NEW! LAFAYETTE SQ-M 4-CHANNEL DECODER — With this new decoder you can convert your present home stereo equipment to play SQ records. The Columbia SQ 4-Channel Quadraphonic record is the latest development in 4-channel high-fidelity components. With separate signals in each of 4 channels, the SQ record provides a startling and brilliant listening experience. It puts the listener right into the room where the performance took place. The result is the most natural sound possible in the home. SQ records can also be broadcast on FM stereo radio and received in the home as 4-channel sound with the SQ Adapter. A conventional 2-channel stereo system requires adding the SQ adapter, an additional stereo amplifier, and 2 more speakers. Present 4-channel systems not incorporating SQ circuitry only require an SQ Decoder. The SQ-M Decoder also includes the

exclusive Lafayette Composer Circuit for deriving 4 dimensional sound from 2 channel records, tapes, and FM broadcasts. A Master Gain Control adjusts sound level for all 4 channels. Also includes a magnetic input for use with amplifiers or receivers not incorporating a magnetic phono input feature. Size: 6W x 2 $\frac{7}{8}$ H x 7 $\frac{1}{4}$ "D. For 105-120 VAC 50/60 Hz. WHY 4 CHANNEL?

4-Channel Sound is the latest advancement in recording technology. 4-channels makes recorded sound more natural and realistic. Four channel stereo makes you more of a participant in music than has ever been possible before. There are sounds and dimensions you did not know existed. Never before could you actually reproduce in your home the original recorded performance as it happened—you can have the spatial quality of the original concert hall right in your own living room—or you can literally be placed in the middle of a folk or rock session with your favorite singer or group.

4-channel stereo comes on tape, on records, and over the air via FM stereo broadcasts. There are 3 basic kinds of 4-channel sound: Discrete, SQ Matrix, and Derived.

① DERIVED 4-CHANNEL

Conventional 2-channel material—records, reel, cartridge and cassette—whether played directly or when broadcast on FM stereo—contains special information not adequately reproduced by the conventional 2-channel stereo system. This material is "Ambience"—the original acoustics of the recording studio or concert hall, etc. This ambience can be extracted and reproduced through 2 additional channels to recreate the sound and feel of the hall or studio in which the original performance took place. This form of 4-channel sound is derived from conventional 2-channel stereo discs or via FM stereo broadcasts. If you now own a 2-channel stereo system, you may achieve derived 4-channel sound by adding a Lafayette QD-4 adapter and 2 speakers. No additional amplifiers are needed.

② 4-CHANNEL SQ MATRIX

A method developed by Columbia (CBS) of recording and playing back 4 separate channels of musical information on a phonograph record (disc). This is accomplished by a system of encoding (matrixing) 4 separate channels onto a stereo record groove. 4-channel SQ records can be broadcast via FM stereo. Playback equipment with SQ circuitry decodes the original 4 channels and reproduces them through 4 separate amplifiers and 4 separate speakers. No special record changer or cartridge is required. This form of 4-channel sound is produced from any SQ processed disc, whether played directly (or via FM stereo broadcasts) with Lafayette equipment incorporating SQ 4-channel circuitry or with the Lafayette SQ-M decoder. The decoder requires the addition of 2 channels of amplification and 2 speakers.

③ DISCRETE 4-CHANNEL

A method, presently limited to tape, in which the 4 separate signals are recorded onto 4 separate tracks, which in turn are played back by a 4-channel tape machine. This form of 4-channel sound is produced from any 4-channel stereo tape, whether cartridge or reel (and, in all probability, in the not too distant future, cassette). You require 4 channels of amplification and 4 speakers in addition to the 4-channel tape machine. If you now own a 2-channel stereo system, you may convert to discrete 4-channel by adding the Lafayette LA-424 amplifier, the RK-48 tape deck and 2 speakers.

