**NOW
IT'S
ELECTRIC!**

**THE CLOCK THAT
CAN BE SET AT
ANY OF THE
WORLD'S 24
TIME ZONES**

Mechanistic Design of Brushed Brass

Tells time like an ordinary clock and automatically shows authentic time in every other zone around the world.

Has A. M. and P. M. divided dial and 24-hour dial. Indicates minutes and quarter hours.

*Actual size is 5 $\frac{1}{4}$ inches high by
4 $\frac{3}{4}$ inches wide.*

Just plug it in and set it for the correct time. No further adjustment nor calculation is required.

For AC 110-120 volts, 60 cycles
What DXers Have Always Wished For!
THE ELECTRIC WORLD TIME CLOCK

\$5.95

Also available in same style case in spring-driven model at \$4.95. We pay the postage.

New SCOTT PHANTOM Offers TREMENDOUS Usable SENSITIVITY

VARIABLE Sensitivity so Great, Finest Laboratory Equipment can hardly Measure the EXTREMELY WEAK Transmissions tuned in and Amplified with this Amazing New Receiver!

The exceptionally high degree of usable, variable sensitivity on *all* wave bands is an outstanding feature of the new SCOTT PHANTOM. The overall Sensitivity curves shown indicate only the *usable* Sensitivity available for signal reception after tube and circuit noises (which have generally been included in sensitivity curves up to now) have been deducted. We believe the new Scott Phantom gives the highest degree of Usable Sensitivity that has ever been attained in *any* receiver available to the general public!

REVOLUTIONIZES SHORT WAVE AND BROADCAST BAND RECEPTION

Radically new advanced radio engineering principles are incorporated. Electrical interference from vacuum cleaners, oil burners, etc. is practically eliminated. A new Scott Super-Double Doublet Antenna System not only gives additional noise reduction but also greater antenna responses on all wave bands from 550 KC to 22 MC. New circuit arrangements

nearly eliminate tube hiss and provide still quieter reception of weak signals from distant foreign stations.

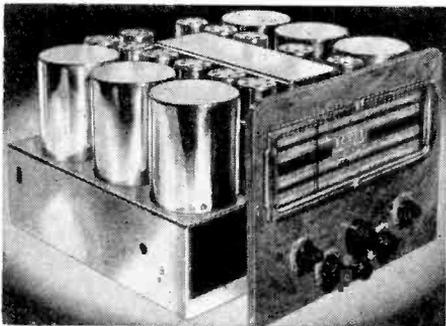

WORLD'S FINEST RADIO

CUSTOM BUILT to order in Laboratories (not a factory), SCOTT RADIOS are hand-crafted with amazing skill and precision for performance impossible with mass produced receivers. Yet, they cost no more than many production type radios. They are treasured by owners throughout America and in 148 foreign countries. When you hear the magnificent tonal realism of the Scott Phantom, you'll understand why world famous musicians, Kings, Presidents, Princes, a host of business and social leaders, buy the SCOTT and recommend it to their friends.

TRY IT IN YOUR HOME FOR 30 DAYS

30 Day home trial and budget payments in U.S.A. NOT SOLD THRU STORES.

MAIL COUPON BELOW FOR ALL CURVE CHARTS AND SPECIAL OFFER!

Radio CLEAN-UP Time

AS the shadows of the early September evening deepened over Main Street, Turner Dial, leaning in the doorway of the "Higrade Radio Sales and Service Shop," breathed deeply of the refreshing air, and realized that fall had come. Then, too, he knew, the clear cold weather of winter could not be far behind, and radio again would become a lively business. He was glad, for things had been dull. But these delightful nights were bringing more and more people down town to stroll, window-gaze and to buy. Perhaps, after the dinner hour, new customers as well as some of the faithful would drop in to shop and talk radio. Restlessly, the well-known and friendly owner of "Higrade" turned, and moved toward the rear of the store.

"Bill", he called to his assistant. "Let's tune in on the 'Evening Serenade'. Guess we can hear most of it before the customers begin to 'rush' us off our feet!"

"Right!" Bill Wood replied. He was a young man who had worked with Turner Dial for a couple of years. "First thing we know everybody will rush in and want their sets fixed up for winter. Summer slumps wouldn't be bad at all if folks didn't wait 'till the last minute."

Turner Dial gazed thoughtfully at the floor. "Say", he remarked "That's an idea! Let's pass out some circulars around town. Make it a special. Complete overhaul job and tune-up; just like they do over at the garage."

"Swell", answered Bill, as he turned down the volume of the blaring radio.

"If you get the copy ready I can chase it over to the Elite Printers before they close." Dial moved toward his desk with its orderly row of servicing manuals and trade bulletins just as two customers entered the front of the store.

"You take 'em, Bill," said Turner. "I'll get goin' on the handbills."

But the "customers" turned out to be just two faithful members of the DX clan around town. "Hi there!" they greeted the proprietor and his helper. "What's new?"

"Nothing," replied Bill. "The Boss is busy. Getting out a new circular. Doing any D-Xing these days?"

"Sure. Picked up Leon, Nicaragua, on 20 meters, the other night," answered one. "Had three feet of inside wire for antenna. Think I'll write for his QSL card." The second young man, like a true radio fan, was hanging over the show cases and examining the parts and replacement units which Turner had put on display.

"Say," Dial called invitingly, "come back and see what you fellows think of our idea." He held out the copy he had penciled on a sheet of paper.

"Looks good!" all three chorused in unison, as they perched along the work bench. "But," asked one, "how can you do such a job at that low figure?"

Turner Dial, of Higrade Sales and Service, leaned back in his creaky swivel chair and ran his hand through his hair. "Well, you know I've been in this game a long time," he said. "We get so we know just what to expect when working on a set. The price, then, is an average. On some sets we lose money, but on most we show a fair profit." Turner hitched around in his chair and waved a hand towards the shelf of neatly catalogued books. "Those are a big help, yet all circuits are practically the same. But they do help my helper most of the time!" he added, with a dry smile toward Bill Wood, who shuffled his feet a bit in his discomfort.

"So, with these publications and modern equipment and tools, we can service any set quickly and inexpensively. And," Turner continued, "overhauling and tuning up a set seldom requires the replacement of parts, so our charge covers only the labor. If the time consumed is considerable, because of inexperience or lack of proper equipment, you can see why some people have to pay unreasonable bills. Then they get pretty sore, and I must say I can't blame 'em."

Turner Dial was not bragging. His customers never questioned a bill, for he was well-known as an honest and fair radio dealer and expert. Since the beginning of radio broadcasting, Dial has been selling and servicing the town's receivers.

Bill reached out and took the copy from Turner's hand. "Will 5,000 be

plenty?" he asked. Dial nodded assent. Wood ran across the street to the printer, and on his return he was pleased to see a number of people standing before the store windows. He and Turner had spent a warm afternoon decorating them. To one side of the store entrance was shown an old-fashioned parlor. The figure of a man and woman were seated at a table, and they were listening to an old 1922 model battery set which Turner had dug out of the "museum" in the basement. Earphones were clamped over their heads. "Earbenders!" thought Bill Wood with a grin. The opposite window showed a modernistic living room and a 1939 model all-wave receiver equipped with the astounding new built-in antenna system. A little girl was tuning in a station simply by touching a button. Bill joined the crowd and admired his handiwork. But radio was getting so complicated—a man had to be good to understand all about these new sets and the dozens of tube types, as well as touch tuning. And there was television yet to come! Bill grimaced to himself in a brief fit of despair, and re-entered the store.

Back in the shop Turner Dial and the two fans were still discussing the pre-winter tune-up and clean-up program. "What do you intend to do to a set when it comes to you?" asked one of the customers.

"I think that when we get a call," answered Turner, "we ought to look over the antenna and operating location of the set. Don't you think so, Bill?" Wood nodded, as he joined the others on the work bench. "Then, here in the shop," continued Turner, "we will play the set and test it for defects.

On the bench, the chassis will come out. The tubes will be cleaned and the prongs scraped bright, and any defective tube will be replaced with a new, guaranteed one. You know, most tubes are given a very good guarantee these days."

One of the listeners interrupted: "How about that tube? You'll have to charge extra, and that's when the customer squawks. He'll say its a racket!"

"I know," declared Turner, somewhat impatiently. "Lots of people think that as long as a tube lights and the set works fairly well its all right. Maybe it is, except on DX reception. They don't get sore around here, but I know places where they do. Sure, the tube racket is worked here and there, but that never happens at a reliable service agency." Turner took a deep breath, and continued: "Lots of the things that go wrong in a radio are hard to explain to the average customer. He has to put his faith in our word just as does in his doctor's. There aren't many crooks in the radio business, but when one does turn up he doesn't last long. Certainly he can't get factory authorization or join the service associations."

"Evening, boys!" said a voice from behind. Turner Dial, Bill Wood, and the "customers" swung around to see an elderly gentleman standing and smiling toward Turner.

"Judge Stevens!" exclaimed Turner as he rose to his feet. "How are you, and tell me about that good ole super-ten radio?" The newcomer was Judge Stevens, one of the shop's oldest customers. Last year he had been won over to all-wave radio, and now was

the proud owner of a receiver that regularly pulled in many foreign stations.

"Dial," asked the Judge, "why is it that some autos make so much noise in my radio when they pass by, while many others are never heard? You know I live on a pretty busy corner. Those short waves pick up a bit of auto static in spite of that fine doublet aerial you erected for me."

"Well, Judge, you see, its this way," began Turner, as he motioned his distinguished listener to the chair at the desk. "When a car has a radio installed in it, certain things must be done to supress spark static, or otherwise reception would be unbearable. New cars, most of them, do not cause this interference. But let an old timer, and 'specially some truck, come chugging by, and you can hear every cylinder when it fires—and tell when it misses, too."

"Thanks," said the Judge. "But what can I do about it?"

"Nothing," replied Turner. "Your antenna will help a lot, but none is perfect. Of course, if one of those car owners should come up before you in court—" he added, with a grin.

"By the way," remarked the Judge. "May I have one of those pipe cleaners? Mine seems clogged. Never mind, just sell me the whole package."

"Help yourself, Judge Stevens," answered Dial. "They're not for sale. We use 'em for cleaning dirty radios."

"Clean dirty radios?" asked Judge Stevens incredulously.

"Yes, sir. Funny thing, we were just discussing our new cleaning campaign when you came in. You see, when we take the radio chassis out of the

cabinet we find that pipe cleaners are fine for getting the dust out between the plates of the tuning condensers." Turner Dial picked up a cleaner and turned toward a dismantled set lying on the bench.

"How interesting!" murmured the Judge. "Proceed with the case!"

"After a set has been in use a year or so", said Dial, "it collects lots of dirt and dust. Look at this!" And he passed the cleaner between two con-

"Better not let Mrs. Stevens hear you say anything like that about our radio," remarked the Judge.

"It's true, nevertheless," continued Turner. "It's a natural thing. The cabinet is open at the back—it has to be for tone and air circulation. The heat, too, causes greasy dirt and dust to adhere in a thick layer. It absorbs lots of energy from weak signals. So the thing to do is to clean up the set. It'll look and act like new!"

"And we blow most of the dirt off with compressed air," Bill Wood hastily uttered with an air of helpful importance. "Then," he continued, "we rub and polish every part, examine the bearings and tuning units. A little carbon tetrachloride and a fine brush works wonders. The most important job is alignment, balancing and adjusting, so the set will tune correctly at all points on the dial. The Boss, here, always does that work himself."

A couple of customers had strolled in the front door and were casting admiring glances at the row of attractive 1939 radio cabinets placed along one side of the store. Turner began slowly to move away from his friends. "Bill is right," he said. "I like to check the alignment myself. An overhauled

set should go back to the customer like a new receiver."

"Glad to hear that," commented Judge Stevens, as he rose from the chair. "Young man," he said glaring at Bill, "suppose that sometime tomorrow you pick up my set and give it one of your fall cleaning and overhauling jobs. But, mind you, it better come back like new!"

Martin J. Olthoff, well known shortwave DXer of Independence, Kans., is shown here in his radio "den." busy reading his copy of RADEX. His receiver is an RME69. A few of his card veries are shown on the wall.

A NEW MEXICAN

Writing from Mexico City, Samuel A. Meyer, Jr. of Rochester, N. Y., sends news about the newest Mexican station, XEQ, temporarily assigned 710 kcs. and 50 kw. of power. The transmitter is situated at Ixtapalapa, D. F., and the temporary studio address is Pasaje Teatro Alameda, Av. Juarez 34, Mexico City. On the air during the first week in October. Attractive veries will be sent for correct reports and return postage.

FOR countless radio enthusiasts, the reception of a foreign station on the broadcast band constitutes a major thrill. For them, there is a sense of achievement comparable to that of the golfer who shoots a hole in one, the ball player who hits a homer with the bases loaded, or the tennisist who wins a major tournament.

Contrary to the beliefs of many casual listeners who have had regular rations of Berlin and London via short waves, trans-oceanic reception on the medium waves is usually an accomplishment accompanied by pardonable pride. Unlike the high frequency stentors that pound in the year around, the foreign BCB stations provide elusive targets which tax the skill and patience of even the veteran DXers.

Eliminating the fortunate few who sometimes complain that signals from across the seas interfere with locals, most of us find reception of trans-oceanic stations sufficiently rare to make the occasion very much worth our while. The average foreign catch is the result of careful planning, skillful tuning and a measure of old-fashioned good luck, and is therefore more than welcome when it trickles down our lead-in.

While foreign reception is relatively difficult, there are few listeners who do not have a few potential TA's, TP's or SA's playing on their aerials during the course of a winter season. The big question, then, is how to reach out and pull them through our receivers.

It goes without saying, of course, that highly efficient equipment is a primary requisite for foreign reception. This does not necessarily mean that the listener must possess a fifteen or twenty tube receiver. The average set of eight, ten or twelve tubes can do wonders if it is properly aligned, if its tubes are in good condition and if it is fed by a good aerial. Old-timers will add the tip that really extraordinary results may be obtained if the receiver is "hopped up" to increase stability and introduce some regenerative action. A good serviceman can advise the DXer if this would be practical with his particular model; and, if so, do the job for a nominal charge.

Of course, if the best possible results are expected and the expense is of no moment, the modern, highly sensitive and selective laboratory-built receivers offer the best possibilities for real DX reception. It goes without

saying that commercial receivers, produced in large quantities, cannot hope to attain the high efficiency achieved by custom builders who assemble their sets one at a time under rigid standards of design, construction and individual inspection.

No matter what receiver is used, no DXer can hope for maximum results if he fails to provide for headphone reception. Although many listeners like to brag about distant catches heard at "full loudspeaker volume," the value of headphones for DX work cannot be over-estimated. Even though there might be no chance of disturbing other members of the family, many weak signals are completely lost in a speaker when they could have been logged with a good pair of phones.

How to Hear Them

Even when DXers have gone to extremes to provide maximum efficiency of receiver and antenna installation, and have spent hours and dollars in getting rid of as much local noise as possible, there still come letters asking "How can I hear those foreign stations?"

