

ANTIQUE RADIO CLASSIFIED

VOLUME 6

DECEMBER 1989

NUMBER 12

SEASON'S GREETINGS

THE NATIONAL PUBLICATION FOR BUYERS AND SELLERS
OF OLD RADIOS AND RELATED ITEMS - PUBLISHED MONTHLY

ANTIQUE RADIO CLASSIFIED

Antique Radio Classified (ISSN:8750-7471) is published monthly, 12 times per year, by John V. Terrey, 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. Telephone: (508) 371-0512; 9:00 AM to 5:00 PM ET; machine answers phone at other times.

Annual subscription rates within the U.S. are \$20.00 by Second Class mail and \$30.00 by First Class mail.

Annual foreign rates. By air: Canada - \$32.00; Mexico - \$30.00; Other foreign countries - \$60.00. Surface mail: Canada - \$27.00; Other foreign countries - \$30.00 (Surface delivery to countries other than Canada may take two or more months and cannot be guaranteed.)

Two-year subscriptions are twice these rates and receive an extra month. Sample issues are available free on request.

PURPOSE. Antique Radio Classified is published for people involved in the radio collecting hobby. Its purpose is to stimulate growth of the hobby through the buying, selling and trading of radios and related items, and to provide a monthly forum for the interchange of ideas and information.

WRITING TO ANTIQUE RADIO CLASSIFIED.

All correspondence should be sent to:

Antique Radio Classified
P.O. Box 2, Carlisle, MA 01741.

Your ads, renewals, letters, etc. can be handled faster and more efficiently if (1) each is on a separate piece of paper, and (2) your name, address and SUB# is written on each.

Unfortunately, A.R.C. is not staffed to answer letters with questions about antique radios or requests for advice. However, A.R.C. does solicit letters of interest to its readers

and will publish them as space permits. A.R.C. assumes that permission is given to edit and to publish all correspondence received unless otherwise indicated.

GUARANTEE. You may cancel your subscription at any time and receive a pro rata refund for issues not yet mailed. If errors to ads are made by A.R.C., upon request a free correction will be run in the next available issue.

PAYMENT. Please send in full payment with your order or ad. A.R.C. does not carry accounts; all subscriptions, ads, etc. must be prepaid. Pay in U.S. funds; checks drawn on a U.S. bank or money orders are preferred. Make check out to "A.R.C." U.S. stamps or cash are OK for small amounts. Canadian payers may send a Canadian check in U.S. funds, but please add \$1.00 (U.S.) for conversion costs. On request, subscriptions will be prorated to amount sent, minimum term is one year.

CHANGE OF ADDRESS. Please notify us 4 weeks in advance of a change of address. Send both your new and old address, and include your SUB# and effective date of your new address. Temporary address changes can be made also.

SUBMISSION OF MATERIAL. Antique Radio Classified welcomes and solicits information that pertains or relates to radio history or collecting. This may include articles, book reviews, photos, information on upcoming radio events, meetings, antique radio organizations, radio auctions and price reports, sources of old radio and restoration supplies, and other related and interesting material. All material submitted should be neat and verified for accuracy. Unless prior arrangements are made, all submitted materials may be edited, become the property of Antique Radio Classified and will not be returned.

MAILING OF ISSUES. A.R.C. is available by subscription in the U.S. either by First or Second Class mail (Second Class is the way most magazines are mailed). First Class copies usually are received by the fifth of the month; copies by Second Class mail, by the tenth. The mailing of First Class copies is staggered, with those living farthest away mailed on the first day, and local copies mailed the last day. All non-U.S. copies are mailed on the first day. All Second Class copies are mailed on the last day. Mailing is usually completed by the 25th of the month.

ETHICS. No person involved in the production of A.R.C. is to act on any information in the magazine until they receive their copy through the mail.

DISCLAIMER. The publisher is not responsible for any buying and selling transactions incurred, or for any other use of the contents of this publication.

Antique Radio Classified subscription rates, frequency of publication, content, policies, size and ad details, and rates are subject to change at any time by A.R.C.

DISPLAY AND BUSINESS CARD ADS - DETAILS AND RATES

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be so identified. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

The deadline for display and business card ad artwork, payment and repeat requests is the first of the month. All advertising must be prepaid; see "Payment" paragraph above. Late ads will be run only if space and time permits. As artwork is reduced to 63% in the printing process, originals should be the artwork size listed below. Do not send in artwork on art board or send negatives. Ads should be typeset or typed neatly with a carbon ribbon. If you want us to prepare your ad, include the one-time cost listed below for A.R.C. to make up the ad.

"Tear sheets" will be sent only for 1/2 and full page ads, if requested when ad is submitted.

Business card ads are limited to one per advertiser. Photos should be at an 85 line screen; otherwise, add

\$8.00 per photo for screening. (Do not glue photos to artwork; submit separately.) If you are confused by these requirements and terms, please write or call A.R.C. before beginning to prepare your ad.

We will be happy to advise you on your ad ideas, estimate how much the ad will cost, recommend an ad size, etc.

We assume that advertisers want all ads which are submitted to run without delay; therefore, we will run the ad and bill for any additional work required for the ad to meet these specifications. A late ad will be run beginning with the next month.

The 3-month rates represent about a 10% discount, the 6-month rates, 20%. Clubs, write for discount rates.

Page	Artwork Size (send in this size)		As Printed (size in magazine)		Cost for 1-month	Cost for 3-months	Cost for 6-months	One-time Cost for A.R.C. to make up Ad (if requested)

Business Card	2	x 3 3/4	1 1/4	x 2 3/8	not avail.	22.00	39.00	4.00

EDITOR'S COMMENTS

Each year A.R.C. prints the *Statement of Ownership, Management and Circulation*, shown at the bottom of this page, which the U.S. Postal Service requires of all magazines. The statement reports on circulation through the September 1989 issue; since that issue, and as reported last month, we have exceeded 5,000 subscribers, and I estimate that this issue will be mailed to almost 5,200. And A.R.C. is still growing at over 100 new subscribers each month. Thanks to you — our subscribers — for this phenomenal success!

In this issue you will find . . .

Richard Foster has contributed the lead article "Victoreen's Last Stand" about the 1929 Model 345 and its extravagant cast-metal chassis. Victoreen was not as successful as was E.H. Scott in the high-end market.

The Atwater Kent Model 55 is described by Richard Arnold, and Robert Gordon describes the Oriole Model 7B. The Oriole set is interesting because of its interstage coupling, which is from the filament to the grid of the following tube.

Four fall auctions are covered this month. The Vintage Radio and Phonograph Society convention near Dallas, Texas, in September, included two auctions. Randy King reported on the October Mid-America Antique Radio Club auction in Kansas. Tim Fuss sent in information on radio items from two general auctions in New York State.

This month *Radio Ramblings* features a combination of fact and fantasy from Charles Fisher. This is his tribute to a ten-tube home-brew superhet receiver in his collection.

Also in this issue are the *Photo Review* and the "Radio-Book Top-Ten Bestsellers."

Another record for A.R.C.: Total regular and boxed classified ads this month top 500! If you have a particular item you want to buy or sell, include a photo or drawing along with the ad; it seems that photo ads really work.

Advertising Rate Increase. One never likes to increase prices, but the increase in circulation forces us to raise display advertising rates (see the inside front cover) and the boxed classified and photo rates (see the inside rear cover). However, the old rates will be honored for up to a six-month prepaid run if received before December 1. **Regular classified rates are unchanged!**

Over this past year, we have gotten to know many of you — either in person, by phone or through the mail; we look forward to meeting more of you in 1990.

