

VOLUME 6

AUGUST 1989

NUMBER 8

# Did Atwater Kent Manufacture a Crystal Set?

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS  
OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

## ANTIQUE RADIO CLASSIFIED

Antique Radio Classified (ISSN:8750-7471) is published monthly, 12 times per year, by John V. Terrey, 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. Telephone: (508) 371-0512; 9:00 AM to 5:00 PM ET; machine answers phone at other times.

Annual subscription rates within the U.S. are \$19.00 by Second Class mail and \$28.00 by First Class mail.

Annual foreign rates. By air: Canada - \$30.00; Mexico - \$28.00; Other foreign countries - \$55.00. Surface mail to Canada, Mexico & other foreign countries - \$25.00 (Surface delivery to countries other than Canada may take two or more months and cannot be guaranteed.)

Two-year subscriptions are twice these rates and receive an extra month. Sample issues are available free on request.

**PURPOSE.** Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

### WRITING TO ANTIQUE RADIO CLASSIFIED.

All correspondence should be sent to:

Antique Radio Classified

P.O. Box 2, Carlisle, MA 01741.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if (1) each is on a separate piece of paper, and (2) your name, address and SUB# is written on each.

Unfortunately, A.R.C. is not staffed to answer letters with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest to its readers

and will publish them as space permits. A.R.C. assumes that permission is given for publication of all correspondence received unless otherwise indicated.

**GUARANTEE.** You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

**PAYMENT.** Please send in full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds; checks drawn on a U.S. bank or money orders are preferred. Make check out to "A.R.C." U.S. stamps or cash are OK for small amounts. Canadian payers may send a Canadian check in U.S. funds, but must add \$1.00 (U.S.) for conversion costs. On request, subscriptions will be prorated to amount sent, minimum term is one year.

**CHANGE OF ADDRESS.** Please notify us 4 weeks in advance of a change of address. Send both your new and old address, and include your SUB# and effective date of your new address. Temporary address changes can be made also.

**SUBMISSION OF MATERIAL.** Antique Radio Classified welcomes and solicits information that pertains or relates to the radio collecting hobby. This may include articles, book reviews, radio photos, information on upcoming radio events, meetings, antique radio organizations, radio auctions and price reports, sources of old radio and restoration supplies, and other related and interesting material. All material submitted should be verified for accuracy and typewritten if possible. Unless prior arrangements are made, all submitted materials become the property of Antique Radio Classified and will not be returned.

**MAILING OF ISSUES.** A.R.C. is available by subscription in the U.S. either by First or Second Class mail (Second Class is the way most magazines are mailed). First Class copies usually are received by the fifth of the month; copies by Second Class mail, by the tenth. The mailing of First Class copies is staggered, with those living farthest away mailed on the first day, and local copies mailed the last day. All non-U.S. copies are mailed on the first day. All Second Class copies are mailed on the last day. Mailing is usually completed by the 25th of the month.

**ETHICS.** No person involved in the production of A.R.C. is to act on any information in the magazine until they receive their copy through the mail.

**DISCLAIMER.** The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

Antique Radio Classified subscription rates, frequency of publication, content, size and ad details and rates are subject to change at any time by A.R.C.

## DISPLAY AND BUSINESS CARD ADS - DETAILS AND RATES

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and non-original items must be so identified. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

The deadline for display and business card ad artwork, payment and repeat requests is the first of the month. All advertising must be prepaid; see "Payment" paragraph above. Late ads will be run only if space and time permits. As artwork is reduced to 63% in the printing process, originals should be the artwork size listed below. Do not send in artwork on art board or send negatives. Ads should be typeset or typed neatly with a carbon ribbon. If you want us to prepare your ad, include the one-time cost listed below for A.R.C. to make up the ad.

"Tear sheets" will be sent only for 1/2 and full page ads, if requested when ad is submitted.

Business card ads are limited to one per advertiser.

Photos should be at an 85 line screen; otherwise, add

Page	Artwork Size (send in this size)	As Printed (size in magazine)	Cost for 1-month	Cost for 3-months	Cost for 6-months	One-time Cost for A.R.C. to make up Ad (if requested)
Full	12 3/8 (or 10 1/2) x 7 1/2	7 3/4 (or 6 5/8) x 4 3/4	\$70.00	\$189.00	\$355.00	\$24.00
1/2 H	5 1/4 x 7 1/2	3 5/16 x 4 3/4	35.00	94.00	178.00	12.00
1/2 V	11 3/4 x 3 9/16	7 7/16 x 2 1/4	35.00	94.00	178.00	12.00
1/4	5 1/4 x 3 9/16	3 5/16 x 2 1/4	18.00	48.00	91.00	6.00
1/8	2 5/8 x 3 9/16	1 5/8 x 2 1/4	9.00	24.00	46.00	3.00
Business Card	2 x 3 3/4	1 1/4 x 2 3/8	not avail.	15.00	28.00	2.00

\$5.00 per photo for screening. (Do not glue photos to artwork; submit separately.) If you are confused by these requirements and terms, please write or call A.R.C. before beginning to prepare your ad.

We will be happy to advise you on your ad ideas, estimate how much the ad will cost, recommend an ad size, etc.

We assume that advertisers want all ads which are submitted to run without delay; therefore, we will run the ad and bill for any additional work required for the ad to meet these specifications. A late ad will be run beginning with the next month.

The 3-month rates represent about a 10% discount, the 6-month rates, 15%. Clubs, write for discount rates.

# ANTIQUE RADIO CLASSIFIED

## EDITOR'S COMMENTS

More pages of articles this month – fewer total pages – a good trade off!

The lead article by Ralph Williams features Atwater Kent's Crystal Set which also appears on the cover. Ralph is *the* authority on AK, having researched and written numerous articles on the company and its sets for A.R.C. and other publications.

More on Atwater Kent follows with Andrew Mooradian's report on his replica AK Crystal Set and William Boyd's description of his Kiel table AK Model 60C.

In another article, Bill Tipton and Mark Oppat propose a solution to the "difficult to find" output transformer problem – use 70-volt sound system transformers and speakers.

In *Radio Ramblings*, Paul Giganti describes his early 1960s' purchase of the historic Harold Greenwood collection (the sets featured in *Vintage Radio*). He also comments on the *why* of prices. An interesting comparison of 25-year-old prices to prices today also is included.

Stan Lopes writes about two Emerson Snow White and the Seven Dwarfs radios. The Vintage TV & Radio auction held on June 24 in Ohio is reported by Robert Uiterwyk. The *Photo Review* and Part 4 of the *Olde Tyme Radio Services Directory* are also included this month.

A review of Alan Douglas' second volume of *Radio Manufacturers of the 1920's* was contributed by John Wolkonowicz. It is no surprise that John continues to predict that *Radio Manufacturers of the 1920's* will become the definitive book on American broadcast receivers of the 1920s. (Another Volume 2 we just received will be reviewed soon – *The Radio and T.V. Collector's Guide Book, Vol. 2* by Guy Biraud, which covers European sets.)

**Horn Speaker Survey.** It's not too late to send in your *Horn Speaker Survey* (see the May A.R.C.). Fill out as many prices as you know, even if you don't have the speaker.

**Rate Increase.** A final reminder: save by renewing or extending your subscription now. Although rates go up August 1, renewals will be accepted at the old rates until August 10th.

**Meet Activity.** In August, *Radiofest* at Elgin, Illinois, is the big event. The Vintage Radio and Phonograph Society holds its three-day convention in the Dallas, Texas, area in September. The annual Antique Wireless Association Conference in Canandaigua, N.Y., will be in October (Editor's recommendation: If you can make only one radio meet, go to this one).

That's all for now. See you at *Radiofest* and in Canandaigua Happy collecting.

John V. Terrey

## OOPS!

A few of you wrote about last month's upside down photo of the Solar Capacitor Analyzer and the *Photo Review's* "1922" Grundig radio. We are sorry about the errors; "1962" is the correct year.

In the Hopalong Cassidy article, we failed to credit William Sureck's source: *Arvin – The First Fifty Years* by C.W. Coons. It is available for \$3.90 ppd. from Arvin Industries, c/o Bob Hubbard, 1531 13th St., Columbus, IN 47201.

