HELPFUL HINTS

for using the IRE DIRECTORY

A few minutes' study of the basic layout of the IRE DIRECTORY will help you to find the information for which you are looking more quickly and more accurately. At first glance, the IRE DIRECTORY may seem to be confusing, but by using the various portions of the book as listed below, you will find your way around easily, and will discover that it is actually a very simple arrangement, and a much more logical one than a purely alphabetical terminology listing.

PINK SECTION at the front of the products and firms section contains a terminology index listing every product, major and minor, for which a list of manufacturers is given. Page numbers refer you to the page on which the listings for that product begin. Following this alphabetical index is a copy of the questionnaire which is sent to the firms who have furnished us with product information. A quick look through this questionnaire will help greatly in understanding the product arrangement. At the top right of this page is a small index referring you to the opening page of the complete-data spread section, the alphabetical directory, and each of the four product directories.

THE COMPLETE DATA SPREAD SECTION (pages 1-140) contains product advertisements of great usefulness to the reader. Most of these advertisements are two pages or more, and all of them contain complete information on the products manufactured by the advertising firms—specifications, prices, illustrations, and suggested applications.

ALPHABETICAL DIRECTORY OF MANUFACTURERS (pages 141-240) contains a list of 4,029 firms representing the majority of buying and selling power in the radio-electronic industry. Each firm listing contains the complete mailing address and telephone number for the firm. Following the state name in the firm address, a list of code numbers is given. These numbers refer to the 100 major products listed in the book (for quick reference to the meaning of the codes, use the questionnaire form in the pink section).

THE FOUR DIRECTORIES OF PRODUCTS ARE:

1. Communications Equipment
2. Components
3. Controls and Instruments
4. Materials and Services

This breakdown into four directories saves you from traveling through many products in which you are not interested at the moment, and helps you to turn immediately to the listings for the type of product you want, following a straight line to your destination. Use the Machol edge index at the top of the first page of the pink section to locate immediately the first page of the appropriate directory, then use the Machol edge index at the beginning of each directory to find the specific product you want. You don't even have to know the page number—the index will find it for you automatically!

100 MAJOR PRODUCTS are listed within these four Directories. Each product listing contains a number of sub-headings so that you may know specifically what each firm makes. To interpret the code numbers shown after each firm's listing, consult the first page of that product class, where the sub-headings are defined. You will note that advertisements are positioned throughout the book in the most appropriate listing section, so that the advertisement for a relay manufacturer will appear in the relay section, to help you with further information on his product. Every advertiser's listing shows you the page number on which his advertisement may be found, and you will derive more value from this book if you consult these advertisements for facts you cannot find in the listings.

COMPLETE ADDRESS LISTINGS are given only for advertisers in this section. If you wish to locate the address and telephone number for any other firm, it will be necessary to use the alphabetical directory.

THE DISTRIBUTION SECTION is class 100, the last class in the book. This section contains a list of 1,362 manufacturers representatives, distributors and jobbers, grouped geographically. See page 594 for a more complete explanation of the use of this section.

ADVERTISER'S INDEX appears on pages 135-140 and on pages 619 and 620.

How to Use the Machol Edge Index

High speed reference is a major objective of the IRE Directory. To this end we have adopted the Machol Edge Index system, and these indexes:

Advertisers Index, pages 135-140 and 619-620.

Key to Products, Pink Section.

Index to Spreads, 1.

1 COMPLETE DATA SPREADS
141 ALPHABETICAL COMPANY LIST
241 DIRECTORY I COMMUNICATIONS
275 DIRECTORY II COMPONENTS
461 DIRECTORY III CONTROLS & INSTRUMENTS
519 DIRECTORY IV MATERIALS & SERVICES

Detailed Machol edge indexes will be found on the first page of the alphabetical Directory and each of the four major product Directories, pages 141, 241, 275, 461 and 519. The Machol system will help you find both alphabetical and product sections swiftly.

HOW TO USE

1. Bend the Directory almost double with the front cover page on the inside.
2. Hold in your right hand with your four fingers near to the bound edge and your right thumb near the middle of the open side of this page.
3. From the heavy or light line symbol adjacent to the subject you seek, run your eyes across the page edges until you reach the horizonally corresponding symbol.
4. OPEN THERE!

LICENSE NO. 25
MACHOL EDGE INDEX PATENT #2680630

1959 Edition prepared by The Advertising Department of the Institute of Radio Engineers, 72 W. 45th St., New York 36, N.Y.
William C. Copp, Mgr.; Lillian Petranek, Asst.; Carl Maier, Production; Frank G. MacAloon, Research.

* This number indicates the number of memberships held in the IRE Professional Group sponsoring the event. The Institute of Radio Engineers has a total membership of 54,579 individuals (plus 12,444 student members); many IRE members also pay an extra fee to join one or more "Professional Groups" in order to associate themselves with others of similar interest and obtain additional material on the subject. The number of such memberships held by IRE members is 66,966 (plus 4,036 held by student members).

NOTE A: PROCEEDINGS of the IRE will publish available information regarding the event, as this conference does not have exhibits. Special reference will be made to advertisements of applicable products under the heading "Exhibits in Print" upon the request of the manufacturer or advertising agency.

NOTE B: Available information regarding the event will be published; also included in PROCEEDINGS will be the names of companies exhibiting with display booth and advertising page numbers.

1959 IRE DIRECTORY

Complete Data Spreads

The full spirit of the IRE DIRECTORY is to give the reader-engineer "facts" in complete detail, and specific enough to be of useful service. Our advertisers have recognized this, and many have made their copy presentation full of useful specifications and illustrations.

Actually, a Directory Publisher cannot hope to describe products adequately in standardized listings. Only the Advertiser, using display space, and with his own intimate knowledge of his service or product, can do the job right.

The advertisers listed below have done their utmost to provide the reader with engineering data in full detail, through spreads and catalogs filed in this book for easy access and permanent reference. This can prove to be the most useful part of the 1959 IRE DIRECTORY to you.

AlSiMag® TECHNICAL CERAMICS

More Materials at one source!

Here you will find industry's widest choice of advanced technical ceramics . . . dense or porous . . . key components in thousands of applications in widely diverse fields. Top performance is assured by careful matching of physical and electrical properties to end use requirements.

If heat is a problem: AlSiMag technical ceramics have higher insulation values at elevated temperatures than fused quartz. Excellent thermal shock resistance. Great strength. Low loss. Rugged AlSiMag Aluminas, for example, deliver superior performance at temperatures beyond the melting points of most commonly used metals.

There are AlSiMag materials which withstand higher compressive loads than steel . . . with lower coefficients of expansion than any general-use metal. Chemically inert . . . will not rust, oxidize or corrode. Permanently rigid . . . will not deteriorate. Some have unusual abrasion resistance. Some are hard as 9 on Mohs' scale.

No matter what your problem, AlSiMag ceramics may help solve it. And, this source has the machines and experience to produce precision parts in any quantity. Send blueprint with details of operating procedure for complete data on the AlSiMag material best suited for your application.

SHORT FORM

CATALOG 1958

HEWLETT-PACKARD COMPANY · PALO ALTO, CALIFORNIA

-hp- offers complete coverage in

-hp- 150A/AR High Frequency Oscilloscopes—DC to 10 MC

Models 150A and 150AR are deliberately designed as the most broadly useful, most convenient high quality 10 MC oscilloscopes ever built. Unique features such as the universal automatic optimum-trace trigger, direct-reading calibrated sweeps, simplified color-coded controls and quick filter or cathode ray tube interchange—all combine to save hours of engineering time.

Plug-in amplifiers increase versatility

A variety of plug-in units (see below) provide the versatility of dual trace or differential input, or high amplification eliminating pre-amplifiers on input from most transducers. Other important features include brilliant, high resolution trace without halo or bloom, etched circuits with unitized construction, highest quality components and ultra-conservatively rated circuitry.

Specifications

Sweep Range: 0.02 μsec/cm to 15 sec/cm.

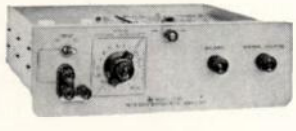
Calibration: 24 sweeps: 1-2-5-10 sequence, 0.1 μsec/cm to 5 sec/cm. 3% accuracy.

Triggering: Internal, line voltage or external 0.5 v or more. Pos. or neg. slope, + 30 to −30 v trigger range.

Preset Trigger: Optimum setting for automatic stable triggering.

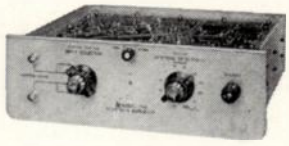
Horizontal Amplifier: Sweep magnification 5, 10, 50, 100 times. Vernier position control selects any 10 cm part of sweep. External input pass band dc to over 500 KC. Sensitivity 200 mv/cm to 15 v/cm.

Vertical Amplifier: Pass band dc to 10 MC. Optimum transient response and rise time less than 0.035 μsec. Signal delay of 0.25 μsec permits leading edge of triggering signal to be viewed.



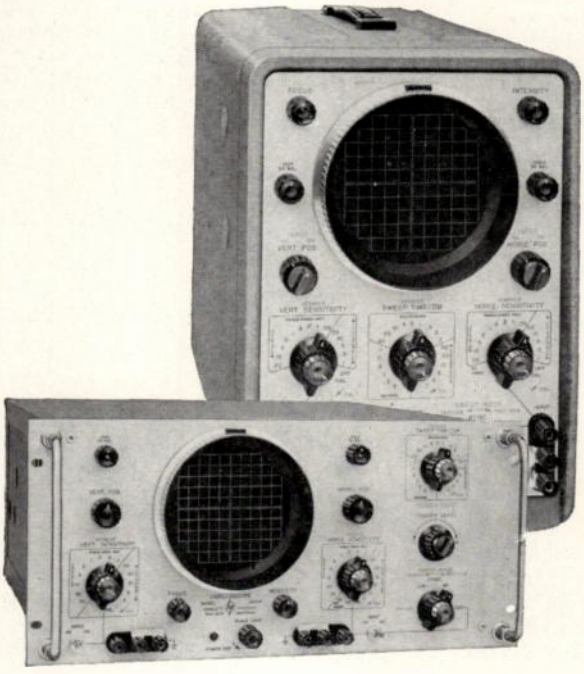
Amplitude Calibration: 18 calib. voltages, 1-2-5-10 sequence, 0.2 mv to 100 v peak-to-peak. Accuracy 3%. Approx. 1 KC square wave, rise and decay approx. 1.0 μsec.

Prices: *-hp-* 150A High Frequency Oscilloscope, $1,100.00.
-hp- 150AR Rack Mount Oscilloscope, $1,200.

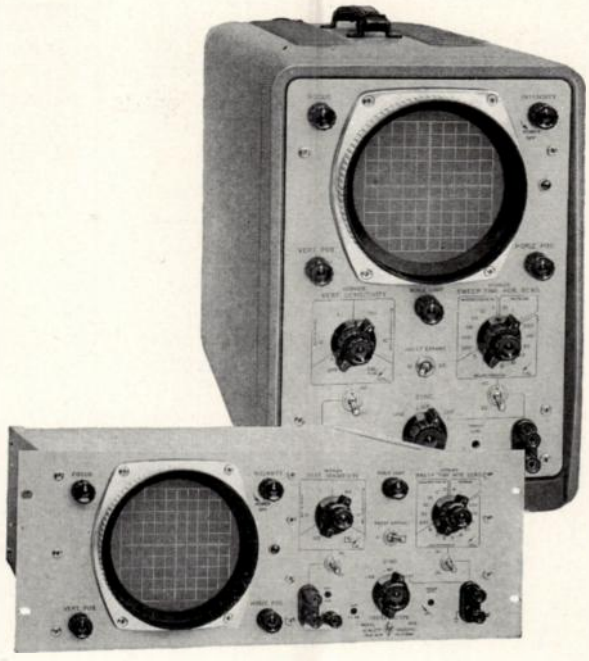


New amplifiers and accessories

-hp- 152B Dual Trace Differential Amplifier. New plug-in amplifier providing differential input and dual traces electronically switched between A and B channels at either 100 KC or on alternate sweeps. Sensitivity range 0.05 v/cm to 50 v/cm, input attenuator with 9 calibrated ranges in 1-2-5-10 sequence and vernier. $250.00.



-hp- 153A Very High Gain Amplifier. New plug-in permitting *-hp-* 150A to be used for many direct measurements from transducer without *preamplification*. Pass band dc to 500 KC, sensitivity 1 mv/cm to 125 v/cm, balanced input on the 6 most sensitive ranges. 15 calibrated ranges in 1-2-5-10 sequence, 1 mv/cm to 50 v/cm; plus vernier. $125.00.



-hp- 151A High Gain Amplifier. For either 150A or 150AR, high gain unit with 5.0 mv/cm sensitivity, frequency response dc to 10 MC. 12 calibrated ranges on 1-2-5-10 sequence. 1 megohm input impedance with 27 μμf shunt. Pass band rise time 0.035 μsec. Has 2 BNC terminals. $200.00.

Data subject to change without notice. Prices f. o. b. factory.

quality oscilloscopes – DC to 10 MC!

-hp- 130B/BR – DC to 300 KC

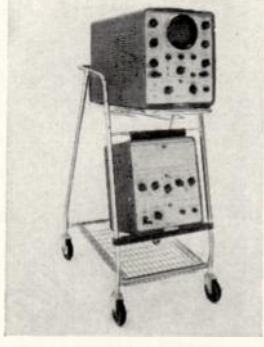
Termed the finest low frequency oscilloscope ever offered, *-hp-* 130B/BR combine big 'scope performance and positive dependability with 1 mv sensitivity and the convenience of direct reading, "universal" automatic trigger, no preamplification from most transducers and simple controls.

Similar X and Y amplifiers

Models 130B/BR have similar horizontal and vertical amplifiers with sensitivity 1 mv/cm to 125 v/cm. Input circuits are balanced on the 6 most sensitive ranges; single ended input dc or ac coupled. 21 sweep times may be directly set, instrument sweeps 1 μsec/cm to 12.5 sec/cm, triggering is internally, by line power, or externally by 0.5 v or greater. Includes x 5 magnifier for all internal sweeps increasing fastest sweep time to 0.2 μsec/cm. *-hp-* 130B (cabinet) or 130BR (rack) $650.00.

-hp- 120A/AR – DC to 200 KC

Ideal for industrial or production line work as well as daily lab jobs, Models 120A/AR are outstanding in both value and "big 'scope" performance features. This all-new instrument covers DC to 200 KC, has the *-hp-* universal trigger circuit which optimizes signals automatically; also offers automatic synchronization on any internal or external voltage including line power.



Sweeps 1 μsec/cm to 0.5 sec/cm

Features include 15 calibrated sweeps in 1-2-5 sequence, sweep speeds range 1 μsec/cm to 0.5 sec/cm, "times-5" sweep expansion on all ranges, high sensitivity calibrated vertical amplifiers. All power supplies are regulated for steady, drift-free traces. Automatic trigger and base line can be cut out for bright, clear photography trace. Extra compact Model 120AR is only 7" high. Utmost dependability, rugged construction. *-hp-* 120A (cabinet) or 120AR (rack) $435.00.

increase convenience of your 150A/AR

-hp- AC-21C 50:1 Voltage Divider Probe. A 50:1 divider with high 10 megohm input impedance and low 2.5 μμf input capacitance. Convenient "pen" size for maximum handling ease. Probe has durable, attractive nylon barrel, alligator clip contactor. $25.00.

-hp- AC-115A Oscilloscope Testmobile. Most convenient mobile oscilloscope mounting. For 150A oscilloscopes but usable with other instruments. Rolls easily on large 4" rubber-tired wheels. Extra-sturdy construction of ⅞" tube stock, gleaming chrome throughout. Top shelf tilts 30° in four 7½° increments for better viewing. $80.00.

-hp- AC-116A Testmobile Storage Unit. Extra-convenient storage for -hp- 151A, 152A/B, 153A oscilloscope plug-ins. Holds up to three extra plug-ins; guards against dust, mechanical damage. Fits *-hp-* AC-115A Testmobile (see photo); no installation needed. $22.50.

-hp- AC-117A Testmobile Accessory Drawer. Fits in *-hp-* AC-116A Storage Unit; convenient drawer storage for tools, components, solder, etc. Photo shows AC-117A installed in top rack of AC-116A Storage Unit. $10.00.

-hp- Oscillators—0.008 to 10,000,000 cps

Hewlett-Packard now offers 12 high quality, fast and accurate oscillators, each an exceptional value and each engineered to do a specific job best. Each incorporates the famous RC resistance capacity circuit pioneered by *-hp-*. This circuit makes possible instruments that are highly stable, wide range, compact and portable; instruments that are extremely simple to operate and require no tedious re-setting or adjustment during operation.

Instrument	Primary Uses	Frequency Range	Output	Price
-hp- 200AB	Audio tests	20 cps to 40 KC	1 watt/24.5 v	$130.00
-hp- 200CD	Subsonic through supersonic audio and ultrasonic tests	5 cps to 600 KC	160 mw or 10 v/600 ohms; 20 v open circuit	160.00
-hp- 200J	Interpolation, frequency measurements	6 cps to 6 KC	160 mw/10 v	275.00
-hp- 200T	Telemetry, carrier current tests	250 cps to 100 KC	160 mw or 10 v/600 ohms; 20 v open circuit	350.00
-hp- 201C	High quality audio tests	20 cps to 20 KC	3 w or 42:5 v/600 ohms	225.00
-hp- 202A	Low frequency measurements	0.008 to 1200 cps	28 mw or 30 v p-p/4000 ohms	465.00△
-hp- 202C	Servo equipment tests, measurements	1 cps to 100 KC	160 mw or 10 v/600 ohms	300.00
-hp- 205AG	High power audio tests, gain measurements	20 cps to 20 KC	5 watts	475.00△
-hp- 206A	High quality, high accuracy audio tests	20 cps to 20 KC	+ 15 dbm	615.00△
-hp- 207A	Audio sweep generation	20 cps to 20 KC	160 mw or 10 v/600 ohms	275.00
-hp- 233A	Carrier oscillator—current tests	50 cps to 500 KC	3 w/600 ohms	475.00
-hp- 650A	Wide range video tests	10 cps to 10 MC	15 mw/3 v	490.00△

△ Rack mounted instruments available at $15.00 less.

-hp- 200 Series Audio Oscillators

For audio and ultrasonic measurements, *-hp-* offers popular Models 200AB and 200CD. Both have highest stability and accurate tuning circuits. Low impedance operating levels plus superior insulation guarantee long years of trouble-free dependability. Operation is simple; just three controls; no zero setting necessary. *-hp-* 200AB, 20 cps to 40 KC, $130.00. *-hp-* 200CD, 5 cps to 600 KC, $160.00.

-hp- 207A Sweep Oscillator

This new audio oscillator provides continuous single-sweep frequency coverage from 20 cps to 20 KC. No band switching is needed; dial accuracy is 4%, and the instrument also provides a flexible 10 v/600 ohm output usable balanced or with one side grounded. Frequency response is ±1.0 db full range, distortion and hum are less than 1%. *-hp- 207A may be swept by hand, motor driven, tuned remotely or coupled to a recorder.* -hp- 207A, $275.00.

-hp- 202A Function Generator

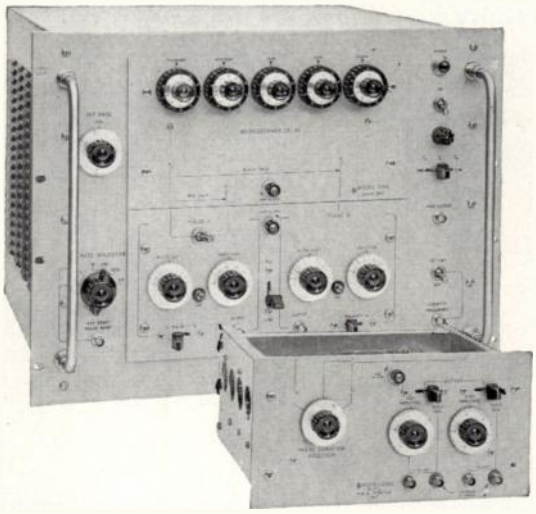
Compact, multi-purpose source of transient-free test voltages from 0.008 cps to 1,200 cps. Continuously variable through 5 bands; offers exceptional stability (within 1%) and distortion less than 1% to 100 cps. Sine, square or triangular waves may be selected by a front panel switch; the 30 volt output peak-to-peak is constant for all wave forms and over full frequency range. *-hp-* 202A, $465.00△.

-hp- 650A Test Oscillator

Covering 10 cps to 10 MC, *-hp-* 650A is a highly stable, wide band instrument for audio, supersonic, video and rf measurements. Output is flat within 1 db full range; voltage range is 0.00003 to 3 v. In addition to 600 ohm impedance, voltage divider provides a 6 ohm impedance. Distortion less than 1% to 100 KC; stability ±2% to 100 KC. $490.00△.

-hp- Distortion, Wave Form Analyzers—20 cps to 20 KC

-hp- 330B Distortion Analyzer



Measures distortion as low as 0.1% from 20 cps to 20 KC; also measures noise voltages down to 100 μv. Sensitivity is high; distortions of 0.3% are measured full scale and levels of 0.1% are readable accurately. Frequency calibration accurate within ±2% full range. Includes a 20 db amplifier, oscilloscope terminals and precision 10 cps to 100 KC vacuum tube voltmeter usable separately. $410.00△.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 300A	Wave form analyzer	30 cps to 16 KC	Variable selectivity; measuring range 1 mv to 500 v	$775.00
-hp- 330B	Measures total audio distortion	20 cps to 20 KC	Includes input amplifier, VTVM	410.00△
-hp- 330C	For FM broadcast measurements	20 cps to 20 KC	Special VU meter to meet F.C.C. requirements	440.00△
-hp- 330D	For AM, FM broadcast measurements	20 cps to 20 KC	AM detector and VU meter to meet F.C.C. requirements	455.00△

△ Rack mounted instruments available at $15.00 less.

For details, circle #6 on Reader Service Card

NEW! -hp- 218A Digital Delay Generator

Independently adjustable time intervals or pulse delays
±0.1 μsec time interval accuracy
Crystal oscillator time base
Regulated power supplies

Model 218A Digital Delay Generator is a totally new instrument applicable to many types of timing measurements including calibrating the range determining circuits of radar receivers, etc. The generator is built to rigid standards and is suitable for military use. It provides two precision time intervals or pulse delays, either of which are independently adjustable from 1 to 10,000 microseconds in 1 microsecond steps. These time intervals are accurate to within 0.1 microsecond ±0.001% of the selected value, and may be initiated from an internal multi-vibrator, 10 cps to 10 KC, or from an external rate generator, 0 cps to 10 KC. Total jitter does not exceed 0.02 microseconds in either case. The instrument also provides a 50 volt synchronizing output pulse at the beginning or end of a time interval, and a 1 microsecond timing comb output at the front panel.

-hp- 219A Dual Trigger Unit

This plug-in drawer for *-hp-* 218A supplies trigger pulses of positive polarity, 50 volts, 0.1 μsec rise time from a 50 ohm source. Pulse A occurs at T_0 or T_1 as selected by a switch; Pulse B is triggered at T_2. *-hp-* 219A, $100.00.

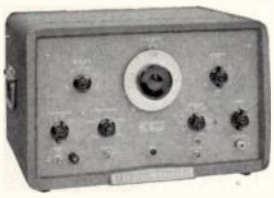
-hp- 219B Dual Pulse Unit

This plug-in drawer for *-hp-* 218A produces two high-power pulses which are continuously adjustable in width, 0.2 to 5 μsec and in amplitude from 0 to 50 volts, positive or negative polarity. The leading edge of these pulses can be set to occur at the beginning or end of the selected time interval. Both pulses are brought out to separate front panel jacks but may be switched to a common jack with no change in level or output impedance. *-hp-* 219B, $450.00.

-hp- 219C Digital Pulse Duration Unit

This plug-in drawer for *-hp-* 218A produces a high power output pulse whose delay and duration are digitally controlled. The pulse is available in both polarities simultaneously, and is continually adjustable in amplitude up to 20 volts from a 90 ohm source. It may also be obtained from a directly coupled 500 ohm source with an amplitude of 100 volts. *-hp-* 219C, $350.00.

No count ambiguity



A unique feature of the new *-hp-* 218A is its time base, a pulsed crystal controlled oscillator. The oscillator starts at T_0 and stops at the last output pulse. This eliminates the "plus-or-minus-1-count" ambiguity of many counter circuits in such application.

Model 218A is a completely self-contained instrument, requiring only one or more *-hp-* 219 series plug-ins to perform a broad variety of time and delay generation measurements. Simplicity and flexibility are increased by the large variety of input and output connections brought to the front panel. The instrument is particularly compact and well-designed; etched circuits and the use of plug-ins materially increase circuit accessibility.

The instrument's power supplies are fully regulated to avoid effects of line voltage variations. It is available as *-hp-* 218A, cabinet mount, or 218AR, rack mount. *-hp-* 218A/AR, $2,000.00.

-hp- Square Wave and Pulse Generators

-hp- 212A Pulse Generator

Provides continuously variable, high power "fast pulses" of superior wave form. Combines broad general usefulness with 0.02 μsec rise and decay time to meet requirements of radar, TV and nuclear work. Pulse length variable 0.07 to 10 μsec; minimum overshoot; 50 watt peak power (50 v to 50 ohms load). Low impedance means accurate pulses can be delivered at a distance from the instrument. Repetition rate variable 50 to 5,000 pps; controlled internally or externally. Synchronizing pulse available in advance of, or following output pulse. $565.00 (cabinet), $550.00 (rack mount).

-hp- 211A Square Wave Generator

Versatile, wide range instrument for testing oscilloscopes, networks, video and audio amplifier performance, modulating signal generators and measuring time constants. Offers simple control of electronic switches; is also convenient for indicating phase shift, frequency response, transient effects. Two separate outputs (a) 7 volt 75 ohm circuit for TV work; (b) 55 volt 600 ohm output for high level work. Both have full amplitude variation. Instrument operates free-running or externally synchronized with positive going pulse or sine wave of 5 volts minimum amplitude. $265.00.

-hp- Vacuum Tube Voltmeters—10 to 700,000,000 cps

NEW! -hp- 400L Logarithmic Voltmeter

New *-hp-* 400L, 10 cps to 4 MC, features a 5" true log voltage scale plus a 12 db linear decibel scale. The log voltage scale plus long scale length provides a voltmeter of maximum readability and an accuracy which is a ***constant percentage of the reading***. Accuracy is ± 2% of reading or ± 1% of full scale, whichever is more accurate, to 500 KC; ± 5% full frequency range. Voltage range 0.3 mv to 300 v in 12 steps.

Generous overlap is insured by a 10 db range switch plus a 12 db scale length. High stability, 10 megohm input impedance. Meter is mirror backed for maximum accuracy. Also may be used as a stable amplifier. $325.00.

NEW! -hp- 425A Microvolt-Ammeter

New, high sensitivity, high stability microvolt meter reading full scale voltages of 10 μv to 1 v in 11 ranges. Also reads currents of 10 μμa to 3 ma in 18 step, 1-3-10 sequence. Accuracy ± 3% on all ranges. Drift less than 2 μv referred to input terminals. Input impedance 1 megohm ± 3% on all ranges. Instrument can also be used as a 100 db amplifier providing up to 1 v output from signals as small as 10 μv. Amplifier ac rejection is at least 3 db at 0.2 cps and 60 db at 60 cps. In addition to engineering uses ideal for physics, chemistry applications including grid or photomultiplier tube currents, ionization levels, thermocouple potentials and voltaic currents. Also measures v in living cells, nerves, seeds, plants. Includes probe. $500.00.

-hp- 400D Vacuum Tube Voltmeter

Best *-hp-* voltmeter ever built! Covers all frequencies 10 cps to 4 MC. Extremely sensitive, wide range, accurate within 2% to 1 MC, measures 0.1 mv to 300 v. Direct reading in dbm. 10 megohm input impedance insures negligible loading on circuits under test. New amplifier circuit with mid-range feedback assures utmost stability, freedom from change due to external conditions. $225.00.

-hp- 410B Vacuum Tube Voltmeter

All-purpose test instrument, range 20 cps to 700 MC. Also serves as dc VTVM with over 100 megohms impedance, or ohmmeter for measurements 0.2 ohms to 500 megohms. Input capacity 1.5 μμf, 10 megohms input impedance; employs radical diode probe which virtually eliminates circuit loading. Industry's most versatile precision voltmeter. $245.00.

Instrument	Primary Uses	Frequency Range	Voltage Range	Input Impedance	Price
-hp- 400AB	General purpose ac measurements	10 cps to 600 KC	0.003 to 300 v 11 ranges	10 megohms 25 μμf shunt	$200.00
-hp- 400D	Wide range ac measurements High sensitivity	10 cps to 4 MC	0.001 to 300 v 12 ranges	10 megohms 15 μμf shunt	225.00
-hp- 400H	High accuracy wide range ac measurements	10 cps to 4 MC	0.001 to 300 v 12 ranges	10 megohms 15 μμf shunt	325.00
-hp- 400L	Log voltages, linear db measurements	10 cps to 4 MC	0.3 mv to 300 v 12 ranges	10 megohms 15 μμf shunt	325.00
-hp- 410B	Audio, rf, VHF measurements; dc voltages; resistances	dc; ac—20 cps to 700 MC	0.1 to 300 v 7 ranges	dc—122 megohms; ac—10 megohms/ 1.5 μμf	245.00
-hp- 425A	Read μv, μμa; 100 db amplifier; medical, biological, physical, chemical	dc voltages as 100 db amplifier	10 μv to 1 v 11 ranges	1 megohm ± 3%	500.00

-hp- 400H Vacuum Tube Voltmeter

Need extreme accuracy of 1%? *-hp-* 400H covers 10 cps to 4 MC, has 5" meter with mirror scale, measures voltages 0.1 mv to 300 v. 10 megohm resistance minimizes circuit loading, amplifier with 56 db feedback insures lasting stability. Direct reading in db or v. Extremely high quality throughout. $325.00.

-hp- accessories increase usefulness of your voltmeters

Instrument	Features	Price
-hp- 452A Capacitive Voltage Divider	For all -hp- ac VTVM. 25 cps to 20 MC. Division 1000:1	$100.00
-hp- 452-95A Adapter	Connects -hp- 452A to -hp- 410B VTVM probe	10.00
-hp- 453A Capacitive Voltage Divider	For -hp- 410B VTVM only. Division 100:1	25.00
-hp- 454A Capacitive Voltage Divider	For -hp- 400D and 400H only. Division 100:1	30.00
-hp- 455A Probe Coaxial "T" Connector	For -hp- 410B VTVM. Measures voltages between conductor and sheath of 50 ohm transmission line	35.00
-hp- 458A Probe Coaxial "N" Connectors	For -hp- 410B VTVM. Measures volts at open end of 50 ohm transmission line	25.00
-hp- 459A DC Resistive Voltage Multiplier	For -hp- 410B VTVM. For measuring high dc voltages safely. Multiplies 1:100	25.00
-hp- 470A to F Shunt Resistors	For -hp- 400 series VTVM. For measurement of current	470A - 15.00 470B-F - 10.00

NEW! -hp- 524D Precision Electronic Counter

New stability—5 parts in 10^8 per week

New convenience—8 vertical readout units

Direct, instantaneous, automatic readings

Covers frequencies 10 cps to 220 MC

Measures time interval 1 μsec to 100 days

Measures period 0 cps to 10 KC

Resolution 0.1 microseconds

No calculation or complex setup

Easily used by non-technical personnel

High, sensitivity, impedance, reliability

5 PLUG-IN UNITS INCREASE FLEXIBILITY, USEFULNESS FOR MANY MEASUREMENTS

-hp- 525A Frequency Converter. Extends 524D's direct reading range to cover 10 cps to 100 MC with no loss in accuracy. Provides additional amplification to increase video sensitivity to 0.1 v through 524D's basic 10 cps to 10.1 MC range. $250.00.

-hp- 525B Frequency Converter. Converts -*hp*- 524D for direct readings 100 to 220 MC in decade steps. Maintains same high accuracy throughout range; provides high sensitivity for low level work. $250.00.

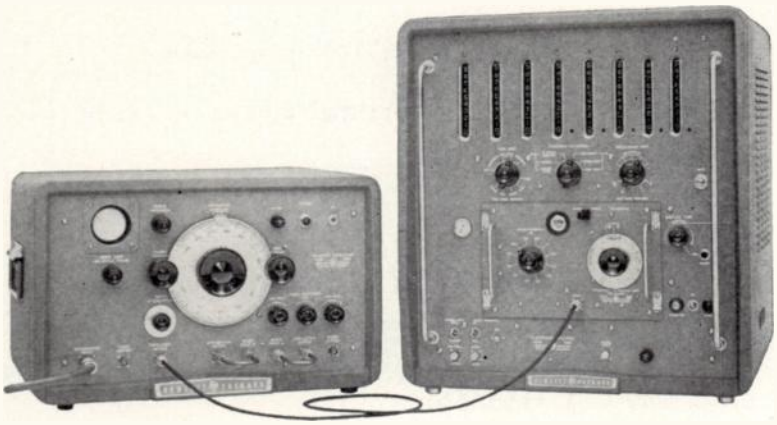
-hp- 526A Video Amplifier. Increases 524D sensitivity to 10 mv for low power frequency measurement 10 cps to 10.1 MC. Accuracy same as counter; minimum input 10 millivolts rms. $175.00.

-hp- 526B Time Interval Unit. Permits 524D to measure interval 1.0 μsec to 100 days with accuracy of 0.1 μsec ± 0.0001%. Reads in sec, msec or μsec. Triggering from separate "stop" or "start" on pos. or neg. going waves. Trigger adjustable −192 to + 192 volts. $175.00.

-hp- 526C Period Multiplier. Permits 524D to measure period over 100, 1,000 or 10,000 cycles of unknown, thus providing the greater accuracy of mid-range frequency readings. Front panel switch selects desired period. $225.00.

New crystal oscillator stability of 5 parts in 10^8 per week plus the added convenience of uniform vertical neon readout units—these are significant advances incorporated into new -*hp*- 524D Electronic Counter, *at no increase in price over -hp- 524B.*

The new 524D permits you to buy only the basic counting facilities you need now—later on add inexpensive plug-ins to triple and quadruple the usefulness of your counter.



The basic -*hp*- 524D reads frequency 10 cps to 10 MC over 5 selected periods. Display time is variable, counts are automatically reset, action is repetitive, readings are direct without calculation or interpolation; an automatic illuminated decimal point is included.

The instrument is of highest quality throughout and employs a military design approach. -*hp*- 524D, less plug-ins, $2,150.00 (cabinet); $2,125.00 (rack mount).

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 524B Frequency Counter	Frequency, period measurements	10 cps to 10 MC (Freq.) 0 cps to 10 KC (Period)	Direct reading, no interpolation, stability about 2/1,000,000/week	$2,150.00■
-hp- 524D Frequency Counter	Frequency, period measurement	10 cps to 10 MC (Freq.) 0 cps to 10 KC (Period)	Direct reading, no interpolation; stability $5/10^8$ per wk	2,150.00■
-hp- 525A Frequency Converter	Extends 524 range to 100 MC; increases basic sensitivity	10 cps to 100 MC	Accuracy ±1 cps ± stability; 0.1 v rms min. input	250.00
-hp- 525B Frequency Converter	Extends 524 range from 100 to 220 MC; high sensitivity	100 MC to 220 MC	Accuracy ±1 cps ± stability; 0.2 v rms min. input	250.00
-hp- 526A Video Amplifier	Increases 524 sensitivity to 10 millivolts	10 cps to 10.1 MC	Accuracy same as basic counter; 10 mv rms min. input	175.00
-hp- 526B Time Interval Unit	Measures interval 1 μsec to 100 days	1 μsec to 10^7 sec	Accurate 0.1 μsec ±0.0001%	175.00
-hp- 526C Period Multiplier	Period measurement	Extends range of 524 to measure 10,000 periods	Greater accuracy in period measurement	225.00

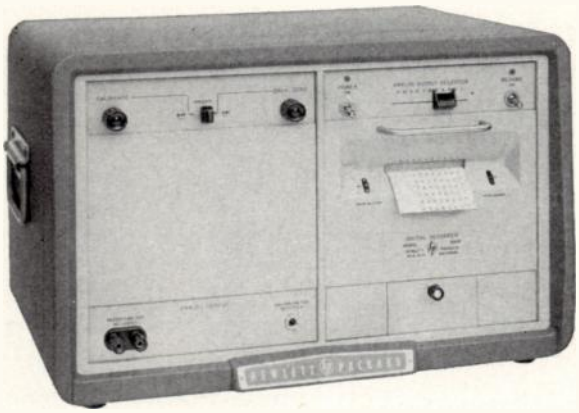
■ Rack mounted instrument available for $25.00 less.

-hp- 540A Transfer Oscillator

Measure frequency to 12 KMC quickly, easily, with electronic counter accuracy. Avoid guesswork, end "trial and error," eliminate expensive setups. Measure on pulsed, AM, FM, CW and noisy circuits.

Just two -hp- instruments—Model 540A Transfer Oscillator and a 524 series electronic counter, (with plug-ins) are all the equipment you need to measure unknown frequencies up to 12 KMC swiftly and accurately.

This simple, two instrument setup is particularly useful for quick CW and AM frequency measurement, FM center frequency and deviation checks, frequency of high-noise signals and pulsed signals. Overall accuracy is better than 10 times that of the best microwave wavemeters; and on clean CW signals, is about 1/1,000,000.



Simple operation

When approximate frequency is known, the 540A is tuned until a harmonic beats with the unknown. The multiplying factor is noted, and the 540A frequency measured on the 524. The 524 reading, times the multiplying factor, is the unknown.

Brief Specifications

Oscillator Freq. Range: 100 to 220 MC
Harmonic Freq. Range: Up to 12 KMC
Stability: Better than 0.002%/minute
Output: 2 volts into 50 ohms
Attenuator Range: 20 to 80 db into 50 ohms SWR 1.5 at 1 KMC
Amplifier Gain: 40 db max, 1 v output
Oscilloscope: 100 cps to 200 KC; vert. sens. 5 mv rms/inch
Price: $615.00

-hp- 560A Digital Recorder

Continuous digital record for frequency counters

Direct reading, simple hookup

Five 11-digit lines/second

Analog output for recorder

Expanded scale; full scale = 10^7

Accuracy identical to counter used

No intermediate equipment is needed between -*hp*- 560A and its Counter. In direct hookup, completely self-contained -*hp*- 560A provides a complete record of all types of test data, plus, through an analog output, a convenient graphic record of very small data variations.

The analog output is a voltage or current proportional to the number represented by any 3 consecutive digits of recorded data. The 560A permits expanded strip chart recording and the chart cannot be driven off scale since range variation for the 3-digit scale is 0 to 999. Wider variation merely causes a repetition of the 0 to 999 sequence.

Print capacity is five, 11-digit lines/second; secondary or coding data may be entered simultaneously with primary data.

Brief Specifications

Accuracy: Identical to counter used
Printing Rate: 5 lines/sec maximum
Digit Capacity: Up to 11 per line
Driving Source: Parallel entry staircase voltages, descending 135 to 55 v, 0 to 9
Analog Output: Proportional to any 3 consecutive digits; max. amplitude 1 ma or 100 mv
Print Command Signal: 10 μsec minimum, pos. or neg., 15 v/pulse
Price: (11-digit, cabinet model), $1,390.00
(11-digit, rack mount), $1,375.00

For details, circle #10 on Reader Service Card

Other -hp- Frequency Measuring and Monitoring Equipment

-hp- 500B/C Frequency Meters

Directly measures frequency of voltages 3 cps to 100 KC; expanded scale allows any 10% or 30% of range to be measured full scale. Sensitivity 0.2 v rms (sine waves) 1 v peak for pulses. Input impedance 1 megohm with 40 μμf shunt; accuracy independent of line voltage changes. Also available as -*hp*- 500C, calibrated for direct reading in rpm. -*hp*- 500B/C, $285.00.

-hp- 506A Optical Tachometer Pickup

Versatile, flexible light source and pickup for use as a transducer with -*hp*- 521A/C, 500B/C, etc. Measures 300 to 300,000 rpm (beyond with amplified output); normal output at least 1 v rms into 1 megohm or greater impedance. Light source 21 cp 6 v bulb; Type 1P41 phototube, phototube bias 70 to 90 v dc (supplied from -*hp*- 500B/C, 521 A/C). -*hp*- 506A, $125.00.

-hp- 508A–D Tachometer Generators

Rotating speed transducers used with electronic counters or frequency meters for simple, accurate measurements from 15 to 40,000 rpm (or beyond with amplifier) -*hp*- 508A provides 60 output pulses per shaft revolution; -*hp*- 508B, C, D provide 100, 120 and 360 pulses/rev respectively. Output voltage increases linearly with shaft speed to 5,000 pps. Running torque approx. 0.15 in. oz.; peak starting torque approx. 4 in. oz. -*hp*- 508A, B, C or D, $100.00.

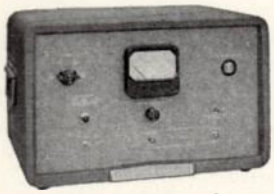
Instrument	Primary Uses	Frequency Range	Characteristics	Price
-*hp*- 100D Secondary Standard	Frequency, time measurements	100 KC, 10 KC, 1 KC, 100 cps, 10 cps	Stability 1/1,000,000 (short-time). Sine or rectangular output. Marker pips	$ 615.00△
-*hp*- 335ER TV Monitor	Aural and visual carrier monitoring; black and white or color	Channels 2 to 83	Aural deviation ±3 KC; video deviation ±3 KC; accuracy ±500 cps approx.	2,050.00
-*hp*- 500B Electronic Frequency Meter	Rapid frequency measurements	3 cps to 100 KC	9 ranges ±2% accuracy. Input 0.2 to 250 volts	285.00
-*hp*- 500C Electronic Tachometer Indicator	Rpm measurements	180 to 6,000,000 rpm	Similar to 500B but calibrated in rpm	285.00
-*hp*- 506A Optical Tachometer Pickup	Rps and rpm measurement	300 to 300,000 rpm	Phototube and light source; output 1 v rms	125.00
-*hp*- 508A Tachometer Generator	Shaft speed measurement	15 to 40,000 rpm	Output 60 cycles per revolution	100.00
-*hp*- 508B Tachometer Generator	Shaft speed measurement	15 to 40,000 rpm	Output 100 cycles per revolution	100.00
-*hp*- 508C Tachometer Generator	Shaft speed measurement	15 to 40,000 rpm	Output 120 cycles per revolution	100.00
-*hp*- 508D Tachometer Generator	Shaft speed measurement	15 to 40,000 rpm	Output 360 cycles per revolution	100.00
-*hp*- 520A Nuclear Scaler	For counting high-rate pulses	Capacity 100 counts in 2 decades. 10,000,000 pps counting rate	100:1 divider for operation of low speed scalers	615.00△
-*hp*- 521A Industrial Electronic Counter	Measure frequency, speed	1 cps to 120 KC	Direct reading, accurate within ±1 count ±0.1%, 4 place registration	475.00
-*hp*- 521C Industrial Electronic Counter	Measure frequency, speed	1 cps to 120 KC	Direct reading, accuracy within ±1 count ±0.01%, 5 place registration	650.00
-*hp*- 522B Electronic Counter	Frequency, period, time interval measurements	10 cps to 120 KC	Direct reading, accuracy ±1 count ±0.001%	915.00△
-*hp*-523B Electronic Counter	Frequency, period, time interval	10 cps to 1.1 MC	Direct reading, accuracy ±1 count ±2/1,000,000	1,245.00

△Rack mounted instrument available for $15.00 less.

-hp- 521A/C Industrial Counters

Low cost, simple operation, almost limitless uses characterize -*hp*- 521A/C Industrial Counters. -*hp*- 521A measures speed, rpm, rps, frequency, random events per unit of time; with proper transducers also measures weight, pressure, temperature, acceleration, etc. -*hp*- 521A reads direct in cps, rpm and rps; display is variable 0.1 to 15 seconds or "hold"; 60 cps check circuit confirms accuracy of readings; three accessory power supplies include −150 v dc, + 300 v dc and 6.3 v ac. Frequency range 1 cps to 120 KC, accuracy ± 1 count ± accuracy of built-in 60 cps timing frequency (usually ± 0.1%); input min. 0.2 v rms; input attenuator adjusts sensitivity 0.2 to 100 v rms, input impedance 1 megohm with 50 μμf shunt, gate time 0.1 and 1 sec, also Manual Gate. -*hp*- 521C same as 521A except has greater accuracy, crystal controlled time base and 5-place (instead of 4-place) registration with count capacity of 99,999. -*hp*- 521C, $650.00. -*hp*- 521A, $475.00.

-hp- 522B Electronic Counter



Compact, low cost, versatile instrument for frequency, period *or* time measurements. Measures frequency 10 cps to 120 KC, time interval 10 μsec to 10^5 sec. Reads direct in cps, KC, seconds or milliseconds. Count automatically reset, action repetitive. Stability of time base 5/1,000,000 per week. Easily used by untrained personnel. High quality, completely self-contained, bright, clear numerals; ideal industrial as well as lab instrument. $915.00△.

-hp- 523B Electronic Counter

Revolutionary all-purpose counter measures frequency 10 cps to 1.1 MC, time interval 3 μsec to 27.8 hours, period 0.00001 cps to 10 KC. Stability 2/1,000,000 per week. Results displayed in sec, msec, μsec or KC; automatic decimal. Display time variable 0.1 sec to 5 sec or indefinitely. Accuracy ± 1 count plus crystal stability, 5 gate times. Usable with 100 KC primary standard. High quality, completely self-contained, bright numerals, controls color-coded for simpler use by non-technical personnel. Pulse output for Z-axis oscilloscope modulation. $1,245.00.

Microwave Impedance Measuring Equipment

-hp- 416A Ratio Meter

Automatically combines forward and reverse signals and displays their ratio directly, irrespective of amplitude variations. Contains rf power monitor indicating proper power level. Rear terminal signal available to operate oscilloscope or recorder. Suitable for single and swept frequency operation. $450.00△.

-hp- 415B Standing Wave Indicator

For all waveguide and coaxial slotted sections. Gives readings in SWR or db. Single frequency operation; 315 to 2,000 cps. Low noise level, 0.1 μv (full scale) sensitivity, 60 db. calib. attenuator. $200.00.

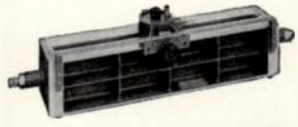
-hp- 803A VHF Bridge

Provides direct impedance measurements in vhf range, 2 to 2,000 ohms, −90° to +90° phase angle. Wide frequency range 52 to 500 MC; makes measurements down to 5 MC and up to 1,000 MC. Fast, simple to use. $600.00.

-hp- 417A VHF Detector

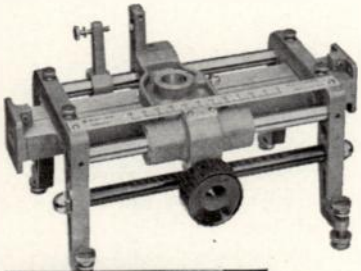
Super-regenerative (AM) receiver covering all frequencies from 10 to 500 MC in 5 bands. Designed for use with -hp- 803A Bridge. 5 μv sensitivity full range. Single frequency control, reads direct in MC. $350.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 360A-D Low Pass Filters	Eliminates harmonic voltages from uhf systems	Cut-off frequencies A- 700 MC C-2,200 MC B-1,200 MC D-4,100 MC	50 db rejection at 1.25 cutoff freq.	$ 40.00
-hp- 415B Standing Wave Indicator	SWR indicator or null indicator	315 to 2,000 cps. Normal freq. 1,000 cps	0 to 70 db attn. Max. sensitivity 0.1 μv	200.00
-hp- 416A Ratio Meter	Reflection coefficient measurements	1,000 cps ±40 cps	Continuous swept frequency presentation; accuracy ±3%	450.00△
-hp- 417A vhf Detector	vhf bridge detector (for -hp- 803A)	10 to 500 MC	Approx. 5 μv sensitivity	350.00
-hp- 803A vhf Bridge	Measurement of vhf impedance, SWR	52 to 500 MC	2 to 2,000 ohms impedance −90° to +90° phase angle	600.00
-hp- 805A Coaxial Slotted Section	Measurement of SWR	500 to 4,000 MC	For Type N Connectors flexible cables	475.00
-hp- 805B Coaxial Slotted Section	Same as above	Same as above	For rigid 7/8" RG44/U line	475.00
-hp- 806B Coaxial Slotted Section	Same as above (mounts in 809B)	3,000 to 12,000 MC	For Type N Connectors flexible cables	200.00
-hp- 809B Universal Probe Carriage	G, J, H, X and P 810 Waveguide Sections Supports 806B section, also		Accepts 442B, 444A probes	160.00
-hp- 814B Universal Probe Carriage	Supports P, K and R 815B Waveguide Slotted Sections		Accepts Untuned Probe 446A	200.00



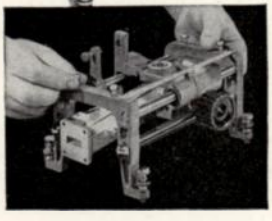
△ Rack mounted instruments $15.00 less.

-hp- 360 Low Pass Filters

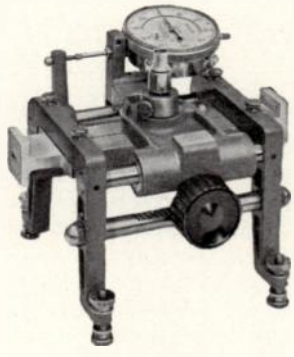


Isolating filters which speed microwave measurements by eliminating harmonics, permitting transmission at single, known frequency only. Particularly necessary in slotted line, filter characteristic, receiver response, similar measurements. Table above gives cut-off frequency; insertion loss not over 3 db; nominal impedance 50 ohms. -hp- 360A, B, C or D, $40.00.

-hp- 805A/B Slotted Lines



Exclusive -hp- "parallel-plane" design insures utmost mechanical rigidity, less leakage, greater accuracy, low SWR of 1.02 or 1.04 (depending on model). Range 500 MC to 4 KMC, reads in cm and mm to 0.1 mm. -hp- 805A, for 50 ohm Type N use, -hp- 805B, for 46.3 ohm RG 44/U stub supported 7/8" O.D. coax. -hp- 805A/B, $475.00.



-hp- 809B/814B Universal Probe Carriages

-hp- 809B

Quick, easy waveguide interchange

-hp- 814B

Models 809B and 814B are precision built mechanical assemblies operating, respectively, with -hp- 810B and 815B series slotted sections.

Combination of the 809B carriage and 810B slotted sections covers 2.6 to 18.0 KMC. Combination of 814B carriage and 815B series sections covers 12.4 to 40.0 KMC.

On either carriage, waveguides can be interchanged in seconds for real savings on engineering time. Only one probe is required for each carriage to cover full frequency range. Manufacture is of highest quality to assure positive mechanical positioning of interchangeable waveguides and precise installation of mating -hp- probes (see page 12). -hp- 809B has a vernier scale reading to 0.1 mm and is equipped for dial gauge mounting. -hp- 814B has a cylindrical dial which may be read directly to 0.1 mm and interpolated at 0.01 mm.

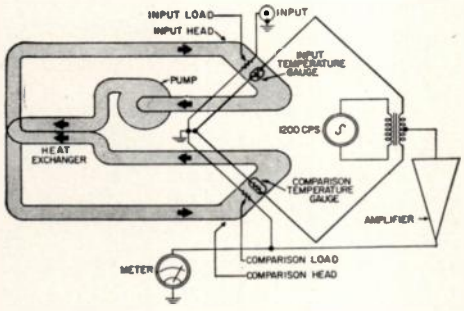
-hp- 810B Slotted Sections. -hp- 810B, for mounting in 809B carriage, is a flanged, waveguide section with accurately machined slot. Slot is tapered at ends to minimize reflection. Available in 5 waveguide bands, 3.95 through 18.0 KMC.*

-hp- S810A. Complete slotted section assembly including probe carriage. In 2.6 to 3.95 KMC (S-band) size only.*

-hp- 815B Slotted Sections. For mounting in 814B carriage. Available P, K and R bands, 12.4 to 40.0 KMC. To insure positive positioning when mounting in carriage, these sections seat on two eccentric rods. Rods are factory-adjusted so longitudinal plane of guide is always parallel to probe travel.*

*For prices, see table page 14.

