- Power Handling Capacity—30 Watts
- Two Separate Speakers—Powerful 10" Woofer with 1 lb. Magnet Plus 4" Tweeter
- "Tuned" Enclosure with Tube-Type Ducted Port
- Overall Response 30-19,000 Cycles

An unusually compact speaker system that delivers really "big" sound. Enclosure is a bass-reflex design using a ducted port of the tube type to provide proper acoustic "tuning." The tube provides a special path for the low frequency sound waves radiated from the rear of the woofer so that they emerge "in-step" with those radiated from the front and thus provides substantially greater bass sound power from the system. Solid wood construction, plus the use of sound absorbent material ensures an extremely rigid enclosure, free of undesirable resonances. A powerful 10-inch woofer provides reproduction of the low frequencies. A 4-inch cone-type tweeter provides reproduction of the mid-range and high frequencies (to beyond audibility) and is of the closed back type to prevent interaction with the 10-inch woofer. Smooth transition is achieved by means of electrical crossover at 2800 cycles. Finished on all four sides to permit either vertical or horizontal placement. Dimensions are 19Wx8 $\frac{1}{2}$ Dx11 $\frac{1}{2}$ "H. Overall frequency response: 30-19,000 cycles; nominal impedance: 8 ohms; power handling capacity: 30 watts program material. LAFAYETTE — For All Car Radio Needs

LAFAYETTE TRANSISTORIZED AUTOMOBILE REVERBERATION SOUND SYSTEM FROM LAFAYETTE... AUTO REVERBERATION A 3rd DIMENSION IN SOUND

- For all 12-volt Negative Ground AM & FM Auto Radios
- Simple—Easy Installation

The new Lafayette Transistorized Automobile Reverberation sound system consists of the transistorized amplifier chassis with the reverberation unit, under dash control plate with on-off switch, fader control, and interconnecting cables. Includes simple instructions for connecting the reverb unit to your regular under dash auto speaker, and to a separate rear seat speaker (if your auto does not have a rear seat speaker, see Lafayette's complete listing of rear speakers in Lafayette Annual Catalog 660, page 373). Reverberation is an entirely different approach to sound reproduction. Normal sound reproduction from a single source has a flat, one dimensional effect; with proper sound delay through "REVERBERATION," tones are created with a truly third dimension for concert hall originality. ELECTRO-LIFT ECONOMY GARAGE DOOR OPERATOR

- Fully Transistorized Transmitter and Receiver
- Operates Only on Personalized Pulse Tone

Enjoy the convenience and safety of an automatically operated garage door with this fully guaranteed unit by Perma-Power. New computer-logic motor control adds new dimensions of safety and freedom from failure. Electronic control module assigns proper priority to the "commands" given the motor—the operator will always shut itself off. Pulse-tone modulation is utilized so that only your own transmitter will operate the system—rejects commands and extraneous impulses given by other transmitters. Door stops automatically if an obstacle is encountered. Sensitive safety clutch permits the mechanism to exert just enough force to move the door reliably—even stops with gentle hand pressure! When door is opened, an automatic illumination circuit is activated—remains in operation for two full minutes after door is closed; plenty of time to exit in complete safety. The 1/4 hp. motor will operate one-piece tilt-up or sectional roll-top doors up to 18' wide by 8' high. Simple one man installation. Meets all FCC requirements without license. Shpg. wt., 65 lbs.

Provides the protection and convenience of automatic garage door operation at a budget price. Both the transmitter and receiver are completely transistorized for long-life, trouble free operation. A new coding system using pulse-tone modulation, allows only your own transmitter to open the door. Opens the door gently with a minimum amount of force—thus easily stopped by hand pressure or any obstruction. As an additional safety feature, if the door is stopped, when the motor is again activated, it reverses direction. Upon closing, the door is completely locked by the lift mechanism. When the door is fully closed, a switch is activated which turns on a light to illuminate your garage. Handy time delay circuit turns light off approximately two minutes after door has been closed—allowing ample time to exit before the light is automatically turned off. Fully complies with FCC regulations and requires no license. Will operate one piece and section garage doors up to 8' high by 10' wide. Shpg. wt., 60 lbs.

Slide Rules — Drafting Equipment

(A) LAFAYETTE VECTORLOG® 12" SLIDE RULE

- Laminated Bamboo Construction
- P, P', and Q Scales—For Direct Vector Addition
- Hyperbolic Sine and Tangent Scales
- Two Sine Scales
- 5 Log Log Scales Plus a Voltage DB Scale

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P', and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units; A problem-tested location of scales; and adjustment screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, TR-2, P', P, Q, ST, S-O, C, D, LL01, LL02, LL03, LL1'; (REAR) Sh-1, Sh-2, DF, A, B, Cl, CF, Th, C, D, LL3, LL2, db. Illuminated slide rule dial, bandsread with markings every 5 KC on 80 and 40 meters, every 20 KC on 20 and 15 meters, and every 50 KC on 10 meters, plus an edgewise S-meter combine to make this receiver Q-5 on the crowded amateur bands. Built-in BFO can be used to separate CW stations by means of the pitch control. Effective Q multiplier adds excellent selectivity. Front panel controls: Function Switch, Audio Gain, Selectivity (Q-Multiplier), Frequency (BFO), Band Selector, IF Gain, Antenna Trimmer, AVC-MVC Switch, ANL Switch, Main Tuning, Bandsread Tuning, and Headphone Jack.

Receiver sensitivity: 1.0 microvolts for 10 db signal-to-noise ratio. Selectivity: -60 db at 10 KC, 6 db at 0.8 KC with Q-Multiplier. IF Frequency: 455 KC. Combined with the recorder have a rather high-pitched, nasal quality, acceptable for voice recording. All things considered, I would rate the Criterion 1000 as one of the best under-\$300 recorders I have tested. It sounds fine, looks even better, and sells for \$199.50.
