- PRECISELY-ADJUSTABLE COUNTERBALANCE WEIGHT
- NON-RESONANT WITHIN THE AUDIBLE FREQUENCY RANGE
- PERFECT TRACKING WITH THE LIGHTEST STYLUS FORCE

### RUGGED CONSTRUCTION — FOOLPROOF — TROUBLE FREE

A remarkable advance in tone arm design is presented in these new Lafayette tone arms. An unusual new principle, utilizing 2 vertical and 2 lateral hardened-steel knife-edge pivots supported by hardened steel bearings, provides extremely low horizontal and vertical friction. This unusual type of bearing provides minimum waveform distortion and no undesirable motion or loose-jointed action as viewed from the stylus end. Groove tracing is smooth, with excellent tracking even with very light pickup weight, due to the absence of frictional losses. Friction in horizontal and vertical directions is low, but mechanical impedance is high at 45°, providing maximum effectiveness with 45-45 stereo cartridges. The unique knife edge bearing construction makes it possible to draw out the shielded cable from the center of the support column, eliminating "stiffness friction" due to the cable. A highly precise bubble level is provided at the top of the support column; the bubble plus 3 adjustments on the base, provide perfect leveling. Height of the arm is adjustable from 1 $\frac{1}{2}$ " to 2 $\frac{1}{2}$ " above motorboard. Overall length of the PK-270 12" arm is 13". Linear distance from support column to stylus tip is 10-5/16"; the PK-280 16" arm is 14 $\frac{1}{4}$ " overall, effective length is 11-13/16".

The solution is to use a demagnetizer to re-

### THE VERY SAME STUDIO QUALITY WOOFERS EMPLOYED IN THE LAFAYETTE CELESTIAL-SATELLITE STEREO SPEAKER SYSTEMS

Acoustical studies have shown that low frequency response is not directional... indeed the stereo effect we hear is determined by frequencies above 350 cps. This dual voice coil woofer features two electrically separate voice coils on a single woofer chassis. Each voice coil receives low frequencies from its respective stereo channel. Both of these signals are blended through the single woofer cone. This advance in woofer design now makes possible 3-channel stereo without the need of complicated costly control filters or adapter networks.

Now Lafayette offers these advanced design dual voice coil woofers for the high-fidelity enthusiast who wishes to build his own 3-channel stereo speaker system—or use it as the basis of a monaural system now and eventually work into a 3-channel stereo system.

## THE NEW ULTRA-LINEAR SK-128 FULL RANGE 8-INCH DUAXIAL SPEAKER WITH NEWLY DEVELOPED TWEETER BAFFLE DESIGN.

- 40 TO 16,000 CPS—FLAT WITHIN 3 DB
- HIGH EFFICIENCY
- HIGH EXCURSION WOOFER WITH UNIQUE "CONICAL STIFFENER"
- HANDLES HEAVY BASS PASSAGES WITHOUT "DOUBLING"

*Eccentric Tweeter Mounting & Unique Elliptical Baffle Completely Eliminates Interaction Between Woofer & Tweeter*

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even, coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a

built-in network. An adjustable brilliance control permits matching of sound to room acoustics. Efficiency of the speaker is such that it will operate from any amplifier with an output of 1 watt or more. Installed in a bass-reflex type of enclosure, it performs outstandingly, and is recommended for all high-quality music systems—whether monaural or stereophonic. SK-131—LAFAYETTE SPHERICON SUPER TWEETER ..... Net 19.50

At long last the breakthrough in High-Frequency Speaker design. Here is a tweeter with unequalled performance, engineered for today's high compliance stereo speaker systems. The Lafayette Sphericon represents a complete departure from Electrostatic tweeters, which are extremely inefficient—indeed so much so that it is often necessary to utilize an L-pad on the woofer in order to hear the tweeter properly, thereby lowering the efficiency of the woofer to the same level as that of the Electrostatic tweeter. In the case of many high compliance low effi-

ciency units this is disastrous, as an already inefficient speaker is made even less efficient. The Lafayette Sphericon, due to its high sensitivity may be coupled to any speaker system with no loss in speaker efficiency. As a result less amplification is needed assuring lower distortion. Equipped with a built-in 3000 cycle crossover network the Sphericon produces a smooth linear response from 3,000 cps to beyond 40,000 cps; within plus or minus 1 db from 3000 cps to supersonic frequencies. A specially designed domed phenolic diaphragm delivers

phenomenally smooth, silky, faithful highs radiating a pattern of 120° in all directions, vertically as well as horizontally—with no trace of stridency or harshness. Power capacity is 30 watts. May be used with any 4-16 ohm speaker. Beautifully styled with an acoustically designed gold anodized aluminum grill set in a sturdy satin black plastic case. Shpg. wt., 3/4 lbs.

