

ANTIQUE RADIO CLASSIFIED

VOLUME 6

SEPTEMBER 1989

NUMBER 9

REPAIRING THE RCA CATACOMB

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

ANTIQUE RADIO CLASSIFIED

Antique Radio Classified (ISSN:8750-7471) is published monthly, 12 times per year, by John V. Terrey, 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. Telephone: (508) 371-0512; 9:00 AM to 5:00 PM ET; machine answers phone at other times.

Annual subscription rates within the U.S. are \$20.00 by Second Class mail and \$30.00 by First Class mail.

Annual foreign rates. By air: Canada - \$32.00; Mexico - \$30.00; Other foreign countries - \$60.00. Surface mail: Canada - \$27.00; Other foreign countries - \$30.00 (Surface delivery to countries other than Canada may take two or more months and cannot be guaranteed.)

Two-year subscriptions are twice these rates and receive an extra month. Sample issues are available free on request.

PURPOSE. Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

WRITING TO ANTIQUE RADIO CLASSIFIED.

All correspondence should be sent to:

Antique Radio Classified

P.O. Box 2, Carlisle, MA 01741.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if (1) each is on a separate piece of paper, and (2) your name, address and SUB# is written on each.

Unfortunately, A.R.C. is not staffed to answer letters with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest to its readers

and will publish them as space permits. A.R.C. assumes that permission is given for publication of all correspondence received unless otherwise indicated.

GUARANTEE. You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

PAYMENT. Please send in full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds; checks drawn on a U.S. bank or money orders are preferred. Make check out to "A.R.C." U.S. stamps or cash are OK for small amounts. Canadian payers may send a Canadian check in U.S. funds, but must add \$1.00 (U.S.) for conversion costs. On request, subscriptions will be prorated to amount sent, minimum term is one year.

CHANGE OF ADDRESS. Please notify us 4 weeks in advance of a change of address. Send both your new and old address, and include your SUB# and effective date of your new address. Temporary address changes can be made also.

SUBMISSION OF MATERIAL. Antique Radio Classified welcomes and solicits information that pertains or relates to the radio collecting hobby. This may include articles, book reviews, radio photos, information on upcoming radio events, meetings, antique radio organizations, radio auctions and price reports, sources of old radio and restoration supplies, and other related and interesting material. All material submitted should be verified for accuracy and typewritten if possible. Unless prior arrangements are made, all submitted materials become the property of Antique Radio Classified and will not be returned.

MAILING OF ISSUES. A.R.C. is available by subscription in the U.S. either by First or Second Class mail (Second Class is the way most magazines are mailed). First Class copies usually are received by the fifth of the month; copies by Second Class mail, by the tenth. The mailing of First Class copies is staggered, with those living farthest away mailed on the first day, and local copies mailed the last day. All non-U.S. copies are mailed on the first day. All Second Class copies are mailed on the last day. Mailing is usually completed by the 25th of the month.

ETHICS. No person involved in the production of A.R.C. is to act on any information in the magazine until they receive their copy through the mail.

DISCLAIMER. The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

Antique Radio Classified subscription rates, frequency of publication, content, size and ad details and rates are subject to change at any time by A.R.C.

DISPLAY AND BUSINESS CARD ADS - DETAILS AND RATES

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and non-original items must be so identified. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

The deadline for display and business card ad artwork, payment and repeat requests is the first of the month. All advertising must be prepaid; see "Payment" paragraph above. Late ads will be run only if space and time permits. As artwork is reduced to 63% in the printing process, originals should be the artwork size listed below. Do not send in artwork on art board or send negatives. Ads should be typeset or typed neatly with a carbon ribbon. If you want us to prepare your ad, include the one-time cost listed below for A.R.C. to make up the ad.

"Tear sheets" will be sent only for 1/2 and full page ads, if requested when ad is submitted.

Business card ads are limited to one per advertiser.

Photos should be at an 85 line screen; otherwise, add

Page	Artwork Size (send in this size)		As Printed (size in magazine)		Cost for 1-month	Cost for 3-months	Cost for 6-months	One-time Cost for A.R.C. to make up Ad (if requested)
	H x W (inches)	H x W (inches)	H x W (inches)	H x W (inches)				
Full	12 3/8 (or 10 1/2)	x 7 1/2	7 3/4 (or 6 5/8)	x 4 3/4	\$70.00	\$189.00	\$355.00	\$24.00
1/2 H	5 1/4	x 7 1/2	3 5/16	x 4 3/4	35.00	94.00	178.00	12.00
1/2 V	11 3/4	x 3 9/16	7 7/16	x 2 1/4	35.00	94.00	178.00	12.00
1/4	5 1/4	x 3 9/16	3 5/16	x 2 1/4	18.00	48.00	91.00	6.00
1/8	2 5/8	x 3 9/16	1 5/8	x 2 1/4	9.00	24.00	46.00	3.00
Business Card	2	x 3 3/4	1 1/4	x 2 3/8	not avail.	15.00	28.00	2.00

\$5.00 per photo for screening. (Do not glue photos to artwork; submit separately.) If you are confused by these requirements and terms, please write or call A.R.C. before beginning to prepare your ad.

We will be happy to advise you on your ad ideas, estimate how much the ad will cost, recommend an ad size, etc.

We assume that advertisers want all ads which are submitted to run without delay; therefore, we will run the ad and bill for any additional work required for the ad to meet these specifications. A late ad will be run beginning with the next month.

The 3-month rates represent about a 10% discount, the 6-month rates, 15%. Clubs, write for discount rates.