NEW! Microwave Power Measuring Equipment



-hp- 434A Calorimetric Power Meter

Just connect and read powers 10 mw to 10 watts! Covers dc to 10 KMC. No barretter or thermistor needed. No external terminations or plumbing. Measures CW or pulsed power. Two simple controls; no technical skill required.

New *-hp-* 434A Calorimetric Power Meter is, factually, the fastest, easiest way yet devised to measure powers accurately from 10 milliwatts to 10 watts, dc to 10 kilomegacycles.

With the 434A, measurement is literally as simple as connecting to the 50 ohm, type N front panel terminal and reading power directly. Thus the instrument is particularly suited for use by non-technical people.

Circuitry, *-hp-* 434A

Compact, self-contained

-hp- 434A fills the range between bolometer microwave power meters (such as the popular *-hp-* 430C, below) and conventional calorimeters for powers above 10 watts. But unlike previous cumbersome equipment suggested for its range, the new *-hp-* 434A is compact, moderate in cost, completely self-contained, and needs no detectors or external plumbing whatsoever.

Brief Specifications

Input Power Range: 7 ranges; full scale readings 0.01 to 10 watts
Frequency Range: dc to 10 KMC
dc Input Impedance: 50 ohms ± 5 ohms at input jack
Input SWR: Less than 1.5 full range
Meter Response (full scale): Approx. 10 sec (high range)
Approx. 2 sec (lower ranges)
Controls: Zero Set, Meter Range
Accuracy: Within 5% of full scale
Price: $1,115.00 (cabinet); $1,100.00 (rack mount)

-hp- 430C Microwave Power Meter

No computations! Provides instantaneous, automatic power readings *direct* in dbm or mw at all frequencies for which there are suitable bolometer mounts. For CW measurements, uses either 1/100 amp. fuse or Sperry 821 barretter. Also measures CW or pulsed power with negative coefficient thermistor. Provides up to 16 ma bias current. Operates with all mounts in adjacent table. Range 0.02 to 10 mw. $250.00.

-hp- 477B Coaxial Thermistor Mount

For frequency range 10 MC to 10 KMC. SWR less than 1.5. Thermistor element is 200 ohm negative. No tuning required; not susceptible to burnout. $75.00 (including thermistor).

-hp- 764D-767D Dual Directional Couplers

New high directivity dual coaxial couplers make reflectometer measurements practical in vhf and uhf coax systems. Flat response, high power capacity, low insertion loss. Four models, covering 216 to 4,000 MC collectively. $125.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 430C Microwave Power Meter	Measurement of rf power	Depends on Bolometer Mount	0.02 to 10 mw ±5% accuracy	$250.00
-hp- 434A Calorimetric Power Meter	Measurement of rf power	dc to 10 KMC	Direct reading, no barretters, thermistors or terminations; CW, pulsed	1115.00
-hp- 475B Tunable Bolometer Mount	Measurement of rf power (with 430B/C)	1,000 to 4,000 MC	Matches 50 ohm line to 100 or 200 ohms	225.00
-hp- 476A Universal Bolometer Mount	Measurement of rf power (with 430B/C)	10 to 1,000 MC	No tuning required SWR less than 1.25	85.00
-hp- 477B Coaxial Thermistor Mount	Measurement of rf power (with 430C)	10 MC to 10 KMC	No tuning required SWR less than 1.5	75.00
-hp- 485 Waveguide Detector Mount	Measurement of rf power	2,600 to 18,000 MC	Full coverage of waveguide band	See Table page 12
-hp- 487B Waveguide Thermistor Mount	Measurement of rf power	3,950 to 26,500 MC	Full coverage, no tuning, 1.5 SWR except K487B 2.0	See Table page 12
-hp- 764D Dual Directional Coupler	Reflectometer and rf power measurements	216 to 450 MC	Coupling attenuation* 20 db, directivity 30 db	125.00
-hp- 765D Dual Directional Coupler	Reflectometer and rf power measurements	450 to 945 MC	Coupling attenuation* 20 db, directivity 30 db	125.00
-hp- 766D Dual Directional Coupler	Reflectometer and rf power measurements	940 to 1,975 MC	Coupling attenuation* 20 db, directivity 26 db	125.00
-hp- 767D Dual Directional Coupler	Reflectometer and rf power measurements	1,900 to 4,000 MC	Coupling attenuation* 20 db, directivity 26 db	125.00

*Power handling capacity all 764/767 series couplers 50 watts CW, 10 Kw peak.

-hp- Waveguide Test Equipment—2.6 to 40.0 KMC

Basic, low-cost elements offer utmost flexibility for assembly of exact instrumentation required. Each unit covers entire range of its waveguide size. Careful engineering, simple, sturdy mechanical design, highest quality manufacture insures accurate, multi-purpose operation.

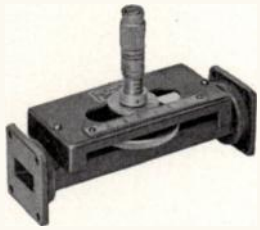
° Includes barretter; checked for square law characteristics.
§Mounts in 809B Carriage.

NEW! -hp- 382A Precision Attenuators

Previously offered for frequencies 3.95 through 18.0 KMC, popular *-hp-* 382A series precision attenuators are now available in "K" and "R" bands, 18.0 to 40.0 KMC. "K," "R" band attenuators are of new, space-saving design (see photo). Direct reading, one-control tuning, high power handling capacity. Attenuation 0 to 50 db full range, independent of frequency. Phase shift constant with attenuation. For prices G, J, H, X and P382A, see table above. *-hp-* K382A, $425.00. *-hp-* R382A, $450.00

-hp- 281A Waveguide - Coax Adapters



For convenient transition between waveguide and coax systems. Each unit covers a full waveguide range with SWR less than 1.25. Type N coax plug, AN waveguide flange. For S, G, J, H and X bands, 2.6 to 12.4 KMC. $25.00 to $50.00.

-hp-487B Thermistor Mounts

For fast, accurate waveguide power measurements. Each unit covers full range of its waveguide frequency. No tuning needed, SWR 1.5 max., except K487B, SWR 2.0 max. Max. power 10 mw. Rugged construction, high temperature coefficient thermistors virtually eliminate burnout. For G, J, H, X and K bands, 3.95 to 26.5 KMC. $75.00 to $95.00.

-hp- 870A Slide Screw Tuners

For flattening waveguide systems, matching, etc. Probe position and penetration adjusts to set up SWR cancelling existing SWR. Precision lead screw or micrometer varies probe insertion; vernier adjusts probe position. Corrects SWRs of 20 with accuracy of 1.02 SWR. For S, G, J, H, X, P, K, R bands, 2.6 to 40.0 KMC. $125.00 to $225.00.

-hp- 420A/B Crystal Detectors

Employs a silicon crystal to detect rf signals in Type N coaxial lines. Covers frequencies 10 MC to 12.5 KMC, sensitivity approx. 0.01 v/0.1 mw, frequency response ±3 db full range. Uses modified 1N26 crystal, max. SWR 3. $50.00 each. Also available in matched pairs as *-hp-* 420B, $150.00 pair.

-hp- 444A/446A Untuned Probes

-hp- 444A is modified crystal (1N76 or 1N26) plus small antenna in convenient housing. Probe penetration easily variable; may be locked in position. No tuning needed; sensitivity superior to most elaborate single or double tuned probes. Range 2.4 to 18 KMC; fits ¾" bore. *New -hp- 446A,* for *-hp-* 814 Probe Carriage, similar but covers P, K and R bands, 12.4 to 40.0 KMC. *-hp-* 444A, $35.00. *-hp-* 446A, $145.00.

For details, circle #14 on Reader Service Card

NEW! -hp- Noise Measuring Equipment

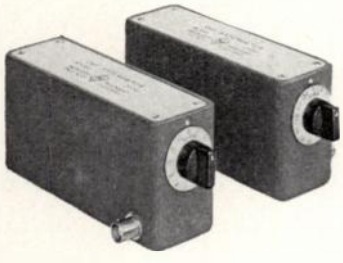
-hp- 340A Noise Figure Meter

Here is totally new equipment that makes it possible for a semi-skilled worker to do, in 5 minutes, receiver and component alignment jobs that once took skilled engineers a full hour. Receiver performance can often be *improved up to 3 db over the best adjustment previously possible. Improvement in receiver performance frequently equals doubling transmitter output.* Since accurate alignment is now easy, equipment is better maintained and peak performance enjoyed daily.

Model 340A is a revolutionary instrument making it possible, in 5 minutes, to optimize receiver performance and measure noise figure directly. *-hp-* 340A is direct reading in db, simple to use, automatic and needs no periodic calibration, operates over any frequency range for which there are noise sources, and has fast response to instantly track and present noise changes. In addition to usefulness in optimizing receiver and component performance, *-hp-* 340A is particularly helpful in designing circuit components such as IF amplifiers, crystal mixing circuits and traveling-wave tubes.

Brief Specifications

Frequency Range: Depends on noise source
Noise Figure Range: 3 to 30 db to ∞ with waveguide noise source
0 to 15 db to ∞ with IF noise source
Accuracy: ± 0.5 db, 10 to 25 db; ± 1 db, 3 to 30 db, waveguide noise source
± 0.5 db, 0 to 15 db, IF noise source
Required Rcvr or rf Amplifier Gain: Approx. 40 db (Waveguide Voice Source)
Approx. 50 db (IF Noise Source)
Input Frequency: 30 or 60 MC, selected by switch
Bandwidth: 1 MC minimum
Input Impedance: 50 ohms
Price: $715.00 (cabinet); $700.00 (rack mount)

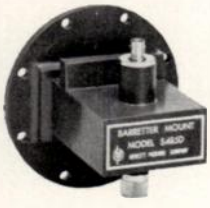


-hp- 347A Waveguide Noise Source

These new devices, Argon gas discharge tubes across a waveguide section provide uniform 15.2 (15.25 in S band) db excess noise level full range with maximum SWR of 1.2 even when noise source is cold. No temperature correction required. Available for S through P band, 2.60 to 18.0 KMC, (S, G bands), $190.00; (J, H, X and P bands), $180.00.

-hp- 345A IF Noise Source

Temperature-limited diode noise sources for IF amplifier noise measurement. Matches 50, 100, 200 or 400 ohms impedance. Center frequency either 30 or 60 MC. Noise level depends on cathode current, controlled and metered by *-hp-* 340A. *-hp-* 345A, $75.00.

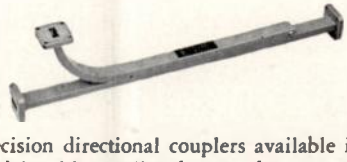


NEW! -hp- 355A/B Attenuators – 0 to 132 db

Here are two completely new design 50 ohm attenuators providing, together, 0 to 132 db attenuation in 1 db steps from dc to 500 MC! *-hp-* 355A provides 0 to 12 db attenuation in 1 db steps; *-hp-* 355B provides 0 to 120 db attenuation in 10 db steps. One simple control for each attenuator; overall full range accuracy is ± 0.25 db for *-hp-* 355A. For *-hp-* 355B, accuracy is ± 1 db to 250 MC; ± 2 db to 500 MC. Nominal impedance is 50 ohms, maximum SWR is 1.2 to 250 MC, 1.5 to 500 MC. Maximum insertion loss is 0 at dc, 0.4 db at 60 MC, 1 db at 250 MC and 1.5 db at 500 MC. Power dissipation is 0.5 watt average, 350 volts peak. The attenuators use BNC connectors. *-hp-* 355A or 355B, $125.00.

More -hp- equipment, available for most waveguide frequencies

-hp- 485 Detector Mounts



Three basic series offered; *S485A* for S band (no tuning, 1.35 SWR, 821 element); *485B*, for G, J, H, X bands (tunable, 1.25 SWR full range, 1N23, 1N21 or 821 element); *485D* for S, G, J bands (factory-installed 821 barretter). Also P485C, like 485B but for P band only, has installed 200 ohm 3 mw thermistor. $75.00 to $145.00.

-hp- 532A Waveguide Frequency Meters

New design for P, K, R bands. Wide band, direct reading, no interpolation or charts. Comprises a high Q resonant cavity tuned by choke plunger; no sliding contacts. Transmits almost full power at resonance; resonance indicated by 1.5 db dip in output. Precision tuning mechanism; no back-lash. Also similar model for X-band. $150 to $250.

-hp- 752 Multi-Hole Couplers

Precision directional couplers available in 3 models with coupling factors of 3, 10 and 20 db. Coupling accuracy ± 0.4 db except K, R bands which are ± 0.7 db. Directivity better than 40 db full range, coupling variation not over ± 0.5 db full range. Primary guide SWR less than 1.05. S, G, J, H, X, P, K, R bands, 2.6 to 40.0 KMC. $75.00 to $375.00.

Wide Band Amplifiers for Fast Circuit Work

-hp- Traveling-Wave Tube Amplifiers

-hp- offers Traveling-Wave Tube Amplifiers for all frequencies 2 to 12.4 KMC. *-hp-* 490B, 492A and 494A are low level, high gain amplifiers with 30 and 25 db gain; they offer amplitude, pulse, phase or FM modulation. *-hp-* 491A is a high power traveling-wave tube amplifier having a rated output of 1 watt, 2 to 4 KMC. All amplifiers have exclusive *-hp-* helical coupling system, and employ encapsulated traveling-wave tubes that can be readily replaced. *-hp-* 490B/491A, $1,400.00. *-hp-* 492A/494A, $1,500.00.

-hp- 460A/B Fast Pulse Amplifiers

-hp- 460A Wide Band Amplifiers, in cascade with *-hp-* 460B Fast Pulse Amplifiers, provide up to 90 db gain, 125 v open circuit. This permits direct connection to oscilloscope deflection plates. Rise time 0.0026 μsec. Will amplify millimicrosecond pulses. Over 100 MC band width for 'scopes. *-hp-* 460AR, $185.00. *-hp-* 460BR, $225.00.

Instrument	Primary Uses	Frequency Range	Characteristics	Price
-hp- 450A Amplifier, Stabilized	General purpose lab amplifier	10 cps to 1,000,000 cps	20 and 40 db gain, frequency response ±½ db	$ 140.00
-hp- 460AR Amplifier, Wide Band	Wide band, pulse amplification	100 KC to 140 MC	20 db gain, rise time 0.0026 μsec	185.00
-hp- 460BR Amplifier, Fast Pulse	Pulse amplification high output	100 KC to 140 MC	15 db gain, 125 peak volts	225.00
-hp- 490B Traveling-Wave Tube Amplifier	Amplification throughout "S" band	2 to 4 KMC	30 db gain; Millimicrosec rise time; 10 mw output	1,400.00
-hp- 491A Traveling-Wave Tube Amplifier	High power "S" band amplification	2 to 4 KMC	30 db gain; millimicrosec rise time; 1 watt output	1,400.00
-hp- 492A Traveling-Wave Tube Amplifier	Amplification through most of "G" and "J" bands	4 to 8 KMC	30 db gain; millimicrosec rise time; 10 mw output	1,500.00
-hp- 494A Traveling-Wave Tube Amplifier	Amplification throughout "X" band	7 to 12.4 KMC	25 db gain; millimicrosec rise time; 5 mw output	1,500.00

-hp- Regulated and Klystron Power Supplies

NEW! -hp- 721A Transistor Power Supply

New, completely transistorized, compact, regulated supply. Output 0 to 30 v, continuously variable. 150 ma maximum output, output impedance less than 0.2 ohms. Regulation, no load to full load, 0.3% or 30 mv whichever is greater. Line voltage change of ± 10% causes output change of less than 0.3% of ± 15 mv, whichever is greater. Front panel switch limits maximum output current preventing damage to transistors, etc., from accidental overload. Reads ma, v direct. $145.00.

-hp- 712B Power Supply

This *-hp-* instrument features high regulation of 50 mv no load to full load, 0.1 millisecond transient response, internal impedance 0.1 ohms in series with 25 μH; full-load maximum hum less than 500 μv, sealed transformers, chokes and condensers. 0 to 500 v, 200 ma supply and fixed —300 v tap providing a 50 ma, 300 to 800 v variable supply for klystron operation. $365.00△.

Instrument	Primary Use	Characteristics	Price
-hp- 710B Power Supply	General purpose regulated dc supply for lab and field use	100 to 360 volts @ 75 ma	$110.00
-hp- 711A Laboratory Power Supply	Same as 710B	0 to 500 volts @ 100 ma	225.00
-hp- 712B Power Supply	Same as 710B	0 to 500 volts @ 200 ma	365.00△
-hp- 715A Klystron Power Supply	Regulated beam, reflector source for low power klystrons	250 to 400 volts @ 50 ma	300.00
-hp- 717A Klystron Power Supply	Powering Type 5721 klystrons	800 to 1,000 volts @ 25 ma	425.00
-hp- 721A Transistor Power Supply	Powering transistors, similar applications	0 to 30 v, 150 ma	145.00

△Rack mounted instrument available for $15.00 less.

-hp- Signal Generators — 50 KC to 21 KMC

NEW! -hp- 606A Standard Signal Generator

New, ultra-modern; 50 KC to 65 MC. Output 3 v full range, continuous attenuation to 0.1 μv. MO-PA circuit with full feedback loop insures constant output full range. Low distortion, broad modulating capabilities. Typical *-hp-* speed, ease of operation; occupies ¼ bench space normally needed for generators of this frequency. $990.00△.

-hp- 608D vhf Signal Generator

10 to 420 MC. Highest stability. No incidental FM or frequency drift. Calibrated output 0.1 μv to 0.5 v throughout range. Built-in crystal calibrator provides frequency check accurate within 0.01% each 1 and 5 MC. Master-oscillator, intermediate and output amplifier circuit design. Premium quality performance, direct calibration, ideal for aircraft communications equipment testing. $1,050.00.

-hp- 608C vhf Signal Generator. High power (1 v max.) stable, accurate generator for lab or field use. 10 to 480 MC. Ideal for testing receivers, amplifiers, driving bridges, slotted lines, antennas, etc. $950.00.

-hp- 626A/628A shf Signal Generators

New instruments, bringing high power, wide range, convenience and accuracy to 10 to 21 KMC range. Frequencies, output voltage directly set and read. Output 10 to 20 db better than previous spot-frequency sets SWR better than 1.2 at 0 dbm and lower. Internal pulse, FM or square wave modulation; also external pulsing or FM'ing. *-hp-* 626A, 10 to 15.5 KMC, $3,250.00. *-hp-* 628A, 15 to 21 KMC, $3,250.00.

Instrument	Frequency Range	Characteristics	Price
-hp- 606A	50 KC to 65 MC	Output 0.1 μv to 3 v. Full feedback loop, low distortion	$ 990.00△
-hp- 608C	10 to 480 MC	Output 0.1 μv to 1 v into 50 ohm load. AM, pulse, or CW modulation. Direct calibration	950.00
-hp- 608D	10 to 420 MC	Output 0.1 μv to 0.5 v. Incidental FM 0.001% entire range	1,050.00
-hp- 612A	450 to 1,230 MC	Output 0.1 μv to 0.5 v into 50 ohm load. AM, pulse, CW or square wave modulation. Direct calibration	1,200.00
-hp- 614A	800 to 2,100 MC	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration	1,950.00
-hp- 616A	1,800 to 4,000 MC	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW or FM modulation. Direct calibration	1,950.00
-hp- 618B	3,800 to 7,600 MC	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, CW, FM or square wave modulation. Direct calibration	2,250.00
-hp- 620A	7,000 to 11,000 MC	Output 0.1 μv to 0.223 v into 50 ohm load. Pulse, FM or square wave modulation. Direct calibration	2,250.00
-hp- 623B	5,925 to 7,725 MC	Output 70 μv to 0.223 v into 50 ohm load. FM or square wave modulation. Separate power meter and wave meter section	1,900.00
-hp- 624C	8,500 to 10,000 MC	Output 3.0 μv to 0.223 v into 50 ohm load. Pulse, FM or square wave modulation. Separate power meter and wave meter section	2,265.00△
-hp- 626A	10 to 15.5 KMC	Output 10 dbm to —90 dbm. Pulse, FM, or square wave modulation. Direct calibration	3,250.00
-hp- 628A	15 to 21 KMC	Output 10 dbm to —90 dbm. Pulse, FM, or square wave modulation. Direct calibration.	3,250.00

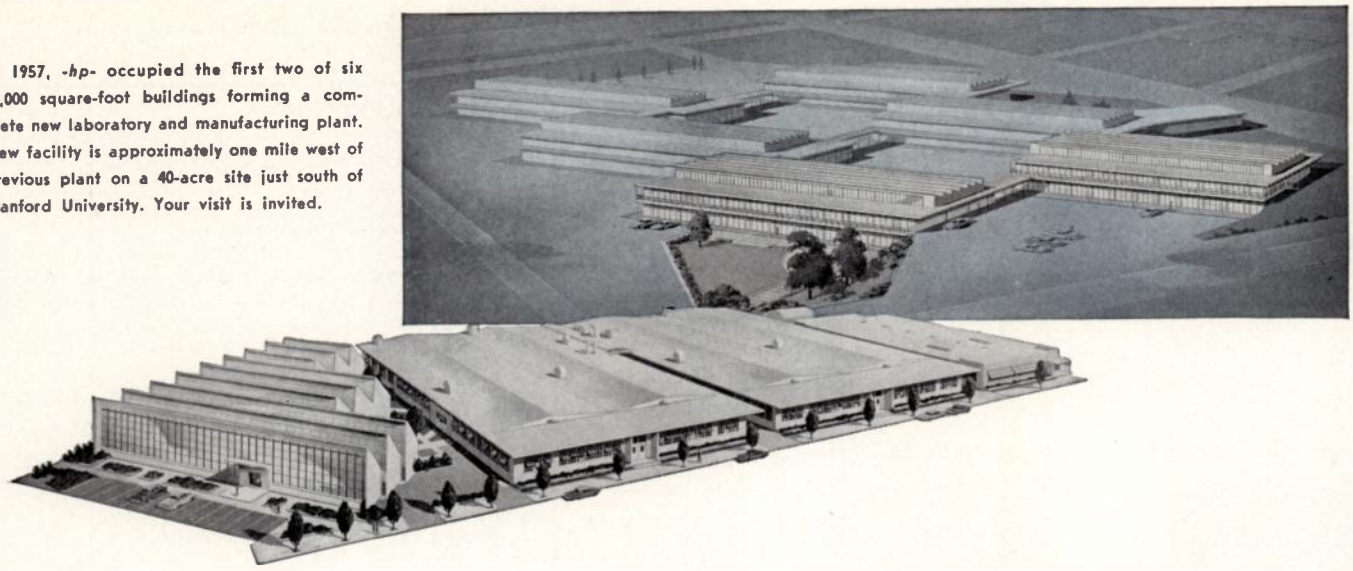
△ Rack mounted instrument available for $15.00 less.

-hp- 614A/616A UHF Signal Generators

Among most widely used signal generators. *-hp-* 614A, 800 MC to 2.1 KMC, *-hp-* 616A, 1.8 to 4.0 KMC. Direct reading, direct frequency set, no calibration charts, wide range. *-hp-* 614A SWR 1.6, output accuracy ± 1 db —10 dbm to —127 dbm. *-hp-* 616A, SWR 1.8, output accuracy ± 1.5 db, —7 dbm to —127 dbm. Both have constant internal impedance 50 ohms. Modulation is internal or external pulse, or FM. *-hp-* 614A or *-hp-* 616A, $1,950.00.

-hp- Swept Frequency Oscillators

-hp- 686A Electronic Sweep Oscillator



Totally new kind of backward-wave device eliminating sweep motors, tuning plungers, range limitations, etc. Covers all or part of X-band with flexible, *quiet* electronic sweep. Simple to operate, direct reading, continuously adjustable sweep width and rate, 10 mw output minimum, frequency sweep linear with time. Has slow sweep for recorders; fast for oscilloscope; single sweep manually started or externally triggered, external FM, AM modulation. Ultimate in X-band sweep oscillators, $2,615.00△.

Data subject to change without notice.
Prices f. o. b. factory.

Instrument	Frequency Range	Characteristics	Price
-hp- 670SM	2.6 to 4 KMC	Automatic adjustable motor-driven sweep, full frequency band coverage, output 10 mw full range, full modulation capabilities, direct-reading frequency dial.	$1,175.00 with motor
-hp- 670GM	4 to 6 KMC		1,175.00 with motor
-hp- 670JM	5.85 to 8.2 KMC		1,175.00 with motor
-hp- 670HM	7 to 10 KMC		1,175.00 with motor
-hp- 684A	3.7 to 5.9 KMC	Electronically swept; variable sweep rate, width. Output 10 mw, SWR 2.1 or less. Pulse, square wave, FM, AM modulation	2,265.00△
-hp- 685A	5.2 to 8.3 KMC		2,265.00△
-hp- 686A	8.2 to 12.4 KMC		2,615.00△
-hp- 687A	12.4 to 18.0 KMC		3,115.00△

△Rack mounted instrument available for $15.00 less.

In 1957, *-hp-* occupied the first two of six 85,000 square-foot buildings forming a complete new laboratory and manufacturing plant. New facility is approximately one mile west of previous plant on a 40-acre site just south of Stanford University. Your visit is invited.

COMPLETE COVERAGE

Won't you agree it is simple and more time-saving when you can turn to one source for your test equipment needs? *-hp-* engineers are continually working to produce new equipment that anticipates your future needs, yet functions smoothly with your existing *-hp-* instruments. At the 1958 I.R.E. Show 20 new, basic *-hp-* test instruments were introduced. Today, *-hp-* makes over 300 instruments; you can choose from the world's largest and most complete line just the equipment you need. In making this choice, you are assured of *-hp-* quality; today the standard of the world in electronic test instruments.

To give you personal help with measuring problems, you have available over 150 electronics specialists in every major U. S. metropolitan area, and around the world. These men, trained and annually re-trained by *-hp-*, are experts in applying as well as selling and servicing *-hp-* instruments. Call them when you can use personal, competent help, in your plant, today.

New LAMBDA L-T TRANSISTORIZED POWER SUPPLIES

CONVECTION COOLED

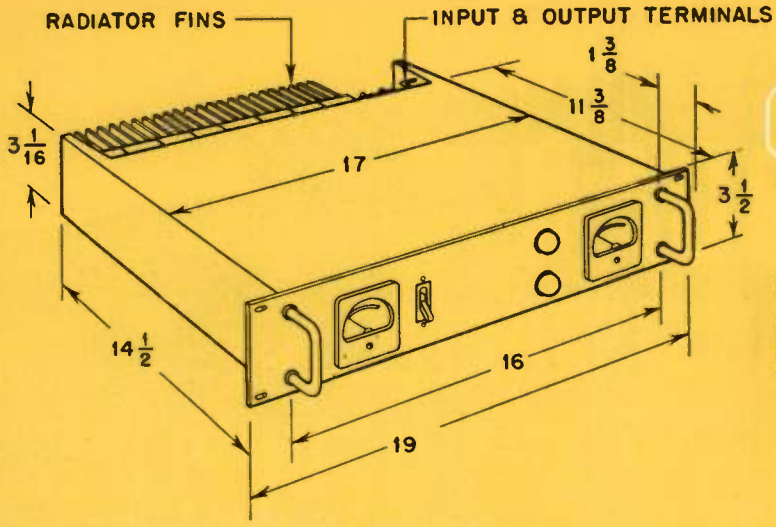
No internal blowers • No moving parts

0-32 VDC 0-2 AMP

Model LT 2095	$365
Model LT 2095M (metered)	$395

GUARANTEED FOR FIVE YEARS

First in Lambda's new LT series of transistorized power supplies, Models LT 2095 and LT 2095M (metered) are conservatively designed to operate at maximum rating at 50°C ambient temperature without the use of internal blowers.



Models LT 2095 and LT 2095M have a combination of special features found in no other transistorized power supply. They are backed by Lambda's exclusive five-year guarantee—the only such guarantee provided by any manufacturer of power supplies.

SPECIAL FEATURES

Convection cooling. No internal blowers.
Ambient 50°C.
Specially designed, high efficiency radiator heat sinks.
All transistor. No tubes.
Silicon rectifier.
50-400 cycles input.
Protected by magnetic circuit breakers.
Short-circuit-proof.
Special, high-purity foil, long-life electrolytics.
Excess ambient thermal protection.
Fast transient response.
Hermetically-sealed transformer. Designed to MIL-T27A.
Remote sensing and DC vernier.
Excellent regulation. Low output impedance. Low ripple.
Compact. Only 3½" panel height.

LAMBDA Electronics Corp.

OUTLINE DIMENSIONS

Preliminary and tentative SPECIFICATIONS

LAMBDA LT 2095 and LT 2095M TRANSISTORIZED POWER SUPPLIES

DC OUTPUT (regulated for line and load):

Voltage and Current

Model	Voltage Range[1]	Current Range[2]
LT-2095	0-32 VDC	0-2 A
LT-2095M	0-32 VDC	0-2 A

[1] *Voltage range for each model is completely covered in four continuously variable bands as follows:*

Model	Voltage Bands
LT-2095	0-8, 8-16, 16-24, 24-32
LT-2095M	0-8, 8-16, 16-24, 24-32

[2] *Current rating applies over entire voltage range.*

Regulation (line) ... Better than 0.15 per cent or 20 millivolts (whichever is greater). For input variations from 105-125 VAC.

Regulation (load) ... Better than 0.15 per cent or 20 millivolts (whichever is greater). For load variations from 0 to full load.

Transient Response (line) ... Output voltage is constant within regulation specifications for step-function line voltage change of plus (+) 10 volts or minus (−) 10 volts within the limits of 105-125 VAC.

Transient Response (load) ... Output voltage is constant within regulation specifications for step-function load change from 0 to full load or full load to 0 within 50 microseconds after application.

Internal Impedance ... Less than .025 ohms.

Ripple and Noise ... Less than 1 millivolt rms.

Polarity ... Either positive or negative may be grounded.

AMBIENT TEMPERATURE AND DUTY CYCLE ... Continuous duty at full load up to 50° C (122° F) ambient.

AC INPUT ... 105-125 VAC, 50-400 CPS. 200 watts[3].

[3] *With output loaded to full rating and input at 125 VAC.*

OVERLOAD PROTECTION:

Electrical ... Magnetic circuit breaker, front panel mounted. Unit cannot be injured by short circuit or overload.

Thermal ... Thermostat, manual reset, rear of chassis. Thermal overload indicator light front panel.

INPUT AND OUTPUT CONNECTIONS ... Heavy duty barrier terminal block, rear of chassis.

METERS ... Voltmeter and milliammeter on metered models.

CONTROLS:

DC Output Controls ... Band-switches and screw-driver adjusting vernier-control, rear of chassis.

Power ... Magnetic circuit breaker, front panel.

Remote DC Vernier ... Provision for remote operation of DC vernier.

Remote Sensing ... Provision is made for remote sensing to minimize effect of power output leads on DC regulation.

VOLTAGE REFERENCE ... Zener Diode.

PHYSICAL DATA:

Mounting ... Standard 19" rack mounting.

Size ... 3½" H x 19" W x 14⅜" D.

Weight ... 30 lb. Net 40 lb. Shipping Wt.

Panel Finish ... Black ripple enamel (standard). Special finishes available to customers' specifications at moderate surcharge.

31 IMPORTANT DESIGN AND PERFORMANCE FEATURES

1. All tubes and controls clearly identified and marked on chassis
2. All tubes readily accessible for replacement
3. Sturdy cable clamp anchors
4. Quarter-turn fasteners for easy access
5. Every connection and solder joint individually inspected and checked
6. Service access without removal from rack
7. Schematic diagram permanently attached for ready reference.
8. Oil-filled hermetically sealed capacitors
9. Rated for operation from 50-400 cycle source
10. Compact—only 5¼" panel height in C-200 and C-400 series; 7" in C-800 series; 8¾" in C-1500 series
11. Semi-conductor Rectifiers in C-400, C-800, and C-1500 series
12. Rated for 24-hour continuous duty
13. Sturdy gripping handles
14. Advanced packaging for optimum thermal and mechanical design
15. Overload protection with built-in blown-fuse indicators
16. Rated for full load over entire voltage range
17. Easy-to-read 3½" meters on M models
18. Every specification lab-checked before shipment
19. Transient-free output
20. Excellent regulation, low output impedance, low ripple
21. Hermetically sealed transformers and choke
22. Harness wiring
23. Stable, low-noise wire-wound reference networks and multipliers
24. Heavy-duty barrier-type terminal block located for convenient rack cabling
25. Heavy-duty filament output
26. Unit welded chassis and frame
27. Provision for remote power control
28. Provision for remote DC vernier voltage adjustment
29. Stable 5651 voltage reference tube
30. Heavy-duty extra-length industrial cord
31. Nylon jacketed vinyl wire

Model 1500:
0-400 VDC,
0-1500 MA,
without meters,
$730.00

500 MA

Wide range power supplies in bench and rack models

Rack Model 50R: 0-500 VDC, 0-500 MA, $420.00

Bench Model 50: 0-500 VDC, 0-500 MA, $440.00

Lambda Model 50 is a general purpose, heavy duty power supply for bench use. It is housed in a compact cabinet provided with a rear access door and two sturdy carrying handles.

Rack Model 50R, intended for mounting in a standard 19" rack, is identical to Model 50 except that a ventilated dust cover is supplied in place of the cabinet.

(See check list on page 6)

200 MA PORTABLE

Wide range de luxe portable power supply for broad field and laboratory applications

Model 71:
0-500 VDC,
0-200 MA,
$310.00

Built for heavy-duty service, this versatile precision unit features maximum compactness and portability. Weight: 49 lbs. Only 13" high, 8¾" wide, 14½" deep.

Model 71 is mounted on rubber bumper feet and is equipped with a sturdy fold-down leather handle.

(See check list on page 6)

LAMBDA GIVES FIVE-YEAR GUARANTEE

Lambda Electronics is now giving an extended guarantee on Lambda power supplies which covers material and workmanship for five full years.

The new guarantee, by far the most liberal offered by any power supplies manufacturer, has been made possible by the outstanding record of field performance achieved by Lambda equipment.

Lambda has been a pioneer in the manufacture of power supplies, and one of the relatively few electronics organizations which has specialized entirely in this field.

ALL LAMBDA EQUIPMENT GUARANTEED FOR FIVE YEARS.

POWER SUPPLIES

(See Check List on page 6 for complete line)

300 MA SERIES

Wide range regulated power supplies in popular 300 MA range for rack mounting

Model 32M: 200-325 VDC, 0-300 MA, with meters, $169.50
Model 33M: 100-200 VDC, 0-300 MA, with meters, 184.50

Widely used power supplies for intermediate power requirements. Models 32 and 33 in this heavy-duty series are designed for standard 19" rack mounting. Models 32M and 33M are identical to 32 and 33, with the addition of 3½" rectangular voltmeters and milliameters.

(See check list on page 6)

Model 32: 200-325 VDC, 0-300 MA, without meters, $139.50

Model 33: 100-200 VDC, 0-300 MA, without meters, $154.50

100 MA SERIES

Complete power supply dependability

Model 28M: 200-325 VDC, 0-100 MA, with meters, $89.50
Model 29M: 100-200 VDC, 0-100 MA, with meters, 99.50

These long-lasting, dependable sources of power deliver "work-horse" service...yet cost as little as $59.50.

Intended primarily for fixed voltage use, they provide a convenient, low-cost power source for auxiliary equipment; also suited to production line applications.

(See check list on page 6)

Model 28: 200-325 VDC, 0-100 MA, without meters, $59.50

Model 29: 100-200 VDC, 0-100 MA, without meters, $69.50

ON POWER SUPPLIES *Guarantee retroactive to 1953*

The new five-year protection is tangible proof of the dependability and heavy-duty characteristics of Lambda equipment. The further step, unprecedented in the electronics industry, of making the new guarantee retroactive to cover all Lambda equipment bought since 1953 and now in use by the original purchasers, provides additional proof of the confidence the company has in the performance of Lambda power supplies.

Confirmed by engineers

Engineers who specify power supplies support this judgment. In every impartial study of power supply preference, these men choose Lambda above all other makes of supply. The most recent study shows Lambda specified by twice as many engineers as the next two combined.

Among more than three dozen manufacturers named, Lambda leads with an impressive 44 per cent preference. The nearest competing make received a 16.5 per cent vote.

Such companies as Bell Telephone, Consolidated Vultee, General Electric, General Motors, IBM, RCA and Remington Rand are among thousands who use Lambda power supplies.

ALL LAMBDA EQUIPMENT GUARANTEED FOR FIVE YEARS.

GUARANTEED FOR FIVE YEARS

SEND FOR LATEST CATALOG.

Complete specifications for all Lambda Power Supplies.

GENERAL SPECIFICATIONS

Sufficient tolerance is incorporated in the specifications to allow for normal commercial component and tube deviations. Tube replacements may be made with any equivalent tubes meeting RETMA specifications.

INPUT:

105-125 VAC, 50-60 CPS, single phase. Except for Com-Pak series (models with prefix C) and LAMBDA L-T transistor series (models with prefix LT) 105-125 V, 50-400 C.

DC OUTPUT:

Voltage Range: Continuously variable over ranges specified, except where otherwise noted.
Current Range: The current ranges given apply to the entire DC output voltage range, and for input voltages from 105 to 125 VAC. No "derating" is necessary.
Polarity: Either positive or negative terminal may be grounded.

AC OUTPUT:

The AC output is unregulated, isolated and ungrounded. It has a value of slightly higher than 6.3 V (when fully loaded) at an input of 115 VAC. This value allows for voltage drop in connecting leads. Dual outputs may be connected in series or parallel.

DUTY CYCLE:

Continuous duty at full load.

METERS:

Where meters are indicated, a separate voltmeter and milliammeter are provided.

OVERLOAD PROTECTION:

Ample protection is provided against external overload and internal failure conditions by means of fuses.
Circuit breakers of the magnetic, "trip-free" type are employed in Models 50, 50-R, 71, "1500" and LT series as protection against external overloads.

STYLE:

Rack Models are designed for mounting on standard 19" relay racks.
Bench Models are provided with compact, specially-designed, ventilated cabinets equipped with carrying handles. The power supply units may be removed from their cabinets for mounting in standard relay racks (except Models 25, 26 and 71).

RATINGS AND COMPONENTS:

All components used are of the highest quality and are operated well within manufacturers ratings. Hermetically-sealed, oil-filled capacitors are used exclusively, except in LT series, where special high purity foil, long-life electrolytics are used. Ample safety factors are provided in the design to insure the long life, and the dependable, trouble-free operation so desirable in industrial and laboratory applications.

All specifications and prices subject to change without notice.

SYLVANIA MICROWAVE COMPONENTS

TRAVELING
WAVE AMPLIFIERS

BROADBAND
REFLEX KLYSTRONS

REFLEX
KLYSTRONS

FERRITE
DEVICES

Rugged, Reliable Traveling-Wave Amplifiers

Broadband amplifiers for airborne, shipboard, and ground based equipment. Fully tested to complete military-type specifications. Ideal for countermeasures, radar, communications and test equipment.

Lightweight Permanent Magnet Types

Type	Frequency (KMC)	Minimum Output
TW-4006	1-2	10 mw
TW-4007	1-2	1 watt
TW-4002	2-4	10 mw
7072	2-4	1 watt

Compact Solenoid Types*

Type	Frequency (KMC)	Minimum Output
6753	1-2	10 mw
6752	1-2	2 watts
TW-538	1-2	0.5-1 KW, pulse
6493	2-4	10 mw
6559	2-4	2 watts
6698	2-4	0.5-1 KW, pulse
TW-613	8-11.5	5 mw
TW-591	8-10.5	0.5 KW, pulse

Rugged, Reliable Backward Wave Oscillators*

Compact voltage-tuned broadband oscillators for wide-range search receivers and test equipment.

Type	Frequency (KMC)	Power Output
6699	1-2	20-150 mw
6496	2-4	20-150 mw
BW-623	4-8	20-150 mw

*Mating Solenoid available for all types.

Low-Cost, Long-Life Reflex Klystrons for Microwave Relays

These reliable klystrons are widely proven in microwave relay service. Fully tested to the equipment specification. Maximum frequency stability results from special tuner design.

Type	Frequency (KMC)	Power Output
6974*	4.6-5.0	1 watt
6468	5.3-6.6	0.07-1 watt
6469	5.8-7.125	0.07-1 watt
6470	6.3-7.5	0.07-1 watt
K-841B	6.125-6.425	1 watt
K-840B	6.575-6.875	1 watt
K-839B	7.125-7.425	1 watt

*Special Linear Tuner.

Broadband Reflex Klystrons

These versatile klystrons are ideal for search receivers, signal generators, and microwave relays. Extreme design flexibility achieved with external cavity design.

Type	Frequency (KMC)	Power Output
6BM6	0.55-3.8	50-175 mw
6BM6A*	0.55-3.8	50-175 mw
6BL6	1.6-6.5	60-250 mw

*Pulse type.

Ferrite Devices—For Better Radar and Microwave Relay Performance, Specify Sylvania Isolators and Duplexer Circulators

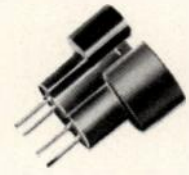
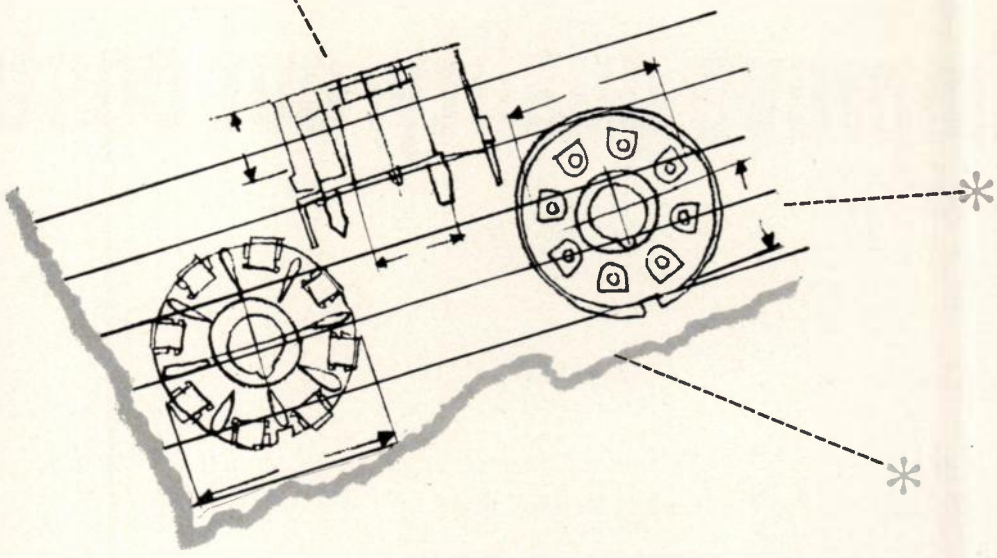
A. C. Receptacle— Designed for economical installation

Interlock Plug—3-pin —positive grounding



Anti-corona Sockets —Octal, 9-pin

Printed Circuit Sockets —Octal, 9-pin, 7-pin



Counter Tube Socket —with built-in zero-adjust

"Class 30" Transistor Socket—for standard 100-mil grid

"In-line" Transistor Socket—with snap-in printed circuit contacts

Any one of these sockets could have been designed for you

IF YOU'RE building circuits . . . chances are you've come across at least one socketing problem. Maybe it was an entirely new problem like socketing the "class 30" transistor or perhaps a recurring bugaboo like high voltage arcing.

Either way, if you brought your problem to Sylvania it didn't take long to find an efficient, economical solution.

If you haven't been checking Sylvania for your socket requirements, why not do it next time? Sylvania has produced millions of sockets in over 150 varieties to fit every need. Many are now standard items and may offer an immediate solution to your problem. Write for specification sheets on the above sockets or let us suggest the best socket for the application you have in mind.

4-LAYER BISTABLE TRANSISTOR DIODE

for: computers
telephony
control
pulse circuitry

For details, circle #31 on Reader Service Card

Shockley / **Transistor Corporation**

Introduction

Transistor diodes of the four-layer bistable type, invented at Bell Telephone Laboratories, are semiconductor switches with functions based on the principles of transistor action. Because the switching properties so closely approach many of those demanded from an ideal switch, the four-layer diode finds many applications in the otherwise diverse fields of high-power switching, pulse generation, and pulse counting.

Basically, the unit is a two-terminal device which operates electrically in either of two states:

1) an 'open' or low-conductance state of 10 to 1,000 megohms, in parallel with about 50 $\mu\mu$f, and

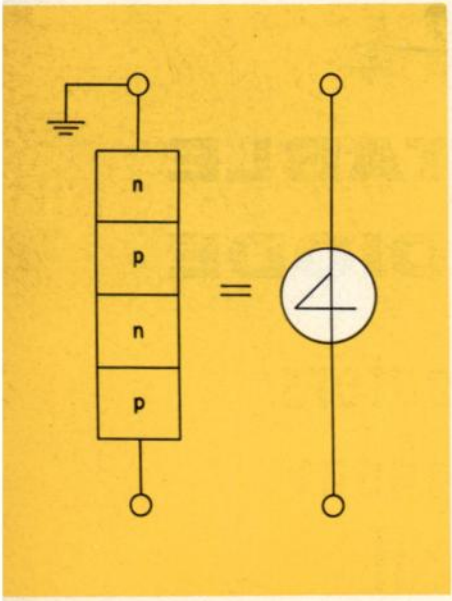
2) a 'closed' or high-conductance state of 1 to 10 ohms. The resistance in this state depends on current and decreases in some units to values as low as 0.2 ohm at currents of 2 to 3 amperes.

The diode is switched from one state to the other through control of the voltage and current. When the voltage exceeds the breakdown level, the diode changes from 'open' to 'closed'—provided sufficient current is available to hold it in the 'closed' state. (Switching occurs very rapidly and is discussed in section on Switching Times.) When the current drops below a threshold value, the diode will switch back to 'open'.

Circuit Properties

As shown in Fig. 1 (below) the four-layer diode passes back and forth between its 'open' and 'closed' state through a negative-resistance transition region II located between region I ('open' or 'off') and region III ('closed' or 'conductive').

Action of the Four-Layer Diode



Visualize the voltage across the device being increased from zero with polarity shown in Fig. 2a. Junctions 1 and 3 are forward biased, and junction 2 reverse biased. Therefore junction 2 has a much higher impedance than junctions 1 and 3. Nearly the entire applied voltage will be developed across junction 2, and the current that flows will be largely that characteristic of a reverse-biased silicon junction.

Hence, the device will have a low-frequency impedance in this range of operation of possibly several hundred megohms. Since pn junctions also possess capacitance, the high-frequency impedance will be considerably lower.

As the voltage continues to be increased, the electric field produced within the silicon at junction 2 increases. The so-called avalanche current together with the increasing alphas of the emitter junctions then lead to the shape of the characteristic in region II.

Transistor Equivalent

The four-layer diode Fig. 2a can be regarded as two interconnected silicon-junction transistors. Current passing junc-

Schematic diagram of the four-layer transistor diode construction. Produced from single-crystal silicon, the four layers in the silicon unit are obtained by controlled diffusion of suitable impurities. Thickness is approximately 0.002 in.

Schematic symbol for the four-layer bistable transistor diode is a modified 4, identifying the diode type. At the same time, the slant line of the 4 indicates the forward direction of the device when in 'on' condition.

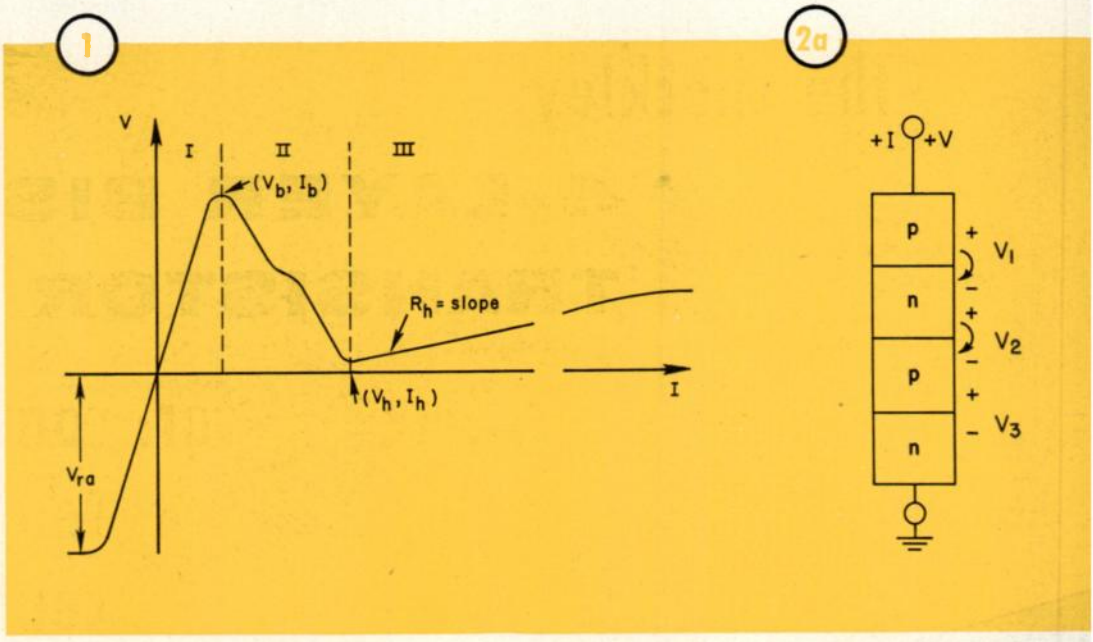


Fig. 1. Voltage-current characteristic for the four-layer diode shows the three essential operating regions: I 'open', II transition or negative resistance, and III 'closed'. Voltage and current conventions are shown in Fig. 2a (For illustration purposes, the current is not shown to scale.)

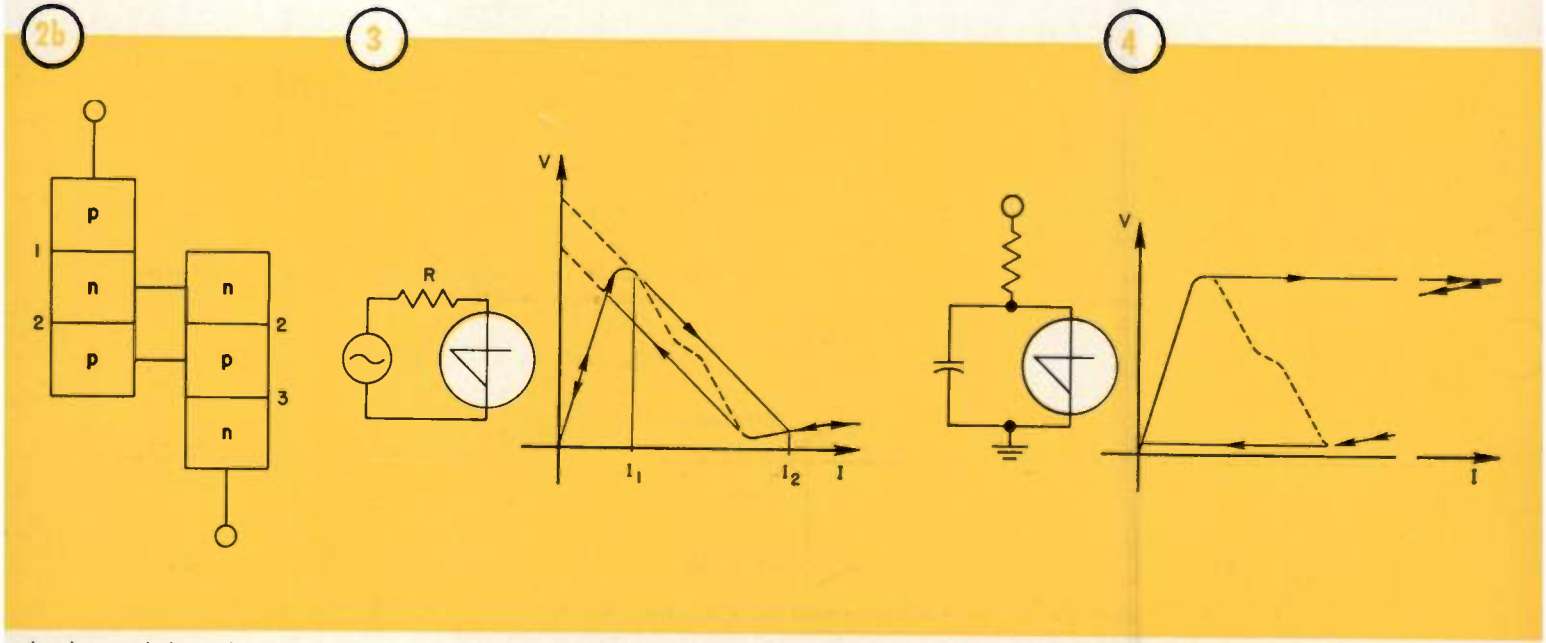
Fig. 2. One way of viewing four-layer diode operation is to regard the device as though it were two interconnected silicon-junction transistors, as shown here. This is

For details, circle #32 on Reader Service Card

tion 2 (which is also the total device current) arises from three components: (a) that which is thermally generated in and near junction 2 and multiplied there, (b) that injected by the p emitter and collected and multiplied at junction 2, and (c) that injected by the n emitter and collected and multiplied at junction 2.

