"Let Your Own Ears be the Judge"

The best "independent testing laboratory" in the whole world is your own living room—because it represents the actual conditions under which you will listen to your hi-fi system.

The best instruments for you to judge sound quality are your own ears—because sound is a very personal thing. So, if you wish, read the so-called "Best Buy Reports," remembering that they do not consider your desires, your ears, the characteristics of your home and your pocket book.

We at Lafayette are conscious of all these factors and invite you to either visit our sound salons if you are able to do so, or to avail yourself of Lafayette's "LISTEN AT HOME GUARANTEE" described on the right.

Over a year of research, planning and engineering went into the design of this superb Stereophonic Tuner. Designed against obsolescence, it incorporates every practical and worthwhile feature necessary for all present and future types of broadcasting. The KT-500 will receive simultaneous FM and AM stereo broadcasts or since the two sections are completely independent it may be utilized for normal FM or AM reception. The Tuner also provides an output for the new multiplex FM stereophonic reception. Apart from its unique flexibility, the KT-500 offers noise-free, drift-free, distortion-free performance the equal and in many instances superior to the highest priced tuners. It has been engineered without compromise of any kind—only the finest component parts have been employed. Each FM & AM section is tuned with its own 3-gang tuning capacitor and is provided with individual cathode follower outputs. This means that long output cables can be used

to connect tuner to amplifier or control center without fear of high frequency loss. Also, separate volume controls are provided for each channel so that when used for stereophonic reception, a proper balance between channels can be achieved. Convenient front panel switch changes from stereo to monaural use. Simplified accurate knife-edge tuning is provided by magic eye which operates independently on FM and AM. Automatic frequency control "locks in" FM signal permanently. Ferrite rod antenna with loading ring is supplied to bring in weak AM stations for quality reproduction. Designed for easy assembly, the kit is built around two printed circuit boards and prealigned IF's insuring fast accurate construction even for the beginner. Beautifully styled, the KT-500 is finished with a copper anodized aluminum front panel plus matching maroon knobs with copper inserts set in a beige finished vinyl enclosure.

Lafayette proudly presents the KT-650 FM Tuner Kit. This is a remarkable instrument—the product of an extensive research and engineering program, designed to produce a no compromise FM Tuner Kit capable of achieving the highest Laboratory Standards. The KT-650 ranks with the very finest FM Tuners . . . Lafayette engineers have succeeded in developing an instrument with performance and flexibility that equals and surpasses factory-wired or kit tuners many times its modest cost. The KT-650 incorporates every desirable FM Tuner feature. A Multiplex jack at the rear of the tuner provides for addition of a Multiplex Adapter for future FM Stereo Reception. (Multiplex FM is still in the development stage). Flywheel weighted tuning enables effortless station-to-station tuning. Pinpoint tuning accuracy is assured by a special electronic bar tuning indicator tube that indicates maximum closure at the point of best tuning. A variable AFC (Automatic Frequency Control) is featured. Once properly tuned, the AFC literally "locks in" the station and is adjustable for tuning weak stations adjacent to strong stations. The convenient front panel Tuner Level Control allows precise adjustment of the Tuner output level. Superb circuitry features a low noise front end with triode mixer plus double tuned dual limiters and wide band Foster Seeley discriminator. Sensitivity of the KT-650 is such that in many areas the only antenna needed will be a short piece of wire, except of course in remote locations. Plate follower outputs permit using the tuner up to 50 feet from the amplifier. Lafayette Kit Research makes doing-it-yourself a pleasure. Time-Saving printed circuit boards are utilized to make wiring errors almost non-existent. Alignment is a critical factor that directly affects the quality of reception in FM Tuners. The KT-650 is provided with IF and discriminator coils that have been carefully factory pre-aligned — permits you to play the tuner as soon as assembly is completed. More than just mere electronics, the KT-650 is a tuner you'll be proud to display. The superbly styled low silhouette enclosure will do justice to any decor. Beige cover is set off by a Cream and Sienna Brown etched panel and knobs with contrasting Black Dial Face. Complete with cage and legs, interconnecting cables with plugs plus an indoor folded dipole antenna. Overall Dimensions: 14x5 1/4 x 11 1/2". For 117V, 50-60 cycle AC. Power consumption 40 watts. BRILLIANTLY CONCEIVED — The KT-550 represents high-fidelity engineering and design in its furthest state of advancement. Specially developed engineering techniques along with new concepts in audio design achieves an output of 50-watts per channel for stereo operation, or 100-watts combined output in monaural application. The conventional approach in amplifier design for lowering distortion has been the use of "single loop" feedback. In contrast the KT-550 utilizes a "multiple loop" design to increase the degree of feedback and thus achieve phenomenally low distortion and high stability, with an absolute absence of listening fatigue. The ratio of these "multiple loops" are adjusted to the relative degree of distortion produced. If one stage has twice the distortion of another, twice as much feedback is applied, resulting in a 20/1 to 30/1 reduction in distortion.

