# ANTIQUE RADIO CLASSIFIED

## Publishing Details

Antique Radio Classified (USPS 735-090) is published monthly, 12 times yearly, at a subscription rate of \$15.00 per year by G.B.S. Enterprises, 9511 Sunrise Blvd., #J-23, Cleveland, Ohio 44133, (216) 582-3094.

Second-class postage paid at Cleveland, OH.

Publisher and Editor - Gary B. Schneider.

POSTMASTER: Send address changes to address above. Antique Radio Classified - Copyright 1985.

## Purpose

Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby thru the buying, selling, and trading of radios and related items. In addition, there will be coverage of upcoming radio conventions, meets, flea markets, etc. Other items of interest to collectors will be included in issues as material or suggestions are received.

## Display Ad Rates

Antique Radio Classified accepts display advertising for companies that provide a product or service to the radio collecting hobby. As artwork is reduced 35% when printed, original should be 1.54 times the desired finished size and must be camera ready artwork. Original size areas are available as follows:

|           |                     |         |
|-----------|---------------------|---------|
| Full Page | 10-1/2" H x 7-1/2 W | \$30.00 |
| Half Page | 5-1/4" H x 7-1/2 W  | 15.00   |
| 1/4 Page  | 5-1/4" H x 3-3/4 W  | 7.50    |
| 1/8 Page  | 2-5/8" H x 3-3/4 W  | 3.75    |

Business Card - same as 1/8 page

Above rates based on circulation of 1,000 subscriptions.

Full page ads may be vertical or horizontal format.

Multiple insertions for 3 months qualify for a 10% discount.

All artwork must be received by the 1st of the month to be included in the following issue, which is mailed on the 1st day of the calendar month.

## Classified Ads

Each subscriber is entitled to one 20 word classified ad free of charge per issue. Additional words over the limit are 10¢ per word. Multiple insertions of same ad are discouraged. This is to allow for a varied ad content in each issue. Multiple insertion ads for more than 2 issues must be run as a display ad. All ads must be printed neatly and be received by the 10th of the month before next issue. All issues mailed on the first of the month.

## Payment

All ads must be paid for in advance. Make checks payable to Antique Radio Classified.

## Subscription Rate

Subscriptions are available on a yearly basis, \$15.00 per year. Sample issues: \$1.50.

## Submission of Material

Antique Radio Classified welcomes and solicits any information that pertains to the radio collecting hobby. This may include material such as upcoming radio events, meetings, radio books and publication reviews, new radio clubs and organizations, radio auctions and price reports, sources of old radio material and restoration supplies, and any other material that would be of interest to the hobby. All material submitted should be typewritten and verified for accuracy.

## Change of Address

Notification of change of address should be made well in advance to receive uninterrupted copies of Antique Radio Classified. Do not depend on the Post Office to let us know.

## Fine Print

The publisher is not responsible for any buying and selling transactions incurred by readers thru the content of this publication.

Antique Radio Classified subscription and ad rates subject to change, as well as frequency of publication, content, and size.

# COLLECTORS CORNER

Last year I attended the BVWS/AWA meet at Harpendon, England, about thirty miles from London. I had not planned on going, but after receiving an invitation from a collector I had been corresponding with, I couldn't pass up the opportunity. It was a very enjoyable affair and most interesting. The collecting scene in England is quite a bit different than in the U.S.A. There seems to be a great interest in later sets, even those of the 1950's and 60's. The collectors were much more gentlemanly and not so grabby as is becoming so commonplace anymore. Battery radios using more than three tubes and AC sets with more than five are quite scarce due to steep license fees based on the number of tubes used, higher assembly cost, and a poorer buying public. Crystal sets were rather common also, though not cheap.

I was very lucky to find a number of sets that I had only seen in pictures. One of the nicest is the Marconiphone 42, Moving Coil Transportable III, manufactured by the Marconi Wireless Co. Ltd. of Dagenham, Essex, the pioneer radio manufacturing firm of Great Britain. The model 42 was introduced in September of 1931 and retailed for 20 Pounds (approx. \$100). Classified a three valve (tube) set for licensing purposes, it actually used four tubes, the rectifier not being taxed. Two wavelengths are received, 540-240 meters (540-1500 KHz) and 2000-1000 meters (150-300 KHz) using a TRF circuit and operating from AC 40-60 cycles, 95-260 volts. Twelve arrangements of two plugs, in seven sockets, allow any voltage within this range to be selected. Also available was a DC mains version. The set weighs 33 pounds, quite a hefty four tuber! It is 17" high, 12" deep, and 20" wide.