## PRINTED WITHOUT COMMENT

The growth of the file on Mike Kirby of Panama City, Fl., (see A.R.C., April, May, June and July, pages 3) seems to be slowing:

Summary of reports so far:

Persons receiving quotes: .....	54
Persons sending money: .....	34
Persons receiving refunds: .....	27
Refund checks which bounced: ....	16
Bounced checks not yet replaced with a money order: .....	6
Persons receiving merchandise: .....	0

Several readers report that a strong letter requesting a refund resulted in their receiving a prompt money order refund.

Please keep A.R.C. up-to-date on the status of

your orders. A.R.C. will forward copies of your letters to the U.S. Postal Inspection Service. If you send your information directly (send to: Betty Sheddan, U.S. Postal Inspection Service, 1407 Union Ave., 10th Floor, Memphis, TN 38161), please send a copy to A.R.C. also.

## ON THE COVER

For many years, it was believed that Atwater Kent never manufactured a crystal set even though a number had turned up. In this issue, Ralph Williams reports on the discovery of a traveling exhibit put together by Atwater Kent in the early 1930s in which Ralph found a crystal set. Finally, a definitive statement can be made on the subject.

Reproductions of the crystal detector unit also have been available for a number of years. For many, like Andrew Mooradian who describes his replica set this month, a reproduction is the only way a rare set such as this could be "owned." (An AK reproduction can best be identified by comparing the unit to a known AK set [any bread-board is O.K.], looking especially at the finish on the bakelite base and the detail on the tag.)

The Atwater Kent crystal set on the cover is authentic and is from the editor's collection.

# A-K BREADBOARD REVIEW

## Atwater Kent Crystal Sets

### Part 1: Did Atwater Kent Manufacture a Crystal Set?

BY RALPH WILLIAMS

*The "A-K Breadboard Review" by Ralph Williams in the January 1986 "Antique Radio Classified" showed two Atwater Kent crystal sets along with the question: "Did the factory manufacture and sell them?" Over the years, Ralph Williams has continued to investigate this question and reports his conclusions in this article. (Editor)*

Crystal receivers have captured the interest of radio fans since the beginning of wireless. Almost all of us look back to the time, perhaps in our teens, when we built a crystal set and marvelled at the idea of receiving radio signals without expending battery energy. Today, when a collector couples these comfortable thoughts to the romance of the Atwater Kent name, his resulting interest reaches well beyond the casual, becoming in some cases, frantic. The questions that are generated center around one: Did Atwater Kent ever market a crystal receiver?

In 1986, the author tried to answer that key question. A short article in the January issue of A.R.C. pictured two nearly identical Atwater Kent crystal sets. In the text the author said that one of the two had been produced by "an independent entrepreneur." The other set that was pictured in the article was described as the author's exact copy of one built by AK's laboratory and illustrated in a 1930's magazine advertisement. Information that has come to light since that article was printed identifies the "entrepreneur" — he was Atwater Kent. The story about finding the correct answer is fascinating in its own right. It clarifies the crystal set question, but it opens more doors than it closes.

#### A-K DID MANUFACTURE CRYSTAL SETS

Before relating the story, however, the key question should be answered in a little more detail. Atwater Kent did assemble some crystal sets and one of them is shown in Figure 1. The tuning instrument was a variometer, and the de-

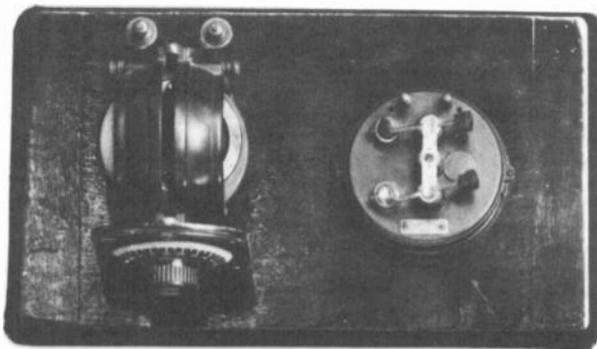

Figure 1. Atwater Kent Crystal Set with Variometer.

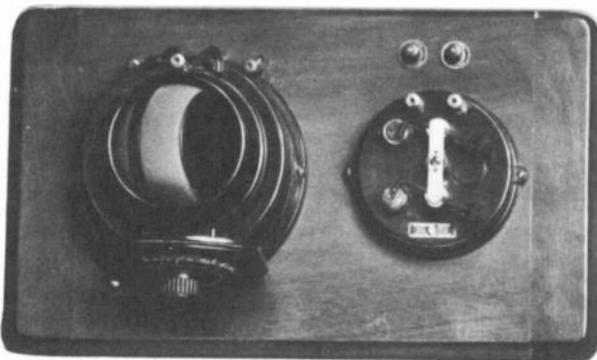

Figure 2. Atwater Kent Crystal Set with Type 11 Tuner.

tor was the double crystal unit, A-K Type 2A, Part No. 4200. How many of these crystal sets were made has not been positively established, but there are three survivors known to the author. Whether they were marketed is a second question. The story suggests answers to both of these questions, so here it is.

#### THE TRAVELING EXHIBIT

In the early thirties, probably late in 1932 and during 1933, the Atwater Kent Manufacturing Company initiated a dramatic sales promotion. A traveling, retrospective exhibit of receivers that spanned the period from the beginning of production in the early twenties to 1933 was assembled from sets that were left over in the factory or were retained in the engineering laboratory. The exhibit was made available to distributors and dealers to display in conjunction with

major sales rallies. The latest model sets in the exhibit were taken from the then-current line of receivers, and were provided by the exhibitor. The earlier sets in the exhibit were carefully selected retrospective models that were shipped from the factory in a large, specially-constructed shipping box.

In 1986, the author was fortunate to examine the traveling exhibit box and its contents. Included with the carefully packed sets were the graphics that completed the exhibit. The retrospective receivers (and some corresponding loudspeakers) ranged backward in time through the metal and wooden boxed sets to the open (breadboard) sets that were AK's first successes. Altogether about twenty sets and speakers, each with an explanatory panel, comprised the exhibit. To convey an effective message about the Atwater Kent product line, the sets were shown on an extended table with current-model consoles providing strong visual impact at each end of the collection.

One of the displayed receivers was a crystal set. The framed placard that was placed behind the crystal set read:

**1921 CRYSTAL SET**

In the year 1921, Atwater Kent made their first crystal detector for use with earphones.

Mr. Kent never placed this product on the market but they were given to hospitals.

The story has been straightforward to this point, but here comes the twist. The crystal set that was used in the traveling display (the set in the shipping crate) was not the one that has survived (the variometer model shown in Figure 1) but is the other one, the one that had been pictured in the 1930's advertisement – the set that used the Type 11 tuner and is shown in Figure 2. Incidentally, between the two sets, the only significant difference is the use of the Type 11 tuner in the exhibition set vs. the variometer in the sets that still survive.

**THE YEAR OF MANUFACTURER**

Another difficulty has to be considered before the AK crystal set story can be accepted and treated as fact. The difficulty is with the date used in the descriptive placard that backed the crystal set in the display. It is given as 1921. While that is certainly a good date for crystal sets made by other manufacturers and for homemade sets, it is not easily accepted for Atwater Kent.

Several reasons point strongly to a later date for the AK set. The first reason is that Atwater Kent did not build any receiver in quantity until 1922. The second is the Part Number of the

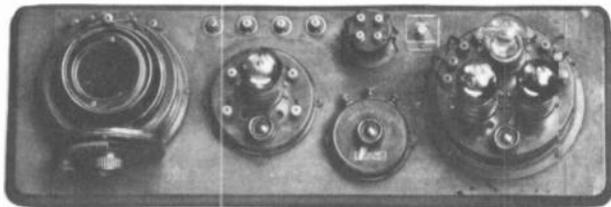

Figure 3. Atwater Kent Model 6 (Part No. 4052).

Figure 4. Atwater Kent Model 7 (Part No. 4066).

crystal detector: No. 4200. That number was not assigned in the factory until the time of the second series of production receivers, the No. 4052 (Figure 3) and the No. 4066 (Figure 4) which can be thought of as Models 6 and 7. These sets were initially produced in 1923. The third reason is a bit less direct but is nevertheless telling. The board on which the crystal sets, both versions, are assembled is the same as that of the Model 5. It is the first of the 10-inch depth boards. Up to

### RADIO EQUIPMENT

Crystal Detector

Variable Condenser  
Table Mounting  
Panel Control

Variable Condenser  
Panel Mounting

ATWATER KENT Radio equipment is distinctive for its pleasing appearance and the quality of its performance. Parts and Sets embrace a variety sufficiently wide to meet the requirements of every user of radio.