Judging from some letters, a lot of listeners seem to think that the foreigners stand out at regular intervals all along the broadcast spectrum, just waiting to be heard. Perhaps they do in some locations, but for most of us they aren't quite as easy as that—which may be the reason why the questioners haven't heard them.

Actually, a signal from a foreign station is most insignificant and unobtrusive after it has travelled a few thousand miles. Unlike the famous alarm clock, it always speaks in a whisper and never shouts if you don't

hear it the first time. In fact, if you don't happen to catch it at the first whispering stage, it has the irritating habit of fading into nothingness for an indeterminable period.

Occasionally you run into one of those "like-a-ton-of-bricks" signals, but as a rule the DXer has to fight quite a battle before he gets any kind of a report. He has to be the personification of patience and perseverance. He must know how to tune, where to tune and when to tune. He must become skilled in waiting out weak signals, and he must have a pair of ears trained to make intelligible the merest whisper.

The Art of Tuning

The art of tuning a receiver for real DX is one which can only be acquired after considerable experience. Some listeners may question this, but it is quite possible for an ordinary radio fan to sit down at a receiver and obtain only mediocre results, whereas an experienced DXer, working with the same receiver and in the same location, might produce really astonishing results.

Undoubtedly the best method of tuning, and certainly the one to be recommended to the beginner, can best be described as "spot tuning." Here the DXer makes out a list of five or six powerful stations which he wants to hear. Considering the season of the year and the time of day, he picks broadcasters which are known to be on the air and which should be heard in his location.

He dials the frequency of the first station and listens. If a signal is heard, well and good. He may have the station he wants, or it may be a domestic broadcaster. At any rate, he

waits for the announcement. More often than not, his first attempt finds a great silence on the selected channel. If so, he should stick around for a few minutes on the chance that the desired station may have faded out. If no signal is heard after a reasonable wait, he goes on to the second station.

Here again patience is a cardinal virtue. There may be no signal at all or he may find a jumble of several stations. In either case, he should wait until the jumble clears or the desired station has a chance to fade in.

And so on down the list of five or six stations. One or two may be heard at the first attempt. If not, the skilled DXer will return time and again to the selected frequencies. Perseverance is one quality which all DXers must possess, and the listener who is incapable of sticking on certain channels for long periods might as well give up hope of hearing foreign stations.

After the frequencies of the original five or six stations have been tried several times, another group may be selected and the same procedure followed. Occasionally freakish conditions find medium-power stations showing to better advantage than the higher powered transmitters, so the success or failure attending the first group may have little bearing on another group.

But regardless of the results at first, the whole process of dialing foreign stations should be systematic—tuning for definite stations at specified hours of the day. In a great majority of cases, this procedure will show the best returns for the time spent at the dials.

Printed in red and blue, this card from LS2, "Radio Prieto," Buenos Aires, Argentina, is very attractive. LS2 is heard on 1190 kcs.

When the orderly "spot tuning" has brought results, the DXer may try some "fishing." Running up and down the broadcast band, he may stop at audible carriers and see what is there. This type of tuning, however, is bound to miss a large percentage of weak signals—particularly those which may have faded out for the moment—and should be used only when going after something out of the ordinary.

Should the combined processes of "spot tuning" and "fishing" produce no results the first night, the listener should merely resolve to try again. Several nights, or even several weeks, may pass before the first foreign station is heard. Sometimes DXers go through an entire season without hearing more than half a dozen different trans-oceanic catches. Even after five or six years, a veteran dial twister may be able to boast of but a dozen TA's, a like number of TP's and four or five SA's.

Consequently, the real test of a DXer's ability is his willingness to persevere under even the most discouraging circumstances.

The Art of Hearing

The important show-down for every listener comes when he actually is tuned to a foreign station. Too little stress has been placed on the "art of hearing a station" and it is here that many listeners fail when success is within reach.

With few exceptions, the average foreign signal at best is only a faint whisper compared with the usual DX catch on one's own continent. Since it must be highly amplified to bring it up to the point where it will be audible, static and local noises are correspondingly increased in volume. The spill-over from stations on adjoining channels is also increased as the power is advanced. As a result, the general interference is usually very high and it takes an experienced ear to separate signal from racket.

The average listener might tune in on what, to him, would be an incomprehensible jumble. Static, local noises, heterodynes and a station or two might be scrambled into a veritable babel. Somewhere in the background, he probably would hear a faint strain of music or speech, but nothing intelligible. Ask him to write out a report on the submerged station, and he would throw up his hands in despair.

Yet the experienced DXer would be able to salvage a fairly decent report from the jumble. His ear would snatch phrases of announcements and identify musical numbers. He might be obliged to spend an hour or more on the one station, but he would be able to get enough material for a verification—and that was his primary purpose.

It is quite impossible to give speci-

fic directions on how to listen when a station once is tuned, as this is an art which can only be developed by actual experience. Perhaps the best method is for the DXer to spend hours listening to the weakest signals on the broadcast spectrum. By concentrating on the toughest stations within range, he will gradually acquire the knack of deciphering the worst jumbles.

He may find that certain adjustments on his receiver will assist in making out announcements. If interference is high pitched, it is likely that turning the tone control to the bass position will cut off some of the racket. Slight de-tuning from exact resonance will cut out some low-pitched noise. Some almost hopeless cases have been cleared up by using the beat frequency oscillator and zero-beating the set. Other methods, peculiar to each individual receiver, can be worked out by the DXer himself.

As times goes on, the DXer will have less trouble making out announcements and will be able to understand speech which would be quite unintelligible to the average listener. When he has developed the arts of hearing and tuning to their fullest extent, and has learned when and where to tune, he will be able to enjoy maximum results for his particular receiver and location. And the chances are that never again will he ask "How can I hear a foreign station?"

Vagaries of Reception

When tuning for foreign stations, listeners will run up against many vagaries of reception. Medium wave signals travelling long distances are temperamental creatures. Sometimes

their behavior is easily understood and on other occasions explanations have not passed the theory stage, but always their antics must be considered by the DXer.

Most listeners are aware that the signals travel real distances only when darkness covers the path from station to listener. Also, cool weather is a prime necessity. Hence, winter nights always find DXers on the prowl for new catches.

However, while the dead of winter is supposed to be ideal for reception between points in the Northern Hemisphere, signals from South America and the Antipodes are not well received. The reason, of course, is that there is summer in the Southern Hemisphere during December and January. Consequently, reception from those parts is best in October, November, March and April—since relatively cool weather exists at the points of transmission and reception.

As yet there has been no accepted explanation for one vagary of reception which directly affects foreign reception by American listeners. This concerns the relative abilities of a signal to travel in different directions.

Take, for example, a clear, cool December morning. The time is one-thirty. Static is light and reception conditions appear to be ideal. A listener along the North Atlantic Seaboard tunes in a European station some 3500 miles away. The time is right, as darkness covers the complete path of the signal, which is almost entirely over water. The station has a powerful transmitter—such as the 120 kilowatts of Rennes. There is no interference from other stations. The set-up should be ideal—yet the signal

shows relatively poor strength, no better than an R4 at best, and fades badly.

A half hour later, the same listener tunes in the 50-KW LR1 at Buenos Aires, some 5000 miles away. It is summer down there, so reception conditions are not as good as they might be. LR1 has less than half the power of the European and is half again as far away, yet it shows a strong R6-7 signal which fades very little.

At two o'clock, the DXer tunes in one of the Pacific Coast 50-kilowatt stations—KFI, KPO or KNX—about 2500 miles away. General conditions are still ideal, yet the signal will be little better than that of LR1 which is twice as far away.

Freaks such as this example were of sufficient interest to the Bureau of Standards to lead to a series of international tests during the past few years. Observations were much the same as those recorded here, yet explanations to date have been only theoretical.

But regardless of the reasons for the queer reception, DXers must consider every factor when tuning for foreign stations. Observations seem to indicate that signals travelling West from Europe do not carry as well as the power of the transmitters and the relatively short distance would indicate. They can be received fairly well on the Atlantic Seaboard, particularly in the New England States and the Maritime Provinces. As they go farther West, they lose strength rapidly. Reception in the Middle West is erratic, and the carrier is completely fagged out by the time it reaches the West Coast, where only a few reports are made.

Although it does not concern us, it is interesting to note that European listeners do not experience the same difficulty in receiving American stations. Much the same is true of DXers in Australia and New Zealand, who have better luck with our broadcasters than we do with theirs.

Reception of trans-Pacific stations offers another oddity. West Coast DXers have little difficulty in dialing Japanese transmitters, many of which even interfere with domestic programs. Yet listeners in the Middle West have infrequent success, and Eastern DXers seldom report a Japanese.

Those South Americans

Perhaps the most fertile field of foreign stations for listeners in this country is South America. Considering the distance and the relatively low power of the average station, observations show that signals from this continent cover the entire United States with really excellent strength.

In the writer's opinion, Latin American stations offer the best possible opportunities for real DXing. Although it is known that they have little difficulty in reaching this country, they are not easy to hear. In fact, they provide a real test of DX skill and the listener with a large log of SA's has good reason to be proud of his record.

In general, listeners find reception of SA's best during October, November, February and March. While this merely confirms the general theory regarding transmission between the Northern and Southern Hemispheres, the mid-winter months also provide their share of catches.

Most frequently heard are stations in Argentina and Brazil, with the nearer countries of Colombia and Venezuela running a good second. Time in the former two countries runs an hour ahead of Eastern Standard, except during our mid-winter months when their summer time puts them two hours ahead. The Colombian Republic observes Eastern Standard Time, and Venezuela is one-half hour faster than EST.

With this in mind, DXers usually can start dialing for SA's at sundown. For the next couple of hours, reception should be at a peak. Between seven and eight o'clock, EST, the signals of domestic stations begin to pick up strength and then there is the problem of interference to consider. Schedules show that most SA's sign off between 11 p. m. and midnight, their time, which means that reception in the United States will probably end by 11 p. m., EST, in the spring and fall, 10 p. m. in the winter.

Late test programs, unless arranged by the Bureau of Standards or one of the radio clubs, are few and far between, with the result that a DXer need not be a night owl to dial for South Americans. Exceptions have been noted on Christmas and New Year's mornings, when early masses and dance programs have been heard from numerous stations.

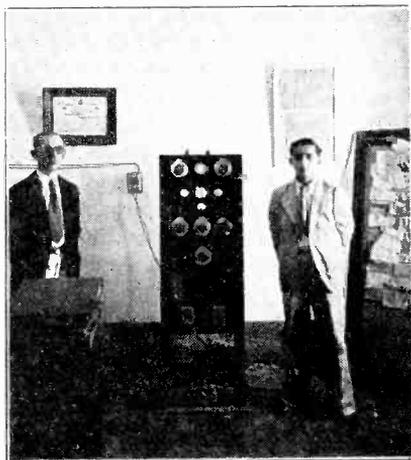

A complete list of South American stations is given in another section of this issue, while following is a short listing of the more powerful stations including a few Central Americans which are worth watching:

570 CB57 5000 Santiago, Chile
 590 LS10 6000 Buenos Aires, Arg.
 600 PRH2 25000 Porto Alegre, Brazil

610 CX4 1000 Montevideo, Uruguay
 625 TIPG 2000 San Jose, Costa Rica
 630 LS3 5000 Buenos Aires, Arg.
 670 LS4 7000 Buenos Aires, Arg.
 PRC5 2000 Belen, Brazil
 680 HJN 1000 Bogota, Colombia
 PRC2 5000 Porto Alegre, Brazil
 710 LS1 5000 Buenos Aires, Arg.
 720 PRA8 25000 Pernambuco, Brazil
 740 PRA4 10000 San Salvador, Brazil
 750 LRA 10000 Buenos Aires Arg.
 760 CB76 10000 Valparaiso, Chile
 PRA6 10000 Sao Paulo, Brazil
 780 LT1 5000 Rosario, Arg.
 790 LR10 10250 Buenos Aires, Arg.
 830 LR5 29000 Buenos Aires, Arg.
 840 PRH9 5000 Sao Paulo, Brazil

From this list, DXers will be able to select a few of the most powerful stations for their initial try. As soon as night has fallen, they might turn to 1190 for the 30-KW LS2 in Buenos Aires. Along the Atlantic Seaboard, WOAI isn't heard on that channel until at least an hour after dark, and the chances are excellent that LS2 may be logged. Listeners at a distance from Cleveland should have no difficulty in hearing the 50-KW LR1 on 1070 between night-fall and the time WTAM begins to come through. Many DXers report

The transmission equipment of station HJ1ABK, "The Voice of the Country," at Barranquilla, Colombia. Working on 1310 kcs., this 250 watt station has been heard in the United States. The owner, Mario Luis Hernandez, is shown on the left.

that the 7000-watt LS4 on 670 is a cinch before WMAQ settles down for the night. LR5 on 830 is often heard between the sign-off of WRUF and the time KOA starts to push through. Other powerful stations may be tried in the same manner.

Later on in the evening, there is still ample opportunity for hearing many Central and South Americans. The regional channels frequently offer good catches. An example would be the 25-KW PRA9 on 1220. In many sections of the country, domestic stations are just a jumble and many evenings find powerful signals from the South overriding all local broadcasters. Although many SA's keep right on their assigned frequencies, there are a few which may wander 5 kcs. off and this provides many opportunities for split-frequency tuning.

Early evening reception of the South Americans affords DXers a rare chance to try directional and loop aeri-als. Too few listeners have taken advantage of this means of overcoming interference from more than one station on a channel. A classic example is afforded by one Toledo DXer who used a loop to bring in LR1 when WTAM on the same frequency was only a hundred miles away.

Sometimes DXers wish that the SA's would borrow from American stations the habit of signing on early in the morning. If they would commence their day of broadcasting at six or seven in the morning, there would be practically nothing to stop them from being heard.

The earliest sign-on among the Argentines is that of LR2, the 12-KW station on 910 kcs., which starts its day at 7:30 a. m., Buenos Aires Time.

That would be 6:30 a. m., EST, during the fall and spring, and 5:30 in mid-winter. Signing on at 8 a. m., B. A. time, are LT1 on 780 kcs., LR5 on 830, LR3 on 950, LR1 on 1070, LS5 on 1110, LS8 on 1230 and LU7 on 1240. At 8:30, B. A. time, we might hear LS10 on 590, LR6 on 870 and LU2 on 900. Other Argentines sign on much later.

All in all, the SA's offer DXers a fine opportunity to build up an impressive log of foreign stations. They are hard to hear, it is true, but they can be logged if the listener has the patience and perseverance to stick with them. DXers who have concentrated on the SA's, find great sport in logging them, and can well be proud of each and every catch.

The Antipodes

Also arriving in October will be the first signals of the season from Australia and New Zealand. Being in the Southern Hemisphere, they are heard during the same seasons as the SA's—namely, October, November, February and March. On the West Coast they are heard during the mid-winter months as well.

Located on the opposite side of the world, they represent the greatest possible distance which can be heard by American DXers, and as such they are highly prized by listeners. Because of the extreme distance and the relatively low power with which they operate, their signals are probably the weakest of all foreign stations regularly heard in this country.