The model 42 has four controls, the left hand is tuning, the center is selectivity, the right hand is a novel combination on/off, radio/phono, and wave change switch. Whatever position it is in shows in the window beneath the tuning dial opening. The volume control is on the right side of the cabinet. It is a dual variable resistor, one controlling the radio volume and the other phonograph volume.

MARCONIPHONE 42

Antenna input via a variable capacitor serving as an antenna trimmer feeds into the tetrode RF tube, Marconi metalized MS4B, which is coupled to a triode detector MH4B. The transformer coupled pentode output tube, MPT4, drives a permanent magnet moving coil speaker, quite unusual for 1931. DC is supplied by a full-wave rectifier, Marconi U10, making use of resistance-capacity filtering since no choke or field coil is used.

Jacks are provided for low impedance external speakers and a built-in antenna for local reception can be used. It is a .0001 Mfd. capacitor connected on one side to the AC line and to the antenna terminal on the other when in use. Most English sets of this vintage include this feature.

The Marconiphone 42 performs very well considering its limits. Sensitivity is adequate and selectivity is helped somewhat by the antenna trimmer. The set is extremely well built and is a very good looking radio. (Next month Sears' first Colonial built mantle radio, the Silverstone 1152, will be featured. - Frank Heathcote)

---

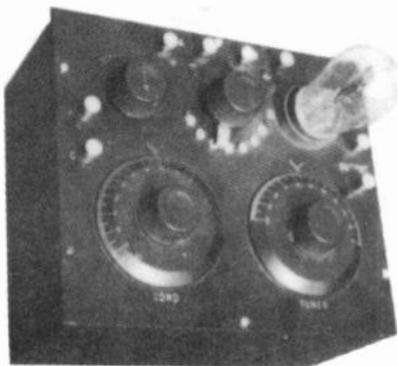

The Collectors Corner will appear as a regular feature of *Antique Radio Classified*. It is an attempt to build knowledge and interest of radio collectors primarily in AC home receivers of the late 1920's to the 1940's, with emphasis on the lesser known and more unusual styles and brands. Helpful restoration hints will be given where possible. Any questions, comments, or suggestions on this column, the radios featured, or on any other radios may be sent to Frank Heathcote, 1235 N. 3rd St., Logansport, Indiana 46947. Please include a self-addressed stamped envelope for reply.

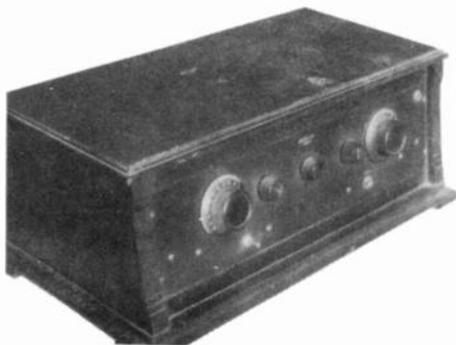

# CROSLEY REVIEW

CONTRIBUTED BY: DAVID CROCKER, 6 OLD FARM RD., DUXBURY, MA 02332

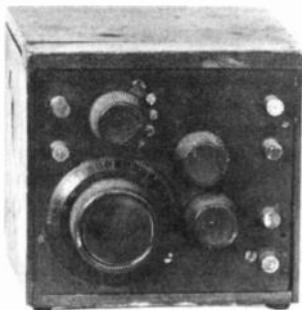

*Of all the radio manufacturers, one of the most popular with collectors is the Crosley Radio Corporation. Due to this wide-spread interest, Antique Radio Classified in cooperation with Dave Crocker, a Crosley specialist, will present a series of articles showing the many models of Crosleys manufactured. This will help assist the collector in identifying the many types of Crosleys made, as well as increasing ones' knowledge on the subject. Any comments or questions concerning this column should be directed to Dave with a S.A.S.E. for reply. See address above.*

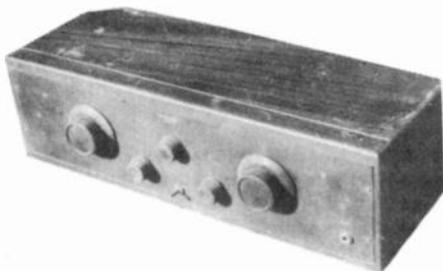

**PRECISION** - A set of mysterious background was this one-tube set of "Tri-City" design. It was sold under the Precision name and was the only Crosley set to ever use the wooden vario-coupler he manufactured. The tube socket was of "Ace" design. The rest of the parts were Crosley. This set might have been produced so Crosley could use up old parts.

