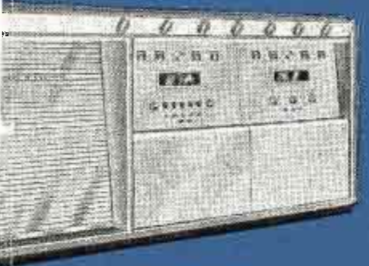
for BROADCASTING

- FM Transmitters
- Television Transmitters
- AM Transmitters
- International Transmitters
- Complete Aural and Visual Equipment for Studios
- Microphones
- Measurement Equipment
- Electronic Tubes
- Studio-to-Transmitter Relay Apparatus
- Micro-Tel Systems
- Intra-Tel Systems
- Power Equipment and Switchgear
- Station Lighting, Heating, Air-Conditioning



The New G-E Television Transmitter

GENERAL ELECTRIC offers to the broadcast industry a most comprehensive line of station equipment—FM, Television, AM, and International transmitters, complete aural and visual equipment for studios, antenna systems, electronic tubes, studio-to-transmitter relay equipment, Micro-Tel and Intra-Tel systems, station lighting, heating, air-conditioning, power equipment, and switchgear.

● Here is broadcast equipment that opens a brilliant era with new basic accomplishments in modulation quality, extended frequency response, and lower carrier noise levels. Circuits, backed by extensive research and long experience, are your guarantee of reliable operation. Complete accessibility, simplified control systems, fewer tubes, and fewer parts are your assurance of minimum supervision and lower maintenance.

● For maximum on-the-air reliability, for lower equipment cost per hour of service, specify G.E. throughout your station. You buy one standard of high quality backed by one source of responsibility. *Electronics Department, General Electric Company, Schenectady 5, N. Y.*

Call your nearest G-E broadcast equipment sales engineer for information and help. In addition to General Electric offices in all principal cities, G-E broadcast Sales Engineers are located for your convenience in General Electric offices in the following cities:

Denver, Colo.
650 - 17th St.

Dallas, Texas
1801 Lamar St.

Philadelphia, Pa.
1405 Locust St.

Boston, Mass.
140 Federal St.

Atlanta, Ga.
187 Spring St., N.W.

Kansas City, Mo.
106 W. 14th Street

Los Angeles, Calif.
212 N. Vignes St.

New York City, N. Y.
570 Lexington Ave.

Cleveland, Ohio
4966 Woodland Ave.

San Francisco, Calif.
235 Montgomery St.

Seattle, Wash.
710 Second Avenue

Washington, D. C.
806 - 15th St., N. W.

Chicago, Ill.
840 S. Canal St.

Birmingham, Ala.
600 N. 18th St.

Cincinnati, Ohio
215 W. Third St.

For earliest possible delivery of your broadcast equipment, place your order now.

Time Buyers!

CALL ON "Spot" FOR SUGGESTIONS

WEAF	New York
WBZ & WBZA	Boston, Springfield
WGY	Schenectady
KYW	Philadelphia
WRC	Washington
KDKA	Pittsburgh
WTAM	Cleveland
WOWC	Ft. Wayne
WMAQ	Chicago
KOA	Denver
KPO	San Francisco

● Looking for a time buy that's just your dish? Then give your order to "Spot." Of course, he may not always be able to serve you the exact time you were eyeing—NBC Spots go too fast for that. But you can count on "Spot" to suggest the best available period in the house—to help you select a buy that will get results—and to show you the way to results you can figure in dollars and cents.

Call on "Spot" today for suggestions on any one or every one of NBC's 11 *sales-leading* stations in 11 *sales-leading* markets. *Sales-leading* because: 1. They broadcast to 55% of the radio homes in the United States. 2. They are in markets where buying power is 34.2% higher than the country's average. 3. They broadcast the finest programs on the air to every corner of these rich markets.

NBC SPOT SALES

www.americanradiohistory.com

FOREWORD

World War II is now history. . . . An explosive era has given way to the atomic opportunity of reconversion. . . . The spirit of an industry that contributed so much toward the winning of the war is again on the march.

The eleven hundred pages that follow tell a comprehensive story. . . . It is the colorful picture of radio and television, both of today and tomorrow as gathered from a thousand and one reliable sources.

RADIO ANNUAL is constantly in preparation . . . the editors live with it day by day. . . . Without the enthusiastic cooperation of every branch of electronics its timeliness would be impossible. . . . To all, our sincere appreciation.

