experimenta-(Continued on page 50)

Dallas News Buys Interest in KGKO Campbell Would Be Head of KGKO-WFAA-WBAP Sales

KGKO-WFAA-WBAP Sales SALE of one-half of KGKO, Fort Worth, to A. H. Belo Corp., of Dal-las, publisher of the Dallas News and owner of WFAA, by Amon Carter, president of the Fort Worth Star-Telegram, WBAP and KGKO, is proposed in an application filed with the FCC for approval March 20 by KGKO Broadcasting Corp. It is understood the transaction in-volves \$250,000. WFAA and WBAP divide the 800-kc. clear channel as a fulltime NBC-Red outlet. KGKO, 5,000-watt regional on 570 kc., is the NBC-Blue outlet and key of the Lone Star Network. Under the plan, it is understood, KGKO would be operated in con-junction with WFAA-WBAP. Un-like the proposed KGKO ownership, however, WFAA and WBAP are individually owned but the sales operation is maintained jointly. The new KGKO Broadcasting Co., as

new KGKO Broadcasting Co., as the corporate setup will be known, will have as its president either Mr. Carter or G. B. Dealey, presi-dent of the Belo Corp.

New Sales Plan

It is understood a new sales or-ganization will be established, to be headed by Martin B. Campbell, gen-eral manager of WFAA, who would eral manager of WFAA, who would serve as general sales manager of both the Red and Blue network operations. For the KGKO Broad-casting Co., a board of trustees would be established comprising two executives of the *News* and an equal number for the *Star. Tale* equal number for the Star-Tele-gram. Harold V. Hough, general manager of WBAP and KGKO and circulation manager of the Star-*Telegram*, is the executive of the Fort Worth operations and will be managing director of the new setup. It is understood that Alex Keese,

Assistant to Mr. Campbell, will be-come manager of WFAA. George Cranston, now general manager of KGKQ, will become manager of WBAP

Mr. Carter announced that after the purchase of one-half interest in the WFAA transmitter near Grapethe wFAA transmitter near Grape-vine, Tex., for WBAP, negotiations were begun for the sale to the Belo Corp. of an interest in the KGKO Corp. WFAA and WBAP have shared time virtually since they began operations in 1922 and for the last decade have operated on the 800 kc clear channel. KGKO serves the Fort Worth-Dallas area as the NBC-Blue out-

let, maintaining main studios in Fort Worth along with Dallas stu-dios. It was acquired two years ago, having been moved from Wichita Falls. The transmitter is equidis-tant from Dallas and Fort Worth.

WSJS is NBC's 188th

WSJS, Winston-Salem, N. C., on June 26 will join the NBC South-eastern Group as the network's 188th affiliate. Operating on 250 watts, 1310 kc. both day and night, the station is owned by the Pied-mont | Publishing Co., of which Gordon Gray is president. Evening rate is \$120 per hour.

SCHRAFFT'S, New York (restaurants), on April 1 will start its first radio in New Yerk, sponsoring daily Dinner Con-certs programs of transcribed salon music on WQXR, New York, Agency is Al Paul Lefton Co., New York.

TBS Circuits Closed

TELEPHONE circuits set up for Transcontinental Broadcasting System and maintained until March 15 despite the failure of the proposed new national network to begin operations have been dis-continued. At TBS headquarters it was explained that the phone company's traffic department desired to put these circuits into other use since TBS did not need them immediately and the network agreed with the understanding that the phone company would reinstate the circuits whenever TBS was ready to use them. TBS executives further stated that certain plans were being developed and that they might have an important announce-ment to make within the month.

WTMA, Charleston, S. C., Sale Approved by FCC

ANOTHER newspaper company became owner and operator of a radio station March 22 when the radio station March 22 when the FCC authorized voluntary assign-ment of the license of WTMA, Charleston, S. C., 250 watts on 1210 kc., to Atlantic Coast Broadcasting Co. Ninety per cent of the stock in the purchasing corporation, which paid \$39,300 for the station, is owned by the News & Courier Co. and Evening Post Publishing Co., publisher of the Charleston News & Courier and Post. The remainder of the stock is held by executives of of the stock is held by executives of those newspapers, namely, Robert S. Manigault, publisher; Edward Manigault, managing editor; H. T. McGee, business manager; Robert

McGee, business manager; Robert Bradham, advertising manager. WTMA was authorized in Au-gust, 1938 and began operation in March, 1939. The owner-founders were Y. W. Scarborough and J. W. Orvin, president and vice-president respectively of the Atlantic Coast Life Insurance Co., who sold it to the neuronana interact. the newspaper interests.

Spang Jr., president of Gillette, and a description of the Colonel's Dinner May 3, with Bryan Field and Ted Husing giving descriptions and interviewing jockeys.

Wisconsin Group **Organizes** Chain Glenn D. Roberts President

Of Seven-Station Hookup

INAUGURATION of a new State network, Wisconsin Broadcasting System Inc., comprising five basic and two supplementary stations, has been announced by Glenn D. Roberts, Madison attorney who is majority owner of WEMP, Milwaumajority owner of WEMP, Milwau-kee, and a director of WIBA, Madi-son. Key station is WEMP, with WJRN, Racine; WHBL, Sheboy-gan; KFIZ, Fond du Lac, and WHBY, Appleton, as other basic stations. WTAQ, Green Bay, and WIBA, Madison, are the supplementary stations.

Gene Dyer, general manager of WGES, Chicago, and a stockholder in WEMP, will be identified with the executive direction of the net-work. Furgason & Walker, station representatives, have been named to represent the network.

Mr. Roberts, who, in addition to his interest in WEMP is a director of WIBA and a part owner of WSAU, Wausau, Wis., has been named president of the network. W. Wade Boardman and John Evenet Boa law partness of Mr. Ernest Roe, law partners of Mr. Roberts, are vice-president and secretary-treasurer, respectively. Charles Lanphier, currently man-ager of WEMP, will act in a similar capacity for the network, as will Charles La Force, program director of the Milwaukee station.

Program Service

At present the Milwaukee outlet is feeding its member stations 41/2 hours of sustaining programs daily. The talent staff of the key station has been greatly enlarged. In explaining the aims of the net-work, Mr. Roberts told BROADCAST-

"Many Wisconsin stations have suffered to a large degree because programs of network quality were programs of network quality were not available. Quality will always be our byword. Many programs will originate in Madison, home of our State university and seat of our State government, where good tal-ent and important program mate-viel obunde rial abounds. "We will invest as much money

as is necessary to make this the outstanding State network in the country. Our package rate for en-tire network will be low enough to attract sponsors of practically any product manufactured.

"Our coverage maps, now near-ing completion, will show that these stations have 75% of the State's population in their primary coverage area. Another important factor is that 80% of Wisconsin's payroll comes from this primary area."

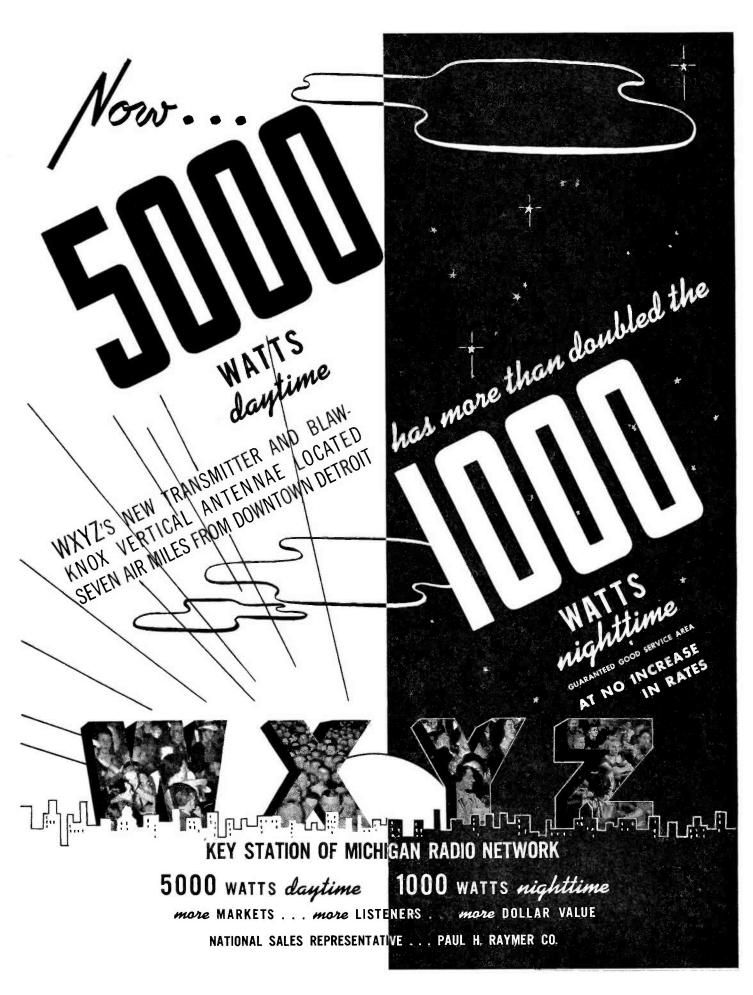

Headquarters will be in the Empire Bldg., Milwaukee.

Baker Jr., Benton & Bowles, New York vice-president in charge of General Foods accounts; Mr. Hawkins; Mary Martin and Dick Powell, singing stars of the weekly half-hour show.

Kaltenborn Switches Programs to NBC; Swing and Hale News Series Expanded

AFTER more than ten years of foreign news reporting for CBS, H. V. Kaltenborn, noted news ana-lyst and commentator, has ended his exclusive affiliation with that network to present a series of twice-weekly commentaries on the NBC-Red network.

Kaltenborn started this sustaining series on NBC March 30 and will continue to broadcast Satur-days from 7:45-8 p. m. and Sun-days 3:45-4 p. m., immediately fol-lowing NBC's regular news roundups from its European reporters, until April 27 when he sails for Rome. In Europe, Kaltenborn will travel extensively to study the progress of the war and report his findings on frequent broadcasts on NBC.

On May 28, Kaltenborn will be gin a thrice-weekly series on NBC, the network and stations as yet undecided, under the sponsorship of Pure Oil Co., Chicago, present sponsors of the thrice weekly Kal-tenborn Edits the News programs on CBS. This CBS series terminates on CBS. This CBS series terminates April 26, until which date Kalten-born will also be heard on NBC on a sustaining basis. It could not be learned from NBC when BROAD-CASTING went to press whether Kaltenborn would present his broadcasts on NBC for Pure Oil from Europe or for how long a time he would remain abroad.

Ray Swing's Network

General Cigar Co. has added 13 MBS stations to the twice-weekly newscasts by Raymond Gram Swing, who is particularly noted for his commentaries on international developments during the Sep-

tional developments during the Sep-tember, 1939 war crisis in Europe. General Cigar Co. started spon-sorship of Swing's program twice weekly on three MBS stations on Sept. 25, 1939, in the interests of White Owl cigars. On March 25, the company added 13 MBS sta-tions for 52 weeks to Swing's Mon-day and Friday talks, 10-10:15 n m p. m.

Mutual stations not broadcasting Swing's sponsored programs, will present him Wednesdays, 10-10:15 p. m., effective April 3, and may present him sustaining on Mondays and Fridays with the White Owl to MBS, Swing has an audience in Great Britain consisting of 30.7% of the adult population, which hears him every fortnight on the BBC. He

is heard in Canada on alternate Saturdays on the CBC. A second MBS news program to receive additional stations is Ar-thur Hale's Confidentially Yours broadcasts, which were on WOR, Newark, as a sustaining feature for about a year, and last October gained two sponsors after the Sep-tember war crisis—Vick Chemical Co. and Richfield Oil Corp. The latter company on Jan. 6 started the program on Mutual, Saturdays 7:30-7:45 p. m., and on April 2 will expand the program to Tuesdays, Thursdays and Saturdays at the same time on 21 MBS stations. At that time Mr. Hale will broad-cast his program from Philadelphia where he will make a personal ap-pearance before a meeting of Richfield Oil's distributors at the Bellevue-Stratford Hotel.

vue-Stratford Hotel. Mr. Hale's program of "news be-hind the news" will gain still an-other sponsor on April 7 when the North American Insurance Co., New York, through the Franklin Adv. Agency, starts Confidentially Yours on WOR, Newark, Sundays, 9:30-9:45 p. m.

Hold Luncheon With Fly; 'Pot o' Gold' Discussed

TAKING advantage of the pres-ence of a number of its members to FCC, the Clear Channel Group, rep-resenting 50,000-watt stations, met in Washington March 20 for an informal discussion of the radio regu-latory situation. Chairman James Lawrence Fly of the FCC attended a luncheon meeting and is under-stood to have discussed primarily prize contest programs such as the Pot o' Gold which he has deprecated in the past.

in the past. Called by Chairman Edwin W. Craig, WSM, Nashville, the group also conferred with Louis G. Cald-well, its counsel, about the general regulatory picture, particularly in the light of the impending realloca-tion under the Havana Treaty. While clear channels are retained under the allocation terms, many broadcasters see in the present trend a threat which might contrend a threat which might con-ceivally result in more extensive duplication of exclusive channels at night, particularly on opposite coasts

Fly's Views on Prizes

Chairman Fly, it is reported, told the group that he personally looked with disfavor upon programs with a main prize contest element which in effect results in "buying" an audience through offers of sub-stantial rewards if listening. The *Pot o' Gold* program, together with a local program broadcast in Texas, has been referred to the Depart-ment of Justice for scrutiny to asment of Justice for scrutiny to as-certain whether there is any infrac-tion of the lottery laws. Previous informal opinions have held that the Pot o' Gold, particularly, is not a technical violation of the statute. The Department, however, has had attorneys assigned to study the case for a month and it was thought possible that it might have in mind a new legal test of what constitutes a "consideration" in prize offers of that general nature, particularly since this program technique has spread like wildfire through the industry.

dustry. Present at the luncheon session with Chairman Fly were Messrs. Craig; Mark Ethridge, W H A S, Louisville, former NAB president; Joseph O. Maland, W H O, D e s Moines; J. M. Cox, Jr., WSB, At-lanta; Harold V. Hough, WBAP-kGKO, Fort Worth, and Jack De-Witt, WSM, Nashville.

Clears Consider Illness of Case Affects FCC Policies; Treaty Allocation Fly Raps Programs 'Buying' Audience

THE FCC appears destined to function as a six-man agency for several weeks — perhaps longer due to the continued illness of Commissioner Norman S. Case, who is convalescing at his home in Washington.

Absent from the Commission since Feb. 20, Gov. Case is now said to be well on the road to recovery, but a number of complications which developed may make his convalescence slow. Initially, Gov. Case suffered a foot infection. Afterward he contracted pneumonia but passed the crisis. A touch of pleurisy also developed, along with phlebitis, an arterial ailment. His physicians report that the pleurisy condition has been virtually cleared up and that all effects of pneumonia now have been passed. The phlebitis was said still painful but his general to be condition is improving.

With the Commission divided on basic policy matters, it was thought Gov. Case's enforced absence might have an important bearing on the complexion of Commission deciions. He has been aligned rather consistently with Commissioners Craven and Brown on broadcasting policy matters. Commissioners Walker, Thompson and Payne have voted together in a rigid-regulation bloc more or less consistently and Chairman Fly has held the balance.

Because of the FM hearings, which got under way March 18 and destined to run through the first week in April, few matters of importance have been considered by the Commission in recent days. Only five members have been sitting at these hearings, with Payne ab-sent in Texas conducting revocation hearings.

'Pot o' Gold' Comes Up

Chairman Fly March 20 met at luncheon with a group of broadcasters representing clear channel stations and discussed informally with them matters pertaining to the regulatory situation. He is un-derstood to have admonished the derstood to have admonished the broadcasters about prize award programs, and particularly men-tioned the NBC Pot o' Gold as one upon which he looked askance. Without commenting on the legality of the Pot o' Gold, now under scru-tiny of the Department of Justice at the FCC's behest, it was reported Chairman Fly held that any pro-grams which place stations in the position of "buying" their audience DEFINITE selection of the St. Francis Hotel as head-quarters for the NAB con-vention in San Francisco Aug. 4-7 was announced March 21 by Howard Lane, busin ess manager of Mc-Clatchy Broadcasting Co., NAB director and chairman of the local convention comof the local convention comof the local convention com-mittee. One of the largest hotels in the West, the St. Francis is said to be ade-quately equipped to handle the expected attendance of upwards of 700.

NAB Convention Hotel

cannot be construed as in general public interest.

Don the Commission itself there has been little activity aside from the FM hearings. The Network Monopoly report, long overdue, still reposes in the office of General Counsel William J. Dempsey in draft form and there appears to be no indication that it will be hur-ried along. Because members of the no indication that it will be hur-ried along. Because members of the Network Monopoly Committee (Brown, acting chairman, Walker and Thompson) are sitting on the FM hearings, it is hardly thought the committee itself will have op-portunity to review the preliminary draft until after the hearings are alored Marcourg it is normal closed. Moreover, it is now general-ly expected that the Commission itself, rather than the committee will pass on the report, which is likely to delay its publication even further.

Brown's Reappointment Due

Meanwhile, no inkling has been given of plans of Commisioner Brown, whose present term on the Commission expires June 30. Commissioner Brown has consistently refused to confirm or deny reports that he will retire upon expiration of his term, presumably to enter private law practice or perhaps to reenter Ohio politics. He was formerly Secretary of State of Ohio. A Republican who has served with the FCC and its predecessor Radio Commission since 1929, first as general counsel, Commissioner Brown could be reappointed if he so desired, it is felt in informed circles. His reappointment has been urged by many broadcasters.

BASEBALL boosters of Oakland, Cal., called a con-ference to plan a welcome for the city's 1940 baseball team, with officials of KROW, Goodrich Tire and Gen-eral Mills joining in festivities. A big booster parade and jamboree March 30 wound up the celebration. At the conference were (1 to r) G. F. McGregor, Oakland Booster's Club; Roy J. Feuchter, General Mills sales executive; C. W. Reed, Westco Adv. Agency; Philip

G. Lasky, KROW manager; Ed Kuhlman, Oakland sales supervisor, General Mills; Keith Kerby, KROW operations manager; Ralph Pahlmeyer, Goodrich re-tail manager; R. J. Loomis, Goodrich district manager; Andy Potter, KROW promotion; Dean Maddox, KROW baseball announcer; Vic Devincenzi, Oaks baseball manager; H. L. Wilson, KROW salesman; V. L. Mish-ler, assistant sales manager of General Mills.

WELCOMED with a leis aboard the S.S. Lurline was W. E. Macfarlane (left) president of MBS and head of WGN, Chicago, as he arrived at Honolulu. Henry C. Putnam, ship-side announcer of KGMB, Hono-lulu, interviewed Mr. Macfarlane.

FTC Activities Viewed Harmless to Advertising THE opinion that the Federal Trade Commission will do nothing "that is harmful" to advertising copy was expressed by Alfred M. Corrigan, of Arthur Kudner Inc., on March 21 at a luncheon meeting of the Ad-vertising Club of New York. With John Benson, AAAA president, presiding, the AAAA saluted the club's 35th anniversary. Holding that no honest citizen can complain when another police-man is added to the force, Mr. Cor-rigan declared the FTC, through the Wheeler-Lea amendments to the Federal Trade Act, is supplement-Harmless to Advertising

Federal Trade Act, is supplement-Federal Trade Act, is supplement-ing the vigilantes in the advertising field, enabling them to dispose of "black sheep", more rapidly. He pointed out also that publishers and advertising men helped draft the Wheeler-Lea Act and worked for its passage. Chronicling the phases through which advertising envy hes passad in the last 15 copy has passed in the last 15 years, Mr. Corrigan observed that the use of humorous copy doubled from 1936 to 1939, chiefly because radio comedians, comic strips and the movies had created a sense of humor on a national basis.

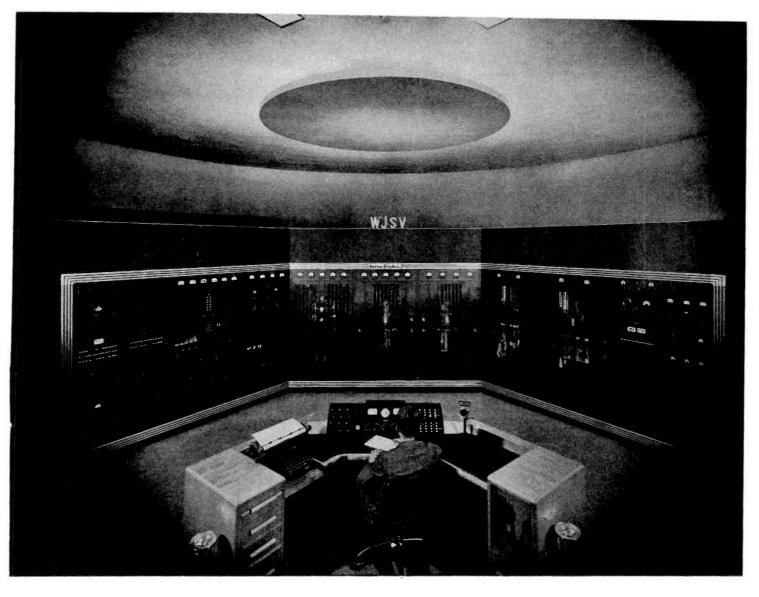

Birdseye Products Test

FROSTED FOODS SALES Corp., New York, is conducting a 39-week test campaign for Birdseye products using a quarter-hour Opinions ucts using a quarter-hour Opinions Wanted program twice weekly on WOKO, Albany. Programs, run-ning since Feb. 20, feature inter-views by an inquiring reporter with customers in local stores sell-ing the Birdseye foods. Customers are also asked a "question of the day" on some interesting topic. No further radio plans will be made till the conclusion of the test, ac-cording to Young & Rubicam, New York, the agency in charge.

Swift Spring Spots

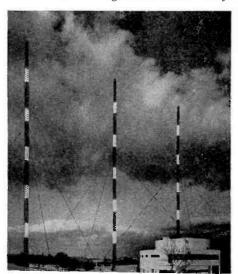

SWIFT & Co., Chicago (Vigoro), is running a varried announcement spring campaign on WJJD, Chi-cago; WOW, Omaha, and WGN, Chicago. Contracts are of undeter-mined length. J. Walter Thompson Co., Chicago, is agency.

Promotion Drives For 12 States to **Include** Air Time

Survey Reveals Plans Made To Draw Tourist Trade

TWELVE States will use radio during the next 12 months to pro-mote their advantages, the Coun-cil of State Governments, Chicago, announces in a compilation of State advertising plans. In all, the States will spend \$4,365,519 to dis-tribute information during the year, the Council finds.

Of the six media used in recent years radio ranks fifth, according to the Council which also says that 39 States or their public and private groups will engage in 1940 promotion. Other media were used in this order: Magazines, 34 States; direct mail, 32; newspa-pers, 30; movies, 13; billboards, 3. Eight States have no tax funds directly available for promotion, pri-vate agencies caring for their needs. States contemplating radio, advertising appropriations with follow

heeds, States contemplating radio, with | advertising appropriations follow: ALABAMA (\$50,000)—State Plan-ning Commission in a spring cam-paign intends to attract industry; its winter campaign is designed for tour-ists. It is estimated that the \$50,000 spent this year will bring in a \$50, 000,000 tourist business. ARKANSAS (\$39,500)—Publicity Advisory Commission devotes its ef-forts to the encouragement of indus-try and tourists. The Arkansas Agri-cultural & Industrial Commission, charged with development of new in-dustries within the State, will not use radio, although it has an appro-priation of \$35,100. INDIANA (\$25,000)—Division of State Publicity is devoted to encour-agement of industry, tourists, resi-dents, markets for agricultural goods and educational activities. KANSAS (\$60,000)—Industrial Development Commission will empha-size industry, promote markets for ag-ricultural supplies, and publicize transid facilities. MAINE (\$200,000 fiscal 1940; \$185,000 fiscal 1941; plus approxi-mately \$100,000 per year from tax on potatoes)—Development Commission mately \$100,000 per year from tax on potatoes)—Development Commission mately \$100,000 per year from tax on potatoes)—Development Commission sets to a stract tourists, develop in-dustry in the State and secure mar-kets for agricultural goods. MASSACHUSETTS (\$83,900)— Development & Industrial Commis-sion encourages industry, tourists and markets for its goods. Plant facilities are offered in some cases, and the Commission stresses skilled labor available and favorable industrial tax structure. MICHIGAN (\$250,000)—State

are object in some cases, and the commission stresses skilled labor available and favorable industrial tax structure.
 MICHIGAN (\$250,000) --- St at e Administrative Board has as its purpose to advertise resort and recreational advantages, agricultural horticultural and dairy products.
 MINNESOTA (\$50,000) -- Tourist Bureau will attempt to attract tourists to the State.
 MONTANA (\$50,000) -- Montanans Inc. is a private agency, privately financed, and attempts to bring tourists into the State. Highways Commission, with an appropriation of \$10,000, will not use radio.
 NEW YORK (\$200,000) -- Bureau of State Publicity seeks industry, tourists, add to increase state-consciousness among New Yorkers; The Bureau of Milk Publicity of New York (\$300,000) will promote the increase of milk consumption within the State. It also will use radio.
 NORTH DAKOTA (\$50,000) -- Hourist, add to increase state.
 SOUTH DAKOTA (\$50,000) -- Hourists, addistry, residents and markets.
 SOUTH DAKOTA (\$10,000 for biennium plus \$30,000 per year) -- Highway Commission will promote ag-

MORE THAN 100 agency, station representatives and members of the press attended the NBC Breakfast Club broadcast March 20 and later a breakfast in the Merchants & Manufacturers Club, as guests of Sidney N. Strotz, NBC vice-presi-dent in charge of the Central Divi-sion sion.

During the broadcast Don Mc-Neill, m.c., interviewed several station representatives briefly on the air and both thanked and joked with them for arising at the crack of dawn (studio doors were closed at 7:45 a.m.) to attend the affair despite the heavy snowfall and freezing weather with which Chi-

ricultural products and industrial de-velopments; Public Relations Bureau of South Dakota (\$10,000 for bienni-um), encourages consumption of agricultural products. endeavors to at-tract tourists and residents.

Tract tourists and residents. , In addition to statewide promotion-al efforts, several parts of the coun-try are advertising on a regional ba-sis. The six New England States work through the New England Council, 11 Southern States have banded to-gether as the Southern Governors' Conference, and the 11 Far Western States are jointly advertised by The Industrial West Inc. Such privately financed organizations as the Ozark Playgrounds Assn.. which publicizes recreational advantages of the Ozark Mountains in Arkansas, Missouri and Oklahoma, serve several States.

Capt. John J. Matheson

CAPT. JOHN J. MATHESON, WHDH, Boston, died March 27 of heart failure at Gloucester. The 59year-old former sea captain estab-lished WHDH ten years ago as the "fishermen's station", broadcasting arrivals, fish prices, weather reports and other information of interest to fishermen on the banks. He is survived by his widow, three sons and two daughters. His son, Ralph G. Matheson, is general manager and treasurer of WHDH.

Perry Heads WCAX

APPOINTMENT of Howard J. Per-APPOINTMENT of Howard J. Per-ry, formerly commercial manager of WTAG. Worcester, Mass., as general manager of WCAX, Burlington, Vt., was announced March 19 by the Bur-lington Daily News, owner of the sta-tion. Mr. Perry has been in radio for weak ways and was accounted with nany years and was associated with John V. L. Hogan. New York radio engineer. in establishment of WQXR. New York.

cago greeted Spring. The stunt was part of a campaign inaugurated by Mr. Strotz to help sell the *Break-fast Club* to local or spot advertisers.

At top (1 to r) are June Rollin-son, of Russell M. Seeds agency; George Hartman, of the agency bearing his name; George P. Hol-linbery and Walter Holden, of the George B. Hollinbery firm. Below (left), McNeill interviews Robert Boniel, of Edward Petry & Co., as Melvin Brorby (above McNeill's hand) watches. At right Dick Kopf, of Paul H. Raymer, submits to Mc-Neill's mike.

Union Leader's New Discs

P. LORILLARD Co., New York. for its series of quarter-hour twice weekly programs featuring Arthur Godfrey, has arranged with NBC Radio-Recording Division for a second series of 26 programs in the interests of Union Leader Tobacco. Programs have been pre-sented since February on the fol-lowing Southern stations: WDBJ WOAI KPRC WBAP KGNC KVOO WKY WBT WPAX WTOC WRBL WGPC WDBO WRUF and WIAY Lowner & Michell New WJAX. Lennen & Mitchell, New York, is the agency.

Omar's Long Series

OMAR MILLS Inc., Omaha, is currently running a 39-week schedule of quarter-hour musical programs on eight stations for its Blue Ribon eight stations for its Blue Rib-bon flour, and a 52-week schedule on three stations for its bakery products. Programs, titled *Blue Ribbon Melodies*, run on a vary-ing five and six-weekly basis. Sta-tions promoting flour are WLS KOA KVRS WNAX WHO WMT WOW KMMJ: bakery products are on WTMJ WBNS WFBM Lyde T on WTMJ WBNS WFBM. Lyle T. Johnston Co., Chicago, handles the account.

Soil-Off to Extend

SOIL-OFF MFG. Co., Glendøle, Cal. (paint cleaner), through Hillman-Shane Adv. Agency, Los An-geles, in a 13-week campaign start-ed in early March, is using from one to six-weekly participations in programs on KOY KEX KOI, KHQ KGMB KPO KFI KFVD, and will expand coverage to include other territories.

Harms Drops Suit **On Record Rights**

SUIT of Harms Inc. against RCA Mfg. Co., a test case planned to obtain a court decision on the question of whether the right to record a musical selection includes the right to make a special arrangement of the number, or whether the latter is a separate right for which a separate license must be secured from the copyright owner, is being dropped by the plaintiff. Decision not to proceed with the suit is based on the publisher's feeling that the defense of the recording company violates a previously made agreement between the parties that no technical defenses would be offered.

Copyright Act of 1909 gives to recording companies the right to record any number which the publisher has previously allowed to be recorded, at a maximum payment recorded, at a maximum payment of two cents a pressing. Copy-right holders claim that this re-cording right covers only the privi-lege of recording a number accord-ing to its published arrangement and that if the recording company wishes to make a special arrangement it must secure this additional right from the copyright owner. Recording firms hold to the opinion that the right to make special ar-rangements is included in the right to record.

To settle this basic point, a test suit was arranged and Harms filed suit against RCA Mfg. Co. for Tommy Dorsey's recording of the Harm's number "Rendezvous Time in Paris" under the Victor label. In its defense Victor pleaded that it had a statutory license to re-cord the number, that the selection had already been recorded by an-other company, that there was no violation of fair use of the record and that the record was made at the solicitation of the copyright proprietor.

Answering charges that the fourth defense is a technicality and unfair in a test case, RCA states that this defense is not only true in this instance but it is the practice rather than the exception. Ac-cording to the company, publishers' professional men (song pluggers) bring piano copies of new numbers to the recorders or recording bands and ask that records of them be made. Usually, it is stated, only piano scores are provided so that it is necessary for each orchestra to make its own arrangement. If, says RCA, such a defense is unfair, then the publishers should stop the practice.

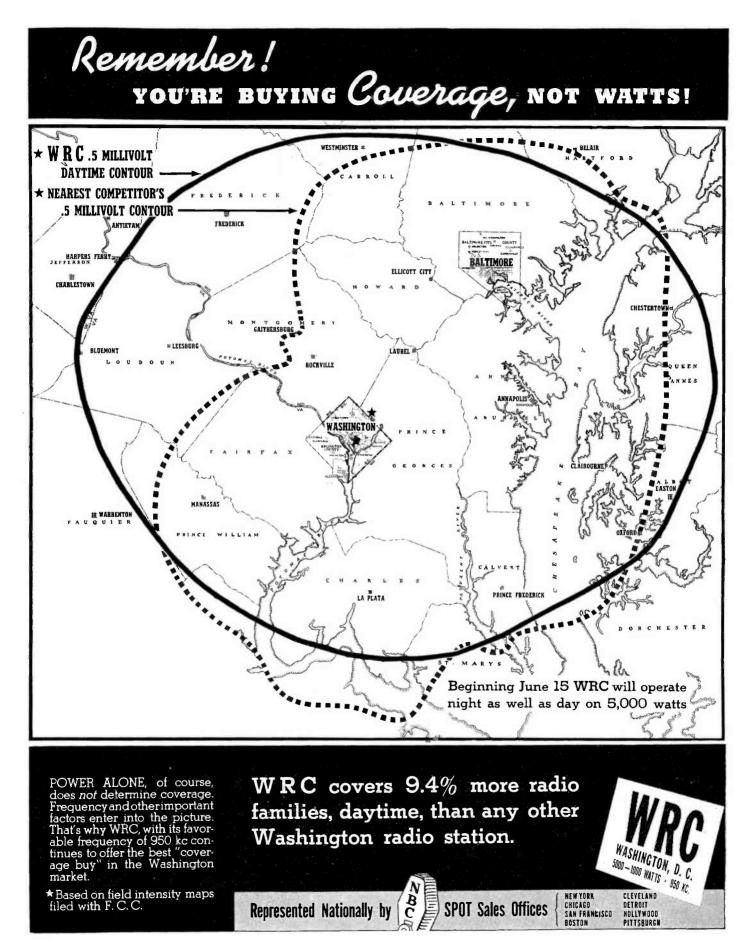

Camel Signs Al Pearce

Camel Signs Al Pearce R. J. REYNOLDS TOBACCO Co., Winston-Salem, N. C., has signed Al Pearce & His Gang for a new program for Camel cigarettes to start early in May, probably on CBS if time can be cleared. Pearce concludes his Wednesday program on CBS for Hawaiian Pineapple Co. on April 3, that period to be filled with Ben Bernie for Ameri-can Tobacco Co. Wm. Esty & Co., New York, handles the Camel ac-count. count.

Who Started This Quiz Business? General Foods Expands Daytime Serial Program

Jack the Tire Expert Is Described as Originator

By FRED BAKER aker, Cameron, Soby & Penfield Hartford, Conn.

TO THE FLOOD of questions and answers now on the air waves might be added still another: "Who first started the Radio Quiz any-way?⁴

All available evidence points to W. M. Hickey, president of Jack the Tire Expert, General tire distributor in Hartford, Conn.

It was back in the summer of 1928 that Mr. Hickey was casting about for a good program idea. A parlor game involving questions and answers was then in vogue. It caught Mr. Hickey's attention. And the result was that on Aug. 27, 1928, Jack Says: Ask Me Another was born on WTIC, Hartford.

Today, as far as anybody can determine, this program, which is now in its 12th year, has the distinction of being the oldest question and answer game on the air, and is in fact, one of the oldest programs in radio. But in spite of its venerable age, Jack Says: Ask Me Another is still vigorous. A recent survey made in Hartford showed that the interest in this show has held up despite its years.

Jack the Inquisitor

Since the sponsor's business is built around the personality of Jack Whelan, veteran tire man, this same personality is carried over into the program, and Jack himself, as Jack the Inquisitor, addresses the questions directly to the listener. After a seven second interval, the answer is given. Thus the game is kept between Jack and the listener, on the assumption, proven by the program's success, that people like to answer the questions themselves.

Questions are informative, entertaining, and timely. Music and sound effects are often used. A cash prize for the best question submitted each week lends added interest. On many occasions between 1,000 and 1,500 letters a week have been received.

Commercials are made as entertaining as the rest of the program. Timeliness is one of the reasons for the success of these commercials. For instance, in November 1936, when pre-election oratory filled the air, a pompous character named Senator Rumblehorn of Eagle Gulch, Nebraska, exhorted all lis-tening to ride to the polls on General tires. In the fall of 1938, when political "purges" were in the news, Jack's program featured a purge of all soiled and used tires and discontinued tread designs.

On the day after Orson Welles terrified the country with his Mars attack, a skit on General tires en-titled "Earth Attacks Mars" was prepared. This however, was not used because of the ticklish situation that immediately developed in radio, but many others equally timely are used.

In the winter of 1939, Hartford County was alarmed by reports of a fabulous wild beast similar to a wildcat prowling in the vicinity of Glastonbury. The beast was christened by the newspapers as a "Glawackus" and attracted nationwide attention. Jack sponsored a shortwave broadcast of a Glawackus hunt led by Jimmy Laneri, former airplane pilot for the Martin Johnson's in Borneo. The hunt failed.

Squawk or Plug?

But on the following Monday night, Jack Says: Ask Me Another featured an interview with Mr. Laneri. And this interview brought out the salient fact that the hunt failed because not all the searchers were equipped with General tires. Generals, it was asserted, run so silently that the cat would have had no warning of their approach.

Another commercial that attracted wide attention was the case of Zeke Peck's parrot. Jack had on the

W. M. HICKEY

THERE'S questioning galore on WTIC, Hartford, when 'Jack Says: Ask Me Another' goes on the air, a habit of some 12 years. There's questioning and plenty of it all over the country when the subject of who started the quiz program is discussed, with the number of claimants to the title of Quiz Pioneer running into the dozens. Perhaps some will question the claim of Mr. Hickey that his tire firm started the cycle when it picked up the Ask Me Another fad back in 1928. But none can question Mr. Hickey's devotion to the quiz program as a method of selling tires and building good-will. He knows the answers, when the quiz business is discussed, and that goes for tires, too.

program as guest stars two characters from The Wrightville Clarion, a popular rural skit over WTIC, Editor Elisha Wright and Zeke Peck. Zeke's pet parrot was supposed to deliver the commercial, but after an elaborate build-up, the parrot refused to speak.

On the following Monday night the parrot was again presented, and after a few moments of coaxing by Zeke, and a tense hush, the parrot did jabber out a half-intelligible phrase. Immediately there was a heated argument, Elisha Wright claiming that the parrot had ut tered only gibberish, and Zeke hotly protesting that the parrot had actually spoken.

To settle the affair Jack then appealed to the listeners asking whether or not the parrot had actually said anything about Generals and if so, what?

The mail brought over 1,000 different versions of what the parrot said. These covered practically every sales point Jack had ever used in selling General tires, as well as several good testimonials. It proved that Jack's radio advertising had registered effectively in the minds of the listeners.

These are but a few of the devices that have been used on the program to catch and hold attention for Jack's commercials.

In 12 years on the air we've learned some important facts about selling tires through radio. And we're constantly discovering new ones. There are definite appeals, and definite ways of presenting appeals that result in quick sales.

A more intangible benefit of the program has been the good-will it generates. Jack Says: Ask Me Another has a friendly, sincere, per-sonal tone that is faithfully followed in script and production. And people respond to this friendliness.

The nearest approach to a test of good-will occurred on St. Valentine's Day, 1940. On the program two nights before Valentine's Day, Jack told about one of his listeners, a lady 87 years old, who was all alone in the world and living in a convalescent home. He mentioned the fact that he was going to send her a Valentine, but he doubted if she would get any others unless some of the listeners should happen to send her a valentine too.

Two days later Jack, the postman, and the lady were all surprised when over 636 valentines arrived at the convalescent home. In addition to the valentines, the lady received candy, cookies, cake, handkerchiefs, poems, and letters. She had received only a brief men-tion in the script over WTIC alone, and there was no prize offered, in fact nothing for the listener to gain.

With results like these it isn't hard to see why Jack Says: Ask Me Another is one of New England's most popular programs.

GENERAL FOODS Corp., New York, which has been testing the thrice-weekly quarter-hour serial thrice-weekiy quarter-hour serial Kate Hopkins, Angel of Mercy on nine stations since last October, on April 1 will add 19 more stations to the list, as follows: KFPY KOMO KYW WSB WMAS WWJ WPRO KWKH WTIC WCSH WMC KMBC KRGV WOW WTAG WNAC WKY KPO WDOD, and on April 29 WHO Scrints are written April 29 WHO. Scripts are written Chester MacCracken of Benton by & Bowles, New York, the agency.

Addition of these stations is in line with a general expansion of daytime serial programs by the agency for its accounts, under the direction of Tom Revere and Kirby Hawkes, who recently joined the agency. A second daytime campaign also starts April 1 for Post Toasties, another product of Gen-eral Foods, consisting of a quartereral Foods, consisting of a quarter-hour five-weekly transcribed serial titled *Portia Blake Faces Life*. Stations are: WLW WLS KSTP WNAX WOW WKY KMBC KSD KRLD KTRH KTSA KFH KVOO KGNC KRGV KYW KFI KPO KDKA WNAC WFEA WHP KFPY KRIS KWFT KADA KCRC KFYR WWJ WEBC KFDM WACO KBIX KGFF, and WHO on April 29. on April 29.

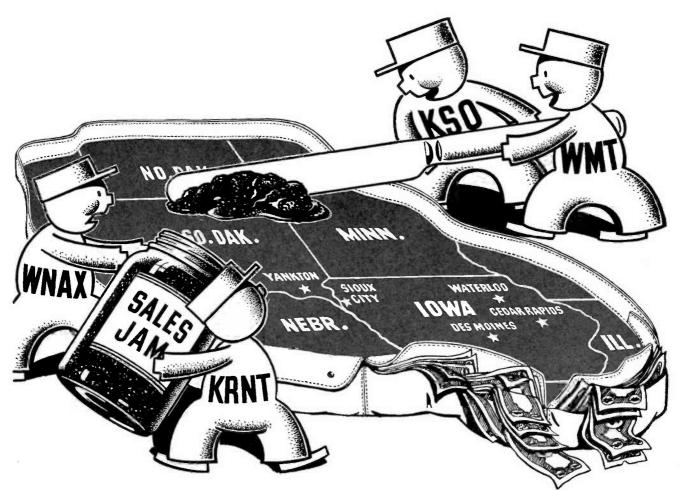

WARM, Scranton, Starting IN LITTLE more than six weeks from the time it was authorized from the time it was authorized for construction by the FCC last Jan. 25, the new WARM, Scranton, Pa., 100 watts night and 250 day on 1370 kc., expects to make its debut on the air April 11, accord-ing to Lou Pollar, Jessup, Pa., merchant who will be commercial manager of the station and who owns 49.6% of its stock. The other chief stockholder is Martin F. Memolo, farm manager, who will Memolo, farm manager, who will become manager. He also owns 49.6%. Charles R. Capp, formerly an engineer with WMCA, New York, will be program director. Adolph Oschman, formerly with WQAN, Scranton, will be chief engineer Announcers are being engineer. Announcers are being supplied through Patsy Kelly of NBC in New York. Equipment is RCA throughout, with tower being supplied by the local Anthracite Bridge Co.