## LAFAYETTE ECONOMY CELESTIAL-SATELLITE STEREO SPEAKER SYSTEM

- FREQUENCY RESPONSE 25-16,000 CPS
- 8" HIGH COMPLIANCE DUAL VOICE COIL WOOFER WITH 2 LB. ALNICO V MAGNET
- 3-CHANNEL WIDE PANORAMIC SOUND FROM A NORMAL STANDARD 2-CHANNEL STEREO AMPLIFIER

The Lafayette engineering staff was faced with the challenge of developing a high quality, compact, inexpensive, 3-channel stereo speaker system reflecting the same excellence and design principles of the larger Deluxe Lafayette Celestial Satellite Stereo Speaker System. Results far exceeded our fondest expectations. Low frequencies below 350 cps are fed from their respective stereo channels, into two electrically separate voice coils of a new high compliance 8" dual voice coil woofer with 2 lb. magnet, housed in an especially engineered rear vented duct port enclosure. This new woofer produces a rich, full bodied bass response with excellent transient characteristics. Middle and high frequencies are produced by two Satellite 8" speaker systems of a unique dual cone construction. The two cones literally float on a flexible corrugated edges, one within the other, resulting in a mechanical crossover—the larger cone produces midfrequencies, but only the small inside cone radiates high frequencies. Satellite enclosures are constructed with a sloping front, making it possible to aim the Satellite toward the listening area.

This economical 3-channel Lafayette Celestial-Satellite Stereo Speaker system produces a quality of sound far in excess of its small size and reasonable price. A clarity and definition of instruments and voices are achieved that is not possible in conventional 2-channel stereo speakers. Balance controls provide just the right degree of balance for your listening tastes and room acoustics. The location of these speakers are not critical—Satellites may be separated by the full width or length of the room with the Celestial bass unit at any point between Satellites. Best of all—the small size of this system practically eliminates upsetting changes in room decor. Finished in 4 sides in choice of Mahogany or Walnut for vertical or horizontal placement. Power handling capacity 30 Watts. Impedance 8-ohms. Dimensions 15 1/2" W x 10 1/2" H x 10 1/2" D for Celestial woofer, Satellite is 4 1/2" D at top x 6 1/2" D at bottom x 12" L x 9 1/2" H. # THE ELIPTOFLEX

Brought To You By Lafayette Research—Engineered To Set A New Standard Of Speaker Enclosure Excellence

- NOW IT IS POSSIBLE TO HAVE ALL THE ADVANTAGES OF A HIGH EFFICIENCY SPEAKER IN A BOOKSHELF SIZE ENCLOSURE
- NEWLY DESIGNED ELLIPTICAL PORT BROADENS FREQUENCY RESPONSE AND PROVIDES BETTER TRANSIENT RESPONSE
- NEW DIFFRACTING RING ELIMINATES CANCELLATION EFFECTS BETWEEN FRONT AND REAR RADIATION

**THE PROBLEM:** With the advent of stereo, the use of two massive unwieldy speaker systems became unfeasible in most of today's combination living room—music room areas. One answer to this problem was the air-tight bookshelf speaker systems of which there are many excellent variations. However this design is inherently inefficient and requires costly high wattage amplification.

**THE SOLUTION:** The "Eliptoflex" is the latest development from Lafayette's acoustic laboratories. It is the result of an intensive research program to develop a bookshelf enclosure that may be utilized with any efficient 12" full range, coaxial or triaxial speaker. It may also be used with a 12" woofer, separate tweeter and crossover. Utilized with a proper speaker the "Eliptoflex" achieves a degree of natural smoothness coupled with low distortion and a rich, robust bass hitherto found only in large speaker consoles or inefficient bookshelf systems many times its price powered by large amplifiers. With the "Eliptoflex" there is no need for costly high wattage amplification due to its highly efficient design characteristics.