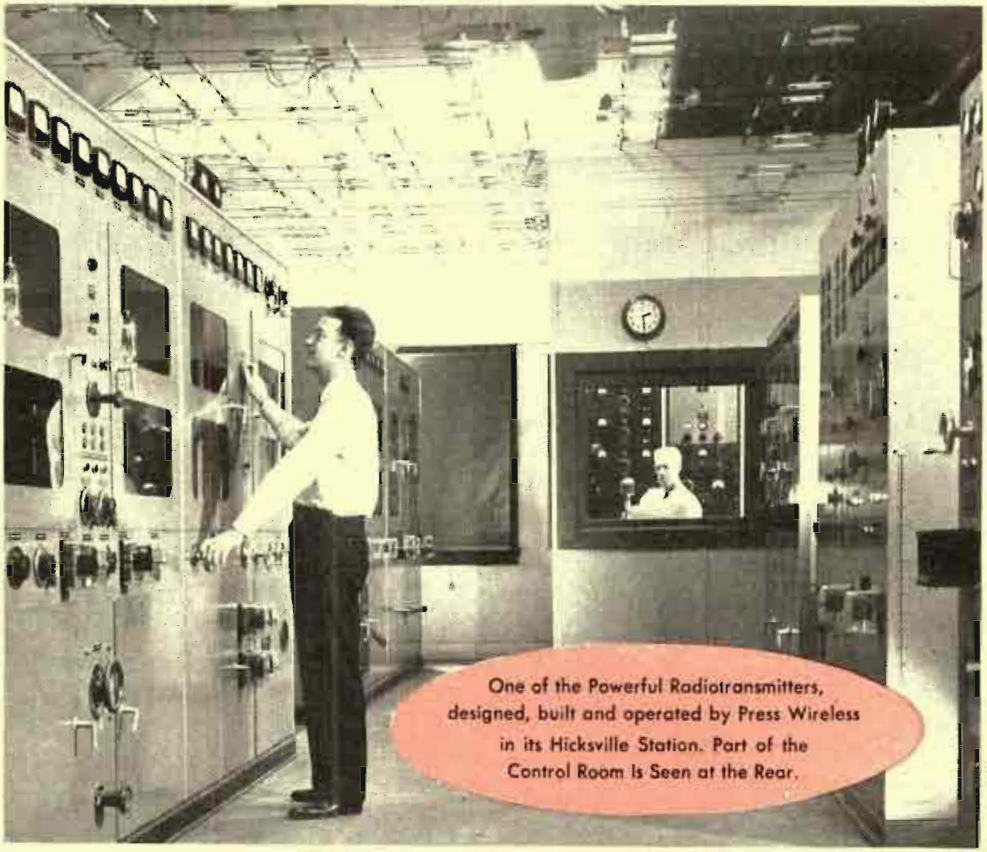
PROGRESS WITH PRESS WIRELESS



One of the Powerful Radiotransmitters, designed, built and operated by Press Wireless in its Hicksville Station. Part of the Control Room Is Seen at the Rear.

Pioneers in battle-field radiotelephone broadcasting service for news commentators and in other progressive advances, Press Wireless is further amplifying its facilities to serve the broadcasting field with increased fidelity and economy to bring about a wider exchange of musical, news and variety programs between America and the nations of the world. For over fifteen years, Press Wireless has been pioneering in telecommunications progress and is specializing in the advancement of constantly better service for broadcasting.

PRESS WIRELESS, INC.

Executive and Sales Office: **1475 BROADWAY, NEW YORK 18**

An interesting booklet, describing in detail Press Wireless and its services will be sent free on request.

THE ONE, THE ONLY and THE ORIGINAL!

TEL-PIC Displays and Service
362 RADIO STATIONS
Coast to Coast

Each week more and more radio stations are contracting for TEL-PIC displays. Renewed contracts are our best evidence as to satisfaction. These stations range from 100 Watters to 50,000 Watters. Upon request we shall be happy to furnish names, etc.

TEL-PIC LEADS BECAUSE . . .

1—Pictures are mailed daily (not just a few a week).
2—100 Booklets to each subscriber gratis.
3—TEL-PIC displays attract attention . . . Because
4—Your station copy screened on glass panel in 4 colors.
5—Separate removable slides with your copy changed weekly or monthly for station and/or sponsor promotion.
6—Pictures are carefully selected for interest so as to attract more attention from passersby.
7—TEL-PIC owns its own printing plant.
8—TEL-PIC manufactures its own displays.
9—TEL-PIC uses Press Association (division of AP) pictures.
10—Most important of all . . .

TEL-PIC Originates not Imitates!

Each merchant subscriber receives 100 bound BOOKLETS for free distribution containing photos of radio personalities that appear on *your station*. Covers of booklets are imprinted with your call letters, frequency and your message.

No other news picture company offers so much radio station publicity promotion to its subscribers.

TEL-PIC SYNDICATE, Inc.

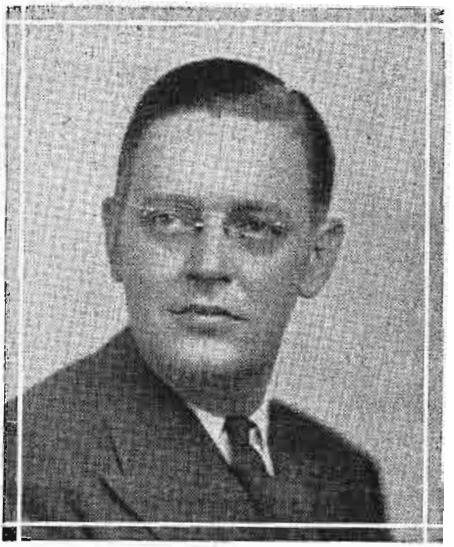
RADIO

FACES BUSIEST YEAR IN 25-YEAR HISTORY



By PAUL A. PORTER
Chairman, Federal Communications Commission

THE twenty-fifth anniversary year of radio has been much more than a year of ceremony commemorating the triumphs of the past. It has itself been a year of some of the most significant milestones in radio's history.

The past year saw the issuance by the Commission of its report allocating frequencies from 25 megacycles to 30,000 Mc which affords broadcasters and other operators in the communications field a blue print of the upper region of the post-war radio spectrum.

Also issued during the year was the Commission's proposed report on frequencies below 25 Mc. A final version will be issued in the near future.

Knottiest of the Commission's allocation problems was the proper location of FM, finally resolved by placing it at 88-108. Television was given the opportunity for immediate post-war development by the allocation of 13 channels below 300 Mc. The advocates of wide-channel color television were given opportunity to experiment in the 480-920 Mc band.

●

Other important milestones in the establishment of these services were reached when the Commission issued its rules and regulations and standards of good engineering practices for FM and television.

The wartime freeze on the construction of new radio stations was ordered lifted by the Commission on August 7, effective 60 days later.