Sets comprise with the simplest combination of tuner and detector unit and include the most complete arrangement of units that has been found practical.

Parts include every instrument necessary to the assembling of complete sets.

Every ATWATER KENT Radio Product represents the accumulated experience of more than 25 years in the design and manufacture of scientific electrical equipment.

All insulating parts are made of moulded condensate—they are moisture proof.

Literature describing the entire line of Atwater Kent Radio Sets and Parts sent on request

ATWATER KENT MANUFACTURING COMPANY  
4912 SEPTON AVENUE PHILADELPHIA, PA.

—Sole Agent—  
THE WORLD'S FINEST ORGANOGRAPHIC  
STARTING AND LIGHTING

Figure 5. Ad from "The American Boy", November, 1923 (from the Editor's collection) showing the crystal unit.

(AK Crystal Sets, continued)

the Radiodyne, No. 4340 and Model 5, No. 4333, the boards were 8 1/2 inches deep.

Yet another reason comes from the "Forms" (instruction sheets) that were packed with early AK instruments to describe the product line. Form 19B dated Feb. 1923 does not include the double-crystal detector. Form 19 (Dec. 1923) shows the detector and several other instruments that were added to the line in the interval between these dates. Form 34, which included circuit diagrams for using AK instruments shows a crystal set that used the Coupled Circuit Tuner and a single crystal. This data appears to date the crystal detector and consequently the crystal set in the middle of 1923. [A November, 1923 advertisement showing the crystal detector unit is seen in Figure 5.] These reasons make it difficult to reconcile the date on the placard.

### THE CONCLUSIONS

What does one conclude? The author comes out this way: AK made crystal sets in early 1923 (based on the sets themselves and Forms 19 and 34). They were not regular production units,

but were specially made in the model shop or laboratory as a good-will gesture (based on the placard). They are very rare and continue to be so (based on the number of survivors). Finally, someone will uncover one or two more facts about early Atwater Kent history and make all the foregoing questionable.

Let us know what you think, and how you come out on the crystal sets. We welcome discussion, amplification and differences of opinion and look forward to being able to look back into Atwater Kent history with the keener insight that results from sharing our rewarding activity: radio collecting, preservation and historical study.

*The sets in Figures 1 through 4 are from the author's collection.*

*Ralph Williams has contributed many articles over the years to A.R.C. and other publications. He is curator of the Voice of the Twenties Museum in Orient, N.Y., which has on display hundreds of old radios including 150 Atwater Kent breadboards, boxes, bathtubs, cathedrals, tombstones and consoles. (Editor)*

*(Ralph Williams, RD 1, Box 44, Orient, NY 11957)*

## Atwater Kent Crystal Sets

### Part 2: A Replica Atwater Kent Crystal Set

BY ANDREW MOORADIAN

About ten years ago, the first Atwater Kent 2A Twin Crystal Detector was discovered, and only a few are known to exist. Luckily Roland Matson of Kennebunk, Maine, was able to borrow one and reproduce it in exacting detail. Always wanting to own an Atwater Kent breadboard crystal set, I decided to go ahead and buy one of these detectors and build my own AK crystal set. The chances were very slim for my finding this detector, not even the A.W.A. Museum in New York had an original.

Very little is known about these detectors, and it is doubtful that AK ever made a crystal set for it. [Editor's Note: This article was written before the information in Part 1 above was known. A.R.C. held this article so that it could be combined with Ralph William's report on the discov-

ery of the A-K traveling exhibit.] The January 1986 issue of *Antique Radio Classified* shows a picture of the set that was produced by an independent entrepreneur in 1923. It would seem this fellow bought the necessary parts and built them to be sold locally in Philadelphia.

The AK Type-2A crystal detector is a double detector unit. (See Figure 7 for a factory-made unit). This means one can choose between two different types of crystals. To adjust the cat's whisker, the arm is turned either left or right to decrease or increase the pressure on the crystal. This is more difficult since the surface of the crystal must be relatively flat to keep the cat's whisker on the sensitive spot.

Building this crystal set is relatively easy and requires a small amount of parts. Parts required

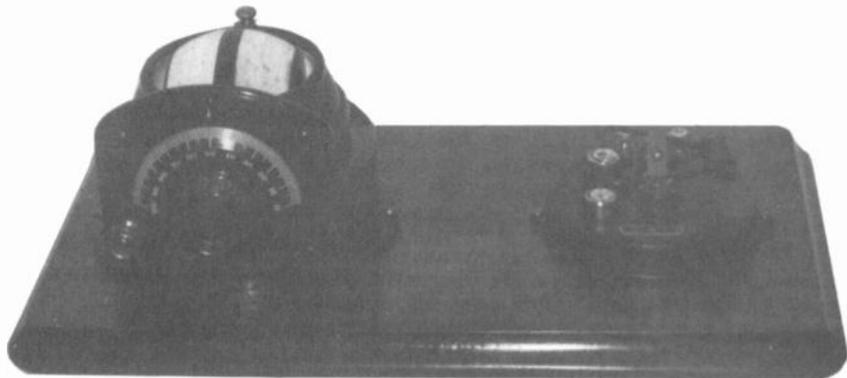

Figure 6. Andrew Mooradian's Homemade Atwater Kent Crystal Set.

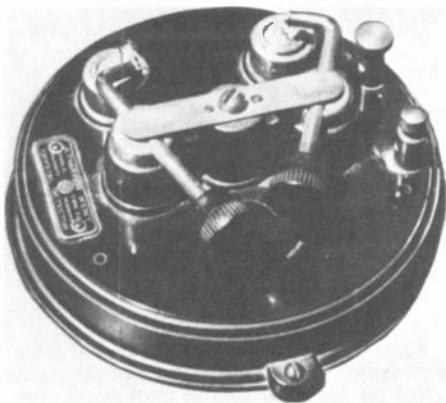

Figure 7. A factory-made Atwater Kent double crystal detector unit from the Editor's collection.

to build this set were an AK Variometer or Type-11 Tuner, AK style breadboard blank about 16" x 9 3/8", some #18 bus wire, binding posts, spaghetti tubing, and some miscellaneous hardware. Once obtaining the necessary parts, an exact duplicate of the board should be made out of cardboard, so that one can position the components to his liking. This template will be used to locate the holes for the variometer, detector, binding posts and eyelets on the breadboard. In this way most mistakes will be eliminated.

The set, now before final assembly, should be fine sanded and stained a dark brown mahogany color. After the stain is good and dry, it should be finished with lacquer available in spray cans. The lacquer finish should be a matte finish and not a super high-gloss finish. Actually more time is spent on sanding the board because the AK board is of a three-piece design and requires

careful sanding so as not to sand accidentally across the grain.

The next step is to mount all the components on the board and wire the units together. Wiring the set is simple, and only two wires have to be soldered from the binding posts to the main wiring. Since AK also used staples to hold the bus bar in place, these should be placed wherever necessary to hold the bus bar in place.

After the set was all together, I decided to test it out. Many different kinds of crystals were tried such as: zincite, bornite, copper pyrite and galena. While most crystals worked well, it is my opinion that the galena crystal was more sensitive. When initially testing the set, a 1N34A diode was used to make sure the wiring was correct because finding the sensitive spot on the crystal takes a great deal of patience. This crystal set tunes between 1030-1500 kilocycles on a modest antenna of 18 feet.

When comparing this set to others in my collection like an Aeriola Jr., the Baby Grand and a Radiola Bijou by BTH, the AK set is very selective just like the Bijou, unlike the Aeriola Jr. which will cover just about the whole broadcast band. Despite the AK crystal set's shortcomings, it was a fun set to build.

Notes: The pictured AK crystal set uses the AK Type-11 Tuner, but the more available AK variometer can be used. The Type-11 Tuner was chosen for its sleek appearance.

## LETTERS - THE ELIMINATOR - PACKING & SHIPPING

Dear Editor,

Just wanted to report to you on the April 1st A.C.R.R. Convention in Bonair, Iowa.

Nobody went home dissatisfied.

Cousin Hugh, Iowa (Hugh Kuhn, Cresco, IA)

Dear *Eliminator* People!