Kem Fertilizer Spots

KEM LIQUID PLANT FOOD Corp., New York, has started its annual spring campaign using daily participations on the Polly the Shopper program on WHN, New York, and three participations weekly on Myrtle Labbitt's Home Chats program on CKLW, Detroit. On April 1, the company starts three Women's Radio Journal pro-grams weekly on WIND, Chicago. Walter Windsor contracted for the time on behalf of Williams & Say-lor, New York, the agency in charge.

Facility Changes in Canada

POWER increases have been authorized for CFGP, Grande Prairie, Alta., from 100 watts to 250 watts, and CHSJ, St. John, N. B., from 100 watts to 1,000 watts. CFGP will start its new power this summer and changes frequency April 1 from 1210 to 1310 kc. CHSJ will have its transmitter ready in the autumn.

Spread it on Thick where it does the most Good

... in "America's Money Belt"

As Our Chinese Friend says, if you want to get rich — go where there's money.

In our primary area there are more than 1,403,000 radio homes ... all representing folks who need and will buy *somebody's* refrigerators, or soap, autos, toothpaste, tires, rugs, cereals, shoes, tobacco, cosmetics — and whatever else any modern, 1940 American family needs.

They have the purchasing power, too. For the people who live within our area annually spend \$1,-

576,659,000. That's more than a billion dollars to be spent *this year* for *somebody's* products.

Will they be yours?

With a 3-station combination of WMT^{*} and WNAX, plus either of the Des Moines stations, KRNT or KSO, an attractive combination rate is available. In this way you effectively blanket a market of more than six million persons — for little cost.

For more details about America's Money Belt write the Cowles Stations, Des Moines, Iowa.

Major Networks **Provide Numerous Premium Offers**

Diversified List of Articles Offered Listening Public

IN ADDITION to cash prize contest differs [BROADCASTING, March 1], national networks report nu-merous premium offers for listeners on commercial network programs. on commercial network programs. With MBS reporting no current offers of this type on any of its pro-grams, a list of program-offers on NBC-Red and Blue and CBS, cur-rently in effect, follows:

NBC-RED

rently in effect, follows: NBC-RED Colgrate-Palmolive-Peet Co. — Ellen Ran-doph (Super Suds), 8 packs flower seeds for 10d and box top. General Mills-Jack Armstrong (Wheat-ies), magic answer box for 10c and box top trademark. Andrew Jergens Co.—The Parker Family (Woodlury soap), four cakes of soap for price of three plus 1c, available at dealers. (Also on same program on NBC-Blue). Benjamin Moore Paint Co. — Betty Moore (Ipaint), membership in Triangle Club and semi-annual home decorating booklets, free for writing. Chas. H. Phillips Chemical Co.—Waltz Time (Phillips milk of magnesia tooth-paste. Same offer on Lorenzo Jones and Young Widder Brown on NBC-Blue. Hildbaury Flour Mill Co.—Womas in White (Pillsbury four), smorsashord book-let and flower seeds, each for 10c and Pills-bury Star label. Proter & Gamble Co. — Ma Perkins (Oxydo)), six packs flower seeds for 10c and box top. Standard Brands — Chase & Sanborn Houri (C&S coffee), cardboard likeness of Mortimer Snerd for 10c and dated bag front; I Lowe a Mystery (Fleischmann's Yeast), seeds valued at \$1.50 for 10c and six yeast labels; Those We Love (Royal Lesserts), silver-plated Finocchio spoon for 10c and package front. Willim R. Warner Co.—Youth vs. Age (Sloan's Liniment), question book for Sloan's Liniment carton. R. J. Watkins Co.—Backstage Wife (Dr. Lion's tooth powder), Bluebird pin for 10c and carton. NBC-BLUE Modern Food Process Co.—The Monies

NBC-BLUE

Modern Food Process Co.—The Moylan Sisters (Thrivo dog food), photo for Sc stamp and Thrivo label. Sherwin-Williams Co. — Metropolitan Opera Auditions (Point & varnish). 1940 S-W Home Decorator, free for writing. (See [NBC-Red for offers on both NBC networks.)

CBS

CBS Colgate - Palmolive - Peet Co. — Hilltop House (Palmolive soap), jade brooch for three Halmolive wrapper bands and 15c in coin; Myrt & Marge (Super Suds), eight packs flower seeds for boxtop and 10c, three initialed silverplate teaspoons for 25c and Colgate toothpaste panel (latter offer on Ask-It-Backet and spot announce-ment before Myrt & Marge). Cudalty Packing Co.—Bachelor's Children (Old Dutch Cleanser), silver plated cake server for 50c and three Old Jutch labels (75c in Canada). free recipe book for writing Kate Smith Speaks (Swans Lown, Calumet), cookbook for 6c in stamps. General Mills — By Kathleen Norris

stamps.] General Mills — By Kathleen Norris (Wheatles), free recipe folder for writing. Lever Bros. Co.—Aunt Jenny (Spry), five packs flower seeds for 10c and Spry disc from can top.

Echoes of 'Adam & Eve' COPYRIGHT infringement suit of \$1,000,000 against Mae West, NBC and others, filed by Joan Storm, Holly-wood writer, more than two years ago in Los Angeles, was dismissed on March 18 by Federal Judge Harry Hollzer, Miss Storm claimed part of her script, Love & Applesauce, was litted and used by Miss West in the much discussed Adam & Eve skit on the NEC Chase & Sanborn hour Dec. 12, 1937. Judge Hollzer ruled there was not enough similarity to consti-tute infringement. Others named in the suit were Don Ameche; Arch Obelor. radio writer; J. Walter Thompson Co.; Standard Brands, and RCA.

Wilson to Add

WILSON & Co., Chicago (Ideal dog food), has started a varying schedule of 100-word participation announcements and five-minute transcribed musical shows on nine stations, and six-weekly five-minute United Press news periods on stations, and six-weekly five-minute United Press news periods on WMAQ, Chicago. Stations selected are WGY, Schenectady, N. Y.; WIRE, Indianapolis; WSPD, To-ledo; WTAM, Cleveland; WBNS, Columbus; WKRC, Cincinnati; WTMJ, Wilwaukee; WCAE, Pitts-burgh; KSD, St. Louis. Stations in approximately 10 additional mar-kets will be added in the near Inture according to A. J. Engelfuture according to A. J. Engel-hardt, account executive of U. S. Adv. Corp., Chicago, the agency.

NOVEL departure in political broadcast technique is the drama-tized life of Terry Carpenter, candidate for Governor in Nebraska, carried as paid advertising by KFAB, Lincoln. The 29 daily dra-matic interludes trace the boy-to-man development of Candidate Carpenter, well-known independent oilman of the State. The idea has caught the fancy of KFAB listeners and has drawn good newspaper publicity.

The serial, simulating March of Time lines, was produced by Had Hughes, KFAB production man-ager. The cast, which includes be-side the character of Terry Car-"oil barons, bankers, customers etc." who entered his true-life experiences, a narrator and announcer, was drawn entirely from KFAB talent.

TRANSFER of the license of WSUN, St. Petersburg, from the St. Peters-burg Chamber of Commerce to the City of St. Petersburg, which makes annual appropriations for its opera-tion though it is conducted on a com-mercial basis, was authorized by the FCC March 22. WSUN shares 620 kc. with WFLA, Tampa.

WGN, Chicago, produced a good example of station showmanship on March 12 when Quin Ryan, general manager, staged a show for

more than 3,000 high school boys from Chicago's public and pa-rochial schools on behalf of Bonds, Chicago clothing company, sponsor of Ryan's eve-ning news broadcasts.

staged in the Ter-race Casino of the Morrison Hotel, included on its entertainment staff such personalities as Edgar Kennedy, movie comic; Chester Gould, creater of *Dick Tracy*, cartoon de-tective; Bill DeCorrovant, much publicized Northwestern football publicized Northwestern football star; Marshall Goldberg, former Pitt All-American who now plays for the Chicago Cardinals; "Eggs" Manski and Jack Manders, mem-bers of the Chicago Bears, pro foot-ball team; Hack Wilson, onetime Chicago Cubs slugger; "Brick" Owens, former American League umpire; Wally Fromhart and Tony Lawless, coaches, respectively, of Lawless, coaches, respectively, of Chicago's Mt. Carmel and Fenwick high school football teams; Barney high school football teams; barney Ross, former world's boxing cham-pion; five members of the Chicago Blackhawk hockey team; the Northwestern Glee Club of 40 voices; Edward Cochran, sports edi-tor of the *Herald-American*, and three WGN stars, Guy Savage, Jess Kirkpatrick and Paul Fogarty. "Aussie", the boxing kangaroo. Bonds distributed tickets to the

affair through their city stores via announcements on Ryan's news shows. The sponsor passed out 60 door prizes.

EIGHTEENTH annual convention of the National Industrial Advertisers Assn. will be held Sept. 18-20 at the Hotel Statler. Detroit.

Young & Rubicam, New York, hau-dles the account. On April 28 Gulf will replace its Screen Guild Theatre on CBS with Adventures of Ellery Queen, mys-terv series, Sundays, 7:30-8 p.m. (EDST). As the Screen Guild show leaves the air April 21, it is esti-mated the program will have brought \$570,000 to the Motion Pic-ture Relief Fund treasury. Since starting on CBS under Gulf spon-sorship in 1938, some 200 screen stars and featured players have donated services with an estimated worth of \$787,000. Among these have been 57 whose film contracts ordinarily forbid radio appear-ances. ances.

Stations Aid Census

CENSUS Bureau officials indicated to BROADCASTING March 22 that "very satisfactory" response has come from radio stations, both English and foreign language broadcasters, to the Bureau's requests for cooperation in explaining procedure and various phases of the 16th Decennial Census, to start April 1. Early in March the Census Bureau offered U. S. foreign language stations translations in seven languages of two-voice question-answer scripts based on census procedure, and notified all other stations of the availability of similar information in script form, designed to supplement the tran-scribed Uncle Sam Calling series produced by the U.S. Office of Education.

Meloripe Using 4

MELORIPE FRUIT Co., Boston, on March 13 started a 13-week campaign of one-minute announce-ments transcribed by WOR (New-ark) Transcription Service thrice weekly on shopping and food hints programs on WEEI and WNAC, Boston, and WJAR, Providence. BBDO, New York, is agency.

Zonite Starts Campaign

ZONITE PRODUCTS Corp., New York, on April 1 starts a campaign of 11 spot announcements weekly for Forhan's toothpaste on WPRO, Providence, and later in the month will use seven spots weekly on KGW, Portland, Ore. More stations may be added. Erwin, Wasey & Co., New York, is the agency in charge.

Armour Soap Spots

ARMOUR & Co., Chicago (Luxor soap), on March 25 started a twice-weekly schedule of its quarter-hour transcribed *Musical Powder Box* show on WGN, Chicago; WJR, De-troit; WTAM, Cleveland. Lord & Thomas Chicago handles the ac-Thomas, Chicago, handles the account.

HELEN MENKEN, the CBS star of the Second Husband series, on March 23 was chosen radio's "best dressed woman" in a poll of fashion designers and stylists announced during a broad-cast from the Fashion Academy's an-nual spring luncheon in New York.

KANSAS went MBS March 16 when the newly-formed Kansas Network, comprising five outlets, tied into the nation-wide network. WHB, Kansas comprising five outlets, tied into the nation-wide network. WHB, Kansas City, is the key. Kansas State Radio Network was officially organized March 11 in Wichita. At the session were (seated 1 to r), Selleck B. Warren, KTSW, Emporia; H. K. Lindsley, KFBI, Wichita (which joins about May 1 upon removal from Abilene); R. J. Laubengayer, KSAL; Don Davis, WHB. Back row, N. E. Vance, KSAL; Herbert Hollister, KFBI; K. W. Trimble, KTSW; Kay Payle, KFBI; and Leo Legleiter, VVCB Creat Bord. KVGB, Great Bend.

"new and endless source for music with Human Appeal"

-writes Josef Cherniavsky, Director of Music, WLW

"A careful study and many experiments fully convinced me that the Novachord is the most important contributian to the music of tamorrow in Radio,

"In following up the policy of Mr. James D. Shouse, Vice-President in Charge of Broadcasting Activities, 'to give the listeners what they want." WLW has three times received the VARIETY National Award, and now in planning and developing my new musical programs, I feel that the Navachord is a new and endless source for music with Human Appeal."

Sincerely yours, Josef Cherniavsky, Director of Music WLW

EUGENE PERAZZO, featured organist at the Novachord, with JOSEF CHERNIAVSKY, Director of Music, WLW—WSAI

From everywhere master showmen ... who give character to music for today's radio ... are writing their praises of the Hammond Novachord.

And you can quickly, easily discover all for yourself the many reasons for this vigorous enthusiasm for the Novachord—as the world's newest news in music for radio.

You'll find the Novachord is played like a piano ... that it produces beautiful piano-like tones ... and that, by just turning the Tone Selectors, you can bring in the amazing musical effects of 'cello, flute, guitar, French horn, and dozens of others.

Then, you'll see for yourself how the Novachord will add new appeal ... new enthusiasm ... to your program-building ideas. And you'll know how the Novachord's vast opportunity for musical expression will give your artists a versatility that never grows old!

Or, if you'd like the proof in advance, write today for the Novachord's Experience in Radio. Address: Hammond Instrument Company, 2989 N. Western Avenue, Chicago

HAMMOND ORGAN STUDIOS: New York - 50 West 57th Street Los Angeles - 3328 Wilshire Blvd. · Hammond Dealers in Principal Cities

As you play the Novachord, just turn the Tone Selectors. Let it add musical effects of violin, clarinet, mandolin, tuba — and actually dozens of others.

See....Hear....Play

BROADCASTING • Broadcast Advertising

DUMMIES had their day as Bond Clothing stores in Detroit announced sponsorship of newscasts over WWJ by such window displays as this. Charles Arlington is newscaster. Neff-Rogow, New York, is agency.

Disastrous Mine Blast Is Covered by WWVA THREE hours after the disastrous March 16 mine blast at Willow Grove Mine near St. Clairsville, O., Grove Mine near St. Clarsville, O., George W. Smith, station manag-er, Wayne Sanders, program direc-tor, and Paul J. Miller, production manager of WWVA, Wheeling, were at the scene after a fast trip and a 21/2-mile walk from the nearest town. For days continuous contact was maintained with the mine office and rescue headquarters.

Besides its broadcasts direct from the mine frequent bulletins were phoned to the Wheeling studios. Recording equipment was used to obtain interviews, with gruesome and tear-jerking material omitted. WWVA aided in identifying one of the victims.

FOREIGN RATE CARD IS ISSUED BY NBC

FIRST rate card to be issued by NBC to cover international short-wave services since the FCC authorized commercial sponsorship on these channels was made effective as of March 23 and covers the 25,as of March 23 and covers the 25, 000-watt WRCA, operating on 9670 and 21630 kc., and WNBI, operat-ing on 6100 and 17780 kc. Stations operate simultaneously nine hours daily in the Latin American service, and the rate card is as follows:

New Benny Contract

GENERAL FOODS Corp., New York (Jell-O), through Young & Rubicam, that city, has signed Jack Benny to a new contract which goes Benny to a new contract which goes into effect on Oct. 6, after his usual summer vacation, when he resumes the weekly Jell-O program on 100 NBC-Red stations, Sunday, 7-7:30 p. m. (EST), with West Coast re-broadcast, 8:30-9 p. m. (PST). The new contract starts Benny on his seventh year for Jell-O and his ninth in radio. The expiring con-tract, which spanned three years and ends in June was the first long and ends in June, was the first long term noncancellable agreement ever signed in radio. Although details of the new contract were not disclosed, it is understood that Benny gets a substantial salary increase over his previous stipend and will be given greater leeway in production.

LARGEST single network ever to carry a prizefight was used March 29 when 103 NBC-Blue stations broadcast the heavyweight champion-ship bout between Joe Louis and John-ny Paychek, sponsored by Adam Hat Stores, New York. The total repre-sents an almost 500% increase over the 21 NBC-Blue stations first used by Adam Hats when it first purchased the broadcasting rights to fights in 1937. Adam Hat on April 3 will spon-sor the Garcia-Overlin middleweight championship bout on 90 NBC-Blue stations, with Sam Taub and Bill Stern at the microphones. Glicksman Adv., New York, is the agency.

THAT youngsters seem to have more stage presence or simply are less inhibited or selfconscious than their elders is one of the findings of Bill Slater's new juvenile show, Junior Spotlight, now being car-ried over WOR, Newark, at 9:30 Saturday mornings. Slater, a popular WOR sportscaster who in pri-Academy for Boys in Brooklyn, acts as m.c., selects three topics for discussion and picks boys and girls from the audience to voice their opinions. The audience, all juve-nile, selects the winners by applause.

Slater has found that the youngsters make better contestants for quiz shows than parents, stating their arguments on the most obtuse subjects with a vigor and clarity of insight that is surprising. Best feature of the show is that they mince no words in letting the world know how they stand.

Kirkman's Spots

KIRKMAN & SON, Brooklyn, on March 25 started a campaign for its soap flakes using five to ten WGAR, Cleveland, WSPD, Toledo, and WFMJ, Youngstown. On April 1, the company starts a thrice-weekly quarter-hour Italian pro-gram *The Veiled Lady* featuring Diana Baldi, on WOV, New York, and WPEN, Philadelphia; 12 foreign language spots weekly on WBNY, Buffalo, and five spot an-nouncements weekly on WNAC, Agency is N. W. Ayer & Son, N. Y.

Scott's List of 40

SCOTT PAPER Co., Chester, Pa., on March 25 started its annual campaign for Scott towels and tissue using participations on women's programs on about 40 stations. J. Walter Thompson Co., New York, is agency.

Knox News in West

KNOX GELATINE Co., Johns-town, N. Y. (Knox Sparkling Gelatine), through Kenyon & Eck-hardt Inc., New York, on April 15 assumes sponsorship thrice weekly assumes sponsorship thrice weekly of the news program, Bob Garred Reporting, on 6 CBS Pacific Coast stations (KNX KSFO KARM KOIN KIRO KVI), Mon., Wed., Fri., 7:30-7:45 a. m. (PST). Con-tract is for 52 weeks. Knox Gela-tine Co. replaces Mennen Co., New-ork (competice), which terminates tine Co. replaces Mennen Co., New-ark (cosmetics), which terminates sponsorship of that program on April 12. Bathasweet Corp., New York (Bathasweet), through H. M. Kiesewetter Adv. Agency, that city, continues to sponsor Bob Garred Reporting on the same list of stations, Tuesday, Thursday, 7:30-7:45 a. m. Axton-Fisher To-bacco Co., Louisville (20 Grand cigarettes), through McDougall & Weiss, Chicago, sponsors the eve-ning edition, Monday, Wednesday, Thursday, Friday, 5:45-5:55 p. m. (PST), on CBS Pacific Network.

Radio Journalism Book

A NEW book on news broadcast-ing titled Radio Journalism [Bur-gess Pub. Co., Minneapolis, \$2] written by Paul H. Wagner, in-structor in radio and journalism at Indiana U, covers newscasting technique as observed in a two-year study. It is designed for use as a textbook by students with previous journalism study. Documentary material and theoretical matter are included.

CBS Farm Staff Enlarged

CBS Farm Staff Enlarged CBS has announced three additions to the staff of farm reporters covering farm news for the Country Journal program, conducted on CBS by Charles Stookey, CBS director of farm broadcasts in St. Louis, and for the recently announced CBS farm news network [BROADCASTING, Feb. 15]. New reporters are Grady Cole, director of farm broadcasts of WBT, Charlotte, who will cover North and South Carolina, Georgia and Florida; Harwood Hull of WAPI, Birming-ham, who will cover Alabama, and Gene Shipley of WIBW, Topeka, to cover Kansas. cover Kansas

MAN-IKENS for a Bond Clothes style show staged by WFBL, Syracuse, recently were members of the WFBL staff. Sensational, claims WFBL, in describing their skill as portable clothes hangers. Some 600 persons saw the show, participated in a musical spelldown, and took home some free radio sets and groceries. Jim DeLine and Neal Moylan were masters of ceremony, with Don Anderson's Minute Men giving Bonds a break.

Los Angeles Area **AFM Pact Looms** Higher Pay In Some Cases; **Negotiations Harmonious**

NEW WAGE deals and improved working conditions for musicians employed by Los Angeles area major broadcasting stations are being negotiated by Musicians Protective Assn., Local 47, American Federa-tion of Musicians. Contracts under which stations have operated for the last year have expired. New agreements in several cases will cover more than the customary oneyear period, it was said. While details of all new contracts

have not been revealed, it is known that pay classifications for several types of musical work will be increased materially. Most of the details have been worked out harmoniously and no hitches are anticipated to mar a mutual agree-ment being reached over all contracts, according to both musician and station officials.

KHJ Contract

KHJ, the Don Lee Broadcasting System key station in Los Angeles, has appointed Dave Rose, Hollywood composer, arranger and pian-ist, as musical director succeeding Alvino Rey. The station has agreed to spend a minimum of \$50,000 in wages and employ a minimum of 18 men during 39 weeks of the cur-rent year. Wage scale is based on the current coast-casual rate. When the orchestra is used on transcontinental broadcast, the wage scale will be at that prevailing rate. If the orchestra is sold to an ad-

vertiser, the station's quota will be raised by one-half of the amount paid in wages under sponsorship. The KHJ contract for last year, ar-ranged under the AFM blanket pact which expired in January, called for an expenditure of \$84,-000, but Don Lee Network spent around \$96,000, according to Willet H. Brown, assistant general manager

KMPC, Beverly Hills, Cal., recently granted an increase in power and fulltime operation by the FCC, becomes a Class A station by Oc-tober, 1940, and will be using a quota of 12 men in its orchestra by that time, according to musi-cians union classification. The station has been using a six-man orchestra, but will add one man each month until the quota is reached in October. Now a CBS affiliate, KMPQ at present is in Class C and will be rated in Class B from July until October. With the new setup, Hugh Lawrence has been appointed musical director of the station, succeeding Oliver Alberti. Formerly musical director of WGAR, Cleve-land, he has been in Hollywood for the past two years doing radio and film work.

'Invasion From Mars' Study

'Invasion From Mars' Study THE 224-page study, Invasion from Mars. published by Princeton Univer-sity Press [\$2.50], a salient chapter of which was featured in the March 1 BROADCASTING, will be issued in book form April 15. Containing the com-plete script of the Orsón Welles CBS broadcast, the book is subtitled "A Study in the Psychology of Panic" and is the work of Prof. Hadley Cantril, Princeton psychologist, with the assis-tance of Hazel Gaudet and Herta Her-zog. The book is one of a series of studies being made by the Princeton Radio Project.

New P & G Quiz

PROCTER & GAMBLE Co., Cin-PROCTER & GAMBLE Co., Cin-cinnati, on March 23 started a new quiz program, titled *Truth & Con-*sequences on four CBS stations--WABC, New York; WDRC, Hart-ford; WPRO, Providence, and WORC, Worcester, Saturdays, 9:45-10:15 p.m. Ralph Edwards, originator of the program, is m.c. and Bill Meader, supplies musical interludes on the organ. A total of interludes on the organ. A total of \$55 in cash prizes is awarded each program. For each consequence idea and each question and an-swer submitted and accepted, \$10 and \$5 are awarded respectively. Contestants receive \$15 for correct answers, \$5 and three bars of Ivory soap for each consequence attempt-ed, while \$20 goes to the person best accomplishing a consequence. Compton Adv., New York, is the agency in charge.

Shredded Wheat in Canada

SHREDDED WHEAT Co., Niagara Falls, Ont. (Cubs) started April 1 an eight-week campaign with 10 transcribed announcements weekly on 10 stations in Eastern Canada. Account was placed by Cockfield Brown & Co., Toronto.

ZOUNDS, my hearties, away to the battle, prithee! Thus, perhaps, spake Karl O. Wyler, manager of KTSM, El Paso, as he addressed a recent Chevrolet sales meeting prosed in this multiple progelin dressed in this musketeer's regalia. The stunt worked so well that he was planed to Phoenix for a similar meeting.

STEREOPHONIC MUSIC RECORDING Bell Laboratories to Demonstrate Method Said -To Yield Every Sound the Ear Can Hear

BELL TELEPHONE Laboratories will give the first public demonstra-tion of "stereophonic reproduction of enhanced music" at Carnegie Hall, New York, April 9-10. New recording equipment and technique now make possible "recording and reproducing every sound that the ear could have heard initially," the announcement states, continuing that "the listener in Carnegie Hall will have the same spatial sense as to the course of the sounds as if he were sitting in the original hall and in addition he will hear the music enhanced by variations of loud-ness and tone quality according to the interpretation of the original director.

Technique worked out by Dr. Harvey Fletcher and his associates -E. C. Wente, J. C. Steinberg, W. B. Snow, R. Biddulph, L. A. Elmer and A. R. Soffel--picks up the original sounds through three microphones at the right, center and left of the stage. Sound curfrom each microphone are rents amplified and recorded on three separate sound tracks on moving film. Since an orchestra or an organ has a volume range much greater than can be recorded without distortion on a photographic film, it is necessary to "compress" the origi-nal range of sounds before recording. A fourth track records the amount of compression as an auto-matic control for the "expansion" of the volume range which must be made in reproduction.

When the film is run through the reproducer three separate sound currents are created, each actuating its own set of loud speakers, located at right, center and left of the stage as were the pickup microphones. This arrangement, with the wide frequency and volume range of the system, gives "spatial and emotional values heretofore un-known", says the announcement.

Performances of Leopold Sto-kowski and the Philadelphia Or-chestra, of the Tabernacle Choir and organists in Salt Lake City, and of Paul Robeson and other artists, recorded by Dr. Fletcher and his staff, will be played at the demonstration. Following the origi-nal recording, auditions were given at which the artist or director was able to vary his original interpretation at will, softening it to the faintest pianissimo or amplifying it to a volume ten times that of any orchestra without altering the tone quality in the slightest. These selfenhancements of the original music, re-recorded on film, are the perma-nent recordings which will be heard at Carnegie Hall.

KING baseball will reign over Pine Bluff, Ark., this summer because B. J. Parrish, manager of KOTN, B. J. Farrish, manager of KOTN, Pine Bluff, pinch-hit in time of trouble for the Pine Bluff Judges, local entry in the Cotton States League, where the franchise was jeopardized by lack of funds.

When the situation was presented to Mr. Parrish just two days before the league deadline, he put several spot announcements between programs asking baseball fans to tune to KOTN that evening. The mayor, C. of C. secretary and several citizens appealed for funds to raise the necessary \$750.

Radio-equipped cars were sta-tioned in the various districts to collect all telephoned contributions. Determined to stay on the air until the needed \$750 was raised, KOTN six hours later announced that contributions totaled \$1,250 and that the Judges would play ball.

CBS Education Board **To Consider Proposals** For Extended Service FOURTEEN leaders in public edrought for the graders in public ed-ucation and public life, member of the CBS Adult Education Board, have been invited by CBS Presi-dent William S. Paley to attend a meeting in New York April 8. Ac-cording to President Paley's an-nouncement, the group will meet to review CBS educational activi-ties of the past year and discuss ties of the past year and discuss ties or the past year and discuss proposals for new educational proj-ects and extension of present pro-grams. Sterling Fisher, CBS direc-tor of education, will present his annual report at the meeting. According to advance analyses of Mr. Fisher's report, in addition to Americans at Work and People's Platform, which were created at

Platform, which were created at the instance of the board, two new series have been added to CBS' educational schedule — Columbia's Country Journal and Which Way to Lasting Peace?—and changes ef-fected in other programs to keep them abreast of educational devel-opments. In addition, plans have been announced for extension next fall of CBS's American School of the Air to Canada and Latin America

ica. Members of the CBS Adult Ed-ucation Board include: Lyman Bry-son, Teachers College, Columbia U, chairman; Dr. Stringfellow Barr, president, St. John's U; William Benton, vice-president, U of Chi-cago; Dr. Harry Woodburn Chase, chancellor, New York U; Father Robert I. Gannon, S. J., president, Fordham U; Alvin S. Johnson, di-rector, New School for Social Re-search, New York; Henry R. Luce, chairman of the board, Time Inc.; Spencer Miller Jr., director, Work-ers Education Bureau of America; Mrs. Ruth Bryan Rohde, former U. S. Minister to Norway; Rep. T. V. Smith, of the U of Chicago; Dr. George Edgar Vincent, former president of Rockefeller Founda-tion; William Allen White, pub-lisher, *Emporia* (Kan.) Gazette; Dr. Ray Lyman Wilbur, president, Stanford U; and Dr. Joseph H. Willits, Rockefeller Foundation. Members of the CBS Adult_Ed-

NBC Inspects S. F. Sites

ON THE EVE of NBC's celebra-ON THE EVE of NBC's celebra-tion of its western division's 13th anniversary April 5, Mark J. Woods, vice-president and treasur-er, went to San Francisco in mid-March to inspect sites for the pro-posed new NBC building to be erected in that city. He was ac-companied on his tour of the pro-posed sites by Al Nelson, manager of KGO-KPO. First NBC-Pacific Coast program was heard April 5. of KGO-KPO. First NBC-Pacine Coast program was heard April 5, 1927 over a network which linked stations in San Francisco, Los An-geles, Seattle, Portland and Spo-kane. The western division, still under Don E. Gilman, vice-presi-dent our source 11 western States dent, now serves 11 western States and Hawaii, with 36 stations affil-iated with the Red and Blue networks.

Film Commentators Organize

IN AN effort to raise the standard IN AN effort to raise the standard of film commentaries on the radio. David Lowe, film commentator of WNEW, New York, has organized the National Film Commentators Circle, which now lists 80 members from 30 States. Eligible for membership are those commentators who are actively engaged in broadcasting at least one program a week of screen news and program a week of screen news and comment on a station in his home city.

DETROIT-

The Greatest Industrial Market in the World Can Be Covered With One Radio Station—

OAKLANE

The Estublished Detroit Trading Area consists of Six Counties Within 50 Miles of Downtown Detroit

ACOMB

♦ Of all the six major industrial regions in the United States, the Detroit area in 1939 was the only area to register an increase in factory employment over 1938, according to the Detroit Board of Commerce. Detroit's gain was 28.7%.

• Continuing its rapid pace this year, Detroit's industrial employment index for February stood at 110.7 as compared with 99.3 for February, 1939. This increase represents a gain of some 40,000 workers and brings the total to 380,000 now employed in factory work, alone! Both automo-

bile production and passenger car deliveries in Wayne County (Detroit), have shown a substantial increase thus far in 1940 over the corresponding period of 1939.

◆ Just as Detroit leads the world in industrial activity, so does WWJ lead all Detroit radio stations in listener-interest, coverage of buying-power homes, community service and prestige—qualities of prime importance to advertisers.

◆ Investigate the exceptional sales opportunities offered by Detroit—and WWJ—now!

Revisions Sought In New York Bill Perry Measure Ignores All Rights of Broadcasters

ALTHOUGH the Perry Bill [BROADCASTING, Feb. 1, March 1] was passed by the New York State Senate on March 19 unanimously and without debate, the State's broadcasters are hopeful that the Assembly will not give its approval to the bill in its present form. Instigated and supported by the National Assn. of Performing Artists and the American Federation of Musicians, the measure is designed to protect the interests of radio performers by making it a larceny to record any radio broadcast or to offer such a recording for sale without the permission of the performers.

ers. As passed by the Senate, the bill included an amendment to the effect that it "is not to apply to any act of recording for private, personal, civic or political use or to any recording of any address or talk on subjects of a political, educational, religious or civic nature."

Committee Appeal

The broadcast interests have appealed to the Rules Committee of the Assembly, where the bill is now under consideration, pointing out that while the measure protects the interests of the artists it does not mention the rights of the broadcaster's rights in programs which have been created only because the broadcaster maintains studios and transmitting facilities and employs writers, producers and technicians in addition to paying copyright proprietors for the right to broadcast their works and to paying artists for their performances, the bill implies that all property rights belong to the performers and so would work an injustice on the broadcasters, it is claimed. At a public hearing on the Perry

At a public hearing on the Perry Bill before the combined code committees of both Senate and Assembly it was recommended that a compromise measure, protecting the rights of the broadcaster as well as those of the artist, be drawn by the conflicting interests, but the NAPA and AFM representatives have shown little interest in attempts by the broadcasters to work out such a compromise, it is reported. Meanwhile, the companion measure to the Perry Bill, introduced by Assemblyman Meyer Goldberg (R-Manhattan), was killed in committee.

KTRB Is Reorganized

PARTNERSHIP of Thomas R. McTammany and William H. Bates Jr. in the ownership and operation of KTRB, Modesto, Cal., has been broken up, and an application has been filed with the FCC for assignment of license to a corporation to be known as KTRB Broadcasting Co. Inc. Mr. McTammany has not been active in the station for some time, and it is understood his interest has been purchased for about \$20,000. Mr. Bates, manager, would become controlling stockholder with 3,396 out of 4,000 shares. Qualifying shares would be held by William H. Bates Sr.; Cecil Lynch, program director; Frank C. Damrell, attorney; Leslie A. Cleary, attorney. EXPANDING in 20 years from a small shop and used-materials yard to a modern plant covering half of one of Salt Lake City's 10-acre blocks, Ketchum Builders Supply Co. gives much of the credit for its growth to its use during the last 12 years of an increasing amount of time on KSL, Salt Lake City. During this time the firm doubled its business four separate times and progressed in its use of radio time from spot announcements to regularly scheduled for-

A BUSINESS BUILT BY A BOY

Sponsor's Young Son Proves Key to Radio

-Success of Salt Lake City Firm-

Ments to regularly scheduled 201mal programs. When C. H. Ketchum, manager of the company, decided to branch out into formal programs, he recognized in his 8-year-old son, Bob, an unusual talent for homely philosophy. Pursuing a programming course of keeping all material within the understanding of the average listener, young Bob was put on the air as a Sunday afternoon Boy Philosopher. He has been at it ever since, and today officiates at substantially the same type program once each week. Ethel Hogan, who started at the same time, furnishes musical background for the program on the organ.

Five years ago an early-morning five-minute strip was added to the KSL schedule. Bob read poems. Although no offer was made, people began writing in for the verses. The format of this program has varied a bit, but Bob continues the homey, personal appeal that keeps drawing response—and sales —from his listeners.

"We reach customers more directly through radio than any other media," comments Mr. Ketchum the elder. "From the very first announcement we felt a definite buying impetus. Although we were using only spot announcements, people would come into our store, would telephone and write in response to our radio 'program'. As a result, from the time we first used radio, we've leaned on it more

YOUTHFUL commentator on the homilies of life—and a veteran at it—is Bob Ketchum, heard regularly as the Boy Philosopher on KSL, Salt Lake City. Young Bob, whose dad, C. H. Ketchum, is head of the sponsoring Ketchum Builders Supply Co., has been featured on the firm's programs almost since they were first started. He is 16.

than any other advertising form. Occasionally we use supplementary stations, but KSL draws practically all the radio appropriation. Our business has doubled itself four times since we began using radio, and I honestly believe radio has been a major factor in making the increase possible."

RALPH L. LEWIS, real estate and insurance agent, who since last May has been mayor of Goldsboro, N. C., has applied to the FCC for a new 250-watt station on 1370 kc. in that community.

WHEN the Cleveland Indians left for winter training at Fort Myers, Fla., early last month, they were given a sendoff banquet and the proceedings were broadcast over WCLE with baseball broadcasters Jack Graney and Pinky Hunter presiding. Oscar Vitt, manager of the Indians, is pictured here with a giant baseball bat, given him by Hunter. Left to right are Hunter; Vitt; Kermit A. Paulson, sales supervisor for the Washburn-Crosby Co., subsidiary of General Mills; Clyde C. Pelton, branch manager for Washburn-Crosby, and Graney. General Mills and Socony-Vacuum will again co-sponsor the Indians games on WCLE and WHK, with Graney and Hunter doing the play-by-play.

Study of Children And Radio Urged Youthbuilders Says Present Plan Gets Adult Views

Fian Gets Adult views SURVEY of children to discover program likes and dislikes of younger listeners is advocated by Sabra Holbrook, executive director of Youthbuilders Inc., New York social organization. Commenting on announcement that the NAB and the new Radio Council of Children's Programs would make a child program survey [BROADCAST-ING, March 1], she raised the question whether information gathered only from adults "will be sufficient evidence for the sponsors of children's programs".

tion whether information gathered only from adults "will be sufficient evidence for the sponsors of children's programs". Youthbuilders' interest in the field of juvenile radio, says Miss Holbrook, "is prompted by the theory that what the child craves recreationally, he craves because of psychological need". "We are therefore concerned with determining his wants, and then making these available to sponsors, in the hope that the sponsor will find it commercially profitable to accede to the child's wants, and thus be instrumental in fulfilling our purpose of satisfying the child's needs.

Lack of Funds

"For that reason we have ourselves been extremely anxious to undertake a national survey among school children which would indicate clearly not only children's preferences among programs, but the production elements responsible for these preferences plus the outside factors such as age and environment, which also influence children's radio choice. Failing ourselves the necessary funds for a project on this scale, it is our earnest hope that some other organization with equal access to school children and with adequate financing may be encouraged to meet this challenge."

It is claimed by Miss Holbrook that children are listening to the radio advertising for floor wax, shaving cream, coffee and proprietaries rather than to the advertising of products such as cold cereals over whose purchase they have an important influence. She points out that it is apparently possible to build a program for children over 10, such as *Sky Blazers* or the *Lone Ranger*, which will also attract children under 10. But it is not possible, she continues, to build a program for children under 10 which will appeal to the upper age groups. Among program elements necessary to attract both age groups she mentioned realism, variety and separation of fantasy and realism.

FORD MOTOR Co., Detroit (antos), through N. W. Ayer & Co., Philadelphia, has signed Leigh Stevens, Hollywood musical director of the CBS Big Town program, sponsored by Lever Bros. (Rinso), to conduct the orchestra for the Ford Summer Hour, which replaces the Ford Sunday Evening Hour on that network May 19. Jessica Dragonette will be featured vocalist.

E. W. AND J. C. Lee, owners of KFXM. San Bernardino. Cal., and Richard T. Sampson. chief engineer of KAWM, Gallup, N. M., are among stockholders in a company applying to the FCC for a new 250-watt station on 1420 kc, in Riverside, Cal. Also in the group is Harry Harry mond, publisher of the *Riverside Daily Press.*

... AND TO THE PEOPLE!

Carved now in marble in America's most noble memorial, are the immortal words of the Gettysburg Address. Few even among those gathered on the battlefield heard them as they were spoken. Days, weeks, and even months and years were consumed before the speech traveled to all parts of the world. Radio would have winged it to the beoble instantly.

83

A Service the Family of RCA Might Have Rendered

THE Family of RCA has kept a good many dates with history. As we shape our plans for presenting all sides of the issues of democracy to the people in this election year, we recall one date with history we wish we could have kept. It was before our time.

Just suppose there could have been an NBC microphone before the speakers at Gettysburg! Then the greatest words ever spoken by an American would have received an instantaneous world-wide hearing. Out over the two major National Broadcasting Company networks! Across the world via R.C.A. Communications, the radio message service of the Radio Corporation of America! To ships at sea through the radio services of Radiomarine!

The assembled crowd on the battlefield would hear each word clearly, impressively, thanks to a sound system developed in RCA Laboratories and built by the RCA Manufacturing Company. Listeners everywhere would hear a lifelike reproduction of the speech on RCA Victor radios. And motion picture audiences would listen to the address recreated by the RCA Photophone Magic Voice of the Screen.

Record lovers would, of course, turn to Victor for a higher fidelity recording of the American masterpiece. And the Gettysburg Address would be relived time and time again on RCA Victrolas.

You may be sure that the members of the Family of RCA will continue to dedicate themselves to their responsibilities to the people. Whatever radio can do will be done to further the cause of government "of the people, by the people, for the people."

WITH March winds howling, WLW, Cincinnati, recently sent a special events crew out-of-doors for a first hand description of sugarin'-claimed by WLW as the first broadcast ever made from a maple sugar camp. Here on a farm near Xenia, O., Ed Mason (left), farm program director of the station, leans on a big sap barrel to interview D. H. Keiter, 83-yearold farmer, as Mr. Keiter made his rounds among the maples. At right in background, standing in front of the WLW-WSAI mobile unit, is Charles Grisham, of the WLW farm department.

KNX-Philco Campaign Gets Radios for Schools

INSPIRED by a similar campaign conducted during early February by KSFO, San Francisco and KROW, Oakland, KNX, Hollywood, with cooperation of Southern California Philco radio dealers, in March embarked on a two-week effort to secure receivers for more than 200,000 school children in 10 Southern California counties whose classrooms have no sets [BROAD-CASTING, Feb. 15].

classrooms have no sets [BROAD-CASTING, Feb. 15]. A mid-February survey conducted by KNX revealed that although every school in Southern California had at least one set, only one in five had a sufficient number of receivers for use of all its students. With this information, KNX sought cooperation of Listenwalter & Gough, Los Angeles Philco distributors, to remedy the situation. During the two weeks, the firm conducted a sales campaign accepting old radios as trade-in on new sets. The old ones were reconditioned and placed in classrooms throughout the Southern California territory without cost to schools. More than 4,500 sets were secured. So successful was the campaign that Philco distributors are continuing it with plans to place additional receivers in schools in other areas where children are deprived of radio educational programs.

cational programs. Carrying out the campaign as conducted in the San Francisco area, the Philco distributors used newspaper snace, display cards, window streamers, etc., to advertise the plan. Spot announcements before and after the CBS American School of the Air were purchased on KNX by Listenwalter & Gough. KNX also contributed courtesy announcements.

WILLIAM J. WELLS, 63, director of Bamberger Broadcasting Service. operator of WOR, Newark, died March 21 from a heart condition. Surviving are his widow and one daughrer. Mrs. Robert Schmid, wife of the advertising and sales promotion manager of MBS.