Negative resistance arises in the transition region II as follows: For small current through the device, the alphas of the transistors of Fig. 2b are low, and a large avalanche multiplication M is necessary to account for device current at junction 2. As the current increases beyond I_b, however, the alphas of the transistors begin to increase rapidly and a decreasing value of M is required to keep charge from piling up at the center junction. Since M is dependent on the voltage drop across junction 2, a decreasing value of M implies a decreasing value of V. Hence beyond I_b, device current increases and device voltage decreases.

This finally results in a condition of zero voltage drop across the center junction, at which point it acts as an emitter as well as a collector. The device is then 'closed', the base layers are flooded with charge, and the device has low impedance. (In region II, proper design will permit the control of certain features of the negative-resistance characteristic, such as a widened flat portion or a modified slope and width of the transition region on the current axis.) At this point on the curve, the voltage drop is about 1 volt plus the voltage drop associated with the ohmic contacts. The 'closed' resistance is defined as the slope R_h of the characteristic in region III.



R_h is approximately constant for pulse currents in the neighborhood of 2 - 3 amps and equal to the ohmic contact resistance of one ohm or less. This characteristic permits high-power applications; i.e., switching 6 watts or, with proper heat sinking, 12 watts, at a power efficiency of nearly 100 per cent.

Switching Times

In many applications, it is desirable to calculate and predict switching times under a variety of boundary conditions. In one of these, the voltage is slowly increased to slightly higher than the switching voltage. A resistance in series with the voltage source makes intersections with the characteristic as shown in Fig. 3. When the upper load line is reached an exponential build-up with a time constant of the order of 0.1 μsec occurs until I increases from I_1 to I_2.

In another case, the voltage across the device is held constant as the switching proceeds, as in Fig. 4. The capacitor charges up to V_b. The device now switches 'closed' with essentially constant voltage across it to a current limited by its resistance and with initial time constants of the order of 30 or 40 millimicroseconds. By using only a portion of the current buildup, circuits can be made to generate rapidly rising pulses.

Consideration of the breakdown voltage point as a rigid threshold value should be modified somewhat with respect to the rate of the voltage rise. The capacitance of junction 2 permits passage of a displacement current proportional to the rate of change of the voltage across the device. Appearing at the two emitter junctions, this current, when large enough, acts to reduce the breakdown-voltage level. This effect, with rising drive frequency, approaches a limit as the device becomes a pure bilateral capacitor.

related particularly to the characteristic curve in the transition region between the 'open' and 'closed' conditions.

Fig. 3. Switching transient of the four-layer diode when a voltage is slowly increased to slightly greater than breakdown and held there. The arrows indicate the "hysteresis loop" traced by applying a-c voltage. (The current is not shown to scale.)

Fig. 4. Switching transient of the four-layer diode when voltage across the device is held constant as switching proceeds. The arrows show the path followed in discharging the capacitor. (The current is not shown to scale.)

A SUBSIDIARY OF BECKMAN INSTRUMENTS, INC

CHARACTERISTICS & TESTS

For application convenience, the following parameters of the four-layer diode are available within the ranges listed below:

No.	V_b Volts	I_b μa	V_h Volts	I_h ma	R_h ohms
4N20D	20±5	<500	<2	<50	<10
4N30D	30±5	<500	<2	<50	<10
4N40D	40±5	<500	<2	<50	<10
4N50D	50±5	<500	<2	<50	<10
4N20-50DL		<4v drop for 3-amp pulse			

For applications requiring more specific limits, please request information.

Since some of these parameters are, to some extent, dependent on the test circuit used, two suggested circuits are shown. See Figs. 5 and 6 (below).

Referring to Fig. 5, the 100 k limiting resistor (R_3) is used to measure the value of I_b, which is arbitrarily defined as the point where the trace disappears on the scope display (see Fig. 7a). The values of V_b, V_h, I_h, and R_h are measured with the 1 k resistor (R_1) as the limiting resistor, in which case the V-I plot appears as in Fig. 7b.

In this circuit, the diode switch S_3 in the 'In' position prevents the reverse avalanche current from heating the device and thus changing the values of the parameters being measured.

Holding current I_h and holding voltage V_h are read at the point on the plot where the trace disappears. This is marked B on Fig. 7b. For low current values, the 'closed' resistance is the slope of the line R_h.

This V-I plotter does not display the shape of the negative-resistance part of the four-layer diode characteristic, but the circuit shown in Fig. 6 will display the entire curve, as shown in Fig. 7c.

5

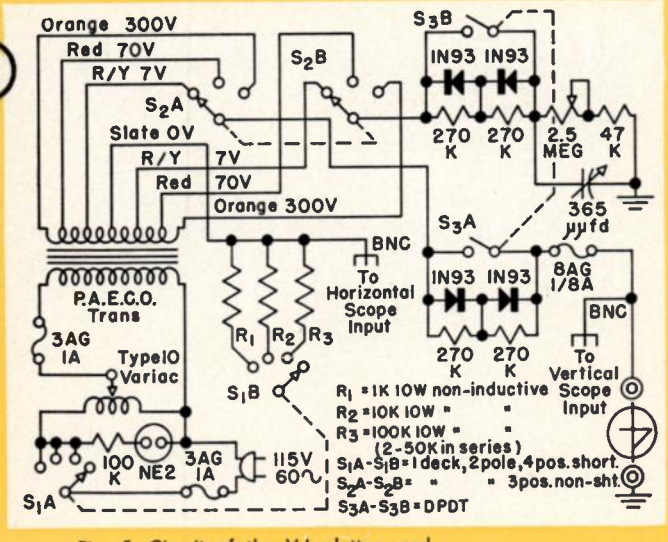

Fig. 5. Circuit of the V-I plotter used to measure four-layer-diode parameters.

6

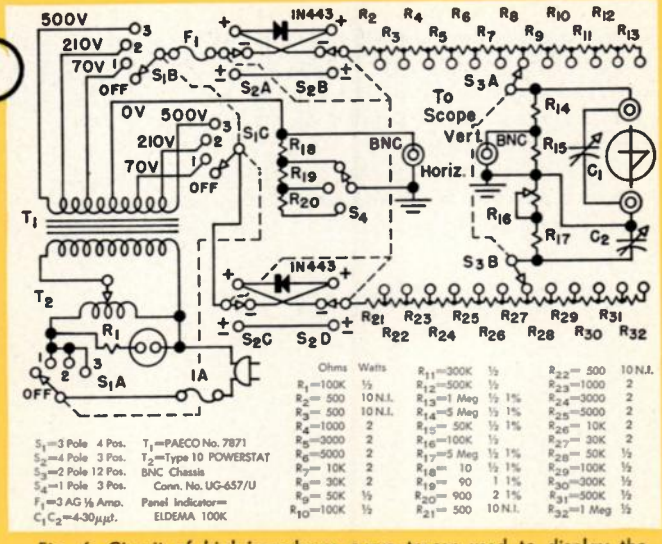

Fig. 6. Circuit of high-impedance curve tracer used to display the entire characteristic curve of the four-layer diode.

7

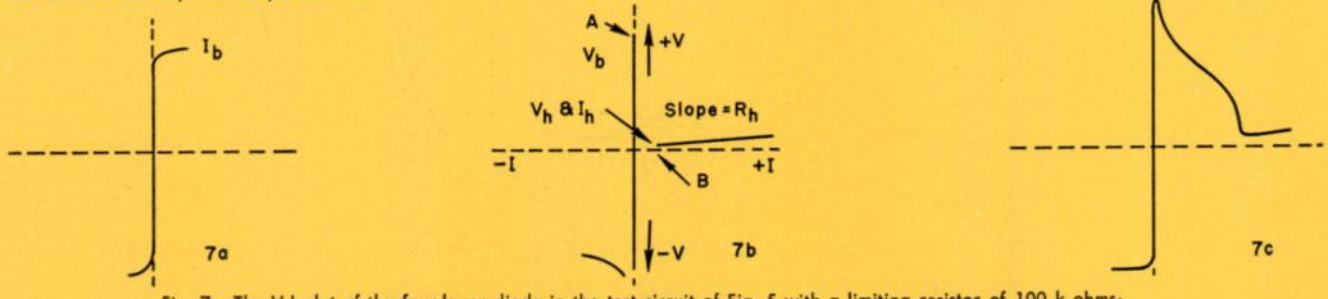

Fig. 7a. The V-I plot of the four-layer diode in the test circuit of Fig. 5 with a limiting resistor of 100 k ohms; 7b, same as (a) but with 1 k ohm limiting resistor; 7c, V-I plot of the four-layer diode in the test circuit of Fig. 6.

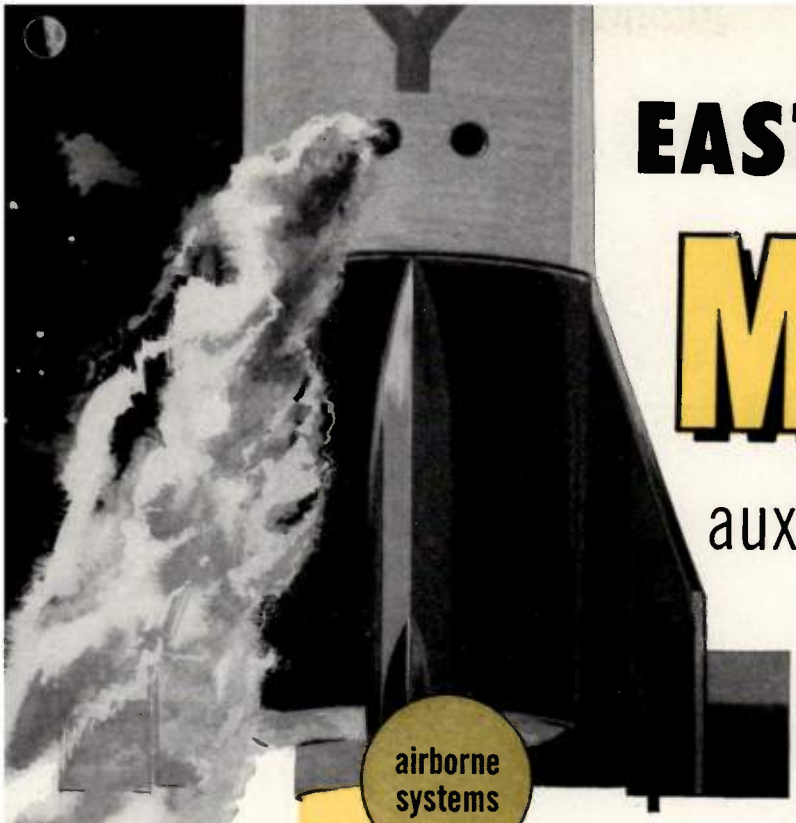
Data Sheets

Separate engineering sheets are produced and regularly kept up to date on numerical values and limits of four-layer-diode parameters including information on temperature effects.



Similarly, information sheets on circuit application and design are made available.

EASTERN... pioneer in MISSILE auxiliary power subsystems

airborne systems

hydraulic power

cooling

pressurizing

ground guidance systems

Eastern has developed miniature, high-output units that give reliable performance in missile auxiliary power systems. Coordination with developers at the planning stage permits Eastern continually to engineer lower weight units that allow more fuel load for longer flight duration. Eastern's experience as pioneers of the thermal frontier provides the all-important knowledge to solve temperature problems at each stage of missile development.

HYDRAULIC POWER UNITS

Miniature high-speed gear pumps are powered by aircraft motors up to 24,000 R.P.M., or direct-driven by the turbine with little or no reduction gearing needed. Missile design engineers get maximum flexibility, reliability, and simplicity with separate hydraulic systems. Eastern has produced power packs with capacity to 1.5 G.P.M. at pressure to 2,500 P.S.I. Units are completely sealed and have pressurized sumps for operation at any altitude and attitude.

ELECTRONIC TUBE COOLING UNITS

Liquid cooling of heat-producing electronic equipment is an efficient, reliable control of temperatures within safe operating limits. By creating designs based on pioneering experience, Eastern provides compact, lightweight equipment for up-to-the-minute missile needs that meet military requirements.

Cooling units have 50 to 50,000 watts dissipation rates, and refrigeration-type cooling units are furnished from 100 to 6,000 watts. Come to the leader in the field for complete and creative engineering help.

EASTERN PRESSURIZATION UNITS

Vital electronic systems that depend on a supply of precisely controlled dry pressurized air are protected by these units. A continuing program of research and development on compressors, dehydators, and air control systems insures that your Eastern pressurization unit features the very latest advances in this field for compactness, high temperature resistance, and reliability. They are custom-made to your special needs and meet rigid military specifications.

TESTED reliability in auxiliary power

Pressurizing-dehydrating unit used in tracking and guidance system of ground-based missile controls.

High-speed gear pump provides hydraulic power to missile as integral part of APU system.

Cools high-powered electronic tubes in guidance sections of missiles.

Eastern power-pack gives hydraulic power for missile elevons and wing-folding actuators.

Maintains sensitive reference component within exact temperature limits. Dissipates 350 watts by "boiling off" water in supply tank.

NEW AVIATION BULLETIN 350 Brand new edition gives data on latest developments in hydraulic power, cooling pressurization. Send for copy today.

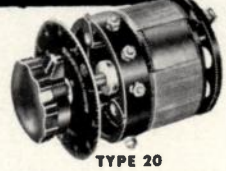
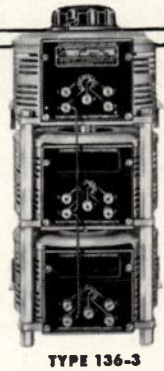
10 SERIES



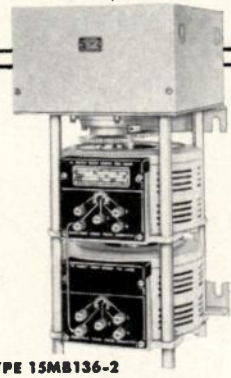
TYPE 10
INPUT: 120 volts, 60 cycles, 1 phase. OUTPUT: 0-120/132 volts, 1.25 amperes, .165 KVA. For back-of-panel.

TYPE 2PF10
INPUT: 120 volts, 60 cycles, 1 phase. OUTPUT: 0-132 volts, 1.0 amperes, .132 KVA.

20 SERIES



TYPE 20
INPUT: 120 volts, 60 cycles, 1 phase. OUTPUT: 0-120/140 volts, 3.0 amperes, .42 KVA. For back-of-panel.



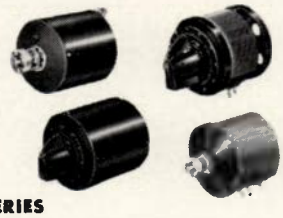
136, 236 SERIES

TYPE 136
INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-120/140 volts, 20 amperes, 2.8 KVA.

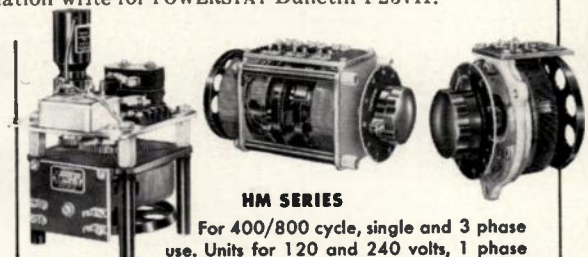
TYPE 136-3
INPUT: 240 volts, 60 cycles, 3 phase. OUTPUT: 0-240/280 volts, 20 amperes, 9.7 KVA.

TYPE 15MB136-2
INPUT: 1 phase, 240 volts, 50/60 cycles. 3 phase, 120 volts, 50/60 cycles. OUTPUT: 1 phase, 0-240/280 volts, 5.6KVA. 3 phase, 0-120/140 volts, 4.8 KVA.

OIL COOLED AND EXPLOSION-PROOF

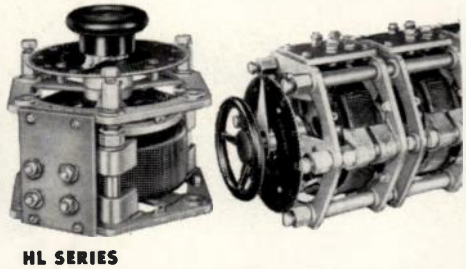


TYPE 0-116
INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-120/140 volts, 15 amperes, 2.1 KVA. For oil-cooled operation.



TYPE X-116
INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-120/140 volts, 7.5 amperes, 1.0 KVA. Explosion-proof for hazardous locations.

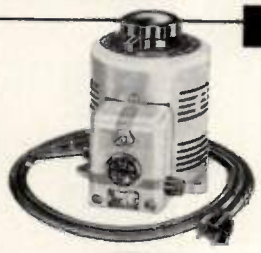
POWERSTAT Variable Transformers for HIGH FREQUENCY Applications



These POWERSTATS are designed for use where weight and space are a factor. Although it will weigh only one-third as much . . . and will occupy only one-half the space, a POWERSTAT designed for 400 cycle service will perform the same as a comparably rated 60 cycle POWERSTAT. Here are some examples of our complete line. For more information write for POWERSTAT Bulletin P257H.

HS SERIES
For 400/800 cycle, 1 phase use. INPUT: 120 volts, OUTPUT: 0-120/140 volts. INPUT: 120 volts, OUTPUT: 0-28 volts or, with fixed tap a non-adjustable 28 volt supply. Ratings from 56 to 140VA.

HM SERIES
For 400/800 cycle, single and 3 phase use. Units for 120 and 240 volts, 1 phase ... 240 and 480 volts 3 phase service. All units with terminal connections to provide output voltages limited to input voltages, or output voltages above input voltages. Ratings from .42 to 3.6 KVA.



HL SERIES
For 400/800 cycle, single and 3 phase use. Manually operated and motor-driven models, single phase units operate from 120 and 240 volt lines. Three phase connected to 240 or 480 volt lines. Input terminals provide choice equal to or 17% higher than line voltage. Ratings from 2.1 to 8.7 KVA.

STAT®

116, 117, 216 & 217 SERIES

TYPE 116

INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-140 volts, 7.5 amperes, 1.0 KVA.

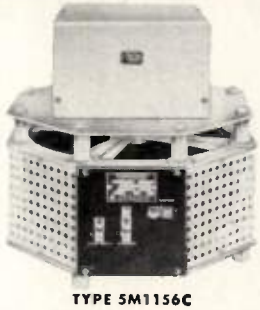
TYPE Q116U

INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-120/140 volts, 7.5 amperes, 1.0 KVA. For back-of-panel.

TYPE EN216-2

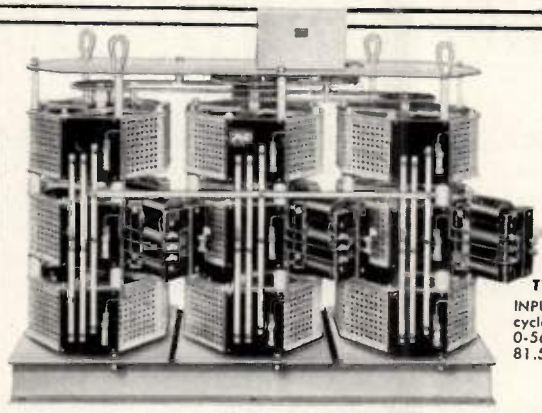
*Aluminum case provides dust-tight enclosure. INPUT: 1 phase, 480 volts, 50/60 cycles. 3 phase, 240 volts, 50/60 cycles. OUTPUT: 1 phase, 0-560 volts, 2.6 amperes. 3 phase, 0-280 volts, 2.6 amperes.

TYPE 117



INPUT: 120 volts, 60 cycles, 1 phase. OUTPUT: 0-120 volts, 10.0 amperes, 1.2 KVA (constant-current); 0-120 volts, 13.0 amperes, 1.6 KVA (constant-impedance).

1156C, 1256C SERIES



TYPE 1156C

INPUT: 120 volts, 50/60 cycles, 1 phase. OUTPUT: 0-140 volts, 45 amperes, 6.3 KVA.

TYPE 5M1156C

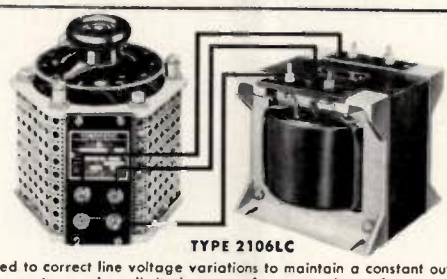
Motor driven. Speed for full range travel 5 seconds. Other characteristics similar to Type 1156C.

TYPE 30M1256C-9Y

INPUT: 240/480 volts, 60 cycles, 3 phase. OUTPUT: 0-560 volts, 84 amperes, 81.5 KVA.

VOLTBOX A-C POWER SUPPLIES

TYPE UC1M



Compact unit for testing variable a-c voltage. Includes voltmeter and POWERSTAT with characteristics of Type 116.

LIMITED RANGE TYPES

TYPE LW136

Double wound assembly with isolated secondary. One phase 120 or 240 volt input. Three uses: (1) Low voltage isolated output variable transformer; (2) line corrector; (3) limited range "buck-boost" variable transformer. Over 200 different ratings possible in the series.

TYPE 2106LC

Used to correct line voltage variations to maintain a constant output voltage or to supply a limited range of output voltage from a stable a-c power source.
INPUT: 95-135 volts, 50/60 cycles, 1 phase.
OUTPUT: 115 volts, 52 amperes, 6.0 KVA.

For precise voltage control with rated outputs from 0.25 to 100 KVA in laboratory, production and testing use

STABILINE®

Automatic Voltage Regulators

When electrical equipment is *tested*, the applied voltage must constantly equal the rated voltage or its characteristics cannot be properly checked. When electrical equipment *operates*, the closer the applied voltage is at all times to the rated voltage the better the equipment performs and the longer it lasts.

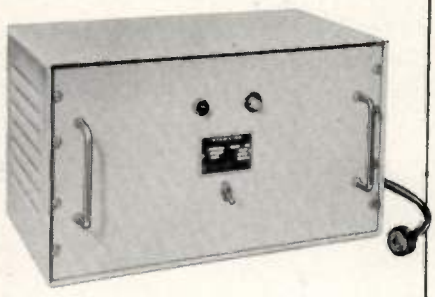
In automated systems varying voltage cannot be tolerated, especially when the voltage is a motivating function in the system. Here is a line of automatic voltage regulators featuring circuit simplicity with mechanical ruggedness. You can use them with assurance that their operational characteristics equal or better their published ratings.

NEW *Automatic* FILAMENT VOLTAGE REGULATOR

STABILINE Type EMT25136U meets the need of sensitive, expensive electronic equipment for gradual tube warm up and constant voltage. This STABILINE *automatically* supplies both needs.
INPUT: 108-132 volts, 50/60 cycles.
MAX. RUN UP TIME: 45 seconds. (Other speeds on special order.)
OUTPUT: 9-24 volts, 25 amperes.

Precision Products of

THE SUPERIOR ELECTRIC COMPANY



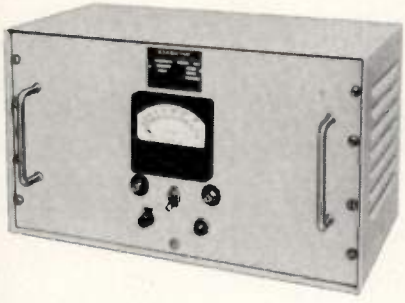
8000 LEE AVE., BRISTOL, CONNECTICUT

For complete information, construction details and ratings write for a Bulletin.
Type IE — Bulletin S358IE
Type EMT — Bulletin S358EMT
Type TM — Bulletin S358TM

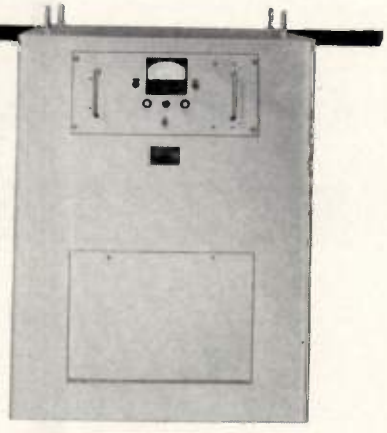
For details, circle #38 on Reader Service Card

STABILINE type IE
Instantaneous Electronic

Type IE is completely electronic without moving parts. It provides complete correction in 3 to 10 cycles in the smaller units . . . in 10 to 20 cycles in the larger units. Rated outputs range from .25 to 10 KVA.



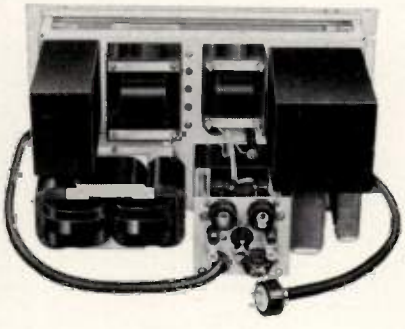
TYPE IE5101
INPUT: 95-135 volts, 60 cycles, 1 phase.
OUTPUT: 115 volts, 8.5 amperes, 1.0 KVA.



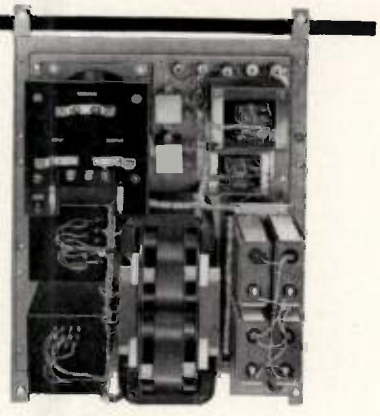
TYPE IE5102R
INPUT: 95-135 volts, 60 cycles, 1 phase.
OUTPUT: 115 volts, 22 amperes, 2.5 KVA.
Rack mounting.

STABILINE type EMT
Electro Mechanical Transistorized

Type EMT is ideal for industrial loads up to 100 KVA and where zero waveform distortion is required. It provides a wide frequency range of 47 to 63 cycles with an efficiency of 98%. Its control circuit is completely transistorized.



TYPE EMT4102
INPUT: 95-135 volts, 50/60 cycles, 1 phase.
OUTPUT: 115 volts, 17.5 amperes, 2.0 KVA.

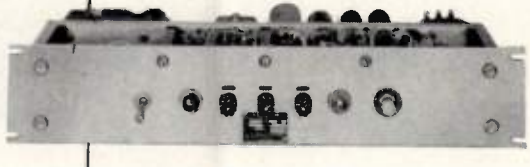


TYPE EMT6475Y
INPUT: 400-520 volts, 50/60 cycles, 3 phase.
OUTPUT: 460 volts, 100 amperes, 75 KVA.

STABILINE type TM
Tubeless Magnetic

Type TM has no tubes, transistors or moving parts. It is used in unattended locations or where failure cannot be tolerated. Its response time under ordinary changes is less than ½ second; always under 1 second.

TYPE TM7101R
INPUT: 95-135 volts, 60 cycles, 1 phase.
OUTPUT: 115 volts, 8.5 amperes, 1.0 KVA.
Rack mounting.



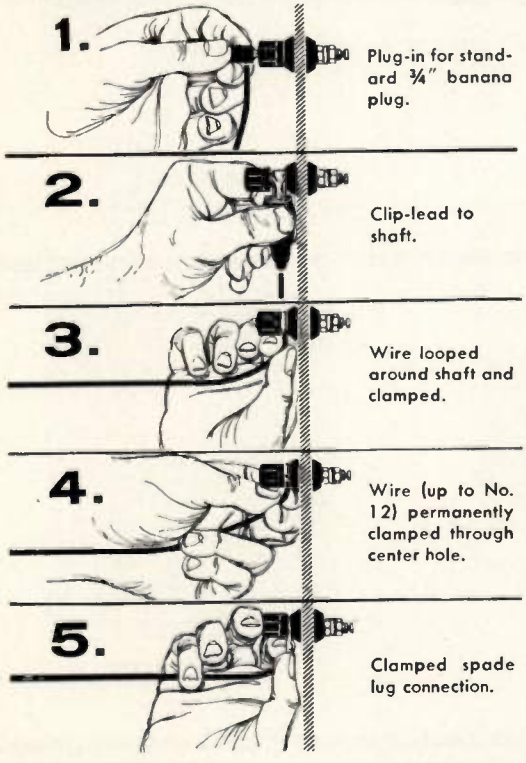
TYPE TM7105 (Cabinet removed)
INPUT: 95-135 volts, 60 cycles, 1 phase.
OUTPUT: 115 volts, 43.5 amperes, 5.0 KVA.

STABILINES for High Frequency Application

Stabiline models for high frequency use provide savings in size and weight. Built to meet military specifications.

TYPE IEH5101, TYPE TMH7101 — for high frequency
INPUT: 95-130 volts, 400 cycles, 1 phase.
OUTPUT: 115 volts, 1.0 KVA.

TYPE IEH5101R — for high frequency
INPUT: 95-130 volts, 400 cycles, 1 phase.
OUTPUT: 115 volts, 1.0 KVA. Rack mounting.



SUPERIOR 5-way BINDING POSTS

GOLD PLATED — *For quicker solder connections with maximum electrical contact . . . corrosion resistance.*

6 COLORS — *For more attractive panels, easier circuit identification.*

5 WAYS TO CONNECT

1. Plug-in for standard ¾" banana plug.
2. Clip-lead to shaft.
3. Wire looped around shaft and clamped.
4. Wire (up to No. 12) permanently clamped through center hole.
5. Clamped spade lug connection.

SHOWN 4 TIMES ACTUAL SIZE

These are the original SUPERIOR 5-WAY Binding Posts and are the first choice of makers of electrical and electronic equipment. Their 30 amperes current capacity and 1000 volts working voltage satisfy a wide range of requirements. They can be mounted and securely locked in any panel from 1/16 to 1/4 inch thick. Adapter spacers are available for mounting in thinner panels. Complete insulation from panel is provided.

Arnold Magnetic Materials

The most complete line in the industry... made by a fully integrated producer

Arnold magnetic materials can answer all your requirements. It is the most complete line in the industry; and in addition, Arnold maintains complete control over every production step from raw materials to finished products. Such a source can bring you advantages in long experience and undivided responsibility, and in unequalled facilities for quality production and control.

● **Let us supply your needs**

PERMANENT MAGNET MATERIALS

Cast Alnico • Sintered Alnico
Arnox • Vicalloy • Cunife

HIGH PERMEABILITY MATERIALS

Tape Wound Cores of Deltamax, Supermalloy, Permalloy and Supermendur • "C", "E" and "O" Cores of Silectron • Bobbin Wound Cores
Mo-Permalloy Powder Cores • Iron Powder Cores
Sendust Powder Cores • Special Magnetic Materials

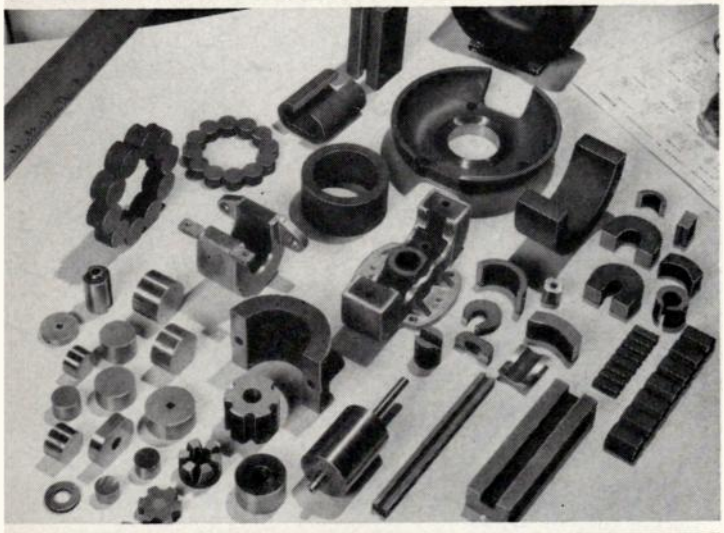
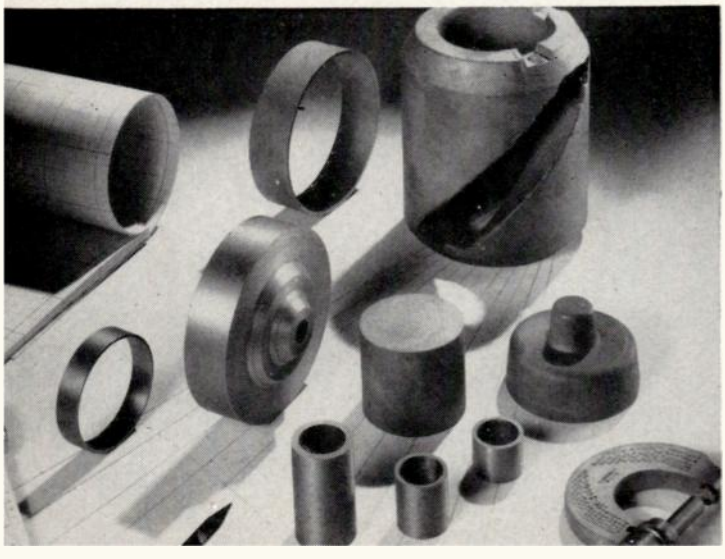
THE ARNOLD ENGINEERING COMPANY



Main Office & Plant: Marengo, Illinois



Repath Pacific Division Plant: 641 East 61st Street, Los Angeles, California

District Representation in all Principal Cities

TYPES "C" AND "E" CUT CORES AND TOROIDS OF SILECTRON

Available in more than 500 standard sizes and almost any special size, Arnold "C" and "E" Cores are made from precision-rolled Silectron strip (highly oriented silicon steel) in 1, 2, 4 or 12-mil thicknesses and a wide variety of window sizes and core areas, for high and low-frequency applications. Sizes range from a fraction of an ounce to hundreds of pounds.

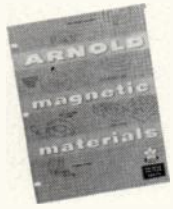
Insulated strip of the proper width is wound on a mandrel, then heat treated, bonded and cut into halves. Careful control results in accurately dimensioned and matched core halves whose effective air gap at the butt joint is very small. Rigid standard tests are employed for both "C" and "E" types of cores, and special tests where required.

Write for Bulletin SC-107

TAPE WOUND CORES OF HIGH PERMEABILITY MATERIALS

Depending upon the specific properties required, Arnold Tape Wound Cores are available made of Deltamax, 4-79 Mo-Permalloy, Supermalloy, Mumetal, 4750 Electrical Metal, Silectron, or the new rectangular-loop material, Supermendur. All except Supermendur Tape Wound Cores are available in standard tape thicknesses of 1, 2, 4 or 12-mils and in ultra-thin gauges of ½ and ¼-mil where required. Standard tape thickness of Supermendur cores is 4 mils.

This gapless type of core construction results in maximum effective working permeability with minimum flux leakage. Practically any size core can be supplied, from a fraction of a gram to hundreds of pounds. Toroidal cores are made in 30 standard sizes with protective nylon or aluminum cases. Special sizes of toroidal cores, and all square or rectangular tape wound cores, are produced to individual requirements.



Standard sizes, properties, etc. of Supermendur Tape Wound Cores are contained in Bulletin TC-113A, available upon request.

Write for Bulletin TC-101A

ALNICO MAGNETS—Cast and Sintered

Arnold manufactures permanent magnets from all grades of Alnico, although Alnico V is usually the preferred type due to the high value of energy product of that alloy. Alnico magnets are quite hard and somewhat brittle and may be machined only by grinding. Most sizes and shapes are manufactured as sand castings and are made to the customer's drawings and specifications. Some types and shapes of Alnico magnets are carried in stock.

Some small sizes of magnets may be furnished in sintered Alnico, and a wide range of shapes are carried in stock for quick delivery. Special shapes made in this way, however, require rather expensive dies.

Write for Bulletin GC-106C

VICALLOY PERMANENT MAGNET ALLOY

Vicalloy is a carbon-free permanent magnet alloy containing about 10% vanadium, 50% cobalt and the balance iron. It belongs to the class of alloys which exhibit dispersion-hardening characteristics. As such, its magnetic properties have been attributed to the dispersion of a critical amount of the high temperature phase into the low temperature phase.

Vicalloy may be fabricated in the form of castings, hot rolled bars and forgings or cold rolled strip, wire and tubing. After suitable heat treatment, the material is quite readily machinable. The alloy finds its greatest usefulness in the form of forged rotors, stamped parts and special recording tape. The coercive force, Hc, is about 250 oersteds, the residual induction, Br, is about 7500 gausses and the energy product, (BH) max, is about 0.8 x 10^6.

WRH

BOBBIN CORES

These cores, fabricated by winding ultra-thin tape of high-permeability magnetic materials on ceramic bobbin cores, possess ideal qualities for use in electronic computer assemblies. Their desirable properties include quite rectangular hysteresis loops, relatively low coercive values and high saturation densities; plus temperature stability and the ability to shift in a few microseconds from negative remanence to positive saturation, and vice versa, under conditions of pulse excitation.

Arnold Bobbin Cores are available in a wide range of sizes, tape thicknesses, widths and number of wraps to suit the ultimate use of the core. Magnetic materials usually employed are Deltamax, Square Permalloy and Supermalloy, in standard thicknesses of 1, ½, ¼ and ⅛ mil. Special advantages derive from Arnold's position as a fully-integrated producer of wound cores, able to maintain precise control over every production operation . . . melting, rolling, winding, testing, etc.

Write for Bulletin TC-108A

MO-PERMALLOY POWDER CORES

These toroids provide high Q in a small volume, characterized by low eddy current and hysteresis losses.

Arnold Mo-Permalloy powder cores are supplied in four standard permeabilities: 125, 60, 26 and 14 Mu. They provide constant permeability over a wide range of flux density. The 125 Mu cores are recommended for use up to 15 kc; the 60 Mu at 10 to 50 kc; the 26 Mu at 30 to 75 kc; and the 14 Mu at 50 to 200 kc. Many of these cores may be furnished stabilized to provide constant permeability (±0.1%) over a specific temperature range.

Arnold Mo-Permalloy powder toroids are available in a wide range of sizes, to obtain nominal inductances as high as 281 mh/1000 turns. They are given various types of enamel and varnish finishes, some of which permit winding with heavy Formex insulated wire without supplementary insulation over the core.

Write for Bulletin PC-104B

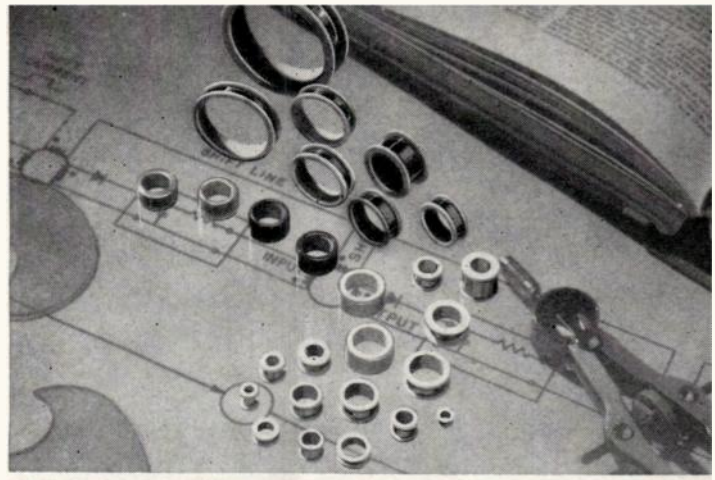
IRON POWDER CORES

Arnold quality control of iron powder cores includes the maintaining of rigid electrical, physical and dimensional specifications unmatched in the industry. A wide selection of cores is available, from simple cylinders to special cores of complicated design. The line includes all standard types and sizes of threaded cores, cup, sleeve, slug and cylindrical insert cores: for use in antenna and RF coils, oscillator coils, IF coils, perm tuning, FM coils, television RF coils, noise filter coils, induction heating and bombarder coils, and other low frequency applications. A standard series of iron powder toroids is also manufactured, conforming to the standard sizes proposed by the Metal Powder Association.

Write for Bulletin PC-109

SENDUST POWDER CORES

Sendust Powder Cores are available in a wide selection of sizes, ranging from .800" O.D. to 3.346" O.D., and in permeabilities of 10, 13, 25, 30, 50 and 80, although not all sizes are available in all permeabilities.



Sendust cores possess magnetic properties that are generally superior to iron powder cores, but inferior to Mo-Permalloy powder cores in the audio and carrier frequency range. The eddy current loss for Sendust cores is lower than that of Mo-Permalloy powder cores, but the hysteresis loss of Sendust cores is substantially higher, and they also have higher values of electrical resistivity. In other characteristics of powder cores, the two types are somewhat similar, but Sendust cores contain no scarce or strategic materials and can offer a core source in times of alloy shortage.

SPECIAL MAGNETIC MATERIALS

Write for Technical Bulletins

Arnox is a molded type magnet having high coercive force and moderately low residual induction and energy product. Principal uses are for magnetic requirements which are not stringent, and for a relatively short magnet of reasonable cross section. Accurate dimensions and close tolerances can be economically obtained. These magnets can be premagnetized before assembly, and have very high resistance to demagnetization. Slightly better magnetic properties are obtained in the pressing direction than in other directions.

Cunife is a permanent magnet alloy of copper, nickel and iron which is malleable, ductile and machinable, even after it has been age hardened. The magnetic properties of Cunife are developed by cold working and are directional with the best magnetic properties found only in the smaller sizes of rods or wires.

Vibralloy is a permanent magnet alloy of nickel, molybdenum and iron whose temperature coefficient of elastic modulus is controllable over a wide range. It has high ferromagnetic permeability, and a rather high coefficient of magnetostriction. It is manufactured in the form of cold rolled strip and cold reduced rod and bar stock. It is used in those types of applications where a zero or controlled thermo-elastic coefficient is desired.

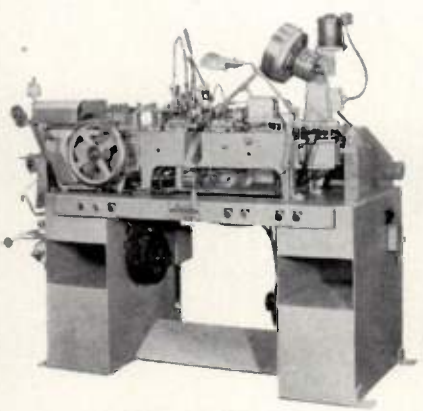
WATERMAN PRODUCTS

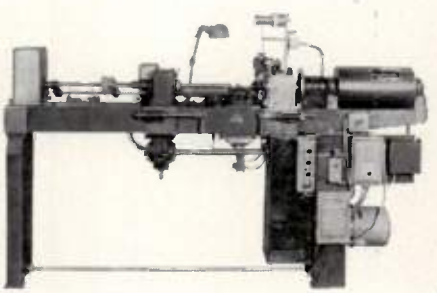
It's A Fact!

KÄHLE HAS CUSTOM-BUILT OVER 1,000 DIFFERENT TYPES OF MACHINES!

For Precision



CRYSTAL GROWING MACHINES
- Produce single crystal billets.
- Sizes to 30" pull.
- Resistance or RF heating.



SEMI-AUTOMATIC GLASS DIODE SEALING MACHINES
- Use tungsten or molybdenum whiskers.
- Whisker tension set by sensitive weight.
- Production rates to 400 per/hr.

For Precision

AUTOMATIC LEAD WIRE WELDING MACHINES
- Produce 3-piece lead wires.
- Fully automatic.
- Production rates to 12,000 per/hr.

GRID WINDING MACHINES
- Make high precision grids.
- Constant and variable pitch.
- To 500 T. P. I. and over.

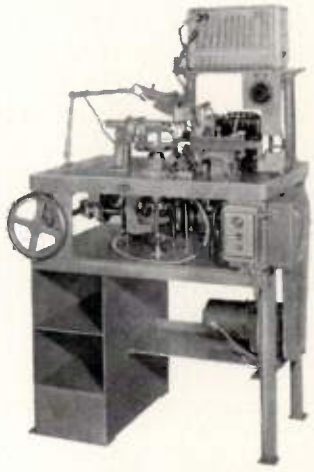
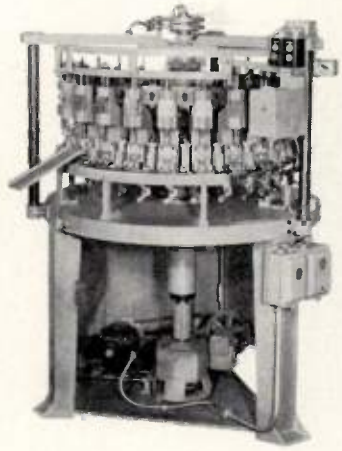
ENGINEERING COMPANY



WORLD'S LARGEST EXCLUSIVE BUILDER

GENERAL OFFICES: *1358 Seventh Street, North Bergen, N. J.*



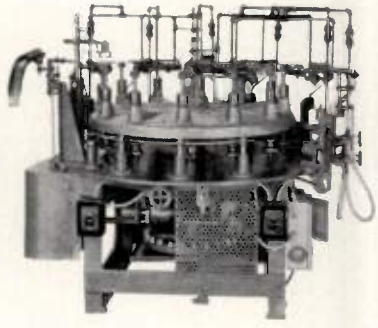
Semiconductor Production

GLASS DIODE BODY MAKING MACHINES
- Automatically make glass encapsulating bodies.
- Hold exact O.D., length, concentricity.
- Production rates to 1500 per/hr. and higher.

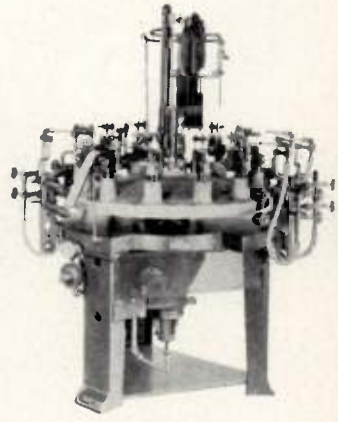
CAT WHISKER WELDING MACHINES
- Feed, cut, form, weld cat whiskers.
- Make either "S" or "C" forms.
- Production rates to 3000 per/hr.

AUTOMATIC GLASS DIODE SEALING MACHINES
- Make final assembly and seal.
- 24 head rotary turret-type machine.
- Production rates to 1500 per/hr.

GLASS DIODE BEADING MACHINES
- Produce concentric beaded leads.
- Fully automatic.
- Production rates to 1500 per/hr. and higher.



Electronic Tube Production



AUTOMATIC EXHAUST MACHINES
- Available with 16, 24, 32, 48 heads.
- One of complete line of exhaust machines.
- Production rates to 2000 per/hr.

BUTTON STEM MACHINES
- Produce stems with short lead wires.
- Dual motor drive.
- Production rates to 1000 per/hr.

HERMETIC SEAL MACHINES
- Make 2, 4, 8 terminal discs.
- 12 head double drive type illustrated.
- Production rates to 1500 per/hr.

BULB TUBULATING MACHINES
- Automatic tubulating and unloading.
- Loaded by hand.
- Production rates to 2400 per/hr.

For Printed Circuit Assembly and All Other Production Requirements

Precision is the keynote of all electronic production . . . and *precision performance* is the reason why more manufacturers rely on Kahle machines.

Kahle offers manufacturers a competent, experienced source . . . which will completely design, engineer and fabricate production machinery for any phase of electronic manufacturing. And Kahle offers an important *exclusive* . . . a "No-Risk" Machine Building Service . . . every Kahle machine must perform satisfactorily, under conditions simulating your actual production conditions, *before* it is shipped to you.

The scope of Kahle "know-how" is only barely indicated by the machines shown above . . . check with Kahle *first* before you decide to build or buy any electronic production machinery! Benefit from Kahle's "No-Risk" Machine Building Service!

Outline your production needs in a short letter . . . let Kahle's engineers do the rest.

NOTE 1: Use 14 pin miniature socket

NOTE 2: Two Relays in one enclosure

NOTE 3: Air Force approved

NOTE 4: Sockets available from Allied Control

*NOTE: MHJ type relays are available in all MH type mountings.

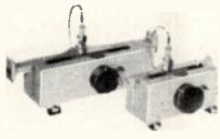
ULTRAMICROWAVE equipment



it's a fact

that D-B offers the most complete line of dependable equipment

Here's the newest equipment for 2.6 to 140 KMC—by DeMornay-Bonardi, leaders in microwave instrumentation for 16 years. This advanced line offers you the ultimate in precision, dependability and operating ease. Major items are shown. Deliveries on most items are running 30 days. Ask for latest catalogue containing complete data.

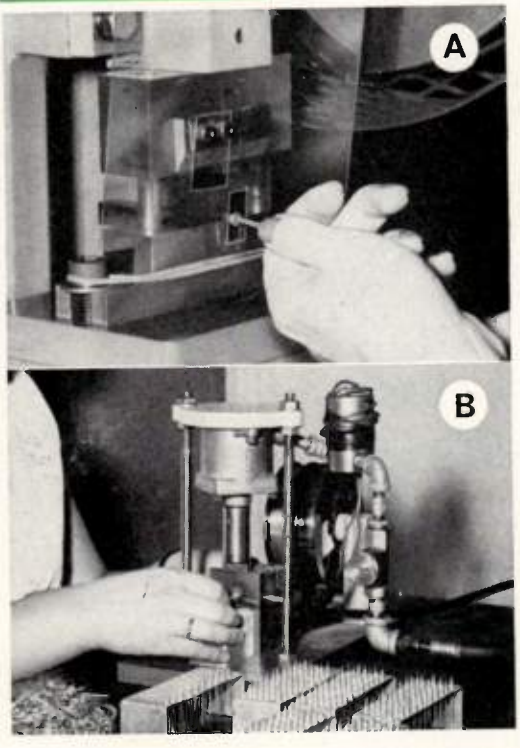
How US SEMCOR assembles a Silicon Diode with ALL STAINLESS STEEL FUSITE TERMINAL

1. *Terminal as supplied by Fusite. V-24 glass and all stainless steel.*

2. *Inside end of straight wire electrode is crimped to a hollow open top shell. (See photo A)*



3. *Fraction of an inch of gold wire and aluminum wire are inserted and crimps folded over tight. (See photo B)*

4. *Precision bit of silicon crystal is fused with heat to ends of wire inserts.*

5. *Assembly is enclosed in miniature can and projection welded closed.*

This application is typical of the hundreds of electronic components whose continuing operation is assured by the safety factor of a terminal with electrodes fused into the glass. The resulting rigidly fixed position of the electrode guards against damage to the finished assembly through movement of an electrode depending only on compression for its position in the glass.

Robert A. Rutherford, Vice President of U. S. Semiconductor Products, permits us this direct quotation.

"The Fusite header provides us with a very satisfactory solution to the problem of the lead wires turning in the header. The fused glass to steel has solved this very troublesome problem. The stainless steel material also provides excellent corrosion resistance. Aside from receiving a superior product from Fusite, we have also received very excellent service and a great deal of cooperation from both the company and their representative."

Test samples of any style terminal available on request. Stainless steel available on most Fusite Standard Headers.

HUGHES SEMICONDUCTORS

A COMPLETE LINE
DIODES • TRANSISTORS
RECTIFIERS • CAPACITORS

Hughes is an acknowledged leader in the development and manufacture of semiconductor devices. Today the line is extensive, encompassing all major categories plus literally hundreds of individual types.