I join the A.R.C. staff — Betsy, Bobby, Chris, Dave, Scott and Shirley — in wishing all of you a happy holiday season and a prosperous new year,

John V. Terrey

ON THE COVER

The cover illustration is from a Frost Radio advertisement appearing in *Radio News*, December 1922. The caption reads:

"Dad, although a recent convert to the mysteries of radio, knows good entertainment. Frost Fones bring in good entertainment with a clarity of tone and accuracy which satisfies the most critical. Billie is so full of plum pudding and excitement, that he has left his other toys unopened... As Billie says, "Gee, Dad! It's plain as if they were in the room here!"

STATEMENT OF OWNERSHIP, MANAGEMENT AND CIRCULATION

(1) Title of publication: *Antique Radio Classified*. (1B) Publication No.: 37507471. (2) Date of filing: Oct. 25, 1989. (3) Frequency of issue: Monthly. (4) Complete mailing address of known office of publication: 498 Cross Street, P.O. Box 2, Carlisle, MA 01741. (5) Complete mailing address of general business offices of the publisher: Same as #4. (6) Full names and complete mailing address of publisher, editor and managing editor: John V. Terrey, 498 Cross Street, Carlisle, MA 01741; Same. (7) Owner: Same. Known bondholders, etc.: None. (9) not applicable.

10.	Extent and Nature of Circulation	Average No. Copies Each Issue During Preceding 12 Months	Actual No. Copies of Single Issue Published Nearest to Filing Date
A.	Total No. Copies (Net Press Run)	5507	6017
B.	Paid and/or Requested Circulation		
1.	Sales through dealers and carriers, street vendors and counter sales	0	0
2.	Mail Subscription (Paid and/or requested)	4360	4835
C.	Total Paid and/or Requested Circulation (Sum of 10B1 and 10B2)	4360	4835
D.	Free Distribution by Mail, Carrier or Other Means		
	Samples, Complimentary, and Other Free Copies	763	730
E.	Total Distribution (Sum of C and D)	5123	5565
F.	Copies Not Distributed		
1.	Office use, left over, unaccounted, spoiled after printing	384	452
2.	Returned from News Agents	0	0
G.	Total (Sum of E, F1 and 2 — should equal net press run shown in A)	5507	6017
11.	I certify that the statements made by me above are correct and complete.	Signature and Title of Editor, Publisher, Business Manager, or Owner <i>John V. Terrey - Publisher</i>	

WITH THE COLLECTORS

Victoreen's Last Stand

An Unusual Radio

BY RICHARD FOSTER

John A. Victoreen, a self-taught physicist and engineer, designed a superheterodyne kit receiver that was very popular in the 1920s. It featured a familiar eight-tube superhet circuit that came with or without antenna coupler, had three IF's and two audios. It worked well, had knife-edge selectivity and lots of gain, but had some rather irritating interactions among circuits. It was already interesting technically for its time because it had tuned IFs. The patent application shows a compression condenser within the IF housing; it was adjusted at the factory by means of a bolt and locking nut which were then soldered together. Victoreen was already showing his innovative gifts.

Victoreen claimed to have offered a high-powered amplifier for his Model 112 superheterodyne kit. Being a physicist and of a "scientific" turn of mind, as he put it, he wanted to "make radios more scientifically" by the late 1920s. He deplored cheap radios. Thus, in November 1929,

Figure 1. Victoreen Model 345 low-boy.

he announced a new receiver, a luxury model and a superheterodyne. The first ad in *Radio Retailing* shows a large furniture cabinet offering a fourteen-tube circuit! He later claimed to have offered radio-phonograph combinations at a price of \$750. The *Radio Collector's Guide* shows three: Models 345, 395 and the radio-phono combination Model 595, whose numbers correspond to the list price. They were expensive.

A question comes to mind; how did Victoreen get away with selling a superheterodyne receiver before anyone other than A. H. Grebe, who had a superheterodyne license?

Ever since I first noticed this set listed in the *Radio Collector's Guide*,

I was curious. Alan Douglas unearthed some interesting information in *Radio Retailer and Jobber* for 1929 and 1930. It seems that Victoreen was sued in Federal District Court in Cleveland as early as 1927, but for reasons unknown the case "languished on the trial docket." The attorneys then withdrew some of the claims and finally moved to "withdraw the suit altogether."

The question seems to have been whether anyone had established ownership of the superheterodyne patents claimed by Westinghouse. In any case, Victoreen made supers, amazing ones, although he was cagey enough not to use the word "superheterodyne" on the nameplates.

INSIDE THE VICTOREEN

I recently acquired the Victoreen receiver as shown in Figure 1. It is an unusual radio; if not in Duesenberg tradition, certainly close to it. Beautifully

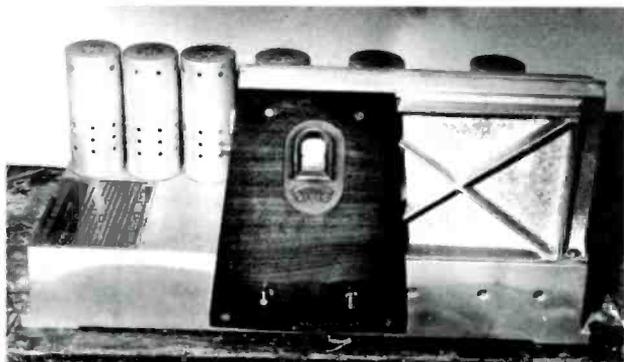

Figure 2. Front of Victoreen Type A chassis showing heavy aluminum casting.

and lavishly made, it has very few off-the-shelf components: an elaborate Queen Anne cabinet, separate tuner and amplifier chassis, and a serious four-gang superheterodyne circuit with an RF amplifier and three IFs. It's a Victoreen Radio Receiver Type A.

This receiver has eleven tubes in two chassis. The tuner lineup is RF, DET, OSC and 3 IFs. The amplifier has 2 DET, 1 AF and push-pull 2AF (45's). The mechanical construction is striking. The chassis are of heavy cast aluminum, as shown in Figure 2. The condenser housing and its cover are also elaborate aluminum castings, and it is clear that the pattern-maker left scribed lines and dimples for the machine shop. The condenser housings have cast-in compartments, as shown in Figure 3. The tuning drum, which we are so used to seeing in distorted pot metal, is typical: huge, rugged, sand-casting in bronze, machined to a fine finish and then nickel-plated! There are three massive brass bearings for the condenser shaft. The pilot-light holder is machined from one-inch bar stock in several operations including knurling! All the castings are so carefully finished that one person at the Antique Wireless Association Canandaigua meet reacted by saying, "Someone spray-painted that set"! The tube shields are heavy deep-drawn aluminum about .050 inches thick, and their supports are special ribbed castings. The trimmers are brass air condensers, and they were sawed off with a hacksaw where less capacity was needed.