**NEWPORT TYPE 1112** - The more expensive Trirdyns were housed in more elaborate cabinets like this Type 1112 Trirdyn Special "Newport" that sold for just over \$100. The later Trirdyns panels were slightly redesigned to have the three center knobs align (both rheostats were raised) and the on/off switch moved to the left. Other Trirdyn models had names like "Standard", "Regular", "Biltmore" and "Super".

**MODEL SR-2** - The smallest Crosley regenerative receiver in a wood cabinet was this "SR-2" one-tube set. It was sold thru Sears and Roebuck exclusively and in actuality was the Model 50 squeezed so compactly that the panel of the Model 50 had to be rearranged. It was offered to the public for \$23.25 and aimed at the youth market.

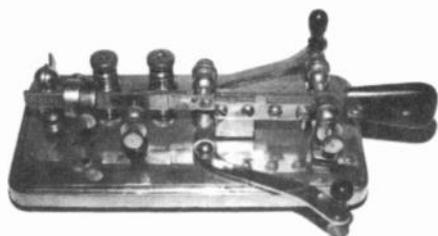

**MODEL 3R3** - The Crosley Model 3R3 or "Trirdyn" (Try-er-dine) was featured in many versions. All were 3-tube regenerative receivers of the reflex design and boasted "Three tubes doing the work of five." It was the first set to depart from the "book" tuner and instead used the more selective variable plate condenser of which two were used. This is the Type 1123 and is the earliest version - 1924. It sold for \$50.

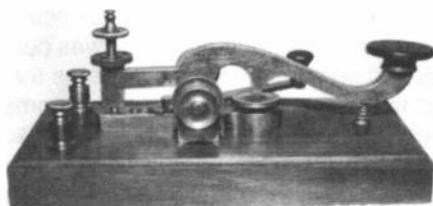

# TELEGRAPH KEY REVIEW

CONTRIBUTED BY: GIL SCHLEHMAN, 335 INDIANAPOLIS, DOWNERS GROVE, IL 60515

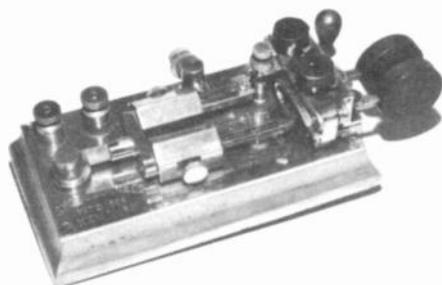

During the course of collecting and searching for radios, many collectors will have the opportunity to acquire telegraph keys and related items. In order to acquaint you to this collecting speciality and broaden your knowledge in this field, the accompanying photos of the Gil Schlehman, K9WDY, collection are presented to show the many types and variations you may encounter. Any questions regarding telegraph keys, please write in care of Antique Radio Classified.

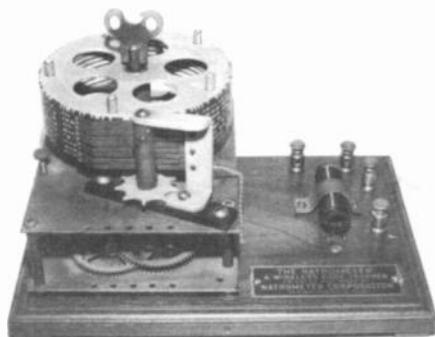

**THE SEMATIC BUG** - This Signal Electric bug could be used as either a speed key, or by closing both shorting bars and flipping over the catch at the end of the operating pendulum, it could be used as a sideswiper. This model is nickel plated and about a third larger than the black based models. They were made in the late 1920's. *Courtesy C. Hinkle.*

**KNOX & SHAIN CAMELBACK** - This 1870's vintage key has a style of its own. Of post Civil War making, it is a good example of the fine art of making camelbacks, soon to be phased out in favor of the straight, steel lever keys. It is made of heavy brass, and seems to have been part of a set. *Courtesy G. Potter.*

