ABBREVIATIONS AND SYMBOLS

The necessary corrections to the List of Commercial and Government Radio Stations of the United States and to the International Lists of Radio Stations appearing in this bulletin under the heading "Alterations and Corrections," are published after the stations affected in the following order:

Name	= Name of station.
Loc.	= Geographical location: W = west longitude, N = north latitude, S = south latitude, E = east longitude.
Call	= Call signal (letters) assigned.
Type	= Type of wave classified as follows: A1=continuous wave (tube), A arc=continuous wave, A2=interrupted continuous wave, A3=phone, B=spark.
Fy.	= Frequency in kilocycles; normal frequency in italics; wave length in meters in parentheses.
Power	= Height (meters) of antenna and intensity of current (meter-amperes) at its base (sample of manner in which published—100/100) or the normal radiated power expressed in meter-amperes (sample of manner in which published—100m amp.).
Service	= Nature of service maintained: PG=general public (ship to shore), PR=limited public (limited to public correspondence between fixed stations), P=private (limited commercial and special), O=Government business exclusively.
Class	= FX=fixed station (point-to-point service), RG=radio-compass station, FA=aeronautical station, AB=aviation beacon, RF=circular radiobeacon, B=ship station, FC=coast station, A=aircraft.
Hours	= Hours of operation: N=continuous service, X=no regular hour, Y=sunrise to sunset.
Accts.	= Message accounts settled by.
M. R. T. Co.	= Mackay Radio & Telegraph Co.
R. C. A.	= Radio Corporation of America.
R. M. C. A.	= Radiomarine Corporation of America.
T. R. T. Co.	= Tropical Radio Telegraph Co.
C. w.	= Continuous wave.
I. c. w.	= Interrupted continuous wave.
A. C.	= Alternating current.
V. t.	= Vacuum tube.
M. A.	= Meter-amperes.
U. S. L.	= Applies only to the list of Commercial and Government Radio Stations of the United States. = Equipped with a radio compass (direction finder).

Beginning in January, the frequencies which ship stations may be licensed to use will be indicated as follows:

For telegraph communication primarily with coastal telegraph stations: Class L (kilocycles-meters in parentheses, followed by symbol designating type of emission)=

143 (2,100), A-1, primarily for calling.	400 (750), A-1, A-2, working (other than Great Lakes).
152 (1,975), A-1, A-2, working (other than Great Lakes).	410 (730), A-1, A-2, B, working (other than Great Lakes).
153 (1,960), A-1, A-2, working.	410 (730), A-1, A-2, B, calling and distress (Great Lakes only).
154 (1,950), A-1, A-2, working.	425 (705), A-1, A-2, B, working.
155 (1,935), A-1, A-2, working.	454 (660), A-1, A-2, B, working (other than Great Lakes).
156 (1,925), A-1, A-2, working.	468 (640), A-1, A-2, working (other than Great Lakes).
157 (1,910), A-1, A-2, working.	500 (600), A-1, A-2, B, calling and distress (other than Great Lakes).
158 (1,900), A-1, A-2, working (other than Great Lakes).	
160 (1,875), A-1, A-2, working (other than Great Lakes).	
375 (800), A-1, A-2, B, direction finding only.	
394 (780), A-1, A-2, working (Great Lakes only).	

RADIO SERVICE BULLETIN

In addition to the frequencies designated hereinabove, this station may transmit on a frequency below 550 kc (545) used by a coastal telegraph station when directed to do so by the coastal telegraph station to which the frequency is assigned, provided that on frequencies below 150 kc (2,000) the emission shall be A-1 only.

Class H (kilocycles-meters in parentheses, on the following frequencies above 3,000 kc. with A-1 or A-2 emission)=