Every component part of the KT-550 has been carefully chosen to complement its overall excellence. Special output transformers were designed to entirely utilize the broad band circuitry — fully potted, massively constructed with grain oriented silicon steel cores in 11 winding sections. The frequency response of the KT-550 extends two octaves above and below the normal range of human hearing . . . ± 0 — 1db from 2 to 100,000 cps without evidence of ringing or instability. Other features include telephone grade electrolytics, highest-quality capacitors plus costly Corning deposited metal film glass-core resistors. The newly developed 7027A high power-sensitivity output tubes are capable of delivering up to 70 watts, yet in the 550 to insure long life at lowest distortion levels, they are required to perform at only 50 watts. An extremely well regulated power supply is provided by four Silicon Diode Rectifiers, an extremely low copper loss power transformer, choke and heavy duty electrolytics. A metered calibration control panel consisting of four potentiometers, a function switch and precision meter furnishes bias and AC balance adjustments. The plate current of each 7027A out-

put tube may be adjusted for proper balance and lowest distortion. In addition, a 60-cycle test signal is provided for AC balance adjustments. Thus optimum performance is easily maintained even after aging of the output tubes. Engineered for the kit builder, the KT-550 incorporates two printed circuit boards — virtually eliminates any possibility of error. Lafayette's famous step-by-step instruction manuals plus large pictorials provide ease of assembly even for the most technically inexperienced — assures performance equal to the original, custom-built laboratory model. Handsomely finished in contrasting brown and beige with control finish steel cover, with built-in handles. 9 1/4 x 12 1/2". For 110-125V 50-60 cycle operation. Shpg. wt., 60 lbs.

- High Excursion Woofer
- Ideal For Stereo

Recreates The Entire Audio Spectrum With Concert Hall Faithfulness — In a symphony orchestra, the musical sound waves generated by the scores of instruments played singly or together form incredibly complex patterns. Each instrument forms its own individual sound-wave pattern distinguishing it from other instruments. These characteristics impose severe demands on a loudspeaker, making it impossible for a single speaker to give anywhere near perfect reproduction throughout the full audible frequency range.

The Lafayette "Trihelix" represents a major breakthrough in three way speaker design. Fresh engineering concepts have resulted in a single 10-inch speaker designed expressly for use in bookshelf size enclosures, that delivers a quality of performance with the unmistakable feel, presence and clarity of a 3-way speaker system. The "Trihelix" is in effect a complete three-way high-fidelity speaker system, with three mechanically and electronically independent speakers mounted within a single 10-inch frame.

Although they are individual units the 2-inch tweeter and 5-inch midrange speakers have been especially designed to compliment the woofer. Special treatment of the cones and cone edges with polyester resins provides an even distribution of mid and high frequencies without peaks or resonances. To minimize interaction between the three cones both the midrange and tweeter units are mounted eccentrically or off center in relation to the woofer. In addition the midrange and tweeter are completely enclosed by a specially designed baffle. These unusual design features result in effectively eliminating inter-modulation distortion due to interaction between woofer, midrange and tweeter cones — a common fault in conventionally designed 3-way speakers.