**DUNNDUPLEX** - This bug was made in 1909 by the Thomas J. Dunn & Co. and was made in both single and double lever models. It is unusual in that code can also be sent by the use of two fingers on the plastic buttons on top of the bridge, one for dashes and one for automatic dots. These seem to be pretty rare, and although they made dots by releasing the tension on the operating pendulum, apparently violated the patents anyway. I have seen one bearing an Albright license, usually a sign that H.G. Martin disapproved. *Courtesy J. Montgomery.*

**THE NATROMETER** - This code teaching machine, like the Omnigraphs of its time, was a device that could generate random code for the purpose of instruction or testing by a mechanical wheel. It was wound up like a clock, and by the selection of any or all the removeable pins on top of the drum, pseudo random code would be transmitted to a sounder or buzzer. *Courtesy R. Rees.*

# BE PREPARED TO SMILE SEZ BRUCE KELLEY!

**COLLECTORS VALUE GUIDE:** This month we are going to depart from our normal listing of values to present a look back at some values of radios and other items over 24 years ago. In 1961, Mr. Bruce Kelley, editor of the Antique Wireless Association's *Old Timers Bulletin*, conducted a survey with collectors to determine an average value of some selected radios and other items. Again in 1975, another survey was conducted on some of the same items that appeared on the 1961 list, plus some new additions. Therefore, with these past listed values, and with the new ones listed in the 1985 column, we have an interesting tabulation for comparing prices over the past 20 years. The 1985 prices are based on past "Value Guides" in A.R.C., plus others that will appear in future issues or researched

for this special listing. Vacuum tube prices were furnished by a well known tube expert.

An exact explanation of the 1961 and 1975 prices may be found in the *Old Timers Bulletin*, Vol. 2, #3 (1961) and Vol. 16, #1 and #2 (1975). I would like to thank Mr. Bruce Kelley of the A.W.A. for permission to reprint the 1961 and 1975 prices . . . . . James Kreuzer

You gotta be kiddin' - you mean this set is worth more than it was twenty years ago!

| DESCRIPTION OF ITEM                            | 1961 | 1975  | 1985  |

\* Market value not established - very seldom seen in "open market"

# PHOTO REVIEW

The "Photo Review" column is intended to present in pictorial form many of the radios, speakers, tubes, advertising, and other radio related items in the collections of other collectors. These photos are meant to help increase awareness of what's available in the radio collecting hobby. Photos are solicited from other collectors for use in future issues of A.R.C. Items desired are the more unusual radios and other items related to the hobby (covering the years 1900 to 1940's). Photos must be B&W (any size) and be sharp in detail, preferably with a light colored background. Please include a short description of each item submitted.

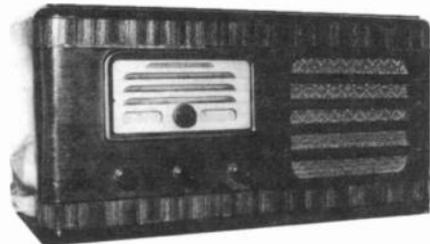

**CRYSTAL DYNE** - This crystal set was made by the Bethlehem Radio Corporation. I have never been able to locate any information on the set or even find the company name listed in any radio books. The name "Bethlehem Radio Corporation" does not appear anywhere on the set, however, both the box and instruction sheet identify "The Crystal Dyne" and the company name. There is one other interesting item about it. On the inside top cover of the box someone has hand written "WLTH - 15". That sounds like a radio station call letters but my old radio log's don't list it. I am not sure what it means. - *Frank White, Olathe, Kansas*

**ECHOPHONE** - Model "C"; this early cathedral dates around 1929-30. With the uses of 01A tubes and a front panel mounted regeneration control, this set is a good example of the "Midget or Cathedral" evolution. The six tube chassis is mounted on the back of the cabinet using the following tube line up: 01A's for the first and second RF and first audio, a 27 for the detector, a 71 for the output and an 80 for the rectifier. (*John Miller - Lexington, KY*)

**RADA CHRON**: Model K-10, a nine tube superhet, manufactured by the Fred Stein Radio Corp., Atchison, Kansas in 1931. - *Frank Heathcote*

**GENERAL ELECTRIC** - Model F-70, made in 1936, 7 tube Superhet. Has shortwave in 3 bands covering 550 kc to 18 mc. Not restored, but 100 percent original. *Ed Turner, Youngstown, OH*

# THE PORTABLE LEGACY

CONTRIBUTED BY: MEL ROSENTHAL, 507 SO. MARYLAND AVE., WILMINGTON, DE

My first recollection of "early radio" is quite unlike those of other collectors. As a war baby, the home radio center was quickly being replaced by the post-WWII TV boom. Instead of Amos & Andy or the Shadow, Howdy Doody, Farmer Gray and the Texaco Comedy Hour were in focus on our 12" Philco TV.