Being a radio collector "nut" and a subscriber to *A.R.C.*, my first copy contained *The Eliminator* - Vol. III No. 1. After reading the events and schedule for the "AC Radio Renegade Conference '89" to my wife, she actually pulled out the checkbook and said, "You're going!" I kid you not.

The last time she did this was in '87, and I went to the Seventh Annual Blues Awards Show in Memphis. Had a ball!

Enclosed is a \$1.98 "check" for parking and conference fees for this splendid event.

And keep it going!!

Gary Arnold, Marion, NC

Dear Editor,

Please stop the *Eliminator* articles. They are horrible.

Donald Sochurek, Muskego, WI

Dear Editor,

I know we all want old antique radios to play sometimes. We have to ship them for repair. How much do you value that nice little plastic radio? Stop and think before you ship it; is it boxed so UPS won't bust it? Take a little more time.

I get in about twenty sets a week to repair. Nice plastic sets are just dropped into a box with hardly any packing. It scares me when I unpack them. Some make it; most don't. Two Zenith plastics recently came in. I was sure they were busted before I unpacked them; they were.

To save that little plastic set, find a dime store. They will have all sizes of boxes. Put your radio in a box that your radio will just slip into. Then use a larger box so that you can get a lot of packing around the sides, bottom and top. If you send a chassis out to be repaired, don't send the speaker. Most shops have a test speaker. If you do send the speaker, box it in good with cardboard so the cone won't get busted. Put some sort of soft packing to hold tubes down in the sockets. Good luck with your set.

Chuck Humphreys, Chuck's, New Haven, WV

# WITH THE COLLECTORS

## Using 70-Volt System Transformers and Speakers

BY BILL TIPTON AND MARK T. OPPAT

*Presented here are two articles on using the transformers and loudspeakers found in commercial sound distribution systems as substitutes in repairing old radios. Each author has his own approach at describing the theory and application; and perhaps one will be the right one for those of you who have never heard of 70.7-volt (or 70-volt, the same) systems. Although this approach will get the radio working, I do not recommend this for an authentic restoration! (Editor)*

### Using 70-Volt Speakers and Transformers in Old Radios

BY MARK T. OPPAT

The most common speaker and transformer in the world is the lowly 8", 70-volt system, ceiling speaker found in nearly all commercial installations. The 70-volt system allows the use of one amplifier to drive many speakers. The volume and impedance is adjusted at each speaker by selecting a wattage tap on the transformer at the speaker.

Radio collectors can use these speaker/transformer combinations to replace missing electrodynamic or permanent-magnet speakers. (For electrodynamic speakers, you must replace the missing field coil in the B+ circuit with a choke or resistor of appropriate value, of course.)

The 70-volt system translates into impedances using the formula:

$$Z = E^2/W,$$

where: Z = impedance of the transformer input (which will be the load on the output amplifier tube)

$$E = 70 \text{ volts}$$

W = wattage tap selected on transformer

The impedance, Z, happens to fall into typical tube load values when you select a 5 watt (or less) "tap" on the transformer.

The following example shows the calculations for a two watt tap:

$$Z = (70 \text{ volts})^2/2 \text{ watts} = 4900/2 = 2450 \text{ ohms.}$$

(2450 ohms is a good value for some output tubes.)

Since the "taps" on the transformer usually run .5, 1, 2, 4, and 8 watt, or something similar, you can get a wide range of effective impedances. The 12" speaker grille even allows mounting to 10" or 12" openings of cabinets.

These speakers can be purchased at most electronics supply houses, at flea markets, or ask your local sound contractors to save their "pull outs" for you. I get them free!

(Mark T. Oppat, 167 Caster, Plymouth, MI 48170)

### 70.7 Volt Transformers for Output Applications

BY BILL TIPTON

Audio output transformers are one of those once commonplace items that are becoming increasingly harder to find. In most cases, they have to be ordered from one of the larger supply houses at rather steep prices. Fortunately, 70.7 volt line to voice coil transformers work just as well for coupling single-ended tube plates to voice coils.

For those of you who are not familiar with sound system wiring, here's a brief explanation: Public address and other sound systems employing multiple speakers and use amplifiers designed to produce 70.7 volts RMS at their maximum output which is distributed to the speakers. (This value was chosen because the peak voltage is 100 volts which allows the speaker wiring to be installed without conduit and still conform to the National Electrical Code.) Any number of speakers can be connected across the amplifier output (through individual line to voice coil matching transformers) until the maximum current rating, and thus the power rating, of the amplifier is reached.

The amplifier is stabilized with negative feedback so that its output voltage does not vary appreciably with loading. The secondary of the line to voice coil transformer has several taps corresponding to the usual voice coil impedances. The primary has taps marked with various wattages that correspond to the power (and thus volume level at the speaker) that the transformer will draw from the 70.7 volt line when properly matched to a voice coil.

**Calculating the transformer impedance ratios:** The primary and secondary taps of the line to voice coil transformer yield a large number of possible impedance ratios, many of them in the range needed to match a tube plate to a voice coil. By using the formula:  $Z = E^2/W$ , the impedance seen by the source can be easily calculated for each available power tap. Dividing the respective secondary impedances marked on the secondary taps into the previously calculated primary impedances will give all the possible impedance ratios of the transformer. Table 1 shows the impedance ratios for common transformer taps.

**Calculating the required impedance ratio:** Now that the possible impedance ratios are known, it is necessary to calculate the required impedance ratio for the plate to voice coil circuit in your set. Divide the rated load impedance of the output tube by the voice coil impedance of

the speaker, and match the result to the closest of the possible impedance ratios of the line to voice coil transformer. (Remember that the wattages marked on the primary of the line to voice coil transformer only correspond to the power that it will draw from the 70.7 volt line and not its maximum power handling capability.)

**Saturation and other problems:** The saturation of the primary caused by the direct current of the plate circuit will be the limiting factor of power capability as is true for conventional plate to voice coil transformers. A single-ended audio amplifier must operate in class A mode, biased about midway between cutoff and saturation so that the average plate current stays about the same for any level of power output within the ratings of the tube. The current rating of the line to voice coil transformer can be calculated by

dividing the rated wattage of the highest power tap by the nominal line voltage of 70.7:  $I=W/E$  or  $I=W/70.7$ . See Table 2 for typical maximum current values. The current transformer rating should be about twice the rated plate current of the output circuit to allow for the saturation effect.

The increased voltage of the tube plate circuits does not pose a problem. Peak plate voltage under full power will be about double the zero-signal plate voltage giving a worst case of less 1,000 volts. I tested several line to voice coils with this voltage applied. None of the transformers failed to withstand the voltage.

**Examples:** 6F6 (2A5, 42, 47) with 7000 ohm plate load to 8 ohm voice coil and 38mA plate current (31mA for 47).  $7,000/8=875$  Z ratio; two combinations on table give 1,000. Any transformer over 8 watts (5 watts for 47) will suffice.

50L6 with 2000 ohm load resistance to 4 ohm voice coil and 49mA plate current.  $2000/4=500$  Z ratio. Several combinations give the exact ratio. 8 watts or greater power.

(William L. Tipton, Jr., 1332 Pinewood Rd., Jacksonville Beach, FL 32250)

Primary Watts	Secondary 4	Impedance 8	Ohms 16
0.31	4,000	2,000	1,000
0.5	2,500	1,250	625
0.62	2,000	1,000	500
1	1,250	625	313

## Atwater Kent Model 60C In Kiel Table

BY WILLIAM BOYD

This 1929 model set was housed in a very ornate "Golden Voiced Table" cabinet (as Atwater Kent advertises). The table was manufactured by Kiel Furniture Co. of Milwaukee, Wisconsin.

The Model 60C chassis consists of 3 RF stages, detector, first audio and push-pull output driving on 11" electrodynamic Type F-4C speakers. The Model 60 circuit design, in fact, consisted of three versions noted as "Early-Type" and "Later-Type" designs (Model 60, 60C, the 2nd type & 60C, the 3rd type). The design changes were made gradually over a period of time - which can cause some problems to one troubleshooting the set in deciding which schematic version to follow.

The unit has excellent sensitivity and a nice bass-quality sound in which the sound is directed toward the floor. The chassis/speaker is accessible by simply raising the table top. The AC power and antenna/ground wiring runs through the rear table legs to plugs at the bottom of the table.

