National Radio Club*

SINCE 1983

Volume 53 Issue 24 Tuesday, April 1, 1986

Hi, this is Sue. I'll be taking over business until Mike comes back. We threw him into Lake Michigan a few weeks ago with a new set of cement galoshes...and then the lake froze over....now onto business.

The following contracts were approved and signed for the upcoming year with the AFL-CIO Printers Local 1173, Drivers Local 133, and Motion Picture & Writers Guild Local 42. Wages were set at 4% this year with the usual 4 days paid personal days, 3 weeks vacation and 1st day paid sick, HMO & dental plans, all retroactive to March 1st. Average employee wage is \$13.42hr.

Management employees received a 3% increase in pay, along with an additional paid holiday day. Dividends paid this year totaled \$3.47, shares: low 28 1/8, high 34 3/8. Our Fortune 1000 rating is B+. So...things are looking okay for the company. By the way, the rumors about the merge with TFW are just that, rumor. Onto other things....

If anyone else calls here into our answering machine and just leaves their first name, and I find out who it is, I'll cut off your subscription and you'll join Mike.

Available soon as a new product will be the NRC 'You design them yourself' dinner jackets. If any of you coming to this years convention and banquet don't order one, I won't let you in. I'm tired of seeing those crudely looking t-shirts. Jackets come in 5 colors: red, green, yellow, light blue, pink.

**DX DATING SERVICE.** As a public service of the NRC, we are starting a column for all you lonely DXers that are interested in getting mates or at least a date. Check out page 6.

**PM DX DIGEST.** Yep, another new column, about time huh. Okay, send your catches to E.C. Info should look like the column inside this issue. Nothing more than 6 months old will be accepted. Single space and one side of paper and all that other stuff that Davy says. Check it out on page 6.

**DDXD Column change.** We'll run this one more time, remember DDXD column will be split into several smaller columns to take more of the load off DS. Dave's only duty will be DDXD - Dave's Front Yard (commonly known to us as "The Twilight Zone"). The only way to contribute to that column is by camping out in his front yard. Other members have volunteered their time (a surprise if they don't know) to do the following other columns. DDXD-Northwest, DDXD-Southeast, DDXD-Northeast, DDXD-Southwest, DDXD-Southbynorthwest, DDXD-Eastof5thstreetSouthofmain, and DDXD-Northeastbysouthwest. Please send in your reports to the respective column editor.

**IDXD Column change.** Yes, even Chuck will be getting a break. Chuck will handle the following column "IDXD-NoReports" and the other editor will handle the column called "IDXD-Reports".

**CPC Test - Times are listed in Aqueduct Park Racing Forms**

Apr 1 WORM-1010, Slippery Rock, PA 0000-2359 Test will consist of tones, tone and more tones, plus a couple bait and tackle tips. Reports to: Babe Winlemanski, 82 Hook Ave., Slippery Rock, PA 2X4 PLQ Arrange for the NRC by Mike "Craw" Leer.

Apr 1 WBBA-950, Rosetown, NY 0125-0333 Test leading off with the National Anthem, then foul language, cleaned up jingles, triple tones, and catchy music. Reports to: Chuck Tanner 2B, 25 Bleacher Road, Rosetown, NY 21-721, Arranged for the NRC by Jerry "Bobby" Bondz.

**LOOK INSIDE:**

(Well, go ahead. It won't open by itself!!!!)

# AM SNITCH

Jared Akeem-Starzium, c/o Radio, 401 N. Blazingeaddles Ave., Hennyongman, OH 44444

## CALL LETTER CHANGE

Old Call	New Call
630 WPRO RI Providence	WONT
850 WHDH MA Boston	CELT
1000 KROS CA Visa	CHRG
1130 WDGY MN Minneapolis	WEGE
1210 New MS Stickball	WACK
1340 WBCS WI Milwaukee	WRIT

Note: We have had a few complaints about not being able to read this column...may we suggest schooling.

## APPLICATIONS FOR NEW STATIONS

830 MN Fungus Falls	50000 U2
890 HI Hawaii	50000/50000 U1
1160 GA Sandy Hair	10000/40 U4 (re-re-reapplication)
1180 CT Fitzville	50000 U1

## GRANTS FOR NEW STATIONS

870 LA Kenner	10000 U1
1200 WI Cambridge	1000/1000 U1
1340 NV Northwest Las Vegas	10000 U1

## APPLICATIONS FROM EXISTING FACILITIES

880 WRFD OH Notworthit	- relocate station to nearest waste container
890 KMRC HI Hawaii	- relocate station to western edge of island

## GRANTS TO EXISTING FACILITIES

550 KUZZ CA	Bakesbread - make changes in recipes
760 WCHP NY	Complain - increase power to 50000w so everyone can hear them
1090 KING WA	Seattle - increase efforts to look for Herb
1340 ____ WI	Milwaukee - replace bearings on rotating call letter sign

## OTHERNESS

890 KMRC HI Hawaii - owner request additional cabinet space to store 2200 panties and 500 black bras, as well as an additional back door  
 1200 WJAY CT Providence - requests additional WATS lines and install a drive up window facility.

## LIST OF TERMS FREQUENTLY IN AM SWITCH

PSSA - (cold) Pizza served, Sounds awful, usually happens when Domino's can't find my house  
 UL - referring to my column, U know who's Number 1  
 XR - Elixir, the type of drink found only at NRC conventions  
 Stem - a form of carbon and water found normally associated with black holes in space  
 Changes in Antenna System - when someone cuts all the guy wires  
 RETURNED - When my letters are undeliverable  
 DISMISSED - When I can't make any sense out of the FCC info  
 LICENSE - see crackerjackbox, where most stations get their licenses from

That's it for this time.

JA-S

**FUNKY WINKERBEAN**

## AMERICAN HISTORY

AMERICAN HISTORY TRACES THE LIFE OF ONE AMERICAN, GEORGE FOONEMAN, FROM HIS BIRTH TO HIS DEATH. IT COVERS THE MAJOR EVENTS OF HIS LIFE, OF WHICH, BEING BORN AND DYING WERE PRETTY MUCH IT!  
 IF YOU WISH TO KNOW WHAT EVERYONE ELSE WAS DOING, THEN YOU'LL WANT TO SIGN UP FOR AMERICAN HISTORY!

# DOMESTIC DX DIGEST - EAST

Dave Schmedlev, 4,2 Callabet Road, Casserole Hills, Badminton, DE 19172-42126

③

Once again, here's the best NRC column written, accept no substitutes. When sending your tip sheets in, please type very lightly, use only one side, keep to 4 inch wide paper and don't write on the perforated edges, UTC, skip breakfast, and nothing over a day old. Don't follow these rules, and your name will be changed to Chuck!

## \*\*SPECIAL\*\*

710 WOR NY NEW YORK - 4/1 2222 simulcasting as repeater station w/ SS type programming (KG-PA)  
 890 WLS IL CHUCKITANDGO - 4/1 1212 heard doing remote at Disney World. (LM-NE), 4/1 1332 heard doing remote at Marcosland. (JS-CT)  
 1520 WSKR PA WEST CHESTER - 4/1 0630 notes w/ s/on, Metromusic format, IDs as "city SlicReR", ex-WCHE. (DS-DE)

## \*\*MIDDAY-MIDNITE\*\*

550 WICE RI PALLBEARER - 4/1 1850 noted in passing w/ old rock and ad for Kaz Kett Ice Cream Bars. (CBR-MS) You're type of ad! (DS)

570 WNAK AL YEGADS - 4/1 1930 bloody strong w/ smashingly good discussions. (BC-NH) Good show! (DS)

650 WKHQ MN NAUSEANTE - 4/1 1929 awful in WSM null with Talknest and advice on how to get ill during a blind date, I'm getting sick of hering this one. (EC-MS) Don't tell me your problems! (DS)

790 WHUM ME RUMNCOKE - 4/1 1810 slurpy signal, slurred words and tapes were played backwards. (HC-PQ) Wonder why?! (DS)

880 WKKK NY GOODENPLENTY - 4/1 1833 breaking in w/ fast mx, details about a local strike w/ workers shouting "we're out" and "Big K" ads. (ES-MA)

920 WGHQ NY KINGSTONTRIO - 4/1 1900 very mellow sounds, Music for Static Lovers, and 3 annc's apparently staying on past power cut. (LM-NE) They enjoy their work! (DS)

1360 CKBC NB BATHTUB - 4/1 1804 ringing in w/ Bubbly Music, then signal went down. (BC-NH)

1560 KQYX MO JALOPY - 4/1 1933 weak and struggling along through mess w/ID. (CBR-MS)

1590 WGOO NY SALAMANDER - 4/1 1828 slipping in w/ ad for Pond's Cold Cream then onto rock mx. (KG-PA)

## \*\*MIDSUMMERNIGHTDREAM-MIDDLE\*\*

570 CBML PQ VALE D'ICTORIAN - 4/1 0801 in and out gradually fading w/ nx & political farewell speeches, held my attention! (HC-PQ)

 DS-DE/ Only the shadow knows!

That's it. And remember, you can call me ray, a DJ, or jay...but don't call me Chuck!

# DOMESTIC DX DIGEST - WEST

Nancy Hardeeharhar, 1987 Pacifier Ave., Seelanes, AK, 99845.2555

DDXD-West (is the best). When reporting follow the same rules as laid down in the East. Be sure to use deodorant on the envelope, I don't want any grimy or smelly letters!

**\*\*SPECIAL\*\***

1260 KANT CA SANS FRANCIS - 4/1 2008 IDs as "We Can't Get it Right", and mx without instruments, lots of acid rock stuff, ex-KXLR-KOIT-KYA-KOIT-KEEP-KXLR-KUIT-KUTT-etc. (DC-CA)

**\*\*MIDDLE-GOODNIGHT\*\***

600 KCLS AZ FLAGPOLE - 4/1 1932 rising up thru dim conditions w/ nationality day parade coverage. (NC-MB)

890 KDXU UT ST. GORGE - 4/1 2000 wide open swallowing WL:S and WQJS completely w/ sort of a chicken-hearted craving format, IDs as "Good Food 89"

1380 KOTA SD RAPID TRANSIT - 4/1 1900 just changed dial to find this, IDs as "Buss Radio" w/ generic mx and traffic info for the public at crosswalks, signal seems to come and go. (NC-MB)

1560 KARP WA SUMMER-TACKLEBOX - 4/1 2004 finally reeled this one in w/ illegal ID and automated music for worms, what a catch! (NH-WA)

1600 KINS TX PIANO - 4/1 2045 tunered in and found this w/ program mentioning keys to success in collecting bottlecaps. (DC-CA)

**\*\*MIDNIGHTIE -GOODDAY\*\***

750 CKGB ON TIMID - 4/1 0401 fear u/WSB w/The pointers "He's so Shy", played 750 times, IDs "We're Scared 7-5-0" (NC-MB) I read the CE locked himself in the bathroom! (NH)

1340 KSFE CA NEEDLESNPINS - 4/1 0258 on the edge of my seat pulling this out w/viewpoint show. (DC-CA)

1400 KPTN UT PRADA - 4/1 0335 hammering thru unbearably strong w/ bolshoi cw ballet mx and program "Health w/ Constantine". (NH-WA)

1590 KJET WA TATTLETALES - 4/1 revealing thru mess w/ demented gossipy talk show host, then mx from Survivor. (NC-MB) This is idle information! (NH)

1600 KWOW CA POMMELHORSE - 4/1 0520 apparently them looping east conducting vigorous testing activity w/ swing-type mx and "Oh Wow" IDs, unusual reception. (DC-CA)

NEWSHOUNDS:

DC-CA/ Dom Casket, Sande Inyourface, CA/ HQ440, M&Ms

NC-MB/ Neal Crayfish, Losseipig, MB/ Superod Longreel, no radio

NH-WA/ You know me/ FR47, R. Wesson Loop

## Dead Chicken Patrol

Sussex County in Delaware is the chicken capital of America. Ergo, it also leads the country in number of dead chickens on the road. To keep track of the fowl fatalities, radio station WSEA in Georgetown has instituted the Dead Chicken Patrol. Every time motorists spot a flattened chicken, they call up the station. WSEA responds with the hourly Dead Chicken Updates: a screech of tires, the death cackle of a chicken, and a report on where the fresh corpse is located. The creed of the Dead Chicken Patrol is: "We really don't care who joins. We don't even care if your credit is good. The important thing is you're sick enough to look for dead chickens on the highway and call us. That way motorists will be able to avoid them or run them over, depending upon their disposition." (Delaware State News—submitted by John Weber, Dover, Del.)

Not many chickens cross the road safely in Delaware.—Editor

Not much of a column this time, but what do you expect for the first time, huh? Want more of the same, let HQ know.

**Contributors:**

I lost the list of names, oh well, next time.

## DX DATING SERVICE

Jade King (401) 555-LOVE  
1620 Clandestine Road  
Wadesboro, NC 28173-6093

Here's the column that's almost as exciting as the Youngstown Chico white pages! To reply to an ad, write to the above address with a brief description of yourself along with your phone number and address, and don't forget the code number of the person you're interested in. To place an ad, it's the same as above, and I'll assign you a code number.

269 - Male, 27, hi-tech professional, like bingo, lawn carts, photographing antenna sites. Looking for YL who will twist dial on IGT's with me.

488 - Male, 54, semi-retired NYI DJ, looking for YL companion who would like to assist with study of effects of a full moon on medium wave signals.

495 - Male, 30, into Van Halen, Bruce Springsteen, and Perry Como. Prefer intelligent blonde, 5'5" to 5'7", with zip plus 4, hi!

6 - Male, 25, couch potato, favorite TV shows are A-Team, Dynasty, and WKRP reruns. Want to share couch with someone special.

502 - Male, 19, IW, MM, SW, ham, VHF, UHF, MDS enthusiast, looking for same. (Good luck! - ed.)

That's right, #6 is still waiting for a response! Maybe #6 should try a TV dating service! And how 'bout all you single ladies out there, send in an ad and get in on the fun! GUN14

Chicoutimi, April 1, 1986

WHOT RADIO  
401, North Blaine Avenue  
Youngstown, OH 44505

To the attention of Mr. Jerry Starre

Sir,

Our Engineering Head Office told me to give you an answer concerning the 24 hour operating system of a high power AM transmitter all night long with a 400HZ tone.

First, it is a less expensive operation and here are many explanations about that:

- 1- Hydro-Quebec overcharges us on everything else.
- 2- Also with this practice, we save on the overtime of our staff by dismissing all of them.
- 3- The stability of our equipment is better for other operations at the station, because as it's brand new, we never use it. Also, the all night transmitter never wears out.
- 4- The tone is necessary, why else would nerds like you write to us. Also, we cannot have the authorization to switch on another CBC Network because as such, there is no identification and it causes people like you who DX to become disgusted. This pleases us.

We hope these informations will give you heartburn.

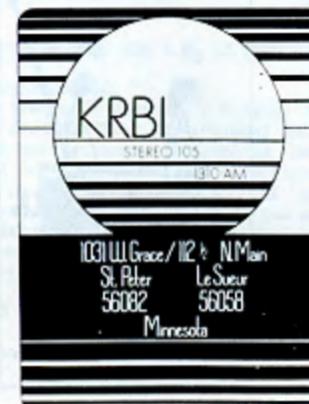

Yours truly,

Pierre Barouche

ATTENTION - ATTENTION - ATTENTION - ATTENTION - ATTENTION

If you're the owner of a longwire antenna, here is a brand new product that will greatly improve your reception WITHOUT adding an inch to its present length! This product was tried out in an experimental basis for over 10 years before it became known to anyone by the government of the South Pacific Island of Fibi-Fibi, well known for its vast quantities of ready-to-use Left Handed Bath Tub Wax!

What is the product boasted as the greatest DX'ers aid ever invented since the invention of static?

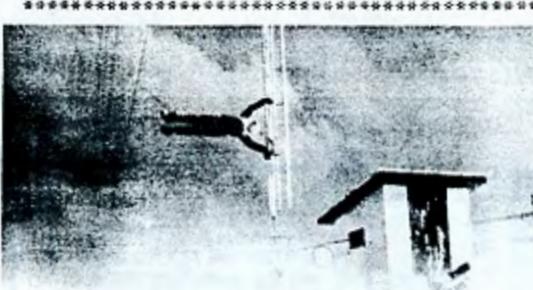

Why it's DOCTOR FOONMANS ANTENNA GREASE! That's right, DOCTOR FOONMANS ANTENNA GREASE!