Following its decision granting transfer of the Crosley radio interests to the Aviation Corporation, the Commission issued a proposed plan whereby all interested parties would be given an opportunity to apply for licenses of broadcast stations which are offered for sale. At the same time, the Commission announced that it will recommend that Congress consider the desirability of adopting a yardstick to measure the appropriate value of stations and also consider defining further the qualifications of licensees and particularly to determine to what extent holding companies, investment banking groups, large industrial empires and other business should be permitted to own stations.

●

A policy of more detailed review of broadcast station performance when passing on renewals was adopted by the Commission. In an order dismissing the UAW vs. WHKC case, the Commission stressed the duty of each station licensee to be sensitive to the problems of public concern in the community and to make sufficient time available, on a non-discriminatory basis, for full discussion thereof, without any type of censorship which would undertake to impose the views of the licensee upon the material to be broadcast.

The Commission ruled that reports of stations to the Commission showing ownership were to be open for public inspection.

There is every indication that the coming year will be even busier than the past one. The development of all forms of broadcasting will be one of the most significant elements in the nation's reconversion picture and the industry and the public can be assured that the Commission will exert every effort to expedite that growth for both the immediate and long-range benefits that can accrue to all.

We're trying to act our ages

It's a little difficult, sometimes. On the one hand, we pride ourselves on being a young, frisky network that puts all the energy and enthusiasm of youth into everything it does. On the other hand, we're still sporting the long beard of experience we grew during the years our network was known as "The Blue."

As *names* go, ABC is America's youngest major broadcasting company. Yet WJZ, our key station in New York, is practically as old as radio broadcasting itself—and our nearly 200 affiliates from coast to coast are rich in experience, too.

We're trying to act *both* our ages, so that the people we do business with can get the combined benefits of seasoned radio experience *and* the willingness of youth to go out and do a job.

Our plans for the future are ambitious. We expect to do big things in radio and television. But our greatest ambition is to keep all the good friends we made in the past—to enjoy the same pleasant dealings we've had with the hundreds of time-buyers, musicians, artists, salesmen and engineers who first got to know us as "The Blue" and who assisted in our rebirth as ABC.

RADIO

Greatest Social Force World Has Ever Known

By
JUSTIN MILLER
President, National Association of Broadcasters

FROM a humble beginning in the crystal set era, radio has forged steadily ahead until it is now one of the greatest social forces the world had ever known. It has done this within a brief span of time embracing only 25 years—a fleeting moment in the vast chronology of history.

Free American Radio looks with pride upon its achievements and its place in the world scene. Those achievements could have come only from this, the one broadcasting system which is not government owned, or in large part government controlled.

A prophecy of its future may be found in radio's enviable war record; a record which the industry made of its own free will, in a spirit of cooperation that found every one of more than 900 broadcasters homogenized into a purposeful war effort and lifted radio to an undisputed position as the greatest of all instruments of communication, in coordinating and sustaining the unity and morale of 140,000,000 determined minds.

•

Free American Radio, immeasurably richer in its own traditions, and potentially stronger through the development of new forms, returns to peacetime operation.

•

With the industry entering this promising phase of expansion, the National Association of Broadcasters is improving and expanding its service to its membership and the great American public which it serves. Our departments of Research and Engineering will be developed with a view toward keeping our members fully informed on engineering and other technical phases.

A carefully selected committee of exceptionally able men is planning, with a sureness born of experience and a well-rounded knowledge of the requirements, an operating program for NAB's new Employer-Employee Relations Department.

The Department of Broadcast Advertising is busily engaged in perfecting an elaborated pattern designed to cultivate new business for broadcasters, especially in the field of local retail advertising. Small market stations now have available a service tailored especially to fit their needs, and devoted exclusively to their interests. This service will be expanded constantly. An encouraging situation prevails in the legislative field, and in our relations with government.

•

A penetrating analysis of every aspect of public relations is energetically underway with two considerations, program service and industry self-regulation, receiving marked attention. Meetings for the purpose of discussing the problems of program managers and news editors are being held.

The American broadcaster has earned a substantial place in the community life of the Nation. It is his purpose to dedicate his services, continuously, to ever-improving operation in the public interest. With the aid of the public he serves—a traditionally insistent public demanding constant improvement—the American broadcaster is striving toward fulfillment of radio's high destiny as a social force. Minor irritations, healthy signs of warm interest, fortunately are not lacking. The very freedom of the public to criticize a system that is dependent solely on acceptance by that public has made American radio the best in the world.

Industry Outlook Bright For 1946-47

By FRANK BURKE, Editor, RADIO DAILY

RADIO greets 1946 with prospects of a boom unprecedented in the history of the twenty-five-old industry.

Although beset with problems of reconversion during the past fall and winter, the backlog of orders for equipment, the applications for new stations, and the present volume of business, augurs well for the present year.

Applications for construction permits in the AM, FM and television fields continue to pour in at the headquarters of the FCC in Washington. Based on pending construction permits 1946 should see the number of stations in the United States doubled—2,000 or more stations before the end of the year.

Manufacturers of sets and equipment, hard pressed by reconversion problems in 1945, look forward to resumption of peacetime production. The OPA price regulations, strikes, shortages of materials have been among the factors which have caused delays.

In the employment field the picture has improved immeasurably since the wartime days. Trained executives and technicians needed by broadcasters and manufacturers alike have returned from services in the armed forces and many thousands more of skilled help are being recruited for industry from the ranks of the G.I. Joes.

With the selection of Judge Justin Miller as president of the National Association of Broadcasters and a revamping of NAB policies especially in the labor and public relations field, the organization looms stronger this year. Labor relations as they relate to James G. Petrillo and the AFM have been placed on the agenda by Judge Miller and indications are that improvement will be noted in the coming months.

