The Stereo 250A . . . a stereo high fidelity amplifier with a high quality of reproduction, remarkable versatility and new distinctive styling—worthy of a place in the finest stereo hi-fi music system. A full range of controls enables you to enjoy the utmost in listening pleasure in any situation. - Sensitivity: 3 mv. Magnetic Phono
- 5 Input Selections
- Frequency Response: 30-20,000 cps  $\pm 1.5$  db At Normal Listening Level

The New Lafayette LA-218 is a perfect combination of outstanding performance, beautiful styling, and low price. It can easily be integrated into a fully equipped hi-fi system utilizing the 5 input selections. Because of its high input sensitivity, either magnetic or ceramic cartridges may be used, achieving full power output. A tape deck, even without playback preamplifiers, may be used in direct recording through tape output jack and in playing back through tape-head input. Also may be used with AM, FM or TV tuner music sources. A loudness control compensates for the loss of low frequencies when listening at low levels—you do not have to listen at high volume level to achieve full tonal quality. A scratch filter is useful in reducing noise of dusty or damaged records. Headphone jack is provided for private listening. Individual bass and treble controls each provide a boost of 10 db and cut of 14 db for adjusting to individual listening areas and tastes. Full 15 watts is sufficient power to adequately drive most speaker systems. Perfect for use as a second amplifier or converting to stereo or for starting out monophonically and adding stereo at a later date. Engineered to include every practical feature at a low, low price. Beautifully styled in popular low silhouette enclosure and will add beauty to any room decor. Size: 12 $\frac{3}{4}$ "x5 $\frac{1}{2}$ "xHx8 $\frac{1}{4}$ "D. Shpg. wt., 18 lbs. Imported.

Designed by Lafayette engineers—built by the foremost English HI-FI Speaker manufacturer to Lafayette's rigid specifications, the Decorette III employs three separate speakers to provide smooth, realistic musical reproduction over the entire audible range—you'll hear deep effortless bass . . . clear precise mid-range . . . shimmering highs.

The particularly low bass response of this bookshelf system is achieved by means of a specially engineered enclosure and the use of a newly-developed 12" low-resonance woofer which covers the range of 30 to 2000 cycles. The 6" mid-range Speaker and the 3½"

"Super" tweeter act as direct radiators and provide smooth reproduction from 2,000 cps to beyond audibility. The enclosure is finished on all four sides in a hand rubbed oiled walnut veneer, tastefully framed in an ebony and gold picture frame molding with white and gold acoustic grill material. Designed for either horizontal or vertical placement, the "Decor-ette III" is a handsome addition to any listening room. For 10-watt amplifiers or larger. Dimensions: 14x24x12"D. Shpg. wt., 35 lbs.

## SYSTEM DESIGN

The enclosure is a bass reflex design using a ducted port of the tube type which is proportioned to provide correct acoustic "tuning" of the enclosure. This arrangement provides a special path for the sound waves radiated from the rear of the woofer so that they emerge "in-step" with those radiated from the front of the woofer. This provides a substantially greater bass sound power from the system. Solid ¾" wood construction, internally braced, plus the liberal use of sound absorbent material, ensures an extremely rigid enclosure, free of undesirable resonances. A

special 12" woofer covers the range to 2,000 cycles and employs a foam-treated cone that contributes greatly to the efficient, distortion-free bass reproduction. A 6" midrange speaker covers the 2000 to 5000 cycle range and is of the closed back type to prevent interaction with the woofer. A 3½" cone-type "Super" tweeter, also with closed back, provides coverage from 5000 cycles to beyond audibility (30,000 cps). All three speakers are acoustically matched and provide a well-balanced and smooth sound output over the entire range of the system.

AS **19.95**

These Ultra-Compliance 2 Way Systems feature a unique dual cone speaker with heavy magnet structure, employed in a specially designed tuned ducted port enclosure. Both tweeter and woofer "float" on flexible, corrugated edges, with the outer edge of the tweeter cone attached to the mid-section of the woofer. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone radiates high frequencies. The same type of wide-range frequency response as found in true coaxial or multiple speaker systems is achieved in these unique "Ultra-Compliance" Speaker Systems. Frequency response is 40-16,000 cps—Impedance: 8-16 ohms.