The specially treated woofer cone employs a revolutionary "conical stiffener" located at the apex of the cone in order to stiffen the diaphragm and eliminate "breakup", thus providing a true piston action. This carefully designed cone-stiffening procedure, in addition to its very high compliance, enables the woofer

to deliver a smooth, crisp, solid bass that balances naturally against a crystal clear midrange and natural treble. A built-in electrical crossover network with crossover points at 1500 cps and 5000 cps, allows each speaker to reproduce its portion of the audio range smoothly and efficiently. An adjustable brilliance control permits matching of sound to room acoustics. SPECIFICATIONS: Overall Response 20-20,000 cps (30 to 18,000 cps \pm 3 db). Free Air Resonance 35-55 cps. Impedance 8 ohms. Power Rating: 20 watts Average Program Material. Crossover Points: 1500 & 5000 cps. Overall Diam: 10". Overall Depth: 7". Baffle cut-out: 8 7/8". High Compliance Dual-Voice Coil Stereo Woofers

THE VERY SAME STUDIO QUALITY WOOFERS EMPLOYED IN THE LAFAYETTE CELESTIAL-SATELLITE STEREO SPEAKER SYSTEMS

Acoustical studies have shown that low frequency response is not directional... indeed the stereo effect we hear is determined by frequencies above 350 cps. This dual voice coil woofer features two electrically separate voice coils on a single woofer chassis. Each voice coil receives low frequencies from its respective stereo channel. Both of these signals are blended through the single woofer cone. This advance in woofer design now makes possible 3-channel stereo without the need of complicated costly control filters or adapter networks.

Now Lafayette offers these advanced design dual voice coil woofers for the high-fidelity enthusiast who wishes to build his own 3-channel stereo speaker system—or use it as the basis of a monaural system now and eventually work into a 3-channel stereo system.

THE SPHERICON MATCHES PERFECTLY WITH ANY SPEAKER SYSTEM

The "Sphericon" is perfect for use with the new high compliance bookshelf speaker systems. Built-in Attenuator permits matching with any low efficiency speaker system.

DISCOVER... A RANGE AND PURITY OF HIGH FREQUENCY RESPONSE YOU NEVER DREAMED POSSIBLE FROM YOUR RECORDS OR SYSTEM!

Achieve unequalled brilliance and musical warmth from your present speaker system or the system you're now planning. For the first time you'll hear the complete high frequency range with a clarity, transparency and musical quality never before possible. The Lafayette Sphericon is an entirely new concept in tweeter design. Equipped with a built-in 3,000 cycle crossover network and featuring a specially designed domed phenelic diaphragm with spherical diffractor. The Sphericon produces a virtually linear response from 3,000 cps to beyond 40,000 cps. \pm 2 db. to 22,000 cps. High frequencies are radiated in a 120° pattern in all directions, vertically as well as horizontally—with absolutely no trace of stridency or harshness.

Unlike electrostatic tweeters the "Sphericon" is highly efficient and may easily be

matched with any speaker or speaker systems... especially the low efficiency high compliance type. Precise matching of the "Sphericon" with today's low and medium efficiency speaker is accomplished by means of a special built-in attenuator designed not to affect or lower the efficiency of the woofer. As a result less amplification is needed assuring lower distortion. Power capacity is 30 watts. May be employed with any 4-16 ohm speaker. Beautifully styled with an acoustically designed gold anodized grill set in a sturdy satin black plastic case. Dimensions: 9x4x2 1/2"D. Shpg. wt., 4 lbs.

Eccentric Tweeter Mounting & Unique Elliptical Baffle Completely Eliminates Interaction Between Woofer & Tweeter

The SK-128 combines the best features of a multiple speaker system in one compact and economical unit. It offers full, even coverage of the entire audible range, with no distortion or coloration to mar your listening pleasure. The specially treated woofer cone has a unique "Conical Stiffener" at the apex which, coupled with its high compliance, enables the cone to operate in a piston-like manner—delivering a clean, powerful bass response. The 2-inch tweeter has its own voice coil and magnetic field. Special treatment of cone and cone edge provides even distribution of the high frequencies, with no peaks or resonances. The unusual off-center mounting of the tweeter and its elliptical baffle minimizes interaction between tweeter and woofer and insures an overall response free of intermodulation distortion. Electrical crossover from the woofer cone to the tweeter unit is provided by a

built-in network. An adjustable brilliance control permits matching of sound to room acoustics. Efficiency of the speaker is such that it will operate from any amplifier with an output of 1 watt or more. Installed in a bass-reflex type of enclosure, it performs outstandingly, and is recommended for all high-quality music systems—whether monaural or stereophonic. The "Eliptoflex" is the result of an intensive research program whose 3-fold purpose was to:

- 1 Develop a speaker system that would meet the space requirements of stereo.
- 2 Utilize the full advantages of efficient 12" speaker performance.
- 3 Provide optimum performance without the use of large wattage expensive amplifiers.