Significantly the approach is dynamic, the line ever-changing. Each phase of the Hughes program is devoted to vigorous development of new devices and to improvement of those already in existence. New techniques are incorporated; modern equipment is used throughout; and all persons involved are carefully chosen for the highly specialized work they must do. In no other way can Hughes continue to anticipate and meet the increasing requirements of industry.

The types listed on the following three pages are representative only. If your particular requirements demand a type which does not appear, ask for descriptive literature or a call from one of our sales engineers. Please write:

Hughes Products
Semiconductor Division

FIRST OF ALL, FOR RELIABILITY

HUGHES DIODES

All types are rugged, thermally stable, tiny. They can withstand severe shock and vibration while operating successfully over a wide range of ambient temperatures. And they are packaged in the famous Hughes glass envelope. This envelope of one-piece, fusion-sealed construction was developed at Hughes to provide complete protection from contamination and moisture penetration. Maximum body dimensions: .107" x .265". Leads: .020" x 1", nominal. EIA, JAN, and special types are available to fulfill practically any circuit requirement. Both Germanium point-contact (see below) and Silicon Junction (see right) types available.

STANDARD GERMANIUM

	Forward Current @ +1V (mA min.)	WIV (V max.)	Reverse Current at Specified Test Voltage (μA max.)	(Volts)
1N67A	4.0	80	50	50

Operating temperature range: −65°C to +200°C

For details, circle #54 on Reader Service Card

RECTIFIERS

LOW POWER SILICON SERIES

These are efficient rectifiers with voltage ratings up to 975 volts, a low forward voltage drop, and low back leakage. They are capable of handling power values which are large for their size (.107" x .265" maximum, the famous diode package). Typical application: electronic power supplies where they can replace many vacuum tube rectifiers.

MEDIUM POWER SILICON SERIES

Hughes medium power rectifiers provide more power to the load at lower junction temperatures. They also feature a combination of high forward conductance and high breakdown voltage which permits rectifier performance never before achieved in the standard JETEC Group 20 stud mount package (7/16" hex). Lead-mount types are available also.

LOW POWER SILICON RECTIFIERS

	Reverse Working Voltage (VDC max.)	Average Rectified Forward Current (mA max.)
HR10251	175	200
HR10252	225	200
HR10253	275	200
HR10254	325	200
HR10255	375	200
Operating temperature range: −78°C to +150°C Derate average rectified current 1 mA/°C above 25°C		
HR10311	475	200
HR10312	575	200
HR10313	675	200
HR10314	775	200
HR10315	875	200
HR10316	975	200
Operating temperature range HR10311 and HR10312: −65°C to +150°C HR10313 thru HR10316: −65°C to +100°C Derate average rectified current 1.5 mA/°C above 25°C		

CAPACITORS

Hughes silicon capacitors are tiny, reliable devices whose capacitance is determined by the applied DC voltage. They are characterized by high Q and a wide capacitance range. Typical applications: remote control tuning, automatic frequency controls, frequency modulators. Once again, Hughes famous glass envelope is utilized.

SILICON CAPACITORS

	Capacity ±20%* @ −4VDC (μμfd)	Maximum Voltage# (VDC)	Typical Capacity Range (0.1V to Max. Voltage) (μμfd)	Typical Q** @ 5Mc and Max. Voltage	Typical Q** @ 50Mc and Max. Voltage

* Averaged over one cycle at full rated conditions of current, voltage, and temperature with a resistive load.

HUGHES TRANSISTORS

This is a PNP silicon fused-junction series intended for audio applications at medium power levels. All types have another Hughes first, the metal package with coaxial leads particularly suited for automatic assembly. Because of the unique internal construction of this package, heat is dissipated very efficiently, and each unit can withstand severe vibration, centrifuge, and shock tests. Transistors with the TO-5 package are available.

C-A-C Toroidal Inductors

• QL SERIES

Standard and custom designed, open construction. Available on short delivery basis. Utilizing molydenum permalloy, iron, ferrite and tape cores. Sizes range from 1/8-in. I.D. to 6-in. O.D.

Specify C-A-C for your designs.

• M. P. SERIES

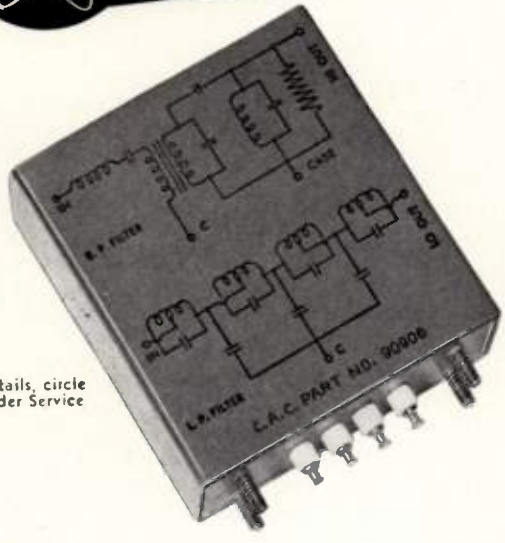
Compression molded. Conceived by C-A-C and accepted by industry as the most popular package. Exceed MIL-C-15305A, Grade 2, Class O. Available from stock. Custom designs for Class C operation.

Specify C-A-C for your designs.

• H. S. SERIES

Highly stable, precisely tuned to production tolerances 1% (0.5% on request) at zero D.C. Exceptionally high Q and low dissipation factors. Thermocycled and Hermetically sealed to MIL-T-27A. Stocked for immediate delivery.

Specify C-A-C for your designs.



• SUBMINIATURE SERIES

MPF and HSD for printed circuits are available off the shelfs for frequencies from 1kc to the low megacycle range. Inductances to 4 Henries on high permeability cores. Exhibit comparable characteristics to larger types. Employ both molybdenum and iron cores. Epoxy cast units in many shapes and lead out arrangements from our short order department on custom basis.

Specify C-A-C for your designs.

C-A-C LC Filters

For details, circle #58 on Reader Service

C-A-C offers a wide variety of ready-designed and standard filters of the low-pass, high-pass and band-pass types. C-A-C filters cover frequencies from the low audio to low megacycle ranges. Custom designs feature temperature compensation, matched phase, or impedance characteristics and miniaturization.

Specify C-A-C for your designs.

Magnetic Amplifiers

COMMUNICATION ACCESSORIES COMPANY

LEE'S SUMMIT, MISSOURI • PHONE KANSAS CITY BRoadway 1-1700

• OPERATIONAL

Amplifier's operation is substantially same as electrical position servo. At steady state, negligible power is drawn from signal. Power drawn only during signal voltage transition. External behavior dependant on feedback impedance selection and largely independent of line voltage, frequency or temperature.

Specify C-A-C for your designs.

• RELAY ACTUATOR

Isolated control inputs facilitate economical logic circuit design. Nearly unlimited combinations of control signals and relay contact arrangements available. Operation can be of the fixed or variable operating point, differential, or multi-input type.

Specify C-A-C for your designs.

• TEMPERATURE CONTROL

A sensitive differential magnetic amplifier for use in controlling the temperature of gyro housings and similar airborne devices. Responds to variations in resistance of a wire type sensor. Includes fail safe feature by reducing output when sensor resistances change abnormally high or low. Operates directly from 115 volt, 400 cps supply. Time response less than 0.5 sec. to a 1 ohm step.

Specify C-A-C for your designs.

For details, circle #59 on Reader Service Card

• HIGH POWER

• TRANSISTOR DRIVE, HIGH SPEED

• SERVO MOTOR DRIVE

(The above types, as well as a full line of inverters are available. DC to DC and DC to AC, regulated or non-regulated. High power keying units which are a rugged, efficient means of performing critical switching and driving functions are designed for single and polyphase versions.)

Specify C-A-C for your designs.

C-A-C Laminated Transformers

TYPES!

- Power
- Filament
- Audi
- Transistor
- Filter Choke
- Saturable Reactor

Since March, 1958, the well-known Collins transformer line has been manufactured and marketed exclusively by C-A-C. Some of the types now offered possess performance characteristics previously unobtainable on the market.

Variety of types, sizes and means of packaging is illustrated in the above photograph. The line includes the specific types standardized by the Armed Services Standards Agency as well as a group of standard types for 400 cycle power supplies.

All C-A-C transformers and filter reactors are designed to meet the full requirements of MIL-T-27A specifications and are hermetically sealed in standard MIL-T-27A case sizes.

Transformers meeting MIL-T-27A specifications Grade 1 through 6 with temperature characteristics of Class S, T, or U can be supplied. Encapsulated units using either Epoxy-Resins or Fosterite can be supplied for Grade 2 and 5. Class U components can be supplied molded in special high temperature resin.

Specify C-A-C for your designs.

Have you a special design problem? Write for additional technical information or application data.

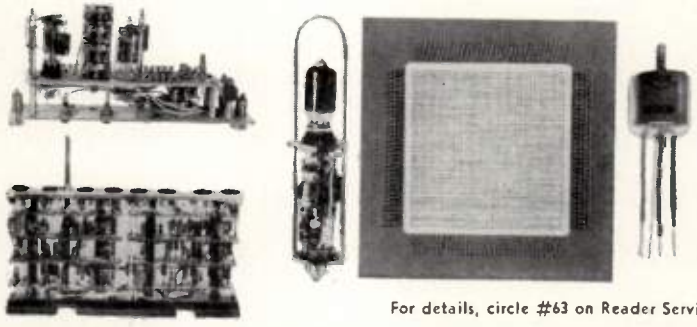
Featuring Glow Transfer Tube Decade Counters

MODEL 210: TIME INTERVAL METER

MEASURES time intervals directly up to 9.999 seconds in increments of 100 μs or 1000 μs with an accuracy of ± .005% ± 1 count provided by crystal stabilization.
COUNTS random or regular events from 0 p.p.s. to 50,000 p.p.s.
STANDARD FREQUENCIES of 1 KC and 10 KC available from front panel jack.
FEATURES compact size (19" x 3½" x 5") and weighs only 12 pounds.
PRICE: $395.00 f.o.b. factory

MODEL 130: EVENTS PER UNIT TIME METER

MEASURES frequency from 0 to 50,000 c.p.s. with gate times of .1 sec. and 1 sec. (10 sec. optional). The 60 cycle line provides the reference standard with accuracies of about ± .1%.
COUNTS random or regular events from 0 p.p.s. to 50,000 p.p.s.
FEATURES electronic reset, variable display time. 25 m.v. r.m.s. sensitivity. Compact design (19" x 3½" panel, 5" deep). Weighs only 12 pounds.
PRICE: $395.00 f.o.b. factory



MODEL 400: UNIVERSAL COUNTER TIMER

MEASURES frequency from 1 c.p.s. to 100 KC.
Period of signals up to 1000 c.p.s. (1 or 10 cycles).
Time intervals from 500 μs to 1,000,000 seconds.
COUNTS random or regular events to 100,000 p.p.s.
STANDARD FREQUENCIES—every decade multiple from .1 c.p.s. to 100 KC.
FEATURES .001% crystal stability. 3 regulated power supplies. Electronic reset. High sensitivity (25 m.v.). Compact (19" x 3½" x 10"). Lightweight (17 pounds).
PRICE: $695.00 f.o.b. factory.

Reliability unmatched... ALL TUBES

BOMAC *first name*

Reliability . . . it's the single most important fact about any microwave tube or component. That's why every single Bomac tube and component *(and we make over 750 different types)* is 100% pre-tested for peak performance and uniformity before shipment. Above are a few of the countless ways in which tubes are put through their paces at Bomac.

For details, circle #64 on Reader Service Card

Bomac stands for reliability you can count on, whatever your needs...

WRH

in microwave for reliability

Bomac, one of the nation's largest designers and manufacturers of microwave products, offers complete engineering and development services . . . *a complete line of fully tested tubes and components.* For more information, write for Bomac's free, 6-page file-size folder with specifications on more than 700 microwave products.

Celco

Design, Development

DEFLECTION YOKES TRANSFORMERS

For . . . Military and Commercial Avionics

Leading system manufacturers now depend on CELCO for their difficult and critical applications on many of these components.

Our design development, production and quality control experience — combined with CELCO's highly skilled operators, production foremen and engineers — comprises a team that has proven their outstanding performance for quality components.

Apply the CELCO "know-how" to your production requirements!

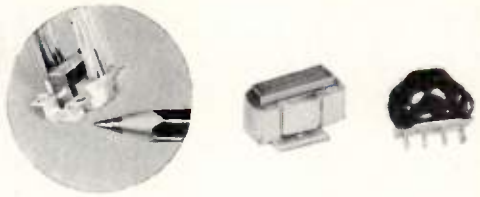
Celco

We specialize in the design and manufacture of **PRECISION DEFLECTION YOKES** for military and commercial applications.
CELCO can give you immediate engineering evaluation on your critical display problems.

Celco

COILS FOR TRAVELING WAVE TUBES — precision wound for minimum transverse magnetic fields. High temperature windings are a CELCO engineering development —

Unit illustrated is 12" long.



Celco

HIGH TEMPERATURE TRANSFORMERS— high temperature windings and impregnations on CELCO TRANSFORMERS permit high operating temperature with reduced size and weight.

Celco

MINIATURE TRANSFORMERS & SATURABLE REACTORS — specially produced for the Transistor and Plug-in type amplifier assembly. CELCO designs these units wherever reduction in size and weight must be made.

Celco

TOROIDAL COILS — CELCO is equipped to cover an extremely wide range of toroidal windings.

No. 50 wire on a .062" ID Toroid
No. 15 wire on 9" OD Toroid

and Production of:

MAGNETIC AMPLIFIERS
AIRCRAFT MOTOR COMPONENTS

...Nuclear and Computer Industries

Celco

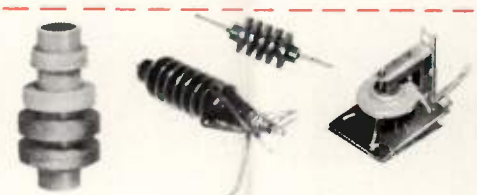
MAGNETIC AMPLIFIERS—encapsulated with epoxy resins or silicone rubber. CELCO experience with proper treatment of Toroidal Coils assures designed performance.

Celco

TOROIDAL COMPONENTS — for use in system assemblies. Sub-assemblies of chokes, Transformers and Saturable Reactors are manufactured at CELCO for packaging into a single unit.

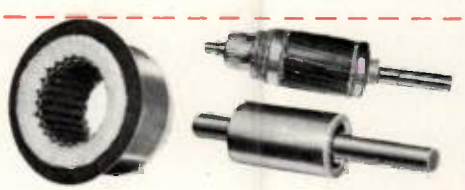
Celco

PRECISION TRANSFORMERS — CELCO develops Precision Transformers for such applications as Computer Components with high accuracy of turns ratio and output voltages.



Celco

HERMETICALLY SEALED MAGNETIC AMPLIFIERS & TRANSFORMERS — with various types of terminations, evacution and inert gas pressurization give CELCO components minimum weight with high-breakdown voltage resistance.



Celco

R.F. CHOKES, TRANSFORMERS– specialized universal winding types of coils and assemblies. These CELCO windings are used when minimum distributed capacitance is required and space does not permit use of mechanical supports.

Celco

MOTOR COMPONENTS—Centrifugally cast squirrel cage rotors for low inertia motors, armatures, stators, field coils and special type rotor coils — are a CELCO production specialty.

SK-601 TUBE EXTRACTOR

A spring steel extractor for use with the 4X150 series, 4X250 series and 2C39 series tubes.

VACUUM SWITCHES

Single-pole double-throw switch within a high vacuum adaptable for high-voltage switching. Contact spacing .015". Switch will handle R-F potentials as high as 20 Kv. In D-C switching will handle approximately 1.5 Amps. at 5 Kv.

Type	Coils
VS-2	12V
VS-4	24V
VS-5	
VS-6	

100IG IONIZATION GAUGE

For measuring pressures from 10^{-3} to less than 10^{-8} mm of mercury.

HV-1 DIFFUSION PUMP

Triple-jet, air-cooled vacuum pump of the oil-diffusion type. Capable of reaching an ultimate vacuum of 4×10^{-7} mm of mercury when used with suitable forepump.

AIR SYSTEM SOCKETS

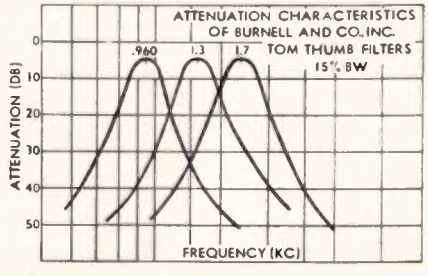
Designed and tested to specification #MIL-T 26985



Supplied in two principal case sizes:

1. For RDB channels 1 through 6, case size is ¾ x 1½ x 2¼ inches high; weight: 4 ounces.
2. For channels 7 and up, case size is ¾ inches square and 1⅜ inches high; weight: 1¼ ounces.

These cases are generally equipped with a 4-pin plug to match the small Winchester socket.

ATTENUATION CHARACTERISTICS

Impedance: 100 K ohms in and out.
Insertion loss: less than 6 db.
At ± 7.5% band width is less than 3 db.
At ± 25% band width is greater than 15 db.
At 1.75 f attenuation is 40 db or more.
At .57 f attenuation is 40 db or more.

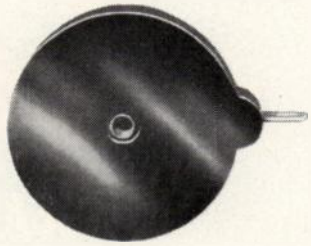
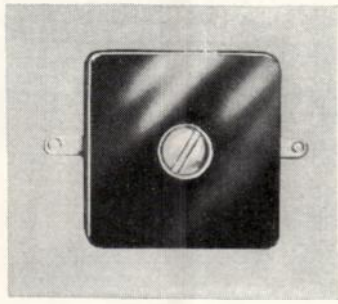
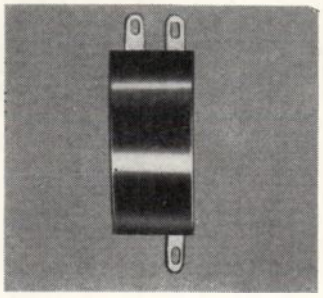
Burnell offers

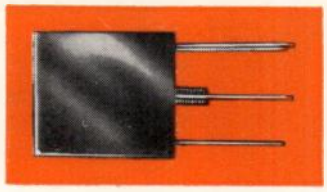


THE MOST

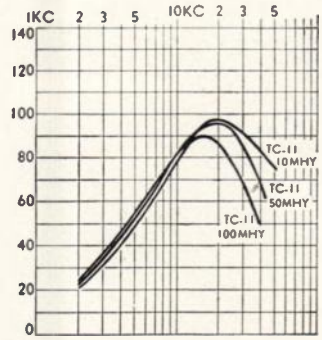


complete line of encapsulated toroids to meet your circuit needs

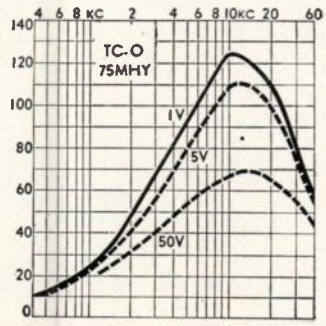




All components shown actual size.



Burnell & Co., pioneers in the development of toroids, filters and related networks now offer the most complete—the most reliable line of encapsulated toroids.



Burnell encapsulated toroids include the only encapsulated adjustoroids available anywhere—satisfy the toughest circuit demands in service-ability—light weight—miniaturization.

Burnell encapsulated toroids are particularly useful in guided missile and similar miniaturization fields where space and mounting are highly critical factors. Send for free, new Catalogue No. 104 covering scores of applications with schematics and performance curves.

A Milestone in Electronics 1938 • 1958

20 YEARS OF Keystone THERMISTOR*

RESEARCH and PRODUCTION

Within the brief span of two decades, Keystone Carbon Company pioneered the development and commercial introduction of *negative temperature coefficient resistance thermistors, and has become the principal supplier of these remarkable units to American industry, in the widest variety of forms.

It is an historic fact that the first thermistor shipment from Keystone, totalling 5000 units, occurred early in 1941 after three years of laboratory and pilot work. These units were for bomber intervalometers—a temperature compensation application. Later that year, 125,000 thermistors were supplied as sensing units for tank engine water temperatures—and the production flood began.

Since then, Keystone Thermistors have been supplied to the great names in American manufacturing for many measurement, control, and temperature compensation applications, including such uses as automobile temperature gauges, in meat probes for modern ovens, clinical thermometers, aircraft liquid fuel level indicators, and surge reducers in radio and TV circuits.

Today, some of the most interesting and promising new applications for Keystone Thermistors are in the very low temperature ranges, where stability and workable resistance values as low as −250°C are necessary.

Let us suggest that you bring your temperature sensing and compensation problems to KEYSTONE—thermistor headquarters for 20 years. Our full cooperation is always available.

GARNETS FOR MICROWAVE

For details, circle #77 on Reader Service Card

Polycrystalline YIG
(Yttrium-Iron Garnet)

for

ISOLATORS, ROTATORS, PARAMETRIC AMPLIFIERS and Other Microwave Applications!

- **Lower loss than ferrites in the microwave region.**
- **Typical Line Widths — 55 oersteds at 9,000 mc.; 30 oersteds at 3,000 mc.**
- **100% Ultrasonic Inspection.**
- **Available in Rectangular or Cylindrical Shapes.**

YIG (Yttrium-Iron Garnet), one of a group of rare earth polycrystalline materials, has been found far superior to conventional microwave ferrites in certain applications where extremely low-loss characteristics and a narrow resonance line-width are advantageous. Results heretofore unobtainable can now be commercially achieved.

Microwave Chemicals Laboratory, Inc. also custom produces garnets to meet specific requirements.

TRADE MARK

Sierra 121 Wave Analyzer

LINE BRIDGING TRANSFORMER

Converts voltmeter and wave analyzer inputs from single-ended to balanced operation. Model 130D bridges both 135 and 600 ohm balanced lines. Frequency range 3 KC to 500 KC. Write for details.

WAVE ANALYZERS

Model	Frequency Range—kc	Selectivity		Accuracy		Direct Reading in dbm	
		Down 3db	Down 45db	Frequency	Measuring	Balanced	Unbalanced
121A	15 KC-500 KC	± 100 cps	± 1000 cps	± 3 KC	± 2 db	Note D	600 ohms
158A	500 KC- 10 MC	± 2000 cps	± 5000 cps	± 0.08 MC	± 2 db	—	600 ohms

CARRIER FREQUENCY VOLTMETERS

101C	20-500	± 550 cps	± 2900 cps	Note A	± 3 db	Note D	600 ohms
103B†	3- 40	± 400 cps	± 3000 cps	± 0.5 KC	± 3 db	Note D	600 ohms
104A	5-150	± 300 cps	± 1500 cps	± 1 KC	± 3 db	Note D	600 ohms
108B	15-500	± 550 cps	± 2900 cps	± 3 KC Note B	± 2 db Note C	135 ohms Note D	600 ohms
114A	100-800	± 550 cps	± 2900 cps	Note A	± 3 db	Note D	600 ohms
121Y	15-500	± 100 cps	± 1000 cps	± 3 KC	± 2 db	135,600Ω	—

All Sierra Carrier Frequency Voltmeters feature built-in calibration oscillators and circuits for level calibration, have aural monitoring jacks, and (except 103B) are furnished with Sierra Model 149A Precision Spiral Scale Dials. New Sierra 121Y CFVM, similar to Model 121A Analyzer but has special 20-pin connectors and selector switch for rapid patching to carrier racks.

†Contains carrier re-insertion oscillator for monitoring suppressed carrier systems. Furnished with planetary drive dial. Note A. Ranges from ± 2 KC at low end of dial to ± 3 KC at upper end. Note B. ± 1 KC in the 48 KC to 256 KC region. Note C. ± 1 db for + 30 db to —40 db attenuator steps on 135 ohm balanced measurements. Note D. All models may be converted for 135 and 600 ohm balanced line measurements by convenient plug-in bridging transformer, Model 130D.

LINE FAULT ANALYZER

Sierra 124A Line Fault Analyzer

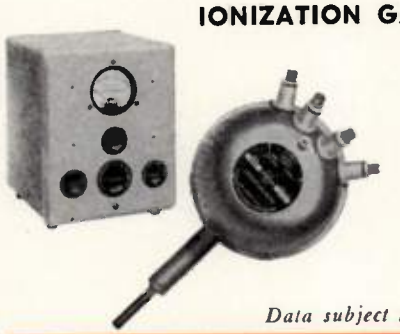
Designed for rapid location of faults on cables, transmission lines. Instantly pin-points shorts, opens, grounds; indicates nature of fault as well as exact location. Easy to use, high resolution.

Model 124A Line Fault Analyzer operates on most OPEN WIRE power, communications lines. Direct reading, range ½ to 200 miles. Sweep marker continuously adjustable from 5 to 100 miles, locates faults with accuracy of ¼ mile. Request Bulletin 102.

New model 199A Cable Fault Analyzer designed for multi-conductor cables. Ideal for quality control in cable manufacturing! Operates with wide variety of cable types. Range to 2500 feet, accuracy ± 5%. Request Bulletin.

IMPEDANCE METER

Sierra Model 166 Carrier Systems Impedance Meter is specifically designed for the measurement of impedances on circuits with high noise levels at any frequency over the range 30 KC to 300 KC. Either high or low power signal sources may be used. Measurements may be made on "hot" power lines through a series carrier coupling capacitor. Request Bulletin 112.



COAXIAL READOUT DEVICES

Insure sensitive readout for Sierra vhf-uhf Directional Couplers. Model 148 Crystal Detector, low VSWR, higher sensitivity to 1200 MC. Incorporates 50 ohm input impedance and filtered output. Type N input, BNC output connectors. Request Bulletin.

DOUBLE STUB TUNERS

New tuners match to a 50 ohm line any load having a 2:1 VSWR. Three models: 151 (155 MC to 300 MC); 152 (380 MC to 825 MC); 153 (900 MC to 1750 MC). Operates up to 1.5 KW peak power. Request Bulletin 110.

IONIZATION GAUGE AND AMPLIFIER

Model 193A Ionization Gauge and Model 192A Ionization Gauge Amplifier provide convenient, dependable and accurate monitoring of pressures during processing from 10^{-4} to 10^{-7} mm Hg. Monel-encased Phillips type ion gauges operate for months without attention; amplifier includes high voltage rf power supply, VTVM, heater transformer and low voltage supply. Request Bulletin 118.

Data subject to change without notice.

LOW PASS FILTERS

Model 184 Series Low Pass Filters have an insertion loss of not more than 0.4 db in pass band, sharp cut-off, 1.5 VSWR or less, and rejection greater than 60 db from 1.25 to 10 times cut-off frequency. Five models: for cut-off frequencies of 44, 76, 135, 230, 400 MC. Power range 250 watts in pass band, 25 watts in rejection band. Request Bulletin 115. *(Also higher frequency models. Request Bulletin M-23.)*

WIDEBAND DIRECTIONAL COUPLERS

Coupling Factor: (in db ± 1 db)

Model	10 KC	3 MC	10 MC	30 MC	100 MC	300 MC	1000 MC	2000 MC	Primary Line Connectors
137, 137A				73	63	53	43	37	Type N
138, 138A				59	49	39	29		Type N
145		52	42	32	22	12			Type N
150				53	43	33	23		Type N
212A				50	40				Type LC Female
213A				68	58	48			Type LC Female
214A					81	71			Type LC Female
139B	50	50							None

Directivity: 12 db ± 3 db greater than coupling factor at each frequency. e.g.: Model 145 at 100 MC has directivity of 34 db (22 + 12).

Impedance: Models 137 and 138 are 51.5 ohms. Models 137A, 138A, 145, 150, 212A, 213A and 214A are 50.0 ohms. Model 139B may be matched to most impedances encountered on open wire lines.

Power: Models 137, 137A, 138, 138A, 145, and 150 usable to 1000 watts. Models 212A, 213A and 214A usable to 150 KW peak. Model 139B usable to 50 KW or higher under certain conditions. See Bulletin 101.

Connectors: See table for primary line. Secondary line, type N, male, except 139B. Model 139B for open wire transmission lines.

THERMOPILE

Model 189A Differential Thermopile converts differential temperatures in flowing liquids to electrical energy. Internal resistance approx. 5 ohms, output voltage approx. 1 mv per °C, max. pressure 75 psi. Request Bulletin 119.

SIERRA ELECTRONIC CORPORATION

A Subsidiary of Philco Corporation

FIELD, LAB POWER MEASURING INSTRUMENTS

Sierra

Sierra 185A-15FN
Termination Wattmeter

TERMINATION WATTMETERS

Sierra 185A Series Average-Reading Termination Wattmeters and Sierra 195A Series Peak-Reading Termination Wattmeters are broadly useful, dependable new instructments for terminating rf coaxial transmission systems and measuring rf powers. All models are ruggedly built, conservatively rated, and ideal as dummy loads for testing and adjusting transmitters and oscillators. Request Bulletins 120 (average-reading) and 121 (peak-reading).

Model 185A Average-Reading Wattmeters

Model Number	Connector	Frequency Range, MC	Power Range, Watts	Accuracy % of F. S.	Max. Power Dissipation	Max. VSWR
185A-15FN	N	20-1000	0-5/15	± 5%	15 watts	1.2
185A-100FN	N	20-1000	0-30/100	± 5%	100 watts	1.2
185A-500FN	N	20-1000	0-150/500	± 5%	500 watts	1.2

Model 195A Peak-Reading Wattmeters

Model Number	Connector	Frequency Range, MC	Peak Power Range, KW	Max. Average Power	Pulse Width, μsec	Repetition Rate, PPS
195A-W*	N	950-1250	0-1 and 0-3	15 watts	3.0 to 5.0	48 to 300
195A-U*	HN	950-1250	0-5 and 0-15	500 watts	3.0 to 5.0	300 to 7200

NOTE: Female connectors are standard. *Available on special order only.

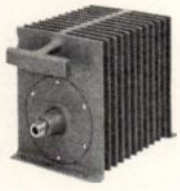
BI-DIRECTIONAL POWER MONITORS

Sierra 164
Power Monitor

Model 164 Series. Two plug-in elements cover 25 MC to 1,000 MC, measure incident and reflected power of 10, 50, 100 and 500 watts full scale. Also four lower power elements covering same range at 1, 5, 10 and 50 watts full scale. Power is read direct on linear scale accurate within ± 5%. Insertion VSWR less than 1.08 (Type N connectors) except on 1 watt ranges where VSWR is 1.15. 50 ohm impedance. Model 164 available with Type N or UHF connectors, male or female. Request Bulletin 111.

Plug-In Elements for Model 164

(Note: Model 164 does not include plug-ins. Order separately as needed.)



180 Series—1, 5, 10, 50 watts full scale
180–52: 25 MC to 52 MC
180–148: 50 MC to 148 MC
180–470: 144 MC to 470 MC
180–1000: 460 MC to 1,000 MC

270 Series—50, 100, 500, 1,000 watts full scale
270–75: 10 MC to 75 MC

181 Series—10, 50, 100, 500 watts full scale
181–250: 25 MC to 250 MC
181–1000: 200 MC to 1,000 MC

Accessories Available: Model 164-LS Equivalent Transmission Line Section; Model 164-CC Carrying Case.

50 OHM COAXIAL TERMINATIONS

New compact, light weight Model 160 series coaxial terminations feature stable operation over a wide frequency range and up to high ambient temperatures. High surface to volume ratio provide a very low VSWR from dc to 4,000 MC. Model 160–1: 1 watt; Model 160–5: 5 watts; Model 160–20: 20 watts; Model 160–100: 100 watts; Model 160–500: 500 watts. Request Bulletin 114.

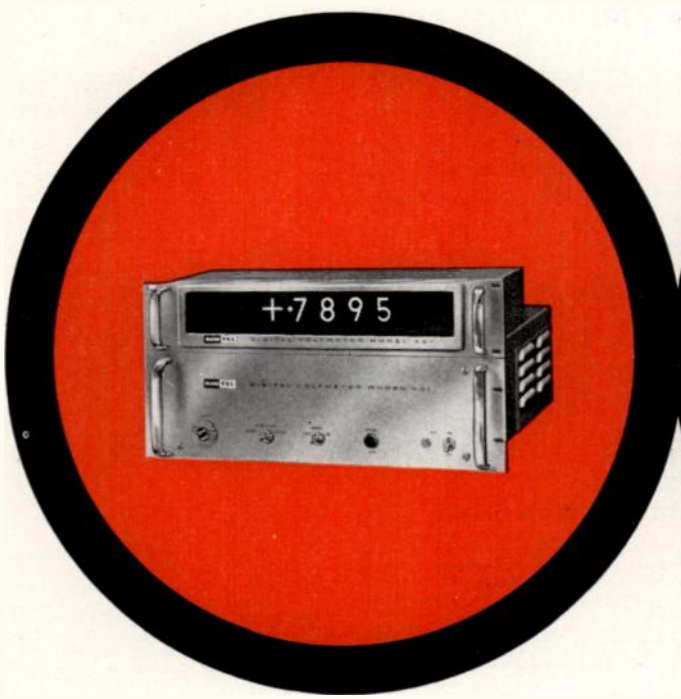
CALORIMETER, X-BAND WATER LOAD

Model 190A Calorimeter and XB187A Water Load provide fast, accurate power measurement from a few watts to kilowatts. Accuracy ±2%. Calorimeter ranges 300, 600, 1,500, 3,000 watts, max. 50 psi, sensitivity 1.5 mv. Water Load range 7 KMC to 10 KMC, VSWR less than 1.2, power 1 Kw CW, 300 Kw peak. Request Bulletin 116.

MODEL 194A-A PEAK-READING POWER MONITOR

Model 194A-A quickly measures incident and reflected powers on radar and other pulsed systems. Measures peak power directly, independently of duty cycle. 200 MC to 1,215 MC. 1, 3, 10 and 30 Kw peak. ±5% full scale. From 1 μsec pulses, 400 pps up. HN connectors. Request Bulletin 122.

NEW! LIQUID-COOLED COAXIAL LOAD



Completely new design! Model 186A-Z Coaxial Load comprises tapered coaxial section and film resistor on ceramic tube. For use with Sierra 190A Calorimeter in power measuring work on 1⅝" rigid line. UG-49/U connector. Ratings DC to 1500 MC with water coolant; DC to 4000 MC with oil coolant. VSWR less than 1.2. Power: Up to 2 Kw. Request bulletin.

DC DIGITAL VOLTMETER

OFFERS MAXIMUM RELIABILITY
0.01% ACCURACY...
SINGLE-PLANE READOUT...
AND MANY OTHER ADVANCED FEATURES
FOR ONLY $2100

The Model 401 offers four-digit display with automatic polarity indication and decimal placement . . . Measures .0001 to 999.9 volts with 0.01% ±1 digit accuracy . . . Adjustable least digit sensitivities of .1, 1, 10 mv . . . Average reading time of one second...Continuous, automatic standard cell calibration...10 megohms input impedance...Built-in printer drive...10 times longer readout bulb life...No circuitry in readout for easy remote mounting...Extra long relay life assured by DC drive.

KIN TEL manufactures an exceptionally complete line of digital instruments. These "digital building blocks" permit measurement of AC, ohms, ratios, and automatic scanning of multiple inputs. Preamplifiers increase digital voltmeter sensitivity to 1 microvolt DC and 10 microvolts AC. Buffers permit driving typewriters, tape punches, printers. Complete digital systems for data logging, missile checkout and production testing are available. Reliability and accuracy are assured by KIN TEL's experience in manufacturing more than 10,000 "standard cell accuracy" DC instruments. Sales and service are available nationwide.

ALL-ELECTRONIC DIGITAL VOLTMETER

MEASURES
MILLIVOLT TO KILOVOLT
WITH 0.1% ACCURACY
...COSTS ONLY $960

Four ranges: 0.000 to 1.599; 00.00 to 15.99; 000.0 to 159.9; 0000. to 1000 volts (manual ranging and polarity)...No moving parts...Digital in-line readout...70 millisecond conversion time...Adjustable display time ...0.1% of full scale accuracy...Direct voltage conversion circuit...Wide range of models.

KIN TEL's Model 801A all-electronic digital voltmeter measures DC from 0.001 to 1000 volts of 0.1% of full scale accuracy . . . and in less than 1/10 second, presents the measured voltage in clear numerical form on an in-line digital readout that even unskilled personnel can read with ease. *Direct* voltage measurement by successive approximation provides accuracy and sensitivity previously obtainable only in delicate, complex and expensive instruments. Extremely stable operation – continuous calibration against an internal reference. (Input impedance of the Model 801A is 20,000 ohms per volt. The Model 802, priced at $1190, has an input impedance of 10 megohms on all ranges. In other special models, the binary coded decimal and decimal outputs are externally available.)

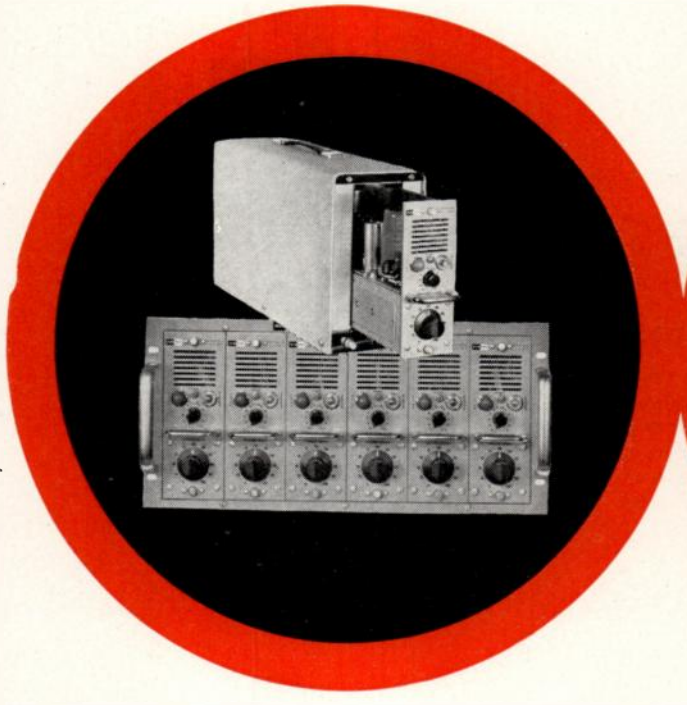
KIN TEL – world's largest manufacturer of precision, chopper-stabilized DC instruments.

For details, circle #80 on Reader Service Card

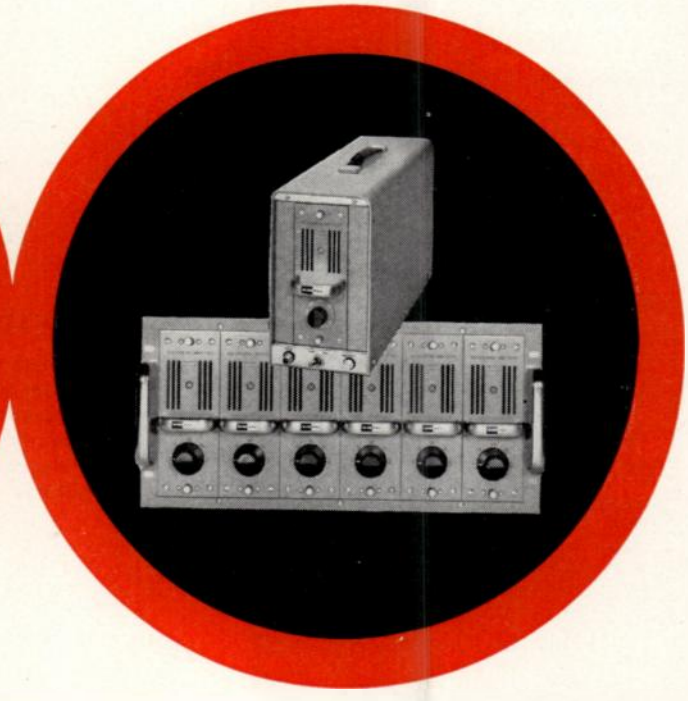
WIDEBAND SINGLE ENDED DC AMPLIFIER

AMPLIFIES DATA SIGNALS FROM DC TO 40 KC WITH 2 MICROVOLT STABILITY

±2 microvolt stability... <5 microvolt noise... 40 kc bandwidth... 100 KΩ input, <1 ohm output impedance ...Gain of 20 to 1000 in ten steps with continuous one to two times variation of each step... ±45 V, ±40 ma output... 1.0% gain accuracy... 0.1% gain stability and linearity... Integral power supply.



Millions of cumulative hours of operation have proved KIN TEL 111 series amplifiers to be the basic component for all data transmission, allowing simple, reliable measurement of strain, temperature and other phenomena. DC instrumentation systems–with their inherently greater accuracy, simplicity, and reliability than AC or carrier systems – are made entirely practical by the excellent dynamic performance, stability and accuracy of KIN TEL DC amplifiers. Price: 111BF – $575; six amplifier module – $200; single amplifier cabinet – $125.



NEW...TRUE DIFFERENTIAL DC AMPLIFIERS

ELIMINATE GROUND LOOP PROBLEMS... RESCUE MICROVOLT SIGNALS FROM VOLTS OF NOISE

160 db DC, 120 db 60 cycle common mode rejection with balanced or unbalanced input... Input completely isolated from output... Input and output differential and floating... 5 microvolt stability for thousands of hours... 0.05% linearity, 0.1% gain stability... Gain of 10 to 1000 in five steps... >5 megohms input, <2 ohms output impedance... 10 volt at 10 ma output... 120 cycle bandwidth... Integral power supply.

Ideal for thermocouple amplification, the 114A eliminates ground loops; allows the use of a common transducer power supply; drives grounded, ungrounded or balanced loads; permits longer cable runs; and can be used inverting or non-inverting. The 114A can be mounted in either single amplifier cabinets or six amplifier 19″ rack adapter modules. Price: 114A – $675; Six amplifier module–$200; single amplifier cabinet–$125.

KIN TEL also manufactures DC microvoltmeters; microvolt-ammeters; "standard cell accuracy" DC power supplies and meter calibrators; electronic galvonometers; secondary DC standard and null voltmeters; digital instruments such as analog-to-digital converters and plug-in logic units; and an exceptionally complete line of industrial television equipment.

Progress Through Increased Service

. . . to the electronics industry! This spirit spearheaded Tung-Sol's dynamic growth over the years. Today, it shows in Tung-Sol's constant effort to diversify, to make new and better components.

Underscoring Tung-Sol's steady diversification and product development, is rigid adherence to uniformly high standards of quality control. Tung-Sol has maintained these standards without compromise. They are your assurance of product performance . . . let you specify Tung-Sol, confident you specify the "best that can be made."

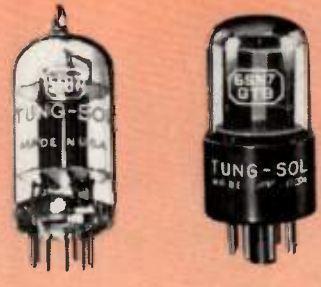
TUNG-SOL ELECTRIC Inc.
NEWARK 4, N. J.

* Products of CHATHAM ELECTRONICS, Division of Tung-Sol Electric Inc., Livingston, N. J.

INDUSTRY

Tung-Sol makes a wide range of tube types . . . tailors selenium rectifiers for diversified application throughout industrial and military electronic equipment.

AVIATION



Tung-Sol's hydrogen thyratrons and power supplies meet the aircraft industry's exacting demand for precision performance both in airborne and ground control.

ts

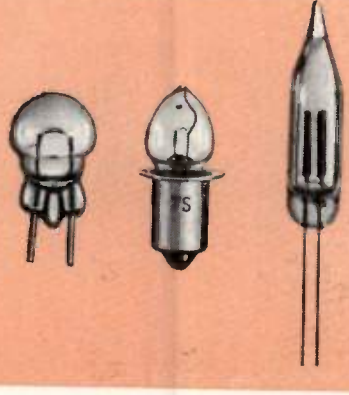
ENTERTAINMENT

You can fill virtually every entertainment socket with Tung-Sol Blue Chip Quality tubes—cathode ray, series string, hybrid auto radio, TV, hi-fi and radio.

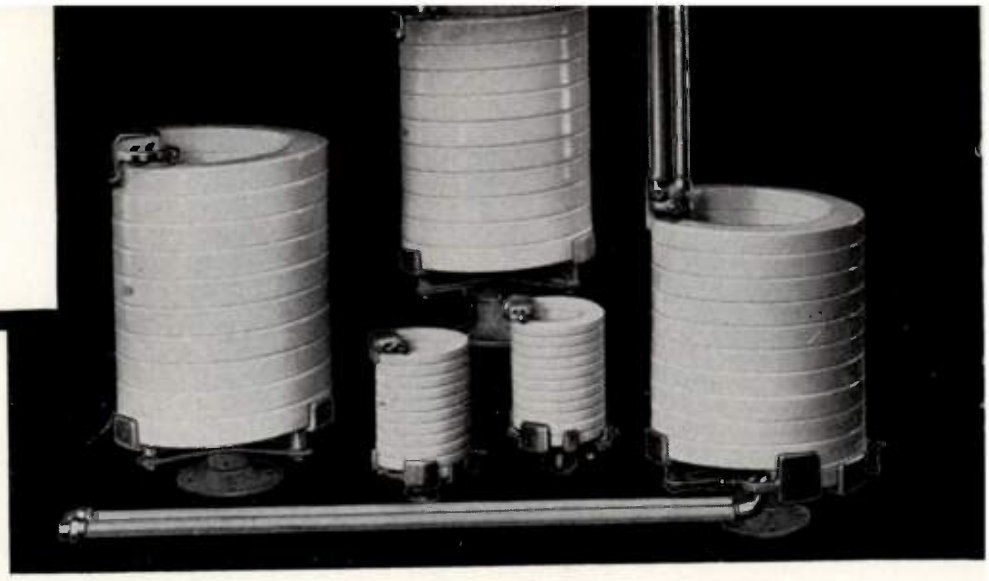
SEMICONDUCTORS

For reliability, long life of electronic equipment and manufacturing economies, specify Tung-Sol transistors in the JETEC 30 (TO-5 OUTLINE) package.

For details, circle #82 on Reader Service Card



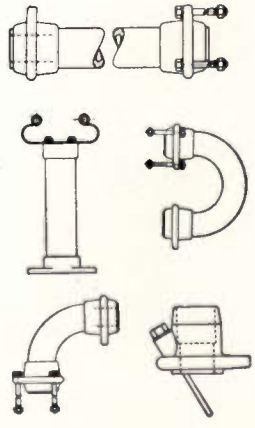
TUNG-SOL®



LAMPS

Neon glow and miniature incandescent lamps are two areas of Tung-Sol lamp leadership that dates from 1907 and development of the first successful electric automotive headlight.

Lapp



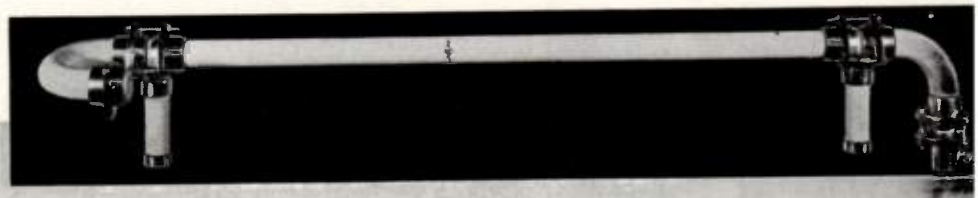
TUBE SUPPORTS
for air-cooled tubes

No longer is it necessary for equipment manufacturers to design supports for forced-air-cooled tubes. After producing many such special designs, Lapp has engineered and built a complete series of insulating supports for air-cooled tubes. Use of these supports facilitates design of transmitter and other high-power circuits. Simple, compact, efficient and attractive in appearance, in porcelain or steatite, they make for economical production, easy interchangeability, and availability of replacement units. Write for Bulletin 301, with complete description and specification data.

For details, circle #84 on Reader Service Card

INSULATION FOR WATER-COOLED SYSTEMS

For carrying cooling water which must undergo a change in potential, use of Lapp porcelain eliminates troubles arising from water contamination and conductivity, sludging and electrolytic attack of fittings. Permanent cleanness and high resistance of cooling water is assured—for positive cooling and long tube life.



LAPP PORCELAIN WATER COILS

Twin-hole and single-hole models in sizes to provide flow of cooling water from 2 to 90 gallons per minute. Cast aluminum mounting bases, lead pipe or flexible metal hose for attachment.

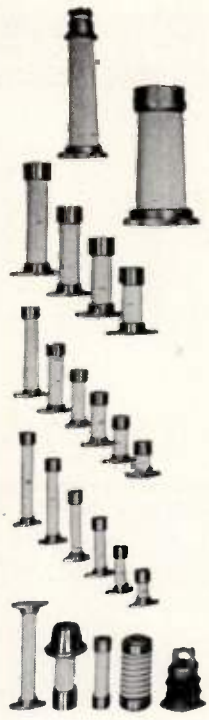
LAPP PORCELAIN PIPE

Inside diameters ¾″ to 3″, in straight, 90° and 180° elbows, fittings. Swivel-type connections. Standoff insulators attach directly to fitting bolts. *Write for Bulletin 301 with specifications for Lapp Porcelain Water Coils and Porcelain Pipe.*

LAPP GAS-FILLED CONDENSERS

Capacitance for high-voltage, high-current duty

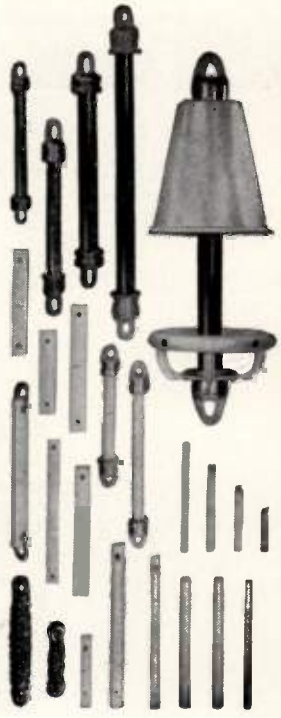
The record of more than 18 years' service, in thousands of installations, proves the reliability of the Lapp Gas-Filled Condenser. For duty at high voltages and high currents, this unit offers the advantages of extreme compactness . . . low loss . . . high safety factor . . . constant capacitance under temperature variation . . . grounded tuning shaft . . . and rugged sturdiness. Units available in four tank diameters, 7″ to 18″ . . . in fixed or variable capacitance . . . capacitances to 30,000 mmf; current ratings to 390 amps at 1 mc; voltages to 85 Kv peak. Write for Bulletin 302.



ENTRANCE INSULATORS

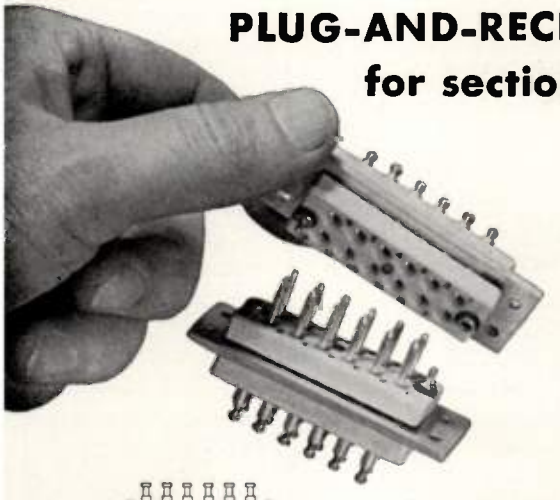
To eliminate losses which occur in ordinary types of bushings at radio frequency, Lapp units use air as major insulation, porcelain path being lengthened by its "bowl" shape. In wide variety of types for most electrical and mechanical requirements.

STAND-OFF INSULATORS

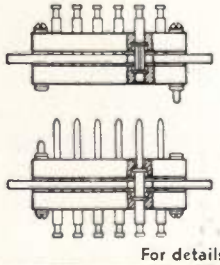


Dependable mechanical and electrical performance—and trim good looks. Hundreds of standard and special types available.

Write for Bulletin 301, listing entrance and stand-off insulators.