There are two departures from convention which contribute to the excellence of the "Eliptoflex" performance: one, the elliptical port, and two, the diffracting ring.

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path length provides an extremely smooth transition from duct to free air; broadens the frequency response at which it is effective and provides better transient response. Mixing the front and rear radiation from the loudspeaker diaphragm in this manner produces a truly coaxial presentation over the complete frequency spectrum. The tonal unity is such that no separation of source can be detected between high, middle and low frequencies. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. The result is a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation.

Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstrably superior throughout the audio spectrum.

The "Eliptoflex" is beautifully finished in a variety of hardwood veneers for attractive room placement. Dimensions are 14" H x 23-7/16" W x 13-5/16" D. Shpg. wt., 24 lbs.

\$17.50 OUTPERFORMS SPEAKERS DOUBLE LAFAYETTE'S LOW PRICE

COMPLETELY ASSEMBLED

Lafayette has indeed wrought a small miracle in engineering such acoustic excellence into so small a package. Smooth, distortion free response with a deep fundamental bass and clean pure highs that give no indication of its small size and price. The perfect speaker for that high quality installation in your home, office or restaurant—two are ideal for stereo.

The speaker features unique dual cone construction with extra heavy magnets. Both tweeter and woofer "float" on flexible, corrugated edges with the outer edge of the tweeter cone attached to the mid-section of the woofer cone. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. The same type of wide-range frequency response normally found only in true coaxial or multiple speaker systems is provided. Frequency response of 40-16,000 cps. Impedance 8-16 ohms. Cabinet is finished on 4-sides in hand-rubbed mahogany and walnut for attractive horizontal or vertical placement anywhere in the room. Dimensions are 10 3/8" H x 18-7/16" L x 8-7/16" D. EICO  
FM  
TUNER  
HFT-90**

Newly-designed, extremely sensitive, low-noise "front end" supplied in a cast housing completely pre-wired, pre-aligned, ready to use. This new front end, for the first time makes it completely practical even for a novice to build an FM tuner equal to really good professional factory-wired units. Employs the broad-band detector circuitry used in \$169 FM tuners now on the market. Temperature-compensated components and advanced circuitry completely eliminate need for AFC. Drift is less than 2 parts in 10,000 from cold start. Sensitivity is 6 times greater than other kit tuners and equals that of the most expensive wired tuners; it is 1.5 uv for 20 db quieting. Radiation suppressed far below FCC standards. Also features new DM-70 traveling tuning eye. Input 300 ohms, IF bandwidth 260 kc, detector separation of 600 kc. Freq. resp. 20-20,000 cps  $\pm 1$  db. Audio output 1 v for 10 uv input with 75 kc deviation. Hum 60 db below 1 v. Cathode follower and multiplex outputs. Flywheel slide-rule tuning, AGC, stabilized low limiting threshold for excellent performance from weaker signals, broad-band ratio detector for improved capture ratio and easier tuning, full-wave rectifier and heavy filtering, very low distortion. Uses 1-ECC85/6AQ8, 3-6AU6, 1-6AL5, 1-6C4, 1-DM70, 1-6X4. Flexible "low silhouette" design adaptable to any panel thickness for console installation; optional cabinet. MWD: 3 1/4" x 12" x 8 1/4". ### THE LAFAYETTE STEREO-TUNER IS UNIQUE AND INCOMPARABLE

More than a year of research, planning and engineering went into the making of the Lafayette Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature that is considered necessary for your complete satisfaction of all present and future types of FM and AM. It will certainly become more and more the popular method of high fidelity broadcasting. The tuner also provides an output for multiplex FM stereophonic reception, enabling you to enjoy the ultimate in high-fidelity sound reproduction. Since the FM and AM sections are completely independent of each other, this tuner can be used furthermore as a dual-monaural tuner. In this way, the music lovers are able to listen to concert programs on the FM channel in one room, while the younger-set can listen to a different program on AM in another room. In addition, an monaural program which is broadcasted simultaneously via FM and AM, this tuner will enable you to tune in both channels and reproduce them through individual amplifier-speaker systems. The improvement of quality will be immediately noticeable because the sound source is now distributed and at the same time, the hole-in-the-wall point source effect is completely eliminated. Of course, the unit can also be used as an ordinary type of FM-AM tuner, providing you with unsurpassed quality of reception.