Allocations Settled

Most important in the technical advances has been fixing of FM and television allocations by the FCC. These decisions, while contested in some quarters, have had a stabilizing effect within the industry with both prospective broadcasters and manufacturers looking ahead to production in 1946.

While no concrete figures are available at this time as to the actual number of new stations which will be erected this year it is possible that 50 television transmitters; 500 FM stations and 200 or more AM stations will be on the air before 1947. These installations, however, are predicated entirely on the ability of the industry to get into full production within a short time.

Coupled with the prospects of much new station equipment is the demand for radio, television and FM receivers and the urgent need for replacement parts at the transmitters. The new set market is tremendous with indications that the industry can work full time production for the next three years before they deliver the requirements of the domestic market.

In the radio production and programming field no outstanding trends are indicated. One phase of programming that is being watched closely by both agencies and clients is the commentator and news broadcasting field.

Educational Outlook

Educational radio is looking to FM in 1947 to give impetus to school broadcast development with the Radio Council of the Chicago public schools being in the foreground of this experimentation. Likewise Ohio State University is fostering development of FM in education.

In appraising the public service obligation of radio for the new year it is the consensus of broadcaster opinion that radio has a special mandate to clarify the issues still standing in the way of real peace. To this end NAB and other organizations are fostering a movement for emphasis on peace and improved racial relations during 1947.

All in all the outlook for 1946 in the electronic industry is bright. With full time production getting in stride this year the prospects for 1947 are still brighter.

TEN OUTSTANDING RADIO NEWS EVENTS OF 1945

The atomic bomb announcement and news of its devastation of Jap cities.

•

The defeat of Germany—V-E Day, and resultant celebration.

•

The defeat of Japan—V-J Day, dramatic status of uncertainty.

•

The death of Franklin Delano Roosevelt. Observation for three days by webs until interment services.

•

The death or mystery of Adolf Hitler's disappearance, still a topic of conversation.

•

The establishment of the United Nations organization in San Francisco.

•

The defeat of Winston Churchill in the first British election in years.

•

Postwar developments in South America, Europe, Orient and other Asiatic points.

•

The nation's reconversion program, business situation and strikes.

•

The war criminal trials at Nuremberg and in Manila, first of their kind in history.

•

Outstanding Broadcasts:

Norman Corwin's "On A Note Of Triumph," full hour show on CBS network.

•

Baukhage coverage of the funeral services of Franklin Delano Roosevelt for ABC.

•

Exclusive broadcast by MBS of the sentencing of Yamashita, Japanese war lord.

•

Pooled broadcast by Merrill Mueller, NBC commentator, during the Japanese surrender aboard the deck of the U.S.S. Missouri, covering signing of documents.

Programs Of 1945 —A Network Picture

By M. H. SHAPIRO, Managing Editor, RADIO DAILY

FOR the edification of the nation's listeners, the four major networks, American, Columbia, Mutual and National, broadcast a combined total of 28,684 program hours. Three out of the four webs broadcast music to the extent of approximately 30 per cent average, with drama and news in second or third place, depending upon the network. Here is the record:

AMERICAN

American Broadcasting Co., Inc. broadcast a total of 6,026 hours with music taking up 1,698 hours, or 28.2 per cent, devoted to various forms. News in second place, totaled 1,142 hours, accounting for 19 per cent of all programs aired. Variety moved into third from fourth place it held the year previous, with 933 hours, equalling 15.5 per cent of the year's total broadcasts. Dramatic programs gave way to news and found itself in fourth place on the network with 818 hours, or 13.6 per cent of all broadcast hours. Generally, American's time was 62 per cent sustaining and the rest commercial. Approximately 35 per cent of the total hours on the air in 1945 were under the classification of public service programs.

COLUMBIA

Picture on Columbia Broadcasting System reveals 14,990 sustaining programs of 4,611 hours duration in 1945 and 1,309 commercial shows totaling 4,038 hours of broadcast time. Drama, script serials and other forms, totaled 2,706 hours, both commercial and sustaining, but with a four to one ratio in favor of sponsorship; music however was hard by with 2,698 hours of time, greatly on the sustaining side. Of 7,381 such programs, 6,313 were sustaining and 1,068 were commercial. Popular music predominated in each case, with light and serious music following far behind, in order named. Variety was sponsored to the tune of 432 hours and 366 variety hours were heard as sustainings. There were 789 hours of news reports, of which 270 were sponsored; analyses and reports, roundups of correspondents, built up toward a grand total of 1,398 hours of news of which total 529 were commercial. Talks, quizzes, discussions, interviews, etc., ran up 868 hours of which total 511 were commercial. These included public affairs, agriculture, household and other shows. Religious services, talks and music, hit 104 hours, but none of the 198 programs in this category was commercially sponsored.

MUTUAL

Mutual Broadcasting System dedicated approximately 32 per cent of its total programming to public service shows. This included religious, educational and special musical programs directed toward the then present war effort, news broadcasts, speeches and sports coverage. Total number of broadcast hours is estimated at 5,928. Broken down, the figures indicate: 242 hours of religious broadcasts; 99 hours devoted to educational shows; 323 hours toward the war effort; 161 to musical shows; 1,024 to news broadcasts and 127 hours to forums, making a total of 1,976 hours of non-commercial programs, excluding 151 hours devoted to special events and 53 hours to special sports shows.

