# THE ONLY 1 OF ITS KIND

- 8 Mic Pre-Amps
- Digital Mixing
- Expandable Computer I/O
- Effects Processing
- Multi-Port MIDI Interface
- Remote Control Surface
- Firewire Connectivity
- mLAN Networking
- VST/AU Plug-in Suite
- Graphic Patchbay
- Comprehensive Software Support

## O1X

### COMPLETE COMPUTER STUDIO

For the first time everything you need to turn your favorite audio/MIDI sequencing program into a complete computer music studio is available in one convenient and affordable package. Combining a 28 channel moving fader digital mixer, 8 mic pre-amps, 24/96 analog to digital converters, a multi-channel 24/96k mLAN Firewire digital audio interface, a multi-port mLAN Firewire MIDI interface and a DAW control surface that supports all the major software platforms. The O1X is the solution and clearly, the Only 1 of its kind.

# E-MU® Digital Audio Systems

Professional PC Audio at an Unbelievable Price

E-MU's Digital Audio Systems deliver everything you need to produce audio on your PC with professional results – 24-bit/192kHz converters, (the same A/D converters used in Digidesign's flagship ProTools® HD 192 I/O interface), hardware-accelerated effects and mixing, and seamless compatibility with your favorite PC audio and sequencing software for less than \$500. These Digital Audio Systems stand toe-to-toe with the most advanced and expensive audio systems in the world, and will change your expectations of desktop recording forever.

- Complete analog, digital and MIDI I/O, plus sync and FireWire® interfaces
- TFP Pro™ Mic/Line/Hi-Z preamps – plug your microphones, keyboards and guitar straight into your system (no mixer needed)
- E-DSP hardware-accelerated effects with over 500 presets
- Zero latency hardware mixing and monitoring
- Works with your favorite audio/sequencer software (ASIO 2.0, WDM and DirectSound® drivers included)
- Audio recording, editing, mixing and effects software package included

MASTERING GRADE  
**24-bit/192kHz**

PERSONAL STUDIO BUYER'S GUIDE® 2005

## TABLE OF CONTENTS

### FEATURES

#### 12 THE BIG BANG

Veteran author and engineer Michael Cooper asked top recording engineers David Bianco, Ed Seay, and David Thoener about their approaches to capturing drum kits and got some surprising and contrasting answers. The three pros offered a range of cool drum-recording techniques, but they agreed on at least one thing: you must start with a great-sounding source.

#### 20 GETTING THE MOST FROM GATES AND EXPANDERS

Gates and expanders are probably the most commonly misunderstood types of signal processors. In this book excerpt, editor and author Paul White explains what these useful dynamics processors do, how they work, and how to best use them.

Great care has been taken to ensure the validity of the information contained herein. However, neither *Electronic Musician* nor PRIMEDIA is responsible for misspellings, omissions, or other errors in accuracy. Specifications that are listed in the charts as "N/A" are either not applicable to the product or were unavailable at press time.

### TIPS & TECH

# OCTAVOX™

Octavox features the pitch shifting technology derived from our flagship processor Orville™, and wraps it in a professional plug-in inspired by decades of music-making. The unique Notation Grid™ allows you to create harmonies and complex musical sequences by dragging notes in a graphic "notation meets step sequencer" window. Micro pitch shifting is also possible for lush detune effects and vocal thickening. With an uncluttered and easy to use interface, Octavox offers up to 8 voices of time-based diatonic pitch shifting for Pro Tools™ TDM.

# REVERB

Reverb brings the best of Eventide's reverb algorithms from the DSP4000, Eclipse™, and Orville™ hardware boxes to Pro Tools® TDM. Offering the complete range, Reverb allows you to create anything from tiny spaces to outer spaces with just a few mouse moves. Pre and post parametric equalizers, a high-quality compressor, dual delays, and a bit reducer give you unprecedented sonic flexibility. An easy-to-use interface stays out of the way of creativity while the unique Snapshot feature provides one-click recall of the entire plug-in. Simply the best of the best, these reverbs are derived from Eventide's top-of-the-line hardware processors used by engineers and producers worldwide on top recording projects.

# H3000 BAND DELAYS™

The venerable H3000 lives on in the Band Delays™ plug-in from Eventide. Derived from the original filtered delay algorithm found only in this legendary processor, Band Delays broadens the landscape with eight voices of tempo-based filtered delays. Filters can achieve high resonance and are selectable low-pass, high-pass, band-pass and notch. Delays offer full tempo support including an intuitive Beat Grid for creating pulsing rhythms.

# PRODUCTION NOTES

**W**hen you have a proven winner, sometimes the best strategy is to keep it rolling and just make necessary updates. At other times, however, it's better to make changes in order to keep the product fresh. We considered both approaches when we started planning our eighth annual edition of the *Personal Studio Buyer's Guide*, and ultimately we decided to use each one.

We've had eight years to get the specification tables right, and although we might well find room for change in the future, this time we opted to deliver more of the same. We updated the information, adding new products and deleting discontinued ones, but you'll find the same product categories, the same specifications, and the same layouts as in the 2004 edition.

In contrast, we made significant changes to the articles. This was partly to keep the guide fresh, but another reason is that the 2005 *Personal Studio Buyer's Guide* is the 13th issue of *Electronic Musician*, not a supplement, as it was last year. So we wanted to give you a greater variety of stories.

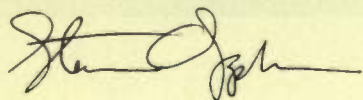

For instance, last year, we had two long interview stories and five shorter "Tips & Tech" items. It was all good material, but we wanted you to have more tips. So for the 2005 edition, we put together nine "Tips & Tech" pieces and two full features.

We jammed in as many good articles as we could, until we ran out of time and pages. The result is a buyer's guide that is also an article-rich issue of *Electronic Musician*. Our only problem was that after we shoehorned in all that editorial we still had several specs tables that wouldn't fit in the magazine, and we had pages of detailed contact information for each manufacturer whose products appear in the tables. We hate waste and we love our readers, so we put it all online, and you can find it on our special PSBG 2005 microsite within EM's Web site ([www.emusician.com](http://www.emusician.com)). The tables are downloadable PDF files, and they're available for a great price: free!

Finally, I want to give special credit to two editors who made all this possible. Tom Fulton is a buyers' guide wizard, and he has put together all of the PSBG and *Computer Music Buyer's Guide* charts for the past several years. Fulton knows how to get all the right information from the manufacturers, include as many appropriate products as possible, ensure a high level of accuracy in two-dozen charts filled with detailed specifications, and bring it all home on time.

EM senior editor Mike Levine took over the job of finding, selecting, and polishing the features and tips. I've done that job for years, so I know it isn't easy, but Levine made it look like a walk in the park.

I hope you enjoy this special issue of *Electronic Musician*. I am confident that you will find it useful now as well as throughout the year.

Before you buy *any* reference monitor

# LISTEN

You might be surprised by how many people purchase a reference monitor—arguably one of the most important links in the recording chain—based solely on price. Sure, we all want to get the most bang for our buck, but think about it: You wouldn't buy a keyboard without checking out the presets, or a guitar without playing it, or a reverb without listening for clean, smooth, performance. (You would? Shame on you!) So why not put the same effort and care into your monitor purchase? After all, *your music is worth it.*

The next time you're at your local music store shopping for a new set of speakers, do yourself a favor: Ask to hear all of the models that are on display. Bring in your favorite CDs, put 'em on, and listen carefully. We're confident that when you hear your music (or the music of Grammy-winning artists) on an Event Tuned Reference Bi-amplified Monitor, you'll clearly hear the difference. Yeah, there are a lot of choices out there, but only one of them delivers honest-to-goodness mixes you can trust.

Available in sizes for every room and every budget.

**TR8: \$499<sub>pr.\*</sub>**

**TR6: \$399<sub>pr.\*</sub>**

**TR5: \$299<sub>pr</sub>**

EVENT  
ELECTRONICS

# The Big Bang

Three engineers give their tips on recording drums.

*By Michael Cooper*

Drum-recording techniques have undergone dramatic changes over the years, in part because of the options afforded by virtually unlimited track counts in modern DAWs. Long gone are the days of recording traps and cymbals to four tracks. In addition to using a stereo pair of overheads, most engineers like to mic each and every piece of the trap set with a separate mic to have the greatest control over levels at mixdown. But beyond that basic foundation, all bets are off. In the never-ending quest for new drum sounds, today's leading engineers are combining adventurous miking and signal-processing techniques with the tried-and-true.

For this story, three top-drawer engineers—David Bianco, Ed Seay, and David Thoener—were interviewed about their approaches to recording drums. (For a look at the interviewees' credits, see "Bad Boys of Bang.") These pros offered a wide range of cool and often opposing recording techniques that they are happy to share. Yet, they all emphatically agreed that the key to slammin' drum tracks starts with a great-sounding source.

## Go to the Source

"Truth be known," Bianco says, "the key to the best drum sounds is great drums that are well-tuned and played by pros."

Thoener concurs. "The most important things in getting a great drum sound," he says, "are tuning and technique. Tuning is absolutely the most important element. You can have a great drummer, but if the drums are not tuned properly, they're not gonna sound good. You can take the same exact kit and have a person who does drum tuning for a profession come in and tune it, and you won't believe it was the same kit [you started with]. It's a combination of

# Cubase System|4. It's never been easier to get an amazing sound.

For the first time, it really is as simple as that. An ideal union of music-making hardware and software, **Cubase System|4** is the integrated system for music production and audio editing. **Here's just a taste of what's on offer:**

**Cubase • SL**

- Full file compatibility with Cubase SX and Nuendo
- Unlimited number of MIDI and Audio Tracks
- New VST 2.3 audio engine
- Up to 16 virtual instrument slots (VSTi's)
- Includes VST Audio and MIDI plug-ins
- 4 audio I/O 24-bit/96 kHz USB Interface
- 2 professional quality microphone preamps
- 16 channel MIDI I/O
- S/PDIF 2-channel I/O

**steinberg**  
Creativity First  
[www.steinberg.net](http://www.steinberg.net)

# The Big Bang

changing heads, [adjusting the] tension, and tuning the bottom head against the top head." He says that once that's done properly, "the toms, especially, just ring out and sound amazing."

Seay recalls the exact moment in his long career when he realized how critical it is for the source to sound great. He was assisting for engineer Cal Harris on a Commodores session in 1981 (recording the album *In the Pocket* for Motown) when he had "a real moment of clarity." Seay describes it like this: "Harris pushes up the kick drum mic's fader and, 'wow,' that sounds great right off the bat! And on the snare drum, damn! He barely touched the EQ! I thought, 'No wonder these records sound so good. They've come in with great-sounding instruments. Duh!' Even though I knew that the sound has to be great at the source, I didn't know how bad the sources I'd been given [in the past] were until I heard professionals. I'd been working with a lot of road bands, live groups, and rock groups with ragtag gear. Now, it's like, 'Boy, look at how much better my engineering just got today when all these good people came in.'"

## Mano a Mono

Each of the engineers interviewed for this article has a different approach to miking drums. Bianco shoots for a very cohesive effect, where the individual pieces of the kit don't sound separate from one another. To achieve this effect, he always begins with "a mono microphone in front of the drum kit, placed where it will get the most complete picture of the drums: an equal amount of kick and snare, and just enough cymbals to where it's not overdoing it. I add some cardioid mics on the left and right to that," he says. "Then I fill it in with [separate mics on] the other drums."

Bianco likes to place a kick drum mic "maybe four to six inches off the beater and pointed right at it." He'll often take the front head completely off of the kick, though he notes that it can sometimes

impart flattering resonance if it's left on and tuned a half-step higher than the pedal-side head.

Bianco often likes to experiment with using a second "crazy" mic on the kick drum. "Sometimes, I put an additional condenser microphone on the pedal side of the kick drum and squash the

to be more like Beck or the Beastie Boys, it's a wild-sounding drum sound on its own. But, I've also run it through a [Line 6] Pod or some kind of amplifier to get a great drum loop sound. It's astounding." To keep his options open at mixdown, Bianco prints the beater-side mic's signal to a separate track.

heck out of it with as inexpensive of a compressor as I can get," he says with a laugh. "That gives you a really crazy, almost gated-reverb kind of sound. It adds size to the kick drum and serves as a snare under-mic, as well. In fact, I've been using a pedal-side kick mic more

Thoener takes a decidedly different approach to miking a kick drum. He typically aims at getting a natural sound, and one that has more low end than beater click. "I place an [AKG] D112 flush with the front head of the kick drum," Thoener notes. "The mic would be touching the head if the hole wasn't there. Then, I'll mess with the angle to find the sweet spot."

Thoener will often build a two- to three-foot-long tunnel in front of the kick drum by draping a heavy packing blanket over two flanking mic stands. "I'll put a Neumann U47 inside the tunnel, about two feet back from the front head. I'll adjust [the U47's mic height to be somewhere] between the middle of the drum and the floor. That mic picks up a lot of bottom that you don't get from the closer mic." To get even more low end, Thoener will set up the drums on a riser whenever possible, thus isolating the kit from the damping effect of the studio's floor.

Seay usually avoids miking the kick drum with two mics because of the phase cancellations that can result when the two signals are combined. When he does use two mics, he'll align the two signals so that their waveform spikes line up in Pro Tools. But most of the time, he'll simply place one mic just inside the hole in the kick's front head and adjust the mic's angle to get the sound he's after. The Audio-Technica ATM25 and Neumann U47 FET are his favorite mics to record kick drum.

often than an underneath snare mic. I'll go in on the hi-hat side with a U87 and place the mic two inches off the beater-side head, pointed right at it. I'll flip the mic's phase and use a dbx 160x or something else on it.

"On its own, it sounds crazy, but mixed in, it gives the kick drum a lot more low-end punch. If you do it right, it almost sounds like there's a lower octave to the kick drum. I find it sounds more effective than using an outside kick drum mic [on the front head]. For bands that are trying

## My Hi-Hat's Off to You

When he is putting a microphone on the snare drum, Thoener always asks the drummer to move the hi-hat as far over to his or her left as possible while still

DESKTOP RECORDING STUDIO

Lexicon has taken a whole-system approach to desktop recording. Omega Studio is an integrated computer recording system that includes the Omega 8x4x2 USB I/O mixer, Pro Tracks Plus 32-track recording software and Pantheon world-class Lexicon reverb plug-in. Omega Studio contains all of the components necessary to transform your computer into a professional 24-bit recording studio.

Whether you're working on your first demo or your fifth gold record, Omega has the performance to produce your masterpiece.

Maybe you don't have the coin to record in the city of Westminster on Abbey Road, but that's no reason your music shouldn't sound like it.

Visit your local Lexicon dealer today and see what Omega can do for your studio.

### **Omega 8x4x2 USB I/O mixer**

Differentiating itself from standard computer I/O boxes which are typically based on a patch-bay paradigm, the Omega 8x4x2 USB I/O mixer is based on a mixer paradigm and includes input, output and mixing functions that support a variety of tracking/monitoring applications while requiring no additional mixing hardware. The I/O mixer is packed with professional features such as ultra-transparent, high resolution A/D converters, extremely low-noise mic preamps with 48-volt phantom power and active balanced line level inputs. MIDI and S/PDIF ports allow connection to a variety of digital equipment.

### **Pro Tracks™ Plus PC Recording Software**

Pro Tracks Plus is an easy-to-use, comprehensive 32-track recording suite that includes all the modules you'll need to track, edit, process, sequence and mix your masterpiece. Not only does it include intuitive non-linear editing, plug-in support, and acidized looping features, it contains a full featured MIDI sequencer with outstanding event editing and powerful automation features as well as soft synth support.

### **BIAS® Deck™ 3.5 SE Mac Recording Software**

BIAS Deck 3.5 SE turns your Mac into a full-fledged recording studio. Easily record up to 64 tracks, with full CD quality and then edit your work instantly, while always being able to revert to your original recordings.

### **Pantheon™ Reverb Plug-in**

From the name synonymous with "world's best reverb", Lexicon brings you Pantheon. With 35 factory presets, 6 reverb types and a simple yet powerful user interface, Pantheon is an indispensable tool for your recording studio.

# The Big Bang

playing comfortably. This allows Thoenner to place a Shure SM57 on the snare drum so that the mic's null point is directly facing the hi-hat. "I try to angle my snare mic underneath the hi-hat, but place it about two fingers' [width] in height above the [perimeter] of the shell," he explains. "That way, I'm going to get some air off of the snare drum. I try to never choke on any of my microphones. If you place the mics too close to the source, you get too

much proximity effect."

Thoenner typically places two SM57s on snare, one on the top and the other on the bottom of the drum. He usually flips the phase of the bottom mic's signal to align it with the top mic's.

Thoenner recalls the days when the total tracks available for recording drums were meager, usually forcing him to use only one mic on the top of the snare drum. To compensate at mixdown, he

would re-excite the snares by feeding the pre-recorded snare track to an Auratone speaker aimed at the live drum. For isolation, both the speaker and snare drum would be placed out in the studio. Thoenner would turn the snare drum upside down and suspend it off of the floor between stacks of books. Then, he would place the Auratone underneath the snare and on the floor so that it was facing up at the top head of the drum. Finally, he'd mike up the snares, which would rattle whenever the Auratone would voice the pre-recorded snare hits.

Of course, one person's pleasure is another one's pain. Seay never mikes the bottom of the snare drum. "I've played with that," he says, "and I just don't love it. It never sounds like a big improvement to me. It's not the way my ear hears the snare drum out in the room."