Apart from its unique flexibility, this is, before all else, a superior high-fidelity tuner, employing many features found only in the highest priced units. An inspection of the tubes and parts used will reveal that this tuner is engineered without compromise of any kind. With the Lafayette Stereo-Tuner you are assured of noise-free, drift-free, distortion-free performance. You will not only hear this quality, but also sense it even in the mechanical details; in the "feel" on the velvet-smooth easy flywheel tuning, in the professional appearance of the tastefully selected colors that will blend with any decor. The just-right shade of gold-brass escutcheon contrasts just enough with the dark maroon background, and it set off by matching maroon knobs with gold inserts. The design of the cabinet has the simplicity of modern styling, touched by a stroke of traditional elegance. Carefully designed for easy installation in console if desired. Deluxe features include separate FM and AM sections, each tuned with its own 3-gang tuning capacitor, and each has its individual low impedance cathode follower output. This means that long output cables can be used to connect tuner to amplifier or control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that, when used for stereophonic reception, a proper balance between channels can be achieved. Without this important feature, the wonderful realism of stereophonic sound would be destroyed. Convenient front panel switch changes from stereo to monaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's, making construction and wiring simple, even for such a complex unit.

### THE LAFAYETTE KT-600 SOLVES EVERY STEREO/MONAURAL CONTROL PROBLEM

In Lafayette's constant effort to bring you the very latest and most advanced developments in electronics — and particularly in high fidelity — at prices everyone can afford, Lafayette went to the most forward-looking experienced brains in the electronics/high fidelity industry and has now DARED to produce what we think is the MOST REVOLUTIONARY DEVELOPMENT IN STEREO HIGH FIDELITY — A BRILLIANT NEW ACHIEVEMENT — THE LAFAYETTE KT-600 STEREO MASTER AUDIO CONTROL CENTER!

The KT-600 provides: 4 dual concentric input level controls for balanced use of different types of program sources — such as AM and FM tuners, tape recorder with microphone, phonograph plus microphone, etc., and without overloading inputs; 3 controls ore for high level input, and a separate level control is provided for the output of the preamplifier stage. The KT-600 provides separate turnover and rolloff dual concentric switches for 24 possible positions of accurate equalization on each channel; equalization on each channel may be set independently of the other. Furthermore, all inputs can be variably mixed, monaurally, at will (mixe with phono, tape recorder with phono, etc.). The Bridge Control permits cross-channel feed or optionally acts as a volume control for the 3d channel (Bridge) output to eliminate "ping-pong" or "hole-in-the-middle" effects. An audible, sharp, accurate "null" (dip in sound output) is provided by a "Calibrate" position of the Stereo Function Switch working in conjunction with the clutch-type Balance Controls for precise stereo balance — highly important for good stereo performance. The 3d channel output can also serve for mixing any stereo program (stereo record, tape, AM/FM stereo) to produce excellent monaural recordings or to play a stereo program monaurally through a separate amplifier and speaker system in another room. The KT-600 has Electronic Phase Reversal to make up for reversed-phase recordings sometimes found commercially, in which there is a loss of some portions of the frequency spectrum, and to correct speakers connected out of phase. Channel reversal is also present for correct positioning of stereo music to the right or to the left — and this may optionally be accompanied by phase reversal for best overall stereo sound. The KT-600 has a Presence Rise Switch which pulls a solo instrument out of the general musical background with minimum disturbance of orchestral balance.

AND STILL OTHER PROFESSIONAL FEATURES OF LAFAYETTE'S KT-600 ARE: Tape head equalization for the new 4-track stereo tapes; Master Gain Control for individual or simultaneous adjustment of channel levels; inputs for constant velocity (magnetic) and constant amplitude (ceramic, crystal or capacitive) phono cartridges, all equalized by the Rolloff and Turnover selector switches; individual channel concentric bass controls and concentric treble controls which permit pre-setting for good stereo tonal balance and maintaining that balance at other tone control settings; tone control circuits use 5% tolerance components and 2 1/2% tolerance precision potentiometers for accurate centering of their "flat" positions; switched rumble and scratch filters; switched Fletcher-Munson loudness contour compensation; tape monitor output jacks and tape Monitor-Play switch permit monitoring with recorders having special monitor heads and preamplifiers and also permit stereo/monaural tape deck with 1 or 2 record/playback preamplifiers to be permanently connected to the KT-600 for recording and playback; "plate follower" output stages for low impedance (1500 ohm) outputs with extremely low distortion; special low-flux power transformer and DC operation of all filaments for exceptionally low hum and cool operation; low-noise deposited metal-film resistors and 7 of the new premium low-noise type 7025 tubes are used for extra-good signal-to-noise ratio. The KT-600 has printed circuit board construction for ease of wiring and maximum performance stability.

