## LAFAYETTE ULTRA-COMPLIANCE 2-WAY SPEAKER SYSTEMS

**VERY SMALL IN SPACE — LESS THAN 1 CU. FT.**

- Frequency Response 40-16,000 cps
- Especially Designed Vented, Tuned Duct Type Enclosures
- Unique Mechanical 2-Way Speaker With Heavy Magnet

**19<sup>95</sup>**

**FULL SIZE PERFORMANCE** — These outstanding Lafayette Ultra-Compliance 2-way speaker Systems achieves a purity of sound and musical quality that is astounding from a speaker system occupying less than one cu. ft. of space. A perfect speaker for use anywhere in your home or office . . . makes ideal extension units or use in pairs for stereo.

These Ultra-Compliance 2 Way Systems feature a unique dual cone speaker with heavy magnet structure, employed in a specially designed tuned ducted port enclosure. Both tweeter and woofer "float" on flexible, corrugated edges, with the outer edge of the tweeter cone attached to the mid-section of the woofer. This results in a mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone radiates high frequencies. The same type of wide-range frequency response as found in true coaxial or multiple speaker systems is achieved in these unique "Ultra-Compliance" Speaker Systems. Frequency response is 40-

16,000 cps—Impedance: 8-16 ohms.

Available in rich mahogany or oiled walnut. Finished on four sides —place it horizontally on its side or vertically on its base. Easily adapts to bookshelf placement or modular use. Dimensions are only 10¾Hx18¼Lx8¾"D. Shpg. wt., 15 lbs. Imported.

## True 2-Way Bookshelf Type Speaker System

4" TWEETER    8" WOOFER    TUBE TYPE  
DUCTED PORT

### SYSTEM DESIGN

The enclosure is a bass-reflex design using a ducted port of the tube type. The diameter and length of the tube have been carefully calculated to provide proper acoustic "tuning" of the enclosure in conjunction with the speakers used. The tube provides a special path for the low frequency sound waves radiated from the rear of the woofer so that they emerge "in-step" with those radiated from the front of the speaker. This results in an increase in the low-frequency sound waves and thus provides substantially greater bass sound power from the system. Solid wood construction, plus the use of sound absorbent material on all four sides and back, ensures an extremely rigid enclosure, free of undesirable resonances.

A heavy-duty 8-inch speaker provides reproduction of the low and mid-range frequencies. A 4-inch cone-type tweeter provides reproduction of the high frequencies (to beyond audibility) and is of the closed back type to prevent interaction with the 8-inch speaker. Smooth transition from one speaker to the other is achieved by means of electrical crossover at 3000 cycles.

## PHENOMENAL ELIPTOFLEX PERFORMANCE

The "Eliptoflex" . . .

- 1 Meets space requirements of stereo.
- 2 Utilizes the full advantages of efficient 12" speaker performance.
- 3 Provides optimum performance without use of large wattage, expensive amplifiers.

The "Eliptoflex" utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances when coupled with the famous Lafayette free-edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1 1/4 lb. TSK-5 high flux density magnet, — special 3/4" wide sheepskin cone-edge suspension and built-in crossover network level control offer a magnificent speaker system. (See listing below).

"Eliptoflex" achieves a degree of natural smoothness, low-distortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14Hx23 1/2Wx13 1/4"D. Shpg. wt., 35 lbs.

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front-plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

**Recreates The Entire Audio Spectrum With Concert Hall Faithfulness—**The Lafayette "Trihelix." Fresh engineering concepts have resulted in a single 10-inch speaker designed expressly for use in bookshelf size enclosures. The "Trihelix" is in effect a complete three-way high-fidelity speaker system, with three mechanically and electronically independent speakers mounted within a single 10-inch frame.

Although they are individual units the 2-inch tweeter and 5-inch midrange speakers have been especially designed to compliment the woofer. Special treatment of the cones and cone edges with polyester resins provides an even distribution of mid and high frequencies without peaks or resonances. To minimize interaction between the three cones both the midrange and tweeter units are mounted eccentrically or off center in relation to the woofer and are completely enclosed by a specially designed baffle. These unusual design features result in effectively eliminating inter-modulation distortion—a common fault in conventionally designed 3-way speakers. The specially treated woofer cone employs a revolutionary "conical stiffener" located at the apex of the cone in order to stiffen the diaphragm and eliminate "breakup," thus

**32<sup>50</sup>**

providing a true piston action. This carefully designed cone-stiffening procedure, in addition to its very high compliance, enables the woofer to deliver a smooth, crisp, solid bass that balances naturally against a crystal clear midrange and natural treble. A built-in electrical crossover network with crossover points at 1500 cps and 5000 cps, allows each speaker to reproduce its portion of the audio range smoothly and efficiently. An adjustable brilliance control permits matching of sound to room acoustics. SPECIFICATIONS: Overall Response 20-20,000 cps (30 to 18,000 cps  $\pm 3$  db). Free Air Resonance 35-55 cps. **9<sup>95</sup>**