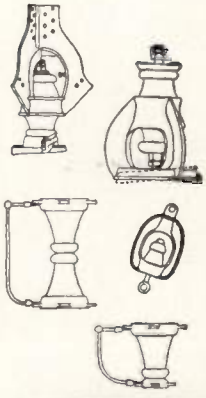


ANTENNA STRAIN INSULATORS



The largest of the porcelain rod insulators shown develops 12,000 lb. strength. Available, as specified, with rain shield and/or corona rings. Smaller units, in porcelain or steatite, for all strain or spreader use. Engineering and production facilities also available for special performance units See catalog 301.

PLUG-AND-RECEPTACLE UNITS for sectionalizing circuits



For panel-rack or other sectionalized circuits, Lapp offers a variety of plug-and-receptacle units. Any number of contacts can be provided (in multiples of twelve). Male and female contacts are full floating, for easy alignment and positive contact. Contacts silver plated, terminals tinned for soldering. Insulation is steatite, the low-loss ceramic . . . non-carbonizing even under leakage flashover resulting from contamination, moisture or humidity. Write for complete electrical and mechanical specifications and recommendations.

For details, circle #85 on Reader Service Card

ANTENNA TOWER INSULATORS

Most of the world's radio towers are supported by Lapp insulators, including the tallest guyed mast ever built. Through the Lapp "compression cone," immense loads can be carried by electrical porcelain. Write for data on Lapp footing insulators for self-supporting radiators, mast-base insulators, or guy insulators.

SPECIAL ASSEMBLIES

Lapp business is electrical porcelain, its application, design, manufacture, and assembly. Our skill is in our knowledge of the capabilities, and limitations, of ceramic insulation . . . in engineering ingenuity to meet specified requirements . . . and in efficient production. If you have need for insulating parts and associated sub-assemblies, we may be able to show you how they can be made most economically, to perform most efficiently.

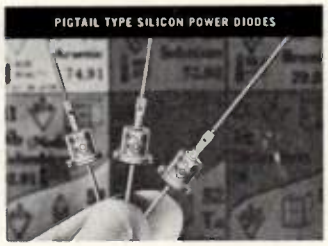
ELECTRONIC TYPES FOR INDUSTRIAL AND MILITARY APPLICATIONS

SILICON AND SELENIUM LOW CURRENT TYPES TO 1 AMP.



***SPECIAL MILITARY TYPES**
Special configurations and high reliability rectifiers for military applications may be obtained under our "Prescribed Reliability" Program. Address your inquiry to: Military Products Dept.

MINIATURE SILICON POWER DIODES

Ratings: 100 to 600 PIV, Up to 500 ma.
Specifically designed for missile and airborne equipment applications where miniaturization and reliability are prime factors. Hermetically sealed, all-welded, pigtail lead construction. Manufactured to meet the most rigid military requirements. Request **Bulletin SR-203**

PIGTAIL TYPE SILICON POWER DIODES

Ratings: 50 to 600 volts PIV • 250 to 750 ma.
An extensive line of silicon power diodes for military and industrial applications featuring all-welded, hermetically sealed construction. All designed and manufactured to meet the most rigid military requirements. For information on types for your application **Contact Factory**

STUD MOUNTED SILICON POWER DIODES

Ratings: 50 to 600 volts PIV • 400 ma. to 1 amp.
Industrial and military types including the 1N253, 1N254 and 1N255. Stud mounted, hermetically sealed, all-welded construction. Operating temperature range: –55°C to +150°C. Designed and manufactured to meet most rigid military specifications. **Bulletin SR-135C**

SUB MINIATURE SELENIUM DIODES

Ratings: 20 to 160 volts • 100μa to 11 ma.
Ideal components for bias supplies, sensitive relays, computers etc. High resistance, (10 megohms and higher at –10 volts). Excellent linear forward characteristics. Extremely small, low in cost. Encapsulated to resist adverse environmental extremes. Specify **Bulletin SD-1B.**

SELENIUM RECTIFIER STACKS

Ratings: From 100 ma. to 50 Amps.
Low forward voltage drop and low leakage characteristics make this series ideal for a wide variety of power applications. For details request **Bulletin C-439,** (26 volt cells); **Bulletin SR-160,** (45 to 52 volts per cell) and **Bulletin SR-152,** on high current density cells.

SELENIUM TV AND RADIO RECTIFIERS

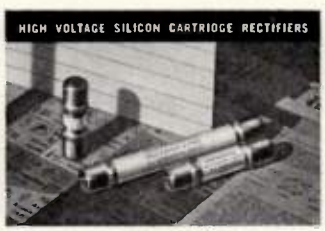
Ratings: 25 to 156 volts AC, 50 to 1,200 ma. DC
The widest range in the industry! Designed for Radio, Television, TV booster, UHF converter and experimental applications. Input ratings from 25 to 156 volts AC and up. DC output current 50 to 1,200 MA. Write for application information. **Bulletin ER-178-A**

SILICON TV RECTIFIERS

Ratings: 400 PIV, up to 750 ma.
SD-500. A hermetically sealed, all-welded silicon junction rectifier offering maximum reliability in the high temperatures encountered in TV applications. Pigtail leads eliminate the need for brackets, blocks, etc., simplify installation. For complete data: **Contact Factory.**

HIGH Q VOLTAGE VARIABLE CAPACITOR

Ratings: Q of 1000, 200 PIV DC
Semicap's small size, light weight, high reliability and low power requirements make it ideal for automatic frequency control, frequency modulation oscillators and filter networks. All-welded hermetically sealed, shock-proof housing. Request **Bulletin SR-205.**



SILICON AND SELENIUM HIGH VOLTAGE TYPES

HIGH VOLTAGE SILICON POWER DIODES

Rating: 600 to 2400 volts PIV • 100 to 125 ma.
Three types available. Hermetically sealed, pigtail construction. Style J rated at 600 to 1000 volts PIV at 125 ma. **Bulletin SR-138E** Styles K and L with PIV ratings from 600 to 2400 volts at 100 ma. dc output current are described in technical detail—**Bulletin SR-157.**

HIGH VOLTAGE SILICON CARTRIDGE RECTIFIERS

Ratings: 1500 to 16,0000 volts PIV @ 45 to 440 ma.
Especially suited for miniaturized military equipment where optimum reliability is a prime factor. Standard types for normal convection cooling and high current types for forced air or oil cooling. Hermetically sealed, metallized ceramic housing. Request **Bulletin SR-225**

SELENIUM HIGH VOLTAGE CARTRIDGE RECTIFIERS

Ratings: 20 to 20,000 volts • 0.2 to 195 ma.
Designed for long life and reliability in half-wave, voltage doubler, bridge, center-tap circuits, and 3-phase circuit types. Phenolic cartridges and hermetically sealed types available. Operating temperature range: –65°C to +100°C. For details specify **Bulletin H-2.**

SPECIAL HIGH VOLTAGE TYPES

Rating: 12,500 volts PIV at 5 Amps.
Illustrated above is a typical rectifier of advanced design produced by International Rectifier Corporation for military application. Data on ruggedized silicon substitutes for many standard vacuum tubes may be obtained from our Military Products Department.

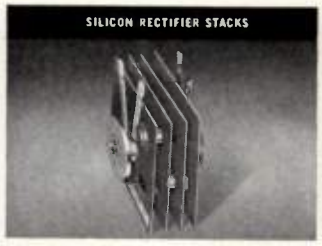
RECTIFIERS FOR ALL DC REQUIREMENTS...FROM MICROWATTS TO MEGAWATTS!



RECTIFIER CORPORATION PRODUCTS

LINE OF QUALITY RECTIFIERS ON EARTH!

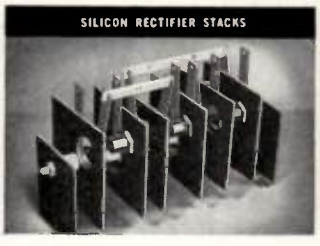
All designed and manufactured to meet the most rigid military requirements!

POWER TYPES FOR INDUSTRIAL AND MILITARY APPLICATIONS

SILICON AND SELENIUM MEDIUM CURRENT TYPES TO 150 AMPS.

Utilizing junctions rated to 1.25 amps DC output
These stacks consist of hermetically sealed junction diodes mounted on copper cooling fins, stacked to include the interconnections required for specific circuits. Junction ratings: 1.25 amps. DC output: 70 to 350 AC input volts rms. Request **Bulletin SR-137A**

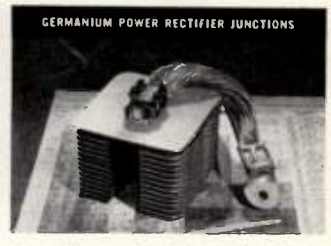
Conservatively rated to provide a substantial safety factor in industrial applications. Hermetically sealed, all-welded case construction provides reliability over a long life. Types available in a wide voltage range. For details **Contact Factory.**



Rating: 50 to 500 volts PIV • 25 to 45 Amps.
Advanced ceramic techniques assuring excellent thermal characteristics and mechanical stability are used in the production of these highly reliable, hermetically sealed rectifiers for military or industrial applications. For complete technical data, request **Bulletin SR-304**

Ratings: 50 to 800 volts PIV • 45 to 150 Amps.
An extensive series of standard and reverse polarity types. Optional mounting bases including machine thread and pipe thread types. Machine thread base types: **Bulletin SR-300,** Pipe thread base types. **Bulletin SR-301,** Complete stack assemblies: **Bulletin SR-302**

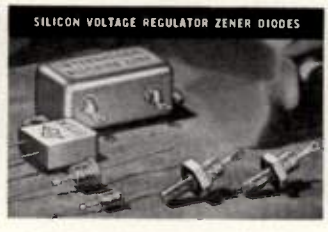
SILICON, SELENIUM AND GERMANIUM HIGH CURRENT TYPES TO 670 AMPS. PER JUNCTION



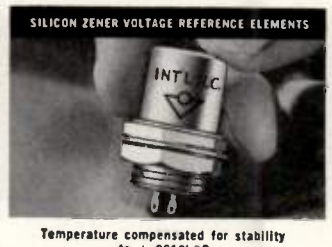
Ratings: 45 to 150 Amperes per Junction
Consisting of hermetically sealed junction diodes mounted on aluminum or copper cooling fins, stacked to include the interconnections required for specific circuits. Junction ratings: 45 to 150 amps average DC. Write for application data.

Ratings: 50 to 500 volts PIV • 75 to 250 Amps.
Standard and reverse polarity types offered in a series of machine thread and pipe thread mounting styles. Complete assemblies in all circuit configurations also available. Rugged construction and hermetic sealing assure long life and reliability. Ask for **Bulletin SR-305**

Ratings: 6 to 30,000 volts • 50 to 2,300 Amps.
Specifically designed for industrial DC power needs. Patented construction features assure long life. Descriptive bulletins available are: **Bulletin C-349,** (26 volt cells); **Bulletin SR-160,** (45 to 52 volts per cell) and **Bulletin SR-152,** on high current density cells.



Ratings: 500 amperes • 26 to 66 volts rms
High capacity junctions especially designed for high-current, low-voltage electrochemical installations. Air cooled, these hermetically sealed junctions provide efficiency to 98.5%. Cast aluminum airfoil housing effects maximum heat transfer. For details **Contact Factory.**



SPECIAL SEMI-CONDUCTOR DEVICES

Complete series of AC and DC types.
Designed to eliminate arcing and erosion across the contacts of relays, switches, etc. A complete series in each of three basic types: diode type, cartridge type and hermetically sealed types for industrial application. For complete data: **Bulletin SR-150-A**

Ratings: From 600 milliwatts to 10 watts
A complete series in 6 types. Miniature single junction types, multiple junction types and double anode units. 750 milliwatt and 1 watt types: **Bulletin SR-251,** 3.5 and 10 watt types: **Bulletin SR-252,** Multiple junction 5 watt types: SR-253, Double anode types: SR-254

Temperature compensated for stability to ±.001% °C
Extremely precise units for power supplies and voltage sources. Temperature compensated for excellent stability over a temperature range of from −55°C to +150°C. Manufactured to meet the most rigid military requirements. Types 1N430, 1N430A, 1N430B. **Bulletin SR-255**

(Wide range of silicon and selenium types.)
Self-generating cells available in standard and custom sizes, mounted or unmounted. For details on wide selection of selenium types, request **Bulletin PC-649.** Silicon solar cells in mounted and unmounted types are described in technical detail—specify **Bulletin SR-156.**

PRECISION GYROS FOR ALL APPLICATIONS

Eclipse-Pioneer . . . the nation's foremost supplier of panel indicator gyros . . . offers a complete line of gyros to meet all applications. This group includes all the basic vertical, rate, free, and directional types used as reference components in complete navigation, radar, compass, automatic flight control, and guidance systems.

CAGEABLE FREE GYRO TYPE NUMBER 17224-1-A

FEATURES: Designed specifically for missile application where maximum operating temperature of 350°F. allows location near missile skin. Caging time of 8 secs. achieved through solenoid-link mechanism, thus replacing standard motor-gear train caging mechanisms.

MOTOR: 115 volts, 400 cps, 3 phase with rated speed of 22,000 rpm and a rotor moment of inertia of 1260 gram-cm².

DRIFT RATE: Will not exceed 4° per hour when subjected to Scorsby test at amplitude of ± 15° and rate of approximately 6 cpm (corrected for earth's rotation).

PICKOFF: Potentiometer pickoff available on inner and outer gimbal axes. May be excited by either dc or ac source potential. 360° freedom on outer axis and ± 85° on inner axis.

CAGING AND UNCAGING: Can be caged and uncaged remotely by applying 28 volts dc. Positive mechanical locking in cage position. Dynamic caging up to roll rates of 30°/sec. Will cage consistently from any position within 8 secs. with gyro rotor at full speed. Application of 28 volts dc will uncage within 0.1 seconds.

WARM-UP TIME: 90% of rated speed in one minute.

ENVIRONMENTAL CHARACTERISTICS: Maximum operating temperature of 350°F. and a minimum of —55°F. Maximum allowable shock is 60 g. with maximum operating vibration of 7 g. (from 10 to 550 cps). Maximum excursion not to exceed 0.5 in. Positive hermetic seal.

OPERATING LIFE: Minimum of 1000 hours.

OVERALL SIZE: 4 inches x 5 inches (less connector).

WEIGHT: Approximately 4.2 lbs.

RATE GYRO TYPE NUMBER 15823

FEATURES: Integral heater for temperature compensation. Hermetically sealed. Null reset externally accessible.

MOTOR: 26 volts, 400 cps, 3 phase with rated speed of 22,000 rpm and a rotor moment of inertia of 175 gram-cm².

PICKOFF: 26 volts, 400 cps, single phase with "E" type variable coupling. With resistive load of 10,000 ohms tuned output is 6 to 7 volts at maximum rate. Null is 30 millivolts with an armature travel of 2½° to 3° either side of null.

DAMPING: Accomplished by fluid flotation of gimbal. Heater and thermostat provided for controlling the viscosity of the damping fluid. Damping factor is 0.5 to 0.7 of critical, but values up to and including 1.0 of critical can be provided.

RUN-UP TIME: 45 seconds.

RANGE: Maximum rate obtainable 250°/second. Variations in range rates less than 250°/second are available.

ENVIRONMENTAL CHARACTERISTICS: —54°C. to +71°C. operating temperature range. Positive hermetic seal.

SIZE: 2 23/64" diameter x 3¼" long.

WEIGHT: Approximately 1 lb.

VERTICAL GYRO TRANSMITTER TYPE NUMBER 14126-1-A

This Vertical Gyro Transmitter provides roll and pitch displacement signals which will operate remote indicating devices or which can be used wherever attitude information could be applied. It consists of an electrically driven, torquer erected, vertical-seeking gyro enclosed in a hermetically sealed case with separate Autosyn synchro transmitter pick-offs on the roll and pitch axis. An outstanding feature of this instrument is the use of the newly developed Eclipse-Pioneer Electrolytic Switch which provides precise erection and has long serviceability. Besides being rugged, of simple design, and easily serviceable, the transmitter also features a quick erection to true vertical instead of vertical in relation to the instrument case; a sensitive measuring vertical detection system with an accuracy of better than ¼°; and an improved gimbal construction resulting in greater operational stability. Provisions have been made for the use of external switches so that the pitch and roll erection systems can be cut out. This gyro is completely self-contained and requires no erection amplifier.

SIZE: 4¾" diameter, 8 21/32" in length.

WEIGHT: Approximately 6 lbs. without shockmount.

POWER REQUIREMENTS: Gyro Motor and Erection System — 115 volts, 400 cycles, 3 phase. Autosyn Synchro — 26 volts, 400 cycles, single phase.

VERTICAL GYRO: Non-pendulous. Momentum: 4,000,000 gm cm²/sec. Freedom: 360° in roll, Controlled tumbling near ± 82° in pitch with stops set to provide minimum loop error at 10°/sec. rate of loop.

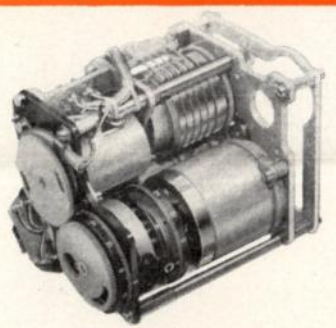
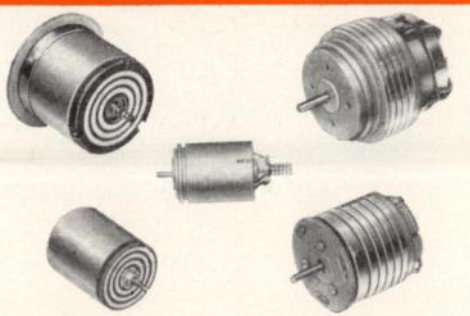
COMPONENT PACKAGING

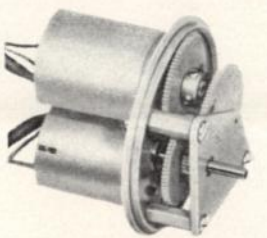


GEAR HEAD MOTORS AND MOTOR GENERATORS

One-source engineering of complete package • Volume-production prices • Wide range of frame sizes with immediate delivery on size 8s • 18 standard size 8 gear ratios from 10:1 to 5250:1 — lower, higher, and intermediate ratios available on special order • High operating torque capacities • Compact, lightweight package • Corrosion-resistant gears • Ball bearing — ABEC 5, or better • AGMA precision 2 gears, or better.



In addition to supplying catalog component items such as — synchros, motors, gyros, etc.—Eclipse-Pioneer is in an excellent position to offer a premium in the way of customer service and accommodation on component packaging. We may have already solved a problem similar to yours, thus enabling our system specialists to adapt from our extensive line, existing production packages to meet your systems requirements.



Should your problem turn out to be entirely new, we can — and will — design, develop, and produce a component or complete system to solve your specific problem.
No package is too small or too large for Eclipse-Pioneer, and may be as simple as an Autosyn synchro mounting clamp or be more complex as a complete servo follow-up sub-assembly from a production computer.

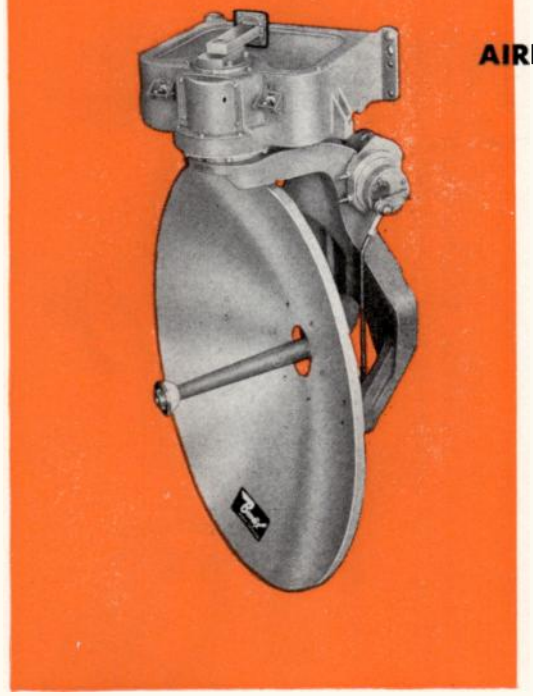
RADAR ANTENNA DEVICES



Vast experience in servo-mechanisms and in latest packaging techniques plus the use of light-weight castings throughout, enables Eclipse-Pioneer to manufacture smaller and lighter radar antenna devices of unsurpassed quality. Airborne or ground radar antenna devices can be supplied to include the electro-mechanical drive unit only or to include the complete reflector assemblies and feed systems.

GROUND ANTENNA PEDESTAL
TYPE NUMBER 40101-1-A

Specifications

Weight	700 lbs.
Data accuracy	0.5 mil.
Slewing rates (in azimuth and elevation)	12 rpm.
Operating temperature range	−54°C. to +66°C.
Elevation and azimuth	Two-speed 60 cps synchro data systems are used, having ratios of 1:1 and 16.1
Servo drives	¾ hp motors (dc) for use with an amplidyne servo system
Wind loading	50 mph (full operating performance) 100 mph (no structural damage).

AIRBORNE WEATHER RADAR ANTENNA
TYPE NUMBER 40023-□-A

Specifications

Standard frequency range	9345 to 9405 mc/s. This permits beacon operation at 9310 mc/s.
Optional frequency range	9215 to 9275 mc/s.
Operation	Up to 60 kw peak with a 0.001 duty cycle.
Beam width	4° maximum in E and H planes
Side lobes	At least 18 db below main lobe peak.
Polarization	Horizontal.
Weight	24 lbs. (approximate).
Operating temperature range*	−40°C. to +55°C.
Storage temperature range	−65°C. to +55°C.
Humidity	10% to 95%.

*These temperature ranges can be extended for specific applications.

Supermarket volume makes Eclipse-Pioneer the ideal place to shop for synchros, motors, gyros, radar antenna devices, and component packages.

Premium precision, minimum cost, and fast delivery have made Eclipse-Pioneer the "buy word" for precision components.

COMPANY, INC.

P E N N A .

★ Extreme Reliability ★ Light Weight
★ Highest Accuracy ★ Tight Coupling
★ Environmentally Qualified ★ Low Nulls
★ Low Phase Shift ★ High Torque
★ Matched Impedances ★ Low Friction
★ Low Heat Rise ★ Early Delivery
★ Special Units ★ Cost No More

SYNCHROS *are our business*

In addition to the wide variety of standard units shown, we also produce an equally large number of special units on special order in production quantities for which we are already tooled.

For more complete information on our synchros including Typical System Measurements, write for booklet SC-3 or phone MAdison 6-2101 (Suburban Philadelphia).

NAVY BuOrd SYNCHROS

½ Actual Size

Contact Clifton Precision for standard Navy BuOrd units. If your specification requires conformance to BuOrd drawings and your system can take advantage of exceptional accuracy, CPPC can hold extra close error spread and accuracy tolerances. See CG-15-MS-1 in the tables.

PRECISION RESOLVERS

Precision Computing Resolvers with functional accuracies of the order of .1% and transformation ratios 1:1 are currently being constructed in the size 15 class for special applications. Contact CPPC for applications involving the use of Precision Resolvers in all sizes.

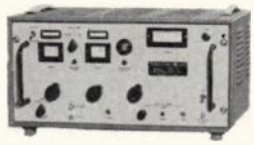
LAVOIE LABS SHOWS

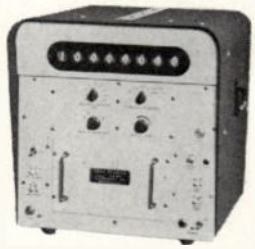
four roads to precision analysis

In the field of precision analysis, Lavoie Laboratories has combined bold theory and proven techniques to evolve many promising concepts. Such concepts continue to yield new laboratory instruments of predicted accuracy and reliability. The four quality instruments shown are acknowledged the most recently recorded triumphs in the field of precision analysis. They represent trails blazed by Lavoie research, development, and engineering know-how to aid you in solving test problems of the present and to improve your efficiency in approaching problems in the future.



SPECTRUM ANALYZERS

Superior units for every day use in laboratory and shop which cover the entire 10-44,000 mc range with one simplified band-switch (LA-18A: 10-21,000 mc; LA-19: 10-44,000 mc; LA-20: 1 Kmc —21 Kmc). Single RF head, triple shielding plus comprehensive human engineering. Unitized subassemblies for rapid maintenance.



LA-302 ROBOTESTER

Makes possible unprecedented ranges of economy, speed, and accuracy in volume equipment checking through time-tested comparator techniques refined and accelerated to meet today's analytic requirements. Automatic circuit analysis from pre-programmed tape, punched by your engineers.

LA-70 FREQUENCY METER

For generation and measurement in frequency range 10 KC to 3000 MC (direct reading) with accuracy to one cycle per megacycle. Thermostatically controlled 1 MC precision quartz crystal for oscillator stability. Weight of 42 lbs. stresses application for mobile service.

LA-80 ELECTRONIC COUNTER

Frequency range from ten cycles to ten megacycles. Plug-in frequency converter extends range to 220 mc. Time interval range from one usec to 100 days. Magnetic beam switching tubes used for decade dividers and scalers eliminate germanium diodes, reduce circuit complexity and overall size. Stable operation from —40°C to +55°C. MIL spec conformance for high reliability.

Lavoie Laboratories, Inc.

MORGANVILLE, N. J.

If you can use custom quality
at commercial prices

–then check on HUDSON...

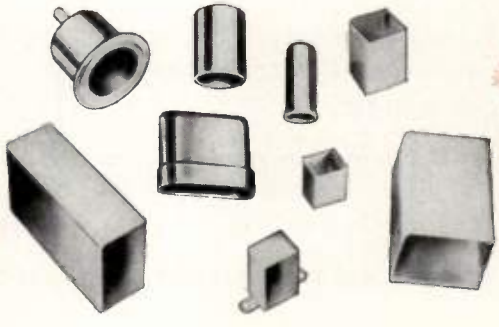
4-stage service

HUDSON precision quality metal components are produced by cost-reducing mass production methods. The HUDSON production department is equipped with batteries of standard and special presses ranging up to 300 tons. HUDSON performs a wide range of operations to meet your needs.

4 STANDARD PRECISION DRAWN INSTRUMENT CASES

Standardized cases include over 1400 different sizes, with both inside and outside covers, in six standard metals. Hudson offers the engineer a range of closures unequalled in the industry.

3 MIL-T-27A CLOSURES FROM AF TO OA



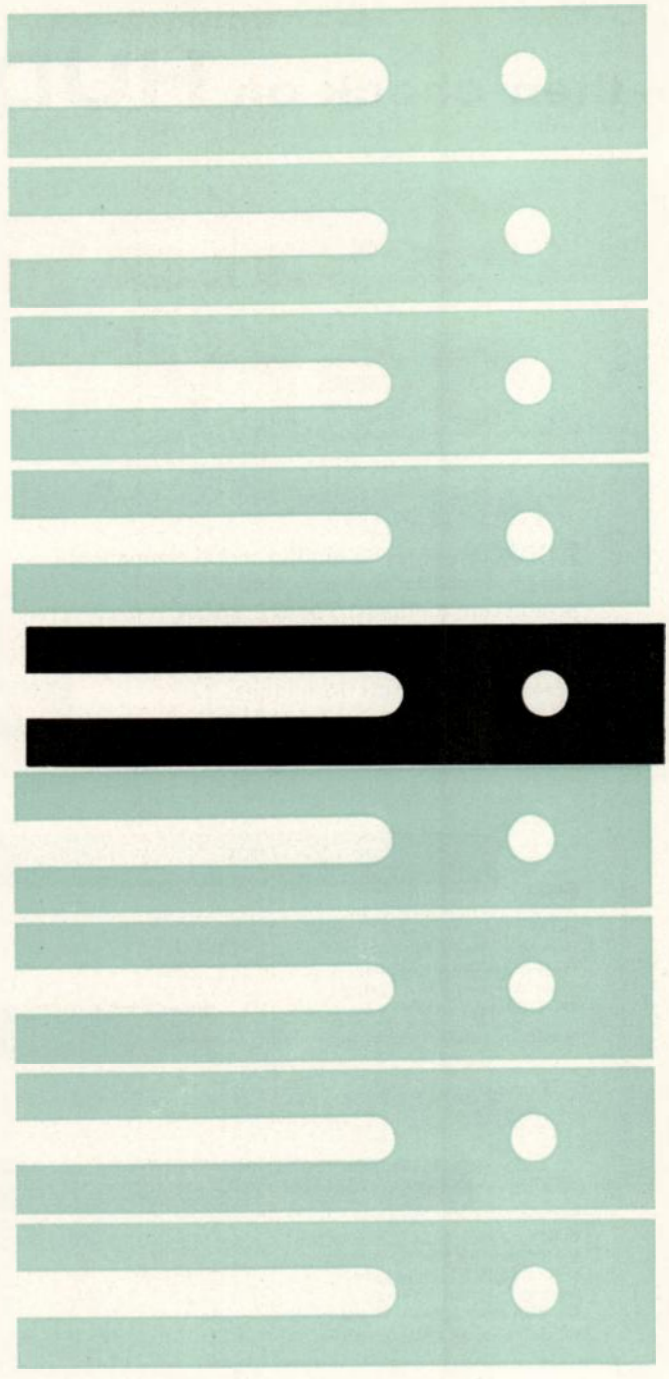
Cases and covers now offered by HUDSON from types AF to OA inclusive. Immediate shipment from large stock supplies. Cover assemblies to MIL-T specifications also available.

2 SPECIAL FACILITIES FOR TRANSISTOR CLOSURES

HUDSON'S newly installed 10 station automatic presses speed production on your transistor caps. Closures for transistors, diodes and other miniature components to specifications.

1 COMPLETE SERVICE ON MU METAL FABRICATION

HUDSON is now able to supply MU Metal closures in all standard sizes and shapes. Stock supply assures prompt delivery. Consult HUDSON on all your electrical alloy requirements.



HUDSON service is complete... includes sheet metal fabrication, spot welding, heliarc welding and silver soldering. HUDSON designers and production engineers will be happy to help work out your problems.

POLARAD MICROWAVE · ELECTRONICS

FOR MICROWAVE SIGNAL GENERATION 650 to 50,000 mc

All Polarad microwave signal generators and sources feature single-dial tuning control, direct reading frequency dial accurate to 1%, continuous tuning in each range, high stability, low harmonic content, and non-contacting short-type klystron cavity chokes for noiseless tuning and accurate calibration.

Model MSG-1

MICROWAVE SIGNAL GENERATORS

Model MSG-1
950 to 2,400 mc
Model MSG-2
2,150 to 4,600 mc

Model PMX

MICROWAVE SIGNAL GENERATOR

Model PMX
4,450 to 11,000 mc
Basic Unit Model GB-2
(Modulator, Keyer, Power Supplies)
Tuning Unit G-48:
4,450 to 8,000 mc
Tuning Unit G-711:
6,950 to 11,000 mc

Model MSG-34

MICROWAVE SIGNAL GENERATOR

Model MSG-34
4,200 to 11,000 mc all in one unit

Model PMK

MICROWAVE SIGNAL GENERATOR

Model PMK
10,000 to 21,000 mc
Basic Unit Model GB-3
(Modulator, Keyer, Power Supplies)
Tuning Unit G-1015:
10,000 to 15,500 mc
Tuning Unit G-1521:
15,000 to 21,000 mc

Model SG-1218 Signal Generator and Model SS-1218 Source are available to cover the frequency range 12,400 to 17,500 mc.

MICROWAVE SIGNAL SOURCES

Tuning Unit	Frequency Range	Power Output Range
SSR	650 to 1,300 mc	100 to 700 mw
SSL	1,050 to 2,250 mc	80 to 400 mw
SSS	2,140 to 4,600 mc	40 to 250 mw
SSM-A	4,450 to 8,000 mc	15 to 50 mw
SSX-A	7,850 to 10,750 mc	14 to 40 mw
SSX-E	7,850 to 11,500 mc	14 to 40 mw

Klystron Power Supply, Model KX-B, available to provide stable, high-voltage power with low ripple content for microwave signal sources.

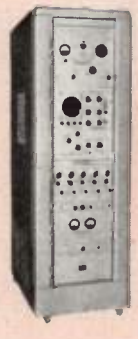
Model SSS

EHF Generator

Model ESG

EHF MICROWAVE GENERATORS AND SOURCES
9 plug-in units cover 18,000 to 50,000 mc

SIGNAL GENERATORS Basic Unit Model HU-2	FREQUENCY RANGE	SIGNAL SOURCES Basic Unit Model HU-1
Plug-In Tuning Unit Model No.		Plug-In Tuning Unit Model No.
G1822-1	18,000 — 22,000 mc	S1822-1
G2225-1	22,000 — 25,000 mc	S2225-1
G2427-1	24,700 — 27,500 mc	S2427-1
G2730-1	27,270 — 30,000 mc	S2730-1
G2933-1	29,270 — 33,520 mc	S2933-1
G3336-1	33,520 — 36,250 mc	S3336-1
G3540-1	35,100 — 39,700 mc	S3540-1
	37,100 — 42,600 mc	S3742-1
	41,700 — 50,000 mc	S4150-1



MICROWAVE SWEEP GENERATOR
Model ESG
1,000 to 15,000 mc
Basic Unit: Model E-B or E-B1
7 Interchangeable Tuning Units:

Tuning Unit	Frequency Range	Power Output
Model E-L1	1,000 to 2,000 mc	70 to 900 mw
Model E-L2	1,600 to 3,200 mc	70 to 900 mw
Model E-S1	2,000 to 4,000 mc	70 to 750 mw
Model E-C1	3,600 to 7,200 mc	20 to 350 mw
Model E-C2	4,800 to 9,600 mc	15 to 125 mw
Model E-X1	6,500 to 11,000 mc	15 to 80 mw
Model E-X2	7,500 to 15,000 mc	10 to 35 mw

Sweep Rate: Model E-B 50-60 cps.
Model E-B1 1,000 sec./sweep—30 sweeps/sec.

PULSE CODE MODULATED MICROWAVE SIGNAL GENERATOR
With Precision Oscilloscope
Model B
950 to 10,750 mc
4 Interchangeable Tuning Units

Frequency Range:
BL-1— 950 to 2,400 mc
BS-1—2,150 to 4,600 mc
BC-1—4,450 to 8,000 mc
BX-1—7,850 to 10,750 mc
Provides 5 independently adjustable pulse channels.

Model B

FOR MICROWAVE RECEPTION

EXTENDED RANGE MICROWAVE RECEIVER
Model R
400 to 46,700 mc

Four instruments in one:

- AM-FM receiver
- Field intensity receiver
- Pulse, pulse-time or pulse-position demodulator
- Sensitive power meter

Basic Unit Model R-B

8 Interchangeable Plug-in Tuning Units*

Model RR-T	400- 1,000 mc	Model RX-T	7,300-11,260 mc
Model RL-T	950- 2,040 mc	Model RKS-T	9,500-15,600 mc
Model RS-T	1,900- 4,340 mc	Model RKU-T	14,700-22,000 mc
Model RM-T	4,200- 7,740 mc	Model RQ-T	20,260-46,700 mc

*U. S. Patent 2,774,243

CALIBRATED FIELD INTENSITY METER

Power Supply

Monitor Unit

Model FIM 1,000-10,000 mc

A highly sensitive instrument for field intensity and r-f interference measurements, antenna pattern analysis. Used as null detector and r-f voltmeter. Highly accurate frequency and power calibration.

Four Interchangeable Tuning Units*	
FIM-L	1,000 to 2,240 mc
FIM-S	2,140 to 4,340 mc
FIM-M	4,190 to 7,740 mc
FIM-X	7,360 to 10,000 mc

*U. S. Patent 2,774,243

Calibrated Antennas Supplied with Model FIM

Test Antennas (not calibrated): 1,000 to 39,700 mc.
Antenna Pattern Recording System:
Automatic Antenna Drive — Model AD-1
Synchronized Antenna Pattern Recorder — Model PR-1

MICROWAVE ACCESSORIES

MICROWAVE ATTENUATOR
Model SIJ
Covering
4,000 to 12,400 mc
Continuously variable, stub-tuned.

For details, circle #103 on Reader Service Card

SUB-MINIATURE S-BAND CAVITIES
Plate and Grid Pulsed Models
Each Covering
2,750 to 3,000 mc

ALL CERAMIC KLYSTRON TUBE
Model ZV1009
VELOCITRON
1,600 to 6,500 mc

FREE LIFETIME SERVICE ON ALL POLARAD INSTRUMENTS

POLARAD

MICROWAVE · ELECTRONICS

FOR MICROWAVE SPECTRUM ANALYSIS

DIRECT-READING SPECTRUM ANALYZER

Model TSA 10 to 44,000 mc

FEATURES:

- Direct-reading UNI-DIAL control
- High accuracy, resolution and sensitivity
- Stable, accurate frequency marker

To test missile, radars, microwave components, telemetering, multi-pulse transmissions.

Model DU
Spectrum Display and Power Unit

Five Interchangeable Tuning Units

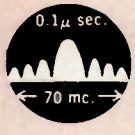
STU-1	10 — 1,000 mc
STU-2A	910 — 4,560 mc
STU-3A	4,370 — 22,000 mc
STU-4	21,000 — 33,000 mc
STU-5	33,000 — 44,000 mc

COMBINATION SYNCHROSCOPE SPECTRUM ANALYZER

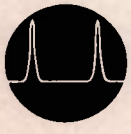
Model TSA-S 10 to 44,000 mc

Time Display: Pulsed signal as seen in synchroscope operation.

Frequency Display: Same signal as seen in spectrum analyzer operation.



Selector switch determines function instantly.
Tuning Units: Same as Model TSA above.



VERY WIDE DISPERSION SPECTRUM ANALYZER

Model TSA-W 10 to 44,000 mc

Narrow and Wide Pulse Analysis

70 mc frequency dispersion displays pulses as narrow as 0.1 μsec. For wide pulse analysis, dispersion may be adjusted to as narrow as 100 kc.

Wide dispersion permits simultaneous observation of two or more signals separated by relatively large frequency difference.

Resolution: 7 kc narrow bandwidth, 50 kc wide bandwidth.
Tuning Unit Frequency Ranges: Same as Model TSA above.

MULTI-BAND, SINGLE UNIT SPECTRUM ANALYZER

Model SA-84

Complete frequency coverage, 10 to 40,880 mc, all in one self-contained unit. No additional tuning units required.

MULTI-PULSE SPECTRUM SELECTOR

Model SD-1

Permits spectrum analysis of individual microwave pulses in a pulse group. Any pulse in a complex coded signal may be isolated and intensified for examination.

For details, circle #104 on Reader Service Card

FOR GENERAL LABORATORY USE

PULSE JITTER TESTER

Model PJ-1

Measures:

— Relative jitter
— Pulse width jitter
— Repetition rate jitter

Displays:

— Jitter magnitude
— Jitter waveform

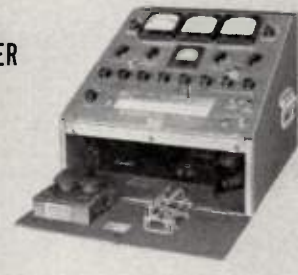
TRANSISTOR MICROWAVE POWER METER

Model P-3 10-39,000 mc

Measures absolute r-f power level instantly without tuning. Line or internal-battery operated. Rugged, weighs only 6 pounds.

RAPID SCAN RATIO-SCOPE

Model VS-2



Used with sweep generator (ESG, opposite side). Displays ratio of two input signals, visual plot VSWR or response-frequency on 7" CRT.

KLYSTRON TUBE TESTER

Model K-200

Tests all microwave tubes as easily as ordinary vacuum tubes.

5-PULSE, CODED MULTI-PULSE GENERATOR

Model MP-1A

Generates 5 separate pulses each with independently variable width and delay for missiles, beacons, and other systems.

FREE LIFETIME SERVICE ON ALL POLARAD INSTRUMENTS

POLARIZED PLUGS

HERMETIC SEAL CORPORATION is your primary source for seals in all sizes, terminations, and shapes to your specifications . . . in Vac-Tite Compression Seals as well as Matching designs. HERMETIC is the pioneer in this specialized field and the originator of more than 10,000 different seals. Precision-quality control of every process from design through manufacturing through precious metal plating is assured at HERMETIC because all operations are completed under one roof.

Consult Our Engineering Department
for technical data to solve your special hermetic sealing design problems.

For details, circle #105 on Reader Service Card

These accurately made components represent products available to you that meet rigid industrial or military requirements.

Choppers—A variety of Airpax choppers enables you to select the appropriate type for each application. They are manufactured on precision machines to assure you of uniformly high quality. These choppers are used in instruments and automatic control. Contacts are rated for 0 to 2 milliamperes at up to 100 volts. Drive is 6.3 RMS volts.

Typical Signal Choppers

Frequency (CPS)	7-Pin Base Type	Octal Base Type	Miniature Solder Lug Type
	Standard Environment		
60	175, 176	170, 586	178, 179, 800*
400	300, 400	520, 580	302 thru 304, 600*
	High Temperature		
400	150, 310, 320	100	311 thru 314
	High Vibration		
400	350		351 thru 354

*Double-pole double-throw, split reed

400-CPS Chopper Drivers—Chopper drivers enable you to use 400-CPS choppers even if 400-CPS drive power is not otherwise available. There are two types: Series 202 is for use in 60-CPS powered equipment with conventional heater and plate voltages. Series 220 is for use in battery powered equipment.

Low Noise Choppers—Airpax choppers Types 2400 (60-CPS) and 2300 (400-CPS) are specifically designed for use in low-level modulators. In most cases the chopper noise is well below the instrument background noise level.

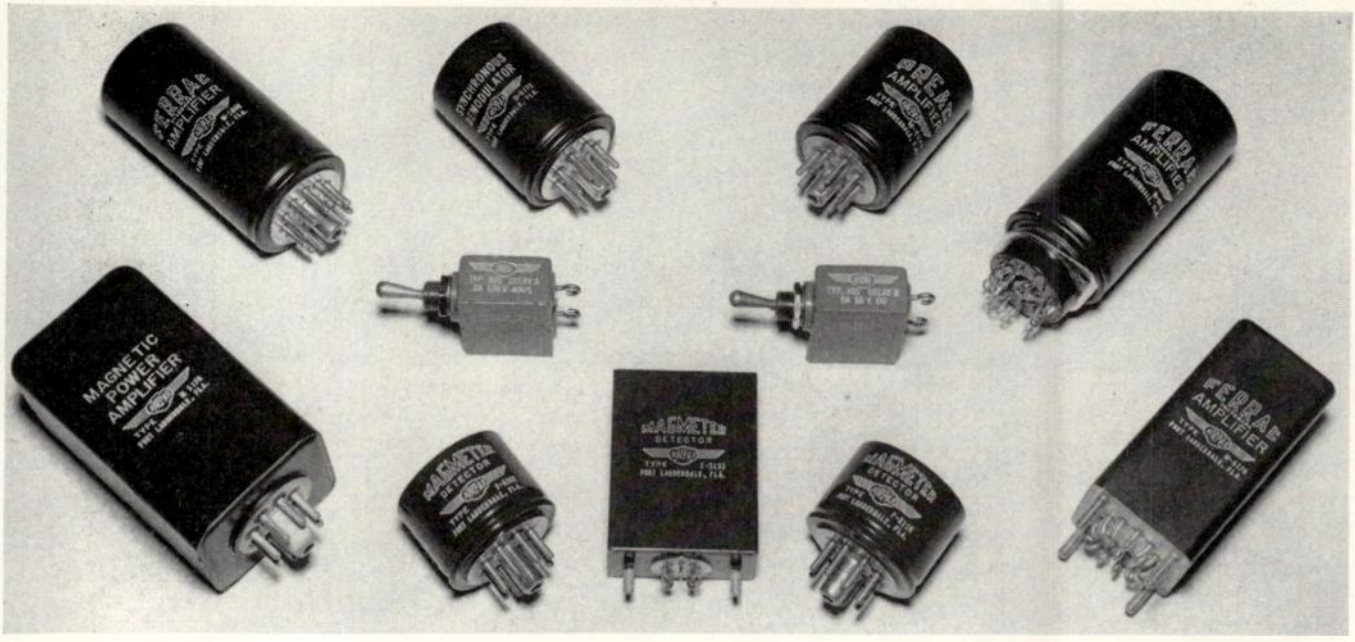
Vibrators—Airpax pioneered high-frequency power vibrators because of reduced size and weight of associated transformers and chokes.

Type 500 vibrator is a 400-CPS interrupter unit for use with moderate continuous or heavy intermittent loads. It is hermetically sealed, operates in any position. This vibrator and variations are used in airborne transceivers, guidance equipments, and portable sets.

Inverters—Using 400-CPS vibrators, Airpax custom designs and manufactures compact low-power inverters. By way of example, Type 512 is hermetically sealed, weighs 14 ounces, occupies 7.5 cubic inches, withstands accelerations of more than 50 G, and has an efficiency of 75%. Its output is essentially a square wave, 15 watts at 110 RMS volts, 400 CPS. Input is 6, 12 or 24 DC volts.

Pulse Transformers—For preferred blocking oscillator circuits, use Airpax Pulsite transformers. These compact, hermetically sealed units are available as a kit covering many requirements of pulse circuits.

Characteristics of Pulsite Transformers



Pulse Width (usec)	Loc (mh)	LI (uh)	Cd (uuf)	Type
0.1	0.08	6	7	PT-1081
0.2	0.13	14	7	PT-1082
0.3	0.30	25	8	PT-1083
0.5	0.80	30	8	PT-1084
1.0	2.4	35	9	PT-1085
2.0	7.8	125	10	PT-1086
5.0	28	400	10	PT-1087
10.0	153	1,000	12	PT-1088

Custom Transformers—Airpax designs and manufactures custom transformers. The largest Fosterite facility in the country is at Airpax; units 3 x 3 x 4 feet can be baked and vacuum impregnated, or large batches of small units can be processed quickly. In addition to vacuum impregnated and molded units for airborne equipment, Airpax manufactures hermetically sealed MIL-T-27A units. Airpax has supplied transformers in quantity for operation in ambients to 175 C.

Sheet Metal Facilities—A complete machine and sheet metal shop complements the transformer production. The shop has sufficient capacity to fabricate custom metal parts, such as chassis and cases.

Thorough testing and inspection assure you that these Airpax components meet critical requirements for control and guidance.

Magnetic Amplifiers—Ferrac magnetic amplifiers are highly stable and linear DC amplifiers. You can use them in analog computer portions of guidance and control equipment. Several types are available to meet usual applications. Each amplifier has two input windings; output is electrically isolated from input and power supply. At stand-by, amplifier draws about 1.5 watts; with full signal, 2.5 watts at 115 RMS volts. These amplifiers are available in either 60 CPS or 400 CPS units.

Instrument Magnetic Amplifiers

Application	*400-CPS*	*60-CPS*
General Purpose	M-943	M-5284
Integrator	M-1039	M-5267
Thermocouple	M-1040	M-5285
High Gain	M-1057	M-5268

Synchronous Demodulators—So that 400-CPS synchros can be used with DC control circuits, Airpax developed highly accurate ring demodulators.

Type D-5170 has a highly accurate null for use in zero-seeking equipments. A null accuracy (exclusive of the synchro) of 9 minutes can be obtained with it.

Type D-5171 has a wider linear range for proportional control equipments. It presents about 20,000 ohms to the control transformer. Synchronous Demodulators are also available in 60-CPS units.

Servo Amplifiers—Airpax magnetic power amplifiers control current to both phases of 400-CPS instrument servo motors. As a result, they draw little stand-by power. This characteristic results in up to 60% saving in stand-by power, compared with some other servo amplifiers. Standard units deliver 3.5, 6, or 10 watts per phase.

Typical Ratings, Type M-5178

Input—Two identical control windings of about 125 DC ohms each

Sensitivity—7.5 DC milliamperes into either control winding produces 6 watts output to each phase

Power—115 to 150 RMS volts at 400 CPS, approximately 21 watts at maximum output, only 3 watts during stand-by

Connections—Octal plug-in base, hermetically sealed

Dimensions (Max.)—1½" square base, 2⅞" seated height

Weight—Approximately 11 ounces

Frequency Detectors—Magmeter frequency detectors convert AC signals to DC outputs. The output is linearly proportional to input frequency. These detectors are relatively insensitive to changes in signal amplitude and wave shape. They are used in telemetering, tachometers, and for pulse-rate measurement. Standard Magmeter detectors require about 1 watt of signal input. They can be driven directly from 120-volt power lines, from vacuum tubes or transistors. Plug-in units fit octal sockets; bolt-down units have solder lugs.

Narrow band units with expanded-scales are also available.

Magmeter Frequency Detector

Frequency (CPS)	*Line or Tube Drive*		*Transistor Drive*
	Plug-In	*Bolt-Down*	*Plug-In*
0-50	F-945	F-5121	F-5156
57-63		F-5132	
0-100	F-5319	F-5122	F-5157
0-200	F-5345	F-5123	F-5158
375-425	F-992	F-5133	
0-500	F-5146	F-5124	F-5159
0-1000	F-980	F-5125	F-5160
0-2000	F-981	F-5126	F-5161
0-5000	F-947	F-5127	F-5162
0-10000	F-5116		F-5330
0-20000	F-5230		F-5331

Circuit Breakers—Electronic circuits can be protected by Airpax miniature magnetic time delay circuit breakers. Trip level is unaffected by temperature. Units are rated up to 50 DC volts or up to 120 RMS volts; the latter either for 60 or for 400 CPS. Trip sensitivities are as low as 50 milliamperes; current ratings are available up to 10 amperes. There are two standard time delays: Rapid response A for protecting conventional electronic equipments, and slow response B for equipments that draw substantial starting surges.

Miniature Circuit Breakers

Rating	*Series Type*	*Shunt Type*	*Relay Type*
50 DC volts	401-	402-	403-
120 RMS volts at 60 CPS	410-	411-	412-
120 RMS volts at 400 CPS	420-	421-	422-

CINCH SOCKETS...

NEW DEVELOPMENTS IN PRINTED CIRCUIT SOCKETS:

These sockets for the three types of receiving tubes. Miniature, Flat Press and Button.

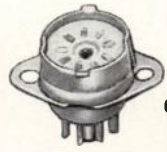
The contacts are so spaced that they can be mounted in an incremental drill pattern. This fact together with the exact precision and uniformity of Cinch sockets make them ideal for automatic assembly.

No. 22920

No. 22920—7 contact miniature molded vertically mounted socket with JAN type shield base. Mica insulation. Silver plated phosphor bronze contacts drop through .062" dia. clearance holes arranged on a .1" X and Y axis.

No. 24255

No. 24255 — 8 contact button base subminiature molded, vertically mounted socket. Mica insulation. Silver plated beryllium copper contacts drop through .070" dia. clearance holes arranged on a .1" X and Y axis.

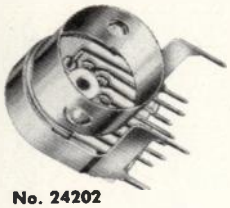


No. 24255A–Same as above except insulation to withstand temperatures above 200° Centigrade.

No. 22024

No. 22024—7 contact flat press subminiature molded, vertically mounted socket for conventional wiring. Assembled with a special shield base to accept a subminiature shield with the "J" lock. Flat sided retaining nuts and screws are provided for mounting. Mica insulation. Silver plated beryllium copper contacts.

No. 22023—Same as above except insulation to withstand temperatures above 200° Centigrade.



No. 22022

No. 22022 — 8 contact button base subminiature molded vertically mounted socket for conventional wiring. Assembled with special shield base to accept a subminiature shield with the "J" lock. Mica insulation. Silver plated beryllium copper contacts.

No. 22021—Same as above except insulation to withstand temperatures above 200° Centigrade.

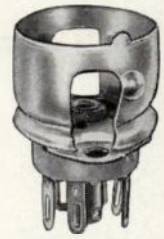
No. 24202–7 contact miniature molded right angle mounted socket with JAN shield base. Mica insulation. Silver plated beryllium copper contacts drop through .062" dia. clearance holes arranged on a .1" X and Y axis.

No. 24202

No. 24257 — 7 contact flat press subminiature molded right angle socket. Mica insulation. Silver plated beryllium copper contacts drop through .046" dia. clearance holes arranged on a .1" X and Y axis.

No. 24257A–Same as above except insulation to withstand temperatures above 200° Centigrade.