The "Eliptoflex"....

- 1 Meets space requirements of stereo.
- 2 Utilizes the full advantages of efficient 12" speaker performance.
- 3 Provides optimum performance without use of large wattage, expensive amplifiers.

The "Eliptoflex" utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances when coupled with the famous Lafayette free-edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1¼ lb. TSK-5 high flux density magnet, — special ¾" wide sheepskin cone-edge suspension and built-in crossover network level control offer a magnificent speaker system. (See listing below).

"Eliptoflex" achieves a degree of natural smoothness, low-distortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14Hx23¼Wx13¼"D. Shpg. wt., 35 lbs.

## PHENOMENAL ELIPTOFLEX PERFORMANCE

U. S. Patent No. 3,089,562

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

Recreates The Entire Audio Spectrum With Concert Hall Faithfulness—The Lafayette "Trihelix." Fresh engineering concepts have resulted in a single 10-inch speaker designed expressly for use in bookshelf size enclosures. The "Trihelix" is in effect a complete three-way high-fidelity speaker system, with three mechanically and electronically independent speakers mounted within a single 10-inch frame.

Although they are individual units the 2-inch tweeter and 5-inch midrange speakers have been especially designed to compliment the woofer. Special treatment of the cones and cone edges with polyester resins provides an even distribution of mid and high frequencies without peaks or resonances. To minimize interaction between the three cones both the midrange and tweeter units are mounted eccentrically or off center in relation to the woofer and are completely enclosed by a specially designed baffle. These unusual design features result in effectively eliminating intermodulation distortion—a common fault in conventionally designed 3-way speakers. The specially treated woofer cone employs a revolutionary "conical stiffener" located at the apex of the cone in order to stiffen the diaphragm and eliminate "breakup," thus

providing a true piston action. This carefully designed cone-stiffening procedure, in addition to its very high compliance, enables the woofer to deliver a smooth, crisp, solid bass that balances naturally against a crystal clear midrange and natural treble. A built-in electrical crossover network with crossover points at 1500 cps and 5000 cps, allows each speaker to reproduce its portion of the audio range smoothly and efficiently. An adjustable brilliance control permits matching of sound to room acoustics. SPECIFICATIONS: Overall Response 20-20,000 cps (30 to 18,000 cps ± 3 db). Free Air Resonance 35-55 cps. Impedance 16 ohms. Power Rating: 20 watts Average Program Material. Crossover Points: 1500 & 5000 cps. Overall Diam: 10". Overall Depth: 7". Baffle cut-out: 8¾". The dual-cone construction used in these high quality 8" speakers, provides the same type of wide-range response normally found in true coaxial speakers or multiple speaker systems. The woofer and tweeter cones "float" on flexible corrugated edges. This mounting results in true mechanical crossover, so that both cones operate at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional characteristics and minimum distortion. Patented cone materials provide extremely smooth response over the range of 40-16,000 cps. Magnets are large and heavy, with a flux density of 10,500 gauss and total flux of 56,000 maxwells. Terminals are screw-type for solderless connections. ## ULTRA-LINEAR SK-128<sup>®</sup>

### FULL RANGE 8-Inch BIAxIAL SPEAKER with Acoustic Tweeter Baffle Design

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a built-in network. An adjustable brilliance control permits matching of sound to room acoustics. Efficiency of the speaker is such that it will operate from any amplifier with an output of 1 watt or more. Installed in a bass-reflex type of enclosure, it performs outstandingly, and is recommended for all high-quality music systems—whether monaural or stereophonic. **SPECIFICATIONS:** Overall Response: 20-20,000 cps (40-16,000 cps  $\pm$  3 db). # FAMOUS LAFAYETTE F-767 STEREO HEADPHONES

**OUR Best Buy in Stereo Headphones**

- Air-Cushioned Headband • Soft Foam Rubber Ear Cushions for Maximum Comfort and Bass Response • High Sensitivity