## Ground Control to Major Toms

All three of these engineers generally prefer to record each tom with a separate mic placed on the top side of the drum only. In rare instances where Thoenner feels he needs more bottom from a floor tom, he'll also place a Sennheiser 421 on the bottom head of that drum. "I'll start with a 421, and if that's not working, I'll switch to a U87," Thoenner says. He cautions that the bottom mic should be pointed in a way so that it rejects the sound of the other drums.

Seay very rarely mics the bottom of the toms. "But every now and then, I do," he admits. "I think that it provides a very neat perspective. It adds a depth and body to the sound that you can't get any other way."

As for topside tom mics, Thoenner likes to use 421s with one exception: Where a drummer has a few "bongos," or very small toms, in addition to the standard-sized rack toms, he'll place a sole SM57 across all of the bongos.

Bianco also likes using 421s on toms. "I try to mic toms from as far away as I can," he notes, "so I get as much ring [as possible] and not just attack. Usually, I end up with the mic five-to-seven inches away and pointed toward the center of the drum."

A potential drawback to such a setup is

"The most flexible keyboard I ever owned."

Studiologic by Fatar introduces the VMK-88 Master MIDI controller.

Real time MIDI programming in an 88-note weighted controller, with true piano contoured keys, USB interface, that weighs in at just 14 lbs. and retails for a mere \$799.95.

Learn more at [www.studiologic.net](http://www.studiologic.net) or speak to a customer service rep to find your nearest dealer • 1-800-431-6699

VMK-88

[www.studiologic.net](http://www.studiologic.net)

that the tom mics may pick up excessive cymbal bleed. Bianco offers a creative solution for both cymbal and hi-hat bleed: "I'll build a cardboard hood for snare and tom mics. I'll tape the hood to the microphone's body or to the rim of the drum to make the mic reject the cymbals and hi-hat a little bit more." If the cardboard causes any diffractive effects, he'll put a bit of absorptive foam inside the hood, as well.

Miking up the cymbals themselves, Bianco likes to use AKG 414s, 452s, or C12s. He will sometimes place a pair of 452s in an X-Y configuration, "just above where the drummer's ears are," and pointing toward the front of the kit. But he stresses the importance of optimizing the exact placement of the overhead mics in order to minimize phase cancellations. "If you use wide cardioids," Bianco says, "you'll find that your kick drum starts to disappear until you find the right spot for the mics." Just moving the overhead mics a few inches can make a big difference in the sound.

Thoener avoids phase problems with overheads by spacing cardioid-mode AKG C 414 B-ULS mics above the far left and right sides of the kit, "on the outer edges of the cymbals." Seay likes using AKG 414s, 451s, or 452s, or Sanken cardioids in a spaced-pair or an X-Y configuration for overheads.

## Room to Grow

Room mics make a huge contribution to achieving a big drum sound. "I think the room mic is just as important as any other element [of the mic setup]," Seay says. "Even if the room mics are pulled in really tight in a really dead room, the sound is more pleasing and accurate to my ear than without [using them]. For more bombast or more rock, you can pull them back [farther away from the kit]."

Seay sometimes ends up using the tracking room's talkback mic as an extra room mic, in addition to using two room mics that are placed in a spaced pair or an X-Y configuration. He cautions that when using a widely spaced pair of mics, one should make sure that one isn't picking up a lot more snare than the other; otherwise, it can throw off the

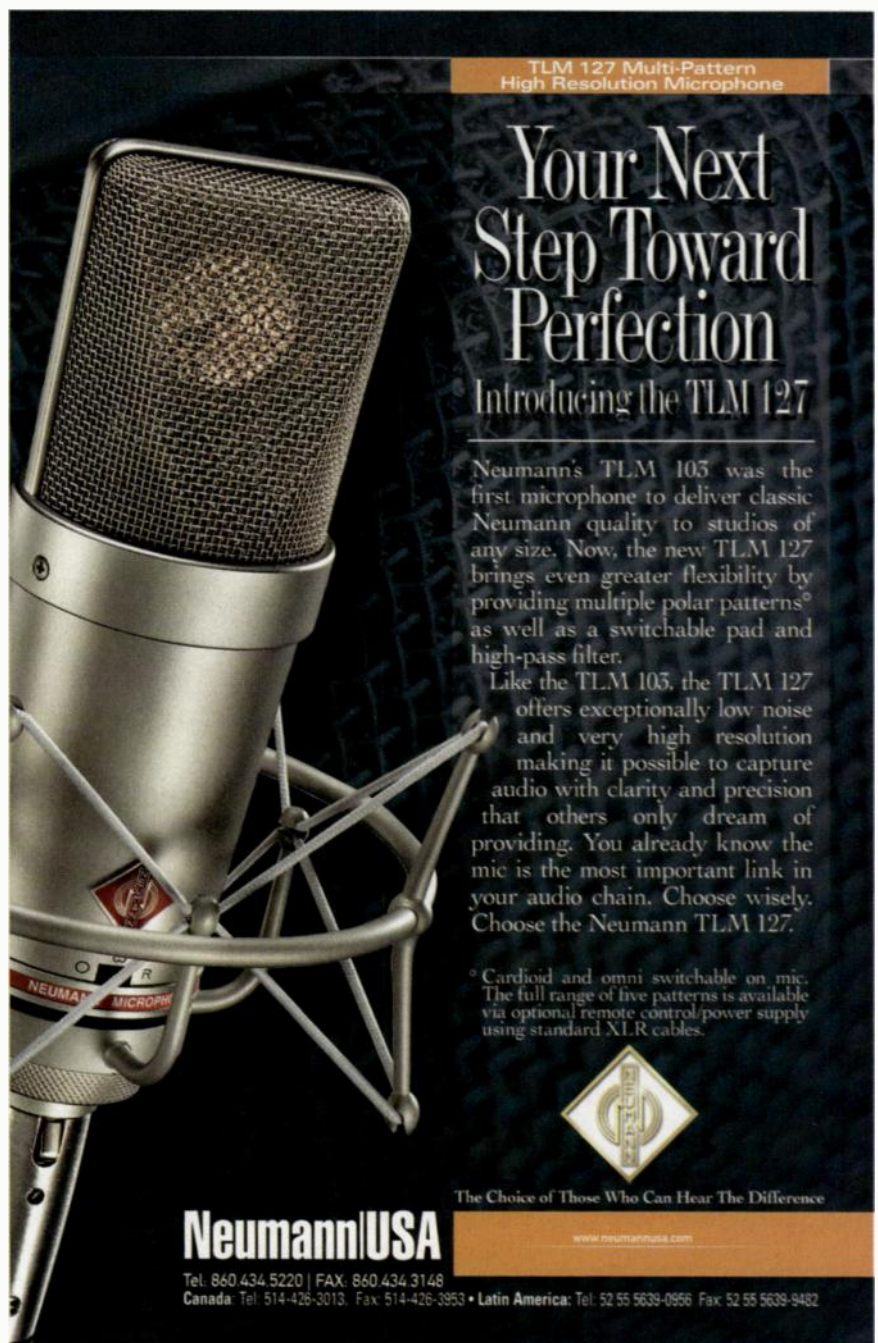

stereo image of the overall sound.

If he wants to capture more bottom-end guts from the drums, Seay will place his room mics "almost on the floor, so that the reflections are negated, and looking up at the kit. That's a good way to avoid all of the cymbal bleed. It 'plays up' the bottom of the kit.

"Almost anything will work for room mics," Seay continues, "as long as the mic is decent; 414s or [Audio-Technica]

4033s do well. Sometimes, SM57s are perfect if you're really going for crack and raw harshness."

Thoener always records room mics in case he can use them in the mix, although they don't always end up being useful. He likes using a stereo AKG C24 or Royer or Coles mics for "rooms," placed roughly 15 feet away from the kit—as long as there are no other instruments in the room besides drums that could bleed into

**TLM 127 Multi-Pattern High Resolution Microphone**

# Your Next Step Toward Perfection

## Introducing the TLM 127

Neumann's TLM 103 was the first microphone to deliver classic Neumann quality to studios of any size. Now, the new TLM 127 brings even greater flexibility by providing multiple polar patterns<sup>®</sup> as well as a switchable pad and high-pass filter.

Like the TLM 103, the TLM 127 offers exceptionally low noise and very high resolution making it possible to capture audio with clarity and precision that others only dream of providing. You already know the mic is the most important link in your audio chain. Choose wisely. Choose the Neumann TLM 127.

<sup>®</sup> Cardioid and omni switchable on mic. The full range of five patterns is available via optional remote control/power supply using standard XLR cables.

# The Big Bang

those mics. "I'll usually keep the mics up fairly high," he notes.

"I really don't want my room mics to pick up too much kick drum. If I've got an uptempo song or 60 faders on the mix, I really don't want my kick drum getting too ambient because it's just going to get lost in the mix. A lot of times, I find myself rolling off the bottom on those room mics so that I can work them into the mix without them taking presence away from the drums. Sometimes, if I like what they do for the snare but not for the other elements of the kit, I'll gate the room mics and key them with the snare [mic's signal].

"Instead of using room mics," Thoenner continues, "sometimes I'll put one [Telefunken] 251 about three or four feet above the drummer's head height, placed dead center right over the snare drum. Sometimes, I compress that just a little bit. I find that adds a natural ambience to my snare drum that the overheads don't get."

Bianco is a fan of using multiple room mics—including some with extreme pro-

cessing applied—when recording drums. "I always have some tracks that use heavily compressed microphones for the more crazy kit sounds," he enthuses. "I'll use a mono omni or a stereo pair that are distressed big time with an [Empirical Labs] Distressor compressor. A four-to-one ratio

relatively mild effect. He'll typically use it on the snare drum to elongate the decay. "I'll do maybe 4 or 5 dB of compression at three-to-one [ratio]," Thoenner explains, "using a slow attack and a fairly quick release. That gives me a little more ring on the drum."

David Thoenner

sounds the best to me, but I really crank the input. Omni mics, even if they're close in, can give you that Led Zeppelin kind of sound. I'll also use the Distressor's Distortion 2 setting a lot of the time; you get a little more grind using that."

## Process This

Thoenner will also use a Distressor while tracking drums, but only to achieve a

Seay typically only applies compression to the room mics during tracking. He'll compress the kick drum, however, if the dynamics are a little erratic or if the drum "needs a little pop on the front end."

Thoenner, Seay, and Bianco are not shy about applying EQ to drums when tracking, as long as they've taken mic choice and miking techniques as far as

they can go. Seay is the most outspoken of the three on the subject, confessing that he always applies some EQ. "My philosophy is, 'Make it sound as good as possible, as quickly as possible,'" Seay elaborates.

It's totally valid to beef-up the drums by any means while tracking, as long as you're absolutely certain that they need it. That said, Thoenner makes a plea to up-and-coming engineers who are tracking cuts that other engineers will mix. "Please, please," Thoenner implores, "stop over-compressing drums to tape. Compression should be used as little as possible [when tracking]. You'd be surprised by how many tapes I get in which the overheads and room mics are compressed 20-to-1." Thoenner acknowledges that a heavily compressed sound might be what the tracking engineer was shooting for, "but if you decide, all of a sudden, that that sound is not working for you any longer [at mixdown]," he warns, "you can't change it. There's nothing you can do about it." ■

## Bad Boys of Bang

From Mudhoney (*Tomorrow Hit Today*; Reprise, 1998 and *March To Fuzz*, 2000, Sub Pop) to Ozzy Osbourne (*Ozzmosis*; Epic, 1995) to John Hiatt to the Black Crowes (*Sho' Nuff*; Universal Sony, 1998), David Bianco's engineering and mixing credits span a wide range of musical styles. Bianco also often lends his skills as a multi-instrumentalist to the records he produces. It was Bianco who tracked Tom Petty's *Wildflowers* (Warner Bros., 1994), which won a Grammy for Best Engineered Album.

Ed Seay has recorded, mixed and produced scores of hit records since the late '70s. His early successes with pop artists Paul Davis (*Paul Davis*; Arista, 1980), Marie Osmond (*All in Love*; Curb, 1988), and Melissa Manchester (*Essence of Melissa Manchester*; Arista, 1997) were followed by hit records for country icons Martina McBride (*The Way That I Am*; RCA, 1993), Highway 101 (*Reunited*; Intersound, 1996), Ricky Skaggs (*My Father's Son*; Epic, 1991), and Collin Raye (*The Walls Came Down*; Sony, 1998), to name just a few.

David Thoenner has tracked and/or mixed hit records for Matchbox Twenty (*Mad Season*; Atlantic, 2000), Wheatus (*Wheatus*; Columbia, 2000), Aerosmith (*Get a Grip*; Universal, 1993), Phil Vassar (*Phil Vassar*; Arista, 2000), and many more. Thoenner won two Grammys—Record of the Year and Album of the Year—for mixing the single "Smooth" by Santana, featuring Rob Thomas (Supernatural, Arista, 1999).

—Michael Cooper

# Your hard disk or ours?

No matter how you approach digital recording, we can help you sound better.

**US-2400** The control surface for serious DAW devotees. Get your hands on twenty-five 100mm motorized faders, real mute and solo buttons, rotary encoders, transport controls and keyboard shortcut buttons. Plug and play set-up with any DAW software that uses the HUI® or Mackie® Control™ protocols.

The Music Trades  
PRODUCT OF THE YEAR

**2488** 24-track, 24-bit personal digital studio for under \$1500! — Complete with built-in CD-RW burner no less.

Combine a 36-channel mixer, built-in effects, 3-band EQ, enough 1/4" TRS and phantom-powered XLR inputs to record 8 tracks at once, 64-voice General MIDI sound module, 40 Gb internal hard disk and USB 2.0 ports for computer connectivity and you have the ultimate Portastudio™.

No other recording solution packs so much into so little space for such a reasonable price.

**FW-1884** FireWire audio/MIDI interface and DAW control surface. Compact enough for personal studios...powerful enough that it's becoming the Industry Standard interface among audio professionals.

Includes eight 100mm motorized faders, eight XLR mic inputs with phantom power plus eight 1/4" TRS inputs, eight inserts, eight analog outputs (perfect for surround monitoring), 64 MIDI channels, stereo S/PDIF I/O, 8-channel ADAT® optical I/O and DAW shortcut keys. Among other things.

Plus the FW-1884 is expandable in 8-channel blocks via the FE-8 "side car."

# Gates and Expanders

USE THESE  
DEVICES  
TO KEEP  
OUT NOISE  
AND ADD  
A VARIETY  
OF EFFECTS.

By Paul White

As far as I'm aware, gates were first devised to solve a problem in the film industry, where dialogue was often recorded under less-than-ideal conditions due to the need to keep the microphone out of the shot. Their purpose is to shut down the signal path when the signal falls below a threshold set by the user. Normally, this threshold will be set just above the ambient noise floor. When the gate is open, both the wanted signal and the unwanted noise pass through, the noise (hopefully) being masked by the signal. During pauses in the wanted signal, the gate closes and, in doing so, shuts off the background noise, which would otherwise be clearly audible in the absence of any signal large enough to mask it.

Gates have undergone a process of refinement since their invention, and modern models can be quite sophisticated. Like the compressor, they have attack and release controls that determine how quickly they respond, enabling them to be used to process most types of sound without undue difficulty. The fastest attack settings are used to allow percussive or highly transient sounds to pass through cleanly, while slower attack settings enable the gate to open more smoothly when processing signals that themselves have longer attack times, such as bowed strings.

The variable release time of a gate is also vital in that it enables the gate to close gradually when sounds with a slow decay are being processed. Examples of such sounds are plucked strings, some synthesized sounds, and sounds that have a long reverberant "tail." As with the compressor, problems can arise if the fastest attack and release times are set, as this means that the gate triggers on each individual cycle of the input, producing a badly distorted, gritty sound.

The solution is the same as that for the compressor—many gates have a hold feature or a built-in hold time. In the absence of hold time (where the gate is forced to remain open for a short time after the signal falls back below the threshold), it's necessary to extend the release time until the problem disappears. The envelope structure of a typical gate is shown in Fig.1.

# Create. Record. PROduce.

D32XD

With the new D32XD and D16XD (Xtended Definition) Digital Recording Studios, Korg has all but erased the line between "home" recorders and full-blown professional studio hardware. The easy-to-use XDs deliver true pro sound, advanced mixing, editing and recording features and built-in CD-RW burners - right at your fingertips using Korg's intuitive TouchView interface. So now, you can finally PROduce at the hottest studio in town - yours.

COMING IN APRIL - Version 2 OS with more simultaneous record tracks at 24-bit resolution, a new noise reduction function, the ability to load backup data from other D-Series recorders and much more!

**FEATURES:** Up to 24-bit/96 kHz resolution • 8 simultaneous record tracks @ 48/44.1 kHz (16 with optional AIB-8) • 32 track playback, 80GB hard drive (D16XD: 16 track, 40GB) • Built-in analog compressor on each input • Final effect, two Master effects and 24 insert effects (D16XD: 8 Insert) • 100

scene automated mixing • Motorized flying fader event automation (D32XD only) • Pinpoint editing, including audio scrubbing • USB and S/P DIF; plus MMC, MTC (all formats) • Import & export .WAV files • Options: 8-input expander, 8 additional analog compressors, ADAT I/O

# Get the Most from Gates and Expanders

The hold facility may also be used in a creative way to produce hard "gated" reverb or ambience sounds. If the reverberant sound is fed into the gate and then triggered externally using a mic located close to the drum, the gate can be used to impose an envelope on the reverberant sound. A fast release time combined with half a second or so of hold time produces

amount of hi-hat bleed fed to the side chain while at the same time maximizing the amount of snare signal, a greater degree of separation can be obtained. This can only be achieved by listening to the filter output while adjusting the controls when "Key Listen" is selected during setting up. It's important to realize that the filters are only connected in series with the sidechain signal path and so don't affect the sound of the main input in any way. The only exception to this rule is when the filters are deliberately used as an equalizer by leaving the gate set to the Key Listen mode.