(William Boyd, 74 Atsion Ct., Medford, NJ 08055)

# RADIO RAMBLINGS...

## Antique Radio Prices: The Phenomenal Escalation Thereof

A talk given before the Southern California Antique Radio Society  
in Redondo Beach, CA, by Paul Giganti, October 3, 1978

*Paul Giganti wrote: "Here is something from which you will get a kick. I had a lot of fun giving this talk 10 years ago. If you can use it you are welcome." Today, ten years later, only the names might be changed in this story to update it.*

*For those of you who have not been lucky enough to meet him, Paul at age 79, is what I call a "vintage collector!" As well as accumulating a superb collection of his own, he has helped many, including myself, add many quality items to their own collections.*

*Following this article, a few items are listed from Paul's "For Sale" list which he sent out in the early 1960s when he sold items from Harold Greenwood's collection. (Editor)*

In a way I feel partly responsible for today's high prices on old radios. When I first began to collect, I made up my mind to accumulate a collection in a hurry. So I decided to pay high prices in order to attract the gear; such as \$5 for a Grebe Synchrophase, (my first set), \$3.50 for an Aeriola Senior, \$50 for an IP-500 (a fantastic price), and \$15 for an AK breadboard. This really blew the market, and sellers began to realize the value of the treasure in their attics.

I met Harold Greenwood about 20 years ago when I first became interested in the old gear. Harold had already been collecting for several years and had just begun work on the Greenwood Book, the first ever written on antique radio and wireless. You probably know the book as *Vintage Radio*, the title given it by Morgan McMahon when he took over the revision and reprinting of the book. I recall vividly a trade I made with Harold. He had been looking for a Radiola Special, a one-tube regen. receiver, and I had the good fortune of finding one. So I went down to see him and set the radio on his desk. We went into his garage where the floor was literally covered with his duplicates. He pointed to a Kennedy 110 and asked me if I thought that would be a fair trade. I was so shocked at such a fabulous offer that I stuttered a little. He took this to mean that I was not satisfied so he kicked a Grebe CR-8 and said how about adding this? Then I was really flustered and started to say, "Do you mean I can have both?" He pointed to a CR-5 Grebe and said he would throw it in also. I pulled myself together and said, "Yes."

A few years later, Bill Traver and I purchased the Greenwood Collection. We acquired almost everything in the book, a total of about 300 pieces, including all the tubes for the receivers.

We did not get the tube collection. This was purchased by Floyd Lyons, an active light bulb collector who was beginning to take an interest in radio tubes. The price of the collection was \$3000 or \$10 per unit. Mind you this included Marconi, DeForest, RCA, Grebe and at least five AK breadboards. I kept what I wanted and readily disposed of the rest. I even sold a DeForest tuner to the Smithsonian Museum.

I recall another incident which occurred during the depression. A friend and I walked into a junk shop in Chicago and spotted a Grebe CR-8 receiver. The price was \$1, so we chipped in 50¢ each, took the set home, and sawed it in half. I wanted the variocoupler for a crystal set, and he took the rest. Today I would be shot for such a sacrilegious act.

The price of antique radios is determined by several factors: 1. How anxious the buyer is to possess the object. 2. How reluctant the seller is to part with it. 3. Then there is inflation. We do, however, have guidelines, such as previous experience. For instance, if a radio is priced at \$100 and does not sell, obviously the price is too high. In a few exceptional cases, raising the price might cause it to move. Some buyers are not attracted to a piece that is, in their opinion, too "cheap."

Some sets, for no apparent reason, seem to skyrocket in value. One of these is the Atwater Kent breadboard. Today this is a very popular set and in extreme demand. About five years ago I had twelve breadboards in my garage, priced at \$35. They did not move. Nobody seemed interested in them as they were too "modern." Finally they went, one by one. Last month I was broker on a sale of an AK Model 5. The price - \$1320. What happened to cause this sudden jump in value of a set that not too many years ago sold for \$85? I can tell you why. A collector in Illinois had a duplicate AK-5 which he was holding for trade. A certain collector in California, made him an offer he could not refuse - \$1000, at that time, the highest price ever paid for an AK breadboard. This set a precedent. From then on, any collector with an AK 5 would take no less. I ask you, who is to blame for this state of affairs, the buyer or the seller?

At this point I would like to say something in defense of the dealer, one of whom, because I have to eat, I happen to be. Some collectors take a dim view of dealers in our hobby and tolerate them as a necessary evil. I once visited a collector who told me that I was not a good collector

because I sold things. I pointed to a Radiola III on his shelf and asked if he would take \$1000 for it. He said "yes". So then I told him that the only difference between us was that his price was higher than mine.

A word on three-dialers. I know a lot of collectors don't care for them. Don't sell three-dialers short. Some of them are quite beautiful and can make a good addition to any collection. I notice some of the new collectors only want Marconi, DeForest, AK breadboards and Wireless Specialty. They might as well ask for the moon. The good thing about three dialers is that they have not as yet been affected by inflation. Prices are as low as \$25.

In conclusion, I would like to tell you a story. It is true and happened over three hundred years ago in Holland. Holland, as you know, is famous for tulips. The flower became so popular that the bulbs were selling in a commodity market, similar

to our Board of Trade. (You know what a Board of Trade is - I visited the Board of Trade building in Chicago, years ago. This enormous room was filled wall to wall with people who were screaming, shouting and shoving each other. What were they doing? They were selling wheat and corn which had not even been planted yet.) On with the tulip story... People were mortgaging their homes and buying tulip bulbs on speculation. Soon the price reached \$2000 for a single tulip bulb. One day, at the town meeting a wise old man got up and said, "Folks, let's face it, no tulip bulb is worth \$2000." At that moment the market collapsed, and a great many people lost their shirts and maybe their pants too. Wonder what would happen if some wise man would say, "No old radio is worth \$2000."

(Paul Giganti, W6GVY, 2429 San Carlos Ave., San Carlos, CA 94070)

### Sale, Harold Greenwood Collection of Antique Radio and Wireless Equipment

Selections from lists dated Feb. 1, 1963 to March 15, 1965

(The Value Today column was furnished by Jim Kreuzer in July, 1989 and assumes that the item is in very good, all original condition, with tubes)

<u>Description</u>	<u>Price</u> <u>'63-65</u>	<u>Value</u> <u>Today</u>	<u>Description</u>	<u>Price</u> <u>'63-65</u>	<u>Value</u> <u>Today</u>

*In a collection which I purchased a few years ago, I ran across several "For Sale" lists which had been sent out by Paul Giganti when he was selling items from the Harold Greenwood collection. Battery set collectors: enjoy looking over the old prices included above. Most of the items are now worth 5 to 10 times (and more) than their '60's prices. The current value estimates were furnished by Jim Kreuzer who contributed the A.R.C. Value Guide series from 1984 to 1986. Items from the Greenwood Collection exchange hands even today and can be identified by Greenwood's green name tag on the item. (Editor)*

# WITH THE COLLECTORS

## The Emerson Company Snow White and the Seven Dwarfs Radio

BY STAN LOPES

Snow White and the Seven Dwarfs was the top money-making film of 1938. During the same year Orson Welles broadcast of "War of the Worlds" frightened thousands of people into trying to escape the invaders from outer space due to the realism of the radio presentation. For sure radio was in its heyday, and America was recovering from the depression.

With the success of the first full-length animated feature film, a novel 1938 radio was introduced to the buying public which depicted the starring "actors" by Emerson, the Model Q 236 shown in Figure 1. It is possible that the characters were hand-painted by Disney employees.

Another model, the DB 247, shown in Figure 2, was introduced probably in 1939. It used a similar mold in a simulated walnut finish similar to the Crosley Repwood material (contrary to the designation "plastic" in the *Radio Collectors' Directory and Price Guide* by Grinder and Fathauer) with a dial to the right of the characters rather than in their midst. The trade name "Syroco" was given to the molded material used by the Emerson Co. which was a pressed-wood composition. It was used in the manufacture of their Mickey Mouse, Snow White and Three Little Pigs radios, according to the book *Cartoon Collectibles* (1983) by Robert Heide and John Gilman, published by Dolphin-Doubleday.