The headband is covered with an air-filled vinyl bag which serves as a gentle air cushion, eliminating discomfort. Vinyl bag can be deflated, removed for washing and re-inflated. Soft foam rubber ear pads keep out external noise, provide maximum bass response and make these headphones extremely comfortable to wear. Sensitivity is very high — a signal power of 1 to 2 mw will produce adequate listening volume. Frequency response, 30-15,000 cycles. Impedance, 8 ohms per phone. Supplied with cylindrical overload control box for connection of the headphones to equipment that does not have stereo headphone jacks. Phones plug into box and two pairs of leads from the box connect to speaker output terminals; may also be attached to two separate 2-conductor phone plugs for connection to units having two separate extension speaker jacks for stereo. This headphone and control box not recommended for transistor amplifiers that do not have a stereo headphone jack — use Model FA-60 headphone set (below) in such cases. The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy-manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P', and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units; A problem-tested location of scales; and adjustment screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, Tr-2, P', P, Q, ST, S, S-D, C, D, LLO1, LLO2, LLO3, LL1; (REAR) Sh-1, Sh-2, DF, A, B, C, CF, Th, C, D, LL3, LL2, db. This high quality V.T.V.M. is an indispensable test instrument for the service technician, engineer, or experimenter. It is a highly accurate DC voltmeter, AC voltmeter and ohmmeter employing a giant 6½" easy reading 400 µa meter. With a high input impedance of 11 megohms, this V.T.V.M. can accurately measure DC voltages up to 1500 volts, while presenting a negligible load to the circuit under test. As a wide band AC voltmeter, it will measure AC peak-to-peak voltages up to 800 on any waveform be it sinusoidal, sawtooth, square or of any other complex form; all this from 30 cps to above 5 Mc — without any accessory probes! AC RMS voltages may be read directly up to 1,500 volts if the waveform is sinusoidal. Resistances can be read directly on the Ohms scale from 0 to 1,000 megohms in 5 overlapping scales. A direct reading scale is calibrated from —10 to +45db (reference 1.73 volts, 6 mw into a 500 ohm line). The meter

is isolated from the measuring circuits by a DC amplifier, making it virtually impossible to burn it out. Multiplier resistors are 1% zero temperature coefficient types. Function Selector-selects power off, AC volts, P-P volts, D.C.V. Neg., D.C.V. Positive, Ohms; Range Selector—for 7 voltage and resistance ranges; Ohms Adjust; Balance (zero) Adjustment. There are 3 probes: Common A.C. volts—ohms, and shielded DC volts probe with 1 megohm isolating resistor. Silicon rectifier power supply for 110-120 VAC, 60 cps. Dimensions: 7½Hx 6½Wx5"D. Comes with 1½ volt battery for ohmmeter circuit and complete instructions. Shpg. wt., 7 lbs.

## LAFAYETTE "PRIVA-COM"™ SELECTIVE CALLER

MODEL HA-200

The "Priva-Com" Selective Caller, when in "Standby" position, silences the speaker of the transceivers to which it is connected. When the "Priva-Com" call switch is actuated at either base or mobile, the transmitted dual tone signal is received by the other "Priva-Com". Its indicator light goes on and the speaker is automatically activated. You can now speak or listen to the calling station. The light stays on until manually reset. If the car horn or an external alarm is connected to the "Priva-Com" terminals the received dual-tone signal causes the horn or alarm to sound for 1 second. Both base and mobile stations can initiate calls and monitor the air at anytime. Cable terminates in plug which mates with Lafayette CB Transceiver. Complete with mounting bracket and instructions. Size 3¾Wx3¾Hx5½"D. Shpg. wt., 3½ lbs. **42 H 0110**

Lafayette is Headquarters For the Citizen Band User

Lafayette advances its leadership in the Citizens Band field with this superb Dual Conversion Deluxe Citizens Band Transceiver. The excellent selectivity and gain of its dual conversion receiver makes the Lafayette HB-200 a natural for efficient fixed and mobile communications over distances of up to 20 miles or more, depending on the terrain and the height of the antenna.