The Results Were Remarkable... The Eliptoflex utilizes a unique elliptical port which broadens frequency response and provides better transient response. A specially engineered diffracting ring eliminates cancellation effects between front and rear radiation. These engineering advances are coupled with the famous Lafayette free edge SK-58 12" coaxial speaker with 3" cone type tweeter, 1 1/4 lb. TSK-5 high-flux density magnet special 3/4" wide sheepskin cone-edge suspension and built-in and crossover network level control.

"Eliptoflex" achieves a degree of natural smoothness, low distortion and rich robust bass hitherto found only in large enclosure speaker systems or inefficient bookshelf speakers many times its price requiring high powered amplifiers. Due to its highly efficient design characteristics the "Eliptoflex" does not require costly high wattage amplification.

The "Eliptoflex" speaker system is beautifully finished on 4 sides in a variety of hardwood veneers for attractive room placement either horizontally or vertically. Dimensions are 14"H x 23-7/16"W x 13-5/16"D. Shpg. wt., 35 lbs.

PHENOMENAL ELIPTOFLEX PERFORMANCE DUE TO:

- A Newly Designed Elliptical Port
- B Specially Engineered Diffracting Ring.

PERFORMANCE EXPLANATION

The loudspeaker is mounted on a baffle recessed in the cabinet shell with the front plate extending partially across the front surface of the baffle forming ducts or tubes from the port openings to the outside air. The elliptical cutout changes the effective length of the duct across its area. This variation in path lengths provide an extremely smooth transition from duct to free air; broadens the frequency response and provide better transient response. A triangular shaped diffracting ring mounted on the front of the baffle board virtually eliminates undesirable cancellation effects normally produced by close coupling of front and rear cone radiation. This results in a "lens" effect, changing relative particle velocities and consequently, phase relationships so as to produce a smooth transition from front to rear radiation. Comparative laboratory and listening tests indicate that "Eliptoflex" performance is demonstratively superior throughout the audio spectrum.

NEW! LAFAYETTE 8" HI-FI SPEAKER

"MECHANICAL 2-WAY" SPEAKER OF UNUSUAL DESIGN • EXTRA-HEAVY MAGNETS, EXTREMELY HIGH FLUX • RESPONSE 40-16,000 CPS • SPECIAL PATENTED CONE CONSTRUCTION AND MATERIAL FOR SMOOTH, DISTORTION-FREE RESPONSE • EXCELLENT FOR STEREO

A most unusual dual-cone construction is used in these extra-high-quality 8" speakers to economically provide the same type of wide-range frequency response normally found only in true coaxial speakers or multiple speaker systems. There are 2 separate cones, acting through a common voice coil. The outer edge of the tweeter cone is attached to the mid-section of the woofer cone; both cones "float" on flexible, corrugated edges. This mounting, plus apertures provided behind the woofer cone, results in mechanical crossover so that both cones operate in phase at low frequencies, but only the tweeter cone operates at high frequencies. This gives improved high frequency directional

characteristics and minimum distortion. The patented cone materials provide extremely smooth reproduction. Magnets are large and heavy, with flux density of 10,500 gauss and total flux of 56,000 maxwells. Their high efficiency means good transient characteristics, low distortion, and good response at either high or low sound levels. Terminals are screw-type for solderless connections. Sensitivity is 99.5 db/watt; resonance is 55-70 cps; voice coil is 8 ohms. Size is 8" diam., 4 1/4" deep; requires 6 1/4" diam. baffle opening. Shpg. wt., 5 1/2 lbs. - FOR EXCELLENT HI-FI SOUND • ECONOMICAL & A SPACE-SAVER FOR STEREO
- RESPONSE 50-16,000 CPS! • BUILT-IN CROSSOVER NETWORK
- LARGE, HEAVY MAGNETS

An excellent speaker, with all the best features of coaxial design, especially recommended for use in stereo high fidelity systems where space and/or cost are factors. The 6 1/2" woofer is provided with extra-heavy large magnets for good power sensitivity and low distortion; the 2" tweeter is a separate speaker coaxially mounted in a housing which completely seals off back radiation and with a mesh dispersion screen to provide smooth, wide-angle-dispersion high frequency response. The built-in electrical crossover

contributes to the overall smooth tonal response of 50/16,000 cps. Woofer resonance is 70 cps; voice coil impedance is 8 ohms. Color-coded, screw-type terminals. Requires 5 1/2" diameter cutout. Mounts with 4 equally-spaced holes. Size is 6 1/2" diam., 3 1/4" deep. Shpg. wt., 3 1/2 lbs.