The DB 247, is larger, perhaps due to the use

Figure 1. Emerson Model Q 236

of a loop antenna, unlike the Q 236 which employed an antenna transformer fed by a hank of wire. Neither of these AC/DC sets is in *Rider's Manuals*.

It is my good fortune to possess the Snow White and the Seven Dwarfs radio Model DB 247, and to have repaired the other Model Q 236

a few years ago for a young lady who refused my offer to purchase it. It had belonged to her mother and was given to her in her teen years. At night she would hold on to the antenna wire in bed because of the low volume it was capable of and go to sleep listening to her favorite music. No, she never pulled it down from the headboard. A recent advertisement in A.R.C. offered a Snow White radio for \$950 without indicating which model was involved, but I would think they would have almost equal value except for the painted characters on the Q 236.

(Stan Lopes, 1201-74  
Monument Blvd., Concord, CA  
94520)

# BOOK REVIEW

## Radio Manufacturers of the 1920's - Vol. 2

### Freed-Eisemann to Preiss

by Alan Douglas

REVIEWED BY JOHN WOLKONOWICZ

Back in the March 1989 issue of A.R.C., I made the statement that *Radio Manufacturers of the 1920's* would become the definitive book on American broadcast receivers of the 1920s. Now that many of you have had a chance to read and enjoy Volume 1, I'm sure that not too many will disagree with my prediction.

Not surprisingly, Volume 1 has been an overwhelming success and achieved international acclaim. I've even seen advertisements for it in a popular Japanese hi-fi magazine. The first printing of Volume 1 is now nearly sold out, but a second printing is on the way.

Now, about a year and a half after publication of Volume 1, Volume 2 of this three-volume set is on sale. Volume 2 contains 266 pages and covers the manufacturers Freed-Eisemann through Preiss in essentially the same format as Volume 1. Volume 3, due out in about one year, will complete the set with coverage of RCA through Zenith.

Since the format used in Volume 1 worked so well, few changes have been made. Each chapter on a particular manufacturer begins with a brief history of the company (1/2 to 2 pages). This is followed by a pictorial chronology of that manufacturer's model range for each year the company was in business during the 1920s. This pictorial chronology consists of both original advertisements and newly taken photographs of receivers from various collections. Many of you will be pleased to see your own sets depicted in this book. The pictorial chronology of sets has been improved in Volume 2 by the use of more original advertisements. In addition, more attention was paid to strict chronological order in depicting each manufacturer's products. As usual, the photographic quality is superb.

As in Volume 1, Volume 2 covers only major radio manufacturers. To be included, a company generally had to have maintained national adver-

tising of its products for a period of three years. Consequently, about seventy manufacturers will be covered in the three volumes which keeps the books to a manageable size and price.

While *Radio Manufacturers of the 1920's* is a work of true historical merit, that does not mean it is dry or boring. Alan's writing style is concise and entertaining, as well as being historically factual. Many of the early radio companies were run by amateurs who operated their businesses in a rather cavalier fashion. By combing contemporary radio trade publications, Alan was able to give his readers a true picture of the sometimes uncivilized, but always exciting, radio busi-

ness in its formative years.

It's hard to find fault with a book as carefully prepared as this one. However, I do have one small complaint. The cover of Volume 2 looks identical to Volume 1. If it was a different color, the volumes could be more easily distinguished on bookstore and home shelves.

There has also been a small increase in price for Volume 2. Paperbacks are now \$24.95, and hardcovers are \$39.95. Considering the value of this book as a reference tool, or simply entertainment, I doubt that many collectors will complain.

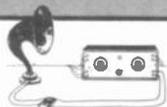

Alan spent over five years researching and compiling this book, and his effort clearly shows in the finished product. Those of you who own Volume 1 will doubtlessly want to get your hands on a copy of Volume 2 as soon as possible. Like Volume 1, Volume 2 is sure to be a sell-out.

Both Volumes 1 and 2 of *Radio Manufacturers of the 1920's* are available from the publisher, The Vestal Press Ltd. (P.O. Box 97, Vestal, NY 13850; add \$2.00 for shipping) and from A.R.C., Antique Electronic Supply and other suppliers.

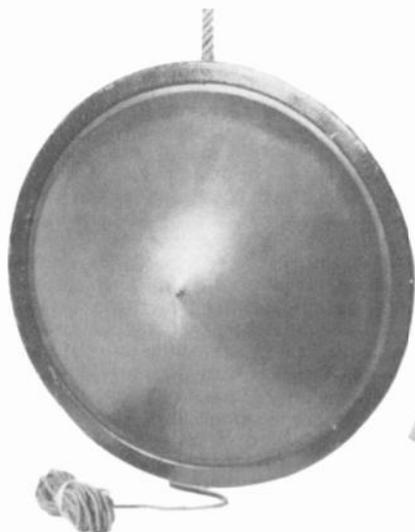

(John Wolkonowicz, 11 Hartford Rd., Worcester, MA 01606)

# PHOTO REVIEW

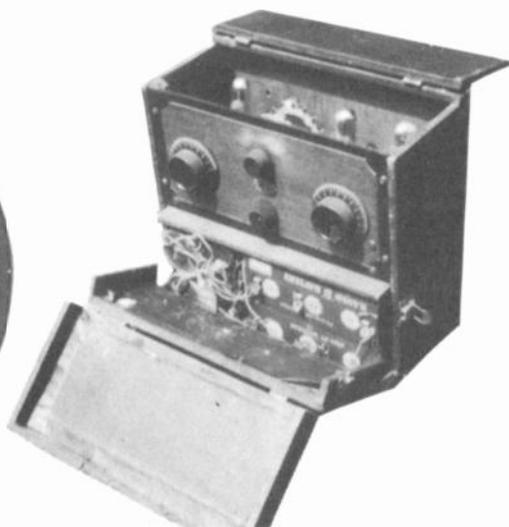

This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other radio-related items (covering the years 1900-1950's) from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short description must be included with each submitted item. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.

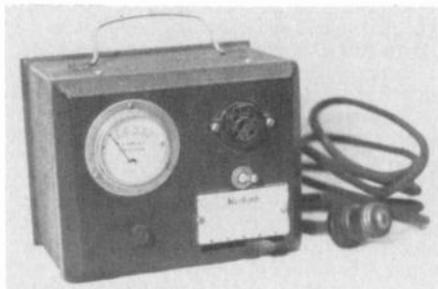

## STROMBERG-CARLSON WALL SPEAKER -

This cone speaker, #11, was made in 1928 and still has its original driver. It still produces excellent tone and volume. The speaker has a diameter of 22", and the cone has been replaced. (Walter V. Worth - Wollaston, MA)

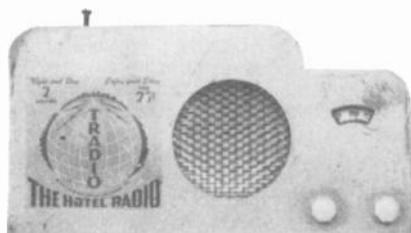

**CROSLY PORTABLE** - This is the standard Crosley Model 4-29, but in a portable cabinet similar to the Model 51 and 52 portables. This set is not found in this style very often, and few examples seem to exist. (Dave Crocker - Lyndonville, VT)

## STERLING VACUUM TUBE REJUVENATOR

This has a lever switch for "flash" and "age". Note the early screw plug for an AC transformer. (Walter V. Worth - Wollaston, MA)

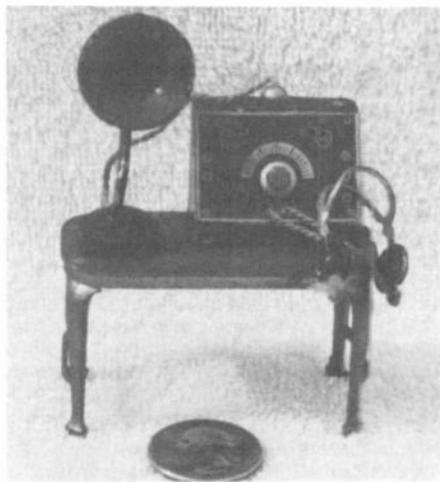

**TRADIO** - This coin-operated bedside radio used by motels had a metal cabinet to withstand heavy use. This model was made in 1947. (Alexandria Nelson - Albuquerque, NM)