The 5-watt input highly efficient crystal-controlled transmitter may be operated on any 8 of the 23 channels assigned by the FCC. The dual conversion receiver circuit provides for 8 crystal controlled receiving channels plus a tuneable superheterodyne receiver that covers all 23 assigned channels with a sensitivity of 1 microvolt or less. An adjustable squelch circuit quiets the receiver when no signal is being received. A dual cascade series gate noise limiter effectively reduces ignition, static and unwanted noises. A sensitive illuminated panel meter is utilized with a 3-position switch to indicate incoming signal strength, relative power output and modulation. The HB-200 also features dependable relay switching; a Spotting Switch for locating exact frequency on tunable receive, and a front panel phone jack for quiet listening. It incorporates a PI-network for matching the output to 30-100 ohm antennas for maximum signal output; input socket on rear of chassis for silent communications between calls when used with Lafayette PRIVA-COM selective call unit. A rear mounted low-loss antenna jack accepts PL-259 connector used with dipole, ground plane, rod and direct mounting antennas (listed below).

Efficient, dependable 2-way communications in any fixed or mobile application is assured with this rugged, new 5-watt CB transceiver. A military-type frequency synthesizing circuit makes it possible to transmit and receive over the full range of 23 channels with crystal-controlled accuracy—no extra crystals to buy and install! A zener diode full wave range-boost circuit increases the average depth of modulation during transmission and thus increases the average power in the sidebands—let's you transmit further within the 5-watt limitation imposed by the FCC! And, the "Range-Boost" system in the HB-400 is fully compatible with existing CB transceivers. Highly efficient circuit design uses 13 tubes (including two nuvistors) and 8 diodes to provide top performance under a wide range of operating conditions. Dual-conversion receiver offers .3 uv sensitivity and low noise, plus excellent adjacent channel rejection. Includes every needed feature for optimum reception—crystal-controlled "fine tuning" capability of  $\pm 2.5$ Kc (Delta Tuning), high-efficiency variable

noise limiter, variable squelch, and Automatic Volume Control. Also included is an illuminated meter which indicates relative RF power output or received signal strength in "S" units. The transmitter is equipped with ceramic push-to-talk microphone and uses reliable electronic transmit-receive switching. Operates in a fixed or mobile location with equal ease . . . has built-in power supply for either 117V AC or 12V DC. Specially designed "Vari-Tilt" mounting bracket simplifies mobile installation—permits fast removal of the transceiver too! And, there's nothing else to buy—you get all crystals and a built-in vibrator for 12V DC, plus 2 power cables. Measures a compact 12"W x 5"H x 10"D (including controls and plugs at rear). ### HIGHLY SELECTIVE MECHANICAL FILTER

With CB channels only 10 Kc apart, selectivity is important! In the HB-500, ultra-sharp selectivity is achieved by means of a true mechanical bandpass filter in the 455 Kc IF section. At 10 Kc on either side of the center frequency, the filter provides 60 db of attenuation.

The filter consists of three sections—an input transducer, a mechanically resonant filter, and an output transducer. The mechanically resonant section consists of six metal disks supported and coupled by a thin rod.

The use of this filter results in an IF bandpass curve which is almost rectangular in shape, with superior "skirt" selectivity.

Another outstanding achievement by Lafayette engineers in tape recorder design. The Criterion 1000 records and plays 4-track stereophonic tapes with "ultra" realism through its own transistorized, preamplifiers, push-pull power amplifiers and matched self-contained high fidelity speakers. Speaker wing panels deflect the sound into the room with the proper stereo separation. Three fingertip selected speeds of 7½, 3¾ and 1½ give you up to 8 hours playing time on a single 7" reel. Positive pushbutton controls coupled to a husky, heavy duty, low slip capacitor-start motor enable smooth tape control with exceptional record-playback characteristics. Pause control, dual volume and tone controls, index counter, separate level meters and an automatic shut-off which electrically and mechanically returns recorder to "stop" position are additional Criterion features.