EDOUARD BRANLY the noted French physicist to whom Marconi credited the discovery of the means for detecting and receiving wireless impulses, died in Paris March 24 at the age of 96. Dr. Brauly was the inventor of the coherer, one of the first devices used successfully as a detector of wireless signals.

Edson K. Bixby

EDSON K. BIXBY, 52, editor of Springfield Newspapers Inc., and part owner of KWTO and KGBX, Springfield, Mo., as well as KBIX, Muskogee, Okla., died March 17 following an illness of several weeks. Mr. Bixby held 20% interest in the Springfield stations and a 12% interest in KBIX. In poor health from a heart ailment for several years, he suffered a cerebral hemorrhage the day before his death. Surviving are his wife, his mother and two brothers.

Misquoted, Says Becker, Submitting File to FCC JUST to keep the record clear, Frank V. Becker, manager of WTBO, Cumberland, Md., has submitted to the FCC a file of letters and clippings involved in a recent talk before the local Lions Club. The incident arose, Mr. Becker points out, when a local newspaper quoted him as saying that radio "is one of the most taxed and censored industries."

The newspaper, the Cumberland News, retracted the story the following day and ran the text of Mr. Becker's remarks affecting Federal regulation. The original newspaper account had been based on notes taken at the meeting by a member of the club.

GAMBLING'S 15th WOR Program's Anniversary Brings Tributes

JOHN GAMBLING's Musical Clock program on WOR, Newark, said to be the oldest continuous program on the air, on March 8 celebrated its 15th anniversary with a special broadcast. Mr. Gambling received a plaque from J. R. Poppele, WOR chief engineer, who was responsible for Gambling's first radio job as an engineer some 15 years ago, while Frank Braucher, WOR vice-president, gave a short talk.

Announcement of the celebration brought several thousand letters from fans who remembered tuning in when Gambling was first launching the program in 1925.

Major sponsors of the program for the past 10 years are: Colgate-Palmolive-Peet Co., Childs Restaurants, General Mills, Nestle Foods, Martinson's Coffee, E. R. Squibb & Sons, Adolf Gobel, Thom McAn shoes, Illinois Meat Co., and Clemons Clothes. Bond Clothes and Pepsi-Cola Co. sponsor the program currently, each taking three days per week.

Futile Exercise

WARNER RAY, radio columnist of the Nashville Times, recently decided to climb the 878-foot vertical radiator which WSM, Nashville, claims is the tallest tower in America. To give his readers pictures as well as words describing the countryside as seen from the lofty perch, he took along his cam-era. Up and up he climbed, hand over hand, doggedly he reached the top, poised his camera-then almost fainted. He had forgotten to bring any film for the picture box! WSM at this recalled a precedent: A station engineer who had made the same hazardous ascent to solder a connection at the pinnacle, and who stopped breathless at the top to find his gasoline blower was out of gas.

THE IDEAL RELIGIOUS PROGRAM Moody Institute Survey Reveals Music-Dramatic Combination Is Preferred

IN AN EFFORT to determine what constitutes the "ideal" religious program, WMBI, the Moody Bible Institute station, Chicago, sent questionnaires to 600 station managers throughout the country. More than 50% of the queries, which contained 20 questions and outlined every possibility for religious programs, were returned.

In the matter of music, the managers expressed a preference for variety, including original compositions, played without difficult orchestrations. Their votes indicated a desire for vocal rather than instrumental music, except for organ or novachord.

In dramatics the portrayal of deep, personal religious experiences and the re-enactment of unusual situations in which the Bible has played a part, the dramatization of Bible stories, and portrayals built around well-known hymns, were preferred. Almost half the votes were against sermons, and those who did vote in the affirmative qualified their answers by asking for brevity.

Based on these replies, the ideal program, the Institute concludes, consists of a combination of music and dramatics, with music predominating.

Having compiled this information, the Institute is now working on the production of a series of transcribed programs which will be offered to stations free of charge to be used once-weekly on a sustaining basis.

Nielsen Honored For Radio Study

Audimeter Is Main Factor in Award by Chicago Group

FIFTEEN awards for excellence in advertising were made by the Chicago Federated Advertising Club, March 21, in the first of a series of annual awards devised to provide proper recognition for advertising talent. Competition was limited to work created and produced in Chicago during 1939.

The major award, issued to the man or woman who has done most in bringing recognition to Chicago as an advertising center, went to A. C. Nielsen, president of the A.C. Nielsen Co., market analysts. Neilsen has pioneered in many market research techniques, but won the award principally for his new system of checking the effectiveness of radio advertising.

Audimeter Research

Basis of the technique is the Audimeter, developed by the Nielsen Co. [BROADCASTING, May 15, 1939]. The Audimeter is a small mechanical device installed in radio sets belonging to a scientifically selected sampling of radio listeners. The instrument records on tape to what extent the set is in use, during which hours of the day, which programs are listened to and the exact moment when these programs are tuned in or out. Use of the instrument is combined with inventories of consumer purchases.

In addition to the major award, proficiency in five other categories received recognition. They were listed under the headings of radio, national advertising, direct mail, mail order and Chicago retail.

Radio Award for 'Fibber'

In radio, C. S. Johnson & Son won first place for its Fibber Mc-Gee & Molly show on NBC-Red. (Although this program has since moved to the West Coast, it was written, created and produced in Chicago most of 1939.) Special acknowledgment was given to Needham, Louis & Brorby, Chicago agency, for production of the program, and to William Connolly of S. C. Johnson & Son.

Winners were announced and awards presented by E. R. Richer, chairman of the awards committee. Assisting Mr. Richer with the judg-ing were Walther Buchen, presi-dent of The Buchen Co., Chicago advertising agency; Emmons Carlson, advertising and promotion manager of NBC-Chicago; Leo Burnett, president of the agency bearing his name; G. D. Crain Jr., publisher of Advertising Age; John Gibson of Western Electric; M. B. Herbert, advertising manager of the Celotex Corp.; L. E. Meyer, advertising manager of International Cellucotton Products; Leo Nejelski, assistant production man-ager of The Pepsodent Co.; Fred Williams, advertising manager of Carson, Pirie & Scott, Chicago retail department store. Elon G. Borton, advertising director of LaSalle Extension University, presided.

The major award presented to Mr. Nielsen was a polished wood trophy designed and hand-carved by Leo Wolf, Chicago artist. Other awards were encased scrolls.

From Canada to Mexico 1,913,588 families read what's on KGO and KPO tonight

Newspapers don't give away precious space just for fun: So when 72* western dailies, with a combined circulation of 1,913,588, carry the schedules of KGO and KPO, there must be a reason. And there is.

These NBC outlets can be heard in Nanaimo, British Columbia . . . and in Nogales, Arizona. That they are listened to regularly in these cities (and in 44 other metropolitan areas in 30 counties, in 5 states and Canada) is evident-or they wouldn't appear in the radio logs.

No other San Francisco station can approach this total. No other is expected to, for KGO and KPO are the most powerful stations in the San Francisco Bay Region.

When KGO and KPO go on the air it's news in the West. When KGO or KPO transmits your program, you get this plus value of millions of impressions-and you get one whale of a market.

* Checked by Allen's Press Clipping Bureau.

An Old Dog Learns New Sales Tricks

men sat around the table; two above 60, three below 35. The discussion grew sharp and at times bitter.

Then one man with grey hair spoke. "It's true, we've been getting along pretty well all these years without radio, but it's worth a trial"-and so it was! A trial it would be.

But how would we put radio on trial? What did we want radio to accomplish for us? Did we want merely the glory of a grand program with more publicity and goodwill tacked on for good measure to what we believed we already possessed, a vehicle for some individual's personal expression or an outlet for personal glorifica-tion of someone's theory? No, we would have none of that.

Five Objectives

Our objectives were definitely crystallized, as clearly defined as the basic elements in the chemist's formula:

1. To increase our distribution by means of direct radio sale.

2. To broaden our trading area.

3. To increase the density of our accounts in our contiguous terri-

tory. | 4. To pyramid our goodwill in institutional advertising.

5. Above all to publicize and sell our institution to the people of Charleston and southern West Virginia.

To obtain these objectives as quickly as possible, we immediately began searching for a program that would represent our store in every way.

Our conclusion was that a sports program would have all the necessary characteristics. Our research also provided us with another definite conclusion: that no "concoction" in sport entertainment, either canned or ready-mixed, could be permanently used on a radio show. Only the theme of the program, the basic structure, should have continuity; the material surrounding of composition of daily and weekly source to be molded and changed according to the demand of the radio audience and with the opportunity for the

injection of any new ideas. Our Swan Song, "Win or Lose, Be a Good Sport," as well as our well-planned featured pillars of each day's entertainment changes little. The time is 6:15-6:30 p.m. Monday to Saturday inclusive, over WCHS. Budget allotment for radio is 20 per cent of our entire advertising program.

Special Features

We have injected features such as "Years Ago in Sports", in which each week we celebrate the anniversary of our oldest employes in our store, tying it up with some sporting event in the year in which the employe entered our store.

Another regular feature is a "Salute to the Cities", in which some prominent coach, athlete or sportsman in a nearby city or community is saluted for his prom-

Store Satisfied There's Something To This Radio Business

By SYDNEY KLEEMAN Secretary-Treasurer, Frankenberger & Co., Charleston, W. Va.

inence or achievement in the athletic world. A four-minute description is given to his record and also a one-minute historical background of the community in which he resides. A thorough research enables us to give a concise, brief salute in which that man, his friends, and the community's goodwill is obtained. Official press releases to daily and weekly newspapers in that community carry a stimulating interest in this broadcast.

Each sports personality is presented with a felt banner on which is written the program slogan. This is presented to the athlete or sportsman in his community by our sports commentator before a large audience in his school or community. This banner stays in some important place in the gymnasium or school in which many hundreds or thousands of young boys and men constantly see it in review during the year.

Many tests have been made on our program to determine the number of our listeners, the intensity and type, and the extent of our primary and secondary listening areas. In the fall of 1938, a month after the installation of our program, we inaugurated a football contest.

What the Contest Disclosed

The information received from our contest was as follows:

1. The area from which we obtained our contestants was practically identical to our newspaper coverage.

2. The area practically coincided with our established trading territory

3. Ninety per cent of the contest-ants came from our own county, 78% of the contestants were men, 17% women, 5% were students.

Since the inauguration of our "Salute to the Cities", and our tie-up with schools and prominent athletic personalities, we have increased our listening audience substantially among grade, junior high school and high school ages.

To stimulate the tension and unusual interest in our program, we interview prominent personalities.

MR. KLEEMAN

Each month our executive staff. in coordination with the production department of WCHS, holds a radio clinic. The objective is to eliminate the useless, boil down the ambiguous, simplify the routine parts of the show and the com-mercial, adding and subtracting to our program. Radio is new and the application of radio advertising and its merchandising interparts are still newer and it has little precedent or formula to follow.

To illustrate, it is generally recognized that certain size news-paper ads, combined with counter cards and window displays, sales demonstrations and national advertising, will produce certain results. Radio thus far, with its application to retail advertising, has relatively no stereotype or canned procedure to insure its success and, therefore, each program in merchandising application is an experiment and its sponsors must explore research and investigate to find the few laurels that it has earned.

This fact must not be forgotten: The entire program must be sold to the store's employes who must be told that their program repre-

MANY years ago, when the Civil War was an actuality instead of a setting for a lengthy novel and lengthier movie, there arose in the West Virginia Hills a retail clothing store. As the years moved forward, Frankenberger & Co. came along. Today Frankenberger & Co. is a West Virginia institution. Like many old-line stores, it eyed radio with suspicion. Finally the Frankenberger board decided to break the ice. In the process it broke precedents and traditions right and left. Did it pay? Will Frankenberger keep using radio? Tune-in to these columns at once for the answer.

sents them and their store at all times and through invitations be invited to various broadcasts of their program at the studio and at special broadcasts at their annual banquet. They are sold upon "wearing" the Sport Page of the Air on their coat sleeve so that their many contacts with the consumer will produce additional stimulation and interest in the program.

Merchandising Tie-up

The objectives of the radio program, the technique used, and the procedure involved are all useless unless the proper merchandising tie-up is given these vital factors. If there is no practical application of all the research, program direction and technique, actual results will not be obtained.

Our belief is that radio can stand on its "own legs". To prove this statement, in July, 1938, we used only the newspapers to announce our semi-annual sale. We noted its results in units and in dollar volume. In 1939, the same month, we announced our sale a day earlier than in 1938, and only through the medium of radio. We found that without the aid of newspapers, or direct mail, that radio produced 70% of the results which we had the previous year only through its exclusive use. We believe, however, that for the best results, radio, newspapers, direct mail, window displays, counter cards and instructions to sales people all go hand in hand and should be started simultaneously and carried through with the same degree of continuity in order to insure the maximum success of each promotion.

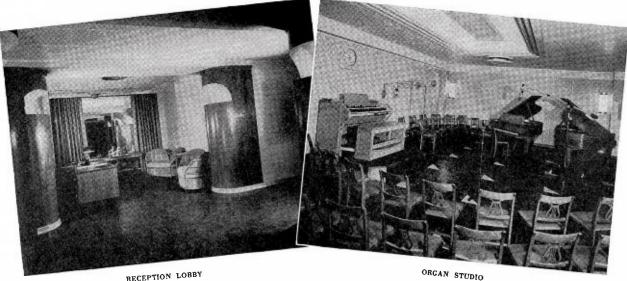

In our application of radio advertising to retail merchandising we have found that spot announcements are not as effective a method for retail radio advertising as the selling medium as a regular continuous program everyday in the week at one set regular period. Spot announcements, we believe, are definitely a better medium for a national account employing "Selvertising" (method of publicity only, not selling), such as Bulova and Benrus and other national firms using spot announcements, rather than retail advertising. We have found that spot announcements in retail advertising do not bring the same relative results in proportion to the actual budget expended in a consistent continuous daily program.

Radio provided our store with an excellent medium in influencing style trend. Twelve months ago we introduced the color "blue spruce". Through the constant repetition of "blue spruce", we were successful in gaining more than a normal share of the "green business", which at that time was a novelty and a new idea in men's and boys apparel. Definitely, radio helped create this new color trend in our merchandising promotion, first, by stimulating an interest which did not heretofore exist in this color, by influencing the consumer to buy (Continued on page 64)

Indiana's Radio Preference Is Best Reflected in The New Studios Of

Awards for the Fourth American Exhibition of Beendings of Educational Be of Recordings of Educational Ra-dio Programs will be made on the opening day of the institute.

Sane Foundation Called Vital to Child Programs

SUCCESSFUL radio programs for children must combine elements which are not only aimed at enter-taining the youngster but which are sane, sound and good for him, according to Dr. John B. Morgan, professor of psychology at North-western U who is the supervisor for the Little Orphan Annie broadcasts heard over 85 ctations of the Mu heard over 85 stations of the Mutual Broadcasting System.

"The critical faculties of chil-dren," Dr. Morgan said, "are often keener than those of adults. Therefore plot, characterization, suspense, drama and certainly humor must be predicated on true and sound ground. When this rule is followed, the show is not only at-tractive to the child but it helps him build his own character, and he learns from the characters in the show."

New NBC Listener's Aid Service wins overwhelming public approval! In only 5 months, more than a million paid orders have been received for Aids that stimulate listener interest and serve as a permanent record of NBC Public Service Programs!

5 moved a million pens:

On the Main Streets of the whole country, and on the farms as well, live millions whose enthusiastic interest in NBC Public Service Programs prompted us, not long ago, to inaugurate a new service to the public— Listener's Aids.

This service consists of booklets and pamphlets that stimulate interest in NBC's Public Service Programs. They provide listeners with a permanent record of the programs . . . "gone, but not forgotten." They expand on the program subjects, and impart extra knowledge. Among the many users are students, teachers and adult groups.

In only 5 months, this new NBC public service has achieved outstanding success. Despite the fact that listeners are required to spend from a dime to a dollar for the published material, well over a million pieces have been ordered.

Most popular of the Aids, which cover such subjects as current events, politics, history, human nature, drama, poetry, art and music appreciation, are these: Reprints of "America's Town Meeting of the Air," Reprints of "Chicago Round Table" discussions, "Pilgrimage of Poetry," based on Ted Malone broadcasts, "Art for Your Sake," color reproductions based on program of same name, and "NBC Music Appreciation Hour" students' work charts and teachers' manuals.

NBC Listener's Aids are another proof that NBC solemnly regards radio as a public service . . . is always eager to perform its duty in behalf of the public interest.

Radio Attorneys Comment on Supreme Court Decision

PHILIP J. HENNESSEY Jr.

President Federal Communications Bar Assn. A SEVEN-year gap between the Nel-son Bros. case and the three decisions of the U. S. Supreme Court at this term, with Congress enacting the Com-munications Act in the interval, might be expected to produce opinions dealing with high policy in broadcasting. The Potisville and Heitmeyer cases em-phasize the scope both of the Commis-sion's authority and its responsibility. The Sanders decision ties this author-ity and responsibility directly to the public interest. It is important both to the industry and to the Commission that the standard be understood as a developing one and that its application to particular sets of facts be reviewed, from time to time, in court proceed-ings. The Sanders decision provides for just that. Federal Communications Bar Assn.

JOHN W. KENDALL

UHN W. KENDALL Associate, Bon S. Fisher AN EXCELLENT decision definitely setting the so-called "economic ques-tion". How the Commission will interpret certain of the court's statements re-mains to be seen. What bearing the decision will have upon intervention by existing stations in cases involv-ing new facilities in the same com-munity still seems a matter of con-jecture jecture

Inasmuch as the court recognizes "competition" as a matter "not to be disregarded" in determining the ability disregarded" in determining the ability of the applicant to provide adequate service, and safeguards the right of appeal under Section 402(b)(2) af-forded existing stations "on relevant questions of law", it would appear that these existing stations will be per-mitted participation in hearings in-volving new facilities for their respec-tive communities.

HORACE L. LOHNES

EORACE L. LOHNES THE DECISION is clear that eco-nomic injury to an existing station is not a separate and independent ele-ment to be taken into consideration by the Commission in determining whether it shall grant or withhold a license to a newcomer in the field. The court emphasized that Congress in-tended to leave competition and the business of broadcasting where it found it, but the question of competition is not to be entirely disregarded by the Commission because the competitive factor may show that both stations, the existing and the proposed, will "go under" with an adverse effect upon of the business in the field may require both stations to render inadequate service. The question as to whether or not an existing station has a right to intervene to bring these facts to the existing station as to appeal and raise any relevant question of law. The decision, in the main, seems to hare the requisite standing to appeal and raise any relevant question of the industry on the decision in that respect.

WILLIAM A. PORTER

THE Commission need no longer con-cern itself with the purely private effect of competition between an exist-ing station and a proposed station. When the effect of such competition causes a public injury the Commission may take such injury into considera-tion

tion. An existing station claiming eco-nomic injury may maintain an appeal, not because it may thereby secure a redress [of its private injury, but be-cause it, on behalf of the public, may bring to the attention of the court er-rors of law committed by the Commis-sion and as a sort of amicus curiae be instrumental in bringing about a re-dress of a public injury.

FRANK D. SCOTT

THE Supreme Court decision in the Sanders Brothers case does not appear subject to serious criticism. The fre-quent repetition of the phrase "public interest, convenience and necessity" in the Communications Act can leave lit-the doubt that this is the heating works the Communications Act can leave lit-tle doubt that this is the basic yard-stick in determining the need for radio service in any community, or the en-largement or diminishment of radio service in any community. The eco-nomic interest of a station would there-fore not appear to dominate "public interest" or merit consideration in-dependent of "public interest". The decision definitely recognizes the eco-nomic interest of a station, but not in-dependent of the "public interest". The court differentiates between the licensee as an individual and the licensee as an "instrument" of the pub-lic. The economic interest of a poorly lice The economic interest of a poorly managed station, rendering passive public service, cannot justly assert an inherent or merited right to perpetuainherent or merited right to perpetua-tion or freedom from competition. A well managed station, performing a commendable public service, deserves perpetuation and freedom from unjust or destructive competition. The deci-sion clarifies what heretofore may have been uncertain. It does not, in my opinion, materially alter the assumed rights of a station or modify the re-sponsibility of the Commission.

ARTHUR M. SCHARFELD

ARTHUR M. SCHARFELD THE DECISION of the Supreme Court in the Sanders Bros. case repre-sents a substantial victory for the American System of broadcasting un-der which stations may engage in full and free competition without super-visory control by the Communications Commission of programs. business management or policy. Although the Commission in the past has given con-sideration to such factors by requiring information to be filed by licensees as well as applicants, it may be assumed that now, in accordance with the deci-sion, the Commission will limit itself to questions of interference, technical and financial qualifications, and com-petency of applicants to make proper use of the assigned channel. It is sig-the Supreme Court accepted the thesis of the Commission to restrict its own regulatory functions in spite of the contrary contentions of broadcasters their present assignments and to be function of jurisdiction is not the sual practice of Federal agencies and the ough self-deprivation what should

prove a boon to continuance of the present American System. At the same time, the court afforded licensees protection from illegal and arbitrary Commission action by al-lowing appeals from decisions where economic injury is the alleged ag-grievement, even though the injury it-self may not be the subject of redress, but where injury to the multic service but where injury to the public service would otherwise be without remedy. This result is undoubtedly satisfactory

vould otherwise be without remedy. This result is undoubtedly satisfactory to broadcasters since it gives them the standing on appeal to call for revision or reversal of Commission action even where the Commission might contend that they had no legal interest entitled to redress in the proceedings before the Commission. Thus the court reconciles the continued existence of the Ameri-can System of broadcasting with the democratic theory of judicial review of administrative action. Of course, there are many implica-tions to be drawn from segregated por-tions of the court's opinion which might lead one into inconsistent by-paths of legal reasoning and there are many questions raised in the opinion which still remain unanswered and which can only be determined through the tedious process of further litiga-tion. We should be slow, therefore, in attributing significance to the decision other than that indicated in the court's opinion dealing with the particular facts of the Sanders Bros. case.

PAUL M. SEGAL

I HAVE never heard anybody seri-ously argue that the Commission could not or should not give A a license merely because <u>B</u> would make less

merely because B would make less money as a result. Nor have I ever heard anyone plausi-bly contend that the Commission should issue so many licenses in any area that nobody can serve the public. And as for appeals, the statute al-lows them to persons who are "ag-grieved or adversely affected" which really means just what it says. Now that these burning truths have the highest judicial approval, I hope everybody can go back to work.

PAUL D. P. SPEARMAN

PAUL D. P. SPEARMAN THE OPINION of Mr. Justice Roberts in Federal Communications Commission v. Sanders Brothers, etc. decides and holds: 1. That the licensee of a broadcast station has no legal right to object to competition which might result in loss or economic injury to himself, but if the economic injury to him arising from conpetition and consequent di-minution in revenue results in injury to the listening public by depreciating

WHILE Amos 'n' Andy (Freeman Gosden and Charles Correll) cele-While Amos in Andy (Freeman Gosden and Charles Correll) cele-brated 12 years in radio on March 19, the event also marked their first anniversary on CBS under sponsorship of Campbell Soup Co. The event was observed with a party at the CBS Hollywood studios. Among those participating were (1 to r) Mary Garvin, Hollywood manager of Ward Wheelock Co., agency servicing the account; Freeman Gosden (Amos); Charles Correll (Andy) and Donald W. Thornburgh, CBS Pacific V.-P.

the quality or reducing the quantity of acceptable service thereafter received by the public, the station licensee legally can raise the objection and it then becomes the duty of the Commis-sion to consider the issue, and to make findings of fact thereon. Briefly stated, the design helds thet a critical licenthe decision holds that a station licen-see has no legal right to object because

see has no legal right to object because of any economic injury to himself, but he may legally object or appeal on be-half of his listening audience as a trus-tee, so to speak, for their protection. 2. That the licensee of a broadcast station has the legal right to appeal from Commission decisions because of such prospective economic injury un-der Section 402 (b) (2) of the Com-munications Act, thus overruling the argument made by the Commission that the Act did not provide for such appeals. There can be no further ques-tion as to the legal right to appeal if the issue is legally presented.

GEORGE O. SUTTON

THE DECISION of the Supreme THE DECISION of the Supreme Court in the Sanders Brothers case is not a one-way ticket to Utopia for either the Commission, the broadcast-ers, or both. It is a simple pronounce-ment by the court of last resort that the power vested in the Commission is given to it by Congress and this power cannot be reduced or enlarged by any unique interpretation of the language used by Congress in the Communica-tions Act. tions Act.

tions Act. The court again reiterates another well settled principle of law. Congress may or may not provide for a judicini review of the decisions of any adminis-trative agency which is creates. In the Communications Act the right of ap-peal and judicial review of the deci-sions of the Commision is given ag-grieved parties, and this right cannot be circumvented, ueither can the lan-guage of the Act creating such right be rendered meaningless.

W. THEODORE PIERSON

THE ONE clear thing that seems to result from the opinion is that anyone likely to suffer economic injury can open the door to the Court of Appeals. open the door to the Court of Appeals, not to redress his own injury, but to right a public wrong. Each party be-comes a public prosecutor, as it were. With all humility, I believe this is something new in our constitutional

With all hamility, I believe this is something new in our constitutional law. The court's opinion was clear that broadcasters have no right to be free of competition but, on the contrary, each broadcaster is "to survive or succumb according to his ability to make his programs attractive to the public." Had the decision stopped there the question as to whether or not economic injury to competing fa-cilities is a proper issue before the Commission would have been finally settled. The court immediately unset-tled the whole matter, however, by a dictum pointing to certain situations where the effect of the economic injury upon competitors might become a mat-ter of public issue. It would seem legally sound to ignore the dictum and remember that the court actually decided that in a case where the existing station was losing money and might even lose 50% of its accounts by the advent of the new sta-tion it was not necessary for the Com-mission to make a finding on the ques-tion of the economic injury that might result to the station or to the public

tion of the economic injury that might result to the station or to the public by the granting of a license for an additional station. It may be that the court found the Commission's findings to be adequate because a proper alle-gation of public interest was uot made. If this should be true, the case decides nothing on this particular point and was based solely upon a technical de-fect of pleading. fect of pleading.

AFTER a layoff of 18 months Ra-leigh, N. C. newspapers have decided to publish daily radio schedules again due to subscriber demands.

MORE PROOF!

that KGW and KEX are your BEST radio salesmen in the rich Oregon market ...

The old saying "The proof of the pudding is in the eating" goes for radio stations, too. The proof of the sales potency of KGW and KEX in the prosperous Pacific Northwest is in the results obtained by those who are using these stations.

As a matter of record, we quote from the following typical local examples:

FURNITURE

"We credit our KGW-KEX radio advertising as the principal factor in our sales increase. You give us thorough coverage of suburban as well as city areas."

"We are very enthusiastic about the results we are getting from our morning program to wnmen, over KEX."

BREAD

-Gevurtz Furniture Co.

WOMEN'S APPAREL

"KGW has been a decided factor in helping us merchandise our store to the styleconscious women of Portland."

-Chas. F. Berg, Inc.

FLOWERS

"We are renewing our contract for the 7th year because KGW has brought us so many new customers."

-Nick's Flower Home.

-Davidson Baking Co.

AUTOMOBILES

"The major advertising factor in the growth of our business has been the use of KGW spots every night for the past three years." -Roy Burnett Motors, Inc.

PIANOS

"KEX has pulled our sales cost down and pushed our sales volume up. Time and again we have cleared our floor of used pianos by means of our broadcasts."

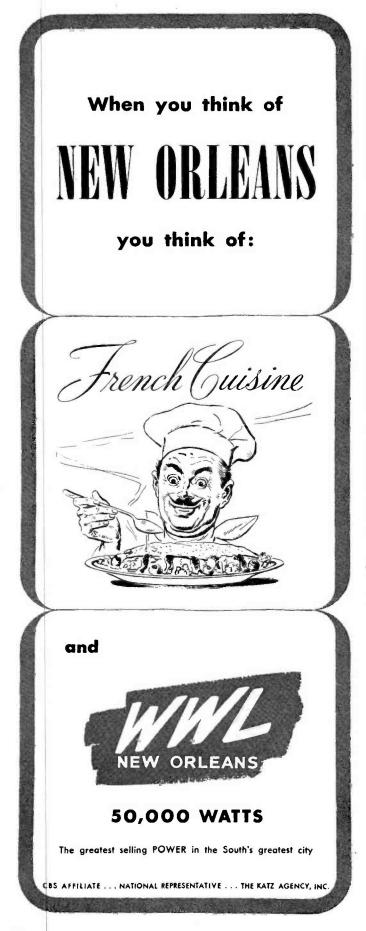

-United Piano Co.

What KGW and KEX is doing for these and other advertisers it can do for you. To reach responsive minds and pocketbooks in the rich Oregon Market where surveys show that 95% of the homes have radios, use the stations of The Oregonian-KGW and KEX.

Television Hearings Reopen April 8

(Continued from page 22)

tion which is in the public interest and may result in crowding them into the market with apparatus at present efficiency levels. Rapid advance is desirable but television is of great and permanent significance to the public. It is therefore of greater importance that the task be done thoroughly and with an eye to television's potential usefulness to the public. These are the goals which the Commission deems the public interest to require."

RCA's Extensive Plans

The action came at a time when RCA and its 100% subsidiary, NBC, were digging in for an all-front visual radio campaign. To assure audience, it had cut receiver prices sharply and had stepped up the schedule of its Empire State transmitter in New York. Applications also had been filed for stations in such key cities as Washington, Chicago and Philadelphia, with the immediate objective of testing network television with ultra-high frequency relays in lieu of coaxial cable. Experimental commercials were arranged, so that when Sept. 1 rolled around and the new limited commercial rule became effective, it could immediately start to recapture a portion of its programming costs under Class II (limited commercial) station operation.

This entire project goes into the discard—at least until the Commission alters its rules or unless intervention from higher places occurs. The first action of RCA-Victor officials was to cancel all advertising copy relating to television scheduled to run in newspapers and magazines. Production at Camden of receivers, it is understood, likewise was tapered off.

Mr. Sarnoff, at White Sulphur Springs on a holiday when the FCC made its Saturday noon announcement, was flabbergasted. So were other RCA-NBC officials, who had no inkling of the FCC attitude and who probably had reason to believe that at least several of the commissioners knew of the promotional activity.

"I am amazed at the action of the Commission," Mr. Sarnoff said. "We have spent nearly \$10,000,000 in developing television and in trying to create a new art and a new industry. We thought that we were proceeding exactly in accordance with the order on this subject recently adopted by the Commission."

Should RCA, in the final showdown, decide to drop television, stockholders of that company will suffer a terrific loss. Moreover, some 1,000 employes assigned exclusively to television, including the staff of W2XBS, NBC outlet in New York, as well as other video specialists, would be promptly affected.

Promotional Drive

The discussion within the FCC on the new action developed March 22 at an FCC meeting scheduled late in the week because of the hearings on frequency modulation. The main allocation issue at these FM hearings is the assignment of one of the seven television bands for FM, which RCA is strongly resisting. In some quarters it was felt this situation played a part in the decision to reopen the television hearings because the subjects are interwoven in a policy decision the FCC must eventually make on allocations of facilities to each service.

It was reported that the question was first raised two or three days earlier by Commissioner Walker, an ardent advocate of strong regulation, who called the Commission's attention to the RCA Mfg. Co. advertising in newspapers and trade papers as well as dealer tie-in ads promoting sales in the New York area. Because the public was not advised that television is experimental and that the sets may not be useful in the future, and because the prices were cut substantially, Commissioner Walker is said to have taken the view that the Commission's regulations were being flouted. Chairman Fly is understood to have supported this view, and Commissioner Thompson apparently was a ready ally. Commissioner Brown's vote was a surprise since he has teamed ally. with Commissioner Craven on television. It is understood Col. Brown urged an early hearing so the issue might be cleared up as quickly as possible.

Suggests FTC Might Act

Whereas the majority contended the RCA advertising was untruthful, Commissioner Craven took the position that even if such were the case, it was a Federal Trade Commission and not an FCC matter. It also was reported that one group felt the advertising did not tell the whole story, and therefore was faulty. The question of jurisdiction was debated well into the evening and, even after the vote, there was talk of modification of the action.

The subject of merchandising and advertising was fully discussed during the extensive hearings befor the Commission Jan. 15-23, which lead to the adoption of the report authorizing "limited commercial" operation Sept. 1, and thereby giving television what amounted to a "green light". At that time it was argued the Commission has no jurisdiction over merchandising and advertising, and some question was raised about limited rather than full commercial operation. RCA, however, voiced no protest against the limited category in its anxiety to open the field and begin large scale telecasting activity through NBC, along with sales activity through RCA Mfg. Co.

IN ADDITION to heading companies seeking new local stations in Key West, Fort Pierce and Hollywood, Florida (BROADCASTING, March 1), former Gov. David Scholtz of Florida was disclosed in an application to the FCC March 21 as president of a company seeking a new 250-watt outlet on S80 kc. in Tampa.

FCC Order Calling New Television Hearings April 8 . . .

Order No. 65

WHEREAS, the Commission on Jan. 15 to 23, 1940, held extensive public hearings preliminary to the promulga-tion of rules and regulations governing television broadcast stations; and

WHEREAS. on Feb. 29, 1940, as a result of study of the general problems involved and after consideration of the record made during said public hearings, the Commission issued a report regarding the present state of the art of television; and

regarding the present state of the art of television; and WHEREAS, in said report, the Com-mission found as follows: "Actual demonstrations to members of the Com-mission indicate the need for further improvement in the technical quality of television. The evidence before the Commission reveals a substantial pos-sibility that the art may be on the threshold of significant advances. Re-search in fact does and should con-tinue in significant phases of the field. * * The issuance or acceptance of transmission standards by the Com-mission, especially in combination with the more extensive experimental pro-gram service which will in all proba-bility develop under these rules, would have a tendency to stimulate activity on the part both of manufacturers and the public in the sale and purchase of receivers for home use. It is inescapa-ble that this commercial activity in-spired and then reinforced by the ex-sistence of Commission standards would cause an abatement of research. To a greater or less extent the art would tend to be frozeu at that point. Even more important, nothing should be done which will encourage a large public investment "in receivers which, by rea-son of technical advances when ulti-mately introduced, may become obso-lete in a relatively short time. * * It will be realized, * that the loss to the public by premature purchase

in a rapidly advancing field might in a relatively short period exceed many times the present total cost of re-search."

WHEREAS, on Feb. 29, 1940, accom-panying said report, the Commission also issued rules governing television broadcast stations, providing for two types of experimental television sta-tions; and

WHEREAS. since the issuance of said report and rules, certain promotional activities in connection with the sale of television transmission and re-ceiving equipment have been engaged in by the Radio Corp. of America in collaboration with, for or on behalf of a subsidiary or subsidiaries of said corporation which are licensees of ex-permental television broadcast sta-tions: and tions; and

WHEREAS, said promotional activi-ties may be detrimental to the public interest by unduly retarding research and experimentation and the achieve-ment of higher standards for television transmission; and

WHEREAS, additional rules and reg WHEREAS, additional rules and reg-ulations or revision or amendments of the rules adopted Feb. 29, 1940, may be necessary in order to promote exper-imental uses of frequencies for tele-vision service and to encourage the larger and more efficient use of radio for television service in the public in-terest. terest;

NOW. THEREFORE, It is ordered, that a further hearing be held beginning April 8, 1940, to determine whether research and experimentation and the achievement of higher standards for television transmission are being unduly retarded by the action of the Radio Corp. of America or its subsid-iaries, or any other licensee, requiring any additions, modifications, revisions,

All the Spots

TO ACQUAINT the listening public with its new auto-matic correct-time service, Republic National Bank of Dallas bought all available 25 and 50-word spots on WBAP, Fort Worth, and WFAA, Dallas, March 18-19. Tracy-Locke-Dawson handled the account.

or amendments of the rules adopted Feb. 29, 1940, governing television broadcast stations, or other action by the Commission; and whether the effec-tive date for the beginning of limited commercial operations set forth in Section 4.73 Subsection (b) of the Commission's Rules and Regulations should be changed from Sept. 1, 1040, to some subsequent date. to some subsequent date.

IT IS FURTHER ORDERED, that Section 4.73 Subsection (b) of the Commission's Rules and Regulations be suspended pending further order of the Commission.

CBS Stock Taken Up

CBS Stock Taken Up ALL of the CBS stock offered to the public March 14 was sold after the close of the market that day, accord-ing to an announcement by Harriman Ripley & Co., which headed a group of underwriters for the stock includ-ing Lehman Brothers, Glore, Forgan & Co., and W. E. Hutton & Co. [BROADCASTING, March 1]. Stock sold consisted of 20,000 shares of Class A stock and 80,000 shares of Class B stock, \$2.50 par value, and was sold at 25%.

FIRST West Coast sponsor to have FIRST West Coast sponsor to have a radio program telecast is Roma Wine Co., Lodi, Cal. (wines, grape juice), whose weekly *Roma Wine World's Fair Party* was broadcast over 35 Don Lee-Mutual Network stations and televised simultane-ously via W6XAO, Los Angeles, on March 2, from KHJ. While (1 to r) Art Linkletter, m.c. of the pro-gram, Gloria Nygard, vocalist and comedienne and C. W. Pierce, an-nouncer-producer of Cesana & Asnouncer-producer of Cesana & Associates, San Francisco agency servicing the account, chatted about re-opening of the Golden Gate Inter-national Exposition and put in their plugs for Roma wines, Nel-son Edwards, telecameraman, fo-cused his camera and released the program to television set owners in the Los Angeles area.

KOA. Denver. engineering staff has developed a new "alarm clock" chimes, simulating the old grandfather clock, to use in broadcasting time signals.

The "home-town station" for almost two million people in three states.

For more information about KWKH, one of the sixteen CBS 50,000 watt stations, inquire of The Branham Company

-CKWX, Vancouver

- ADVERTISERS' BLUE BOOK

These stations enjoy exclusive local rights to the World Library – greatest repertory of music ever recorded for radio – and their audiences enjoy vastly superior reception because these stations have installed the most sensitive and costly equipment designed especially for broadcasting World recordings. Advertisers planning spot campaigns will do well to consider the influence and popularity of World Program Service stations.

SYSTEM

OUR PLATFORM

Keep American radio free as the press.

Maintain a system of free, competitive broadcasting, rendering public service without undue restraint.

Build programs to provide the greatest good for the greatest number.

Avoid political partisanship on the air.

Install radios in every home, classroom, office, automobile, passenger train and airplane.

Keep pace with technical developments and foster their commercial applications.

A\$CAP Rides Again

ASCAP didn't do the unexpected. It's still playing the broadcasters for suckers. It was that way in 1932 and again in 1935. The only difference is the over-all asking price, which increases by the size of a junior national debt each time. In ASCAP's shell game all that's necessary is to throw one industry group a chunk of red meat, sock the others and, when they are cut and bleeding, ride through the middle with skull and cross-bones aflutter. This may be indelicately expressed, but the facts lend themselves well to metaphor.

This time the \$50,000-a-year-gross-or-less independent is the object of ASCAP's flirtation, after having been percented almost to extinction for nearly 10 years. Other stations, by virtue of the clearance at the source proposition, seemingly also would get concessions, with the networks—on paper—as the real fall guys. It's smart baseball, if the ump isn't looking.

Except for the smaller stations and for the networks, the ASCAP plan is strangely ambiguous. Who falls in what bracket seems open to negotiation—negotiations which will begin April 15, according to the command from Tin Pan Alley. And you get 'em for 10 years this time if you take contracts while they're hot.

What do we think? Well, up to now copyright history is repeating itself. In 1932 ASCAP proposed clearance at the source, with the networks to pay 5% on all their revenue. But it didn't turn that way. To think that the networks will absorb the proposed $7\frac{1}{2}$ % on their gross income under the new ASCAP asking price is foolhardy. They can't, and continue the same operating scale. Readjustment of compensation with affiliates sconer or later would be a foregone conclusion, if the present system of operation is to survive.

Let's take a quick inventory. Assuming ASCAP's success in mulcting the industry to the tune if proposes, it would mean an industry outgo of \$7,500,000 to \$10,000,000 a year for the use of ASCAP's repretoire. ASCAP offers 10-year contracts. That means during the next decade the industry would shell out from \$75,000,000 to \$100,000,000 to ASCAP and its none-too-happy publishers for the right to help them sell sheet music and records and get radio, stage and other engagements.

Now what is to be lost by taking a little time to sleep on the ASCAP proposition? It can't recant on the offer to the independents because it has admitted it has done them wrong for lo, these many years. Network affiliates, whatever their grievances with headquarters, can't hope to win on all scores—not after the rude awakenings of 1932 and 1935. It seems rather idle to talk again about a united industry, after so many past splits, but that's the only salvation.

As long as we can remember NAB conventions, broadcasters have resolved for a "payas-you-use" method of royalty, whatever the figure. A necessary part of such a plan is clearance at the source. ASCAP has blandly adopted the clearance provision, and dismisses the "per program" method without ever having discussed it with a representative industry group. It has excluded NAB from its conversations by the same snubbing tactics it employed in 1932 and 1935. Obviously, it means to negotiate individually with stations or small groups, if it can, because it fears the impact of a united industry. To us it seems clear that if the "per program" formula is to be attained it can only be through a strong industry committee with the power to act for all.

In 1932 it was Oswald F. Schuette, then NAB copyright negotiator, who became the butt of ASCAP's tormenting tactics, and kept it in its act of perpetual rage. In 1935 it was James W. Baldwin, NAB managing director. Now its NAB President Neville Miller, CBS Executive Vice-President Edward Klauber and Broadcast Music Inc. But there is a difference. The industry is stronger and wiser, and, if advance signs mean anything, it is willing to engage in a finish fight.

Nearly 300 broadcasters are in Broadcast Music Inc., making the third attempt to set up an industry music supply. ASCAP doesn't like BMI. The derisive comments of Gene Buck indicate that. Which makes us feel that maybe BMI is the salvation after all.