Now you can hear the full performance in true dimensional depth not just a part of it... from discrete 4-channel 8-track cartridges, discrete 4-channel reel-to-reel tapes, and when they are available discrete 4-channel cassettes, 4-channel FM broadcasts, and 4-channel records. Has input for external 4-Channel "SQ" Adapter to play new Columbia 4-Channel "SQ" records, no additional stereo amplifier is required. Another feature is the "Composer" circuit which takes existing conventional stereo records, tapes and FM broadcasts and derives from this material, rich four dimensional sound in your living room. It also enables the tape recording of derived 4 dimensional stereo from your present favorite stereo records, stereo tapes, and FM stereo broadcasts. In addition the LA-44 can be used as the heart of two completely independent stereo systems, supplying two different stereo programs to two different locations from two different stereo sources simultaneously, i.e., phono and tuner, plus the flexibility of additional remote speaker locations for each pair of channels. The LA-44 features separate volume controls for front left and front right channels, rear left and rear right channels; separate Bass controls for front and rear channels and separate Treble controls for front and rear channels; Headphone jacks for front and rear channels; front and rear channel tape output jacks provided on both front and rear of amplifier chassis for your convenience; a "Reverb" position for use with an external reverberation unit to the rear channels only. The rear panel features input jacks for 2-channel and 4-channel stereo for tape playback, magnetic and ceramic phono, tuner, Auxiliary I and Auxiliary II; main and remote speaker outputs for all four channels. CONVERT to a Derived 4-Channel Stereo System with the LAFAYETTE QD-4 4-Channel Adapter

30⁷⁵†
With All
Connecting Cables

- Derive 2 Extra Channels from Your Records, Tapes, and FM Broadcasts
- Compatible with 4-Channel Encoded Records
- Features Exclusive Lafayette Geared Control Mechanism

Add the Lafayette 4-Channel Stereo Adapter and two additional speakers to any existing stereo amplifier or receiver and enjoy multi-dimensional derived 4-channel stereo sound from regular 2-channel stereo records, tapes, and FM broadcasts. QD-4 adapter actually recovers "reflected" sounds that already exist on regular stereo recordings but are "hidden" during conventional 2-channel stereo playback. During a stereo recording session, the microphones pick up two types of sounds: direct and reflected, both of which are always included on a stereo recording. Because of the limitations of a conventional stereo system with 2 speakers in the front only, the reflected sounds are not reproduced. The Lafayette QD-4 recovers these "reflected" sounds and reproduces them thru two additional rear speakers along with the direct sound from the existing front speakers. Now, the acoustics of the original recording location have actually been introduced into your own listening room. This adds a

dramatic new dimension to all existing 2-channel stereo programs—the sound literally envelopes you and becomes astonishingly "live". Unlike other matrix adapters, the QD-4 preserves full channel separation and does not require an additional stereo amplifier. Connects to any standard stereo amplifier or receiver and 4, 8, or 16 ohm speakers. For even better results from your records, we recommend the Lafayette/Pickering Phase 44 magnetic stereo cartridge (See page 27). The adapter has a 4-position Function switch (Balance, 4-CH, Front Speakers, Rear Only), plus a Rear Speaker Level Control. Phono jacks on rear for easy hook-up to 4 speakers and amplifier/receiver. 3 pairs of cables supplied with phono plugs at one end. One 6 ft. pair for adapter to receiver, one 15 ft. pair for adapter to front speakers, one 25 ft. pair for adapter to rear speakers. Dimensions: 5 $\frac{1}{4}$ "x4 $\frac{1}{2}$ "x2 $\frac{1}{8}$ "H. Imported. Shpg. wt., 3 lbs.

 - 2 Master to Remote
 - 3 Intermixed Master and Remote

XL-6 MASTER **2995** ea.

R-6 REMOTE **1195** ea.

- Balanced Input and Output to Virtually Eliminate Annoying Noise Interference

3 separate types of installations can be hooked up depending on requirements: (1) MASTER TO MASTER: All Master Intercom System incorporates up to 6 separate master stations enabling 3 private conversations or 6 station conferences to be held. Master can initiate calls to any other Master. (2) MASTER TO REMOTE: Enables 1 Master station to communicate with up to 5 remotes either separately or in a six station conference. Remote can be hooked-up private or non private. Remotes can initiate call back to Master, but cannot talk directly to other remotes. (3) INTERMIX SYSTEM USING UP TO 12 MASTERS AND REMOTES: The number of units in this system may be as high as 12 depending on how many masters are used. For example if 3 Masters are used, each Master has 3 of its selector switches available to call 3 remotes, thus giving a total of

3 Masters and 9 remotes or 12 units in the system. The maximum number of remotes associated with any 1 Master is 6 minus the number of Masters in the system. Master unit has 5 individual station selector slide switches, 2 position Press to Talk—Talk/Lock Bar, and Volume Control. Remote unit has 2 position Press to Talk—Talk/Lock Bar. Handsome walnut wood cabinet. Dim. Master & Remote 7¾"L x 2¼"W x 4¾"D. For 117 VAC. 60 HZ. Imported.