How does this great product work, you ask? Simple! All you do is apply a thick coating of DOCTOR FOONMANS ANTENNA GREASE to ANY type of longwire antenna. It doesn't matter if the wire is 10 feet or 1000 feet long. Then sit back, turn on your radio and just listen to all the radio signals slide in! You've never seen anything like it.

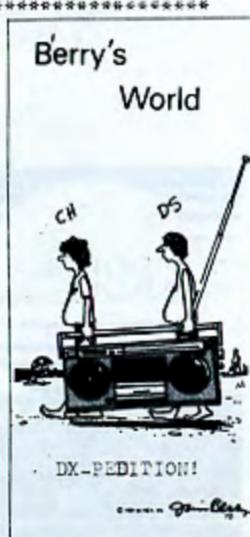

This product is available for just a very limited time, the items used in this product can only be found at certain times of the year since it contains the prized OIL OF FOO, a tree that grows only in the hills of IOWA!

ORDER TODAY - DON'T DELAY! Send just \$65 in check to DOCTOR FOONMANS ANTENNA GREASE, P O BOX 24, CAMBRIDGE, NJ 07812. Tax extra - offer not valid in Alaska or New Zealand - local governments may ban its use due to high levels of noise - no stamps - don't call me Chuck - batteries not included. And if you write before 2/29, you'll receive the free booklet, '30 Things to Do With 3 In 1 Oil, 12 Illegal'!

This is an offer that only comes once every APRIL FOOLS DAY So Don't Miss Out!

DOCTOR FOONMANS ANTENNA GREASE works Great on Vertical Antennas as well! Here you see an actual photo showing an employee of the BBC Monitoring Service putting the GREASE on one of the many antennas used by the Service.

## A New Look At The Absorbtion Effect

by Jaanti R. Thur  
Technical Psychologist

'WHD Radio 640 tested on December 23rd at 0100EST with 100 watts,' read the notice in De Eck Snooze. 'Despite a publicity barrage they received few reports, and those mostly complained of the weak signal.'

If you ask me, that's perfectly understandable. A station can only support a certain number of listeners at one time; it's just plain, old-fashioned Ohm's Law. Transmitters radiate signals by pushing electrons off antennas. Conversely, receivers pull electrons out of the ether to receive a signal, and that's where the Ohm's Law power formula ( $P=I^2E$ ) comes into play.

Since the 'typical' antenna is 50-ohms nominal impedance let's look at two examples:

1. In an older tube set the RF voltage on the plate of the RF tube is generally 250-300 volts. Punch a few buttons on your calculator, and you'll see that approximately 50 millamps of RF current is sucked out of the ether by each tube receiver tuned to a given signal. Thus, a station transmitting 100 watts can support about 65 tube receivers with adequate signals.

2. Newer, solid-state, receivers are a whole different story, since they operate at lower voltages and Ohm's Law still applies. This time consider a typical 12 volt RF stage; work the formula and you'll see that each receiver draws nearly a quarter of an Ampere. Therefore, a 100 watt station can only support about 35 solid-state receivers with a good signal.

When you are DXing with the RF Gain cranked all the way up, this current drain causes a signal well to form around your antenna, and the 'right hand' rule applies. In addition, the sharper the 'Q' of your receiver's front end, the deeper the signal well and the stronger the absorption effect, causing even more signal to be grabbed by your antenna; something like magnetism. Naturally, horizontal antennas produce signal wells at the ends of the wire; vertical antennas form a signal well around the top of the pole (see illustrations in any antenna manual). These are not really so much 'wells' as 'whirlpools' and the suction effect can be devastating to a low powered station on a quiet winter night, when many others are tuning around.

**WMBH**  
**1450**

WMBH • P. O. Box 1667 • JOPLIN, MO. 64802

This explains both why major broadcasting stations run so much power and the phenomenon we know as fading. A major station has to provide a good signal to as many people as possible. A 50,000 watt station will support about 30,000 listeners; more than the largest quarter-hour share on record. Fading is caused by people tuning in and out; as someone tunes away the signal gets slightly stronger, and when more people tune in the signal gets weaker.

Let's go a step further; if you stay tuned to one station all the time the signal well will cause that station to gradually get weaker at your location and the tubes in your set will eventually overflow, creating what is known as grid leaks. This, it is a good idea to do frequent bandscanning to even out signal strengths.

But don't quit DXing; preliminary research indicates that there are a few ways to combat the absorption effect. Simplist solution is the use of a balanced antenna which, when properly constructed, can reduce the effect by up to 75%. Balanced antennas present higher impedance to signals, reducing electron consumption; they also give off electrons from one side as they absorb them on the other. This causes a ripple in the ether, but it does balance things. For those with more space and equipment available, the use of a buried antenna not only reduces the absorption effect by up to 99%, but also provides a lower noise level to the receiver, is a superb groundwave antenna, and has virtual immunity from lightning strikes.

Of course, nobody asked me...

## FFC CHIEF SETS NEW A.M. ID STANDARDS

Washington D.C.

The Frequency Management Bureau, Station Log Requirement Division, Records Section Chief has stated, "That all regional and local A.M. stations will be required to identify on each quarter hour. We realize that this may create a hardship for some stations as this will cut into commercial advertisement time, however the level of co-channel interference has become extreme." The Chief, speaking at a luncheon for obese station owners. "We have monitored stations exceeding the maximum allowable interference level, which is set at 22.5% over maximum interference, and have discovered that such stations as WOKY-920 Milwaukee, was heard at our monitor station at Grand Island, Nebraska on 930KHz." The chief also stated that forthcoming will be agreements with both Canada, Mexico and Cuba.

## STATION PROFILE

Tony Fizzleswick, 356 Jackrabbitstart St., Busfare, Ct 03560-0356

VIN - 630 Marvy's One and Only 100% Verification Station

Yes, I've finally found it! The station that will verify all reports! It was along trip, but I was finally able to see the station DXers around the world were talking about. VIN is located on the island nation, "Marvy", in the Caribbean. To get thee, I took 5 metros, 4 trains, hitch-hiked, another train, 2 metros, a bus, a taxi, another bus, a ricksha, a subway, a jitney, stowed away on a cruise ship, and finally a camel (one humped was first class, two humped was coach).

It is owned by former hitman turned informant, Victor 'Igor' Nodice who was told, "no dice Igor", leave the U.S. or else in 1983. So, with the help of the natives or Marvelettes, he set up this station, named after his initials, the call sign of "VIN". In fact, all the natives who worked for him are nicknamed Vin. During my 8 hour ride by camel (two humped) of which I developed camel soreness, my guide pointed out the signs that showed the way to my destination. When I arrived at VIN, I identified myself as an NRC member and was showered by flowers, gifts, and bubblegum. These people just love visits by DXers, even unannounced.

After momentarily waiting, I was greeted by Vin, which is the only name Victor referred to himself. He was dressed in a long red velvet robe wearing a crown and a gold cane at his side. For over an hour, Vin never said anything. We just smiled and nodded at one another over a lavish lunch of exotic donuts, peanuts, potato chips, hot dogs, french fries, and other Marvy delicacies, plus beverages of beer and moonshine. I think he got drunk.

Later, Vin began to relate his tale starting as a young DXer to the present. His first radio was a speaker box from a drive-in, but Vin was frustrated because he could hear only one station. On his seventh birthday, Vin got a pocket radio, but that didn't last long when he sat on it at lunchtime in school. On his eighth birthday, Vin got a Hammerlund, but the grade school bullies broke that when he took it for show-and-tell. Some days later, he noticed an old man sitting with a large boom-box. Vin went over and kinda borrowed it. Vin was again hearing stations from all over the place. He wrote to every station he heard, but no one ever answered. Time after time he was turned down for a QSL. He even asked if they could just send an empty envelope, but the stations wouldn't even do that! As Vin grew older, he was disgusted with everything and began a life of crime.

One day, while waiting for his goons to get a client to talk, Vin was spinning the dial of his radio, hearing a new religious station, he decided to write for a QSL. A few weeks later came his first QSL! Suddenly he had found himself, a born again DXer! Soon Vin joined as many clubs he could find, went to all the conventions and meetings, contributed regularly to the publications, sent postage to all the stations, and double to the religious ones! He was reformed! He felt so good that he testified against crooks and the like and then was forced to leave the country.

Vin had to leave in such a hurry that he packed all his items on a raft and floated out into the sea. One night he was caught in a raging storm, lost all his gear and eventually washed ashore on this backward island nation of Marvy. The natives found him and nursed him back to health.

On this island is where Vin built his station. Equipment included two used Gates 50,000 watt transmitters for 24 hour operation. He set up his station on 630 KHz. The tower was built on top of the tallest coconut tree he could find. The building itself was constructed like a Taj Mahal with a jacuzzi on all 4 floors, tennis and racquetball courts were also included in the building.

For a format, Vin carefully chose programming so that everyone could enjoy the different styles of music making VIN easily recognizable on the dial. The format consisted of banjo-pickin' country, punk rock, elevator music, and for those late night listeners, march music. The station signed on the air on December 7th 1984, the day of his birthday.

After a week of paradise, or so it seemed, I had to leave on that long trip home. A native girl came up to me, put a wreath of sugarless gum around my neck and said, "You write again, we send verie, okay?". I couldn't respond, I was too emotional. This is the end, but I will never forget Vin, VIN, the other Vins, and all the Marvelettes!

Editors Note: Just this week, Vin was overthrown by the Marvelettes and escaped by surfboard (provided by the U.S. Government) to France...or was it Hawaii.

## NRC 1986 GTG CONVENTION RESERVATION FORM

LABOR DAY WEEKEND - August 29, 30, 31 and Sept 1 in beautiful downtown New Castle

WELCOME to the state where hens are actually painted blue! In northern Delaware, there isn't too much to do, but here's some of the more interesting features: a visit to the spectacular New Castle Waste Treatment Plant, the giant auto junk yard outside Wilmington, paying the toll collectors on the Delaware Memorial Bridge, watch the smog come in from Philadelphia, and actually witnessing the local New Castle post office sort my club and DX mail! A great family vacation, too! The convention will be held at the Ramshackle Bar Grill & Casino in the old part of town.

Name \_\_\_\_\_ Phone \_\_\_\_\_ Address \_\_\_\_\_

City/State \_\_\_\_\_ Zip \_\_\_\_\_ When arriving \_\_\_\_\_

Roomates \_\_\_\_\_ No. in Room (no more than 10) \_\_\_\_\_

Next of Kin \_\_\_\_\_

(We are not allowed to have beer inside the premises, only in the parking lot)

### Choice of meal:

- 1) Cod liver oil soup, saltine, grits, okra, shoofly pie
- 2) Limburger cheese soup, "C" rations, hash, raisin cookies (previous used hockey pucks)
- 3) (vegetarian) Ground eye of gnat soup, Potato slop specially seasoned with epsom salts, chocolate covered ants
- 4) Chef's surprise

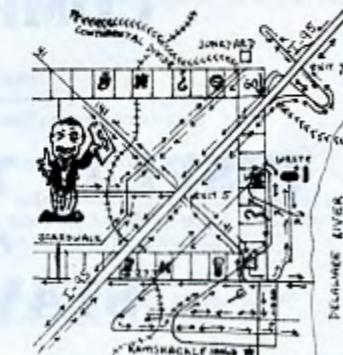

Registration fee: \$75.00 This includes a new pack of playing cards, \$5.00 worth of chips, banquet, market-style auction with a real hogcaller as our guest auctioneer, and some other kind of entertainment (a musical cake...if you know what I mean). If you prepay the fee, send check made out to me. Address will be given at the top of this form.

Reservations at the Ramshackle Inn are on a first come, first served basis. There are 30 rooms reserved in all: 3 with no mirrors or running water, 5 with cardboard box beds, and 5 with no windows but well padded. A can of D-con is provided with all advance reservations.

Guest speakers include, Minnesota Fats with tips on 8-ball pool and Amarillo Slim with tips on how to beat the pants (or skirts) off your opponent.

Excursions including the already mentioned but not limited to: a trip along route 273 to see at which points WRNK fades, a trip to WDEL to see if the fire extinguisher works, and DS will demonstrate sending the call letters of the station in morse code by using the transmitter on/off switch.

Directions (as prepared by Ron "Map Maker" Musco): coming in from I-95 north & south, take exit 7, coming from the east, take 41, then route 141, stop at Wendy's, Pizza Hut, and eat some food, get back on 141 and follow the WCHE bumper stickers that will be attached to any surface that will hold a sticker, turn at the fork in the road, take route 273, head straight to the Delaware River, we advise driving across bridge (your option if you want to take the water route), turn at dead end, if you have trouble and can't get there from here, stop at a phone booth and call a cab, I'm not picking you up!

# **DX NEWS**

*the magazine of the  
National Radio Club*  
**SINCE 1933**

VOLUME 53 ISSUE 24 Monday, March 31, 1986

THIS IS THE REAL FRONT PAGE

Well, I hope you enjoyed the first 12 pages of this issue. I hope none of you believed the AM Switch section on page 2. We sure caught it last year when alot of you changed your logbooks. If you did it this time blame yourself, hi.

**DDXD-East** Two editions in one issue, Dave got more material over the past week so he decided that instead of waiting why not get it in, so here it is, page 17 has the 1st part and page 30 the 2nd. Same goes for the AM Switch, one follows the other in that section.

Log Updaters 1, 2, 3 and now 4 are available for US\$1.00 each. Get yours for your logbook from the NRC Publication Center.

Renewal notices posted on Mail Label Your mail label will be your source of notice that your DX NEWS is about to run out. The Top line (first line) of your address will contain one of the following (in this order): "First Notice", "Time to Renew", "Final Notice", and "Final Issue". As you can see you will receive 4 notices (winter renewals will receive 5, with an additional "Time to Renew" thrown in). This we figure should be more than enough notice, right? Yea, we thought so too. Anyway, Just start getting into the habit of looking at your label for info. It's the first line of the label. Canada & Foreign persons, we're still working out the bugs on your system, but it'll be something similar.

From the Miami Valley DX Club, comes word that it is putting on its 4th annual SWL-DX-Listener Forum at the Dayton Hamvention on April 25 - 27, 1986. This year the All Ohio Scanner Club (AOSC) is co-sponsoring the event. The Listener's Forum will begin Sunday Morning about 9:30 EDT and last about 2 hours. Any questions should be directed to Dave Hammer of the Miami Valley DX Club, 4666 Larkhall Lane, Columbus, OH 43229, Phone 614-471-9973 evenings.

**CPC TESTS** — Times listed are EASTERN Local Time

You'll get better returns if you include an SASE with your report.

And even if you don't hear it, at least send a postcard thanking the station.

Mar 31 KPCR-1530 Bowling Green, MO 0300 - ???, Voice, Code ID's, and music will be used. Reports to: J. Paul Salois, President, KPCR Radio, Box 1, Bowling Green MO 63334 Arranged by Wayne Heinen and Dan Bartek for the NRC.

Mar 31 KURL-730 Billings, MT 0300 - 0400 This is a retest of the Feb test. Reports to Mr. Clark D. Prim, CE, KURL Radio, Box 31038, Billings, MT 59107 Arranged by Wayne Heinen and Ken Chatterton for the NRC.

Apr 7 WGHQ-920, Kingston, NY 0100-0130 will be running an equipment test. Reports to: Don Stewart, CE, 82 John St., Kingston, NY 12401. Test Info provided to the NRC by Laura M. McCusker, (employee at stn and NRC member!)

Other Magazines using CPC info MUST credit the NRC and the Arranger.