No. 24257

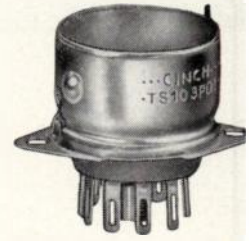


No. 24308–8 contact button base subminiature molded, right angle mounted socket. Mica insulation. Silver plated beryllium copper contacts drop through .046" dia. clearance holes arranged on .1" X and Y axis.

No. 24308

No. 24308A — Same as above except insulation to withstand temperatures above 200° Centigrade.

CINCH MIL SOCKETS MEET AND SURPASS RIGID MILITARY REQUIREMENTS

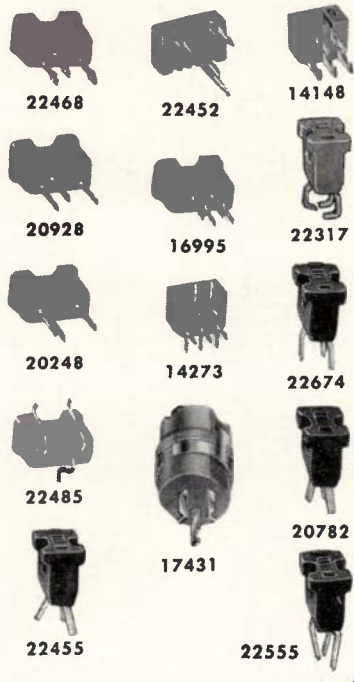


MINIATURE SOCKETS

Saddles and shield base of these Cinch miniature sockets are brass, nickel plated. All contacts are silver plated; tails are hot tin dipped. Molded castings are type MFE material; ceramic castings are grade L4B material or better.

NOVAL SOCKETS

The saddles and shield bases of Cinch noval sockets are brass, nickel plated. Contacts are silver plated; tails are hot tin dipped. Molded castings are type MFE material; ceramic castings are grade L4B or better.



22384

CINCH MIL SOCKET SHIELDS:

CINCH MIL shields are made of brass, nickel plated. Springs are non-magnetic stainless steel. Heat-reducing inserts are available for these shields.

Descriptive circular with complete information on CINCH MIL sockets, shields and shield inserts available on request.

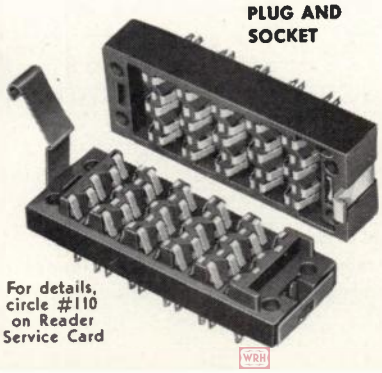
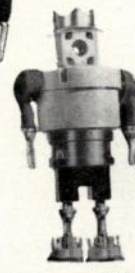
JONES

JONES PLUGS AND SOCKETS

Jones 300 Series are small in size with good separation between contacts. Made in two to thirty three contacts. Plugs and sockets are polarized. A popular, inexpensive connector adaptable to a thousand uses. Phosphor bronze "knife switch" socket contacts engage both sides of heavy brass plug contacts for positive connections. Molded Bakelite insulation. Can also be supplied with contacts that will take the Faston or Quick Connect solderless terminals.

Jones 2400 Series are designed for highest electrical and mechanical efficiency. Ideal for Public Address, Radio, Electronic Controls, Vending Machines, or wherever a quality connector is required. Maximum creepage distances between contacts and contact to ground makes this series a must when Underwriter label is required. Made in 2, 4, 6, 8, 10 and 12 contact. Molded Bakelite insulation. Caps are of steel with black wrinkle finish.





HINGE CONNECTOR, PLUG WITH CABLE CLAMP ASSEMBLY AND SOCKET. 50 Contacts

Centrally located plants at Chicago, Illinois; Shelbyville, Indiana; LaPuente, California; St. Louis, Missouri.

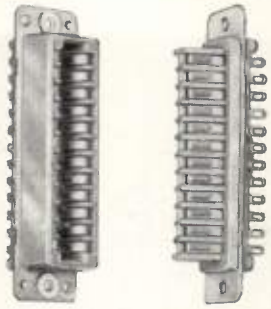
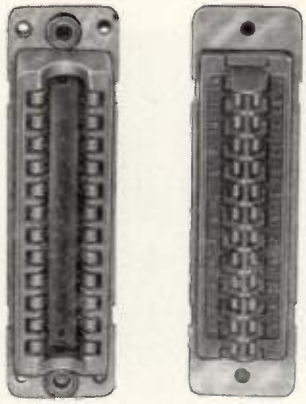
Subsidiary of United-Carr Fastener Corporation, Cambridge, M

CINCH HINGE CONNECTOR



(Left)—insures positive contact; has simple locking device, easy relea Maximum number of contacts in minimum space. Equipped with ca hole, cable clamp, top or end or both. Plug or socket can be moun in cover, reversing hardware for catch. Cover assembly finished in bl Wrinkle (E 73); cable clamp assemble is Cadmium plated. Contact t will take either conventional solder wiring or AMP "78" series Taper 1 receptacles.

...CONNECTORS

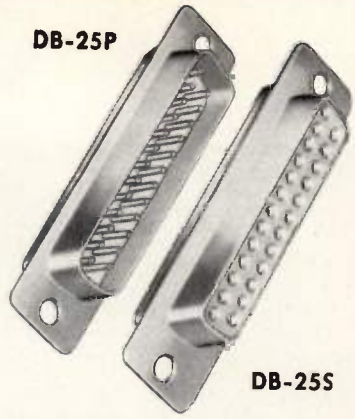


8 CONTACT PLUG AND SOCKET

The ribbon contact principle, with dielectric guide and support eliminates the possibilities of damaged or bent contacts and prevents difficulties of plug-in. No dependence on contact arrangement or visual alignment is necessary.

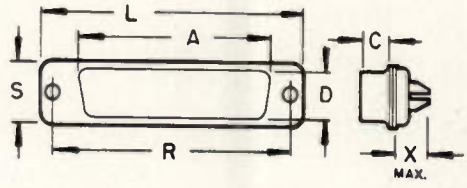
24 CONTACT PLUG AND SOCKET

Manufactured by agreement with Amphenol Electronics Corporation



24 CONTACT PLUG AND SOCKET IMPROVED TYPE

The above illustrates the improved design of plug and socket casting which eliminates any possible breakage.

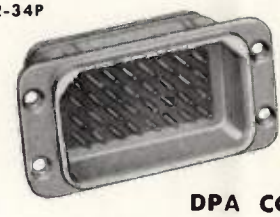


Manufactured by agreement with Cannon Electric Company

Send for illustrated Catalog No. 157 with details of "D" Sub-Miniature, "DPA" and "DPX" Series.

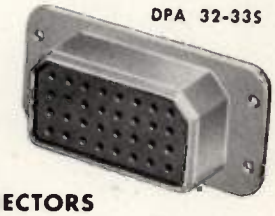
★CANNON D SUB-MINIATURE, DPA and DPX SERIES CONNECTORS

(Right) D Sub-Miniatures; Standard Pin and Socket Inserts:



Insert arrangements —5 plus coaxials in 9, 15, 25, 37 and 50 contacts. Insulation material—Zytel 101 or DIALL. Polarization — Keystone cornered shell. Operating temperature —67° to +310°F.

BLUE RIBBON CONNECTORS

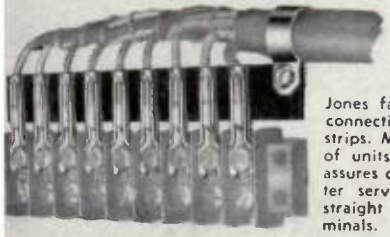


Barrier Polarization Type Insure Quick Positive Contact With Ease

The Wedge principle with the strong spring action of the contacts holds the connector in positive contact, and provides ease of insertion and withdrawal. The protective barriers between ribbon contacts insure uniform spacing. The entire length of the contacts are supported by quality dielectric. Multiple mounting makes it possible to make or break any number of circuits simultaneously. Molded-in mounting plates are of corrosion resistant passivated stainless steel.

DPA 32-34P

DPA 32-33S



DPA CONNECTORS

BARRIER TYPE TERMINAL STRIPS, PLUGS, SOCKETS, FANNING STRIPS

Jones 202 Series: Shielded type low loss plugs and sockets for high frequency connections. Ideal for antenna connections, photo-cell work, microphone connections. Phosphor bronze knife-switch type socket contacts engage both sides of flat plug contact—double contact area. Plugs and sockets have molded Bakelite insulation.

JONES FANNING STRIPS

Jones fanning strips simplify connections to the barrier strips. Makes the replacement of units an easy matter and assures correct connections after servicing. Supplied with straight or right angle terminals.

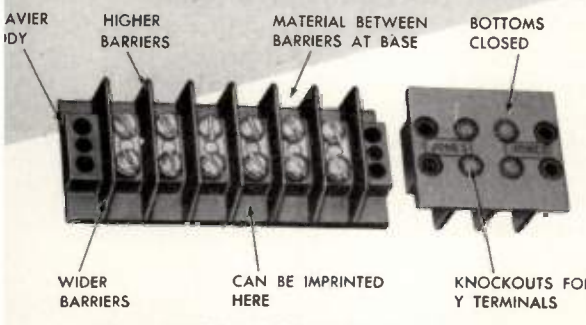
JONES MEANS PROVEN QUALITY

The steadily expanding variety of plugs and sockets produced at the JONES Division has a wide range of the highest quality electrical and mechanical parts to efficiently fill every need.

Hundreds of standard JONES terminal panels available; complete latest equipment for specials, send your specifications for prompt quotation.

"50" EDGE CONNECTOR

Cinch 50M Edge Connectors are available in any number of contacts from one to 56. The contacts are on standard 5/32" centers. A polarizing guide may be assembled at any contact position.



Eight different contact tail terminations provide for use of A.M.P. "78" or "98" solderless taper tab connections. A standard solder slot is also provided.

40 contact connector "A" style for applications where plug is "live voltage" side.

FXC, the Ferroxcube Corporation of America, is one of the few pioneer companies in the world specializing in the brand-new science and technology of ferrite components. The *"Ferrite Man"* from FXC is at your service with the widest range of ferrite cores available from any source today and is ready to discuss with you your individual requirements and specifications with regard to any of the following custom engineered ferrite products:

television flyback transformer cores • recording and playback head cores (contact and non-contact) • pulse and transformer cores • broadband transformer cores • pre-adjusted filter cores • high-frequency power transformer cores • delay line cores • ferrite choke or shielding cores and simple inductor cores • square hysteresis loop cores for memory arrays • square hysteresis loop cores for switching and other applications

also available: ceramic permanent magnets • thermistors • varistors

lower costs begin with

PREFERRED TUBE TYPES

The RCA Preferred List of 62 carefully selected tube types covers practically every tube function necessary for the design of TV, AM and FM receivers. Here for quick reference is the current list of Preferred Tube Types. Their use helps assure equipment that is more economical to manufacture and performance that is more dependable.

YOU GAIN 3 BIG BENEFITS FROM RCA'S PREFERRED TUBE TYPE PROGRAM

- **Lower Costs**...concentration on the manufacture of fewer types makes possible lower tube production costs and reduced warehousing and stocking expenses, all of which contribute to lower prices.
- **More Uniform Quality**...operating skills in tube manufacture increase when production is concentrated on fewer tube types and longer runs—assuring superior quality.
- **Better Availability**...fewer tube types make possible better availability and faster delivery schedules to support continuous production of radio and television receivers.

Before you specify—check the advantages of RCA Preferred Tube Types with your RCA Field Representative. You will find it is time well spent.

RADIO CORPORATION OF AMERICA
Electron Tube Division *Harrison, N. J.*

WT-100A Electron-Tube MicroMhoMeter—Accuracy suited for electronic equipment manufacturers and research, development, and maintenance groups. Precision tube testing under actual circuit conditions. Built-in "shorts" test; burnout-protected meter; regulated power supplies for dc voltages; measures transconductance up to 100,000 micromhos in 6 ranges. $949.00*

WT-110A *Automatic* Electron-Tube Tester—Automated punch-card tester, sets up all socket connections and all operating voltages at touch of lever. Scale indicates transconductance in terms of "Renew-?-Good." Extremely versatile, simple to operate. Supplied with 263 cards. Accessory cards and punch available to keep card file up-to-date as new tube information is released. $199.50*

WV-84B Ultra-Sensitive DC Microammeter—popular choice for industrial, chemical, and general laboratory applications. Designed to measure currents from 0.0002 to 1000 microamp. Can be used as ohmmeter to measure resistance in the order of billions of ohms. Self-contained batteries permit use for field applications. Low current drain tubes extend battery life; meter protected from accidental overloads. $110.00* (less batteries)

FOR YOUR LAB OR LINE

WP-25A TV Isotap—Speeds up servicing, prevents damage to test equipment, minimizes shock hazards. May be used as high-medium-low-voltage isolation transformer or autotransformer for testing TV receivers at various settings of line voltage. Supplies outputs of 130, 115, and 105 volts at maximum load. Tapped to match line voltages from 105 to 130 volts in six steps. $22.00*

WV-74A High-Sensitivity AC VTVM—All new AC VTVM with large 6½-inch meter. Nine voltage ranges, from 0.001 to 100 volts. Overall accuracy ±5% of full scale. Built-in amplifier with gain of approximately 38 db and output impedance of 400 ohms. Can be used as a preamplifier for numerous applications. $99.50*

WO-91A—5" Oscilloscope—4.5-Mc scope, choice of wide-band or high-sensitivity operation for waveshape observation and measurement, signal tracing and alignment of chrominance circuits and wide-band amplifiers—voltage-calibrated, frequency-compensated, vertical-input attenuator and calibrated graph screen make possible direct voltage readings as easily as with a VTVM. $239.50*

RCA WV-77C Junior VoltOhmyst...value plus efficiency! Designed to check avc, oscillator, and other high-impedance circuits as well as audio and rf circuits. Five ranges each for dc and ac voltage and resistance measurements. Sturdy, 200-microampere meter movement electronically protected against burnout on all functions. Complete with WG-299C DC/AC Ohms Probe and Cable, ground cable, alligator clip, clip insulator, instruction booklet. $59.50*

CHOOSE AN RCA DESIGN!

RCA WV-87B Master VoltOhmyst...features a 7½ inch meter with mirror-backed scale. Easy-to-read peak-to-peak voltage scales are particularly useful for TV, radar, and other types of pulse work. Current ranges from 0.01 ma to 15 amperes. Complete with WG-299C DC/AC Ohms Probe and Cable, current cable, ground cable, alligator clip, instruction booklet. $137.50*

RCA WV-98A Senior VoltOhmyst...time-proved performance, "workhorse" of the VoltOhmyst line. Large, easy-to-read wide-vision meter (6½"w). Features: direct peak-to-peak readings of complex waveforms, accuracy of ±3% full scale on both ac and dc voltage measurements. Complete with sturdy single-unit WG-299C DC/AC Ohms Probe and Cable, ground cable, alligator clip, clip insulator, instruction booklet. $79.50*

WA-44B—Audio Signal Generator—for use in measuring: intermodulation distortion in amplifiers, frequency response of amplifiers, tone controls and phonograph equalizers; input and output impedances of amplifiers; resonant frequency of loud-speakers; and speed of recorder/reproducer mechanisms. Continuously tunable from 11 cps to 100 Kc. $107.50*

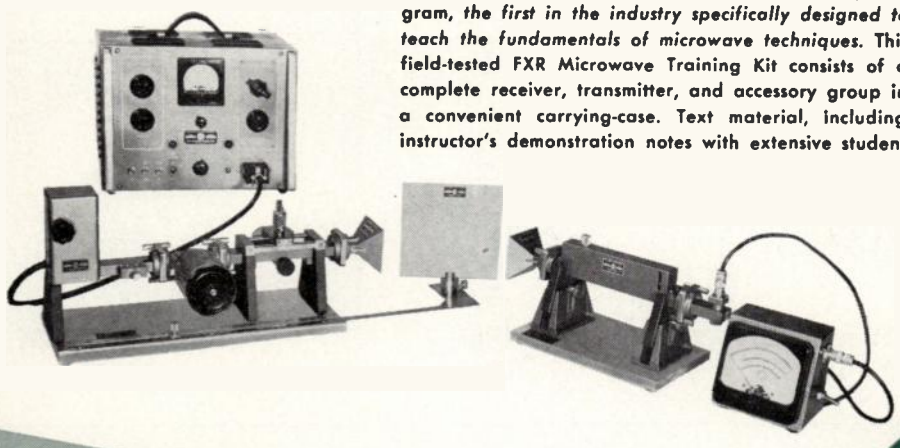
FXR MODULATORS

• CUSTOM

• STANDARD

FXR's High-Power Pulse Modulators are custom designed and built to meet specific technical requirements. Experienced engineers, expanded modern test facilities and improved manufacturing techniques combine to fabricate the most intricate pulse modulators and high voltage power supplies—individually "*custom-tailored*" to the needs of the user.

FXR welcomes the opportunity to acquaint you with "proven reliability" in the design and construction of specialized modulators.



High Power Modulator Type No.	Power (peak mega-watts)	Voltage (peak kilovolts)	Current (peak plate-amperes)	Impedance (output-ohms)	Duty Cycle (maximum)	Pulse Shape (μsec/pps)	Input 60 CPS (Ø/volts)	Tubes Operated

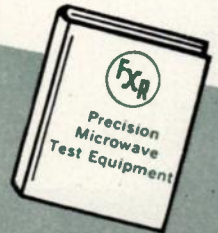
Send for the "PRELIMINARY QUESTIONNAIRE" to assist you in planning the design of your next High-Power Pulse Modulator!

X845A FXR's MICROWAVE TRAINING KIT

FXR presents a complete packaged training program, *the first in the industry specifically designed to teach the fundamentals of microwave techniques.* This field-tested FXR Microwave Training Kit consists of a complete receiver, transmitter, and accessory group in a convenient carrying-case. Text material, including instructor's demonstration notes with extensive student laboratory exercises, are also furnished. By interchanging the accessories, the students learn fundamentals of propagation and the method and effects of such phenomena as shielding, polarization, reflection, focusing and bending of microwaves.



The Microwave Training Kit, an FXR exclusive, trains students to take numerical data and learn the methods and techniques of microwave measurements. This simple, efficient training program provides the student with a foundation of practical knowledge and experience necessary to his work in the microwave field.

COMPARATIVE DATA REPORT

Note Exceptional Stability. Note extent that MIL-R-93B is exceeded

MIL R-93B (proposed) Tests	MIL Requirement	CTS Maximum	CTS Average
Short Time Overload	0.5%	.05%	.02%
Temperature Cycling	0.2%	.05%	.02%
Moisture Resistance	100 megs 1.0%	1000 megs (min) .1%	—— .05%
Salt Water Immersion Cycling	0.5%	.03%	.015%
Load Life at 125°C or 85°C (500 hours)	0.5%	.15%	.05%
Temperature Coefficient Less than 2000 ohms 2000 ohms and over	 Up to 75 PPM/°C 30 PPM/°C	 30 PPM/°C 20 PPM/°C	 —— ——
Low Temperature Storage	1.0%	.01%	.005%
Low Temperature Operation	1.0%	.05%	.02%
High Temperature Exposure (145°C)	1.0%	.05%	.02%
Acceleration	0.1%	.02%	.008%
Shock	0.1%	.02%	.008%
Vibration	0.1%	.02%	.008%

- No Wire Strain. Unique CTS "floating element" needs no bobbin or winding form . . . permits resistance elements and contacts to be firmly embedded in epoxy resin . . . forming a monolithic mass with a smaller space factor.
- Permanent Stability—Less than .05% average change under most environmental conditions and shelf life.
- 5PPM/°C Temperature Coefficient available.
- 100% Tested—High temperature exposure and short time overload tests are run on all resistors before shipment.
- Guaranteed Close Tolerance — Resistors guaranteed to be in tolerance under normal conditions of measurement. Tolerances down to ±0.05% available in standard sizes depending upon resistance value. Closer tolerances and/or matched multiples available.
- Low Inductance and Low Capacitance Characteristics with reproducible uniform frequency response.
- Withstands extreme vibration and shock due to unique construction and encapsulation method.
- Modular—Design flexibility permits grouping many resistors in a single unit.

Available in a wide variety of tubular, rectangular or square shapes. Special dimensions, tolerances, wattage ratings, resistances, etc. can be made to your precise requirement. Either axial or radial leads available.

For help in solving your fixed resistor problems, phone or write your nearest CTS office today.

*MIL-R-93B (proposed) soon to be issued, superseding MIL-R-93A.

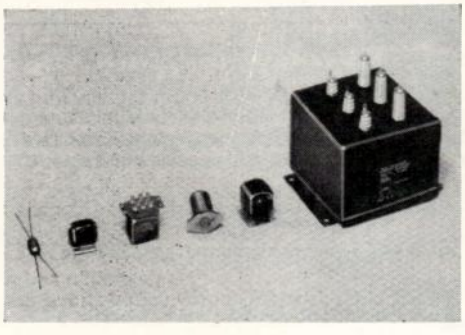
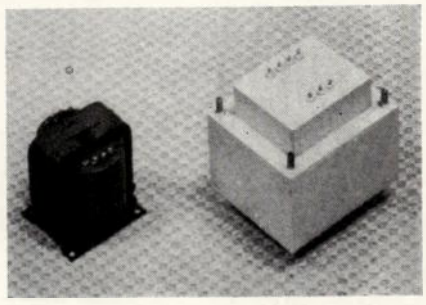
TRANSFORMERS FOR MILITARY & INDUSTRIAL APPLICATIONS

APPROVED FACILITIES FOR CERTIFYING COMPLIANCE TO MIL-T-27A



Manufacturers of Transformers since 1930

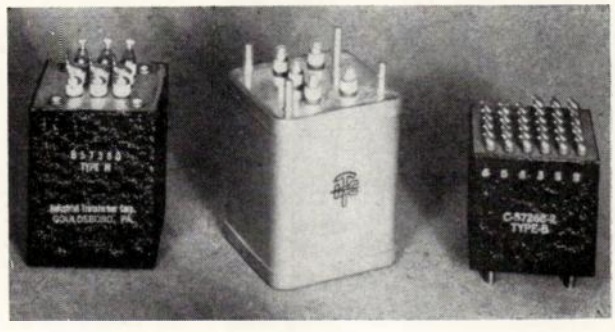
SPECIALLY TREATED TRANSFORMERS



For those innumerable transformer applications in electronic equipment where size, weight and resistance to various atmospheric and temperature conditions are the determining factors, ITC can encapsulate or mold to meet practically any specified condition. This can be accomplished without any deviation in transformer performance due to special ITC techniques and materials. Special ITC test equipment can simulate temperature, humidity and atmospheric conditions thereby permitting transformer testing under identical operating conditions. ITC specially treated transformers have been "use-proven" in the field under rigid MIL-T-27A specifications.

PULSE TRANSFORMERS

ITC's design file includes pulse transformers varying in size from the subminiature molded types used for blocking oscillator and low power matching purposes to high power pulse output transformers feeding magnetron loads. ITC engineers have produced a great variety of pulse transformers designed for a wide range of specialized electronic equipment and as a result are considered outstanding specialists in this field. This, coupled with their many other design specialties, points out the versatility of design and manufacturing facilities available at ITC.



HIGH TEMPERATURE TRANSFORMERS

Constant technological developments in the electronic industry, primarily in the area of military defense, are rapidly increasing the applications for reliable, high temperature transformers. ITC has accumulated much data and experience in the design, fabrication and testing of these transformers to meet rigid Military Specifications.

Transformers have been constructed using practically every high temperature material that has been available in the last decade to insure transformer reliability and performance in the field. ITC's work on high temperature transformers has met with complete acceptance by both government and industry . . . you can put their "know-how" to work with confidence on high temperature transformer applications.

COMPUTER TRANSFORMERS

ITC engineers have, for several years, devoted considerable time to developing precision transformers for computer applications. These transformers have found complete acceptance among the outstanding computer manufacturers. Illustrated are some examples of computer precision transformers typical of the engineering skill and resourcefulness gained as a result of constantly working to rigid technical requirements demanded in computer components.

PRODUCTION TECHNIQUES FOR GUARANTEED PERFORMANCE

Industrial Insulation Breakdown Testers

DIELECTRIC TEST SET NO. 50

General: Designed to furnish the potentials required for dielectric tests conducted under M I L-C-13294A. Console type unit completely selfcontained. Rating: Output is 5 kw at 1000 or 5000 V RMS.

Input: Operates from 220 V RMS, 60 cycle, single phase line.

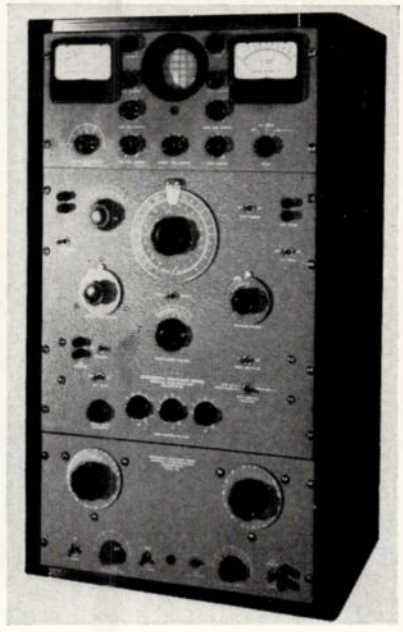
Output: 1000 V RMS at 5.0 amps or 5000 V RMS at 1.0 amps, selection to be made by manual changeover switch mounted on the control panel.

Voltage Control: Output voltage is continuously adjustable from zero to max. by panel mounted control driving a variable auto-transformer within the console.

Overload Protection: Instantaneous trip type circuit breaker is mounted on panel to interrupt circuit in case of breakdown. Also serves as on-off switch for unit. Two pole type, rated to trip at 25 amps.

Indicators: Control panel has 2 pilot lights to indicate "line voltage on" and "high voltage on."

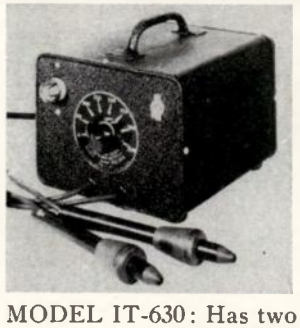
Metering: Voltage and current are simultaneously metered. An iron vane type ammeter having ranges of 0-1.0 amp. and 0-5.0 amperes is included in the output circuit. An iron vane type volt meter with 0-1000 V and 0-5000 V range is mounted on control panel.



Input Cables: 50-ft. line-cord fiurnished having 3 conductors; 2 for line circuit, 1 to ground set. Two 50 ft. 8KV cables furnished. Insulated fittings at remote ends of cables.

COMPLETE FACILITIES

Coil Winding · Complete Machining · Can Fabrication · Plating · Tinning · Potting · Humidity Cycling Testing · Constant Temperature Testing · Vibration Testing.



We are completely equipped with facilities for in-plan testing to meet MIL-T-27 specifications. All raw materials are given numerous inspection tests to insure uniform high standing quality and ability to withstand the stresses of actual service. We are constantly working to improve design and production, and our engineering staff is always ready to assist you in your Transformer problems.

INCREMENTAL INDUCTANCE BRIDGE

Model 226 Three bridge circuits in one instrument. Owen - Hay - Maxwell. Range — 1 Millihenry — 2000 henrys. Test voltage — .01-300 volts — R.M.S. D.C. saturation — 0-1000 M.A. Q—.06-300. Frequency-60 cycles internal, 20-5000 cycles external. Accuracy—1%. With the HAY arrangement, any inductance between 1 Millihenry and 2000 henrys can be measured provided the Q is larger than 5. With the OWEN arrangement, the same inductance range can be covered, but the Q must be comparatively low and can have a value as low as .06 at 60 cycles. The MAXWELL arrangement is suitable for the measurement of low Q coils (below 5 at 60 cycles) without superimposed D.C. and for the measurement of leakage inductance. Both the OWEN and the HAY circuits can be used with or without superimposed D.C. Automatically disconnects the D.C. supply from the bridge when it is put into the MAXWELL position.

INSULATION BREAKDOWN TEST SETS

MODEL 1T-25-A: Accurate indicator of grounds, shorts or opens. High voltage output and short circuit current: 500 V 1 amp-1500 V 360 ma, 1000 V 500 ma-1750 V 310 ma, 1250 V 420 ma-2000 V 370 ma. Input: 115 V, 60 cycles. Rating: 500 Va.

MODEL IT-630: Has two operating ranges. 0-3000 V RMS and 0.6000 V RMS, continuously variable, with circuit breaker. It is a convenient, compact and accurate means of testing insulation breakdown. Input: 115 V, 60 cycles. Rating: 1 KVA.

Narda—UHF and Microwave products from 200 to 90,000 Mc

Narda's full catalog includes a complete line of UHF and Microwave instruments, as well as bolometers and thermistors, all of the highest quality. Most of our products are available for immediate delivery; flexible production schedules permit prompt shipment of even those items not regularly on the shelf.

Narda's list of repeat customers reads like a "Who's Who" of American industry and universities. You'll experience the same satisfaction, when you choose among the instruments listed on this page and the next three. For additional information on any item, and a free copy of our latest catalcg, write to the address shown below.

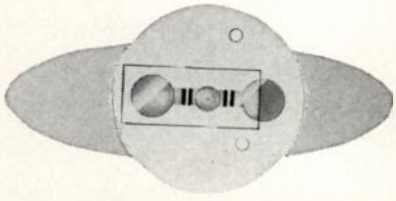
Narda-UHF and Microwave products from 200 to 90,000 Mc

STANDARD GAIN HORNS

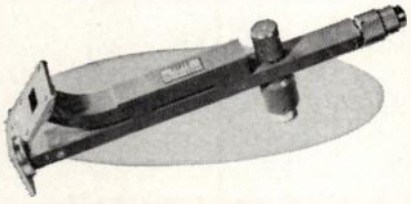
Precision instruments, supplied with accurate calibrations covering a complete band width. Available from 1100 to 90,000 mc. Gain at mid-frequency is 16.5 db; variation is 1.5 db over complete band; calibration accuracy—0.3 db over complete band. Beam width — approximately .28 degrees.



Avail. in 13 models, from $80 to $1180.

VARIABLE ATTENUATORS FIXED CALIBRATED PADS

Variable attenuators — 0 to 20 db range; VSWR under 1.15; all waveguide sizes.
Fixed calibrated pads available in all waveguide sizes with 3, 6, or 10 db calibration.

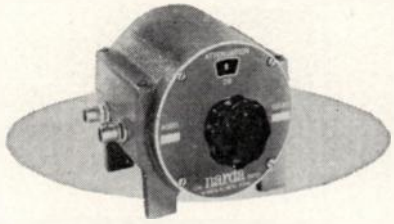


13 models, from $55 to $200.

DISC BOLOMETERS AND THERMISTORS

Coaxial bolometer elements available for 200-ohm operation at 4.5 or 8.75 ma bias. Thermistors with 200 ohms resistance at 13 ma. For power measurement and detection to 10 mw.

$25.00 each.



HARMONIC AND CRYSTAL MIXERS

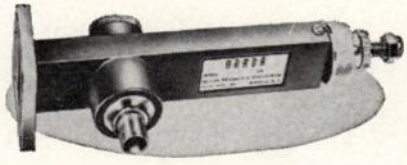
Mixers serve as converters in coaxial lines and waveguides with microwave receivers and spectrum analyzers. NARDA Harmonic Mixers hold a silicon crystal element with provision for the injection of a standard frequency.

Priced from $425.

Write for your free copy of Narda's new 1959 catalog. Address: Dept. IRE-8

TURRET ATTENUATORS

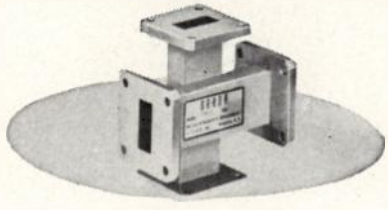
A UHF-only attenuator, representing considerable savings in costs for this application. Each model offers a Designer or Development Engineer twelve steps of attenuation from d.c. to 1,500 mc, with a VSWR of 1.25. Model 705 provides 0 to 30 db attenuations; model 706 — 0 to 20 db; model 707 — 0 to INF db.



All models . . . $275 each.

COAXIAL ATTENUATORS

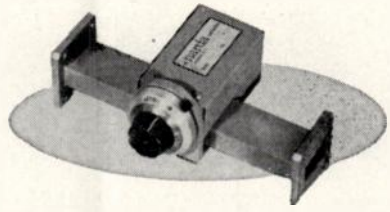
Double pi-section attenuators for high power rating and broad frequency characteristic. Available in 6 or 10 db values, dc to 1500 mc. VSWR equals 1.2. Frequency variation is ±1 db; calibration frequency equals 1000 mc; calibration accuracy equals ±0.2 db.



6, or 10 db Models . . . $40 each.

WAVEGUIDE DETECTORS

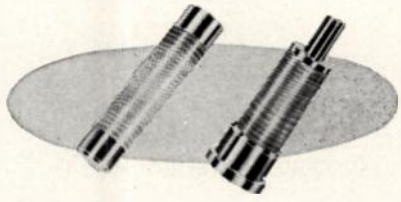
Designed for broad band operation with low VSWR and maximum versatility. May be used with a variety of crystal, bolometer (barretter) or thermistor elements, for absolute power measurement when used with appropriate bolometers and thermistors, as well as for detection of relative power levels. Also fixed tuned models.



13 models available from $75 to $125.

CROSS GUIDE DIRECTIONAL COUPLERS

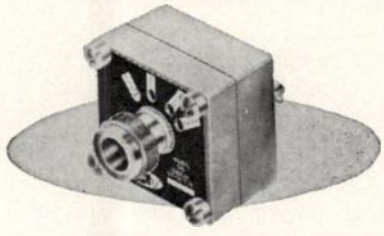
20 db couplers designed to provide uniform coupling over the entire waveguide frequency range with uniformly high directivity over 20 db. For increased usefulness and versatility, both primary and secondary arms have cover flanges on both ends. VSWR of any arm is under 1.05.



8 models from $48 to $90.

CALIBRATED VARIABLE ATTENUATORS

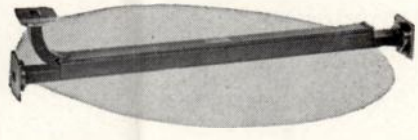
Precision attenuators of the parallel vane type, providing a maximum VSWR of 1.15; maximum insertion of 0.5 db; calibration accuracy — 0.3 db; calibration chart supplied. Calibration is precise and permanent, and not affected by humidity or temperature variations.



Seven models from $200 to $375.

BOLOMETERS AND THERMISTORS

Ruggedized construction; coin silver contacts. Barretter types available for 4.5 and 8.75 ma bias; 50, 100, 200, 400 ohm values. Thermistor types 100 or 200 ohm operation.



N821B & N610B, $10.00 each.

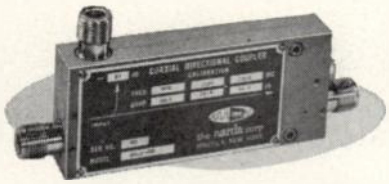
COAXIAL DETECTORS

Mounts for both bolometers and thermistors of the mica disc type, from 500 to 10,000 mc. Usable with any of the four types of bolometers and thermistors; a unique arrangement permits rapid change of elements and shows at a glance which type is in the detector, as well as its bias current requirements.

Model 561 (not including element) $50.

HIGH DIRECTIVITY COUPLERS

3, 6, 10, 20 and 40 db couplers, all with directivity exceeding 40 db. 40 db (high power) coupler may be used at full rated power of the waveguide size. Standard cover flanges terminate both ends of primary line; low VSWR termination and standard cover flange on secondary arm.



$95 to $400.

the narda microwave corporation

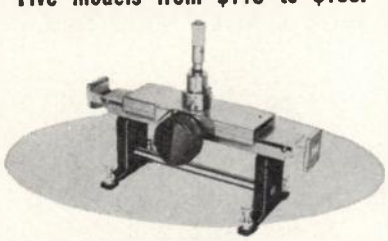
118-160 HERRICKS ROAD, MINEOLA, L. I., N. Y.

For details, circle #125 on Reader Service Card

Narda-UHF and Microwave products from 200 to 90,000 Mc

COAXIAL DIRECTIONAL COUPLERS

Only Narda offers coaxial directional couplers in 10 and 30 db values, as well as 20 db. Flat coupling — values within 1 db of nominal over full octave frequency range. Calibration provided to ±0.2 db accuracy. Directivity exceeding 20 db. May also be used at lower frequencies than specified. 225 to 10,000 mc.



Five models, from $100.

WAVEGUIDE FREQUENCY METERS

Each consists of a section of waveguide with a resonant cavity attached symmetrically to the broad wall. Coupling is through an inductive iris, designed so unit is electrically equivalent to a straight section of waveguide. Power dip is at least 10% over the frequency range; accuracy equals 0.08%.

Five models from $110 to $150.

HIGH POWER IMPEDANCE METERS and VARIABLE REACTANCES

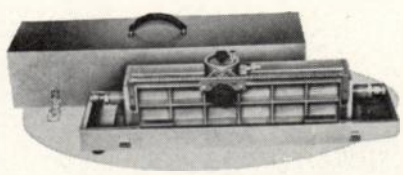
Meters have fixed value output coupling of 45 db, nominal. Reactances can vary magnitude of standing wave ratio from 1.02 to 2.0. Phase of standing wave is separately variable. Maximum residual VSWR: 1.02. (1.03 for 12.4-18.0 kmc Meter)

Meters: $1375 to $2175
Reactances: $1975 to $2775

RADAR PERFORMANCE CHECKER (Transistorized)

Used with an echo box, for rapid pre-flight or production line measurement of over-all radar performance. Completely portable; no power source needed. Accuracy: 2 db. Resolution: 2 db. Range: +3 db to −12 db on panel dial.

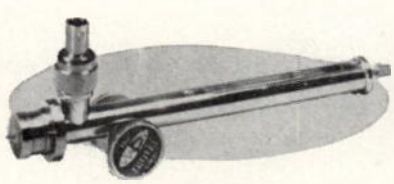
Model 116T . . . $485.



Write for your free copy of Narda's new 1959 catalog. Address: Dept. IRE-8

S to X BAND FREQUENCY METER

The only single instrument covering 2,350 to 10,500 mc., and less expensive than any combination covering same frequencies. Completely self-contained; built-in detector and indicating meter; nomograph type calibration chart converts digital counter readings to frequency in mc., to rated accuracy of 0.2%.



Model 802B . . . $785.

COAXIAL SLOTTED LINES

Parallel plane transmission line provides increased accuracy and ruggedness and minimizes the effects of leakage and variations in probe depth. Matched, compensated connectors permit load connection to either end. Available in type N, 5/8, 7/8, and type C connectors.

Four models . . . $475 each.

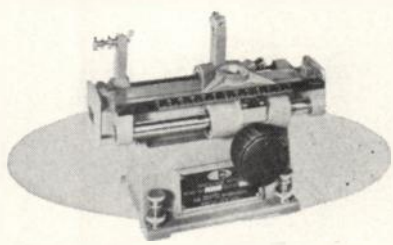
RF PROBE

A precision tuneable RF Probe with optional detector (included). Fine wire probe is adjustable in depth over a wide range by a fine-pitch threaded knob. Probe pickup may be tuned over the range of 900 to 18,000 mc. Insertion loss: 25 db or less in most slotted lines.

Model 229 . . . $125.

ECHO BOXES

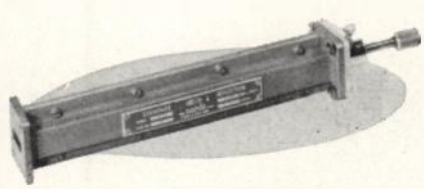
C Band and X Band Echo Boxes with high Q resonant cavities used for rapid testing and evaluation of radars. Frequency indication is direct reading in megacycles; resonance indicator is panel microammeter. Complete with carrying case.



C Band (Loaded Q: 50,000) . . . $ 970
X Band (Loaded Q: 90,000) . . . $1500

UHF FREQUENCY METER DETECTORS

The only direct reading frequency meter detectors available for the UHF range. Absorption type meters, with 0.2 db insertion loss, each includes resonant cavity, coaxial switch, crystal detector, current meter, sensitivity control, and type N input and output terminals. 200-500 mc; 500-1500 mc., 1500-2400 mc.



Three models . . . $375 each.

IMPEDANCE METERS

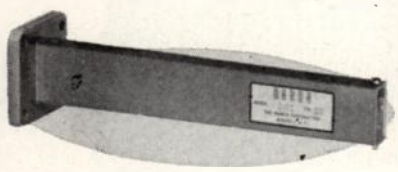
Carriage mounting and drive mechanism are integral with the transmission line casting, for permanent accuracy and freedom from slope errors. Angle-mounted, scale and vernier. Removable supporting stand. Coverage from 2600 to 90,000 mc; coaxial models, from 1500 to 90,000 mc—all accurate for VSWR's of 1.01.

13 models from $250 to $425.

STANDARD REFLECTIONS

Narda offers five values of reflections for each of six different waveguide sizes. Provides calibrated reflections or VSWRs for use in standardizing reflectometers or calibrating slotted line impedance meters. Five values of reflection coefficient in each waveguide size.

Six models from $125 to $300.

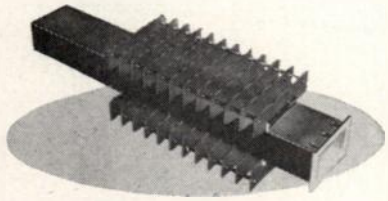


WAVE AND POWER METER SET

Portable, self-contained equipment for measuring power and frequency from 500 to 1500 mc. at power levels of 0.5 mw to 2 watts average (−3 dbm to +33 dbm). Fixed 10 db attenuator extends the power range of the step attenuator. Direct reading frequency measurement ±3 mc absolute. 50 ohm input.

Model 107 . . . $1150.

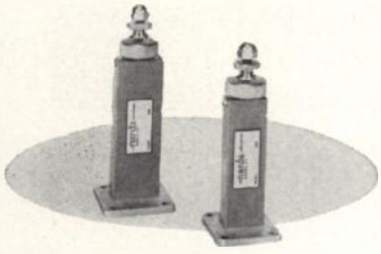
the narda microwave corporation
118-160 HERRICKS ROAD, MINEOLA, L. I., N. Y.



Narda-UHF and Microwave products from 200 to 90,000 Mc

WAVEGUIDE TERMINATIONS

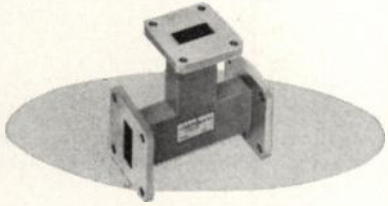
Narda Waveguide Terminations provide an exceptionally low VSWR (less than 1.02) over the entire frequency range of the waveguide. Power is in excess of 1 kw peak, 1 watt average. Standard cover flange input.



13 models from $20 to $45.

HI POWER TERMINATIONS

An improved type capable of handling extremely high power without deteriorating under high temperatures. Designed for operation over the entire waveguide band with average VSWR approx. 1.05. Heat dissipating fins at regions where most power is absorbed.

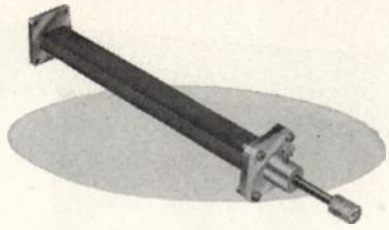


Seven models . . . $125 to $700.

ADJUSTABLE WAVEGUIDE SHORTS

Tuneable shorts of the trap or non-contacting type for minimum r-f loss for use in many tuning and measurement applications. Tuned by a knurled lead screw with locking nut, except for model covering 12.4 to 18.0 kmc, which uses micrometer drive. Models to cover bands from 2.60 to 90.0 kmc.

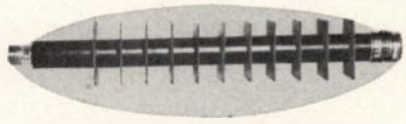
13 models from $40 to $90.



TEE SECTIONS

Waveguide tee sections for making connections in microwave circuits corresponding to series and shunt connections at lower frequencies. Very tight tolerances permit use as a power divider. Branches are terminated with standard cover flanges.

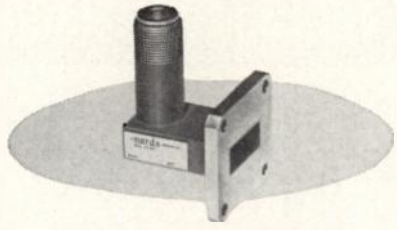
Thirty models from $35 to $275.



Write for your free copy of Narda's new 1959 catalog. Address: Dept. IRE-8

SLIDING TERMINATIONS

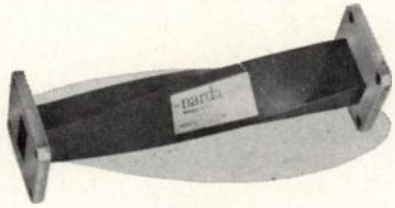
The most convenient means for evaluating the residual VSWR of slotted lines. VSWR of the element is 1.01 or less, from 1100 to 90,000 mc. The sliding feature makes these terminations particularly suitable for evaluating residual VSWR of impedance meters.



13 models from $60 to $90.

COAXIAL HI POWER TERMINATIONS

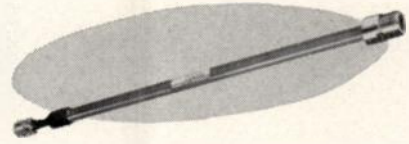
Useful over the complete frequency range from 700 to 12,400 mc, with a VSWR of 1.20 or less and under 1.1 from 1000 to 9000 mc. Designed for power levels up to 200 watts average and 50,000 watts peak. Efficient heat-dissipating fins permit withstanding temperatures in excess of 500° F.



Model 369, NF & NM . . . $250
Model 369, CF & CM . . . $270

ADAPTERS

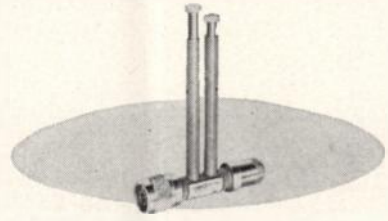
These adapters provide a low VSWR, lossless transition from rectangular waveguide to type N coaxial line. Broadband design provides bilateral VSWR below 1.25 over the complete waveguide frequency range. Small but rugged, for both laboratory and field use.



Seven models from $25 to $175.

TWISTS

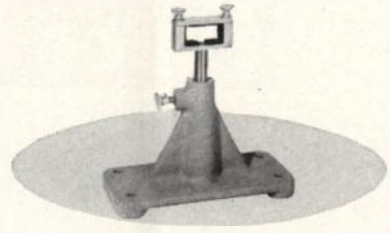
Narda waveguide twists provide a smooth 90 degree twist in waveguide orientation. Standard models use brass waveguide and two flanges equivalent to standard cover flanges. Other flange combinations, waveguides and lengths, available on special order.



13 models from $40 to $175.

COAXIAL TERMINATIONS

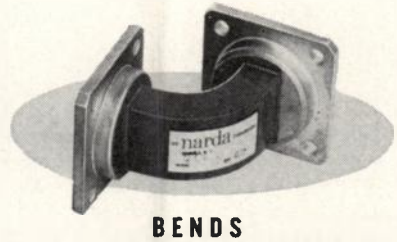
Narda Coaxial fixed and sliding Terminations are the first and only to cover the entire frequency range S to X band; provide accurate reference for coaxial component VSWR measurements. VSWR of the terminations is 1.05 or less. Travel of sliding termination is in excess of half wavelength at lowest frequency.



Fixed: $55 to $58 Sliding: $110 to $116

E-H & DOUBLE STUB TUNERS

Waveguide and coaxial tuners provide a variable susceptance over a wide range to tune transmission lines for maximum power transformer.



Coaxial double-stub tuner . . . $90
Waveguide E-H tuners from $130 to $225

STANDS AND CLAMPS

Heavy cast iron Model 3 stands for use with Model 2 Series Clamps. Rectangular base for stability and closer spacing when required. Knurled screw provided for height adjustment. Clamps are felt lined to provide secure clamping action without marring surfaces or finishes.

$3.50 to $5.50.

BENDS

Narda E — and H — Plane waveguide bends for use where a 90 degree angle is required with negligible reflection of the microwave signal. VSWR equals 1.05 maximum. Standard cover type flanges. Special flanges, materials and dimensions available on special order.

13 models from $25 to $100.

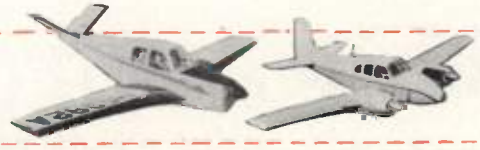
YEARS AHEAD IN

Celco YOKES FOR CHARACTER DISPLAYS

Deflection yokes for difficult character display problems are another achievement in advanced design and engineering at Celco.

Celco Deflection Yokes permit the rapid presentation of random character and alpha numeric displays. Low hystersis, high accuracy and fast recovery time with emphasis on the degredation of current near zero make possible magnetic deflection in character displays.



Celco High Sensitivity Yokes minimize the deflecting currents required from the deflection drivers, resulting in high efficiency for your system.

The construction of our yokes makes it possible to achieve **sensitivities, linearities, responses and distortion-free deflecting fields** not possible with the usual types of yoke.

For critical applications, many of our customers have saved years of trial and error in YOKE selection by specifying CELCO YOKES.

Write for CELCO DEFLECTION YOKE Catalogue & Design Sheets or for assistance Call your nearest CELCO Plant listed below.

YOKES

DESIGN PERFORMANCE!

Celco FOR STANDARD, COMMERCIAL & MILITARY APPLICATIONS

Single units or production quantities immediately available in wide range of inductance–resistance–Recovery time–pin cushion corrected or optimum focus as required. Also available 2-1/8" and 2-1/2" neck CRT yokes.

For details, circle #129 on Reader Service Card

TYPE BY
Transistorized encapsulated yokes for 70° 7/8" neck CRT and 1" neck image storage tubes.

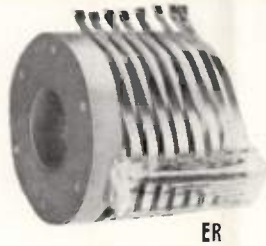
TYPE AY
Push-pull or single ended yokes for 52°, 70° and 90° deflections for 1-7/16" neck CRT.

TYPE RY
Rotating deflection yokes for PPI displays. Gears, bearings, slip rings and contact assembly included.

TYPE CF
Electromagnetic focusing coil for 7/8", 1" and 1-7/16" neck CRT.

TYPE MY
Miniature light weight deflection yoke coils or assemblies for incorporation into customer housings.

Celco ENGINEERED YOKES FOR PRECISION DISPLAYS



DP
Dual purpose yoke custom designed. Deflection system plus axial off-centering coils.

HS
Special high sensitivity deflection yoke with critical damping provisions.

PI
Plug in type encapsulated deflection yoke for rapid insertion.

ER
Encapsulated rotating, 4 axis slip ring precision deflection yoke.

MS
Miniature deflection yoke for rotating or fixed coil radar system.

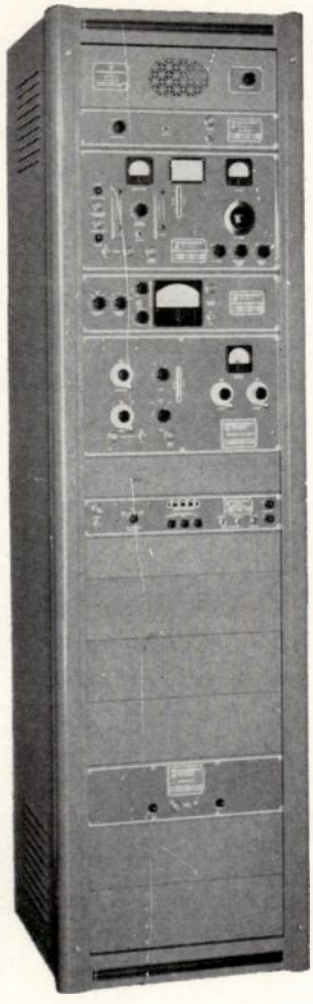
Northern Radio FREQUENCY SHIFT TERMINAL EQUIPMENT

FREQUENCY and SHIFT MONITOR SYSTEM



This system consists of a Type 106 Frequency and Shift Monitor and a Type 127 Frequency Meter. It is designed as a secondary standard to monitor the frequency and amount of shift of transmitter carrier output. It is particularly intended to measure the frequency shift of a mark and space (FS) signal either when setting up for traffic or under normal keying conditions.