## Gating While Mixing

Gates are very important in multitrack recording, even when the recordings appear

of salvage. Nevertheless, sometimes it's necessary to gate while recording—for example, in situations where several signals have to be mixed onto one tape track and only one of these is to be gated. In this instance, it's wise to set the gate attenuation control to give only as much attenuation as is really necessary and to err on the side of caution when setting the threshold. It's better to put up with a little unwanted leakage than to have a signal with vital sections cut out of it by an overzealous gate!

Gate plug-ins are useful for cleaning up audio tracks recorded into a sequencer or other multitrack software program, as no permanent change needs to be made to the audio file. Once the gate settings have been optimized, the processed track may be bounced to a new track to make the changes permanent, but still without discarding the original version, enabling you to go back to it later if required. Where gate plug-ins have a sidechain access

FIG. 1: A typical gate envelope.

the familiar gated drum sound when used to treat percussion.

Today, gates are available as hardware units, software plug-ins, and also as part of the processing capability of most digital mixing consoles. As a rule, gates are really effective against noise only when used on individual tracks rather than complete mixes, although their creative uses shouldn't be underestimated.

## Sidechain Filters

A common feature on many gates is sidechain filtering. This usually takes the form of a pair of shelving equalizers, one highpass and one lowpass, connected in series with the sidechain circuitry. By varying the filter settings, it's possible to make the gate respond only to a selected band of frequencies, which helps avoid false triggering in situations where bleed from other instruments is present. An example of a situation in which filters can be helpful is when miking a drum kit, where sounds from all of the drums leak into all of the mics to a greater or lesser degree. By making the gate frequency selective, it's possible to reduce the risk of, say, the hi-hat triggering the snare gate.

By setting the filters to minimize the

tracks is cumulative, so if a track can be gated into silence when nothing is playing, the finished mix can be made considerably cleaner. For example, the vocalist won't be singing during instrumental breaks and solos, so it makes sense to gate the vocal track in order to mute any tape noise from that track, as well as breath noise, and any bleed from the headphones that might otherwise be audible during pauses in the singing.

It's also desirable to gate electric guitars, because they have a relatively poor noise performance, especially when used for overdriven or heavily distorted lead-guitar sounds. Using a gate will remove the hum, hiss, and buzz generated by a guitar amplifier and can significantly improve the clarity of the final recording.

Gating is best carried out after the signal has been recorded rather than during recording, for the obvious reason that an incorrectly set gate at the recording stage can ruin a take beyond any hope

FIG. 2: Gating a slowly decaying sound.

facility to permit chopping or ducking effects to be created, these are normally fed from a designated audio track rather than from a live input.

## Alternative Filter Applications

The sidechain filters used in gates necessarily have a very sharp response curve—usually 12 dB per octave. This

# DYNAMIC CONTROL

Introducing the TCS™ Twin Compressor System. The Cure for the Common Compressor.

## V3™

ART is proud to announce the arrival of the new TCS™ – a two-channel dynamic compressor designed to suit a wide variety of audio processing applications and environments. Coupled with ART's preset technology V3™ (Variable Valve Voicing), the TCS features both an Opto-compressor (based on our Pro VLA) and VCA compression system which allows you to select one of the compression types, or "stack" the two depending on

your needs and techniques or style. It also allows for full manual control of all settings such as attack, release and noise reduction to fine tune and define your desired sound. Housed in a convenient single rack space design, the TCS can be used directly with vocals, instruments, samples or material captured by microphones.

The two independent channels can be linked together and adjusted with the available

global controls. When linked, one level control acts as a balance control for true stereo operation.

With the TCS you possess complete control over your signal with a wide selection of settings – not to mention the smooth, transparent sound that a quality tube compressor should have. The TCS is an affordable enhancement to any professional or project recording studio, or live rig.

Check one out at your local retailer today! For more info on this or any ART product, visit our website at: [www.artproaudio.com](http://www.artproaudio.com).

*Celebrating Twenty Years of Audio.*

**ART**  
APPLIED RESEARCH AND TECHNOLOGY

# Get the Most from Gates and Expanders

makes them far more selective than most conventional equalizers, and in some circumstances the filters in a spare gate can be used to supplement the basic console EQ. To do this, it's necessary only to leave the gate switched to Sidechain Listen; the gate will be bypassed and the filters placed in line with the signal path.

FIG. 3: Panning with a gate.

The lowpass filter can work wonders in removing high-frequency noise from an electric-guitar track without significantly changing the character of the basic guitar sound, while the highpass filter can be used to remove low-frequency hums and rumbles, as well as to "thin out" rhythm-guitar or backing-vocal parts.

In very desperate circumstances, the lowpass filter can even be used to reduce the effects of overload distortion on recordings of rhythm guitar and other dynamic sounds, where a little too much enthusiasm on the part of the player can drive the tape machine or mixing console into clipping. When working with plug-ins in a software environment, a shelving-filter plug-in can be used for this purpose.

## External Control

Gates can be triggered externally through their sidechain access points, allowing the level of one signal to be controlled by another. An "External" switch is usually provided to enable the sidechain input, although some models may simply be fitted with a sidechain-access jack wired in the

same way as a console insert point.

Used normally, this facility enables the signal routed through the gate to be turned on and off by the signal fed into the side chain. This is commonly known as *chopping* because, if fast attack and release times are set, extremely abrupt, rhythmic effects can be created. Where

the triggering source is very short (as it would be if a beat from a drum machine was used), the "on" duration of the gate must be set using the Hold Time control. Here are some practical examples:

A sustained sound fed through the gate could be turned on and off by a drum beat fed into the sidechain input. The rate at which it turns on and off depends on the attack and release settings, but it does provide a novel way of synchronizing a sustained sound with

a percussive one (see Fig. 2). This technique is often used to beef up kick-drum sounds by adding a gated, low-frequency synthetic sound and works well in the context of dance music. In this instance, the gate would need a fast attack but a slightly longer release time to create the impression of a decaying drum sound.

Synthesizer chords can be gated from a rhythm pattern to create a synchronized arpeggio effect.

Bass-synth or bass-guitar sounds can be gated so that they're audible only when a kick drum is present. A popular trick is to use the kick-drum track to trigger the gate while passing the bass-guitar track through the gate. The Attenuation Range control may then be set to reduce or even remove any bass-guitar notes not falling directly on top of kick-drum beats, which can help to tighten up an otherwise sloppy track. The gate Release Time control is set to allow the bass-guitar notes to decay at an appropriate rate.

## Gate Ducking

If the gate has a Duck facility, it can be used as a ducker in a similar way to a compressor. The Attenuation control of the gate can be used to determine exactly how much the signal level drops once the sidechain input signal (a voice, for example) exceeds the threshold, and as this control is calibrated directly in decibels, it's much easier to set up a precise ducking effect using one of these gates than it is using a compressor. Again, the gate's attack and release times determine how fast the ducked signal will fade out and in again in response to the sidechain input.

## Gate Panning

The sidechain access facility of a gate also means it can be used to produce a limited range of panning effects, which can be useful in a hardware recording environment as relatively few sophisticated panners are available. In a software environment, dedicated panners are usu-

FIG. 4: Rotary-speaker simulation using panned EQ.

ally available with Tempo Sync facilities, so it may not be necessary to use a gate to achieve the effect, but it's still worth knowing how to do it.

If the signal to be panned is fed into both channels of a two-channel gate, the sidechain inputs could alternately be fed with percussive sounds from a drum machine (synchronized to the track) to act

—continued on page 30

# Instant studio . . . just add Freeport™ and mix!

**Introducing Freeport, the great sounding, go-anywhere, turn-any-room-into-a-studio solution by Primacoustic.**

Everyone knows that treating a room with acoustics makes recording easier. The problem is, most rooms are difficult to treat; they have doors & windows in the way, or they're temporary spaces that can not have acoustical panels permanently applied.

**Primacoustic has a solution. . . It's called Freeport™.**

Freeports are designed to give you the freedom to set-up anywhere and the portability to take your acoustic environment with you wherever you go. With Freeport, any room can be instantly turned into a usable, working recording space. Freeport also makes a great recording gobo to isolate instruments and is a quick and easy solution for a voice-over booth.

Made of high-density open-cell acoustic foam with a solid PVC frame and backboard, Freeport sets up in minutes and can be stored just as fast! It's that easy. And it really works... just ask BNL's **Steve Page**:

*"Once upon a time, I had a studio setup in a room in my basement. A room with enough space for my gear and my instruments and a comfortable chair and some bookshelves. I liked to record in there. I spent hours and hours recording and mixing, and then I would proudly march my mixes to my car stereo, where they sounded terrible.*

*What a huge disappointment to know how I'd been misled by my own basement. To the rescue came Primacoustic, with a whole bunch of affordable solutions. With the addition of some Freeports and some Australis bass traps, I could actually HEAR what I was mixing! Then, later, in my car, I could proudly crank mixes with confidence! See, it doesn't take a million dollars to help out your room!"*

**~ Steve Page, Barenaked Ladies**

Steven Page and Jim Creeggen with Primacoustic's Peter Janis.

**Don't pay more than \$129\***

**Price \$1,000,000**

\* estimated street price per unit

From page 24, Gates and Expanders as timing triggers.

By setting the attack and release times of the gate to fairly long values and panning the two outputs hard left and right in the mix, the signal will appear to move back and forth between the speakers as first one channel is triggered and then the other (see Fig. 3).

If the gate has a ducking function, the process is simplified further: one channel is set to gate, the other to duck, and the two channels are linked for stereo operation. Feeding a single pulse or drum sound into one sidechain input will cause the signal to pan and then return.

If the tempo of the drum machine is synchronized to that of the music by means of a tape time code track or something similar, the pan timing will remain accurately synchronized to the tempo of the music. Furthermore, the pan triggers don't have to be evenly spaced but can follow a suitable rhythm, allowing more complex effects to be created. Given the extent to which this technique is used in dance-music production, it's surprising that more time-clocked rhythmic effects haven't been produced.

This basic triggered-pan setup can be further modified to produce a rough approximation of a rotary-speaker simulation simply by feeding the two gate

outputs into two equalizers, each set to give a noticeably different sound (see Fig. 4).

## Expanders

Although they perform a similar task to gates, expanders are easier to understand if you think of them as compressors in reverse. Compressors reduce the gain of a signal once it exceeds a predetermined threshold whereas expanders apply gain reduction to signals that fall below the threshold. Whereas a gate will close completely when the signal falls below its threshold, the expander reduces the gain of signals that fall below the threshold by a user-definable ratio, in just the

same manner as the compressor. For example, if the expansion ratio is set to 1:2, for every 1 dB the signal falls below the threshold, the output will fall by 2 dB.

This produces a more progressive and more subtle muting effect than can be achieved by using gates but, because the action of a gate is smoothed considerably by its Attack and Release controls, both gates and expanders behave in a very similar way, subjectively, when used to clean up sounds. The smaller the expansion ratio, the more subtle the gain-reduction effect, while a high expansion ratio will make the expander behave in exactly the same way as a gate. Expanders are often incorporated into compressor designs be-

cause they are less critical to set up than gates and yet still provide a worthwhile reduction in noise during pauses in the signal.

### Final Analysis

Gates in all their forms are useful to keep pauses silent in individual tracks. However they are of little use on mixed material as in this case there are unlikely to be many true pauses for the gate to work on. With modern 24-bit recording systems, noise in the recording chain is no longer a problem. Source noise is a different matter, though, especially with instruments like electric guitars, which have pretty poor signal-to-noise per-

formance when used with overdrive.

The creative use of gates to modulate the envelope of one signal under the control of another is an area of control that's well worth exploring and, with a little ingenuity, it's possible to set up some very sophisticated-sounding rhythms using very simple source material. ■

MOTU	HD192	(12) XLR	AES/EBU	Win ME/2000/XP; Mac OS 9/X; ASIO; GSIF	PCI	All native	44.1-192 kHz

A/D/A CONVERTER/ BIT RATE	DIGITAL RECORDER RESOLUTIONS (MAX)	SYNC TYPES	MIDI CONTROL	TRACKS/VIRTUAL TRACKS	# OF LOCATE POINTS	EFFECTS/DYNAMIC PROCESSING	ADDITIONAL FEATURES	PRICE
24-bit	16-bit, 24-bit	S/PDIF	No	N/A	N/A	N/N	4-ch full duplex in and out (analog and digital); ASIO 2.0	\$199
24-bit	24-bit	N/A	Yes	N/A	N/A	N/N	ADC 100dB ; DAC 104dB; 4 mic preamps with phantom power	\$469
24-bit	24-bit	N/A	Yes	N/A	N/A	N/N	ADC 123dB ; DAC 106dB; 4 mic preamps with phantom power	\$599
24-bit	24-bit	N/A	Yes	N/A	N/A	N/N	2 mic preamps with +48V phantom power; Hi-Z input for guitar	\$499
24-bit	24-bit	N/A	Yes	N/A	N/A	N/N	4 mic preamps with +48V phantom power; 64 channels MIDI	TBA
24-bit	24-bit	SMPTE; word clock; video sync	Yes	N/A	N/A	N/N	8 mic preamps with +48V phantom power; 16 channels MIDI; headphone amp	TBA
24-bit	24-bit	Word clock; ADAT	Yes	N/A	N/A	N/N	PCI card can handle 4 expanders for 128 tracks total; 4-channel coaxial I/O; 1 port MIDI I/O	\$1,999
N/A	24-bit	N/A	Yes	N/A	N/A	N/N	Optional board for WT192 series (X,L,M); 16-channel MIDI	\$59
N/A	24-bit	MTC	No	N/A	N/A	N/N	2x2 MIDI I/O; ASIO 2.0 and GigaSampler drivers	\$329
N/A	24-bit	9-pin ADAT sync; MTC; SoDA (SMPTE on digital audio)	No	N/A	N/A	N/N	ASIO 2.0; GigaStudio drivers; MIDI I/O (8x8 optional); expandable to 32 ADAT channels	\$449
24-bit	24-bit	Word clock	Yes	16/64	Unlimited	Y/Y	28 simultaneous I/O; Storm and Ableton Live software	\$899
24-bit	16-bit, 24-bit	MIDI	Yes	64/999	Unlimited	Y/Y	dbx mic pres; Hi-Z in; monitor mix control; -20dB pad; +48V phantom pwr; software and Pantheon plug-ins	\$530
24-bit	24-bit	AES/EBU; word clock; super clock	No	32/unlimited	N/A	N/N	L-Stream modules; 6 ft. XLR audio cable; 2 ft. sync cable; multichannel ADAT and AES/EBU expansion	\$749
24-bit	24-bit	Word clock; multiscard	No	NA	N/A	N/N	6 ft. XLR cables with AES16-XLR and -SRC models; sample rate conversion on AES16-SRC (\$995 SRP)	\$795
24-bit	24-bit	AES/EBU; word clock; super clock	Yes	N/A	N/A	N/N	XLR audio and MIDI/clock I/O cables included	\$499
24-bit	24-bit	AES/EBU; word clock; super clock; SMPTE; composite video	No	N/A	N/A	N/N	6 ft. XLR audio cable; 2 ft. sync cable; multichannel ADAT and AES/EBU expansion cards	\$995-\$1,195
24-bit	24-bit	N/A	Yes	Unlimited	Unlimited	Y/Y	Compact recording system including all software necessary to track, mix, and record	\$495
24-bit	N/A	N/A	No	N/A	N/A	N/N	Samplitude Bundle software	\$249
24-bit	N/A	N/A	No	N/A	N/A	N/N	Samplitude Bundle software	\$299
24-bit	N/A	N/A	No	N/A	N/A	N/N	Samplitude Bundle software	\$369
24-bit	24-bit	MIDI	No	N/A	N/A	N/N	2 x MIDI in/out; Samplitude software	\$369
24-bit	N/A	MIDI	No	N/A	N/A	N/N	3 x MIDI in/out; Samplitude software	\$499
24-bit	N/A	MIDI; word clock	No	N/A	N/A	Y/Y	Full digital DSP mixer	\$499
24-bit	N/A	MIDI; word clock	No	N/A	N/A	N/N	Samplitude Bundle software	\$699
24-bit/128x	24-bit	Multiscard sync	Yes	N/A	N/A	N/N	On-board digital mixing, routing and monitor controls; SCMS; ASIO 1/2; EASI; GSIF; DirectX	\$230
24-bit	24-bit	S/PDIF; internal	Yes	N/A	N/A	N/N	MIDI	\$230
24-bit	24-bit/128x	N/A	Yes	N/A	N/A	N/N	Headphone output (1/4" TRS) w/volume control	\$250
24-bit	24-bit	Word clock; S/PDIF; internal	Yes	N/A	N/A	N/N	MIDI	\$800
24-bit	24-bit	S/PDIF; internal	Yes	N/A	N/A	N/N	MIDI; 2 built-in mic preamps	\$500
24-bit	24-bit	S/PDIF (coaxial/optical); MTC; MIDI clock	Yes	N/A	N/A	N/N		\$500
24-bit/128x	24-bit	Multiscard sync	No	N/A	N/A	N/N	Split console design; 2 mic pres have inserts; 2 line inputs; 4 stereo aux inputs; effects send	\$600
24-bit	24-bit/128x	N/A	Yes	N/A	N/A	N/N		\$599
24-bit, 1-bit	PCM 32-bit, DSD 1-bit	SMPTE; VITC; MTC; word clock; RS422; PAL; NTSC; HDV	Yes	Unlimited	Unlimited	Y/Y	Cross-fade editor; multipoint source/master editing; DSD; supports PMF, SDII, AIFF, AVI, MPS, WAV	\$3,495 and up
16-bit	24-bit	Video black burst; SMPTE (all, optional)	No	Unlimited	32,767	Y/Y	Can edit and mix CD-ROM master files	\$3,995
24-bit	24-bit	Internal; word clock (in/out)	No	Host dependent	Host dependent	Host dependent	114 dB S/N A-weighted; +4/-10dB switchable inputs	\$1,495 core
24-bit	24-bit	ADAT (sample-accurate); SMPTE; word	Yes	Host dependent	Host dependent	Host dependent	CueMix DSP no-latency monitoring; front-panel LCD programming	\$795
24-bit	24-bit	Word clock; SMPTE; ADAT; lightpipe; DTP	No	Host dependent	Host dependent	Host dependent	Works as standalone format converter; sample-accurate ADAT/Tascam transfers	\$995 core
24-bit	24-bit	ADAT; word clock; optical	No	Host dependent	Host dependent	Host dependent	8 mic inputs w/preamps; CueMix DSP no-latency monitoring; programmable meters	\$1,295
24-bit	24-bit	Internal; word clock; AES/EBU	No	Host dependent	Host dependent	Host dependent	120+ dB S/N A-weighted; supports 5.1 surround I/O; AES/EBU I/O rate converters	\$1,895 core

## COMPUTER-BASED DAWs

MANUFACTURER	PRODUCT	ANALOG I/O	DIGITAL I/O	PLATFORM VERSION	BUS TYPE	PLUG-IN FORMAT(S) SUPPORTED	SAMPLE RATE

## Planning Your Session Setup

By David Franz

The first step when preparing for a recording session is to plan how you'll use your studio space. Some questions to ask yourself include: What is the instrumentation of the session? Do I need sound separation, isolation, or baffling of some sort? Do the musicians need to see each other? Where can the musicians stand or sit comfortably? Does the studio need some special acoustical treatment for the session?