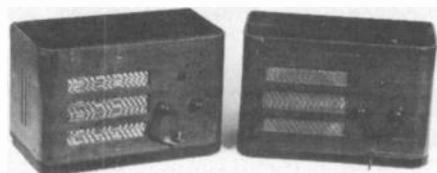

## PHOTO REVIEW

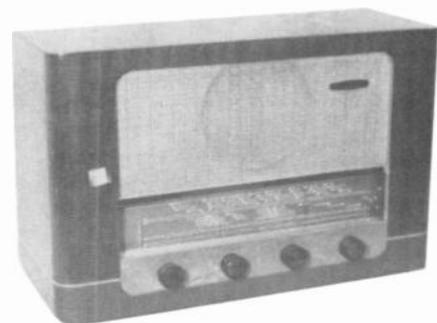

**MAJESTIC MODEL 463** - Notice the typical Art Deco treatment of chrome on the grille of this 1933 styled AC radio. (Ron Boucher - Goffstown NH)

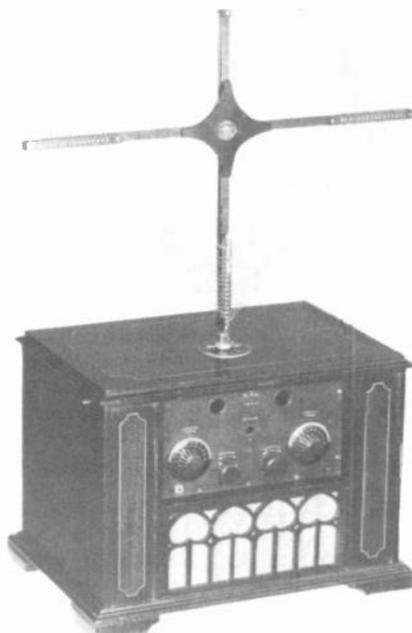

**MINIATURE NOVELTY** - Shown is a toy radio complete with attached headphones and horn speaker on a matching table. On the radio cabinet top there appears to be the tip of a tube protruding. In the foreground is a quarter coin to show scale. (Jim Kreuzer - Elma, NY)

**CHATTABOXES** - Crosley Radio Corp. manufactured these receiver/transmitters for use as home or business intercoms, probably around 1938. The metal lever and hook allowed the system to remain on. (Dave Crocker - Lyndonville, VT)

**PYE ENGLISH 8-BAND TUBE TYPE SET** - This set is very easy to tune, and has exceptional tone. Manufactured in 1939, it has an excellent method of band switching and even has a "ground" position. (Walter V. Worth - Wollaston, MA)

**DEFOREST D12** - This rather large 1924 set used an internally-mounted catwhisker and crystal for detection along with a four-tube circuit for power. Later versions substituted a detector tube instead of the crystal for ease of operation. (Dave Crocker - Lyndonville, VT)

# AUCTION REPORT

## Vintage TV & Radio Auction - June 24, 1989

REPORTED BY ROBERT H. UITERWYK

About 300 lots owned by Vintage TV & Radio of Cleveland, Ohio, were auctioned on June 24, 1989, at the S.O.T.R. Hall, N. Ridgeville, Ohio. Jerry Canterbury, 5999 Avon Belden, N. Ridgeville, OH 44039, (216) 327-9394, was the auctioneer. Highlights included a FADA 1000 bullet that went quickly for \$725 and a very nice, all original, unrestored Federal DX-58 which went for \$575. The items generally were in good to very good condition. A selection of the items follows:

### Battery Sets:

All American 44, 5-tube, rough, no tubes	.....\$10
Atwater Kent 10, Pooley type w/tubes, no tags	.....275
Bristol 1-tube amp	.....30
Crosley 51SD, no tubes	.....60
Crosley 52, 3-tube black leatherette portable w/tubes	75
Crosley 51, w/brass tip tubes, good filament	..75
Crosley Pup, w/brass base tipped WD-12, open	.....195
DeForest D12, w/loop, w/tubes, good filaments	.....125
DeForest D10, 4-tube set w/loop & tubes	.....225
DeForest F5, leatherette w/tubes	.....225
FADA Neutrodyne chassis	.....35
Federal 58, w/tubes	.....575
Harmonson, 4-tube set w/tubes, has internal wood horn, exc. cond., mfg. Grove City, Pa.	.....175
Kit sets, w/display tubes, vgc	.....40 to 55
Kodak, 2-tube chassis only w/two 199s	.....35
Michigan MRC3, no tubes	.....105
Operadio wood portable w/loop, w/6-199s & 1-120	..175
RCA Radiola II, chassis only, incomplete	..12.50
RCA Radiola 21, good cabinet, rough chassis	.....7.50
RCA Radiola 21, w/tubes, good cabinet	.....70
RCA Radiola IIIA, no tubes	.....55
RCA Radiola IIIA, w/four WD-11s, display tubes	.....120
RCA Radiola III, w/two WD-11s, display tubes	.....85
RCA Radiola IIIA Deluxe, large table model w/ internal wood horn, no tubes	.....130
RCA Radiola IV, w/tubes, works	.....325
RCA Radiola VIII superhet portable w/tubes	175
RCA Radiola 25, w/factory antenna coil & plug	.....150
Tri-City Radio, 1-tube Montgomery Ward set w/199	.....75
Zenith Super 7 w/tubes	.....60

### Cathedrals/Tombstones:

Atwater Kent 82 cathedral	.....275
Crosley 148 cathedral	.....50
GE K52 cathedral, vgc	.....90
Gloritone 99A cathedral	.....75
Philco 16 cathedral	.....135
Philco 16B cathedral	.....275
Philco 20 cathedral	.....95
Philco 20B cathedral, needs grille repair	.....75
Philco 50 cathedral	.....100
Philco 60 cathedrals	.....60, 65 & 125
Philco 70 cathedrals	.....175 & 250
Philco 80 cathedrals	.....65 & 95
Philco 84 cathedral, vgc	.....65
Philco 90 cathedral	.....375

Phoenix cathedral, no spkr., no tubes	.....55
Air Castle tombstone	.....35
Detrola tombstone	.....35
GE M61 tombstone	.....60
Grunow tombstone, chrome grille	.....110
Philco 620 tombstone	.....55
Philco 610 tombstone	.....60
Philco 66 tombstone	.....50
Silver-Marshall tombstone	.....60

### Novelty Sets:

Emerson jewelry box	.....90
Mitchell lamp	.....50
Trophy bowling ball, broken base	.....70
Ansley Paneltone, wall panel	.....15
Crosley Commuter pocket radio, tan swirled cover	..22.50

### Catalins:

Bendix 526MC, Catalin, green & black	.....400
FADA 1000, Catalin bullet, butterscotch	.....725
RCA 66X8, Catalin, maroon w/yellow swirl	...375

### Metal:

Arvin, white	.....30
Arvin 444A, white	.....40
Silvertone 1, white	.....30

### Bakelites and Plastics:

Admiral 5J22N, brown	.....5
Airline 62-288 Miracle	.....22.50
Airline 14BR526A, white, push button	.....22.50
Airline WG1637A, brown	.....5
Belmont 6D111, white	.....85
Belmont 6D111, brown	.....55
Bendix 0526A, black	.....17.50
Blaupunk 21053, brown & white	.....12.50
Crosley D25BE, grey	.....50
Crosley 10-138, maroon	.....65
Crosley 11-108U, maroon	.....25
Delco R1238, wood w/bakelite front and chrome/glass handle	.....25
Emerson Silver Jubilee model, brown	.....12.50
Emerson 560, maroon	.....5
Emerson 560A, maroon plastic	.....17.50

# Olde Tyme Radio Services Directory

## 1989 A.R.C. Edition, Part 4

COMPILED BY ANDREW MOORADIAN, 5 PRISCILLA LANE, WINCHESTER, MA 01890

*Antique Radio Classified has obtained permission from Andrew Mooradian to serialize the latest edition of his "Olde Tyme Radio Services Directory," with a few additions entered by A.R.C. Every month or so, another excerpt will be printed in A.R.C.*

*With the help of readers, Andrew hopes to make this directory the most comprehensive list of radio services available. Write to Andrew directly if you have a service you can provide, if you know of one that you can suggest, if you wish to change or delete your listing, or if you have any other suggestions. The 1989 Fourth Edition of his directory contains 69 service categories with 209 suppliers, plus a list of books and radio clubs (some suppliers appear in several categories). A copy of the directory can be obtained by sending \$2.50 to Andrew Mooradian at the above address. © 1988 Andrew Mooradian.*

**When writing to a service listed, please include a long SASE for reply and tell them that you saw their listing in the *Olde Tyme Radio Services Directory* in A.R.C.!**

**Within each category, the listings are alphabetical by two-letter state code.**

### **PUBLICATIONS (CONTINUED):**

## GUIDE TO OLD RADIOS POINTERS, PICTURES AND PRICES

BY DAVID & BETTY JOHNSON

**350 Illustrations – 3300 Prices – Completely New Book  
Perfect for the beginning collector!  
Useful for the experienced as well!**

From early crystal sets to AC sets, David and Betty Johnson explore the evolution of radio from its infancy to its heyday. The authors help collectors solve the difficulties of identifying and dating radios and provide pointers on where to find the best buys.