We recall Warner Bros. pulling out of ASCAP in 1936 with about 25% of ASCAP's

popular catalog. We recall its return to the fold after the networks and many stations refrained from performing its music while a series of WB musical colossals flopped because the public hadn't heard the numbers. The important ASCAP publishing houses are moviedominated. ASCAP revenue, despite its bleeding of radio, is a pittance to the Hollywood producers, who gauge their music as a byproduct of the movies. They use it (and plug for radio performance) to attract box-office.

As we see the broad picture, the networks must give BMI everything they've got to break the ASCAP stranglehold. That may means ASCAP music will not be performed over the networks effective next Jan. 1. And that would mean a tobogganing of the popularity of ASCAP's repertoire, for it is a truism that nothing is deader than an unperformed tune. Will the motion picture music publising subsidiaries be satisfied with that?

ASCAP has started out on a high-handed basis, repeating the past. It will wax more truculent as time marches on because that technique has worked before, and because it can wave that \$250-per-innocent-infringement law in the face of every broadcaster. It has already begun to abuse key individuals dealing for the broadcasters after refusing to negotiate with a copyright committee of the NAB. It's the identical song and dance, with a few of the personalities changed, and the inevitably higher asking price.

However attractive the bait might be, we think it would be a serious mistake to flop at this stage. The composite industry has a fighting chance without ASCAP music. It would be a complete surrender to accept the untenable over-all terms. There just isn't any reason for a stampede. Besides, who knows, Uncle Sam may yet see fit to do something about that bewhiskered anti-trust suit against ASCAP still on the books in New York.

'Pulitzer' Awards

THIS 20th year since modern broadcasting began its phenomenal rise to its present social and economic stature seems a particularly appropriate time for recognition of a new sort. Unlike other arts and professions, radio has never been honored with awards for merit of the kind represented by the Pulitzer award for journalism and letters. Since radio in some of its important aspects is audible journalism, the move on the part of the University of Georgia, prompted largely by the veteran Lambdin Kay of WSB, is in the right direction.

The Pulitzer awards themselves also have a golden opportunity not only to prove that the breach between radio and the press has been healed entirely but to give proper recognition to audible journalism. Judged by a group of outstanding figures in public and professional life, these annual prizes are the most coveted in American journalism, literature and the theatre. Radio partakes of all three, and it would be a simple matter for the Pulitzer board to broaden its scope by including radio achievements for annual awards. The board meets this month, and it would be a particularly appropriate time to announce that radio awards will begin next year. Old Joe Pulitzer, whose able son as a radio station owner has shown a keen appreciation of the importance of radio, would, we think, seize upon the opportunity.

We Pay Our Respects To - Personal

EDWARD WILLIAM WOOD, Jr.

WHEN, last month, Edward William Wood Jr. moved his headquarters from Chicago's Tribune Tower to 1440 Broadway in Manhattan as the first incumbent of the sales managership of MBS, the story might have been headed "Return of the Native" or "Local Boy Makes Good". For Ed Wood is one of that seldom-met species, the born and bred New Yorker.

To get the vital statistics over with let's record here and now that Ed was born just 36 years ago, come next month. He attended New York's public grammar and high schools and New York U. In college he majored in Latin, with extra-curricular attention to dramatics and to various editorial jobs on the school publications. It was only after his graduation that a kind friend, deciding that Ed was now old enough, introduced him to the facts of advertising life, starting a romance that in 15 years has never missed a beat. Or, to express it more prosaically, Ed's first job was in advertising; he liked the field and he's still in it.

After a year with a trade paper in the export field, Ed in 1926 became New York advertising representative of the European edition of the Chicago Tribune. For three years he sold advertisers on the idea that, since all Americans with enough money to buy anything had moved to Europe, the best way to secure their patronage was to advertise in the paper they read over there. Then came 1929. Something happened to the stock market; dividends disappeared; Americans in Europe came home; those who were already at home stayed here, and Ed was transferred to Chicago as a member of the Trib's advertising staff.

In 1930 he left the paper to sell space for *True Story* magazine, but a couple of years later he returned to the *Tribune* fold as a salesman for the newspaper's radio station, WGN, Chicago. Late in 1932 Ed went back to New York to open and head a sales office there for the station. This venture proved so successful that in 1935 he was again transferred to Chicago, this time as sales manager of WGN.

In January, 1940, the Mutual Broadcasting System underwent a reorganization. In February, at the first meeting of the new board of directors, a decision was made to divide the duties of the general manager and to create a new post, that of sales manager. The job called for a man of proven ability both as a salesman and an executive, for a thorough knowledge of radio and for an intimate acquaintance with Mutual policies and pro-cedure. Since WGN had been one of the founders and co-managers of MBS, the sales manager of that station was an obvious choice for the position and so, in mid-March, Ed Wood returned to New York.

Handsome, cheerful and friendly without carrying any of those happy traits to an objectionable degree, Ed is a sociable sort of person who is inclined to spend more time in the offices of his clients than in his own, a fact that may explain his extra-successful sales record. The kind of a leader who actually leads his men in the field rather than directing them from a secluded office, Ed in his first week in New York had found no time to get settled in his new quarters, but had become intimately involved in a number of solicitations for new business for Mutual.

Married to the former Esther Effrd of Winston-Salem, Ed is the father of a boy, Edward William Wood 3d, who will be 5 in May. Though an enthusiastic golfer, Ed spends more time following sports, and whenever a major fight, meet, tournament or other athletic event is scheduled he can usually be spotted in a ringside seat.

JAMES PETRILLO, president of the Chicago Musicians' Union, who came to Hollywood in mid-March with Joseph N. Weber, president of the American Federation of Musicians, has returned to his home headquarters. Mr. Weber will remain on the West Coast for several weeks.

M. H. AYLESWORTH. former NBC president and until recently publisher of the New York World Telegram, has announced the opening of his new offices as attorney and public relations counsel. Suite 4224. 30 Rockefeller Plaza; telephone, Circle 6-2535.

STUART SPRAGUE, New York radio attorney and special counsel for the NAB. is the father of a son, as yet unnamed, born March 21, the Spragues' second son.

ALEN KEESE, regional sales manager of WFAA, Dallas, on March 23 began a six-weeks layoff on doctor's orders.

G. STANLEY MCALLISTER, CBS New York director of construction and building operations, was in Hollywood during late March to inspect two new audience studios now nearing completion. These fncilities will be ready for use by mid-April. They adjoin the network's Columbia Square building.

JACK FIELD Jr., sales manager of WPTF, Raleigh. and his partner defending champions, were runners-up in the Raleigh badminton doubles tournament. Mrs. Field and partner placed second in the women's doubles division.

JOHN T. McMANUS, radio editor of Time Magazine, on April 1 joins the new New York newspaper P.M. as radio editor. The daily paper is scheduled to start June 1. Mr. McManus was previously film critic of the New York Times. No successor has yet been named at Time.

L. J. (Jerry) DuMAHAUT, commercial manager of CKLW, Detroit-Windsor, is the father of a boy born March 19.

GILBERT SELDES. CBS director of television programs, discussed television in relation to the motion picture industry at the AMPA luncheon meeting in New York March 21.

WILBUR EDWARDS, account executive of WBT, Charlotte, N. C., in mid-March married Jane Holman.

IIOWARD KEEFE, formerly western advertising manager of the American Magazine, has joined the MBS sales staff in Chicago.

HAL SEVILLE has returned to WBAX, Wilkes-Barre, Pa., as general manager, succeeding Dale Robertson, who resigned as of March 15. Richard Evans has been appointed local sales manager.

JAMES EDWARD GOLDSMITH, formerly with Wills & Co., St. Louis, has joined the sales staff of KMOX, St. Louis.

BERRY LONG, KOA, Denver, account executive, has returned to his station duties from Memphis. where he was called by the serious illness of his father.

PAUL W. KESTEN. CBS New York vice-president, was in Hollywood during late March to confer with Donald W. Thornburgh, Pacific Coast vicepresident.

JAMES A. DAVENPORT, formerly with the Atlanta Journal and the Hearst Newspapers, has joined the sales staff of WGST, Atlanta.

DON E. GILMAN, NBC western division vice-president, Hollywood, has heen appointed a director of the Los A ugeles Community Development Assu., to represent radio.

B. F. McCLANCY, NBC New York traffic manager, was in Denver during late March for conferences with Lloyd E. Yoder, manager of KOA. HERMAN BESS, executive vice-president in charge of local sales of WNEW, New York, has signed a five-year contract with the station to continue in that position and will hold the title of commercial manager. Irene Davis assistant to Mr. Bess, has been promoted to commercial traffic manager. Judy Dupuy, assistant to Richard Bard. WNEW publicity director, on April 8 joins PM, daily New York newspaper, as assistant to John Mc-Manus, radio editor. Rhea Diamond, formerly assistant to John Mc-Manus, radio editor. Rhea Diamond, publicity director of WMCA, New York, will take over Miss Dupuy's position.

position. WALTER DUNCAN, national sales manager of WNEW, New York, on March 18 was elected vice-president of Wodam Corp., operator of the station, according to announcement by Bernice Judis, managing director of WNEW, Mr. Duncan, formerly of the NBC sales department, joined WNEW in 1937 as head of the national sales department and will continue in charge of that department. Herman Bess, executive vice-president, is director of the WNEW local sales department.

JULES DUNDES of the CBS sales promotion department has been named sales promotion manager of WABC, New York, in line with the CBS policy of having each of its owned and operated stations function with its own promotion staff, according to an announcement on March 18 by Arthur Hull Hayes, WABC sales manager. Mr. Dundes has been in the CBS sales promotion department for the past four years and previously was on the staff of the New York Post.

C. W. CHATTERTON, formerly assistant business manager of the Portland Oregonian and director of its stations, KGW and KEX, has joined the business staff of the Chicago Herald-American.

ROBERT C. MAYO, salesman of WABC, New York, and Barbara Jacobs of Bethlehem, Pa., have announced their engagement.

JERRY AKERS, veteran radio executive, has been named general manager of the new KYUM, Yuma, Ariz., which was inaugurated March 15 and joined the NBC network as a supplementary outlet on that date.

ROY C. WITMER, NBC vice-president in charge of sales, left New York March 28 for a business trip to the West Coast. He plans to stop in Chicago en route and to return to New York in about three weeks.

EMILE J. GOUGH, formerly head of Hearst Radio Inc. is now in the fabric manufacturing business, with offices at 280 Madison Ave., New York, and plant in Pawtucket, R. I. Product is Tecron and company is Tecron Inc.

F. A. BUTTREY, president of KFBB. and Al Hansen, general manager, after a month's sojurn in Phoenix, have returned to Great Falls, Mont.

R. C. LOCKMAN, CBS Hollywood account executive, is the father of a girl born March 15.

H. B. McNAUGHTON, former general manager of WTBO, Cumberland, Md., has joined KBIX, Muskogee, Okla. in an executive capacity.

EDWARD JANSEN. formerly promotion and production manager of KOL, Seattle, has joined the sales staff of KSFO, San Francisco.

DR. GEORGE W. YOUNG, owner of WDGY, Minneapolis, has been commissioned by American Airlines as an Admiral of its flagship fleet in recognition of service on behalf on behalf o air travel. He has been flying his own plane since 1922.

BROADUS McSWAIN, manager of WGNC, Gastonia, N. C., on March 16 married Catherine Todd. daughter of Floyd C. Todd, WGNC owner.

VERNON BOYLSON, formerly of WDZ, Tuscola, Ill., has joined the commercial staff of KTOK. Oklahoma City.

HELEN BROWNE BENNETT, daughter of Andrew W. Bennett, Washington counsel for National Independent Broadcasters Inc., was married March 23 to Lieut. (J. G.) Bruce Langdon, of the Navy Medical Corps. They will live temporarily in China where Lieut. Langdon has been assigned for a tour of duty.

VIC RUGH, sportscaster of KTUL, Tulsa, is the father of a girl, Dana Joanne, born in March.

JOHN ADEMY, announcer of WCAO, Baltimore, presented a recent song recital sponsored by Peabody Conservatory of Music Alumni Assn. of which he is a graduate.

MISS WAUHILLAU LaHAY, director of women's activities of KLZ, Denver, and publicity director of the station, has resigned to join the staff of the Kansas City (Mo.) Labor Herald. She has been succeeded as m.c. of the Lady Lend an Ear program by Pat Burns. continuity chief, while Helen Benwell moves into the continuity department and Jeff Baker, of the promotion department, adds publicity to his activities.

DON DOWD, NBC-Chicago announcer, has returned to his desk following an abdominal operation.

ELMO TANNER. whistler and singer on the NBC Beat the Band program, is the father of a boy born March 13. Baby has been named Elmo Jr.

HELEN HALL has been promoted to publicity director of WAIM, Anderson, S. C.

MAURICE HART, announcer on World's Fairest Music, daily program on WMCA, New York. has written a song hitled "Belleving" in collaboration with Bob Emmerich and Al Stillman for recording by Freddie Martin, Tommy Dorsey, Bob Crosby and Dick Jurgens.

Dick Jürgens. FOX CASE, CBS Pacific Coast director of public relations, Hollywood, has been elected president of the California | Sixth District Agricultural Assn. Gase recently was appointed to the California State Board of Agriculture| by Gov. Olson for a fouryear term. He is also a director of the California State Agricultural Society and a member of the State Fair Board. In late March he was made a member of the advertising committee of the All-Year Club of Southern California. He is owner and operator of Rancho Cielito in Orange County, Southern California. FRANK GALEN Hollwood writer

FRANK GALEN, Hollywood writer on the CBS Texaco Star Theatre, sponsored by Texas Co., and Natalie Firestope, non-professional, were married in that city Feb. 15.

RAY LINTON, head of Ray Linton & Co., radio program firm, on April 1 opened a New York office. Mr. Linton has moved his family from

Chicago to New York and will be in charge of the New York office, with Paul Brines continuing in Chicago. The firm recently signed Courtenay Savage, wellknown writer and producer. Mr. Savage was for-

Mr. Linton

merly head of continuity of CBS, New York, and more recently wrote and produced a number of daytime serials for General Mills and Procter & Gamble while with Blackett-Sample-Hummert, Chicago.

RONALD REAGAN. formerly announcer of WHO, Des Moines, and now a Warner Bros. contract player, will play the role of George Gipp, Notre Dame football star, in the film, "Life of Knute Rockne".

Fibber, Lum and Abner Are Signed for Movies

THE JORDANS, Jim and Marian, stars of the NBC Fibber McGee & Molly program, sponsored by S. C. Johnson & Son (wax), have closed a deal with Mel Shauer, Hollywood film producer, to make three pietures a year. The first will go into production in June when their weekly program goes off the air for the summer. Stories selected will be the homey type, similar to the theme used in the radio series. Don Quinn, writer; Cecil Underwood, producer of Needham, Louis & Brorby Inc., on the show, and members of the radio cast are expected to draw assignment in the film. The Jordans made their film debut under Shauer's production supervision two years ago, in "This Way Please," at Paramount Studios.

Chester Lauck and Norris Goff have been signed by Voco Production, Hollywood, for a series of pictures to start in early April. Pictures will be based on their Lum & Abner program.

"ONLY KSFO WAS THERE"...one of a series

The FLOOD didn't come to SAN FRANCISCO

...but KSFO went to the flood-

In Northern California early in March. excitement ran as high as the waters that swept over farms and villages. While real disaster was averted, its threat made nation-wide news.

The only COMPLETE radio coverage of the flood's climax was that given by KSFO and through it to the Columbia Pacific network.

Ranging from an *eye-witness story that could have come only from the flight of a chartered plane over the flooded areas to bulletins broadcast in cooperation with State authorities, KSFO's coverage of this near-disaster was typical of this station's alert handling of matters important to Northern California.

• So outstanding was the eye-witness story as broadcast by KSFO that it was used almost verbatim by United Press in a nation wide press release.

It's this sort of SERVING, along with topflight local shows and Columbia's leadership in network programming, that has established and maintains KSFO at the peak of popularity in Northern California.

Supreme Court

(Continued from page 12)

has any jurisdiction over FCC decisions denying assignments of license. This issue is raised in the appeals of both CBS and KSFO, San Francisco, from the Commission decision denying assignment of KSFO under lease to the network.

Justice Roberts, in reciting the court's opinion without referring to a single note, pointed out the lower court had held that the Commission had erred in failing to make findings on the economic issue and that, in the absence of such findings, the Commission's action in granting the Telegraph-Herald permit was arbitrary and capri-cious. The Supreme Court, how-ever concluded that economic injury to an existing station is not a separate and independent element to be taken into consideration by the Commission in determining whether it shall grant or withhold a license. Moreover, it held that the Commission's findings were adequate to sustain its grant.

The court handed down its opinion under four separate headings. Devoting the major portion of its ruling to the question of economic injury, it reiterated that such injury to a rival station is not in and of itself, and apart from considerations of public interest, an element the FCC must weigh and as to which it must make findings in passing on an application for a broadcast license.

Hayes

Not Common Carriers

In contradistinction to communication by telephone and telegraph, which the Communications Act recognizes as a common carrier activity and regulates accordingly in analogy to the regulation of rail and other carriers by the ICC, the court said the Communications Act recognizes that broadcasters "are not common carriers and are not to be dealt with as such". Thus, the opinion continued, the Act recog-nizes that the field of broadcasting is one of free competition. The sections dealing with broadcasting demonstrates that Congress has not doned the value of free competi-tion, as it has done in the case of railroads, in respect of which regulation involves the suppression of wasteful practices due to competition, the regulation of rates and charges, and other measures which are unnecessary if free competition is to be permitted."

Holding that an important element of public interest affecting the issuance of a license is the ability of the licensee to render the best practicable service to the community, the court said the Act contemplates inquiry by the Commission into the applicant's financial qualifications to assure such ability. "But the Act does not essay to regulate the business of the licensee," the court held. "The Commission is given no supervisory control of the programs, of business management or of policy. In short, the broadcasting field is open to anyone, provided there be an available frequency over which he can

APPOINTMENT of John F. Merrifield as agricultural coordinator of W H A S, Louisville, was made known to listeners when Robert L. Kennett (left), WHAS program director, introduced Mr. Merrifield during a special broadcast. Long employed in agricultural research work, Mr. Merrifield came to WHAS from WLW, Cincinnati, where he organized and conducted WLW's agricultural department. Previously he was with WLS, Chicago, while with the Sears-Roebuck Agricultural Foundation, and on WHO, Des Moines, and WOI, Ames, while majoring in farm subjects at Iowa State College.

broadcast without interference to others, if he shows his compentency, the adequacy of his equipment and financial ability to make good use of the assigned channel.

"The policy of the Act is clear that no person is to have anything in the nature of a property right as a result of the granting of a license. Licenses are limited to a maximum of three years duration, may be revoked and need not be renewed. Thus the channels presently occupied remain free for a new assignment to another licensee in the interest of the listening public.

"Plainly it is not the purpose of the Act to protect a licensee against competition but to protect the public. Congress intended to leave competition in the business of broadcasting where it found it, to permit a licensee who was not interfering electrically with other broadcasters to survive or succumb according to his ability to make his

RUSSELL C. COMER CO. 101 W. 11th St., Kansas City, Mo.

programs attractive to the public." The court added this did not mean that the question of competition between a proposed station and an existing one is to be entirely disregarded, pointing out that the Commission's practice shows it does not disregard the question. The court said it may have a vital and important bearing upon the ability of the applicant to serve the public and may indicate that both stations, the existing and the proposed, will go under, with the re-sult that a portion of the listening public will be left without adequate service. It may also indicate that, by a division of the field, both stations will be compelled to render inadequate service

No Power Over Rates

"These matters, however," the court said, "are distinct from the consideration that, if a license be granted, competition between the licensee and any other existing station may cause economic loss to the latter. If such economic loss were a valid reason for refusing a license this would mean that the Commission's function is to grant a monopoly in the field of broadcasting, a result which the Act itself expressly negatives, which Congress would not have contemplated without granting the Commission powers of control over the rates, programs, and other activities of the business of broadcasting."

Taking up the second conclusion, Justice Roberts said it does not follow that, because the licensee of a station cannot resist the grant of a license to another on competitive grounds, he has no standing to ap-peal from an order of the Commission granting the application. Pointing out that the law provides for an appeal by an applicant for a license, or by another person aga license, or by another person ag-grieved or whose interests are ad-versely affected, the court said Congress may have been of the opinion that one likely to be in-jured by the issue of a license would be the only person having a sufficient interest to bring to the attention of the appellate court errors of law in the action of the

Commission. "In this view, while the injury to such person would not be the subject of redress, that person might be the instrument, upon an appeal, of redressing an injury to the public service which would otherwise remain without remedy," the court stated.

Right to Appeal

The court then held that WKBB had the requisite standing to appeal and to raise in the lower court any relevant question of law in respect to the order of the Commission.

On the third point, as to adequacy of the Commission's findings, the court said its examination of them and of the grounds for deci-"to comply with the requirements of the Act" in respect to public in-terest. In any event, it added that if the findings were not as detailed as might be desirable "the attack upon them is not that the public interest is not sufficiently protected but only that the financial interests of the respondent have not been considered."

"We find no reason for abrogating the Commission's order for lack of adequate findings," the court stated.

On the fourth point, the court said that WKBB renewed a contention made in the lower court that the Commission used as evidence data and reports in its files without permitting it, as inter-venor before the Commission, the opportunity of inspecting them. Deopportunity of inspecting them. De-claring that the Commission dis-avowed the use of such material as evidence and that the Court of Ap-peals had found the disavowal "veracious and sufficient", the court said it was not disposed to disturb that conclusion that conclusion.

that concusion. The court's action, it was indi-cated, ends the litigation over the Dubucue controversy. Louis G. Dubuque controversy. Louis G. Caldwell, chief counsel for WKBB, declared thought would be given to a petition for reconsideration either in the lower court or the Supreme Court but that no determination had been reached.

BARBARA ANN BAKING Co., Los Angeles (bread), through Dan B. Miner Co., that city, is sponsoring two weekly participations in Norma Young's Happy Homes on KHJ and in Mirandy. on KFI, as well as one a week in Art Baker's Note Book on the latter station. In addition the firm is using four time signal announcements weekly on KNX, Hollywood.

VANTI PA-PI-A Corp., New York, on March 25 increased the spot announcement campaign for its fruit drink with addition of daily spots on WHK and WGAR, Cleveland, and WADC, Akron. The company also added a five times weekly quarterhour program on WCLE, Cleveland. Erwin. Wasey & Co.. New York, is the agency.

L. A. BRESKIN, president of Sterling Casualty Insurance Co., Chicago (Penny-a-day insurance), was in California during late March to look over radio shows and check on markets preparatory to starting a campaign, and will probably use spot and regional network time. WHOLESALE UTILITIES, New York, on March 24 started a 52-week campaign for Federal Recording Radios using five-minute and quarterhour programs 23 times weekly on WMCA, New York, 10 times weekly on WAAT, Jersey City, and a weekly program with spot announcements on WEVD, New York. A large number of stations will be added throughout the year, according to Klinger Adv. Corp., New York, the agency. WARREN-NORGE Co., New York, for its electric refrigerators has been conducting for the past three weeks a weekly half-hour Jewish program on WEVD, New York, and on March 27 started a twice-weekly quarterhour comedy program in Italian on WOV, New York. Account is handled direct, and campaign is for 13 weeks.

HAAS BARUCH & Co., Los Angeles (Moon Rose Soap), in a 13-week test campaign which started March 18, is using 15 spot announcements weekly on KHJ, that city. For its Iris Coffee, the firm is also using 30 spot announcements weekly on the station. Robert Smith Adv. Agency, Los Angeles, has the account.

BLOUNT PLOW WORKS, Evansville, Ind. (Flexihoe cultivators), is using a series of one-minute transcribed announcements on WLS, Chicago, placed direct.

G. T. FULFORD Co., Toronto (Baby's Own Tablets) has started a thrice-weekly transcribed aunouncement campaign on 11 Canadian stations. Recordnigs were made by Dominion Broadcasting Co., Toronto, and account placed by James Fisher Co., Toronto.

HEALTHAIDS Inc., Jersey City, on March 30 started the Boone County Jamboree on WLW, Cincinnati, Saturdays, 8-8:30 p. m. as part of its campaign of programs and spot announcements for Serutan. Austin & Specter, New York, is agency.

PIERCE'S MEDICINE Inc., Buffalo (Golden Medical Discovery tonic), is running a 13-week test campaign of one - minute transcribed announcements on WGBI, Scranton, Pa., and XEAW, Reynosa, Mexico. Spots are supplementary to newspaper campaign. It is expected that radio will be used on a larger scale in the future, according to George Duram, timebuyer for H. W. Kastor & Sons. Chicago, which handles the account.

LYDIA PINKHAM MEDICINE Co., Lynn, Mass. (proprietary), during the first week of April will bring the total number of stations carrying thricedaily spot announcements to 150 throughout the country. Erwin, Wasey & Co., New York, is agency.

SONTAG DRUG Co., Los Angeles (Pacific Coast chain), an occasional user of spot announcements on Southern California stations, on March 18 starts a five weekly quarter-hour news program, Sontag Local Page, on KFI. Contract is for 52 weeks. Herb Allen is commentator and concentrates on local news. Firm will also continue use of spot announcements. Robert Smith Adv. Agency, Los Angeles, has

HERE IT is April Fool's Day, or isn't it, and no one is more fooled than I am to be doing business at this same stall. But The Boss decided I was just a natural born columnist. He spotted in the dictionary.— COLUMN: Any body of certain dimensions pressing vertically on its base. And just what have I been doing here at Standard, he asks, but sitting here, years on end, just pressing vertically on my base!

WELL, THE power of the press, you know—and here I am, the Little Tailor, symbol and spokesman of the one and only Tailored Transcription Library Service, promoted to the dignity of typography and a legitimate publication. While for years I've been broadcasting for Standard Radio just through the medium of mimeographed sass — TRANS-CRIPTION TOPICS—a house organ that consistently proves the old axiom about a straight line being the shortest distance between your mail desk and a waste-paper basket.

BUT GETTING back to April Fool. In a recent library release we introduced under the frockcoat label, WINDSOR STRING QUARTET, a series of transcriptions which the hep-boys immediately sized up as more of this business of gearing up a Bach fugue to sound like Washboard Blues. But nothing so simple. It was the Washboard Blues — all dressed up like a Bach fugue! And more standard pops, even to Boogie Woogie, arranged and played superbly in chamber music style. Of course, the head man of the string foursome was our Harry Bluestone, who can get everything out of a violin but milk.

WASN'T IT Horace Greeley who said—when a dog bites, that's just standard, but when you can make the cats bite on chamber music, THAT'S Standard Radio ... And now, home, James, and let's spare the plugs.

TO A READER'S contention that auto radios cause traffic accidents, Portland Oregonian in its the March 20 issue came out editorially on behalf of car receivers and their benefits.

Auto radios contribute to safety, the Oregonian contends, by keeping drivers' eyes on the road instead of wandering around the landscape. They tend to prevent day-dreaming and serve as an antidote for drowsiness. Reference is made to safety programs during traffic peaks and to warnings of sudden road haz-ards. Traffic safety groups, the Oregonian adds, testify to the value of auto radios in getting warnings to motorists and in generally helping safety campaigns.

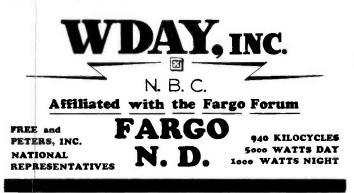

Pittsburgh Press "Now if all you junior housekeepers are following the recipe carefully we're going to have a big surprise for mother.

Obediah's gone and got himself a gas-buggy! In fact, most of our prosperous hayseeds have! For the record, our Red River Valley listeners account for 46.8% of all automotive sales in North Dakota, South Dakota and Minnesota (omitting the counties containing St. Paul and Minneapolis).

Every bit of this "spending" is done within range of WDAY, the only N. B. C. chain station for 190 miles around Fargo. Why not let us take YOUR message to this ready market?

Court Decision

(Continued from page 13) broadcasters to survive or succumb according to his ability to make his pro-grams attractive to the public.

This is not to say that the question of competition between a proposed sta-tion and one operating under an ex-isting license is to be entirely disre-garded by the Commission, and, in-deed, the Commission's practice shows that it does not disregard that ques-tion. It may have a vital and impor-tant bearing upon the ability of the applicant adequately to serve his pub-lic; it may indicate that both sta-tions,—the existing and the proposed —will go under, with the result that a portion of the listening public will be left without adequate service; it may indicate that. by a division of the field, both stations will be compelled to render inadequate service. These matters, however, are distinct This is not to say that the question

These matters, however, are distinct from the consideration that, if a li-cense be granted, competition between the licensee and any other existing station may cause economic loss to the station may cause economic loss to the latter. If such economic loss were a valid renson for refusing a license this would mean that the Commission's function is to grant a monopoly in the field of brondcasting, a result which the Act itself expressly nega-tives.⁴ which Congress would not have contemplated without granting the Commission powers of control over the rates, programs, and other activities of the business of brondcasting. We conclude that economic injury

We conclude that economic injury to an existing station is not a separate and independent element to be taken into consideration by the Commission in determining whether it shall grant or withhold a license.

Right of Appeal

Second. It does not follow that, be-cause the licensee of a station cannot resist the grant of a license to another, on the ground that the resulting competition may work economic injury to him, he has no standing to appeal from

him, he has no standing to appeal from an order of the Commission granting the application. § 402(b) of the Act provides for an appeal to the Court of Appeals of the District of Columbia (1) by an appli-cant for a license or permit, or (2) "by any other person aggrieved or whose interests are adversely affected by any decision of the Commission creating ar refusing any such applicagranting or refusing any such applica-

any decision of the Commission The petitioner insists that as eco-nomic injury to the respondent was not a proper issue before the Commis-sion it is impossible that § 402(b) was intended to give the respondent standing to appeal, since absence of right implies absence of remedy. This view would deprive subsection (2) of any substantial effect. Congress had some purpose in en-acting § 402 (b) (2). It may have been of opinion that one likely to be injured by the issue of a license would be the outy person having a sufficient interest to bring to the attention of the appellate court errors of law in the action of the Commission in granting the license. In this view, while the in-jury to such person would not be the subject of redress, that person might be the instrument, upon an appeal, of redressing an injury to the public serv-ion which would otherwise remain be the instrument, upon an appeal, of redressing an injury to the public serv-ice which would otherwise remain without remedy. It is within the pow-er of Congress to confer such standing to prosecute an appeal." We hold, therefore, that the respon-dent had the requisite standing to ap-peal and to raise, in the court below, any relevant question of law in re-spect of the order of the Commission. *Third.* Examination of the findings and grounds of decision set forth by the Commission discloses that the find-ings were sufficient to comply with the requirements of the Act in respect of

requirements of the Act in respect of the public interest, convenience, or necessity involved in the issue of the permit. In any event, if the findings were not as detailed upon this subject as might be desirable, the attack upon them is not that the public interest is not sufficiently protected but only that the financial interests of the respon-

Disc Network Project Claims Good Response In Contacting Stations

REPORTING an "encouraging re-sponse" from stations in secondary markets, Naylor Rogers, vice-presi-dent and general manager of Key-stone Broadcasting System of Los Angeles, asserted March 20 that he expected the wax network project to be a going concern by July 1. The enterprise [BROADCASTING March 1] seeks to set up a tran-scription network employing a wire-network type contract, under which a minimum of 100 stations in secondary markets would be sup-plied with transcription program piled with transcription program service and offered to national ad-vertisers as a group. The formula, according to Mr. Rogers, is similar to that used by newspapers in sec-ondary markets in selling space to national accounts under blanket contracts.

Now contacting stations, in addition to himself, are three represention to himself, are three represen-tatives of Keystone, Mr. Rogers declared. These are W. B. Green-wald, owner of KWBG, Hutchinson, Kan., M. J. Mara, of Los Angeles, formerly with C. P. MacGregor Transcription Co., and Richard Weed, formerly with NBC and more recently in Hollywood in radio talent pursuits. Keystone, Mr. Rogers said, does not propose to become a going con-

not propose to become a going concern until it has a minimum of 100 stations in secondary markets definitely aligned. He pointed out the project is not competitive with but is designed to supplement wire network service.

dent have not been considered. We find no reason for abrogating the Com-mission's order for lack of adequate findings.

Fourth. The respondent here renews a contention made in the Court of Appeals to the effect that the Comof appends to the enert that the Com-mission used as evidence certain data and reports in its files without per-mitting the respondent, as intervenor before the Commission, the opportun-ity of inspecting them. The Commis-sion disavows the use of such material as evidence in the cause and the Comt of Appeals has found the disavowal veracions and sufficient. We are not disposed to disturb its conclusion.

The judgment of the Court of Ap-peals is reversed.

MR. JUSTICE MCREYNOLDS took no part in the decision of this case.

*See § 311, 47 U. S. C. § 311, relating to unfair competition and monopoly.

⁹ Compare Interstate Commerce Commis-sion v. Oregon-Washington R. Co., 288 U. S. 14, 23-25.

NBC RADIO-RECORDING Division reports that during March seven new subscribers signed for Thesaurus library service as follows: WHFC, Cicero. Ill.; WDEV, Waterbury, Vt.; WPIT. Pittsburgh; WARM, Scranton; WKBB, Dubuque, Iowa; WLPM, Suffolk. Va.; and WBOS, Boston. Stations renewing the service include HP5K and HP5O, Colon, Panama; CKOV, Kelowna, B. C.; WHO, Des Moines; WIS, Columbia, S. C.; WJLS, Beckley W. Va.; WCHS, Portland. Me.; KDON, Monterey, Cal.; WRAW Reading; WPAY, Portsmouth, O.; KQW San Jose, Cal.; WOW, Omaha WSGN, Birmingham; WMRO, Aurora, Ill.; CKPR. Fort William, Ont.; WGEA and WGEO, General Electric shortwave stations in Schenectady.

Schenectady. STANDARD RADIO announces the following new subscribers to its Standard Library Service: WWL. New Orleans; WNAX, Yankton. S. D.; KANS. Wichita. Kan.; WLOG. Logan. W. Va.; KGHI. Little Rock. Ark. Eleven new sound effects records just released hy Standard brings its total to 86 double-faced discs. New effects include a number of sequences connected with the drilling of oil wells, the chimes of Big Ben in London. surf sounds, outboard motors and various musical effects.

various musical effects. KASPER-GORDON Inc., Boston, has released Little By Little House, a transcribet serialized program designed primarily for the daytime feminine audience. The series, which is being produced in units of 39 quarter-hour episodes, features several merchandising angles, including a 64mage booklet titled "1003 Household Helps", prepared newspaper ads and quarter-hour Anstralian serials with all-British casts have been acquired by Knsper-Gordon for sale in the United States. The Enemy Within deals with the smash of the Nazi spy ring in Australia; The Strange Adventures of Dr. Danton is based on the supernatural. GENERAL Broadcasting System, De-

the supernatural. GENERAL Broadcasting System, Detroit, has acquired the Tri-State Motion Picture Co., of Cleveland, producers of industrial and commercial motion pictures. The company will operate in Cleveland as General Broadcasting & Motion Pictures Inc., and will be headed by Donald C. Jones also president of General Broadcasting System, which has operated in Cleveland and Detroit for 10 years. specializing in transcriptions, sound radio show. Motion picture studios will remain in Cleveland, with radio, recording and slide film facilities operating in Detroit. SOUND recordings and motion nic-

operating in Detroit. SOUND recordings and motion pictures were given as the products to be marketed by Telefilm Inc.. Hollywood, when the California State Commissioner of Corporations on March 25 authorized that firm to issue 1.000 shares of stock at \$10 par value. Directors of the company, which proposes to issue 7,500 shares of stock are Joseph A. Tomasiello. Peter Cioga, Peter Comandini. Harold Spina, Martha Spina and J. B. Pinkham.

ALL. - CANADA RADIO FACILI-TIES. Calgary, Alta., has purchased exclusive Canadian rights to the 156 quarter-hour transcribed serial. Adventures of Uncle Jimmy, from Warner Bros. Broadcasting Corp., Hollywood.

COLUMBIA RECORDING Corp.. Hollywood, subsidiary of CBS has started cutting a series of six recordings of Shakespeare's Macbeth. featuring Orson Welles and members of his radio troupe. Recordings supplement the Mercury Shakespeare text for schools and colleges.

Discs Offered Stations By Children's Campaign A SERIES of WBS transcriptions carrying talks by leading literary

A SERIES of WBS transcriptions carrying talks by leading literary and public figures has been submitted to broadcast stations as part of the Children's Crusade for Children, which will stage a campaign April 22-30 on behalf of child victims of the world crisis. The Crusade is designed to raise funds from American school children, who will be asked to donate as many pennies as they are years old, or anything down to a cent.

No direct money appeals will be made on the discs, which are designed to explain the purpose of the Crusade, and children will not be asked to send pennies to stations. Among those behind the Crusade are Mrs. Eleanor Roosevelt, Dorothy Canfield Fisher, Mrs. John A. Ryan, William Allen White, Dr. Charles B. Glenn. Wide support to the movement has been given by publications and by civic and educational organizations.

CBS Recording Appoints WILLIAM T. MEYERS, formerly of Earl J. Goetze Corp., Kansas City, has been appointed executive consultant on chain-store and sales policies of Columbia Recording Corp., Bridgeport, according to Edward Wallerstein, president. Mr. Meyers attended Purdue U where he studied chemical engineering. After graduation he joined RCA in Chicago, where he remained 12 years, becoming general manager. His duties, cooperating with H. S. Maraniss, assistant to the president of Columbia Records, and Paul E. Southard, sales manager of the company, will deal with the increased importance of record sales in chain stores.

THE Duncan Sisters, Vivian and Rosetta, famed as "Topsy and Eva" recently filed articles of incorporation at Sacramento, Cal., as "Duncan Sisters Inc." stating they plan to produce recordings, plays, motion pictures and radio features. The first radio production will be a series of Streamlined Fairytales.

Mertens and Price Split; Big Florsheim Campaign

FRED C. MERTENS has sold his interest in the Los Angeles transcription firm of Mertens & Price, to George Logan Price, co-founder of the business, who will carry on as George Logan Price Inc., with offices at 3902 W 6th St., that city. Mr. Mertens has organized his own production unit under the firm name of Fred C. Mertens & Associates, with headquarters at 3923 W. Sixth St. He is now producing a re-creation of famous ring battles of the last century which will be sponsored on a group of stations nationally by Florsheim Shoe Co., Chicago. Titled *The Squared Circle*, the series features James J. Jeffries, ex-world champion heavyweight.

heavyweight. George Logan Price Inc., will carry on with transcribed shows which Mertens & Price had developed since 1934. They include The Sunday Players, Wade Lane's Home Folks, Martha Lane's Kitchen and Leisure House.

More than *fifteen million meals* a day are served to WIBW's big, hungry family. The tablecloth covers Kansas and spreads half-way across adjoining states as these husky, active folks sit down to the BIG meals their out-of-door-life demands.

Is your product found on our giant table? Are you sharing the profits from this tremendous daily consumption of food? Then let WIBW help you!

During one of our informal family gatherings, let us tell **our** family about your product . . . its flavor, convenience and economy.

> From our many years experience directing the food purchases of **our** family, we can promise you swift and gratifying results.

New Studios and Offices Are Planned by WFAA WFAA, Dallas, will soon start construction of new studios on the tenth floor of the Santa Fe Bldg., according to a recent announcement by G. B. Dealey of the Dallas News, operating the station. Work is to be completed about Sept. 1. Plans for the new studios, drawn

Plans for the new studios, drawn by NBC engineers and George Dahl. of Dallas, in cooperation with Ray Collins, WFAA technical supervisor, call for five studios, one an auditorium se at in g 300. Large music library, artist lounge, recording studios, audition room, and master control room are included. Offices will be on a higher level. Since 1925 WFAA studios have been housed in the Baker Hotel.

Radio Fraternity

HONORARY college radio fraternity, Lambda Lambda Mu, has been founded at Baylor U, Waco, Tex., its membership limited to 20 and its requirements being that members must have been on the air at least five hours. Sponsoring the society is Miss Sara Lawrey, head of the speech department, who is ready to receive petitions from other institutions for chapters. The Greek letters selected were Lambda Lambda (for length) and Mu (for micro).

THE LARGEST TRADING AREA have every evidence that immediate results exist in a substantial BETWEEN BALTIMORE AND ATLANTA results are cumulative. The cumulative effect of our entire program

New Sales Tricks

(Continued from page 44)

extra garments or articles for his wardrobe, by influencing the consumer's subconscious mind toward this color, so when it was presented to him over the counter it was not new, radical or strange, but whose acceptance was partially insured by this previous publicity.

Actual Results

After 18 months on the air, we have come to the following conclusions resulting from our radio experience.

1. The single foremost effect of radio for retail advertising is principally cumulative. Although we have every evidence that immediate results exist in a substantial way, we find that the greatest net results are cumulative. The cumulative effect of our entire program over a period of 18 months has grown larger as our time has lengthened.

2. The trading area which radio reaches coincides with the majority of our territory, but in addition it exceeds the radius of newspaper coverage and the net results from the contiguous territory are not as great from radio as from newspapers. Mail orders are more frequent and in greater volume from newspapers than from radio in the same density of coverage. But the number in volume have been definitely increased by radio, the total results being greater than from newspapers alone.

3. Radio is the best "publicity" medium for a retail store, replacing billboards and other types of institutional mediums.

4. Radio has increased the density of our accounts in our trading area.

5. Radio has pyramided our stock of goodwill in institutional value in our contiguous territory.

In conclusion, radio offers the retail merchant on additional medium to augment other methods of distribution. It provides the retailer with the opportunity to send the personality of the spoken word over the air lines to amplify the printed word in a substantial way. Radio brings the miracle of the second sense to the consumer in merchandising your products. Radio, if used wisely, will help build better business.

Millions in Time Given Educators Industry Praised for Aid to

Federal Radio Activities

VOLUNTARY cooperation by the broadcasting industry with the U. S. Office of Education has provided \$3,500,000 worth of free radio time in four years, J. Clark Waldron, supervisor of station relations for the Office declared March 14 in a talk before the South Carolina Education Assn. at Greenville.

In its radio activity the Office enjoys the facilities of 260 network stations and many independents, he said, with some of its network programs being heard on hookups of 70 to 100 stations, he said.