**LOOK INSIDE:**

## APPLICATIONS FOR NEW STATIONS

720 CA Atascadero: 1000/1000 U1 (competes with existing application)

## GRANTS FOR NEW STATIONS

1150 MS Canton: 500 D1

## APPLICATIONS FROM EXISTING FACILITIES

970 WJMX SC Florence: night power 3500 watts  
 1140 WIXC AL Hazel Green: power to 20000 watts  
 1180 WJJF RI Hope Valley: power to 1800 (1000 CH)  
 1190 WAYD AL Ozark: to 1200 kHz 10000 (2500 CH) D1

## GRANTS TO EXISTING FACILITIES

840 KBLA LA Ball: relocate XR (new, not on yet)  
 930 KAGI OR Grants Pass: night power to 1500 watts, antenna to U4  
 1310 KIOT CA Barstow: reduce night power to 500 watts, changes in antenna system but will remain U4  
 1350 WDAR SC Darlington: changes in antenna system  
 1380 WOLA PR Barranquitas: changes in antenna system, mode to U1  
 1480 WHBC OH Canton: relocate XR

## OTHERNESS

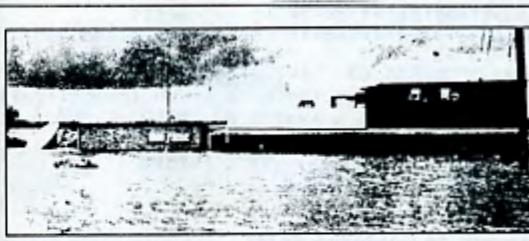

650 KBKK NV North Las Vegas: CP no longer on FCC Database, see 840 below  
 660 \*App OR Portland: application for new station DISMISSED  
 - KSKY TX Dallas: requests extention of CP for fulltime in Balch Springs  
 770 KCHU AK Valdez: granted extention of CP for new station to 8/13 (I love this call letter....think about it)  
 800 CKOK BC Penticton: move to 780 kHz stalled for the foreseeable future due to financial considerations  
 820 WIQT NY Horseheads: here now ex-1000 kHz temporarily daytime only  
 830 WADU LA Norco: granted extention of CP for new station to 8/1  
 840 \*CP\* NV North Las Vegas: FCC Database shows a CP here for 50000/25000 U4. No call listed so evidently not a reassignment of KBKK CP which is now gone as noted above. Was granted 4-17-85 but it never appeared in any Public Notices. Not to be confused with 840 CP in Gardnerville, NV which is still current. Another of those left-field surprises from the FCC that keep it interesting  
 850 CKRD AB Red Deer: move to 700 kHz scheduled for "June 1986"  
 1010 \*App CA Rancho Mirage: both applications for new stations here DISMISSED  
 KRKX OR Milwaukee: application for power increase returned  
 1030 KGUS AZ Florence: report that this station is on is in error, bad info from another club's bulletin. KGUS is NOT on yet.  
 +App CA North Palm Springs: application for new station DISMISSED  
 1040 WLUL AL Fort Deposit: expired CP reinstated and extended to 7/29  
 1060 KAHU HI Hilo: transmitter under construction, on the air late spring  
 1130 WHHQ SC Hilton Head Island: fulltime CP is on the air, NSP  
 1150 WQMR ME Showhegan: requests extention of CP for move to 1160 kHz  
 1170 WMVI NY Mechanicville: move to 1160 kHz expected by "mid-summer"  
 1212 WSBI TN Static: granted extention of CP for new station to 7/29  
 1220 CKDA BC Victoria: move to 1200 kHz anticipated by "this summer"  
 1230 WJUK AK Bethel: this long-standing CP has been cancelled  
 1240 KBZB AZ Bisbee: this long-silent station was reported by several other DX bulletins as being back on the air with the call KESE. The truth is that they are still silent with no immediate plans to reactivate the facility. By the way, FCC Database still gives the calls as KBZB  
 1270 KWTR CA Lakeport: CP for move to 840 kHz cancelled  
 1290 KKZN UT Kanab: requests extention of CP for new station  
 1310 WDLF FL Deland: station is silent  
 1340 KSKI ID Halley: move to 1330 kHz on back burner due to financial considerations, will remain on 1340 kHz indefinitely

1390 KKDV CA Fields Landing: report that this station was on the air is evidently in error, there is no phone listing in the 707 AC for these calls as of 3-11 when we tried to call. Furthermore the FCC this week listed their application for extention of CP for new station as DISMISSED. We are looking into this further.  
 1430 WRMK TN Knoxville: formerly silent, is back on with same Black format  
 1450 KRZY NM Albuquerque: CP for 1090 kHz no longer in FCC Database, evidently officially CANCELLED  
 1520 KJIA SD Sioux Falls: station is silent

All for this time, 73 and Good DX,

*Jerry & Buffalo K. Foonman*

PS: Please excuse another missing AM Switch several issues ago. Despite being correctly addressed with full Zip-plus-four, the envelope with the AMS master was somehow sent to Birmingham, AL according to the postmark when it finally showed up at HQ. Thanks a lot, USPS! That's two lost in the last month! We have retyped several columns to consolidate information that was in the "missing" envelopes so you haven't missed any info, only experienced a delay on some of it.

Flooding fallout. Flooding due to heavy rains which hit the West Coast caused KHFQ AM in Marysville, Calif., to go off the air on Wednesday Feb. 19, and remain off until Tuesday Feb. 25. The station's general manager, B. Paul Moore, said that although both the AM and FM transmitters escaped the waters, estimated damage to the studio was about \$250,000.

Kirb first received reports that Marysville would be flooded on Monday Feb. 17. "From the gods," said Moore, "it was a battle to save the radio station as well as keep the public informed." Volunteers built a five-foot-high sandbag wall to no avail. Before abandoning the station, the staff transferred its EBS responsibilities to KSFN AM, Yuba City, Calif. With this flood, the third at its Marysville site, KHFQ management is now "definitely" thinking of relocating.

## Ship has come in

The M.V. Communicator, the ship that served as the home of the former European pirate radio station, Laser 558, is now on the auction block in England. Overseeing the bids—the deadline is April 8—is London-based C.W. Kellock & Co.

Laser 558, which had been anchored in international waters in the North Sea off Great Britain, left the air last fall and sailed to England. The station's failure was due, in part, to a lack of international advertiser commitments. Also, a British government ship was reportedly keeping close watch on traffic to and from Laser 558, tracking the origin of supplies for the pirate station. It is illegal in many European nations to offer supplies, such as food, water and technical parts, to offshore and unauthorized radio stations. Laser 558 made its debut in May 1984, beaming European contemporary hit music to most of Western Europe ("Riding Gains," June 4, 1984). The last known registered owner of Laser 558 was a Panamanian company, Burad, S.A. *Bulletin issue*

\* Statewide Broadcasting has been found eligible for federal compensation for increasing nighttime power at WVCG-Coral Gables, FL to 50 kw to offset Cuban interference. Approval was provisional, however, because the station hasn't fully carried out the power hike. *R/R*

## Engineering Tape

The FCC has produced a course on videotape that is designed to train nontechnical professionals in the basics of electronic communications systems. The "plain language" course includes basic electromagnetic principles and antenna theory.

The tape, titled "Engineering For Non-Engineers," features FCC Policy and Rules Division Assistant Chief Ralph Haller, who has also worked as a consulting engineer.

The four-hour session consists of two VHS video cassettes and a study field guide. A copy of the course can be obtained from Prism Corporation, 4545 42nd St. NW, Suite 109, Washington DC 20016. *ETC*

## Brazil Chooses C-QUAM

Brasilia, Brazil ... The Brazilian government has established the Motorola C-QUAM system as the official national AM stereo standard, Motorola officials announced on 6 February.

According to Motorola AM Stereo Manager Chris Payne, the Brazilian government passed legislation ratifying the standard on 29 January. At press time, officials from the Brazilian Embassy were not available for comment.

Brazil is the third country to formally establish C-QUAM as its national standard. Australia adopted the C-QUAM standard in October 1984, and South African radio stations broadcast AM stereo with C-QUAM as the standard.

This announcement should provide a leadership example to other South American countries to choose C-QUAM," Payne said.

Payne said that Motorola and Brazilian officials have been negotiating since the middle of 1985 over the "transfer of technology," which grants Brazilian manufacturers the right to Motorola's patent. In return, Brazil would establish C-QUAM as the official standard.

As a result of the agreement, Payne said Motorola will turn over to the Brazilian government the technical "background and schematics" of the C-QUAM system.

In the meantime, US manufacturers (Motorola, Delta, Harris and Broadcast Electronics) will be allowed to sell their C-QUAM systems to Brazilian stations until Brazilian manufacturers possess C-QUAM production capabilities.

For more information, call Motorola at 202-862-1549.

NEWTON IOWA 50208

AMs On Canadian,  
Bahamian Clears

The FCC has begun to clarify how it  
will carry out an earlier decision to begin  
licensing new AM stations, with  
maximum nighttime power of 500  
watts, on the Canadian and Bahamian  
clear channels.

For the first two years of a five-year  
implementation period, applications  
will only be accepted for:

- \* new stations
- \* power hikes by daytimers already  
operating on the foreign clears.

After two years, any AM could apply  
to move to a foreign clear as long as it  
provided full protection to existing stations  
and abided by the nighttime  
power cap of 1/2 kw.

Stations on the new clear channels  
will receive no nighttime protection  
during the five-year period. Minimum  
power of 250 watts will be required at  
night, although rules on city grade  
signal coverage won't apply.

930 WSOC NC CHARLOTTE - 2/28 0030-0100 fading atop most of time  
w/ID, usually atop freq. in E NC. (JH-NC)  
980 WFHG VA BRISTOL - 3/10 0245-0300 fair w/alternating IT (al  
la WJSO/WETB DX's), o/WKRC. (DS-DE)  
1150 WDEL DE WILMINGTON - 2/28 0126-0200 local news w/female  
anc'r, call in show. Regular here. (JH-NC)

- 1380 UNID 3/10 0025-0040+ strong 11 in WAMS null, sounded like a Pop (varying 11). (DS-DE)  
 1580 WCCF FL PUNTA GONDA - 2/13 1930-2003 very good o/mess w/sports call in show, local news, AP news. Per call, sez 122 watts DA. (JH-NC) Wrong section, I know, but with this weeks turn out, I could have made it one big section! (DS)

\*\*WHA HAPPENED??\*\*

This is EVERYTHING up till 3/12 PM, this just can't turn out to be like Chuck Hutton's column and his lame-duck excuse. There is still a lot to be heard out there, so make sure you jot it down and send it along.

APOLOGY TIME.....somewhere I got the idea that Niel Wolfish of MB was in Nancy's time zone but I find out it isn't, I was sending Niel's reports to Nancy for her column. Maybe we should include another time zone for guys like myself, the Twilight Zone! Sorry about that!

\*\*OUR GANG\*\*

CH-RI/Craig Healy, Providence, RI (via 'the machine!')  
 TF-CT/Tony Fitzherbert, Fairfield, CT/ICFSSW  
 JS-CH/Jerry Starr, Hubbard, OH/HQ180, Loop, LK  
 JH-NC/Jim Headlee, Robersonville, NC/NC125, Heath QFI, LK's  
 RB-NY/Ray Bauernhuber, Rosedale, NY/KF2800, Shotgun Loop  
 DS-DE/Mel/HQ180, Loop, LK

Welcome to Ray & Jim to our column, Jim was the CE at KEDD a few years back, ran the special anniversary DX TEST. Nice to have you along!

That's it - don't quit - there's still some DX that'll give you a fit!

*Doe*

New York upgrade. The City of New York Municipal Broadcasting System's noncommercial WNYC has been granted permission to operate full time.

For years, the daytime-only station had been basking clear channel WCCO (AM) Minneapolis-St. Paul to extend its hours into nighttime on the 830 kHz frequency they share. But now that WNYC has been granted the right to move to 820 kHz, it can stop worrying about WCCO.

"After 45 years, we're better off than if we'd won over WCCO," said WNYC Director Mary Perl Nichols in a statement. "More power, more time on the air."

WNYC won the right to the new frequency in a comparative contest that originally included eight applicants. Most of the competitors either dropped out or amended their applications to eliminate mutual exclusives earlier in the going. The last two competitors reached settlements with WNYC during a hearing before FCC Administrative Law Judge Joseph Chachkin, who, without fanfare, granted WNYC's application and approved the final settlement agreement paving the way for the grant on Jan. 3 (BROADCASTING, Jan. 27).

With the grant, which is now final, WNYC will be able to upgrade from 1 kW daytime-only to full-time operation with 10 kW day and 5 kW night. Under the settlement agreement, Mid-Shore Broadcasting, one of the mutually exclusive applicants, agreed to drop its application for a new AM in Weymouth, Mass., for \$40,000. Marshfield Broadcasting Co., the other competing applicant, agreed to drop its application for a new AM in Whitman, Mass., for \$35,000.

Both Marshfield and Mid Shore would have provided first radio services to their communities, and their applications on those grounds would receive a preference under criteria favoring applicants that would bring local service to unserved areas. (The criteria stem from Section 307(b) of the Communications Act, which directs the FCC to distribute facilities equitably among the states and communities.)

In cases where competitors for a frequency who would have provided first radio service to a community settle, the FCC is supposed to furnish other parties with an opportunity to file fresh competing applications for the frequency. But the FCC case law, according to an FCC official, allows for an exception to that obligation when there are other channels available for application in the unserved communities. In the case at hand, WNYC, according to Chachkin, demonstrated that there would still be "potential" for using 890 kHz full time at Weymouth or Whitman and 810 kHz daytime at Whitman. "The availability of these frequencies is sufficient to eliminate the need for repudiation," Chachkin said.

## DOMESTIC DX DIGEST - WEST

Nancy Hardy, 2301 Pacific Avenue, Aberdeen, WA 98520

DXDX-West is for members in the Pacific & Mountain time zones, or farther west. When reporting use the form that you see in the column, with Eastern time, and use one side of the sheet of paper. Be sure to put DXDX or NRC on the envelope or report. The next few deadlines are Fridays March 28, April 18, May 23, June 27, August 1 and September 5.

MIDNIGHT - MIDDAY

- 570 KLUB UT SALT LAKE CITY - 2/24 0045 w/NBC News. KLAC off air for about 30 minutes. (JD-CA)  
 610 KOJM MT HAVRE - 3/2 0700 s/on w/SSE, quick local weather forecast, ID, and ABC News; good. (WOLF-MB)  
 650 WSM TN NASHVILLE - 3/2 0321 C&W u/KPI-640 splatter. (JD-CA)  
 660 KTNN AZ WINDOW ROCK - 3/2 0720 loud w/country music in English and announcements in Navajo language, occasional English phrases such as "50,000 watts of power," "third day of broadcasting." CFRR in null at times. Again 3/3 0700 full data sign-on, owned & operated by The Navajo Nation, NBC News, 0705 country/Navajo again, totally different from nighttime format. Schedule 0700-0200 Eastern time seven days a week. (BH-WA) 3/3 0109 a big surprise; in like gangbusters-- signal strength greater than KPI. ID'd as "The Great American Music Machine, 66 KTNN." Top 40 music. (RT-CA)  
 700 WLW OH CINCINNATI - 3/3 0115 in strongly, on top of KFAM w/talk show; this makes my day. "Clear" channels aren't dead yet, I guess. (RT-CA)  
 730 CJNR ON BLIND RIVER - 3/2 0204 w/pop music by various artists, including Canadian Gino Vanelli, ID'ing as "Mid-Canada Radio" and also mentions "serving Algoma & Manitoulin Island." Fair w/CKDM off. (WOLF-MB)  
 UNID 3/2 0701 somebody w/CNN news, 0705 "Skoal Tobacco Fishing Report" which discussed upcoming competitions in the South Pacific. Fair until 0706 when KEX suddenly appeared, apparently signing on. (WOLF-MB)  
 740 KBRT CA AVALON - 3/2 0453 surfaced with a singing ID clearly audible o/KCBS. Moments later Dire Straits' "Walk of Life" began-- not sure if this was KBRT as I believe KERT is religious... at any rate, I assume this was an ET of some type. Poor briefly w/KCBS and the Cuban Radio Progreso. (WOLF-MB)  
 KCBS CA SAN FRANCISCO - 3/2 0447 w/Jim Bohannon talk show, ID and CBS news at 0500, Bohannon resumed at 0506. Poor-fair w/KBRT and the Cuban while CXB & CBL both still off. (WOLF-MB)  
 WRPX WI HUDSON - 3/2 0854 local sports, 0859 weather forecast, 0900 ID as "WRPX AM 7-4-0h" into CNN news. Fair o/CBX. (WOLF-MB)  
 760 KMEL AR SHERWOOD - 3/2 0720 dominating SW antenna w/gospel music, ID's & local weather. Fair w/no sign of WJR. (WOLF-MB)  
 KGU HI HONOLULU - 3/2 0759 surfaced w/male giving brief weather forecast, ended forecast by saying "K-G-U newstime is three o'clock...Talk Radio 76 KGU----" into CBS News. The second half of the ID appeared to be over a bit of piano music (light piano music). Very poor & soon gone, although it may have been heard earlier. Luckily, got ID on tape. (WOLF-MB)  
 UNID 3/2 0718 first noted something w/KMEL on SW antenna w/a phone-in show discussing finances/earnings/investments. This may have been KGU which was later ID'd, but I wonder what KFMB-San Diego would have been doing at this hour? Doubt WJR because of the time of day. Incidentally, absolutely no trace of this or KMEL on other antenna pointing towards Ecuador and Brasil, only the Mexican, XEABC. (WOLF-MB)  
 UNID 3/2 0746 a different mystery barely audible w/KMEL only on the SW antenna. Heard an American Airlines spot & a little later Earth, Wind and Fire's "September." Does anybody know what KSJL-San Antonio would have been playing at this time of day? (WOLF-MB)  
 UNID 3/2 0825 one last 760 mystery, very poor at 0825 w/an OM giving road conditions for highways 2 & 4 (and maybe also US? 27), then Glen Campbell's "Galveston." Doesn't sound like this would be KMEL-AR. Everything else, including XEABC was gone by this point. (WOLF-MB)

