

# 1400 WKAV

'CAVALIER COUNTRY'

11-1-85

Mr. Beary:

This confirms your  
reception of WKAV on  
Wednesday, April 25, 1984  
at 5:45 AM

Your logging of this station  
is accurate.

Cordially

Mark Wilson, Pres.

March 6, 1985

Dear Mr. Geary,

My apologies for the delay in responding to your inquiry about WSLC programming on 2/8/85. I have enclosed a photo-copy of the program log for the time you indicate. It appears that you did in fact receive WSLC but I'm not sure from your description that you had our station the total time. The description you indicate at 5:24PM doesn't appear to reflect the commercial advertisements that we aired.

# A Note From ... **SCOTT SLOCUM**

1 February 1990

Dear Mr. Geary:

We were pleased to receive your recent report of WZKT-AM, on the morning of January 26th, just after midnight. This note will confirm your reception report of that day. Recent changes to a new NRSC-2 modulation system may be making our signal more readable.. especially in the early morning hours when many of the Class IV's are off-the-air. We usually go off the air around midnight ourselves.

I've enclosed one of our coverage maps for your files.

Thanks for writing, and happy hunting!

Best Regards,

Scott Slocum  
General Manager

DEERFIELD, VA.

Mr. Kermit Geary  
Walnutport, Pennsylvania

Dear Mr. Geary:

We surely do want to thank you for the very wonderful letter which you wrote regarding your reception of the signal from WABH, in Deerfield, Virginia. It was most complete, and proved that you did receive us very well.

It was great to learn that you had as much as 10 microvolts of signal from us. The fact that fading was negligible was gratifying, also. Another fact which has been giving us a great deal of satisfaction, is that the other, more powerful stations do not cut us out. We had a report from near Boston which said that we were heard over WCOP with 5,000 watts of power. We are only 1,000 watts.

It was interesting to me that you were using a National HRO 1935 model and it was still so very quiet, and the fact that you had a deep well for a ground system.

The portion of the program which you logged and sent us surely serves to verify the fact that you were getting good reception. We had several to tell us about the selection "AbdullahBulbul Ameer", which we did not intend to play. As you may have noted, we are playing gospel and better type of country and hillbilly music.

This was a good February 24th morning because we are still answering letters received after that broadcast day.

Thanks again. Tune in again, and if you ever come down Route 11, leave the route at Staunton, and come by R 250 to R 629 and thus to Deerfield and look us up, if you care to do so.

Cordially yours,

*Joseph L. McFarland*

Dear Mr. Geary:

As you said in your letter, it was indeed a surprise to learn that our travelers information station reaches up to Pennsylvania.

We do broadcast on 1610 KHZ with a power output of 10 watts. We are using a TR-20 transmitter and are enclosing a specification sheet for it. The Antenna is mounted on a 12 foot 6"x6" and is approximately 20 feet high. The groundplane consists of approximately 14 bare copper wires (#6) 60 feet long buried approximately three feet.

We are also enclosing a copy of the message which was used at the time you received it. We have since modified the message to include seasonal information.

Thank you for bringing this to our attention and, if we may be of further assistance, please let us know.

Sincerely yours,

  
Jon B. Montgomery  
Superintendent

DX Listening Post  
1266 Riverview Drive  
Walnutport, Pennsylvania 18088

Dear Mr. Geary,

It was a pleasure to receive your report of reception of our signal on December 15 and 19, 1989. WSTK, Starlight 1290 is a non-directional station, broadcasting with pre-sunrise authority of 500 watts, daytime authority of 5000 watts, and post-sunset authority of 41 watts. Our transmitter is located in Colonial Heights, Va., just north of Petersburg. We are fortunate to have a Harris SX-5 solid state transmitter. Our single tower has an HAAT of 450 feet. Our STL is a brand new Marti model STL-10, so no quality is lost between the studio and transmitter. The only processing we are using currently is an Optimod 8000A in conjunction with an Audimax 4450A limiter.

Thank you so much for listening and taking the time to write. I hope to hear from you again in the future. Happy New Year!

Sincerely,

Chuck Mayo  
Operations Manager

Walnutport, PA 18088

February 8, 1999

Station Manager  
Radio Station W K N V  
P.O. Box 889  
Blacksburg, VA 24063

Dear Sir,

It is a pleasure to report that WKNV, Joy 890 AM, is being heard here in northeastern Pennsylvania at the beginning and closing of its broadcast day. I first tuned in on the evening of Friday, February 5, 1999, at 5:50 P.M., and listened to the program of Christian songs and sign-off announcement until 10 seconds before 6:00 P.M., Eastern Standard Time. WKNV was again heard the next morning from 7:16 until 7:25 A.M. with a program of gospel songs by a male quartet and an announcement at 7:22 A.M.; and then again on the evening of Saturday, February 6th, with a program of Christian songs from 5:48 to 5:58 P.M. and sign-off announcement at 5:53 P.M.

On each occasion, WKNV's signal was moderately strong and afforded good, clear reception at this distance from Fairlawn of 380 air miles. Your broadcasts dominated the 890 kHz frequency until sign-off, or until fade-out at 7:22 A.M. on the morning of February 6th, easily overriding all co-channel interference. The signal was steady, clean-cut and fully modulated. The tonal quality was excellent. There was no atmospheric static. It was a pleasure to hear WKNV reach out in a clear, enjoyable condition, and you are to be congratulated on the power and efficient operation of the transmitting equipment.

My receiver is a Hammarlund HQ-180 communications set, using 18 tubes. The antenna is a Model SM-2 Space Magnet, a rotatable 12-inch ferrite loopstick with 2 stages of preamplification. Ground connection is made to a well 175 ft. deep. I am situated in the northeastern part of the State of Pennsylvania, 60 miles north of the city of Philadelphia near Allentown, Pa., and 21 miles west of the New Jersey state line.

I would be happy to receive your reply, kindly confirming my reception of WKNV on 890 kiloHertz as reported above. Your verification of the fact that I heard your broadcasts on Friday, February 5th, and Saturday, February 6th, will be greatly appreciated for inclusion in my reception records. Return postage is enclosed for your reply. As evidence of my reception of WKNV, I give the following description of the programming to which I listened:

  - 7:01 to 7:03 A.M., News.
  - 7:03 A.M., Announcement: "It's a couple of minutes after 7:00 o'clock."
- Weather forecast: Sunny and breezy today, with a high around 68 degrees; partly cloudy tonight, with showers.

Please compare the data I have listed with your programming on the morning of Wednesday, March 17th, and if my report is accurate, kindly send me a reply to confirm my reception of WPIN-AM on 810 kiloHertz. I would also like to know the power of your AM transmitter. Your response to this request will be greatly appreciated for inclusion in my reception records, and return postage is enclosed for your reply.

I received WPIN-AM on my Hammarlund HQ-180 communications set, using 18 tubes. The antenna is a Model SM-2 Space Magnet, a rotatable 12-inch ferrite loopstick with 2 stages of preamplification. Ground connection is made to a well 175 ft. deep. I am situated in the eastern part of the State of Pennsylvania, 60 miles north of the city of Philadelphia near Allentown, Pa., and 21 miles west of the New Jersey state line.

Best wishes to you, Mr. Baker, and to the PAR stations for continued success in Christian radio. I hope to enjoy further reception of your broadcasts. I look forward to receiving your reply in confirmation of my reception of WPIN-AM on 810 kiloHertz, for which I thank you.

