"RADIO FREE AMERICA". AIRED FOR ONE DAY ON 1160 KHZ. TO BE REACTIVATED ON SHORTWAVE

Copyright 1973 by L.E. Magne & NASWA

When Dr. Carl McIntire — religious fundamentalist, political conservative, and fiery orator — was driven off the air by the FCC in the now-famous Supreme Court action concerning WKUR-AM/FM in Media, Pennsylvania, he proclaimed he was not about to be silenced for the first time in his 67 years and would very soon be broadcasting from a ship in international waters 8½ miles off the New Jersey coast. On September 19, 1973, at 1622:47 GMT (12:22:47 PM Eastern Time), the station, "Radio Free America", aired a brief hymn, followed by its first interval signal — an RSA-style bird chirping — on 1160 kHz. At 1624 GMT Dr. McIntire opened programming by proclaiming, "Radio Free America, out in the North Atlantic, goes on the air."

America's Second Offshore Station

Contrary to press reports, RFA is not the first station of its type to take to the air off the U.S. coast, although it is the first with U.S. registry. In 1933, an offshore gambling-speakeasy ship, the "City of Panama", operated a 5 kw pirate transmitter for commercial purposes on 815 kHz with the call sign KYER, the "Voice of Panama". It shuttled between Santa Monica, California, and the high seas for weeks before its loss of registry in Panama forced it off the air for good. Even though it operated at times while docked in port, the U.S. Government felt helpless to close it down so long as it had a valid foreign registry.

Ship Obtained on Third Try

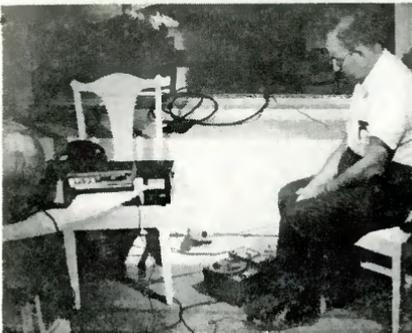

In July, 1973, Dr. McIntire's assistants had prepared the final papers for the purchase of a 160-foot merchant ship drydocked in Trinidad, flying the St. Kitts' flag. According to Dr. McIntire, the U.S. State Department pressured the Trinidadian Government to disallow the sale to McIntire's representatives. Yet another deal on a ship fell through elsewhere. Finally, a 1945 wooden-hulled, 136-foot, 300 ton WW II U.S. Navy minesweeper, the "Oceanic", once used for research by Jacques Cousteau, was procured for \$40,000 by a McIntire supporter, Herbert Hansen of Merritt Island, Florida, who turned around and sold it to Dr. McIntire. The ship was berthed at the preacher's docking facility at Cape Canaveral, Florida, where it was fitted out as a clandestine exile broadcasting ship. An old 10 kw RCA transmitter was secretly purchased for \$6,000 right under the noses of the FCC hierarchy and installed in the ship sans antenna, so as not to attract attention among passersby. So equipped, Captain Paul Hamerle guided the "refugee station" — Dr. McIntire's term to avoid the patch-on-eye image of a "pirate" operation — off to Cape May to have installed a harmonic-prone VFO, a ground consisting of two thick copper straps along the ship's hull, 4 tape decks (3 useable), a transistorized studio board, and an end-fed inverted-V long-wire antenna. It flew the Christian Flag, its U.S. registry notwithstanding. To repel marauders and unfriendly Soviet travelers — and to attract publicity — the ship contains a cache of rifles, guns, and ammunition; however, they have no intention of firing on their own countrymen (vandals presumably excluded, DXers hopefully included).

Hopes to Reactivate WKUR

Why did "Radio Free America" come about, and why so soon?

The prime motive force behind RFA appears to be financial. "The 20th Century Reformation Hour", Dr. McIntire's taped program aired by hundreds of stations throughout the country, was being deleted from a number of stations' schedules. According to the station managers, they felt their licenses might be revoked, as WKUR's was, if they continued to air Rev. McIntire's programs. In order to alleviate these

eliminate the possibility of heterodyning WJJD or KSL. The 1160 kHz crystal was picked up from a regional outlet and one of the transmitter's two oscillators was adjusted to bring the frequency to better than 1160.002 kHz, well within FCC specs, despite the absence of a crystal oven. The end-fed V antenna was completed and, along with the transmitter circuits, peaked to the frequency. These required firing up the transmitter for brief periods, namely around 0330 GMT September 13 and 0500-0508 & 0530-0830 GMT September 16, the last transmission being an open carrier interspersed with gospel music.

"Studio" engineer tapes inaugural broadcast, using Bogen mixer and vintage Wollensak recorder. NASWA cassette is at left.

However, the September 13 transmission resulted in the transistorized console board's belching forth flame and smoke due to the heavy RF. The fire was smothered and an intermittent used tube board was acquired in its place. It also began smoking, but the damage was minor and it was later completely repaired. After that was cleared up the ship's anchor broke, making it difficult to stay out at sea. Further, the antenna feed line's high voltage brought about by the end-feeding of the V caused arcing with the water-logged deck. Finally, the ship docked at Cape May for anchor and generator repairs and some of the antenna problems were minimized so the station could get on the air as soon as possible.

Inaugural Broadcast Poorly Heard

When the station fired up Wednesday afternoon, the signal was spotty, but poor overall, due directly and indirectly to antenna problems, although harmonic suppression was excellent. Reception along the northeastern coastline tended to be good, and reception to the south was not bad, especially in Washington. No jamming occurred, but the signal inland suffered from weakness and selective fading, although good reports were common around sunset. By 0100 GMT, however, the signal had weakened considerably and WJJD tended to predominate in most areas. Even the Dominican

station, running a mere 5 kw on the same channel, was stronger in parts of Massachusetts. So, given that and renewed arcing of the feed line, the transmitter was prematurely shut down at 0214 GMT. The engineers went into a huddle.

Jersey Broadcaster Claims Interference, Injunction Issued

Meanwhile, the operators of WHLW, 1170 kHz in Lakewood, New Jersey, 87 miles from Cape May, called up Dr. McIntire's wife and cabled the FCC to complain of alleged interference with their signal. When Dr. McIntire returned home, he immediately called WHLW and promised to move to another channel. The New York Times reporter Donald Janson quoted Dr. McIntire as saying, "There is no dearth of wavelengths, and we do not want to interfere with any other station." Unfortunately, analysis of the frequency spectrum did not confirm this and the technical staff went to work to find an available channel where none appeared to exist.

Knowledgeable radio sources felt the complaint was unjustified not only because it contradicted their findings, but also because an informed source had indicated WHLW decided two weeks before the station went on the air to file the complaint, regardless of whether such interference existed.

Two days later U.S. District Court Judge Mitchell H. Cohen issued a temporary restraining order against RFA, scheduling a hearing for October 1 to determine if the order should be made permanent. Inter alia, the order accused RFA of interfering with not only WHLW, but also KSL in Utah. This accusation was greeted with some amusement in radio DX circles.

RFA Prepares for Stronger Signal on SWBC Fringe Channel

RFA will remain off the air until the hearing is concluded sometime on October 1, which is also the 40th anniversary of the Reverend's pastorate at the Collingswood "Bible Presbyterian Church". However, it is also possible the transmitter won't be ready to go on the air until the next day. One friend of Dr. McIntire even suggested he may wait until October 5, the third-month anniversary of the closing down of WJUR, to reinaugurate "Radio Free America". In any case, it will very shortly be on the air, using the new crystal-controlled frequency of 1608 kHz (varies +60 Hz), which is a "shortwave" channel by NASWA convention. It will be above the AM broadcast band edge using an internationally-recognized increment over the nearest channel, i.e. 1600 kHz. The European increment in the upper portion of the band is 8 kHz, while the U.S. increment is 10 kHz. However, mixing products are common on 1610 kHz and an NRC test indicates only roughly 60% of ordinary radios receive that high up, whereas possibly up to 80% or so receive 1608 kHz. Additionally, a recently-installed audio compressor & limiter will be used to clip the bandwidth to about 8 kHz at 6 db. down (4 kHz per sideband) and thus minimize interference with nearby stations.

Although 1608 kHz is difficult to receive in New York City and Boston, it will likely be well heard at nights in most rural and semi-rural parts of the eastern half of the continent, where Dr. McIntire's message would likely find more widespread acceptance. Not only is this frequency free from significant interference, but also the efficiency of the antenna system would be greater at that shorter wavelength than it was at 1160 kHz, thus increasing RFA's effective radiated power. RFA will be a nice DX catch on the West Coast and possibly, with the proper equipment, in Europe after Bayerischer Rundfunk signs off at 2310/2400 GMT on 1602 kHz (370 kw).

The antenna shortcomings were examined and a center-fed inverted-V has been installed in place of the long wire. It allows the transmitter to operate at a full 11 kw without arcing, which helps signal strength considerably. One Midwestern bootleg radio aficionado wistfully recalled how an earlier bootleg operation with low power had used, with considerable success, a half-wave wire vertical antenna held erect by a gas-filled balloon, and suggested that with the outstanding salt-water ground out at sea such an arrangement would probably throw RFA's signal out clearly all over the country. "You could even install neon crosses. Lit by the RF energy, on the balloon to warn airplane traffic and get across a visual message, as well," he mused. A more likely possibility is that RFA will eventually go to a short vertical antenna, although this would take time to set up.

The choice of 1608 kHz brings with it a whole set of imponderables. The European pirate ship, Radio Nordsee International, had its "out-of-band" shortwave transmitter on 6210 kHz jammed by the Norwegian coast station, Rogaland Radio, which broadcast the continuous announcement, "This is a transmission from the Norwegian coast station Rogaland Radio. The transmitter is operating in SSB mode, upper side band, with a carrier frequency of 6210.4 kHz. The purpose of this transmission is to clear the channel of unauthorised and out-of-band broadcasting and to improve reception conditions for ships wishing to communicate with coast stations on this frequency." Rogaland Radio felt so confident of its legal position that it verified its jamming transmissions with a QSL card, the only time this has ever been done. On the other hand, the "in-band" RNI medium-wave transmitter on 1578, 1385 and 1232 kHz was continuously jammed for some time by the British GPO, which runs the august "British Broadcasting Corporation".

RFA's inaugural broadcast audience being photographed by ABC News

In the case of RFA, the FCC has indicated it would not jam the transmissions. However, if they change their stance they could do so with impunity on 1608 kHz, especially if an upper sideband jammer were used, thus avoiding sideband splashing 1600 kHz outlets. Thus, if jamming commences, look for RFA to revert to 1160 kHz, for which one of its two oscillators is already tuned. Jamming on 1160 kHz would raise havoc in broadcast industry circles and is thus highly unlikely.

As for the degree of illegality in transmitting above 1600 kHz, there are three mitigating factors. First, the FCC now is allowing groups like the Boy Scouts to broadcast on a one-shot basis above 1600 kHz for such things as jamborees, provided they broadcast in daylight on low power. Second, there has been talk in FCC circles of extending the upper limit of the medium-wave broadcast band to 1620 kHz, thus providing two additional channels for broadcast use. Third, the 8 kHz increment above 1600 kHz, the nearest broadcast channel, is in conformity with the European standard of 8 kHz separations in the upper end of the band.

Dr. McIntire earlier approved obtaining a 1 kw shortwave transmitter to relay RFA on 41 and 25 meters, but this idea has been temporarily shelved. If the earlier technical shortcomings can be ironed out, it may no longer be necessary to implement a shortwave relay in order to reach the Midwest. Nevertheless, a 1 kw shortwave transmitter and receiver may be purchased for two-way communication with Hans the way Able Nathan does from the shortwave gear on board his "Peace Ship". The RFA transmitter would likely relay the 1608 kHz broadcasts when it was not in use for two-way communication.

The Doctor has also toyed around with the idea of using a laser beam to communicate from ship-to-shore without being subject to FCC regulation. Supposedly, this can be accomplished, at least when the ship is anchored 3 or 4 miles out, but would be tricky and expensive.

RFA Verifies Reception Reports

As of the beginning of September there was neither a verification policy nor any idea that such things as QSL's would be necessary. However, after some study of pirate and clandestine QSL's -- especially that of "Radio Nordsee International" -- Dr. McIntire requested a card be designed and printed and that a verification procedure be drawn up.

This currently is in process and the chances are at least even that it will be implemented by early October. In the meantime, special arrangements were approved and a dozen first-day letter QSL's were given out under Dr. McIntire's signature. As things now stand, these and one other verification may be the only ones that will ever be given out for 1160 kHz, although possibly some of those that were addressed to the attention of John Jones, Engineer, or Dr. McIntire, Director, may yet be verified. If yours was one of these and you receive no verification by mid-October, try sending a polite follow-up letter to the address below.