800 CHAB SK MOOSE JAW - 3/2 0309 very strong w/ID and promo for the "Saskatchewan Weekly Top 30 Countdown" Saturdays at noon, CHR/Top 40 music followed. Good w/slight CKJS-810 slop. (WOLF-MB)

640 WHAS KY LOUISVILLE - 3/1 0250 "Cruisin" segment re-broadcast--old tape of Boss Radio, KHK c. 1965 till 0300. (JD-CA)

KAPN NE WEST POINT - 3/2 0853 Olivia Newton-John music, 0855 ID and spot for a sausage maker in Howells, NE; fair & alone. (WOLF)

KSWE OR SEASIDE - 2/22 0255 s/off 0300 o/u WHAS. (JD-CA)

860 KNUU NM NEW ULM - 3/2 0842 w/local spots, YL w/ID and weather, into gospel music. Fair o/CBKF. (WOLF-MB)

KUTR UT SALT LAKE CITY - 2/23 0446 talk about church, "2:46" TC, KUTR ID. No sign of KTRB. New. (RT-CA)

870 WHCU NY ITHACA - 3/2 0616 faded in above WNL w/local spots, talk about the Cornell U. "Big Red," ID & weather at 0617. Fair. (WOLF-MB)

890 KXWU UT/NV ST. GEORGE-RENO - 3/1 0230, 15db over 9 w/weather for local areas in Los Angeles given (maybe they are serving LA market? (JD-CA) (Oops, this should be Las Vegas, not Reno! --NH)

910 KPOF CO DENVER - 3/2 0903 w/news, 0905 ID "Christian Radio 9-10 is KPOF Denver," into religious program; good & alone. (WOLF)

920 CBO ON OTTAWA - 3/2 0620 through CFRY open carrier w/discussion about Canadian transit systems parallel to CBL-740. Fair over WOKY (CFRY on regular Sun. morning silent period). (WOLF-MB)

970 KBIT MT BILLINGS - 3/2 0624 w/C&W music and IDs by OM. Fair on southwest antenna and no sign of WDAY-Fargo. Exactly the reverse situation on the South-Southeast antenna. (WOLF-MB)

1120 KLIM CO LIMON - 3/2 0938 w/C&W music, 0939 ID by woman as "KLIM 11-20 on your AM dial," OM gave temperature as 34° & time as 7:40, and "Hymn Time" followed. Fair o/KMOX. (WOLF-MB)

1210 CKWA AB SLAVE LAKE - 3/2 0104 in three-way battle w/WCAU and an unID Latin, Broadcast News, local weather, spot for Westlock Farm Equipment, the C&W music relaying CPOK-1370. Fair to poor. (WOLF-MB)

1270 KIML WY GILLETTE - 3/2 0944 w/C&W mx, ID and promo for a song writing contest. Fair & alone. (WOLF-MB)

1280 KVOY MN MORHEAD - 3/2 0949 w/Country Countdown program, 0951 ID and local Hardee's spot. Fair w/CFRW-1290 splatter. (WOLF-MB)

1450 KVEN CA VENTURA - 2/23 0506 AP News, local weather, KVEN ID, local ads. In tight KEST null. (RT-CA)

1480 KSDR SD WATERTOWN 3/2 1006 OM w/talk about high school wrestling, ID and pop oldie "Build Me Up Buttercup." Fair. (WOLF-MB)

1530 KFEK CA SACRAMENTO - 3/2 0438 noted off. Too much 1540 splash to hear anything. (RT-CA)

1540 UNID 3/2 0602 somebody u/XEL w/Eagles "New Kid In Town" & then a country tune. Poor. Is this WPTR? (WOLF-MB)

1560 WTOD OH TOLEDO - 3/2 0646 C&W mx, ID "Here at your country-gospel station WTOD," spot for Superior Kitchens, then more music. Fair w/WPAD before KKAA signed on at 0700. (WOLF-MB)

1580 WLNZ MI ST. JOHNS - 3/2 0650 tuned in to hear music by Stevie Nicks, Rod Stewart & The Doobie Brothers, OM gave ID and said "good morning" at 0659 before "What A Fool Believes." Very good signal. (WOLF-MB)

## MIDDAY - MIDNIGHT

760 WJR MI DETROIT - 2/25 2245 weak under KFMB null. (JD-CA)

1070 KHMO MO HANNIBAL - 3/1 1811 with "Afternoon News Digest" program of local news. Fair w/WTSO. (WOLF-MB)

1140 CKWL AB CALGARY - 3/1 noted as early as 1809 with usual CHR/Top 40 music (including song by Canadian artist Body Electric) and OM host ID'ing as "XL Radio." Good with no sign of KS00 in Sioux Falls. (WOLF-MB)

1170 KPSC CO WINDSOR - 3/1 1853 ranchera music, 1858 several announcements and spots for places in Loveland, Denver and Greeley, 1902 gave slogan as "Radio Paco," then more ranchera. Poor to fair with KVOO. (WOLF-MB)

1330 KOVE WY LANDER - 3/2 1953 w/ID by woman, mention of upcoming basketball game broadcast, local spots. Fair & alone. (WOLF-MB)

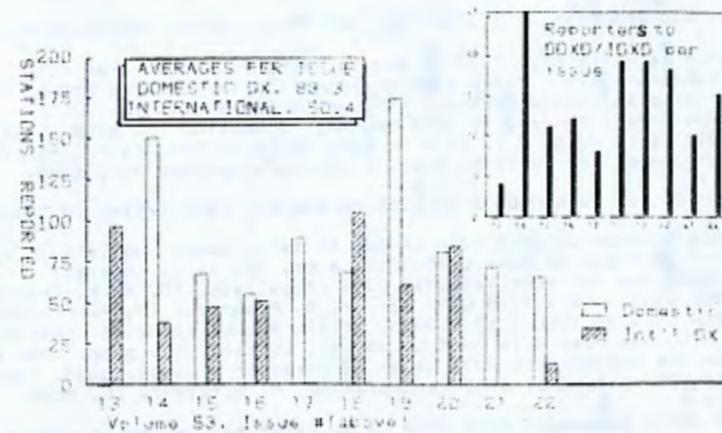

1560 KARP WA SUMNER - 3/7 2056 in good w/Christian music. 2101 s/off with mention of 500 watts of power (NRC Log lists 250). They are in 2115 sunset zone, so I was surprised to hear their s/off at 2101. (NH-WA)

1580 KTGR MO COLUMBIA - 3/2 1953 ID heard before an Elvis Presley record was played. Poor, fighting KDOM-Windom who was playing Beatles oldie at this time. (KDOM seems to stay on until

1580 KTGR midnight local/0100 ELT now). (NJW-MB)  
cont'd

HISTORIC HERALD

## Radio station changes call letters

By David S. Glasier  
News Herald Staff Writer

listening audience was located in the Painesville area.

"It was our intention to make the format switch all along," WBKC vice president and general manager Clarence Bucaro told The News-Herald yesterday. "We'll go full-time with the country format on Monday (tomorrow)."

Dale Broadcasting has been operating the station since FCC final approval on the sale was granted on Feb. 1. Bucaro said audience response has been favorable, and anticipates that technical adjustments on broadcast equipment should help WBKC enfranchise an even larger audience in the near future.

The new weekly line-up (Monday through Friday) on WBKC is 5:30 to 11 a.m., Ken Krause; 11 a.m. to 3 p.m., Jim Cullen; 3 to 8 p.m., Barbara Lincoln; 8 to 10 p.m., Bill Starkey, sports call-in show; 10 p.m. to 2 a.m., Country Music Satellite Network.

 765 SENEGAL Dakar 2/4 2315 usual weird string mx, vernacular talk, good. (Hakiel)  
 770 COLOMBIA Bogota HJKH 2/10 0915 accordion mx, RON ID, WABC off, xint. (Hakiel)  
 774 FIJI Fiji R. FIJI 3/2 carrier first noted 0828, audio began to surface 0839 with Hindustani mx sung by woman (sounded like east Indian mx), talk by man in between musical selections which I presume was in Hindustani, best signal noted at 0922 but this was unfortunately during a piece of music, 0930 probable ID by man in that undl lang followed by dialogue from woman (news?) and the lady was joined by the man at 0935, more music again at 0937, signal started to rapidly deteriorate in favor of KOB/WABC, still barely audible at 1004 with instrumental music on a harp-like stringed instrument..last noted at 1031 with more of the East Indian sounding music with female singer. My first TP..hets also noted on 756, 1008, 1017 and 1026, but alas, no audio. The 1017 (Tonga?) was especially strong. (Wolf)

## WTOB Gets FCC Permit for Towers

By Dan Froomkin  
 JOURNAL REPORTER

The Federal Communications Commission issued a permit yesterday for WTOB to build its radio broadcast towers in the Town and Country Estates subdivision.

The six 200-foot towers were built last spring, about 100 yards west of Mill Creek Road. But they were built almost 800 feet from a site that the FCC had approved.

Yesterday the FCC granted WTOB a permit to build the towers where they actually are. And as a result of yesterday's FCC ruling, the station will begin using the towers "very soon," said David Plyler, WTOB's general manager.

But the lawyer for the Town and County civic group that has opposed the towers said yesterday that his fight "is not over yet."

David C. Pishko said that he is appealing a Superior Court judge's decision affirming that radio towers are allowed in residential neighborhoods, just as utility towers are.

Larry D. Eads, the chief of the audio services division at the FCC, said WTOB's application complies with FCC rules.

He said yesterday that WTOB submitted to the FCC a copy of the court ruling affirming its zoning permit, a report from the N.C. Department of Natural Resources saying that the towers would not damage the environment, and technical information that suggests the towers should present no serious interference problems.

Plyler said the towers will be operating within "30 to 90 days or sooner."

That will allow the station to broadcast at 5,000 watts during the day and at 2,500 watts during the night, Plyler said. The station now only broadcasts with 61 watts at night, from its Trade Street transmitter, and can't be heard outside the Winston-Salem city limits, he said.

"I am delighted," Plyler said. "We waited almost two years for this action."

Pishko said he might appeal the FCC decision as well as the local court decision in every instance thus far.

V/R ERIN GOAD

Residents have argued in the past that the towers would cause interference and would harm the environment. He said that there are several grounds on which he could appeal the FCC decision.

He said the sole issue in the appeal of the local court decision is whether the towers are properly classified as public utilities.

The neighborhood in which the towers are located is zoned for residential use only. Pishko said that a commercial structure such as a radio tower should not be allowed in a residential area.

But a city inspector ruled last year that radio towers are like utility towers and are exceptions. A Forsyth Superior Court judge upheld that decision in December.

Pishko said that he expects a hearing of the appeal by the N.C. Court of Appeals by late summer.

Plyler, however, said that he is optimistic. "I am confident that everything will be found in our favor, as has been the case in every instance thus far."

## SPORTS NETWORKS

Barry S. Finkel, 10314 S. Oakley Ave., Chicago, IL 60643

Here is information about Major League Baseball networks. Most of the information comes from Broadcasting Magazine March 3, 1986. Again, as last year, CBS radio will be broadcasting two games each Saturday -- one daytime and one evening. Broadcasts begin May 24 and run for 20 weeks. The announcers will be (rotating) Brent Musburger, Dick Stockton, Lindsey Nelson, Johnny Bench, John Rooney, Curt Gowdy, Jerry Coleman, Bill White, Robert Murphy, Howard David, and Ted Robinson. Here are flagship stations, network sizes, and announcers.

Atlanta Braves	750 WSB -GA	?	Skip Caray, Pete Van Weeren, John Sterling, Ernie Johnson
Baltimore Orioles	1300 WFBR-MD	60+	
Boston Red Sox	1390 WPLH-MA	65	
California Angels	710 KMPC-CA	28	
Chicago Cubs	1090 XEPRS-BC	?	(Spanish)
	720 WGN -IL	?	Harry Caray, Lou Boudreau, Dewayne Stats, Vince Lloyd
Chicago White Sox	670 WMAQ-IL	15	Lorne Broen, Del Crandall
Cincinnati Reds	700 WLW -OH	81	Marty Brennaman, Joe Nuxhall
Cleveland Indians	1100 WMEW-OH	28	Herb Score, Steve LaMar
Detroit Tigers	760 WJR -MI	37	
Houston Astros	740 KTRH-TX	?	(Spanish TBA)

(LM-NY) If you look at the map, there is a bay between Pleasantville & Atlantic City, thus the 'Mainland' temp. checks/mentions. Common practice w/all the stations in that area. (DS)

# AM Antenna Design: The New Wave?

Relaxed regulations and improved technologies are beginning to make AM's future sound better.

By Hugh Aldersey-Williams

The AM industry has been thrown into turmoil by recent moves both in technology and in regulatory areas.

For its part, the FCC has outlined regulatory changes it would like to see in AM broadcasting. The changes would improve AM's competitive position with regard to FM transmission, which has been received rather more favorably in recent years.

## Night and day

While the FCC has been relaxing its regulations, the NAB has been seeking to improve AM antenna technology. The principal problem that hampers the success of AM transmissions is signal interference arising from the antenna signal strength profile (Figure 1a). Existing antenna designs generate signals having two components.

The groundwave is directed from the antenna to the horizon. The stronger it is, the wider the coverage of that broadcasting station. The skywave, on the other hand, is directed more vertically, and would not matter but for the fact that its signal is reflected by the earth's ionosphere back towards the surface. This can cause "selective fading"—severe amplitude and phase distortion or even disappearance into noise—of one broadcast signal, as well as interference between stations with signals that are close in frequencies even though they may be hundreds of miles apart. At night, the ionosphere reflects radio waves even more strongly than it does during the day, making many AM services unusable after dark. Efforts to increase the groundwave signal strength produce a concomitant increase in the skywave, merely exacerbating the problem of interference. In a typical AM broadcast antenna system, perhaps only 10 percent of the radiated energy goes into the groundwave.

Previous attempts to devise an antenna design with a stronger groundwave but a weaker skywave have not been very successful. Larger radiating structures have been able to generate stronger groundwaves while suppressing the skywave component, but this has not been possible with short radiators (shorter than half a wavelength). Successes have been limited by the comparative expense of the antenna designs

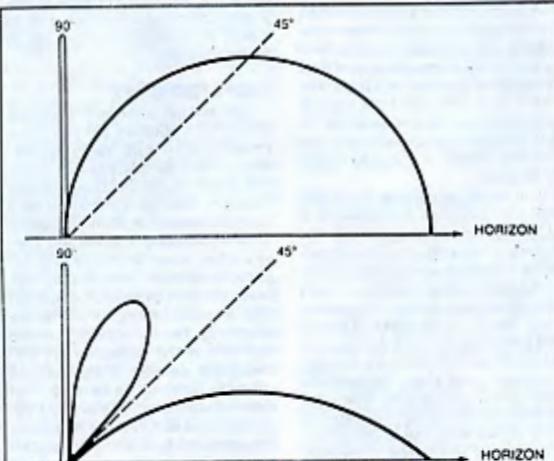

Figure 1. Signal strength versus departure angle for a typical AM antenna: (a) new design antenna. Note the relative increase in signal strength at the horizon (groundwave) and the decrease at 45 degrees (skywave).

and the fact that they did not suppress the skywave signal over the full range of vertical angles necessary to cut interference to an acceptable level.