- Mechanical 2-Way Design
- Overall Response 40-16,000 Cps.
- Large Magnet Structure
- Patented Cone Construction and Material High Excursion Woofer

The dual-cone construction used in these high quality 8" speakers, provides the same type of wide-range response normally found in true coaxial speakers or multiple speaker systems. The woofer and tweeter cones "float" on flexible corrugated edges. This mounting results in true mechanical crossover, so that both cones operate at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional characteristics and minimum distortion. Patented cone materials provide extremely smooth response over the range of 40-16,000 cps. Magnets are large and heavy, with a flux density of 10,500 gauss and total flux of 56,000 maxwells. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; free air resonance is 55-70 cps; voice coil impedance is 8 ohms. Size is 8" diam., 4¼" deep and requires 6¾" diam. baffle opening. Shpg. wt., 5½ lbs. Imported.

# LAFAYETTE Solid State Automobile Reverberation Sound System

FROM LAFAYETTE . . . AUTO REVERBERATION —  
A 3rd DIMENSION IN SOUND

The Lafayette solid state Automobile Reverberation sound system consists of the transistorized amplifier chassis with the reverberation unit, under dash control plate with on-off switch, fader control, and interconnecting cables. Includes simple instructions for connecting the reverb unit to your regular under dash auto speaker, and to a separate rear seat speaker (if your auto does not have a rear seat speaker, see listing of rear seat speakers on page 68). Reverberation is an entirely different approach to sound reproduction. Normal sound reproduction from a single source has a flat, one dimensional effect; with proper sound delay through "REVERBERATION," tones are created with a truly third dimension for concert hall originality. Mounts conveniently in the trunk of your car. For all 12-volt negative ground AM or FM auto radios. Dim: 10½x1x6". Shpg. wt., 3 lbs.

Combines versatility and efficiency with simplicity and ease — you just walk and the Garden Genie does the work. It can fertilize the lawn, flowers, shrubs and trees quickly and safely. It pre-mixes plant food solutions and covers a wide area. Also useful for safe, easy and effective control of destructive insects and plant diseases. The sprayer works in front of you, keeping unpleasant insecticide spray away from you; sprayer also tilts back and gets those garden pests up in bushes and trees. A single jugful gives 60 gallons of solution—plant food or insecticide. Features fingertip control for switching from wide-angle high-pitched spray for fertilizing and pest control, to powerful, ground-sweeping jet for cleaning walks, driveway, patio, even the family car. Lightweight, sturdily constructed, on wheels for easy maneuverability. Shpg. wt., 9 lbs.

This high quality V.T.V.M. is an indispensable test instrument for the service technician, engineer, or experimenter. It is a highly accurate DC voltmeter, AC voltmeter and ohmmeter employing a giant 6½" easy reading 400  $\mu$ a meter. With a high input impedance of 11 megohms, this V.T.V.M. can accurately measure DC voltages up to 1500 volts, while presenting a negligible load to the circuit under test. As a wide band AC voltmeter, it will measure AC peak-to-peak voltages up to 800 on any waveform be it sinusoidal, sawtooth, square or of any other complex form; all this from 30 cps to above 5 Mc — without any accessory probes! AC RMS voltages may be read directly up to 1,500 volts if the waveform is sinusoidal. Resistances can be read directly on the Ohms scale from 0 to 1,000 megohms in 5 overlapping scales. A direct reading scale is calibrated from —10 to +45db (reference 1.73 volts, 6 mw into a 500 ohm line). The meter is isolated from the measuring circuits by a OC amplifier, making

it virtually impossible to burn it out. Multiplier resistors are 1% zero temperature coefficient types. Function Selector-selects power off, AC volts, P-P volts, D.C.V Neg., D.C.V. Positive Ohms; Range Selector—for 7 voltage and resistance ranges; Ohms Adjust; Balance (zero) Adjustment There are 3 probes: Common A.C. volts—ohms, and shielded DC volts probe with 1 megohm isolating resistor. Silicon rectifier power supply for 110-120 VAC, 60 cps. Dimensions: 7½Hx 6½Wx5"D Comes with 1½ volt battery for ohmmeter circuit and complete instructions. Shpg. wt., 7 lbs.

## MECHANICAL FILTER

In the HA-350, ultra-sharp selectivity is achieved by means of a true mechanical bandpass filter in the 455 Kc IF section. The filter consists of three sections—an input transducer, 6 non-corrosive nickel alloy resonators and an output transducer. The "skirt" selectivity is greatly increased as shown by the almost rectangular I.F. bandpass curve.