Very truly yours,

3/26/99

Mr. Geary:  
Most of your listening  
to WPIN-AM apparently  
due to Skywave. Thanks  
for listening. VA Baker

Dear Mr. Geary:

Thank you very much for your letter telling me that you received our traveler's information broadcast between 2:10 and 2:15 AM, Eastern Daylight Time, on May 2, 1988 on a frequency of 1610 kilohertz.

This letter is to confirm your complete and accurate reception of the transmitted message on the 1610 frequency and to express my appreciation to you for taking the time and effort to contact me about your reception of the message at a distance of 200 air miles from the sending station.

Concerning other information you requested, our transmitter has a field transmission strength of 10 watts and we use an antenna 41 feet in height. We are licensed by the FCC through the Department of the Interior and the Fish and Wildlife Service. We have not been issued any call letters for our station.

If I can be of further assistance to you, please contact me.

Sincerely,

*Robert E. Wilson*

Dear Mr. Geary,

You probably thought you would never hear from us again, and you had probably kissed your 22 cent stamp good-bye! Well, my timely return of your inquirey has nothing to do with the upcoming postal rate change, merely that things can get pretty hectic when you don't have the number of staff members that larger stations have.

I can't tell you how pleased I was to receive your letter, and yes, according to your program information, you did hear WMMM on 1430 kiloHertz.\* I plan on keeping your letter in order to show stubborn advertisers that our signal is stronger than they think ~~XXX~~ it is! We transmit on 1000 watts, which, as you know, poses no great ~~xxxxxx~~ threat to the larger Richmond stations, but serves us well in our attempt to be the community station for Ashland(city), Hanover(county). In October of 1987, we changed our call-letters and format from WIVE-Contemporary Christian to WMMM-Stardust Music(Big Band sound), while still maintaining some of the good Christian programs which you picked up that evening. We are currently on the air 7:00 AM to 6:00 PM. Thank you again for the letter, and sorry again for the delay.

Sincerely,

A handwritten signature in cursive script that reads "John Tindall".

Dear Mr. Geary,

This letter will confirm your reception of WHKT AM 1650 on the date you specified. We are currently testing our signal for WHKT.

The station will officially go on the air on or around April 1, 1999. WHKT is licensed to Portsmouth, Virginia.

It is a clear channel radio station which broadcast 10,000 watts during the day and 1,000 watts at night. During the day WHKT will reach Northeastern North Carolina and Southeastern Virginia as far as Richmond, Virginia.

We have been very pleased with the reception reports we have received. The programming for WHKT when it goes on the air will consist of sports, news, and talk with some ministry programs on the weekend.

We thank you for writing and confirming your reception of WHKT 1650AM on the radio dial.

Sincerely,

Susan Ervin  
Asst. Manager

Mr. Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Mr. Geary:

My apologies for the delay in responding to your recent letter concerning your reception of our station in Pennsylvania. The station is preparing for its FCC License Renewal Application and it has been quite busy recently.

From the description of the programming you heard on the morning of April 14, it was indeed Lite 102 you heard. We have changed the call letters and programming to a 100% simulcast operation with WJLT-FM. That became effective February 1, 1988. Also, Joe Beail, who was station manager for the past 12 years, moved on to a similar position at WKEU in Griffin, GA on February 1 as well.

It is quite interesting that our station can be heard clearly from some 260 miles away. It sounds like you have a keen ear for distant stations. I would be interested in knowing what other stations you hear from your "listening post."

Consider this letter a confirmation of your reception on WJLT on 810 KHz. I look forward to hearing from you again. Best wishes.

Sincerely,

C. Mark Garwood  
Operations Manager

---RECEPTION REPORT---

Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

From data submitted by you, this is to confirm your reception of WLEE,  
1320kHz, Richmond, Virginia at the following times:

February 15, 1989 - 6:00 am - 6:08 am operating 500 Watts directional  
February 18, 1989 - 6:00 am - 6:45 am operating 500 Watts directional  
February 18, 1989 - 5:23 pm - 5:43½pm operating 5,000 Watts directional

Please note WLEE, Richmond, Virginia, ceased operation on 1480kHz December  
31, 1988, and began operation February 1, 1989 on 1320kHz with 5,000 Watts  
directional daytime (500 Watts directional pre-sunrise) using facilities previously  
operated by WEET/WRJY/WANI.

November 27, 1993

Mr. Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Kermit,

What a surprise it was to get your letter this afternoon letting us know about your reception of WBLU "Lake Radio 880" in Moneta, VA. Your log of what we aired that afternoon is correct and accurate and we do confirm that what you heard came from our station.

To give you a little history of the station you received, we are a 900 watt station located on the north side of Smith Mountain Lake on Route 122. If you look on the map you will find 122 to run south out of Bedford, VA and extending through Smith Mt. Lake. We are at the corner of 122 and 655 just north of the bridge that crosses the lake.

Our transmitter is a Gates BC-1J capable of 1000 watts although we cruise along at just 900 watts. The antenna system consists of a guyed, shunt-excited, folded unipole that is 196 feet tall. The ground system consists of 120 equally spaced buried copper radials 85.3 meters in length plus 120 radials 15.2 meters in length around the base of the tower (I'm not an engineer.. I'm just giving this to you off of the license).

The station itself is only about two years old, however I have been here only about three weeks. My partner, Diane Newman and I are in the process of purchasing the station and right now are managing the station as the paperwork goes through the FCC. Diane followed her father into the radio business and I have been in it since I was fifteen.. about sixteen years now. We used to work together in Madison, Wisconsin at an FM station there--Diane was the General Manager and I the Programming and Operations Manager. After becoming good friends we decided to purchase a station of our own. Three years of looking led us to Moneta, Virginia and WBLU. In fact, the voice you heard reading the sign off was mine!

We are playing all Christmas music from now until Christmas day and will continue with the nostalgia based format after Christmas. You will hear news from the Washington Newsdesk (the company I worked for before coming to Moneta) at the top of each hour. I think that if you listen for very long you might say we have a pretty good radio station.

*Locally Owned and Operated*

Again, we were glad to hear from you and hope you can tune in again sometime. If you are ever in the Smith Mountain Lake area, please stop by.. we would love to meet you and show you the station. I have enclosed a coverage map and newspaper article telling you about the station ownership change. If there is any other information you would like concerning the station, just drop me a line. Hope to hear from you again soon--and hope you hear us!

Happy D-X-ing!

A handwritten signature in blue ink, appearing to read 'Jeff Raynor', with a long horizontal flourish extending to the left.

KERMIT GEARY  
1266 RIVERVIEW DR  
WALNUTPORT, PA 18088

Dear MR GEARY

Thank you for your letter reporting reception of WABS on  
11 FEB 91 at 0001-0018 . Your report agrees  
with our station log and you may consider this letter as  
verification of your reception.

WABS features religious programming with a mixture of syndicated  
and local programs, and contemporary music.

Our station began operating on November 7, 1946, with a power  
of 1,000 watts and the call letters WARL. The call letters  
were changed to WAVA in January, 1961, and to WABS in November  
1977. Power was increased to 5,000 watts in 1985. Our trans-  
mitter is located at the corner of Lee Highway (U.S. Route 29)  
and George Mason Drive in Arlington. Our studios are also on  
Lee Highway, about  $\frac{1}{4}$  mile west of the transmitter. Our antenna  
system is a unique two tower non-directional array. Also  
unique is that WABS is one of only 3 radio stations in the  
United States licensed to a county.

Enclosed is a copy of our program guide. Please enjoy our  
programs whenever you can.

Yours Truly,

Bill Ashley  
Chief Engineer

Dear Mr. Geary,

Many thanks for your reception report concerning  
WDCT's special DX Test.