- ADVANCED DESIGN 8" HIGH COMPLIANCE WOOFER WITH 1 LB. MAGNET & 1 1/4" VOICE COIL
- 3-WAY LC ELECTRONIC CROSSOVER NETWORK
- PERFECT FOR STEREO

Lafayette designers have succeeded in achieving a standard of performance formerly associated only with very large speaker systems. The Lafayette Mini-Duct bookshelf enclosure is employed with advanced Hi-Compliance speaker design—both enclosure and speakers have been carefully engineered and matched in efficiency for a precise musical blend and balance. An unusually full, clean low frequency response is provided by this unit is superior to systems many times its size and price. The Hi-Compliance woofer cone is suspended by a new type of fabric edging permitting extremely wide cone excursions; the true piston action of the cone plus the use of a 1 lb. magnet and 1 1/4" voice coil not only provide a high efficiency bass response but also serve to eliminate distortion and give excellent transient response. Both the 6" Mid-range speaker and 3" Tweeter have completely sealed rear housings to prevent back radiation and interaction with the woofer. The 6 db per octave LC electronic crossover network crossing over at 750 cps and 5,500 cps employ separate balance controls for the midrange and tweeter, thereby providing precise control for balancing the speaker system to room acoustics and individual listening tastes. Handles up to 25 watts of integrated program material. Impedance 8-16 ohms. Dimensions are 23" W x 11 1/2" H x 11 1/4" D. Complete with easy to follow speaker assembly instructions. CITIZENS BAND — The New Two-Way Personal Communications Method for Everyone — Fill out the FCC form enclosed with each Lafayette Transceiver. No examination or technical knowledge required — Any citizen 18 years or older is eligible for a license.

THE GREATEST VALUE in the CITIZENS BAND FIELD

Just think... now you can have economical, efficient 2-way radio communication from your home, office, store, auto, truck or boat... literally hundreds of uses. The Lafayette HE-15A Superheterodyne Transceiver is both a compact precision transmitter and receiver designed to operate on the new class D "Citizens Band." Two or more of these units furnish your own communications system covering up to a 20 mile or more radius depending on antenna height and terrain. The Lafayette HE-15A meets all FCC requirements and operates in much the same manner as police and other short-wave communications systems. The Transceiver features 5 crystal controlled transmitting channels operating at a maximum legal power input of 5 watts fully modulated, RF stage in both transmitter and receiver. The 5 position crystal selector on the front panel selects any one of 5 transmitting frequencies. These 5 crystals are readily accessible by means of a removable front plate. The superheterodyne receiver is tuneable over the full 23 channel band with 3 watts audio output, AVC, and an amazingly effective Full-Wave Variable Noise Limiter. The noise limiter is continuously variable from the front panel for diminishing ignition and other unwanted noise pickup. A new 5 prong microphone jack facilitates conversion to a push-to-talk relay. RF Jack on the front panel may be used to monitor the current in the final tube using external meter.

Controls include a 3 position function switch (transmit, receive, and transmit with spring return), planetary vernier tuning plus variable noise limiter. Output impedance matches 52 and 72 ohm antenna with Amphenol type coax connector. Has large 4" PM speaker; input jack for crystal or ceramic microphone; power receptacle in rear for AC line and 6 or 12 volt external power supply. Supplied with single transmitting crystal for channel 9, high output crystal microphone, and brackets for easy mounting of units in auto, boat, etc. Operates on 115 volts AC. STUDIO QUALITY PERFORMANCE IN ONE SUPERB INSTRUMENT!

Designed and Constructed To Meet The Most Precise Professional Standards — The Lafayette PK-449 combines on a single mounting plate a four-speed transcription turntable and tone arm — each unit precision engineered to complement the other.