Now, the NAB has authorized the construction and testing of two new antenna designs, which represent the most promising move in the technology of the field for years. "This is a major undertaking for the association," says NAB president Eddie Fritts, "one which we expect to have a significant impact on AM radio. The result should be a clearer, louder, better quality sound for AM."

In a field 40 miles west of Washington, DC, next month, ground will be broken for the prototypes, developed independently by two engineering consultancies. Construction of the antennas is expected to take one year, and field testing and proof of performance will take another year. Tests will be conducted on the unused 100 kHz available on AM.

The engineers responsible for the projects stress that both designs currently only exist on paper and have not yet been proven in any way. Nonetheless, theoretical predictions have been sufficiently optimistic for the NAB to give its backing. "A significant increase in AM service would result if these antennas are successful and implemented by AM broadcasters," says the NAB.

The new designs work essentially by combining a number of antennas at one location. The overall signal obtained by adding the individual signals from each antenna in the array is expected to provide more independent control over the skywave and groundwave component signals. Suitable adjustment of the component antennas could then minimize the skywave signal and simultaneously increase the horizon signal strength of the groundwave (Figure 1b).

## Antenna segments

The first public announcement of a design, one of those now being investigated by the NAB, was announced at the September 1985 IEEE Annual Broadcast Symposium by Ogden Prestholdt, a retired partner of A.D. Ring and Associates. It comprises vertical, horizontal, and diagonal antenna segments. These segments are designed to be excited with carefully chosen current amplitudes and phases to obtain an overall radiation distribution with a suppressed skywave. Using separately driven diagonal as well as vertical and horizontal segments provides a selection of amplitudes and phases that has been possible with the "T" and "L" antennas tried in the past, says Prestholdt.

The design was conceived when it was realized that "vertical polarization isn't necessarily generated only by a vertical wire," says Prestholdt. A possible configuration of Prestholdt's design is shown in Figure 2. It comprises a typical 190 degree base-fed vertical tower with a base insulator and guy cables. At the 145 degree height, there is a center-fed horizontal antenna oriented parallel to the y-axis and supported at its ends by insulators and an auxiliary set of transparent guy cables at a 45 degree angle. Thus, each half of the antenna is 45 degrees in length. The horizontal element would be fed from a balanced feed network supported in the tower which is in turn fed by a coaxial transmission line supported inside the tower and insulated for isolation, from it for the lower 90 degrees.

Prestholdt calculates the radiation distribution—described in a series of conic sections—from the prototype antenna by first developing a mathematical description of the total radiation from a short current element using a computer. Then, the far-field—both skywave and groundwave—is calculated by integrating the antenna current elements and their images for each antenna segment. The component due to the vertical antenna only varies with the angle of elevation and is in that direction, while the horizontal signal is a function of both elevation and bearing from the antenna and has components in both of these directions. The elevation components are found to be in time quadrature—i.e., these signals from the horizontal and vertical antennas are 90 degrees out of phase when the antenna currents are in phase. By selecting appropriate signal amplitudes the skywave component can then be minimized.

A typical configuration of two

distant antennas of the new design might reduce the RMS of the groundwave significantly from its value for conventional vertical antennas. But, Prestholdt reports, the AM transmission service radius can be approximately doubled because of the reduced level of interference between the two antennas. "It is not yet known how versatile the system will eventually be," says Prestholdt, "but it is anticipated that it will permit new stations to be added to the spectrum, for existing stations to improve their local service and to result in reduced interference to many stations."

### Short radiators

The second proposed antenna comes from Richard Biby of Communications Engineering Services. It will be described in detail in April. The design centers on a base-fed monopole of about a quarter of a wavelength in height. This operates over a conventional ground system comprising approximately 120 buried copper radial ground wires of the same length as the monopole. Around the base of the monopole are distributed a number of shorter ( $\frac{1}{10}$  wavelength) base-fed radiating elements. These short radiators and the central monopole are enclosed by a circular electric screen also about  $\frac{1}{10}$  wavelength high and roughly a quarter of a wavelength from the monopole (Figure 3). Biby says that "this is not a super-gain scheme—the performance of the antenna is critically dependent on the imperfect conducting characteristic of the earth."

The screen in the layout serves to cancel the creation of a strong groundwave by the short radiators, but does not prevent them from radiating a strong skywave at angles above the horizon. Judi-

cious positioning of the screen and the short radiators allows the skywaves from the central monopole and from the short radiators to be closely matched in phase and amplitude. Then, adjustment of the short radiator currents can cancel the two skywaves over a range of vertical angles. The circular electric screen only has a small effect on the groundwave component from the monopole.

"This antenna design," says Biby, "should result in greatly increased groundwave signal strengths per unit of input power as compared with that obtained with conventional antenna systems." Biby's computer model of the new antenna concept allows for variation of a number of details that affect the radiation strength at vertical and horizontal angles from the antenna. These variables on the computer model include frequency, the number and dimensions of radiating elements, conductivity, and dielectric constant of the screen and the earth. Biby is able to compare results for well-established designs for verification of the model before using it to predict an optimum new antenna configuration.

### For the future

Both Biby and Prestholdt are confident that their computer modeling of their antennas' performance will be verified when the antennas are up and running in

July 1987. For the moment, however, they emphasize that they have only these theoretical predictions.

Nonetheless, their experiments are being followed with interest by the parties that stand to benefit. Biby and Prestholdt have been

Finis J. Farnsworth, Page 34

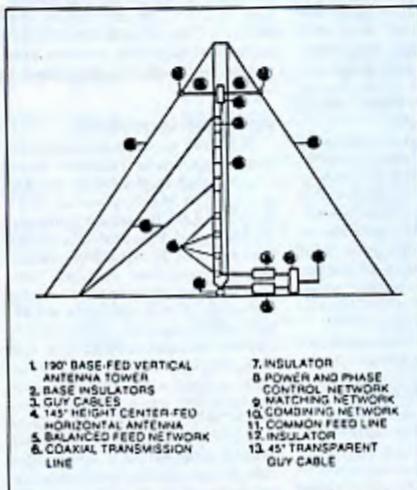

Figure 2. Design of Prestholdt's AM antenna comprising horizontal, vertical, and diagonal antenna elements.

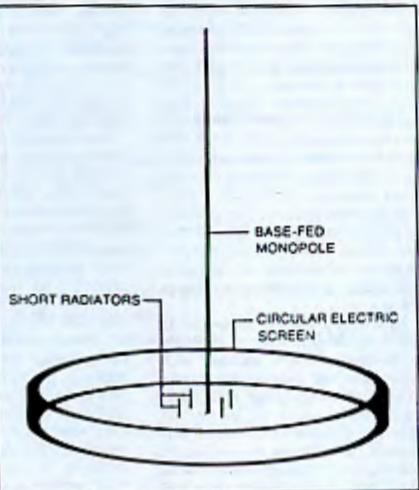

Figure 3. Design of Biby's AM antenna showing the central monopole, four short radiators, and the circular electric screen.

by David Hughes

Washington DC ... The FCC has authorized a test of a synchronous AM transmitter in connection with its report on AM improvement, now expected to be released in mid-March.

On 17 January, the Commission granted an "experimental authorization" for a synchronous transmitter test in East Las Vegas, Nevada.

AM synchronous transmission involves using additional, strategically located, carefully synchronized transmitters that broadcast the same programming on a frequency identical to that of the primary transmitter.

Synchronous transmitters are widely used in Europe, where the problem of AM band congestion is far more severe than in the US. In England, for example, the BBC operates four transmitters operating between 50 and 150 kW, all on 1089 kHz, for its "Radio 1" domestic pop music service.

US stations, the FCC said, could utilize synchronous transmitters to fill gaps in coverage within an authorized service area, or to extend the station's actual service area.

However, the Commission maintained that synchronous operations must comply with the allocation procedures contained in the FCC rules for stand-alone stations.

### Nevada test

Laughlin Roughrider Broadcasting, which has been awarded a construction permit to build a new AM station in Laughlin, Nevada, will conduct the experiment, according to Gary Thayer of the FCC's AM Branch.

Laughlin Roughrider said it wanted to construct "a second facility to provide uniform coverage in the primary service

area" of the authorized Laughlin facility without requiring the use of a second radio frequency.

The proposed slave station would be located in East Las Vegas, about 60 miles away from the primary station in Laughlin.

Operating on 870 kHz, the slave station will have a power of 300 W omnidirectional daytime and 500 W directional nighttime. The main station, on the same frequency, is authorized to operate with 10 kW directional daytime and 1 kW directional nighttime.

The FCC asked Laughlin Roughrider to file regular reports on the operation.

Thayer said the Commission has not received any additional requests from stations wishing to perform tests with synchronous transmitters.

### Technology advances

Because of technological advances, particularly in the areas of sophisticated new control circuits and highly stable frequency elements, two or more AM transmitters can be precisely locked on the same frequency and can "compensate for the program propagation delay between the primary and synchronous slave transmitters," the FCC said.

The experimental authorization will provide data "concerning the potential benefits and practicality" of allowing synchronous AM transmitters, the Commission added.

However, FCC Mass Media Bureau Engineer Bill Hassinger said that the FCC is taking "more of a slow-go attitude" with the synchronous transmitter rule proposal, due to be released during the first half of 1986.

Though the issue was originally included as part of another docket last

year, the FCC, in response to comments from broadcasters, particularly the NAB, decided that the issue should be removed from Docket 84-752 and examined separately and in greater detail in 1986.

Synchronous transmitters do cause an "area of interference," Hassinger said, and their use may have to be confined to areas with less population and less AM band congestion, as in the West.

Hassinger added that the practicality of allowing synchronous transmitters in the crowded AM band in the east was "doubtful."

"We may find out that synchronous transmitters work only in some special cases," he said.

### AM improvement report

The synchronous transmitter issue is part of a much larger FCC examination to improve the overall technical quality and options for AM radio.

FCC Mass Media Bureau Chief James McKinney said the Commission will soon issue a report on a wide range of methods to improve the fate of AM radio.

The report will examine the nation's clear channel service, bandwidth reductions to reduce interference, AM translators and AM duopoly rules. McKinney said that one of the first rulemaking proposals to be spawned from the report will examine the use of AM synchronous transmitters.

Hassinger said the report is now due to be released in mid-March. It had earlier been scheduled to be released in December, and then in January.

Hassinger said many of the FCC personnel working on the report are also busy preparing for the Regional Advisory Radio Conference (RARC), scheduled for April in Switzerland, which has caused a delay in the AM improvement report. The RARC will study expanding the AM band to 1705 kHz.

## Storm drill too real for radio,

By Ralph Haurwitz

The Pittsburgh Press

The Pennsylvania Emergency Management Agency and some broadcasters are sounding an early warning of their own on the National Weather Service's plan to use a simulated tornado warning in a statewide broadcast next week.

"Somebody putting around their kitchen may hear the word 'tornado' and miss the bit about a test and panic," said Jack Layton, engineering manager for KDKA-Radio. "We don't want to have a 'War of the Worlds' thing where (people think) the Martians are coming."

Layton was referring to the 1938 radio drama based on H.G. Wells' "War of the Worlds," in which a simulated newscast of an invasion of New Jersey by creatures from Mars panicked thousands of listeners.

The National Weather Service plans to activate the Emergency

Broadcast System during the tornado drill March 14 to test the communications readiness of the weather service, broadcasters and state emergency officials.

The current script repeatedly mentions that it is a test tornado warning, said Charles Heckler meteorologist-in-charge at the National Weather Service office in Pittsburgh. "I think it's worded such that it's not too likely" the public will misunderstand, he said.

The drill is a response to a series of tornadoes in last May that killed 65 people in Pennsylvania, 12 in Ohio and 12 in Ontario. Statewide tornado drills have been held in many other states, but never before in Pennsylvania.

The weather service plans to issue messages concerning the make-believe tornadoes over its NOAA Weather Radio channel and through the Emergency Broadcast System, a voluntary network of radio and TV

stations.

The 179-word script prepared by the weather service, part of the National Oceanic and Atmospheric Administration, begins:

"This is a test. It is part of a statewide tornado drill which the National Weather Service is conducting in cooperation with the Pennsylvania Emergency Management Agency. The National Weather Service in Pittsburgh has issued a test tornado warning until 9:15 a.m. for these counties in Western Pennsylvania — Mercer, Lawrence, Beaver, Washington, Greene, Butler, Allegheny, Clarion, Armstrong, Westmoreland, Fayette, Indiana,

# FCC Plan Redefines Class III AMs

by David Hughes

**Washington DC** ... The FCC has approved a plan that calls for a single Class III AM radio category by eliminating the Class III-A and III-B distinctions.

As part of the same docket, the Commission said it will upgrade Class IV AM operations in Puerto Rico, the US Virgin Islands, Alaska and Hawaii to Class III.

**The rule change would give the stations "greater flexibility" in the application of directional antennas.**

status, thereby allowing them to better combat interference from foreign broadcasters.

As part of 16 January action, the FCC said it has made a modification in skywave field strength measurements and then cross-referenced domestic and international station classifications.

#### Class III changes

Elimination of the distinctions between Class III-A and Class III-B stations will give Class III-Bs similar maximum power limits and protection against interference that apply to Class III-As.

"At this stage of the AM service's development, we believe that no useful purpose

would be served by maintaining the distinctions between Class III-A and Class III-B stations," the FCC remarked when it proposed the rule change in July 1985.

Class III rules require that a station operate between 500 W and 5 kW. Class III-Bs had a power ceiling of 1 kW.

The FCC said that Class IIIIs operating on regional channels would be protected to their 0.5 mV/m contour daytime and to their 2.5 mV/m contour at night, or to their interference contour limit, whichever is greater.

The FCC also said that the former Class III-Bs would continue to be protected to their current nighttime limits, even if less than 4 mV/m.

#### Class IV upgrades

The FCC, in the same docket, has reclassified six local AM channels in Alaska, Hawaii, Puerto Rico and the US Virgin Islands as "regional channels." It also reclassified Class IV stations in those areas as Class IIIIs, thereby allowing them to apply to increase their power to 50 kW.

AM stations in Puerto Rico and the Virgin Islands have complained that interference from neighboring Caribbean countries is severe due to the high conductivity of sea water.

The FCC added that Alaska and Hawaii, two other areas where stations are affected by the propagation characteristics of bodies of water, could also benefit from higher power levels.

The Commission's action reallocates the "local" channels in Puerto Rico, the US Virgin Islands, Alaska and Hawaii as "regional" channels. Affected frequencies

include 1230, 1240, 1340, 1400, 1450 and 1490 kHz.

The rule change would give the stations "greater flexibility" in the application of directional antennas during both daytime and nighttime operations, the FCC said in its Notice of Proposed Rulemaking (NPRM), released in July 1985.

The FCC, however, stated that reclassified Class IIIIs would be required to protect Class IV stations on the US mainland. "No loss of service would result from the use of increased power by such reclassified stations," the FCC said.

#### Other changes

The rule changes in the docket also prescribe the values of skywave field strength at distances of 100 km for distances less than 100 km from the transmitter.

Figure "Ia" of FCC rules section 73.190 does not extend to distances less than 100 km, according to the Commission.

In the relatively few cases that may be expected to arise where there would be any occasion to calculate skywave field strengths at distances less than 100 km from the transmitter, it is anticipated that the pertinent locations would seldom be substantially less than 100 km," the FCC said in its July rulemaking proposal.

Originally the docket examined the use of AM synchronous transmitters, which would allow an AM station to extend or reinforce its coverage area by using a second transmitter on the same frequency. However, the FCC decided to examine that issue separately (see article in this issue).

FCC docket number is MM 84-752.

For Page 33

**Jefferson, Clearfield, Cambria, Somerset, Blair, Bedford.** If this had been a real tornado warning, it would mean that a tornado was imminent or in progress."

The message goes on to say where the simulated tornado touched down and lists safety precautions that should be taken during a tornado, such as staying away from windows, doors and outside walls. It asks listeners to send a card to the weather service to let officials know that they heard the message.

Heckler said he doubted whether listeners would misunderstand the drill message. He said an earlier draft of the message "did, I think, raise that concern because it was worded like a real warning with the beginning saying it was a test."

Donald Witten, a spokesman for the headquarters office of the National Weather Service, said: "It sounds to me like a perfectly clear statement."