The Monitor's stability is better than 2 cycles per megacycle over an ambient temperature range of 0-50° C—using crystals having a temperature coefficient of only 3 parts/million/degree C. Range is 2.5-30 mc with 10 crystal-controlled frequencies (separate panel trimmers for each); use of external oscillator also provided for. Frequency Shift range is 10-10,000 cps. Less than 100 millivolts RF input needed for 2 volts audio output.

The Frequency Meter is specially designed with selectable normal and fast-acting damping factors, permitting frequency measurements of signals while keying. Its accuracy is 2% of full scale for the ranges 0-200, 500, 2000, 5000, 20,000 cps.

METER: TYPE 127, MODEL 2
MONITOR: TYPE 106, MODEL 4

TYPICAL TRANSMITTER TERMINAL for TWINPLEX OPERATION

TYPE 105, MODEL 6

FREQUENCY SHIFT KEYER

Supersedes and replaces its leader predecessor, Type 105 Model 4.

- Highest stability achieved by any FS Keyer.
- Increased frequency range 1.0 to 7.0 mc.
- Pre-selection of proper FS for any particular transmitter frequency multiplication.
- Permits use with external oscillator without need of adapters.
- Improved accessibility for even easier maintenance.
- Direct-reading frequency calibration of shift from 0 to 1000 cps.
- FS dial adjusts "Mark" and "Space" frequencies equally above and below the carrier position.
- Direct-reading frequency calibration of mixer and output tuning dials from 1.0 to 7.0 mc.
- Direct reading calibration of output frequency vernier±600 cps.
- Pulse-shaping circuit permits operation within assigned band-width with no adjacent channel radiation.
- Linear carrier shift up to 1400 cps for Fax operations.

TWINPLEX COMBINER TYPE 177 MODEL 1

For twinplex operation, the transmitting terminal includes a Twinplex Combiner Type 177 Model 1.

The Twinplex communication system makes possible a 2-channel radio circuit whereby 2 non-synchronous or synchronous telegraph transmissions modulate a single radio carrier wave causing the carrier to assume one of four specific frequencies with 400 cps separations.

The Combiner converts the four possible conditions of two telegraph signals (M1-M2, M1-S2, S1-M2, S1-S2) respectively into one of four voltages related in a 0-1-2-3 manner. The Combiner output voltage modulates the Frequency Shift Keyer.

The two telegraph channels provide the same operational flexibility as that of two separate single channel FS systems. One can, for example, simultaneously use channel #1 on 60 wpm teletype and channel #2 on high-speed Morse or Time-Division Multiplex.

TECHNICAL DATA:

Keying Inputs: 1. Contacts; 2. DC current pulses, positive, negative, or polar; 3. DC voltage pulses, positive, negative, or polar.
Input Level: 1. DC Voltages: ±10 volts minimum; 2. DC Current: ma. minimum.
Keying Speed: 240 words per minute maximum.
Output Impedance: 10,000 ohms.
Keying Input Impedance: 1. DC Voltage: 100,000 ohms. 2. DC Current: 220 ohms.
Output Level: Neutral: 0 to 25 volts; Polar: +6 to −6 volts.
Output Voltage Conditions: Four output voltages are to be proportioned as follows assuming linear F.S. Keyer characteristic.
Input: M_1 M_2, M_1 S_2, S_1 M_2, S_1 S_2; Output 0, 1, 2, 3.
Individual level adjustments provided.
Power Requirements: 110/220 volts, 50/60 cycles. Approximately 50 watts. Connections at rear of chassis.
Dimensions: 3½" High x 19" Wide x 10" Deep.

For details, circle #130 on Reader Service Card

VARIABLE MASTER OSCILLATOR
TYPE 173 MODEL 1

The Northern Radio Company Variable Master Oscillator provides a continuously variable source of radio frequency energy with a stability of approximately 1 cycle per megacycle in the range of 2 to 4 megacycles. It may be used as the basic control oscillator for diversity receivers, high frequency transmitters and other communications devices, or as a laboratory standard for test and measurement functions.

Its ease of operation and direct reading of frequency make it an outstandingly useful device where precise frequency control must be maintained by completely unskilled personnel. No curves, interpolations or calculations of any kind are required in its use. Frequency is set approximately to the desired value by rotating the oscillator dial. The last three digits of the frequency automatically pulls in to the valve pre-set on the switches and holds with an accuracy that exceeds that of most temperature-controlled crystal oscillators.

HIGH FREQUENCY OSCILLATOR

Output Frequency: 2-4 MC continuously variable.

Stability for any combination of temperature range from 0 to 50° C, and line voltage of 115 to 230 ± 10%: Approximately 1 cycle per megacycle.

Output level: ½ watt into 75 ohm load. Lever control on rear of chassis.

Readability: ± 2.5 cycles per second. Direct digital readout on mechanical and electronic counters.

Resettability: Absolute.

BEAT FREQUENCY OSCILLATOR

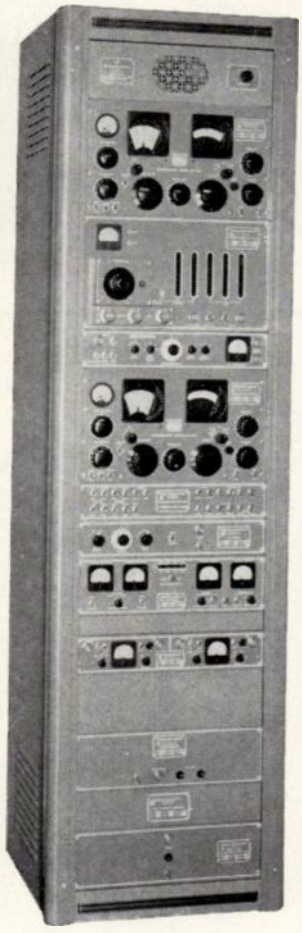
Output Frequency: 400-800 KC crystal controlled.
Output Level: 3.5 volts into 1000 ohm load. Level control on rear of chassis.

TIME BASE CRYSTAL OSCILLATOR

Output frequency 100 KC
Stability for 0 to 50° C and ± 10% Line Voltage change: 0.2 part per million for any 12 hour period; 1.0 part per million for thirty days.

Output Level: Approximately 2 volts.

Output Impedance: Approximately 100,000 ohms.



TWINPLEX CONVERTER
TYPE 178 MODEL 1

This Twinplex communication system makes possible a 2-channel radio circuit whereby 2 non-synchronous or synchronous telegraph transmissions modulate a single radio carrier wave by causing the carrier to assume one of four specific frequencies with 400 cps separations.

The receiving equipment consists of the Twinplex Converter Type 178 Model 1 and a single or diversity receiver such as the Northern Radio Type 110 Dual Diversity Receiving System. The Converter demodulates and separates the four audio tones from the radio receiver(s) into two channels each carrying the originally transmitted intelligence. The Twinplex Converter replaces the standard FS Converter for this purpose.

The two telegraph channels provide the same operational flexibility as that of two separate single channel FS systems. One can, for example, simultaneously use channel #1 or 60 wpm teletype and channel #2 on high-speed Morse or Time-Division Multiplex. It further permits the reception of channel #1 signals on all standard FS converters (tunable to 400 cps shift) without need for a Twinplex Converter: this is valuable for "Forked Circuit Operation" where the intelligence of channel #1 is intended for pick-up by other receiving stations which are not equipped for Twinplex Reception in addition to the main receiving stations which are so equipped. Reception of channel #2 (or of both channels) requires the receiving end to be equipped with a Twinplex Converter.

TYPICAL RECEIVER TERMINAL for TWINPLEX OPERATION

VARIABLE MASTER OSCILLATOR
TYPE 115, MODEL 1

The Variable Master Oscillator Type 173 (above) may be replaced by this Variable Master Oscillator Type 115 Model 1 which is designed principally for use in diversity reception to supply variable or crystal HFO voltage to the receivers. Its variable frequency has a stability equivalent to that obtained by non-temperature-controlled crystal oscillators. It also provides 3 HFO crystals for operation of diversity receivers where fixed frequencies are required, and 2 BFO crystals.

FREQUENCY SHIFT DIVERSITY CONVERTER
TYPE 174, MODEL 1

For use with either single-receiver frequency diversity systems or 2-receiver space diversity systems. By means of plug-in units, any reasonable number of channels is available between the frequencies of 425 and 3315 cps for either frequency or space diversity operation. For standard FS operation, the plug-in networks provide shift adjustments from 100 to 1000 cps shift.

Normal Input Level: −40 to +10 VU (Zero VU = 1MW into 600 ohms). (Satisfactory operation on fades to −60 VU.)
Limiter Recovery Time: Negligible for a 40 VU differential between Mark and Space frequencies.
Output: 65 ma into 2000 ohms floating (self-contained line battery).
Keying Speed: Maximum of 40 dot cycles with narrow band frequencies diversity. Up to 400 dot cycles with the wide band networks.
Monitor: 2-inch Cathode Ray tube
Input phone jack
2 input volume level indicators
1 output current indicator

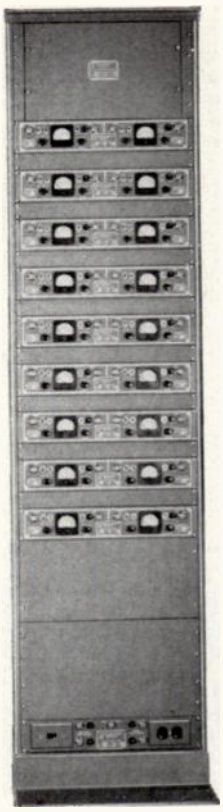
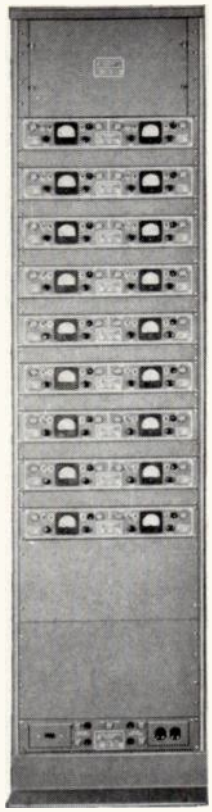
MULTI-CHANNEL FREQUENCY SHIFT TONE TELEGRAPH SYSTEMS

These Multi-Channel Telegraph Systems are audio carrier systems capable of multiplexing such circuits as telephone lines, VHF, UHF, or radio frequency links—or practically any type circuit from which a two-wire audio circuit can be derived. Designed to meet any speed requirements, these systems are fully electronic, without relays or moving parts to wear. They can be used for high-speed printer, Morse or time division Multiplex Circuits, as well as such application as Telemetering, Control Circuits and Servo-Mechanisms. Instantaneous and complete sending and channel control permits any binary code groups, either "Clear Text" or "Crytographic," to be channelized without need for additional phasing or synchronizing equipment, while paralleling of channels will allow for transmission of other type codes, such as 3 element cable code. The completely independent operation of each channel, including its own power supply, localizes faults to one channel only, leaving other channels unaffected. Individual channel separation filters are used at both transmitting and receiving ends. This arrangement allows for sending telegraph or control signals over a circuit carrying, simultaneously, other forms of intelligence: or for two-way communications on the same line. The audio frequency shift principle of transmission provides for high fidelity of signal reproduction over a wide range of signal levels as well as under severe noise or interference conditions. Circuit requirements of any speed, shift and center frequency can readily be met. The systems illustrated are for use on printer circuits up to 100 WPM channel capacity. The system arrangement is very flexible, permitting grouping of the basic units into various arrangements of Multiplex Systems. These systems can be made to accommodate a large variety of channel numbers and speeds to meet any individual requirements. The flexibility is further improved by the fact that the racks, power control units, and terminal connection panels are the same for both transmitting and receiving terminals.



DUAL FS TONE KEYER; TYPE 153 MODEL 3:



Keying Input. . . . Relay contacts, ± DC current or voltage pulses, neutral or polar.

Input Level. . . . DC voltage: ± 10 volts min. DC current: 45 ma min., ± or polar. Relay: contact rating 5 ma min.

Keying input Z. . . . DC voltage: 100K ohms. DC current: 220 ohms.

TRANSMITTER

RECEIVER

DUAL FS TONE CONVERTER: TYPE 152 MODEL 3:

Input Z: 600 ohms, unbalanced.

Input Level: −40 dbm to 0 dbm.

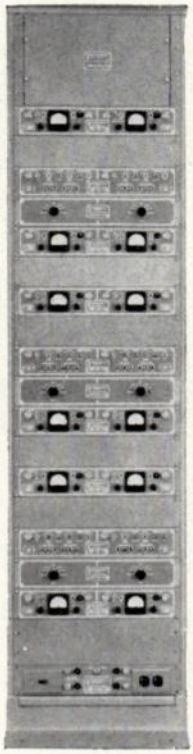
Input Frequencies: 18 channels, 425-3315 cps, 170 cycle spacing.

Keying Speed: 45 dot cycles.

DUPLEX TELEGRAPH SYSTEM FOR MULTI-CHANNEL TONE EQUIPMENT

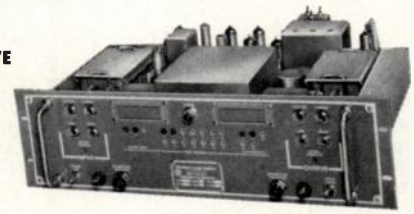
SEVEN NEW FEATURES in this system—simple 4-position switch selects from 12 possible duplex combinations; duplex operation between stations connected via carrier telegraph channels; *all-electronic,* without relays or moving parts; polar or neutral for either half duplex or full duplex; break-in now also possible for all *half*-duplex circuits; provided with positive feature to prevent space signal lock-out; includes individual line battery for each channel.

The Northern Radio Duplex Telegraph System consists of one each Dual Frequency Shift Tone Keyer, Type 153 Model 3; Dual Duplex Selector Panel, Type 200 Model 1; Dual Loop switch Panel, Type 200A Model 1; and Dual Frequency Shift Tone Converter, Type 152 Model 3.



DUAL DUPLEX SELECTOR PANEL Type 200 Model 1

The Dual Selector Panel provides 12 loop options, patching facilities for monitoring purposes and channel routing, including the possibility of patching-in another teleprinter loop circuit (T-junction). Any of the 12 loop options are available and may be selected for the Dual Loop Switch Panel by simple strapping arrangement. It has an individual line battery for each channel for greatest circuit flexibility. Battery and line fuses are also provided for maximum protection.



DUAL LOOP SWITCH PANEL Type 200A Model 1

The Dual Loop Switch Panel rapidly selects half-duplex and/or full duplex mode of operation for any of the 4 standard loop options by front panel switching available from the 12 loop options in the Dual Duplex Selector Panel.

NEW! REGENERATIVE REPEATER

TYPE 207 MODEL 1

This new Regenerative Repeater—the most advanced in the industry—is designed for use in telecommunication circuits to re-shape and re-time distorted signals for local use or retransmission. Special provision has also been made for its use on half duplex where it will not only regenerate the ordinary teleprinter signals but also faithfully reproduce such special signals as "break" signals and "mark restoration" information. *Outstanding features include:* . . . maximum acceptable signal distortion; new circuitry accepts up to 47% mark or space distortion; "floating" input & output circuits; completely electronic output, no relays; greater timing circuit stability; time base derived from highly stabilized L-C oscillator; adaptable to any speed; low-pass filter & frequency-determining elements are plug-in units; completely self-contained: includes power supply & line battery.

TECHNICAL DATA:

Input Keying Signal Requirements: (1) Neutral keying, positive or negative sense, (a) on-off 60 ma pulses, (b) on-off voltage pulses 10-100V into 100K ohms, (2) Polar keying, (3) Dry contact keying.

Frequency Stability of Time Base Generator: Less than 1 point range loss for ± 10% line voltage variation or ± 20° C ambient change from 25° C.

Sampling Time: Approximately 50 microseconds.

Output: Electronic tube outputs: (a) neutral 65 ma. max. into 2K ohms, (b) polar 33 ma (max.) into 2K ohms.

Power Requirement: 125 watts approx.: 110/220V, 50/60 cps.

Mounting: Standard 19" rack mounting, 5¼" panel.

MAGNETIC AMPLIFIER RELAYS

Magnetic Amplifier and Relay combined in one package. Provides positive snap action on low level signals insuring excellent shock and vibration performance. Eliminates chatter.

TYPES:

Ultra-Sensitive: 25 Microwatt Sensitivity. 2 Amp Rating.

Time Delay: To 30 Seconds. 10 Milliwatt Sensitivity.

Frequency Sensitive: 360 CPS cut off. 2 Amp Rating.

Magnetic Switching: (No Contacts) Pulsers Flashers

TINYMAX 400 CPS TRANSFORMERS

Up to 30% lighter and smaller than conventional types.

Ruggedized
Shockproof

Available in many standard ratings. 3 ϕ and 3 ϕ to 2 ϕ also available. Designed to meet military specifications.

V.A.	WT.	O.D.	HEIGHT
1.5	3/4 oz.	1"	7/16"
3.0	1 oz.	1"	9/16"
6.0	1 1/2 oz.	1"	13/16"
9.0	2 oz.	1"	1 1/16"
16.0	4 oz.	1 3/8"	1 1/8"
25.0	5 oz.	1 3/8"	1 3/8"

TOROIDAL WINDING

High Q Inductors - Magnetic Amplifier Coils - Saturable Reactors - Oscillator Coils - Current Transformers

WINDING RANGE:

Wire Size: #7 thru #46
Ins. Dia. 7/8" - 3/32"
Outs. Dia. 9 1/2" - 1/2"
Height: 6" - 1/4"

MAGNETIC AMPLIFIERS

Complete Magnetic Amplifiers designed and developed to customer specifications. Applications include: Temperature Control - Voltage Regulation - Synchro Amplifiers - Valve, Clutch, or Solenoid Control - Magnetic Switching.

FEATURES:

Input powers as low as 10^{-10} can be reliably recognized. Gains up to 10^{6} per stage. Response as low as one cycle. Output ratings to 25 KW.

WIRES and CABLES

Though most wires look alike, there is a difference. At Chester, we think of this as wire personality. Chester wires and cables reflect their background . . . ultra-modern production facilities, selected raw materials, exacting manufacturing methods supervised by engineers who are wire and cable specialists.

And every type of Chester conductor is *especially engineered for its recommended application.* The next time you need an insulated conductor, inspect a Chester sample first! Our engineers will be happy to show you how the wires with the *engineered personality* can help solve your wiring problems!

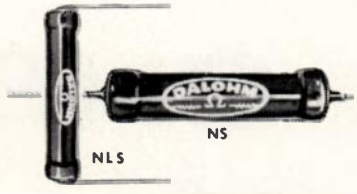
DALOHM Ω

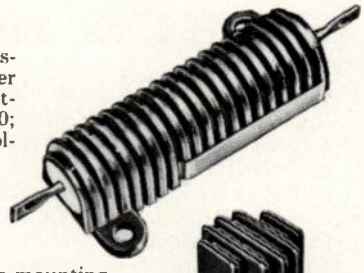
WIRE WOUND RESISTORS
Retain 100% Reliability

Carefully designed, precision made to meet all space problems and for all applications where equipment must meet the most severe environmental, shock, vibration, and humidity conditions. Smallest in size; completely coated with special silicone material; welded from terminal to terminal; impervious to moisture, salt spray, vapor gases.



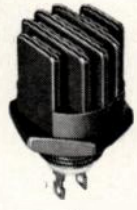
TYPES RS, RLS, RSE

Six wattage ranges 1, 2, 3, 5, 7 and 10; eight sizes; resistance range from .05 ohm to 175K ohms, depending on type; tolerance range .05% to 3%. Type RS with axial leads; Type RLS with radial leads; Type RSE housed in metal tubing for extreme reliability from severe shock and vibration.



TYPES NS, NLS

NON-INDUCTIVE resistors. Five wattage ranges—2, 3, 5, 7, and 10, six sizes; resistance range from 2 to 37K ohms; tolerance from .05% to 3%. Type NS with axial leads; Type NLS with radial leads.



TYPE RH

Die-cast, black anodized radiator finned housing, enables these resistors to take high power ratings. Lugs provided for horizontal mounting. Four wattage ratings—10, 25, 50, and 250; resistance range 0.1 ohm to 175K ohms. Tolerance range from .05% to 3%.

TYPE PH

New ruggedized Powerhouse resistor for hole mounting in chassis. Black anodized finned aluminum housing. Three wattage ratings—10, 25 and 100; resistance range from 0.1 ohm to 60K ohms; tolerance range .05% to 3%.

TYPES WWL, WWA, WWP, WWR

Encapsulated for hermetic sealing; non-inductive pi wound; powered at .1 watt to 2 watts; resistance range 0.1 ohm to 6 megohms; sizes from sub-miniature ⅛ by ⅜ inch to ½ by 2 inches.

DALOHM Ω ®

DEPOSITED CARBON RESISTORS
Retain 100% Reliability

Assure accurate, dependable performance. Precision resistance values, low voltage coefficient, low capacitive and inductive characteristics in high frequency applications, extremely high stability and economy.

TYPES DC, DCH

Resistance range from 10 ohms to 50 megohms; tolerance 1% or higher as specified. Type DCH hermetically sealed in non-hygroscopic ceramic envelope. Five wattages—⅛, ¼, ½, 1 and 2; eight sizes.

DC

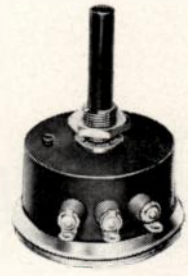
DCH

TYPE MC

Completely protected from moisture and salt spray by molded covering. Five wattage ratings, 2, 1, ½, ¼ and ⅛; resistance range from 1 ohm to 50 megohms; tolerance 1%, standard.

MC

DALOHM POTENTIOMETERS



TYPE A10-W TRIMMER

High temperature—humidity proof—ruggedized—wire wound—designed to provide highest performance under ever-increasing MIL. SPEC. requirements. Rated at 1 watt; resistance range 10 ohms to 30K ohms; tolerance 5% standard. Also commercial versions B11-W and C12-W available.

TYPE DP-12

Hermetically sealed, moisture proof for critical electronic circuitry. Military Type RA-30 built to surpass JAN-R-19.

DALOHM COLLET-FITTING EQUIPMENT KNOBS

Precision made Dalohm knobs, incorporating an exclusive collet-fitting design, permit positive locking on the shaft without any of the damaging effects found in other knob securing methods.

TYPE K INDUSTRIAL KNOBS

For hard use at high/low temperatures; precision cast of thermo setting plastic; five sizes—⅝", 1-1/16", 1¾", 2¼", 3". Collets interchangeable for shafts ⅛" to ⅜". Standard pointers, escutcheons and indicators available.

TYPE MILITARY STYLE KNOBS

The ultimate in airborne and other knob applications. Made of tough, durable, fungus-proof thermoplastic; metal parts corrosion resistant. Complete selection of skirts.

YOU CAN DEPEND ON DALOHM Ω ®

During the past eight years, the radio-electronic industry's spectacular growth has been paced by the increase of advertising pages in the annual IRE DIRECTORY.

In the 1949 edition, 158 advertisers took 133 pages. In the 1959 IRE DIRECTORY, the number of advertisers mushroomed to 533 and advertising pages numbered 373—an increase of 280% over the '49 edition.

The IRE DIRECTORY sells year 'round by serving over 55,000 IRE members who daily are developing and perfecting remarkable new devices. To sell ahead, put your product story before radio-electronic engineers who are planning ahead . . . in the 1960 IRE DIRECTORY.

Engineers are educated to specify and buy.

HELPFUL HINTS
for using the IRE DIRECTORY

A few minutes' study of the basic layout of the IRE DIRECTORY will help you to find the information for which you are looking more quickly and more accurately. At first glance, the IRE DIRECTORY may seem to be confusing, but by using the various portions of the book as listed below, you will find your way around easily, and will discover that it is actually a very simple arrangement, and a much more logical one than a purely alphabetical terminology listing.

PINK SECTION at the front of the products and firms section contains a terminology index listing every product, major and minor, for which a list of manufacturers is given. Page numbers refer you to the page on which the listings for that product begin. Following this alphabetical index is a copy of the questionnaire which is sent to the firms who have furnished us with product information. A quick look through this questionnaire will help greatly in understanding the product arrangement. At the top of the first page of the pink section is a small index referring you to the opening page of the complete-data spread section, the alphabetical directory, and each of the four product directories.

THE COMPLETE DATA SPREAD SECTION (pages 1-140) contains product advertisements of great usefulness to the reader. Most of these advertisements are two pages or more, and all of them contain complete information on the products manufactured by the advertising firms—specifications, prices, illustrations, and suggested applications.

ALPHABETICAL DIRECTORY OF MANUFACTURERS (pages 141-240) contains a list of 4,029 firms representing the majority of buying and selling power in the radio-electronic industry. Each firm listing contains the complete mailing address and telephone number for the firm. Following the state name in the firm address, a list of code numbers is given. These numbers refer to the 100 major products listed in the book (for quick reference to the meaning of the codes, use the questionnaire form in the pink section).

THE FOUR DIRECTORIES OF PRODUCTS ARE:

1. Communications Equipment
2. Components
3. Controls and Instruments
4. Materials and Services

This breakdown into four directories saves you from traveling through many products in which you are not interested at the moment, and helps you to turn immediately to the listings for the type of product you want, following a straight line to your destination. Use the Machol edge index at the top of the first page of the pink section to locate immediately the first page of the appropriate directory, then use the Machol edge index at the beginning of each directory to find the specific product you want. You don't even have to know the page number—the index will find it for you automatically!

100 MAJOR PRODUCTS are listed within these four Directories. Each product listing contains a number of sub-headings so that you may know specifically what each firm makes. To interpret the code numbers shown after each firm's listing, consult the first page of that product class, where the sub-headings are defined. You will note that advertisements are positioned throughout the book in the most appropriate listing section, so that the advertisement for a relay manufacturer will appear in the relay section, to help you with further information on his product. Every advertiser's listing shows you the page number on which his advertisement may be found, and you will derive more value from this book if you consult these advertisements for facts you cannot find in the listings.

COMPLETE ADDRESS LISTINGS are given only for advertisers in this section. If you wish to locate the address and telephone number for any other firm, it will be necessary to use the alphabetical directory.

THE DISTRIBUTION SECTION is class 100, the last class in the book. This section contains a list of 1,362 manufacturers representatives, distributors and jobbers, grouped geographically. See page 594 for a more complete explanation of the use of this section.

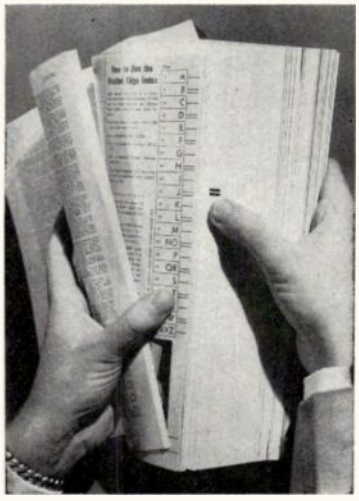
ADVERTISER'S INDEX appears on pages 135-140 and on pages 619 and 620.

How to Use the Machol Edge Index

High speed reference is a major objective of the IRE Directory. To this end we have adopted the Machol Edge Index system, and these indexes:

Advertisers Index, pages 135-140 and 619-620.

Key to Products, Pink Section.



Index to Spreads, 1.

1 COMPLETE DATA SPREADS
141 ALPHABETICAL COMPANY LIST
241 DIRECTORY I COMMUNICATIONS
275 DIRECTORY II COMPONENTS
461 DIRECTORY III CONTROLS & INSTRUMENTS
519 DIRECTORY IV MATERIALS & SERVICES

Detailed Machol edge indexes will be found on the first page of the alphabetical Directory and each of the four major product Directories, pages 141, 241, 275, 461 and 519. The Machol system will help you find both alphabetical and product sections swiftly.

HOW TO USE

1. Bend the Directory almost double with the front cover page on the inside.
2. Hold in your right hand with your four fingers near to the bound edge and your right thumb near the middle of the open side of this page.
3. From the heavy or light line symbol adjacent to the subject you seek, run your eyes across the page edges until you reach the horizontally corresponding symbol.
4. OPEN THERE!

New

ASTRON CAPACITORS AND RF NOISE FILTERS

- for precision products designed for missile, ground support applications and all reliable military units
- for computers, printed circuits and critical industrial electronic equipment
- for radio, TV and Hi-Fi

For details, circle #142 on Reader Service Card

New
CAPACITORS
Metallized Mylar**

Either a hermetically sealed (type RQL) or uncased unit (type RLR) with a working temperature range of —55°C to +125°C without derating. Applications in military reliability equipment . . . critical industrial circuits . . . potted assemblies.

New
CAPACITORS
Mylar Metallized Dielectric**

Round (type XPR) and flat (type XPF) miniature capacitors with a working temperature range of —55°C to +125°C. In applications requiring minimum size, high IR, good capacitance stability and exceptional performance characteristics.

CAPACITORS
Safety Margin* Electrolytic

Astron Electrolytics with high purity foil, special stable electrolytes and precision assembly provide long life, exceptionally low leakage and resistance to corrosive elements. Designed for use in transistor circuits in radio, TV, Hi-Fi and other quality commercial applications.

CAPACITORS
MIL-C-25A Paper

Available in a wide range of electrical characteristics and made to reliability standards and under reliability conditions . . . variety of types and styles for every possible military and industrial application.

CAPACITORS
Metallized Paper

Offer extremely small size . . . long life . . . low power factor . . . self healing characteristics . . . excellent r. f. characteristics . . . design flexibility . . . ideally suited to applications where space is a critical factor.

* TRADEMARK ** REGISTERED DUPONT TRADEMARK

RF Noise Suppression Filters

Astron's Four Step Filter Service Plan has solved thousands of industry and government RF Filter Problems.
This "Packaged" Service includes:

1. Definition of Requirements
2. Engineering Analysis
3. Prototype Design and Testing
4. Appropriate Solution of Problem

Astron will custom-engineer and produce filters specifically for your equipment.

SOLVING YOUR FILTER REQUIREMENTS
FROM THE PROBLEM TO THE PRODUCT.
Write today for complete technical and engineering data.

Numbers after address show the product and service classes in which firm appears. These classified listings follow the Alphabetical Directory. For complete instructions on use of this Directory, see pink sheets preceding catalog section.

BALLANTINE ELECTRONIC VOLTMETERS

Famous for
ACCURACY ▫ STABILITY
SENSITIVITY

Each Ballantine Voltmeter has only one voltage scale, with decade range switching, which provides the **same accuracy of reading at all points on the logarithmic voltage scale.** A linear decibel scale is also provided for use by acoustical engineers. Each Voltmeter also may be used as a high gain wide band amplifier.

TRUE RMS INDICATION MODEL 320

Voltage Range ..... 100 μv — 320 v
Frequency Range ..... 5 cps — 500 kc
Accuracy ..... 3% 15 cps — 150 kc
5% elsewhere
Stability of Internal Calibrator 0.5%
Input Impedance . . .
10 megs shunted by 18 μμf below 10 mv
10 megs shunted by 8 μμf above 10 mv

AUDIO to 250 kc MODEL 300D

Voltage Range ..... 1 mv — 1000 v
Frequency Range ..... 10 cps — 250 kc
Accuracy ..... 2% ENTIRE RANGE
Input Impedance ..... 2 meg shunted by 15 uuf

DC & AC PRECISION CALIBRATOR MODEL 420

Voltage Range ..... 0-10 v RMS; Pk-to-Pk; or DC
Frequency (Std. Model) ..... 1 kc
(other values on special order)
Accuracy (long term) Better than 0.5% above 1 mv
Distortion and Hum ..... Less than 0.25%
Setting Resolution Approaches 0.01% above 10 mv
Output Impedance (AC) .... 2-20 ohms depending on range setting

SUB-AUDIO to 150 kc MODEL 302C

Battery Operated

Voltage Range ..... 100 μv — 1000 v
Frequency Range ..... 2 cps — 150 kc
Accuracy ..... 3% 5 cps — 100 Kc
5% elsewhere
Input Impedance ..... 2 meg shunted by 10 μμf*
*Shunt capacitance, 25 μμf on two most sensitive ranges

SENSITIVE INVERTER MODEL 700

For Measuring DC Voltages when combined with any AC Voltmeter

Voltage Range ..... 1 μv — 100 v DC
Ratios DC Input to RMS Output ..... 1:100 & 10:1
Accuracy ..... 1% 100 μv — 100 v
Input Resistance ..... >10 meg for 1:100
50 meg for 10:1

PEAK-to-PEAK MODEL 305

Voltage Range ..... 1 mv — 1000 v pk-to-pk
Frequency Range ..... 10 cps — 100 kc (sine wave)
Pulse Width ..... 3 μsec — 250 μsec
Min Rep Rate ..... 20 pulses per sec
Accuracy ..... 5% for pulses
Input Impedance ..... 2 meg shunted by 8 μμf*
*Shunt capacitance, 15 μμf on two most sensitive ranges

DECADE AMPLIFIER MODEL 220B

For Increasing the Sensitivity of any AC Voltmeter by 10 or 100 times

Voltage Range ..... 20 μv — 50 mv
Frequency Range ..... 10 cps — 150 kc
Accuracy ..... 2% ENTIRE RANGE
Input Impedance ..... 5 meg shunted by 15 μμf

AUDIO to 2 mc MODEL 310A

Voltage Range ..... 100 μv — 100 v
Down to 40 μv at reduced accuracy
Frequency Range ..... 10 cps — 2 mc
As null detector 5 cps. — 4 mc
Accuracy ..... 3% 15 cps — 1 mc
5% elsewhere
Input Impedance ..... 2 meg shunted by 9 μμf*
*Shunt capacitance, 19 μμf on two most sensitive ranges

DIRECT READING CAPACITANCE METER MODEL 520

Capacitance Range ..... 0.01 μμf to 12 μf
in 9 decade ranges covering over a billion to 1
Accuracy ..... 2% above 0.1 μμf
5% below 0.1 μμf
Capacitor Power Factor 0.15
Test Frequency ..... 1 kc

AUDIO to 6 mc MODEL 314

Voltage Range ..... 1 mv — 1000 v
(100 μv — 1 mv without probe)
Frequency Range ..... 15 cps — 6 mc
Accuracy ..... 3% 15 cps — 3 mc
5% elsewhere
Input Impedance ..... 11 meg shunted by 8 μμf
(1 meg shunted by 25 μμf without probe)

ACCESSORIES are available for all voltmeters to extend voltage measurements down to 20 μv and up to 10 kv, and to measure currents from 0.1 μamp to 10 amp, and to provide DC from the Model 300 Voltmeter to drive external recorders or remotely located meters.

INFRASONIC to 30 kc MODEL 316

Voltage Range ..... 20 mv — 200 v pk-to-pk
Frequency Range ..... 0.05 cps — 30 kc
(Down to 0.01 cps with correction)
Accuracy ..... 3% ENTIRE RANGE
Input Impedance ..... 10 meg shunted by 17 uuf
or 40 uuf depending on setting

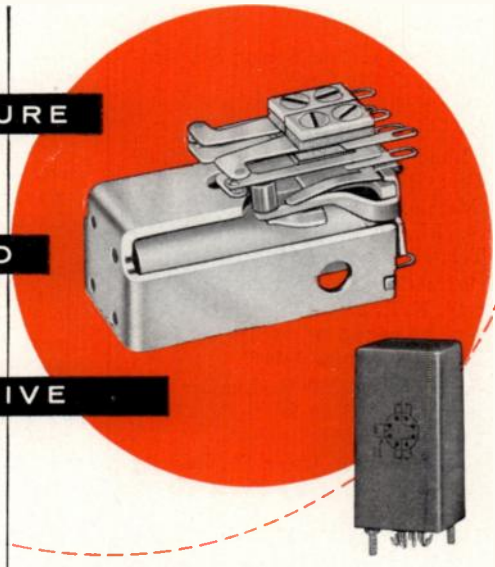
COMAR'S NEW



TQ

RELAY

MINIATURE

RUGGED

SENSITIVE

● Operates on DC coil signals at sensitivities from 20 to 100 milliwatts. Available with SPDT, DPDT or 4PDT switch arrangements.

CONTACT RATING with resistive load at 28 VDC, or 115 VAC: silver contacts, 3 amperes; Palladium or gold alloy, 0.5 amperes. **CONTACT LIFE:** 100,000 operations, minimum. **OPERATING TEMPERATURE:** −55°C to +100°C. Also, −65°C to +125°C, on special order. **SHOCK:** up to 50G. **VIBRATION:** up to 10G, from 10 to 500 cps. Also available hermetically sealed, as Type TQH.

With CARBON FILM POTS you get life of 18,000,000 revolutions

MILLIONS OF REVOLUTIONS AT 625 R.P.M.

3 GANG POT-COMMUTATOR MODEL 208-3S

PROBLEM

Airborne radar antenna mounted adjacent to rapid fire guns rotates continuously at 625 rpm. Pot pick-off on mount indicates antenna position on a scope. Effective linearity of pot±.12%. Ambients —73°C to 71°C, sea level to 60,000 feet, humidity, shock, vibration per MIL-E-5272A. Pot must operate to specs for 500 hours at 625 rpm, *equivalent to more than 18,000,000 revolutions.*

SOLUTION

Precision carbon film potentiometer ganged with C.I.C. commutator cups meet all performance requirements, with a life well beyond 18,000,000 revolutions at 625 rpm on production-line units.

The smooth surface of the carbon film combined with its natural lubricative properties insures long life at high speed. Wipers are not required to follow the contours of wire windings, therefore, with very low brush pressures which enhance pot life, no wiper bounce occurs at high speeds.

The continuity of the resistance element does not depend upon a single hair-like wire. Failure of the potentiometer therefore does not occur suddenly, but any deterioration of performance is gradual. This fail-safe characteristic enhances reliability, and insures against catastrophic system failure at critical times

Your critical pot requirements can readily be met with C.I.C. Precision Carbon Film Pots and Commutators. We welcome your inquiries.

CLEVELITE*

is engineered to make your product better with the necessary electrical and mechanical properties. Produced in seven grades to meet almost any requirement.

Clevelite is the accepted standard in the radio and television industry. AT NO EXTRA COST, it has provided that additional margin of quality and protection in a great number of applications.

Coil forms and collars with terminals or printed circuit lugs attached are shown at the left.

Write for latest Clevelite brochure. Samples furnished if requested.

Numbers after address show the product and service classes in which firm appears. These classified listings follow the Alphabetical Directory. For complete instructions on use of this Directory, see pink sheets preceding catalog section.

Orders for DRIVER-HARRIS Nickel and Nickel Alloy Wire FILLED IN 24 HOURS

If we receive your order in the morning, it will be shipped out before evening . . . this is the new service policy of Driver-Harris in the manufacture and distribution of 18 most frequently purchased Nickel and Nickel Alloys in wire form. In addition to this new warehouse stocking program, is the improved delivery schedule for Monel, Grade "A" Nickel, Inconel, R Monel and some Stainless Steels with lead time reduced to only 7 days in certain cases. The following list covers immediate availabilities. For complete detailed current listing showing all sizes and specifications, contact the nearest Driver-Harris branch — or call HUmboldt 3-4800 (New Jersey), REctor 2-9579, 80, 81, 82 (New York City).

IN STOCK READY FOR DELIVERY

MONEL	25 wire sizes from .0021 to .091
GRADE "A" NICKEL	12 wire sizes from .0025 to .091
GRADE "D" NICKEL	9 wire sizes from .005 to .015
INCONEL	3 wire sizes from .0253 to .050
STAINLESS STEEL	
Type 304	24 wire sizes from .0016 to .164
Type 316	6 wire sizes from .007 to .0135
Type 330	25 wire sizes from .0063 to .144
NICHROME*	65 wire sizes from .0007 to .289
NICHROME* V	62 wire sizes from .00045 to .289
CHROMAX*	35 wire sizes from .0031 to .258
KARMA*	36 wire sizes from .0005 to .036
ADVANCE*	49 wire sizes from .0008 to .258
MANGANIN	37 wire sizes from .001 to .1285
LOHM*	29 wire sizes from .001 to .182
MIDOHM*	28 wire sizes from .00175 to .182
30 ALLOY	28 wire sizes from .0015 to .182

LEAD TIME FOR MANUFACTURING WIRE & RIBBON

As low as 10 days for

COLD DRAWN MONEL	wire sizes from .001 to .1875
GRADE "A" NICKEL	wire sizes from .001 to .1875
COLD DRAWN INCONEL	wire sizes from .001 to .1875
R MONEL	wire sizes from .0285 to .204

As low as 7 days for

STAINLESS STEEL wire and ribbon
Types: T-302, T-304, T-305, T-316, T-430, T-446

Facing Today's Expanding Design Frontiers–

WBD Custom Alloys

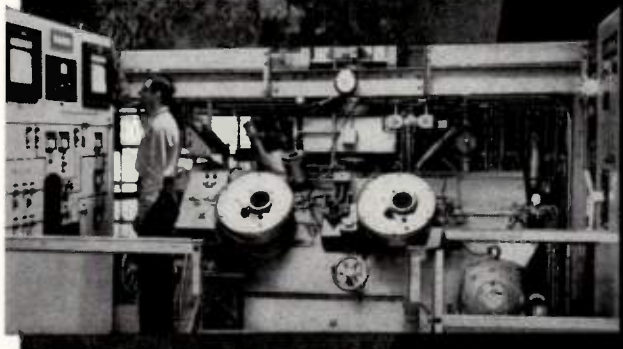
–from one of the nation's *largest vacuum-melting installations*

Precision Resistance, Chemical and Mechanical Alloys in –

- WIRE
- ROD
- RIBBON
- STRIP
- FOIL

Resistance Alloys:
ALCHROME®
TOPHET A®
EVANOHM®
=30 ALLOY
=180 ALLOY
BALCO®
TOPHET C®
CROMIN D®
=60 ALLOY
BALLAST NICKEL
CUPRON®
MANGANIN
=90 ALLOY

Glass Sealing Alloys:
RODAR®
NIRON 52
NIRON 46



Filament and Grid Alloys:
COBANIC®
SYLVALOY®
MAGNOCARB
MANGRID®
PERMOCARB
MODIFIED HILO®
PERMAGRID
CUPROCHROME

Vacuum Tube Materials:
BRITECARB
RADIOCARB
PERMOCARB
DUOCARB®
MAGNOCARB
POLICARB®
CATHODE NICKEL

Special Spring Alloys:
BERALOY®
COBENIUM®
NI-SPAN C*
17/7 P.H.

Corrosion Resisting Alloys:
NILSTAIN®
MONEL*
INCONEL*

*T. M. International Nickel Co.

WBD vacuum-melted metals are providing the answer to increasing demands for entirely new alloys. New applications in missiles, rocketry, nucleonics and aircraft call for the creation of new alloys . . . new metals, new highs in degree of purity, alloys subjected to the selective removal of certain materials.

WDB research and production facilities are available to help industry work out special problems requiring these custom alloys. This integrated service provides complete development and manufacturing departments and features one of the nation's largest vacuum-melting installations. Over 40 years experience in melting and manufacturing precision alloys is at your service. Consult our Sales Engineering Department for information on custom alloy service.

WILBUR B. DRIVER CO.

Main Office: NEWARK, NEW JERSEY – Tel. HUmboldt 2-5550

Specialists In Semi-Conductor and Magnetic Designs...

ELECTRONIC RESEARCH ASSOCIATES, INC.

Electronic Research Associates, Inc. is the pioneering organization in the field of tubeless and transistor designs. ERA's high calibre of engineering, development and production talent has been responsible for an imposing list of technical achievements:

- *First Miniaturized Power Packs*
- *First Transistorized Power Supplies*
- *First Automatic Transistor Test Equipment*
- *First Dual Output Tubeless Supplies*
- *First Packaged Transistor Circuits*
- *First Transistor Application Power Supplies*
- *First Constant Current Generators*
- *First High Current, Semi-Conductor Regulated Supplies*
- *First "E" Core Transistorized Convertors/Inverters*
- *First High Power Semi-Conductor Frequency Changers*
- *First Slim-Tran Space Saving Transformers*
- *First Transistor Transient Filters*
- *First Transistorized Limit Relay*

In addition to stock and catalogue items, ERA specializes in custom engineered units designed to customer specifications, and supplied in either prototype lots or production quantities. Quotations and comments covering your requirements gladly supplied without obligation on your part. Write us for a quotation on your special needs.

Catalogue Sheets and Technical Bulletins Are Available Covering All Products. Write For Catalogues Listed Below:

	Catalogue No.
MINIATURIZED POWER PACKS	
• TRANSPAC Miniaturized Power Packs	102
• Transistorized TRANSPACS For All Power Applications	103
SOLID STATE INVERTERS/CONVERTERS	
• TRANSPAC Transistorized Inverters and Converters	104A
TRANSISTORIZED POWER SUPPLIES	
• Transistorized Regulated DC Power Supplies	105
• Transistorized High Current Regulated Power Supplies	106
TRANSISTOR POWER SOURCES	
• Transistor Application Power Supplies	107
SOLID STATE HI-VOLTAGE POWER PACKS	
• HYPAC Miniature Hi-Voltage DC Power Supplies	501
TRANSISTORIZED FREQUENCY CHANGERS	
• TRANSPAC Transistorized Frequency Changers	110
CONSTANT CURRENT GENERATORS	
• Special Purpose Power Supplies	109
• Transistorized Constant Current Generator (Model CC2000)	113
MULTIPURPOSE POWER SUPPLIES	
• Solid State Power Supplies For All Power Applications	111
TRANSISTOR PACKAGED CIRCUITS	
• TRANSAMP Miniaturized Transistor Packaged Circuits	108
TRANSISTOR TEST EQUIPMENT	
• Transistor Test Equipment	101
TRANSISTORIZED LIMIT RELAY	
• Transistor Circuit Protector	112
SPACE-SAVING TRANSFORMERS	
• SLIM-TRAN Space-Saving Transformers	301
TRANSISTOR TRANSIENT FILTERS	
• SLIM-TRAN Transient Filters	302

ERA PACIFIC, INC.
1760 Stanford Street, Santa Monica, California • Exbrook 3-0511

Numbers after address show the product and service classes in which firm appears. These classified listings follow the Alphabetical Directory. For complete instructions on use of this Directory, see pink sheets preceding catalog section.

RELIABILITY is the word

El-Menco *Dur-Micas* are the CAPACITORS with BUILT-IN RELIABILITY.

TWO WAYS . . .
- Highest-Grade INDIA RUBY Mica Films . . .
- TOTAL DEBUGGING . . .

Guarantee Super Dependability*

the finest of materials...

superior engineering know-how . . . combine to build in El-Menco Dur-Mica Capacitors the highest reliability . . . to give long, ever-ready, powerful service in electronic equipment — from lightning-fast giant brains to tiny transistor receivers.

* unique features in El-Menco *Dur-Micas*

- Specially-selected, highest-grade India Ruby mica films . . . pre-tested to have highest insulation resistance . . . greatest dielectric strength . . . lowest dissipation factor. Specially developed dipped coating retains the superior properties of India Ruby mica.

- Debugging — the removal of early failures by subjecting mica capacitors to short life tests at elevated voltages and temperatures . . . THE SCORE . . . DM30, 10,000 MMF, "Debugged" El-Menco Dur-Mica Capacitors . . . subjected to 257,000 hours of life at 85°C with 100% of the rated DC voltage applied . . . turned in a record computed reliability performance — APPROX. 0.6% CUMULATIVE FAILURES OR ONLY 1 FAILURE PER 43 MILLION UNIT-HOURS.

El Menco "Dur-Micas" have *proved* their tremendous power and ability under accelerated conditions of 1½ times rated voltage at *ambient temperatures of 125°C and 150°C*, winning out over all others in longest life, most powerful performance, smallest size, greatest stability.

DM15, DM16, DM19, DM20, DM30, DM40, DM42, DM43 . . . perfect for extreme miniaturization; ideal for new miniatured designs and printed wiring circuits. New "hairpin" parallel leads insure easy applications in radio, television, guided missiles. El-Menco Dur-Micas meet all humidity, temperature and electronic requirements, including military specs.

Avoid Costly Breakdowns . . . with Two-Way Built In Rugged Reliability.

Numbers after address show the product and service classes in which firm appears. These classified listings follow the Alphabetical Directory. For complete instructions on use of this Directory, see pink sheets preceding catalog section.

ELECTRONICS RELIABILITY

MINNI E

CONNECTORS

Newest miniature electrical connectors, fully conforming to the "E" performance requirements of MIL-C-5015C. 4 constructions, 5 shell sizes, 17 insert arrangements are available.

MS CONNECTORS

AMPHENOL provides complete line of MS/AN types, including new Stub E – small environmentally resistant "E's" per MIL-C-5015C.

RF CONNECTORS

Hundreds of UG types in every popular series. The remarkable miniature Subminax connectors are available only from AMPHENOL. Matching RG-/U cables also from AMPHENOL.

CUSTOM ENGINEERING

AMPHENOL Custom Engineering, through research and development, works to anticipate the needs of our customers. Basic design improvements in materials, processes and performance come from this group – furthering the connector "art" in imaginative ways that benefit the entire industry. New concepts (externally wired and removable *Poke Home* contacts) and new lines (minniE, Stub E) are advanced by:

AMPHENOL ELECTRONICS CORPORATION *chicago 50, illin*

CABLES & WIRE

Almost 100 RG cables, standard and miniature, in polyethylene and Teflon dielectrics; Teflon Hook-Up Wire to MIL-W-16878B. Cable assemblies also.

AMPHENOL

RACK & PANEL CONNECTORS

Up to 50 contacts available in Blue Ribbon and Micro-Ribbon connectors; two complete new lines of R & P types are available with *Poke Home* contacts.

For details, circle #151 on Reader Service Card

HERMETIC SEALS

Hermetically sealed MS/AN, miniatures and Rack & Panel connectors. Available as *Idento Seals* with contact identification on the compression sealed glass inserts.

Fairchild silicon transistors

Milli-micro-second switching speeds and high current too

Where applications require transistor performance beyond previously accepted high limits, Fairchild Silicon Transistors offer an exceptional three-way combination:

1) 50 milli-micro-second typical rise time — permits faster switching rates in computing devices. Total switching time is typically 0.2 microseconds.

2) 1 watt dissipation at 100° C. — Saturation resistance is 10 ohms maximum. Resulting high-current capability provides opportunities to increase equipment performance while reducing circuit complexity.

3) Silicon temperature performance — Maximum junction temperature of 175° C. gives low leakage and more safety factor at any lower temperature.

These characteristics are the outcome of the solid-state diffusion technique used at Fairchild. Other important accomplishments of this process are excellent reliability and a high order of electrical uniformity throughout large production runs.

The accomplishment of a research-production team
Singleness of purpose did it. Fairchild assembled a uniquely experienced team of research scientists and production engineers whose objective was to bring the advanced solid-state diffusion process under close control. They succeeded in putting laboratory-quality silicon transistors into quantity manufacture with firm product specifications exceeding anything previously offered.

2N696 and 2N697 SILICON TRANSISTORS

Symbol	Specification	Rating	Characteristics	Test Conditions
V_{CE}	Collector to Emitter voltage (25° C.)	40v		
P_C	Total dissipation Case temp. 25° C. Case temp. 100° C.	2 watts 1 watt		
h_{FE}	D.C. current gain		2N696 — 15 to 30 2N697 — 30 min.	I_C = 150ma V_C = 10v
R_{CS}	Collector saturation resistance		6Ω typical, 10Ω max.	I_C = 150ma I_B = 15ma

For full information and specifications, write Dept. E-9D

FAIRCHILD SEMICONDUCTOR CORPORATION

844 CHARLESTON ROAD • PALO ALTO, CALIFORNIA

The unretouched scope face below shows the time comparison of input (positive) and output (negative) pulses in a non-saturating mode. Time base is 20mμsec. per large division on the scope face. Maximum collector current is 50 ma.