NATIONAL

National Broadcasting Company's major programming was music as to the number of hours, 32 per cent of the total. Sponsored was 580 hours of this music and sustaining 2,078; former comprised classical, semi-classical and light music; latter category included 534 hours of dance music. Drama comprised 23 per cent of the total hours on the air. Of the 1,903 dramatic hours of programming, 1,730 was sponsored and 172 sustaining. News, which accounted for 21 per cent of the total, found 319 hours of news reports sponsored and 506 hours of analyses commercial. Variety, sponsored, was heavy comparatively speaking, with 603 hours commercial.

Otherwise NBC had 197 hours of quiz shows sponsored and 76 hours sustaining; making 3.4 per cent of the total.

MILTON BERLE

NEW YORK OFFICE—1650 BROADWAY

www.americanradiohistory.com

TEN OUTSTANDING TELEVISION EVENTS OF 1945

Regularly broadcast network television was begun linking New York, Philadelphia and Schenectady.

●

Long distance tele transmission was further advanced when the Bell System announced that at least 1,500 miles of coaxial cable would be laid by the year's end.

●

Philco Radio applied to the FCC for experimental relay stations in New York, Philadelphia and Washington asking for frequencies between 42 and 10,000 mc.

●

The first comprehensive experiment of classroom tele was announced by the New York Board of Education and NBC.

●

A plan for using airplanes cruising in the stratosphere for transmission of tele and FM was revealed by Westinghouse and the Glenn L. Martin Co.

●

The installation of three complete tele studios in the New York department store of John Wanamaker Co. announced by Allen B. DuMont Laboratories, Inc.

●

Successful transmission of full-color, high frequency tele across the New York skyline was announced by Paul Kesten, CBS vice-president.

●

A super-sensitive pickup tube, the image orthicon, claimed to be 100 times more sensitive than previous tubes was unveiled by RCA.

●

Coaxial cable between New York and Washington will be turned over to telecasters for experimental use after Jan. 1, the Bell System announced.

●

RCA demonstrated color tele, but said it would not be practical for home use for five years. Vastly improved monochrome was also shown and declared ready.

Reconversion Is Dominant Factor

By BRIGADIER GENERAL DAVID SARNOFF, President RCA

SINCE V-J Day, in August, "reconversion" has been the dominating factor in research as well as in production at Radio Corporation of America. Laboratories that devoted every effort to the war now are concentrating on peace, as are broadcasting and communication services.

Since the war, the new supersensitive television camera tube called the Image Orthicon, developed in RCA Laboratories, was demonstrated at the NBC studios, in an exhibition that showed how television has acquired an electronic eye so sensitive that it sees in candlelight, moonlight, twilight or even in darkness with the scene "illuminated" by infra-red rays. This achievement solves major problems in television programming and in outdoor pick-ups, making possible 24-hour news coverage. Here was a camera that brought new life and detail into television at the Army-Navy football game, despite the darkening shadows of a December afternoon.

Crossing New Frontiers

The demands of war led the scientists across new frontiers in the spectrum of space. In applying television techniques to radar and in mastering the radio "echo," as well as in the development of secret systems of communication, new and even shorter wavelengths have been harnessed to perform new magic. A recent demonstration by the Western Union Telegraph Company of an ultra-short wave radio relay system, developed by RCA was a revolutionary step in electric communications, destined eventually to replace thousands of telegraph and telephone poles and thousands of miles of wire from coast to coast.

As a result of wartime developments, vehicular radio, or "citizens' radio," as it is popularly called, is about to be introduced. From microwave transmitters in automobiles, trucks and buses, travelers on the highways will be able to establish contact by radio with the nearest telephone exchange so that they can talk with any telephone subscriber in the country, just as a passenger on a modern ship can telephone via a radio link to home or office.

Civilian radio production is under way. Home and automobile receivers again are coming into the market, along with the new and improved Victrola phonograph. With "the music you want when you want it," the phonograph steadily climbs in popularity. A new non-breakable record, the most revolutionary development in phonograph records in forty-five years, has been introduced by RCA Victor to mark a new milestone in the reproduction of music by the world's greatest artists.

Television Ready For The Home

Science has made television practical for the home. All elements of a satisfactory television system are available. Television networks are in prospect as automatic radio relay stations are being built to relay television from city to city. At the same time the coaxial cable, another artery of television, is being extended; already New York is linked with Washington by means of this new cable, and it is moving into the South toward Dallas, Texas. Gradually, radio relays and coaxial cables will grow out across the country to link coast with coast—and to provide a nationwide service of sight and sound.

Before nationwide television is possible, however, there must be hundreds of transmitters to supplement the nine commercial stations now on the air. These transmitters will begin to be generally available late in 1946, and by the end of 1947 considerable activity in television broadcasting may be expected.

Television will be widely utilized throughout commerce and industry. Department stores will use it so that the public may shop by television; through intra-store television, merchandise will be displayed throughout the stores at "telesite" salons. Gimbel Brothers in Philadelphia, in co-operation with RCA Victor, have demonstrated this idea with

A Place In The Sun For Women In Radio

By DOROTHY LEWIS, Coordinator of Listener Activity, NAB

DURING 1945 the importance of women in radio increased in significance primarily through two factors: their continued participation in wartime industry operation and the rapid growth of the Association of Women Directors of the National Association of Broadcasters. While during the war emergency women filled numerous staff jobs including engineering, many will automatically take over other duties with the replacement of veterans. Permanent values have accrued from this experience, however, since an all-round knowledge of station operation constitutes a necessary asset.

As part of their wartime service women broadcasters were represented by several well-known commentators in several war theaters, notably, Dorothy Thompson, Mary Margaret McBide, Kathryn Cravens, Katherine Clark, Rhona Lloyd, Janet Flanner, Ann Stringer and Pauline Frederick (Mr. Baukage's assistant).