The QSL card that has been designed features a picture of the ship -- now referred to as the "Columbus" -- with "RADIO FREE AMERICA" and possibly "Free Voice of the American People" printed on the front. The reverse side may have the following verification statement, "This confirms your reception of Radio Free America on _____ kHz on _____ at _____ GMT, on _____ ET. Aerial power _____ kw. Our transmission site is in international waters off the northeastern United States. Thanks for your report. Date _____, for RFA." Tentatively, it has been decided that reception reports will be verified at the following address: Dr. Carl McIntire, Director
Radio Free America
c/o Mrs. Irene O'Dell
Beach & Pittsburgh Avenue
Cape May NJ 08204 USA

Taped reception reports -- full-track reels or half-track cassettes only -- are welcomed. Telephoned reports are probably best avoided, but will nonetheless be accepted at 609-894-8471, where Mrs. O'Dell can sometimes be reached. "Radio Free America" bumper stickers and printed religious material are available free upon request, with or without reception reports.

Future of RFA Undetermined

By the time you read this "Radio Free America" should once again be on the air, this time 24 hours a day with a far more powerful signal than before. There is also a chance it will eventually revert to the old channel of 1160 kHz, either 24 hours a day or from roughly 2230-1200 GMT. Its regular identification

Dr. McIntire with WJNB's John Norris, Jr. (left). Shortwave station WJNB is affiliated with Rev. McIntire.

will be the following statement by a man, "Broadcasting the Word of God and our freedom of speech, this is Radio Free America, from international waters along the coastline of Cape May, New Jersey." As of the moment, it appears as though the sign-on hymn will vary from day-to-day in accordance with the philosophical message the Reverend wishes to impart at any given time. Probably the same holds true for sign-off. The continuation of the bird-chirping interval signal just before sign-on is similarly in doubt.

Although programs and program times are not yet settled, Dr. McIntire has indicated RFA will accept advertising at an unspecified rate and possibly even sell air time to anti-communist governments to relay their foreign radio services or official news services; the most likely candidate for the latter service is Taiwan, with its "Voice of Free China/Broadcasting Corporation of China" radio and the semi-official "China News Agency". Dr. McIntire's syndicated program, the half-hour "20th Century Reformation Hour", will probably be aired as follows (times Eastern local time):

Program "AM": 7:30, repeated 23:00 & 4:30 (that's 4:30 AM!)

Program "PM": 12:30, repeated 1:00 (again, that's 1:00 AM)

These hours may be altered slightly to take advantage of RFA's powerful signal during the morning and evening rush hours. The only other program hint is that the Reverend is fond of making live -- as opposed to canned -- broadcasts; thus it would not be surprising if he were out at the ship from around 7:00 to 13:30 most days handling most of the program effort. On the other hand, it may prove impractical to shuttle between his home in Collingswood and the ship off Cape May daily and the programming may have to be largely taped.

Of course, there is the off chance the station will remain off the air permanently in order to conform to a court order. Even now the ship is docked at Cape May and the crew preparing for the October 1 court hearing.

There is a bill before Congress authorizing WKUR to go back on the air (see letter, below). If it passes, "Radio Free America" will probably be moved to Bahaman territorial waters, there to transmit anti-communist programming to Cuba. However, the original owner of WKUR, Mr. Elayne Butcher of Media, Pa., plans to ask the FCC to grant him the right to begin broadcasting on the silent WKUR-FM channel of 100.3 Mhz. If this were approved before the bill in Congress were passed, there might be further complications in getting WKUR reactivated under the aegis of Carl McIntire's Faith Theological Seminary. The AM channel of 690 KHz is for daytime use only, which makes the FM channel a near-necessity. Nevertheless, Dr. McIntire's lawyer feels the FCC cannot legally reassign the WKUR-FM channel.

RE: H.R. 10076, for the relief of radio stations WKUR & WKUR-FM

Dear Colleague:

Last Wednesday I introduced the above-captioned legislation for "the relief of Brandywine-Main Line Radio, Inc., WKUR and WKUR-FM, Media, Pennsylvania".

This bill simply directs the Federal Communication Commission, notwithstanding any other provision of law, to renew the station licenses for the operation of WKUR and WKUR-FM, radio stations owned and operated by the Brandywine-Main Line Radio, Inc., whose stock is owned by Faith Theological Seminary, Elkins Park, Pennsylvania.

At issue is the fundamental question as to whether or not an agency of the Executive branch, staffed by unelected bureaucrats, can arbitrarily deprive a United States citizen of the rights granted to him by the Constitution and protected by the First Amendment in the Bill of Rights.

This was what occurred in the case of these radio stations, now labeled Dr. Carl McIntire's case, since he is president of Faith Theological Seminary. The FCC ruling to revoke the license was appealed to the Circuit Court of Appeals of the District of Columbia. The ruling was upheld by a divided court with a dissent by Chief Judge Bazelon. An appeal was taken to the Supreme Court, which refused a hearing. It is interesting to note that Justice William O. Douglas, the great libertarian, dissented arguing that the fundamental rights of the people -- as protected by the First Amendment -- were involved in this case.

In this instance, I support the position taken by Mr. Justice Douglas. My bill simply gives Dr. Carl McIntire the opportunity to present his case before the elected representatives of the people, representatives who are charged by their oath with upholding and defending the Constitution of the United States.

If the action of the FCC in this case and the subsequent Federal court rulings are allowed to stand, they will be used in the future as a precedent for decisions by the FCC and the courts against other broadcasters. Thus, I believe that the McIntire case threatens the entire broadcasting industry and free press and the free exercise of religion. If this decision is allowed to stand, we can reasonably ask: "Which station or which individual will be next to fall to the dictates of unelected bureaucrats?" The United States must have an unencumbered broadcast industry free to express the beliefs of the people just as much as it demands a free press. Fear caused by the decision is already intimidating other stations in their program selections.

Involved is more than one man or one radio station. Every American is involved. These restrictions threaten the very heart of our constitutional system and the individual citizen's historic right to be informed. This is what the First Amendment is all about.

If you believe as I do that the issues involved in this case touch all Americans and our constitutionally secured liberties, I urge you to introduce similar legislation. In this way, we will assure our constituents that we as elected officials shall protect their Constitutional rights from nullification by arbitrary decisions of unelected bureaucrats and that the Congress of the United States will perform its function in directing and deciding issues that affect all our citizens.

For your ready reference, I am attaching a copy of my bill introduced in behalf of free speech and free press.

With kindest regards,

Sincerely,
John Rarick

My DX Trip To Guatemala

By ERNST G. LOHE
A NASWA Exclusive

Driving from Guatemala City toward the western provinces along the Pan American Highway takes you to one of the world's most scenic spots. It is Indian Country, heavily populated and as picturesque as a handwoven blanket purchased by the tourist at the market in Chichicastenango. At the market, bargaining is part of the game and once you've tried it you'll like it.

From Chichicastenango it is a two hour drive on the Pan American Highway to Nahuála, a small town located off the main road. You meet people everywhere and they are extremely helpful in pointing you in the right direction. And it is wise to ask as often as possible.

"La Voz de Nahualá" is a station operated by the Ursuline congregation from the state of Washington. It is the center of radio education for all Indians speaking "Quiché".

Also, it is at present the only station that might be heard with a musical program throughout the states each night. Earlier the station broadcasts lessons in mathematics and everything that is referred to as Alfabetización. Antonio Ixmate Hernández is in charge of the programming in the morning and at night. He is a very shy person as are all Indians. The Indians who comprise almost one half of Guatemala's population are well behaved, quiet and friendly.

Antonio took me up to the transmitter site which is located about one half kilometer away on a hill. The actual transmitter is about the size of a large refrigerator and has a power of one kilowatt.

Antonio was quite happy when he recently received reports from Scandinavia and Australia.

The antenna is a one half wave dipole and one of the towers looks like a tree with the limbs removed. It works, however, as the reports show.

The station operates from 1100 to 1300 hours and from 2230 to 0430 GMT. The latter portion of the nightly broadcast is a musical presentation with Spanish announcements. Reception reports may be addressed to Antonio. All correct reports are verified by a nice QSL card and sometimes by a beautiful pennant. The frequency is 3360 kHz.

Si Signs Off

It is with regret that the editor of SWC says goodbye after this issue. Promotion to a managing editor's post plus appointment to a night teaching post at a college mean we cannot find time for SWC. A special thank you to all whose bylines have graced these pages with a special kudo to Don Jensen whose support in many ways was outstanding....AL SIZER

In the same province of Sololá one finds probably the most magnificent lake in the world. It is called "Lago de Atitlán". The lake is surrounded by three huge mountains of volcanic origin. The water is as fresh and pure as the air.

From the village in which we stayed it is only 25 kilometers to the town of Santiago, situated on the opposite side of the lake. The roads are generally good until you hit a dirt one that frequently requires all the nerve you can conjure up. Maps in Latin America don't tell you much about curves and winding highways. A short distance sometimes takes hours, constantly increasing your fears that you might be lost. At last there it was, Santiago.

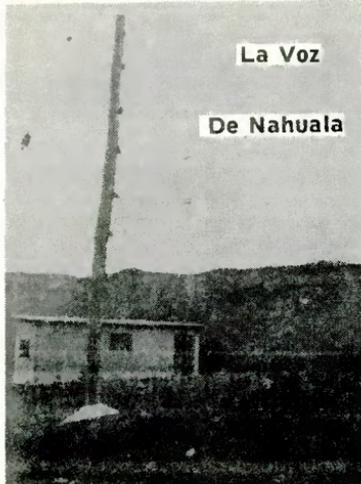

You can't miss "La Voz de Atitlán" since it

has a tower located next to the twin steeples of an old Spanish church. The transmitter stands in the corner of a classroom. And that is what it is all about; a school in connection with a transmitter used to broadcast classes to the Indian population who live along the shores of Lake Atitlán.

When we arrived an American Sister of the Ursuline congregation (they take care of both stations) was teaching in a room located right next to the small studio. We had previously met her in Nahuála.

Since everyone is unable to attend the classes in person, receivers are supplied to the students in other villages. Forty thousand people live in this area and the number of students, every six months, jumped from 162 in

(PLEASE TURN TO NEXT PAGE)

La Voz

De Nahuala

TRANSMITTER SITE OF TGVN
(Photos by Author)

GUATEMALA TRIP...(Continued)
...1968 to 348 in 1969. In 1971 there were six classes teaching mathematics, farming and Spanish.

Juan Ajtzip Alvaredo is not only an announcer but he is also the president of the station. The operating hours each day are from 2400 to 0330 with a power of 500 watts. There is an additional broadcast on Sunday from 1800 to 2200. QSL cards are not available but Juan answers each report with a friendly letter. Besides Spanish the station transmits mostly in "Tzutujil". The frequency is 2390 kHz.

"La Voz de Atitlán" was founded in 1968 at a time when less than 6 per cent of the Indian population knew how to read or write and only about 10 per cent attended school. The people earn their living in agriculture; always busy caring for the land that is often located many miles from the home village. You see no vehicles such as a cart or an automobile since the Mayans never made use of the wheel. Even today it is difficult to introduce such a simple thing as a wagon to the Indians. They are accustomed to carrying extremely heavy loads on their backs.

It was almost evening and too dark to take pictures as we departed via the curving dirt road through the village of San Lucas back to our hotel in the town of Panachachel.

In the east of Guatemala another station of "Escuelas Radiofónicas", the well known "Radio Chortis", operates. Although broadcast times seem to be quite limited, it might be possible for some DXers to pick up the station on 3380 kHz early in the morning. They sign on at 1130 and transmit until 1300, returning for another period from 2130 to 2400. A Belgian mission is in charge of the operation.

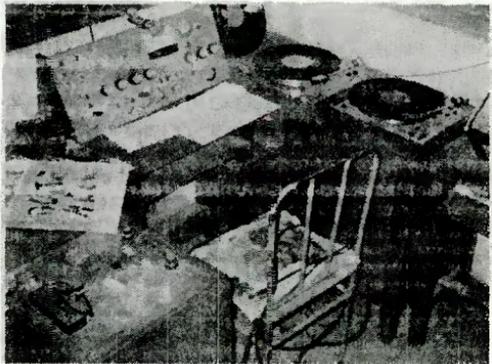

"Radio Mara" in Barillas serves the west of Guatemala and as far as I know is maintained by Canadians. I don't know the actual schedule but the station was heard at around 0100 in the 120 meter band, 2360 kHz. I never received it in the 90 meter band. The QSL card, just recently received, claims 3325 kHz as their frequency. (Editor's note: both freqs. logged here)

Other than "Radio Tesulutlán", testing on 4835 and written up here recently, there is another station waiting for a license. It will be called "Radio Mam" and located in Cabricán, Depto. Quetzaltenango. A 1 KW Phillips transmitter will be used for "Mam" broadcasting in the Indian language in the 60 meter band.

(Supplementary information: "La Voz de Guatemala", 6180 kHz, has a new address: 5 Av. 13-18 (Z 1), Guatemala. In Honduras I did not find "LW de Occidente". A reactivated station is "R. Católica Suyapa", address, Av. Paz /Barahona, Tegucigalpa. Frequency is 4935 but, unfortunately, the schedule is only from 2200 to 2400 with an educational programs.