To offset this handicap, the Aussies and Zedders are heard at hours when channels are clear and interference is at a minimum. The New Zealand stations ordinarily begin to come

through just after nightfall down there, which would be 8:30 p. m. their time and 4 a. m. in Eastern Standard Time. It is then but 7 p. m. in Eastern Australia, so the Aussies don't come through until a little later. From then until daylight over here, their signals increase in strength.

On a morning when reception conditions are favorable, it is a relatively easy matter to log the more powerful Aussies and Zedders. "Spot Tuning" is the best possible method, and a group of half a dozen stations may be selected from the following list of the more powerful transmitters.

550	2CR	10000	Cumnock, N. S. W.
560	6WA	10000	Minding, W. A.
570	2YA	60000	Wellington, N. Z.
580	3WV	10000	Horsham, Vict.
610	2FC	3500	Sydney, N. S. W.
620	3AR	4500	Melbourne, Vict.
630	4QN	7000	Clevedon, Qsld.
640	5CK	7500	Crystal Brook, S. A.
650	1YA	10000	Auckland, N. Z.
670	2CO	7500	Corowa, N. S. W.
700	2NR	7000	Grafton, N. S. W.
710	7NT	7000	Kelso, Tasmania
720	3YA	10000	Christchurch, N. Z.
730	5CL	4000	Adelaide, S. A.
740	2BL	3000	Sydney, N. S. W.
770	3LO	3500	Melbourne, Vict.
790	4YA	10000	Dunedin, N. Z.
800	4QG	2500	Brisbane, Qsld.
830	3GI	7000	Longford, Vict.
840	2YC	5000	Wellington, N. Z.
870	2GB	1000	Sydney, N. S. W.
910	4RK	2000	Rockhampton, Qsld.
950	2UE	1000	Sydney, N. S. W.
990	2GZ	2000	Orange, N. S. W.
1020	2KY	1000	Sydney, N. S. W.
1040	5PI	2000	Crystal Brook, S. A.
1120	4BC	1000	Brisbane, Qsld.
1170	2NZ	2000	Inverel, N. S. W.
1190	2CH	1000	Sydney, N. S. W.
1220	4AK	2000	Oakey, Qsld.
1230	2NC	2000	Newcastle, N. S. W.
1260	3SR	2000	Shepparton, Vict.
1270	2SM	1000	Sydney, N. S. W.
1300	2TM	2000	Tamworth, N. S. W.
1410	2KO	5300	Newcastle, N. S. W.

By picking some of the more pow-

erful stations such as the 60-KW 2YA and the 10-kilowatts 2CR, 1YA, 3YA and 4YA, the DXer will be able to "size up" the reception conditions for the morning. On some mornings, he will hear the ever-welcome "swish" of the carrier as he dials the proper frequency. Other times he will hear nothing at first, but remembering the great distance and the resulting weak signals, he will "park" on the frequency for several minutes to allow for a period of fading. If the signal eventually comes in, he should have no difficulty logging the station. If nothing is heard after five minutes, he can go on to another station and frequency.

If he finds that the big boys in New Zealand are coming through in good style, he can take a crack at some of the more popular Aussies such as 4QN on 630, 5CK on 640, 2CO on 670, 7NT on 710, 5CL on 730, 2BL on 740, 4QG on 800, 4RK on 910 and so on up the line. If he is still successful, he can try the smaller stations such as 2KY on 1020, 2NZ on 1170, 2CH on 1190 and 2NC on 1230 all of which are reported frequently, despite their relatively low power.

Finally, after covering the stations listed above by "spot tuning," he will find a certain amount of "fishing" in order. Occasionally freak conditions will find several low power broadcasters coming through, although, as a general rule, fishing won't bring in anything startling.

DXers on the Pacific Coast have little trouble with the TP's, and few winter mornings will pass without at least a few of them being heard. In the Middle West, reception falls off

(Please turn to page 82)

The RADEX Club

FOR several years we have felt that the followers of this magazine would like to become associated with a club, if one was formed to operate under the RADEX aegis. This "hunch" was fairly well founded because frequently letters came suggesting that an association be formed for RADEX subscribers, and even more frequently, correspondents referred to themselves as members of the "Radex Clan." From the "Radex Clan" it is but a step to The Radex Club. In actually forming the Club, we have merely given a name to a group of people which has existed for many years—all of them bound together by their mutual interest in long distance radio reception. It was with no misgivings, therefore, that we inserted the announcement of our Club in the September issue of our publication.

As this column is being written only a few days after the September RADEX appeared on the newsstands, we cannot report accurately, as yet, how our new venture appeals to "the clan," but returns from a few of the nearby states, and a few airmails from more remote localities, seem to indicate that the Radex Club is definitely wanted.

At the present moment, members have been enrolled from fifteen states and two Canadian provinces. Following is a list of the names of the first person to enroll from each of the states.

Arizona: John A. Ranta, Bisbee.

California: Norman Kinzly, Burbank.

Connecticut: Fred Burleigh, Meriden.

Eddie Cantor and "Willie Winkett" before the BBC microphone, during the American star's recent visit to England. Eddie Cantor and "Willie Winkett," a rosy-cheeked, dapper ventriloquist's dummy, took part in the first production of "Sing Song," a new BBC variety feature. (Photo by courtesy of British Broadcasting Corp.).

District of Columbia: Charles S. Greenwood, Washington.

Florida: Fred L. Hinkley, St. Petersburg.

Illinois: D. S. Barnes, Chicago.

Massachusetts: Charles Leboeuf, Webster.

Michigan: Carl E. Sylvester, Yale.

Missouri: Walter V. Scholz, Webster Groves.

New Hampshire: Harry Hawkins, Manchester.

New Jersey: Mrs. F. W. Reitz, Ocean Grove.

New York: W. M. Pettis, Ardsley-on-Hudson.

Ohio: Theodore Johnson, Youngstown.

Pennsylvania: A. M. Hankins, Latrobe.

Washington: Cecilia Huntoon, Wenatchee.

Saskatchewan: Paul Sampson, Regina.

Ontario: J. F. Morris, Toronto.

We shall not print the complete addresses of members unless we are requested to do so. Any member who wishes the address of another member may obtain it by writing to us.

Membership cards are being prepared and will be sent to all the clansmen shortly.

Verify All Continents

An inscription on our Honor Roll, and eventually a more tangible award which may be hung on the wall of the "den", are the rewards our members will earn who succeed in verifying radio stations on all the continents.

We shall have three separate Verified All Continents Classes. One class will be for those members who have verified the six continents on the standard broadcast band. Another class will be for those who hear amateur stations on every continent, and the third group, for clansmen who hear shortwave stations on all continents.

Without question, it is more difficult to hear all continents on the broadcast band than on the shortwaves, or on the amateur bands. This fact makes it necessary to require different qualifications for the three different classes. The three rules which follow explain the different requirements.

1. To qualify for the Verified All Continents rating on the standard broadcast band (540 to 1600 kilocycles), members must send us ONE verification from a broadcasting station located on each one

of the six continents.

2. To qualify for the Verified All Continents rating on the amateur bands, members must send TWO verifications from bona fide amateur stations located on each one of the six continents.
3. To qualify for the Verified All Continents rating on the shortwaves, members must send FIVE verifications from shortwave stations on each one of the six continents.

The Broadcast Band

At the present time we are prepared to receive requests from our members for the Verified All Continents citations on the broadcast band only. PLEASE DO NOT SEND US AMATEUR OR SHORTWAVE VERIFICATIONS UNTIL WE REQUEST THEM.

Each verification submitted to us must be a genuine verification of reception. It must bear the name of the person submitting it. If a card, it must bear the original postage stamp, or if a letter, the envelope with stamp affixed must also be submitted. The date on the postmark must coincide, within a few days at least, with the date of the verification. Only ONE verification from each continent, or six veries altogether, should be sent at one time, and postage should be enclosed for their return.

Broadcast band verifications, as explained above, will be within the frequencies of 540 and 1600 kilocycles. The six continental areas are:

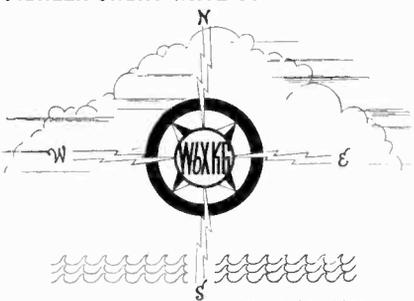

1. North America, including Newfoundland, Mexico, Bermuda, Central America and the West Indies.

High Frequency Globe Trotting

With **RAY LA ROCQUE**

THE PIONEER SHORT WAVE STATION OF THE WEST

Verifies Your Reception Report of March 10, 1938

W 6 X K G 25,950 Kc.	BEN S. McGLASHAN, Owner 1417 South Figueroa Street, Los Angeles, Calif.	K G F J 1200 Kc.
--------------------------------	---	----------------------------

WITH the arrival of colder weather and a longer period of daily darkness, reception on the lower frequencies, especially the 6 megacycle and the 4.8 megacycle strips, should improve rapidly. Atmospheric static, always prevalent on this band during the warm months, has made reception dull and uninteresting on these particular channels in the Summer. Now, the static is declining and signals are improving in strength. The crowded conditions on this band tend toward causing much inter-station interference, but show us a DXer who doesn't delight in digging through QRM after a distant catch! The 4.8 megacycle band, which, last season, was a meca for Colombians seeking refuge from the crowded channels, will doubtless find many new countries filling its none too many vacant frequencies. All in all, the coming months of cold weather should provide many evenings of enjoyable DX with very fruitful results.

Before we start digging into the news of the month, we hope that you will not mind a few lines of explanation regarding our system of crediting

An ultra-high frequency verification. This large-size card from W6XKG is printed in blue on a blue-colored card, with call letters in red.

the various items contributed to us. All information received from official sources will be credited with the symbol RX. All information mustered by yours truly will be appropriately labeled RL. Readers who by subscription to RADEX have been assigned a club number will find only their club number and the state following the item they submitted. (e. g. R201—Mass., R555—Calif., etc.) Those reporters not belonging to the RADEX club will have their items credited with their last name and the name of the state. Full names of contributors with residences and RADEX Club code numbers (if any) will be found at the end of this department.

MEGACYCLE BREVITIES

"Radio Turkey," reported by a few club bulletins to be operating on various frequencies from 15180 kcs. to its assigned 15195 kcs., is still a mystery! Though the Ankara (transmitter location) station was scheduled to come on the air some time ago, we have no

definite reports on reception and we believe that those who have reported it are merely guessing at its identity as the language is distinctly foreign to all short wavers and no positive identification is included in any report we've seen thus far. Certainly, no English is being used in the announcements as yet. . . . A station not commonly heard by DXers is reported by A. V. Deterly of Baton Rouge, La. He reports hearing FZE8 (17280 kcs.) in Djibouti, Somaliland. It's a phone station used for commercial purposes, but it is a good target at which to aim. . . . In Guatemala, TGWA will soon be relayed by a 1000 watt sister station—TGWB on 6040 kcs. . . . Italy's 100 kilowatters will be ready for operation before we get ready to "ring out the old and ring in the new." . . . We heard a British comedian tell it over GSG the other afternoon: Seems that an American strolled into a London butcher shop and asked the clerk for a sheep's head. "One sheep's head", shouted the butcher. The American promptly spoke up, "Make sure it's an American sheep's head." "One sheep's head—and remove the brains," was the clerk's added shout.

QUOTE AND UNQUOTE

Below are just a few selections from the many letters received during the month. They contain items that in our opinion are of general interest to readers.

S. D. Stutson, Box 32, Suffolk, Va.: "In answer to the query of Richard Wright in the September issue of RADEX, the national anthems of the various countries named are:

Costa Rice, *De La Patria* (Of the Fatherland).

Cuba, *Himno Nacional de Cuba*.

Guatemala, *Guatemala, en tul impia bandera* (Guatemala, Around thy Spotless Banner).

Mexico, *Mexicanos, al grito de guerra* (Mexicans, at the call to Arms).

Philip Craig, Waterville, Maine: "I hear VK3ME regularly, but it is difficult to copy their signals in order to get a correct report. When they give their address, it is spoken quite rapidly and is usually accompanied by a fade, making it impossible to get the complete address correctly. I have part of it, reading 167 Queen St., but elsewhere I have seen it listed as King St. Which is right?" (167 Queen St., Melbourne, Australia is correct—RL)

Carl M. Hansman, Bethel, Maine: "I heard what seems to be a new station on approximately 9655 kcs. the other evening about 8 p.m. and listened for about two hours. Part of the program consisted of talks on Venezuela. 'Lima' was mentioned on several occasions. The signal was QRMed badly and was weak." (Obviously it is either a new Venezuelan or Peruvian station, but we have no definite information or particulars concerning this one. Anyone else hear this one?—RL)

Rudolph Bossert, Rochester, New York: "I always read the various articles in RADEX with great pleasure, but there is one thing no one has discussed so far. I refer to ignition noise from autos. I think it is about time that something be done to do away with this type of disturbance. I'm using a Scott 23 with doublet antenna and noise reducing lead-in. Now, the lead-in helps a little, but as long as the aerial is within 150 feet of a street, it will pick up auto spark QRM. Many people buy short wave or all wave sets,

but soon give up short waves on that account, unless they live in the country—but we can't all live in the country!

"I personally cannot do anything about it, but perhaps the radio clubs and magazines acting in unison can do something." Mr. Bossert certainly has brought up a point worth mentioning and in another part of his letter he mentions having the manufacturers build noise suppressors into their automobiles. This is a good idea—if it can be done—but there are, and will be for many years to come, hundreds of thousands of old cars on the road not equipped with the proper spark noise eliminators.

The National Association for the Prevention of Radio Interference (NAPRI) has been organized for the purpose of combatting interference, through the enactment of suitable legislation, and although the task is a stupendous one, some progress has already been made. We understand that the states of Washington, Oregon and Vermont, and the Territory of Hawaii, have enacted laws looking to the correction and elimination of this evil.—RL).

ULTRA HIGH

Unknowingly, last month, we answered one of our own questions. We refer to the Minneapolis station on 26050 kcs., whose call we failed to ascertain. We showed it as W9XGP and listed a W9XTC in Rose Township as a new one. It has been revealed that Rose Township is a suburb of Minneapolis and W9XTC is none other than the station we have been hearing on 26050. Particulars are shown in the list below.

W1XPW on 40300 kcs. in Hartford, Conn. has been granted a con-

traction permit for a new high frequency broadcast station on the summit of West Peak, 2½ miles northwest of Meriden. Power—100 watts. (RX).