3,100 (96.62)	5,530 (54.25)	8,260 (36.32)	12,360 (24.27)	16,580 (18.094)
3,115 (96.84)	6,170 (48.62)	*8,280 (36.23)	12,375 (24.24)	16,660 (18.007)
*4,140 (72.46)	6,180 (48.54)	8,300 (36.14)	12,390 (24.21)	16,680 (17.986)
4,145 (72.38)	6,190 (48.47)	8,320 (36.06)	12,435 (24.13)	22,025 (13.621)
4,150 (72.29)	6,200 (48.39)	8,330 (36.01)	12,450 (24.11)	22,050 (13.605)
4,160 (72.12)	*6,210 (48.31)			*22,080 (13.587)
4,165 (72.03)	6,220 (48.23)	11,025 (27.21)	16,480 (18.228)	22,100 (13.575)
	6,230 (48.15)	*11,040 (27.17)	16,480 (18.204)	22,125 (13.559)
5,515 (54.40)		11,055 (27.135)	16,500 (18.182)	
*5,520 (54.35)	8,240 (36.41)	11,070 (27.10)	16,520 (18.160)	22,150 (13.544)
5,525 (54.30)	8,250 (36.36)	11,085 (27.065)	*16,560 (18.116)	

In addition to the frequencies hereinabove designated this station may transmit on a frequency above 3,000 kc (100) used by a coastal telegraph station when directed to do so by the coastal telegraph station to which the frequency is assigned.

For telephone communications primarily with coastal telephone stations, for telephone or telegraph communication with coastal harbor stations, and for telephone or telegraph communication primarily between ship-harbor stations, the specific frequency or frequencies for which a station is licensed to use will be indicated.

Marine radiobeacon stations

[Addition to the List of Commercial and Government Radio Stations of the United States, edition of June 30, 1931, and to the International List of Stations Performing Special Services, published by the Berne bureau]

WEST QUODDY HEAD LIGHT STATION, ME.—Loc., 66° 57' 04" W., 44° 48' 55" N.; transmits every 180 seconds, groups of 1 dash, 1 dot and 2 dashes for 60 seconds, silent 120 seconds, thus:

— — —	Silent
60 seconds	120 seconds

Fy., 292 (1,025); hours, operates daily in clear weather during the third 15 minutes of each hour, and continuously during thick or foggy weather.

CAPE DECISION LIGHT STATION, ALASKA.—Loc., 134° 08' 05" W., 56° 00' 05" N.; the radiobeacon will be operated on intermediate power and will transmit on a frequency of 285 kilocycles (1,055 meters) the following characteristic:

• — — • — — • — — etc.

For distance-finding purposes the air typhoon fog signal may be used. This fog signal will sound blast 5 seconds, silent 1 second, blast 1 second, silent 53 seconds every third minute. In fog or low visibility the characteristic will be transmitted 60 seconds on, 120 seconds off. During each minute of operation a long dash (3 seconds) will be transmitted for distance-finding purposes, the end of the dash coinciding with the beginning of the long (5-second) blast of the sound-in-air signal. The number of seconds elapsing between the termination of the long radio dash and the end of the blast of the sound-in-air signal divided by 5 will give the approximate distance in miles from the light station. The distance thus derived may have a possible maximum error of 10 per cent. Masters of vessels equipped with a radio receiver capable of receiving at about 300 kilocycles may utilize these signals for distance-finding purposes. The distance to which this method may be used will vary with atmospheric conditions. In clear weather the radiobeacon will transmit its characteristic continuously from 0 to 10 minutes and from 30 to 40 minutes past each hour.

NEW INTERNATIONAL LISTS OF STATIONS AVAILABLE FOR DISTRIBUTION

The International Bureau of the Telegraph Union, Radiotelegraph Service, Berne, Switzerland, now has available for distribution to the general public the following-named new lists of stations: Performing special services, \$1.74; aircraft, \$1.22; and broadcasting, \$1.55. These prices include subscription to all monthly supplements up to the issuance of the next edition, and postage. All remittances should be forwarded direct to the Berne Bureau by international money order.

BROADCASTING FREQUENCY MEASUREMENTS FOR JANUARY

According to the list of honor-roll broadcasting stations just released by the Radio Division for January, over one-half of the stations measured deviated less than 50 cycles. Out of the 449 stations measured, 230, or 51.2 per cent, deviated less than 50 cycles; 94, or 20.9 per cent, deviated less than 100 cycles; 63, or 14 per cent, stayed under the 200-cycle mark; while the remaining 62, or 13.9 per cent, went over that mark. This record is the best for any month since these monthly lists were first issued, December, 1930.