EXTERIOR AND INTERIOR OF TGVN STUDIOS

DENIS BASTIEN,
CHIEF ENGINEER, AND
TRANSMITTER AT
RADIO CITADELLE

the data for this article for FRENDX. (If you have any old hi-fi, aviation or the better class of U.S. magazines you might show your gratitude by sending them to Prof. Bastien for the use of him and his six children).

Radio Citadelle was founded in 1950 by the well known Haitian merchant, Monsieur Jean Baptiste Dorothee, owner of the Edison Shop. At the start the station was in the 49 meter band four hours a day, from noon to 4 p.m. Haiti time with a staff of only three persons. In August 1962 it went to medium wave for awhile and was heard on 1500 kHz from 7 a.m. to 10 p.m., its staff now enlarged to six. It is still on MW on 1145 kHz but now also broadcasts on nominal 6155 with a staff of 16 from 5 a.m. to 10 p.m. On Sundays and holidays the station is on from 7 a.m. to 2 p.m. and a few hours later from 4 to 10 p.m.

The power of the station is only 500 watts and it uses a dipole antenna with balun, oriented north-south. It employs the French and Creole languages and its target is all the Caribbean area.

The station is commercial but relays the Voice of Ave Maria from the Evêché (diocese) of Cap-Haitien three times a day, from 6:30 to 6:45 a.m., 11:30 a.m. to 12:30 p.m. and late afternoon from 5:15 to 6:15 p.m. There are news broadcasts and "all kinds of music" although the station's music library is "not too rich". (If you have records to spare, they could use instrumental, semi-classical and classical).

The station is located at A-16th St. in Cap-Haitien. It has received many reports from Sweden, U.S.A., Canada, England, New Zealand and the Dominican Republic.

Radio Citadelle is named after the famous citadelle erected near Cap-Haitien by Henri Christophe who ruled as king in the northern part of the island from 1811 to 1820. The station uses the citadel on its masthead.

On August 15 Radio Citadelle held a celebration of its 23rd anniversary with important dignitaries there to mark the occasion. Prof. Bastien sent us the elaborate program in French.

The celebration actually began August 14 with a special mass in the cathedral and later an evening dance at the "Rumba Club des Melomanes" with, if our limited French does not betray us, a musical group named the "Blue Devils" playing.

(PLEASE TURN TO NEXT PAGE)

Radio Citadelle, Haiti

O.K., all you people out there in the radio audience. How many of you have a verification from any other SW station in Haiti other than 4VEH, the Evangelistic Voice of Haiti? In fact, how many of you honestly were aware that there was any other Haitian outlet active on short wave?

Well, there is another station and actually it has been in existence for 23 years. It is 4VWA, Radio Citadelle, Cap-Haitien, whose nominal frequency is 6155 kHz but which has been recently been logged by U.S. DXers on 6147-48 usually around 1000 GMT. Despite some QRM from R. Atenea, Costa Rica, it puts out a very nice signal ECNA and its classical music is a welcome change from the usual SW diet.

DXers who, rather dubiously, sought a QSL from R. Citadelle ran into a pleasant surprise. Denis Bastien the chief engineer asked for his father's help in answering correspondence and this brought DXers into contact with Jenner Bastien, Rue 15-B, Cap-Haitien, a friendly, learned man, proficient in several languages, who was formerly a professor at College of Notre Dame in Cap-Haitien. In addition to helping to obtain QSLs, Prof. Bastien went out of his way to get

Radio Citadelle (CONT.)

Haiti

The next day there was a pontifical mass in the cathedral, a dance festival, a visit to the studios by Msgr. Albert François Cousineau to bless the news announcers , a parade through town escorted by the Armed Forces of Haiti and a championship regional football cup match at the Francois Duvalier stadium with the cup donated by Radio Citadelle and blessed by the Monsignor. The match was broadcast by R. Citadelle and relayed by 4VEH and R. Nouveau Monde, MW. A big banquet with speeches by many important officials, and radio staff members, concluded what must have been a memorable day for all.

Some of the station's staff.

DX Tips By JAN TUNER....**ARE VERIFICATION SIGNERS REALLY USEFUL?**

I seldom use the names of verification signers in QSL reports for several reasons. If the station is small, the Director is likely to be the only one reading the mail. Nobody else is allowed! Putting his name on the envelope is, therefore, superfluous. It deprives you of the possibility of somebody else's attention.

The name of the v/s should be used only if somebody else than the director/gerente is known to verify reports. This means that 1) somebody else is interested in Reports or 2) has been "appointed" by the busy director to handle this. This may be some relative of the director (often his son or daughter!), not too seldom the Director Artistico, if any.

The idea is to keep an eye on the QSL Section continuously to see whether a v/s is a freak or regular. And it should be an up-to-date v/s! The person in question may have left the station in the meantime. Your letter to him will be regarded as a personal letter and returned to the sender!

If uncertain, do not use any name on the envelope, only in the report itself. If the guy has left the station, your report will be opened anyway.

God Bless The Postman

By AL SIZER

The much maligned Postal Service has come in for more than its share of knocks in recent years and undoubtedly some of them have been deserved. On the other hand each DXer if he examines past QSLs may run across cases where the postman has done all right by him.

The author knows of at least two outstanding incidents in his own files where he has a right to exclaim, "God Bless the Postman!" Before describing them, however, it is necessary to point out that at the time I was using a return address of: "Alvin V. Sizer, News Editor, New Haven Register, New Haven, Conn., U.S.A.", trying to keep away from street addresses.

One of my most prized QSL letters is from the Comoro Islands, thanks to the postal service. The envelope bears only this typewritten address: "Monsieur Alvin V. Sizer, News Editor, New Haven Register". No city and no country! Someone at the Moroni Post Office must have decided this was in Great Britain because in red ink in French I can read a handwritten "Grande Bretagne". And so it went to New Haven, Sussex, England where a postman realized it was a newspaper address, looked it up in a journalistic directory and forwarded to "Conn., U.S.A. (Written by hand... "New Haven, Sussex postmark stamped also). Score one for the Postal Service.

The second instance is a QSL letter in Indonesian from R.R.I studios at Pekanbaru, Sumatra. The envelope is addressed only: "Tuan Alvin V. Sizer, News Editor, Daily and Sunday, di New Haven." No newspaper name, no country!

Unfortunately, there are no postmarks except Pakambaru or any notations that explain the route this letter took to get to New Haven. Apparently it came direct, thanks to someone along the way who had a little know how.

Score two for the Postal Service. Tnx, Fellows!

Of course, on the other hand, I'll never know how many QSLs these guys did not get to me over the years either! hi.

A PITCH: Ye ed seems to have enough space here to make a pitch for more support for FRENDX and SWC especially. To keep up the high quality it is necessary that some of the more experienced members contribute more than they have. Frankly, the younger DXers are much more cooperative. And to all of you who did not point out left out accent marks, words broken incorrectly at end of lines, miscellaneous other errors--my sincere thanks!

ON TO THE TOP:

By DON JENSEN

How Can I Identify The Rare DX Stations?

EDITOR'S NOTE: This is the fifth in a series of articles exploring serious DXing aimed at the listener with some experience who's ready to move beyond the techniques covered in the usual beginner's manuals. They proceed from some broad, basic questions, such as the one we began to discuss last month: How Can I Identify the Rare DX stations?

If you haven't progressed beyond the "if it isn't in English, I can't ID it" stage, you've got some basic homework ahead of you before you're ready for serious DXing.

Minimally, you should be able to distinguish among the major languages, Spanish, Portuguese, French, German, Arabic, etc. You should be able to recognize the tonal Asian languages, such as Chinese. Foreign languages should no longer all sound alike to you. You need not be a linguist..few experienced DXers are.. but you should be able to pick out words.

If you can't, spend some months on the whole business of learning what languages sound like. There have been articles written on the subject in various journals, hobby publications and books. Seek them out and study. One of the best ways to learn is to study the VOA foreign language broadcasts.

For those of you who are still with us, it should be obvious by now that a very experienced DXer, because of his accumulated knowledge, may well be able to positively identify a station that a less experienced DXer might not be able to ID at all, or, at best, consider a tentative.

But even the best of the "pros" frequently come up short of ID certainty. And, as I suggested last time, under certain conditions, one can send a report on the strength of a tentative ID.

A tentative, you'll recall, is when positive identification isn't possible, but a whole series of factors surrounding the reception strongly lead the DXer to believe he's hearing a certain station.

But a word of warning! Tentatives are tricky and dangerous. Most misidentified stations that crop up in club bulletins result because the DXer lacks information or experience, is careless, or jumps to hasty conclusions due to wishful thinking.

A DXer, anxious to log a rare one, is easily tempted to conclude, "Well others are hearing it so it must be Station 'X'!" Leap to such conclusions at your own peril!

The measure of a top DXer is his reputation, especially among other experienced DXers. A reported rare station almost always prompts a frantic hunt by others. If you were wrong in your ID, it will be discovered quickly enough. Everyone makes mistakes now and again. It is embarrassing but not fatal to a reputation. Your error may not be challenged in print but be sure it will be noted by the more experienced DXers. If you later find you erred, a correction to the editor helps mitigate the mistake. Pretending it didn't happen is a mark against you.

To make a mistake occasionally is human. To be wrong regularly earns you the wrong kind of reputation. Before long you're marked as unreliable which is the worst of all possible curses in DXing. Then no matter what rare loggings you claim, no matter how high you climb on the scoreboard, a tinge of doubt will always be attached to your reports.

Tentative IDs, to return to the subject, are the result of piecing together a number of separate factors that, in composite, convince you of a station's probably identity. The number of bits that "fit" can vary, but the more that do, the surer you can be. Too few "fits" and all you've got is a "possible", or perhaps even an "unidentified". And the experienced DXer has the edge since he's accumulated more know-how and background info to test for "fit".

The factors? Frequency, naturally. Time? Does your reception match the schedule? Propagation? Is reception possible, or likely, at the time you are hearing it? Does your reception match the language and programming known to be used? Can you, for one reason or another, eliminate from consideration other stations known to operate on the frequency at that time?

Other clues? You heard no country reference, but did hear a Spanish commercial for Cerveza Carta Blanca. In which country or countries of Latin America is that brand of beer distributed? Can you identify the national anthem heard at sign off?

What does the music tell you? Can you distinguish between Mexican and Brazilian music? Between that of Peru and the Dominican Republic? What is high life music? Gamelan?

The 'Unique Wire Tuner'

By NEAL A. PERDUE

There will be a very limited clientele for this antenna tuner due to the rather stiff price tag of \$69 (plus shipping). This unit is definitely for the serious, discerning listener with limited space who wishes to use a single wire to absolute best advantage. The reason for the stiff price is readily apparent upon examination. It is built to take a power input of full legal Amateur Power. This may appear on the surface to be of little interest to the SWL-DXer, but its construction to meet this standard does assure a rugged, reliable, precision piece of equipment.

The U.W.T. is Amateur gear, and due to stricter requirements for SWR and impedance-matching associated with transmitting as opposed to receiving antennas, it is engineered to give a PERFECT resonance and impedance match whereas other lower-priced tuners on the market use arbitrary taps off every few turns of the coil, which could not possibly give a perfect match to every DXer's choice of random-length wire. Where this unit differs is that the induction coil of 36 turns is CONTINUOUSLY followed by the inductor-tuning dial with accuracy and resettability over a turn-counting dial down to 1/100th of a turn (0-36 turns). The variable capacitor is calibrated from 1 to 10.

The functions of this unit are to show the receiver (or transmitter) a 50 ohm impedance and a perfect 1:1 SWR (the condition of maximum transfer of energy from the microvolt or so on the antenna into the receiver). Further, and quite important, it lets you use a single wire cut to resonance for 1/4 wave length of the lowest band worked in conjunction with a ground connection. A 75 foot length of wire strung vertically or semi-vertically to a height of 35 ft. or more will show the receiver a perfect match from 90M up to 10M or so.

I am using a 50 ft. wire which gives me resonance and impedance match down to 60M. The other 50 ft. seen by the receiver is supplied by the ground plane. A horizontal wire will also work but the semi-vertical configuration is chosen here due to its inherent non-directional characteristics. A 75 ft. horizontal wire could become quite directional on the higher frequencies due to the multiple 1/2 wave lengths.

Tuning through 36 turns of the rotary inductor can become a chore but one advantage of this tuner is that where only one combination of settings (some involve many turns of the inductor) would give a perfect match for transmitting, all optimum settings for receiving can be accomplished with less than 15 turns with the appropriate variable capacitor setting.

After extensive testing, I feel strongly that this unit supplies the answer to the most often asked question--What antenna is best for GOOD reception on ALL bands? This tuner is a FB performer. You can do no more with a general purpose, multi-band, single wire antenna than to show your receiver a perfect resonance and impedance match. A few comparison comments are in order in closing: no single wire without a tuner can give excellent performance on all bands from all directions. The trapped vertical and horizontal antennas available commercially are a compromise--you either get optimum reception in the middle of the band with decreased performance toward the band edges or you get a "sloppy trap" which covers the whole band at REDUCED efficiency. Electronically, you can't have the best of both.