EDITOR'S COMMENTS

Repair and restoration – the lead topics in this issue – are suggested by this month's cover. The article by Richard Foster, "Repairing the RCA Catacomb," should interest both those of you who don't know what a catacomb is as well as those who perhaps wish they didn't. (What is a catacomb? In some early RCA superhets, much of the circuitry was placed in a can, and the can was filled with wax; this assembly was called a catacomb.) Richard describes a novel method of repairing these units.

The article on restoration of an Atwater Kent Model 9A by Ron Ramirez follows. When a radio needs more than good cleaning, refinishing and extensive restoration are required. Some may argue with Ron's choice of restoration materials, but if, for example, new old stock capacitors are not available, one must improvise with modern materials. What are your thoughts on restoration materials for A.K. breadboards?

Richard Arnold has compiled a short article on the Zenith Radio Nurse, an early baby-sitting, intercom device. In a future issue we may have more information including a photo of the transmitter portion of the Radio Nurse.

Also in this issue is the final installment of the *Olde Tyme Radio Services Directory*. Included are some new listings which missed inclusion previously. Remember, if you have a service that you would like listed, write Andrew at the address shown in the article.

The *Photo Review* features its usual variety from a Pilot Lone Ranger bakelite set to a Radiola Grand.

Two club-related articles are included – the

first on the July auction and meet held by the New England Antique Radio Club in New Hampshire. A Crosley Pup and a Westinghouse AC Amplifier each brought \$125 for the high bids.

The *Club Spotlight* this month features the Vintage Radio and Phonograph Society (VRPS), Dallas, Texas. The VRPS annual convention comes up in early September, and the club is celebrating its 15th anniversary this year.

BONUS ISSUE FOR EARLY RENEWALS.

Please note a small change in our policy on the early renewal bonus issue. Beginning with October '89 expirations, to receive the bonus issue on your subscription, you must renew **before your expiration month** (that is before the end of the month before your expiration month); the policy in the past has been **before the end of your expiration month**.

RADIO MEETS. I just returned from *Radiofest* in Elgin, Illinois, where the turnout of collectors was tremendous. The highlight was a historical display of products of the Zenith Corporation from its early wireless days to modern television.

I continue to mention *Radiofest* and other meets, such as the October Antique Wireless Association conference, to encourage those of you who have not yet attended a meet to do so. Antique radio activities are now being held from New England to Florida, from Chicago to Texas and from Washington State to California. A day at a meet is the best way to get a broad understanding of antique radio collecting, to get a feel for prices and to meet other collectors.

So, I hope to see you at the AWA Canandaigua meet.

John V. Terrey

PRINTED WITHOUT COMMENT

The growth of the file on Mike Kirby of Panama City, Fl., (see A.R.C., April through August, pages 3) is slowing:

Summary of reports so far:

Persons receiving quotes:.....	56
Persons sending money:.....	35
Persons receiving refunds:.....	27
Refund checks which bounced:.....	16
Bounced checks not yet replaced with a money order:.....	5
Persons receiving merchandise:.....	0

The postal service is now conducting an investigation into Mr. Kirby's activities. If you would like to fill out an information form, write: Postal Inspector – Case No. 530-FC(2), P.O. Box 2707, Mobile, AL 36652-2707.

Please keep A.R.C. up-to-date on the status of your orders. A.R.C. will forward copies of your

letters to the U.S. Postal Inspection Service. If you send your information directly, please send a copy to A.R.C. also.

ON THE COVER

The cover this month shows the circuit diagram for the battery-operated RCA Radiola 28, the subject of this month's *Restoration Topics* article by Richard Foster. The "catacomb" circuitry is that below the large word "THE" on the cover. This circuitry, including coils, condensers and grid leak, is in a metal can filled with wax.

The illustration is from the *RCA Victor Service Notes for 1923 – 1928*. It also can be found in *Volume I of the Revised and Abridged Edition, 1923 – 1937*. These books, often called the *RCA Red Books*, are available in radio flea markets at reasonable cost and have hundreds of pages of data on all RCA receivers.

RESTORATION TOPICS

Repairing the RCA Catacomb

By RICHARD FOSTER

Many collectors own a first-generation RCA superheterodyne such as a Radiola 24, 25, 26, 28 or the ubiquitous AR 812 "portable" Super (sometimes mistakenly referred to as the Model VIII.) And many of us as newer collectors replaced the tubes in one of these sets at great expense only to find that there was another problem: an open circuit somewhere. The set looked nice on the shelf but wouldn't work.

These sets are a daunting prospect at first. Almost all the coils, resistors and condensers are enclosed in a metal can and as well potted in moisture-shielding wax. The whole being was called a "catacomb" (perhaps because of the labyrinthine passages followed by the electrons deep in the bowels.) Three apparent purposes were served: shielding, the exclusion of moisture and keeping the competition's eyes off the circuitry.

A lot of words have been written about catacomb repair. Most of these procedures (one such example is melting the wax out using the kitchen oven) are at best damaging, invasive, smelly, and leave irreversible signs of the work that has been done, a violation of any decent restoration ethic. This article attempts to describe a method that minimizes the damage done while providing a way to achieve operation with a maximum of ease and efficiency.

Catacomb problems are usually of three kinds:

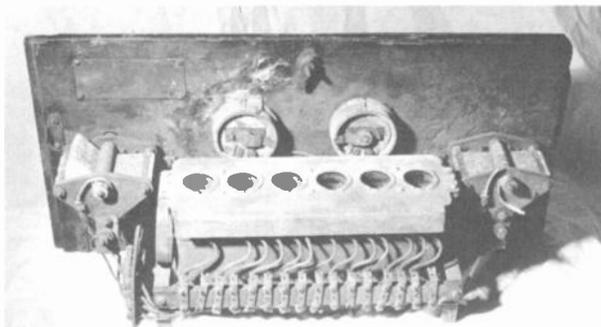

Figure 1. RCA Superheterodyne catacomb assembly from the Model AR-812 Superhet.