My earliest memory of radio was as a young child going to the beach lugging my father's 194? simulated alligator covered suitcase portable. Of course, we had to first stop by the local radio shop to pick up a fresh 90 volt battery. I believe then, and do now, that the radio stores made more money on the batteries than on the radios themselves. Polaroid seems to have been the leader in this area - a \$19.95 camera with \$200 a year for film!

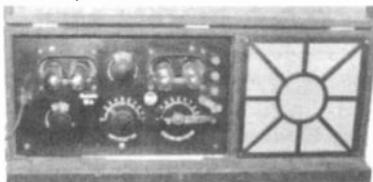

As a child I loved foolin' with the knobs and dials of those mysterious radios. Coupled with my interest in antiques as an adult, I developed a love for early radios and a special warm spot for suitcase portables. Portables also attracted my attention because it is refreshing to collect something that everyone else isn't hungry for. I have been collecting for ten years or so and specialize in portables, Kellogg tube AC sets, DeForest, fancy horns and WWI items. In "real life" I am a practicing chiropractor in Wilmington, Delaware.

GLEB PORTABLE (MID 20'S)

Early portables are ugly... there is no getting away from it. Most were merely black enameled cloth covered boxes. Electronically, they were simple, less sophisticated and functionally less impressive than their table or floor model cousins. You cannot take away parts to reduce weight and still maintain the same performance. Those radios which kept all of their components so not to sacrifice quality, without concern for

weight, quickly discouraged portability. An example of this was the 1932 eight tube RCA P-31. The beauty of the portable lies in two areas: (1) the art of compactness and miniaturization, and (2) the emotional appeal of portability to the American public.

RADIOLA IIIA

Although I haven't yet researched it, portables seem to have preceeded table models. I say this because the Signal Corp during WWI was the first to have contracted to manufacture "carriable" field transmitters, transceivers and receivers. Of course many of the 1922 sets were in small boxes with handles (early Radiolas and Crosleys, for example). In 1924 Zenith intentionally beat out Operadio by introducing the first truly self-contained manufactured portable. However, the marketing speed of Zenith did nothing for its quality. The Operadio was by far the finest portable of its time. Within the next few years, dozens of portables hit the market. Like the stereotyped three dialers, the 1925-27 portables were mostly copies of each other.

The early 1930's brought a reduction in size (except for RCA's P-31) and an increase in performance. However, the one volt tube of the early 1940's brought a true revelation... in miniaturization, performance and features (multi-band). Best known is the Zenith Transoceanic which was the longest productions of any radio line of which I am aware. Pictured are some of the versions of the Transoceanic which spanned a 35 year period, from 1940 through the 1970's.

Americans love portable radios. They have made them look like cameras, contain cameras, look like watches and even fit into coke bottles. While TV killed the radio as being the in-home family entertainment center, the portable flourishes even today. As a teenager, I was one of the first to have a transistor "pocket portable". My son and daughter love their "ghetto boxes" (was RCA's P-31 before its time and how would the Radiola Super Portable fit on a shoulder?)

The values of portables are certainly on the low side as compared with their pretty wood cabinet, exposed knobs brothers. Most of the common cloth covered portables from the mid

Continue next page...

1920's bring from \$30-\$70. Some obvious exceptions are such emotional names as Kennedy, Cutting & Washington, Grebe and Operadio. These sets and other similar portables may bring in the hundreds of dollars. The infamous 1924 Zenith, of which only a handful survived, may bring up to \$1000 or more.

I have limited my portable collection to sets through the 1940's. A few collectors now even collect early transistor models. I am now trying to focus on finding such sets as Grebe portables

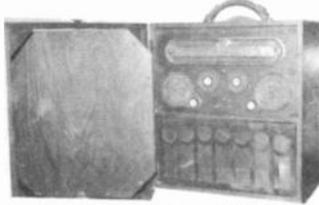

and early camera/novelty portables. I plan on writing a more comprehensive historical paper in the future and welcome any assistance from other collectors.