The price guide comprises half of the book and includes 3300 collectible radios and related items, with model names and numbers, descriptions, and price ranges for each. Also included in the price guide: amplifiers, speakers, test equipment, books & manuals.

**Price: \$16.95 – SHIPPING NOW!**

*U.S. Orders: Enclose \$1.50 shipping per order if under \$35.00. Mass. residents please add 5% sales tax. Allow 2-4 weeks to receive order after shipping date.*

*Foreign Orders: Surface shipping per book: \$5.00; allow 2-3 months.*

PICTURE THIS SCENE:

BOB: What I miss on this island most Bing, is that old portable radio we used to have when we took the girls to the beach. Remember, it had a good tone.

BING: Wouldn't do you any good Bob, You can't buy batteries for those old radios any more.

BOB: I'd heard that, but I also heard that a company in St. Louis sells a converter that lets you operate those set's on ordinary batteries that are available just about anywhere.

BING: Sounds to good to be true. What else do you know about it?

BOB: Well I also heard that the converter costs less than a couple of those big battery packs would if they were available today and that the recommended batteries cost around five dollars and last for months.

BING: Say Bob, I'm impressed. We've got to get one of those. Wow!

\*\*\*\*\* \* \*\*\*\*\*

Yes sir! You should have one too. For any battery set that calls for a 1.5 to 9 volt "A" battery and a 67 1/2, two 45's or a 90 volt "B" battery. Sets like the Zenith Transoceanics and other suitcase portables, so popular in the late 30's and the 40's and 50's. Also farm radios using similar batteries. The converter goes in the battery compartment along with 5 or 6 "D" cells, which are the only batteries required to operate the radio. Power to the converter and radio are controlled by the receiver switch but absolutely no radio modifications are required. The converter measures approximately 3 x 5 x 2 inches. It has plug connections and can be easily transferred from one radio to another. Suitable battery holders ( not supplied ) are recommended for installation.

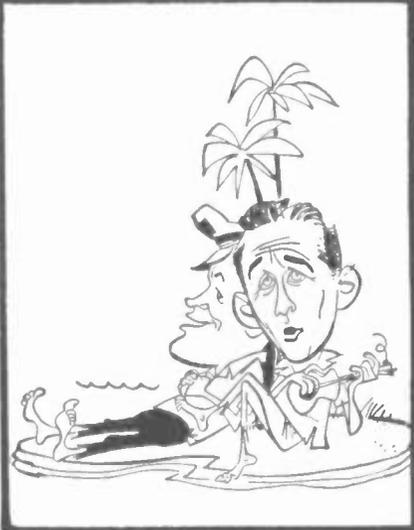

For sets requiring a 1.5 volt "A" battery, order # CVA-1 \$79.95  
For sets requiring a 6, 7.5 or 9 volt "A" battery, order # CVA-9 \$79.95

Installation kit: (consists of battery holders, connectors  
and instructions ) order # BK-1 \$9.95

**CLASSIFIED ADS . . . ONLY 15¢ PER WORD!**

**SSS P.O. Box 2224**

S. Hackensack, NJ 07606

# CLASSIFIED ADVERTISING POLICY

ONE FREE 20-WORD AD for subscribers in each issue; additional words are 10¢ each. See details below. All classified ads must be received (not just postmarked!) by the ad deadline. Late ads are held for the following issue. Please enclose correct payment with all ads. Stamps or cash are OK for small amounts. (Canadian and other foreign advertisers, please see "Payment" on page two for methods.) "Free words" cannot be accumulated from month to month; "free words" must be "taken" when ad is submitted.

Please write each ad on a separate sheet of paper, especially when included with other A.R.C. correspondence. A 3" x 5" card is suggested if the ad is short. Ads may be sent in advance; again, write each ad on a separate piece of paper and indicate the month (or two months) you want the ad to run.

Please write legibly and use both capital and small letters. Do not use dashes between words. Some numbers and letters can look alike, for example 1, l and I (the number one, the capital i and the small l.) Write the following characters clearly (especially in model numbers): 1, I and l; 0, O, o, Q and D; r and n; 6, b and G; V, U, u, v and Y; A and R; 5, S and s; 2, Z and z. We try to correct spelling errors, so when using an uncommon word or manufacturer which looks similar to a common word or manufacturer, note it so that we do not "correct" it. Editor's comments are in [brackets].

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be identified as such. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

Publisher reserves the right to edit ads without notification to the advertiser and to reject ads for any reason. Publisher is not responsible for errors due to illegibly written ads or for any other reason; if requested, the ad will be run in the next available issue at no charge for errors made by A.R.C. All ad rates and details are subject to change by the publisher. See page two for additional information.

## CLASSIFIED AD DETAILS

Classified ads must have a standard heading such as WANTED, FOR SALE, FOR TRADE, FOR SALE/TRADE, SERVICES, MESSAGE, HELP, etc. This heading is the only bold or all-capitalized words allowed in the ad. Capitalize only manufacturer names, model names, etc. Wanted and For Sale ads are mixed together to encourage the reading of all ads, including the Wanted ads. This standard ad format makes scanning the ads easier.

Before writing your ad, please look over the ads in a recent issue of A.R.C., and try to write your ad in the same style.

To encourage varied content of the ads, multiple insertions of the same classified ad are limited to two successive months. (To run an ad continuously, use a boxed classified or display ad.)

### Classified Ad Rates per Month

Subscribers:

- First 20 words: FREE\*
- 10¢ per word for extra words over 20 plus
- 10¢ per word for a shaded ad (count all words including free words).

\* Subscribers may take 20 free words on only one ad each month.

Non-Subscribers:

- 20¢ per word plus
- 10¢ per word for shaded ad.

Please do not forget to send in the extra 10¢ per word when your classified ad runs over the free 20 words; your payment will be appreciated, and it will help to keep A.R.C. healthy.

## BOXED CLASSIFIED AD DETAILS

*Deadline: 5th of the month!*

Boxed classified ads can run unchanged for three months or more. No words are free. Ads may be shaded and may include bold and all-capitalized words freely. The ad need not begin with For Sale, etc. Boxed classified ads are placed with the display ads on the lower portion of the page.

Minimum run is 3 months, prepaid.

### Boxed Classified Ad Rates per Month

Nonshaded ads:

- 12¢ per word for all words,\* none free, plus
- 10¢ per word for each bold word plus
- 10¢ per word for each all-caps word.

Shaded Ads:

- 22¢ per word for all words\* plus
- 10¢ per word for each all-caps word.
- Note: All words in shaded ads are bold.

Non-Subscribers:

- Add 15¢ per word to above costs.

\*Three of the total words can be bold-all-caps at no extra charge.

## PHOTO & DRAWING DETAILS

*The deadline for ads with drawings or photos is the fifth of the month.*

Drawings and photos are encouraged as the response to your ad is much larger and the reader knows better what you want or are selling. Send in your drawing or photograph and A.R.C. will reduce it or enlarge it as needed.

### Photo and Drawing Rates per Month

\$5.00 per month for each photo or drawing

## IMPORTANT — COUNTING WORDS — IMPORTANT

The standard headings: WANTED, FOR SALE, etc., count as one word each time used in an ad. Name, address and (one) telephone number, count as 6 words, regardless of length. Ham call letters and business name can be included in the 6 words and do not count extra. (Note: "Jim, (111) 111-1111" also counts as 6 words.) So, please include complete name and address in your ads.

Each additional word, abbreviation, model number or number group, extra telephone numbers, etc. count as one word. Hyphenated words count as two words.