This tuner lets you get peak performance at ANY frequency within the SWBC bands. I highly recommend it to anyone who is willing to spend this kind of bread for real performance. Supplier is Unique Products, 1003 S. Firecroft St., West Covina, Calif. 91791.

(P.S. Rough tuning settings (will vary slightly with each installation) are available from me at 4902 S. Bilrae Circle, Millington, TN. 38053 for SASE--for 50 foot wire.)

ON TO THE TOP (Cont.)--- What is a sitar and what does it sound like?

There are dozens of clues, factors that can help you to identify a station. There's no practical way they can be taught, except by experience. But if you're alert to the basic techniques, you can begin to file away in your mind these scraps of information that will help you in identifying stations.

Naturally, none of these clues alone is sufficient to justify even a tentative identification. Enough of them, however, may make a strong enough case for a tentative ID.

But, again, be careful!

NEXT: Getting rare stations verified.

RAMADAN has already begun---Sept. 28 to Oct. 27. It comes earlier and earlier and this year may be your last real chance to zero in some of the Arabic stations that sign off later, especially Djibouti on 4780 kHz.

Radio San Miguel

EDITOR'S NOTE: The following Article was written from a QSL letter in English sent to Connecticut DXer Sam Barto.

Radio San Miguel, Riberalta, Bolivia, is a small station operating on 4700 kHz in the 60 meter band. Not many DXers have logged or QSLed it or know much about it until now. However, Michael J.

Letter head design of Radio San Miguel.

Ruck, director, writes that Radio San Miguel operates nine hours daily, putting 250 watts into a dipole 10 meters high.

"We have been on the air for five years now and in all this time," the director writes, "have lost only a total of two days transmission time. Speaks well for the old modified Gates 250 which we are using. We put 813s into the final instead of the 812s it had before. The 812s were just not standing up well enough. At this moment I am in the process of checking out an old BC 610E which I want to use as a standby so that the Gates can get a well earned rest and reconditioning. As yet I don't know what kind of a job the modulation transformer of the BC610 will do with music. Hope we can squeak by."

Senor Ruck reveals that "I am myself also a 'ham' with the call letters CP8BB and am quite frequently on the 15 and 20 meter bands. I've been using the SWAN 400 which has done a great job here for the past five years."

The director told Barto that he was absent for a month and just beginning to clear off the accumulated mail and "please pardon this long delay in acknow ledging "your FB QSL".

"Naturally," he writes, "it always amazes and pleases us when we hear from "Pro" listeners such as you. In the last week we were literally swamped with five QSLs. 2 from Sweden, 1 from Maryland, 1 from Finland and 1 from Denmark. If this keeps up we will just have to go ahead and get some banderines (pennants). Unfortunately, Mr. Barto, en este momento we have absolutely nothing on hand that we could send you. You certainly merita banderin."

"Many thanks for your excellent report and felicidades for the great hobby you practice so well." So ended Senor Ruck's informative letter. Riberalta is small Bolivian town in the northern part of the country, about 50 miles from the Brazilian border. The station's motto is "Formar e informar es nuestra meta." (To educate and inform is our objective).

A Valuable Tip On The SPR-4

By JAN TUNER

EDITOR'S NOTE: The following information was taken from an article in a SWEDISH DX bulletin on improving the SPR-4 by the great Swedish DXer Jan Tuner and reproduced here by permission of the author. If, like your editor, you operate a Drake SPR-4 you will find it of great value although there is a possibility that Drake itself in later models may have caught on to this improvement itself. We don't know.

The receiver is sensitive for cross modulation. This may be the cause for the manufacturer's recommendations regarding the tropical bands. Using the setting of the manual you will get no cross modulation. On the other hand, you will hear no DX!

The golden rule is: The lower the preselector setting, the better the gain. On 3.5 mHz, for instance, you have a setting of 2.5. On 3.0 the setting is 7. Tuning the Chinese station on 3400 on both there is a difference of at least one, maybe two QSA units! Same goes for 4.5 mHz.

The solution is simple but not advised in the manual. For 3.0 mHz use the "D" range instead of the recommended "C". You then find the signals at a lower preselector setting (about 1.5) and even stronger than on the 3.5 mHz comparison! For 4.5 mHz do the same trick, use "E" instead of "D" and a preselector around 2. These two corrections are the only useful ones but they are indeed important.

On other bands you gain little by using higher ranges. On higher ranges such as 9.5 mHz the signals are luder and cross modulation will occur rather often. Then you do the opposite—use lower ranges and consequently higher preselector settings. You then get reduced sensitivity and improved QRK (readability) in some cases!

On Medium Waves you should buy the 1.5 mHz crystal. Since the overlapping of the crystals is generous, you can use it from the vicinity of 1380 kHz. On 1380 the preselector setting is 8 on the "normal" 1.0 mHz x-tal, on the 1.5 x-tal it is 0! Not a great difference, but it helps.

Arrows point to Riberalta site.

Up The Lazy River To Puerto Martinez

By DON JENSEN

The River Atrato rises on the slopes of the cordillera and flows northward some 400 miles, draining the jungle region of western Colombia and pouring more than a million gallons a second into the Caribbean.

It is a broad artery that is navigable as far upstream as Quibdo (underlined on map), capital of the remote and neglected Choco Department, over 200 miles from the Atrato's delta.

The Atrato is the only way one can reach the small river landing "pueblito" known as Puerto Martinez. And Puerto Martinez, so tiny it cannot be found on most maps (arrow on map at left points to location) is the location of one of the most interesting of Latin American stations, Ecos de Puerto Mar-

It apparently came on the air early this year. It was first noted by Glenn Hauser, Texas, in late February on the out-of-band frequency of 5568 kHz.

The station is owned by Oswaldo Martinez Chaverra, the "tecnico propietario", an electronics technician in Quibdo, about 80 miles up river from Puerto Martinez. It operated on virtually the same frequency as a Caribbean aeradio net, including stations in Miami and Havana, causing some mutual interference. Though Sr. Martinez is a bit vague, apparently Ecos de Puerto Martinez operated initially without a government license.

However, recently Sr. Martinez traveled to Bogota and after consultation with the Colombian Ministry of Communication, obtained his station license. The station was assigned the frequency of 4900 kHz where Martinez says the station now operates.

Ecos de Puerto Martinez is non-commercial. Various it uses the slogans, "Emisora al Servicio de las Necesidades del Atrato" and "Emisora al Servicio del Choco y los Intereses de los Pueblos de Rio Atrato." Martinez operates the station as a public service and, it seems, as something of a hobby.

Ecos de Puerto Martinez is also a shoestring operation. The owner laments that funds for the station are short and, while he would like to broadcast indigenous music and other local programs, the station lacks even a tape recorder. Most programs consist of recorded Latin American music, "musica popular variada."

Though you probably won't find Puerto Martinez on your map, it is located on the west bank of the Atrato, in the municipal region of Bojaya, geographic coordinates, 76.48W and 6.25N. Its population? Who knows? But it is a good bet that no other Latin American shortwave station is located in such a small, remote community. And few stations running

so little power have been heard in North America. However, some surprisingly good receptions have been made in the U.S. Martinez says the station is a home-brew transmitter running somewhere between 90 and 150 watts, to a "bipole" antenna, 88 feet long and 52 feet high.

Martinez lives in Quibdo, where he has his electronics studio, but he makes periodic visits to the station. The station is operated by three non-professionals who have also received a crash course in broadcasting from Martinez. But the equipment is very simple to operate, he notes.

As of this writing, the station has not been reported as heard on its 4900 channel but earlier a number of receptions were reported during the evening hours, to 0300V signoff, on 5568 kHz. Reports in Spanish are welcomed by Ecos de Puerto Martinez. They should be addressed to Sr. Oswaldo Martinez Chaverra, Ecos de Puerto Martinez, Carrera 5, No.30-54, Quibdo, Choco, Colombia.

CHOCO SCENE

BEST DX TIME: What's the best time GMT to DX? Opinions vary but unless you consistently listen just before and after daybreak at your QTH you'll never be a top DXer, we've heard some of the "pros" say.

A wide variety of loggings this month with some unusual items from Scott Reeves who spent much time traveling out west this summer and whose above loggings were from an Idaho QTH. Things are picking up here and with my R-390 just realized who knows what DX lurks in the dead of nite?-ERS

RADIO FREE AMERICA

Late news in just before we go to press in that the hearing on Radio Free America originally scheduled for October 1 has been continued until October 11, 1973. Thus, presumably, the station will not be on the air again until that date. The October MID-MONTH FLASHESHEET should have some information on that. (HDQ)

 WE EXPECT TO ANNOUNCE AVAILABILITY OF NEW BAND SURVEYS OF 90, 60, 49, 41 METERS IN THE NOVEMBER ISSUE OF FRENDX. This will depend on several factors. But the announcement will be made as soon as possible.

 Someone suggested, after hearing of the west coast meeting arranged by ASWLC & SPEEDX, that there ought to be that type of meeting on a more frequent basis, and that the east could well do with such a meeting...Arrangements are being made for such a meeting, possibly in Pittsburgh in November. Again, the November FRENDX should carry some word on that. We can say that it would probably be a one day meeting, on a Saturday, with a small registration fee to be used to pay for a meeting room.....More next month!

73 from HDQ....Dan Ferguson

Apparently some reporters are sending their reports direct to the various section editors rather than to Liberty, Indiana for distribution. It should be pointed out that unless the report comes here, the reporter and QTH will not be listed in the credits since I will not be aware of the report having been sent. Also, as is the case this month, an unannounced change in editors may result in a portion of a report sent direct not being used at all.

FLASHSHEET

The FLASHSHEET is published twice monthly by NASWA, Box 8452, S. Charleston, West Virginia

OCTOBER - 1973

Freq: KCS

TIME: GMT

AL NIBLACK, Editor, 420 Shelby St., Vincennes, Ind. 47591 DEADLINES: 15th & 26th Month

AUGUST 1973: SUNSPOT COUNT AS FURNISHED BY THE ZURICH OBSERVATORY, 9-7-73- 1-36, 2-28, 3-21, 4-28, 5-34, 6-40, 7-42, 8-40, 9-38, 10-27, 11-23, 12-0, 13-0, 14-0, 15-0, 16-0, 17-0, 18-7, 19-7, 20-7, 21-15, 22-10, 23-17, 24-22, 25-28, 26-38, 27-37, 28-47, 29-56, 30-64, 31-82

MEAN--25.6

PREDICTED: SEP-30 OCT-28 NOV-26 DEC-24 JAN-22 FEB-20 (Grady Ferguson, S.Car.) (Look at those zeroes in there, Editor!)

ANGOLA En Oficial, 3375, here like a local 2310 in PP anmcts, light orchestra music. Really fine. (Dan Henderson, Md.) 3375 This one, En Oficial, in at good lvl 2335-2345, pops and light music, man MCing in PP, on a Sunday. (Al Niblack, Ind.)...R. Clube Cabinda, 2230, with pop music prgm, faded out by 2245, poor strain lvl. (Dan Henderson)

AUSTRALIA 6090 VLT6, Sydney, 1315, world news by man, pops, two IDs, came in at poor to fair lvl. (Joe Helm, Ind.)...According to HCJB DX Party Line, RA will update their SW set-up at Shepparton with more powerful transmitters, more fqys, additional time. (August Balbi, Cal.)

BOLIVIA 4755 En Bolivia from 0330, 9/18th, with Latin type music, news, talk, in Spanish. An ID at 0345, some QRM and QRN. (Joe Helm)

BELGIUM RTB, Brussels, heard on 9655, 2255-2315, and 0040-0100, with English prgm "Belgium Speaking". QRM from USSR outlet on same freq makes for poor reception. And, the parallel freq of 11920 is covered by Ivory Coast outlet, and reception is about impossible. (Bob Zilmer, Wisc.)

BRAZIL 3255 Unidentified, 0900 PP ads and music, strong lvl amidst QRM, possibly is R. Assuncao, Fortaleza. (Ernie Behr, Canada)...15145 R. Jornal do Comercio, Recife, ZYK33, may be heard under RNE, Madrid from 2100...15190 R. Inconfidencia, Belo Horizonte, logged at 2200 with PP news...15135.5 A Brazilian from Sao Paulo is heard here, though definite ID has not been heard. Have heard mention of R. Nacional, Sao Paulo. Some claim that R. Sociedad da Bahia, Salvador, has moved here. Heard as early as 2100 and after 0200. Also, some QRM. Anyone has definite ID on this one??(Credit all to Bob Zilmer) (See MID-Sept. 1973 FS - Ernie Behr says is definitely Radio Record since Sept. 1st; and, Ernie is not easily fooled, is quite reliable, Editor)

BURUNDI 6140 La Voix de Revolution, Bujumbra, still observed S/on at 0330 with Rundi, into local music. DW splatter kills prgm details, usually. (Dan Henderson)

CAMEROON 5010 R. Garoua here from 2040 with excellent sigs on 9/18th. AA, FF, vernacular languages. (Dan Henderson)...3270 R. Buea, here on good African propagation days, until 2200 off with anthem--EE prgming apparently the last 15 minutes or so. (Dan Henderson)

CHILE 9571.5 Eniscoras Diego Portales, with this ID since 9/18th, from 0030 music. ID as listed in 1966 WRTH, no longer, "Radio Portales".

COLOMBIA 3140 (See previous FS) In re the new one, seemingly reported as La Voz de Cincorder, a word of caution: La Voz de los Fundadores, Manizales, is a new name for Radio Sensacion, and heard anncing same freq of 1570 khz, 1 kW, but is often heard on 2nd harmonic of 3139, first IDed wrongly as LV de la Cincorder. (DSWGI via Don. Jensen, Wisc.)

COOK ISLANDS (repeated from previous FS because of importance) 5049V Station ZK5, Rarotonga is reported at 0600 as heard in New Zealand. (Arthur Cushen, via Ernie Behr)

COSTA RICA Faro del Caribe, San Jose, TIRF, heard on the new freq of 6175 at 1045-1115, with SS prgming and religious music. Possibly a move from 6037. (Bob Zilmer) (May be heard in our evenings too on the new freq, though a severe hetrodyne also there, Editor)

CYPRUS 15420 BEC Relay S/on with Big Ben at 1800 in language. EE lessons at 1815, good lvl 9/17th. (August Balbi)

ECUADOR HCJB DX Party Line now on 1174//9560, at 0300 Tuesdays, at 0230 same fqys, on Fridays and Sundays; to Europe Mondays, Thursdays, Saturdays, at 1900 on 17755//15300. To Pacific 0930 on Mondays, Thursdays, and Saturdays, on new 6130, 9745, 11915; 6130 replaced former 5990. (August Balbi)

FINLAND Pori has dropped their 2300 EE Prgm on 15185 because of WRM; are still on 15185 at 1400 and 1800 in EE. Though, at 0300-0330 they have EE on 9585. Reception is poor on latter freq because of heavy QRM. (Bob Zilmer)

GERMANY(W) 6005 RIAS, Munich, noted at 1000 with old pops, YL hosting, with an ID. Fair lvl though QRM. (Joe Helm) (An awful amount of day light at transmitter site, Editor)

GERMANY(E) RRI heard on 15160 with EE to Africa from 2030-2045, then into language, a fair lvl. (Bob Zilmer)

INDIA 9525 AIR with EE news 2200-2210 to UK. Several parallels also heard, 11620 and 9912, both poor lvl; 11740 in EE to E., and SE., Asia, poor to fair lvl. And, 11710 at 2300 with sometimes fair sigs though often QRM de Argentina on 11710. (Bob Zilmer)

INDONESIA 4932 RRI, Surakarta, 1140 with YL in talk and music, 9/20th. (Dan Henderson)

ISRAEL IBA in EE from 2000-2045 on new 15315//15160. Is a move in fgy. (August Balbi)
 ...IBA is also using 11700, a new fgy, 2200 in FF, //11960, both heard well. (August Balbi)

LEBANON Beirut now on 9545, moved from 11790, but is buried under DW till 0250, clear ID at 0257, after DW S/off. Observed on 9/11th. (August Balbi)

MOZAMBIQUE 4925 IMR here most days between 0330-0400, with best signal from So. Africa in the 60 MB. Prgmng mostly U.S. pops, ads. (Dan Henderson)

JAPAN NHK—has a new address according to a letter from them:

Japan Broadcasting Corporation
 Jinman 2-2-1, Shibuya-ku,
 Tokyo 100, JAPAN

INTERNATIONAL WATERS (Please see previous FS) Radio Free America, 1160, not heard so far but 3 or 4 stations are mixing on this fgy at 0330. A large picture of RFA is now available from Dr. Carl McIntire, P. O. Box 190, Collingswood, N.J. 08108; donations are appreciated. (This FLASH from Ernie Behr)...(FLASH) Radio Free America began transmitting 9/19, at 1223 PM E.D.T. (1723 GMT, Editor), 12 miles off the coast of Cape May, N.J. on 1160 khz MW. I logged them from 2300 tune till 0214 GMT S/off, with reception here varying from fair level, due to QRM de WJJD, Chicago on same fgy, to good lvl at best. Power is 10kW. I logged this first on my SX-100, though was audible on my regular AM radios. A directional antenna is a big help! On Sept. 22, the Star - Ledger reported: "Rev. Carl McIntire is temporarily prohibited (9/21st) from renewing broadcasts from his ship...The FCC obtained a temporary restraining order in the U.S. District Court in Camden. October 1st has been set for a hearing on whether to make the restraint a permanent one. McIntire claims there are no federal laws barring offshore broadcasts, but the FCC said he must have a license if the broadcast interferes with any other station". Note: It appears a big challenge to R. Free America, finding a clear fgy. Also the FCC said that R. Free America caused QRM to KSL, Salt Lake City, also on 1160. So..., Radio Free America is currently, at least, inactive. (End of FLASH from Ed Insinger, state of New Jersey)

MALAYSIA Surprised yesterday by a QSL for the BBC's Far Eastern Relay listing date, time, and frequency!! Also, very happy! (Ed Insinger)...BBC Relay, Tebrau, has EE news on 6195 //9740//11750, all observed at good lvl on 9/17th. (August Balbi)

MEXICO 15160 LV de la Am. Latina, 1700 SS talks on 9/15th, alternates with 15176 some days. (Ernie Behr)

NEW CALEDONIA 7170 Noumea heard daily at 0700 in FF news, //11710. (August Balbi)

NIGERIA Ibadan, NBC, 3204, noted 2255 with S/off anmcs. Much Ute QRM. (Dan Henderson)
 ...3396 Kaduna at 0430 with Talking Drums IS, RBC in the background. (Dan Henderson)

NIGER 5020 Niamey here with surprisingly good lvl 9/18th, at 2150 until 2200*, with FF anmcs and music. (Dan Henderson)

PAKISTAN RP, Karachi, tuned 9/19th, and heard with language anmcs at 1315. A repeat of President Nixon's welcome to Bhutto and his reply. Language anmcs and then had speeches from these two at the dinner. All in language! (Grady Ferguson)

PHILIPPINES 15440 International Svc of FEBC with EE news, ID, at 1530, fair. (August Balbi)
 ...9580 Radio Philippina now on this fgy regularly 0700-1905, most EE, some Japanese at times. Strong lvl, good prgmng. (August Balbi)

RHODESIA 3396 RBC here with excellent lvl, some QRM, news at 0401 in EE. (Dan Henderson)

SIERRA LEONE 3316 SLBS with ID at 2315, native music, EE, good lvl. (Dan Henderson)

SUDAN(DR) 9505 Noted 0630 on 9/21st, with native music. Gave a TC and etc., in EE, plus an ID. This is the first time for me to note any EE. Fgr lvl, bad QRM. (Joe Helm)

TAHITI 11825 Papeete at 0515 with pops, as well as other types. This was continous, did not ID till 0330, then in FF. Reception was good. (Joe Helm)

TUNISIA 15226 RTVT, 2000-2333*, clear with AA prgm; is not Algeria as reported in the Sept. Log Report. (Ernie Behr)

TURKEY 11880 At 2100 the news by M&W, in AA. An ID, came in real good. (Joe Helm)

TURKS IS (FLASH) VS18 here 2126-2136 S/off on 9/14th; 2130-2200* on 9/15th, with EE anmcs, pops recordings. Sometimes no ID at the end. (Dan Henderson) (4788)

VIETNAM(NO) Voice of Vietnam heard at 0100 in EE, news and propaganda. (Grady Ferguson)

TIMOR(PT) 3668 Dili here for the first time noted this season at 1052 with PP YL anncr, soft orchestra music, though heavy QRM. (Dan Henderson)

YEMEN(SO) Aden at 2200 S/off with AA ID, into anthem, sometimes squeezed by Ute. (Dan Henderson)

CLANDESTINE: An unidentified Pirate in the Philadelphia area, 7229, noted / Henderson till 0333*, a powerhouse, with Alice Cooper rock, dedications to Yls, admonitions "Not to study too hard", DJ Ids as, "Ron Taylor", weird S/off, poor fidelity, on 9/11th logging. (Larry Magne, Pa.) (End of FLASH item)...15275 R. Libertacao noted here since 9/13th, from 2240 with Afro music, anthem, till 2303*V, //6240, both at good lvl. (Ernie Behr)

GRAPHIC TIME TELLER: (Please see Mid-Month FS) The operating aid that was reviewed there-in has had changes effected; the "kit" that was mentioned has been discontinued and an economy model has been substituted in its place. Price of Economy Model is \$12.50 PP from U-J Industries, 6605 Shoal Creek Blvd., Austin, Texas 78757.

NOTE: A number of reports were received for the FS, after the deadline, as we were closing out the work on the master sheets. We will use the reports in the preparation of the next FS, as they will not be outdated by then, being only a matter of two weeks hence. Please try to get your reports here by the deadline. (GRACIAS)

ACKNOWLEDGEMENT: A sincere thanks to all who supplied material for this effort. Please note FLASHES may be phoned to 812-882-3976, but must be phoned BEFORE 2000 GMT. Again, please note this important time change. Good DX

A VISIT WITH GEORGE PARTRIDGE

By Sara Stillman

(Ed. Note: George Partridge is well known to American DXers through his popular antenna design, the Joystick and accompanying tuning unit called the Joymatch. At this printing other Partridge equipment is being evaluated for sale into the American market, and we may look forward to perhaps a small box which will enhance the DX-ability of receivers. We are grateful to Sara for this opportunity to share her visit with Mr. Partridge, her friend and correspondent of several years.)

Broadstairs is on the Channel coast of England, about 70 miles due east of London. There is a Charles Dickens Museum there. And, this was the home of Partridge Electronics Ltd. Meeting with George Alfred Partridge was like the renewing of an old friendship!

I had not let him know I was coming, but instead gave him a ring from the "Salamander", a place where I had stopped for food and drink. George was just going home for his lunch when I called, but he asked that I come on over to the office in about 45 minutes. His office is in "Caister House" on a corner of Prospect Road, attached to other houses on the street as is common in England, and as mimicked in American townhouses today. A gentle, older man named Bill Edwards took me to the second floor to George's office. A bit later Bill brought us tea during the course of my visit.

George Partridge is a big, somewhat rotund, man, in his early sixties, six feet tall, with sandy hair. His greeting was so cordial, and he genuinely welcomed me. We sat for a couple of hours talking. His office is a small one with desk covered with stacks of papers spilling over to the floor at its side, varied electronic equipment piled all around. Yet, when he wanted a certain bulletin or letter, he went right into the pile and managed to pull it out unhesitatingly. Keen, intelligent, with an obvious professional understanding of all the electronic facets that have enabled him to develop the entirely new principle used in his Joystick and Joymatch. With his consent, I turned on my tape recorder during part of my visit, and following are portions of our conversation:

S: Tell me, do you manufacture your inventions here?

P: Well, not exactly. We subcontract to local contractors who do the actual manufacturing. And, we do all the administration, dispatch, packing and so forth from here.

S: Are many Joysticks used in England?

P: Oh yes! If we had just one tenth of the market abroad that we have here, I would be driving a Rolls-Royce instead of my Alsatian dog. (Dixy, his beautiful 7 year old dog was in the room with us constantly.)

S: Is there much shortwave listening in England?

P: Well, it depends on how you base it. We know the proportion of radio amateurs to shortwave listeners in this country is something like 12 or 14 to one. (With so many more amateurs in the U.S.) that is the market we'd like to get into.

Authors Note: At this point, Mr. Partridge related a couple of "bad" experiences with American sellers of SWL equipment who have represented his equipment in the past, resulting in a substantial loss to him. Concerning these, Mr. Partridge said:

P: From my knowledge of Americans, they're very nice people, but we seem to have got hold of the wrong ones.

S: Who is your present distributor in the States?

P: Gilfer. We have supplied them previously, and recently they picked us up again. We just sent a consignment to them by sea. It takes about five weeks, possibly longer; they must have the stuff by now.

Author's Note: On other subjects, Mr. Partridge continued:

P: I know one fine American, a good friend of mine - Bill Paschke. A Korean war veteran. Here -- I've got his picture. He's a very devoted short wave listener in Wisconsin. He was a sergeant -- about the only survivor in his outfit, suffering crippling injuries and is a paraplegic. He's a wonderful fellow.

S: Yes, Bill Paschke is well known in the States. (He is also a NASWA member - Ed.)

P: Bill devotes nearly all his time helping a program for other physically handicapped SWLers. People like Bill make us physically fit people feel very humble. Our office accountant also is a paraplegic. (Paschke's work is with SPEEDX's noble HAP program assisting Gene Moser, another handicapped DXer also. Ed.)

VISIT WITH PARTRIDGE ELECTRONICS, LTD (Cont'd)

S: Tell me, who made up the Joystick?

P: I'm the inventor, and I've invented a lot of things in my time -- mostly when I was in the Royal Navy. They'd not even say "thank you, very much"; just took anything you offered them.

S: But the Joystick is patented?

P: Oh yes, we have international patents.

S: How did you happen to pick the name "Joystick"?