This letter is to verify that you received WDCT  
from 1:12 - 2:00 a.m. on February 10, 1986.  
From 1:12 - 1:30, you heard us operating with  
5000 watts and our 3-tower daytime directional  
array, and from 1:30 - 2:00 you heard us operating  
with 1000 watts and a non-directional antenna.  
Transmitters used were a 1965 GATES BC5H (5kw) and  
a 1955 RCA BTA 1R1 (1kw).

Although reception conditions were somewhat poor,  
the test was fairly successful, with reports  
received from Massachusetts, Ohio, West Virginia,  
Tennessee, Pennsylvania, and Maryland.

Again, thanks for writing.

Sincerely,

David W. Schweikart  
Operations Manager

March 16, 1987

Mr. Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Mr. Geary,

I am pleased to confirm that you received  
WDCT at your location on February 16, 1987  
from 2:09 - 2:52 am Eastern Time.

Between 2:00 - 2:30, we were operating with  
5000 watts using our 1965 Gates BC5H transmitter  
and our three-tower daytime directional array,  
which creates an oval coverage area running  
roughly SW - NE across the Northern Virginia area.

Between 2:30 - 3:00, we were operating with  
1000 watts using our 1955 RCA BTA 1R1 transmitter  
and a non-directional antenna pattern. (Daytime  
backup equipment.)

In response to our special DX Test, we received  
reports from Massachusetts, Connecticut, Ohio, New  
Hampshire, New York, New Jersey, Illinois, Indiana,  
Kentucky, Virginia, and Colorado, as well as Ontario  
and Quebec in Canada.

Thanks for writing, and good luck with your

MR KERMIT GEARY  
R.D. 2 Box 298  
WALNUTPORT, PA.

I hope you will forgive me for not replying sooner to your reception report, but I imagine you are familiar with the normal 'broadcast day' of a radio station; particularly small stations.

Your letter was particularly interesting to me because it was the first one reporting reception during our daytime hours. All the rest of our reports have concerned reception during the experimental hours of from 1 AM to 6 AM EST.

This will confirm your reception of WDDY on Wednesday and Thursday, Nov. 21st and Nov 22nd. Thank you so much!

Sincerely  
Kenneth S. Bradby

THE BIG VOICE OF SOUTHWEST VIRGINIA

GATE CITY, VIRGINIA

December 16, 1959

Mr. Kermit Geary  
R. D. 2, Box 298  
Walnutport, Pennsylvania

Dear Kermit:

I would like to say reception verified. According to our Log, Radio Station WGAT 1050 kilocycle was on the air for a Frequency and Equipment Test from 12:01 AM to 3:16 AM, e.s.t., December 10, 1959, with music and a 1000cps tone, from approx. 12:14 to 12:36 AM, e.s.t., we used a 1000cps tone for Frequency check, which was reported to us as being  $\pm 0.5$ . Station breaks were given approx. every two (2) minutes during frequency test. The Station Breaks during the Frequency Test were Frequency Tests WGAT 1050 Radio from Gate City, Va. Outside of the Frequency Test with the above hours, we used different Station Breaks; such as, WGAT 1050 Radio serving beautiful Southwest Virginia and East Tennessee from Gate City, Virginia, and several others, and we played music and used a 1000cps tone for checking the equipment at different times.

I wasn't the one at the controls - it was one of our announcers who was helping me out that night, because I had to be up at the transmitter. His name is James Roberts. I am usually on. If you would like to listen in again, we have a Frequency test ever second Thursday of the month from 12:15 AM to 12:30 AM, e.s.t. Our next one is January 14, 1960. Am sorry that you couldn't get all of our program but we just don't have enough to compete with a 50 kw on the same frequency.

Well, a little about our Station - we began broadcast operation on July 24, 1959. Our transmitter is a 250 w, Collins 300-J-2 feeding a 148 ft. tower. Ground system includes a 24 x 24 ft. copper ground screen and 120 radials 235 ft. long.

We have our Studios downtown and operate transmitter by remote control with Rust remote equipment. Studio equipment includes Collins control board; Collins turntables and Ampex 601 tape equipment.

We have a very nice Staff of five. While am thinking about it, I was told that the Station was using the City Water System as a ground. I haven't checked into this yet, but my guess would be that it is just for the Studio.

Glad you took the time to report reception of WGAT. Hoping to hear from you again soon.

Sincerely yours,

*Richard P. Haslehurst*

Telephone 1500

January 30, 1958

Mr. Kermit Geary  
RD #2, Box 298  
Walnutport, Pennsylvania

Dear Mr. Geary:

Please accept my apology for not answering your letter at an earlier date but the press of previous commitments made this unavoidable. As you know, each new radio station entails much work in the beginning periods of its operation. We have been on the air since November 21, 1957 and are enjoying pleasant successes thus far. A number of reception reports have arrived and we are of course delighted to hear from you. Your report is correct and I am happy to hear that our signal was clear prior to WMLP of Milton, Pennsylvania.

WEER is located approximately 50 miles from the District of Columbia in the heart of what is generally known as the Hunt Country. Should you ever be down this way please stop in and visit.

Thank you again for your interesting and informative report.

Sincerely yours,

*Bernie Mahoney*  
BERNIE MAHONEY  
Station Manager

July 10, 1982

Dear Mr. Geary,

This is to acknowledge the letter you sent on May 4th. I regret that your questions were not answered sooner; only recently did your letter come to my attention. Please accept our apology for the delay.

Based on your careful record of our programming on May 3rd and May 4th, I can assure you that you were indeed monitoring our station during these times. Our station is the Washington area's only AM country station, operation twenty-four hours a day on 1310 khz.

Our chief engineer was not available to answer your questions, however, I believe I can give you most of the information you requested accurately. We are located approximately 20 miles southwest of Washington, DC, broadcasting at 5000 watts from sunrise until sunset. After dark we are required to drop our transmitting power to 500 watts. We are currently utilizing a Gates BC5H transmitter, with asymmetric modulation. Our transmitter drives a 4-tower antenna pattern, with height above average terrain being approximately 160 feet. Due to interference from another station in Norfolk, Virginia which is also on 1310 khz, our signal is quite confined. For this reason we were pleased to hear that our modulation and signal quality were good at your location.

It is not often that we hear from DXers like yourself, and we wish to extend to you our sincere thanks for your letter and interest in WEEL. Please feel free to write me personally if you have further questions concerning our technical facilities. I will be more than happy to answer any you may have. Again, let me say thank you, and I hope that we meet again on the airwaves.

Sincerely yours,

A handwritten signature in blue ink that reads "Peter J. Fakoury". The signature is written in a cursive style with a large loop at the end.

February 12, 1979

Mr. Kermit Geary  
RD 4, Box 321  
Walnutport, Pa. 18088

Dear Mr. Geary,

In reference to your letter of December 27, 1978, and your recording of our A.M. station, WGGM, in Chester, I'm pleased to verify without any doubt that this was our signal on December 25, 1978.

Our exact location is 37°22'58" north latitude and 77°25'32" west longitude - about ten miles south of Richmond, Virginia.

Our transmitter equipment consist of a Gates BC5P2, 5k transmitter using a 3CX2500F3 final tube plate modulated by a pair of 3CX2500's. R.F. power is series fed to a 353' vertical tower with a 163 ohm impedance. Our power input at the present time is 4427 watts, but will be increased by mid-year to 5000. The ground system consist of 120 copper radials 175' in length plus a 24' x 24' copper ground screen at the base of our tower. The ground system stays moist year round as it sits in what's almost a swamp. Modulation is limited to 100% negative and 125% positive (required by FCC) by a Gates Limiter; no compression is normally used for better dynamic range and a better natural sound.