Through its Educational Radio Script Exchange, the Office in four years has distributed almost 250,-000 scripts. In March 1,309 volumes of scripts were in circulation and the Exchange has just published its fourth edition catalogue listing some 3,000 scripts. A radio glossary, a manual and recordings of the Americans All-Immigrants All series also are distributed by this extension service.

Scripts Circulated

Scripts are available, he said, to qualified groups interested in educational radio. They not only promote education, but are non-partisan and based on careful research. Emotional factors, he continued, are not over-emphasized and the listener is free to form his own opinions.

An audience service section is maintained, according to Mr. Waldron. Through this section education al groups, superintendents, principals, teachers and listeners may obtain printed matter, radio lists and study guides supplementing Office programs. Nearly a million letters have been received from listeners.

Dramatic broadcasts are featured, since listeners have been found to prefer educational programs with a high entertainment content. Talks are included only as incidental material. The Office believes its activity is a logical development of the American system of broadcasting, Mr. Waldron declared, "under which we will reach the apex of efficiency, democratically, in contrast to the rigid controls which have been fastened upon radio in almost every other part of the world."

VIRGIL REITER & Co., represent-ing WCAU. Philadelphia, in the Chi-cago area, and also WFBM, Indiana-polis, on March 15 was named exclu-sive representative in the Midwest of WMCA, New York. Mr. Reiter has assumed active charge of Western sales activities of his company from his New York office at 22 W. 48th St. J. M. Ward, formerly WMCA repre-sentative in Chicago, will act as ter-ritorial agent for Reiter, operating from the Chicago office at 360 N. Michigan Ave.

K M P C, Beverly Hills, Cal., will shortly open its own representation offices in Chicago and New York, and has already selected A. K. Bucholz, formerly of the radio department of Ruthrauff & Ryan, Chicago, to handle Oliicago sales. The decision to have its own offices in no way affects the pres-ent relationship of WJR. Detroit, and WGAR, Cleveland, owned by the same interests, with the Petry organization which will continue representing WJR-WGAR exclusively.

EDWIN FOREMAN, head of The Foreman Co., national representative firm, has announced the opening of a New York office at 247 Park Ave., effective April 15. Robert W. Criddle, formerly vice-president of Outdoor Ad-vertising, Inc., New York, will be stationed in New York.

ROBERT R. HARKNESS, for five years Western manager of the Wom-an's Home Companion, and Norma Smith, formerly of the radio depart-ment of Blackett-Sample-Hummert, Chicago, have joined The Forman Co., Chicago representative firm.

Engineers to Consider Recent Video Progress

Recent Video Progress THOMAS F. JOYCE, vice-president and advertising director of RCA Mfg. Co., Canden, will deliver the keynote address on "The General Outlook for Television" at the opening day's session of the Society of Motion Picture Engineers' annual spring convention at Hotel Haddon Hall, Atlantic City, April 22-25. In addition to the technical papers on every phase of the motion picture art, the following television papers have been scheduled.

uled. "Television Pick-up of the Pasadena Rose Tournament Parade," H. R. Lubcke, Don Lee Broadcasting System; "Tone Reproduction in Television," I. G. Maloff, RCA Mfg. Co.; "Remote Control Television Lighting," W. C. Eddy, NBC; "Quality in Television Pictures," Peter C. Goldmark and John N. Dyer, CBS; "Frequency Modulation," E. H. Armstrong, Columbia U; "RCA Portable Television Pick-up Equipment," G. L. Beers, RCA Mfg. Co., O. H. Schade, RCA Radiotron Corp., and R. E. Shelby, NBC. Julius Haber, publicity director of RCA Mfg. Co., is chairman of the SMPE publicity committee. Television session will be open to all radio technicians and broadcasters.

THE NEWLY incorporated Television Engineers Institute of America. Hollywood, has tentatively set June 19 to 22 inclusive as dates for an international television convention to be held in the Roosevelt Hotel, that city. George H. Seward, president and Arthur A. Stern, secretary-treasurer, are in charge of arrangements.

Manchester (N. H. Union) "If y'ask me, they're carrying this television a little too far!"

Television Theater at Fair RCA MFG. Co., Camden, N. J., has announced plans to construct a special two-story addition to its present exhibit building at the New York World's Fair, which will provide for a television theater to accommodate 100 visitors. The theater also provides for ten television receiving stations, fitted out as living rooms, enabling visitors to view television reception under home conditions. Further details will be announced early in April.

GIVING New York televiewers a preview of the forthcoming political conventions, NBC is planning to telecast the April 11 broadcast of *Town* Hall Meeting of the Air.

Large-Screen Exhibit

LARGE-SCREEN television, which RCA demonstrated at a private showing last month before the FCC at the RCA plant at Camden, will be shown to the general public in a large auditorium for the first time at the home appliances exhibit conducted by the Electrical League of South Jersey at Convention Hall, Camden, April 3-6. The television pictures will be projected on a large screen on the Convention Hall stage by means of an optical system developed by RCA.

Special Use of Sound Channel

SINCE the television channels in the ultra-high frequency range are much freer from static than the normal broadcast zone, W2XBS, NBC's television station in New York, is now using its sound channel three hours each evening, from 7 to 10, broadcasting regular NBC sound programs during whatever time television programs are not on the air, as a special service to television set owners in the New York area.

Remote Coverage

THOUGH 142 airline miles away, Daniel J. Duval, Schenectady Union-Star sports editor, covered the recent Knights of Columbus track meet in New York by television. The telecast from NBC was picked up by GE atop Helderberg mountain and rebroadcast to the Albany-Schenectady area where Duval picked it up in the home of John Gilmour, GE television program director.

Cath-Ray's New Set

CATH-RAY Television Corp, New York, has introduced a new lowpriced combination sight and sound receiver to retail at \$149.50. Instrument, a console model, has a 7-inch tube for direct viewing in the front of the cabinet and 23 other tubes, and features the "Syncroloc hold," a special circuit designed to keep the pictures locked in Synchronization at all times.

Video Receiver Prices Sharply Reduced by GE ALSO deeply interested in television, with several stations in operation or building and with production line geared for market demand. BROADC

Don Lee Speeding Plans For New Video Station

WITH all legal obstacles cleared, Don Lee Broadcasting System, Los Angeles, is speeding up plans to erect and operate a television station on Mt. Lee, 1,700 feet above Hollywood. Blueprints have been approved, and it is expected that work will start immediately. Thomas S. Lee, president of the organization, proposes to build studios and facilities at a cost of more than \$250,000 and move the Don Lee telecaster W6XAO from downtown Los Angeles to the new site. He plans to have it in operation by Sept 1.

The FCC recently approved removal from downtown Los Angeles and also assigned the transmitter a new channel. Los Angeles City Council and Planning Commission have sanctioned the move. Road work to the new site is now under way and will be finished by early April. Don Lee has also made application to initiate experiments in frequency modulation. If granted, it is planned to install the transmitter and antenna in a special building on Mt. Lee.

Porter Named by AFRA As Field Representative

JAMES PORTER, who has a background of some ten years in union organizing and negotiations, has been appointed national field representative of the American Federation of Radio Artists. Although Porter has no previous radio experience, AFRA executives stated they felt this lack was more than outweighed by his history in other labor fields. Following a week in Charlotte, N. C., he is going to Detroit on April 1, where he will establish temporary headquarters for organizing activities in that area.

A contract for staff announcers at KOA, Denver, has been negotiated by Vic Conners of the union's San Francisco office as the first step in a drive to sign up all Denver stations before the AFRA convention, to be held there in August. Contract, which follows the standard form set up by AFRA and the networks for M. and O. stations, calls for immediate raises for announcers. Station is the fourth NBC owned and operated outlet to sign with AFRA in the past few weeks, others being WBZ-WRZA, Springfield - Boston, and WMAL and WRC, Washington.

AFRA transcription code is still in the relination, ac-

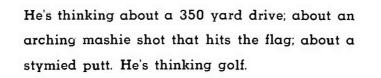

A 25-WORD STATEMENT WHICH HAS ALREADY WON ITS OWN It has proved most -----Hective and leanomical in-I LIKE WKY BECAUSE: trengthening-our-posite with poblers-and-dea MPSell. gasoline and oil Heve Underson FIRM Underson - Prichard Will, NAME

When one of the world's largest refiners of industrial naphthas began to expand the marketing of a branded gasoline through independent Oklahoma jobbers it selected WKY to merchandise that gasoline to consumers. Gallonage increased immediately. The number of jobbing accounts mounted. But of even greater importance was the effectiveness of WKY in bringing about a closer relationship between the company and its jobbers and their dealers. WKY planned and produced the program responsible for this merchandising success. Through a seven-piece string orchestra

with vocalists, this show offers fifteen minutes, five days a week, of the kind of popular music WKY's statewide listening audience goes for in a big way.

ANDERSON-PRICHARD OIL CORP. is one of the largest independent producing, refining and marketing organizations in Oklahoma. Its history as refiner dates back to post-war days of 1922.

shoots a 66 ?

What's he thinking when

And what's he thinking when he reads BROADCASTING? He's thinking radio.

BROADCASTING means radio advertising. It's 100% radio all the time. Its 8,000 circulation blankets your prospects. You know you're reaching the right people when you sell your story through BROADCASTING.

They're Radio Minded when they read BROADCASTING

SPONTANEOUS was the tribute paid by listeners to Sportscaster Art Bramhall, of WHBL, Sheboy-gan, Wis., for his descriptions of the home games of the Sheboygan the home games of the Sheboygan Redskins, up among the leaders in the National Professional Basket-ball League. Coming as a complete surprise, WHBL listeners sudden-ly popped up during one of the game broadcasts with \$52 to buy Sportscaster Bramhall a watch. Here at the presentation ceremonies are (1 to r) Announcer Clair Stope Here at the presentation ceremonics are (1 to r) Announcer Clair Stone, of WHBL; one Mr. Froelich, rep-resenting the listeners, and Mr. Bramhall, who also received sundry gifts of clothing and merchandise. The whole thing was arranged by listeners, who even refused to ac-cept a contribution from Ed Cuniff as director of WHBL.

Small Loan Radio Ban **Proposed in New Jersey** A BILL asking \$25,000 for the State attorney general to finance State attorney general to finance a campaign against radio broad-casts of small loan companies was introduced in the New Jersey State Assembly in March by Peter P. Artaserse, Democratic assem-blyman. The measure would au-thorize the attorney general to employ investigators, commenta-tors and lecturers and to use any radio station in the State in an attempt to counteract radio adverattempt to counteract radio advertising which might be construed to

tising which might be construed to be against public interest. "The purpose of this bill," com-mented Mr. Artaserse, "is to ex-pose the vicious practices of the small loan racketeers in soliciting loans by the use of radio." In a companion statement he added, "Every type of rosy picture is pre-sented to make it attractive for people to run themselves into debt people to run themselves into debt. Nothing, however, is ever said about the interest they have to pay; nothing is said about the facts that they have to pledge their furniture as collateral; nothing is said about putting up life insur-ance policies and bartering away ance policies and bartering away their securities for these loans." It was the State's duty to protect the people, he declared. Several Assem-bly members have introduced bills to cut from $2\frac{1}{2}$ to $1\frac{1}{2}$ % the month-ly interest rate on small loans.

Miss Hackett to KROW ELMA LATTA HACKETT, after three years on KSFO, San Francisco, has moved her Friendly Homemaker participation program to KROW, Oak-land, managed by Philip G. Lasky, former KSFO manager. Currently on KROW she will handle Cook Book Quiz sponsored by Miller Packing Co. Mr. Lasky announced he plans to build an elaborately equipped electric kitchen for Miss Hackett, who is a graduate in home economics of the U of California and U of Oregon. She will continue her lecture work under the auspices of KROW. She was suc-ceeded at KSFO by Ethel Hawes, formerly of Cleveland.

Tries All Three

BILL PENNELL, announcer of WIOD, Miami, claims the distinction of having worked on all the major networks within a period of two months. While they were keyed from Miami, the Wal-ter W in chell and Milton Berle programs on NBC, Ripley's program on CBS and the Hialeah Park races on MBS were all handled by Pennell. Incidentally, Win-chell on the Jergens Journal made the first announcement distinction of having worked made the first announcement of Pennell's angagement to Margaret McFarland of Atlanta, whom he will wed in the spring.

Illicit Operator Fined

FOR conviction on charges of oper-ating an unlicensed radio station and operating a station without an operator's license, Russell Callender, of St. Paul, was fined \$25 on each of the two counts by the U. S. District Court, St. Paul. The violations were uncovered by FCC inspectors.

WCBM Technicians to ACA

TECHNICIANS of WCBM. Balti-more, have signed a one-year contract, retroactive to March I, with ACA. providing for wage increases, vaca-tions with pay, a 42-hour week, time-and-a-half for overtime, and hiring through ACA. The agreement was ne-gotiated for ACA by Sidney Adler. field representative of the Broadcast Division. Division.

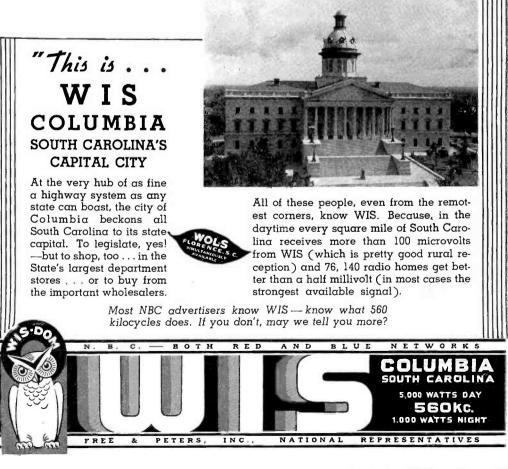

WFIG, Sumter, on Air

WITH T. Douglas Youngblood re-turning to his native city to become manager, the new WFIG, Sumter, S. C., went on the air March 15 with a dedicatory broadcast in which the mayor and other city notables as well as mayors of surrounding communities participated. Licensee of the station, which last July was authorized to construct with 100 watts night and 250 day with 100 watts night and 250 day on 1310 kc., is Julius S. Brody, for-merly connected with a local dry goods firm. Manager Youngblood recently was with the sales staff of WCOS, Columbia, S. C., and for-merly was manager of WFOR, Hat-tiesburg, Miss., and commercial manager of WRBL, Columbus, Ga. Program director is John Sherman, formerly with WTMA, Charleston. Chief engineer is Robert E. Liver-ance, formerly with WGBR, Golds-boro, N. C., and WFTC, Kinston, N. C. George Crawford, formerly of WSPA, Spartanburg, S. C., and WAIM, Anderson, S. C., is staff announcer; L. E. Rish, formerly with WCOS, operator; Miss Alison Keels, continuity chief. The station is RCA equipped throughout, with a 185-ft. Wincharger radiator. on 1310 kc., is Julius S. Brody, for-

Bing Crosby Honored

Bing Crosby Honored BING CROSBY, star of the NBC Kraft Music Hall, sponsored by Kraft Cheese Co., and also a directorate member of KMPC, Beverly Hills. Cal., has been awarded the United States Junior Chamber of Commerce distinguished service key for the young man under 35 years of age who contributed most to his com-munity during 1939. It was in recog-nition of his contribution in radio, motion pictures and sportsmanship.

ESTERN ELECTRIC equipment WESTERN ELECTRIC equipment and a Blaw-Knox tower have been ordered for the new KWFC, Hot Springs, Ark., to be headed by How-ard A. Shuman, former commercial manager of KTHS. Mr. Shuman re-ports that delays in the construction of the new Malco Theater Bidg, may delay starting date until June or July although it had first been planned to have the station on the air April 15.

have the station on the air April 15. GATES RADIO & Supply Co., Quin-cy, Ill, has sold remote amplifier equipment to KVNU. KSOO, WTBO, WCOA, WFDF, WFTC, WJMS, WCARI WEW, WPAR and to radio room of House of Representatives, Washington. Company also has deliv-ered 27-C limiting amplifiers to WAGF WGTM, WJMS and WHBU. Gates American Corp. has sold a 250-A transmitter complete with peak limit-ing amplifier and antenna tuning equipment to KIUP, Durango, Col., and 25-IA precision frequency control and 25-A precision frequency control units to WEOA, Evansville, and Co-lonial Broadcasting System, St. Johns, Newfoundland.

NEW transmitter building of CKCL, Toronto, is well under way at Scar-borough, nine miles from the studios, where a 46-acre farm has been pur-chased for the new 1 kw. transmitter to go on the air about July 1. The station building, of modern design, heated by oil and air conditioned, with living quarters, is a one-story build-ing 40 x 50 feet, with basement. Two 200-foot vertical radiators built by Ajax Engineers Ltd., Toronto, are being placed 1,060 feet apart to give CKCL the first directional antenna in Canada, being installed because the transmitter location is near the shore of Lake Ontario. A Marconi 1 kw. transmitter is being installed. The en-tire cost is expected to be about \$70,-000. NEW transmitter building of CKCL,

CKWX, Vancouver, will begin opera-tion of its new 1,000-watt transmit-ter this summer, according to Reg Dagg, manager. The station is installing a Collins transmitter purchased from the Canadian Marconi Co. at the new site on Lulu Island. A 260-foot Ajax Engineers quarter-wave vertical antenna is being erected for operation on 950 kc.

KFXM, San Bernardino, Cal., has contingently purchased an RCA 250-watt transmitter and associated equipment.

GE Edison Films

NINE REELS of film and a recording of the inventor's voice made in Schenectady during his life have been loaned to Metro-Goldwyn-Mayer by General Electric Co. to help make the movie of the life of Thomas Edison. The movie is being released in two parts, the first already released with Mickey Rooney as star and the second part, for which GE is furnishing not only the films but other data, to star Spencer Tracy.

RCA announces an ultra-high fre-quency antenna MI-7823-A fabricated at the factory for specified operating frequency and requiring no adjustment after installation.

W9XYH, the FM adjunct of WEBC. WDATH, the FM adjunct of WEBC. Duluth, which went on the air March 15, is utilizing General Electric equip-ment and not a WE transmitter, as erroneously reported on page 30 of the March 15 BROADCASTING.

RADIO Engineering Laboratories Long Island City, has issued a 24-page booklet on frequency modulation, containing photographs and descrip-tions of a number of FM installa-tions in New York and New England in addition to data concerning the ap-paratus manufactured by REL.

FOLLOWING completion of the base FOLLOWING completion of the base construction for its new antenna, 36 concrete piles, reinforced with steel, driven 110 feet into the cedar bog at the transmitter site at Kearney, N. J., WOV, New York, has started erec-tion of the tower, which will be 350 feet high, with a 40-foot "top load-ing" umbrella. Work is under the di-rection of R. E. Study, chief engineer of WOV.

ington represen-tative of the na-tional Graybar organization, has be en announced by A. J. Eaves, general telephone sales manager. Mr. Jones will su-pervise Washington activities re-

Mr. Jones

lated to Western Mr. Jones Electric broadcasting equipment sales. He became interested in radio in the pre-broadcasting era of spark transmitters and crystal de-tectors. Since 1921 he has engaged in radio construction, sales and service, amateur and broadcast station operation and, more recently, tion operation and, more recently, broadcast engineering and equip-ment sales. From 1933 until join-ing the Washington Graybar staff in 1935 he was associated with Jansky & Bailey, consulting radio engineers, specializing in field in-tensity surveys and allocation en-cipacing gineering.

IT DOESN'T COST-"It Pays"

> A Gates American transmitter has never cost a Broadcaster one single penny. Reason? From the day they are turned on the improved signal, the new high fidelity transmission quality and that "Means Business" appearance brought much more business than the pro-rata cost of a complete Gates transmitting plant over a two-year period.

> 250 watters can buy Gates American either for cash or on convenient terms. Investigate the Gatesway to betterlower cost broadcasting.

The complete new 1940 Gates Catalog, exclusively broadcast equipment, yours for only requesting on your station letter head.

ROBERT F. WOLFSKILL, assistant manager of Commercial Radio Equipment Co., Kansas City, has been assigned, effective May 1. to head the company's new branch office at Crossroads - of - the - World, Hollywood. FRANK J. ELLIOTT, formerly of KWBG, Hutchinson, Kan., is now operator at KVSF, Santa Fe, N. M. ARTHUR OLSEN, engineer at WOV, New York, on March 30 married Helen Poll.

PRESTO offers a new Dual Turntable Transcription Recorder

. . . complete in a single unit

This new, moderately priced Presto Model F recorder makes the perfect installation for broadcasting stations, colleges, advertising agencies and personal recording studios. It records continuously, without interruption, on records up to the 171/4" master size and also re-records from one record to another. The quality of the recordings made on the model F recorder makes them suitable for use by any broadcasting station.

Note these operating conveniences:

• The exclusive Presto rubber-rimmed turntable driven directly by a steel pulley on the motor shaft, a drive system that eliminates idler wheels, belts, gears and other parts subject to rapid wear. Speed shiftlever changes instantly from 78 to 331/3 R.P.M.

• Tables are equipped with the Presto 1-C high

fidelity cutting head which records uniformly a range from 50 to 8,000 cycles and completely modulates the groove at a pitch of 112 lines per inch.

• A vertical damper eliminates vertical modulation in the groove and prevents rapid changes in groove depth due to surface irregularities in the disc.

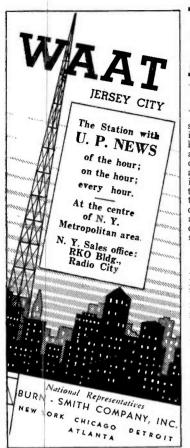

• A time scale on the cutting arm shows the correct starting point for all sizes of discs and elapsed recording time at both 78 and 33¹/₃ R.P.M.

• Amplifier gain 125 DB, output 10 watts. Amplifier controls include a two microphone mixer, playback gain control, combination control which increases the high frequency response for 331/3 R.P.M. recording and attenuates the high frequencies when playing commercial records, low frequency equalizer and a switch for changing instantaneously between cutters for continuous recording or re-recording.

• The complete equipment mounts in a wood table (Length, 67"—Depth, 21"—Height, 49") attractively finished in two tones of gray with silver trim. Height of turntable above floor level, 32".

For descriptive folder and price quotations, write:

PRESTO RECORDING CORPORATION 242 West 55th St., New York, N.Y.

Purely PROGRAMS

TEW audience participation program with a sports slant, Sporto, has started on WGL, Fort Wayne, Ind., under sponsorship of Harvey Bros., local cloth-iers. As part of the half-hour weekly show, featuring John Hackett and Neil Searles, printed forms containing names of athletic figures and events are offered listeners during the week. The program hints at the names via sound effects and con-tinuity. Listeners check names rec-ognized, trying to get five in a row a la bingo. Listeners presenting card with five names in a row at sponsor's store win a necktie.

Wits vs. Nits

wits vs. Nits LOCAL clubs provide participants for Battle of Wits & Nitwits on WDWS, Champaign, Ill. Carol Lay-mon is quizzer. Question senders get theatre tickets. Another series, Going Ahead with Rantoul on WDWS is actively supported by the town's Chamber of Commerce.

From the Capital

WAAF, Chicago, has inaugurated a new series of Sunday features titled Under the Capitol Dome which consists of a resume of the important developments which took place in Washington the previous week. Quarter-hour shows are heard at 4:45 p.m.

Page 74 • April 1, 1940

In the Army Now

TROOP personnel from Fort Benning, center of peace time concentration of soldiers, provides the talent for the Army Hour broad-cast over WRBL, Columbus, Ga., Saturday nights. The half-hour variety show, originating in the new Army YMCA in Columbus, is spon-sored jointly by the YMCA and WRBL. Inaugural broadcast March 16 featured talks by Manager J. W. Woodruff, the mayor of Columbus and army officers.

Decision by Public

EXPRESSION of public opinion on matters of current interest is in-vited for *The Public Jury* heard over WMBD, Peoria, Ill. Forms presenting the facts on the chosen controversial issue are submitted to 12 selected persons. Space is provided for a verdict of yes or no and a brief explanation of the verdict. Two announcers alternately read the explanations while a third gives names and summarizes the verdict.

From Honeymoon Hdqrs.

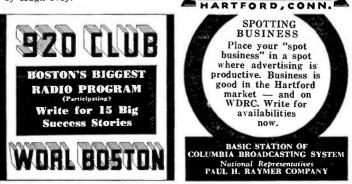

BROADCAST from the recently publicized Honeymoon Isle off Florda was effected March 16 through WSUN, St. Petersburg, Fla. De-scription of the project and interviews with honeymooners were con-ducted by Bob Wilbur of WSUN and C. M. Washburn, promoter of the project. Since no telephone communication was available to the island, a shortwave relay to a land receiving station was necessary.

The Deacon's Speakin'

ENTIRE life of a small town is reconstructed in a new one-man show recently started on WGN, Chicago. The thrice-weekly 15-minute feature is titled The Deacon and features John Howard in monologues and stories during which he introduces various typical Main Street characterizations, Included in each performance are two hymns or folk songs.

Ladies' Hour

FEATURING woman's angle news and chatter by Atlanta Journal personalities and music of a staff orchestra, For Women Only on WSB, Atlanta, covers society gossip, garden news, theatre and radio, fashions, foods, books and women in the headlines. The show is writ-ten by Bob Pollock and announced by Hugh Ivey.

Two at a Time

BREAKFAST CLUB COFFEE Co., Los Angeles (coffee) is sponsoring a series of sidewalk reporter broad-casts, thrice weekly, featuring Ernie Smith and Bert Buzzini on KJBS, San Francisco. The inter-views are conducted in front of Benatar's Drug Store, likewise a KJBS account, which now is serving exclusively Breakfast Club Coffee over its lunch counter. Be-natar's purchased 2,500 pounds of Breakfast Club Coffee when the interview series started. Thus KJBS has been instrumental in bringing actual new business to two of its clients-the coffee sponsor and the drug company, the latter through sending many observers at the sidewalk broadcasts into the store, The coffee account was placed through Lockwood, Shackelford Adv. Agency, Los Angeles.

Quiz of the Stars

NEW quiz idea program started on KFWB, Hollywood, has motion pic-ture name talent answering questions on the film industry each week. Titled, Ask the Stars, the studio audience half-hour program is similar in format to Information Please, and has five participants each week. George Jay projects questions about film stars, pictures and the industry in general, which are sent in by listeners. If guest talent fails to give the correct answer, an encyclopedia is given the question sender. ste *

Ambitious Youth

AMBITIONS, hobbies and activi-Ambilitons, hobbies and activi-ties of the younger generation are presented to KGVO, Missoula, Mont., listeners on *Citizens of To-morrow*, half-hour weekly program. Six children, selected on the basis of letters they submit, are inter-viewed informally. Sponsored by Sunnymaid Bakery for Pinocchio Bread, the broadcast is conducted by Jimmy Barber.

35 Spotlight on Rackets

UNDER auspices of the local Better Business Bureau, KOMA, Oklaweekly series, Rackets That Rob, designed to expose merchandising rackets. Each program dramatizes a different racket. Written and a different racket. Written and produced by the KOMA production department, the programs feature talent of the Oklahoma City Theatre Guild. JUNIOR LEAGUE members of Greater Cleveland are participating in a weekly program on WGAR, *Junior League Radio Workshop*, presenting in dramatized form the functions of the various welfare agencies. Scripts are prepared by League members and supervised by Wayne Mack, WGAR drama director. Golf hints by leading local "pros", top scores of the week, recognition of "hole-in-one" players and soothing music will comprise *The 19th Hole* on WGAR, Cleveland, beginning in May and extending into September. The idea was developed and will be produced by Maurie Condon and Dave Baylor of the WGAR staff.

Freaks of Sports

Freaks of Sports NEW daily feature, Quirks in Sports, carried as part of Morey Owens daily Sports Review on WROK, Rockford, II., spots the yarns of a well-known sport official—kept anonymous except for calling him "referee" — who has made a hobby of collecting stories of unusual happenings in sporting events. Owens rewrites these tales of freak plays and such and highlights them on his sports show.

Edgar Allen Poe Dramas

KECA, Los Angeles, has started a new weekly half-hour series of dramatized stories by Edgar Allen Poe. Titled, Once Upon a Midnight, the series is adapted for radio by Forrest Barnes, Hollywood writer. Glan Heisch, program manager of KECA produces the series which features Ted Osborn as Poe. Claude Sweeten's orchestra provides incidental background music.

Art and Antiques

NEW program, The American Treasure Chest, recently made its bow on KPO, San Francisco. Don Thompson, m.c. takes art objects, curios, antiques, etc., and asks studio guests to identify them and give information, history and anecdotes. Thompson then tells the complete story of the object, sent in by listeners, comparing the information of the experts in the studio to the actual facts surrounding the Americana concerned.

News From the Counter

The 'Quiz Clock'

A. & S. LYONS, New York production agency, is offering for sponsorship to stations and agencies a new type quiz program What *Time It It?*, designed for radio listeners rather than a studio audience. Written by Joe Liebman, the show is based on a "quiz clock" which listeners manipulate to answer the questions they hear on the program and then send in to the station. Winners are automatically checked on the dial of the clock and cash prizes are then awarded by the sponsor.

* * *

Clipped From the Films NOVEL new show of KLZ, Denver, Off the Sound Track, is carried at 10 p.m. Saturdays directly from the local Orpheum Theatre. With a brief opening and closing by an announcer, the program is picked up from the sound track of the film showing at the theatre, affording an actual 15-minute sample of the attraction. The timing on the motion picture story is carefully worked out, with announcer's continuity written to fit the scene and

* * * Insurance Problems

JOSEPH PATRICK LEE, New York in sur an ce consultant, on March 20 started an audience participation program titled What You Should Know on WEVD, New York, during which Lee discusses insurance problems with members of the studio audience. For over a year, Lee has been conducting quarter-hour programs and using snot announcements on WAAT and WHOM, Jersey City, and WARD and WLTH, Brooklyn.

BOSTON'S biggest man and biggest horse barged into the studios of WBZ in mid-March for a special broadcast commemorating evacuation of the city by British troops. Edward J. (Knocko) Mc-Cormack, impresario of the commemorative parade, hoisted his 270 pounds on this 2,800-pound pensioner of the fire department. The special booties on Knocko's mount prevented damage to the studio floor during a sugar cube-induced canter. Fred Hoey, sports commentator, described the carnival of heft.

112 QUARTER HOURS MORE!

action.

Totalling 203 quarter hours for this week of March 18, WSAI already has 112 quarter hours MORE BUSINESS than last year during the same week.

And our contracted-for business volume is scheduled to up and up. Within a month, Wheaties and Mobilgas add 48 weekly quarter hours of baseball.

For seven consistent months, a steady influx of NBC Blue and Red network advertisers, local and national spot advertisers and announcement users has kept pace with WSAI's increasingly attractive programming.

All these facts have made WSAI the choice of those who wish more business sent their ways!

Represented by International Radio Sales, New York • Chicago • Los Angeles

WITH 3,092 persons participating, the Twin City Radio Popularity Con-tests conducted by the St. Paul Shop-per and Minneapolis Shopping News was concluded last month with the following voted most popular station artists in this order: George Higgins, WTCN; Cedric Adams, WCCO; "Whoopee" John, WTCN; Halsey Hall, KTSP; Benn ett Orfield, WTCN; Clellan Card, WCCO; Bee Baxter, KSTP; Bob De Haven, WTCN; Rollie Johnson, WCCO; Brooks Henderson, KSTP. Favorites of Minneapolis voters were, in order, Cedric Adams, WCCO; Clellan Card, WCCO; Eddie Gallaher, WCCO; Florence Lehman, WCCO; George Higgins, WCCN. Contests were orig-inated by WCCO, which put up the prize money—\$50 to each paper, with the winners in each contest the per-sons who picked the right personali-ties and got them in the right order. WCCO: contest.

contest. OPENING of the Columbia Lecture Bureau, division of Columbia Artists Inc., in Boston was marked by a prevue at the Copley Plaza Hotel, directed by Margaret E. Richardson. New England representative. Among those booked by the bureau for per-sonal appearances in the East are Fred Garrigus and Jay Wesley, of WEEI. Boston, both of whom ad-dressed the club women present at the prevue. prevue

WHAT, Philadelphia, on March 30 WHAT. Philadelphia, on March 30 observed its 10th anniversary and started "Old Home Week", during which open house was held for listen-ers and former WHAT artists. The present staff is headed by Milton Laughlin, with Chester a'Beckett, Sam Serota and Joe MacCauley as an-nouncers, and J. Chet Geise, techni-cal supervisor.

WITH Arizona's tourist season in full swing and numerous radio person-alities from various parts of the na-tion sojourning there. Fred Palmer, manager of KOY. Phoenix, admits that he has been spending more time lately staging his nationally famous mid-desert steak roasts than running his station and the Arizona Network. Guests at the latest such function in-cluded Glenn Snyder, manager of WLS, Chicago; Al Hansen, manager of KFBB, Great Falls, Mont.; Jack Laemmar, manager, radio contract de-partment, Blackett-Sample-Hummert, Chicago, and Burridge D. Butler, owner of WLS and KOY.

KOIL, Omaha, has added to its pro-duction staff, a 12-piece studio orches-tra under direction of Prof. Gary. The band started early in March with two commercial shows—Yaun Patrol, early morning quarter-hour ponsored by Evans Laundry and Emerson Sara-toga Laundry Omaha, and the half-hour weekly Musico show for Falstaff heer

ADDED revenues during dull Janu-ary and February local seasons were derived by KELD. El Dorado, Ark., by broadcasting all home high school basketball games as well as four tour-sements in Saoth Arkansa and North naments in South Arkansas and North Louisiana, all sponsored. Waymond Ramsey and Roger Laux handled.

WMAQ, Chicago, has arranged a tie-up with the *Chicago Daily News* to broadcast Illinois primary election results April 9. Special broadcasts throughout the evening will come from the editorial rooms of the newspaper.

CONDUCTED by Carl Vandagrift. originator of the Views of the Editors program, WOWO, Fort Wayne, Ind., launched a sequel in Tri-State News. a 15-minute weekly roundup of news in the Fort Wayne area, culled from weekly and daily newspapers with their permission. Program is expected to promote relations with the press.

BASEBALL training camp color is transplanted daily to WEMP. Mil-waukee. listeners via transcriptions made by Mickey Heath, manager of the Milwaukee Brewers at their Ocala, Fla., base. Interviews with baseball celebreties, latest baseball fashes and a daily award of \$5 to the player telling the most humorous baseball anecdote constitute the pro-gram. An engraved cup will be given for the best story over the period of a season. a season.

WHIO, Dayton, claims to be the only Ohio station to carry a broadcast from the scene of the March 16 ex-plosion in a coal mine near St. Clairsville, O. Dick Boll, announcer, and Lester Spencer, program direc-tor, left for the scene a few minutes after the blast and recorded a 15-minute program. The mobile unit traveled a total of 480 miles.

WOR. Newark, on April 5 will broadwork newark on April 5 will broad-cast a special half-hour program from the dedication ceremonies of the in-dustrial recreation center constructed by the Bristol-Myers Co. at Hillside. N. J. Lee Bristol, vice-president and secretary of the company, will act as m.c.

WQXR. New York. on April 1 is raising its commercial spot announce-ment rate from 33% to 50% because its symphonic musical programs permit the use of only a limited number of such announcements per hour. The such aunouncements per hour. The base rate will remain at \$250 per hour. Evening spots will be \$35 as against the former \$25, and daytime spots will be \$20 instead of \$15.

WBIG. Greenshoro, N. C., broadcast the third annual Greenshoro Golf Tournament at Starmonut and Sedge-field Country Clubs. The broadcasts, 15 in number, each for 15 minutes. were sponsored by the Coca Cola Bot-tling Co.

PANEL discussions of sports by a forum of leading sportswriters is the formula of the WKY. Oklahoma City, duily *Roundtable of Sports* started daily Roy March 25.

FORM RADIO CLUB Quaker City Social Group on Permanent Basis

FEELING between newspaper and radio men in Philadelphia which resulted when the newspapermen's Pen & Pencil Club black-balled the membership applications of radio men, although many had been admitted to previous membership, resulted in the formation of the Sta-tic Club of Philadelphia. Functioning primarily as a social organization comprising program and pro-duction directors, news and sports commentators, announcers, publi-cists and radio editors, an organization meeting on March 20 resulted in the election of the following officers

ficers: Bill Lang, KYW, president; Mort Borow, WPEN, vice-presi-dent; Eddie Mayer, WIP, recording secretary; Pat Stanton, WDAS, treasurer; Powers Gouraud, WCAU, chairman of the board of directory which includes James directors, which includes James Allen, WFIL; Joe Hastings, radio columnist; Fred Wood, WIP; and Mort Lawrence, WCAU. Perma-nent quarters will be established.

NBC's foreign pickups from 29 coun-tries during 1939 totaled an all time high of 760 broadcasts, according to A. A. Schechter, manager of news and special events, the number jumping nearly 200 over the 1938 total of 589 foreign pickups. These pickups do not include those made in United States territories and possessions, nor from Central and South America or Can-ada. News broadcasts made up 95% of the total, the other including musi-cal programs, holiday events, World's Fair salutes and "on the spot" war broadcasts. broadcasts.

TO COMMEMORATE the 50th an-niversary of the Cudahy Packing Co., the company devoted the March 19 broadcast of Bachelor's Children, pre-sented serially on CBS, to a drama-tization of the development of the American packing industry as it par-alleled the growth of the company since its start in 1890.

A SERIES of auditions has been started by Toledo Civic Opera Assn. in collaboration with WSPD, winners to receive four-week contracts to sing in summer operas in which New York professionals will take leading roles.

KWJB. Globe, Ariz., on March 22 dedicated new downtown studios dur-ing a statewide salute by the Ari-zona Broadcasting Co. network. in-cluding KTAR. Phoenix; KVOA. Tue-son; KYUM, Yuma, KCRJ, Jerome. The station had been staging pro-grams from the transmitter building.

REPRESENTATIVES of various New York broadcasting stations met on March 15 with the group of Westchester women, who recently instituted the "I'm Not Listening" campaign which seeks to boycott radio programs considered objectionable. Among those speaking in defense of current radio serials at the luncheon meeting in Mt. Vernon were Donald Shaw, executive vice-president of WMCA; Leslie Evan Roberts, a vice-president of WMCA, and Al Simon, publicity director of WHN. Speaking for the women were Mrs. Everett L. Barnard, chairman of the campaign, who reported that the movement had sprend to 39 States, and Mrs. Charles M. Phelps Jr. of Bronxville.

TO PROVIDE room for a new directional antenna this summer, a 12½acre site adjacent to the present transmitter has been purchased by KDYL, Salt Lake City.

A UNIQUE angle was added to the annual Easter sunrise service broadcast from the Grand Canyon's Shrine of the Ages over the Arizona Broadcasting Co. Network, when J. Howard Pyle, KTAR, Phoenix, program director described the rising sun from the floor of the canyon, one mile below the service on the rim.

MBS on April 3 will shift the news broadcasts by John Steele and Waverly Root, the network's London and P a r is representatives respectively, from alternate Fridays to an alternate Wednesday schedule, 11:15 to 11:25 p.m., which will continue throughout the spring. Sigrid Schultz, head of the Berlin burean of the Chicago Tribune, continues on MBS alternate Sundays at the same time.

Sundays at the same time. WINNERS of the 26-week search on the fifth series of Metropolitan Opera Audition of the Air programs for the best young American talent worthy of a place with the Metropolitan Opera Co. were announced on the March 24 program, sponsored on NBC-Blue by the Sherwin-Williams Co. Miss Eleanor Steber, soprano, and Arthur Kent, baritone, were the winners, each receiving a bronze plaque and \$1,000 from George A. Martin, president of Sherwin-Williams. E me ry Darcy, teuor, received an Audition Fellowship of \$500 as runner-up.

WOR. Newark, on April 3 will take over the Where Are You From f series of weekly programs, which have been tested on WQXR, New York. WQXR retains an interest in the program after the move in view of possible sponsorship of the program. Dr. Henry Lee Smith, English lecturer at Columbia U, New York, conducts the program, during which he attempts to tell members of the studio what section of the country they are from after hearing them speak certain key words.

KVOE, Santa Ana, Cal., now located in new offices at 307 N. Broadway, that city, on March 27 held its formal opening with city and county officials attending, and Ernest L. Spencer, general manager, acting as host. Besides many exhibits pertinent to modern radio, guests witnessed the receiving of a television program from WXAO, the Los Angeles telecasting station of Don Lee network, of which KVOE is an affiliate.

AS ITS PART in observing the 12th air anniversary of Amos 'n' Andy, WBNS. Columbus, sent a greeting consisting of 2.500 birthday cards signed by Central Ohio listeners.

WKBN, Youngstown, O., has started two new safety campaign programs -the quarter-hour Backseat Driver series, under auspices of the American Legion, and safety talks by traffic experts of the Youngstown police department.

WDRC, Hartford, Conn., has been publicly cited by Gov. Baldwin, for its continual policy of highway safety reminders. Short, casual announcements at the conclusion of all programs urge motorists and pedestrians to be cautious. WBT. Charlotte, N. C., in mid-March clained a scoop on its coverage of the fire which destroyed an 80-family apartment house. largest blaze in the city's history. The fire started just after midnight when WBT's Midnight Dancing Party went on the air. A phone call from an apartment tenant mought WBT announcers to the scene a few minutes after the blaze was discovered, before the fire department arrived. Don Kerr, WBT announcer phoned a running story of the confagration to the studio from a filling station within sight of the fire, and WBT carried the descriptions at threeminute intervals between recordings on the Dancing Party brondcast. First other news did not come until five hours later, with early morning newspaper editions, according to WBT.

paper editions, according to w B1. SPORT quiz promotion contest on CJLS, Yarmouth, N. S., conducted by Fin Hollinger, station manager, was won by former Toronto footballer, Jim Harnett, whose prize was a trip to his home town to see the playoffs of the Toronto Maple Leafs and Chicago Hawks hockey teams. Hollinger also hails from Toronto, so CJLS was featured by Toronto sport columnists of the daily press.

KFJZ, Fort Worth, Tex., again this season carried the broadcasts of the Fort Worth Cats exhibition games, with Zack Hurt, haseball commentator, handling the play-by-play. The broadcasts, extending from March 23 to April 9, are a buildup for the official opening of the 1940 season, during which KFJZ has exclusive broadcast privileges. The season opens April 12.