Ideally suited for stereo, the turntable features an especially designed heavy duty 4 pole induction motor, free-floating and shock mounted to virtually eliminate vibration. The 3 lb. rim-weighted 12" aluminum table is constructed with a permanently lubricated oilite bronze bearing while the precision spindle turns on a single ball bearing. Speeds — 162½, 33½, 45 and 78 rpm are selected by means of a click-in shift lever ("off" positions between all speed positions). The oversize idler disengages in off positions. A speed control allows for ± 7% variation of each speed. Noise and rumble are —50 db below average recorded level with wow and flutter less than 0.2%.

The 12" Transcription Tone Arm has been designed to track perfectly at the lowest stylus pressures recommended by cartridge manufacturers. Stylus force adjustment is easily accomplished by simply rotating the Knurled Knob at the rear of the arm. Use of ball bearing suspensions result in a high compliance lateral, vertical movement. A plug-in head is provided which accepts most of today's popular stereo cartridges. The unique arm-rest serves a double duty — simply lift the tone arm from the lock position to start the motor and replace to stop. Complete with stroboscope disc, 45 rpm adapter, shielded hook up cables and AC line cord. The entire motor plate is spring suspended and measures 16½x12½" requires 4" below motor board. For 105-120 volts 60 cycles AC. Shpg. wt., 15 lbs.

LAFAYETTE 12" VISCOUS DAMPED STEREO TRANSCRIPTION TONE ARM

This Stereo/Monaural transcription arm assures dependable and stable operation, utilizing the floating-action principle of viscous-damping. The arm is supported at a single point by a pivot and jewel bearing having negligible friction. Damping is accomplished by a silicone fluid occupying the gap between a ball and socket. This damping control permits high compliance and negligible tracking error and prevents damage to either record or stylus should the tone arm be accidentally dropped. The tone arm accommodates virtually all Stereo or Monaural hi-fi cartridges by means of precisely engineered adapters which simplify installation and provide proper stylus pressure. Overall length is 12", height adjustable from ¾" to 2¼" above motorboard; round mounting base is 2¾" in diameter Shpg. wt., 2½ lbs.

Meets the most critical studio requirements — an integrated transcription tone arm and cartridge compatible for stereophonic and monophonic records. Integrating the cartridge into the tone arm provides exact alignment of the stylus in the record groove. Tone arm resonance is minimized by use of specially designed counter weight, sub weight and lateral damping mechanism. The arm counter balance is floated on a damped suspension bar, furnishing critical damping without hampering normal tone arm motion. Precision ball-bearing assembly assures an absolute minimum of lateral friction while vertical friction is practically eliminated by use of nylon bearings. Overall height of arm adjusts from 1¾" to 2¼" for use with any turntable. The cartridge utilizes the "moving-magnet" principle with extremely low stylus mass, resulting in amazingly realistic and accurate reproduction. Distortion-free frequency response from 20-16,000 cps; response is flat ± 2db from 20-15,000 cps. Hum and noise virtually nonexistent — cartridge coils and

generating components are housed in nu-metal shielded case. Nu-metal shielding also used throughout the entire length of the arm, providing a signal to noise level of well over 100db. For stylus replacement, simply pull out the old stylus and plug in the new one. Each tone arm individually balanced by hand to track at a pressure of 3 grams... assures a minimum record and needle wear. Because of its ideal balance and tracking characteristics, turntable leveling is not critical—the Lafayette Panasonic will properly track records even if turntable is set at angle in excess of 45°.

Excellent for beginners as well as advanced experimenters, this kit enables you to build and learn about 20 interesting and useful transistor circuits. By utilizing "breadboard" construction, each project can be simply wired and traced. After building the basic circuit, any of the 20 projects can be built by simply inserting a few preassembled component blocks and interconnecting leads between them. A soldering iron is only required for the basic wiring and not for subsequent projects. All wiring is covered in a step-by-step manner by the instruction manual. Each of the 20 projects is clearly presented with step-by-step instructions, large easy-to-read pictorial wiring diagrams, schematic diagrams, and an explanation of the circuit behavior. There are no AC voltages to produce shock hazard. Amaze your friends with a Voice-Actuated Alarm, Rain Alarm, Home Broadcaster, and other projects. Build useful projects for the home — Metronome, Burglar Alarm, and Timer. Learning Morse Code with the Code Practice Oscillator and receiving Short-Wave Citizens Band Stations are only a few more of the many interesting and useful things you will build while exploring this new world of transistor-electronics. NEW! LAFAYETTE STEREO PHONO AMPLIFIER KIT