*(Editors note - Space limitations prevent us from listing complete details for each radio. I am sure Mr. Rosenthal would be glad to answer any questions you may have on those pictured or on any others. Please send a SASE to: Mel Rosenthal, 507 South Maryland Avenue, Wilmington, DE 19804)*

## SEE HOW EASY IT IS

to Get the Radio Broadcast from all over the Continent if You Have a

### DE FOREST RADIOPHONE!

**No Outdoor Antenna**—The Loop as shown is all you need, though the De Forest Reflex can be used with outdoor aerial if desired.

**No Outside Batteries**—All Dry Cells go inside the box, although the set can be used with the storage batteries if desired.

**No Grounds**—No outside wires or connections of any sort. The set gets cross-continent broadcast just as you see it with great clearness.

The world famous De Forest Reflex Radiophones. Type D-10 is a 4-tube set with a range on indoor loop of 3,000 miles (record range 5,000 miles). It has a reputation for the clearest reception of broadcast in existence. Uses either head phones or loud speaker. The simplest long-distances set made; low in first cost; economical to operate. Price for set and loop, \$150.00, plus 8% for territories west of the Rockies.

**FREE RADIO CATALOGS.** Send us your name and address and we will send you the new De Forest Catalog with full details and prices on sets, subunits and parts.

**DE FOREST RADIO TEL. & TEL. CO.**

**ANTIQUA WIRELESS ASSOCIATION MEET -** Annual conference Sept. 25th thru the 29th, Canandaigua, New York. For details send SASE to: Antiqua Wireless Assn, Main St., Holcomb, NY 14469

## WHAT IS IT?...

WHAT IS IT column is provided as a service to collectors to help them identify items in their collection which they would like to have identified by any of the readers of A.R.C. If you have any knowledge of the item pictured, please write to the person requesting help. If you have an item which you would like to have identified, send a B&W photo or sketch, along with a brief description of the item and what you would like to know about it.

**APOLLO-DYNE:** I know very little about this set. The speaker is built in the lid, the lid being about the 4 inch section above the bakelite panel. It is obviously a regenerative. Have no idea where it was made. Well built, uses spider web coils. It has serial #1367. Other than the fact I have had it about 25 years, I bought it sight unseen for \$25. Anybody know anything about it? Don Iverson, 10115 NW St. Helens Rd., Portland, OR 97231

## COVER PHOTO STORY...

**FRONT COVER STORY:** The photo on this months cover was photographed from an early 1930's issue of *Short Wave Craft*, a Hugo Gernsback publication. Thought the cover showing a "suit case" radio fit right in with this months feature article on "suit case" portable radios by Mel Rosenthal.

## "SOUNDS INTERESTING"

On Thursday, April 11th, 1985 a new exhibit entitled "Sounds Interesting" opened at the Halton Region Museum located in the Kelso Conservation Area near Milton. This display, housed in the Temporary Exhibits Building, is designed to interpret various aspects of the history of man-made sound including musical instruments, phonographs, radio and television.

Many interesting artifacts are on display including a turn of the century Edison phonograph, a 1918 Victorla, a collection of radios from the early 1920's up until the 1960's, a 1948 television set believed to be the first used in Georgetown and a number of musical instruments some well over 100 years old.

Contact: Morris Sorensen, Halton Region Museum, R.R. #3, Milton, Ontario, Canada L9T 2X7 (416)878-3232

## FINDS OF THE MONTH...

Hi Gary, Enclosed is my check in the amount of \$15.00 for subscription renewal. Very fine magazine. Please keep up the good work. All the people I've discussed A.R.C. with feel that it is excellent.

My find of the month: 6 tube Thermodyne, 4 tuned stages. Also a Bristol 1 tube amp., mint in original box! Also a Stromberg Carlson "Treasure Chest", already sold the latter to a California collector.

Good luck, good hunting and I expect to see you at the A.W.A. meet this coming September. Chet Wisner - Dalton, MA

## RADIO TIDBITS...

In the publication *Antique Gazette*, July 1985 edition, an article was presented describing the traveling exhibit of early radios by the Smithsonian National Museum of American History. This exhibit is currently on display at the Cumberland Museum in Nashville, Tennessee through September 9th. Radios and radio components from the Museum's collection supplement the Smithsonian exhibit. Much of the Cumberland Museum's display was donated to the Museum in 1969. Included are Atwater Kent, telegraph equipment, transmitters, and other early radio equipment. The exhibit provides a chronological presentation of the events of Marconi's life in the context of American and European history and the technological developments of the era. Also explored are modern technological developments that were made possible by Marconi's work - radio astronomy, satellite communications, lasers and computer chips.