While you're considering these questions

**FIG. 1:** A small one-room studio setup with the guitar amp in the closet, the stand-up bass in the hallway, the drums in one corner, and the keys-vocals in the adjacent corner. This setup facilitated eye contact among members of the band and provided enough sound separation to record great tracks.

you might try sketching diagrams of possible setups to help you visualize how the studio will look with everyone in it. I've included a sketch (see Fig. 1) of a session I engineered once in a small apartment. We recorded drums, electric guitar, acoustic bass, keyboards, and scratch vocals all at once in my home studio at the time.

You also need to consider how many mic-line cables, microphones, mic stands, headphones, and headphone extension cables you'll need for the session, because your access to these items may influence the setup. For those of us on tight budgets, creative setups are the only way to maximize our equipment while minimizing expenses. Regardless,

when it comes right down to it, you may have to buy some extra equipment to make sure sessions go smoothly and sound good.

Even with planning, there are still many last-minute contingencies that will require a flexible setup. The musical lineup may change, and you'll have to record unexpected instruments. Or the band may have a particular requirement. For example, the bass player and the drummer may ask to be next to each other, even though it would work better for you if they were across the room. To help accommodate sudden changes like these, you might want to sketch several scenarios ahead of time. Because the

fundamental role of the engineer is to capture a great performance, you need to do everything in your power not to impede the performance.

If you're only recording yourself, one instrument at a time, then you won't need to worry about sound separation at all. However, once you start recording multiple instruments at one time in the same room, studio setups and mic placement become important. ■

## Acoustic Instrument Miking Tips

By Paul White

**M**ost instruments produce sound from more than one place. Take the acoustic guitar—some sound comes out of the sound hole due to air vibrating inside the body, the wooden panels making up the body resonate, the strings themselves produce sound, and the neck and headstock vibrate. What we identify as a good acoustic-guitar sound

FIG. 1: [This caption is in the original graphic.] The 5:1 rule. The distance between adjacent mics should be at least five times the distance between the mics and the sound sources they are recording. This will reduce bleed and minimize tonal deterioration caused by phase cancellation.

is in fact a combination of all of these separate sounds. The same is true of all acoustic instruments, and even in the case of an electric instrument, such as an amplified guitar, it could be argued that the cabinet vibrates and contributes to the sound directly produced by the loudspeaker. Unless we capture all the elements that make up the sound as perceived by a listener at a distance from the instrument, the result is likely to sound less than natural.

### Mic Distance

Choosing the right miking distance can be a challenge, because if we bring the microphone too close to the instrument, we start to focus on just one part

of it, which means that we are no longer capturing the composite sound of the whole instrument. It is tempting to put the microphone close to the part of the instrument that seems to be making the most sound, such as the bell of a trumpet, the sound hole of a guitar or the head of a drum (especially tempting if you are using insensitive microphones), and though it is occasionally possible to obtain usable results in this way, what we actually get is not really representative of the whole instrument.

On the other hand, placing the microphone too far away could capture the necessary components of the sound but could also pick up other unwanted sounds

or room ambience. For this reason, it's always easier to record an instrument if it's played in a sympathetic acoustic environment, and most Western instruments need a little reverberation because they were designed to be played indoors. The same is not necessarily true of ethnic instruments, as many are only ever played outdoors and thus need a less reflective environment.

### Universal Rule

As acoustic instruments vary enormously in loudness and frequency content, I'd normally choose a condenser microphone in order to be confident of having a high enough degree of sensitivity and the ability

EDIROL

Let nothing tie you down.

PCR-1

At less than 3 pounds and 1.5" thickness, the metal casing of the PCR-1 makes it the most portable (and durable) MIDI Controller in the market – the perfect tool when a creative explosion hits, whether you're recording a love song, ripping out bass lines at a gig, or sequencing tracks at the beach.

With 25 full-sized, velocity sensitive keys, the USB-powered PCR-1 accommodates your playing style. It doubles as an audio interface as well, recording at up to 24-bit/96kHz. Of course, we've thrown in plenty of buttons for maximum control, and WDM/ASIO 2.0/ CoreAudio support for low latency when recording or performing with software synths. Want zero latency? Direct Monitoring is also supported.

Record your band's gig, slam the PCR-1 back into your bag, and use the assignable controls to sequence tracks anywhere you like. Compact and capable, the PCR-1 is the best way to get your music out there.

## Cutting Your Own Loops

By Todd Souvignier

**W**hether you've recorded a special looping session, or are cutting into tracks from any multitrack recording or CD, the process of editing loops is essentially the same:

- Pick a sound editing program. Two good examples are BIAS Peak (Mac) and Sony Digital Sound Forge (Windows), since they have deep professional toolsets and large user bases. Pretty much any audio editor may do in a pinch.

**FIG. 1:** Always cut loops so they start and end on zero-crossings. In the top example the start point is in the positive and will result in a click. The lower example is cut correctly, beginning at a zero-crossing.

- Next, get the audio onto the computer (if it's not there already). Ideally, you'll

have the files on a CD-ROM, which can easily be copied to your hard drive. Next best would be if the files are on an audio CD, which can be digitally imported ("ripped") to your hard drive. Somewhat less ideal, but still viable, is to record the audio into your computer from some external source, such as a tape deck. Use a professional-quality sound card or the audio fidelity may be degraded during the recording process.

- Open one of the audio files in the sound editing program.
- Locate the first section of audio to be cut.
- Highlight the section where the loop is and copy the selection. This does not have to be an exact selection; a little extra audio

before and after the loop is okay right now.

- Create a new, empty file document (Control-N or Command-N), then paste the selection into the new document.

- Locate the beginning of the "one" beat in the loop. Place a marker or loop start point there, or click-and-drag from the beginning of the "one" to make a highlight selection.

- Locate the end of the "four" beat in the loop (or the beginning of the next "one.") Extend the selection to this point by holding down the shift key and mouse clicking; or place a marker or end point.

- Audition the loop; most editors have a "loop play" option that will repeatedly play any selection or any audio between the loop start and end points.

- If the loop sounds wrong, adjust the start and end points.

- When you're in the right neighborhood, zoom in on the file and fine tune the start and end points. Ideally the loop should start immediately before the first cycle of the "one" and end right before the first cycle of the next "one." Make sure to not cut into the transient or attack portion of the sound!

- Check that loop start and end points occur on a zero-crossing, a point where the waveform is in the middle of the display at 0 dB (see Fig. 1).

- By now the loop should sound really tight and natural—one should not hear any noise or glitch when the loop repeats.

- Use the Crop command, found in

the edit menu, to trim the loop, omitting sound before the start point and after the end point.

- If it was not possible to edit on zero-crossings, perform a tiny fade-in at the beginning of the loop, and a tiny fade-out at the end, to force the waveform to zero.

- Now save the loop under a new name. ■

Dual padding level	\$40
Input attenuation switchable	\$40
Phantom power; attenuation switch	\$40
12V-48V switchable	\$70
Power LED	\$50
Dual direct box	\$60
Variable gain; hi-cut filter; optional rack kits	\$595
Active; BBE Sonic Maximizer; -15dB pad switch	\$249
Active/passive; BBE Sonic Maximizer; Jensen transformer; 0, -15, -30dB pad switch	\$299
Converts two separate unbalanced 1/4" jack inputs into two balanced XLR outputs	\$25
Direct connection of amp outs up to 3000W	\$79
Direct connection of amp outs up to 3000W	\$229
Auto power-off; phase inverse	\$150
0/-20/-40 dB pads	\$185
0/-20/-40 dB pads; LP filter; phase reverse	\$899
Transformerless, 4 Hz to 200 kHz	\$299
Input attenuation -0, -20, -40 dB	\$25
Isolates ground even w/ phantom power	\$232
Passive direct box; uses top-of-the-line Jensen transformer in die-cast aluminum box	\$300
Jensen output transformers; tube-buffered output	\$600
Tube-buffered 1/4" outputs	\$899
All-tube construction; 27 Mohm input	\$1,100
Can be used as a mic/instrument splitter; 3-position pads + 180	\$65
Can be used as mic/instrument splitter; 3-position pads + 180	\$85
Speaker/instrument level switch	\$95
20 Hz-40 kHz frequency response	\$124
20 Hz-40 kHz frequency response	\$360
20 Hz-40 kHz frequency response	\$130
20 Hz-40 kHz freq. response; uses E535 mods	\$745
High-isolation operation	\$190
Parallel unbalanced outputs	\$1,225
Removes ground hum; balances audio signal	\$90
Includes 4 RCA adapters; hum elimination	\$100
Removes ground hum; balances audio signal	\$290
Converts between -10/+4 dBu equipment	\$350
Semiparametric EQ; sweepable mid w/notch	\$250
Exclusive voltage doubler circuit stands up to high output active basses	\$250
Internal electro-static shield in xfmr; steel case/shield for xfmr; steel chassis w/ foam pad	\$59
Reactive, load sensitive direct interface of guitar amp to mixer; 25% & 50% power reduction return to spkr cab; 16 Ω	\$599
Accepts line level signals from consoles/keyboards	\$49
Accepts guitar amp outputs	\$70

# Acoustics First®

## Materials To Control Sound And Eliminate Noise

### The 1014 AcoustiKit™

The 1014 AcoustiKit is the small control room package with real studio Art Diffusers®, Acoustics First combines these in one box with Cutting Wedge® foam, Bermuda Triangle Traps™ and specific instructions for installation.

The 1014 AcoustiKit is everything you need for a 10' X 14' control room, without buying more than you need.

## Guitar Effects and Recording

By Paul White

**G**uitar parts tend to be recorded with their basic effects, such as overdrive, spring reverb, and expressive pedal effects such as wah-wah. Some analog effects pedals produce a more musical sound than their better-specified rack-mounted counterparts, especially chorus and flange units, while stereo reverb treatments can safely be left to the final mix.

Don't be tempted to dismiss an effects pedal purely because of its technical spec; if it sounds good, use it. However, if it produces too much noise, distorts, or causes some other problem, discuss it with the player using the pedal and see if you can simulate the sound with your own equipment. Even if you decide to add the effect at the final mixing stage, you should be able to arrange things so that the player can hear his part with the required effect while playing via the headphone monitoring system. This can usually be achieved by feeding

FIG. 1: Re-recording a guitar track through a combo amplifier.

the effect to the monitor mix but without recording it to tape.

If it really is necessary to leave a guitar treatment open-ended, it may help to record the sound that the player wants on one tape track and a straight, clean, DI'd output from the guitar (via a DI box) on a spare track. In this way, it's possible to feed the dry guitar track back through an amplifier or recording pre-amp or plug-in with the desired effects and overdrive settings in order to get the desired result when mixing.

In a traditional multitrack tape studio,

it's not uncommon to play back the guitar track through a guitar amplifier and then mic it up in order to change the sound, and if you can arrange an interesting live acoustic space in which to place the amp and mic, it's often possible to achieve results that would be difficult or even impossible using artificial effects on their own. Fig. 1 illustrates how this is done using tape, but the technique is equally applicable

to other multitrack recording systems.

Today, digital-modeling guitar preamplifiers are so good that you may not even feel the need to mic an amplifier. A typical modeling pre-amp combines amp modeling, speaker modeling, and effects all in one unit, and many purport to emulate a range of classic European and American amplifiers. As you hear exactly the sound you're recording over the monitors while you're playing, you know just how the end result will turn out. However, it's worth pointing out that some of the more unlikely combinations

## SPECIAL FEATURES

## PRICE

Selectable input sensitivity; ground lift on each channel	\$379
Instrument preamp & DI; phase control; power headphones; variable impedance	\$495
Instrument interface for computer sound cards and mixing consoles	\$95
Semi-parametric EQ; tube/mic emulation	\$225
Bass tube amp emulation; active bass/treble; drive, presence, blend controls	\$225
Switchable 15 dB boost circuit for Jensen output	\$595
0, -20, -40 dB pad switch	\$30
	\$60
Instrument/amplifier switch; LP switch	\$110
-20 dB pad switch per channel	\$199
Interfaces with computer sound cards	\$199
Instrument/amplifier switch	\$160
Instrument/amplifier switch	\$395
Instrument/amplifier switch; LP switch	\$400

of amplifier models and speaker cabinet models can produce unexpectedly interesting results, so don't just rely on the factory settings.

Some guitarists comment that the sound they hear coming back over the studio monitors isn't the same as what they hear when standing in front of their amp at a gig—which is hardly surprising, since studios seldom monitor at that kind of level. The real question is whether the sound you hear over the monitors is comparable with the guitar sound heard on similar records. If the answer is yes, then this method of recording has a lot of advantages, not least being that you can store all of the settings as a program, enabling you to recreate the sound exactly at a later date, if necessary. ■

# EQing Drums

By David Franz

One of the first things to do when starting a mix is to work on the drum sounds. That usually means EQing the kick and snare first.

## Kick Drum

The kick drum (aka the bass drum) provides the rhythmic foundation. There are two basic parts to its sound: the *thud* and the *click*. The *thud* is the low-end beef—the part that you feel in your chest. The *click* is the sound of the beater attack on the drum's head. As with any instrument, the kick drum creates multiple frequencies when struck. In most cases, the thud lives between 40 Hz and 80 Hz, while the click lives between 1 kHz to 5 kHz. And, on a kick drum, *mud* usually lives between 220 to 340 Hz!

So, as a general technique for EQing a kick drum, try boosting between 40 and 80 Hz for more thud, cutting around 300 Hz for less mud, and boosting/cutting between 1 and 5 kHz for more or less click.

## Snare Drum

Snare drums can be very tricky to EQ. Each drum sounds completely unique and thus each requires its own EQ treatment. To make it more complicated, the sound of every drum is very dependent on its tuning as well as the drummer's style and ability. Despite all these factors, most snare drums share some sonic similarities. The bottom range for a snare is around 100 to 160 Hz. The fattest part of its sound usually occurs in the 220–240 Hz range, while

## EQ Settings for Drums

Here's a chart that summarizes some common drum EQ settings. All of these suggestions depend on the individual drum sound as well as how you want it to sit in the mix. Use your ears to choose the best-specific frequency from the frequency ranges listed for each outcome

	for this outcome	adjust this frequency
<b>Kick Drum</b>	more bottom end	boost 60–100 Hz
	less muddiness	cut 220–350 Hz
	less boxiness	cut 500–700 Hz
	more attack	boost 1–3 kHz
	more click	boost 4–5 kHz
	high-end rolloff	roll off above 8 kHz
<b>Snare Drum</b>	more bottom	end boost 100 Hz
<b>Toms</b>	less muddiness	cut 220–350 Hz
	less boxiness	cut 500–700 Hz
	more punch	boost 5 kHz
	more brightness	boost 8 kHz
	more crispness	boost 10 kHz
<b>Cymbals</b>	low-end rolloff	cut 100 Hz and below
	less dullness (gong sound)	cut 200–600 Hz
	less clanginess	cut 1–4 kHz
	more punch	boost 5 kHz
	more brightness	boost 8–10 kHz
	more crispness	boost 10 kHz and above

## The Dirt On Mud

The frequencies between 200 and 350 Hz are often associated with descriptions such as muddy, tubby, woody, boomy, thumpy, or even barrel-like. Some just call that frequency range *mud*, as in the gooey concoction of water and dirt. And who wants mud in their mix? By reducing the frequency content of this area in some bass instruments (like a kick drum), you can take out the mud, to clarify the sound of that instrument. However, as with all EQing suggestions, always listen to your EQ adjustments. Don't just cut these frequencies because of my recommendation. Reducing too much of this frequency range can cause your overall mix to lose power.

the crispness of the attack is found in the 4–5 kHz range. 300–700 Hz is the boxy range; cut some of this, if needed.

EQing higher frequencies (around 8 kHz and above) on the snare can sometimes add a nice sizzle to the track, but if there's any leakage from the hi-hat on the snare track, the boost may significantly boost the hi-hat as well.