The HA-350 is Lafayette's newest and most advanced model in its line of popular communications receivers. Both its performance and appearance are professional-type, designed exclusively for the amateur with the problems of today's crowded ham bands in mind. Features Dual Conversion giving an Image Rejection of more than 40 db and IF Rejection of more than 40 db—important especially on the high frequency bands for correct tuning. One control tuning makes the HA-350 a pleasure to operate and features widespread tuning utilizing an 8-position band-switch. Product Detector, providing selectable upper or lower sideband, solves the problems in SSB reception. Tuneable preselector circuit gives sensitivity of less than 1 microvolt for 10 db signal-to-noise ratio. Selectivity: Bandwidth of 2KC at 6 db down and 6KC at 60 db down using Mechanical Filter in IF. Front panel 100KC crystal calibrator reset control used in conjunction with the 15 MC WWV National Bureau of Standards station assures consistent and accurate calibration. Remote

control socket on back permits simultaneous control of HA-350 with a transmitter. Audio output: 1-watt maximum. Speaker impedance: 8; 500 ohms (speaker not supplied). Front panel controls: Preselector; Cal—On/off; Band Selector; Receive/Send; Tuning Cal Reset; Function—Off/AM/SSB1-CW/SSB2; RF gain; AF Gain; ANL; Phone jack. - 60 db Attenuation of Unwanted signals
- Complete Adjacent Channel Rejection
- For 455KC IF Tube Circuits

**EXCELLENT FOR:** Citizens Band Transceivers; Amateur: AM, CW, SSB Receivers; Shortwave and Standard Broadcast.

### Precision Filter Design

The Mechanical Filter consists of input and output Transducer elements plus six carefully machined resonant metal discs which are made of a ferro-nickel chromium alloy for extreme hardness and complete resistance to corrosion.

Now you can achieve razor-sharp selectivity with AM, standard broadcast, shortwave, CW and SSB Communications receivers, and CB transceivers, having an intermediate frequency of 455 Kc. Update your present receiver to cope with today's crowded bands. Pick up distant stations formerly masked by strong signals. The Mechanical Filter provides a steep-skirted, flat top, ideal band pass response. At 2.5 Kc on either side of the center frequency, the filter provides 60 db attenuation. The complete filter network consists of a mechanical filter and 2 coupling transformers. Easily installed between mixer and 1st I.F. stages. Model HB-500 with  
Solid State  
AC Power Supply

If you're looking for a high-performance CB transceiver in a small, compact size, you'll want the HB-500! Using advanced solid-state circuitry, this transceiver offers full 5-watt performance, yet is small enough to fit conveniently into the most compact car. And, battery drain is so low as to be negligible — the transceiver draws as little as .12 amps on receive, .85 amps on transmit. As a result, you need neither heavy-duty battery nor generator — an important advantage in mobile applications! The transmitter features full crystal control on any 12 of the 23 CB channels. Dual conversion receiver with better than .5  $\mu$ v sensitivity offers 12 crystal-controlled channels, plus full 23 channel tuning. A 455 Kc mechanical filter provides ultra-sharp receiver selectivity — virtually eliminates adjacent channel interference! Full fidelity voice reception is assured by the use of a powerful push-pull circuit that supplies up to 2.7 watts of audio into a big 5x3" front-mounted speaker. A powerful 3-stage transmitter offers full modulation capability and delivers a signal that's all audio — you can lower your voice to a whisper and still hit 100% modulation! And you get built-in reliability. 9 rugged, heat-resistant silicon mesa transistors (superior to conventional germanium) are used in critical areas to assure dependable, failure-

free operation. Other features include an efficient multi-stage automatic noise limiter, variable Squelch for silencing the receiver on standby, spotting switch for exact frequency location on tunable receiver, "S" meter, earphone jack, and illuminated channel dials. Supplied complete with special easy-mount mobile bracket with exclusive "quick-release" feature, push-to-talk dynamic microphone and .003% tolerance transmit and receive crystals for channel 12. For operation on 12V DC negative or positive ground with DC cable supplied. Size: 3Hx11 $\frac{1}{2}$ Wx6 $\frac{1}{4}$ "D. Shpg. wt., 12 lbs.

Efficient, dependable 2-way communications is assured with this rugged, 5-watt CB transceiver. A frequency synthesizing circuit makes it possible to transmit and receive over 23 channels with crystal-controlled accuracy—no extra crystals to buy and install! A zener diode full wave range-boost circuit increases the average depth of modulation during transmission—let's you transmit further within the 5-watt limitation imposed by the FCC! And, the "Range-Boost" system in the HB-400 is fully compatible with existing CB transceivers. Efficient circuit design uses 13 tubes (including two nuvistors) and 8 diodes to provide top performance. Dual-conversion receiver offers .3  $\mu$ v sensitivity and low noise, plus excellent adjacent channel rejection. Includes every needed feature for optimum reception—crystal-controlled "fine tuning" capability of  $\pm 2.5$ Kc (Delta Tuning), variable noise limiter, variable squelch, and Automatic Volume Control. Also included is an illuminated meter which indicates relative RF power output or received signal strength in "S" units. The transmitter is equipped with ceramic push-to-talk microphone and uses reliable electronic transmit-receive switching. Operates in a fixed or mobile location with equal ease . . . has built-in power supply for either 117V AC or 12V DC. Specially designed "Vari-Tilt" mounting bracket simplifies mobile installation—permits fast removal of the transceiver too!