- GANGED TONE CONTROLS
- STEREO-MONAUURAL SWITCH
- .04 VOLT SENSITIVITY
- 4 WATTS STEREO OUTPUT

• ISOLATION TRANSFORMER • SEPARATE VOLUME CONTROLS

This is a complete 4-watt hi-fi stereo amplifier having 2 watts output per channel. Features separate volume control for each channel; ganged tone controls; Stereo-monaural switch to feed one channel to both speakers and to reverse the channels. Just right for any use where a small stereo amplifier is required—ideal for custom mounting in even the tightest locations; specially designed for small apartment sized stereo systems. An isolation transformer makes this circuit extra safe. LAFAYETTE TAPE HEAD DEMAGNETIZER

- REMOVABLE POLEPIECES
- EXTRA CONVENIENT

Lafayette Tape Head Demagnetizer uses removable polepieces. Three complete sets are furnished: straight, 45°, and 90° (right angle), permitting quick and easy use with any tape head. Far from being a luxury, a tape head demagnetizer is necessary for best tape recorder performance. Although unmagnetized when new, tape heads gradually become magnetized by sharp switching pulses occurring while switching the recorder from play to record or vice versa. The solution is to use a demagnetizer to re-

move this permanent magnetism from the head, thus reducing the noise level. Periodic head demagnetization is required for all tape recorders to insure optimum signal-to-noise ratio. Now Lafayette enables anyone with even the most modest budget to perform this necessary demagnetization with a minimum of effort. For 110 volts 60 cycles. Shpg. wt., 1 lb.

Perfect exposure every time is assured by the cross coupled photoelectric exposure meter: merely set desired shutter speed and ASA film speed, aim camera at subject and adjust lens aperture until light meter needle lines up with colored mark on meter scale. Now any adjustment of shutter speed will cause a corresponding adjustment of lens opening to maintain the proper speed/f-stop ratio for a particular lighting condition (lens opening may also be controlled independently). Superimposed coupled range finder with automatic parallax correction enables accurate focusing from 2.5 ft. to infinity on the fast f2.8 coated anastigmat lens. DELUXE LOG LOG DUPLEX DECI-TRIG SLIDE RULE

• 25 Scales with 8 Log Log Scales • Extended Range Avoids "Going Off Scale" • Extra P Scale Simplifies Computations • Two Color Scales
This brand new 10" log log duplex trig slide rule is built for the most exacting demands. Contains 25 scales in total including 8 Log Log Scales. The need for the troublesome end-for-end resetting of the slide is eliminated by the extensions of the C and D scales. Scale arrangements also allow easier calculation of problems involving the value of trigonometric functions. The twin set of Log Log scales run from 1.001 to 100,000 and .999 to .00001, thereby enlarging the scale by one scale length each compared with ordinary log log slide rules. Extra features include the P scale which enables easy computations of vector problems. Scales include LLO1, LLO2, LLO3, DF, CF, C1, C, D, LL3, LL2, and LL1, LLO0, L, K, A, B, S, ST, T, C, D, D1, P, and LLO. Complete with instruction book and saddle leather case. Overall length is 14". STAR SPECTROSCOPE WITH 3 EYEPIECES

- Observe the spectra of stars of magnitudes — 1 to 3
- Identify Fraunhofer lines from C to G
- Drawtube focus arrangement
- Fits threads of 25.4 mm O.D. and 24.5 mm O.D. eyepieces

The Star Spectroscope (Amici-prism type) is excellent for visual observations of the spectra of bright stars, comets, and novae. The spectroscope consists of a 5-piece prism assembly, threaded ocular tube adaptor and 3 cylindrical-lens eyepieces. These widen the star spectrum for easier recognition of details. Use this direct-vision spectroscope on medium-size telescopes to observe stars as faint as magnitude 3. The dispersion angle between the Fraunhofer C line (wave length 6600 angstroms) and the G line (4300 angstroms) is 9°. The resolution is enough to separate the yellow D lines of sodium. 4.95 ACHROMATIC BARLOW LENS

- Makes Any Good Telescope Better!
- Doubles Your Telescope's Power!
- Provides Greater Eye Relief!
- Improves Definition!
- Greater Illumination—Wider Field!