W1XOE on 31600 kcs. (May also use 35600, 38600, and 41600 kcs.) owned by Columbia Broadcasting System in Boston, Mass. has been granted permission to move to Los Angeles, Calif. Some jump, eh wot? Of course, this means a change in call letters. The oddity is that we never would have been able to hear this one while it was located just a few miles from here, but prospects should be much better when it starts broadcasting on the coast. Just another peculiarity of the ultra bands. (RX)

W2XGD on 40300 kcs. in New York City, owned by the National Broadcasting Company, has been granted a construction permit for a limited high frequency broadcast station. We say limited because assignments on that band may be changed at any time. (RX)

W2XMN on 42800 kcs. in New York City has had extended its permission to conduct tests with 40000 watts on this channel. As yet, we have not been able to hear any of them though it seems that this tremendous power ought to pack some kind of a wallop on these bands. (RX)

W9XA in Kansas City, Mo. has been granted permission to rebroadcast any or all programs of station KITE on 1530 kcs. (RX)

W9XPD on 31600 kcs. in St. Louis, Mo. is owned by the St. Louis Post Dispatch. They are continually asking for reports and promise to answer all reports with their QSL cards. (RL—Mass.)

W9XTC on 26050 kcs., in Minneapolis, Minn. relays the programs of WTCN and asks for reports. A very easily heard station in the Northeast, they are on in the morning till 1:00 p.m., at which time they sign off to return again at 5:00 p.m. They fade out here before they sign off so that the time is not known. (RL—Mass.)

W9XUP on 25950 kcs., in St. Paul, Minnesota continues to be the best of the ultra high broadcasters here. They are suffering more and more from W6XKG's QRM, though, and the Californian will no doubt continue to gain in signal strength when the colder weather brings on greater skip distance.

Your comments and reports on ultra-high frequency reception are most welcome and we hope that soon there will be many more short wave fans realizing the fun that can be had DX'ing on this band while it is still in the experimental stage.

VERI NEWS AND NEW VERIES

VP3THE card folds over double and contains plenty of information. It has three pictures. White call letters on green background at top of card. (Keirstead—Mass., Gardner—Ohio).

RKI Some listeners are receiving a magazine "USSR in Construction" from this and other Russian stations. Bigger than LIFE magazine and full of pictures, it makes an interesting addition to any veri collection. (Tavener—Texas)

PSH—Card shows a sketch of Rio de Janeiro harbor in black on yellow background. Call in red and frequency in violet at top right corner of card.

W6XKG—Veri card is light blue with all print in dark blue except en-

circled call in red in center. Outside of circle are lightning flashes representing radio waves in all directions. Cloud effect in background makes for a very neat card!

"JZJ verified with an eight page program sheet for the month, and the statement that my report was correct. A questionnaire was also received containing twelve questions to be filled out when reporting to them again, pertaining to type of radio and antenna system and conditions existing about the listener's own receiving post." (Craig—Maine).

W4XB is now certifying reports of listeners. They verify by letter. (N.N.—R.C. Bulletin).

A pretty two-color card from Buenos Aires. This card is used to verify reception of broadcast band station LR4, or short-wave station LSX. The deckled edge is distinctive among veries.

SHORT WAVES IN REVIEW

China

XGOW is now on 8900 kcs. about 8:00 a.m. daily (Wilson—Maine).

Curacao

PJC-2 on 15220 kcs. is very good from 10:30-11:00 a.m. on Wednesdays. They have a very enjoyable musical program. W8XK sometimes causes a little QRM. (Wilson—Maine).

Denmark

OZF on 9520 kcs. is R9 in the eastern part of the country almost nightly. (Wilson—Maine).

Ecuador

HCJB on 12450 kcs. is heard on this new frequency with very strong signal from 7:30 p.m. to 10:15 p.m. Heard program in English titled "Wonders of Quito" from 10:00 to 10:15 p.m. (Satterthwaite—Calif.)

Finland

There are two short wave transmitters in Finland. One in Lahti ("Radio Lahti") with 1000 watts on 9500 kcs. and 11780 kcs., and another in Helsinki with 2000 watts on 6120 kcs. A third station of 1000 watts to be completed in October will transmit on 15190 and 17800 kcs. The power of both stations now operating will be increased to 10000 watts by the end of this year. A directional antenna to North America is now under construction. Schedule for OFE on 11780 kcs. is 1:05-1:45 a.m., 5:00-6:15 a.m., and 10:00 a.m. to 12:05 p.m. For OFD on 9500 kcs. the schedule is noon until 5:00 p.m. Both are daily schedules. All of these programs are broadcast by the 6120 kcs. station and consist of relays from the regular Finnish Broadcast Programs. (Hubbard—England, and IDA Globe Cler).

France

TPB-7 on 11885 kcs., has been heard from 10:00-10:45 p.m., with signal about R8. TPA4 (TPB-9—RL), with signal about R5 and interference from CJRX, also broadcasts the same program. (Ososke—Mich.)

Guatemala

TGWA on 15170 kcs. remains on the air till 2:00 p.m. daily except Sunday. Announcements are made in both Spanish and English (Scholz—Missouri).

India

VUE-3 is reported to be the call of the new Delhi transmitter reported here last month on 15160 kcs. VUE-3 comes on the air at 8:30 p.m. with chimes followed by a clock striking seven times. (RL—Mass.)

Martinique

"Radio Martinique" on 9700 kcs. now comes on the air at 6:00 p.m., not 7:00 p.m. as formerly. (RL—Mass.)

Peru

OAX4T on 9562 kcs. heard between 5:30-6 p.m. although QRM from W1XX was severe. (RL—Mass.)

Poland

SPW on 13635 kcs. is being heard between 6 and 8 p.m. daily. On Sunday they are on until 9 p.m. SPD is heard on 11535 kcs. with the same program as SPW. Both stations seem to come in equally well—signals about R5. (Ososke—Michigan).

Two new Warsaw, Poland stations operating in parallel with SPD and SPW are SP-19 on 151160 kcs., and SP-25 on 11740 kcs. SPD is heard with a fair signal, but SP-25 is covered by CCOX most of the time and is a tough one to hear. Both come on the air at 5:30 p.m. along with SPD and SPW.

(Arthur F. G. Bruder—Mass.)

Portugal

CSW (officially 9940 kcs.) heard around 9800 kcs. has been received with good volume lately and at times

their signal is equal to that of WWJ. They seem to be on 9800 kcs., but the card verification from them shows the frequency as 9940 kcs. CSW is operating from 5-8 p.m. (Ososke—Michigan).

Spain

EAR on 9860 kcs. at Madrid, Spain now follows this new schedule: Three broadcasts daily starting at 3:30 p.m., 6:30 p.m., and 7:40 p.m. This, apparently, is the old EAQ transmitter, but they are using EAR as a call and the address is given as "EAR, The Voice of Republican Spain, Box 951, Madrid." (Satterthwaite—Calif., and Harris—Mass.)

Switzerland

HBO, (listed 11402 kcs.) reported on 11435 kcs. Heard easily with an R9 signal. They are on the air Sunday nights from 7:00-7:45 p.m. (Ososke—Michigan).

U.S.A.

W2XE on 21515 kcs., New York, N. Y. Frequency has been changed from 21520 to 21515 kcs. in order to eliminate sideband interference in European transmission. Arrangement is only temporary—until interference can be cleared. (RX)

W4XB on 6040 kcs. has been heard from 10:00 p.m. to 1:00 a.m. relaying the programs of WIOD. This station is now back on the air after being silent for a long period. They are heard here with an R7 signal. (Ososke—Michigan).

W4XD on 6425 kcs. This station announcing as an experimental station of the University of Florida was heard

one morning at 7:45. Any further particulars will be appreciated. (Scott—Tenn.)

WAWZ—the famous "Pillar of Fire" organization station on the broadcast band has applied to the FCC for a construction permit for a short-wave station to operate on 6080, 11830, and 17780 kcs. (RX)

And thus, without further comment, we come to the terminal point of another session. We hope you've enjoyed this, our second get-together, as much as we have and that you'll be back with us next month for more. In the meantime, how about letting us know what sort of stuff is trickling down your antenna wire these autumnal evenings?

RADEX REPORTERS FOR THIS MONTH

Curtis F. Keirstead, Framingham, Mass.
Cliff Tavener, Rosenberg, Texas
Philip Craig, Waterville, Maine
C. Robert Wilson, Portland, Maine
Harold Satterthwaite, Los Angeles, Calif.

Leonard D. Hubbard, London, England
Edmund Ososke, Detroit, Michigan
Walter V. Scholz, 2nd, Webster Groves, Mo.

G. L. Harris, Northampton, Mass.
William Scott, Johnson City, Tenn.

KENORA STATIONS

Gordon Myles of Kenora, Ontario, is the first to report that the new station being built in his city will be known as CKCA. It will transmit on 1420 kcs. with 100 watts, and hopes to increase power to 250 watts soon after its inauguration.

ACROSS the Editor's DESK

SINCE the month of October heralds the beginning of reception of stations from South America, this issue of RADEX has been dedicated to that continent.

South America, land of oil, pampas, high mountains and enormous rivers, tin and silver, marvelous cities and uncounted opportunities, offers to the radio fan, broadcasting stations on long and short waves, from the smallest "peanut whistle" to the finest high powered transmitters. On the shortwaves dozens of South American stations can be heard every night, and during our winter months the stations on the regular broadcast band come through with *relative* ease. Mr. Lord's broadcast band column this month gives many tips to aid you in hearing these stations, and the index of South American stations will prove an invaluable aid in identifying the stations you hear.

South America surpasses all other continents in the tremendous extent of its inland waterways and the largest ocean steamers are able to sail for 1000 miles up the Amazon River, as far as Manaus, in Brazil. Only about one quarter of the area of this continent has been surveyed.

There are only four European dependencies on the continent, the three Guianas, British, French and Netherlands, and Inini. French Guiana is best known for Devil's Island, its penal colony. Netherlands Guiana is now called Surinam. Inini, formerly a part of French Guiana, has been a separate colony since 1932.

"Rio Internacional do Brasil"

Caixa postal 700

Rio de Janeiro

1935

The most beautiful harbor in the world, at Rio de Janeiro, Brazil. This view is taken from the verification card of PSH, shortwave station on 10220 kcs. This is a bi-lingual card, in English and Portuguese, printed in black on a yellow background.

All the other countries in South America are republics, and the official language of all the republics is Spanish, except Brazil, where Portuguese is spoken.

The Argentine

The Argentine Republic is divided into fourteen provinces, ten territories and one Federal District. Like New York, she has a Staten Island. It is situated near Tierra del Fuego, and used as a point of deportation for criminals and undesirables. Twenty-five per cent. of the Argentine population is foreign. Her largest cities are Buenos Aires, the capital, with 2,153,200 persons, Rosario, Cordoba, Tucuman, Santa Fe, Mendoza, La Plata, Bahia Blanca, Parana and Salta. The distance from Chicago to Buenos Aires is 5598 miles.

Bolivia

Bolivia is the most sparsely populated of all the republics. She has two capitals, La Paz being the site of the

executive and legislative branches of government, and Sucre the seat of the supreme tribunal. La Paz is the largest city, with 149,500, and Oruro is the second largest city, with 31,360. Other large cities are Sucre, Potosi, and Santa Cruz de la Sierra. From Chicago to La Paz the distance is 4130 miles.

Brazil

The largest of the South American countries, occupying more than half of the continent, is Brazil. First called "Vera Cruz", after its discovery in 1500, it was later changed to Brazil by King Emmanuel of Portugal, because of the large number of brazilwood trees. The United States of Brazil is divided into twenty states, one national territory and one Federal District. The names of the states are usually given in parentheses following the names of cities. Her largest cities are Rio de Janeiro, the capital, with 1,700,000, Sao Paulo (Sao Paulo), Sao Salvador (Bahia), Recife (Pernambuco), Belem (Para), Fortaleza (Ceara), and Manaus. The air line distance from Rio de Janeiro to Chicago is 5320 miles.

Chile

Chile, with a coast line 2485 miles long, and an average width of only 90 miles, boasts every kind of climate, from desert regions in the north to cold, almost Arctic wastes, in the south. This republic consists of seventeen provinces. The largest city is Santiago, the capital, with a population of 696,231. Other large cities are Valparaiso, Concepcion, Antofagasta, Iquique, Vina del Mar, Talca and Chillan. Airline, the distance from Chicago to Santiago measures 5320 miles.

Colombia

The area of the Colombian Re-

public is about equal to the combined areas of the states of Louisiana, Texas, New Mexico and Arizona. There was a time, however, when this country was much larger. For thirteen years (1819-1832), during which time she was known as Greater Colombia, she occupied nearly all of the northwestern

Except for the automobiles driving on the left side of the street, this photograph of the "Diagonal" in Buenos Aires might be a picture of any progressive American city.

part of South America. In 1832, however, Greater Colombia was split up into the three countries of Venezuela, Ecuador and new Granada. In 1863 the name of New Granada was changed to the Republic of Colombia.

This is the only South American country which has a coast line on both oceans. It is also wholly within the tropics, and nearly all the emeralds mined today come from this country, famous also for coffee. Her capital

and largest city is Bogota, with 241,999; Medellin, with 120,044, and Barranquilla, Cali, Cartagena, Manizales, Cucuta and Bucaramanga, her other large cities, are all familiar to shortwave listeners. From Chicago to Bogota, the crow flies 2691 miles.

Inca-land

The republic of Ecuador, in area about the same as Arizona, lies on the equator, hence the name. Ecuador is most famous for its Panama hats, and the volcanoes of Chimborazo and Cotopaxi. The capital is Quito, and the cities of Quito and Guayaquil are about equal in population, both having 100,000 people. Other towns are Riobamba, Ambato and Loja.

Paraguay is one of the two inland countries of the continent, and, in size, is about the same as Nebraska and Kansas combined. The capital, Asuncion, is the largest city, with 90,003, and her other important cities are Villarrica, Concepcion and Luque.

Peru, with about 2800 miles of railroads, and important mineral deposits, is still the land of the llama, since most of the mountain transportation is done by means of caravans of llamas driven by Indians. Lima, the capital, is a city of 316,000, and Cuzco, the ancient capital of the Incas, is 15,000. Callao and Arequipa are other important centers.

At one time a province of Brazil, Uruguay became independent in 1825. It is the smallest South American republic. Her capital, Montevideo, has a population of 655,615, and her other cities are Paysandu, with 26,000, and Salto, with 30,000.

Venezuela, the third largest producer of petroleum in the world, is equal in size to the combined areas of

the states of Texas and New Mexico. Her capital and metropolis is Caracas, with 135,253, and La Guaira, seaport, has 7,334. Other cities are Maracaibo, 46,706; Valencia, 29,466; Barquisimeto, 23,943; Ciudad Bolivar, 19,712; Puerto Cabello, 14,099. From Chicago to Caracas the distance is 2480 miles.

Parade of the States

When this column was prepared, we had not yet received enough of the ballots, which were printed in the September issue, to determine which stations will be asked ultimately to broadcast for the entertainment of our readers. We expect by next month, however, to be able to report on the voting, and perhaps to give the dates of some programs.

For the benefit of readers who may have missed the September issue, we are reprinting the ballot this month.

Thanks

For photographs used in RADEX this month, we thank the following contributors: A. R. Rose, of station WMCA, New York; the British Broadcasting Corporation, Martin J. Olthoff, HJ1ABK of Barranquilla, Colombia, W6XKG of Los Angeles, LS2 and LR4 of Buenos Aires, and PSH of Rio de Janeiro.