In northwestern Pennsylvania, where much of the death and destruction occurred during last year's tornadoes, some broadcasters have refused to carry any message during the drill, said Comey of the state emergency agency.

"We are urging the National Weather Service, if they are going to activate the Emergency Broadcast System as part of the exercise, to make the message very general, with no mention whatsoever of tornadoes."

KDKA-Radio is planning to write its own script, omitting references to tornadoes, said Layton. As the primary Emergency Broadcast Station in southwestern Pennsylvania, KDKA-Radio would trans-

mit its script — not the weather service's — to other radio and TV stations in the region.

Layton, who said the station's decision on the matter was not final, said there was too great a risk that a casual listener would mistake the test tornado warning for the real thing.

Heckler said he doubted whether listeners would misunderstand the drill message. He said an earlier draft of the message "did, I think, raise that concern because it was worded like a real warning with the beginning saying it was a test."

Donald Witten, a spokesman for the headquarters office of the National Weather Service, said: "It sounds to me like a perfectly clear statement."

In northwestern Pennsylvania, where much of the death and destruction occurred during last year's tornadoes, some broadcasters have refused to carry any message during the drill, said Comey of the state emergency agency.

However, at least one station said it would carry a detailed message discussing the make-believe tornadoes.

receiving attention from a number of companies, which do not wish to be named. Michael Rau, the NAB's engineer coordinating the field study, also says a lot of interest is being shown by the broadcast community—engineers, consultants, and managers.

Such interest, while encouraging, is a little premature with first tests not due to start for at least a year. The NAB is, however, maintaining a mailing list for those who wish to be updated on progress and for volunteer AM engineers interested in performing the necessary skywave field measurements over the period of the test.

# Funds OK'd for Two Florida AMs

by David Hughes

**Washington DC** ... The FCC has approved that funds be released to two Florida stations as monetary compensation in the battle to override Cuban AM band interference.

On 16 January the Commission approved funds totalling \$113,271.44 to be given to Sudbrink Broadcasting, the former owner of Miami AM station WNWS "for expenses incurred in modifying its transmitting facilities to offset the effects of Cuban interference to its service area."

On 5 February, the FCC approved \$84,026.79 in funds to compensate WIOD/WAIA Inc., owner of Miami AM station WIOD.

The two funding recommendations bring the number of stations that have had their requests for compensation approved to three. In 1985, the Commission approved \$12,265 in compensation for another Florida AM station, WSUN in St. Petersburg.

Six other Florida AM stations that have also filed for compensation await FCC rulings on their claims.

The compensation program, which is administered by the FCC, was adopted by Congress in October 1983 after Florida broadcasters complained that increasing Cuban interference forced them to make expensive improvements to their transmission systems.

The Radio Broadcasting to Cuba Act authorized compensatory payments to broadcasters, with the applications to be reviewed by the FCC. Rules regarding the compensation procedures were adopted in March 1984.

Even though the FCC has approved the compensation claims for WNWS, WIOD and WSUN, none has received any funds.

According to FCC Audio Services Division Asst. Chief Dennis Williams, the Commission's compensation recommendations are sent to the US Information Agency (USIA), which is then supposed to distribute the money.

"The FCC makes the findings," but does not award money, Williams said. He added that no funds have been appropriated by Congress to the USIA for the compensation program.

A USIA spokesman said that while Congress has "authorized" the agency to spend \$5 million for Cuban interference compensation, no funds have actually been "appropriated" or "earmarked."

He said that USIA would wait until most of the Cuban interference claims are handled by the FCC before it asks Congress for the money. "We can't go to Congress every time we get a claim. We'll probably wait and ask for one lump sum," he added.

#### WNWS case

The Commission said that WNWS, which operates an English language news/talk format on 790 kHz with 25 kW, was given Special Temporary Authority in 1981 to increase power from 5 kW to counteract Cuban interference.

At the time the improvements were made, the station was owned by Sudbrink Broadcasting, which filed its application for compensation on 31 October 1984. However, Sudbrink has since sold WNWS to Jefferson-Pilot Broadcasting.

Williams said the compensation, when awarded, would go to Sudbrink, unless the transfer of ownership documents between Sudbrink and Jefferson-Pilot specified otherwise.

"The increased power and modified radiation patterns utilized by WNWS in its day and night STA facilities fall far short of recovering all the previously served areas lost to Cuban interference," the FCC said in the WNWS ruling.

"It is quite obvious, given the engineering constraints involved, that the modifications to both the daytime and nighttime transmitting facilities of WNWS were made for the sole purpose of mitigating the effects of severe interference from Cuba and not for the purpose of rendering service to previously unserved areas," the Commission added.

#### WIOD case

WIOD, 610 kHz, operates according to a STA issued in 1981 with 10 kW day and night using a directional antenna system, up from its previous 5 kW.

The Commission said it conducted an interference study and found that WIOD "receives widespread Cuban interference throughout the northwestern, western and southwestern regions of its licensed daytime service area." The station suffers "severe interference" at night, the FCC added.

Williams said FCC compensation recommendations for the additional six AM stations could be announced by spring, but added that some of the remaining cases are "extremely complicated."

Incidentally, the new owners of WNWS, Jefferson-Pilot, recently sold another Miami station, WBGS, a 50 kW operation on 710 kHz that became WAQI and assumed a Spanish-language format. In October 1985, Cuba began broadcasting its Radio Rebelde program underneath WAQI, interfering not only with WAQI, but also with WOR in New York. That interference continues.

## TO THE LONG ISLAND EDITOR

BY TINA E.

### Long Island Radio: The Other Market

Your Feb. 16 article, "L.I. Radio Beats City Stations for Listeners' Hearts and Ears," was interesting reading but unfortunately only told half the story.

In fact, Long Island is two markets, the one upon which you focused, Nassau and western Suffolk County, and the one which you overlooked, eastern Suffolk County, which encompasses Bellport, Brookhaven, Town and the five East End towns of Riverhead, Southold, East Hampton, Southampton and Shelter Island.

Although less populous, this area is as long geographically as Nassau and western Suffolk, and is the fastest growth area on Long Island. It is served by eight excellent radio stations: WBAZ-FM, Southold; WRIV-AM, WRIHD-AM and WRCN-FM, Riverhead; WWBB-FM, Hampton Bays; WSBB-FM, Southampton, and WLNG-AM and FM, Sag Harbor.

Seldom do any of these radio stations appear in the Nassau-Suffolk rating books because Arbitron places so few diaries on the East End. However, on the East End these eight stations demolish the competition from New York City.

Fact No. 1: Of the 13 "most listened to" stations from New York City, eight are FM stations whose signals cannot be received on the East End.

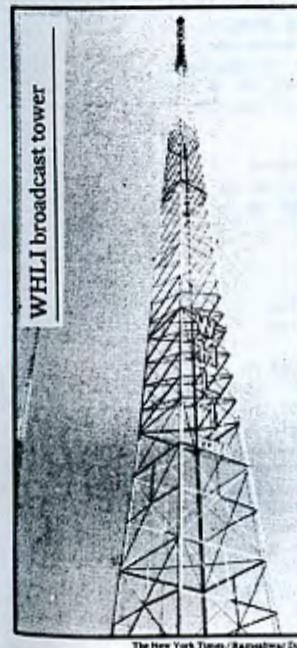

Fact No. 2: Of the remaining five AM stations, four are news or news-talk stations with minimal or no coverage of local issues, events, weather and public affairs on the East End. And even they do not cover the entire East End all of the time with clear sig-

nals.

Beyond that, the eastern Suffolk stations overwhelm all other Long Island stations on the East End. A survey conducted by a local newspaper last July showed that New York City, Nassau and western Suffolk stations attracted a mere 16 percent share of the listening audience on the East End.

Connecticut stations attracted 21 percent, and the East End radio stations attracted 63.7 percent, three times as many as Connecticut and four times as many as the stations upon which your article focused.

## The Micro-Mwdx-4 Phasing Unit: A Small, Cheap, & Simple Approach

Mark Connelly

WALION DX Labs

27 JAN 1986

### Introduction

Since the '70s, many phasing unit designs have appeared in the DX press. Over two dozen medium-wave DXers have successfully implemented phasing systems of various types: they enjoy the ability to null out many unwanted stations & noises and, as a result, hear desired co-channel or adjacent-channel DX stations. Phasing (along with looping, audio filtering, active preselection, and IF-circuit enhancements) has become a useful weapon in the DXer's arsenal, a valuable tool in the "bag of tricks" necessary to log new stations in this age of broken-down "clear channels", extended hours for "daytime" stations, and new RF noise-pollution sources (light dimmers, digital appliances).

A frequent complaint heard about phasing systems is that they are too complicated for some DXers to operate. It is generally true that establishing a null with a phasing unit takes more control manipulations than establishing a null with a loop antenna. The main reason that phasing is used by serious international MW DXers is that it sometimes offers nulls not obtainable with looping. (In some cases - e. g. inside metal buildings - looping isn't viable at all.)

The Micro-Mwdx-4 is an L-C type phaser that has simplified control operation as its major design goal. Other concepts embodied in the Micro-Mwdx-4 are:

- (1) passive design: no battery or mains power is required
- (2) small size: practical for DXpedition purposes, especially when airplane travel is involved
- (3) low cost: estimated parts cost \$ 60 or less (the tuning capacitor is about 25 % of the entire cost)

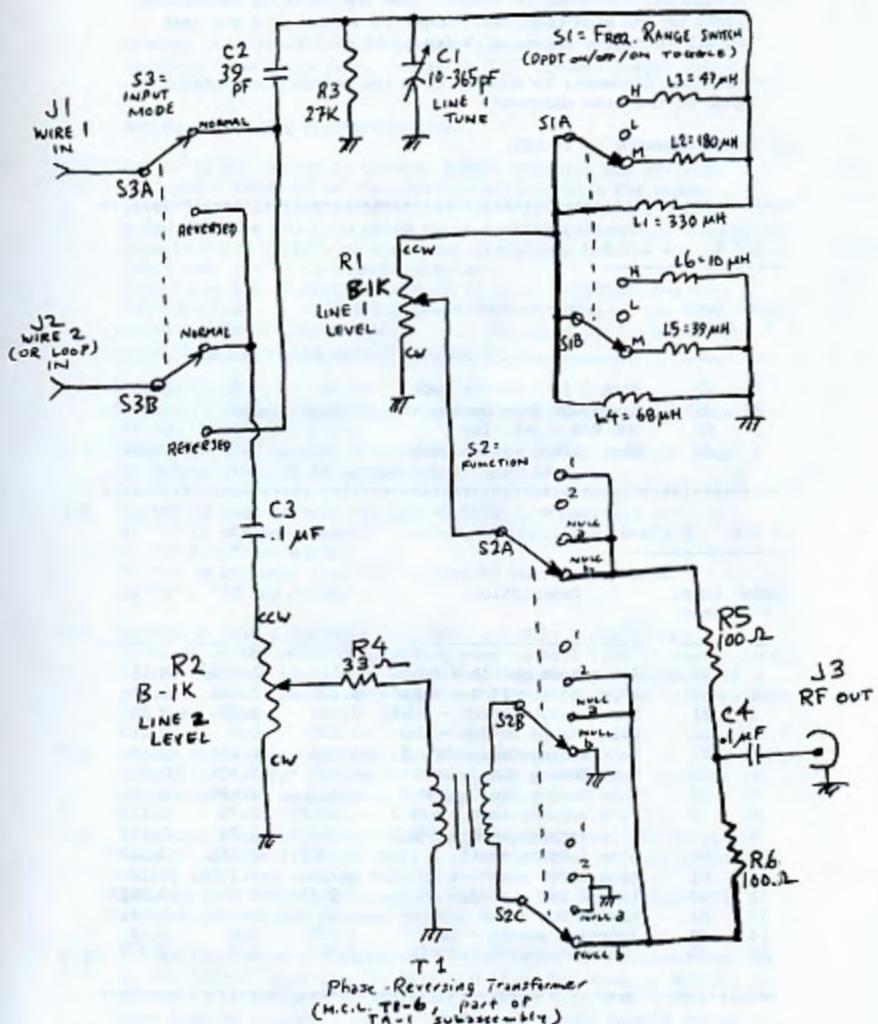

The relationship between the fancier Mwdx-4A and the Mini-Mwdx-4 is somewhat akin to the relationship between a luxury car and a subcompact model. The Mwdx-4A (with its more efficient coupling, more precise null-tuning, and amplification capability) certainly outclasses the Micro-Mwdx-4, but the increased cost, size, and complexity of operation may not suit every DXer's tastes. For many DXers, more than 75% of the medium-wave stations that can be nulled with the Mwdx-4A can also be nulled with Micro-Mwdx-4.

In discussions to follow, please refer to the Micro-Mwdx-4 schematic (Figure 1). Construction documentation is restricted to a chassis-hole list only. Other aspects of construction may be derived from information in my other recent phaser and active-tuner articles.

### Single-Line Tuning: the Key to Micro-Mwdx-4's Simplicity

Of the two antenna inputs required for phasing, only one of these (Line 1) has an L-C tuner associated with it. DX Lab. testing has determined that if a receiver can operate spur-free with the antennae-to-be-used connected directly to its input, it will work well with the Micro-Mwdx-4. The spur-free stipulation must be met because there is no tuning on the Line 2 aerial. Those who experience overload when connecting their favourite longwires to their receivers are advised to pump the output of Micro-Mwdx-4 through a tuner. Any member of the MWT and Mini-MWT families of tuners is ideally suited to be placed between the output of Micro-Mwdx-4 and the input of the receiver. The normal way to set up a follow-up tuner is to set S2 of Micro-Mwdx-4 to Line 2 (the untuned line) and peak the tuner (adjusting the tuner's attenuation pot if necessary) before proceeding to actual nulling procedures.

## Micro-MWDX-4 Phasing Unit Procedure

\*\*\*\*\*

Refer to schematic &amp; to labels on unit.

## 1.0 2-wire phasing

1.1 Connect longwire 1 to J1. Connect longwire 2 to J2. Connect receiver input (via coax. cable) to J4. Connect earth ground to J3.

1.2 Set R1 & R2 fully counterclockwise.

1.3 Set S2 to 2. Switch S3 between NORMAL position and REVERSED position. Leave S3 on the position which yields the weaker level of the station to be nulled, or - if levels are within a few dB - the position which shows greater evidence of subdominant signals. (If there's no clear-cut difference between the two S3 positions, set S3 to NORMAL position.)

Note (from the schematic) that if S3 is on REVERSED, the Line 1 controls (C1, S1, R1) will actually be operating on the wire connected to J2 rather than on that connected to J1; similarly, R2 will act upon the wire connected to J1.

1.4 Set S2 to 1.

Set S1 to correct range for frequency of operation (per Table 1).

1.5 Tune Line 1 by peaking desired-frequency signal strength with C1 (then, leave C1 at peaked-signal position).

1.6 Switch S2 back & forth between position 1 & position 2: If "1" is stronger than "2", adjust R1 until the levels of "1" & "2" are equal.

If "2" is stronger than "1", adjust R2 until the levels of "1" & "2" are equal.

1.7 Switch S2 back & forth between Null a & Null b positions: leave S2 on the position yielding more cancellation (= weaker level) of the dominant station to be nulled. Subdominant signals, if present, should become more apparent if the proper S2 null position has been chosen.

1.8 Adjust C1 to get a null of the dominant station.

If a null or "dip" at a given C1 setting does occur, leave C1 at that setting and proceed to step 1.11.

1.9 If a null doesn't occur [an unlikely possibility], set S2 to the 'other' null position (to Null b if it had been on Null a, to Null a if it had been on Null b) & adjust C1 for null. If a null or "dip" at a given C1 setting does occur, leave C1 at that setting and proceed to step 1.11.

1.10 If, at this point a decided null still can't be discerned, set S3 to its 'other' position (to REVERSED if it had been on NORMAL; to NORMAL if it had been on REVERSED). Steps 1.5, 1.6, 1.7, & 1.8 must then be re-done. In all likelihood, a null should now be established (thereby obviating the need to re-do step 1.9).

1.11 Try to enhance the null by adjusting R1. If best null is with R1 fully CCW, leave R1 there.

Try to enhance the null by adjusting R2. If best null is with R2 fully CCW, leave R2 there.