## LAFAYETTE STEREO REMOTE CONTROL CENTER KIT KT-315

### ELECTRONIC STEREO ADAPTER KIT

This self-powered electronic adapter offers exciting features unique even in the fast moving stereo field. Inclusion of low-impedance "plate follower" outputs permits remote operation 50 feet or more from the controlled amplifier. Unusual bridge circuit assures precise balancing of the stereo system by means of audible "null." Objectionable "hole-in-the-middle" effect can be eliminated by cross-feeding variable amounts of audio from each channel. Includes controlled third-channel output for driving third amplifier and speaker, if desired. Individual or simultaneous control of each channel. Phase reversal with or without channel reversal. Selective monaural operation. Frequency response 10 to 25,000 cps ± 0.5 db; gain 6 db; cross channel rejection better than 50 db. Premium type 7025 dual triodes. Printed circuit boards for easy error-free assembly. Complete, profusely illustrated manual included. Adapter with cage measures 6 1/2" wide x 4 1/2" high x 7" deep (not including knobs and projections). Shipping weight 7 1/2 lbs. KT-315 Stereo Adapter Kit (with cage) 2.00 Down ..... Net 27.50

## SOLVE THE SPACE PROBLEM WITH NEW! LAFAYETTE

### TRIOSONIC

#### BOOKSHELF SPEAKER SYSTEM

- FOR BOTH STEREO & MONAURAL
- FREQUENCY RESPONSE 35 TO 18,000 CPS
- UNIQUE 8" WOOFER-MIDRANGE ASSEMBLY
- COMPRESSION — HORN TWEETER
- 6 DB PER OCTAVE ELECTRONIC CROSSOVER WITH LEVEL CONTROL
- SOLID 3/4" VENTED DUCT PORT BOOKSHELF ENCLOSURE

"Triosonic" The perfect blending of attractive bookshelf cabinetry and advanced audio design (years ahead of other engineering efforts along these lines). The exceptional smoothness and cleanliness of the bass and mid-range is the product of a unique 8" woofer-midrange speaker design employed in a solid 3/4" acoustically lined vented duct port enclosure. Two separate cones are coupled through a common voice coil, with the outer edge of the midrange cone attached and floating on the flexible corrugated edges of the woofer cone. This results in a mechanical crossover with an absolute minimum of distortion, so that both cones operate in phase at low frequencies, but only the midrange cone transmits the midfre-

quencies. The heavy magnets provide high efficiency and excellent transient characteristics. Smooth extended high frequencies are brilliantly reproduced by use of a compression horn tweeter utilized with an electronic crossover and level control provided for balancing the system according to individual listening tastes. **14.95**

New high frequency tweeter featuring a louvered acoustic lens for uniform sound dispersion and capable of handling up to 25 watts of distortion-free power. The directional tendency of high frequency notes is overcome by the natural wide dispersion angle of the short horn and the acoustic lens which disperses and radiates the high notes smoothly throughout the entire listening area. The lens is detachable for panel mounting, with a separate base for the tweeter furnished for external mounting where desired. Aluminum voice coil has 16 ohms impedance. Size: 4 1/4" long x 3" diameter, lens extends 2 1/2". Requires a crossover network, preferably one with a level control, such as the LN-2. With full instructions. Shpg. wt., 5 lbs.

# NEW! Achromatic BARLOW LENS

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Improves Definition!
- Provides Greater Eye Relief!
- Greater Illumination—Wider Field!

**4.95**

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpens definition and reduces image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb.

Manufactured to extremely close tolerances by one of world's leading manufacturers of optical accessories. These oculars allow you to obtain maximum performance from your refractor or reflector. You can determine the magnification possible by dividing the focal length of the eyepiece into the focal length of the telescope objective lens. All are hard coated. The 24.5 mm O.D., (.97") fits most telescopes currently available.