Everyone who submits a photograph which is used receives a free copy of the issue in which the picture appears, or if he is a subscriber, his subscription is extended an additional copy. If you have some good-looking QSL cards, unusual views of radio stations, or a good snapshot of yourself in your radio den, send them along—we will take good care of them, and if we can use them, you will get your RADEX for nothing. Fair enough?

NEWS of the STATIONS

THE photograph shown at the head of this column pictures one of the studios of WMCA, New York City. There are ten studios all together, no two of them being alike; each one features a different design, and the walls and ceilings are of light pastel tones. The patterned linoleum on the floor of the studio illustrated has as a motif, a radio tube filament and grid.

This room, known as Studio Number Five, accommodates a 14-piece orchestra and is used for such productions as "Five Star Final," a popular WMCA program. The control room and the sponsor's room shown at the rear are elevated about four feet from the studio floor.

Station KOB of Albuquerque, New Mexico, announces that Mr. C. L. Eanes, who for the past nine years has been connected with Albuquerque newspapers, has been named manager of the Albuquerque Broadcasting Company, operators of radio station KOB.

The "Station News" column this month has been expanded to include a tabulation of applications to the Federal Communications Commission for new stations, or new

facilities for existing stations. This news, along with the Examiners' Recommendations and the Month's Changes, will give our readers a complete picture of what is going on in the radio world.

Comments from our readers concerning the usefulness of this new table will be appreciated.

APPLICATIONS TO THE FCC

KEX, Portland, Ore., change freq. to 1160. (SFH).

KFBB, Great Falls, Mont., mod. of lic. to change freq. to 900, pwr. to 5 kw. unltid.

KFJZ, Ft. Worth, Tex., CP to change freq. to 930, pwr. to 500 w. unltid.

KOVC, Valley City, N. D., CP to change freq. to 1340, pwr. to 500 (1).

KRMC, Jamestown, N. Dak., CP to change freq. to 900, pwr. to 500 (1).

KRSC, Seattle, Wash., CP to incr. pwr. to 500. (SFH).

KWNO, Winona, Minn., mod. of license to change pwr. to 100 (.25) unltid.

WBAL, Baltimore, Md., CP to change hrs. from share with WTIC to unltid., change pwr. to 50 kw., move xmitter to Reisterstown, Md.

WBOW, Terre Haute, Ind., CP to change freq. to 1200.

SFH (Set for hearing); freq. (frequency); mod. (modification); lic. (license); pwr. (power); unltid. (unlimited time); CP (Construction Permit); hrs. (hours); xmitter transmitter; exp (experimental) LS (local sunset).

- WCHS, Charleston, W. Va., CP to increase pwr. to 1000 (5).
- WCOU, Lewiston, Me., mod. of CP for new station requesting approval of xmitter site at 378 East Ave.
- WDEL, Wilmington, Del., mod. of CP to change pwr. to 1000 w.
- WGTM, Wilson, N. C., CP to change freq. to 1240, pwr. to 500 w.
- WHAI, Greenfield, Mass., mod. of lic. to change pwr. to 100 (.25) unlt.
- WHB, Kansas City, Mo., CP to change pwr. to 10 kw. unlt.
- WHDH, Boston, Mass., CP to change pwr. to 5 kw. unlt.
- WHJB, Greensburg, Pa., CP change pwr. to 1000 w. unlt.
- WIP, Philadelphia, Pa., CP to change pwr. to 5 kw., move xmitter to Brooklawn, N. J. (SFH).
- WIRE, Indianapolis, Ind., mod. of CP to change pwr. to 5 kw. (SFH).
- WIS, Columbia, S. C., special exp. authority for new satellite station at Sumter, S. C., 560 kcs., 10 to 100 w. from LS to sunrise. (SFH).
- WJAR, Providence, R. I., CP to change pwr. to 5 kw. unlt.
- WJBL, Decatur, Ill., CP to change freq. to 1310, pwr. to 100 (.25) unlt.
- WKBN, Youngstown, Ohio, mod. of lic. to change freq. to 640, pwr. to 1 kw. unlt.
- WMBC, Detroit, Mich., CP to change freq. to 600 pwr. to 250 w. unlt. (SFH).
- WMFF, Plattsburg, N. Y., CP to change freq. to 1240, pwr. to 1 kw.
- WPG, Atlantic City, N. J., CP to change hrs. from specified to unlt., move studio from Atlantic City to 132 W. 43rd St., New York, transmitter Kearney, N. J. (Requesting facilities of WBIL and WOV. Change owner to Greater N. Y. Broadcasting Corp.)
- WRAW, Reading, Pa., CP to change pwr. to 250 w. (SFH).
- WSJS, Winston Salem, N. C., CP to change pwr. to 100 (.25), move xmitter to Liberia St. and Salem Creek. (SFH).
- WTEL, Philadelphia, Pa., mod. of lic. to change freq. to 1500, hrs. to unlt. (SFH).
- WTMV, E. St. Louis, Ill., mod. of lic. to change pwr. to 250 w. (SFH).
- W3XAU, Philadelphia, Pa., mod. of lic. to add freq. 11830 kcs.
- Ashland, Wis., WJMS, Inc., CP 1200 kcs., 100 (.25). (SFH).
- Bowling Green, Ky., 1310 kcs., 100 (.25) unlt.
- Cleveland, Ohio, Cuyahoga Valley Brdctg. Co., 1500 kcs., 100 w. days. (SFH).
- Ely, Wyo., 1500 kcs., 100 w. days. (SFH).
- Fremont, Nebr., Nebr. Brdctg. Corp., 1370 kcs., 100 (.25).
- Hastings, Nebr., South Nebr. Brdctg. Co., 920 kcs., 1000 (5).
- Herrin, Ill., Orville W. Lyerla, 1310 kcs., 100 (.25) unlt.
- Kingston, N. Y., 1500 kcs., 100 w. days.
- Metuchen, N. J., Bernard Goldsmith, 1420 kcs., 100 w. days. (SFH).
- Modesto, Calif., Thomas R. McTammany, 740 kcs., 250 w. unlt. Requests facilities of KTRB.
- Ocala, Fla., John T. Alsop, Jr., 1500 kcs., 100 w. unlt.
- Phoenix, Ariz., M. C. Reese, 1200 kcs., 100 (.25) unlt. (SFH).
- San Juan, P. R., Enrique Abarca Saanfeliz, 580 kcs., 1 kw. unlt. (SFH).
- Sedalia, Mo., 1500 kcs., 100 (.25) unlt. (SFH).
- Springfield, Ohio, 1310 kcs., 100 w. unlt. (SFH).
- Steubenville, Ohio, John F. Nolan, 1310 kcs., 100 w. days.
- Sumter, S. C., J. Samuel Brody, 1310 kcs., 100 (.25) unlt. (SFH).
- Tacoma, Wash., Michael J. Mingo, 1400 kcs., 250 w. unlt.
- Worcester, Mass., Winfield A. Schuster, 1200 kcs., 100 w. unlt.

RECOMMENDATIONS OF FCC EXAMINERS

- KATE, Albert Lea, Minn., mod. of lic. to change pwr. to 100 (.25) unlt.
- KEEN, Seattle, Wash., CP to change freq. to 1420 pwr. to 100 (.25) unlt.
- WDAE, Tampa, Fla., mod. of lic. to change freq. to 780.
- WGNY, Newburgh, N. Y., CP to change freq. to 1220, pwr. to 250, and hrs. from shared to days.
- WHP, Harrisburg, Pa., CP to change pwr. to 1000 (5).
- WMSD, Sheffield, Ala., mod. of lic. to change studio to Muscle Shoals City.
- WPRa, Mayaguez, P. R., CP to change freq. to 780, pwr. to 1000 (2.5) unlt.
- WRBL, Columbus, Ga., mod. of CP to change freq. to 1330, pwr. to 1 kw.
- WTAQ, Green Bay, Wis., CP to change pwr. to 1000 (5).
- Atlantic City, N. J., Press Union Publishing Co., 1200 kcs., 100 (.25) unlt.
- Denver, Colo., F. W. Meyer, 1310 kcs., 100 (.25).
- Emporia, Kans., Emporia Brdctg. Co., Inc., 1370 kcs., 100 w. days.
- Lihue, Hawaii, Garden Island Pub. Co., Ltd., 1500 kcs., 100 (.25) unlt.
- Goldboro, N. C., 1370 kcs., 100 w. unlt.
- New Bern, N. C., Nathan Frank, 1500 kcs., 100 w. unlt.
- Rock Hill, S. C., 1500 kcs., 100 w. days.
- St. Petersburg, Fla., Pinellas Brdctg. Co., 1370 kcs., 100 (.25) unlt.
- Vancouver, Wash., 808 kcs., 250 w. days.
- Wallace, Idaho, 1420 kcs., 100 (.25) unlt.
- Washington, D. C., Lawrence J. Heller, Commissioner recommended dismissal of application for 1310 kcs., 100 (.25).

GROUND FLOOR

WHEN the usual personality story of a radio entertainer breaks into print, it is an odds-on bet that the theme will fall into one of three "elevator-like" classifications—*Going Up, At the Top or On the Way Down.*

Certainly out of the ordinary, and perhaps of genuine interest to radio listeners, is the story of a young man, who, although still on the ground floor, seems destined to enter the elevator which will carry him to the heights. Such is the story of Carrington Veale, who was an outstanding hit as the singing lead in "Fifty - Fifty," the latest production of the University of Pennsylvania's justly famous *Mask and Wig Club*.

Audiences have come to accept the usual college undergraduate performance much in the same light as the traditional high school senior play. They go to applaud the capers of local favorites, don't expect a great deal in the way of real entertainment, manage to come away without being disappointed.

Not so are productions of the *Mask and Wig Club*, which in late years has demonstrated that Penn prestige is safer behind the footlights than on the gridiron. Theater-goers in the larger

Eastern cities delight in the balanced, well-produced extravaganzas of the Wiggers, concur in the belief that only top Broadway hits can cram more entertainment into an allotted two and a half hours.

Last season found the *Mask and Wig Club* offering its fiftieth annual production, and critics agreed that undoubtedly it was the best in recent years. From its opening in Trenton, through its regular engagement at the Erlanger Theater in Philadelphia and at the famous Center Theater of Rockefeller Center in New York, and on its triumphant 3000-mile tour through Mid-Western cities, reviewers were enthusiastic in their praise.

They liked the uniformly well-staged dances, the lively specialty numbers, the novel and sometimes glittering costumes, the imaginative sets, the sparkling dialogue. But in the minds of all, the brilliant music was the outstanding feature of this vivacious jubilee production. Audiences left the theaters humming and whistling the hit tunes, "I Live the Life I Love," "Make Believe Island" and "Gypsy in My Soul."

And no review failed to applaud the

Carrington Veale

voice and personality of the handsome young baritone, Carrington Veale, who introduced "I Live the Life I Love." From the opening performance, at which a Trenton critic reported that Veale "brought the audience to its feet" with his rendition of this rollicking song, each succeeding appearance brought further acclaim.

The staid Philadelphia *Bulletin*, not unduly influenced by the home-town boy angle, reported " 'I Live the Life I Love,' not only is good for a Mask and Wig show but it would be good in any performance, and Carrington Veale has a voice of which much the same can truthfully be said." The *Evening Ledger* of the same city singled out Veale's singing as the "foremost solo performance of the evening." Mid-Western papers commented on his "fine voice coupled with pleasing personality."

The tip-off for the future is found in the warning words: "The hit song is 'I Live the Life I Love,' which is the kind of a song that makes a guy want to put his best girl up in a balcony so he can sing to her. It is sung by Carrington Veale, just as it should be sung. Mr. Veale is what is known in the trade as 'a find.' Broadway will be looking for him if he doesn't watch out."

With such a reception to his first important public appearance, it is small wonder that Carrington Veale has good reason to look forward to a career in radio and on the stage. Coached by Edwin Evans, his naturally brilliant voice is developing rapidly, and his Mask and Wig reputation may provide the necessary impetus for the next big stride ahead.

Ample precedent for whatever ambitions he may cherish is furnished by former stars of the famous U. of P. organization. John Beal of the 1930 show is known to many movie-goers as a featured MGM player today. Austin Marshall, the singing star of the 1934 *Mask and Wig* production, has his name in Broadway lights as the juvenile lead in the smash hit "I'd Rather Be Right." And Remi Martell, one of the principles of the 1935 show, has made a reputation as a dancer in "New Faces of 1938."

Like so many budding stars, Carrington Veale made an early start. His warm, pleasing voice was noticed several years ago, and churches near his Philadelphia suburban home provided the opportunity to develop an effortless style of singing. Sound coaching laid the right foundation for future success.

Oddly enough, although his greatest fame so far has come from his *Mask and Wig* performances, it was only during the last year that he was associated with the club. When he entered the Wharton School of the University of Pennsylvania in 1934, he was attracted by the reputation of *Mask and Wig*, and decided to try out for the show which was soon to go into production. But at the first auditions, he found the blue torch songs then featured not to his liking, and he left the hall before his turn.

For three years he confined his campus vocal activities to the Penn Glee Club, at whose concerts he was a featured soloist. It was only last year that the *Mask and Wig* Director heard him sing, persuaded him to try out for

"Fifty-Fifty," and finally installed him as the singing lead.

During the past winter, Veale added radio to his activities. As a soloist with organist Arthur Hinett on Philadelphia's KYW, he soon impressed listeners with the warm quality of his voice. On another regular sustaining program, he sang with Jan Savitt's popular NBC orchestra.

When "Fifty-Fifty" played in New York, he appeared over a coast-to-coast NBC network with Al Donahue's orchestra from Radio City's Rainbow Room. During the same visit, he was heard with Vox Poppers Wally Butterworth and Parks Johnson on their Tuesday night commercial. And although he was pleased by the interview, he admits that he hasn't gotten around to using the free tube of Molle.

Despite the warm reception which greeted his *Mask and Wig* performances and the approval which followed his radio appearances, his biggest thrill so far came at a Penn dance early last spring. Introduced to sing the song which he made famous in "Fifty-Fifty," he was cheered to the echo. No gridiron hero on Franklin Field ever received a greater ovation, and that is a memory which he will treasure for many a day.

With a June graduation behind him and a B.A. degree in his pocket, he is buckling down to the task of carving a career for himself. He appreciates only too well the difficulties which lie ahead, realizes the obstacles which must be surmounted before he can crash into Big Time. But he has the confidence and determination which will be his most valued aids in the long, tough climb.

Where is he going? What kind of a career would he like?

"Radio is interesting work," he will answer, "and it certainly pays well. Opportunities should be unlimited, particularly since there haven't been many new singers to reach stardom in the past few years. It is different, though, since the engineers do the shading of your voice, since you can't do it yourself.

"For my part, singing before a real audience is the greatest of all experiences. Your voice comes back to you from the auditorium and you can do your own shading. You can watch the audience and see just how your song is getting across. And when it goes over—Boy! That's a real thrill!

"I suppose my real ambition, though, is a chance in the movies. I'll always hope for the opportunity to make a screen test. It may not pan out very well, but I guess that's what I really want. However that may turn out, I'll still want to do some radio and concert work.