The following table gives the figures for the months December, 1930, to January, 1932, inclusive:

Month	Number stations measured	Less than 50 cycles	Less than 100 cycles	Less than 200 cycles	Over 200 cycles
December 1930	339	35 (13.5%)	66 (16.5%)	238 (70%)	
January 1931	363	54 (15%)	102 (27%)	207 (58%)	
February	367	99 (27%)	55 (15%)	213 (58%)	
March	337	65 (19.3%)	63 (18.8%)	77 (22.8%)	132 (39.1%)
April	314	72 (22.9%)	54 (17.2%)	92 (29.3%)	96 (30.6%)
May	326	78 (23.9%)	89 (27.3%)	68 (20.9%)	91 (27.9%)
June	330	97 (29.4%)	71 (21.5%)	69 (20.9%)	93 (28.2%)
July	294	94 (32%)	70 (23.8%)	60 (20.4%)	70 (23.8%)
August	304	117 (38.6%)	64 (21%)	67 (22%)	56 (18.5%)
September	328	115 (35%)	72 (22%)	68 (21%)	73 (22%)
October	381	136 (35.7%)	97 (25.4%)	72 (18.9%)	76 (20%)
November	383	153 (40%)	86 (22.5%)	76 (20%)	68 (17.5%)
December	422	190 (45%)	98 (23.2%)	64 (15.2%)	70 (16.6%)
January 1932	449	230 (51.2%)	94 (20.9%)	63 (14%)	62 (13.9%)

AVIATION AND MARINE WEATHER BULLETINS BY ARLINGTON AND ANNAPOLIS NAVAL STATIONS

(Effective Mar. 1, 1932)

The United States Weather Bureau, through the Naval Radio Station NAA, at Arlington, Va., or NSS, at Annapolis, Md., broadcasts early reports of weather observations taken at about 200 stations in the United States, Canada, and Alaska; also, pilot-balloon, upper-air reports and airplane-aerograph observations from selected stations. The observations taken at land and aerological stations are in the Weather Bureau word codes applying to these types of stations, and are easily decoded.

All broadcasts described herein are made daily throughout the year, including Sundays and holidays. The time of broadcasting is given in eastern standard time and its equivalent in Greenwich civil time (G. C. T.)

Broadcasting schedules

At 8.05 a. m., 75th meridian time (1305 G. C. T.), on frequencies of 4,015, 8,030, and 12,225 kilocycles (74.7, 37.4, and 24.5 meters, respectively), simultaneously.

At 8.05 p. m., 75th meridian time (0105 G. C. T.), on a frequency of 4,015 kilocycles (74.7 meters); also during winter months on 113 kilocycles (2,655 meters).

All observations in the foregoing broadcasts are of current date, taken at 8 a. m. and 8 p. m., 75th meridian time (1300 and 0100 G. C. T.), except as hereafter indicated, and they contain coded weather information in a group of words arranged for each station as follows:

- (a) Sea-level barometric pressure.
Current temperature.
- (b) Wind direction.
State of weather.
Wind velocity.
- (c) Pressure-change characteristic and amount.
Temperature (minimum in the a. m. broadcast and maximum in the p. m. broadcast).
Another word (K) follows when amount of change exceeds 0.09 inch.
- (d) Time and character of precipitation.
Amount of precipitation.
- (e) Thunderstorms.
- (f) Clouds (kind, direction, and rate of movement).
- (g) Maximum wind velocity and direction.

Reports from Alaska are observations taken approximately at 7 a. m. and 7 p. m., 75th meridian time.

Aerological (pilot-balloon, upper-air) observations of current date made at a selected list of Weather Bureau Stations are also included in this broadcast. These reports are based on readings which give the wind velocity and direction at the surface, the maximum altitude reached, and at various levels aloft, using sea level as a reference plane. Readings are reported for such of the following heights above sea level that are more than 200 meters above the level of the station: 500, 1,000, 1,500, 2,000, 2,500, 3,000, and 4,000 meters, and also maximum altitude reached. For example, if the elevation of the station is 1,600 meters above sea level, readings are reported for surface, 2,000, 2,500, 3,000, and 4,000 meters above sea level, followed by data for the maximum altitude reached. Data for visibility and clouds are also included.

Notes

Code books for translating the foregoing broadcasts are necessary. Regular observations (8 a. m. and 8 p. m.) are in the Weather Code, 1931, except that the word for relative humidity and maximum temperature is omitted in the a. m. broadcast. Aerological (pilot-balloon, upper-air) observations are in the Aerological Code, 1930. Information regarding the procuring of these separate codes may be obtained by addressing the Weather Bureau Office at Washington, D. C.