1.12 Make successive adjustments of C1 and whichever pot (R1 or R2) was found to have the greatest effect on null enhancement in step 1.11. After several of these successive adjustments, a very good null should be obtained. Occasional re-adjustment may be necessary when the station to be nulled is arriving via skywave and is closer than 500 mi./800 km. The need for re-adjustment is more common on the high end of the band (above 1100 kHz).

(40)

## Micro-MNDX-4 Phasing Unit Procedure (continued)

## 2.0 loop vs. wire phasing

Loop must have fixed 15K (Q-spoiling) resistor across LC tank.

The fixed 15K resistor should be switchable in (= low Q) or out (= high Q); the switch used will be referred to as the Q switch.

Loop's tuning capacitor will be referred to as the Loop cap.

2.1 Connect longwire to J1. Connect loop output cable inner conductor to J2. Connect loop cable shield and earth ground to J3. Connect receiver input (via coax. cable) to J4.

2.2 Set R1 &amp; R2 fully counterclockwise. Set S3 to NORMAL position.

2.3 Set S2 to 1.

Set S1 to correct range for frequency of operation (per Table 1).

2.4 Tune Line 1 by peaking desired-frequency signal strength with C1 (then, leave C1 at peaked-signal position).

2.5 Set loop's Q switch to High Q. Turn loop power on. Set S2 to 2 &amp; peak the desired-frequency signal with the Loop cap. Then, set the loop's Q switch to Low Q.

2.6 Switch S2 back & forth between position 1 & position 2:  
If "1" is stronger than "2", adjust R1 until the levels of "1" & "2" are equal.  
If "2" is stronger than "1", adjust R2 until the levels of "1" & "2" are equal.2.7 Switch S2 back & forth between Null a & Null b positions:  
leave S2 on the position yielding more cancellation (= weaker level) of the dominant station to be nulled. Subdominant signals, if present, should become more apparent if the proper S2 null position has been chosen.

2.8 Adjust C1 to get a null of the dominant station.

2.9 Try to enhance the null by adjusting R1. If best null is with R1 fully CCW, leave R1 there.  
Try to enhance the null by adjusting R2. If best null is with R2 fully CCW, leave R2 there.

2.10 Make successive adjustments of C1 and whichever pot (R1 or R2) was found to have the greatest effect on null enhancement in step 2.9. After several of these successive adjustments, a very good null should be obtained. Occasional re-adjustment may be necessary, especially on high-angle skip. If you've reached a deep &amp; steady null and the C1 / pot adjustments to get additional nulling become too touchy, try slight physical re-positioning of the loop to help in establishing the maximum null.

\*\*\*\*\*

Please write to me if you have any questions about Micro-MNDX-4 use, construction, availability, etc.

(41)

The opinions expressed in this column are those of the individual writer and do not necessarily reflect those of the Editors, Publishers, or the National Radio Club, Inc., or its subsidiaries.  
Times are local per Muse.

we're into the season of spring showers and t-storms, but the DX keeps rolling in. Don't forget that we start skipping weeks with the next issue, #25, which will be in your hands on or about April 14. #26's deadline will be April 18, and for this one, let's hear recommendations from those of you who continue DX'ing year-round ... suggestions for target areas and stations, DX techniques, best times, etc., for during the QRN of the summer months. In #27 (May 23), we'd especially like to hear from NRC'ers living outside of North America. And we'll accept Keith Ferguson's suggested Musings theme for #28 (June 27), "Computers in DX'ing". I'm holding #29 (August 1) open for now, but #30 (Sept. 5) will be the annual "Memories" issue, and #1 some time in September will be the annual re-intro issue. So now that you can mark your calendar to plan ahead through the spring and summer for these topics, let's get on with it!

We received a goodly number of Musings concerned with this issue's topic, favorite sign-on and sign-off announcements, but unfortunately Jerry Starr's cassette tape of one is somewhere between L. A. and Youngstown ... looks as if it slipped out the side of the envelope, Jerry. Sorry! And speaking of envelopes, those of you who recycle used and business reply envelopes to send Musings may be costing the recipient a healthy amount of postage due. Business reply envelopes, if the bar graph on the right side of the envelope is showing, will cost the recipient as much as 45 cents ... and the next postage due letter in such an envelope addressed to this address will be refused! 'Nuff said!

John R. Malicky - 995 Shadycrest Rd. - Pittsburgh, PA 15216-3023

Hello, all! I'm back into Musings after an absence since the December 2 issue. First off, just received a call tonight from (and I hope I have your name correct) new member Loyal Richmond of Louisville, CO (suburb of Denver) who asked about Eric Bueneman's DX-400 (in BandScan) which he thought I used, a simple mistake, but thanks for calling, Loyal, and welcome to the club! Speaking of phone calls, way back on January 25, Laurie (pronounced "Larry") Boyer of Invercargill, New Zealand, wanted to know the dates for this year's convention, so we'll be looking for you, Laurie! ... As for the theme of this issue, my favorite sign-off announcement has to be from WFIV-1060 Kissimmee, FL. Although they were at the time I heard them in January, '83 a country station, their sign-off begins with the beautiful "Ebbtide" by the Frank Chacksfield Orchestra. Some NYL'ers and BBD stations play this tune and you might recognize it. "Ebbtide" (and the sign-off) starts with waves lapping at the shore with the sound of seagulls, then soft string music and the message overtop, "At this time, radio station ...", then the music slowly fades into "An Evening Prayer" by Marty Robbins, which actually sounds like a Gospel tune. When I was DX'ing at sunset during that month, WFIV would almost boom inightly with that sign-off which signified to me that the day was coming to a close, evening and night coming in. Even though I didn't know those two selections, I was very moved by them and taped it for my files. However, verifying WFIV didn't come until July, '84, but the signer wrote a nice letter and mentioned those selections. Now I'll always associate "Ebbtide" with Florida. Offhand, some other favorites include a slow Dixie tune and the sign-off of WCRU-1570 Oneonta, AL, in January, '81 (verified and taped); Black-sould music extolling the virtues of "Number 1 (ratings) for the past 5 years ..." WNNM-1070 Tallahassee, FL (verified and taped) in December, '84; ending the sign-off of WML-Hendersonville, NC with "...that's all, folks!" and theme mentioning "leaving the air" ... because the FCC says we have to ... (a really pesty non-verifier and taped); and a corny, but funny one from WFAR-1000 Huntsville, AL of last year mentioning phrases like "... we now must yield to our neighbors in the north (and the background real briefly, 'Remember the Alamo!') ... and to our neighbors to the south (mentioning 'be very careful, gringos!').". Of sign-ons, a few come to mind, in December '79, WWIN-1550 Newton, MA after the N. A. played bold, brisk music while a bold-sounding announcer spoke; last year in January fairly new station WIS-770 Buchtel, OH began with a cuckoo clock; and WYIS-690 Phoenixville, PA began with large bells. All 3 verified and taped. A pre WPIN-1590 in Carnegie, PA (local), WZUM, a favorite hard rocker, in June, '74, signed off for a month with electronic music from Tomita ... Finally, thanks to those who tried and enjoyed receiving the WIFX-1000 tests given 3 times. The CB, Don Russell, said he wanted to do 3-4, so that's why there were so many! An avid SWL'er, Don said it's possible he might join our ranks after looking over the sample DX News! (Sign 'im up! -pls) He's contracted for 4 stations in his area. I hope everyone got their verie. 73's. (John's getting the most mileage out of his 22-cent stamp ... he's achieved the record of FOUR Musings in one envelope, all participating in the Musings themes. Thanks for your contributions, John -pls)

Bob Harrison - 166 Renner Ave. - Union, NJ 07083-8839

A few years ago there was a record on the country charts by Hank Williams Jr. called "Pixie On My Mind". It was about some fellow from down South who found himself stuck in New York City, and the opening lyrics of the song were, "The stations up here, they don't sign off with 'Dixie'." Well, in the four years I've been DX'ing, I've heard a lot of stations from down South signing off, but believe it or not, I still haven't heard a single

one sign off with "Dixie". There are a lot of clever sign-ons and sign-offs kicking around, however, and here are a few of the ones I remember best. Let's start with WVCH-740 PA. They announce the number of days they've been broadcasting every evening: "We now conclude our 10,287th day of broadcasting," for example. Another memorable sign-off was that of WSAY-1480 VA. The one time I heard them, they mistakenly signed off with their "good morning" announcement. I hate to accuse anyone of incompetence, but they verified my reception report with a letter with said a bumper sticker was enclosed, but you guessed it, no bumper sticker! Well, I guess they don't exactly run a tight ship at WSAY. The award for the longest sign-off has to go to WCPK-1600 VA. They spend a good ten minutes with "good bye" and "good night" songs, and then end with the announcement, "When WCPK leaves the air, even the sun goes down." Another award should go to the man who sells airtime at WDOS-730 NY. He found an FM car radio installer to sponsor their sign-off announcement. And more recently, he took the idea one step further and found a real estate agency to sponsor "The Star-Spangled Banner"! I suppose if we ever got him to run a DX test, he'd run commercials during that, too. (Or promos during the day, hi -pls) When it comes to sign-ons, I guess one of the most dramatic belongs to WKW-1420 VA. They hit the air with a rousing "big country" jingle, and an announcer who speaks of "5000 wild, wooly watts"; it's enough to wake anyone up, even with the radio off! My favorite sign-on, though, belongs to WBHG-1360 VA; they have a hauntingly beautiful rendition of "Shenandoah". This city-slicker almost expects to look out the window and see beautiful trees and mountains whenever that one skips in here. Well, here's hoping you get to hear your biggest local pest sign off soon!

**Ed Mitkus** - Rt. 2, Box A-108 - Zionville, NC 28698-9621

Best to all. Been awhile since I've Mused. I've been fortunate to be a regular in COX-East. Conditions haven't been too good here. Last 3 weeks of Feb. have seen auroras very often. No New York or Chicago, but Minneapolis did make it in. Noticed this helps the sunset skip, keeping some northern pests out, while the west or south still rolls in. Good conditions once to AR and MO. Really enjoyed Issue 21 Musings from Steve Kennedy and Paul. (Thanks, Ed -pls) Random thoughts - even though my wife doesn't keep her own log of stations, she does DX with me, and enjoys it! I'm lucky to have a wife that not only tolerates this but enjoys! Looks like we might make Delaware Labor Day, the time off is taken care of; just need a few \$ to go. We're working on it! For my favorite sign-off announcement, WEYY-1580 AL used to sign off with the phrase, "When WEYY leaves the air, even the sun goes down"! WOOF-560 used to have a dog barking on its sign-off; of course we have the usual "That's all folks" phrase; someone on 1600 around here uses that. Not to forget WFSO-570 Pinellas Park would have a big yawn after its sign-off announcement, then pull the plug! Well, gotta go. 73's to all.

**Thomas Connatser** - Route 9, Box 78 - Sevierville, TN 37862

Hello, all. Despite rumors to the contrary, I'm still alive and DX'ing. Guess it has been a while since I've appeared in these pages. This week's topic, favorite sign-on/off announcements was interesting, so I thought it was about time I made a return to Musings. In my 16 years of DX'ing I've heard more than a few of these announcements. Indeed, almost all of my verie tapes are of sign-on/off announcements. I guess my favorites would have to be the sign-offs of a number of daytimers who complain about "antiquated FCC rules" that force them off the air at sunset. Probably the best of the bunch is WTAK-1000 Huntsville, AL. In their sign-off, they equate daytime-only licenses in the same category as Susan B. Anthony dollar coins and the MX missile as government failures. Then, to answer the question as to why they are a daytimer, they say that many years ago 1000 kHz was set aside so "powerful Northern stations can beam information and entertainment for our well-being; frankly, 'Big Brother', we'd rather do it ourselves!" The tape is beautifully produced, and I wish I had a copy of it. I'm not too sure I'd want to play it if the FCC was inspecting the station, though! I know we are guaranteed freedom of speech in the U.S., but this one lays it on pretty heavy. Another interesting sign-off was that of WEYY-1580 Talledega AL which ended, "...and remember, WEYY is so great that when we sign off even the sun goes down." Two semi-locals WIVK-850 Knoxville and WLIL-730 Lenoir City TN used to have an interesting plug for their FM stations. They would end their sign-offs by saying "...for those of you with just half a radio, we must say good night until 6 am tomorrow. If you have a whole radio we invite you to switch to our FM affiliate for continued programming." Finally I'd like to mention what I consider the area's worst signoff - that of WNNF-94.3 Oak Ridge TN. They don't have one! At midnight they just shut down the transmitter (probably with a timer - sometimes they ID, sometimes not, sometimes they leave the air in the middle of a song!!). One more announcement, while it is not a sign-on or sign-off announcement, is, I think, rather unique and deserving of mention. Every day at noon, WKWV-900 Knoxville, a religious station, runs the following "(Sound of a bell ringing) As the WKWV Liberty Bell rings out freedom for everyone, let us pause for the playing of Our National Anthem." The "Star Spangled Banner" is then played followed by an ID. Interesting. WKWV also signs on with "Reveille" so there's another unusual sign-on ID. (Bet the soldiers love that one!) Well, that pretty much takes care of my thoughts on this subject. Now, if you're lucky, I'll be back before another year passes. Until next time,

73's and best DX to all.

**Paul Swearingen** - Canoga Park, CA

When I started in radio, at then KAIN-1370 in Iola, KS, their s/off announcement was read live, as it was easier to do that than to cue up a three-inch tape (they didn't install tape cartridge machines until about 1967). If I remember correctly, the last song would be a nice, soft religious song over which the announcement was read. Later, when the FCC relaxed its rules concerning having a first-phone on the premises of directional stations all the time, we'd still play an instrumental, read over it, and announce at the end, "... When the music stops, it's exactly 6 pm." Then we third-phone types would amble next room to the transmitter and flip the switch at the appointed time. Some stations also make mention of power changes ... perhaps true is the story of the western Kansas announcer who would announce in the evening, "Goodby, western Kansas!" and then change power and pattern. The end of that story is that he was supposedly asked to find other employment. But my unfavorite s/off announcement was that of KQX-1560 Joplin, MO, which would include "Dixie" and immediately afterwards the SSB in their announcement. I always felt that the juxtaposition was rather tacky; and my friends and enemies who live south of the Mason-Dixon line and who are still fighting the War Between the States may send me personal notes, not Musings, on this topic. // KIRN-660 Window Rock, AZ has been on the past few days, but not noted on 11:00 pm 3-7. Format is ROK to AdCon, with ads and promos emphasizing the Navajo Nation. 73.

**Jerry Starr** - c/o WHOT Radio - 401 N. Blaine - Youngstown, OH 44505

Just a short Muse to make a few comments on recent issues. Tony's profile of WEXL in the 2-24 issue mentioned that they were one of only three directional stations on 1340 kHz. Actually there are four as WOYL-1340 in Oil City, PA has a two-tower DA to protect WKSJ Jamestown, NY with their day power. This station also has to sign off during the few hours that WSAJ-1340 Grove City operates; this makes them the only SH-5 station in the country, a true oddity. I know all this because I used to work there back when the call was WKRZ in the late 1950's. They have a huge self-supporting main antenna and a tiny unpainted tower down over the hill for the second antenna element. Also noted that Dave Schmidt made mention of a "CP" for 830 kHz at WHRF-1520. As of today this is only an application, not a CP. No DX to report, no time to listen. V/I from WIFX-CX, WXY.

**Eric Buemeler** - 836 Lamplight Lane - Hazelwood, MO 63042-3407 (314) 895-1436 ppd

How's your DX season, folks? DX'ing has been minimal due to college work and duties at KCFV-FM in Ferguson. I have a big responsibility at the station now, with the Tuesday afternoon traffic report between 1640 and 1650 CST. (No doubt from the college's Traffic Copter, hi -pls) Not much heard since my Radio West loop died in January, but it went out in grand style with logs of WSUI-910 IA at 1715 CST on 1-13 and KCLM-1520 MN (simulcasting KMK-FM) ten minutes later. Verifies have trickled in from CHEC-1090 AB, WBCA-1110 AL, WASG-1140 AL, WAGY-840 AL, KGKF-690 KS, KDKA-1020 PA, and WGEE-1360 WI (All signers sent to Wayne Heinen, right? -pls). Reports are still out to WJSB-1050 FL, WLIB-740 AL, KUYU-870 WY, KJJC-1500 AR, KIWO-1030 WY (4th report), KOLM-1520 MN, KSLQ-1350 MO, KFJB-1230 IA, and WVV-1570 WV (tentative reception). KSLQ Washington, MO, hit the airwaves in late January, after testing for three months with an OC. Format is Top 40, and already, KLPW-1220 is paying the price, losing its morning DJ. KCFV-FM lost Buzz Carlson (known as Buzz Bennett as KSLQ) as a result. KSLQ's owners are looking for an FM channel; maybe KLPW would give up its 101.7 slot and go caw on 1220. WEW-770 was off for one day as fire destroyed its Soulard, St. Louis studios; they are now back on from a West St. Louis County site. One more Canadian province to go before I get my first Provinces Verified award and three more states before another States Verified award (I earned my thirty-state award in February 1984 and veried two more and haven't veried another one since WBT-1110 in August 1984). Malcolm Maxwell, get ready! Have a nice rest of the season. Rock on!