Electrically the set is not innovative; in fact, it's rather conservative. The circuit is a superhet. It uses screen-grid tubes and a separate oscillator. The RF coils are on threaded isolantite forms in specially made tinned copper boxes; see Figure 4. The IFs are worth noting. They are bank-wound on bakelite forms, housed in special boxes of their own and tuned at the factory with mica condensers, as shown in Figure 5. No adjustment is provided, since they are intentionally broad. According to calculations, they would have about 100 turns giving 1 mh., and the capacitors would be .001 mfd. The IF reads 175Kc when it beats with a known set. There seems to be a fair amount of variation in the different coils in the IF stages; this suggests that although he may not have aimed for pedestal tuning, Victoreen probably felt that this arrangement allowed gain under stable conditions and good band-width while the front end provided the necessary selectivity. No stage-gain measurements have been

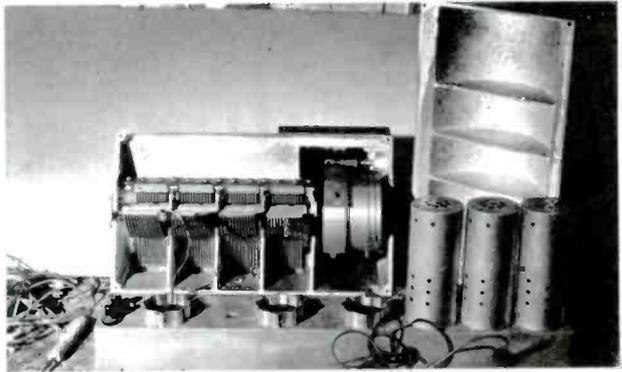

Figure 3. Rear of Victoreen Type A chassis with condenser cover removed.

made, but it seems likely that the three stages do the same work as the two in a Philco Model 111/112.

Performance is hot. There is good selectivity and a large volume of sound without distortion all the way to the top of the volume range except on one very close local station. At first there was a serious loss of sensitivity at the 600Kc end of the dial, but recentering the oscillator condenser blades changed that; it was a tracking problem. In spite of pot-metal growth, it was possible to push the tuning condenser blades back into alignment, and it tracks very well except at the middle of the dial where it is 9 or 10Kc off. The dial is linear, and the tuning range is 550Kc to 1500Kc with the oscillator 175Kc above.

VICTOREEN QUALITY

This set has an honesty and a solidity from another time. It has a low-production feel to its cast chassis where the pattern-maker left his trace, where drilled holes were not done by automated machinery. The whole idea of casting these parts at all instead of using steel stampings is bewildering, and the number of unique and specially made parts gives cause for wondering whether they knew the depression was on. There is an undertone of defiance about the words

(Continued on following page)

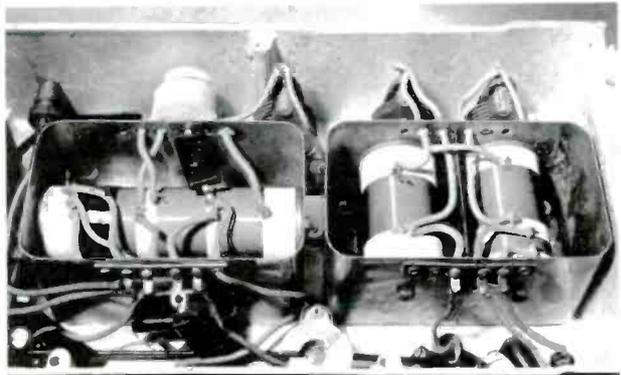

Figure 4. RF coils of Victoreen Type A with box covers removed.

(Victoreen, continued)

Victoreen uses in his salesman's remarks, that recall Leutz in *Modern Radio Reception*.

Probably Victoreen thought that if he could market a super-heterodyne, the world would beat a path to his door. Certainly he must have felt that such an advanced circuit deserved the best quality, and he seemed to be aiming for the same market that E. H. Scott had targeted.

By the end of 1930, there was no more advertising and Victoreen concentrated on measurement of X-rays and government contracts. Victoreen, like so many other radio manufacturers, followed the same fate as automobiles after the crash of 1929. Many of these expensive sets could not have been sold.

In this set the tuner bears the number 1833 and the power amplifier number 1892. The name plate contains one error where it states that the dial calibrating condenser is between the second and third sockets. This suggests that either the same name plate was used for both the eleven- and fourteen-tube versions or that something happened in communication between the order for etching of plates and the making of foundry patterns.

It would be interesting to know how many of these excellent radios have survived. If anyone knows of one in existence, I would be most grateful for the following information:

1. Number of tubes in the tuner and amplifier?
2. Cabinet style?
3. Phonograph included?
4. Serial numbers in the tuner and amplifier?

I will be happy to publish an update.

(Richard Foster, 12 Shawmut Ave., Cochranton, MA 01778)

Letters – What is Catalin?

Dear Editor,
Please explain what "Catalin" means.
Thank you.
Marvin Faupel, Altoona, Iowa, and.
Barry J. Fuerst, Oak Park, Illinois

Often an ad will read: "Wanted: Catalins." This means that the collector wants radios with a Catalin plastic cabinet. The following is taken from an article in *A.R.C.*, October 1987, by Harry Poster on the *FADA Bulletin* (a radio with a Catalin cabinet) and from an article by Ed Lyon, an "expert" on Catalin radios, in the *Mid-Atlantic Antique Radio Club Newsletter*, December 1987. (Rumor has it that Ed is planning a book on these collectible sets.)

Harry wrote, "Learn the difference. The key is translucence: light can be seen dimly through a Catalin cabinet itself when a light is shined from behind. Bakelite cabinets transmit almost no

light. Also, the bottom of a Catalin cabinet is closer to the original cabinet color. The rest of the cabinet can be faded to a different color."

Ed wrote, "Catalin was a trademark for a plastic made by the Catalin Corporation, just as Bakelite is the trade name for products of the Bakelite Corporation. To the modern radio collector, though, Catalin is used to describe any of several cast resin plastics while usually Bakelite is a name reserved for injection molded or diecast phenolic plastics.

"What does this mean to the collector? Well, the cast plastics, Catalins, are nearly universally translucent, and can be of bright colors such as cherry red, cobalt blue, maroon, white, green, and others. On the other hand, the Bakelites are never really translucent.

"The scarcity of Catalin sets is because few were made. Today a Catalin radio is often worth 50 to 100 times as much as a brown Bakelite."

WITH THE COLLECTORS

The 1929 Atwater Kent Model 55

It Takes More Out of the Air and Brings More Into Your Home

BY RICHARD ARNOLD

In the summer of 1929, Atwater Kent was one of the first radio manufacturers to market a screen-grid receiver. Many new features were claimed for the new Model 55, as shown in Figure 1. Most noticeable was the perfection of the tonal reproduction. Advertised as being practically silent, it eliminated the hum and extraneous noises that were so common to non-screen-grid sets. The only sound that this new set made was from the desired signals coming into it from the antenna. It was so quiet that the makers may have thought it necessary to equip it with a pilot light so that the operator of the radio would know at all times whether the power was on or off. In fact, an Atwater Kent advertisement tells of a woman going to a friend's house for a visit. When she got to the front door, she heard voices. Thinking her friend had "guests," she left. Thus, the ad was boasting about the unmechanical perfection of Atwater Kent's electrodynamic tone.

This new radio receiver was produced after a long period of experimentation and testing in the Atwater Kent laboratories. Mr. Kent felt that in its perfection and highly sensitive and precise character the new receiver represented the culmination of his twenty-seven years of experience as a manufacturer of electrical equipment.