- 1) A shorted detector/plate by-pass condenser (located right under the cover);
- 2) Open audio transformers;
- 3) Most common: opens in high-frequency circuits caused by shrinkage of the wax causing breaks in the hair-like wire leads.

Most people have been unpotting catacombs by melting the wax which then allows them to solder the leads and put the set back to work

Before you unsolder and unpot a catacomb, consider this: anyone looking into it can see that it's been invaded; if you put the wax back, the chances are that the same problems will recur as the wax cools and shrinks. If there was another way, would you use it? Here is a way that is relatively easy and includes a short-hand chart for checking continuity.

STEP BY STEP CATABOMB REPAIR

1. Check for opens referring to Charts 1 or 2 (a shorted "phone" condenser won't show up here). The 6-tube catacomb photographed and used in this example, from a Model AR-812 Superhet, had an open grid, terminals G3 to Terminal 6.

2. DON'T UNSOLDER THE LEADS. To open the catacomb, remove the screws at the tabs on the ends of the can. To cut the seals, tap gently on a single-edged razor blade between the can and the mounting as shown in Figure 2. Save

Figure 2. A single-edged razor and hammer is used to cut the seals.

the seals carefully. The bottom half of the seals will remain in the mounting.

Tip the catacomb out for access as shown in Figure 3.

3. Remove the cover screws and the cover; using a bit of brass and a light hammer, tap the can on its edges as shown in Figure 4. I use the crimps, working alternately at one end and then the other. With care you can drive the can right off the wax block without damage.

4. Using your chart test results and the tube basing diagrams, follow the hair-like leads, melting the wax as you go with a soldering iron. See Figures 5 and 6. The key tool is a small soldering iron plugged into a variac to melt the wax at a temperature that avoids smoking. (I've used my gun, but it smokes.) Start from the screws to which they are soldered. Follow the lead until you find the break. If you happen to be able to have an unpotted sample catacomb, it's a big help for comparison. Figure 7 shows an unpotted catacomb.

5. After repairing any breaks, recheck for continuity using the chart. If at this point you have an open audio, it will need repair. I have used the spark treatment on numerous audios, but my experience has been that the "weld" purported to take place is fiction, and that over the long haul the transformer either gains resistance or opens again and has poor fidelity in any case. The alternatives are: (a) changing the circuit to resistance coupling with a slight loss of gain; (b) using one of the miniature audios that could fit in a cavity in the wax without removing the old transformer; (c) removing and rewinding (or replacing) the original audio.

To maintain the external appearance of the set, flow some remelted potting wax (use a bit of foil as a dam under the tube socket) to cover the repairs.

6. Put tubes in the set and test your catacomb. If it works, go to step No. 7. If not, go back to step No. 1 and recheck.

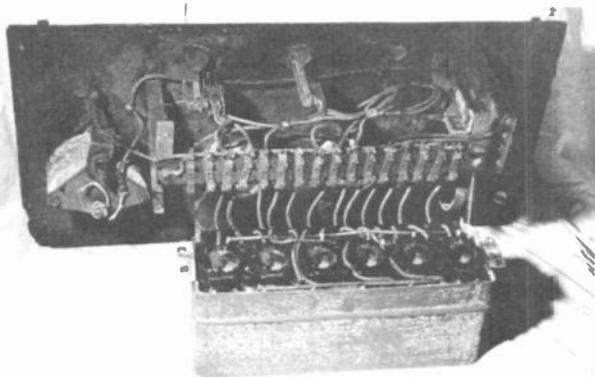

Figure 3. Tip the catacomb out for access.

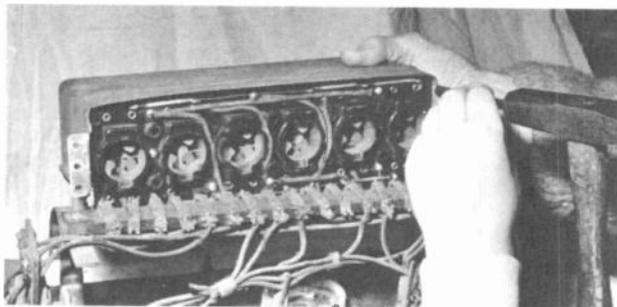

Figure 4. Tap the can on its edges using a bit of brass and a hammer.

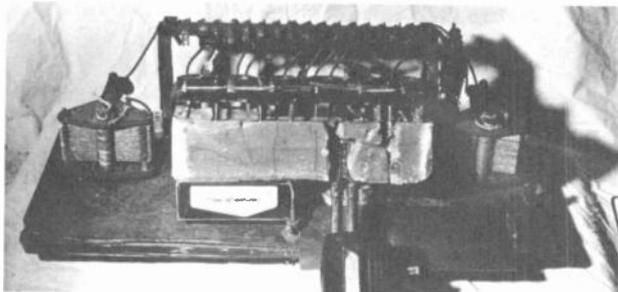

Figure 5. Melt the wax away from the leads as you look for the break.

Figure 6. Suspect leads are exposed by selectively melting wax.

(Continued on next page)

(Catacombs, continued)

7. To replace the can, squeeze it gently back on. I try to avoid tapping which can cause bits of wax to come loose and fall to the bottom of the can and keep the wax block from fully sliding to the bottom of the can. If you must tap, shield the can from direct hammer blows with a wood block.

8. Reassemble the cover and the mountings. A bit of contact cement or a drop of clear epoxy will keep the seals in place thus assuring 100% original appearance.