**Steve Francis** - 1620 Lodge St. - Alcoa TN 37701

I'm long overdue for a Musing. WAGE-1200 VA was heard 5 pm 10-27 with Broadway show tunes and ID. MM 10-28 brought WARH-730 IA on AN for hurricane warning with MYL-ish fare, in the clear after XEX's 3:00 s/off. Long-sought WDSC-800 SC in fair 11-13 with 6:00 s/off, giving frequency as "800 megacycles". This and WMEW-W were 6 pm regulars this winter on PSSA operation. MM 11-25: A surprise in CJAD-800 Montreal, fair in CKLN null 1:30-1:45 am with English teletext and local spots. No sign of XEROW/PUB; I think the latter is either off or beamed away from N. A. at that hour. 11-28 brought a quick no-data s/on at 7 am from the new WCXN-1170 NC. Log shows this as fulltime, but they're only on from LSR-ISS. The new Cuban behemoth on 710 was first heard 11-30 with Radio Rebelde network stuff. Two nice birthday presents on 12-2, thanks to NBC reporters. KFGQ-1260 IA boomed in on first Monday r/c from 2:00-2:02 with long, full-date ID (even included format), then about 45 seconds of TT with no ID at end. I think he said 5,000 w. in the ID (and their signal sure sounded it), but I neglected to tape it and haven't been able to get to the Knoxville library to check BYB, thanks to these seven-day work weeks at WCGM. Log sez 1,000 w. Neil Zank's Musing tipped me off to this one. After reading the reports from

Chris Baskind, Dr. Wood, and Chuck Hutton of TICAL-530 in IOWD that evening, I tried for them and there they were, fair at peaks with romantic vocals and "Rumbo" ID's up to their midnight EST s/off. 12-22: WSOY-1340 IL readable with end of news and ID at 11:00 pm, in "battery null" of local WRGN. 12-23: The new WJOR-1040 TN about even with WHO at 5:46 pm with full-data s/off, power given as 2500 w, not the listed 250. I'll pick this up in 14. Nancy Hardy, your first DDXD column looks great! (Ditto comment from -pls)

**Andy Rugg** - 669 de Gaspe, #218 - Nuns Island, QUB H3E 1J1

My DX'ing activity nosedived in February because of lack of time and poor cx. There were no new catches. Around February 8, there was a major solar disruption which befuddled propagation for many days. The test from WOCT-1310 did not make it to Montreal on 2-11. Just after 1:00 am, my ears perked up when I heard some unID symphony music upsurge under CIW's newscast. At 1:04, it got obliterated by their music. That was the only signal I could discern under CIW at that time. That AM, the only other notable signal was WDCR-1340. I have heard them occasionally since my initial logging in 1961. It was slightly surprising to hear them way on top of the 1340 channel, with by far the strongest signal between 1280 and 1410. By 2-12, the full skywave had not yet returned, but there were good cx to the Maritimes. At 11:00 pm, CKBC-1360 was giving gears to WDR. There was an unusual juxtaposition between the CBC'ers on 1070/1110. The usually-strong CBA-1070 was having a terrible time with CHOK. Conversely, CBD had an awesome signal on 1110, clobbering the usually-strong WEP. I taped CBD's s/off, and WEP can't be heard on the replay, most unusual. The only trace of a TA was a het from Langenberg-1593 at 1 am on 2-23. Veries were very strong, with KVITS-1314 and WCVI-1340 both replying promptly. Late in January, I sent out 7 follow-ups, and the response was amazing! They all replied, specifically WITP-1060, WSCP-1070, WWSG-1170, WURS-1220, WBBC-1260, WADR-1480, and WLIM-1580 (we demand a copy of your f/up letter, hi! -pls). Totals now are 1642 logged and 1562 verified. 73.

**Tony Fitzherbert** - 356 Jackman Ave. - Fairfield, CT 06432

Hello to all!! First, while settling into my new job, I had to attend a week-long seminar on engineering railroad tracks in Wilmington, DE. The highlight of the trip was a very delightful visit with Dave and Donna Schmidt. Dave is planning a most interesting convention. Veries - have done very little DX'ing, have been too busy, and when I did sit down, conditions were awful. Veries this year - almost 100% return - latest are a nice v/l from WESO-970, after the fifth try - a v/l and v/q from CEO-920, a v/q and B/S from CKSO-790, a v/l from WWR-980, for a 9-85 report, and a nice v/l from WDT-900. Hope you all enjoyed the WEXL-1340 profile (You bet! -pls) - that's it for the 1985 rail trip. However, there are, thanks to Fred Vobbe and Wally Wawro, two mega-profiles enroute about two world-famous rockers, one of which changed the whole industry!! Many other people contributed to these profiles - lots of writing, but they will be very interesting! Now, the 1986 rail trip via Amtrak will allow tours of four new commuter rail/rapid transit systems. Two are in Miami and Atlanta. Also want to visit some radio stations - can any DX'ers in Miami and Atlanta take a map of the area and designate radio station locations? I would really appreciate that. Thanks! 73's.

**Jim Fedor** - Box 2034 - La Mesa, CA 92041 (619) 443-4592

It has been a long time since I last Mused, so I decided to drop you a few lines, Paul. First, since I haven't talked to you since ANARC '85, it was a pleasure rooming with you. (Igual, Jim, y gracias -pls) I had a good time and met some old but not forgotten friends. Even got a little DX'ing in (Did you ever hear KFYR? -pls). It has been awhile since I have heard the band full of W's (hi). What we need now is an NRC convention on the west coast, maybe at Laguna Beach or someplace like that. I have been extremely busy here with the spring semester in full swing and business at Radio West increasing. We are working on some new ideas for catalog #8 so it should be the best yet. I have recently acquired a Ford F-250 4x4, camper shell, and approximately 4,000 feet of wire. With spring break coming up around the end of March it looks like beverage time in the high desert. I have a spot picked out near the Tecate Divide which is about 5,000 feet above sea level, approximately 65 miles east of San Diego. There is a primitive (running water and picnic tables only) campground there, and it is plenty quiet. I am planning on running 2,000-foot long antennas in two directions. Anyway, if any serious MW DX'ers in the San Diego area are interested in getting together and going, please contact me at the above telephone #. Lastly, just purchased another R-390A with loads of spare parts for an extremely fair price - Happiness is ... 73's.

#### Radio Roundup

**Pete Kemp, KZIZ** - P. O. Box 73 - Bethel, CT 06801

Greetings all ... WNN in New York has been sold, but no changes to their country format are expected. Also in the Big Apple, the FCC has granted WNYC's request for a move from the 830 to the 820 spot on the dial. An increase in power and 24-hour programming is planned, but not for at least a year ... Joey Reynolds is rumored to be coming to WNAC in New York City to fill the spot vacated by Howard Stern a while back.

Reynolds had most recently been heard on WFIL ... WGY and WPTF are going to have to take notice when tiny WMVI, in Mechanicville, NY (20 miles south of Albany) increases its power from 250 watts to 50,000 watts and moves from 1170 to 1160 on the dial ... KDKA is bringing back talker Mike Levine. He is currently finishing up his contract in Tampa on WFIL. Upon his return the on-air staff will be reshuffled and Cris Cross will exit his mike duties and remain with the station in an administrative capacity ... Bruce Bradley is leaving New York radio to move on to WNOX in St. Louis for an open line program nights and weekends. I still remember him as Jucie Brucie on WAZ, Boston's answer to Cousin Brucie of WABC fame ... In Milwaukee WMGF is now WKLH and has changed its format from soft rock to classic hits ... KCNO in Kansas City, acquired about a year ago, is on the selling block ... WHB, in Kansas City, will be moving into larger studios in Merriam, KS ... the Australian government is looking into the future of their country's commercial broadcasting. Of special interest is the status of AM'ers. While the FM band has only been in existence for six years, in Australia it has grown rapidly, and under their current rules, AM'ers are not allowed to own FM outlets. Many AM station owners want to have sister FM stations to bring in the revenue for the future ... Bob Costas (NBC) has been named Sportscaster of the Year by the National Sportscaster and Sportswriters Association ... Augusta LaFaire is the new host of CBC's Cross Canada Checkup, a call-in show ... Joe O'Brien, one of the original WACA Good Guys, and the morning man at WNAC, prior to Imus's first arrival, has announced his retirement from radio after a 50-year run. He was most recently heard in the mornings on Peekskill's WHUD-FM. He will remain on the station, doing voice-overs. His replacement is Eddie Baer, another old WACA Good Guy ... The Maryland Sportscaster of the Year is WBAL's Tom Davis ... WMGB, in Buffalo, has taken the rights to Yankee baseball from WLWV ... WLVL, not to be left out in the cold, has acquired the rights to the Toronto Blue Jays ... So much for now.

**Jim Wallace** - 63280 Sand Hill Road - Bellaire, OH 43906

I have been meaning to send in a Musing for about six months now but have continually put it off. I have not had a lot of time this season for DX'ing, but I have managed to get some good catches. The auroral weekend of 2-8/10 was a good one. WBSS-980, Pompano Beach, FL, was one of my better domestic catches. But the morning of 2-10, I was picking up mostly Latin Americans. I finally decided to throw a tape on a couple of them and send out my first Spanish language reception reports. I used an old Gilfer form that translates reception reports into French and Spanish as my guide and used a couple of Spanish books to adapt it to my use. It must have worked. I just received a v/q from TIEB-730, Radio Reloj de Costa Rica. I am also hoping to hear from HUZG-780, Radio Sonorama, in Cali, Colombia. I expect to send more Spanish-language reports in the future, because I have signed up for an evening course of introductory Spanish. The article recently in DX News about reception of North American stations in Finland was interesting. I have written to a couple of Finnish DX'ers who have reported reception of WWA to ask them what North American stations they have received. Speaking of WWA, I was able to log at least one new station on 1170 this season. I woke up shortly before 7 am on 11-7 to discover WWA was off the air. I quickly put on a tape. I heard a couple of stations coming in, but they were immediately covered by WAXX, Lexington, SC, with its sign-on. A couple of minutes later, the engineers at WWA were able to get the station back on the air, so I was unable to log anything else. I did get enough for a report to WAXX, and it verified. If I had been up earlier, I might have been able to DX for more than an hour on 1170 and adjacent frequencies. I've told the morning team at the station to give me a call if that happens again. Lately, WWA has been having some strange transmitter problems, so it could happen again. I wouldn't be surprised to have it go off some afternoon and wipe out my afternoon newscasts. By the way, I'm now working on a special series of reports about the Ohio River flood of 1936. WWA played a big role in covering that flood, so the reports will include some station history. That's given me a chance to interview some oldtimers associated with the station and did through the station's archives. If you want to tune in, the special reports will air at 7:30 am and 5:30 pm 3-17 through 3-21. If you tune in, send me a reception report.

**Keith Ferguson** - 3133-273rd Ave. SE - Issaquah, WA 98027-9120

Greetings to one and all. I've been saving up Muses for awhile, so I'll cover some of the themes I may have missed. My most notable DX achievements in the last 6 years seem to be cauliflower ears (from tight headphones) and a large collection of taped static. One of my specialties is classical music (all too rare on AM!), and long before I did any organized DX'ing, I used to listen to KCRW-780 Reno. I have since logged KKHI-1550 and KIBB-1220 (now KDFC) San Francisco, and KBPS-1450 and KKS-910 in Portland, OR. (KBPS is a rarity, one of my favorite catches. I logged the s/off in 1982.) I also collect CBC outlets. So far this season, I have added KHV-970 Modesto, CA (near sunset, my favorite time to DX) and CIBB-1280, AB (ID'd after 3 days of fading just at the announcement - don't they all?). I miss hearing the clear channels as they were before the "hopeless jumble" took over. But, a good one can still slip through. So far, I've netted WIZ-1030 (last heard in 1980) and WABC-770 as rarities, and WHAS-840 (an enjoyable regular here -pls), WLS-890 (on MM's only, thank to KDXU) as semi-regulars past midnight and/or MM's. In response to a question, 880 is a mess up here. I'm just 10 miles due east of KIXI, but

they're little problem at night. Evenings, I hear KMFN, KWIP, and KJJR, but after midnight, KRVN can still be heard. Once, CKLQ made it through the muck. It wasn't too long ago (1980) that KRVN and WCBS were the only things I could find on 880. On the plus side, I've added several new loggings this way. There are similar tales to be told on the other clears. But the one I regret the most is KQIN-820. Ever since they went NSP on 12-11-85, 830 has been difficult at best. Luckily, I got KUNO and KNNO (also CHAM-820) before it was too late! Also, KGO-810 is free of splash out here, but most Seattle listeners have lost the chance to enjoy KGO's excellent talk format. Oh, sure, there's Larry King on KING-1090 and Talknet on KIRO-710, but locally produced talk has all but vanished here. Locally, there have been a few station changes. Aside from KARR-1460, KITZ-1400, and KARP-1560 (already reported in DXN), I note that KKU-1510 is still silent after 2 years. This brings me to the matter of counting stations. First, I only count loggings that I've taped, so I try not to miss too many! My "official" count is smaller than my informal count, as it only includes freq changes and city changes, for the most part. Informally, I like to collect all the different antenna patterns, etc., so I see any major technical change as separate. E.G., KQIN, for their new 50 kW xmtr, had to find a new site. KITZ returned to the same xmtr site in Tacoma, so it's the same (but when they move to Silverdale, 30 miles away, that'll be different!). And KARP, as mentioned in "AM Switch," is completely new. Some history: KXA-770, from 1942 to 9-84, used a T-line antenna atop a bldg. in downtown Seattle. The towers are still there, for all to see. A little hard to photograph from street level, though (I've tried!). News flash: KXA has Dick Cavett's Comedy, Sunday mornings from 8 to 10. I am very interested in seeing Station Profiles of Seattle-area stns, so much so that I'd even try my hand at writing some. So, if anyone has info, contacts, hints, or can assist me, please contact me at the above address, and we'll get this project started. Some suggested Muse topics (for April 1?): "The Worst Station Slogans", and "Favorite DX Jokes". A more serious topic: "Computers in DX'ing." I, too, hear the "annoying tone" on 1210 nightly under KASY, KREW, and CWRA (Me, too - pls). As it appears just after sunset, and never goes away, my suspicion is that KASY is responsible, but I've been known to be in error! I have yet to catch any other stations on 1210. 73's and static-free DX to all!

FAMILY STATIONS INC., 290 Hegenberger Road, Oakland, California 94621 (415) 568-6200

Dear Mr. Durocher,

We here at Family Radio are indeed rejoicing on our 27th anniversary (February 4th), especially because of a marvelous open door that has been presented to the ministry.

Recently a friend of Family Radio approached us with an opportunity to purchase his licensed AM station which is located near Hartford, Connecticut.

He felt that his commercial AM facility could be better utilized by Family Radio. So, he sold it to us at what we felt was truly a God-directed bargain -- far below what it would cost to build a new radio station. Ordinarily, building a new facility is the most economical way to start a station -- but WRTT is truly a delightful exception.

So, Lord willing, within the next 60 days radio station WRTT (1170 AM) near Hartford could be on the air.

But before WRTT can go on the air, funds are needed now in order to refurbish and upgrade some of its existing equipment. For example, a satellite down link and receiver has to be installed in order to enable it to receive our present signals, as well as to ensure good reception within the city of Hartford.

Also this month, our new station in Joliet, Illinois (WJCH) near Chicago is very close to completion. However, a few unexpected delays have caused some temporary hold-ups on our first broadcasts.

Gratefully Yours in Christ,