•

One woman station manager, Mrs. Scott Bowen, WIBX, Utica, had the distinction of winning the coveted Peabody Award for the program "Cross Rhoads."

Linnea Nelson, time buyer for J. Walter Thompson, continued her important service to the industry through numerous NAB and AWD committees.

The Association of Women Directors increased its membership to over 700 women on 425 stations in 270 cities. Their activities supplement and complement many of the NAB's purposes and projects.

•

The AWD has many Associate Members, some in other countries. These women are in official radio positions in government, advertising agency or educational fields.

AWD members have taken active part in many important drives in 1945 rendering concrete service to national groups through appeals to homemakers.

Highlighting the year was the launching of the 1945 campaign "Women of the United Nations." Not only did such distinguished personalities as Mrs. Franklin Delano Roosevelt and Queen Wilhelmina, but thirty-five national groups and all of the United Nations officially cooperated. Material was prepared by these countries and organizations for use on women's programs throughout the country. In 70 cities, AWD women spearheaded community campaigns dedicated to interest and inform their listeners about the United Nations. In this connection several women broadcasters attended the San Francisco conference, among them Dorothy Lewis who sent back official releases to AWD members. She later rendered this same service from the Food and Agriculture Conference at Quebec. This international project of AWD won commendation from government and civic leaders. Alma Kitchell and Dorothy Lewis represented the Association at White House and State Department conferences.

•

Another 1945 AWD project was the celebration of radio's 25th anniversary. Special material was forwarded to members in 270 cities where special programs with tributes from prominent local leaders were featured.

•

Thousands of women radio chairmen and officers of women's groups numbering into the millions have served radio through national radio committees and local Radio Councils.

On January 1st, 1946, there are three announcements of special interest to women:

On March 16th AWD will launch its third campaign on the theme "Women in the Communicative Arts; Their Part in Developing an Informed Public Opinion."

A census of AWD members and a membership drive is being launched during January and February.

Baroness Marthe Boel, Presidence, Conseil International des Femmes, announced the appointment of Dorothy Lewis as Vice-Convener of Radio for this key organization in most of the United Nations.

1946 Radio Market —Larger Than Ever

By WILLIAM NOBLE, President, Noble & Swars, Inc.

THE first full peace time year presents Radio with an opportunity to increase rapidly its great listening audience. Once again sets will be available in unlimited quantities and radio's potential listening audience should be upped substantially before the year's end without doubt.

That a new radio set stands high on the list of most desired purchases when goods become plentiful is revealed by numerous surveys made during the course of the war time years. In the case of radio it is significant to point out that the greatest increase from 1944 to 1945, in a survey conducted by the Bureau of the Census indicates that radio sets show the greatest per cent increase of six major household appliances. The Bureau estimates that well over 5,000,000 families will be in the market for a new radio set when they become available. Naturally this figure does not represent radio's new potential audience, but together with the yearly increase in number of families plus recovery of those "dead" wartime radio homes, it does indicate that radio's 1946 audience will be substantially greater than the 1945 audience.

•

Radio Homes figures presented in another section of RADIO ANNUAL for Major Radio Markets take all these factors into consideration. While the total United States estimate for Radio Homes declined in 1945, for the first time despite the greati ncrease in the number of families, the 1946 Total United States Radio Homes is estimated at an all-time high of 34,398,302—a national family coverage of 91.0 per cent based upon the 1946 estimate of 37,786,000 families.

Major cities of the country—those which showed an actual gain in civilian population during the period 1940-1943—while the nation's civilian population declined as a whole—are expected to maintain their rate of growth in 1946. At the same time rural counties, many of which suffered severe losses are expected to regain some part of these losses during the year due chiefly to the return of veterans to civilian life. All this adds up, of course, to Radio's biggest potential audience of all time.

•

During the war we witnessed the greatest numerical dislocation of population in our history. The drift was to the industrial cities in the main and away from rural areas. Surveys conducted during the past two years in many cities show a surprising number of persons who intend if possible to remain in their new homes. This is particularly true in Pacific Coast cities where the milder and more even climatic conditions apply. Naturally, all those who relocated will not remain, but by comparing regional, state and county civilian population figures from the 1940 Census with the subsequent releases on War Ration books, it can be clearly seen where population shifts have occurred.

Radio's national family coverage, now standing at 91.0 per cent is the greatest single market medium available to the national advertiser. When it is remembered that commercial radio only celebrated its twenty-fifth aniversary in 1945 and in that comparatively short time has reached this eminence as our leading mass medium, it reflects credit on all those who have made this possible so short a time.

•

Future growth of family penetration by radio will be governed principally by the single factor of yearly family increase. With the present 91.0 per cent family coverage radio has practically reached the limit of response to advertised messages or to put it another way, radio has attained nearly complete coverage of selective families. However, most forecasts on number of families show substantial gains yearly up to and through 1960 and if the present coverage percentage prevails, then nearly all new families will become "Radio Homes."

The Current Era Of Television

By J. R. POPPELE, Pres., TBA—V.P., Chief Engineer, WOR

MUCH has been written or said about the "promising era" of television. I hereby inter the "promising era" for good. It ceased to exist the moment the defeated Japanese military aides affixed their signatures to the surrender documents aboard the Missouri in Tokyo harbor last September.

At long last we can ditch the "promise of television" for something we've all been "promising" for years,—television for everyone is here. The year just ended marked the beginning of television's participation in our daily lives. Granted, delivery of equipment is still in the stage of expectation, but by the time these words appear in print, it shall have, to some extent, reached the market.