A true "mechanical universe." Designed for and dedicated to those who recognize the challenge and adventure that lie on the frontiers of space. The concept of the celestial sphere is the most convenient means of illustrating and discussing the common motions of the stars and the individual motions of the members of the solar system. It offers an easily used and easily understood working model of our universe. An invaluable aid in visualizing and identifying the stars and constellations and their relationship to each other, to terrestrial positions and to times and dates. Permits comprehensive explorations in time and space beyond the earth atmosphere. The Lafayette celestial sphere may be defined as a sphere of infinite radius with its center located at the center of the earth. This system of geocentric coordinates will illustrate the true geographic zeniths of the sun and stars at any time on any day. All systems of astronomical spherical coordinates, such as the equatorial, galactic, ecliptic, etc., which are based on the celestial sphere, rotate with the sphere. The apparent contra-rotation of the stars, actually due to the earth rotating about an axis is clearly demonstrated. The sphere will illustrate how the sky will appear at any hour—on any date—from any point on earth. With it you can tell time by the stars—learn to tell time by the stars—learn to tell time by the stars and navigational problems. Traces the orbits of man made satellites and finds their overhead positions. Serves as a superb star chart. Sun and moon positioned by external controls. Artificial satellites automatically circle around the celestial globe. The various stars, constellations and their identifications are permanently matted—not printed—on the celestial sphere. The celestial globe is 14" in diameter with the terrestrial globe centered within. Equipped with horizon ring—time ring—fixed meridian ring—swinging meridian ring—sun and moon pointers—fixed ecliptic—detachable "planet"—indications—universal base—and complete instructions. Shpg. The highly corrected optics permit extremes of magnification without distortion or color aberrations. The "Magni-Scope" has also been designed for use as a shadow graph, making it invaluable in industrial and testing laboratories. All standard (society size) microscope objectives and eyepieces are standard and can be used in the "Magni-Scope". Hence the "Magni-Scope" offers all advantages of the most expensive microscopes. Magnifications up to 1500x are possible by using a 15x eyepiece and 100x oil immersion objective. Polarizing filters and an iris diaphragm are mounted substage for light control.

The "Magni-Scope" finned housing and the large stable base are cast aluminum alloy, finished in black crackle enamel. The focusing mechanism is a dovetailed chromed brass slide with a spring-loaded micro-drive for fine focus. Stage is 90mm by 80mm. Supplied complete with a 10x eyepiece, 10x objective, 100 watt projection lamp, instructions and a fitted hardwood carrying case. Shpg. wt., 10 1/2 lbs.

## A LAFAYETTE SPECIAL TUBE TESTER!

- COMPLETELY WIRED — NOT A KIT
- MOST ADVANCED ENGINEERING TO FIT SERVICEMAN'S NEEDS

26.95

A new streamlined tube tester with a realistic approach to the problem of quickly testing the ever increasing number of tube types. It incorporates new and advanced engineering features and all at a price of about half of even the most ordinary tube tester. Read these Specifications.

**"FREE POINT" ELEMENT SELECTOR SWITCHING:** Newly designed, it reduces possibility of obsolescence to a minimum because any pin may be used as a filament pin and voltage applied between it and any other pin, or even the "top cap." Tubes with tapered filaments or with filaments terminating in more than 1 pin are truly tested.

**MULTIPURPOSE TUBES:** Special isolating circuit allow each section of multi-purpose tubes to be tested individually as if it were in a separate envelope.

**SHORTS AND LEAKAGES:** Supersensitive method checks shorts and leakages up to 5 megohm between any and ALL elements; continuity between various sections individually indicated.

**SIMPLICITY:** Fast simple operation. The 4 position fast action snap switches are all numbered in exact accord with RMA standards. Thus when testing element terminating in pin No. 7 of a tube — you use button No. 7. You can't insert a tube in the wrong socket — there's one for each type of tube base.

**TUBE TYPES:** Tests all octal, loctal, 7 pin miniatures, 9 pin miniatures as well as the new naval and Sub-Minar types. Old type sockets used for testing obsolete types — that you rarely see anymore — have been eliminated.

**SIZE:** A practical size to carry with you as well as for use in the shop — only 8 1/2" x 6 1/2" x 2 1/4" deep. Shpg. Wt. 5 lbs.