"Lots of singers today have voices which *could* be popular. A few are gifted with talent equal to that of Nelson Eddy and other top-notch vocalists. All that most of them need is the one important break that will give them the right start. Once on the way, a lot of today's unknowns would have what it takes to go places."

Disinterested observers around Philadelphia agree that Veale is one young singer who definitely has what it takes. Some of the older music lovers who recall Nelson Eddy's early solo work in that city will tell you that Carrington Veale has a voice strongly reminis-

(Please Turn to Page 95)

Answers To Readers' Problems

• • • By The TECHNICAL EDITOR

Adding A Tube

PLEASE TELL ME HOW I MIGHT ADD ANOTHER TUBE TO MY MODEL 59 PHILCO? THE SET IS SENSITIVE BUT SEEMS TO LACK SELECTIVITY. IT HAS BEEN ALIGNED TO ITS MAXIMUM SELECTIVITY.—R. K.

We are of the opinion that the addition of another tube to this receiver is useless, as well as being a difficult and expensive undertaking. To improve selectivity it will be necessary to have another stage of radio-frequency amplification. This means additions to the tuning condensers and other vital parts of the circuit. Our suggestion is the use of a separate preselector, such as has been mentioned in these columns a number of times.

Atwater Kent 89

I HAVE BEEN TRYING FOR YEARS TO GET A CIRCUIT DIAGRAM OF MY ATWATER KENT, MODEL 89. IS IT POSSIBLE THAT YOU CAN GET ONE FOR ME?—L. J. B.

We cannot reproduce the diagram of the circuit used in your Atwater Kent, model 89, receiver, but we are mailing you a copy of this diagram which you may copy or have photostated, and return the original to us. Circuit diagrams are not available for all sets, unfortunately, but we are happy to help our readers as far as possible. Photostats can not be made by us unless the reader wishes to incur that expense; otherwise, he will have to make his own copy if we can loan the original.

Atwater Kent 82

WHY IS IT THAT AN ATWATER KENT, MODEL 82, FLUTTERS OR MOTOR BOATS WHEN A LITTLE ABOVE OR BELOW A STATION SETTING ON THE DIAL? AND THE SET HUMS A BIT, TOO.—O. C. H.

We wish to suggest that motor boating or the fluttering, of which you complain, may be due to a defect in a 0.25 microfarad condenser which is connected between the detector plate and the ground. This is the type 24 tube. This same tube has a condenser connected between the screen and the ground, which might be examined. The filter condenser, first mentioned, attaches to the plate of the second detector between two resistors that are in the plate supply line—one is black, and the other is yellow and red. Hum can be caused by a number of things which a good service man can find, one usual cause for trouble being in the grid resistor leading to input of the type 47 power tube. This is a purple and black grid leak. Bad tubes and improper adjusting or aligning can cause similar troubles. Check the power units connected to the type 80 tube if hum persists.

Unnecessary Tubes

I HAVE A 1937 ZENITH, 6 TUBES, AND IT GIVES WONDERFUL RESULTS. BUT I WISH TO PURCHASE A LARGER SET WITH ULTRA-HIGH FREQUENCY BAND. HOWEVER, MY SERVICE MAN TELLS ME THAT IN THE VERY LARGE SETS SOME OF THE TUBES ARE UNNECESSARY AND THAT ONE CAN OB-

TAIN EQUALLY SATISFACTORY RESULTS WITH A SET OF LESS TUBES. PLEASE TELL ME IF THIS IS TRUE, AND WHAT YOU CONSIDER AS A PROPER NUMBER OF TUBES TO USE.—H. G. S.

Your service man is correct when he says that the larger sets have some tubes that are not needed actually to pick up and tune in distant stations. Even in the larger sets, the circuit nowadays seems to employ but one radio-frequency tube, and seldom more than two. Then, after a mixer, there are two or three intermediate-frequency amplifiers, and another detector. One or two audio tubes, powerful amplifiers, complete the circuit. This, in our opinion, provides an excellent set of nine tubes. Now, when you add more tubes, you improve tone and volume of sound by giving more paths for the audio currents to flow to the speaker without distortion. Besides the really essential tubes, you will find special tubes, such as beat note oscillators, electric tuning eyes, etc. A modern receiver of 11 tubes makes a very fine instrument; it has sensitivity, selectivity and fine tone. The 15-tube set can do little more except improve upon the volume and tone. They do, however, provide excellent tone, and we must not overlook this when thinking, perhaps, that the 15 tube set is more than provide excellent tone, and we must not overlook this when thinking, perhaps, that the 15 tube set is more than we need. In some sets, employing 18 and 20 tubes, special consideration and design is given to sensitivity and long distance reception. Any good receiver, advertised widely and sold in every city and town, is a good buy. Nine tubes will give great satisfaction;

eleven tubes will provide almost everything possible in D-Xing; and 15 tubes will give tremendous volume, and fine tone in addition. Sets having the ultra-high frequency band are more or less experimental. More or less consistent reception will be found on 20 meters; but on the ultra-high frequencies, such as ten meters and below, reception is often unreliable. Certain 10-meter work is possible under conditions which occur only in spells, and the 5-meter and lower bands are limited to the range of human vision, in general, and quite local in their scope.

Amateur Band Poor

I HAVE A MIDWEST, 1937, RECEIVER THAT TUNES DOWN TO 9 METERS. I GET GOOD RECEPTION ON ALL BUT THE 20-METER BAND. I THINK IT OUGHT TO BE MUCH BETTER. THE SWITCH SEEMS TO BE GOOD, FOR THE 10-METER BAND ON THE SAME CIRCUIT COMES IN NICELY.—J. W. N.

Failure to receive on a certain wave band may be due to some defect in the coils and parts which tune that specific band. If reception is good on 10 meters, this shows that the set is sensitive in its pre-selecting circuits. It may be that you have an oscillator tube that fails to produce the proper frequency when tuned against the 20-meter signal, but which works well at other frequencies. There is a vast difference between the 10 and 20-meter frequencies. Try several new oscillator tubes before discarding this belief. Make certain that the contacts in the band switch are very clean and tight. Other than this, you will have to look into the 20-meter coils in the radio-frequency and first detector circuits; replacement may be the only solution.

If your own remedies, as outlined above, fail to help, then we suggest a complete cleaning, testing and aligning of the 20-meter units and circuits by a competent service man.

Radio Meters

I UNDERSTAND THERE ARE METERS TO MEASURE VOLUME AND STATIC AND WHICH CAN BE ATTACHED TO A RADIO SET. PLEASE GIVE SOME INFORMATION ABOUT SUCH METERS.—W. M.

There are meters to measure the volume of a received signal, and these often are called "R" meters. We believe the meters to which you make reference are called "tuning meters", and are inserted in the output to the speaker. They sometimes are connected in the r-f circuit, and are high-resistance milliammeters. The greatest swing of the needle indicates maximum signal strength, or that you have tuned the signal to complete resonance. Such meters can be procured from most radio supply houses and are easily installed by your service man. A number of readers have asked similar questions, and it is planned to publish a short article dealing with the use and installation of meters in radio receivers. This will appear in one of the forthcoming issues of RADEX.

Elevator Interference

RECENTLY I MOVED TO A BUILDING WITH ELEVATORS. I ALWAYS HAD QUIET RECEPTION WITH MY SCOTT 15 BEFORE THAT TIME. NOW I AM BOTHERED WITH CONTINUAL CLICKS FROM THE ELEVATOR EVERY TIME IT STARTS AND STOPS. I INSTALLED A TOBE FILTER, BUT THIS DOES NOT SEEM TO HELP. WHAT DO YOU ADVISE?—C. H. W.

Unfortunately, these elevator clicks, caused by severe flashes or sparks, occur when the elevator switch within the car is thrown. This trouble occurs up in the elevator head or housing at the top of the shaft where the motors are located. Heavy switches usually are installed next to the motors, and controlled remotely from the car itself. Frequently, too, the hum of the motor can be heard if your apartment is very close to the top of the shaft. While some of the interference comes into the set through the electrical wiring of the building, a filter at your wall outlet, such as you have used, is not always satisfactory. The elevator usually is on a different circuit—a power line that is separate from the house lighting lines. The TOBE people have a number of filters which they recommend be placed *at* the motor where the flashes occur. This, then, prevents the generation of an electric wave that carries through the air like a radio wave. Even a good doublet, or noise eliminating antenna, might not be of great help since the antenna top would be near the elevator motors and source of interference. We suggest you write the Tobe Deutschmann Corp., Canton, Mass., and ask for prices on their filter unit suitable for this purpose. Of course, permission of the building owners and the electric company must be obtained before you can have the installation made by a licensed electrician. If other occupants of the building are also annoyed in a similar manner, this filter system will benefit them, too, and should compel them to join with you in requesting the management to take this action.

Short Wave Sets

I HAVE A ZENITH, MODEL 9S262, AND IT DOES VERY WELL. BUT WOULD

A SPECIAL SHORT WAVE RECEIVER, SUCH AS A 'SKYRIDER', GIVE ME BETTER RECEPTION? I WOULD LIKE TO D-X IN EARNEST. ALSO, I NOTICE THAT MY DIAL IS NOT DIVIDED FOR CAREFUL LOGGING OF HIGH FREQUENCIES.—H. P. R.

While you have a very good set, it, like all general purpose receivers, is limited to its selectivity on the short waves. Naturally, a specially built short-wave receiver, as long as it is a good one, will bring in many more short wave signals than a standard all-wave set. The Skyrider sets are very good for this purpose, and also have a band covering the regular broadcasts. There are other short-wave sets, too, that amateurs use extensively along with the Hallicrafters. You can buy very complex and expensive sets of this latter make as well as those manufactured by National, R. C. A., and others. Some of these communications type receivers provide astonishing signal reception from all points of the world. But even then, on some amateur bands, the congestion and interference is so bad that experts have difficulty in getting signals to come through clearly. These professional sets are carefully calibrated so that you can tune in and relocate distant stations. Band spread and crystal sharpness are also features of these sets.

In your receiver, you will find a coverage of the short-wave and amateur bands, but more or less in a general way. The dial is not subdivided since the total wave band in question is spread over a very small portion of the circumference of the dial. The rapid-motion pointer, therefore, is necessary to relocate stations falling in between the printed figure on the main

dial. It becomes necessary, therefore, to estimate the probable location of a station if it has never before been located. Professional sets eliminate this guessing, and the entire scale is devoted to the band in question, thus separating stations and allowing more to be heard.

Separating Stations

I LIKE TO LISTEN TO THE SHORT WAVE STATIONS THAT BROADCAST BETWEEN 9 AND 12 MEGACYCLES. BUT MY TWO SETS, BOTH OF WHICH HAVE THREE ALL-WAVE BANDS, DO NOT HAVE SUFFICIENT SELECTIVITY TO SEPARATE POSITIVELY THE STATIONS IN THE BAND JUST MENTIONED. DO YOU KNOW OF ANY SHORT WAVE RECEIVER THAT WILL GIVE ME THE KIND OF RECEPTION I DESIRE?—G. A. A.

We do not see why the two sets you have mentioned can not separate the short wave stations between 9 and 12 megacycles in the way you wish. However, there will be some stations in this band that will interfere, and some you probably never will hear, because radio sets of this kind will never equal those special short wave receivers made particularly for short-wave station separation and amplification. The average all-wave set will bring in many far distant short wave stations, it is true, and this is about what the average radio fan desires. The set, therefore, serves its purpose very well, and brings in the most popular of the foreign stations when reception conditions are good and the proper type of antenna is utilized. To improve on this the commercial type of short wave set is needed. There are a number of makes, and some are quite expensive. They do afford much entertainment on the short waves and bring in excellent am-

ateur reception. A query somewhat similar to yours has already been answered in this issue, and it is obvious that we cannot undertake to recommend any one set. You will do well, however, to consult the advertisers in RADEX.

Antenna Transformer

I HAVE A DUPLEX ANTENNA 33 FEET HIGH AND EACH SECTION IS 24 FEET LONG. SHOULD A TRANSFORMER BE INSTALLED IN THIS ANTENNA AND AT THE SET? NONE CAME WITH THE KIT. MY RADIO IS A KNIGHT 8-TUBE SET.—H. R.

In many cases a duplex or doublet antenna works best if it is matched to the input coils of the receiver through a set of matching transformers. At least one transformer is furnished for use at the receiver. Then, too, there are aeriels that need no transformer, but they are generally well matched to the receiver. For your set we suggest an aerial made of two half sections of wire, each 30 feet long, or a total of 60 feet; a length of 60 feet of twisted transmission line (not cut, if too long); and one impedance matching transformer. These transformers may be purchased at any radio supply house at small outlay. It should improve short wave reception as well as broadcast, and tend to eliminate objectional noise.

Rotary Antenna

I HAVEN'T SPACE TO ERECT A NUMBER OF ANTENNAS IN ORDER TO COVER ALL DIRECTIONS, SO WOULD LIKE TO PUT UP A ROTARY TYPE SO AS TO GET MAXIMUM RECEPTION ON 10 AND 20 METERS. HOW SHOULD THE ANTENNA BE ROTATED?—C. D. J.

When we get into rotatable beam antennas we are, as a rule, dealing with

transmitting problems. Also, we are likely to get into something else, such as expense, building construction and careful calculation of antenna, feeders or leadin and reflectors. There are a number of types of rotatable beam antennas. We feel that for ordinary reception, the use of the rotating aerial is unnecessary, and that a good stationary type will do the work. However, you can build one of the currently popular beam antennas on a large frame of light wood attached to a shaft that is rotated by a light rope and wheel. This antenna really is a loop and more of the direction finding type. For good reception we see no need for a rotating loop.

Head Phones

I WISH TO ATTACH HEADPHONES TO MY GRUNOW 1291. THE JACK WAS ATTACHED DIRECTLY TO THE OUTPUT POSTS OF THE SPEAKER WITH CONDENSERS AND RESISTORS. I WAS ABLE TO CUT OUT THE SPEAKER WITH A KNIFE SWITCH IN THE FIELD COIL OF THE SPEAKER BUT THE PHONES DO NOT WORK. CAN YOU HELP ME?—G. N.

When you place a knife switch in the field coil you cut out the speaker and seriously overload the whole set. Do not do this. But the switch can be placed in the voice coil circuit to silence the speaker. Flexible leads run from the tiny coil attached to the apex of the speaker cone to the output of the power transformer. Place the switch in one of these leads. Connect one side of the phone jack to the plate terminal of the tube socket leading to the speaker transformer through a .005 condenser. The other side of the jack goes to another .005 condenser and a 500,000 ohm variable re-

sistor, and then the chassis of the set. In this way the headphones and the jack are entirely insulated from the chassis and the plate output of the last power tube, and no shock or short circuit can occur. There is a .005 condenser on either side of the headphones. But, why not the simple way, and try one of the phone adapters advertised in the pages of RADEX?

Silver Marshall Adjustments

I WOULD LIKE TO KNOW HOW TO ADJUST THE CONDENSERS ON MY SILVER MARSHALL 8 TUBE RECEIVER SO AS TO PREVENT LOCAL STATIONS FROM BEING HEARD ON TWO SETTINGS OF THE DIAL.—H. H.