13¼" VECTORLOG® SLIDE RULE

17.95

- Laminated Bamboo Construction

The Lafayette VECTORLOG Slide Rule provides a new concept in scientific calculation, incorporating scales and arrangement designed for quick-easy manipulation. Twenty-seven (27) scales incorporate the many problems encountered in Electrical Engineering and Physics. The unique P, P, and Q scales allow direct right angle vector addition. No longer are several settings required to obtain right angle vector sums—these scales work in the same manner as the C and D for multiplication. The two Hyperbolic Sine and one Hyperbolic Tangent Scale, the voltage db scale, and the five Log Log scales, provide maximum coverage of these dynamic fields. VECTORLOG is the result of extensive tests for ease of manipulation. Several of these features are: C and D scales on both the front and back of the rule; Sine scales in both degrees and radians, removing the necessity of bothersome conversion of units: a problem-tested location of scales; and adjusted screws to allow variable tension on the slide. Scales include: (FRONT) Tr-1, Tr-2, P, P, Q, ST, S-1, S-0, C, D, LL01, LL02, LL03, LL1'; (REAR) Sh-1, Sh-2, DF, A, B, CI, CF, Th, C, D, LL3, LL2, db. Boost flea power to high power for extended range and better readability. Provides up to 100 watts PEP (50 Watts DC) input into a 50 ohm load (with 10 watts RF drive). Unique RF sensing circuit automatically switches in linear when transmitter is activated. Absolutely no external switching is necessary. Built-in relay directly connects antenna to input SO-239 coaxial socket when receiving. No internal connections are required to your existing equipment. Simply insert the unit in series with your transmitter (or transceiver) and antenna and you're on the air with a real punch. Circuitry is broadbanded so only one tune-up is usually necessary on any band. Illuminated front panel meter indicates relative RF strength of linear's output signal when linear is on, or exciter's relative RF signal strength when linear is off. Self-contained power supply utilizes a high efficiency toroid power transformer. Rugged, attractively designed chassis with oversized heat sinks sturdy and cool operation. Supplied with comprehen-

Logix ELECTRONIC COMPUTER KIT

29⁹⁵

- Absolutely Safe—No High Voltage
- No Soldering
- Over 425 Parts
- 39 Different Programs
- 112 Page Detailed Illustrated Instruction Manual

Provides an insight to the Complex World of the Computer

The Logix electronic computer provides an introduction to computer technology by means of numerous experiments and programs. Its fundamental principles correspond to those of infinitely larger computers systematically showing what makes them work and how they can be used. "Snap-in" type parts simplify assembly of the console. Once assembled its manual details 39 different programs, progressing from very simple to more and more complex ones. Setting up a program simply involves connecting wires on the top side of the console exactly as shown in a wiring scheme. With each program is learned the logic that goes with it. You can play computerized games with an opponent, or match wits with the computer. Computerized weather forecasting is obtained by use of weather

input. Similarly, the computer can diagnose illness and recommend therapy. You can program airline bookings, routing of long distance telephone calls, mixing of complex colors, translation of languages, detection of criminals and investigation of cybernetic problems. Nine advanced programs deal with the binary system, complex mathematical calculations, Venn diagrams and the law of sets as well as playing a game of simulated chess. In addition provisions are made for individuals own creative programming. Kit is complete with 112 page manual, less flashlight battery. Imported. Wt., 2½ lbs.

SOLID-STATE TREASURE/METAL LOCATOR

- Gives Positive Variable Audible Signal Indicating The Presence Of Buried Coins And Metal Objects
- Locates Both Ferrous Metals (Iron, Steel, Tin) And Non-Ferrous Metals (Gold, Silver, Copper)
- New Design Using Integrated Circuit

Pays for itself many times over . . . opens up a new world of excitement and adventure. Electronically detects metal objects as small as a half-dollar up to 6 inches beneath the ground: gold, silver, coins, anything metallic. No meters or dials to check; solid-state integrated circuit gives positive audible low frequency beat heard through a built-in 2¼" speaker whenever a metal object is approached. Audible signal intensity increases when the treasure/metal locator draws nearer the object. Practical for home and public utilities (gas and telephone servicemen) too. Helps locate plumbing inside walls, or find pipes in yard or garden before digging. Epoxied super-sensitive 8½" coil is shock, heat and water resistant. Special shield increases sensitivity, prevents false indications. Lightweight and easy to use. 36" handle collapses to 20" for easy storage. Not a kit—electronics completely factory wired and tested—merely requires attachment of loop and handle. Uses single 9V, transistor battery (not supplied). Overall length: 40"; housing 4x5x2¾".