ENZO COTRUVO. director of the Italian Hour on WGAR. Cleveland. was instrumental in re-uniting a father and son who had not been together in 25 years. Cotruvo received a letter from an Italian woman in a local hospital who asked his help. She explained that she had left her husband and taken their two year old son 25 years before. Now she was eager that the two be united. Cotruvo broadcast the family together again within the week.

TO MAKE way for the erection of a new 11-story office building, WMAZ, Macon, Ga., has moved to temporary studios on the top floor of the Graud Theatre Bldg. Upon completion of the new structure, WMAZ will occupy the top floor.

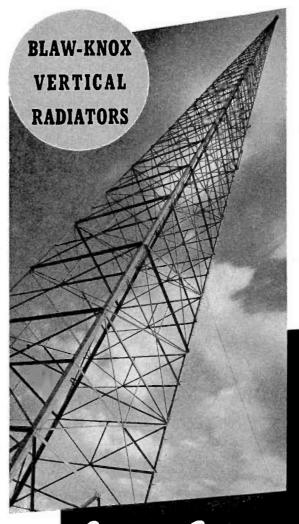

CKY. Winnipeg. celebrated its 17th birthday March 13, having opened in 1923 as the first government-owned broadcasting station in Canada. The station is still owned by the Manitoba provincial government, but the monopoly which the province held for many years is no longer operative, other stations now being operated in Manitoba province by private enterprise.

enterprise. WHK, Cleveland, accomplished a novel pickup recently when the Cleveland fire department staged a demonstration race between three old and three new fire trucks along the city's Lake Shore Drive. Announcer Carl Mack boarded one of the trucks with a 10-watt pack transmitter and broadcast a running description of the event, the pack transmitter signals being picked up directly by WHK's Terminal Tower receiver.

FOR THE 16th consecutive year, KECA, Los Angeles, on March 22 presented its annual Good Friday dramatic feature. *The Terrible Meek*, and also for the first time released it to NBC-Blne Pacific network. Written by Charles Raun Kennedy, it was originally intended as a one-act play for three voices to be presented in darkness. Time and place are indefinite, but throughout action is paralleled to the Crucifixion.

PACIFIC Coast intercollegiate ski championships were broadcast for the first time from the Yosemite Valley by KSFO. Sau Francisco. R. W. Dumn, special events director of the station; John Nelson, announcer; R. V. Howard, technical director, and Clarence Stevens, engineer, conducted the broadcasts three days via KSFO's portable shortwave transmitter.

Industry Gives FM Views at Hearing

FCC Hears Witnesses Tell of Advantages, Limitations

(Continued from page 21)

of the AM transmitter—a 5 kw. transmitter costing about \$20,000 and 1 kw. from \$8,500 to \$9,500. These prices will drop, he predicted, when volume production is attained. The relatively higher cost of FM receivers, also reflected from limited production, stems from the need for higher range audio and loudspeaker construction, he explained. The present lowestprice console receiver with standard broadcast, shortwave and FM reception, sells for \$145, and its selling price will lower materially as production is increased, he said.

Commenting on the price factor of radio in its progressive pioneer stages, Maj. Armstrong cited his experience at the time he intro-duced his revolutionary superheterodyne receiver. Demonstrating it to a group of engineers representing RCA, Westinghouse and General Electric, he related, the con-sensus was that although operation was fine, such a set could not be built for commercial markets for less than \$400 or \$500. At this time (1924) he told them he be-lieved they could build the six-tube receiver for about \$200, and finally it was built for \$268. At present a six-tube superheterodyne set "infinitely superior" in con-struction and operation can be bought for as little as \$38, he added. During this discussion he exhibited his original commercial model of the superheterodyne receiver, the same one demonstrated to the engineer group.

Reviews Cost of Present FM Receivers

Commenting further on the price factor, Maj. Armstrong declared, "In all my inventions I have made the mistake of estimating the price too high, and it comes back in later years to confound me for lack of vision". As FM broadcasting becomes established, combination sets probably will give way to straight FM receivers, he added. Queried by Commissioner Brown,

he estimated that between 2,000 and 3,000 sets capable of receiving FM signals are now in use, divided quite evenly as to price range from the \$145 combination set to a high of about \$375. Also available and in use are table model FM sets selling for \$69.50 and up, he stated. These are constructed so that the receiver's detector circuit can be plugged into a console speaker on an AM set and operat-ing by themselves they can give high-fidelity reception, he explained, although quality of reception is limited because of the smallsize speaker in the small cabinet. He agreed with an observation by Commissioner Craven that size is a great factor in any audio system and that size of the receiving set imposes limitations in either AM FM construction.

or FM construction. "From all my experience I have found that a receiver will be supplied which will sell for a price the public is willing to pay," he commented.

Going into the Armstrong patent holdings, three exhibits—blank license agreements for operating an FM transmitter employing the Armstrong method, and license agreements for construction of transmitters and receivers — were introduced by Counsel Lohnes. The exhibits listed 15 FM patents held by Maj. Armstrong and set forth the respective rights conveyed in the licensing a g r e e m e n ts. The transmitter operation agreement also listed royalties to be paid at time of purchase, for use of transmitters under Armstrong FM patents—\$300 for transmitters with operating power of 250 watts or less, \$500 for 1 kw., \$750 for 2 kw., \$1,250 for 5 kw., \$2,000 for 10 kw., \$3,000 for 20 kw., \$3,750 for 30 kw., \$4,500 for 40 kw., \$5,000 for 50 kw. and \$50 for each additional kw.

Tells of Earnings

From Prior Inventions

Questioned on incidental phases of his licensing procedure, Maj. Armstrong explained that licenses for using his FM system were available to any operator licensed for FM by the FCC. Transmitter manufacturers have been more or less hand picked for licensing, he brought out, explaining that he carefully considered their technical skill and facilities. At present three manufacturers are licensed, he said —General Electric, Western Electric and Radio Engineering Laboratories—adding that he had "no doubt" that all manufacturers now in the broadcast field will be licensed eventually.

Asked specifically about Philco and RCA, he commented that Philco was not licensed, and as for RCA he was "not sure whether RCA's participation in FM may be considered an application or not". In certain cases, he explained, provision has been made for manufacturers to hold back a portion of the royalties on condition these funds be plowed back into FM research.

Asked by Counsel Lohnes for a capitulation of his earnings from his three early major inventions, Maj. Armstrong stated that the patent rights for the regenerative circuit and the superheterodyne circuit had been sold at the same time for a total of \$330,000 while the super-regenerative circuit patents

INVENTOR of FM is Maj. Edwin H. Armstrong, shown as he opened the hearings before the FCC March 18. What was to have been his two hour presentation resulted in a two-day appearance covering virtually all phases of broadcast allocations, economics and science.

had been sold several years later for \$425,000. As against this direct income from these three inventions, he estimated he has put between \$700,000 and \$800,000 of his personal funds into the development of his FM system.

of his FM system. Asked by the chair if he planned to sell his FM patents as he had the others, he stated flatly that he did not intend to do so, but rather would issue licenses to capable operators, believing that the art would develop faster in this manner. He has made no effort to buy other patents in the FM field, he stated, but operators holding Armstrong licenses will be fully protected in the matter of newly-patented improvements, he assured the FCC.

Asked by Commissioner Craven whether authorization of narrowband rather than wide-band operation would nullify his patents, Maj. Armstrong commented that if there is noise reduction in narrow-band operation "coming under the teachings" of the basic FM patents, then a narrow-band system also would be subject to the Armstrong patents.

Going into the corollary equipment necessary for good FM reception, Maj. Armstrong stated that although no complicated receiving antenna was needed, use of a double di-pole antenna will add materially to the scope of reception. He pointed out that directional characteristics of such an antenna would permit wider selectivity of stations as well as reception of weaker signals.

Craven Interested

In National Allocations

Explaining that he was endeavoring to get a more concrete idea of Maj. Armstrong's allocation recommendations, Commissioner Craven passed him a pair of charts prepared by the FCC engineering department showing a prospective allocating of three 50 kw. FM stations on two channels and 25 1 kw. stations on two other channels covering the New England area. Asked whether this fit into his previous statement that "hundreds"

Asked whether this fit into his previous statement that "hundreds" of low-power stations with "definitely circumscribed" service areas could operate on the same frequency and give a wide aggregate broadcast service, Maj. Armstrong protested that the specimen allocations were premised purely on geography and that he could not give any meaning answer to such a question until he had an opportunity to study the situation from its varied aspects. He pointed out that allocation on

He pointed out that allocation on a geographic basis did not amount to much, since it disregarded such important factors as topography, and stated that although conductivity was not a particularly important consideration for FM, there was a great difference between a transmitter located on a mountain top and one located atop a 200 or 300-foot building in the center of a city when FM is concerned.

Asked by Commissioner Craven about FM's capabilities in conserving frequency space Maj. Armstrong pointed out that he foresees multiplexing and binaural transmission on FM frequencies, and also that despite the 200 kc. separation in FM channels, the wide band actually occupies only $\frac{1}{3}$ of 1% of the total band, while in the standard broadcast frequencies a single station's signal, with a swing of 5,000 to 6,000 cycles, occupies about 2% of total band. FM's application to television de-

FREQUENCY MODULATION

(ARMSTRONG SYSTEM)

First to Develop

Original equipment at W2AG (Yonkers, N. Y.) and at W2XMN (Alpine, N. J.) was developed at REL in collaboration. with the inventor, Major E. H. Armstrong.

First to Produce

F-M Equipment for the following:

15 W Portable Mobile Transmitter.	1000 W High Fidelity Broadcast Transmitter	
50 W Portable Broadcast Relay.	2000 W High Fidelity Broadcast Transmitter	
50 W High-Fidelity Studio-Station Relay.	5000 W High Fidelity Broadcast Transmitter	
200 W High-Fidelity Studio-Station Relay.	50000 W High Fidelity Broadcast Transmitter	

Now in Daily Service

REL F-M Transmitters are no longer in the experimental stage, as proved by the following list of stations which cre now servicing the public daily:

STATION	LOCATION	OWNED BY
W2XMN	Alpine, N. J.	Maj. E. H. Armstrong
	Yonkers, N. Y	
	Paxton, Mass.	
	Boston, Mass.	
	Washington, D. C	
	Rochester, N. Y	
	Long Island City, N. Y	
W9XAO	Milwaukee, Wisc.	The Journal Company
W8XAD	Rochester, N. Y	WHEC, Inc.
W2XOR	Newark, N. J.	Bamberger Broadcast Service

and the following are now being built by REL:

STATION	LOCATION	OWNED BY
WGAN	Portland, Me Detroit, Mich	The Portland Broadcast.Sys.Inc. The Evening News Ass'n.

A large percentage of the construction permits now on file with the FCC calling for F-M equipment specify REL transmitters.

We invite engineers and executives to profit from our experience as the pioneer builders of successful F-M Transmitters.

before it is mounted in its shielded room. Immediately beneath is the central control desk, which contains all monitoring equipment.

To the right-1st-Power control. Next-Rectifier Unit.

These units are only part of the complete station. All units are assembled in a building particularly designed for the purpose.

Above-top-shows the power amplifier unit

pends largely on the attention given it by developmental engineers, he commented. However, its first application has been in point-topoint relay, as he predicted in 1936 he stated.

Receiver Design

Well Advanced, He Says

Most FM receiver design problems have been met, and present receivers are capable of giving firstclass service, although further improvements are likely to come, he said. He emphasized that manufacturers in bringing out the first FM sets had equipped them with audio and reproduction facilities capable of yielding the greatest benefits of FM transmission. He commented further that the industry is "on the verge of the greatest development in radio art, from a production standpoint".

FM can be applied readily to educational stations operating above 25 mc., he stated. Since these stations immediately face a receiver problem, even with AM operation, the transmitters could be converted to FM and the stations would get a ready-made FM audience, he explained. Applied to police radio, frequency space savings effected in cities probably would be eaten up as radio service was extended to the state police systems, he said.

Under cross-examination by Lieut. Jett, FCC chief engineer, Maj. Armstrong reiterated that because of bad skywave reflections in the 27-28 mc. band, he had focused his experiments on operation in frequencies above 40 mc. Mr. Jett then asked for his comment on the proposition that if 440 local stations operate, as they do, on six channels in the standard broadcast band (an average of 73 stations per channel), and if 42-44 mc. were assigned to FM operation, then at least 730 stations, and probably more be cause of FM characteristics, could be accommodated in these 10 FM channels.

As a geographic allocation this would be true, but the service areas in the latter case should not be cramped like the present local stations operating on AM, Maj. Armstrong cautioned. In order to give as wide a service as possible, he reiterated, two types of FM stations must be used, and the 50 kw. stations designed to serve wide areas could not be operated without more channels.

High-Fidelity Standard Brings Varying Views

This observation caused Chairman Fly to point to the "embarrassment of squeezing other services" for FM, which on the one hand is advanced as a means of saving ether space by allowing hundreds of stations to operate on a single frequency and on the other hand needs more and more space.

"There is no doubt that FM will relieve the congestion in the present broadcast band," Maj. Armstrong declared, adding that although he didn't know just when, he expected it "before long". However, if FM is to accomplish rural coverage to any extent, it will be necessary to have a substantial number of 50 kw. stations, not duplicated within 300 miles, he added.

A discussion of what constitutes high-fidelity was precipitated by

FOR THE GOVERNMENT at the counsel table were heads of both the FCC engineering and law departments, flanked by aids (1 to r) Andrew D. Ring, assistant chief engineer; Lieut. E. K. Jett, chief engineer; William H. Bauer, attorney; William J. Dempsey, general counsel, and Dr. L. P. Wheeler, technical information director.

Chief Engineer Jett in pursuing his cross-examination of Maj. Armstrong. Whereas the inventor had selected 15,000 cycles for high-fidelity, Lieut. Jett inquired whether 10,000 or perhaps 11,000 might not suffice and still afford greater fidelity than now available. Maj. Armstrong said there was a great deal of conflict regarding high-fidelity and that he felt 15,000 cycles is desirable to give greatest "naturalness" to reception.

Presumably aiming his questions at possible reduction of the 200 kc. band width urged by Maj. Armstrong, Lieut. Jett suggested that perhaps tests first should be undertaken to determine the necessary band widths for so-called high fidelity. Commissioner Craven observed that 8,000 cycles is the "top level" insofar as the auditory appreciation of the average person is concerned.

The effect of multiplexing facsimile on the same channel as FM is an increase in the signal to noise ratio, Maj. Armstrong said in replying to Lieut. Jett. He pointed out that only 10 kc. of the 200 kc. band is used for facsimile.

Orderly Licensing

Necessary, Says Fly

When Lieut. Jett raised the question of use of ultra-high frequency channels for network relays of FM, Maj. Armstrong said he had not gone into local programming problems which might be created by such a relay process. Lieut. Jett inquired how relay stations could provide local programs, as is done in the case of affiliates of established networks. Maj. Armstrong concluded that for purely local broadcasting he would prefer a separate service, admitting that more frequencies would be required but pointing out that in the upper reaches of the ultra-high band (above 130,000 kc.) which would be used for FM relay, plenty of channels are available.

FM could be adapted for regional network relays and a number of broadcasters have inquired about the possibility of lining up four or five stations in such regional groups, Maj. Armstrong asserted. He pointed out that the Yankee Network is now using an FM relay between Boston and Paxton experimentally with little difficulty.

Some confusion developed when Commissioner Craven and Lieut. Jett sought to ascertain just how a national type of service would be provided under two separate

systems, as proposed by the noted inventor. They wanted to ascertain whether high or low-power stations should be used on the proposed network relays and the Major said he would not want "a lot of low power stations" making up the networks.

As the cross-fire reached high pitch, Maj. Armstrong stated that in his judgment the question boiled down to the allocation of an adequate number of channels for FM and that then "all the problems would disappear". Chairman Fly, however, said that nothing could be gained by "disorganized methods of licensing" and that the Commission would have to develop an orderly procedure.

derly procedure. Maj. Armstrong said that the conflict is between FM broadcasters and the "large block of assignments" to television. He asserted television is not ready for the public whereas FM is ready. Commissioner Craven, however, observed that Maj. Armstrong made such a statement r e g a r d i ng television when he previously had testified he had not seen television in two years.

Returning to multiplexing of facsimile with FM, Maj. Armstrong said replying to Commissioner Craven that if both the transmitter and the receiver are properly designed there would be no serious effect upon the FM transmission.

Cross-examined by William H. Bauer, FCC attorney, regarding the FM patent structure, Maj. Armstrong said he would receive royalties under his arrangement both from transmitter and r e c e i v e r manufacturers. He said he understood RCA has two patents for narrow band FM but he described it as the "old type". Principal holders of FM patents, aside from himself, Maj. Armstrong said, include Hazeltine, RCA, AT&T, Westinghouse and General Electric.

CBS Urges Preference For Video Service

Maj. Armstrong completed 8¹/₂

Maj. Armstrong completed 5.72 hours of testimony just prior to the afternoon recess March 19. He had intended appearing for about four hours, and contemplated testimony of two other witnesses in his behalf. The other witnesses were not called, however.

CBS did the unexpected when Paul A. Porter, Wahington counsel, advised the Commission March 19 upon completion of the Armstrong case, that no testimony would be offered on behalf of the

network unless subsequent developments made it desirable. He pointed out that CBS has two FM applications pending, (New York City and Minneapolis) but that the network feels "preference should be given to the new service of television and not to another aural service". He asked the right to file a statement, if it became necessary.

Appearing without counsel, Everett L. Dillard, owner of the Commercial Radio Equipment Co. of Kansas City, manufacturer of specialized radio equipment and specialist in monitoring and allocations work, as well as operator of W9XA, high-frequency amplitude modulated station, told of the results of that experimental operation. While he had no practical experience with FM operation, he said he had concluded that AM operation is less satisfactory than FM and that he could not see how any harm would be done today by abolishing AM operation in the highfrequencies.

Expressing complete faith in the high-frequency range for broadcasting, he said the results of his own experiments indicated that a service of quality equal to standard broadcasting can be provided in those ranges. The biggest obstacle today to ultra-high frequency broadcasting, particularly AM, is lack of receivers capable of picking up such transmissions, attributable to the lack of interest of the public in listening to such broadcasts, he said. Duplication of programs transmitted by other stations is not the answer to this problem, he continued. To specialize the higher frequencies, he said, it is necessary to conduct a distinctly different type of program service and one that is not duplicated elsewhere.

Problem of Automotive Noises Is Considered

Based on his observations, Mr. Dillard said that a signal to noise ratio of 35 to 1 is necessary to provide an interference-free service in downtown areas. A satisfactory signal can be procured at a 30 to 1 ratio, he declared. He emphasized his testimony related only to AM rather than FM. Mr. Dillard stressed the need for

Mr. Dillard stressed the need for suppression of noise created by automobile ignition systems. He urged that the FCC take steps to bring about cooperation of the automotive industry in suppressing ignition noises, pointing out that a very inexpensive suppressor can be employed, costing only about 10 cents per car. Because of the absence of static,

Because of the absence of static, even during heavy thunderstorms, Mr. Dillard said it was his belief that standard broadcast stations would be glad to move into the ultra-high frequencies. He urged that horizontal, as opposed to vertical polarization, be employed in the ultra-high frequencies as a means of eliminating serious interference sources.

Mr. Dillard suggested the FCC revise its allocation policies. Pointing out that all services want continuous bands in the ultra-highs, he said that until this is done the public will never get what it wants. He urged the Commission to cease parceling off small sections of the spectrum and sandwiching in other services. He suggested that the range 41-44 megacycles be staked

Page 82 • April 1, 1940

off exclusively for aural entertainment broadcasting. That would greatly simplify receiver construction, he declared.

Asked by Chairman Fly why he favored FM over AM, Mr. Dillard said that so far as quality is concerned, he felt it is possible to procure just as good AM as FM signals. The only reason he favored FM, he said, is because less noise can be delivered under the Armtrong system with a more satisfactory signal. His main thought, he said, was to give the public one system and not a combination of two. He said he saw no particular advantage in duplexing other services, such as facsimile, on the same band.

Shepard Recites

Events in FMBI Formation

Leading off as the first of 11 witnesses for FM Broadcasters Inc., John Shepard 3d, president of Yankee Network and head of the FM organization, took the stand to open the March 20 session. Under questioning by Philip G. Loucks, chief counsel for the group and former NAB managing director, he briefly reviewed his experience as an operator and leading industry figure and developed a resume of Yankee Network's participation in the experimental operation.

Tankee Network's participation in the experimental operation. Yankee Network, in addition to WNAC and WAAB, Boston, WEAN, Providence, and WICC, Bridgeport, owns and operates W1XER, 500-watt high frequency AM station, W1XOJ, potential 50 kw. FM transmitter, and WEOD, 250-watt FM relay transmitter, all located in the Boston region, Mr. Shepard stated.

Reviewing the formation of FM Broadcasters Inc., which he described as a non-profit corporation, he said notices were sent in December, 1939, to all FM operators, grantees and applicants that a meeting was to be held in New York Jan. 5, to evolve a group stand on FM matters. The organization was incorporated following the meeting, attended by representatives of from 85 to 90% of the prospective FM operators at the time. A list of 55 members of the group, as of March 18, was entered as an exhibit. He added that a total of 89 were eligible for membership.

Mr. Shepard individually amplified a series of 11 resolutions adopted by FM Broadcasters at the Jan. 5 meeting and ratified at the organization's first annual meeting, held March 17. These also were entered in the record as an exhibit.

Eleven-Point Program Reviewed by Shepard

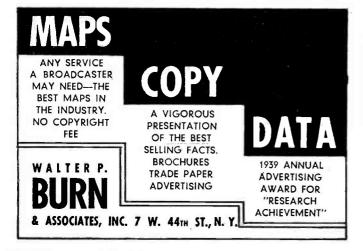

The first resolution requested the granting of regular, instead of experimental, licenses for FM operation. Mr. Shepard stated that the group believes FM can furnish a regular broadcasting service equaling or bettering the present service on the standard broadcast band. Pointing out that broadcasting in the standard band could not have developed to its present stage had it been limited to experimental operation, he declared all the organization asked was that FM in the ultra-highs be given the same advantages as AM had been given in the standard band.

Mr. Shepard pointed to the regular operation of W1XOJ, Yankee's FM station, on an 8 a.m.-to-midnight schedule as an illustration of practical operation, but noted that "some prospect of commercial return is necessary for full development of FM broadcasting". Although improvements can be expected in FM operation, he declared, there was "no need for further experimentation" before putting FM on a regular operation basis. Under the present experimental status, he observed, the large majority of FM applicants are established operators and larger groups with financial resources sufficient to enable them to operate FM experimentally, while the experimental restriction tends to exclude the smaller operators.

Other resolutions recommended raising the power limitation from 1 kw, to 50 kw.; a minimum separation of 200 kc. between adjacent FM channels as "essential in order to accommodate facsimile by multiplex transmission and because narrow-band transmission may be carried on within such channels (while wide-band could not if narrow channels were set by the FCC)"; more than five adjacent channels as "essential" for FM.

Suggests Educational Stations Use FM

The fifth resolution recommended allocating the 41-44 mc. band to FM stations, with facsimile broadcasting using FM on frequencies coordinated with sound broadcasting, and giving "due consideration to educational and facsimile transmission". The last point elicited the query from Commissioner Craven

BROADCASTING • Broadcast Advertising

FM BROADCASTERS Inc., nonprofit corporation formed by FM operators and applicants, has a membership totaling 55 a little more than two months after its organization early in January, according to the testimony of John Shepard 3d, president of the group and Yankee Network head, at the FCC's FM hearings March 20. Entering a list of the 55 members as of March 18 when the hearing opened, Mr. Shepard commented that at present a total of 89 operators and applicants are eligible for membership, which is open to FM licensees or applicants.

The membership, as listed by Mr. Shepard, includes: Licensees of the following stations:

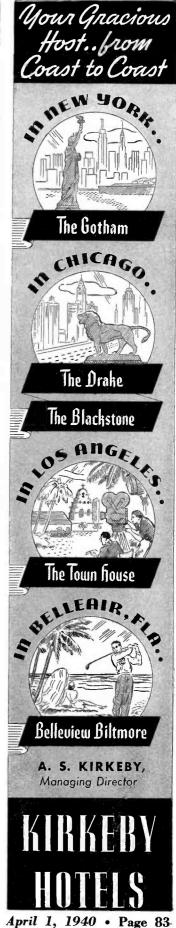

Licensees of the following stations: WLAP, Lexington, Ky.; WOR, Newark; WEEI, Boston; WHO-WOC, Des Moines - Davenport; WSYR and WFBL, Syracuse; WPRO and WJAR, Providence; WKRC, Cincinnati; WLW-WSAI, Cincinnati; WSAR, Fall River, Mass.; WJR, WWJ and WJBK, Detroit; WGY, Schenectady; WOV and WHN, New York; WEBC, Duluth; WQXR, New York; WNBF, Binghamton, N. Y.; WTMJ, Milwaukee; WJHP, Jacksonville; KMBC, Kansas City; WMBI, Chicago; WSM, Nashville; WBIG, Greensboro; WHBC, Canton, O.; WIP, Philadelphia; WGAN, Portland, Me.; WGBI, Scranton, Pa.; WHAM and WHEC, Rochester; WTIC, Hartford; WBNS, Columbus; WGN and WJJD, Chicago; WIBX, Utica, N. Y.; WOKO, Albany; WTAG, Worcester; WPTF, Raleigh. In addition, the following persons and companies, some of them broadcast station licensees and some licenses of or applicants for FM [BROADCASTING, March 15], are

In addition, the following persons and companies, some of them broadcast station licensees and some licenses of or applicants for FM [BROADCASTING, March 15], are members: William G. H. Finch, New York; Frequency Broadcasting Corp., New York; General Electric Co., Schenectady; Jansky & Bailey, Washington; Muzak Chanbers, Washington; Muzak Corp., New York; National Broadcasting Co., New York; Jerome Raymond Popkin-Clurman, Philadelphia; Carman R. Runyon, Yonkers, N. Y.; Stromberg-Carlson Telephone Mfg. Co.; Yankee Network; World Broadcasting System, Zenith Radio Corp.

whether FM Broadcasters meant to take away the $41-42 \text{ mc. band from$ educational stations and give it toFM operators, and whether the proposal called for a shift of educational facilities to other frequencies. Mr. Shepard explained it didnot mean depriving educational facilities but visioned a switch ofeducational stations from AM toFM, operating on that band. Hesaid if educational stations were touse FM, they would give a betterservice and achieve a wider coverage.

The sixth resolution, recommending allocation of the 26 mc. band, now assigned to FM, to other services, was explained by Mr. Shepard as a step toward simplifying the prospective receiver design problem. He argued that from the receiver standpoint, FM should be developed on adjacent channels.

The seventh resolution provided: "In our judgment 15 channels will not prove sufficient for the needs

of FM, and immediate provision should be made which will insure the availability of additional channels in the near future, and that from the point of view of receiver design, the additional c h a n n e ls should be as nearly adjacent to the 41-44 mc. band as possible" without injuring other services. Responding briefly to queries on this observation, Mr. Shepard commented that if FM is allowed to go ahead on 10 commercial and five educational channels, "public acceptance will prove the need for additional channels".

The eighth and ninth recommended separation distances for stations on the same and adjacent channels for varying power, and setting "an established policy" of permitting rebroadcasts between stations subject only to permission of originating stations, as is the rule in the regular broadcast band.

Favors Policy

Of Relay Stations

The tenth resolution, requesting the FCC to set "an established policy" of permitting relay stations on FM brought intensive questioning from Chairman Fly and other Commissioners. Pointing to the peculiar need for locating FM transmitters to take advantage of high spots in the terrain, often at inaccessible locations not served by telephone lines, Mr. Shepard said the transmission problem could be best solved by setting up low-power relay stations, using about 250 watts power and operating on frequencies above 130 mc., beamed at the high-power transmitter. Asked by Commissioner Craven

Asked by Commissioner Craven who would foot the bill for a network of relay stations, presumably established to widen coverage, Mr. Shepard explained that a network such as NBC or CBS, if relieved from the payment of line charges, could pay the construction and operating costs of a relay system, while a mutual organization such as MBS could apportion the cost as it does at present with line charges. Although no such plan has been definitely worked out "beyond the conversation point", he said the relay system would develop if the FCC "established the policy" of granting permission. He pointed out that no wires are used between the Boston studios and the W1XOJ transmitter, 43 miles away—only the 250-watt WEOD as a beamed relay.

The final resolution reiterated the recommendation that provision be made in the FM band so as not to exclude educational and facsimile transmission, the latter either on multiplex or simplex transmission.

Concluding his discussion of FM Broadcasters from an organizational standpoint, Mr. Shepard reviewed the membership of the engineering committee of the organization, entering the list in the record.

Claims Superior

Service Via FM

Relating his experiences as a regular FM listener during W1XOJ's operation the last seven months, Mr. Shepard observed that after listening to an FM broadcast for two or three hours nightly and then switching to AM reception "you realize you have been listening to something startlingly natural" and get the impression that

AM reception and reproduction is "mechanical". Remarking on the superior service characteristics of FM, he continued that "par for par, height for height, it is impossible to get the same coverage on the ultra-highs with AM as with FM". Specifically, he added, AM transmission does not reduce static in the ultra-highs as does FM.

Except for spots in Northern Vermont and Southern Connecticut, he estimated that rural New England could be effectively covered with a 50 kw. station at Paxton, such as WIXOJ, and a 5 kw. transmitter at Mt. Washington, location of WIXER. In his coverage estimate he inferred the use of superpower AM transmitters that would furnish supplementary signals to inaccessible points.

estimate he interred the use of superpower AM transmitters that would furnish supplementary signals to inaccessible points. Although it will take some time for commercial programs to reach FM station's schedules, since an audience must be built to attract advertisers, he commented that eventually he sees FM replacing AM and operators using only FM transmitters. He indicated that he foresaw a transition period of "roughly 10 years", during which the FM audience would constantly increase and the AM audience tend to shrink, and at the end of which the advertiser would be reaching the same markets as now.

During this period the station operator probably will use both AM and FM to maintain an aggregate audience attractive to advertisers, he commented, adding that it would be practical to use the two systems together until almost a 100% replacement of AM sets is achieved. In the normal course of events about 10% of the outstanding receivers are replaced annually, he also pointed out, and where FM service is available, this 10% and others likely will obtain straight FM or combination sets. This combination operation would increase the cost to the station operator, he admitted, but not 100%, since only the final stage — transmission would be duplicated.

Favors Separate

Programs for FM

Duplication of standard broadcast programs for FM transmission should not be permitted, Mr. Shepard commented, but individual program development for FM should be encouraged. If FM is given the green light, W1XOJ probably would extend its schedule from 8 a. m. to midnight to 6:30 a. m. to 1 a. m., he indicated.

Responding to an inquiry by Commissioner Craven, he explained that although FM should not necessarily have preference over other services in allocation matters, keeoing FM allocations compact would be a practical treatment of the receiver problem. So far as other services are concerned, he commented, they may well find they can operate on higher frequencies. However, pushing FM bodily into higher frequencies would retard FM development at least "a year or two", he estimated. Also, he added, putting any "straightjacket" on FM programs would retard development, and the same program freedom should be allowed FM as in the standard broadcast band.

Cross-examined by Mr. Jett, the Yankee president emphasized that he did not advocate FM relay allocations below 132 mc. He did advocate that FM be allowed to develop, insofar as allocations are

SCIENTIFIC aspects of FM coverage are discussed at length on the stand by Dr. Greenleaf Whittier Pickard, consulting engineer for FM Broadcasters Inc. Dr. Pickard is one of American radio's venerable pioneers. Inventor of many devices, he is perhaps best known for his development of the crystal detector.

concerned, independently of the present broadcast service reflected in standard band allocations. At this Chairman Fly declared, "It seems to me all your recommendations are for complete freedom freedom to do all the good things as well as all the bad things on the standard broadcast band". The chairman then repeated his desire to have FM Broadcasters submit a definite allocation plan.

At this point Mr. Bauer, FCC attorney, introduced a series of four FCC exhibits—a summary of pending high-frequency broadcast applications, a list of high-frequency stations licensed as of March 12, a compilation of rules governing broadcast services other than standard broadcast and extracts from these rules giving frequencies allocated for various classes of stations.

Pickard Tells of Noise Studies

Mr. Shepard concluded his appearance with cross-examination by Frank W. Wozencraft, RCA coun-sel. He stated that he believed better results would come from use of 15 channels of 200 kc. than 30 chan-nels 100 kc. wide. Carried into the FM-facsimile field under Mr. Wozencraft's questioning, Mr. Shepard said he could not say that all FM licensees would carry on facsimile in conjunction with their FM operations. Asked if operators not including facsimile should be given the full 200 kc. assignment when it might be shown that they would only need 185 kc. without facsimile, he declared they should be allowed to develop on the basis of a 200 kc. band, although if it was later determined that the full space was not needed, the residue could be used in another manner. FM licenses should be available both to established broadcast operators as well as to new parties, he declared, without preference.

Appearing as the second witness for FM Broadcasters, Dr. Greenleaf Whittier Pickard, noted radio pioneer and consulting engineer of

Yankee Network, reviewed the results of comparative AM-FM noise studies during the last two years. From his experience in these tests, he indicated, the FM signal, where FM service is available, regularly is better than the standard broadcast signal. He cited as a specific instance the reception at his home, at Seabrook Beach, N. H., approximately 35 miles north of Boston.

As for standard broadcast reception, he said it was not only difficult to tune in AM signals—from regional and clear channel stations alike—because of excessive adjacent channel interference, but once the signal was tuned it was weak at best. He related how he had measured an AM signal received at his home at a strength of 1 millivolt per meter. Switching to and FM receiver, he said he received a signal of 50 to 60 microvolts per meter, free from interference. The AM transmitter was located about 40 miles away, he stated, while the FM signal came from W1XOJ, 67.5 miles away.

Describes Characteristics

Of Ultra-High Signals

Under cross-examination, Dr. Pickard explained that exactly opposite types of locations are recommended for AM stations, as against standard broadcast stations. Whereas the standard stations derive maximum propagation from low swampy grounds, ultra-high frequency stations find high mountains ideal because of the line-ofsicht characteristics.

tains ideal because of the interorsight characteristics. Questioned by RCA Counsel Wozencraft, Dr. Pickard said that under present manufacturing technique, the effort is to "pre-emphasize" signals at the transmitter and "de-emphasize" them at the receiver. He asserted that static is less in the ultra-highs than at lower frequencies, though still present. One reason for the popular misconception regarding static, he said, is that the super-regenerative receiver "shushes" the static. Ultrahigh transmission is superior, he declared, because of the lesser channel and adjacent channel interference. FM has the advantage of separating noise from the reception, he declared, though there is apt to be more man-made than static noise, such as that caused by automobile ignition systems.

When Commissioner Craven inquired regarding the results of the Alpine experiments, during which two FM stations operated from approximately the same location and could be separated on the receiver, Dr. Pickard said he felt it was possible to put two high-power stations in the same city on adjacent channels with no interference. In standard broadcast operation, a frequency separation of at least 50 kc. is required in the same metropolitan area. Dr. Pickard pointed out that his listening operations were made under very unfavorable conditions, from roadside locations and with a short antenna.

Martino Tells of

Hartford Operation

Italo Martino, chief engineer of WDRC, Hartford. which operates FM station W1XPW, reported on a coverage survey of that station. The substance of his testimony was that FM reception at varying locations was far superior to that of standard AM stations in the area,

despite the fact that W1XPW used

His survey covered the entire State of Connecticut, he said, and as a result of these tests the conclusion was reached that a field intensity of about 10 microvolts per meter is required to produce satisfactory service in quiet rural disfactory service in quiet rural dis-tricts. In the majority of cases, even with noise present, an inten-sity of 50 to 60 microvolts results in perfect reception. In very noisy locations, an intensity of 250 mi-

cororolts was found necessary to completely suppress noise. His survey showed that in gen-eral, he concluded, that good recep-tion from W1XPW can be expected in most points in Connecticut ex-cept noisy localities where the field intensity falls to a low value, de-spite the very rugged terrain. Ad-ditional power above 1,000 watts would be required to serve satisfactorily certain sections where the signal is weak due to shielding by hills and high elevations, he said, pointing out that all such measurements were made in daylight hours.

Wisconsin Propagation **Explained** by Gallerup

Dan W. Gallerup, chief engineer of WTMJ, Milwaukee, which oper-ates W9XAO with 1,000 watts on ates W9XAO with 1,000 watts on 42.6 mc., gave a similar report on propagation of that station. Gen-erally, he said, the results based on his observations revealed a very good signal with no noise. He de-scribed the FM signal as superior to that of standard broadcast sta-tions in observations throughout to that of standard broadcast sta-tions in observations throughout the State. Because of the detailed nature of the technical exhibit in-troduced by Mr. Gallerup, FCC Chief Engineer Jett asked for an opportunity to study the data, after which he desired to areas avaning which he desired to cross examine Mr. Gallerup at length.

Channel Desirability

Explained by **Pickard**

Recalled by Chairman Fly at the opening of the March 21 session, Dr. Pickard for one hour answered questions put to him by the chair and Chief Engineer Jett, hinging on the relative desirability of various ultra-high frequency channels. Commenting on the propagation characteristics of the 26 mc. band, as deduced from his experiments, Dr. Pickard stated these characteristics were not unlike those of the amateur 10-meter band or channels in the 40-50 mc. band, except that diffusion characteristics are such that groundwave "shadows"

caused by hills or other obstruc-tions are "not so black". He noted also that the lower frequencies yielded more static, and that they probably could best be used by some special service such as forestry, police or aviation.

Allocating FM operation on the 26 mc. band and also in the 40's would be a "bother" to the listener in making him shift from band-toband in tuning, he stated. A similar problem, from the allocation standpoint, must be faced in considering television allocations, he added. While the low 40's are a good place for FM, he continued, they are a poor location for AM, which should operate in the higher ultra-highs.

Asked by Lieut. Jett why fre-quencies in the 25-27 mc. band should be assigned services like forestry and police, Dr. Pickard stated that these services are less critical and hence could better use them than regular broadcasters.

Noble Tells How

FM Is 'Superior'

Prof. Daniel E. Noble, assistant professor of engineering of Con-necticut State College, followed Dr. Pickard to the stand. He told how, after becoming interested in the Armstrong FM system several years ago, he designed and built an experimental transmitter at Storrs, Conn. Later, as consultant of WDRC, Hartford, and W1XPW, he designed and supervised construc-tion of the W1XPW transmitter on Meriden Mountain, he added, and is at present designing a second transmitter in the Storrs area.

Based on home listening, using a field test receiver developed by Maj. Armstrong and an antenna consisting merely of a short length of lamp cord draped over the ve-netian blinds in the house, located about 40 miles from both the Paxabout 40 miles from both the Fax-ton and Meriden Mountain trans-mitters, he said "an excellent broadcast service" was receivable from both W1XPW and W1XOJ, with a field strength ranging from 18 to 34 microvolts per meter. His observations were based on a sixmonth comparison of quality and noise reduction, he explained, with signals of the FM stations com-pared with those of WDRC, about 25 miles distant, and other AM stations.

"Definitely more pleasant to lis-ten to," he said the FM signals ten to," he said the FM Signals were superior both from a stand-point of noise level and fidelity to either 50 kw. or 5 kw. signals re-ceived. Considering method of modulation and disregarding band width, AM can attain high-fidelity, he admitted, but "it is the hard way he admitted, but "it is the hard way to do it". Queried along this line by RCA Counsel Wozencraft, he said that although it would not be par-ticularly difficult to develop an AM audio range of 15,000 cycles, FM through circuit design can readily reduce audio distortion, which could be done only "with greater compli-cation" in AM.

Reception Studies Analyzed by Sise

Further testimony on FM reception characteristics was supplied by Albert F. Sise, of Wellesley, Mass., Albert F. Sise, of wellesley, mass., Yankee Network supervising engi-neer, who presented field strength measurements made for W1XOJ and W2XMN. FM service, both locally and afield, was "vastly su-perior", he stated. Citing compara-tive home reception of W1XOJ, 35 WTMJ Shows FM

WTMJ, Milwaukee, and the Milwaukee Journal were hosts to about 100 leaders in the local engineering, musical and educational fields at a special FM demonstration by W9XAO, experimental FM out-let operated by the Journal. With Don Stanley, W9XAO announcerlet operated by the Journal. With Don Stanley, W9XAO announcer-producer, as m.c. a half-hour pro-gram was piped into the WTMJ lounge in the Journal Bldg. The program was devoted largely to sound effects to dramatize FM staticless reception. A roundtable discussion was held under direction of L. W. Herzog, WTMJ manager, who welcomed guests and gave an explanatory talk. The demonstra-tion was conducted under the technical supervision of Dan Gallerup, technical head of the new FM sta-tion and WTMJ chief engineer. Re-freshments were served following the demonstration.

miles away, and a 50-kw. station 10 miles distant, he said W1XOJ reception was "practically perfect" while the AM signal was adequate "but not as good". Telling of a visit with friends in rural Vermont, 100 miles from Paxton, he said he re-ceived on a regular FM set he had taken along "infinitely better service" than had been available in that region before.

Comparing AM and FM reception in the ultra-highs, Mr. Sise said he had listened to signals of W1XER, Yankee high-frequency AM station, and two other high-frequency transmitters of low power, and over a long period of listening all had yielded objectionable static. There had been none in all the FM listening he has done during the last year, he added.

Levy Compares Wide And Narrow Bands

Morris Levy, supervising engi-neer of Stromberg-Carlson, de-scribed a comparative study of the merits of wide-band and narrow-band FM transmission conducted under his supervision. Four special receivers were used, he stated, one built for a 30 kc. swing on a 40 kc. band, the second for 60 on 80, 120 on 160 and 150 on 200.

Under cross - examination, Mr. Levy agreed that FM is superior to AM even in narrow-band transmission with a 30 kc. swing. He declared that if the swing is reduced. the amount of noise received will increase. Much work remains to be done in studio, microphone and other technical fields to reduce background noise, he added.