P: I chose an easy-to-say name that falls off the lips. People are lazy-- and, the name "Joystick" comes easy - free advertising - and what name could be more descriptive?

S: So you were in the Navy?

P: Yes, after I left the Navy I lived here in Broadstairs, and there was no business; it was just after the war -- tremendous unemployment. This was about the worst place in the world to find a job. Also, I was in a bad way - had been knocked about a bit during the war. I had three years and four months without any leave, and I was in all the battles in the Mediterranean. I'm living on borrowed time. After the war I had a rough time for some years. Then I decided -- well, I do know something about something. So I picked myself up by the bootstraps and spent a year developing the antenna. I had to borrow money to get it moving.

S: It's a fascinating invention. Living in an apartment, as I do, it's very frustrating to know other people are pulling in so many countries -- and you cannot put an antenna on the roof.

P: I'm working on another invention now. This is the framework for the first prototype -- that is, for a miniature frame aerial. You see, the best receiver in the world is no better than its antenna. This new aerial will be sort of complementary to the Joystick. Development will take sometime, for you need a lot of capital to make the tools to build this up. It will be for the broadcast band. It will be a directional antenna. The Joystick, however, is not a directional antenna. This new one is also very sensitive. I've been carrying out tests with it -- there are two stations on the same frequency here on the broadcast band. One is a pirate station off the Dutch Coast - radio Veronica. The other is one of the new commercial broadcast stations in this country. They are on exactly the same frequency. With this new aerial, you can absolutely separate the two -- hear each without hearing anything at all of the other. Just turn the antenna in that direction and you've got IBA; turn it in the right-angle direction without touching the receiver at all and you bring in the other one. What I am trying to do is make this directional for shortwave and medium wave as well.

P: We are now selling something other than just Joysticks and tuners. We are using a Japanese receiver - I believe it is called Kenwood in the States - a very good set. (Ed. note: Mr. Partridge refers to the Kenwood R-599, a preselected receiver manufactured with direct dialing.) We combine the receiver with the Joystick and Joymatch tuner and have the Partridge Package, a complete amateur station. We operate by mail order and are doing very well. We also give a pair of headphones.

S: I'd like to get our conversation transcribed and perhaps print it in the NASWA bulletin, FRENEX - would that be all right?

P: Yes, surely. It may give a bit of publicity. It's surprising the number of people who write to say they have been looking all over, trying to find out our address.

S: There are so many SWLers and ham operators in the U.S. - many of whom live in cities where they can't put an antenna on the roof -- there must be a large market for the package or antenna.

P: Yes, that's true -- you call them cliff-dwellers, don't you?

S: Well, whatever it is, that's what I am.

P: You see, we have patents on the new principle demonstrated in the Joystick in all the countries in which we're really interested. Of course to finance a world program takes a lot of cash. And you don't get any assistance from the British tax authorities.

S: You once told me you had known the famous John Logie Baird.

P: Yes, John was a native of Helensburgh, Scotland, and the inventor of television.

A VISIT WITH PARTRIDGE ELECTRONICS, LTD - (Cont'd)

P: I met him when I was a very junior Naval Wireless Operator, and John and I talked more about Scotland than about wireless. I recall he demonstrated his thirty-line disc television to me and I afterwards built my own Baird television set. My impression of him was of a wireless fanatic, with long dark hair -- amateur radio QSL cards pinned all over the wall.

S: And, what is the Society of Wireless Pioneers you mentioned?

P: That is an American based organisation with membership mainly from professional or ex-professional wireless pioneer men, dating back to the days of Marconi. I was once approached by a fellow "Pioneer" to join, and if possible take over his office as U.K. representative. Regretfully, I had to decline the assignment because of increasing business commitments.

Authors Note: When I had to leave, Mr. Partridge walked me back to catch the London train, carrying the two Joysticks and Joymatch tuners I was bringing home. As he marked them "Free and unsolicited gift" I hand-carried them all the way to New York -- with no trouble from Customs. We said 'farewell for a space', and I thought of how much I would enjoy spending more time with him on another occasion. Sara Stillman.

HOW I ONCE SHAMED A WATCH INTO TELLING CORRECT TIME

By Edward C. Shaw

The Sears and Roebuck Timex I wore had always kept me in a constant state of exasperation until an old timer DXer living in California told me about a sure cure he had used to correct a recalcitrant wall clock.

I accepted his sage advice which merely suggested that I lay the watch in front of my short wave receiver speaker, in close proximity to assure optimum results. According to the old DXer's instructions I tuned in WWV as loudly as my family's health and my neighbor's ire would allow it. The theory is similar to that of a vibrating tuning fork which will set in motion another tuning fork of the same pitch through sympathetic vibrations. After three days of steady ticks, toots, and time tones the nearby watch was literally forced to sympathize in perfect cadence with WWV. To this day I have never had to reset my watch as long as it is kept wound.

***** TALL TALES CONTEST!! *****

I realize that the above tale may be difficult for some of you to swallow, and lately Headquarters has been wondering if perhaps others of you out there have had similar experiences worth sharing. Therefore, we believe a contest would be appropriate for the best DX Tall Tale. Everyone can enter. Simply type out or write legibly your tall tale, put your name and address on the same sheet of paper, and mail it to Ed Shaw, 621 Burleigh Avenue; Norfolk, Virginia 23505. Two other NASWA officers or editors will assist me in judging the three best tales submitted. Naturally, officers and editors in the club will not be eligible. Winners will receive nice, worthwhile prizes including a cassette tape of good quality Interval Signals. The First Prize Tale will also be printed in FRENDX. Hurry and get yours in this week! All participants will receive a NASWA QSL.

NEW BAND SURVEY AVAILABLE A survey of the 31 meter band, compiled by Mac Leonhardt, is now available from Reprint Manager Ed Shaw, 621 Burleigh Ave., Norfolk, VA 23505. Cost is 75¢ to members, \$1.00 to non-members.

Other items available from Ed Shaw are:

THE ART OF VERIFICATION, by Gregg Calkin	50¢
AFTER THE SUN GOES DOWN, by Ed Shaw (sunrise/sunset charts & how to use)	50¢
NIBLACK REPRINT BOOKLET, by Al Niblack (reprints of receiver & antenna articles)	50¢ (½ price)
90 METER SURVEY (last year's edition)	50¢
BROADCASTING IN PERU, by Richard Wood	10¢
THE BC-221 FREQUENCY METER, by Al Niblack	10¢
TIME CONVERSION CHART FOR NORTH AMERICA	SASE
NASWA JACKET EMBLEM	\$2.50
RECOGNITION OF LANGUAGES, by Richard Wood	SASE
SI-190 USER'S MANUAL, by Ed Shaw	16¢ postage on an SASE
AN EXAMINATION FOR DXers, by Ed Shaw	16¢ postage on an SASE
THE BEST OF LOUDENBOOMER	\$2.50

Deadline: 15th

SURVEY RESULTS - SPOTLIGHT, PART III Credits to the Spotlight go to "Numero Uno, SWBC Weekly", FRENDX, observations by other DXers and ye ed. * **NEPAL** It appears that Radio Nepal has not been reported in NA for the past few months. This may be due to the fact that RN is seemingly most widely reported during periods of good India subcontinental reception. These periods of good subcontinental reception usually occur between the months of late November and late January. Our chances for logging RN seem somewhat greater when there is a low sunspot count. RN has its 100 KW xmttr fired up on only one frequency, 5000. Victor Goonetilleke of Sri Lanka has observed RN during its scheduled periods fm 0020-0350 and 1150-1720. Victor also says that there is an English External Svc fm 1435-1520. We all know that 5000 is not a clear freq. WWV and WWVH provide the accompaniments. As Ed Shaw once said, "maybe we could ask WWV to move down a couple!" The Cambodian clandestine station, VNUFK, has been also noted on 5000 in the past. RN has been noted in the past year in ECNA fm about 1130-1300; in the midwest around 1300-1330; and in WCNA fm around 1415 to around 1515. (# = adapted fm a speech by Don Jensen in Charleston, WVA., July, 1973)

* **THAILAND** Have you ever heard the NA Svc in English fm Radio Thailand? Neither have I. In fact, I don't think that many other people have either. Nonetheless, the NA Svc fm RT is scheduled fm 0415-0530 listed on 9655 and 11905. DXers across the nation have reported English pgm'ing fm 1025-1030 on 11905. This freq is // to 9655 which is much weaker. 9655 has been noted til 1245 when RT then signs off, but first they give an EE ID and close with an anthem. The 7115 outlet seems to afford the greatest opportunity to log RT on ECNA. Try the early morning slot around 1130 to 1230 or so. While you are still in the 41 meter band, drop down a few kHz to 7106 and tune for Thai TV during local early morning hours. Don't confuse Thai TV with another nearby Asian station, namely Hanoi on 7102.

* **SOUTH VIET NAM** The SW station broadcasting from the city once known as "The Pearl of the Orient" or "The Paris of the East" is Radio Vietnam, VTVN. Radio Vietnam has been noted often on 11950. The station begins their flute IS at 0610 and signs on at 0615. Best reception on 11950, however, seems to occur in ECNA around 1200 and in WCNA around 1530 or so. Strong signals are often noted on 9620, also during the general time slots mentioned above. The 41 meter band houses several VTVN outlets. 7245 and 7175 may be hrd with relative ease during periods of favorable Asian reception during your local early morning hours. Also include the fairly recent additional 41 meter band freq of 7043 during your early morning tuning for VTVN. Asian DX'pert Larry Magne has recently noted VTVN on 7085 fm around 1030 til around 1230. 6165 carries the Home Svc pgm and can probably be noted in parallel to 7175 and 9620 plus 11950. If you would like a challenge in logging VTVN, go after the 60 meter band outlet on 4877 which is parallel to 7175, et al, also during the early morning hours, local time.

* **TIMOR** Emissora de Radiodifusao de Timor Portugues has been widely heard over all parts of NA in the past year. The 10 KW xmttr on 3668 and the 1 KW xmttr on 3268 are seemingly scheduled from 0900-1500, however, the "Log Report" in the September FRENDX has listed broadcasts til 1600. RDP Timor is usually noted in the ECNA region fm around 1030 til past 1300. Reception in the midwest seems to be noted around 1200 til after 1400. WCNA DXers indicate that reception is best after 1400 and is noted to sign off at 1500 (1600) when AP is played. Of course the times listed above are just general times of reception and will vary throughout the year. There is a direct correlation between the general times noted above and the seasonal sunrise times.

* **PARAGUAY** Seemingly, the most widely reported Paraguayan station in NA has been Radio Encarnacion. It appears that most notations of RE on 11948 have been between 2245-2300. RE is able to be well heard during this period until 2300 when the VOA and Radio Canada sign on and cause considerable QRM. RE, despite the QRM, has been noted within the past six months after 0030. Also, you may try for the not-very-often-heard station, Radio Nacional de Paraguay which operates on 5273. To my knowledge, this station has not been heard w/in the past few months. But when it is heard, it seems as though the station signs on at 0000 and broadcasts til between 0030-0045. Ute stations often cause QRM to RNP. As a matter of fact, some people have claimed that RNP is a ute station itself, but the full story is not known (by ye ed at least).

Radio Paraguay yields mixed reception on 6015 fm before 9030 to after 1130. Another Paraguayan which may be heard by persevering is Radio Guaira on 5975 during the early morning hours, local time. While looking for the Paraguayan, Radio Guaira, be on guard for the Brazilian, Radio Guaraja, also on 5975.

* GREECE The Hellenic National Radio & TV Institute, sometimes referred to as Radio Athens, has been noted on various freq's in NA during the past year. The freqs of 15425 15345 appear to be the most widely heard outlets. 15425 signs on at 1730 but the sign on is preceded by a folk song IS, "Once-I Was A Shepherd Boy", played on a native flute and sheep bells. Most of the pgm'ing on this freq is in Greek. The 15425 outlet signs off at 2100. Mixed Greek, EE, and FF pgm'ing has been noted on 15345 fm 1930 til after 2230. EE news is scheduled at 2215 and the news in FF is scheduled at 2220. The 25 meter band outlet from Athens may be hrd fm around 2200 til as late as midnight GMT. Radio Habana Cuba often splashes to 11720 fm its "home" on 11760 to interfere with the broadcast fm Athens. The additional freq of 9605 has been noted signing on at 1758 with the shepherd flute IS and Greek pgms to 1850. They have also been observed on this freq at around 1500 but were suffering fm VOA QRM.

!!! AFGHANISTAN !!! R. Afghanistan is going to discontinue their Overseas Svc because there has not been enough letters from overseas listeners. What do you think about that gang? Let's try to keep RA on the air. How about sending a few reception reports, regardless if you have a QSL already, and maybe a few comments about RA's svc in the past years may be in order.