Repeat reception has been discussed in the last few previous issues of RADEX. A complete retuning of your set is necessary. The r-f circuit must be tuned; the oscillator must track, and the detector circuit must be in accord. If the unwanted signal gets through this you will get repeat reception regardless, especially if the i-f of the set is low; about 175 kilocycles. Then the trimmer condensers on the i-f transformers must be adjusted, and this requires the use of instruments and a separate oscillator for careful adjusting. Such work is best performed by a capable service man.

Universal DX Club Corner

• • • By "Pooky"

THE Universal DX Club's pet mascot, "Pooky", again presents a prize-winning letter from a RADEX

reader. This, you will agree, is a revolutionary step in the field of DX and one that deserves serious consideration. The writer is the Secretary of a new but rapidly growing club in the state of Washington, the International Listeners' Association, located in the town of Dryden. Read what he says and then, whether or not you belong to any of the clubs mentioned, write to him and give him your suggestions or comments. His address: Merton M. Hiatt, Dryden, Wash.

A Consolidated Pacific Coast DX Club?

"The question of a Consolidated DX Club for the Pacific Coast has arisen, and through this RADEX column I hope to be allowed to discuss it with readers everywhere.

"First of all, the cooperation of the DX clubs now active on the West Coast would be absolutely necessary. Those involved would be the Universal Radio DX Club, the Before Breakfast DX Club, the Quixote Radio Club, and a recent addition to the constantly growing list, the International Listeners' Association. As secretary of the ILA, I can promise full cooperation with the officers of the other clubs, and Stanley LaRue, who is president of the BBDXC, has endorsed the proposition as being a good one, and worthy of deep consideration.

"As things stand at present, none of the present clubs is operating at a profit, one reportedly at a loss. It is only logical that a combination of the four could operate for less than the combined operating costs of the four clubs. Probably the cost would not run over the present expense of operating two of the clubs.

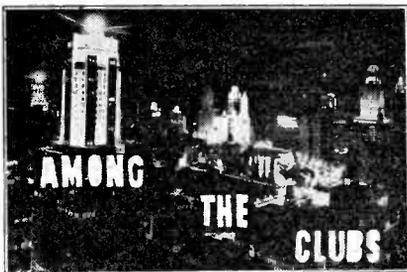

"Now, it is physically impossible

for any one club to cover completely the entire field of radio and we find many DX fans enrolled in several different clubs in order that they may not miss anything important. With the combined talents of the staffs of the present clubs, it should be possible to cover the field concisely and completely. In case a person is a member of more than one of the four clubs, his membership could be extended to cover the sum of the present memberships. It would also reduce the financial burden on the members at large, making necessary the paying of dues to but one organization.

"The consensus of opinion seems to be that each of the clubs should be equally represented on a board which would control the activities and form the policies of the Consolidated Club. I believe that if three out of the four clubs agree to consolidation the plan could be successfully completed, even though the fourth may decide to hold out for a time.

"I invite members of any of the clubs which would be included in the proposed Consolidated Club to write me, giving their opinions and views, and any suggestions for making it a success and, of course, comments from non-members will be equally valuable."

"Pooky" thinks you've got something there, Mert. And don't overlook the fact that if this plan is successful the Eastern clubs may recognize the value of the plan and—who knows?—it may lead eventually to the organization of one Consolidated Club for the whole United States!

The International Listeners' Association, a new club with headquarters at Dryden, Wash., announces a contest for its members. The contest started on September 1st, and will continue for one year, until 2400 GMT, September 1, 1939. The object of the contest is to collect as many verifications from radio stations, on all bands, as possible, and points will be awarded on a mileage basis. The International Listeners' Association informs us that the prizes to be awarded will be announced soon.

The Detroit Chapter of the International DXer's Alliance sponsors a program called "The SWL Chatterbox" on station W8XWJ, ultra high frequency auxiliary of WWJ. This program is radiated on 41 megacycles on Thursdays at 11:30 pm, EST.

The World Friendship Society of Radio Amateurs, founded in London in 1935, announces that Duane Magill, W9DQD, 730 N. 6th St., Grand Junction, Colo., has been appointed Secretary for the United States. Particulars of this organization can be obtained from Mr. Magill.

The Cleveland Radio Club now meets twice a month. On the first Sunday of every month, meetings are held at the New Amsterdam Hotel at 2 o'clock in the afternoon, and on the third Wednesday of each month, the gatherings are held at the home of one of the members, at 7:30 in the evening.

WHAT'S ON THE AIR TONIGHT

Fill in the calls and frequencies of the stations through which you best receive the network programs. You can then turn quickly to the one that has the feature you want.

Network	Stations
Columbia (C)	
Mutual (M)	
National Blue (B)	
National Red (R)	

Time: E—Eastern; C—Central; M—Mountain; P—Pacific. For Daylight Time, add one hour to Standard Time.

While these programs are correct at the time of going to press, changes are made very frequently.

To learn which stations broadcast the various network programs in your locality, look up your own, or neighboring, city, in the Index by Locations, commencing on page 76.

These programs were set up when Eastern Daylight Time was in effect, and converted to Eastern Standard. All the times shown, many of the stations, and some of the programs, will be revised on the first of October, but this information is not available at the time of going to press.

The Shortwave Index

The shortwave broadcasting stations of the world are shown in the index which follows. Broadcasting stations which are easily received in the United States are listed in "Twenty Stentors," on another page. The North American Police Broadcasters were indexed in the September issue.

1615	15	YDB4	Tjepoc, Java	4107	1000	HCJB2	Quito, Ecuador
1630	150	YDD2	Bandoeng, Java	4273	20000	RW15	Khobarovsk, U.S.S.R.

Twenty Stentors

LISTED below are the twenty shortwave stations which possessed the loudest voices last month. Arranged according to the number of reports received, this chart can be used by new listeners as a guide to the stations which they are most apt to receive in their own localities. Beginners should not attempt to tune for difficult catches until they become familiar enough with their receivers to bring in these easy-to-get stations regularly.

By all Readers	Best in EST	Best in CST	Best in MST	Best in PST
Paris	CSW	Paris	Rome	OAX4Z
CSW	SPW	London	Tokyo	EAR
Rome	SPD	Rome	HJ1ABB	HCJB
Tokyo	Paris	RKI	TGWA	ZGE

VPD2	HH2S	Berlin		
HH2S	PCJ	EAR		
PCJ	LRX	HJ5ABD		

* No others reported.

Combined reports from all readers during the month show but little change in the standings of the stations. Three of the first five stations in the September list are included among the first five this month; SPW entered the first five in the list by only two more votes than RKI. Among the first ten, Paris and Praha are the only newcomers this month, replacing SPD and HH2S, which have fallen to twelfth and nineteenth place, respectively.

Judging by the first five stations in each list, no stations seem to be heard consistently throughout the entire country at this time. Only four stations are reported in

more than one time zone, and none is reported in more than two zones. Among the first ten stations, the Tokyo transmitters are the only ones which were heard in all the time zones.

The operating schedules of the forty-three stations which are shown in the table above, are given in the list following.

Berlin. Deutscher Kurzwellensender, Haus des Rundfunks, Berlin, Charlottenburg 9. Transmitters are at Zeesen. Can be identified by a tune on a music box which precedes each trans-

mission. These stations verify by card for an IRC.

For North America: 8 to 9 am, DJL, 15110 kcs.; 4:50 to 10:50 pm, DJB, 15200 kcs, and DJD, 11770 kcs.; 7:15 to 10:50 pm, DJP, 11855 kcs; On Sundays only, 11:10 am to 12:25 pm, DJB, 15200 kcs. *For Asia:* 12:05 to 11 am, DJA 9560, DJB 15200, DJQ 15280, and DJS 21450 kcs. 12:05 to 5:50 am, DJE 17760 kcs. 8 to 10 am, DJE 17760 kcs.

NORTH AMERICAN B. C. STATIONS BY FREQUENCIES

KEY TO SYMBOLS

As shown in the
Index by Frequencies

Frequencies are given in kilocycles per second, and wavelengths in meters. Night power is shown in watts in third column. Daytime power is shown in parentheses in fourth column, in kilowatts. Thus: (.25) indicates 250 watts. Exact frequencies, when not multiples of ten, are shown in the fourth column.

Second Column Symbols		G	Assigned this frequency but using another under Special Authorization.	Q	Station not in use.
a	Verifies for return postage.	H	Assigned another frequency—using this one under Special Authorization.	R	National "Red" Network.
b	Verifies only occasionally.	J	Assigned lower power but using this power under Special Authorization.	S	Sundays only.
c	Does not verify.	K	Licensed for facsimile.	Sy	Synchronized.
d	Verifies—no postage required.	L	Limited time.	X	Has Permit to change power.
e	Verifies for International Reply Coupon	M	Mutual Network.	Y	Has Permit to change location.
z	No information available.	N	National "Red" and "Blue" Networks.	Z	Has Permit to change frequency.
Fourth Column Symbols		P	Has Construction Permit only.	a-b-c	Small letters show stations using same transmitter.
A	Status in doubt—in Court.			1-2-3	Figures denote stations sharing time.
B	National "Blue" Network.			...	No information.
C	Columbia Network.				
D	Daytime only.				
F	Canadian Network.

RADEX CLUB

(Continued from Page 17)

2. South America.
3. Europe, including Iceland and the British Isles.
4. Africa.
5. Asia, including the Philippine Islands.
6. Oceania, including Australia, New Zealand, the Netherland East Indies, the Islands of the South Pacific, and Hawaii.

WE PRESENT

Next month in RADEX Mr. Lord will resume his regular broadcast band articles, with lots of letters from his readers.

The accent is on Europe in November. The Count de Veries tuning article, started in this issue, will continue with hints on

how to hear the Europeans. There will be pictures of European stations on long and shortwave, European verification cards, and European cities.

KFBB BROADCASTS

Montana's "Voice of the Treasure State," KFBB in Great Falls, has set the time for its annual DX Party at 10 pm, MST, October 29, until 4:30 am, MST, Oct. 30. This is 12:01 am until 6:30 am, Oct. 30, in EST.

KFBB's Birthday Party DX Broadcast is a heavy favorite with DXers who revel in its Jamboree Western spirit and varied entertainment. As this article goes to press, the broadcast schedule is not complete, but we are assured of hearing some of the finest talent in the west.

Working on 1280 kcs., KFBB is an affiliated station of the CBS, and they recently added an Audio-Compressor, doubling its power and coverage.

SCRAPBOOK*(Continued from page 15)*

considerably, although listeners in these states usually report their share. Eastern DXers experience the greatest difficulty with the TP's, and occasionally a week will go by without an Aussie or Zedder being heard.

But regardless of where the listener may reside, it's an odds-on bet that the old stand-bys, patience and perse-

verance, will show not a few TP's before the season is over. Reception this year will be much better than the past two or three seasons and increased power Down Under will mean better signals and more catches.

(to be continued)

KTFL, Tulsa, has changed call letters to KOME.

KGGC, San Francisco, has changed to KSAN.

Broadcasting Stations of NORTH AMERICA

This supplementary call letter index began in the September, 1938 issue of RADEX, and will appear on these pages every month until completed.

The abbreviations used throughout this list are familiar to all our readers, except perhaps "CP" for Construction Permit, "LS" for Local Sunset, and "ss" for Sunset.

- KDTH, Dubuque, Iowa. Issues in Court of Appeals. Has CP for new station on 1340 kcs, 500 watts, daytime. *Owner:* Telegraph Herald Co.
- KDYL, Salt Lake City, Utah. 1290 kcs, 1000 watts, Unltd. time. Red Network. Transmitter at 898 W. 33rd St. *Aerial:* 2 towers, 200 ft. *Manager:* S. S. Fox. *Address:* Intermountain Broadcasting Corp., Ezra Thompson Bldg. *Has CP for 5 kilowatts days.*
- KECA, Los Angeles, Calif. 1430 kcs, 1000 watts nights, 5 kilowatts days, unltd. time. *Network:* National Blue. *Aerial:* vertical, 365 ft. *Transmitter:* 1418 E. 81st St. *Manager:* Harrison Holliday. *Address:* Earl C. Anthony, Inc., 1000 S. Hope St.
- KEEN, Seattle, Wash. 1370 kcs, 100 w., shares time with KRKO. *Manager:* Arthur C. Dailey. *Address:* KVL, Inc., 2101 Smith Tower.
- KEHE, Los Angeles, Calif., 780 kcs, 1000 watts nights, 5 kilowatts days, unltd. time. *Transmitter:* 2951 Moynier Lane. *Aerial:* vertical, 485 ft. *Manager:* Jack Gross. *Owner:* Hearst Radio, Inc., 141 N. Vermont Ave.
- KELA, Centralia, Wash. 1440 kcs, 500 w., unltd. time. *Network:* Mutual. *Aerial:* vertical, 190 ft. *Manager:* J. Elroy McCaw. *Address:* Central Broadcasting Corp.
- KELD, El Dorado, Ark. 1370 kcs, 100 w., unltd. time. *Transmitter:* Country Club Colony. *Aerial:* vertical, 180 ft. *Manager:* F. E. Bolls. *Address:* Radio Enterprises, Inc., Exchange Bldg.
- KELO, Sioux Falls, S. Dak. 1200 kcs., 100 w. unltd. time. *Network:* National Red and Blue. *Aerial:* vertical, 234 ft. *Manager:* Joseph Henkin. *Address:* Sioux Falls Broadcast Association, Inc., 317 S. Phillips Ave.
- KERN, Bakersfield, Calif. 1370 kcs., 100 w. unltd. time. *Network:* National Red and Blue; California. *Aerial:* vertical, 251 ft. *Manager:* Robert Stoddard. *Address:* McClatchey Broadcasting Co., Elks Bldg.
- KEUB, Price, Utah. 1420 kcs., 109 w., unltd. time. *Aerial:* vertical, 175 ft. *Manager:* Sam G. Weiss. *Owner:* Eastern Utah Broadcasting Co.
- KEX, Portland, Ore. 1180 kcs., 5000 w., shares at night with KOB. *Network:* National Blue. *Transmitter:* North Portland. *Aerial:* vertical, 300 ft. *Manager:* W. Carey Jennings. *Owner:* National Broadcasting Co., Inc. *Licensee:* Oregonian Publishing Co., Oregonian Bldg.
- KFAB, Lincoln, Nebr. 770 kcs., 10,000 w. Transmits simultaneously days, synchronizes nights, with WBBM. *Network:* CBS. *Transmitter:* 17th and Holdrege St. *Aerial:* 2 towers, 100 ft. *Permits:* has CP to move to 1080 kcs., to use directional aerial at night, with 50 kilowatts unltd. time. *Manager:* Reginald B. Martin. *Address:* KFAB Broadcasting Co., Hotel Lincoln. *KFAB formerly worked on 1249 kcs., with 200 watts power, at which time it was owned by the Nebraska Buick Auto Co.*
- KFAC, Los Angeles, Calif., 1300 kcs., 1000 w., unltd. time. *Transmitter:* 8581 W. 18th St. *Aerial:* 2 towers, 140 ft. *Manager:* Calvin J. Smith. *Owner:* Los Angeles Broadcasting Co., Inc., 3443 Wilshire Blvd.
- KFAD, *Not now on the air. This call was assigned to a station on 833 kcs., with 100 w., in Phoenix, Ariz. The owner was McArthur Brothers.*
- KFAE, *a former radio station in Pullman, Wash. It worked on 900 kcs., 500 w. State College of Wash.*
- KFAF, *a former station in Denver, Colo. 1079 kcs., 500 w., Western Radio Corp.*
- KFAJ, *a former station in Boulder, Colo. 1150 kcs., 100 w., University of Colorado.*
- KFAM, St. Cloud, Minn. 1420 kcs., 190 w. nights, 250 w. days., unltd. time. *Aerial:* vertical, 178 ft. *Manager:* George B. Bairey. *Owner:* Times Publishing Co. *The initial broadcast was on June 14, 1938.*
- KFAN, *a former station in Moscow, Idaho. 1300 kcs., 50 w., University of Idaho.*
- KFAR, Fairbanks, Alaska. Under Construction. To work on 610 kcs., 1000 w., unltd. time. *Owner:* Midnight Sun Broadcasting Co.
- KFAU, *a former station in Boise, Idaho. 1090 kcs., 500 w., Boise High School.*
- KFAW, *a former station in Santa Ana, Calif. 1071 kcs., 10 watts. The Radio Den.*
- KFBB, Great Falls, Mont. 1280 kcs., 1000 w. nights, 5000 w. days, unltd. time. *Aerial:* vertical, 420 ft. *Manager:* Jessie Jacobson. *Applied:* 7/9/38, for modification of license to change freq. from 1280 to 900 kcs., power to 5 kw., unltd. *Owner:* Buttey Broadcasting Co., First National Bank Bldg. Mail to P. O. Box 1817. *The call letters KFBB were formerly assigned to a station in Havre, Mont., 1090 kcs., 50 w.*
- KFBC, *a former station in San Diego, Calif. 1079 kcs., 5 watts. W. K. Azbill.*
- KFBG, *a former station in Tacoma, Wash. 1199 kcs., 50 w., First Presbyterian Church.*