Particular mention was made by Mr. Levy of the "drift" problem, encompassing gradual shifts in transmitting frequency both on the transmission and reception ends. Much more research is required in this field, but he predicted that with a good receiver and further study the problem can be met.

Replying to Lieut. Jett, Mr. Levy declared that the 200 kc. FM band, using a swing of 150 kc., has an advantage of about 5 to 1 over the 40 kc. band, having a swing of 30 kc. He predicted that receiver costs ultimately could be brought down to \$150 for high quality and possibly less than \$100 for average receivers.

Cross-examination of witnesses by RCA Counsel Wozencraft be-came more intense as the hearing proceeded. He questioned Mr. Levy closely regarding his comments on modes of transmission, and when the witness asserted he was not thoroughly familiar with binaural transmissions, involving superimposing of a second aural carrier on the same channel, Mr. Wozencraft questioned him regarding the cometence of his testimony along that line.

Fly Calls for FM **Allocation Program**

Upon completion of Mr. Levy's testimony, Chairman Fly precipi-tated another colloquy by advising FM Broadcasters Counsel Loucks that the Commission expects to receive a proposed plan of FM allocation. He questioned the admissibil-ity of testimony of proponents of FM regarding advantages of the system unless a proposed allocation plan was submitted indicating how service would be provided.

Asserting the Commission must weigh the advantages and deficiencies of the system against such a plan of allocation, Mr. Fly repeated that the Commission expected FM Broadcasters to submit the plan promptly.

The entire subject of allocation, Mr. Loucks responded, would be covered by Paul A. deMars, Yankee Network technical director, and key engineering witness for FM Broadcasters. He explained, however, that actual drafting of a pro-posed allocation was difficult since FM is in the position of asking for additional channels and that any plan submitted could not conceivably take into account the many variable factors involved, such as sizes

of communities and propagation characteristics. He pointed out that his group did propose to offer delarly since the chief inherent virtue of FM is flexibility of allocation.

"So your answer is no?" observed Chairman Fly. Mr. Loucks said it was not ex-actly "no" but that some understanding would have to be had as to the nature of the allocation chart. Chairman Fly suggested that perhaps a sectional allocation covering the New England and Mid-Atlantic States would suffice. Asserting that he wanted the "full dope", Chair-man Fly said that he would be in-clined to "disregard the oral testi-mony" relating to FM allocation unless such data were provided. He added he did not want any surprise expressed on the part of FM Broad-casters during the ensuing week when the demand is made for the sample allocation.

hen Mr. Lohnes, as counsel for Maj. Armstrong, said attempts had been made to draw up a plan but that the group was handicapped because it did not know how many frequencies to work into the structure, Chairman Fly said he did not care about the details but he thought it logical to take into account the demands of FM Broad-

casters. Mr. Wozencraft, for RCA, assert-ed that it was his intention to have a partial allocation plan drafted when his witnesses presented direct testimony. Mr. Fly retorted that the Commission was willing to receive several plans.

In the ensuing discussion, Mr. Loucks reiterated it was the inten-tion of FM Broadcasters to attempt to show the efficiency of the system but that it was difficult for the group to undertake a sample allo-cation in which ten stations might be placed in one city and a lesser number in another city of compara-ble size. To this the Chairman re-plied that the Commission wanted 'a plan of allocation which demonstrates the efficiencies of FM broadcasting which the Commission could translate into a scheme of allecation so far as it would be applicable and acceptable."

Weir Tells of Tests

By General Electric

Further testimony on the superi-ority of FM over AM transmission was given by I. R. Weir, radio en-gineer of GE, who outlined the results of experimental transmissions and receptions both by automobile and plane. GE first conducted comparative tests of 250-watt transmit-For the second s FM, he declared, using the transmitters from exact locations. He said that FM appeared to have a 50% greater signal than AM under such conditions.

Describing airplane tests, Weir said an acceptable signal was received at a distance of 75 miles from the transmitter with AM and 115 miles with FM, with the sig-nals picked up at an altitude of 4,000 feet.

In other tests, involving signal-to-noise ratios, FM appeared bet-ter than AM all down the line, he declared. Discussing reception of comparative stations beyond the line of sight, he declared that an area of "no man's land" in which no acceptable signal was received appeared to be about seven miles be-yond the 117-mile reception limit

"THEY SHALL NOT PASS television" might have been the thought of these "opposition" counsel, who oppose allocation of any frequencies now assigned television in favor of FM. Left to right are Dr. C. B. Jolliffe, former FCC chief engineer, now an engineering executive of RCA; Ralph R. Beal, RCA patent research director; Frank W. Wozencraft, RCA chief attorney; Paul A. Porter, CBS Washington counsel.

on FM. He described an area of sharp transition from one station to another operating on the same frequency with FM, when received on an auto set while traveling. At no time were both stations on the frequency heard simultaneously, he declared, and there was no hetero-dyne interference. The hearings were recessed March 21 until March 25.

Discrimination in Signals Is Cited

Mr. Weir concluded his discussion during the short morning ses-sion March 25. Continuing his description of the airplane surveys, he related that a "cone of silence" was observed immediately above the stations' vertical antennas, due to a region of zero radiation at to a region of zero radiation at these points. Although the Sche-nectady station, W2XDA, could not be heard immediately above its own antenna, he observed, signals from W2XOY at Albany were received at this spot.

This illustrated "FM discrimina-Inis inustrated "I'M discrimina-tion", he remarked, agreeing with Chairman Fly's observation that while a strong FM signal skips the area covered by a weaker sig-nal, it becomes receivable again al, it becomes receivable again where the weaker signal leaves off. In the mobile experiments on the ground, he added, use of a directive antenna enabled the listener to change stations in the fringe area by moving only a few inches. Switching the two transmitters

to AM operation, similar tests for AM reception were conducted, he stated. The AM tests showed the interference factor to be much greater, he declared. In a discus-sion of comparative characteristics with Commissioner Craven, he noted that while the stronger of two FM signals ordinarily is heard, with AM there is no comparable discrimination unless the strong signal virtually drowns out the weaker signal.

Cross-examined briefly by Mr. Jett, for the FCC, and by RCA Counsel Wozencraft, Mr. Weir supplied supplementary data on con-struction and equipment of the two GE stations and various phases of his charts and diagrams. Responding to a question by Mr. Wozen-craft, he agreed that the airplane and auto tests were "not typical" of living room tests.

Advantage Claimed

In Noise Factor

Explaining the remaining sec-tions of the technical exhibit setting forth results of the GE tests, Henry P. Thomas, GE radio en-

LIGHTNING TEST Proves FM Immune to Bolts, -According to GE-

TO PROVE the ability of FM to operate practically free from static under the most trying conditions Dr. W. R. G. Baker, manager of the General Electric Co. radio and television department on March 25 described a series of GE tests.

A million-volt continuing arc of "man-made lightning", created only a few feet away from an FM set while it was bringing in a program, sufficed to prove to the ears of those present at the test that the FM set was practically immune to electrical interference, the bane of ordinary receivers, according to a statement by GE. To add "eye proof" to "ear

To add "eye proof" to "ear proof", another series of tests was described in which a cathode-ray oscillograph produced graphic evi-dence of the same kind of per-formance on a smaller scale. Dr. Baker submitted photographs of the oscillograms made in the GE research laboratory in Schenectady. The actual lightning test was con-ducted in the GE building at the New York World's Fair.

gineer, took the stand. Describing tests conducted by himself under the direction of Mr. Weir, he de-clared that tests of signal-plus-noise-to-noise ratio indicated that FM had an advantage over AM of from 15 to 20 db. Tests employ-ing several listeners, with listeners fixing an FM signal and then telling transmitter operators to raise ower on AM transmission until a comparable AM signal was avail-able, showed that a 50-to-1 power ratio was needed for the AM sig-nal to approximate the FM, he commented. Further tests indicated that in AM reception interfer-ence resulting from an FM sigand was less than another AM sig-nal, since the power of the FM signal was steady, with modula-tion in frequency rather than power, he said.

Following a conference between FCC counsel and representatives of parties still to be heard, an agree-ment was announced by FCC Attorney Bauer by which parties would eliminate repetition in testimony so far as possible and in many cases would forego personal appearances in favor of statements by counsel. The conference was held at the request of Chairman Fly in the interest of expediting the proceeding.

Putting the "streamlining" agreement into effect, Counsel Loucks called as his final witness for FM Broadcasters Paul A. de-Mars, technical director of Yan-kee Network and technical advis-or of the FM group. Punctuated by lively questioning, led by Chairman Fly and Commissioner Crav-en, Mr. deMars discussed a series of five exhibits encompassing various FM operation phases, along with another including recommended principles of allocation and sample allocations on a country-wide and sectional basis, as requested by Chairman Fly.

Mr. deMars' first exhibit was a graphic portrayal of field intensity measurements along seven ra-dials of transmission of W2XMN, at Alpine, N. J., adjusted to a re-ceiving antenna height of 30 feet and including factors of topography. The second presented tabulations of relative service areas of stations operating on 200, 100 and 40 kc. band widths. It showed that with a peak swing of 75% of band width on the same channel and with same power a 200 kc. station would have a 100-mile service radius and an area of 31,400 square miles, while a 100-kc. station would have only an 83-mile service radius and a 21,650 square mile area, and a 40-kc. channel, 45 miles and 13,-230 square miles. It indicated also that to achieve an interference-free radius of 100 miles, 200-kc. stations on the same channel must be 330 miles separated, 100-kc. stations 400 miles with a 4 to 1 power ratio, and 40-kc. stations 520 miles with and 40-kC. stations 520 miles with a 25 to 1 power ratio. On adjacent channels the 200 kc. stations were shown to need a 53-mile separation to achieve a 100-mile interferencefree radius, 100-kc. stations 65 miles and 40-kc. stations 84 miles, with the same power ratio.

Radiating Efficiency

Of Transmitter Shown

The three other exhibits in the group graphically represented co-channel and adjacent channel operation of stations from an allocation viewpoint, showing propagation characteristics of the 40-50 mc. wavelengths, based on field intensi-ties at varying distances from the transmitter, terrain and conduc-tivity. In his illustrations in these exhibits Mr. deMars employed in lieu of definite wattages and other definite transmission factors the RE—radiating efficiency — of the transmitter, which he described as a combination of power, antenna

a combination of power, antenna. The principles of allocation rec-ommended by Mr. deMars encom-passed FM stations operating in the 40-50 mc. band with 200-kc. channel width. Designated in terms of radiating officiency (RE) the of radiating efficiency (RE), the proposed classification in cluded three types of stations; Class I-5,000 RE or better with co-channel separation of 400 miles or more and adjacent channel separation of 150 miles or more; Class II-1,500 RE or better with no minimum cochannel separation and adjacent channel separations beyond the service range of stations on the adjacent channels; Class III - nc minimum RE with the same provisions as Class II stations regarding co-channel and adjacent channel separation.

He recommended that no mini-mum limit of RE be imposed or Class III stations in order to al low "the greatest flexibility" in

GENERAL C ELECTRIC

serving smaller communities, and that no minimum limit of separation of either Class II or Class III stations be imposed in order to supply a correspondingly flexible service.

Accompanying this outline of "allocation principles" was a series of four maps presenting sample allocations. On the country-wide basis, one map encompassed the use of six 200-kc. channels, with cities and metropolitan areas of 250,000 or more population served by 40 FM stations having an RE of 5,000 or better.

Stresses Importance Of Channel Width

The other three covered only the Middle Atlantic-New England area. The proposed allocation provided three Class I stations, [50 kw.] each using a separate channel, serving the Washington-Baltimore, New York and Boston-Providence-Worcester - Springfield - Hartford metropolitan and contiguous areas. To serve cities and metropolitan areas of 100,000 or more in the region, the plan proposed 15 Class II [250 to 50,000 watts] stations' using two channels. For cities and areas of 10,000 to 100,000 population the map indicated a large number of Class III [500 to 5,000 watts] stations operating on four channels.

In advancing these "allocation principles", Mr. deMars cautioned that they amounted merely to "a recommendation, and not the only one, believed to reflect sound views and principles of allocation". He stated also that it did not mean FM Broadcasters advocated three types of stations or only three types of stations.

Queried by Chairman Fly and Commissioner Craven on why a 200-kc. channel was so desirable, Mr. deMars stated it would provide the greatest service over a wide area with the greatest flexibility. Asked if receiver design could compensate for a reduction in channel width from 200 kc., he declared, "No changes that could be made in receiver design could make narrower channels any more desirable." The advantages of channel width lie in relative swing and not in equipment construction, he declared.

To a question from Commissioner Craven he answered that although, accepting high-fidelity merely as transmission of wide range, a range of 15,000 cycles can be transmitted on a 100 kc. band, a power increase of 4 to 1 would be necessary to secure the same signal-to-noise ratio. The "improvement factor" in FM, which he said has no counterpart in AM, starts with the switch from AM to FM and increases as swing increases, he commented further.

With an eye on widening coverage, FM operating on 200 kc. channels will actually conserve other space, he declared, and therefore will not operate at the expense of other services or the frequency spectrum.

Repeating that his recommendation of several types of stations was merely a suggestion, he stated to Commissioner Craven that although it has nothing to do with the advantages of FM, as such, a plan for several types of FM stations "has a lot to do with attaining complete and wide coverage". Although making it clear that he never has said FM will serve all

OBSERVERS for WOR, MBS and FM were these attendants. Theodore C. Streibert, WOR and MBS vice-president, just returned from a Nassau vacation, chatted with WOR's chief engineer and FM Broadcasters' engineering committee chairman, J. R. Poppele.

Press Is Interested

DEVELOPMENT of frequency modulation, which already has brought a surge of more than 100 applications for new stations, may provoke an out-cropping of requests for fa-cilities from leading New York newspapers, it was in-dicated during the FM hear-ings before the FCC. One of the few major cities which does not have any of its important newspapers affiliated with stations, New York is regarded as a likely center of FM activity. Among the newspapers understood to be contemplating filing applications perhaps for 50,000-watt FM stations are the New York Daily News, the ownership of which is affiliated with the Chicago Tribune, operating WGN, and the New York Herald-Tribune. Both newspapers had observers at the hearings. The Washington Post and Washington Times-Herald also are reported contemplating applications for FM.

rural or outlying areas, he remarked, "I believe a vastly improved service will be rendered most of the people of the country, provided FM is given an opportunity to expand, with sufficient channels made available".

Map Allocations

Described by deMars

Concluding his appearance March 26, Mr. deMars further described the sample allocations provided on the maps. Estimating Class III stations as having an RE of 300, amounting to a power of less than height above the surrounding territory of 200 feet, he brought out that if the population of the area required, a still greater number of the low power stations could be provided on the four channels. He also explained that in case more than one station was warranted in a single city, additional stations could be allocated indiscriminately, from an engineering standpoint, so long as one channel separation is allowed between each station.

Class II stations would have an RE of about 1,500, he continued, which would be attainable "with reasonable power", probably several kilowatts, depending on antenna height. The specimen allocations were reckoned on a 35-mile service radius under unfavorable conditions, he commented. Under favorable conditions this radius would be longer, except where another station caused mutual limitation, he added.

Although Class I stations would have an RE of at least 5,000, Mr. deMars said this did not necessarily mean 50 kw. stations, remarking that he "has in mind" one station that with its peculiar antenna location could account for a 5,000 RE with 5 kw. power. Reckoning the Class I station's service radius at from 100 to 150 miles, he commented, duplication of this service on a country-wide basis would in many cases yield better rural coverage than at present.

Where Stations

Could Be Located

To a query by Commissioner Thompson he explained that Class I stations need not be limited to large cities, since in some cases a city of 50,000 with its surrounding trade territory could support a large station. On a similar tack he explained to Commissioner Craven that there was no reason for not locating Class III stations in large cities. Although stating definitely that a Class III station would not blanket a large metropolitan area, he pointed out that the map showed Class III stations located in smaller cities in the New York area, such as Newark, to give supplementary local service. Locating these small stations in large cities, although it might be done from an engineering standpoint, probably would prove to be "economic fantasy", he said.

Asked by Commissioner Craven whether narrowing the band to 100 kc. would amount to yielding "more stations and less quality", Mr. deMars answered that it would allow putting in a larger number of inferior stations resulting in less service to the public.

Cross-examined by Mr. Jett, he explained that the 50 kc. guard band in the 200 kc. channel is necessary because the ideal electrical circuit cannot be constructed to eliminate this protective factor. Based on full operation, he estimated the RE of W2XMN, Alpine, at 8,000 and that of W1XOJ, Paxton, at 20,000, in the latter case assuming a 1,500-foot antenna elevation. He pointed out that in the case of W1XOJ the antenna height toward Boston amounts to about 1,800 feet, while toward the west where average elevation runs from 800 to 900 feet, the actual elevation is that much less, a factor effecting signal propagation in that direction.

Providing Coverage

For Economic Areas

This discussion precipitated a brief colloquy on the suitability of "radiation efficiency" as the empirical term to be applied as a common denominator in speaking of FM transmitter potentialities. It was finally decided, with Mr. de-Mars acceding, that the term "radiation index" (RI) could be more easily understood. RI was substituted at this point.

Mr. deMars stated that he and FMBI was in complete accord with Chairman Fly's observation that applicants should consider not only their immediate economic area, but also neighboring areas, and then set out to establish a station that will give the best service to the whole area, rather than go into the proposition with the idea of just setting up a 50 kw. station in any particular city, letting the service area question work itself out.

Speaking of the relative merits of horizontal and vertical polarization of signals, he commented that while horizontal polarization yields a more satisfactory signal-to-noise ratio, in practical operation it costs the operator no more than vertical polarization. He added that horizontal polarization "in no way whatsoever" complicates receiver design.

Returning momentarily to the relative desirability of various ultra-high frequencies, he stated that the higher frequencies are suitable for services of limited coverage, and that forcing of FM upward would curtail the wide coverage shown as attainable with FM. RCA Counsel Wozencraft ques-

RCA Counsel Wozencraft questioned Mr. deMars at some length on cross-examination, particularly on the comparative merits of wideband and narrow-band transmission. Although a 5 microvolt-permeter signal may amount to good service under certain conditionswhere man-made interference and set noise is low-the number of people served or dependent on such a signal would be small, he commented.

Mr. Wozencraft, through a series of rapid-fire questions, then undertook to develop a comparison of wide-band and narrow-band reception by asking Mr. deMars what constituted "quality of reception" and then eliminating unvarying factors. Mr. deMars stated that "quality of reception" depended on noise, frequency range, dynamic range, harmonic distortion and phase distortion. From Mr. deMars' comparative answers Mr. Wozencraft developed that the difference between 200-kc. and 40-kc. reception lies in the amount of noise, the dynamic range because of noise,

Urges Uniformity

In Station Separation

Applying these observations, Mr. Wozencraft then asked what reception at a point 50 miles distant could be expected from a 5,000 RIstation with a 1,000-foot antenna "in the middle of Boston Common". Operating on 200 kc., good reception would result, Mr. deMars statet, while on 100 kc. reception still would be "good", but susceptible to intermittent noises. However he continued on 40 kc. the signal-tonoise ratio would begin to deteriorate, probably dropping from 70 db. to 62 or 64 db. Under further questioning by Mr. Wozencraft, he stated that despite this drop, such reception was still better than the present service and could be called "good".

Referred to the sample allocations, Mr. deMars emphasized that the station separations mentioned were not "recommendations", only "comparisons". Whatever channel width were decided upon, he added, it should be the same for all stations.

Although Hartford and Providence could be served satisfactorily by a 200-kc. station such as W1XOJ, 40 miles distant, a 100-kc. station could serve the cities neither so satisfactorily nor economically, as power would have to be increased, he said. He continued that while he was not necessarily "recommending" more than one station in any one city, he did foresee more than one in a single city, with the type of stations dependent on economic considerations as well as service requirements.

Asked for a "guess" on the number of channels needed for a country-wide service, Mr. deMars estimated that 30 or 40 FM channels would permit a service for the whole United States vastly superior to present service. He suggested a channel ratio, based on three types of stations, of 1 Class III to 2 Class II to 5 Class I.

Class 11 to 0 Class 1. Asked if it would be practical to allow Class I and Class II operation in the 40's and push Class III up into the 100-120 mc. band, he said it would not because of the necessity of minimizing the effects of terrain. The higher frequencies are not as efficient in doing this, he explained. As between the various classes of stations, it would make little difference which one was moved, he continued, since it would still hold true that the higher frequency operation would cover a smaller area. He added that receivers for the higher-frequency transmission would cost more.

Directive Antennas

Would Add Stations

From a practical standpoint, he explained to Commissioner Craven, by using directive antennas more stations could be placed in a given area than could be plotted geometrically purely on a basis of necessary separation.

metrically purely on a basis of necessary separation. Diverted momentarily into the television field, Mr. deMars commented, "Television is a great engineering achievement, but a misfit in its present position in the band". It will necessarily go to higher frequencies and employ FM in a wider band, he commented, declaring there was "no question" that the advantages of FM would apply to visual as well as to aural transmission.

Concluding, he stated in response to questioning by Mr. Wozencraft that channel width of 8 to 10 mc. was being used in point-to-point video relay and that a similar channel probably would be used in other television transmission yia FM.

Finch in Favor Of 200.kc. Channels

Appearing as counsel for W. G. H. Finch, pioneer facsimile inventor

Operation of Multiplex At FM Field Laboratory Demonstrated by Finch

ACTUAL demonstration of how facsimile can be multiplexed on an FM station without interfering with music being broadcast at the same time was featured by W. G. H. Finch, president of the Finch Laboratories, at the Shoreham Hotel in Washington during the FM hearings. Mr. Finch, formerly assistant chief engineer of the FCC, has built an extremely compact trailer installation for checking on FM transmissions. This he operates in addition to a 1,000-watt fixed station in New York City.

In his trailer, secreted under a cabinet the size of a small kitchen cabinet, Mr. Finch has a 250-watt FM transmitter, W2FX. In the coupe which draws the trailer is a 30-watt FM transmitter which can be taken out for even more portable testing.

In this demonstration he set up an FM receiver in the hotel, connected to which was a loudspeaker and one of his facsimile machines. In the trailer was a record turntable and pickup alongside a facsimile pickup and scanning unit. A record was played and a crossword puzzle transmitted. Listening inside the hotel the music came through with out the slightest sound of any interference. With such quiet reception any cutting in by the facsimile system would have been very apparent. A check on the picture transmitted showed that it maintained the same quality as another print sent without music. Mr. Finch confirms the testimony

Mr. Finch confirms the testimony given at the hearings by Maj. Armstrong and the engineers of FM Broadcasters Inc., and pointed out that with this multiplex feature facsimile will rapidly develop in many fields of communication.

and licensee of W2XBF, New York facsimile station, former FCC Commissioner E. O. Sykes read a brief statement endorsing the stand of FM Broadcasters and Maj. Armstrong in the proceeding, particularly concerning FM facsimile operation. The statement agreed on the need for 200 kc. channels for multiplexing facsimile and pointed to the desirability of establishing "sufficiently wide channels at the outset".

Hogan Describes Opportunities of FM

Appearing without counsel, John V. L. Hogan, licensee of W2XQR, New York FM station, made a brief rapid-fire statement covering most of the points at issue. With FM "equivalent in its service value" to present standard broadcast operations, he said FM is ready to furnish a reliable regular service "fully as good, and I believe better for distances up to 100 miles". As between AM and FM, he commented that FM enjoys "a far superior opportunity for service".

Going into his facsimile operations, he exhibited specimens of facsimile transmission under both AM and FM. Noise interference in AM transmission yields a "not white" background on the facsimile sheet, he explained, pointing out that the FM transmission cut down noise and lightened the background. This pkenomena he termed a "visual index of noise suppression". Wide-band operation is more satisfactory from the standpoint of range, quality, multiplexing and flexibility, he stated, pointing out that once band width is set, channels can be narrowed more easily than they can be widened. FM also will save ether space, he stated, by showing the way to put a large number of stations on the same channel "with almost no waste space".

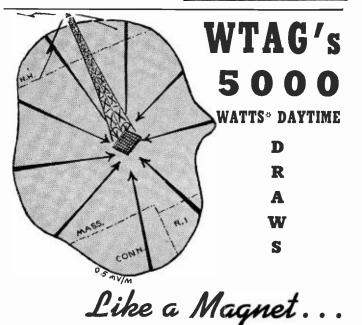

From the educator's standpoint, as well as from the regular broadcaster's, it would be advantageous to place educational stations on FM channels contiguous to commercial broadcast channels, he observed. Since modulation efficiency runs lower on higher frequencies, FM could make better use of frequencies in the 40's than television, he added.

Bailey Reviews Multiplexing Tests

Stuart L. Bailey, of the Washington consulting engineer firm, Jansky & Bailey, licensees on W3XO, briefly described the technical operation of the station, with emphasis on its multiplexing experiments with an IBM Radiotype on a printer circuit. His appearance was handled by Counsel Fred W. Albertson.

In view of the effort to "streamline" the proceedings and eliminate repetitious testimony, McNary & Chambers, originally scheduled to testify, cancelled their appearance.

Radiotype Multiplexing Outlined by Lemmon

Walter S. Lemmon, representing International Business Machines as general manager of its Radiotype Division, testified briefly, describing possible use of FM in developing Radiotype as a "special class of facsimile". Under questioning by Counsel M. M. Jansky, he stated that Radiotype's application to broadcasting purposes included transmitting news both in homes and via large-screen projection to large crowds. He also briefly described demonstrations of Radiotype multiplexing conducted in Washington in cooperation with Jansky & Bailey through W3XO. Mr. Lemmon warned against defi-

Mr. Lemmon warned against definitely tying up frequencies "too far in advance" and advocated holding frequencies above 100 mc. open for experimental purposes. When this recommendation was originally made in 1938, he explained, point-to-point operation of Radiotype was in mind, while now general broadcast via FM multiplex is envisioned. He added that "with some encouragement", such as making frequencies available, IBM would develop a simplified Radiotype machine suited for home use.

In closing the March 26 session, Chairman Fly commented that "no substantial attack" had been made on the interests of educational stations, and pointed out that it would expedite matters if representatives of educational broadcasters met meanwhile and presented their composite case through a single representative.

Catchings Sees

Advantages for Muzak

Waddill Catchings, president of Muzak Corp. and Wired Radio and chairman of the board of Associated Music Publishers, opened the March 27 session. Stating that Muzak now serves some 600 establishments and 1,000 homes via wire lines, he said FM seemed to be a means of supplying Muzak service at lower cost. In addition to the economy feature, he continued, FM also affords the additional advantage of transmitting a wider tonal range than wires.

Observing that present wire operations are limited to a maximum transmission of about 9,000 cycles, and that whenever reception drops to as low as 6,000 cycles customers are quick to complain, he stated Muzak's experience has shown that "the public wants the utmost in faithful reproduction of music". This attitude has been borne out also in several listener tests conducted by the organization, he added.

Referring to a magazine article by Leopold Stokowski, well-known symphony conductor, he developed Mr. Stokowski's statement that at least a 13,000-cycle maximum was necessary to reproduce "great music". With the average ear capable of registering a 15,000-cycle maximum, he declared, the same rule holds for popular music and dramatics.

There is a general demand by the public for both high quality and high fidelity in entertainment, he emphasized, and whether operating individually or through relays FM stations using transcriptions can supply a more faithful reproduction service than standard stations are getting their programs over wire lines. He pointed out also that Muzak wires, which are the best available, although affording better reproduction than standard broadcast stations, are far behind FM transmission.

The scheduled appearances for WSM, Nashville, and Carmen R. Runyon Jr., licensee of W2XAG, Yonkers, N. Y., were eliminated in favor of brief statements by counsel. Both endorsed the general stand of FM Broadcasters and Maj. Armstrong.

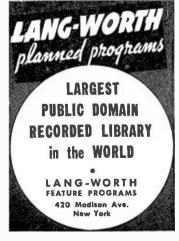

Wozencraft Sees High Frequency Ready

In a preliminary statement at the opening of the RCA case, Counsel Wozencraft stated that the presentation would be "cut to the bare bone" in the interest of expediting the proceeding. He also announced that since the question of television allocations had been drawn into the FM considerations, he would call Elmer W. Engstrom, in charge of RCA television research.

Elmer W. Engström, in charge of RCA television research. Announcing RCA's stand, which up to this point had been a matter of conjecture, Mr. Wozencraft declared, "RCA and its affiliated companies believe that ultra-high frequency broadcasting is ready for commercial use. It is our conclusion that ultra-high frequency broadcasting when sound alone is broadcast should use frequency modulation because of technical advantages and that the time has come when ultra-high frequency sound broadcasting should be presented to the public as a regular service."

Although FM's future cannot be predicted, he continued, with FM competing with standard band broadcasting "only the public can determine which the public will prefer and for which it is willing to pay through the purchase of new receiving sets". Going into forecastable factors, he said it appeared certain there never will be a time when the entire country can be served by ultra-high frequency broadcasting, and that "welding networks" and adding sight to sound "will be difficult tasks". Receivers will cost more and even if the public welcomes FM enthusiastically, it will be many years before all the listeners in any area will have purchased FM receivers, he added.

he added. During the transition standard band broadcasting must be maintained, he pointed out, commenting that "ultra-high frequency broadcasting offers a technical improvement in the broadcasting service

WHAT you may pay for your FM receiver, in relation to the price scales of present standard broadcast receivers, is shown in this table entered as an exhibit in the FM hearings March 27 by RCA. According to Stewart Seeley, of the RCA License Laboratories, tw o types of FM sets would be put on the market—one designed to give a "minimum performance" and another, embodying fancier gadgets, designed for "maximum performance". The cheaper sets at best would not give high fidelity, according to Mr. Seeley, but the highpriced sets—from \$140 up—would include standard band, shortwave and FM with high fidelity.

for which the public must ultimately pay." Concluding, he declared, "We believe that the public interest will best be served by Commission action giving frequency modulation a green light."

Beverage Explains Noise Characteristics

The first RCA witness called by Mr. Wozencraft was H. H. Beverage, RCA Communications chief research engineer and inventor of the so-called Beverage shortwave antenna for trans-oceanic broadcasting. Mr. Beverage explained a series of six technical exhibits covering propagation and noise characteristics as determined in RCA tests of transmission in the 40-50 mc. bands.

In a discussion of the comparative attributes of FM on narrow and wide bands, Mr. Beverage stressed the importance of taking into consideration the "threshold", where, he explained, noise peaks equal signal peaks. In order to get the full benefit of any swing, whether it be wide or narrow, he commented, the carrier-to-noise ratio must be 2 to 1. Continuing,

he explained that as channel width narrows, the threshold moves out, thus increasing the signal advantage, and as the channel widens, it moves in. There are three avenues to decreased noise, he stated --increasing the frequency swing, increasing power or increasing antenna efficiency.

Propagation Traits Are Cited by Guy

Following Mr. Beverage to the stand, Raymond F. Guy, NBC radio facilities engineer, described the tests c on duct ed through W2XWG, NBC's FM transmitter in the Empire State Bldg., and a receiving station at Bellmore, L. I. He explained that the tests were run to determine just what use might be made of FM in the broadcast field. These tests, which started in the summer of 1939, he estimated cost about \$20,000 "out of pocket expense".

An exhibit introduced by Mr. Guy indicated comparative propagation characteristics of narrow-band and wide-band FM and AM. According to the exhibit, a 50 db. signal-tonoise ratio, rated as excellent in the tests, was attained at a distance of 88 miles with an FM deviation of 75 kc. (equivalent to the 200 kc. Armstrong standard), at 70 miles with an FM deviation of 15 kc. and at only 40 miles with AM.

miles with an FM deviation of 15 kc., and at only 40 miles with AM. Stewart Seeley, of the RCA license laboratories, was the next witness called by Mr. Wozencraft. Through a series of technical exhibits he analyzed phenomena leading to FM set construction problems. He also introduced a table giving comparative costs of AM and FM receivers. Explaining this table, he commented that two types of FM sets likely will be built, one type designed for minimum performance and another for maximum performance, both types running the complete price range.

The table indicated that an FM receiver comparable in class to present sets selling for \$19.95 would sell for about \$27 if designed for minimum performance, and \$30, designed for maximum performance. Such a set, he commented, would not yield high-fidelity reception, as its range would probably be only from about 100 to 8,000 or 10,000 cycles. True high-fidelity sets would not

True high-fidelity sets would not start below \$140, and in comparative price would approximate present \$100 AM sets, he stated. In the upper brackets, a set equivalent to a \$200 AM receiver would cost \$230, if designed for maximum FM performance, according to the table.

Specimen Allocations Explained by Lent

Conclusions stemming from the preceding RCA testimony were presented by Worthington C. Lent, NBC allocations engineer. High point of Mr. Lent's testimony, illustrated graphically by maps and charts, was a series of four specimen allocations, each covering the eastern half of the country. Each allocation was based on a different transmission system, ranging from the 40-kc. narrow-band channel to the 200-kc. wide-band channel advocated under the Armstrong system.

Stating RCA's conclusions, Mr. Lent declared the maximum service radius occurs for a maximum deviation of about 33 kc. (a swing of 66 kc.), and the increase of service radius with 33 kc. maximum deviation is about 10% greater than that obtained with a 15 kc. maximum deviation. Higher deviations than 33 kc. yield smaller service radii, he continued, and a maximum deviation of 90 kc. (using a 200 kc. band) yields a service radius approximately equal to that obtained with a 15 kc. maximum deviation.

with a 15 kc. maximum deviation. Regardless of deviation, the required separation distance between stations operating on the same channel is essentially constant, he declared, and since the ability to allocate is in general measured by the separation distance required, the net effect of increasing maximum deviation above 15 kc. is a constantly increasing loss in the number of channels available in a given band without any gain in the ability to allocate.

He pointed out also that since the "bottleneck" in allocation lies in the geographical distribution of cities along the Eastern seaboard, a minimum of 11 channels is required to provide one facility in each of approximately 64 metropolitan areas east of the Mississippi, regardless of the maximum deviation of the system used. To permit complete allocation in these areas, he estimated an additional 11 channels would be necessary.

Western Half Offers Few Problems

Supplementing his figures with reference to the series of individual maps, he stated that by using 40 kc. channels with 15 kc. maximum deviation systems, six facilities can be furnished each of 64 metropolitan areas east of the Mississippi with nine channels to spare. Using 30 kc. channels, three facilities can be furnished in each of 64 areas, with four channels to spare, he conzinued, and using 140 kc. channels (60 kc. maximum deviation), one 'acility can be furnished to each of 15 areas, with 10 channels left over, or two facilities can be furnished to 62, with one channel with 90 kc. Jsing 200 kc. channels with 90 kc. naximum deviation systems, one 'acility can be furnished each of 66 netropolitan areas, with four chanuels to spare.

He explained that the maps treatd only of allocations for areas ast of the Mississippi because once n allocation scheme could be orked out for this half of the ountry, "the bottleneck", there ould be no comparable problem i making allocations for the westn half. In view of the density of opulation in the east, he pointed it, the allocation problem is one adjacent channel interference of not co-channel separation.

Asked why RCA employed a 180 . swing in its 200 kc. channel .lculations, rather than the 150

'Radio Traitors'

"LORD HAW-HAW," the unidentified newscaster with an ultra-Oxford accent who broadcasts from Germany to England each night, has become so much of a joke to Britishers that their newspapers run schedules of his talks and urge their readers to tune him in. Not so jokeworthy to the French are Announcers Paul Ferdonner and Andre Obrecht, who broadcast in French from Germany's Stuttgart station. A Paris military court on March 6 handed down death sentences in absentia for the two renegade Frenchmen, who were convicted as "ra-dio traitors".

kc. swing with a 50 kc. guard band of the Armstrong method, Mr. Lent declared he thought 50 kc. was too much and a 10 kc. guard band on either side was "plenty" to protect against adjacent channel interference. This wider deviation would provide only for aural signals on a 200 kc. band, he added, and would allow no room for facsimile or other services.

Otto S. Schirer, RCA vice-president in charge of patents, followed Mr. Lent to the stand. He was questioned briefly by FCC Attorney Bauer about supplementary information offered in connection with a previously filed report on RCA patent holdings touching the FM field.

Stromberg-Carlson Set Sales Analyzed

Mr. Loucks read into the record a brief statement on behalf of Stromberg-Carlson which included figures on FM receiver sales by that company. The statement said that from Oct. 14, 1939, to March 2, 1940, the firm had shipped a total of 1,592 FM sets. This included 467 sets selling at \$59.50; 379 at \$149.-50; 312 at \$179.50; 172 at \$275, and 262 at \$395. All these sets were built for operation under the Armstrong system, he stated.

Mr. Lohnes concluded the session with a brief appearance on behalf of WDRC, Hartford, and Westinghouse E. & M. Co., offering no testimony for either beyond formally filing for the record a Westinghouse exhibit describing its FM experiments. The exhibit indicated endorsement by Westinghouse of the FM Broadcasters-Armstrong stand.

RCA Demonstrates Signal-to-Noise Ratios

RCA picked up its presentation March 28, concluding at the noon recess. Cutting down its planned demonstration to a single recording, RCA presented a transcription offering an aural comparison between 20, 30, 40, 50 and 60-db. signal-to-noise ratios. The demonstration drew intensive questioning from the FCC members, who showed particular interest in the disparity, from a standpoint of noise, between the 40-db. signal, classed as the minimum acceptable signal by RCA, and the 60-db. signal, classed as excellent.

Recalled for cross-examination, Mr. Lent further interpreted his exhibits covering comparable chan-

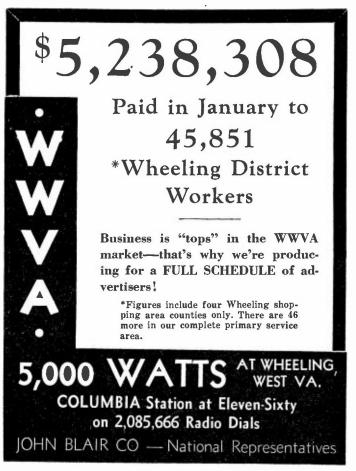

nel widths between various frequency swings. In a colloquy with Commissioner Thompson, during which the commissioner took issue with certain allocation factors in the RCA exhibits, Mr. Lent declared that although a particular facility could be allocated to a city of 10,000, its actual needs and ability to support must be taken into consideration, but there is no sense in giving it more service than can be used efficiently. He explained this did not mean that the program service desires of the community should be disregarded.

Responding to a query by Commissioner Brown, he stated that although rural areas would necessarily be served by the standard band, at least in the present state of the FM art and until a method is found of extending u.h.f. coverage, in some cases rural sections contiguous to FM service areas probably would get better service under FM, particularly where the effect of ground conductivity on AM is marked. As for smaller cities and population areas, he continued, all probably could have a station, if necessary, by limiting surrounding service areas. Although a single facility probably could be given to all cities above 10,000 population by restricting service areas, if the competitive factor were to be introduced by allowing more than one station to each city, more channels would be necessary, he stated.

A Choice of Frequency Space or Coverage Gain

The FCC must decide which is more valuable, frequency space or coverage gain, Mr. Lent declared. In connection with his discussion of signal-to-noise ratios in this respect, Lieut. Jett cited the propagation characteristics of the two General Electric FM transmitters at Schenectady and Albany, located about 15 miles apart, and asked if their 200-kc. operation could be duplicated using the 30-kc. deviation recommended by Mr. Lent. The latter answered that it could be done, but that the 30-kc. deviation operation would yield a larger "no man's land".

After an explanation by Mr. Lent that his FM calculations were based on a study started about 18 months ago, with working figures resulting from operation of RCA's experimental transmitter and receiving station at Bellmore, Mr. Loucks took issue with RCA for basing its allocation suggestions on observations of "one day in one month on one station in one area". In response to another query by Mr. Lohnes, Mr. Lent explained that to increase the signal-to-noise

April 1, 1940 • Page 91

ratio from 40 to 60-db., power must be increased 100 times.

Also recalled for further crossexamination, Mr. Schairer, RCA vice-president in charge of patents, was asked bluntly by Chairman Fly whether RCA would hold any patent advantage as between narrow and wide-band operation of FM. In answering in the negative, Mr. Schairer pointed out that it has always been RCA's policy to acquire all patent rights available that would lead to improvements in service. Although RCA holds no Armstrong license, he stated there have been some conversations toward that end and RCA is preprepared to negotiate.

Sees Disadvantages

In Higher Frequencies

As the final RCA witness, Mr. Engstrom, in charge of RCA television research, discussed the television aspects developed during the hearing, most of which were confined to FM's potential function in television operation and allocation matters. He stated that television functions effectively in the 40-mc. band, particularly in giving good metropolitan service. At the present state of the art television could not be moved bodily into the higher frequencies and maintain equivalent operation without considerable delay, he declared.

delay, he declared. If television Channel I were turned over to FM operation and the NBC television transmitter, W2XBS, moved to Channel II, the switch would take about four months and cost around \$100,000, he estimated. However, he added, if the station were transferred to another channel above Channel II, the transmitter conversion would entail extensive tube changes, dependent upon culmination of a new development not due until the last of the year, and would take in all about 18 months.

Comparative Results Of Band Widths

Commissioner Thompson at some length developed the proposition that perhaps it would be worth delaying television if, by supplying an additional service via u.h.f., certain areas now deficient in radio service could be benefited. Mr. Engstrom made no comment on this beyond pointing out that he was only advancing the engineering aspects of the various services and could not attempt a choice between them.

Applying FM to video, Mr. Engstrom estimated that at least 8 mc. would be needed to carry the picture signal, along with an addi-tional .5 or .75 mc. for sound, necessitating a total band width of "something under 9 mc.". The 750kc. guard band employed in televi-sion functions to keep the sound signal out of the picture signal, he explained. Narrow-band FM would give better aural service for television than AM, he commented, but wide-band operation would necessitate a channel more than 9 mc. wide. He said he foresees the use of FM in video, but at much higher fre-quencies than the present. In this respect, FM could serve as an "ele-vator", he commented to Chairman Fly, but not necessarily, since it could move into the higher frequencies and still employ AM. How-ever, FM is thought to have better possibilities, he added.