The Barlow Lens is a negative (diverging) lens which can increase the range of magnification of any given set of eyepieces. Greater eye relief is provided—even on short focal length eyepieces. Sharpens definition and reduces image deterioration by permitting use of low-power eyepieces to achieve high magnification. This also provides for greater illumination and a wider field. By increasing the effective focal length of the objective—and reducing its relative aperture—it greatly reduces aberrations present in poorly corrected eyepieces. Lafayette's Barlow lens will make any good telescope perform like a much larger one. Fits all Lafayette telescopes except F-330 Explorer. Accepts eyepieces of 24.5 mm (.97") O.D. and fits draw tubes of that size. Shpg. wt., 1 lb. F-423 Net 4.95

DIRECT VISION . . . SPECTROSCOPE

19.50

- SIMPLEST WAY TO OBSERVE SPECTRA
- BETTER THAN ANY GRATING SCOPE OF EQUAL COST
- HIGHEST GRADE OPTICS IN DIRECT VISION FIELD

Every physics, chemistry, science class, or hobbyist can afford to own this superb instrument. It is the simplest means by which one can observe emission spectra from light sources and vaporized chemical salts, and the Solar Spectrum. A broad dispersion field of high intensity is obtained from several dispersing prisms of matched glass, while a high grade optical system yields good resolution, sufficient to separate 5769.6Å from 5790.6Å in the spectrum of a fluorescent lamp. The slit has adjustable width and can be focused sharply by means of an eye piece draw-tube, assuring easy viewing and establishment of Fraunhofer lines of the Solar spectrum or bright lines of the emission spectra. Metal parts are made of highly polished corrosion-proof steel. Comes in plush-lined case. Shipping wt., 9 oz. F-359 Net 19.50

THE Magic of SCIENCE and TECHNOLOGY OPENS A NEW FRONTIER IN COMMUNICATIONS

NEW!

INFRAPHONE

**PROJECTS YOUR VOICE
HUNDREDS OF YARDS
ON AN INVISIBLE BEAM
OF LIGHT**

Developed by the solid State Physicists in one of our leading scientific laboratories.

- ★ Utilizes the infrared detector principle used in the SIDEWINDER MISSILE and MIDAS SATELLITE • Day or night • Use indoors or out
- ★ Used by our armed forces for secret signaling • As safe to use as a flashlight!
- Completely wireless transmitter and receiver! • Just aim and talk!
- Ship-to-Shore, Ship-to-Ship, Air-to-Air, Air-to-Ground, Car-to-Car, House-to-House, Plant Security, Police Work, Construction Crews, Civil Defense, Hunters, Campers, Survivors, Boy Scouts

The Infraphone uses the same principle of basic energy conversion for secret communications that is now used by the U.S. Army and Navy when radio or visible light would reveal their position. It is the principle that will be used to communicate between space ships when they are launched. The Infraphone, by means of basic energy conversion, changes sound waves into a voice modulated, invisible infra-red beam. A pair of Infraphones provides absolutely private, tap-proof, jam-proof, scatter-proof line-of-sight communication over a distance of 300 yds. or more. The Infraphone has been developed and produced by the largest manufacturer of infra-red photoconductors. Each unit consists of a printed circuit, transistorized transceiver. The detector element is a highly sensitive lead sulfide photoconductor, such as is used in missiles and satellites. The

lead sulfide detector converts the infrared beam into electronic signals which are, in turn, transistor amplified and fed to a miniature earphone. The transmitter section consists of a battery operated, filtered light source which emits the infra-red beam and is modulated by a special, built-in microphone. The Infraphone provides an ideal, wireless method of "phone" communication for industry, sport or play. Utilizing only ordinary flashlight batteries as power it is absolutely safe. It is ready for instant use, without "warm-up." The Infraphone may be tripod mounted as well as hand held. Housed in streamlined, unbreakable, high impact styrene. Includes miniature earphone, batteries and instructions. Shpg. wt., 5 lbs. AP-65W