•

During the war the torrent of promises for television rolled off lips and the presses in an unending stream. Some of them were well grounded; a great many others soared in the realm of dreams and nonsense. Separating the wheat from the chaff brings these factual certainties to light:

1. Large screen television sets for home use, with improved definition and operating efficiency, have been demonstrated and put into production.

2. Flat-faced cathode ray tubes for direct viewing and projection television were manufactured and shown to be far superior to pre-war rounded-edge types.

3. The immense possibilities for television's use in news pickups was demonstrated when RCA tore away the veil of secrecy on its uncanny Image Orthicon, making possible the scanning of news events that take place in little light—or no light at all!

4. Network television on a regular operating basis was inaugurated Saturday, December 1, when the Army-Navy football game was coaxial-cabled from Philadelphia to New York City and air-relayed to Schenectady. Thus audiences in Philadelphia, New York and Schenectady watched the classic event simultaneously. The Washington-to-New York cable link for video was scheduled to begin in January of this year.

5. Most important, the Federal Communications Commission authorized immediate commercialization of 13 channels for television operation and over 140 firms clamored for frequency assignments. An allocation plan making possible over 400 video stations in the first 140 major markets of the nation was approved by the Commission.

•

In addition to the foregoing, television stations operating in five major cities from coast to coast began a gradual expansion of program service to the public. At the year's end some stations were telecasting 17½ hours a week, the most ambitious programming since 1940.

The demand for television receivers, which, up to the end of 1945 were not in general production, amazed even the most ardent enthusiasts. Program parties at homes of those possessing television receivers have been a general rule for sometime, with as many as 60 persons viewing the Army-Navy classic on receivers in some homes.

Thus it is quite apparent that the "promising era" of television has resolved itself into the "current era," and now that we have finally seen television come into its own, there is every reason to believe that it will carry to the far reaches of the nation on its own atomic momentum.

To say that television has attained the acme of perfection is to court ridicule. Men of science who probe the mysteries of our electronic world tell us they see advances which, in time, will make present perfection appear crude.

•

We may well assume that these future developments will bring us three-dimensional and all-electronic color images, more compact receivers in great volume at low cost and an array of other awaited improvements that will amaze the world and expand our industry.

BMB Objective A 'Yardstick'

By HUGH FELTIS, President, Broadcast Measurement Bureau

"HOW many listeners have you got? And where are they located?

These questions are fundamental in the purchase of radio time, and therefore fundamental in its sale.

The number of families who listen to a station and their location are the most basic of all radio measurements. Odd, then, that the 25th anniversary of commercial radio should be but the birth date of BMB, designed primarily to provide this measurement.

For years radio stations have used widely varying definitions of station audience, widely varying yardsticks whereby to measure it. Indeed, the growth of commercial radio has focused attention on the need for a common yardstick by which to measure station audiences and has prompted the formation of BMB to create the yardstick and measure station and network audiences by it.

The Association of National Advertisers and the American Association of Advertising Agencies as well as the National Association of Broadcasters are represented on the Board of Directors and on every committee of BMB, assurance that BMB will serve buyer and seller alike.

What Does BMB Measure?

BMB measures station listening by radio families in the continental U. S. The BMB Index of Station Audience will report the number of families who listen each week to every subscribing station—separately by day and night. The weekly standard is based on the normal radio programming cycle. The BMB measurement of total audiences establishes a true potential for the comparison of all stations.

How Does BMB Measure Listening?

In measuring station audiences BMB uses the controlled-mail ballot technique, which is a carefully designed, closely supervised procedure to assure a representative sample, active attention of each family in the sample and sufficient time so that every member in the family can participate in filling out the ballots.

Official BMB Reports are published in two forms, U. S. Area Reports and individual Station Reports.

The Area Report shows for the entire United States, alphabetically by state, county and measured cities in those counties, the number of radio families, and for each subscribing station, its day and night audiences in the area, expressed in terms of radio families and per cent of all radio families in the area.

Where Does BMB Measure?

BMB surveys each of the 3,072 counties in the 48 states and the District of Columbia. For the 36 counties having abnormally large areas and sufficient population, 85 subdivisions are separately sampled.

Separate tabulations are made for each city in which a station is located. All cities of 50,000 population or more in heavily populated metropolitan counties and all cities outside of metropolitan counties having a population of 10,000 or more are also separately surveyed. A total of 4,500 separate places are to be measured and reported.

BMB Survey

The first nationwide study will be in the field in the spring of 1946. The huge number of replies called for by BMB's stringent standards will require the summer and early fall for tabulation. The finished reports of the first study will be in the hands of subscribers in the winter of 1946-47.

First Year's Progress

Progress in the development of the Bureau since its incorporation in January, 1945, has been rapid. The first three months of 1945 were devoted exclusively to station solicitation. With the completion of the operating staff in July, the Bureau Board and Committees, composed of Research and Advertising executives, concentrated on working out the technical details of Bureau operation. By the end of the year contracts for the coding, editing, tabulating and mailing of the first Bureau study were assigned. By January 1, 1946, 602 stations or over two thirds of all U. S. Commercial stations had subscribed. So had all four major networks.

What FM Means To Education

By JAMES R. ANGELL, Public Service Counselor, National Broadcasting Company

THERE are many reasons why FM should be of peculiar value in the field of educational broadcasting and it is to be hoped that nothing will seriously interfere with the development of this relatively new technique.

The comparative freedom of FM from the interruption of noise is in and of itself an item of considerable importance where broadcasts are being brought directly into school and college classrooms. The acoustical properties of many of these rooms are inevitably none too good and when the broadcast itself is blurred by static, or other noise disturbances, the teaching value of the broadcast is often seriously impaired.