ALGERIA RTA, Algiers, has been noted on 17790, 17825, & 17825. (Dr. Richard Wood LA)

AA 0600-0900 15160, 7220
 0600-1800 17790 (AA), 17825 (FF) (Thanks go to Steve Estes, VA
 AA 0900-1800 17745, 9725 for supplying us w/the RTA sked)
 AA 1800-0000 15160, 7220
 24 hrs 17880 (AA), 11715 (AA), 11835 (FF), 9610 (AA)

ANGOLA Emis. Oficial, Luanda, noted on 9545 rather than nominal 9535 at s/on 0500 in PP; on top of DW or in clear, until they abruptly leave the freq w/out an acmt at 0600. Then they immediately open on 9535 mixing with Switzerland which also opens at 0600 on 9535. (Dr. Richard Wood, LA)

CHILE R. Corporacion on 15150 observed fm 1800-1830 via all daylight propagation. Mixed cmcl and patriotic spots; ID as "CB114, Una radio en la vanguardia de la Revolucion. Radio Corporacion." (Dr. Richard Wood, LA) Scott Reeves rpts rec'ing a QSL letter fm Fernando Donoso Sazo, ABOGADO, Cola Cola 603, Linares, CHILE. Fernando says that he would like to receive some jazz records or music fm the grand orchestras.

BRAZIL R.Nac. de Brasilia announces that very shortly new xmtrs w/a combined power of 950 KW will be put into svc. They will then be adding new lang's to their pgms as well as increasing the hours of transmissions abroad. RNB now has GG fm 1930, FF fm 2030, PP fm 2130, EE fm 2300-2400, and then SS. The freqs used are 15445, 11720, 9665, 6065. (Many thanks to George Schnabel, NY, Mike Anger, NJ, and Don King, PA)

DOMINICAN REPUBLIC EE pgms fm RTV Dominicana, Santo Domingo, are noted daily at 0215 w/nx and on Sat's w/a mx'ical pgm at 0230. (Don King) RTV Dominicana has been noted at 0100 returning fm drifts to nominal 5970. (Richard Wood, LA)

FINLAND b/c's to NA fm 1400-1430% & fm 2300-2330 on 15185 and fm 0300-0330 on 9595. All pgm'ing is in EE. (Thanks Ken Earhart, PA)

GERMAN DEM. REP. NA Svc of RBI effective Sept 2;

ECNA 0100-0315 (EE/GG/EE) on
 9730, 11890
 WCNA 0330-0500 (EE/GG) on 6080,
 9650, 9725

Each lang xmsn is 45 mins
 (The two side by side tips are credited to Dr. Richard Wood, LA)

GREAT BRITAIN In a surprise move, the BBC has reversed its two chief 40 meter xmtrs beamed to the Americas. 6110, tradition-ally carrying the World Svc in EE to NA is now used for SS to LA fm 0015-0415. World-Svc in EE is now on 5975, formerly used for SS fm 2115-0415. 11780 now s/off at 0030. Other freq to NA are unchanged.

GUINEA, REP. of Conakry, 15310, listed in WRTH to s/off at 1600 is noted at 1730 w/FF pgm'ing. Good strength but hum and low modulation. Same pgm'ing also noted on 9650 at 0500 (Dr. Richard Wood, LA) Voix de la Revolution, Conakry, has sent to following sked w/their QSL; 1600-0800 on 9650; 1230-1600 on 15310 (see Richard's observations) and also fm 1230-0830 on 7125 and 4910. (Thanks a bunch Charley Wootten, NASWA's man in Morocco)

INDIA AIR, Bhopal 3315 fm 0100-0200, 1130-1730

 1500-1600 on 3288, 6170, 7105, 17730 woon to be replaced by
 17840French & English Internat'l Sc
 1600-1900 on 3288, 6170, 7105 in French
 (Many thanks to DXers Ralph Perry, ILL and Scott Reeves, MD)

MEXICO KEWW, Mexico City, is regularly active during daylight hours (local) only. However, noted on both 15160 (apparently weekdays) and 15176 (apparently weekends) around 1500-1800. 9515 was also noted at 1400. (Dr. Richard Wood)

MOROCCO Our man in Africa, Charley Wootten, has visited the offices of RDF TV Marocaine in an attempt to solve the capper - why RTVM does not QSL. After being yo-yo'ed fm department to dept, Charley was finally passed off as a "radio amateur" by a gent and was led into an office where he met a gent sitting behind a desk with a pile of QSL's on top of it. It was here where Charley learned that RTVM has not received repts in over a year! You might try using the following address now for your verie: Royaume du Maroc, Ministere de l'Information, RDF TV Marocaine, 1 Rue al Brihi, Rabat, Morocco. EE is sked'ed fm 0900-1200 on 6190, 7115, 7225. FF&AA fm 1200-0300 on 9615, 15360, 6170, 11735. Richard Wood has observed RTVM in Maghrebi Arabic at 1730 on 15360 and also RTVM s/on at 0500 on 6190 which is noted daily.

NORWAY Radio Norway has EE to WCNA on 11860 and to ECNA on 15345 fm 1600-1630. Also at 0000-0030 and 0200-0230 on 6185 and 9559. Fm 0400-0430 on 6185 to ECNA and 9645 to WCNA. In addition, Oslo b/c's to WCNA fm 0600-0630 on 11860 (Thanks to Louis Buehler, MO)

REUNION ORTF, St. Denis audible here in Northern NJ this past June in the 0230-0300 time slot (to 0300 fade out). on 2446. (Ed Insinger, NJ)

SARAWAK EE from Sarawak is scheduled fm 0800-1600 & 2200-0100 on 4950
 2230-1445 on 7160
 0200-0730 on 9605
 "Sked does not fit my WCNA logs"-SR
 (Scott Reeves, MD)

SOUTH AFRICA Radio RSA's EE to NA xmsn's fm Sept-Oct 1973 are listed as follows:
 2215-2315 11900, 11970, 9695, 9585
 2326-0242 11970, 9695, 9585, 6080
 fm Nov 73-Feb-74
 2230-0242 11970, 11900, 9695, 9585
 (Louis Buehler, MO)

TOGO RDF du Togo lists the following sked:
 5047 fm 0530-0800 & fm 1730-2300
 7265 fm 0800-0900, 1600-1730, & 1200-1400 ... (We appreciate it, Tom Cwikla, CT)

UZBEKISTAN Radio Tashkent has EE language programs from 1200-1230 and 1400-1430 on 15460 and 11730 (Steve Estes, Virginia)

VENEZUELA Radio Angostura Sensacional, Ciudad Bolivar (not merely "Bolivar", as in WRTH by-frequency listing) is noted with this consistent ID, never only "Radio Angostura", at 0900 sign on with both Venezuelan and Estado - Bolivar anthems on 6120. Excellent strength. (Mucho thanks Richard Wood)

USSR Home Svc: Radio Station MAYAK: In a letter just received fm Mrs. S of the NA Svc, she writes, "we would like to inform you that you can pick up a

pgm in the RR language, "Mayak" in particular, which is intended especially for those who know the language, for fishermen at sea, or Soviet people living abroad temporarily." I also received a full data QSL listing MAYAK on the card, via Moscow. (Thanks Ed Insinger, NJ)

USSR - SOVIET ASIA This month's wrap-up of Soviet b/c'ing operations has once again been compiled in an excellent manner by our resident Soviet DX'pert, Bill Davis of Laguna Niguel, California. The only Soviet Asian change for this month seems to be in the Pacific Fishing Fleet pgm fm 1430-1525, Wed's, Fri's, Sat's, and Sun's. The pgm is now on 9770 kHz from Vladivostok and on 9780 from Blagoveshchensk replacing 11870 and 12010. On these mornings the HS station on 6035 goes off the air at 1400. Would this suggest something to you about a possible location for 6035? (Very interest'g)

GERMAN FED. REP. Facts about Deutsche Welle: DW has two xmtr sites in West Germany, one in Julich, one in Wertachtal; DW has two relay sites, one in Kigali, Rwanda, and one in Sines, Portugal; DW has two more relay sites under construction, one in Malta and one in the Caribbean; DW has another relay site in Asia in the planning stage. (Thanks Haris J. Rahow, Canada)

NORTH KOREA DX'er Bill Davis has put together the following information fm actual band observations: Radio Pyongyang in English fm
 0500-0600 on 11535 1800-2000 on 12075, 9455 to SEA
 0600-0800 on 12075, 9820 to SEA 2000-2200 on 11535 to Europe
 1000-1100 on 12075, 9455 2300-2400 on 15630, 11535 to SEA
 1200-1400 on 15630, 9455 to SEA (very good Bill)

INDONESIA The RRI station at Sibolga has been observed on the new freq of 5259, vice the old freq of 5210 fm 0950-1600 s/eff.
 (Victor Goonetilleke via Radio Australia's "DX'ers Calling")

GREAT CIRCLE CHARTS of the world are useful when orienting SW antennas. This chart shows actual compass directions over the "great circle" (as the crow flies) to any point on the earth. Great circle charts are available from the ARRL, 225 Main St., Newington, Conn. 06111 for \$1.50. (Ed Shaw)

EUROPEAN DX COUNCIL (EDXC), the European version of ANARC, offers several very useful printed materials for nominal fees. Currently, Eng. information materials available are:

List of all DX clubs in the World	12 pgs	2 IRC's	
Basic Terms in connection w/radio	9 pgs	3 IRC's	EUROPEAN DX COUNCIL
DX Publications of the World	15 pgs	3 IRC's	D-6000 Frankfurt 90
1973 Reporting Guide	19 pgs	3 IRC's	Alexanderstrasse 122
Band Surveys (Summer & Winter) sample		2 IRC's	Fed. Rep. of Germany
Complete List of EDXC Services		1 IRC	

(Ed Shaw)

PENNANTS & QSL's Radio Canada Internat'l offers a new card now. HCJB has a new series of four cards which depict the local oil industry. Every 3 months, one of the new cards will be issued. O.R.T.F. does have a pennant but it can only be obtained by sending a very detailed report with remarks of the programming. (Radio Nederland's "DX Juke Box")

And so concludes another LISTENER'S NOTEBOOK. But first let us mention that if you would like to participate in an "Out-of-band Survey" just fill out and send the coupon below to ye LN ed. Now, let us extend a hardy word of thanks to all of our contributors. We are looking for material from you for LN because you all make LN what it is. It is all up to you. Schedules, observations, tid-bits, and general information are always welcome. If you desire the return of your sked, please enclose a SASE. Also post cards are welcome with suggestions. Let us know your desires for this section too.

NEXT MONTH: a big surprise!!

73 and Happy Listening,

Dan

Dan,	
You bet ya! I'd like to work on the "Out-of-Band Survey"

QSL Report

Editor:
Larry Yamron
P.O. Box 5103
Pittsburgh, Pa.
U.S.A. 15206

Deadline: 12th of month.
Phone: (412) 361-6832

-WELCOME TO THE DX SEASON-

With this years declining sunspot number some rare Dx catches are to be had and should produce a few interesting and exotic verifications....Radio Canada Int. is issuing a special QSL card for its transmissions during the week of Oct. 1 to 7 inclusive.

TO IRC OR NOT TO IRC? International reply coupons are not valid in the following countries China (P.R.), Dom. Rep., E. Germany, Guyana, Lesotho, Malaysia, Maldives, Mauritania, New Hebrides, Peru, Rhodesia, Samoa, Somali Rep., S. Yemen, Surinam, Swaziland, N. Vietnam, S. Vietnam, Indonesia....Mint stamps should be sent when obtaining verifications from these countries. Mint stamps are available from Dx Stamp Service, G.N. Robertson, 83 Roder Parkway, Ontario, N.Y. 14519.

INCREASE YOUR QSL PERCENTAGE! The new Verification signers list is now available from Ed Shaw, 621 Burleigh Ave, Norfolk, Va. 23505. Cost is 50 cents postpaid in NA.

OCTOBER-QSLs RECEIVED-OCTOBER

Again this month we have a fine selection of rare verifications. Many interesting South Americans have been received. The seldom heard Bolivian Radio San Miguel has verified clandestines from Great Britain are also plentiful...A verie also in from Azad Kashmir Radio. On with veries!

ALGERIA: RTV Algerienne, 17880, card, sked, and report forms, sea in 9 weeks. (Padula)

ARGENTINA: RAE, 9690, full data card in 94 days for 2 IRCs. (Novacek)

ARMENIAN S.S.R.: R. Yerevan, 17700/Africa svc. full veri w/site. (Reeves) 17776, f/data card in 2 months for 2 IRCs. (Pyatt)

ASIAN S.S.R.: R. Moscow, Chita, 11720, card in 5 weeks. (Plum)

ASIATIC S.S.R.: R. Moscow, Khabarovsk, 9610, card in 3 weeks. (Plum)

AUSTRALIA: R. Australia, 9580, card w/full data, 174 days, no IRCs. (Novacek) 9580, Dx Friendship Year card, 12 days air for 2 IRCs. (O'Malley) 9580, card in 20 weeks, no IRCs. (Earhart) ABC, Lyndhurst, antenna card in 4 months sea, no IRCs. (Bettenhausen) 17870, flower card w/full data, 30 days air, 3 IRCs. (Wiseberg) ABC, Shepparton, 21740, card in 90 days air, no return postage. (Buehler)

VLM, 4920, full data card in 3 weeks air, 2 IRCs. (Gendron)

VNG, Time station, multicolored folder card, f/data, 105 days, 1 IRC. (Ross)

AUSTRIA: ORF, 9655, card w/full data in 3 months, no IRCs. (Earhart) 9770, card w/full data in 59 days, no IRCs. (Novacek) ORF, Aldrans, 6000, card w/full data, 2 months for 2 IRCs, followed two days later by technical pack of info on ORF. (Calkin)

Schulungssender des Osterreichischen Bundesheeres, 6255, new style card (since 1971) w/full data in 19 days air for 3 IRCs. (Calkin)

AZAD KASHMIR: Azad Kashmir Radio, 3583, prepared card w/full data, 26 days for 1 IRC and local postcard. Power given as 100KW. (Campbell) excellent!