## Toms

The primary fullness of floor toms can usually be found between 80 and 120 Hz, while the fullness of higher-pitched toms is usually found between 200 and 250 Hz. The brightness and attack for these drums, as with every drum, is in the 4–5 kHz range. And watch out for boxiness in the 300–700 Hz range.

## Cymbals

Usually, cymbals don't need too much EQ help, especially if you have high-quality ones. If you find they are a little dull, try boosting a little bit at 8–10 kHz. You can also roll off the low end of your cymbal tracks. The dullness (like the "gong" part of the cymbal's frequency range) occurs around 200–240 Hz. So, if you want to add more definition to your cymbal sound, roll off some of the low frequencies (even up to 600 Hz) using a highpass filter. Additionally, if you want to take away some of the clanginess of hi-hats, cut a little bit from the 1–4 kHz range. ■

# Ultimate Upgrade for Digital Audio Workstations

- 44.1k - 192k Sample Rate
- Up to Four Cards per System
  - Works with Magma PCI Expander for Laptops
  - AU, VST, MAS, DX, & RTAS\* Plug-In Support
  - WinXP & OS X Panther Support

CS-1 Channel Strip  
with suite of 4 plugs  
EX-1 EQ & Compressor  
DM-1/DM1L Delay Modulators  
RS-1 ReflectionEngine

“The UAD-1 is possibly the **best value** of any product available for a DAW.”

Mike Clute - Pro Sound News, October 2002

Awards for UAD-1 and/or included Plug-Ins

The UAD-1 is now available in the **Studio PAK** or the **NEW, low-cost Project PAK**

Get the **NEW Pultec Pro FREE** with Project PAK - For a Limited Time Only!

### AT3060

phantom-powered  
tube microphone

Never satisfied to rest on their laurels, our engineers were inspired to improve upon the technical excellence and coveted sound of valve design. How? By making it *simpler*.

The new **AT3060** tube microphone offers the convenience and easy setup of a standard studio condenser by operating exclusively on 48V phantom power – no dedicated power supplies and special cables required. Add to that an all-new large-diaphragm cardioid capsule design and you get the warm sound of a vintage tube mic combined with the exceptional quality and consistency you count on from Audio-Technica.

The result is, quite simply, something special, for a lot less than you'd expect.

**audio-technica.**  
always listening.

(40) SERIES

**AT4040**  
cardioid condenser  
microphone

A marriage of technical precision and artistic inspiration, the **AT4040** features an advanced large diaphragm tensioned specifically to provide smooth, natural sonic characteristics. Designed as a multi-purpose performer, this true condenser microphone offers exceptionally low noise, wide dynamic range and high-SPL capability for greatest versatility.

A passion to achieve the highest quality inspires every aspect of 40 Series design and manufacturing. Employing the latest technological innovations in the quest for superior performance, unerring dependability and sonic consistency, the **AT4040** continues the tradition of excellence embodied in every 40 Series microphone.

**audio-technica.**  
always listening.™

General; X/Y recordings; mid-size config	Neutral record space $\pm 135^\circ$	\$249
Strings; acoustic bass; piano; location	Wide cardioid w/ increase in low freq reproduction	\$249
Speech; vocals	12 dB low-cut @ 50 Hz	\$249
General	High directivity	\$295
Stereo	Directional pickup largely indep. of frequency	\$612
Vocal; choir; piano; sax; acoustic bass; guitar	1" vintg capsule; brass plate; gold sputtrd membrane	\$764
Piano; choir; acoustic bass; sax; ac guitar	1" vintg capsule; brass plate; gold sputtrd membrane	\$764
Overhead; drums; choir; acoustic guitar; percussion	Short external routings with MBHO's SMD technology	\$369

# New ADK VIENNA

"The Vienna is an absolutely beautiful sounding microphone! It has all the warmth of a rare vintage mic, but adds a slight presence boost in the high end that just screams 'expensive!'"

-Ted Perlman, Producer, Arranger, Composer: Ron Isley, Bob Dylan, Burt Bacharach, Young MC, Chicago, Kellie Coffey

Studio/live vocals; guitars	Fully variable control microphone; new HF-1 capsule	\$899
Vocals; guitars; piano; overheads	10dB self noise; fully variable polar pattern; HF-1 capsule	\$999
Vocals; instruments; general purpose	6072 twin triode; Jensen transformer; shockmount	\$1,999
General purpose; vocals; guitar	5 dBA self noise shockmount	\$349
Vocal; instruments; drums	Internal shockmount; transformerless output	\$199
Drum overheads; inst; room; studio; location	Custom case; windscreen; stand mnt; stereo XY	\$899
Acoustic gtr; drum overheads; hat; ride; perc	Matched pair	\$599

From page 51, Acoustic Instrument Miking Tips

to capture the full audio spectrum. Most instruments sound reasonably accurate to the person playing them, which gives us one fallback position straight away: if all else fails, put a mic close to the player's ears. I've used this technique to good effect when working with acoustic guitars, where a cardioid mic "looking" over the player's right shoulder will often produce a natural and well-balanced sound when other positions have failed.

The other method I've developed is based on rules normally applied to the stereo miking of ensembles. When working with stereo, it's common practice to create an approximately equilateral triangle, with the musicians forming one side of the triangle and the stereo-mic array occupying the point opposite. This ensures that all the instruments in the ensemble are roughly the same distance from the mics, yet the mics are close enough to the performers to exclude external sounds to a useful degree. But what happens if we apply this rule to a single microphone?

## Single Instruments

A typical drum kit is around five feet in width, so a single mic placed five feet in front of the kit should give a usable result without favoring one drum above the others. Of course, few people would record the drum kit with a single mic these days, but this arrangement serves to illustrate the principle.

This rule may be extrapolated to accommodate single instruments by considering the various parts of each instrument to be a kind of mini-ensemble. It's necessary to estimate only the longest dimension of the instrument and then place a cardioid-pattern mic at that distance from the instrument, pointing towards its center. For example, a drum kit is normally miked from between four and five feet, while a piano might be miked at between five and eight feet. This is only a rule of thumb, however, and if it's desirable to capture a little more of the room ambience, the mic can be moved a little further away until the desired balance is achieved. Even so, if you check the mic position calculated via this method against the standard mic positions for known instruments, you'll be surprised

at how closely they correlate. Virtually all of the wind-instrument mic positions can be worked out in this way.

Likewise, the acoustic guitar can be recorded using a single mic at a distance of around three feet. As before, avoid the temptation to point the mic at the loudest part of the instrument and experiment with both the angle of the mic and the distance once you've heard the initial results. Also, monitoring the results on enclosed headphones as you move the mic can speed up the process considerably.

### The 5:1 Rule

A further consideration arises when several instruments are being recorded together, as it may be necessary to compromise the individual microphone positions in order to minimize leakage or bleed between the instruments. Using cardioid-pattern mics, it's best if the mics are separated by a distance of at least three and, ideally, five times the distance between the microphones and the instruments upon which they're trained (see Fig. 1). A slight improvement in preventing unwanted leakage can be achieved by using a tighter microphone pattern, such as a hypercardioid or supercardioid, but it could also be argued that omnis will produce just as good a result. Omnis may pick up more bleed, potentially causing phase problems, but because of their improved off-axis response, this bleed will at least be recorded faithfully.

Cardioids, on the other hand, will produce slightly better separation (and consequently fewer phase problems), but because of their inferior off-axis response, what bleed is picked up may be tonally inaccurate, leading to a less accurate representation of the performance when the outputs from all of the mics are mixed. Of course, there are cardioids on the market with excellent off-axis responses, but these tend to be rather specialized and very expensive. ■

## How to Handle a Stubborn Mix

By Paul White

**O**ccasionally, you'll find a mix that defies all of your attempts to balance it satisfactorily, perhaps because the song hasn't been arranged in a way that leaves space for all of the important parts. If you find yourself in this situation, here are a few tricks you can try. Work through the following points and you should end up with something usable.

Set up a rough mix, in mono, with no EQ or effects, and see how it sounds.

If the mix seems too busy, ask yourself if all of the parts are really necessary, or if you can lose something. What matters most in the majority of pop songs is the rhythm and the vocals—the rest is decoration. If you can't lose something completely, try mixing it so low that you only notice it if you turn it off, or "squeeze" it with EQ so that it occupies a narrower part of the audio spectrum. Double-checking on headphones can also help you sort out what's clashing with what.

If the midrange sounds are fighting with the bass sounds, try using EQ to thin

out some of them by taking some bottom end out of the pad synth, the backing vocal, or the acoustic guitar parts.

Still no luck? In that case, go back to the basic rhythm section plus vocals and see if that's working. If not, is it too late to try a different drum or bass sound? Similarly, if you're working with a sequencer, you could try picking thinner pad keyboard sounds or brighter bass sounds.

Don't overdo effects—reverb creates the illusion of distance and space, yet often you want something to stand out in front. Try using less reverb on up-front sounds to make them drier.

If things are improving, try panning the

instruments and effects to their desired positions, as this will further improve the separation between sounds.

Although exciters shouldn't be thought of as a means of salvaging poor recordings, the extra separation that they create can make the difference between an okay mix and a good one. Use only when you've got everything as good as it can be without it.

Perhaps the mix sounds fine but just lacks cohesion or punch. In this case, try a little overall compression. A soft-knee compressor will usually provide the most transparent results, but try whatever you have and let your ears

be the judge. Start out with a low ratio of around 2:1 and lower the threshold until you get between 5 dB and 10 dB of gain reduction. Use a 20 ms attack time and around a 200 ms release time to start with, and then adjust by ear, making sure that you don't squeeze the life out of the track. ■

# EmulatorX

Desktop Sampling Systems

## The Next Generation of Professional Sampling

Emulator® X is the culmination of over 30 years of sampler development; combining the pristine sound quality, powerful synthesis and legendary filters of E-MU's hardware samplers with the disk streaming, file management, and interface advantages of software. Emulator X is a true professional sampler from the ground up, providing you with breakthrough tools for automated sampling and preset creation unlike anything that has come before.

- **Automated sampling and preset creation**

Effortlessly sample external sources and turn existing audio files into playable presets in seconds with a single click of your mouse.

- **Unmatched synthesis engine**

Over 50 patented Z-Plane morphing filters, 36 patchcords per voice, multi-wave LFO's, conditional voice modulation, clock modulation and a host of other synthesis features deliver unmatched control over your sounds.

- **Hard disk streaming and RAM playback**

- **Standalone and VSTi operation**

- **Comprehensive sound format support**

Includes EOS, EIII, GigaSampler®, Akai, HALion®, EXS24, SoundFont® 2.1, .WAV and many more. Ships with over 2GB of sounds including a stunning multi-layer piano, complete Proteus® 2000 sound set and more.

- **Integrated waveform editor**

Easily edit your samples with a host of professional DSP tools.

- **Hardware-accelerated effects processor**

Over 20 plug-in effects (more than 500 presets).

- **24-bit/192kHz I/O**

Mastering-grade converters guarantees pristine sampling and playback of your audio.

## What to Look for in a Personal Digital Studio

By Chris Middleton

**W**hether you are using a personal digital studio in place of a computer, or alongside your desktop or laptop in a home-studio setup, select from features such as these:

- 24-bit, 96 kHz recording. Many machines give you the option to record either eight tracks to 24-bit, or 16 tracks to 44.1 or 48 kHz 16-bit to economize on processing and storage.

- At least one built-in effects board. You may find your model is expandable to up to four effects boards.

- Input compression and limiting as standard—allowing you to record vocals professionally, without using up effects from the main board.

- Virtual tracks—allowing you to store alternative takes of each track.

- COSM mic modeling (a proprietary feature available only on Roland products), a filtering system that emulates

The Yamaha AW16G allows you to record 16 tracks of audio to the internal hard drive, then burn it to CD using the built-in CD-RW drive. Importantly, it is magnetically shielded, so you can use it alongside your regular computer system without a danger of electromagnetic interference from computer monitors or speakers.

the dynamic signature of a range of top-quality professional microphones.

- Three- or four-band parametric EQ—explore all those frequencies in the mix.

- A range of digital and analog outputs—e.g., S/PDIF.

- A number of effects Sends and Returns—these are your routes to and from external signal processors.

- “Flying” (motorized) faders—they’re far from essential, but having flying faders means that your mixer will set itself up automatically for each song, moving each fader to its correct position in the mix.

- At least 10 GB of onboard storage—go for 20, 40, or more if you can afford it.

- An integral CD-R/CD-RW drive. ■

## Audio Archiving Strategies

By Chris Middleton

**W**he following article is a conversation with Geoff Pryce (technical manager) and Owen Leech (studio manager)

of Peter Gabriel's Real World Studios in box, England.

**GP:** Damp and humidity are the enemies of audio. Most big studios who still use tape bake their tapes in an oven to keep out the moisture. But when it comes to digital, you really need an archiving strategy. Archiving is big business, but it no longer means consigning data to one format and just leaving it there—you need a re-archiving strategy

to migrate your data onto each new technology as it comes along. We're aiming for a 100-year timeframe to preserve all our recordings for. As long as all the ones and zeros remain intact, the archive will survive. But that means ensuring that audio is archived with incredibly accurate clocking today—more accurate than the atomic clocks that keep world time.

**OL:** You'd think that record companies

would be good stewards of their own material, especially given that backlist is so important to them. But so many big companies throw out their master tapes. Or they just lose them. A few years ago there was a skip [dumpster] outside Olympic Studios in London that was full of master tapes—they belonged to record companies, but they never bothered to ask for them back! Maybe they had nowhere to store them.

We hosted a big event recently, in honor of Band Aid's "Do They Know It's Christmas?" The BBC were here, and the record company sent the master tape of this huge worldwide hit that spawned the whole Live Aid thing. There was a big fanfare, and the tape machine was switched on. It was the wrong song! They'd lost the master tape! God knows what some of these companies do now that stuff is mastered on Pro Tools

or Logic Audio. Just leave a box of CDs in the corner? ■

## Proper Monitor Placement

By David Franz

**W**hen listening to two speakers, your goal is to hear the optimal stereo image. Also called the phantom image, it occurs in the middle of two speakers placed at equal height from the floor. It creates the illusion that sound is emanating from a third speaker between them.

To hear the phantom image, your head should be on the median plane, an imaginary line equidistant from each speaker (see Fig. 1).

Ideally your head and the two speakers should form an equilateral triangle—the distance between you and each speaker is the same, and equal to the distance between the two speakers. This ensures that you're hearing the most accurate stereo image from your speakers. In this setup, you'll perceive the sound coming from the area directly between the two

FIG. 1 (called Fig. 2.20 in the book): Properly placed stereo monitors should form an equilateral triangle with the listener.

speakers. (The way I have my studio set up, it often seems like the sound from my speakers is actually coming from my computer monitor, which is placed directly between them.)

When you are equidistant from the speakers, the sounds from each speaker reach your ears at exactly the same time. Otherwise, you may experience the precedence effect. The precedence effect (or Haas effect) occurs when the listener is off the median plane (by as little as six inches). It shifts the phantom

image toward the speaker closest to the listener. As a result, the sound from the closer speaker arrives at the listener's ear first, which may fool them into thinking it's louder. If you're basing a mix on this kind of false imaging, you may have to redo the entire thing!

To create the proper listening setup, I recommend using a tape measure to accurately position your speakers. First, sit down where you'll normally be listening in your studio, then use the tape measure to approximate an equal distance from

your head or chest to a spot on your left and right sides where your speakers could be placed. A good distance is 3 to 4 feet, which is the same distance the speakers should be apart from each other.

In fact, the closer you are to your speakers, the less the room acoustics will color the sound. (This is called close-field monitoring, and is the most common approach for mixing.) Additionally, if at all possible, try to keep your speakers away

# SONIC TREATMENT

MANUFACTURER	MODEL	TYPE	FIRE RATING	DIMENSIONS	SPECIAL FEATURES	PRICE
Acoustical Solutions	AAP Alpha Pyramid	Sound-absorbing foam	Class 2	2'x2' sheets, 2, 3, 4" thick	Matching pattern; variety of colors; NRC 0.70-1.05	\$180-\$215/box
Acoustical Solutions	AB10-NR Audio-Seal Sound Barrier	Sound-transmission blocker; high temperature-fused vinyl	N/A	54"x60"x1/8" roll	Stops noise from transmitting through walls, floors and ceilings	\$1.75-\$2.25/sq ft
Acoustical Solutions	AS1, AS2 AlphaSorb Panels	Fabric-wrapped wall panels and hanging baffles	Class 1	Any size up to 4'x10'; 1" or 2" thick	NRC 0.80-1.05; 48 colors; custom shapes and cut-outs	\$39-\$280
Acoustical Solutions	Sonex Acoustical Foam UNX	Polyurethane	Class 2	2'x4' or 4'x4'; 2, 3, or 4" thick	Charcoal, beige, and brown	\$179 (3"); \$181 (2")
Acoustical Solutions	Sonex Acoustical Foam SOC-2	Melamine	Class 1/Class A	2'x4'x2"	White or colortec charcoal	\$213-\$251
Acoustical Solutions	Sonex Contour Ceiling Tiles	Drop in T-grid or surface mount	Class 1/Class A	2'x2'	White, gray, almond, or black hypalon finish	\$315-\$374
Acoustical Solutions	Crosspoint Acoustical Wall Fabric	Fabric wall covering	Class 1	Bolt: 54"x50 yards; 54"x36"	45 colors; NRC 0.25; easy to install	\$825/bolt; \$50/yard
Acoustical Solutions	SS1 / SS2	SoundSuede Wall Panels	Class 1/Class A	Up to 4'x10'/1		\$59/\$345
Acoustical Solutions	ARIC	AlphaResilient Isolation Clip	N/A	N/A	Clips for floating walls	\$5 each
Acoustical Solutions	Door Seal Kits	Acoustical door seal kits	Class A	Sold by the ft.	Seal leaks around doors	\$175 and up
Acoustical Solutions	RPG Skyline	Diffusor	Class A	2'x 2'x 8" deep	(2) per box (white)	\$298 per box
Acoustics First	1014 AcoustiKit	Acoustical room treatment	Class 3	Various	(24) 1'x1' and (6) 2'x2' sections of cutting wedge foam; (2) 2'x2' Art Diffusor Model F; (2) 2' Traps	\$398
Acoustics First	Art Diffusor Model C-ADCS	Styrene	N/A	24"x24"x4.5"	Custom colors	\$108
Acoustics First	Art Diffusor Model C-ADCT	Thermoplastic	Yes	24"x24"x4.5"	Custom colors	\$166
Acoustics First	Art Diffusor Model E	EPS plastic	N/A	15"x15"x9"	Custom colors	\$88
Acoustics First	Art Diffusor Model F-ADFS	Styrene	N/A	24"x24"x2"	Custom colors	\$108
Acoustics First	Art Diffusor Model F-ADFT	Thermoplastic	Yes	24"x24"x2"	Custom colors	\$166
Acoustics First	Art Diffusor Model W	Wood	N/A	15"x15"x9.5"	7 finish choices	\$170-\$260

# SONIC TREATMENT

MANUFACTURER	MODEL	TYPE	FIRE RATING	DIMENSIONS	SPECIAL FEATURES	PRICE
Acoustics First	Art Transfuser	2-Dimensional binary array diffusor	N/A	2'x2' ceiling grid	Translucent light and sound diffusion	\$166/unit
Acoustics First	Bermuda Broadband Triangle Trap	Corner absorber	Class 1/3	1'x1'x4'	Also avail as bermuda shorts (24") and stand-alone sound cylinder	\$42
Acoustics First	Cutting Wedge	Acoustic foam	Class 3	1'x1', 2'x4', 2'x8' sheets; 2", 3", 4" or 6" thickness	Pattern creates extra surface area; available in charcoal, brown, beige, blue, burgundy, and hunter green	\$3-\$11/sq ft
Acoustics First	Double Duty Diffusor	Polycylindrical diffusor/bass trap	Class A	2'x2'-4'x8'	Uniform high-frequency dispersion; increases the acoustic size of a mixing room	\$200
Acoustics First	Geometrix	Broadband	Class A	8" diam; up to 10' high	Formed fiberglass covered with 1.00 above Guilford FR701 fabrics; 84 absorption at 125 Hz	\$157
ASC	Acoustical Soffit System	Absorptive/diffusive soffit	Class 1	Custom	Broadband control	\$89/in ft
ASC	Attack Wall	Acoustic subspace	Class 1	Customized for console and room	Studio traps/monitor stands	\$4,000 and up
ASC	Mix Station	Room acoustic control package	Class 1	5'x5' arrays; 6" x60" panels	Low-frequency and reflection control	\$1,728
ASC	Monitor Stand/Acoustic Control Product	Reference monitor stand	Class 1	11, 13, 16, 20" diameters; height varies	Low-frequency control; reduces vertical mode problems	\$378-778
ASC	Quick Sound Field System	Sub-space	Class 1	(8) studio traps	Increase/decrease ambience via placement; adjustable for bright or dead recording	\$2,898 and up
ASC	Studio Trap	Adjustable/tunable floor-standing acoustic control device	Class 1	9" diameter, 4' tall; adjustable height	Diffusive side and absorptive side; adjustable	\$368
ASC	Tube Trap	Bass trap resonance	Class 1	9", 11", 13", 16", 20" diameters; 4' tall	Bass absorption down to 30 Hz with built-in diffusion above 400 Hz	\$288-928
ASC	Tube Trap Fractionals	Bass trap/diffusor	Class 1	9", 11", 13", 16", 20" diameters	Bass absorption down to 30 Hz w/built-in diffusion above 400 Hz	\$218-578
ASC	Sound Panel	Acoustic wall panel	Meets code	2"x8"x48"	Controls flutter echo, excess reverb and brightness while maintaining ambience and presence	\$458 (set of 8)
ASC	Sub-Stand Cube	Bass trap/resonant control	N/A	Standard 17"x17"x9", 24"x24"x9"; custom sizes available	Decouples sub; controls vertical resonant mode; improves bass articulation	\$379-539
ASC	WallDamp IsoWall System	Soundproof wall and ceiling construction kit	Meets fire codes	N/A	Room soundproofing/isolation construction kit for new construction or remodeling	\$3-5/sq ft
ASC	P.C.A.D.	Poly-Cylindrical Absorber/Diffuser	Class 1	2'x4', 3'x5', 4'x8'; custom available	Affords broadband absorption to out perform flat panels; housed in wood frame	\$350-\$550
Auralex Acoustics	ATOM-12 Corner Treatment Kit	Bass traps	Class B	12"x12"x17" LENRDS; 12"x12"x12" cubes	Contains 12 LENRD bass traps and 4 corner fill cubes	\$399/kit
Auralex Acoustics	D36 Roominator DST	Absorptive foam	Class B	1'x1'x2"	18 DST112s in charcoal; 18 DST114s (choice of 4 colors); 2 tubes Tubetak Pro liquid adhesive	\$119/kit
Auralex Acoustics	D108L Roominator DST	Absorptive foam	Class B	1'x1'x2"; DST-LENRDS: 12x12x17" triangle; 24" long	54 DST112s in charcoal; 54 DST114s (choice of 4 colors); 8 DST-LENRDS in charcoal; 6 tubes Tubetak Pro liquid adhesive	\$599/kit
Auralex Acoustics	D160HT Roominator DST	Absorptive foam	Class B	Various: DST, LENRDS	32 DST112s; 32 DST114s (4 colors); 12 DST422s; 8 DST-LENRDS (4 colors); 24 DST-Rs; 8 tubes adhesive	\$799/kit
Auralex Acoustics	D240Xi Roominator DST	Absorptive foam	Class B	Various DST, LENRDS, T-Fusor	48 DST112s in charcoal; 96 DST114s (choice of 4 colors); 12 DST422s; 16 DSTLENRDS; 12 T-Fusors; 16 tubes Tubetak Pro; 1 GRAMMA	\$1,599/kit
Auralex Acoustics	GRAMMA (Gig & Recording Amplifier & Monitor)	Amp and monitor riser	N/A	Docking: 15"x23"x2.5"	Lightweight; portable; standard size fits most amps	\$60
Auralex Acoustics	MAX-Wall 211	Absorptive foam	Class B	20"x48" panels; 4.37" thick	Portable; expandable; adaptable; interlocking panels; 3 colors; 2 panels, MAX stand, MAX-Wall window kit & clamps	\$249/kit
Auralex Acoustics	MAX-Wall 420	Absorptive foam	Class B	20"x48" panels; 4.37" thick	Portable, expandable, adaptable; interlocking panels; available in 3 colors; includes 4 panels 2 MAX stands & clamps	\$349/kit
Auralex Acoustics	MAX-Wall 831	Absorptive foam	Class B	20"x48" panels; 4.37" thick	Portable, expandable, adaptable; interlocking panels; available in 3 colors; incl. 8 panels, 3 MAX stands, 1 MAX-Wall Window kit & clamps	\$749/kit
Auralex Acoustics	MAX-Wall 1141VB	Absorptive foam	Class B	20"x48" panels; 4.37" thick	Portable, expandable, adaptable; interlocking panels; available in 3 colors; incl. 11 panels, 4 MAX stands, 1 MAX-Wall Window kit & clamps	\$999/kit
Auralex Acoustics	Mineral Fiber Insulation	Construction material	Class A	2x4' panels; 2, 4" thick	More dense than standard insulation; designed for acoustical usage; 2" has 6 pcs/box; 4" has 3 pcs/box	\$80/box
Auralex Acoustics	MoPADs	Monitor isolation pads	N/A	12x4x2 w/wedge adjuster	Charcoal; set of 4 monitor pads and 4 wedge adjusters	\$30/set
Auralex Acoustics	Platfoam	Isolation device	N/A	2x4x48	24 pieces per box; includes 3 tubes Tubetak Pro liquid adhesive; charcoal gray only	\$199/box
Auralex Acoustics	RC8-Resilient Channel	Construction materials	N/A	2.375"Wx8"Lx0.5" thick	Metal used to hang drywall; improves sound-transmission characteristics of wall or ceiling system; 24 pcs/tube	\$140/tube
Auralex Acoustics	Roominators Alpha-DST Kit	Absorptive foam	Class B	DST panels: 1'x1'x2"; DST LENRDS: 12x12x17" triangle; 24" long	32 DST-112s in charcoal; 32 DST-114s (choice of 4 colors); 4 DST-LENRDS in charcoal; 3 tubes Tubetak Pro liquid adhesive	\$319/kit
Auralex Acoustics	Roominators Project 2 Kit	Absorptive foam	Class B	Wedge panels: 1'x1'x2" LENRD: 12"x12"x17" triangle; 24" long	24 Studiofoam wedge panels; 8 LENRD bass traps and 5 tubes of Tubetak Pro liquid adhesive	\$429/kit
Auralex Acoustics	Roominators Deluxe Plus Kit	Absorptive foam	Class B	Wedge panels: 2'x2'x2"; LENRD: 12"x12"x17" triangle; T-Fusors: 23.75"x23.75"x5.5"	24 Studiofoam wedge panels; 8 LENRD bass traps and 6 T-Fusor 3D sound diffusers; 2 cans Foamtak spray adhesive; charcoal gray only	\$699/kit

MANUFACTURER	MODEL	TYPE	FIRE RATING	DIMENSIONS	OPTIONS	SPECIAL FEATURES	PRICE	PRICE
Auralex Acoustics	Roominators Pro Plus Kit	Absorptive foam	Class B	Wedge panels: 2'x2"x2" LENRD: 12"x12"x17" triangle; T-Fusors: 24"x24"x5.5"	36 Studiofoam wedge panels; 12 LENRD bass traps and 8 T-Fusor 3D sound diffusors; 3 cans FoamTak spray adhesive; charcoal gray only		\$999/kit	
Auralex Acoustics	Sheet Blok	Sound barrier	N/A	0.125" thick; 4'x10'; 4'x30' rolls	Limp-mass vinyl material; approx. 6 dB more effective than lead at stopping transmission of sound		\$140 (4x10 roll); \$360 (4x30 roll)	
Auralex Acoustics	Sheet Blok-Plus	Sound barrier	N/A	0.125" thick; 4'x30' rolls	Limp-mass vinyl material; incl. pressure sensitive adhesive on back; available in black		\$460/roll	
Auralex Acoustics	Studiofoam	Absorptive foam	Class B	2'x4' panels; 1", 2", 3", 4" thick	10 colors; wedge cut; seamless installations; 6-12 pieces per box; overall NRC 0.50-1.10		\$239/box	
Auralex Acoustics	Studiofoam-DST-112	Absorptive foam	Class B	1'x1' panels; 2" thick	Charcoal; designer cut; seamless installations; 24 or 96 pieces per box		\$79 (24); \$299 (96)	
Auralex Acoustics	Studiofoam-DST-114	Absorptive foam	Class B	1'x1' panels; 2" thick	4 colors; designer cut; seamless installations; 24 or 96 pieces per box		\$79 (24); \$299 (96)	
Auralex Acoustics	Studiofoam-DST-244	Absorptive foam	Class B	2'x4' panels; 2" thick	4 colors; designer cut; seamless installations; 12 pcs/box		\$299/box	
Auralex Acoustics	Studiofoam-DST-422	Absorptive foam	Class B	2'x4' panels; 2" thick	4 colors; designer cut; seamless installations; 6 or 12 pcs/box		\$139 (6); \$229 (12)	
Auralex Acoustics	Studiofoam Metro	Absorptive foam	Class B	2'x4' panels; 2", 4" thick	12 colors; unique "cityscape" profile; seamless installations; 6-12 pieces per box		\$239/box	
Auralex Acoustics	Sunburst Broadband Absorbers	Broadband absorbers	Class B	Male: 12"x48"x7.5"; female: 12"x48"x5.16"	12 colors; wedge cut; 8 pcs/box; 32 linear ft/box		\$259/box	
Auralex Acoustics	Sunburst 360	Stand-mounted absorber	Class B	Male: 12"x48"x15.5"; female: 12"x48"x7"	Available in charcoal, purple, burgundy; 2 MAX stands w/18" extensions per box, allowing height of 4'6" to 9'		\$289/box	
Auralex Acoustics	T-Fusor	For floated drum risers	N/A	23.75" x 23.75" square; 5.5" thick	Wall mountable; fits drop ceilings; easily painted; 4 pieces/box		\$280/box	
Auralex Acoustics	Stand-Mounted LENRD Bass Traps	Bass traps	Class B	12"x12"x17" triangular; 48" long	12 colors; 4 pieces/box; 4 tripod-style mic stands included; overall NRC 1.35		\$319/box	
Auralex Acoustics	Studiofoam Pyramids	Absorptive foam	Class B	2'x4' panels; 2", 4" thick	10 colors; pyramid cut; seamless installations; 6-12 pcs per box; overall NRC 0.70 to 0.95		\$289/box	
Auralex Acoustics	U-Boats	Floor beam float channels	N/A	2.125"Wx1.5"Hx2"L	Made of EPDM rubber; U-shaped channels used to support and float framing members of surrounding structure; avail. in lots of 50 or more; black only		\$2 each	
Auralex Acoustics	VersaTile	Broadband absorber	Class B	16"x24"x2"	12 colors; 3 different installation options; 6 or 24 pieces per box; overall NRC 0.80 to 1.05		\$99 (6); \$329 (24)	
Auralex Acoustics	Aural-Xpanders	Microphone baffles	Class B	Various	Kit consists of 13 pads and baffles		\$50	
Auralex Acoustics	HoverDeck HD-88 Concert	Portable drum riser	N/A	96"x96"	Low-profile, portable drum isolation riser		\$999	
Auralex Acoustics	HoverDeck HD-64 Gig	Drum riser	N/A	72"x48"	Low-profile, portable drum isolation riser		\$399	
Auralex Acoustics	ISO Producer Pack	Recording engineer toolkit	Class B	N/A	Kit consisting of 1 GRAMMA, 1 set MoPADs, and 1 set Aural-Xpanders		\$119	
Auralex Acoustics	SonoFlat System SFS-112	Complete room system	Class B	Covers 112 square ft.	Absorption and bass trapping		\$699	
Auralex Acoustics	SonoFlat System SFS-184	Complete room system	Class B	Covers 184 square ft.	Absorption, diffusion, bass trapping components		\$1,499	
Auralex Acoustics	ELITE Pro Systems EPS-112	Complete room system	Class A	Covers 112 square ft.	Class A, fabric-covered absorption and bass trapping		\$2,499	
Auralex Acoustics	ELITE Pro Systems EPS-160	Complete room system	Class A	Kit covers 160 square ft.	Class A, fabric-covered absorption, diffusion and bass trapping		\$4,495	
Auralex Acoustics	ProPanels B22	Absorptive panel	Class A	2'x2'x1"	Beveled edge, cloth-covered absorptive panels		\$999/12 panels	
Auralex Acoustics	ProPanels B24	Absorptive panel	Class A	2'x4'x1"	Beveled edge, cloth-covered absorptive panels		\$149 per panel	
Clear Sonic	Flector	Acrylic personal monitor disc	N/A	8" and 12"	Reflects, diffuses sound associated with brass instruments; reduces potential for feedback		\$12/\$15	
Clear Sonic	Sorber	Absorbing panels	Class A	22"x24"x1.5"; 48"x44"x1.5"; 48"x66"x1.5"	Portable; free standing; use with ClearSonic Panels and lid to create portable isobooth; 2 colors		\$30/\$120/\$180	
Clear Sonic	Sorber Lid	Absorbing lid for use w/Clear Sonic panels	Class A	6' Wx66"	Portable; reduces sound that normally escapes upward; 2 colors: dark gray, light gray		\$270	
Clear Sonic	Clear Sonic Panels	Acrylic drum shield	N/A	2', 4', 5.5' H; up to 14' W; 0.25	Portable, durable; free standing; full-length transparent hinge; use with SORBER and Lid to create isobooth		\$320 and up	
Hill Acoustic Design	Insta-Trap	Bass absorber	UL/ulc-listed 25 flamespread	12", 24" models	Corner-mounted bass absorbers that can be digitally printed with any image; ship flat		\$499 (12"); \$799 (24")	
HSF Acoustics	Studio Pack - Songwriter	Acoustic treatment room kit	UL94-HF1/MVSS307	Partially treats 9'x12' room	Includes 2 BassWave bass traps, 24 WedgeSonic tiles, and mounting adhesive		\$110	
HSF Acoustics	Studio Pack - Control Room	Acoustic treatment room kit	UL94-HF1/MVSS306	Treats a 9'x12' room	Includes 4 BassWave bass traps, 42 WedgeSonic tiles, and mounting adhesive		\$200	
HSF Acoustics	Studio Pack - Engineer	Acoustic treatment room kit	UL94-HF1/MVSS302	Treats 10'x14' room	Includes 4 BassWave bass traps, 60 WedgeSonic tiles, 12 WaveFuser tiles, and mounting adhesive		\$295	
HSF Acoustics	Studio Pack - Producer	Acoustic treatment room kit	UL94-HF1/MVSS303	Treats 10'x14' room	Includes 8 BassWave bass traps, 68 WedgeSonic tiles, and mounting adhesive		\$370	
HSF Acoustics	WedgeSonic	Absorption tiles	UL94-HF1/MVSS304	2x12x12	Each pack includes 44 tiles (44 square feet)		\$100	
HSF Acoustics	WaveFuser	Absorption/diffusion tile	UL94-HF1/MVSS305	3x12x12	Each pack includes 32 tiles (32 square feet)		\$100	
HSF Acoustics	AcoustiKick	Kick drum resonance controller	UL94-HF1/MVSS308	2.75x16x47	Provides tight kick drum sound for live performances and/or recording		\$40	
HSF Acoustics	BassWave	Acoustic absorption bass trap	UL94-HF1/MVSS309	12x12x24	Includes 4 bass traps		\$100	
illbruck/SONEX	FABRITEC	Fabric-wrapped acoustical wall panels	Class I/Class A	24x48x1, 1.5" thick	Hundreds of fabrics to match any décor; box contains 4 sheets or 32 sq. ft.; install with illbruck adhesive		\$264/\$312 per box	
illbruck/SONEX	FABRITEC	Fabric-wrapped acoustical panels	Class I/Class A	24x24x1, 1.5" thick	Hundreds of fabrics to match any décor; box contains 4 sheets or 64 sq. ft.; install with illbruck adhesive		\$140/\$160 per box	

# SONIC TREATMENT

MANUFACTURER	MODEL	TYPE	FIRE RATING	DIMENSIONS	SPECIAL FEATURES	PRICE
illbruck/SONEX	SONEXjuniors	Acoustical and sound absorptive foam	Class1/Class A	24x24x2" thick	For very small installations; each box contains 16 sq. ft.; available in natural wilttec (white)	\$80/box
illbruck/SONEX	SONEXjuniors	Painted wilttec acoustical panels	Class 1/Class A	24x24x2" thick	For very small installations; each box contains 16 sq. ft.; available painted 5 colors	\$80/box
illbruck/SONEX	SONEXjuniors colortec	Dyed wilttec acoustical foam	Class 1/Class A	24x24x2" thick	Specially-dyed foam with charcoal color thru entire panel; box has 4 sheets/box; for small applications	\$67/box
illbruck/SONEX	SONEXone Panels	Natural wilttec acoustical panels	Class1/Class A	24x48x2.3" thick	Soft convoluted surface pattern with beveled edge; NRC of .85 or 1.05; box has 8 sheets (2") or 4 sheets (3")	\$299/\$226 per box
illbruck/SONEX	SONEXpyramid 2	Wilttec acoustical panels	Class1/Class A	24x24x2" thick	Available in natural (white) or painted 5 color options; 14 sheets/box	\$260/\$325 per box
illbruck/SONEX	SONEXclassic	Natural wilttec acoustical panels	Class 1/Class A	24x48x2" thick	SONEX pattern; box has 8 sheets covering 64 square ft.; natural color is white; NRC of 0.80	\$216/\$233 per box
illbruck/SONEX	SONEX Corner Trap	Corner or bass trap	N/A	12x12x24 H	Made with charcoal polyurethane foam; 2 pcs/box	\$62/box
illbruck/SONEX	PROSPEC Barrier	Non-reinforced vinyl-loaded barrier	N/A	54x20", 30", 60" length	This 1/8" thick barrier has an STC of 26 and is suitable for staggered stud wall construction	\$175/\$120/\$335
illbruck/SONEX	SONEXone Panels	Painted wilttec acoustical panels	Class1/Class A	24x48x2", 3" thick	Painted convoluted surface; 5 color options; NRC of .85 or 1.05; box has 8 sheets (2") or 4 sheets (3")	\$374/\$282 per box
illbruck/SONEX	SONEXone Panels	Hypalon-coated wilttec acoustical panels	Class1/Class A	24x48x2", 3" thick	Hypalon-coated convoluted surface; 4 color options; NRC of .95 or 1.1; box has 8 sheets (2") or 4 sheets (3")	\$374/\$282 per box
illbruck/SONEX	SONEXclassic Panels	Painted wilttec acoustical panels	Class1/Class A	24x48x2" thick	SONEX pattern with surface paint option in 5 colors; box has 8 sheets or 64 sq. ft.; NRC of 0.80	\$266/box
illbruck/SONEX	SONEXclassic colortec	Dyed acoustical wall panels	Class 1/Class A	24x48x2" thick	SONEX pattern in wilttec foam specially-dyed charcoal; color through entire thickness; 8 sheets/box; NRC 0.75	\$251/box
illbruck/SONEX	SONEXpyramids 3	Wilttec acoustical panels	Class1/Class A	24x24x3" thick	Seamless install; available in natural (white) or painted 5 color options; 10 sheets/box	\$232/\$290 per box
illbruck/SONEX	SONEXpyramids 4	Wilttec acoustical foam	Class1/Class A	24x24x4" thick	Seamless install; available in natural (white) or painted 5 color options; 8 sheets/box	\$234/\$293 per box
Netwell Noise Control	Pyramids	Acoustic foam	Class 1/2	2"x2"x3"	Absorbs 90% of reflected sound	\$2-\$4/sq ft
Noren	AcoustiLock	Noise reduction cabinets	Class I	PC, 14, 24 space racks	DbI-pane glass; heavy duty casters; temp meter	\$1,500-\$3,800
RealTraps	MicroTraps	Acoustic panel	Class A	24x48x1	Acoustic panels that mount like a picture, with no permanent wall damage	\$120
RealTraps	MiniTraps	Bass trap/acoustic panel	Class A	24x48x3	Suitable as bass traps; absorb less at high frequencies	\$180
RPG Diffusor Systems	Room Optimizer	Software tool	N/A	N/A	Optimizes speaker and listener location in rectangular rooms for modal and SBIR correction	\$100
RPG Diffusor Systems	Room Sizer	Software tool	N/A	N/A	Optimizes room dimensions for rectangular rooms	\$100
RPG Diffusor Systems	Flatfusor	Combination tool	Class A	23.625x23.625x1	Omnidirectional high frequency diffusion/mid frequency absorption	\$139/box of 2
RPG Diffusor Systems	Hemifusor	Spatial tool	N/A	23.625x23.625x4	Patented 2-dimensional quadratic residue reflection phase grating; broadband omnidirectional diffusion; white	\$200/box of 2
RPG Diffusor Systems	Skyline LP	Spatial tool	N/A	23.625x23.625x4	Patented primitive root reflection phase grating; broadband omnidirectional diffusion; white	\$200/box of 2
RPG Diffusor Systems	Skyline	Spatial tool	N/A	23.375x23.375x8	Patented primitive root reflection phase grating; omnidirectional diffusion; 400-4,000 Hz+	\$298/box of 2
RPG Diffusor Systems	QRDPA	Spatial tool	N/A	47.25x23.625	1-dimensional quadratic residue diffusor; arrayable for increased performance	\$250
RPG Diffusor Systems	ProCorner Polyflex	Bass management tool	Class B	48x12	Optimized corner profile; integration w/ ProFoam; NRC=1.0; gray or purple	\$294/box of 4
RPG Diffusor Systems	ProCorner Melaflex	Imaging tool	Class A	48x12	Optimized corner profile; integration w/ ProFoam; NRC=1.0; white or white fleck	\$430/box of 4
RPG Diffusor Systems	ProFoam Polyflex	Imaging tool	Class B	48x24x2/24x24x2/12x12x2	Nestable to any depth; Variable Depth Air Cavity (VDAC); gray or purple	\$282/\$148/\$41/box of 12
RPG Diffusor Systems	ProFoam Melaflex	Imaging tool	Class A	48x24x2/24x24x2/12x12x2	Nestable to any depth; Variable Depth Air Cavity (VDAC); white	\$461/\$242/\$67
RPG Diffusor Systems	Studio in a Box Silver Polyflex	Total room solution	Class B	14'x10'x8" room (customizable)	Comprehensive room treatment, incl. reflection, reverb control, diffusion, bass mgmt; Polyflex	\$590
RPG Diffusor Systems	Studio In A Box Gold Polyflex	Total room solution	Class B	14'x10'x8" (customizable)	Comprehensive room treatment, incl. reflection, reverb control, broadband diffusion, bass mgmt; Polyflex	\$950
RPG Diffusor Systems	Studio In A Box Silver Melaflex	Total room solution	Class A	14'x10'x8" (customizable)	Comprehensive room treatment, incl. reflection, reverb control, diffusion, bass mgmt; white (Melaflex)	\$1,029
RPG Diffusor Systems	Studio In A Box Gold Melaflex	Total room solution	Class A	14'x10'x8" (customizable)	Comprehensive room treatment, incl. reflection, reverb control, broadband diffusion, bass mgmt; white	\$1,389
RPG Diffusor Systems	Abflector	Imaging tool	Class A	47.25x19x6	High and mid w/ extended low-mid frequency absorption	\$625/box of 4
RPG Diffusor Systems	Modex Corner	Bass management tool	Class A	23.625x23.625	Corner wall mount or freestanding; controls room modes; stackable; light	\$677/box of 2
Silent Source	SoundSucker	Corner bass traps	Class A/CC	12"x24"; 12"x48"	Available in charcoal, beige, brown, blue, hunter green, burgundy; 8 and 4 units/box	\$200
Silent Source	Whisper Wedge	Absorptive foam	Class A/C	24"x48"x2", 3", 4", 6" thick	Many colors to choose from; 2-12 sheets/box (16-96 sq ft); class 1 available	\$160-\$250/box
Steven Klein Sound Control Room	Saturn Diffusor	Polycylindrical diffusor	Class A	24.75"x23.75"x5"	Reradiates sound energy through an angle of 120 degrees	\$50

MANUFACTURER	MODEL	TYPE	FIRE RATING	DIMENSIONS	OPTIONS	SPECIAL FEATURES	PRICE	PRICE
Steven Klein Sound Control Room	SCR 2" Acoustic Foam	2" convoluted 10/box	Class B	2'x4'x2"	2 lb.-density acoustic foam		\$190/box of 10	
Steven Klein Sound Control Room	SCR 3" Acoustic Foam	3" convoluted	Class B	2'x4'x3"	2 lb.-density SCR acoustic foam		\$175/box of 6	
Steven Klein Sound Control Room	SCR 4" Acoustic Foam	4" convoluted foam 5/box	Class B	2'x4'x4"	2 lb.-density SCR acoustic foam		\$190/box of 5	
Steven Klein Sound Control Room	Rubber Decoupler	Medium density floor	Class A	N/A	Designed to grip any 2x lumber; helps user achieve a floated floor system		\$1.75 each	
Steven Klein Sound Control Room	TF Block Vinyl Barrier Sound Proofing Material	1lb/ sq. ft. mass loaded vinyl	Class A	4.5'x30' rolls	Limp mass vinyl used in wall systems for sound attenuation; low frequency rejection properties		\$195/roll	
Soundsuckers	Acoustic Foam	Foam panels	Class 2	2'x4' to 4'x8'	Custom sizes, densities, thickness available; various colors; polyurethane and melamine foam		\$38 and up	
Soundsuckers	Standard Barrier Panels	Soundproofing panels	Fire retardant	2'x4', 4'x4', 4'x8'	High-density panel with 2" acoustic foam fabric and foam color choices		\$55/110/220	
Soundsuckers	Premium Barrier Panels	Soundproofing panels	Fire retardant	2'x4', 4'x4', 4'x8'	High-density panel with 2" acoustic foam fabric and foam color choices		\$69/\$138/\$276	
Systems Development Group	Cutting Wedge 2000	Absorptive foam	Upon request	Various	Sawtooth pattern across face and back for easy stacking		\$3/sq ft and up	
Systems Development Group	Cutting Wedge Classic	Absorptive foam	Fire/smoke analysis available	Various	Sawtooth pattern for greatest absorption per sq ft tear-resistant; shape memory		\$3/sq ft and up	
Systems Development Group	Model E	Diffusor	Available	15" x15" x9"	Small footprint; light weight; simple install		\$88	
Systems Development Group	Model C	Diffusor	Full Class A	24"x24"x4.5"	Install on wall or drop into 24"x24" opening of a T-Bar grid; available with center cutout		\$97-166	
Systems Development Group	Model F	Acoustic diffusor	Full Class A	2"x24"x1.75"	Specialized high-frequency diffusion on wall or ceiling		\$97-166	
Systems Development Group	Reflektors	Absorptive face/reflective panel	N/A	24"x48"x8"	Creates reflection-free listening space		\$166	
Systems Development Group	Sonora Panels	Absorptive fiberglass panel	Class A	Up to 48"x120"x2"	Molded fiberglass board non-resin chemically hardened edges; wrapped in Guilford fabrics		\$8-\$10/sq ft	
Systems Development Group	Bass Eraser	Broadband bass trap	Class A	24"x48"x10"	Mounts horizontally or vertically		\$360-\$450	
Taytrix	Absorptive Panels	Absorptive panels	Class 1	2'x2', 2'x4', 2'x6'	Fiberglass absorption panels trimmed w/decorator fabrics		\$129 and up	
Taytrix	Stack It Gobo System	Gobo	Class 1	15"x8"x48", 30"x8"x48"	Stackable, lightweight, modular, interlocking acoustical control panels		\$300-\$445	
Vibrant Technologies	DF-24	Diffusor panel	N/A	23.75x23.75x6.25	Available in white, black or custom finishes		\$79

## STUDIO FURNITURE

MANUFACTURER	PRODUCT	TYPE	DIMENSIONS (INCHES)	SPECIAL FEATURES	PRICE
Omnirax	S800	Synergy 800 mixing console housing	41.37x41.7x101.1	Adaptable console housing for most mixers; padded wrist rest; 12 space rack bay; requires additional kit	\$1,790-\$2,090
Omnirax	S1000	Synergy 1000 mixing console housing	41.37x41.7x121.5	Adaptable console housing for most mixers; padded wrist rest; 12 space rack bay; requires additional kit	\$2,210-\$2,510
Omnirax	Synergy Kits	Add-on kits for Synergy series console housings	Varies according to mixer	Mixer specific kits including additional rack bays, writing surfaces and filler panels for S800, 800 & 1000	\$120-400
Omnirax	S62480	Dedicated console housing for Roland VS-2480	41.12x41.7x83.5	Kit Included with 2 rack bays, filler panels and hinged wrist pad	\$1,810-\$2,100
Omnirax	S6C24	Dedicated console housing for Digidesign Control 24	40x42.7x87.5	Kit included with 2 rack bays	\$1,575-\$1,875
Omnirax	S6D8	Dedicated console housing for Mackie d8b	41.12x41.7x83.5	Complete: kit included with 2 rack bays	\$1,700-\$2,000
Omnirax	S6DM2000	Dedicated console housing for Yamaha DM2000	41.7x47.2x86.7	Complete: kit included with 24 rack spaces	\$2,060-\$2,360
Omnirax	S8R100	Dedicated console housing for Sony R-100	38.2x41.6x91.1	Complete: kit included with 2 rack bays	\$2,060-\$2,360
Omnirax	PSJR	ProStation Junior	42.50x29.50x60.40	Audio/video editing workstation	\$1,040-\$1,380
Omnirax	PRESTO	A/V and composing workstation	37.10x31.40x55.88	Audio/video composing workstation	\$530-\$730
Omnirax	S6DXB	Synergy 600 for Mackie DXB	37.30x38.82x89	Synergy 600 console for Mackie DXB; complete with 8 rack spaces and writing surface	\$1,720-\$2,020
Omnirax	S600XL	Synergy 600 XL console series	41.12x41.70x83.50	Synergy 600 on heavy-duty powder coated steel legs	\$2,140-\$2,440
Omnirax	S800XL	Synergy XL console series	41.37x41.70x101.10	Synergy 800 on heavy-duty powder coated steel legs	\$2,540-\$2,840
Omnirax	S1000 XL Series	Synergy 1000 XL	41.37x41.70x121.50	Synergy 1000 on heavy-duty powder coated steel legs	\$2,960-\$3,260
Omnirax	S6C24XL	S6C24 on steel legs	40x42.70x87.50	Kit included with 2 rack bays	\$2,320-\$2,620
Omnirax	S62480XL	S62480 on steel legs	41.12x41.70x83.50	Kit Included with 2 rack bays, filler panels and hinged wrist pad on steel legs	\$2,565-\$2,865
Omnirax	S6D8XL	S6D8 on steel legs	41.12x41.70x83.50	Complete: kit included with 2 rack bays on steel legs	\$2,450-\$2,750
Omnirax	S6DM2000XL	SDM2000 on steel legs	41.70x47.20x86.70	Complete: kit included with 24 rack spaces on steel legs	\$2,810-\$3,110
Omnirax	S6DXBXL	S6DXB on steel legs	37.30x38.82x89	Synergy 600 console for Mackie DXB; complete with 8 rack spaces and writing surface on steel legs	\$2,460-\$2,760
Per Madsen Design	RACKIT System 19 Base 19	Foundation for System 19 units	20.75x16x1.5	Provides a foundation for stacking System 19 units	\$40
Per Madsen Design	RACKIT System 19 Cassette 19	Media storage drawers (3 drawers)	15x20.75x16	Modular, stackable oak or birch drawer units hold DAT, 8 mm, and most other tape cassette formats	\$275-\$295
Per Madsen Design	RACKIT System 19 Cassette 19-10	Media storage cabinet (2 drawers)	20.75x16x10	Modular, stackable oak or birch drawer units store DAT 8mm, and most other cassette tape formats	\$225-\$245
Per Madsen Design	RACKIT System 19 CD 19 unit	Media storage drawers	15x20.75x16	Modular, stackable oak or birch drawer units hold CDs and other	\$245-\$265
Per Madsen Design	RACKIT System 19 Component Rack	Equipment rack with shelves	5, 7.5, 10, 15x20.75x16	Modular, stackable oak equipment racks available in 4 sizes	\$90/\$95/\$105/\$110
Per Madsen Design	RACKIT System 19 Component Rack with Rails	Equipment racks with mounting rails	10, 15, 30x20.75x16 EIA standard 5, 8, 16 unit sizes	Modular, stackable oak equipment racks available in 3 sizes	\$110/\$125/\$185
Per Madsen Design	RACKIT System 19 Disc Cabinet 19/glass door	Media storage cabinet glass door	15x20.75x16	Stores LPs, laser discs, books	\$185
Per Madsen Design	RACKIT System 19 Disc Cabinet 19	Media storage cabinet open front	15x20.75x16	Stores LPs, laser discs, books	\$135
Per Madsen Design	RACKIT System 19 DVD/VHS 19 unit	Media storage drawers	15x20.75x16	Modular, stackable oak or birch drawer units hold DVD, and VHS	\$245-\$265
Per Madsen Design	RACKIT System 19 Dolly 19	Dolly for all RACKIT System 19 units	4x20.75x16	4 twin-wheel casters; 300 pounds rolling load	\$55
Per Madsen Design	RACKIT System 19 Dolly 19 PC Tower	Dolly for RACKIT System 19 units	4x30x16	Holds RACKIT 19 units and PC tower on its own shelf	\$110
Per Madsen Design	RACKIT System 19 File 19-25	Storage drawers for hanging files (2 drawers)	25x20.75x16	Stores letter or legal hanging file folders	\$330-\$365
Per Madsen Design	RACKIT System 19 File 19-25	Storage drawers for hanging files (3 drawers)	25x20.75x16	Stores letter or legal hanging folders, cassettes, DATs and CDs	\$360-395
Per Madsen Design	RACKIT System 19 Tabletop 19	Tabletop for all System 19 units	20.75x16x0.75	Tabletop for System 19 units	\$40
Quik-Lok	A-50	Tripod studio boom stand	H: 53.5-91.5; Boom: 46.5-87	Tripod leg design with solid steel legs; holds mics; locking casters; 7' boom; mic cable clips	\$180
Quik-Lok	BS-300	Height adjustable near field	Shelf: 9 square; H: 31.5-48; base 17.7 each side	All-steel, arc-welded construction; cable management; triangle base with adj leveling floor spikes	\$180/pair