If you are up on your electronics and like to play with calculators, you will find that our antenna current at the base is 5.21 amps of R.F.  $I^2 \times R = \text{watts}$ .  $5.21^2 \times 163 \text{ ohm} = 4424$  or 3 watts under 100% power level. R.F. within 20 or 30 feet of the tower is so intense it will light a 40 watt fluorescent tube to full brilliance when held up in your hand, a very interesting effect.

Thanks for writing and good listening.

Michael Melnyk, Jr.

Chief Engineer

Kermit Geary  
R.F.D. # 2  
Walnutport, Pennsylvania

Dear Mr. Geary:

This will verify your reception of our station on the morning of 7 March 1946 during the hours from 0146 to 0212. The announcements and musical selections given in your letter have been checked against our program log and found to be correct.

Thank you very much for the nice letter of verification you sent us. It was very encouraging since we had not taken to the air on a regular broadcast schedule at that time and didn't know too much about just what the regular operation of the equipment would prove. We started operating on a regular broadcast schedule on 9 March 1946 at 0630

Just in case you might be interested in knowing something about the type of equipment we are using down here on this end of the line, I am sending along a brief description.

Both our transmitter and studio console are of composite construction. We designed and built them here. So far we are pretty proud of them. The console has a overall frequency response of 35 to 17,000 cycles within plus and minus 1.5 db. The transmitter is flat from 35 to 8,000 cycles within 1 db. The transmitter is feeding a 180 ft lingo tower.

Many thanks for your very excellent report and may I extend the best wishes of the entire staff for your continued good DXing.

Sincerely,

*Rex C. Houser*

Dear Mr. Geary:

301 West Main Street

Thank you for your visit to the Chamber office today. Listening to your tape recording of the broadcast was quite exciting to know that you picked up our radio station 160 am WPJM404 in far off Pennsylvania. I estimate the watts to be 20 per station.

Waynesboro VA 22980

The system was developed for the tourism program for Waynesboro and Augusta County, with VDOT and the city of Staunton as partners. To our knowledge, this is the first such system in the state of Virginia. We have five stations in the area, all broadcasting the same loop message.

Phone: 540 949 8203

Fax: 540 949 7740

Thank you again for your interest.

Sincerely,

Maureen A. Kelley  
Executive Director

October 7th 1947

Kermit Geary  
R.F.D. #2  
Walnutport,  
Pennsylvania ?

Dear Mr. Geary;

Thank you very much for your report on our Equipment Test program of Sept 25, 1947. Your report as far as we can tell is correct in every detail.

Our transmitter is a Gates, 1000 watt job, connected to a 205 foot antenna that is erected in the middle of a salt marsh.

Your report and others like it were very helpful to us in determining whether the extra trouble and etc. that was involved in putting the equipment in a salt marsh in order to get the best possible ground system, was justified. So thanks again.

Very truly yours,

Orville K. Gibboney, Chief Eng.

P.S. Sorry I dont have reg. Ver. cards

Walnutport, Pennsylvania

Dear Mr. Geary:

Letters like the one we just received from you this morning are always welcome.

We are pleased to verify your report and thank you for the fine report that you gave us.

Perhaps you would like to know something of the line-up of equipment here. So, I shall give you a brief description.

We are using a modified Tempco GSC 250 transmitter, with a pair of 810's in the final stage, modulating with 805's. Transmission line is 7/8" coaxial cable underground to a 200' Blaw-Knox tower. Our control console was designed and built up by Mr. Cole, owner-manager. It is a very nice job and easy to operate.

Some of the other reports that we have received from up that way mentioned interference from a couple of the stations that you were hearing. I believe about two or three others reported interference from WJLB and WXAL.

Wonder if you heard us on the last three mornings? We have been on with equipment tests every morning since Friday. If you have heard us, we shall be glad to receive further reports on our signals.

Thanks again for writing us, and our best regards to you.

Sincerely yours,

*William D. Gregory*

Dear Mr. Geary:

This is in response to your letter dated October 23 concerning WGO-848.

As you can see from the enclosed list of Richmond-area radio stations, I know of no such station.

Since you mentioned that you heard the message "This Traveler's Information Station WGO-848 is operated by Richmond Convention & Visitors Bureau ..." I am forwarding your letter to Lisa Smith of the Metro Richmond Convention & Visitors Bureau (555 E. Marshall St., Richmond, VA 23219, 800-370-9004).

Hopefully, she will be able to assist you with information on the radio messages you have been receiving.

Sincerely,

Julie C. Grimes  
Editorial Services Manager

Post Office Box 369 • Bristol, Virginia 24203 • (703) 669-6950

Dear Fellow DXer:

This is to confirm that the station you heard on February 13, 1993 was WZAP.

WZAP operates on Canadian Clean frequency 690KHz with 10,000 watts of power from local sun-up to sun-down with a Continental 316F-1 10KW AM transmitter. Pre-sunrise and Post-Sunset, WZAP operates with a 25 watt LPB transmitter. Our antenna is a 280 foot guyed vertical tower and is non-directional. Our studios and transmitter are located at 180 Wallace Pike, Bristol, Virginia. Our format is Christian/Southern Gospel.

Enclosed is a copy of our rate card which shows our coverage area.

Thank you for your report and your interest.

Sincerely,

  
John J. Faniola  
Chief Engineer

WLTP, 1450 kiloHertz;

Sunday morning, February 4, 2001,

1:34 to 2:05 A.M., Eastern Standard Time:

- 1:34 A.M., Announcement by a male announcer of a program heard "every weekday right here at 8:30 A.M. on WLTP, brought to you by ....." (I missed hearing the sponsor's name clearly.)
- 1:38 A.M., Advertisement of an Ohio Valley "Industrial Bank".
- 1:42 A.M., Male announcer mentioning "24 hours-a-day".
- 1:43 to 1:58 A.M., Talk programming.
- 1:58 A.M., Announcement by a woman, following 3 quick tones, about the benefits of the Alliance for an Affordable Health Care Plan.
- 1:59½ A.M., Weather forecast by a male meteorologist.
- 2:00 A.M., Announcement by a female announcer:  
"This is WLTP, Parkersburg, the only station you hear ..... with Doctor Laura Schlessinger's program nationwide, weekday mornings ....."
- 2:00 to 2:05 A.M., News.

If the above information accurately reflects your programming on the morning of Sunday, February 4th, kindly send me a reply to confirm my reception of WLTP on 1450 kiloHertz. Your response to this request will be deeply appreciated. You will be interested to know that I have a printed verification (QSL) card in my files that confirms my reception of WPAR, WLTP's predecessor, on January 26, 1936. WPAR was then operating on a frequency of 1420 kilocycles with a power of 100 watts. If you are interested, I can send you a photocopy.

Best wishes to you, sir, and to WLTP for continued success in broadcasting. I hope to hear your signal on future occasions when atmospheric conditions are favorable. I look forward to receiving your reply in confirmation of my reception of WLTP, for which I thank you.

Very truly yours,

Kermit,

Confirming the above to be true and accurate with our station logs..Sounds like you have been into this for some time.....Hey, I would be very interested in seeing that old QSL card.....TNX

Mr Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Kermit,

You caught me. This is to confirm your reception of WWVT on January 16, 2002 between 17:59 and 1808 hours. I sit here red faced as our transmitter computer system failed to change power at 1730 hours that day when it was supposed to. So we were still on daytime power when we were not supposed to.

Thank you for your report. I don't see as many report as the days when AM was on top of its game. It is good to see there are folks still out there chasing AM DX.

WWVT is owned and operated by Virginia Tech. It is 2800 Watts daytime with 500 Watts PSRA and 45 Watts PSSA. We use a Continental 315R transmitter, CRL shortwave type processing and a series fed 195 foot radiator.

Thanks for your report!

Sincerely,

A handwritten signature in blue ink, appearing to read "J. Paxton Durham".

VERIFICATION OF RECEPTION

MR. KERMIT GEARY, WALNUTPORT, PA. THANK YOU for  
your report of reception of this station. Your report  
checks with our program log for June 26, 1948  
from 2:40 AM to 3:03 AM EST.

WVEC operates regularly during daylight hours on  
1050 kilocycles with 250 watts power output. The ant-  
enna is a series-fed, vertical steel radiator 220 feet  
high. The transmitter is a Raytheon type RA-250.

James E. Swafford

Thanks for very nice report, OM.

# We're Virginia's Best Kountry

November 27, 1981

Dear Mr. Geary,

This will verify the probable accuracy of your listener report of October 21, 1981. We were indeed on the air at that time and were broadcasting with a 1000 Hertz tone at the time. Lacking an indication of station identification I cannot of course state for sure. We do transmit a station ID before and after transmissions of this type as a matter of policy and in compliance with FCC regulations.

Thank you for your report and your interest - we broadcast monthly between 1245 and 0100 am with test tone - usually up somewhat earlier with music modulation on the third monday of each month. Normal hours of operation are daylight only with 1000 watts into directional antennas.

Good Luck and Good Listening,

Richard E. Sanderson  
Chief Engineer, WVBK AM Radio

Mr. Kermit Geary  
R.D. 2  
Box 298  
Walnutport, Pennsylvania 18088

Dear Kermit:

Thank you for your excellent reception report. I am always amazed at the accuracy and detail to which members of the International Radio Club of America display. Your radio log, needless to say was accurate, to a high degree.

Just to clear the record it's Wynne Wright Chrysler Plymouth instead of Wain Wright, and another one that gave us a chuckle was Kim Knott, which is actually Kimmach Ford. Thought you might like know that in case you might like to buy a car.

By the way WVAB is totally automated using a Gates Automation System and a Gates BC-5H 5000 watt transmitter.

Thanks again for the report.

I remain

Donald W. Beckstrom  
Station Manager

Walnutport, PA 18088

Dear Mr. Geary:

Thank you for your October 23, 1999, letter verifying reception of VDOT's highway advisory radio station, WQO848, on 1620 kHz from October 18 through October 22, 1999. The programming you indicated is correct. In response to your question regarding transmitter power, the station operates on 10 watts.

On July 1, 1999, our contractor placed the sites in operation. I have attached a map of the region showing our five transmitter sites and sign locations for your information.

Our partnerships with the regional tourism agencies are being finalized. The Metro Richmond Convention and Visitors Bureau will control the Ashland, Oilville, and Bottoms Bridge transmitters. The cities of Hopewell and Petersburg are working with Pamplin Park Civil War Site to control the Carson and Chester transmitters. VDOT will have pre-emption rights over all transmitters during traffic emergencies.

Thanks again for your interest, and feel free to give me a call at (804) 524-6127 if you have further questions or comments.

Sincerely,

A handwritten signature in blue ink, appearing to read "Robb Alexander".

# WIVE

1430 kc • ashcake road • p. o. box 452 • ashland, virginia • telephone 798-8484

**Mr. Kermit Geary**

**R. D. #2**

**Walnutport, Pa.**

Thank you very much for your letter reporting reception of Radio Station WIVE. We are always pleased to know of the facts, location, conditions, strength and clarity of the reception of our signal.

We confirm your reception of Radio Station WIVE as stated in your letter.

WIVE is located 11 miles north of Richmond, Virginia . . . and about one mile south of the Town of Ashland, Virginia, which is our licensed site. We believe that you will be interested in the technical conditions of our transmission, as follows:

Transmitter: Gates BC-1T operating @ 1000 watts.  
Tower: 180 feet above base insulator. Guyed.  
All equipment, studios and offices in one building.  
The transmitter is fed from a standard limiting amplifier, sequentially preceded by a 'Sta-Level' type of limiter receiving audio from a Gates 'Yard' console.

Again . . . thank you for your kindness in reporting reception of Radio Station WIVE on 1430 kilocycles.

Cordially yours,

*Raymond F. Schmitt*

January 24, 1986

Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Mr. Geary:

Thank you for your wonderful letter. We were delighted to receive your report of picking up our broadcast all the way up in Pennsylvania. As we read the first page, we were so excited to hear such a glowing report on our new station, but unfortunately, as we continued on the second page, we realized that you must be referring to another station.

We are, indeed, WHRQ-AM broadcasting on 1320 kiloHertz and a daytime station, signing on at 6:00 A.M. and signing off at 5:15 P.M. EST. However, we are not programming a Christian format. We are an adult contemporary station broadcasting at 1,000 watts daytime and 500 watts presunrise.

Perhaps you were listening to WBRG-AM or WRVL-AM, both of which are Christian stations broadcasting in Lynchburg. We did not end our broadcast with the description you gave us on January 18, 1986.

Sincerely,

*Mary Tinsley*

Dear Mr. Geary:

This will confirm your reception of WBBI radio, Abingdon, Virginia on the morning of April 8, 1986.

At the time indicated in your correspondence we were ending a regular agricultural news feature program "Agrinet" and had aired a promotional announcement for an upcoming sports broadcast that afternoon.

Thank you for tuning us in! It's a pleasure our quality broadcast is appreciated.

Very truly yours,

R. Shane Southern  
General Manager

Kermit:

Please accept this as verification of reception 11/5/85.

At the time of reception, we were operating at full daytime power of 5,000 watts. As noted, our format on AM is country, with Sunday being religious and public affairs programming for the most part.

Our sister station, WOLD-FM operates at 102.3 MHz and programs in a contemporary format. FM operates 6AM-midnight, while AM is 6AM to local sunset.

Thanks again for the tape, and your reports (I did find another from 12/4/83 in our files) and continued success in your DXing efforts.

Sincerely,

Kevin Soos  
Director of  
Computer Operations

Dear Mr. Geary--

I am pleased to confirm your reception report on WNIS dated November 29-30, 1979. You might be interested to know that on the fringes of our listening area, we often get complaints of interference from WSLR in Akron.

A little bit about our station--we operate at five-thousand watts, with a CCA Electronics AM5000DS transmitter as our main; and an RCA BTA5U as an auxilliary transmitter. We have a three-tower directional antenna array, with seperate patterns for day and night operation.

I'm enclosing a rate card from our advertising department that includes a small coverage map and program schedule.

Thanks again for your interest in WNIS

Sincerely,

Doug Boynton  
Operations Manager

Dear Mr. Geary:

This is to verify your reception report on W Y T I for Sunday, February 9, 1958.

It was a pleasure to hear from you and to hear such a favorable reception report, which incidentally, was 100% correct.

As a matter of information to you and any other NRC members, if you care to pass it on, W Y T I conducts a scheduled frequency test transmission on the second Tuesday of each month from 12:10 AM until 12:20 AM. Modulation consists of transcribed march music with voice identification.

Thank you again for your fine reception report.

Yours very truly,

William M. Farley

Chief Engineer

Dear Kermit:

This will acknowledge receipt of your letter dated March 24, 1953. I am very happy to be able to give you a reception verification.

We were on the air for a frequency check from 1:45 til 2 AM with a 1000 cycle tone broken every three minutes for station identification which went as follows: "This is WPUV, WPUV in Pulaski, Va. making a frequency check" and we signed off with "This is WPUV in Pulaski, Va. operating on 1230 Kilocycles with a power of 250 watts. This completes our frequency check."

Your report was most accurate. Incidentally, our monthly check falls on the 2nd. Tuesday of each month.

Pulaski is located in the Southwest section of Virginia approximately 40 air miles from Roanoke.

I appreciate your report and want to wish you continued success.

# WPMH AM 1070

Nov 26, 1981

Dear Kermit,

This is to confirm your reception of WPMH on Nov 16<sup>th</sup> at 4:56 P.M. It would be interesting to note if you are able to receive WPMH after we've repaired our antenna system that was damaged due to vandalism. We have been operating with parameters at variance for several months now. Our new pattern puts excessive radiation in the northern direction. The 90 true north radial should be about 7 mV/m but is 44 mV/m. We are in the process of determining the cause of phase & power shifts in our pattern. Hopefully, we'll be back to normal by Jan 1, 1982.

Sincerely,

John Kruger  
Chief Engineer

804-693-2105

04 February 1989

Kermit Geary  
1266 Riverview Drive  
Walnutport, PA 18088

Dear Kermit,

In response to your letter dated January 24, 1989, this is to confirm your reception of WXGM at 1420 kilohertz on January 15, 1989 and on January 22, 1989. WXGM operates a Gates BC-1J transmitter from a 150' tower (155' overall) with a ground system of 120 buried copper radials 170' long, plus 120 radials 50' long. We are also operating with a recently installed di-pole apparatus on our tower.

On January 15, 1989 from 5:14 P.M. to 5:14:30 P.M., WXGM was operating at full licensed power of 1,000 watts. Most assuredly you lost our signal at 5:15 P.M. when we lowered power to our post-sunset output of 73 watts (nominal).

On January 22, 1989 from 6:15 A.M. to 6:16 A.M., we were operating at our pre-sunrise authorized power of 500 watts. The operator on duty should not have been playing Count Basie and his Orchestra, however the commercial announcement you mentioned was indeed broadcast by us.

Additionally, reception of WXGM from you letter dated November 28, 1988 is also confirmed. I apologize for the delay in confirmation. We have only recently changed format and the response has been overwhelmingly positive, causing us all alot of unanticipated, additional work.

Please keep us appraised of any additional reception of our station. We have quite a few upgrades planned for 1989, both technically and in programming.

Sincerely,

  
Harvey C. King, Jr.  
Operations Manager

V A

November 28, 1949

Mr. Kermit Geary  
 R.F.D. # 2  
 Walnutport, Pennsylvania

Dear Sir:

Thanks for the very complete report on the reception of WROV on November 26, 1949. Your enclosed log checks with our program log of that date.

Our sky wave is apparently much stronger than the ground wave as we have considerable "monkey chatter" behind our signal about 6 miles out from transmitter. The antenna (192 ft.) is shielded by surrounding terrain on the East and North for 1/2 to 3/4 the height of the tower. However, we are a few hundred yards from a river, about 500 feet from an electric railroad, and have part of the ground system buried in a swamp. Take your pick as the contributing factor.

The transmitter is a W. E. 451-A-1 250 watter using 6-242-C (211) tubes, grid modulated. It is practically impossible to modulate 100% but we ride it as high as possible.

I recall some correspondence from your city some time ago, but it is on file at the transmitter. I will check and see just who it was from. We have received some requests for verification which name the Mutual Programs only and then state that the sign-off was the Star Spangled Banner. We have to discount these, of course.

There is no doubt about your report, so thanks again for your nice letter and comments.

Very truly yours,

## CENTRAL VIRGINIA BROADCASTING CO., INC.

ADDRESS TO: P. O. BOX 730

GRETNA, VIRGINIA

Oct. 31, 1956

Dear Kermit,

Glad to hear from you, yep you got us ok. Glad to know that we were coming in so well. The report that you gave us jives with our station log. That is what we ran every day during the month of Oct. We are a daytime station and starting tomorrow we sign off at 5:15. As you already know we are lkw, and by the way we are directional.

We are using all Gates equipment and we have been on the air since August 11, 1956, so you see we are still kinda new.

I am enclosing a coverage map of the station, so you can see what we are supposed to do.

Hoping to hear from you again, I am,

Sincerely,

*Charlie*

VERIFICATION OF RECEPTION

ON: Sept. 12, 1984

Thank you for your letter detailing reception of our broadcast on the above date.

WMZQ operates at an assigned frequency of 1390 KHz with a power output of 5,000 watts, 24 hours a day. WMZQ broadcasts with a directional antenna system utilizing different patterns for both day and night operations. Our array employs four 200 foot towers in line on a bearing of 108 degrees located just north of Falls Church, Virginia at a mean ground elevation of 368 feet.

Good luck to you with your DX'ing, and remember that Washington's best country music is located on WMZQ, FM 98.7 and AM 1390.

Sincerely,

*Jonathan M. Hardee*

Jonathan M. Hardee  
Assistant Engineer

JH/vs

Dear Karmit,

Sorry I took so long to reply - we have been quite busy here getting ready for the installation of a new transmitter & stereo exciter & we will be programming country music in stereo by the first of the new year (power output will remain @ 5kW)

Mr. Kermit Geary  
R. F. D. # 2  
Walnutport, Pa.

Dear Mr. Geary:

Thanks a million for your unusually complete report of reception of WAFC's signal. I am surprised but delighted with the 50 microvolts of signal which you were able to record. However, we have had reports of very clear reception as far as Iowa and Vermont.

W A F C is pleased to verify your reception of our signal from 4:43.....A M to 4:51.....A.M 11-3-54.....E Standard Time. Thanks for your interesting report.

Thanks for your best wishes to all our staff. We are all appreciative of the fine comments which you made in your complete report.

We wish as much for you, and hope you will reach your goal in receiving your long log of stations throughout the country.

The transmitter of WAFC is a Gates Model BC-1F, with a power of 1,000 watts operating on 900 Kc. with high level modulation. Our antenna is a triangular cross section guyed with a breadth of 22 inches and a height of 255 feet.

Wishing you every success in completing your desired list of stations, we are,

Cordially yours,

Staff of  
RADIO STATION WAFC

Dear Sir,

We received your reception report for November 1, 1951 and wish to verify it. There has been a delay in answering due to the large volume of mail we are receiving.

The W A N T transmitter is located on Belle Island in the James River near the Lee Bridge. The transmitter is Western Electric 353-E1 with direct crystal control. The final is two 500 watt tubes (W.E. 279's) with low level modulation. The antenna is 300 ft. uniform cross-section, guyed, series excited, vertical radiator Ground consists of 120 radials 300 ft. long and 120 radials 30 ft. long of buried copper wire.

W A N T operates on EST daytime schedule (6:45 AM to 5:00 PM) through November. There is no regularly scheduled night test and frequency checks are made during regular broadcasting hours by Hutton Monitoring Service of Catonsville, Md.

Thanks for the information and may your DXing be good.

Sincerely,

*S. J. Bell*

Chief Engineer.

*It was a pleasure to served so many dxers

# WAVY

*NBC Radio — In Norfolk, Portsmouth, Newport News, Virginia*

WAVY BUILDING, NORFOLK - PROFESSIONAL BUILDING, PORTSMOUTH

Dear Sir:

Your report on the reception of our signal was very much appreciated. The listings you offered for verification have been checked, and found correct.

Our equipment consists of a Collins Type 21-B 5 Kilowatt main transmitter, and a Collins Type 20-V 1 Killowatt auxiliary (stand-by) unit.

The antenna system consists of three 200 foot towers in a line. This line falls  $305^{\circ}$  East of true North. We radiate two different directional patterns, one daytime, and one at night.

Our transmitter is located in Norfolk County Virginia about five miles from down town Portsmouth, and about seven miles from down town Norfolk.

Our station, previously WSAP, has changed its call letters to WAVY and is now an affiliate of NBC.

Thank you again for taking the time to let us know that we have been heard in your community.

Sincerely,

Walnutport  
Pennsylvania

Dear Mr. Geary:

This is to acknowledge and verify your reception of our signal from 3:11 AM to 3:45 AM EST on the day of January 23, 1949.

The transmitter in use at WAYB is a Western Electric type 451A-1, using direct crystal control. Using in the final stage six (6) W. E. 242-C, 50 watt vacuum tubes for grid bias modulation, with a maximum rated carrier output power of 250 watts.

Associated gear used with this transmitter is as follows:  
Western Electric antenna tuning unit type D-97200 into a vertical antenna of the Windcharger type, 180' (185' overall height) of uniform cross-section, guyed, series fed. We use a ground system of 240 radials 1/4 wavelength long of buried copper wire and a 50' square ground screen.

We employ a Western Electric limiter type 1126-C, a General Radio frequency monitor and a General Radio modulation monitor in conjunction with the above transmitter.

At the present time our frequency checks and equipment tests are not made on a definite schedule. We thank you for listening and for your reception report.

Very truly yours,

January 25, 1982

Kermit Geary  
R.D. 4, Box 321  
Walnutport, PA 18088

Dear Mr. Geary,

This will confirm your report of reception of Radio Station WBLT, Bedford, Virginia, 1350 KHz on the morning of January 18, 1982.

At that time WBLT was conducting a Proof of Performance test consisting of a series of 50 Hz to 7.5 KHz tones, on for a short time and then off, which I'm sure made listening more difficult. I also used a couple of musical selections and voice ID at varying intervals.

As of February 9, 1982, WBLT will have been on the air for 32 years, starting with 250 watts on 1490 KHz. At present the station operates with a power of 1000 watts and uses a Gates BC1G transmitter feeding a 215 foot non-directional antenna. The call letters were derived from a slogan the Town Fathers came up with years ago: World's Best Little Town. (We still like to think it is).

Thank you for your report of reception. Also, thanks to the National Radio Club for listing the test in "DX News". This resulted in too many replies to answer each one individually, hence, the form letter.

Best DX and 73.

Kermit,

I promised...and now I am fulfilling that promise. Here is the confirmation letter you requested! It took us awhile, but they say better late than never, right?

It was great to receive your letter, and even better to meet you in person and learn about your club. I found it very interesting, and our Station's General Manager Paul Sexton was very sorry he missed you. Anytime you are in the area, feel free to stop in!

We just recieved our bumperstickers today, and I am enclosing one (along with another coverage map) with this letter.

WCRR - "66-Country"- signed on the air May 15, 1985 at 250 watts. In December, we recieved authorization to increase our power to 550 watts. At present time, we are doing the ground work to apply for an FM frequency, and hope to receive one within two years.

WCRR AM 660 plays 14 - 16 songs an hour - thus our "more music station" slogan. We follow a totally Country format...playing 4 - 5 current titles an hour, mixed with recent hits and memories from as far back as the '50's. We are a daytime operation, broadcasting from sun-up till sun-down.

I hope this information will be usefull to you. If you need anything else, just let us know....and as I said before, if you're ever in the area.....

Sincerely,

David Noonkester  
Program Director

Dear Sir:

I am very glad to verify your excellent report of reception of WFAX on March 15, 1949 during our test broadcast 0414-0512.

"Dusty" Rhoads is one of our regular announcers who volunteered his services during the test. He also heard from his relatives in Pa. The DX tips were read by our local DXer, Harold Schrock. Also you heard a local talent show during this test broadcast.

The March 15th test will be the last test of this DX season. At the present time we do not have any other periods set aside. If you should tune in WFAX again we would be very pleased to hear from you.

Good DXing, 73,

Hello Kermit,

Just a quick note to say, yes, we received your letter and the information you relayed to us was correct. It was ironic that your letter arrived when it did, as December 15th was the day that WEXM was sold to us and as you can see by the letterhead, we are now WKRE. The mornings you mentioned hearing us was a mistake on the part of the morning announcer. It had been a policy by the individual to sign on the AM when he signed on the FM at 7 A. M. This was completely illegal as we are a daylight station and legally cannot sign on until daylight, that being 7:15 A.M. in December. Thanks to your letter, he was made aware of his mistake. We would have found the mistake in time, as the new owners and management have a bit more interest in the station, moreso, than the previous owners did.

I have enclosed some P. R. material for your interest, and should you receive us again, am or fm, please let me know. If you are in the area ever, drop in and see us. Best regards...

Sincerely,

Richard J. Shingleton  
General Manager

Walnutport, PA 18088

Dear Mr. Geary,

Thank you for your letter concerning reception of WSLC in your area. We are, indeed, on 610 kiloHertz with a daytime power of 5000 watts and night-time of 1000 watts. Power change time in January is 5:30PM, which is why you lost our signal. We will stay on full power until 6PM in February and increase a little each month until July when we change at 8:45PM.

Your log of programming corresponds with our logs of January 21 and 22, so you undoubtedly were in-tune with WSLC. I appreciate your listening and your response, and do hope you will be a listener whenever you can.

Mr. Hawk is no longer with us and Paxton Durham is our Chief Engineer.

Sincerely,

A handwritten signature in cursive script, appearing to read "George Gillock", is written over the typed name.

September 30, 1954

Mr. Kermit Geary  
RD 2  
Walnutport, Pa.

Dear Kermit,

Just received your DX report in the morning's mail and thought I would take time out right away to reply. First, for the record, your verification:

This is to verify your report of reception taken of WSIG on the morning of September 28, 1954 from 558 to 617 A.M. EST. Your report of reception was 100 percent correct.

That covers the "official" part of my reply. Thanks for your kind remarks about our signal. We are glad to know we get out so well. My wife and I visit Harrisburg, Pa. and WSIG puts in a fine signal there, but as you state, WTAR gives us trouble. I am a bit surprized that in your area WEAN in Providence doesn't begin to rear its ugly head, but I presume they use a directional array which precludes reception in a southwest direction.

There is no doubt about it, I've found that NRC Club members submit far better and more complete reports than independent DX'ers or members of other clubs. NRC must be a good influence. By the way, I am planning a nice DX card or letter which I hope to complete fairly soon. I will send you a copy when it is complete.

Being fairly new at my job most of my attention has been on station business, so I have had no chance to do any DX'ing thus far. I have an ll tube National which is a fine set. Right now it is getting an yearly physical in Winchester, but as soon as I get it back I hope to be in business. I'm not much of an engineer, but I am told it won't be much of a trick to hook our tower up as an antenna, and that should really do the job on BCB.

If you ever take a trip into this area I hope you'll take time out to stop in and say hello. Got a letter the other day from one of the prominent club members (name escapes me) who had passed through the area, but he didn't have time to stop by.

Thanks a million for your report, and write again when you have the chance.

Radio cordially,

*Phil Potter*

December 18, 1981

Kermit Geary  
R.D. 4 Box 321  
Walnutport, Penn. 18088

Dear Kermit;

This will confirm your reception of WLRV on December 11, 1981, from 5:12 PM to 5:15 PM EST.

WLRV operates with 1000 watts daytime only, non-directional. The transmitter is an RCA BTA-1R1. Our modulation is highly processed with positive modulation peaks of 120%. This high level of modulation with the proper atmospheric conditions were the probable reasons you were able to copy WLRV through all the QRM.

The tape recording of WLRV's reception was enjoyed by the staff and management, and is concrete evidence of your reception report.

Thanks for this fine reception report and good DXing in the future. Merry Christmas and Happy New Year.

Best regards,

*Mitch Sandidge*

October 19, 1960

Mr. Kermit Geary,  
R. D. 2, Box 298,  
Walnutport, Penna.

Dear Mr. Geary,

Your nice letter of the 16th to Mr. Bill Montgomery was turned over to me for reply. I also was on duty that same morning and can also verify your reception of WKCW.

You are absolutely correct in your description of the program matter for the time period of 6:00am to 6:16am inclusive, E.S.T., for the date of Sunday, October 16th, 1960.

Mr. Montgomery was very pleased with your comments upon his program, and said to express his heartfelt thanks.

The transmitter here is a 5-Kw Gates BC-5P, and we use a Gates Sta-Level Audio Amplifier in conjunction with a Gates Audio Limiter.

The tower is 205 feet high, and is located some 0.2 miles north of the town of Warrenton. The Studios are about 0.4 miles from the transmitter and we operate by Remote Control.

Thank you very much for this fine reception report.

Yours sincerely,

Stephen J. Hart  
Chief Engineer

Dear Mr. Geary;

Thank you for reception report of 25 November, 1967. Please pardon the delay in responding to your report; I was out of town at the time and the letter got lost in the office before I returned several weeks later. You may consider this letter as verification of your report.

WKBY operates with one thousand watts, non-directional. Our tower height of 236 feet gives us a radiation of 191 mv/m/mile/kw. Our transmitter is the Gates Vanguard II, transistorized unit. Most of our other equipment is also transistorized, with CBS, Ampex, and Gates brands represented.

Our building combines studio, offices and transmitter, with eleven rooms, and is located three miles south of Chatham, at the Banister river.

You are invited to listen to WKBY's sister stations, WFMC, 730 kHz, Goldsboro, N. C.; WKYX, 570 kHz, Paducah, Ky.; and (when I get it on the air shortly) WASC, 1530 kHz, Spartanburg, S. C.

Thank you again for your report; it is always a pleasure to receive reports from members of NRC. I was a member for several years back in the late fifties, but had to drop out for lack of time to devote to DXing. If you ever have occasion to pass through southside Virginia, drop in to see us.

Yours truly,

January 6, 1978

Mr. Kermit Geary  
R.D. 2, Box 298  
Walnutport, Pa. 18088

Dear Mr. Geary:

This is to verify your reception of our station on Dec. 21, 1977. I have checked our program log and according to it your report is totally accurate.

Your reception report is one of several I've had from the Pennsylvania-New York area. I still find this most interesting. As you can see from the enclosed coverage area map we are a directional station covering an area mostly south of us. Also to date I have had no reception reports from locations south of us. Very strange indeed.

I see from your letter that you are from Northeastern Pennsylvania. Would you be anywhere near Stroudsburg? The reason I ask is because my wife-to-be is from there.

Anyway in addition to the coverage area map I have enclosed my card. If you are in need of any other information or if I can be of any help in any way please feel free to contact me.

Sincerely Yours,

*Roy Moore*

reception.

Thanks again for the signal report and  
congratulations on being one of the very  
first to write us.

Sincerely yours,

Bob Koolage, Jr.,  
Assistant General Manager.

Dear Mr. Geary:

I would like to thank you for your reception report on our program test for January 15th. Please consider this letter a confirmation of the reception.

I hope you will forgive the form letter but in the interest of time, I am writing this way.

Below please find a list of all areas from which we received reports of reception:

Wilmington, Delaware	University City, Missouri
Tampa, Florida	Lincoln, Nebraska
Rockton, Illinois	Alden, New York 2 reports
VillaPark, Illinois	Warren, Ohio
Gary, Indiana	Hatfield, Pennsylvania
Valparaiso, Indiana	Walnutport, Pennsylvania
Bradford, Massachusetts	Yardley, Pennsylvania

I enjoyed reading your comments and thank you again for your interest.

Sincerely,  
  
Keith Vollnogle

Dear Mr. Geary:

My name is Phil Badger and I am writing you this note to confirm your reel to reel tape recording of our A.M. Sign OFF. R.J. and myself listened to your recording in our production room--R.J., being quite busy with promotions and the like asked me to drop you this line. I am the announcer that works the mid-day to six shift and it really tickles me that the signal from A.M. transmitter can reach into Pennsylvania. I Have been with the station for about 4½ years and I like answering letters your nature and am really sorry that our old management ignored them.

I am jotting this down while I'm pulling my air shift but I'll give you some information about our transmitter. It is a Gates Model BC-500-CY manufactured sometime around 1949. The transmitter is just about completely tube type and it sits in the rear of our building hooked to a 2 tower directional antenna. From what I know about it, it seems to be the most reliable piece of equipment in the station and has been serviced on only about 8 times in the period I have been with the station.

I am happy and glad to answer your letter and if you would like any other information about the station or transmitter, feel free to give a call or drop me a card. Thanks for letting us hear from you.

Sincerely,

Phil Badger

Dear Mr. Geary:

This letter is in reply to your letter which we received today.

This will verify that our program log reflects that you did receive our signal at 6:27 A.M. on January 19, 1958 as were broadcasting the program referred to in your letter at that time.

Very glad to hear from you and I'm sure I echo the sentiments of the WKTF staff when I say thanks for your interest.

If I can be of any further assistance, please do not hesitate to write.

Sincerely,

Ray Curry  
Gen. Mgr.

DEAR MR. GEARY:

IT IS A PLEASURE TO VERIFY YOUR RE-  
CEPTION OF WCAV'S SIGNAL DURING OUR EQUIPMENT  
TEST PROGRAM, DECEMBER 10, 1947.

WCAV IS APPRECIATIVE IN RECEIVING  
MANY, MANY FINE REPORTS FROM DXRS WHEREVER  
OUR SIGNAL WAS HEARD. THANK YOU KINDLY FOR  
WRITING, AND GOOD DXING TO YOU.

VERY TRULY YOURS,

RADIO STATION W C A V

Walnutport, Pennsylvania

Dear Mr. Geary:

Thanks so much for your letter of January 25, 1947.

This is to verify reception of Radio Station WLOW in Norfolk, Virginia on the morning of January 24th, 1947 from 1:12 am to 1:31 am. Your report was correct.

We do not go on the air officially until Sunday, February 2nd, and our equipment is of the best, of course. Collins 20-K 1000 watt transmitter, Raytheon Speech equipment, 200 foot antenna with 135 ground radials 200 ft. long.

Here's hoping you will be tuning our way often.

Thanks again for the report.

Yours truly,

RADIO STATION WLOW

October 21, 1958

Mr. Kermit Geary  
R.D. 2 Box 29B  
Walnutport, Pennsylvania

Dear Mr. Geary:

Thank you for your reports on our test signal. WEZL officially signed on Sunday morning, April 20th, however we have been testing during the early morning hours to get out all the bugs for about a week.

We operate on 1590 Kc with 5,000 watt RCA-BTA-5F transmitter into a three-hundred foot single antenna on farm land soil. WEZL is a daytime non-directional operating on an AM transmitter only.

As a result of top loading tower, our effective radiated power is 10,000 watts. We use this fact in our station promotion along with "E Z Listening" and the character of a live weasel.

Thanks again for your verification.

Sincerely yours,

WEZL