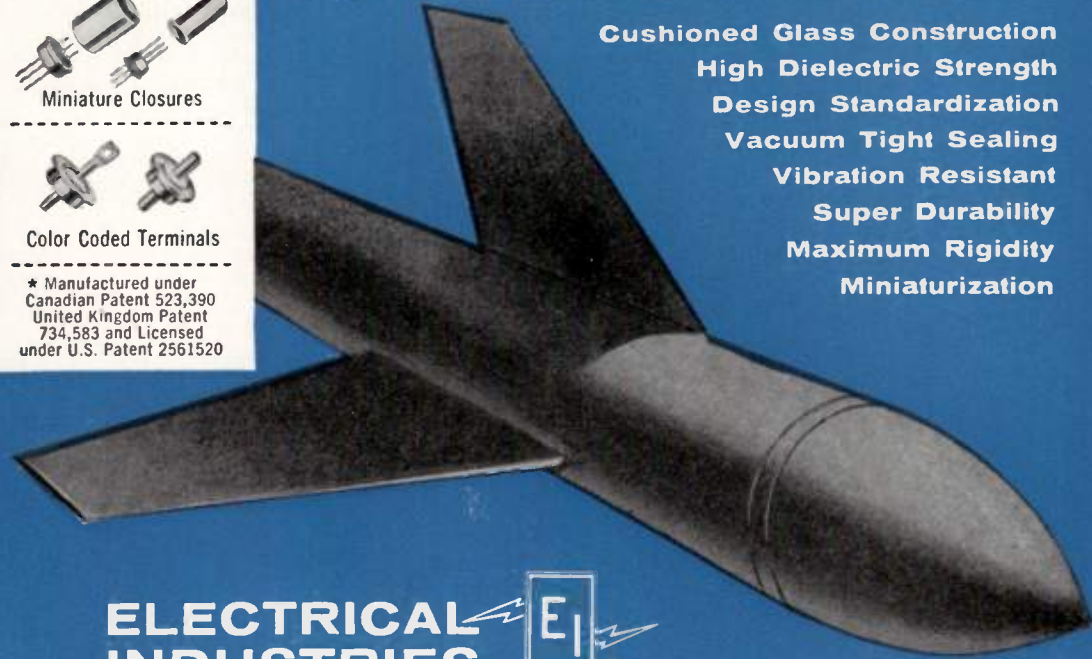
Miniature Closures

Color Coded Terminals

★ Manufactured under Canadian Patent 523,390 United Kingdom Patent 734,583 and Licensed under U.S. Patent 2561520

Complete Facilities to Meet Your Hermetic Seal Requirements



E-I GLASS-TO-METAL SEALS*

Standard, miniature or sub-miniature, E-I sealed terminals are available for every commercial or military requirement. E-I super-rugged compression seals meet the most critical specifications and provide maximum immunity to vibration, mechanical shock and wide temperature and pressure changes.

In addition to hundreds of economical standard terminals and closures, E-I offers complete service on custom seals or will seal components of your own manufacture. Request catalog today, or consult E-I on your specific hermetic seal requirements.

Check These 8 Design Advantages

- Cushioned Glass Construction
- High Dielectric Strength
- Design Standardization
- Vacuum Tight Sealing
- Vibration Resistant
- Super Durability
- Maximum Rigidity
- Miniaturization

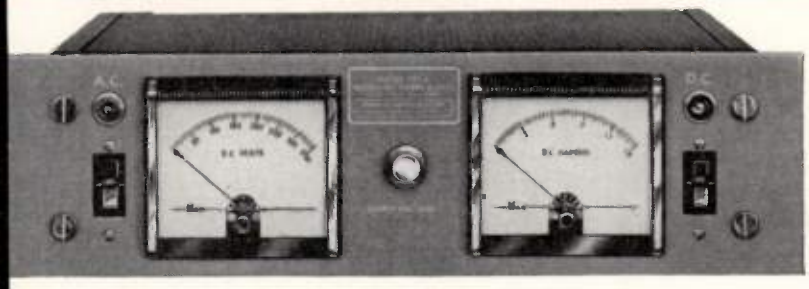
A complete line of

POWER SUPPLIES

...including

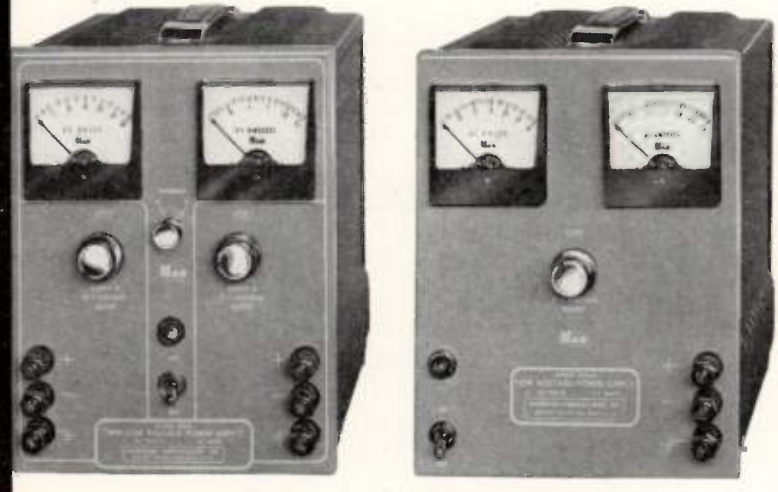


VARIABLE VOLTAGE HIGH CURRENT

700 Series

Regulation Constant

Over Full Voltage and Current Range!



Model 700A
Price, $750.00

LESS THAN .01 VOLTS VARIATION, FROM NO LOAD TO 1.5 AMPS... LESS THAN 500 MICROVOLTS RIPPLE... CONTINUOUSLY VARIABLE FROM 3 TO 325 VOLTS.

A new design philosophy enables the 700 Series of DC power supplies to provide a high degree of regulation at high output currents. Two feedback loops are employed—one, to keep the voltage across the series tubes constant; the other, to keep the output voltage constant. The result? Greater efficiency and more accurate regulation!

LOW VOLTAGE HIGH CURRENT

800 Series

left
Model 800A
Price, $580.00

right
Model 800B
Price, $395.00

LESS THAN 500 MICROVOLTS RIPPLE... LESS THAN .01 VOLTS VARIATION FROM NO LOAD TO FULL LOAD

Model 800A consists of two continuously variable 2 to 36 volt, 0 to 1.0 ampere, power supplies in a single housing that can be connected in series to obtain a single 4 to 72 volt supply at 1.0 amps.

Model 800B is a single, continuously variable, 2 to 30 volt, 0 to 2.5 ampere, power supply. Both models use transistor circuitry throughout and feature automatic short circuit and overload protection. When overloaded or short circuited, the output current is cut off before any transistor damage can occur. Under these conditions, the supply tries to re-establish the output voltage at approximately four second intervals, and will do so when the short circuit or overload condition has been removed.

TelAutograph and other modern communications and facilities speed Streamliner orders from sales to shipping in record time.

new Formica® streamliner program delivers more copper clad laminates faster

Streamliner is an entirely new program that delivers *more* Formica copper clad laminated plastics *faster* . . . and gives circuit designers and fabricators these extra advantages:

more grades Nine outstanding grades (see chart above) cover the broad range of standard circuit requirements. In addition, our research and development facilities – with the new resin laboratory and processing plant – are at your service for the development of new grades for special applications.

more properties Every conceivable combination of electrical, chemical and mechanical properties including highest IR; cold punching; arc- and heat-resistance; "hot strength"; dimensional stability; low moisture absorption; greater bond strength and solder resistance.

more sizes Thicknesses from 1/32" to 1/4". Standard sheet sizes 36" x 42" and 36" x 84". Additional sizes – 36" x 60", 36" x 72" and 36" x 96" – available on special order.

Send for your Streamliner Bulletins

THE FIRST MACHINE-MADE RF COIL FOR

FULLY-AUTOMATIC ASSEMBLY

OF VIDEO IF STRIPS

FEATURES

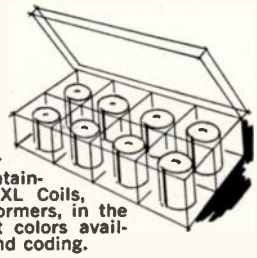
PATENTED DESIGN
Design consists of a core and outer case molded into a single unit of rugged plastic. Mounting lugs are extensions of the coil itself . . . no separate soldered pieces to loosen. Covered by U.S. Patent 2,836,805.

RUGGED CONSTRUCTION
XL is completely encased in a sturdy plastic cup; requires less care in handling; designed for hopper feeding.

SUPERIOR PERFORMANCE
Low-temperature coefficient for inductive drift of plus 50 parts per million per degree centigrade. Machine-made precision eliminates rejects encountered with handmade coils.

ECONOMICAL
XL coils cost less; require smaller inventories because they're available in unlimited supply on short notice.

COILS AND TRANSFORMERS
Standard XL available in one and two windings, complete with adjustable tuning.



The new Essex XL — the first truly *automated coil* — is precision-made *by high-speed machinery* for automatic or hand insertion into printed circuit boards.

Sturdily constructed, the patented XL coil is completely encased in tough, durable plastic . . . in your choice of 8 brilliant colors.

The new XL coil already is saving money for TV manufacturers who have adapted it to the automatic assembly of video strips. XL will speed *your production*, and reduce *your costs*, too. Write today for more information about this amazing new electronic development.

We welcome inquiries from coil manufacturers interested in a license agreement for the manufacture of this unique new coil.

FREE!

Write today, on your company letterhead, for your free sample kit containing 4 Single Inductor XL Coils, and 4 Bifilar XL Transformers, in the full range of 8 brilliant colors available for identification and coding.

There is No Substitute for Reliability—

NEW *miniaturized*
"MAG MOD"

Magnetic Modulators

All Magnetic Modulators strictly conform to MIL-T-27A. Some typical circuit applications for Magnetic Modulators are algebraic addition, subtraction, multiplying, raising to a power, controlling amplifier gains, mechanical chopper replacement in DC to fundamental frequency conversion, filtering and low signal level amplification.

Especially Engineered for Printed Circuit Wafer Designed Structures and Circuit Assemblies Featuring:

Actual Size

- FASTER RESPONSE TIME
- NEGLIGIBLE HYSTERESIS
- EXTREME STABILITY
  (Ambient Temp. Range from −65°C to +135°C)
- COMPACT SIZE
- LIGHTWEIGHT
- INFINITE LIFE
- COMPLETE RELIABILITY

Miniaturization of the new Magnetic Modulator makes it possible to incorporate this component into wafer type structures and transistorized printed circuit assemblies without sacrificing ruggedness or reliability.

CONSULT GENERAL MAGNETICS on magnetic amplifier components for automatic flight, fire control, analog computers, guided missiles, nuclear applications, antennas, gun turrets, commercial power amplifiers and complete control systems. Call or write for Catalog B on miniature and standard components.

	 Magnetic Input Modulator	 Magnetic Input Modulator	 Magnetic Thermocouple Converter
TYPE NUMBER	IMM-436-2	IMM-436-3	MTC-435-2
Excitations Frequency—Carrier	400 cps	400 cps	400 cps
Signal Winding DC Resistance	1000 ohms ±15% each signal winding	1000 ohms ±15% each signal winding	10 ohms ±15%
AC Excitation Volts	5.5 V. @ 400 cps	2.5 V. @ 400 cps	6 V. RMS
Input DC Signal Range	0 to ±100 μa.	0 to ±80 μa.	0 to ±10 mv.
AC Output Range	0 to 2.2V. @ 400 cps (sine wave)	0 to 1.5V. @ 400 cps (sine wave)	0 to 2.7V. @ 400 cps (sine wave)
Overall Dimensions (Inches)	27/32x27/32x1 5/16	27/32x27/32x1 3/16	1 1/4x7/8x5/8
Null Amplitude (Noise Level)	20 mv. RMS	15 mv. RMS max.	25 mv. RMS max.
Output Impedance	7000 ohms	7000 ohms	10,000 ohms
Null Drift (In terms of input signal) −65°C to +100°C	±0.5 μa. max.	±0.5 μa. max.	±0.1 mv. max.
Hysteresis — % of maximum input signal	0.5% maximum	0.5% maximum	0.5% maximum
Type of Mounting	Male Stud	Female Insert	Male Stud
Maximum % Distortion in Output	25%	15 %	20%
Weight Ounces	1.3 oz.	1.2 oz.	1.5 oz.

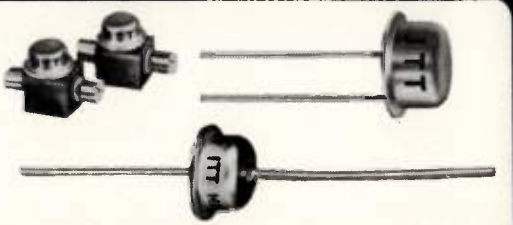
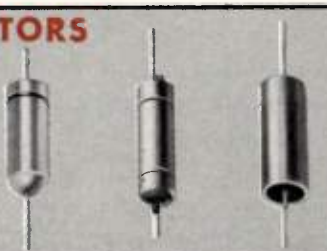
MINIATURE SWITCHES

Reliability and miniaturization for military and commercial electronic equipment . . . ensured operation under all environmental conditions . . . rugged construction with solid coin silver contact arms . . . all wear parts hardened and plated.



SELENIUM RECTIFIER LINE

High density rectifiers . . . 60 volt rectifiers . . . contact protectors . . . encapsulated rectifiers . . . high temperature aircraft rectifiers . . . miniature dual and single diodes . . . high voltage rectifiers . . . specialized industrial rectifiers . . . high temperature industrial rectifiers.



SILICON RECTIFIER LINE

For industrial and home entertainment applications . . . versatile electrical, mechanical, and design characteristics . . . available in all popular mounting styles . . . single and dual universal replacement kits . . . Kwick-Klip Kit . . . 100% replacement.

MINIATURE TANTALUM • • • ALUMINUM CAPACITORS

A complete line of tantalum and miniature aluminum capacitors . . . tantalum types: foil, solid anode and wet anode . . . extensive range . . . Aluminum dry electrolytic . . . meet MIL specs . . . OEM, industrial and commercial applications.

HERMETIC GLASS SEALS

Rugged, vacuum tight compression seals . . . withstand extreme strain, vibration and thermal shock . . . exclusive Inter-Seal process insures insulating characteristics to 100,000 megohms . . . meet MIL specs . . . custom seals to your exact requirements.

A COMPLETE INDEX OF

. . . reliable products from one world-famous manufacturer

DESIGNED FOR THE MILITARY, INDUSTRIAL AND COMMERCIAL MARKETS . . . Aircraft . . . Missiles . . . Radio and TV . . . Industrial Controls . . . Military Equipment . . . Computer and Processing Devices . . . Instrumentation.

Write today for complete technical specifications.

Hoffman

Leader in Diffused Junction Silicon Semiconductors offers the greatest selection of silicon **diodes, rectifiers, regulators, solar cells.**

	Available in Case Types
General Purpose Silicon Junction Diodes *26 types — PIV Range — 6.8V thru 470V*	M1
Double Anode Silicon Junction Diodes *14 types — Zener Voltage Range: 3.0V thru 45V*	M1
Zener Diodes *21 types — Zener Voltage Range: 2.0V thru 145V*	M1
HB Silicon Junction Diodes *6 types — PIV Range — 6.8V thru 270V*	M1
Zener Reference Devices *OPERATING ZENER VOLTAGE* *1N429 — 6.2V ±5%* *1N430, 1N430A, 1N430B, 1N1530, 1N1530A — 8.4V ±5%* *15 types — 1N1735 thru 1N1742A — Zener Voltage Range: 6.2V thru 49.6V*	M1 M3 P1 E1A, E2A E3A, E4A
Silicon Junction "Glass" Diodes *General Purpose — 8 types PIV Range — 25V thru 175V* *Fast Recovery — 5 types Zener Voltage Range: 30V thru 200V* *Zener — 6 types Zener Voltage Range: 2.0V thru 8.0V*	 G1 G1 G1
Medium Power "Top Hat" Rectifiers *Axial Types — 6 types PIV Range — 50V thru 500V* *Stud Mounted Types — 8 types PIV Range — 95V thru 570V*	 M2 S1E
Medium Power Diffused Junction Rectifiers *12 types — PIV Range — 50V thru 1000V*	M1A
Silicon Diffused Area Zener Regulators • *10 watt rating — 38 types Zener Voltage Range: 5.6V thru 200V* • *One (1) watt rating — 38 types Zener Voltage Range: 5.6V thru 200V* • *¼ watt rating — 38 types Zener Voltage Range: 5.6V thru 200V*	 S1E M1A G1

Silicon Solar Cells

Ranging in size and power from 0.1 square centimeter (1mW) to square yards (K watts)

Only Merck makes all three forms of ultra-pure

SILICON

for semiconductor applications

Merck Polycrystalline Billets—have not been previously melted in quartz, so that no contamination from this source is possible. Merck guarantees that single crystals drawn from these billets will yield minimum resistivities over 50 ohm cm. for n type material, and over 100 ohm cm. for p type material. Merck Silicon Billets give clean melts with no dross.

Merck Polycrystalline Rods—are ready for zone melting as received . . . are ideal for users with floating-zone melting equipment. Merck Polycrystalline Rods (8½ to 10½ inches long and 18 to 20 mm. diameter—smaller diameters on special order) yield more usable material. In float-zone refining one can obtain minimum resistivities of 1000 ohm cm. p type with minimum lifetime of 200 microseconds.

Merck Single Crystal Silicon—offers manufacturers without floating-zone equipment semiconductor Silicon of a quality unobtainable elsewhere. No crucible-drawn crystals can match the reliability of Merck single crystal material in semiconductor devices. Merck Single Crystal Silicon is available with min. resistivity of 1000 ohm cm. p type. Other resistivities ranging from 1.0 ohm cm. p or n type up to 1000 ohm cm. will soon be available.

© Merck & Co., Inc.

For additional information on specific applications and processes, write Merck & Co., Inc., Electronic Chemicals Division, Dept. ES-2, Rahway, N.J.

ULTRA-PURE SILICON—a product of MERCK

BASE BORON CONTENT BELOW ONE ATOM OF BORON PER SIX BILLION SILICON ATOMS

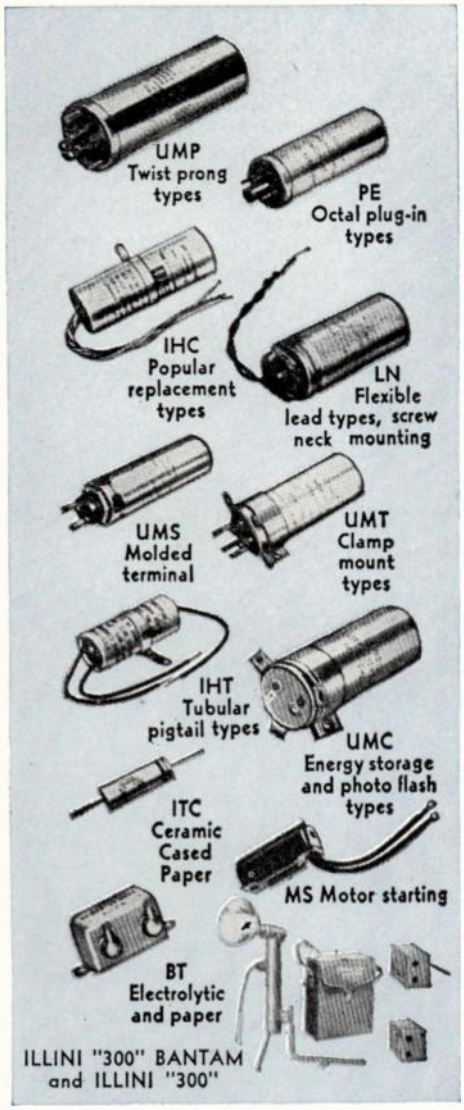
ILLINOIS CAPACITORS

KNOWN THE WORLD OVER FOR



Time Tested Quality

For almost 25 years ILLINOIS CONDENSER COMPANY has been foremost in the development of ever greater dependability and longer life in all types of capacitors. Listed below are only a few of the more popular—and most recently developed ILLINOIS types.

SUB-MINIATURE ELECTROLYTIC CAPACITORS

A complete line for low voltage D.C. circuits. Have many advantages including Aluminum Cases patented construction; hermetically-sealed; immersion-proof; excellent life characteristics; low leakage currents; shock and vibration-resistant; ideal for applications requiring minimum size and weight.

TYPE UMP — Standardized twist-prong type. Patented molded terminal construction for efficient, stable operation under extreme temperature ranges. Capacity ranges from 10 to 3,000 MFD and from 6 to 525 WVDC.

TYPE PE — Hermetically sealed plug-in octal base type. Especially useful in fixed or mobile communications equipment. Operating temperature range −40°C to +85°C. Available in wide ranges of capacities and voltages.

TYPE IHC — Popular multiple section types with flexible leads, insulating sleeves and mounting straps. Equally adaptable for original equipment or replacement purposes. Available in capacities from 10 to 250 MFD at 25 to 500 WVDC.

TYPE LN — Extruded aluminum can type with screw neck mounting and flexible leads. Capacity ranges from 8 to 80 MFD and from 450 to 600 WVDC.

TYPE UMS — Hermetically sealed inverted can type with screw neck mounting and molded-in terminals. Wide ranges of capacities and voltage ratings. Meets all government specs.

TYPE UMT — Inverted can type with clamp mounting. Hermetically sealed, shock resistant with new molded terminal construction. Ideal for use in highest quality equipment. Meets all government specs. Wide capacity and voltage ranges.

TYPE IHT — Popular tubular aluminum can, pigtail type electrolytic. Internal riveted construction. In capacity ranges of 1 to 2000 MFD and from 6 to 600 WVDC. Also available with solder lug terminals. Supplied with insulating sleeves.

TYPE UMC — Low leakage-high capacity electrolytic for power filter packs, voltage stabilization, energy storage and photo flash. Capacity ranges up to 10,000 MFD to 50 V. and 1000 MFD at 450 V.

TYPES IMT and SMT — Newly developed "miniature" and sub-miniature electrolytics with hermetic seals. Especially designed for printed circuits, portable equipment, transistor equipment and any application where size and weight must be kept at an absolute minimum. Capacity ranges from .5 to 100 MFD and from 3 to 50 WVDC. Ceramic case and aluminum case types.

TYPE MS — Motor starting capacitors available in bakelite and aluminum cases. Long wire leads with terminals. Capacities to 5,000 MFD at 115, 220 and 320 VAC.

TYPE BT — Hermetically sealed bathtub type especially designed to withstand vibration and shock. Available in electrolytic and paper capacitor types for government and commercial use.

ILLINI 300 ELECTRONIC FLASH KIT — A new high intensity, low voltage electronic photoflash kit featuring latest advances in tube, capacitor and reflector design. 100 watt second output. Uses standard type batteries. Easily assembled, rugged, reliable and economical to operate. AC Power Pack also available.

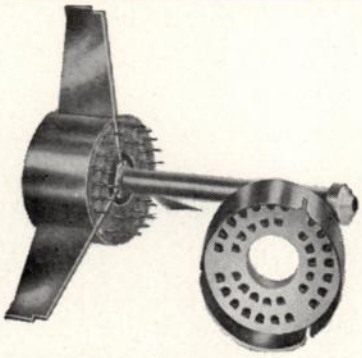
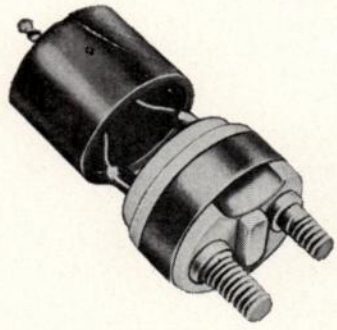
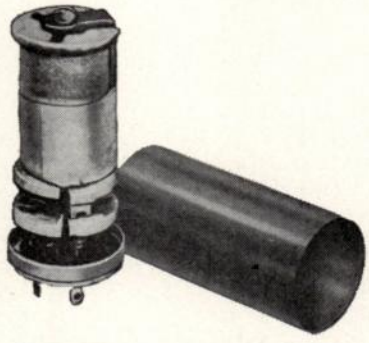
DESIGN ACHIEVEMENTS WITH SUPRAMICA* CERAMOPLASTICS



OPTICALLY FLAT CAPACITY COMMUTATOR PLATE|SUPRAMICA 500



HIGH-TEMPERATURE AIRCRAFT TERMINAL BLOCK|SUPRAMICA 560



HIGH-TEMPERATURE A-N CONNECTOR |SUPRAMICA 560

RADIATION RESISTANT AIRCRAFT ENGINE CONNECTOR|SUPRAMICA 555

HIGH TEMPERATURE FIREWALL THERMOCOUPLE|SUPRAMICA 555

ORGANIC VAPOR FREE HIGH TEMPERATURE SEALED RELAY|SUPRAMICA 555

HIGH TEMPERATURE ceramoplastic INSULATION

SUPRAMICA ceramoplastics provide broader design scope for product engineers

Increased thermal endurance . . . total, permanent dimensional stability . . . better electrical properties . . . lower density and improved machineability of SUPRAMICA ceramoplastics bridge the design gap between organic plastics and conventional ceramics. The world's most nearly perfect insulation, SUPRAMICA ceramoplastics allow product engineers to meet the requirements of today's thermal problems.

There is no possibility of shrinkage, growth or age polymerization since the materials are completely inorganic, made with SYNTHAMICA* synthetic mica. Metal inserts molded in SUPRAMICA ceramoplastics cannot loosen during thermal cycling because coefficients of expansion are closely matched. Other desirable properties are high dielectric strength, radiation and arc resistance, low electrical loss, resistance to moisture, oil and organic solvents. In thousands of military and critical industrial applications, SUPRAMICA ceramoplastics are contributing to better, safer, more reliable operation of electrical and electronic equipment.

Write for complete technical information.

SUPRAMICA* 560 — for temperatures up to 500°C (932°F)
SUPRAMICA* 555 — for temperatures up to 350°C (660°F)
SUPRAMICA* 500 — sheet and rod material for machining

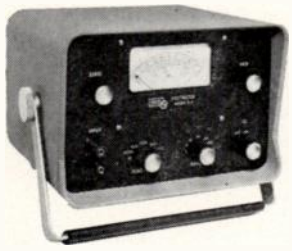
New additions to the SIE line of

ADVANCED DESIGN INSTRUMENTS

SIE instrumentation continues to set standards for accuracy, versatility and reliability. These new ADI instruments join the already popular:



R-1 Voltmeter—laboratory-precise AC-DC measurements, ohmmeter and direct coupled amplifier.

C-6 Resistance Meter—direct reading from 0 to 10,000,000 megohms.

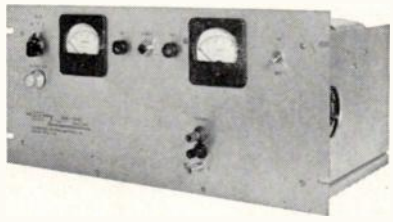
E-2 Comparison Bridge—for fast, accurate component matching.

M-2 Oscillator—low distortion sine waves from 1 to 120,000 cps.

Let your SIE representative demonstrate these instruments in your lab and watch for additions to the ADI line in the near future.

model R-3 transistorized voltmeter

Combines more desirable features than any other instrument in its class. Transistorized circuitry provides outstanding reliability, eliminates warm-up, gives instantly stable operation. Battery operation makes the R-3 immune to transient power-line disturbances. Self-contained battery source in a quick-change compartment gives more than 300 hours battery life using readily available batteries. "Battery Test" indicates battery condition.
VOLTAGE RANGES: AC, 1 mv to 1000 mv full scale in 14 ranges; DC, 1 v to 1000 v full scale + or — in 7 ranges; Electrometer, 0 to 1 vdc + or — • **RESISTANCE RANGES:** 10 ohm, 100 ohm, 1 k, 10 k, 100 k, 1 m half scale • **INPUT IMPEDANCE:** AC, 10 m, shunted by 25 mmf; DC, 100 m; Electrometer, Greater than 10,000 megohms • **FREQUENCY RESPONSE** (on AC): 10 cps to 500 kc • **ACCURACY:** 3% • **DIMENSIONS:** 11 1/16" W x 7 1/2" H x 10 3/8" D • **PRICE:** $295.00 f.o.b. Houston, Texas.



model N-1 transistorized signal generator

Continuously variable over a frequency range from 2 to 200,000 cps. Transistorized, battery operated, providing 1 v. rms output at less than 1% distortion. Five band, extended frequency range makes this instrument particularly useful in the design, test and repair of audio, geophysical, medical, and control equipment. Special features include calibrated attenuator and adjustable combination handle-support.
FREQUENCY RANGE: 2 cps to 200 kcps in 5 bands (10:1) • **CALIBRATION ACCURACY:** Frequency 2%, 20 cps to 200 kcps • **LEVEL** 5% • **OUTPUT:** Volts (Rated) 1.0 v. rms at less than 1% distortion • **SOURCE IMPEDANCE:** 1500 ohms in attenuator positions; less than 50 ohms in low impedance position • **DIMENSIONS:** 7 1/2" H (with feet) x 11 3/16" W (with handle) x 10 3/8" D • **PRICE:** $275.00 f.o.b. Houston, Texas.

New circuit developments now enable SIE to offer transistorized power supplies to cover all possible applications: DC to DC, DC to AC and AC to DC; regulated and unregulated, high and low voltage and current ratings, for laboratory, industrial and military applications.

TPS-1 transistorized power supply

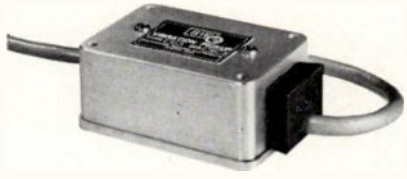
TPS-1 Rack Mounted

For use in every laboratory or industrial application to eliminate wet storage batteries.

TPC transistorized power converters

TPC-2

Small, compact, with efficiency better than 80% —ideal replacement for dynamotors and vibrator type power supplies.
TPC-2 60 watt, TPC-3 100 watt, TPC-4 25 watt



TPC-7

TPC 5, 7, and 8. These compact units are useful in a wide range of applications requiring a well regulated DC output from an AC power source.

model K-1 microsource

Can be used in conjunction with any standard oscillator in its frequency range to produce small, known, controlled test signals. Internal battery and associated polarity-reversing switch for testing present day high-gain DC amplifiers. Output, read directly on front panel meter, is continuously variable from zero to 10 volts.
OUTPUT VOLTAGE RANGE: 0-10 v. continuously adjustable (minimum full scale, 10 microvolts) • **FREQUENCY RANGE:** ± DC; AC, 10 cps to 1 megacycle • **ACCURACY:** 3% • **INPUT REQUIRED:** 10 volts rms for AC output (DC source self-contained) • **INPUT IMPEDANCE:** Between 1900 ohms and 3000 ohms, depending on control settings • **OUTPUT IMPEDANCE:** 0-10 v Range, Less than 2000 ohms; 0-1 v Range, 500 ohms; 0-0.1 v Range and Lower Ranges, 50 ohms • **DISTORTION:** less than 0.02% • **DIMENSIONS:** 8 5/8" W x 5 3/4" H x 6" D • **PRICE:** $125.00 f.o.b. Houston, Texas.

TD series vibration pickups

Temperature stability of magnetic damping with sensitivity previously available only by fluid damping are made possible by development of unique magnetic circuit. Five compact 9 oz. models are available with natural frequencies ranging from 1.8 to 5.6 cps and response to 2500 cps on undamped models — 1500 cps on damped units.

NOMINAL OPEN CIRCUIT SENSITIVITY: 300 mv (rms)/in/sec (rms) • **THRESHOLD VELOCITY:** 0.01 in/sec at 50 cps • **COIL RESISTANCE:** 900 ohms • **DISPLACEMENT AMPLITUDE:** 0.560 in max. between stops • **COIL SUSPENSION:** jewel bearing, hairspring control • **PRICE:** $195.00 f.o.b. Houston, Texas

ENGINEERS, SCIENTISTS AND SUPPORTING PERSONNEL

WHAT COULD YOU EARN IF 1,000 FIRMS KNEW WHAT YOU CAN DO?

HAYNES ASSOCIATES is a confidential engineering search office retained by the leading industrial firms. It is staffed by graduate engineers and technical employment directors from industry. Don't wait—act now!

HAYNES ASSOCIATES publishes a semimonthly bulletin (1st and 15th). It is mailed to 1,000 companies. Each applicant is assigned a number (names are withheld). Names of present or past employers are also withheld. Your name and address only, will later be given to interested companies.

THERE IS ABSOLUTELY NO CHARGE FOR ANY OF OUR SERVICES TO GRADUATE ENGINEERS AND SCIENTISTS (REGISTRATION, SUMMARIZING RESUME, INCLUSION IN BULLETIN OR PLACEMENT).

Drop a postcard with your name and address to HAYNES ASSOCIATES today. We will send you our resume guide to complete. If you are within commuting distance, telephone Hobart 2-7117 tomorrow for either an appointment during the day, evening or Saturdays. Open on Saturdays and evenings by prior appointment only.

To expedite matters send us today a detailed resume with all the facts on your academic training, vital statistics and professional experience—be sure to include dates and salaries, type of position desired, geographic location and salary expected. WE WILL HAVE A CONFIDENTIAL SUMMARY OF YOUR QUALIFICATIONS IN THE HANDS OF 1,000 COMPANY-CLIENTS WITHIN DAYS.

At absolutely no charge to you, HAYNES ASSOCIATES will circularize a confidential summary of your training and experience to 1,000 industrial companies.

You have no idea what you can command in today's employment market and no doubt you are too busy to find out.

HAYNES ASSOCIATES

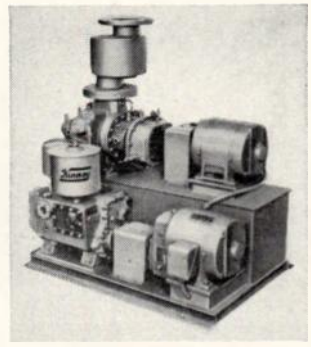
Kinney® HIGH VACUUM EQUIPMENT

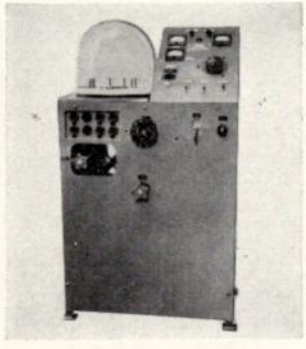


SINGLE STAGE VACUUM PUMPS

3 Single Stage Simplex and 11 Single Stage Duplex Pumps ranging from 13.0 to 780 cfm free air displacement. These oil-sealed Rotary Piston Pumps, featuring gas ballasting, develop ultimate pressures to .010 mm Hg or better.

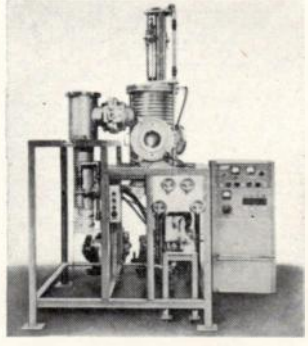
TWO STAGE VACUUM PUMPS

These Compound Pumps, designed for work in the low micron area, comprise 6 models of the famous KINNEY design, with pumping speeds from 2.0 to 46.0 cfm free air displacement. Gas-ballasted . . . ultimate pressures to .002 mm Hg or lower.



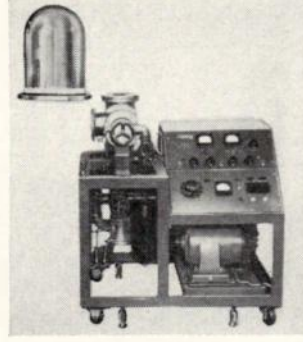
MECHANICAL BOOSTER VACUUM PUMPS

The greatest advance in High Vacuum pumping, featuring two and four stage Pumps to produce clean, dry Vacuum in the order of .002 mm Hg. These KINNEY Pumps provide a range from 30 to 5100 cfm free air displacement, affording highest pumping speeds at minimum cost.



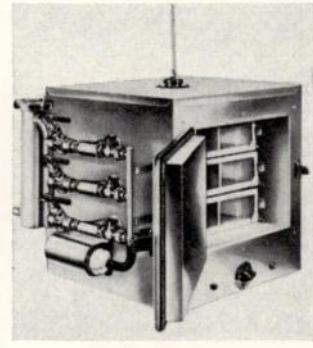
OIL DIFFUSION PUMPS

High Speed and Fractionating types in advanced KINNEY design. Feature many distinctive advantages with exceptional pumping speeds in the low micron region. Models range from 1" to 16". Available with special KINNEY Valve Baffles.



HIGH VACUUM EVAPORATORS

From small laboratory research models to full production sizes with chambers to 6 ft. in diameter. The KINNEY SC-3 Evaporator includes features found in no other equipment of this type and is widely recognized as the standard laboratory unit.



CRYSTAL GROWING AND PURIFYING UNIT

A new development of KINNEY advanced engineering. This Floating Zone Refiner will process loads 6" to 10" long and up to 1½" diameter providing crystal purification heretofore unattainable. Arranged for controlled atmosphere or high vacuum operation.

PACKAGED PUMPING SYSTEMS

Versatile tools for speedy evacuation of chambers, tanks, bell jars, tubes and other equipment. The Pumping System comprises a KINNEY Cold Trap, Fractionating Oil Diffusion Pump and Two-stage, Gas Ballasted Mechanical Vacuum Pump.

HIGH VACUUM OVEN

Fabricated completely from stainless steel and aluminum with Pyrex glass doors and Silicone "O" rings and gaskets — no contamination of parts being cured. Three vacuum chambers manifolded to permit evacuating any or all chambers independently.

VACUUM VALVES

Performance-proved right angle and straight through types in sizes ½" to 3". The flanged bonnet type of construction with "O" ring seals eliminates the use of wrenches for bonnet assembly installation. High Vacuum Poppet Valve Baffles in sizes from 4" to 16".

VACUUM GAGES

The KINNEY family of integrated Vacuum Gage Systems covers a large range of pressures. The newly designed, Compensated Thermocouple Gage accurately spans the range from 3000 microns to 1 micron, while the KINNEY TIG-5 gives accurate reading from 1 x 10-3 mm Hg to 1 x 10-7 mm Hg.

HIGH VACUUM ACCESSORIES

Packaged Power Units, Vacuum Furnaces, Hermetic Sealing Units, Liquid Nitrogen Cold Traps, Complete Gage Systems, Ionization Gage Tubes, Feed-Throughs of all sizes, Rotary Motion Devices, Headers, Filament Holders, Pyrex and Stainless Steel Bell Jars, Bell Jar Guards, Gaskets, Japanese Fan Type Shutters, Work-Holding Fixtures, Tripods, Low Voltage and Rectified Power Supplies, Highest Purity Coating Materials.

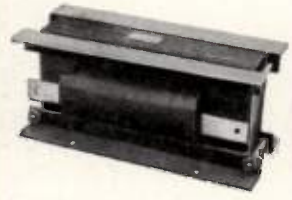
SPECIALISTS IN SPECIAL TRANSFORMERS

Known for over thirty years for transformer custom-design and manufacture.

The illustrations shown here are only a few of the many types manufactured.

NWL manufactures and designs transformers for—

HEATING
TESTING
POWER
ELECTRONIC
ELECTRIC FURNACE
SPECIAL WELDING
PHASE CHANGING
PRECIPITATION
CONTROLLING
RESEARCH
LIGHTING
INDUSTRIAL
MEASURING
SIGNALING
HIGH AND LOW VOLTAGE

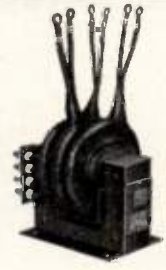


NWL

ESTABLISHED 1920

NEMA

High Voltage Test up to 50 KV Often equipped with circuit breakers, indicating meter and variable auto transformer input to 20 KVA



Current Transformer. Phase Angle error corrected 2.4 minutes. Accuracy ½ of 1%. 1 to 10,000 Amperes.

Audio Transformer, from 2 Cycles to 3 KC in sizes from 1 to 100 KVA

Air Core Reactors 0 1 to 50 KVA

Multi-filament transformer up to 10 KVA and up to 60 KV insulation.

Multi-Voltage Transformer for test or experimental use 0 1 to 50 KVA

Saturable Core Reactors from sizes 1 to 200 KVA

Rectifying Transformer 1, 2 or 3 Phase, 1 to 3000 Amperes up to 300 KVA

Phase Changing Transformer 2 to 300 KVA

Filament Transformer, 400 cycles with 4 secondaries. 10 volts, 100 Amperes. Each secondary can be mounted in parallel series or series parallel.

Outdoor Potential Transformer, output: 35 KV, 25 KVA continuous duty, Vacuum-oil filled. With brackets for pole mounting.

Heating Transformer for Molybdenum Furnaces: Has a 10,000 Ampere secondary with a maximum of 5 volts. Primary taps extended to reduce secondary to 0.75 volts.

MISSILE IMPACT PREDICTION

IN .0001 SECOND

TRICE, the world's most advanced computer, saves many minutes over time currently required for ballistic missile impact prediction. TRICE modules (Integrators, Multipliers, etc.) can be assembled as a special purpose computer for dynamic systems or as a digital differential analyzer. Its incredible speed of 100,000 iterations per second *in parallel* is unaffected by the size of the problem. The first model is in operation at the U.S. Army Ordnance Missile Command, Huntsville, Ala.

Write for literature describing TRICE and its many uses: aerodynamic stability, control system stability, impact prediction, stable platform calculations, satellite orbit predictors and others.

ENGINEERING BEYOND THE EXPECTED

TRICE (Transistorized Realtime Incremental Computer, Expandable) is the first computer to combine the accuracy and repeatability of a digital computer with the speed, flexibility and ease of programming of an analog computer.

NEW FROM PHILCO!

Medium and High Power Transistors

FOR COMPUTERS AND INDUSTRIAL CONTROL SYSTEMS

2N670
2N671
2N672
2N673
2N600
2N601

TYPE	$V_{CE\ MAX}$ (Volts)	$I_{C\ MAX}$ (Amps)	P_{MAX} (Watts)	$f_{\alpha b}$ (mc)
2N670	40	2	0.3	0.65
2N671	40	2	1	0.65
2N672	25	2	0.3	1
2N673	20	2	1	1
2N600	20	0.4	0.75 (1.0 peak)	5 MIN.
2N601	20	0.4	0.75 (1.0 peak)	12 MIN.

Announcing Philco's newest family of PNP germanium alloy junction, high current switching transistors specifically designed for industrial relay driving and pulse amplifier applications and for computer core driver circuits. These transistors feature current ratings to 2 amps, voltage ratings to 40v and alpha cutoff frequencies to 12 mc.

- The 2N670 and 2N671 with 2 amps max. collector current, continuous max. power dissipation up to 1 watt, plus controlled current gain, input drive voltage and saturation resistance at 1 amp are particularly useful in "ON-OFF" industrial control systems.
- Types 2N672 and 2N673 featuring a maximum 0.5 microsecond, one-half ampere rise time are intended for pulse amplifier and tape and drum writer applications.
- The 2N600 and the 2N601 are high speed power switches specially designed for core driving applications. They feature power dissipation up to 1 watt, current ratings of 400 ma and controlled minimum alpha cutoff frequencies of 5 and 12 mcs.

Each of these transistors is housed in Philco's exclusive cold welded, all-copper, hermetically sealed package on JETEC TO-9 base. Positive heat sinking is obtained by tieing a transistor element to the copper case. Types 2N671, 2N673, 2N600 and 2N601 are designed with threaded stud and hexagonal shoulder assembly. All of these transistors are available in production quantities.

Make Philco your prime source for all transistor information and prices. Write Dept. IR-958

For details, circle #170 on Reader Service Card

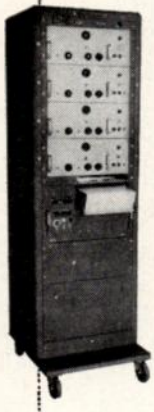
...the record tells you more

from a

SANBORN SYSTEM

DESIGNED SPECIFICALLY FOR YOUR TYPE OF WORK

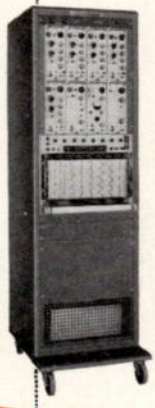


MODEL 276 CHART VIEWER

Permits convenient, variable speed editing and study of Sanborn charts and other types up to 16" wide, 200 ft. long. Single control for direction, paper speeds (15" to 100"/min). Transparent cursor slides left or right, adjusts for accurate alignment with coordinates.

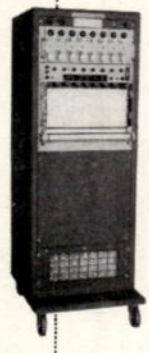
1- TO 8-CHANNELS, 12 PLUG-IN PREAMPLIFIERS

150 SERIES



Features of the "150 series" direct writers include: frequency response to 100 cps; linearity 1% overall; inkless recording in true rectangular coordinates by heated stylus on plastic coated Permapaper charts; current feedback driver amplifier and regulated power supply for each channel. Recorder has 9 chart speeds, 0.25 to 100 mm/sec; individual stylus heat controls, time-code marker. Up to 6-channels can be housed in one vertical cabinet. Amplifiers, recorder also available in individual portable cases.

6-, 8-CHANNELS, FLUSH FRONT RECORDER, FREQUENCY RESPONSE TO 120 CPS



350 SERIES

New "350" series direct writers with compact plug-in preamps in modules of up to 4; individual power supplies; current feedback transistorized power amplifiers; limiter circuit ahead of power amplifiers; velocity feedback galvanometer damping; enclosed galvanometers. Linearity 0.2 div. over entire 50 divisions. Recorder-power amplifier-power supply package has 0.1 volt/div. sensitivity, can be used separately; pushbutton controls for 9 chart speeds 0.25 to 100 mm/sec; individual stylus heat controls; contacts for remote control; inkless rectangular coordinate recording on Permapaper charts.

6-, 8-CHANNELS

850 SERIES

Compact "850" series direct writers use 7" high plug-in preamplifiers in modules of up to eight and "350" flush front recorder package with transistorized power amplifiers, power supply; features velocity feedback galvanometer damping, linearity 0.2 div. over entire 50 divisions; 9 chart speeds from 0.25 to 100 mm/sec controlled by electric pushbuttons; inkless recordings on Permapaper charts. Available preamps include Servo Monitor (demodulator) and DC Coupling. Carrier, Chopper Stabilized and Low Level types are in development.

COMPUTER READOUT . . . AUTOMATIC PROGRAMMING

150 SERIES

"150 series" 6-, 8-channel consoles in 46½" high mobile cabinet. Dual-Channel Amplifiers have selectable sensitivity from 0.01 to 10 volts/div.; internal calibration 2 volts ±1% freq. response flat to 20 cps. Optional Programmer sequences system operation in 20 steps, including recorder turn-on, calibration, computer DC level reading, recording for pre-set time, turn-off and reset.

SELF-CONTAINED UNIT PREAMPLIFIERS TO DRIVE 'SCOPES, OPTICAL OSCILLOGRAPHS, TAPE RECORDERS, ETC.

Portable "350" series include Carrier, DC Coupling Servo Monitor (demodulator), True Differential DC types; others in development. Mount in portable "450" cases or in four-unit modules in 19" frame. Use individual power supplies. One "450" case and power supply can serve any "350" Preamp.

PORTABLE INDICATORS FOR STRAIN, ETC.

Model 150-300/700 Wide Band Amplifier and Power Supply accepts "150" series preamplifiers — for use with low power galvanometers, oscilloscopes, panel meter. Freq. range DC to 10,000 cps (but limited by particular preamp range). Panel meter has center zero scale, 25 divisions each side of center.

STEMCO THERMOSTATS
for precise, sensitive temperature control

1, 2, TYPE C *semi-enclosed* **(1),** *hermetically sealed* **(2).** Small, positive acting with electrically independent bimetal strip for operation from -10° to 300°F. Rated at approximately 3 amps, depending on application. Hermetically sealed type can be furnished as double thermostat "alarm" type. Various terminals and mountings. Bulletin 5000.

3, 4, TYPE M *semi-enclosed* **(3),** *hermetically sealed* **(4).** Electrically independent bimetal disc types for appliance and electronic applications from -20° to 300°F. Rating: 8 amps at 115 VAC, 4 amps at 230 VAC and 28 VDC. Semi-enclosed with virtually any type terminal; hermetically sealed with pin or solder terminals, wire leads, various mounting brackets. Bulletin 6000.

5, 6, TYPE MX *semi-enclosed* **(5),** *hermetically sealed* **(6).** Snap acting miniature units to open on temperature rise for missile, avionic, electronic and similar uses. 2° to 6° differentials available. Rated at 3 amps to 1 amp, depending on duty cycle, at 115 VAC and 28 VDC for 250,000 cycles. Semi-enclosed types with metal or ceramic bases; hermetically sealed in circular or CR7 cans. Various terminals, mountings, brackets, etc. Bulletin 6100.

7, 8, TYPE S* *adjustable* **(7),** *non-adjustable* **(8).** Positive acting with single stud or nozzle mounting. Operation to 600°F. Rated at 15 amps at 115 VAC, 7 amps at 230 VAC. Spade, screw or elevated terminals, various adjusting stems, etc. Bulletin 1000.

9, TYPE SA* *adjustable* **(9)** *or non-adjustable.* Snap acting with electrically independent bimetal. Also single-pole, double-throw. Single stud or nozzle mounting. Non-inductive-load rating: 15 amps at 115 VAC, 10 amps at 230 VAC. Spade or screw terminals. Bulletin 2000.

10, TYPE SM* *manual reset* **(10).** Electrically same as Type SA (above) except for manual reset feature. Bulletin 2000.

11, TYPE B *adjustable* **(11)** *or non-adjustable.* For uses where heat generated by passage of current through bimetal strip is desirable. Various terminals, single stud or nozzle mounting. Operation to 400°F. Nominal rating: 5½ amps at 115 VAC of 40 cycles and higher. Bulletin 9000.

12, 13, 14, TYPE A* *semi-enclosed* **(12, 13),** *hermetically sealed* **(14).** Insulated, electrically independent bimetal disc gives fast response and quick, snap action control for appliance, electronic and apparatus applications from -20° to 300°F, or higher on special order. Rating: 3 to 4 amps, depending on duty cycle, at 115 VAC, 2 amps at 230 VAC and 28 VDC. Various enclosures and mountings, including brackets. Bulletin 3000.

15, TYPE R* *sealed adjustable* **(15),** *sealed non-adjustable.* Positive acting for operation to 600°F. Rated at 15 amps at 115 VAC, 4 amps at 230 VAC. Screw terminals. Bulletin 7000.

16, TYPE W* *adjustable* **(16),** *or non-adjustable.* Snap action bimetal strip type for operation to 300°F. Rated at 5 amps at 115 VAC, 3 amps at 230 VAC. Screw or nozzle mountings; spade, solder or screw terminals. Bulletin 4000.

17, TYPE H† *adjustable.* Positive acting for fry pans, skillets, sauce pans, etc. Fail-safe, open in low to 500°F in high. Rated at 1650 watts at 115 VAC. Bulletin 10,000.

18, TYPE D* *automatic* **(18),** *or manual reset.* For laundry dryers or other surface and warm air applications. Snap acting disc type U.L. approved for operation to 350°F. Open or enclosed styles. Rated at 25 and 40 amps at 120-240 VAC. Screw or spade terminals. Bulletin 8000.

Illustrations, for general information only, do not necessarily show size comparisons. Fully dimensioned and certified prints on request. Manufacturer reserves right to alter specifications without notice. AA-7230

*Refer to Guide 400 EO for U.L. or C.S.A. approved ratings.

SHIELDING'S *Universal* ENCLOSURE
PROVIDES MAXIMUM SHIELDING EFFECTIVENESS
. . . FOR COMPLYING WITH ALL APPLICABLE
MILITARY SPECIFICATIONS.

R. F. *interference* SUPPRESSED

Shielding has the practical solution to all your electro-magnetic suppression problems — the Shielding Universal Enclosure. Multi-Cell® design features either single or double shielding in cell or isolated type enclosure . . . interchangeable standard panels of solid and/or mesh material . . . a wide variety of enclosure sizes both standard and custom-built. A complete test report, performed by independent consulting engineers in accordance with military specifications, has just been completed — evaluating designs and different types of material used. For your copy of this report and the new Shielding folder giving all design details, write today to:
