UNIDYNE III SERIES

THE ONLY CARDIOID MICROPHONES FEATURING
PICKUP PATTERN SYMMETRICAL ABOUT
AXIS AND UNIFORM AT ALL FREQUENCIES

The world's finest moderately priced dynamic cardioid microphone for public-address system use. The Unidyne III approaches the theoretical ideal of the cardioid pickup pattern. This means completely uniform pickup about the axis at all frequencies — in all planes. The 488 incorporates the patented Shure Controlled Reluctance cartridge into a distance discriminate microphone that effectively cancels background noise to permit transmission under conditions that would be impossible with any other microphone. Correct placement of microphone for close-talk use is assured by convenient rubber lip-guard. Rugged, impact-resistant "Armo-Dur" case is lightweight, easier to handle in extremes of temperature. Four versions of the 488 are available: 488A — high impedance; 488B — low impedance; and 488C and 488T — transistorized for direct replacement of carbon microphones (488T FAA Certified for Aircraft applications). All models equipped with coiled-cord and long-life heavy-duty push-to-talk switches. Field-testing these blade-type switches confirms their operating life rating to be in excess of one million cycles.

NEW M55E* CARTRIDGE WITH ELLIPTICAL STYLUS—15° TRACKING

. . . PROVIDES REMARKABLE PURITY OF MUSIC REPRODUCTION AT MODERATE COST

A fine cartridge for the latest automatic turntables and finest manual tone arms capable of tracking at 1½ grams or less. Designed to give professional performance with elliptical diamond stylus at new 15° tracking angle to provide freedom from distortion. Scratchproof. Similar to the V-15 except that it is made under standard quality control conditions. Will actually improve the sound of your high fidelity system—unless you are using Shure's V-15—our finest cartridge.

NOTE: Extensive research with elliptical styli reveals that an elliptical stylus should not be played at tracking forces in excess of 1½ grams. Serious record wear can be expected at forces in excess of 1½ grams. (Reported in May, 1964 issue of Audio Magazine, copies available upon request.) The M55E will play monaural LP's as well as stereo discs without changing styli, tracking perfectly at ¾ to 1½ grams. The N55E Stylus can also be used to upgrade the performance of Shure M44 Series Cartridges.

THE ORIGINAL LOW DISTORTION 15° CARTRIDGE SERIES M44 SCRATCH-PROOF CARTRIDGE WITH RETRACTILE STYLUS

It is in the distortion measurements where Shure engineers have achieved a highly significant and dramatic reduction of 75% to 90% in IM and harmonic distortion from even such admirably distortion-free cartridges as earlier versions of the Shure Stereo Dynetic. Further, cross-talk between channels has been effectively negated in the critical low frequency and mid ranges . . . providing superior channel separation throughout the audible spectrum.

SCRATCH-PROOF RETRACTILE STYLUS

And, as if that were not enough, the new 15° cartridge incorporates a totally efficient retractile stylus that momentarily retracts whenever excessive forces are applied to the tone arm. This feature protects your records and prevents annoying "clicks."

THE ULTIMATE TEST

You must hear this cartridge to appreciate the totality of the sound improvement. It will be instantly recognizable to the ear without the necessity for elaborate test instruments or A-B listening tests—although we assure you, instruments and A-B tests will more than substantiate our claims.

Model M44-5 tracks at ¾ to 1½ grams and is recommended for use in quality tone arms and the newest automatic turntables.

Model M44-7 tracks at 1½ to 3 grams and is for use in good quality changers.

Model M44C is specifically designed for use in record changers tracking at 3 to 5 grams.

REPLACEMENT STYLUS

The Dynetic stylus assembly used in Shure cartridges is the most critical component. To maintain the original performance standards of your cartridge, be certain that any replacement stylus you buy bears the following certification on the package: "This Dynetic stylus is precision manufactured by Shure Brothers, Inc."

Avoid inferior imitations. They will seriously degrade the performance of your cartridge. All genuine "Dynetic" styli are manufactured by Shure Brothers, Inc.

Select the appropriate replacement stylus for your cartridge in the chart below. If you choose a stylus that upgrades your cartridge, check to be certain your tone arm will track at the force required by the stylus.

SOLO-PHONE™

Stereo Amplifier for Headphones for Private High Fidelity Listening to RECORDS... FM... TAPE

- ✓ Provides privacy for the listener
- ✓ Insures quiet for those around him
- ✓ TWO can listen simultaneously, using TWO pairs of headphones
- ✓ Perfect for students to listen to music while others study
- ✓ Ideal for second set in study, den, bedroom, office, living room
- ✓ Excellent for music appreciation in schools and libraries
- ✓ For listening booths or "up-front" listening station in record stores
- ✓ Advantageous for use in homes for the aged, nursing homes, hospitals

The small, light Solo-Phone provides sufficient amplification to use any fine quality magnetic cartridge (such as the Shure Stereo Dynetic). In addition to magnetic cartridge input jacks on back of the unit, auxiliary jacks are provided to plug in a multiplex FM tuner or tape player.

A convenient switch on the front panel permits you to keep two program sources plugged in and switch instantly, for example, from your Record Player to FM/Stereo Tuner.

A clutched concentric control permits separate adjustment of each stereo channel to achieve proper balance between channels. Simple volume adjustment can be made without rebalancing channels.

An On/Off switch and pilot light is also provided on the front panel. The convenient 110 AC outlet on the back panel permits you to plug in the power cord of your record changer or tuner; therefore, the Solo-Phone On/Off switch will control the power supplied to whatever is plugged into this outlet. When the amplifier is turned on, the record player is turned on, and when the amplifier is turned off, the record player is turned off.

Net Weight: 2 lbs.

Walnut finished, solid wood cabinet with beige finished metal case

The Solo-Phone provides true high fidelity:

Broad frequency response

Low distortion—at low power levels suited for headphones (some transistorized amplifiers have more distortion at low level than at higher outputs)

Extremely low hum and noise at normal listening levels.

SHURE

V-15

the connoisseurs'
high fidelity phono cartridge

The major features of the V-15 are the Shure Bi-Radial Elliptical Stylus, the singular quality control techniques and standards devised to produce perfection of stylus symmetry, and the 15° tracking angle. They combine to reduce IM and harmonic distortion to a dramatic new low. In fact, the distortion (at normal record playing velocities) is lower than the inherent noise level of the finest test records and laboratory measurement instruments!

In extensive listening tests, the V-15 proved most impressive in its "trackability." It consistently proved capable of tracking the most difficult, heavily modulated passages at a minimum force of 3/4 grams (in the Shure-SME tone arm).

The entire V-15 is hand-crafted and subject to quality control and inspection measures that result in space-age reliability. Exact alignment is assured in every internal detail—and in mounting. Mu-metal hum shield surrounds the sensitive coils. The V-15 is a patented moving-magnet device—a connoisseur's cartridge in every detail.

... FEATURING THE REVOLUTIONARY BI-RADIAL ELLIPTICAL STYLUS

SPECIFICATIONS

The basic specifications are what you'd expect the premier Shure cartridge to reflect: 20 to 20,000 cps, 6 mv output. Over 25 db separation, 25 x 10⁻⁶ cm per dyne compliance, 3/4 gram tracking, 47,000 ohms impedance, 680 millihenries inductance per channel, 650 ohms resistance. Bi-Radial diamond stylus: 17.8 microns (.0007 inch) frontal radius, 5 microns (.0002 inch) side contact radii, 24.5 microns (.0010 inch) wide between record contact points.

But most important, it re-creates music with a transcendent purity that results in a deeply rewarding experience for the critical ear.

The most remarkable independent tone arm ever made—by any standard. Brings out the very best from any high quality cartridge, mono or stereo. Virtually frictionless bearings, both horizontal and vertical... pivot friction at stylus tip measures less than .020 gram! Knife edge bearings are absolutely protected against dust. Manufactured to incredibly close tolerances for Shure by skilled British craftsmen. Unprecedented combination of adjustments: height, overhang, length (up to 1'!), tracking force (so accurate no pressure gauge is required, ever)... even bias (to counteract tendency of arm offset to pull toward center of record and "favor" one side of stereo groove over the other). The result is an independent tone arm that carries the cartridge over the record surface with rock-like steadiness and precision—literally eliminates wear on the record and stylus. Lever operates arm through hydraulic damper. No resonances within audible spectrum! Complete with shell, alignment protractor, and plug-in cable assembly for quick, solderless hookup.