No forecasts of any kind are included in this broadcast. Forecasts for the benefit of marine interests are broadcast from the same radio station (NAA) in the daily Major Marine Bulletin, which is described in the Weather Bureau Radio Circular No. 13 (third edition—revised).

The Major Marine Bulletin begins at 10 a. m. and 10 p. m., 75th meridian time. (1500 and 0300 G. C. T.), and usually occupies between 40 and 50 minutes in the morning and between 35 and 45 minutes at night. Listeners desiring the forecasts, and who do not wish to copy the entire Major Bulletin, may easily adjust their schedules to the reception of the forecasts only.

*Bulletin broadcast for the benefit of European meteorological services***BROADCASTING SCHEDULES**

At 11 a. m., 75th meridian time (1600 G. C. T.), on a frequency of 16,060 kilocycles (18.7 meters).

At 11 p. m., 75th meridian time (0400 G. C. T.), on a frequency of 8,030 kilocycles (37.4 meters).

The 11 a. m. and 11 p. m. broadcasts are in the international number code and are primarily intended for the benefit of European meteorological services. It forms a part of the system of international exchange of weather information. The broadcasts are repeated from the radio station on the Eiffel Tower in Paris. They consist, respectively, of 8 a. m. and 8 p. m. observations of current date from selected stations, and indicate the name of the station, state of weather, wind direction, wind force (Beaufort scale), barometric pressure in millibars, and current temperature; also, reports from ships in the Universal Groups of the International Code: PQLLL lIIGG DDFww BBVTT. Information concerning the code used in these bulletins may be obtained upon application to the Weather Bureau at Washington, D. C.

NOTE.—In accordance with article 17, paragraph 2, of the General Regulations of the International Radiotelegraphic Convention of 1927, the 3-minute silent intervals are observed in connection with all broadcasts described herein.

RADIO TRANSMISSIONS OF STANDARD FREQUENCY

The Bureau of Standards transmits standard frequencies from its station WWV, Washington, D. C., every Tuesday. The transmissions are on 5,000 kilocycles, and are given continuously from 2 to 4 p. m. and from 10 p. m. to 12 midnight, Eastern Standard Time. (From October, 1931, to March, 1932, inclusive, the evening schedule was two hours earlier.) This service may be used by transmitting stations in adjusting their transmitters to exact frequency, and by the public in calibrating frequency standards and transmitting and receiving apparatus. The transmissions can be heard and utilized by stations equipped for continuous-wave reception throughout the United States, although not with certainty in some places. The accuracy of the frequency is at all times better than 1 cycle (1 in 5,000,000).

From the 5,000 kilocycles any frequency may be checked by the method of harmonics. Information on how to receive and utilize the signals is given in pamphlets obtainable on request addressed to Bureau of Standards, Washington, D. C.

The transmissions consist mainly of continuous, unkeyed carrier frequency, giving a continuous whistle in the phones when received with an oscillatory receiving set. For the first 5 minutes there are transmitted the general call (CQ de WWV) and announcement of the frequency. The frequency and the call letters of the station (WWV) are given every 10 minutes thereafter.

Supplementary experimental transmissions are made at other times. Some of these are made with modulated waves, at various modulation frequencies. Information regarding proposed supplementary transmissions is given by radio during the regular transmissions, and also announced in the newspapers.

The bureau desires to receive reports on the transmissions, especially because radio transmission phenomena change with the season of the year. The data desired are approximate field intensity, fading characteristics, and the suitability of the transmissions for frequency measurements. It is suggested that in reporting on intensities, the following designations be used where field intensity measurement apparatus is not used: (1) Hardly perceptible, unreadable; (2) weak, readable now and then; (3) fairly good, readable with difficulty; (4) good, readable; (5) very good, perfectly readable. A statement as to whether fading is present or not is desired, and if so, its characteristics, such as time between peaks of signal intensity. Statements as to type of receiving set and type of antenna used are also desired. The bureau would also appreciate reports on the use of the transmissions for purposes of frequency measurement or control.

All reports and letters regarding the transmissions should be addressed Bureau of Standards, Washington, D. C.