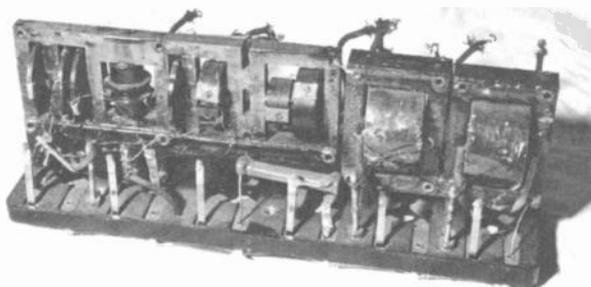

Figure 7. An unpotted catacomb.

In this catacomb I started at the grid and fol-

lowed the lead to the coil about 1/2" where I found a break. I added a bit of wire to tie the lead to the post leading to #6, and I was done.

(Adapted by R. Foster from RCA Victor Service Notes for 1923 - 1928)

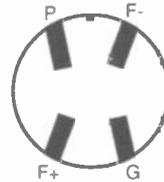

For two or three breaks this technique is easier than unpotting, leaves the external appearance intact, and keeps the house smelling country-fresh.

In spite of careful checking, errors may have crept into the continuity chart, and the author will be indebted to any readers who can locate and correct them.

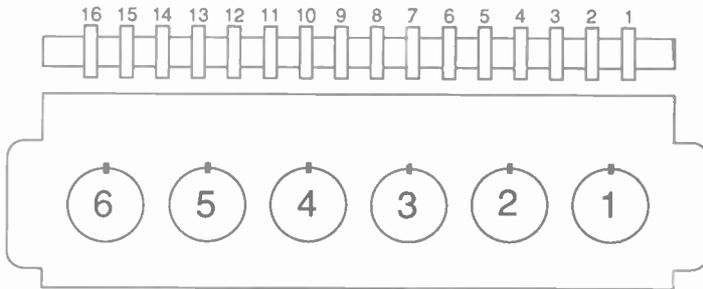

I would like to thank Charles Fisher who first suggested this technique to me.

[Other catacomb and test charts can be found in *RCA Victor Service Notes for 1923-1928*, often called the *Red Books*. Editor]

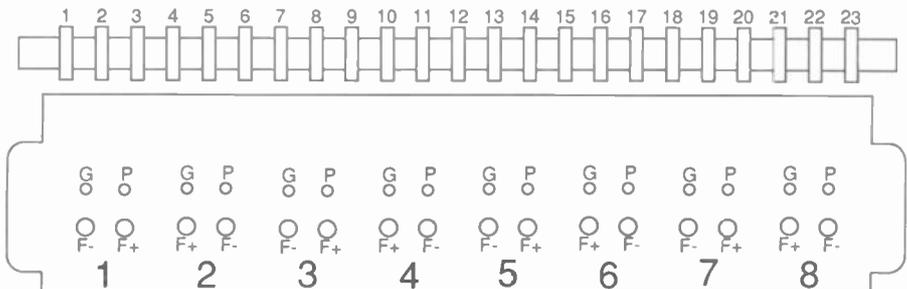

(Richard Foster, 12 Shawmut Ave., Cohituate, Ma. 01778)

Tube base diagram

Radiolas 24 & 26 and Superhet AR-812

Radiola 28 - DC model only

Figure 8. The top view of the catacomb, the tube locations, tube diagrams and terminal strip numbers are shown for the Radiolas 24, 26 & 28 and the Superhet Model AR-812. To identify which end is tube 1 and terminal 1, orient the catacomb so that the wide part of the top is away from you as in the diagrams above. Follow the wires from the tube 1 end to find terminal 1. Note that tube 1 and terminal 1 are on the left for the Radiola 28 but on the right for the others. Also note that the filament polarity on the Radiola 28 alternates back and forth as you move from tube to tube. The polarity for the other models remains the same.

RESTORATION TOPICS

Restoring the Atwater Kent Model 9A Breadboard

BY RON RAMIREZ

How rare are Atwater Kent breadboards? Certainly, you don't see one every day. If you do not have one in your collection, you might expect to come across one only at the antique radio swap meets. But if you keep looking, you may be surprised where you might find one.

I acquired the subject of this article right here in Providence, Kentucky, from an antique and junk dealer for the modest price of \$100. The set was complete, although very dirty from years of storage, and included a complete set of burned-out UX-201A tubes.

Atwater Kent made three versions of the Model 9. The original Model 9 (like the AK "Tuned R.F. Regen. Det." set on page 75 of *Vintage Radio*) used two open type tuners and had binding posts at the back of the board for battery connections. The Model 9A (shown here in Figure 1) was nearly identical to the Model 9 except that it had a battery cable instead of binding posts for battery hook-up. The later version, the Model 9C (also shown on page 75 of *Vintage Radio*), used variable condensers for tuning. All three versions used four tubes.

If you have a Model 9A which needs more than just a cleaning, let me share my restoration with you. All the components should be removed from the board and each individual component cleaned as thoroughly as possible, the board refinished, and then reassembled. [I suggest refinishing only if the finish is completely gone. Eductor.] This is not as hard as it may seem. Before

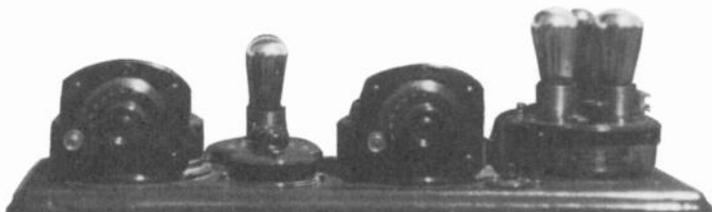

Figure 1. The Author's Restored Atwater Kent Model 9A.

disassembling anything, study the schematic diagram (see Figure 2). Also look over Figure 3 to see how the wires underneath the board connect to the various components.

When cleaning grime from the variometers, use extreme caution as the windings have a tendency to start coming off if you are not careful. If you run into this problem, carefully glue the loose windings back into place.

Notice the 0.2 μ F capacitor (C3) in Figure 3. This is a large fixed paper capacitor which looks like it is covered in black tissue. This capacitor on my set was badly dry-rotted when I purchased the radio; in fact, it fell apart when I began to restore the set. This is fairly easy to fix. Use a 0.22 μ F, 200-volt mylar capacitor as a replacement. If the leads come out at right angles to the capacitor body (such as a Sprague "Orange Drop"), bend the leads so that they stick out from either end of the capacitor. Then cut some Kleenex or toilet tissue to the same width as the original capacitor body, and wrap the tissue around the new capacitor until its size matches the original. Use some black electrical tape to wrap around the middle of the unit to hold the tissue in place. Finally, use a black magic marker to color the tissue black. The best way to do this is to hold the marker against the tissue in differ-

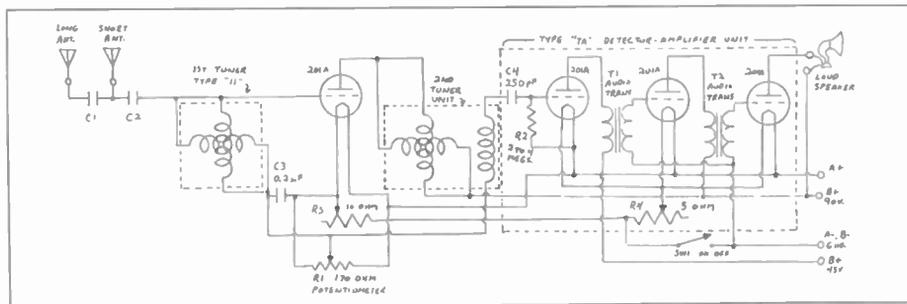

Figure 2. Schematic Diagram of Atwater Kent Model 9A

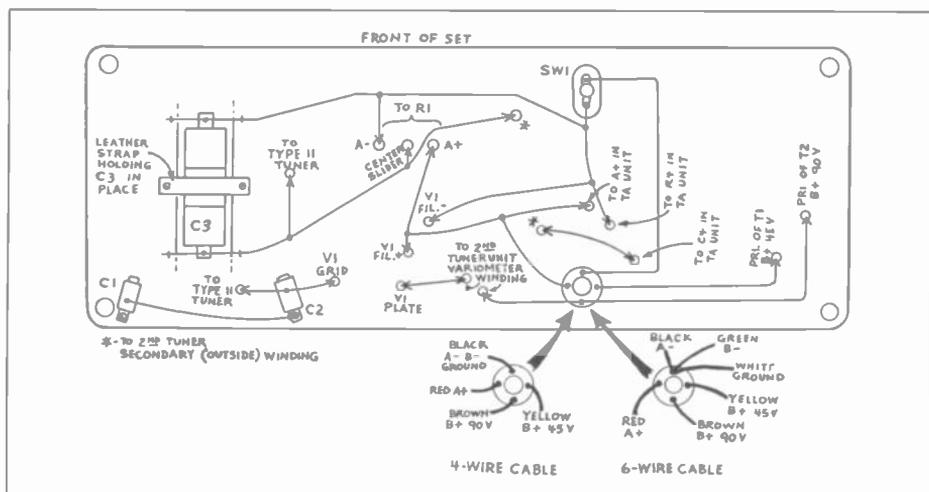

Figure 3. Bottom View of Breadboard and Battery Cable Hook-up for Atwater Kent Model 9A

ent places, and let the black ink soak in until the entire unit is black. The wires coming out of each end of the unit then hook into the circuit as shown in Figure 3.

If you have to replace C3, you will probably need to replace the strap which goes across the body of C3 to hold it in place under the board (see Figure 3). If you need to replace this strap, cut a piece of black leather to the proper size and mount it as shown in Figure 3.

Once the board has been refinished and the parts cleaned as much as possible, the radio can be reassembled. Remember, the Type 11 tuner (the variometer without the coil wound around the outside of its body) goes on the extreme left of the board. The variometer with the coil wound on the outside of it goes in the middle of the board.

Before you mount the three-tube detector-amplifier unit back in place, open it up and check the two audio transformers. The two are mounted in a hard tar-like substance in the base of this unit. You will only see the eight leads coming out of the "tar." Use the schematic diagram to identify each transformer and perform a continuity check on each. If one or both are bad, you can remove the tar and replace the faulty transformer(s), or if you have experience in applying high voltage to old audio transformers, try that method of repair. If you replace the old transformers, replacing the tar is a matter of personal taste and desire for authenticity. (I replaced both transformers in my set since both were bad, and did not replace the tar.)

There are some exposed wires on top of the breadboard which have loose-fitting black rubber insulation. If the insulation on these wires is dry-rotted and crumbling, it may be approximated with black insulation stripped off 12 or 14 gauge electrical wire, cut to the proper lengths, and slipped over the wires in place of the old insulation.

Finally, check your battery cable. If it is in bad shape, reproduction battery cable is available.

Sources for this cable advertise regularly here in A.R.C. Be sure to notice if your battery cable has four or six wires. This Model 9A had 4-wire battery cable. However, an old Atwater Kent breadboard instruction manual shows 6-wire cable used on the 9A. Figure 3 shows how to hook your battery cable up, whether it be 4-wire or 6-wire.

Now it's time to try your set out. Tuning is accomplished by setting the R1 potentiometer which is mounted in front of the first tube (don't confuse it with the filament rheostat which is part of the first tube socket) to the center of its travel, then tuning with both variometers. Once a signal is picked up, the potentiometer is to be adjusted for best signal strength.

One word of caution: Don't expect your AK 9A to play as well as the AK 20 Compact I wrote about in the Oct.1988 issue of A.R.C. The 9A does not work very well!

In spite of its poor performance, the AK 9A (or any AK breadboard for that matter) makes a nice addition to any collection. However, if you decide to go out and purchase one, be warned: these sets have a current market value far above the \$100 I paid for mine. I have seen these type sets go for \$350 and up.

For more information on AK breadboards, you may be interested in a reprint of the Atwater Kent breadboard instruction book. This booklet contains battery hook-ups and operating instructions for Models 5, 9, 9A, 9C, 10, 10A, 10B and 12 as well as No. 4052 and 4066. This reprint is of high quality and is very useful to owners of AK breadboards. Collectors who do not own an AK breadboard may also be interested in this booklet as it may help them identify a particular model (pictures of the models listed above are included in it). In fact, it was by using this booklet that I identified my set as being a 9A. Reprints are available for \$3.50 each from Arthur W. Aseltine, 345 Glenwood St., Ann Arbor, MI 48103. You may write to Mr. Aseltine for more information.

(Ron Ramirez, 807 Maple St., Providence, KY 42450)

PHOTO REVIEW

This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other radio-related items (covering the years 1900-1950's) from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short description must be included with each submitted item. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.

LONE RANGER RADIO - Pilot Radio Co. manufactured this Model B1151 in 1939. The cabinet is of brown bakelite with a handle on top. Pictured on the dial is an illustration of the Lone Ranger riding Silver. It is a superhet circuit using 5 tubes: 1- 65K7, 1- 6SQ7, 1- 25L6G and 1- 65A7. (Jane Walackas - Whitman, MA)

CRYSTAL SET - This is the 1928 Model Baby by Horny of Vienna. It has a bakelite case but was also known to appear in a wood case. It was a popular inexpensive European set. It uses condensator tuning. (Erwin Macho - Vienna, Austria)

FADA CATHEDRAL - This Model 43 receiver was my 1000th radio! It has seven tubes, a TRF circuit with push/pull output. The front is of Repwood-type of material. (Ron Boucher - Goffstown, NH)

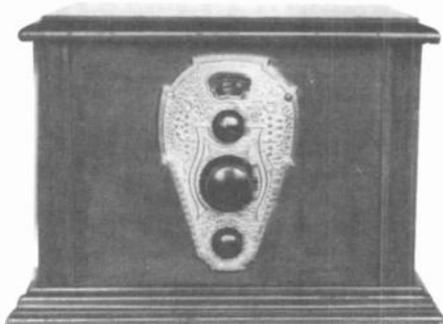

MODEL VIII PORTABLE - Crosley offered their Model VIII in two versions: the standard table cabinet style and this oak portable. It sold for \$96 which included 3 tubes, phones, batteries and antenna wire wound around a wooden frame. (Dave Crocker - Lyndonville, VT)

PHOTO REVIEW

RADIOLA GRAND - This highly sought after early receiver was manufactured by RCA in 1922. It uses four WD-11 tubes and has one dial tuning in a phonograph style cabinet. Originally it sold for \$350. (Robert E. Lozier - Monroe, NC)

1926 MOHAWK - This TRF receiver uses six O1-A tubes. It features one-dial tuning, which most manufacturers were advertising at the time. (Robert E. Lozier - Monroe, NC)

DISPLAY SIGN - Advertising piece by Atwater Kent for their dealers in the 1920s. The image is the same as the metal plate used on the Atwater Kent Model 35 radio. (John C. Allport - Cary, IL)

RCA MODEL 110 CATHEDRAL - This smaller 1934 set has quality finishing touches on the cabinet. Four knobs included a band switch for "police calls". (Walter V. Worth - Wollaston, MA)

STYLISH PORTABLE - This Zenith Model K412-R was manufactured in 1953. (Frank R. White - Olathe, KS)

WITH THE COLLECTORS

Zenith's Radio Nurse

BY RICHARD ARNOLD

"Why worry about the baby," the ad says. "You can hear he is sleeping peacefully. An electric baby watcher." In June of 1937, Zenith thus advertised its Radio Nurse in *Radio News* magazine.

The story behind the development of Zenith's Radio Nurse: It seems someone named E. F. McDonald Jr. was having a problem with his daughter Marianne when she would wake up from a nap on his yacht - the "Mispah." The heavy doors on the boat would suppress her cries, and no one would come to her aid. So, Commander McDonald thought there should be some way to hear his daughter's every move without someone in constant attendance. He tried other communications systems but to no avail. He then, through much experimentation, developed a super-sensitive wired radio device. You could plug it into any light fixture in a nursery or sick room, and at maximum volume a pin dropping on a glass table sounded like a spike falling. Faint sounds like foot steps or rustling of covers could be heard quite well.

Why worry about the baby? You can hear he is sleeping peacefully. An electric babywatcher.

Wired radio transmits sounds picked up on mike over the house light lines.

Loudspeaker with concealed amplifier brings sounds right to your seat.

Figure 1. Zenith Radio Nurse advertisement that appeared in the June 1937 issue of "Radio News"

The unit consisted of two separate systems. The pick-up unit had three tubes: 1-79, 1-41 and 1-84 while the speaker unit had 1-6F5G, 1-41 and 1-84. The sets had adjustable frequencies so that two or more could be used in the same building.

The information for this article came from *Radio News*, June 1937, page 46.

(Richard Arnold, PO Box 275, Lone Grove, OK 73443)

Olde Tyme Radio Services Directory

1989 A.R.C. Edition, Part 5

COMPILED BY ANDREW MOORADIAN, 5 PRISCILLA LANE, WINCHESTER, MA 01890

Antique Radio Classified has obtained permission from Andrew Mooradian to serialize the latest edition of his "Olde Tyme Radio Services Directory," with a few additions entered by A.R.C. Every month or so, another excerpt will be printed in A.R.C.

With the help of readers, Andrew hopes to make this directory the most comprehensive list of radio services available. Write to Andrew directly if you have a service you can provide, if you know of one that you can suggest, if you wish to change or delete your listing, or if you have any other suggestions. The 1989 Fourth Edition of his directory contains 69 service categories with 209 suppliers, plus a list of books and radio clubs (some suppliers appear in several categories). A copy of the directory can be obtained by sending \$2.50 to Andrew Mooradian at the above address. © 1988 Andrew Mooradian.

When writing to a service listed, please include a long SASE for reply and tell them that you saw their listing in the *Olde Tyme Radio Services Directory* in A.R.C.!

Within each category, the listings are alphabetical by two-letter state code.

AUCTION & MEET REPORT

New England Antique Radio Club Summer Swap & Sell Meet and Auction July 22, 1989 – Nashua, New Hampshire

REPORTED BY SUE BUNIS

Nearly 400 people attended the New England Antique Radio Club (NEARC) Summer Swap & Sell Meet and Auction Saturday, July 22, at Resurrection Center, Nashua, N.H.

Club members from throughout New England, New York and New Jersey participated in the morning Swap & Sell Meet with over sixty tables of antique and collectible radios, TVs, parts, books, magazines and related items for sale or trade. Per "Here Come the Consoles" by Dave Crocker [A.R.C. July 1989], a record number of consoles and other large sets were displayed for sale throughout the room. The popular radio contests featured TRF receivers and pre-WWII crystal sets; contest chairman Lenny Arzooonian reported a record number of votes.

Over sixty people registered for the afternoon auction which offered 230 lots up for bid. Well known New Hampshire auctioneer, Col. Ken Martin, generated over \$2,100 in sales, including the following highlights:

Philco Model 39-70, tombstone, battery	\$15
Federal 110, chassis & panel only, 1924	45
GE Model 14T010, TV, metal case	12
Firestone S-7426-6, table, white bakelite, cracks	12
Kent 422, midget, ivory metal cabinet	32.50
GE Model E-72, table, wood, multi-band	8
GE L-652, table, wood, push buttons	10
Truetone W691C, table, radio/phone	5
Kadette, Model 96, table, AM/SW	7
Zenith 5G03, clock radio, brown bakelite	13
Silvertone 1671, table, wood, push buttons	9
Emerson B206, table, bakelite	10
Philco Model 47-204	9
Silvertone 3351, table, bakelite	15

Leonard Arzooonian's Grebe Synchrophase 7 took first place in the TRF receiver contest.

Tied for third place in the TRF receivers contest was Al Monroe's Federal Model 57 and Dick Desjarlais' Jackson Bell Model 26 cathedral.

Silvertone 6271, table, battery/AC	10
Philco 625, tombstone, working	75
Hallicrafters S-38, SW, working	23
Wall telephone, novelty radio, working	24
Hallicrafters, Model SX-110, working	30
RCA 8T241, TV with stand, working	75
Philco 89, console, untested	45
Silvertone Model 2761	17
Vogue speaker	41
AK Model E speaker	15
RCA service manual, 1931-1932	8
RCA service manual, 1933	7
Crosley Model 5-38	20
Crosley Pup	125
Westinghouse Radiola, AC amp	125
Westinghouse, Aeriola Sr.	75
All American 6, console, battery	34.50
Kolster, Model 6D, battery, no tubes	19
Kolster Model 6J, AC, with tubes	21
Majestic Model 90, console	15
Meissner, signal shifter, untested, 1941 w/manual	10
AK Model 55, working	20
AK Model 40	15
RCA Model 46X13	25
Westinghouse Little Jewel, working	50
Zenith Model 5678, console, working, w/schematics	16
Philco Model PT3, table, wood, working	25
Philco Model 46-250, bakelite, working	10
RCA Model X551, working	16
Crosley Model 6H-2, tombstone	21
Crosley Model 66TA, bakelite	10
Philco Model 60, cathedral, battery	41

(NEARC, 422 Day St., Manchester, NH 03104)

CLUB SPOTLIGHT

The Vintage Radio & Phonograph Society – VRPS

Dedicated to the Historical Preservation of Early Wireless and Phonograph

The Vintage Radio and Phonograph Society, Inc. (VRPS) was founded in the fall of 1974 by a handful of collectors in Dallas, Texas. A few veteran radio collectors formed the club one October evening fifteen years ago at the Electronics Center in Dallas. These collectors tossed in \$1 each for expenses for this radio and phonograph club for the Dallas and Fort Worth area. VRPS has grown to a membership of 300.

One of the first "Newsletter" mailings, on January 13, 1975, consisted of a few notes on the next meeting and a small membership list. Originally called the Southwest Vintage Radio & Phonograph Society, the name was changed in later years to VRPS to reflect the change from growth beyond a purely regional club. In 1975, VRPS sponsored its first convention.

This active club has monthly meetings and swapfests. Yearly events include a spring and fall

V R P S

15th

Aniversary 1974 - 1989

day-long swapfest, spring auction, and an annual convention with a contest, auctions, banquet and awards ceremony. Over the years the convention auction has attracted some very scarce equipment and over \$20,000 in sales. Club publications are the quarterly six- to twelve-page journal *The Reproducer* and *Soundwaves* – a newsletter for meeting notices, ads and new members – which is published on months between the quarterly journal.

This year's 14th annual convention – VRPS/AWA Convention '89 – will be held September 8, 9, 10 at the Holiday Inn Dallas Southwest in Duncanville, Texas, a suburb of Dallas. Events scheduled are three auctions, an old equipment contest, an RCA film, a flea market, awards, a banquet and an anniversary celebration. This year the convention has two general auctions and one silent auction.

NEW!

GUIDE TO OLD RADIOS POINTERS, PICTURES AND PRICES

BY DAVID & BETTY JOHNSON

350 Illustrations – 3300 Prices – Completely New Book
Perfect for the beginning collector!
Useful for the experienced as well!

From early crystal sets to AC sets, David and Betty Johnson explore the evolution of radio from its infancy to its heyday. The authors help collectors solve the difficulties of identifying and dating radios and provide pointers on where to find the best buys.

The price guide comprises half of the book and includes 3300 collectible radios and related items, with model names and numbers, descriptions, and price ranges for each. Also included in the price guide: amplifiers, speakers, test equipment, books & manuals.

Price: \$16.95 – SHIPPING NOW!

U.S. Orders: Enclose \$1.50 shipping per order if under \$35.00. Mass. residents please add 5% sales tax. Allow 2-4 weeks to receive order after shipping date.

Foreign Orders: Surface shipping per book: \$5.00; allow 2-3 months.

Send order with payment to:

CLASSIFIED ADS . . . ONLY 15¢ PER WORD!

SSS P.O. Box 2224

S. Hackensack, NJ 07606

CLASSIFIED ADVERTISING POLICY

ONE FREE 20-WORD AD for subscribers in each issue; additional words are 10¢ each. See details below. All classified ads must be received (not just postmarked!) by the ad deadline. Late ads are held for the following issue. Please enclose correct payment with all ads. Stamps or cash are OK for small amounts. (Canadian and other foreign advertisers, please see "Payment" on page two for methods.) "Free words" cannot be accumulated from month to month; "free words" must be "taken" when ad is submitted.

Please write each ad on a separate sheet of paper, especially when included with other A.R.C. correspondence. A 3" x 5" card is suggested if the ad is short. Ads may be sent in advance; again, write each ad on a separate piece of paper and indicate the month (or two months) you want the ad to run.

Please write legibly and use both capital and small letters. Do not use dashes between words. Some numbers and letters can look alike, for example 1, l and I (the number one, the capital i and the small L.) Write the following characters clearly (especially in model numbers): 1, l and I; 0, O, o, Q and D; r and n; 6, b and G; V, U, u, v and Y; A and R; 5, S and s; 2, Z and z. We try to correct spelling errors, so when using an uncommon word or manufacturer which looks similar to a common word or manufacturer, note it so that we do not "correct" it. Editor's comments are in [brackets].

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be identified as such. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

Publisher reserves the right to edit ads without notification to the advertiser and to reject ads for any reason. Publisher is not responsible for errors due to illegibly written ads or for any other reason; if requested, the ad will be run in the next available issue at no charge for errors made by A.R.C. All ad rates and details are subject to change by the publisher. See page two for additional information.

CLASSIFIED AD DETAILS

Classified ads must have a standard heading such as WANTED, FOR SALE, FOR TRADE, FOR SALE/TRADE, SERVICES, MESSAGE, HELP, etc. This heading is the only bold or all-capitalized words allowed in the ad. Capitalize only manufacturer names, model names, etc. Wanted and For Sale ads are mixed together to encourage the reading of all ads, including the Wanted ads. This standard ad format makes scanning the ads easier.

Before writing your ad, please look over the ads in a recent issue of A.R.C., and try to write your ad in the same style.

To encourage varied content of the ads, multiple insertions of the same classified ad are limited to two successive months. (To run an ad continuously, use a boxed classified or display ad.)

Classified Ad Rates per Month

Subscribers:

- First 20 words: FREE*
- 10¢ per word for extra words over 20 plus
- 10¢ per word for a shaded ad (count all words including free words).

* Subscribers may take 20 free words on only one ad each month.

Non-Subscribers:

- 20¢ per word plus
- 10¢ per word for shaded ad.

Please do not forget to send in the extra 10¢ per word when your classified ad runs over the free 20 words; your payment will be appreciated, and it will help to keep A.R.C. healthy.

BOXED CLASSIFIED AD DETAILS

Deadline: 5th of the month!

Boxed classified ads can run unchanged for three months or more. No words are free. Ads may be shaded and may include bold and all-capitalized words freely. The ad need not begin with For Sale, etc. Boxed classified ads are placed with the display ads on the lower portion of the page.

Minimum run is 3 months, prepaid.

Boxed Classified Ad Rates per Month

Nonshaded ads:

- 12¢ per word for all words,* none free, plus
- 10¢ per word for each bold word plus
- 10¢ per word for each all-caps word.

Shaded Ads:

- 22¢ per word for all words* plus
- 10¢ per word for each all-caps word.

Note: All words in shaded ads are bold.

Non-Subscribers:

Add 15¢ per word to above costs.

*Three of the total words can be bold-all-caps at no extra charge.

PHOTO & DRAWING DETAILS

The deadline for ads with drawings or photos is the fifth of the month.

Drawings and photos are encouraged as the response to your ad is much larger and the reader knows better what you want or are selling. Send in your drawing or photograph and A.R.C. will reduce it or enlarge it as needed.

Photo and Drawing Rates per Month

\$5.00 per month for each photo or drawing

IMPORTANT — COUNTING WORDS — IMPORTANT

The standard headings: WANTED, FOR SALE, etc., count as one word each time used in an ad. Name, address and (one) telephone number, count as 6 words, regardless of length. Ham call letters and business name can be included in the 6 words and do not count extra. (Note: "Jim, (111) 111-1111" also counts as 6 words.) So, please include complete name and address in your ads.

Each additional word, abbreviation, model number or number group, extra telephone numbers, etc. count as one word. Hyphenated words count as two words.