MANUFACTURER	PRODUCT	TYPE	DIMENSIONS (INCHES)	OPTIONS SPECIAL FEATURES	PRICE PRICE
Quik-Lok	BS-336	36" fixed height near field studio monitor stand	Shelf: 11 square; H 36; base 17.7	All-steel, arc-welded construction; cable management; triangle base with adj leveling floor spikes	\$150/pair
Quik-Lok	BS-342	42" fixed-height near field studio monitor stand	Shelf: 11 square; H 42; base 17.7	All-steel, arc-welded construction; cable management; triangle base with adj leveling floor spikes	\$160
Quik-Lok	Z-250	Triple-shelf computer workstation	33.6x29.8x22.3	Main shelf with pull-out and peripheral shelves; holds computer equip/access	\$320
Quik-Lok	RSW-503	Workstation with 14-space rack stand	65.85x28x23.66	Users can build a modular solution by integrating RS-400 / 500 series rack units; black w/ cherry laminate top	\$500
Quik-Lok	Z-555	Z-500 Series expandable music project station (55" w)	55-75.6x28.75x35.4	Expandable; shelves and crossbars; computer-welded steel frame	\$300
Quik-Lok	Z-260 BK/CY	Computer workstation	51.4x35.3x19.6	Dual level workstation with pull-out QWERTY keyboard shelf; black frame with laminate cherry wood tops	\$380
Quik-Lok	Z-260 TI/BK	Computer workstation	51.4x35.3x19.6	Dual level workstation with pull-out QWERTY keyboard shelf; titanium metal frame with laminate black wood tops	\$379
SoundAnchors	ADMID	Adjustable studio monitor stand	Custom	Adjustable platform heights; variable speaker tilt	\$425
SoundAnchors	Digital Audio Workstation	Workstation for digital-based recording, mixing, post-production	Custom	Adjustable platform heights; built-in cable management; can be configured for multiple monitors	\$450 and up
SoundAnchors	Mixer Table	Custom mixing table	Custom	Adjustable platform heights; can be configured for multiple monitors	\$750 and up
SoundAnchors	PROJ	Studio monitor stand	Custom	Spikes at floor; sorbathane pads	\$235
SoundAnchors	PROVID	Adjustable studio video monitor stand	Custom	Adjustable platform heights; spikes at floor; variable tilt platform	\$275 and up
SoundAnchors	STUDADJ	Adjustable studio monitor stand	Custom	Adjustable platform heights; prefilled and damped; variable speaker tilt	\$335
SoundAnchors	STUDADJR	Adjustable studio monitor stand	Custom	Adjustable platform heights; prefilled and damped; variable speaker tilt; heavy duty platforms	\$375
Soundsuckers	Sound Isolation Booth	Isolation booth	Custom	Compression door sealing; cam door closure; optional low-profile ventilation (\$355); easy assembly	\$1,499 and up
Standtastic	100KS Single Tier Keyboard Stand Frame	Keyboard stand	48 H; variable W; folds to 6x48	Fully adjustable	\$149
Standtastic	100TK Tier kits	Accessory for stands and wall mount kits	12-24 D; 3 angle adjustments	Fully adjustable	\$68/pair
Standtastic	102KS 2 Tier Keyboard Stand 60" Frame	2-tier keyboard stand	60 H; adjustable W; holds 2 keyboards	Fully adjustable; folds to compact size	\$209
Standtastic	103KS 3 Tier Keyboard Stand 60" Frame	3-tier keyboard stand	60 H frame; adjustable W	Fully adjustable	\$259
Standtastic	122KS Double Tier Keyboard Stand Frame	For live or studio performance	48 H; variable W; folds to 6x48		\$199
Standtastic	P3 Wood Adjustable Stand	Home or studio	36-54 W	Adjustable width	\$200
Standtastic	UB-1 U Bolts	Wall-mount kit accessory	N/A	Adjusts 100TK's to 90° when used with VF-1s on the wall	\$10
Standtastic	VF-1 Vertical Frames	Wall-mount kit accessory	36 H	Attaches to wall so 100TKs can be attached for wall mounting keyboards	\$53/pair
Taytrix	Counter tops	Counter tops	Varies	Straight; angle wing; corner units	\$35/sq ft. and up
Taytrix	Rack Units	12, 14 and 16 rackspace units	29.5-32x16.5-23	Available in square or unique front-angle design; maple or cherry furniture-grade plywood	\$117-\$300
Taytrix	Workstations	Workstation	6.5' and 5' mini ovals	Adjustable meter bridge shelf; 180° swivel speaker wings; rack packages available	\$2,875 and up
Ultimate Support	HS26BP	Studio organizer stand	27.5-32H; surface: 16x35.5	Large work surface; center tier and side arms support gear; many accessories available	\$250
Ultimate Support	MS36	Studio monitor stand	H: 36, top plate 9x9; triangle base diameter: 14	Cable management; triangle cast zinc base; available in black and pewter	\$210/pair
Ultimate Support	MS45	Studio monitor stand	H: 45, top plate 9x9; triangle base diameter: 14	Cable management; triangle cast zinc base; available in black and pewter	\$230/pair
Vocalbooth.com	Small Amp Box	Amplifier enclosure	30x36x26	Designed for amplifiers up to 24"x28"x13"	\$695
Vocalbooth.com	Medium Amp Box	Amplifier enclosure	36x36x30	Designed for amps up to 30"x30"x17"	\$765
Vocalbooth.com	Med-Lg Amp Box	Amplifier enclosure	36x36x36	Designed for amps up to 30"x30"x23"	\$835
Vocalbooth.com	Large Amp Box	Amplifier enclosure	48x48x48	Designed for amps up to 40"x40"x32"	\$895
Wenger	Workstation	Computer/synthesizer workstation	48x37x32	Cockpit-like design; steel and wood frame; cord-management system	\$1,143

# SYNCHRONIZERS

## SYNCHRONIZERS

MANUFACTURER	PRODUCT	SN/PT	JAM SYNC	FREEWHEELING	MTC/MMC	SPECIAL FEATURES	PRICE
Aardvark	AardSync II	No	No	No	N/N	Ultra low-jitter master clock, 96 kHz, 4 WC, 2x WC, 256; AES/EBU; video blackburst lock	\$1,795
Aardvark	Sync DA-Word Clock Distribution Amp	No	No	No	N/N	Generates word clock from AES/EBU; 6 word clock outputs; supports Digidesign 256 superclock	\$845
Apogee Electronics	Big Ben	No	No	No	N/N	Apogee's C777 clock technology; format conversion; X-FireWire expansion card; X-Video expansion card; termination sensing	\$1,495
Brainstorm	SA-1	Yes	No	No	N/N	Displays time code format, position; prints error list	\$949
Brainstorm	SR-1	Yes	Yes	Yes	Y/Y	Recovers, reshapes time code; level control	\$239
Brainstorm	SR 3	Yes	Yes	Yes	N/N	Repairs and generates time code, video reference, or internal	\$699
Brainstorm	SR-15 Distributalyzer	Yes	Yes	Yes	N/N	SMPTE analyzer, distributor, reshapener, error printer; video reference	\$1,599
Brainstorm	SR-26	Yes	Yes	Yes	Y/Y	Distributes 2 inputs to 6 outputs; refresh, reshape, amplify time code	\$549
Brainstorm	SR-8000	Yes	Yes	Yes	N/Y	Remote control for up to 8 machines; MIDI, 9-pin 100 locators; shuttle; track arming	\$1,999
Digidesign	SYNC I/O	Yes	Yes	Yes	Chases LTC directly	Low-jitter clock design; word clock I/O up to 192 kHz accurate; supports industry-standard pull-up/pull-down rates for film/video; 9-pin dual device control	\$2,095
JL Cooper	Datasync 2	Yes	Yes	Yes	Y/Y	ADAT sync to MIDI time code or MIDI clock	\$300
JL Cooper	PPS-2	Yes	Yes	Yes	Y/N	Allows MIDI clock sequencers like Triton Kurzweil to sync to recorders/tape HD; software, firmware options [available]	\$170
Lucid	GENx6	No	No	No	N/N	Sample clock source that also functions as a 1x6 clock distribution amplifier	\$499
Lucid	GENx6-96	No	No	No	N/N	Sample clock source that also functions as a 1x6 clock distribution amplifier	\$699
Lucid	LTC; VITC; MTC; 24, 25, 29.97, 29.97d, 30, 30d	Yes	Yes	No	Y/Y	Converts Song Pointer sync (Smart FSK) to MIDI clock	\$135
MOTU	Digital Timepiece	Yes	Yes	Yes	Y/Y	Universal synchronizer; MTC; Sony 9-pin; video, ADAT, DA-88, S/PDIF sync; 0.1% pull-up/down sample rates (44.1/48 kHz)	\$995
Rosendahl	BIF	Yes	Yes	Yes	Y/Y	Positional LTC and MTC full/MMC locate in jog/shuttle; LTC and MTC gen from bi-phase signals	\$799
Rosendahl	LIF	Yes	Yes	Yes	Y/Y	Generates LTC, MTC from LANC-embedded code; positional LTC and MTC full/MMC locate in jog/shuttle	\$749
Rosendahl	MIF3	Yes	Yes	Yes	Y/N	Reclocks LTC for stable output from MTC input; LTC stationary frame output for MTC full frame	\$549
Rosendahl	Nanoclocks	No	No	No	N/N	Master word clock generator/distributor w/12 word clock outputs, 2 transformer-isolated inputs; 44.1-192 kHz and super clock	\$1,299
Rosendahl	Nanosync V3	Yes	No	No	N/N	Low-jitter master clock generator; S/PDIF, AES, (6) word/super clock outputs; (4) video outputs; video sync generator	\$1,599
Rosendahl	WIF2	Yes	Yes	Yes	Y/N	Word clock/superclock out from LTC or video input; film/video pull up/down; MTC out for VITC jog/shuttle	\$799
Steinberg	Steinberg Time Lock Pro	Yes	Yes	Yes	Y/Y	Word clock or Digidesign superclock lockup less than 0.4 seconds	\$999

From page 131, *Proper Monitor Placement*

from walls, which (along with the floor and ceiling) have a tendency to magnify bass frequencies. Next, place your speakers at equal height from the floor in your approximated positions. If possible, the speaker height should correspond to your sitting height (or at least be pointed to that height).

Angle the speakers at approximately 60 degrees toward the median plane. Finally, sit down again, use the tape measure, and precisely position the speakers to achieve the equilateral triangle setup. Now listen to some music and find out if you hear

the phantom image. Try moving back and forth along the median plane and moving your head side-to-side. Can you hear the difference? If you think you've placed your speakers correctly but still don't hear the phantom image, first make sure the balance control on your output device is centered.

If the sound is "hollow" or strange when you're in the listening position, your speakers may be out of phase. Fortunately, this is an easy fix. If you're running speakers through an amplifier with positive (+) and negative (-) connections, make sure your speaker wire is attached correctly;

that is, negative connector on the amp to negative connector on the speaker, and positive to positive. If this doesn't fix the problem, your speaker cables could be wired out of phase, so try different wires. Correctly connecting your speakers with properly wired cables should eliminate speaker phase problems.

# CAKEWALK OFFERS PERFECT SOLUTIONS FOR YOUR PC STUDIO

## **Project5** VERSION 1.5 Soft Synth Workstation

A FLEXIBLE, EXPANDABLE SOFT SYNTH ENVIRONMENT THAT WILL ENGAGE YOUR CREATIVITY, AND INSPIRE NEW MUSICAL IDEAS.

- Combines the best of pattern-based and live-input sequencing, with powerful ACID™-compatible looping tools.
- Comes loaded with inspiring synths and samplers, creative effects, and professional sample content.
- Supports industry-standard effects, synths, and samples so you can create your own sound.
- Intuitive real-time performance features make Project5 perfect for both live and studio work.

MSRP \$429

## **SONAR 3 Producer Edition** Digital Multitrack Recording System

A COMPLETE SOFTWARE-BASED PRODUCTION ENVIRONMENT AND SO MUCH MORE.

- Features the creative tools you need to realize, excite, and act upon your musical inspirations.
- Offers unmatched ease-of-use, efficiency, customization, and flexibility to speed your ideas to completion.
- Delivers master quality productions with the precision and power of a world class studio environment.
- Support for professional standards (ACID™-loop, ASIO, Control Surfaces, DXi, ReWire, VST, WDM, more) ensures compatibility with the tools you need.
- OMFI and Broadcast Wav support for collaboration with other studios.

MSRP \$719

## **Home Studio** Affordable Multitrack Recording Studio

THERE IS NO BETTER WINDOWS SOFTWARE AVAILABLE FOR MUSICIANS TAKING THE FIRST STEP INTO THE WORLD OF DIGITAL RECORDING.

- Record unlimited audio and MIDI tracks.
- Simultaneously record your whole band at up to 24-Bit/96 kHz quality with support for multi-channel audio cards.
- Mix with real-time effects (DirectX, VST, MFX).
- Play and perform with soft synths (DXi, VSTi, ReWire).
- Create backing tracks fast with ACID™-loop support.
- Print notation with chord charts, tablature, lyrics and more.

MSRP \$129

## **Guitar Tracks Pro** VERSION 3 32 Track Recording Studio

DESIGNED SPECIFICALLY FOR GUITAR PLAYERS AND SINGER-SONGWRITERS, GUITAR TRACKS PRO REPRESENTS THE BEST OF BOTH WORLDS – THE EASE OF TAPE AND THE POWER OF YOUR PC.

- Record and play back up to 32 audio tracks using a familiar interface.
- Simultaneously record your whole band at up to 24-Bit/96 kHz quality with support for multi-channel audio cards.
- Create backing tracks fast with full support for ACID™-format loops.
- All the effects you'll need with Amplitude LE guitar amp plug-in and the GT:FX multi-effects suite.
- Add more effects with support for VST and DirectX.
- Use any Windows-compatible audio hardware via ASIO and WDM.

MSRP \$209

# MX4

MULTI SYNTH PLUG-IN

MAC OS X • AU • MAS • RTAS

Meet the new instrument plug-in powerhouse for your studio. Inspired by legendary subtractive synthesizers, MX4 combines several core synthesis techniques in a unified, hybrid synth engine that delivers fresh & vintage sounds alike. As you explore its many banks and hundreds of presets, you'll soon rely on MX4 as your "go to" instrument. Fat basses, nasty leads, analog pads, vintage electronica — it's all at your fingertips and conveniently saved with your host application projects for instant recall. Tweaking sounds is fast and easy with clearly presented controls in one

window, and with a depth true synth programmers will appreciate. MX4's flexible programming and advanced modulation architecture provide the intimacy of a vintage synth, the flexibility of a modular synth, and the innovation of a virtual synth.

## FEATURE HIGHLIGHTS

- Unique hybrid 32-bit synth engine.
- Unlimited voices, polyphony and instantiations as allowed by host CPU.
- Sample-accurate playback with host apps that support this OS X feature.
- Integrated modulatable chorus and delay effects saved as part of the patch.

- 3 wavetable oscillators
- 2 resonant multimode filters
- 6 variable waveshape LFOs
- 4 ADSHR envelopes
- Dozens of wavetables, or roll your own
- Audio input — process any audio signal with MX4's flexible synth engine.
- Modulatable waveform symmetry lets you create dynamic harmonic changes
- Hard oscillator sync effects, just like the classic Sequential Circuits Prophet 5 and other classic polysynths.
- Variable Filter Topology™ provides 11 different filter & distortion configurations
- Extremely flexible and easy to use modulation architecture.