AZERBAIDJAN S.S.R.: R. Baku, 9840, responded direct to rpt, no IRCs, using Farsi form for broadcast to Iran, 2 QSLs w/full data in 4 months, used Moscow format, verifies programs to Iran and Arabic countries. (Sizer) verified direct for 9840 program to Iran, full data reported in Russian with mint stamps. (Perry) great!..ed

BELGIUM: ORU, 9655, map card w/full data except time, pennant and sked, 25 days, no IRCs. (Brown) new QSL card w/full data, 25 days air. (Flynn)

BOLIVIA: R. San Miguel, 4700, full data letter from v/s. Michael J. Ruck, Dir., in EE, 3 weeks for EE rpt. and mint stamps. (Reeves) 4700, letter in EE, for SS report and 1 IRC. (Barto)

R. Altiplano, 5045, card in 25 days, SS rpt. and mint stamps. (Hagen)

BOTSWANA: R. Botswana 4845, Lilies card in 4 months for EE report

Radio Gemini

50 Hempstead Road, Watford,
Hertfordshire, England

QSL

We thank you for your reception report for our transmission on

SUNDAY JULY 1ST 1973 - 6235 KHZ
10.37 - 11.02 GMT

QTH IS LONDON - PWR IS 150 WATTS

BOTSWANA: R. Botswana, 4845, Lilies card in 4 months for EE report and 1 IRC. (Cwikla) 4845, 2 different animal cards for 1 report in 230 days, 31 days after f/up w/mint stamps (Campbell) 2 cards for EE report and 1 IRC, 5 months. (Barto) card w/freq. only in 7 mon. for 1 IRC, postcard. (Reeves)

BRAZIL: R. Aperecida, 9635, card w/full data and pennant, station decal, air in 4 months for EE report and 2 IRCs. (Gendron) full data card and pennant, decal, v/s. Waldomiro Jose Fantanari, Generte, 3 months for PP report and mint stamps. (Reeves)

R. Clube de Pernambuco, 11865, card in 3 months w/acknowledgement only. (Pyatt)

BRUNEI: R. Brunei, 7215, card w/full data and sked, 3 weeks for 3 IRCs. (Reeves)

TIME RADIO QSL

VERIFICATION CARD

Issued to: J.A. Campbell

Time Radio acknowledges with thanks your reception report. The observations therein show the true reception of our programmes.

DATE: 10th June 1973 . **TIME:** 09.56-10.03 gmt. **FREQUENCY:** 6237 kHz

POWER: Output 40 watts. **AERIAL:** Longwire (for tests only) 10 metres

We hope you will continue to listen to our programmes and we will appreciate future reports which will aid in bettering those transmissions.

REMARKS: Test transmission. Regular schedule starting July 73. Your report was the only one from your country for this broadcast. Thanks for a very interesting letter. Such valuable reports are always welcome.

SUPER 73!

CANADA: R. Canada Int, 11835, map card w/all data, 17 days, 2 IRCs. (O'Malley) card in 15 days, no IRCs. (Novacek) 6145, map card in 5 weeks, no IRCs. (Earhart)

CBC Northern Svc., 9625, native card, 14 days. (Nebron)

CFRX, 6070, Skyline card, 13 days, 2 IRCs. (Buehler)

CHNX, 6130, card w/no details, 25 days, 2 IRCs. (O'Malley) card in 3 weeks with

personal note from Sec. Patricia Walsh, 1 IRC. (Perdue)

CAPE VERDE IS: R. Clube de Cabo Verde, usual card listing 3960 for reception on 3885, 210 days, 23 days after f/up, PP report, 2 IRCs. (Campbell)

COLOMBIA: Ondas del Meta, verie letter from Jaire E. Cifuentes, full data, 2 weeks. (Perry)

R. Guatapuri, SS letter and decal from v/s. Glenix Peraza Moron, Sec. notes that they have no pennants now, but hope to have them soon., 8½ months for SS report and mint stamps, postcard. (Reeves) sorry out of order..ed.

CHILE: R. Portales, 9573, letter from v/s. Arturo Tarud Siwady, air in 1 month for mint stamps. (Sparks) SS letter on 5th try from above v/s., SS report and SASE not used, my 7th Chilean verified. (Flynn)

CLANDESTINE: R. Feyenoord van Rotterdam, 1621, prepared card in 15 days for 1 IRC. Example of the many Dutch pirates in 1608-1640 khz. after 2200 Fridays and Saturdays, but rare because it announced its name and address. (Campbell)

R. England Int, 6260, prepared card in 12 days for mint stamp. Located in Liverpool and testing with a power of 100 watts. (Campbell)

R. Freedom, 6283, prepared card in 5 days, Scottish pirate in Edinburgh, power of 50 watts. (Campbell)

R. Gemini, 6235, full data card and personal letter from v/s. Edwin Borg, C.E. 15 days air for mint stamps. Transmits from London with a power of 150 watts on a nominal freq. 6220 but also tests on 6235. Address: 50 Hempstead Rd, Watford, Hertfordshire, England. (Calkin) see QSL 1...ed.

R. North Yorks, 6230, hand drawn card in 54 days for mint stamp, QTH unknown card posted from forwarding address. (Campbell)

R. Scotland Int, 6225, prepared card, QSL and letter in 19 days, mint stamp, power 12 watts. (Campbell)

Time Radio, 6237, printed card and stickers, 19 days, 1 IRC. (Campbell)

Tower Radio, 6225, card and letter with statio details, power 15 watts but says will increase to 220. (Campbell)

World Music Radio, 6250, card w/full data in 12 days, v/s. Steve Wainwright, and invitation to join WMR club, Address: 79 Rookery lane, Rainford, St. Helens, Lancs, WA11 8BL (Calkin)

Estimado señor:

Al fin puedo contestar su carta fechada el 4 de marzo pasado, y la inicio pidiéndole mil disculpas por no haberlo hecho antes, siendo el motivo el haber estado impedida de escribir a más-

pero gusto en establecer una amistad de unas religiosas, y yo con entusiasmo el ver que con nuestra estrechar las relaciones recordando que todos no somos los hijos de Dios que peregrin-

reportaje es muy buena. Efectivamente, encuentro que el programa termina a las 3.37 minutos de la mañana, por el día de Carnaval. El programa escuchado salvo raras excepciones, todos los mensajes y Comunicados, estos son "noticias familiares las personas del campo algún negocio, etc. al cual suelen ir para alegría de la familia. Le copio el mensaje que se ha pasado ese día: parroquia Guadalupe, Barrio Pinza, musical, para los esposos Raúl Maldonado también para sus hijos Rosa, Diana y Mercedes de parte de su querido hijo Alonso en carnaval y a la vez por encontrarse

se dedicaron, fueron: Larga espera. Lo y A brillas del Tomebamba. me equivocado corriendo el penúltimo, y no ol. Para Ud. creo no tiene tanto interés esto terminar hoy, por contestar muchas cartas más, e a no, no tenemos otro reportaje de Canadá, y de E.E.U.U. Suecia, Finlandia, N.Zelandia. ro haberle complacido, agradezco envío de para la respuesta, pues los cupones no los cam- y me despidió, hasta pronto.

Muy cordialmente,

Thank you for your report concerning our transmissions on 60 Metres

Kjcs 5.01 Mjcs covering the period 1220 hrs to 1243 hrs

on 16th December 1968. The contents of your report have been checked with our Station Log for that day and found correct. May we take this opportunity of wishing you good luck and happy listening during 1969.

SENIOR ENGINEER

DOMINICAN REP: RTVD, 9505, letter and pennant in 1 month for SS report and 2 IRCs. R. HIN, 4910, map card w/date and freq. for SS report and (Boudreau) mint stamps, also received letter, tourist info and pennant. (Wiseberg)

ECUADOR: El Mercurio, 6070, card w/SS verie message, freq. only, from v/s. Fabian Meliner -es, Gerente. Also red on gold pennant and postcard. (Perry)

Emisoras Luz y Vida, 4845, replied by lengthy friendly letter and pennant from v/s. Hermana Amanda Campos D., giving verie statement and full data, plus data on the station and where it has been heard. 5 months total, 2 months after f/up. Says IRCs are exchangeable in Loja and would appreciate mint stamps. (Calkin)

HCJB, 11745, oil in Ecuador card in 3 weeks air. (Eichenhorn) card w/full data in 3 weeks air for 2 IRCs. (Earhart) card in 21 days, 2 IRCs. (Buehler)

Radio Quito, blue/black folder QSL and pennant for SS report, mint stamps. (Perry) R. Rio Amazonas, 4870, replied w/EE letter from v/s. Jim Hedlund, Station Eng. 6 months, 3 months after f/up. Hedlund says studio and transmitters are located in Macuma, 54 miles south of Puyo. Shell is where mail service originates. Also says I replace Al Sizer as most northern listener. (Calkin)

ETHIOPIA: R. Ethiopia, 6185, no data "Camel Driver" card with veri statement only, 14 days air for 1 IRC and EE report. (Mayer)

ELTF, 15190, blue/white card in 15 days for no return postage. (Eichenhorn)
 EUROPEAN S.S.R: R. Moscow, 11720, card in 35 days air. (O'Malley)

FINLAND: R. Finland, 15185, full data card in 11 days, no IRCs. (Novacek)

FRANCE: ORTF, 15120, card and pennant in 4 months. (Brown)

GABON: La Voix de Renovation, 4777, Africa card, w/full data except time, 43 days air for FF report and mint stamps. (Wiseberg) Africa map card in 9 weeks, 2 IRCs. (Earhart)

GAMBIA: R. Gambia, 4820, form letter in 2 months for 2 IRCs. (Hagen)

GERMANY G.D.R: R. Berlin Int, 9730, card w/full data, 80 days, no IRCs. (Brown) Rostock card in 75 days sea, no IRCs. (Buehler) 7260, card w/full data, 66 days sea. (Schwartz)

GERMANY G.F.R: DW, 9605, via sackville relay, card in 20 days w/sked, pennant. (Brown)
 VOA, Munich, 15195, 30th anniv. card, 1 week w/site. (Cwikla)

Bayerischer Rundfunk, 6085, optical illusion card, freq. and date, plus technical data on BR operations, 3 weeks air, 2 IRCs. (Calkin)

Sender Freies, 6190, via Bremen transmitter, card w/text in EE/GG, seemail in 10 weeks. This outlet is extremely rare for Australian reception, due to use of freq. by Bucharest and Moscow. Have waited 10 years for a chance, and took it when Morocco was strangely absent from the channel. I know of no other QSL for this outlet having been reported to Australian DX News by an Australian Dixer the whole time ARDXC has been in operation. (Padula) very interesting Bob.ed.

GERMANY G.F.R.: Sddeutscher Rundfunk, Stuttgart, 6030, long yellow/white card with "QSL" in large letters, giving data, freq., and xmtr site. Station now also calling itself "Sudfunk". 19 days air, 2 IRCs. (Calkin)

GHANA: R. Ghana, 4915, full data card, 98 days, 1 IRC. (Rosa)

GREECE: Radiofonikos Stathmos Makedonias, Thessaloniki, 9710, replied by RIRT card w/full data, 2 months air, 3 IRCs. Station not listed in WPTVH, but address is: Veniselou 4, Thessaloniki. (Calkin) see QSL below..ed.

"RADIO FIJI"

GLADSTONE ROAD, SUVA, P.O. BOX 114.

10th March, 1970

Dear Mr Shaw,

Thank you for your letter dated 18th February, 1970 and tape recording of our transmission on 7195 Kc/s. I am pleased to confirm that this recording was of Radio Fiji.

The transmission which was of only 500 watts was on test as this frequency is only used for a supplementary program we relay to our local listeners on Sunday morning. I am pleased you heard it but doubt whether you will hear this particular transmission at that time again.

We have recorded a verbal acknowledgement on your tape and our official QSL card is enclosed. With best wishes for your DXing.

Yours faithfully,

(P. L. Littin)
ENGINEER

Help your editor!! In order to cut editing and typing time please print your name at the end of each item and leave a space between items so they may be cut apart.

REQUEST! Illustrations are needed for the pages of QSL REPORT, send either a copy or the original (will be returned) Do you have an QSL that you would like to see? Write QSL REPORT and I'll see what I can dig up. Those who didn't make the deadline will be in the November issue. Its 0700 GMT! and its finally done.

Until November 73's and good Dx,

Larry Yammer