MILLING MONEY NEVER STOPS in Wichita, the principal city in the state that leads the nation in flour milling. Flour makes dough for housewives and smart advertisers alike.

for housewives and smart advertisers alike. Since you're not a housewife we can skip that part, but if you're thinking of making any dough this year in Kansas, let us remind you that "You can't sell Kansas without KFH". And right now Kansas folks are looking forward to another big year. That means that 292,421 families in the KFH AIREA are going to have more money to spend. again this year, than the average American family. Perhaps it might be an idea for you to get more information (or place your reservation) from Edward Petry & Co. NOW about

THAT SELLING STATION FOR KANSAS

• Call Any Edward Petry Office

If bands are to be split, as between television and FM, so that operation would be on several groups of channels, he said he thought television would be hurt more than FM. Asked how much snace might be made available for other services if the video sound track were moved down to a separate frequency, Mr. Engstrom explained that although a 750-kc. guard band is used, only about 100 kc. would be freed. He added that television could not operate effectively under such conditions, since two tuning operations would be necessary. Television operates most effectively with sight and sound interlocked, he pointed out.

Civil Liberties Union

Would Open Ultra-Highs

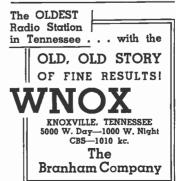

Opening the final afternoon session March 27, Percy L. Russell, as counsel for the American Civil Liberties Union, presented for the record a statement urging opening of the ultra-high frequencies for FM as a means of permitting a substantial increase in broadcast stations and a "freer expression of thought by means of radio communication". The maintenance of an adequate opportunity for the expression by radio of minority views requires an enlargement of the number of broadcast facilities, the statement said.

Limitations of the broadcast band permit the construction of but few additional broadcast stations, the Union declared. The fewer the number of stations, the fewer the number of stations, the fewer the differences of opinion that can be discussed over the air at any given period. "Technical developments in the radio art which tend to overcome the artificial restraints imposed upon the free expression of thought are in the public interest and should be utilized as fully as possible," it was stated.

Howland Sees Better Coverage in the West

John R. Howland, assistant to the president of Zenith Radio Corp., which has been experimenting in FM, as well as television, declared the results of these experimentations indicated that FM coverage in the West will be considerably greater than that in the East. He declared that eventually an FM network using radio relays can be achieved during "certain hours of the day", serving smaller stations which now do not get network service because of the high wire costs.

Advising caution, Mr. Howland said the evidence presented during the hearing reflects factors which cannot possibly be measured and that the important consideration is what the public will get out of FM.

AN ATTACK of appendicitis couldn't keep Leroy Miller, musical clocker of KYW, Philadelphia, away from his March 16 morning broadcast, but right after the program he was hustled to Graduate Hospital for an emergency operation. Two mornings later he did a part-time performance from his hospital bed, aided by Engineer Roy Nuss.

He said he felt the proponents of FM were "a bit on the enthusiastic side" in predicting replacement of present-day broadcasting by FM.

present-day broadcasting by FM. Pointing out there are 37,000,000 or more radios in use, he said a large majority of the homes are in the service areas of clear-channel stations which could not procure service with cheap FM receivers. It should be taken into account, he said, that during the last six months of 1939 about 100,000 receivers were sold each week at \$15 or less.

Moreover, he pointed out that high-fidelity reception is not required generally, since children are not interested in many programs other than script shows and that 60% of the daytime program schedule is not adapted to high-fidelity.

Declaring it was apparent from the testimony that FM will not take over all of the AM duties but that it must "cooperate", Mr. Howland said he felt that introduction of FM will spur manufacturers to produce quality AM receivers for standard broadcast reception and that a good service thereby will be done.

Admitting FM advantages under certain prescribed conditions, Mr. Howland said he felt the medium was too young yet to ascertain whether it is better for the public than television. The public, he said, will make its views known when it has the choice of the two services. He advocated continued experimentation for at least a year for both FM and television before satisfactory allocations are determined. Replying to Commissioner Craven, he urged that the two services should go hand-in-hand at the moment so that the public can make its choice.

Brown Favors

Wide-Band System

J. E. Brown, executive engineer of Zenith, presented the results of experiments conducted by his company with both wide-band and narrow-band receivers. His conclusion was that wide-band is the safest course to follow, depicting graphically the technical c on clusion reached during the experiments.

reached during the experiments. Replying to Commissioner Craven, he said there are advantages if a 200-kc. band is used and that if it is found eventually that the band can be narrowed perhaps to 100 kc. it would not render receivers adapted for wide-band operation ob solete. He asserted that with 200kc. bands, there would of necessity be fewer stations.

Current prices for FM receivers will be considerably higher now than a year from now, assuming the art is introduced, he estimated, a good receiver costing about \$125.

Coverage and Fidelity Compared by Ring

As the only FCC witness, Assistant Chief Engineer A. D. Ring presented the results of field intensity surveys of ultra-high frequency broadcast stations, and in one instance compared distortion with AM stations in the same locality. In substance, Mr. Ring testified that some of the claims as to coverage were not as great as these studies indicated. He pointed out the FCC's observations indicated that FM has a directional effect and as a consequence, distortion may be present in certain directions.

Regarding distortion, Mr. Ring compared the results of reception of W3XO, Jansky & Bailey station in Washington, with WRC, using a special AM broadcast receiver and two types of FM receivers. Because of the inefficient type of experimental antenna used by W3XO, he said the studies indicated subnormal coverage. Distortion varied greatly on the two types of FM receivers while on the AM receiver, picking up WRC, the signal appeared as good as the better of the two FM signals. This was attributed largely to the fact that the AM receiver was of exceptional high-fidelity.

Proposed Allocations Are Submitted

Following a recess, Mr. Fly asked for comments on precisely what frequency bands were being sought. On behalf of Maj. Armstrong, Mr. Lohnes declared his witness had asked that the band 41-44 mc. be set aside definitely for wideband FM and that in addition television Channel I ranging from 44-50 kc., be assigned, giving FM a continuous range and thereby simplifying receiver construction. In this connection, he pointed out, Maj. Armstrong had testified that certain television channels were not being used.

Continuous Lower Band Is Favored

When Chairman Fly asked whether the 78-84 mc. television channel (No. IV) might be assigned for

FM, Maj. Armstrong said it could be used but that it was more logical to use the continuous lower band. Shadows and distortion result on the higher frequencies, he declared.

On behalf of FM Broadcasters, Mr. Loucks said his group had gone on record favoring the sweep from 42 to 50 mc., so that the present No. II television band from 50-56 mc. would become the No. I television channel. Moreover, he said his group urged that the present non-commercial educational band from 41-42 mc. now being used by only two AM stations, could to advantage be employed for non-commercial FM operation, though FM Broadcasters did not look for assignments in it. Mr. Loucks said that no alternative suggestion had been discussed, pointing out that FM Broadcasters is a trade association and that it takes time to canvass its membership.

Asked by Chairman Fly what FM Broadcasters proposed in connection with the 25-27 mc. band and the 116-118 mc. band earmarked for FM under existing allocations, Mr. Loucks said his group does not desire to hold the lower band and felt the band above 116 mc. should be kept for experimentation.

All semblance of a battle with the educators was eliminated when Mr. Wozencraft observed that his company felt the 41-42 mc. band should be left to education as long as there is reasonable prospect of educators using the band. Maj. Armstrong concurred in the view as did Mr. Loucks on behalf of FM.

Jett Sees Problems In Selecting Bands

When Chairman Fly asked Chief Engineer Jett for his comments, he said it appeared unfortunate that a part of the first television band could not be allotted to FM but that the situation appeared to be one where it was "all or none". He pointed out there was no way of going below that band while above the desirable portion of the immediate spectrum involved both Government and television had to be considered. Moreover, he pointed out that the problem would become more difficult if the allocation was too long delayed.

Mr. Wozencraft made a plea for a comprehensive study of the re-spective merits of the 44-50 mc. and 78-84 mc. bands before any conclusion is reached on allocations. Asserting there should be a very complete analysis of the complicated evidence given during the hear-ing, he said it would be dangerous to hurry the allocations. He said, based on observations of his engineers, that the 78-84 mc. band could be used without undue hardship, and asserted he did not believe it was necessary to disturb the present television band. Declaring there was plenty of room in the 42-44 mc. band to accommodate FM stations, he suggested that the Commission might leave the lower television band available for the present visual stations assigned to it in New York. Chicago and Los Angeles, and then perhaps place FM stations on them in other parts of the country. For example, he said engineers believed that the 44-50 mc. band could be used in Boston and New York without interference.

Asserting that FM and television could well "grow together" and that the No. I television band might still be used in the three major cities without disturbing additional FM assignments on them, he declared that if it was taken away now, visual radio would be retarded.

Engstrom Recalled

For Channel Data

Chairman Fly recalled RCA Engineer Engstrom and i n q u i r ed whether there would be any substantial loss to television if the No. I channel were assigned FM. The witness observed that while the placement of FM stations on the channel in addition to the television stations would not seriously impede the visual operations, it would not be as good as if the band were available for television all over the country. He said he would like to see television channels No. I and No. II reserved for the larger centers, which would give visual radio two bands below 56 mc. He pointed out that because of separation requirements Channels I, III, V and VII could be used in a city like New York, giving it four stations, whereas if the lower band were taken away only Channels II, IV and VI could be used there.

Kennedy Requests Low Frequency

Zenith Engineer Brown, recalled to be questioned on television, said he would not like to see television disturbed since his own company's experiments on the No. I channel would be disrupted. Asked by Commissioner Craven whether he knew of any channels above the No. I and II bands which would give equivalent coverage and service, Mr. Brown said he did not.

Frank M. Kennedy, chief engineer of Don Lee Broadcasting System, licensee of W6XAO, the third station on television channel No. I, was then called, at the suggestion of Attorney Lohnes. Mr. Kennedy said his experience has been that propagation conditions in California require a low frequency and that he believed assignment of the lower band to FM would not be in the best interests of visual radio. He said that it was possible for the station to operate on the No. II television band but that it was not desirable.

The stormiest period of the eightday hearing session developed when Mr. Wozencraft asked the Commission to authorize an engineering conference following the hearings to cover the allocations conflict. It was when the RCA counsel used the phrase "snap judgment" and urged the Commission not to use it, that Chairman Fly flew into a nearrage. Half rising in his chair, the chairman said the Commission had never "taken snap judgment" but that on the contrary it had exer-cised caution and that the industry might well do the same. Without making specific reference to the Commission's recent order reopening the television hearings April 8 because of RCA merchandising practices, the chairman said that ever since he had been on the Commission, it had given mature consideration to all matters and had not rushed things through. He then observed he did not like observations made several times during the hear-

ings about hasty action. Mr. Wozencraft immediately responded that perhaps he had made an unfortunate choice of language but that he simply wanted to impress upon the Commission the de-

Studebaker Gives

Views of Educators

Chairman Fly observed that, since all parties to the hearing had agreed not to place the 41-42 mc. educational channel in jeopardy, he presumed the educational group did not desire to present testimony. Dr. John W. Studebaker, U. S. Commissioner of Education, however, took the stand to place in the record an exhibit covering comments of various educational and related groups supporting retention of the non-commercial band for educational purposes. The purport of the exhibit was that organized education should retain its complete rights to the band. He was not cross-examined as to why so few educational organizations had taken advantage of the availability of assignments in the 1,000 kc. range, available for the last two years

available for the last two years The last witness to appear was S. Howard Evans, who testified on behalf of the National Assn of Educational Broadcasters and the National Conmittee on Education by Radio, of which he is secretary. He urged an equalized allocation of FM, under which all stations in the same city would be given identical powers and facilities, rather than anything like the present system with several classes of stations assigned. He pointed out his organization had criticized the whole broadcast allocations for that reason. Urging wide-band FM, he said that in his conversations with educators he has found a deep interest in using facsimile for classroom work and that the multiplexing possibilities of wide-band would make that allocation method desirable.

work and that the multiplexing possibilities of wide-band would make that allocation method desirable. Upon completion of the testimony by respondents, Mr. Fly called the second recess of the afternoon to consider the suggestion of Mr. Wozencraft that an engineering conference be authorized and that all parties be permitted to submit detailed briefs. After the five-minute recess, Mr.

After the five-minute recess, Mr. Fly said the Commission had agreed to accept briefs, to be submitted by April 15 by individual respondents, but that it did not feel disposed to authorize the engineering conference. He said the Commission felt the h e a r i ng itself had been a thorough - going technical inquiry. While the Commission would not suggest a general conference, he said he saw no objection to the submission of additional material.

Page 94 • April 1, 1940

Federal Union Decision Held to Apply to AFM THE DECISION of Judge Peyton Gordon of the Federal district court for the District of Columbia March 25, holding that labor unions are subject to provisions of the Sherman anti-trust laws where their objectives are not "legiti-mate", was seen in radio circles as having a possible bearing on the current studies of the Department of Justice into activities of unions generally and more particularly the American Federation of Musicians. In his opinion, involving action of the Government against the truck drivers' union of the American Federation of Labor, Justice Gordon held that where labor unions use unlawful means to obtain their ob-jectives, they are subject to the penalties of the anti-trust laws.

In the truck drivers' case, the union was charged with a conspiracy to compel several concrete mixing companies to hire members of the truck drivers' union rather than members of the operating engineers' union. In connection with the AFM situation, it is understood the Department is conducting studies to ascertain whether it is conflicting with the law under requirements that broadcasting stations hire fixed quotas of musicians irrespective of whether they need them.

CLARENCE H. CALHOUN. Atlanta manufacturer of sirup concentrates who is identified with Sam Pickard. former CBS vice-president, in the lense operation of WGST, Atlanta, is affiliated with G. P. Stanley, cotton man of Greenville, S. C., in an application to the FCC for a new local station on 1500 kc. in Greenville. Dora Catherine S. [See page 19 for list of other FM applicants since publication of list of licensees and applicants as of March 13 in the March 15 BROADCASTING.]

MAGNETIC STORM Stops Shortwave Broadcast From Abroad

LITTLE interference was caused domestic broadcasts by the March 24 magnetic storm which interrupted wire, cable and shortwave communications. Cancellation of several network programs resulted when shortwave transmissions from abroad were marred by the static storm.

A curious feature of the storm was the disabling of AT&T automatic repeater reversing equipment on transcontinental broadcasting circuits. AT&T remedied this trouble by operating the equipment manually and little disturbance was noted by listeners.

E a r ly shortwave programs on March 24 were not affected, the magnetic storm not becoming troublesome until 11 a.m. CBS received an early broadcast from the Vatican in Rome and a news roundup at 9 a.m. The usual news summary by CBS correspondents abroad on *The World This Week*, 7-7:30 p.m., failed to come through. In its place, William H. Barton, curator of Hayden Planetarium, New York, and Dr. H. E. McNish, research expert in terrestrial magnetism of Carnegie Institute, Washington, held a two-way conversation on the astral physical war. The domestic roundup on the last half of the program went on as usual. NBC cancelled its European broadcast at 3:30 p.m. and 7 p.m. MBS also cancelled foreign pickups.

The 8-8:15 a.m. and 6:45-7 p.m. news roundups by CBS foreign correspondents failed to come through March 25 and domestic roundups were substituted. By March 26 the European transmissions were coming through again.

AFRA Signs NBC-Hollywood LOS ANGELES chapter of American Federation of Radio Artists and NBC. Hollywood, on March 25 signed a contract covering network staff announcers. Pact calls for a substantial increase in wages and improved working conditions. Don E. Gilman, NBC western division vice-president, and I. B. Kornblum, executive secretary of Los Angeles Chapter, signed the contract.

SEVENTH anniversary of the WWVA Jamboree was celebrated March 28 with the entire staff of the Wheeling station participating. To accommodate the studio audience, it was necessary to give three performances in addition to the regular two-hour show at the Wheeling Auditorium. Ilillbilly entertainment and the inquiriug mike constituted the programs.

ASCAP Boost Stirs Industry

(Continued from page 11)

ably be 5%, the same as will be paid by those individual stations with which the Michigan Network competes. Similarly a hookup of two low-powered stations, each of which pays an individual 3% rate, would probably be assessed at 3% for the network programs.

Asserting that the ASCAP charges are based on the value received from the use of ASCAP copyrighted music by the station or network broadcasting such music, Mr. Paine said that if a single major station pays 5% then it is not unreasonable for a national network to pay 71/2% since it makes much wider use of the music. Although the ASCAP plan may seem simple on first inspection, he said, its compilation has taken months and months of study during which the ASCAP radio committee went over the records of every station in the country. In addition, he explained, field men made personal calls on 120 stations and discussed in detail with the broadcasters a wide variety of possible licensing plans. Lengthy reports of these conversations were submitted to the committee, he said, and were carefully studied.

Should be Pleased!

Declaring that approximately 300 of the nation's broadcasters will, under the proposed plan, find their ASCAP payments cut in half, and that some 500 broadcasters will pay "substantially less" than at present, he said that the broadcasters should be "greatly pleased" with the plan.

ASCAP sought to produce fig-ures to justify its claim that broadcasters should pay additional revenue. Charges and counter-charges developed, with the result that only a matter of hours after ASCAP's proposition, both Tin Pan Alley and the daily and trade press were filled with a babble of conflicting claims.

Mr. Paine, for example, held that 75% of radio programs are com-posed of music from ASCAP's repertoire. BMI immediately disputed the figures, citing surveys made by NBC and FCC showing that music occupied less than 60% of all broadcast time and indicating that the amount of time devoted to

Setting the Pace

TO DEVELOP new sources of supply for radio music, WOV, New York, during its Opera Hour programs, is presenting a series of spot an-nouncements inviting those contemplating careers as lyricists and composers to submit their work along those lines to WOV's music depart-ment. Also included in the announcements is the suggestion that all compositions be copyrighted before submitcopyrighted beior e submit-ting for protective purposes. Those compositions showing promise will be turned over to Broadcast Music Inc., of which WOV is a member.

music on the air is decreasing year by year rather than increas-ing as ASCAP contends. BMI de-nounced as "even more incorrect and misleading" the ASCAP claim that music constitutes 70% of the material used in commercial time on the air. Quoting the NBC survey, it said that only 20.7 of all time on sponsored programs was devoted to music.

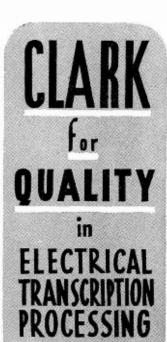

ASCAP Hearings

MOTION of William J. Hotz, attorney for the State of Nebraska, for a new trial of the suit to test the constitutionality of the Nebraska anti-ASCAP law was heard March 25 by the same three-judge court which in a previous unanimous de-cision found the law to be unconstitutional. Court has taken the matter under advisement and will hand down a written decision, probably within the near future. Next suit in the chain of actions filed by ASCAP to test the constitutionality of the various anti-ASCAP state legislation will be held April 15 belegislation will be held April 15 be-fore a Federal statutory court in Gainesville, Fla. ASCAP, seeking a permanent injunction against the State's enforcement of the Florida anti-ASCAP law, will be repre-sented by Louis D. Frohlich of Schwartz & Frohlich, ASCAP counsel.

Ethyl Case Seen Supporting Radio In Using Records

Bennett Finds Analogies in **Supreme Court Opinion**

THE OPINION of the Supreme Court March 25 in the Ethyl Gasoline Corp. case, holding that restrictions imposed upon the use to which an article may be put after it has been purchased in regular channels of commerce are illegal, was con-strued by legal observers in Wash-ington as directly applicable to per-formance of phonograph records over broadcast stations.

Andrew W. Bennett, Washington counsel for National Independent Broadcasters, in a letter March 26 to President Harold A. Lafount of NIB, asserted the court stated in positive terms that in the case of the Ethyl Gasoline formula, the parent company could not control its_use through the retailer.

He said the case was analogous to the situation confronted by the broadcasting industry regard-ing restrictions on performance of phonograph records, and that the opinion should tend eventually to clarify that issue. Mr. Bennett last February [BROADCASTING March 1] February [BROADCASTING March 1] had advised independent stations they could perform phonograph records without paying tribute to various groups seeking compensa-tion if they purchased the records in regular channels of commerce and if they refrained from use of the name of the recording artist or the record manufacturer.

Rights Relinquished

The Supreme Court in the gasoline case unanimously held that conditions and restrictions imposed by Ethyl Corp. on the resale of Ethyl gasoline are illegal. The court said that such contracts or combinations which are used "to ob-struct the free and natural flow in the channels of interstate commerce of trade even in a patented article, after it is sold by the patenarticle, after it is sold by the paten-tee or his licensee, are violations of the Sherman Act." The court said that by its sale to refiners, Ethyl Corp. relinquished its exclusive rights to use the patented fluid and it relinquished to licensed jobbers its exclusive rights to sell the fuel by permitting the refiners to manu-facture and sell the fuel to them. Applying the court's conclusion to the attempted restrictions sought

to the attempted restrictions sought to be imposed on use of phonograph records by record manufacturers and the National Assn. of Perform-ing Artists, Mr. Bennett said both claimed they had a "common law copyright". He pointed out the Supreme Court repeatedly has held that an article subject to copyright

that an article subject to copyright protection is no different than one subject to patent protection. "When the recording artists per-form a musical composition for the record manufacturer with knowl-edge that records will be manufac-tured and sold, and when the manu-factured records are sold to disfactured records are sold to distributors, any exclusive right of the artists to use and sell the re-corded rendition is exhausted," he declared. "The sale of the records to distributors exhausts the alleged common law copyright and neither the recording artists nor the manufacturer may exercise any further control over the records."

Thus Mr. Bennett concluded that the Supreme Court opinion con-

BIRTHDAY felicitations flew thick and fast at KDKA, Pittsburgh, on March 19 when Fort Pitt Brewing Co's *Tap Time* program started its third year on the air. S. D. Gregory, KDKA general manager, during the observances presented to Sponsor Mike Berardino a mammoth birthday cake decorated with a replica of the KDKA transmitter and tower. Grouped around the cakemaker's dream here are (1 to r) Walter Horn, KDKA salesman; Maurice Spitalny, musical director of the station; Mr. Berardino; Mr. Gregory; Ferris Feland, producer, and Harry Veith, **BBDO** account executive.

Summoned

ABSORBED in editing teletype releases in the news room of WNAX, Yankton, S. D., News Editor Ray Clark was electrified as an anwas electrified as an an-nouncement came over the studio loudspeaker, "And now we turn you over to Ray Clark, who is conducting an inquiring mike in the studio auditorium." Bewildered at his apparent lapse of mem-ory, he rushed to the audi-torium only to learn the an-nouncement was part of an already transcribed program already transcribed program in which his inquiring mike interview had been featured.

firms his observation of last February that a station may lawfully broadcast a phonograph record if it purchases the record in regular channels of commerce and if it limits a broadcast to recreating the sounds on the phonograph record and does not in any way make use of the names of the artists or of the

of the names of the artists of of the record manufacturers. Coincident with this develop-ment, it was reported that dissatis-faction had cropped up among re-cording artists, particularly those on the Decca list, because of that company's ban on the use of its records by stations. Whereas the performance of the state of the st record manufacturers have held that radio performances hurt rec-ord sales, the Decca artists contend that non-performance on the air results in loss of income and repute.

BARD OF BOSTON Promotion Drive Moves Agency Official to Poetry-

AS A RESULT of the latest pro-motion campaign of WBZ-WBZA, Boston-Springfield, G. A. Holcomb, of Alley & Richards Co., Boston, was moved to poetry. For weeks Sales Manager Frank Bowes had wargled Holcomb and other time regaled Holcomb and other timebuyers with samples of products advertised on the station. The poetry:

I'm gassed and I'm candied, Carnationed and floured, With radio products Each day I am showered.

I'm flattered and favored Like Count de Ciano* But please Mr. Bowes Don't send a piano.

* If you know a better rhyme with piano-go to it.

Canada Political Time

PRELIMINARY figures show that Canadian broadcasters, with the exception of those in Quebec prov-ince. sold political candidates a total of 623½ hours of time during the six-week general election cam-paign ended March 23 for the elec-tion held March 26. Figures for Quebec province were not available, but Quebec stations sold more time but Quebec stations sold more time than those of other provinces of the Dominion, and it is estimated that with the Quebec figures included a total of about 800 hours of com-mercial time sold to candidates. Small stations did better on the po-litical broadcasts than the large detained due largely to other acc stations, due largely to other com-mercial commitments, the data reveal.

Bucks for Hams

Bucks for Hams CONTEST for children only is sponsored by the St. Louis Inde-pendent Packing Co. (Maryrose Hams) and heard over KWK, St. Louis, and KWOS, Jefferson City, Mo. Contestants obtain entry blanks from dealers and get sig-natures of five housewives pledg-ing to buy Maryrose Hams for natures of five housewives pledg-ing to buy Maryrose Hams for Easter. Each entrant receives a pocket knife free. A dollar bill is given every evening to the child submitting the largest list the pre-vious day. The wholesaler then is able to sell the dealer more hams, on the strength of the number of on the strength of the number of pledges in that neighborhood.

REPRESENTING the four stations comprising the Minnesota Radio Network, these executives met in Minneapolis for their first annual business session and reported that business session and reported that business was very good. Left to right: Fred Schilplin, owner of KFAM, St. Cloud; Gregory Gent-ling, owner of KROC, Rochester; Ray C. Jenkins, general manager of KSTP and MRN; Ray Schwartz, manager of KYSM, Mankato.

Parental Courage

DWIGHT NEWTON, who conducts the funnypaper broadcast for youngsters on KYA, San Francisco, each Sunday morning, labored before the mike for many anxious minutes recently, when, during the middle of his show, he learned his baby boy had swallowed some ant poi-son. Mrs. Newton, frantic, telephoned the station while Newton was on the air. She asked that a note be slipped under the studio door to him. He got the note—but the show had to go on and he finished his broadcast. In the meantime Mrs. Newton had given the baby antidotes and rushed him to a hospital. He recovered

WESTINGHOUSE ELECTRIC Co., New York, on March 21 added KYUM, Yuma. to *Musical Americana* making a total of 99 NBC-Blue stations, Thurs., 8-8:30 p.m. Agency: Fuller & Smith & Ross, N. Y.

AIR CONDITIONING TRAINING Corp., Youngstown, Ohio, on March 31 shifts *Happy Jim Parsons* on 36 NBC-Blue stations Sun., from 10:45-11 a.m. to 11:30-11:45 a.m. Agency: National Classified Adv., Youngstown.

BROWN & WILLIAMSON TOBAC-CO Corp., Louisville. effective May 7, will sponsor Uncle Walter's Doghonse (Sir Walter Raleigh tobacco) on Tues-days at 9:30 CST on NBC-Red. Plan-tation Party, which replaces Avalon Time (Bugler tobacco), will be heard Wedwedwar at 7:20 nm CST on Wednesdays at 7:30 p.m. CST. on NBC-Red, with a rebroadcast at 10:30 p.m. *Home Toton* (Raleigh cigarettes) will be aired on Fridays at 8 p.m. on NBC-Blue, with a rebroadcast at 10:30, Russell M. Seeds Co., Chicago, burdlet the accent bandles the account.

Thrown by Kite

A CURE for kites will be welcomed by KLZ, Denver, where March zephyrs have attracted young followers of Ben Franklin. Two adoles-cents whose sky toy encountered some high tension wires pulled wires and all down, blacking out the North En-glewood section as well as KLZ.

Special Station Planned by Store

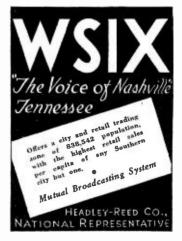

AN INNOVATION in broadcast-ing, under which a department store would provide service to its charge-account customers and abstain from all commercials, is con-templated by May Department Stores Co. of Los Angeles, an ap-plicant for both a frequency-modulation broadcast station and a television transmitter, according to Gerald Fitzgerald, executive of that company.

In Washington for the FM hear ings as an observer, Mr. Fitzgerald said his plan was to provide service for a nominal charge, perhaps \$3 a year. Pointing out that many department stores, such as Gimbels, Bambergers and the Shepard Stores in Boston, had pioneered early ra-dio, he said the May Company, as the first department store applicant for FM and television, hoped to lead in California.

Program Problems

"The licensee buying its equipment from the first line companies has little if any mechanical prob-lem," Mr. Fitzgerald declared, "Its greatest task is right program-ming. With the hundreds of thousands of charge account customers available to a department store, I should like to find an avenue of approach whereby they could elect a program board to give supervision to programs of their choosing; these programs to be completely varied in every way so that a full fare to suit all tastes would be included on the daily radio menu.

"There would be no commercials of any kind, probably not even the name of the store. A charge of \$3 a year or some such sum, would be made to subscribers and they would be assured perfect programs. In the case of nationally important speeches and other programs, an arrangement could be made with the commercial station whereby in consideration of the huge extra listconsideration of the huge extra list-ening audience furnished, the pro-gram could be relayed. It would be also possible to include, for a small extra charge, some kind of adaptor which would permit FM pickup without any change in the present radio owned by the listener; this, of course, would be de-pendent on the quality of receiver owned. There would be many 'chiselers' to tune in on the station without subscription, but, in the main, most people would want to pay their share."

LaGuardia Urges WNYC Fulltime

A NON-PROFIT, non-commercial broadcasting station, operated by a Governmental subdivision—State or city—should have priority for wavelengths and time over any private commercial station. Mayor LaGuardia of New York City told the FCC March 29 in support of the application of WNYC, municipally-owned station, for extension of its limited time to 11 p.m. If the law does not now provide this pri-ority, he advocated that Congress clarify it.

In a hearing before FCC Counsel Hyde, the Mayor contended that Congress in enacting the Radio Act took every precaution to prevent monopoly on the air and laid down the policy of revocable licenses to prevent it. Mayor LaGuardia was critical of the networks, especially CBS, and related instances which he alleged showed an "arrogant at-titude" by CBS officials in regard to the operations of the New York municipal station, which operates municipal station, which operates daytime on 810 kc., otherwise the clear channel of the CBS-owned, 50,000-watt WCCO, Minneapolis. He stated that "when a city of 7½ million people comes before the FCC on application for full-time there is a presumption of pe-

time, there is a presumption of necessity, and no private station op-erated for profit can claim a prior right to prevent unlimited time by such a Governmental facility oper-ated on a non-profit basis." The proposed expansion of WNYC's time would break down the WCCO clear channel and curtail its rural coverage.

Coverage. Mayor LaGuardia added that he appreciated the wavelengths were limited in number, but "were also operated by too few people." He agreed the FCC's power to re-voke licenses tended to place in-vestment of private broadcasters at the agency's mercy. Duke M. Patrick, counsel for CBS, cross-examined Mayor La-Guardia on his views about the pri-

Guardia on his views about the pri-ority of publicly-owned stations over existing private stations. This Mr. Patrick said, would be con-trary to the Communications Act and the former Radio Act which passed during the Mayor's was service in Congress.

AMID the exhibits at the recent WCKY-Junior Chamber of Commerce Hobby Lobby show ventriloquizes L. B. Wilson, president and general manager of WCKY, Cincinnati, with this puppet monkey on his knee. During the event five local hobbyists were chosen from a field of 265 for a special broadcast. A transcription was sent to Dave Elman of CBS' Hobby Lobby, and Elman chose one of the five to appear on his coast-to-coast Fels Naptha broadcast. Mayor Stewart proclaimed a "Hobby Lobby Week", 500 street cars carried posters plugging the event, 400 window cards were placed throughout the city, along with 400 displays of the sponsor's product in local grocery stores. An estimated 4,000 persons riewed the Hobby Lobby display.

Old Timer's Return

JOHN E. LINGO & SON, INC. Dept. B-4 CAMDEN, N. J.

Durstine for Crosley

CROSLEY Corp., Cincinnati, has appointed Roy S. Durstine Inc., New York, to handle advertising for all products, including, radios, refrigerators, midget cars and washing machines. H. G. Little. recently resigned as a vice-president of Lord & Thomas, New York, will manage the account. Recent additions to the staff of the Durstine agency include George Cooke, formerly of the Stromberg Time Corp.; Walter J. Daily, previously in charge of advertising and sales promotion for General Electric Co., Cleveland, and Matthew Hufnagel, formerly of BBDO, New York.

BOB PROVAN, recently elected a city alderman, on April 1 celebrates his fifth anniversary as an announcer of WDRC. Hartford.

Press Berates FCC's Order For Rehearing on Television

Commission Said to Have Gone Too Far, Stifling New Industry; Called 'Usurpation of Power'

A BARRAGE of editorial criticism against the FCC developed in the daily press following the March 23 television citation [see pages 22 and 50-51], ordering RCA to explain at a rehearing April 8 its merchandising campaign to promote receiver sales.

Branding the action as "bureaucracy at its worst" and as "usurpation of power" several newspaper editorial writers and columnists saw in it dire forebodings for radio generally. These commentators held the view that the FCC had overstepped its authority.

Aside from the very brief statement March 23 by David Sarnoff, RCA president, expressing "amazement" over the Commission's acion, no further official word was forthcoming from RCA regarding the citation. However, Alfred H. Morton, NBC vice-president in tharge of television, without directly commenting on the action, on March 26 told a group of more than 100 New York agency, advertising and station executives attending the weekly "broadcasters bull session" luncheon in New York that

HIS HAYRAKE antenna located 00 feet from the stage of the Iollywood Bowl, to which it was ied by a coaxial cable, served as elay to the Don Lee television ransmitter W 6 X A O, six miles way. Easter services attended by 0,000 were broadcast. Robert L. 'itzer, Don Lee engineer shown in icture, was in charge of the relay. Iarry R. Lubcke, Don Lee teleision head, directed the pickups y conference circuit telephone. 'wo new portable televising camras were used, one with telephoto nd the other with wide angle lens. ince the event took place at dawn, rtificial illumination was necesary. Another Don Lee outdoor ickup originated at the World's hampionship Rodeo Circus from te Los Angeles Coliseum. although there are today certain attempts to block television progress, reminiscent of those of "King Canute to stop the tide", there is no doubt as to the eventual outcome.

Called Unwarranted

Industry observers generally regarded the FCC action as unwarranted. Observers were of the opinion that the industry erred when it capitulated to a "limited commercial" status for television. They pointed out that after the television hearings the FCC promptly set up forms to glean from television licensees all factual data. In this connection, they pointed to the recent Supreme Court decision in the Sanders case, which holds that Congress did not give the FCC authority to regulate program or business phases of broadcasting.

David Lawrence, noted Washington columnist, pounced upon the FCC citation as an instance of another Governmental Commission joining "the wave of arbitrariness and usurpation of power which has swept Washington lately." He held that "a big industry has been struck down with the inevitable result that more unemployment will follow."

Asserting that the FCC was empowered by Congress to allocate wavelengths but was never given any power or control over the sale or merchandising of receiving sets, Mr. Lawrence declared that "it now seeks to grab that control". If the present order is not upset by the courts, he stated, "the FCC will exercise complete control next over what the owners of radio sets may or may not do".

Should Be Rescinded

"There is as much legal justification for what the FCC has just done to kill off or retard television —a pioneer industry in which millions have been spent in research as there is for telling people what programs they may listen to with their receiving sets," Mr. Lawrence's syndicated article said

Mr. Lawrence called for a "Congressional investigation of the FCC in its entirety to determine the extent to which the present law is being distorted." Pointing to other instances of purported excesses by the FCC, Mr. Lawrence declared that in the case of television the "usurpation of p o wer has gone further than ever before". He said that if there is anything wrong in RCA merchandising, the Federal Trade Commission is the agency to make a finding and not the FCC.

Mr. Lawrence followed up his March 25 column with another March 27 analyzing the Supreme Court decision in the Sanders case as one which negatived the FCC television citation. He said it cannot be doubted, in the light of the Supreme Court opinion, "that the FCC now will rescind its order and let the American people have tele-

FIRST sponsored news series designed especially for television was launched March 20 as a regular Wednesday evening feature of W2XBS, New York, through the cooperation of NBC's television department and Marschalk & Pratt, New York, advertising agency for Standard Oil Co. of New Jersey, sponsor of the series, The Esso Television Reporter. Although FCC regulations do not permit the sale of time or facilities, cooperative experimentation is allowed, and in this series the salary of William Spargrove, newscaster, is paid by the sponsor.

Differing from the telecasts of Lowell Thomas's newscasts for Sun Oil Co., during which the camera is focused on Mr. Thomas as he reads his script, the Esso series presents news pictures illustrating the words of the announcer as he talks. Between news items printed titles are shown and appropriate organ music heard. When he reads the commercial, concerning one of the ingredients of Esso gasoline, the announcer shows the audience first a bottle containing a sample of that ingredient and then a copy of the U.S. Patent covering it.

Consensus of a number of televiewers was that the commercial was better television than the program itself. To watchers accustomed to newsreels and to television pickups of actual news and sporting events, the still photos seemed crude and lacking in interest, too simple for so sophisticated a medium as television. As an experiment in the use of a new medium, however, the telecast was both interesting and significant.

vision." The Supreme Court opinion, according to Mr. Lawrence's interpretation, declares in unmistakable language what the rights of the FCC are "and plainly the Commission had no lawful right to issue the order which it did last week, striking down the development of television."

FM and Obsolescence

The New York Herald-Tribune in an editorial March 26 viewed the FCC action as "absurd". It branded the FCC action as not only "utterly unsound" but without the "virtue of consistency". Referring to the FM hearings looking toward introduction of another new "radio device", it said that if the Commission considers it its duty to protect the handful of well-to-do customers potentially affected by RCA's television selling campaign "then it is infinitely more important that it halt all sales of radio sets until FM shall have been established commercially." It added it is an open secret that this advance in radio transmission (FM) "will make not 2,500 but 45,000,000 radios become old-fashioned overnight."

The Washington Post labeled the FCC action a "setback for television". It called the FCC's expression of alarm "exaggerated" and said that the only way in which privately-owned industries can attract capital with which to perfect the products of invention is to ask the public to share the developmental costs by buying their goods or services. "The FCC's reluctance to permit

"The FCC's reluctance to permit limited commercialization of television programs suggests an excess of caution", said the Washington Post. "To be sure television is an infant industry. But unless more encouragement is given to stimulate public interest in the initial stages of its development, it will be impossible to discover just where televisions' wonders can be most usefully employed."

Cartoon and Comment

In its issue of March 27, the New York Herald-Tribune published a three-column cartoon by Brown ment, Again". There was depicted the public in front of a television receiver, labelled "Television Business". The television reception, however, was blocked by the proboscis of a giant head labelled "FCC". The public was represented as observing: "Say! I'm willing to pay for this!"

The Philadelphia Inquirer commented March 28 in an editorial titled "Bureaucracy's Blackout of Television" that there probably would never have been an auto or a radio industry if similar Federal paternalism had marked their early days. "Government regulatory bodies are necessary," the Inquirer wrote, "but they can be interfering nuisances that hamper industrial advancement, shackle business and stifle re-employment. The ICC was set up when railroad conditions made Federal regulation essential. But the ICC has just about regulated the railroads to death.

"There is a legitimate place for the FCC. But it oughtn't to be allowed to stall progress by keeping a bureaucratic blackout on television."

An Effective Medium

Mr. Morton, in his March 26 address, gave a factual report on NBC's experience with regular television broadcasting during the last year. Asserting that NBC currently is presenting between 12 and 13 hours of video programs a week to televiewers in the New York arca, he estimated there were about 2,500 sets in homes within the range of NBC's television transmitter, of which about 75% are tuned to evening telecasts and 60% to afternoon programs.

"Television will stand or fall on what passes across the screen in the living room of set owners," he declared. He added that television versions of stage dramas have been the most popular presentations. As an advertising medium, he said television combines the three essential elements of salesmanship sight, sound and motion—and adds a new element of immediacy. He said authorities in advertising have estimated television will "pack a punch" from four to ten times as powerful as that of any existing medium.

Regarding networking of television, he said NBC hopes to inaugurate a relay system connecting New York with Philadelphia and then with Baltimore and Washington. "All we need to go ahead is adequate encouragement and a moderate freedom of action," he declared.

FCC APPROVAL No. 1462

Designed for new frequency deviation regulations of the FCC

THE RCA 311-A is an entirely new instrument of unusual accuracy and reliability for measuring and checking carrier frequencies of broadcast transmitters. Employing advanced methods of precision frequency measurement, the 311-A makes it easy for the operator to know accurately his carrier frequency at all times and to maintain its value well within the 20 cycle deviation limits the FCC will require.

Designed for maximum stability and freedom from drift, the 311-A enables stations to avoid the expense of too frequent check measurements. An extra large Deviation Meter permits the operator to check deviation easily from across the average room. A unique audio discriminator circuit provides reactance balance rather than resonance equalization. The oscillator employs a "V" cut low temperature coefficient crystal mounted in a holder especially designed to eliminate frequency changes caused by sudden shock or vibration. The holder is contained in a heat chamber whose temperature is controlled to $.05^{\circ}$ C. The oscillator circuits are located in an outer temperature-regulated chamber. Both thermostats are factory adjusted. Additional "watchman" thermostats furnish safety protection against accidental overheating.

A careful analysis of this instrument will reveal that the customary high standards of RCA Engineering have again created an instrument of real value to broadcasters.

TECHNICAL SPECIFICATIONS		
POWER SUPPLY: R. F. INPUT:	105-125 volts; 50-60 cycles; 165 watts total. Less than one volt required.	
FREQUENCY RANGE:	•	
ACCURACY:	Crystal oscillator stability, 2 parts per million. Effect of 25°C. temp. change, less than .6 cycle.	
SIZE:	Rack mounting panel-width 19", height 15-3/4".	
WEIGHT:	96 pounds. (unpacked).

... of Mikes and Men

HE Nation's Station has always been among the first to adopt proven new methods of broadcasting. Not only is WLW's technical equipment as modern as can be created, but a continuous program of research keeps it abreast of the newest developments. Its research laboratory has developed numerous new ideas which have been accepted by manufacturers and broadcasters alike.

Equipment is not installed and then used until completely antiquated or until the full limit of depreciation has been written off. Instead, it is constantly improved and kept up-to-date through research and experimentation.

Justifiably proud of its engineering achievements, the Nation's Station suggests that advertisers consider these things, too, when planning to sell the vast mid-west market.

JAMES R. ROCKWELL, (center), Peelinical Supervisor of the Nation's Stations consults with Master Control Engineers Frank Newcod and Lamy Dammert. Althe (celinical success of WLW is the largely to the close cooperation of its staff of more than 60 engineers.