- KFBI, Abilene, Kans., 1050 kcs., 5000 w., limited time. *Transmitter:* Milford. *Aerial:* 2 towers, 100 ft. *Manager:* K. W. Pyle. *Owner:* Farmers and Bankers Broadcasting Corp., 410 N. W. Third St. Mail to P. O. Box 345.
- KFBK, Sacramento, Calif., 1490 kcs., 10 kilowatts, unlt'd. time. *Network:* National Red and Blue. *Facsimile:* from midnight until 6 am, PST, using 5 kw. *Transmitter:* Yolo County. *Aerial:* vertical, 365 ft. *Manager:* Howard Lane. *Owner:* McClatchey Broadcasting Co., 708 Eye St.
Formerly worked on 1050 kcs., 100 w. Kimball-Upson & Co.
- KFCY, a former station in LeMars, Iowa. 1190 kcs., 50 w., Western Union College.
- KFDM, Beaumont, Texas. 560 kcs., 500 w. nights, 1 kilowatt to LS. unlt'd. time. *Network:* National Red and Blue. *Aerial:* 2 towers, 200 ft. *Manager:* J. M. Gilliam. *Owner:* Magnolia Petroleum Co. *Licensee:* Sabine Broadcasting Co., Inc., Hotel Beaumont. Mail to P. O. Box 2950.
- KFDY, Brookings, S. Dak. 780 kcs., 1000 w., daytime only. A non-commercial station. *Aerial:* 2 towers, 102 ft. *Manager:* S. W. Jones. *Address:* South Dakota State College, Box L.
Was formerly on 1099 kcs., with 100 w.
- KFEL, Denver, Colo., 920 kcs., 500 w., shares time with KVOD. *Network:* Mutual. *Transmitter:* 5580 W. 20th Ave., Edgewater Branch, Denver. *Aerial:* vertical, 285 ft. *Manager:* Gene O'Fallon. *Licensee:* Eugene P. O'Fallon, Inc., Albany Hotel.
Formerly used 1181 kcs., 50 watts. W. L. Winner Radio Shop.
- KFEQ, St. Joseph, Mo. 680 kcs., 2500 watts, daytime only. *Aerial:* vertical, 330 ft. *Manager:* Barton Pitts. *Licensee:* KFEQ, Inc., Schneider Bldg.
- KFGQ, Boone, Iowa, 1370 kcs., 100 w., daytime only. Non-commercial station. *Aerial:* 2 towers, 83 ft. *Licensee:* Boone Biblical College, 924 W. Second St.
- KFGX, a former station in Orange, Texas. 1199 kcs., 500 w., First Presbyterian Church.
- KFH, Wichita, Kans., 1300 kcs., 1000 w. nights, 5 kilowatts to LS, unlt'd. time. *Network:* Columbia. *Aerial:* vertical, 220 ft. *Manager:* Russel L. Lowe. *Licensee:* Radio Station KFH Co., York Rite Temple, 124½ S. Market St.
- KFI, Los Angeles, Calif. 640 kcs., 50,000 w. Unlt'd. time. *Network:* National Red. *Transmitter:* Buena Park. *Aerial:* vertical, 400 ft. *Manager:* Harrison Holliday. *Licensee:* Earle C. Anthony, Inc., 1000 S. Hope St.
- KFIO, Spokane, Wash., 1120 kcs., 100 w., daytime only. *Transmitter:* 526 Riverside Ave. *Aerial:* vertical, 178 ft. *Manager:* Arthur L. Smith. *Licensee:* Spokane Broadcasting Corp., Ziegler Bldg.
- KFIZ, Fond du Lac, Wis., 1420 kcs., 100 w., unlt'd. time. *Transmitter:* 18 W. First St. *Aerial:* 2 towers, 90 ft. *Manager:* Lynn N. Fairbanks. *Licensee:* Reporter Printing Co., Lange Bldg.
- KFJB, Marshalltown, Iowa., 1200 kcs., 100 w. nights, 250 w. days to LS, unlt'd. time. *Aerial:* vertical, 219 ft. *Manager:* Homer Griffith. *Licensee:* Marshall Electric Co., Inc., 1603 W. Main St.
- KFJI, Klamath Falls, Ore., 1210 kcs., 100 w., unlt'd. time. *Aerial:* 2 towers, 135 ft. *Manager:* George Kincaid. *Licensee:* KFJI Broadcasters, Inc., Willard Hotel.
- KFJM, Grand Forks, N. Dak., 1410 kcs., 500 w. nights, 1 kw. days to LS, unlt'd. time. *Aerial:* vertical, 165 ft. *Manager:* Dalton LeMasurier. *Licensee:* University of North Dakota, First National Bank Bldg.
- KFJZ, Fort Worth, Texas. 1370 kcs., 100 w. nights, 250 w. days to LS, unlt'd. time. *Transmitter:* Sunny Hill Dairy Farm, Ft. Worth. *Aerial:* vertical, 155 ft. *Application:* Applied July 26, 1938, for CP to change frequency from 1370 to 930, increase pwr. from 100 (.25) to 500 w. unlt'd. *Manager:* R. S. Bishop. *Licensee:* Fort Worth Broadcasters, Inc., 502 Trinity Life Bldg.
- KFKA, Greeley, Colo., 880 kcs., 500 w. nights, 1 kw. days to LS, shares with KPOF. *Network:* Mutual. *Aerial:* vertical, 279 ft. *Manager:* H. E. Green. *Licensee:* Mid-Western Radio Corp., 620 Eighth Ave. Mail to Box 735
a former station in Conway, Ark. 1199 kcs., 100 w. Conway Radio Laboratories.
- KFKU, Lawrence, Kans., 1220 kcs., 1000 w. nights, 5 kw. days to LS, shares time with WREN. *Transmitter and Aerial:* KFKU uses the WREN transmitter, which is located in Tonganoxie, between Kansas City and Lawrence, Kans. *Aerial:* is 2 towers, 200 ft. *Manager:* Harold Ingham. *Licensee:* University of Kansas. (A non-commercial station).
- KFNF, Shenandoah, Iowa, 890 kcs., 500 w. nights, 1 kw. days to LS, sharing with KUSD. *Aerial:* vertical, 260 ft. *Permits:* Has CP for directional aerial nights, and to increase power to 1000 w. nights, 5 kw. days. *Manager:* Fred E. Tunnicliff. *Licensee:* KFNF, Inc., 407 Sycamore St.
- KFOR, Lincoln, Nebr., 1210 kcs., 100 w. nights, 250 w. days to LS, unlt'd. time. *Networks:* Columbia, Mutual, Central States. *Transmitter:* 4706 S. 48th St., *Aerial:* 2 towers, 80 ft. *Manager:* Don Searle. *Licensee:* Cornbelt Broadcasting Corp., Hotel Lincoln.
- KFOX, Long Beach, Calif. 1250 kcs., 1 kw., unlt'd. time. *Network:* California. *Aerial:* 2 towers, 142 ft. *Permit:* has CP to increase day pwr. to 5 kw. *Manager:* Hal G. Nichols. *Licensee:* Nichols & Warrinner, Inc., 1220 E. Anaheim St.
- KFPL, Dublin, Texas, 1310 kcs., 100 w. nights, 250 w. days to LS, unlt'd. time. *Aerial:* vertical, 182 ft. *Manager:* C. B. Baxter. *Licensee:* KFPL Broadcasting Station, 205 Grafton St. Mail to P. O. Box 176.
- KFPW, Fort Smith, Ark., 1210 kcs., 100 w. unlt'd. time. *Licensee:* Southwestern Hotel Co., Goldman Hotel.

(to be continued next month)

PARADE of the STATES

FOR the first time in the history of DXing, radio fans throughout the country will have an opportunity, during the 1938-39 season, to tune for special programs from broadcasting stations of their own selection, under a plan sponsored by the publishers of RADEX.

This plan, known as the *Parade of the States*, provides that all the readers of this magazine submit their votes for the most *desired* station in each state and territory, on a ballot printed on the next page. The stations receiving the greatest number of votes will be asked to broadcast, and any other stations which might interfere will be requested to stand by during the program.

The success of this plan will be assured if *each one* of our readers will take but a moment of his time to check over his log, and submit the questionnaire to us as soon as possible. The more ballots we receive

the greater will be the chances that the stations will agree to broadcast.

Following the name of each state and territory, on the ballot, place the call letters of the station in that state or territory which you are most anxious to log. Stations which broadcast regularly on frequency checks, or which are on the air twenty-four hours a day, should be avoided, since they can be heard without benefit of special programs.

This ballot can be clipped and pasted on a 1c postal card. Address all ballots to The Radex Publishing Co., 289 Queen Anne Road, Teaneck, N. J.

If you do not wish to mutilate your copy of RADEX you can write your selections on a postal card. Do not vote for more than one station in any state, and do not vote for stations which you can usually hear on their regular programs.

Back issues of RADEX available from September, 1930 (No. 41) to date, at 25c each; five for \$1.00; ten for \$1.75, or twenty for \$3.25.

GROUND FLOOR

Continued from Page 32

cent of that of the popular radio, concert and movie star. And the girls in the Quaker City will add that few movie stars are easier on the feminine eyes.

With his *Mask and Wig* reputation on one side, every essential for suc-

cess on the other, and the approval of critics and talent scouts in back of him, Carrington Veale stands on the ground floor, about to enter the "elevator" which can carry him to the heights.

Going Up!

Don't miss the pictures of verification cards from Europe, in the November issue!

BALLOT

Listed below are the call letters of the radio station in each State and Territory which I am most anxious to add to my radio log.

Signed

I WILL TRAIN YOU TO START A SPARE TIME OR FULL TIME RADIO SERVICE BUSINESS WITHOUT CAPITAL

*Here's
Proof*

Picked up
\$1800 while
Learning

"I picked up \$1800 while studying and I call that easy money—the time I gave my Radio work did not interfere with my other business." O'NEIL DEN'TON, 14105 Lorain Ave., Cleveland, Ohio

Own Business
Pays \$300 a
Month

"I now have my own Radio business which shows three hundred dollars a month profit—thanks again to National Radio."—FRANK T. REESE, 39 N. Felton St., Philadelphia, Penna.

Get My LESSON on Radio Servicing TIPS FREE

I want to prove my Training is just what you need to master Radio. My sample lesson text, "Radio Receiver Troubles—Their Cause and Remedy" covers a long list of Radio receiver troubles in A.C., D.C. battery, universal, auto, T.R.F., super-heterodyne, all-wave, and other types of sets, cross-indexed for quick reference. Special section on receiver checkup, alignment, balancing, neutralizing, testing. Get this lesson Free. Mail the Coupon.

The world-wide use of Radio has made many opportunities for you to have a spare time or full time Radio service business of your own. Four out of every five homes in the United States have Radio sets which regularly need repairs, new tubes, etc. Servicemen can earn good commissions selling new sets to owners of old models. Even if you have no knowledge of Radio or electricity, I will train you at home in your spare time to sell, install, fix, all types of Radio sets to start your own Radio business and build it up on money you make in your spare time while learning. Mail coupon for my 64-page book. It's Free—it shows what I have done for others—what I am ready to do for you.

Many Make \$5, \$10, \$15 a Week Extra in Spare Time While Learning

The day you enroll I start sending Extra Money Job Sheets; show you how to do Radio repair jobs. Throughout your training I send plans and directions that made good spare time money—\$20 to \$500—for hundreds, while learning. I send you special Radio equipment to conduct experiments and build circuits. This 50-50 method of training makes learning at home interesting, fascinating, practical. I ALSO GIVE YOU A MODERN PROFESSIONAL, ALL-WAVE, ALL-PURPOSE RADIO SET SERVICING INSTRUMENT to help you make good money fixing Radios while learning and equip you for full time jobs after graduation.

Get Ready Now for Your Own Radio Business and for Jobs Like These

Radio broadcasting stations employ engineers, operators, station managers and

pay up to \$5,000 a year. Fixing Radio sets in spare time pays many \$200 to \$500 a year—full time jobs with Radio jobbers, manufacturers and dealers as much as \$30, \$50, \$75 a week. Many Radio Experts open full or part time Radio sales and repair businesses. Radio manufacturers and jobbers employ testers, inspectors, foremen, engineers, servicemen, and pay up to \$6,000 a year. Automobile, police, aviation, commercial Radio, loud speaker systems are newer fields offering good opportunities now and for the future. Television promises to open many good jobs soon. Men I trained have good jobs in these branches of Radio. Read how they got their jobs. Mail coupon.

Find Out What Radio Offers You

Act Today. Mail the coupon now for Sample Lesson and 64 page book. They're free to any fellow over 16 years old. They point out Radio's spare time and full time opportunities and those coming in Television; tell about my training in Radio and Television; show you letters from men I trained, telling what they are doing and earning. Find out what Radio offers YOU! MAIL COUPON in an envelope, or paste on a postcard—NOW!