A statement issued by the company says: "The new screen-grid radio has enormous power, longer reach and magic tone. It takes more out of the air and brings more into your home. It is vastly more powerful, yet all of this new energy is completely under control - as obedient to the fingers of a child as to those of a radio engineer. All unwarranted noises are filtered out. The electrodynamic tone is so pure that the listener feels he might reach out and touch the artist. Every station, every program is clear. They are not elbowed out by others, because of the new receiver's

Figure 1. The Atwater Kent Model 55 AC receiver shown with the matching Model F4-A Electro Dynamic speaker. (Illustration from the 1929 Atwater Kent advertising booklet).

needle-point selectivity."

When the top cover of the Model 55 receiver is removed, the viewer is impressed at the attention to detail and the quality of workmanship of the chassis components for which Atwater Kent is known. See Figure 2.

The new set was offered as a table model with a separate AK Type F-2 or F4 speaker. It also could be purchased in cabinets designed as highboys, lowboys, simple, elaborate, sliding doors, swinging doors, or no doors at all - a highly adaptable set, indeed.

(Richard Arnold, P.O. Box 275, Lone Grove, OK 73443)

Figure 2. Interior view of the Atwater Kent Model 55 receiver showing the quality of workmanship. (Illustration from the 1929 Atwater Kent advertising booklet).

WITH THE COLLECTORS

The Oriole Model 7B

BY ROBERT GORDON

Figure 1. Oriole Model 7B (Photos from the collection of Robert Enemark, Duxbury, Mass.)

Although other manufacturers sold radios with the Oriole trade name, I present the Oriole Model 7B built about 1924 by W-K Electric Co., Kenosha, Wisc. In the schematic, note that the RF

stages and the regenerative grid leak detector are coupled through their filament circuits – a very unusual design. I believe this was used late in many AC sets and known as the Cathode Follower circuit, but I had never seen it used in battery sets.

The tube complement is probably five 201A's or four 201A's and one 71A. It used tinned bus bar wiring, brass shell bayonet sockets and brass variable condensers made by Hammarlund. The cabinet was of solid walnut 9"x23"x11" deep. The panel is of hard rubber with two in-line vernier dials having a ratio of 2 1/2 to 1. The Oriole 7B works on either loop antenna or outdoor antenna. The price tag in 1924 was \$90.

Figure 2. Interior view of the Oriole Model 7B showing the 5-tube layout and the unique antenna coil tap switch to the right.

(Robert Gordon, S66 W18560 Jewel Crest Dr., Muskego, WI 53150)

"Radio-Book Bestsellers" is a ranking of the top-ten selling books of interest to radio collectors according to the sales in the first nine months at Antique Electronic Supply (AES) and Antique Radio Classified (A.R.C.). The data is supplied by George A. Fathauer of Antique Electronic Supply, 688 W. First St., Tempe, Arizona 85281, and John V. Terrey of *Antique Radio Classified*, P.O. Box 2, Carlisle, MA 01741. Prices shown are the publisher's suggested retail prices.

David and Betty Johnson's new book, *Guide to Old Radios: Pointers, Pictures and Prices*, which was published early this year, has quickly jumped to the top of the list. Alan Douglas's new book, *Radio Manufacturers of the 1920's, Vol. 2* was available for sale only the last month of the period reported. This book is quickly moving up the list.

PHOTO REVIEW

This column presents in pictorial form many of the more unusual radios, speakers, tubes, advertising, and other radio-related items (covering the years 1900-1950's) from our readers' collections. The photos are meant to help increase awareness of what's available in the radio collecting hobby. Send in any size photos from your collection. Photos must be sharp in detail, contain a single item, and preferably have a light-colored background. A short description must be included with each submitted item. Please note that receipt of photos is not acknowledged, publishing is not guaranteed, and photos are not returned.

LABELLE MODEL 21 - This dual-tapped crystal set was produced in 1923 by the Labelle Radio Co. of Attleboro, Mass. The panel is orange and black swirl to match the two tap switch knobs. The small center knob rotates the catwhisker on the crystal inside the box. *(William Key - Halifax, MA)*

CHRISTMAS CARD - This card appeared in the shape of an antique radio loudspeaker. Inside it says "Merry Christmas," and there is a small valentine heart that says "I'm Yours". *(Bob Dennison - Westmont, NJ)*

EARLY BREADBOARD - This Model 3945 was Atwater Kent's second breadboard consisting of a Type 11 Tuner, a variometer and a three-tube TA unit. The earlier model was similar except for a two-tube TA unit. *(Augie Walackas - Whitman, MA)*

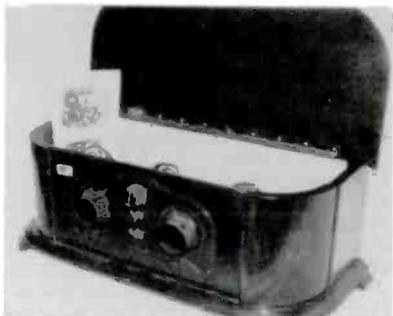

PHOTO REVIEW

PICNIC RADIO - This Scottie Cooler radio is a four-tube novelty set. The receiver is hidden inside a plaid picnic cooler case with a telescoping antenna. No other manufacturer's information is available. (*Frank R. White - Olathe, KS*)

PHILCO MODEL H765-124 - This set was produced ca. 1959, and looks like it was made to resemble Predicta TVs. The white plastic AM clock radio has a black face. (*David Mednick - Fort Lee, NJ*)

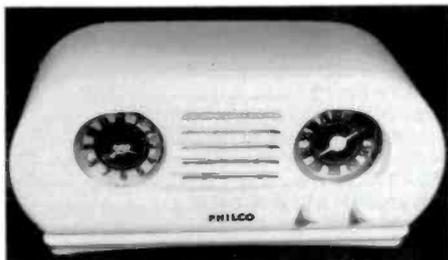

ARBORPHONE 27 - Made in Ann Arbor, Michigan, with excellent card instructions and original operating manual, this is the only rounded front version of which I know. (*Walter Worth - Wollaston, MA.*)

SR-4 - This one-tube portable is obviously of Crosley design (ca. 1925) but sold through the Sears & Roebuck stores. It is leatherette covered, and the circuit used a variable-plate tuning condenser instead of the familiar "book" type. (*Dave Crocker - Lyndonville, VT*)

PHILCO MODEL 41-2221 - This 1941 table radio used a combination of fine angle-cut veneers with plastic and painted trim. The little handle on the top adds to the name "Transitone." (*Fred Geer - Jacksonville, FL*)

PHILCO MODEL 42KR5 - This 1942 wooden clock radio was a trend-setting design that would be echoed in the 1950s. This set was designed with a curved bottom to fit the top of the refrigerators of that time. (*Fred Geer - Jacksonville, FL*)

MEET & AUCTION REPORTS

VRPS/AWA Convention and Auction September 8-10, 1989

CONTRIBUTED BY GEORGE POTTER

The September 8-10, 1989, convention of the Vintage Radio & Phonograph Society (VRPS) and the Antique Wireless Association (AWA) held in Duncanville, Texas, drew 157 registered collectors with over 225 in attendance. Because of the amount of gear, two auctions were conducted. Not only were last year's sales surpassed, they came close to those of the national meets! Totals for both auctions came to \$27,674.50 with 660 items sold.

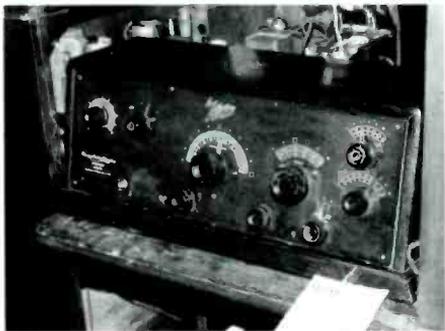

In addition to the auctions, an excellent RCA 16mm film on tube manufacturing was shown. There was an old equipment contest, a banquet and fifteenth anniversary celebration. Over 58 awards were presented, and a well attended swapfest on Sunday concluded a very successful convention.

Following is a general listing of equipment sold. Not all items were listed due to incomplete descriptions, nor were test equipment, common plastic sets and large quantities of common tubes listed.

There was an excellent selection of cathedrals, ham sets and even several Catalins. Some of the high bids were an excellent AK Kiel table - \$375, Philco 16B cathedral - \$240, FADA 652

MAARC Fall Radio Auction

October 15, 1989 - Overland Park, Kansas

CONTRIBUTED BY RANDY KING

The Mid-America Antique Radio Club (MAARC) of Kansas City held its semi-annual Fall Radio Auction at the Legion Hall in Overland Park, Kansas, on October 15, 1989. Approximately 100 attended the auction. Due to the increased participation of new collectors in the

club, there was a tremendous amount of material to sell. As a result, the auction lasted nearly six hours.

Below is a representative listing of items sold. Most of the interest centered around sets in the \$40 to \$50 price range. A lot of books, schemat-

ics, and technical manuals moved through the lines, also a few TVs but no rare ones. One remote-tube Predicta, restored in mint condition, failed to bring its \$400 minimum bid.

Participation in MAARC is \$8 annual dues, which allows you to bring merchandise to the semi-annual auctions, monthly meets, occasional museum displays, etc. For more information, contact: Sheldon Wheaton, 14708 Murray Ln., Olathe, Kansas 66062, (913) 764-5436.

RADIO RAMBLINGS...

Surprise Service Call

BY CHARLES FISHER

I had just bought a very ordinary Browning-Drake kit set distinguished only by a good brass-base '99. I was paying for it when the antique dealer asked, "Do you want another radio? I've got a real big one out in the barn - if I can get to it." "Not if it has legs, he doesn't!" said my gorgeous and tolerant spouse. "No legs," said the man, and he disappeared into the back of the barn. Soon he reappeared and motioned to me to follow him. We stumbled over stacks of building materials and other junk, and finally the man

shown in Figure 2, it was a superhet with ten tubes, eight rheostats, seven transformers, and at least two of everything else, including large holes in the panel for meters.

Finally I moved it into the house and gingerly set about powering it up, clip-leading my way around open transformers and unmarked binding posts. Dusty! But there seemed to be no missing parts - the old thing had at least not been cannibalized except for the meters.

At a certain moment, as I was poking a clip

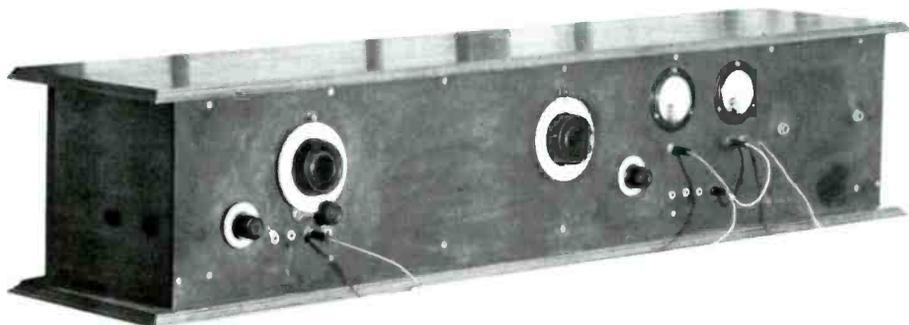

Figure 1. Ten-tube Superheterodyne. Builder and designer unknown. Controls: RF gain; ant. tuning; osc. tuning; IF gain; audio outputs. Lower eight banana plus jacks are for metering each filament voltage; last one reads three audios together. Use a patch cord to the jack under left meter. Right meter is for high voltages. Panel is 47 1/2" by 9".

pointed under a big old workbench. There was the end of what looked like a small coffin sticking out. Opening the lid was impossible where it was, so the man began pulling, and pulling, and pulling what seemed like yards of dusty mahogany but was actually only a bit over four feet. Finally we could open the thing up. Inside it was so murky and confusing that I didn't know what to make of it. I hesitantly asked the price. I guess the man was tired of stumbling around the monster, because the price was right. We loaded it into my car along with the Browning-Drake, and I still didn't know what I'd bought, although with nine or ten tubes I guessed it had to be a superhet. It is pictured in Figure 1.

THE WORK BEGINS

Even before we got home, I realized I had literally no place to put the giant. So it sat on a trash barrel in the garage for several days, during which time I was able to separate the chassis from the cabinet and get an idea of what I had. As

lead into a dark corner in which I noticed a dense and foul-looking wad of flug (see end of article for a discourse on this term); I touched something, and there was a crackle and a sizzling whoosh. A small but blinding flash was followed by a cloud of dark smoke in which sparks twinkled, making more smoke, only white. I reeled back, angry at my error. Before I could plan my retreat from the weird, acrid smell, my head swam, I lost my balance and slumped into a handy chair.

This happened late in the afternoon, and although it seemed that I came to almost instantly, you will imagine my surprise at finding the room almost totally dark. Gradually I realized that it was the smoke, which had spread into all corners of the room, blotting out everything familiar.

I soon realized that the smoke had narcotic as well as optical effects; I couldn't move, and somehow didn't even want to. I tried at least to see and recognize familiar things. All that I could make out was the giant radio on a table at the level of my bleary eyes. As I concentrated, with

great effort, I began to see better. There was a sort of pleasant glow coming from inside the set. "Wow!" I thought, "I must have dropped that clip lead just right. There seem to be a lot of those 201-As lighting up!"

The glow grew much brighter, quite rapidly, which I attributed to the strange effects of the toxic smoke. Just as I thought I was getting better, a face materialized across the room at the fringe of the glow. I tried to get a grip on myself and make the face turn into something reasonable – like a vase or a lamp – but it wouldn't. Instead, it grew clearer, small and smiling under close-cropped gray hair. As if to reassure my limited senses, it acquired arms and a torso, neatly dressed in trousers and vest, with a delicately striped shirt showing here and there. I especially remember the black elastics on the rolled-up sleeves.

STRANGE CONVERSATION

My first inclination was to scream, "Who the hell are you, and how come you're in my house?" But, although my physical faculties seemed to be coming back, I had no will of my own. I heard myself say, "What did you say your name was?" "Can you make it work?" He replied, "Well, I should hope so – I myself built it! And I'm T. Clarence Bell; no relation to A. G. They call me T."

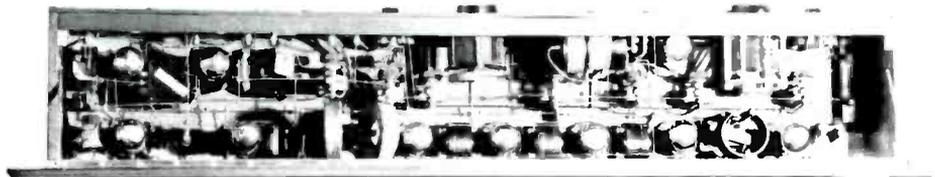

Figure 2. Left to right: ant. amp.; first det.; osc. next to panel; three IF amps.; second det.; first audio; second (push-pull) audio. Note seven Cutler-Hammer rheostats plus single GR for audios.

With that, Mr. Bell went to work, with a pair of headphones, a flashlight battery and some lengths of stiff wire. In no time at all, he had checked out continuities and had found a loose connection. He quickly reconnected some batteries which I couldn't remember seeing before, and turned the two dials like a banker opening a safe. A voice announced, "This is WNAC, the Shepherd Stores, in Boston. We now bring you fifteen minutes of popular organ music played for you by Del Castillo." Just as the first nostalgic tune started, Mr. Bell shut off the set with a look of smug satisfaction.

That was when I got the idea I might be living in two time frames. Again, I didn't seem to have the will power to study it thoroughly, and found myself speaking as though I were being fed the lines.

"Exactly when did you make this radio?" I said.

"Let's see," said T. "This is May 1928, so it's only a bit over three years ago – when I finished it, that is. Sure looks like an antique compared to a Radiola 28, doesn't it?"

"How did you happen to do it?" I asked. Mr. Bell answered, "Well, there was this wealthy colonel at Fort Devens, and he had a friend who

had put together a Leutz, which he bragged about endlessly. You'd have thought he was Leutz's daddy. One day the Colonel dropped into my Music-and-Radio store in Maynard and got talking about it. He said he sure wished he could find something that would shut his friend up for a while. That gave me an idea. I'd been reading all the popular articles, so I was well up on superhets. I said to the Colonel, 'I can make you a set that works and sounds better than his Leutz, for less money using equal or better parts. And I'll put in a nice up-to-date cabinet without all those binding posts up and down the sides.' The Colonel's eyes bugged and he said, 'It's a deal!'"

BETTER THAN A LEUTZ?

Mr. Bell went on. "I'd read George Eitz's articles in *Radio Broadcast* and I had worked on Leutzes. And I had seen inside a Western Electric, over at WTAG, so I had some ideas. I rounded up a set of RCA 1716 transformers along with an old pair of Glibin Remler honeycombs. I had almost everything else in stock, like those massive RCA porcelain tube sockets which were already out-of-date then. I only had six so I had to use some GR's too.

"I had decided to go with push-pull output, so I had to buy two of the new Thordarson push-pull transformers. I figured I could top the ordinary Leutz by adding one tube for an antenna ampli-

fier, to make the set more sensitive and tune sharper. By then, I was up to ten tubes, and nervous about B battery life. I lashed up a breadboard to try the thing out, figuring I'd sure have to use a C battery, like the Western Electric push-pull amps., but I found I could get plenty of volume out of my old 10D speaker with just 45 volts on the three audio tubes and only 22 volts on the others – and no C battery.

"I was off and running. I got my brother down at the Hastings Organ shop in Weston to make me a cabinet, and I made a layout and tracings so I could do a nice neat job for the Colonel.

"I was still nervous about batteries, so I put a whole mess of C-H rheostats in the thing – one for each of the seven RF tubes, plus a GR for the three audios. I put them behind the panel for neatness, but I brought leads out to a row of the new GR banana pin jacks, figuring to use patch cords to the meters (which the Colonel insisted on account of his friend's Leutz). It turned out real handy because we could shave the filament current down on each stage to the lowest level where the set still worked fine. It drew just eighteen mills at average speaker volume!"

(Continued on following page)

(Radio Ramblings, continued)

"I'm curious about a couple of things," I interrupted. "How come you used different kinds of tuning condensers, and why those General Radio RF coils with the banana plugs?"

Mr. Bell continued, "I was getting close to the price I gave the Colonel, so I had to use what I had around – one GR and one Acme. I had a friend at GR who told me about the coils coming out in the fall of '24, and he got me some from the first production. My idea was they'd be handy in case I had to make changes later. All I'd have to do would be rewind one and plug it back in, which would impress the Colonel and save me a long house call. It worked out fine. I did get another coil for the first detector with more turns to make it work better down around WEEI."

A JOB WELL DONE

I was fascinated by this sixty-year trip back in time, and my head was clearing. I had dozens of questions to ask T. Clarence. But something in the atmosphere was changing: it was the air. It

was clearing, and Mr. Bell seemed to shrink and grow misty. I even thought I could see things across the room through him. Before I could collect my returning wits, he gathered up his tools and said, "By the way, that Thordarson input transformer is going to go any day – this is the last one still working that I know of. They've got a new one out now, Type 4508, which will put out more low notes, if you have one of the new speakers. Only thing is, I don't know how I'll squeeze it in there. I really used all the space."

There was a sudden rush of wind in the room, even though all the doors and windows were closed. All the familiar things jumped into focus. There was no T. Clarence Bell to be seen. For a horrible moment I thought the radio might have disappeared too, but no, it was there. I looked inside. Sure enough, there, with neatly reworked wiring, was the replacement transformer.

(Charles Fisher, 161 Belknap Rd., Framingham, MA 01701)

"Flug?" – An Explanation

We at A.R.C. were hesitant to use the author's word "flug" included on the first page of the previous article "Surprise Service Call". Not familiar with its meaning, we contacted the author, Charles Fisher of Framingham, Ma., to clarify the term "flug" or suggest an alternate.

By return mail, we received an explanation of the word with a small packaged sample included! Below is Mr. Fisher's reply:

Dear Editor:

I am always amazed to discover how local some seemingly common colloquial words are.

Anyway, I enclose a sample of certified Middlesex County flug – collected this very day from one of our upstairs rooms. Analysis

would show it to consist of textile fibers, wood ashes, spider webs and other less easily identified homely substances.

As you know, it is commonly transported into radios by uninvented mousekeepers, or, sometimes as in the case I reported, merely by random air movement.

I am always ready to throw light into the darker unimportant corners of knowledge.

Cordially,
Charles Fisher

[Editor's note. For readers desiring their own sample of flug, a brief note and a SASE to Mr. Fisher may, or may not, produce results. Writer's discretion is advised.]

Three 1990 Calendars

The 1990 *Vintage Radio Calendar* features an entirely new monthly selection of radios. Something for every collector is included: consoles, plastics, portables, cathedrals, crystal sets, early AC and battery sets. (\$11.45 postpaid, from Boyce Publishing Corp., Dept. ARC, PO Box 23420, Milwaukee, WI 53273-0420)

The 1990 *Radios – The Golden Age* calendar features full color photos of collectible radios of the 1930s and 1940s including bakelite, plastic, mirrored and Catalin sets, all of which are from Philip Collin's book *Radios – The Golden Age*. (\$9.95 + \$2 shipping, from Antique Electronic Supply, 688 West First St., Tempe, AZ 85281)

The 1990 *Amateur Radio Calendar* honors the 100th anniversary of Edwin H. Armstrong. Its 44-pages feature radio pioneers, upcoming ham events and notations of radio milestone dates. (\$10.95 + \$2 shipping from KB1T Radio Specialties, Box 1015-A, Amherst, NH 03031)

Letters

Dear Editor,

A picture is worth a thousand words!

I was looking for a particular Sonora radio. The first ad I placed listed the make and model; this netted zero. The second ad featured a photo of the same radio – presto, I had a dozen responses. Before I knew it, I had three radios of that make and model.

I think I should say thank you.
Bruce Young, Denver, Colorado

Dear Editor,

I am a recent subscriber, and I really enjoy A.R.C. articles and classifieds.

My cousin recently stated that during World War II, non-citizens were requested to bring their radios to the police department so they could be modified to block out the shortwave bands. Do any readers know if there is any truth to this?

John Chinsky, Towson, Maryland

WANTED

The **New Scott Shield-Grid Symphony**

It can be supplied for either AC or DC operation. The AC model has a built-in power supply and uses AC tubes. It is a genuine AC set, not merely an electrified set. Two type 227's, one AC 222 and one 171A are the tubes used. A full-wave type 280 rectifier tube is used in the power pack.

Where AC current is not available, the DC model will be found an ideal set. It possesses all the power and tone quality of the AC model and is very economical to operate on batteries. It uses three 201A tubes and one 171A.

CLASSIFIED ADVERTISEMENTS

WANTED: Early spark transmitters and xtal and early tube rec. Also QST and early communications books. Edward J. White, WA3BZT, 809 Seymour Rd., Bear, DE 19701-1121. (302) 322-1313

FOR SALE: Marconi Wireless Telegraph Co. of America. We have a limited quantity of Original Stock Certificates, signed by the Vice President and Treasurer of the Company, sealed, issued, and cancelled. Marconi first proved that messages actually could be sent by wireless, and sparked the imagination of those who became the first ham radio operators. These certificates, dated in the 1910s, are colorful with an exceptionally nice vignette of Miss Liberty sitting between globes of the East and West Hemispheres, with transmission towers on each side. Each comes suitable for framing, and ready to add to the decor of any room or shack. Original Marconi Certificates cost much less than limited edition art works, represent the beginning of our great hobby, may increase in value (Scrippophy, the collection of old stock and bond certificates, is in its infancy and becoming more popular), represents the beginning of a giant corporation (RCA was formed with the express purpose of buying out the Marconi Wireless Telegraph Co. of America), makes a unique addition to any home, and makes a great gift. 10-day unconditional money back guarantee. Price delivered: \$49.95 (Pa. residents must add \$3 for sales tax). Send check, money order, or Master Card/Visa/Amex information to: Authentic Certificates, Box 177, Main St., Virginville, PA 19564. (215) 562-5065

WANTED: FADA Model 170 superhet chassis. Also, Solar brand tubular paper condensers from mid-1930s; .05/400, .01/200, .1/400. Will pay regardless electrical condition (please help an authentic restoration). Jeff Gilbert, 8488 Bayridge Rd., Clay, NY 13041. (315) 699-2353, evenings

FOR SALE: 1922 Bnstol amplifier - \$120. Ampion Dragonfly horn and bell - \$45. Calloway gold panel battery set - \$85. Crosley 10-135 white 1952 plastic, (nice, working) - \$45. **WANTED:** Cabinet for Stromberg-Carlson 501A chassis. Please help! Crocker, 2 Wheeler Circle, Canton, MA 02021

RADIO KITS

"GOLDEN AGE" RADIO KITS

ALL HAND-CRAFTED IN THE STYLE, TRADITION, and QUALITY WE STILL LOVE

MODEL MBRT1

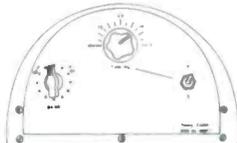

"Numbered Limited Edition"

Multi-Band, Two-Tube Regenerative Receiver

Only 250 serial numbered kits available!

Three authentic Air Variable Capacitors, Type 30 Tubes, three Plug-In Multi-Band Coils, and Vernier Dial Tuning.

\$99.95

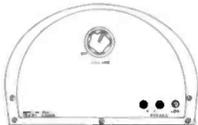

MODEL MRAT1

Multi-Band Antenna Tuner

550kc to 30mc Range for ultimate DXing with MBRT1, Crystal Sets, or any AM Receiver. Tune out "Dial-Swamping" stations and bring in distant ones.

\$29.95

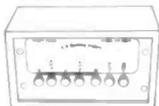

MODEL RHAT1

Two-Tube Resistance Coupled Amplifier to boost those weak signals. 2k Ohm and 32 Ohm Headphone Jacks in front.

Type 30 Tubes match the MBRT1.

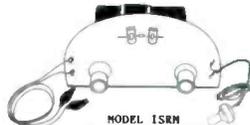

\$49.95

MODEL ABBS1

Beautiful, Brass Trimmed A & B Battery Supply Cabinet that uses inexpensive C and 9 volt Batteries to power all your "Golden Age" Tube-Type Units.

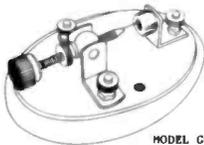

\$24.95

MODEL ISRM

Short Wave Crystal Receiver covering 3.1 to 13.0mc with two Air Variable Tuning Capacitors.

\$24.95

MODEL GCDS1 (Oval)
MODEL GCDS2 (Round)

Authentic Cat Whisker and Galena Crystal Detector and Stand with All Brass Mechanism and True Woods Metal Crystal Mounting.

\$19.95

MODEL BCCR1

Striking, Brass Trimmed Cathedral Style Receiver that uses Cat Whisker and Crystal for very powerful reception.

\$34.95

All kits come complete with all parts, wire, tubes, sockets, and pre-drilled quality wood chassis. Complete step-by-step instruction books filled with photos, drawings, charts, and schematic, are bound to lay flat for easy reference. All you provide is the time to have fun building and using these "Golden Age" kits.

California residents must add 6% Sales Tax. Please add \$5 shipping for the first kit and \$3 for each additional kit in the Continental U. S. All others add double these costs for Air Mail, balance will be refunded to you.

Each Model is available pre-assembled and working for an additional charge.

Send your order in now, before these one-of-a-kind kits are gone forever!

WIRELESS COMMUNICATION IN THE UNITED STATES

The Early Development of American Radio
Operating Companies

BY THORN L. MAYES, W6AX

★ 240 Pages

★ 160 Illustrations

★ Soft Cover

Here's the
perfect
Christmas gift !

(Target shipping date: Dec. 31, '89)

This book covers the glory days of high powered wireless, three hundred thousand watt spark transmitters, one million watt arc transmitters and mighty Alexanderson alternators with antennas as long as nine miles.

It was prepared for publication by Westinghouse engineer, Arthur C. Goodnow, W1DM, known for his definitive work on spark transmitters, *Across the Gap*.

Wireless Communication In The United States is a factual account of alternators, arcs and sparks, and of coherers, barretters and tikkers! It describes unscrupulous stock promotions that by chance yielded technical breakthroughs.

The Appendix includes fresh opinions from excerpts of unpublished letters of pioneers, and early drawings of well designed, quenched gap spark transmitters.

Price after publication (December 31, 1989):	\$ 29.95
Prepublication Price (order now and save!):	\$ 24.95
Add for shipping and handling:	\$ 3.00

Send order with payment to:

The New England Wireless and Steam Museum, Inc.
697 Tillinghast Road, East Greenwich, RI 02818

MESSAGE: A new easy-to-understand book on servicing old radios is coming out soon. It is called, "Fixing Up Nice Old Radios." It teaches you to repair radios without any higher math or complicated technical terms. You can even fix many radios without tools or test equipment. Scott, Zenith, Radiola, Grebe MU-1 and Hallicrafters are among the unusual radios described and pictured with chassis photos of old radios like the recent Photofacts. It even covers early hi-fi and ham radio. Ed Romney N4DFX, formerly instructor at Mass. Radio School in the 1950's, is the author. Much further information comes from his Dad, W1AYH, formerly 1AYH, who was a ship radio operator starting in 1922. The book, fully illustrated, costs \$15 prepublication, after publication about January 1 - \$19. We have been publishing textbooks, mostly on camera repair, for fifteen years! Order today! Visa/MC OK. Ed Romney, Box 96, Emlenton, PA 16373. (412) 867-0314

SERENDIPITY*

*Discover Gems of...

HISTORY, TECHNOLOGY and ENTERTAINMENT

from sparks to compact disks

Read about the famous investigators whose work unwittingly paved the way for the development of the auto radio, one of the greatest success stories ever witnessed.

The auto receiver helped save the radio industry during the great depression and rose from a hang-on novelty to become a sophisticated accessory that helped shape the styling and engineering of the automobile.

Stories of radio broadcasting's halcyon days featuring big bands, drama and outstanding announcers who kept the listeners in tune with the times.

A definitive reference book in a handsome hardbound 8-1/2" x 11" edition of over 300 pages. Profusely illustrated. Includes a listing of manufacturers, a glossary and an extensive index.

Available from:

The perfect Holiday gift for radio amateurs and radio history enthusiasts

1990 Amateur Radio Calendar

Edwin H. Armstrong
100th Anniversary Edition:

Special four page section with a biographical tribute by Tom Lewis, author of a new book to be published in the fall of 1990 on the inventors of radio: Armstrong, DeForest and Sarnoff, includes three historic Armstrong photos.

This 44 page photo calendar is the radio amateur's complete guide to operating events and activities for 1990--including 10 pp. of contest and DX reference data, with footnotes to the history of radio and broadcasting.

The 1990 Amateur Radio Calendar contains:

- Notation of over 100 contest and special event dates and times.
- Over 30 radio history milestone dates, with extensive footnotes.
- 1990 HF Propagation Forecast by Chod Harris, VP2ML
- Birthdays of Maxim, Armstrong, De Forest, Marconi, Faraday, etc.
- CQ and ITU world Zone maps and prefix/Zone lists.
- Russian prefix, Zone and Oblast lists, by Tom Frenaye, K1K1
- U. S. Amateur Bands, modes, and power limits: 160m to 23cm.
- Reference list of event sponsors and information sources
- Exact moon phase, eclipse, solstice, and meteor shower data

Calendar contains 44 pages and 14 photos, five in full color. Two-color printing for dates. Calendar covers January, 1990 through February of 1991, and measures 11" x 18" when open, spiral bound to hang or lie flat.

Order your 1990 Calendars now. For delivery to U. S., Canada, and Mexico, send \$10.95 each (\$9.95 each when ordering 3 or more) and add \$2.00 for first class mailing and handling for each ship-to address. For overseas (DX) delivery, send \$14.95 each (\$13.95 each when ordering 3 or more), air shipping included. For gift Calendars, please state desired seasonal greeting.

CLASSIFIED ADVERTISING POLICY

ONE FREE 20-WORD AD for subscribers in each issue; additional words are 10¢ each. See details below. All classified ads must be received (not just postmarked!) by the ad deadline. Late ads are held for the following issue. Please enclose correct payment with all ads. Stamps or cash are OK for small amounts. (Canadian and other foreign advertisers, please see "Payment" on page two for methods.) "Free words" cannot be accumulated from month to month; free words must be requested when ad is submitted.

Please write each ad on a separate sheet of paper, especially when included with other A.R.C. correspondence. Include SUB# with ad. Ads may be sent in advance; but, write each ad on a separate piece of paper and indicate the month (or successive two months) you want the ad to run.

Please write legibly and use both capital and small letters. Do not use dashes between words. Some numbers and letters can look alike, for example 1, l and I (the number one, the capital i and the small l.) Write the following characters clearly (especially in model numbers): 1, l and I; 0, O, o, Q and D; r and n; 6, b and G; V, U, u, v and Y; A and R; 5, S and s; 2, Z and z. We try to correct spelling errors, so when using an uncommon word or manufacturer which looks similar to a common word or manufacturer, note it so that we do not "correct" it. Editor's comments are in [brackets].

Advertising is accepted only for items related to antique radios, communication, electricity, etc. All items must be described fairly; reproductions, reprints and not-original items must be identified as such. Advertisers agree to respond promptly to inquiries and orders, and to resolve problems promptly if the buyer is not satisfied.

Publisher reserves the right to edit ads without notification to the advertiser and to reject ads for any reason. Publisher is not responsible for errors due to illegibly written ads or for any other reason. Since club activities receive free advertising on the *Coming Radio Events* page, the free 20 words may not be used for club activity ads. See inside front cover for additional information.

CLASSIFIED AD DETAILS

Deadline: 10th of the month!

Classified ads must have a standard heading such as **WANTED, FOR SALE, FOR TRADE, FOR SALE/TRADE, SERVICES, MESSAGE, HELP**, etc. This heading is the only bold or all-capitalized words allowed in the ad. Capitalize only manufacturer names, model names, etc. Wanted and For Sale ads are mixed together to encourage the reading of all ads, including the Wanted ads. This standard ad format makes scanning the ads easier.

Before writing your ad, please look over the ads in a recent issue of A.R.C., and try to write your ad in the same style.

To encourage varied content of the ads, **multiple insertions of the same classified ad are limited to two successive months.** (To run an ad longer, use a boxed classified or display ad.)

Classified Ad Rates per Month

Subscribers:

First 20 words: **FREE***

10¢ per word for extra words over 20 **plus**

10¢ per word for a shaded ad (count all words including free words).

* Subscribers may take 20 free words on only one ad each month.

Non-Subscribers:

20¢ per word **plus**

10¢ per word for shaded ad.

Please do not forget to send in the extra 10¢ per word when your classified ad runs over the free 20 words; your payment will be appreciated, and it will help to keep A.R.C. healthy.

BOXED CLASSIFIED AD DETAILS

Deadline: 5th of the month!

Boxed classified ads can run unchanged for three months or more. No words are free. Ads may be shaded and may include bold and all-capitalized words freely. The ad need not begin with For Sale, etc.

Minimum run is 3 months, prepaid.

Boxed Classified Ad Rates per Month

Nonshaded ads:

16¢ per word for all words, * none free, **plus**

10¢ per word for each bold word **plus**

10¢ per word for each all-caps word.

Shaded Ads:

26¢ per word for all words* **plus**

10¢ per word for each all-caps word.

Note: All words in shaded ads are bold.

Non-Subscribers:

Add 15¢ per word to above costs.

*Three of the total words can be bold-all-caps at no extra charge.

PHOTO & DRAWING DETAILS

The deadline for ads with drawings or photos is the 5th of the month.

Drawings and photos are encouraged as the response to your ad is much larger and the reader knows better what you want or are selling. Send in your drawing or photograph, and A.R.C. will reduce it or enlarge it as needed.

Photo and Drawing Rates per Month

\$6.00 per month for each photo or drawing

IMPORTANT — COUNTING WORDS — IMPORTANT

The standard headings: **WANTED, FOR SALE**, etc., count as **one word** each time used in an ad.

Name, address and (one) telephone number, count as **6 words**, regardless of length. Ham call letters and business name can be included in the 6 words and do not count extra. (Note: "Jim, (111) 111-1111" also counts as 6 words.) So, please include complete name and address in your ads.

Each additional word, abbreviation, model number or number group, extra telephone numbers, etc. count as **one word**. Hyphenated words count as two words.