Long Term Viewpoint

Even more important, however, from the long-time point of view is the circumstance that FM, in part because of the intrinsic limitation of the primary area in which it can be effectively used, makes it both possible, and indeed necessary, to have special regard to the local peculiarities of the institutions and communities which it attempts to serve.

Broadcasts directed to the grades are not often seriously affected by school time-schedules. To be sure, the special school curricula which are to be served must be taken fully into account; but in the case of broadcasts directed to high schools there has always been the most obstinate difficulty in adjusting time-schedules to the hours at which broadcasts were offered.

A program put on over an FM station in a given locality can, with the cooperation of the school authorities, adjust itself to these local conditions in a way in which no network program can hope regularly to do. Furthermore, an FM system, whether owned by a School Board or by some private agency, can readily repeat a program to meet the particular needs of different schools or local organizations. This procedure is also practically impossible over a network.

Network Difficulty

The same difficulty from which the networks suffer in this matter has also lessened the usefulness of educational broadcasts from powerful regional stations using the common AM system. Such a station may be clearly heard in two large cities, A and B, situated one hundred miles or more apart, and the school time-schedules in A, as well as the curricula, may differ widely from those in B.

It should, of course, be remarked that some cities have had their own school broadcasting stations, some of them operating on AM and some of them over ultra-shortwave facilities. To all such FM offers appreciable improvement in service and it can hardly be questioned that many communities which have not had thier own school broadcast programs will now find it possible to enter into this extremely useful field.

Conclusion

As is well known, it is expected that through relays and other devices we shall presently have FM networks. When and if this occurs on any large scale, the improved clarity of the broadcasts would remain, but the schedule difficulty will occur again just as with the AM system in existing networks.

The Economic Role Of Advertising

By FREDERIC R. GAMBLE, President, American Assn. of Advertising Agencies

EMPLOYMENT of 55 to 60 million people is shaping up as our post-war goal.

If income per person averages $2,000 a year, total income payments will be 110 to 120 billion dollars. At least that much national income will be necessary annually for many years to carry our post-war budget, including our great national debt.

This means producing and distributing goods and services in greater quantities than ever before—from 30 to 50 per cent more than in any previous peacetime year. There is no question about our ability to produce. Our war experience proves that. The problem is how to distribute the increased volume.

The responsibility falls on the dynamic factors in distribution—the activities that move goods. There are only a few of these dynamic factors:

(1) Personal selling; (2) Sales promotion and merchandising; and (3) Advertising.

Of these three, advertising is the mechanized counterpart in distribution of the machine in production. Much of the responsibility for distributing this great volume of goods and services will fall on advertising—perhaps the greatest.

•

When national income was 56 billion dollars in 1935, advertising expenditures totaled 1.7 billion dollars, or approximately 3 per cent.

In 1943, national income, under the impetus of the war, rose to 142 billion dollars. Advertising expenditures were 2.1 billion dollars, or approximately 1.5 per cent.

If the peacetime ratio of advertising to national income prevails post-war, then advertising volume should reach 3.3 to 3.6 billion dollars annually.

All branches of advertising should, I believe, recognize this responsibility and prepare to handle a much greater volume of business. We must strive to make advertising more productive and to lessen advertising failures if we are to do our part in moving this great post-war volume of goods and services.

President Truman recently said, "The consumer must be reached and sold at the lowest possible cost. The techniques of selling and servicing need polishing up after having been laid away for more important things during the war. Circumstances this year clearly point to the need for a critical re-examination of the ways and means, and the costs of distributing goods and services from producer to consumer."

•

In retrospect, the contribution of broadcasting in the war effort, particularly through the work of the War Advertising Council, speaks for itself, and radio doubtless will continue its co-operation on campaigns in the public interest through the Advertising Council's peacetime program which is now getting under way. Radio advertising has shared in the greater recognition by government of the power of advertising as both a social and economic force for good, something which was not generally appreciated in Washington at the time the War Advertising Council was organized.

•

Because radio comes into the home and in many ways has become an intimate part of family life, radio has a special and peculiar responsibility in seeing to it that both the public interest and the good will of the listening public continues to be maintained and strengthened.

This brings up the question of the current charges in some quarters that radio is being over-commercialized. While some of the attacks on radio are without foundation, the apparent objections of some listeners to the number of consecutive commercials concentrated in the period

For List Of Advertising Agencies And Radio Accounts See Page 167

Thanks, Radio Editors, for your confidence in me, and thanks also to my new friends at Columbia Recording Corporation for making recording with them such a pleasure.

Sincerely

Dinah

www.americanradiohistory.com

of two or three minutes around the station break are understandable and worthy of examination and consideration by the radio industry.

To improve this situation is a very real problem since no one in the advertising business controls radio. Certainly the advertising agencies do not. They compete vigorously among themselves and on behalf of their clients. Scores of advertising agencies are engaged in network broadcasting, and even more scores or hundreds in spot broadcasting. Advertising agencies endeavor to make their clients' advertising successful, which is natural and understandable, since that is their job. But at the same time, most agency executives are sufficiently enlightened to realize that quick success at the expense of radio listening and public good will toward advertising itself is neither good business nor good citizenship.

●

The A.A.A.A. works for the improvement of advertising and recognizes that advertising agencies, along with advertisers and media, have a considerable responsibility for any elements of it that may be deemed objectionable and for working toward the improvement of these elements. Our Association, working with the representatives of advertisers and media is actively seeking to develop ways and means to improve the content of advertising through self-regulation and to make an over-all industry approach to the improvement of radio, as well as all other forms of advertising.

Our A.A.A.A. Committee on Radio Broadcasting is constantly working in the field of radio and in 1946 figures to be even more active in working toward the goal of facilitating the use of radio as an advertising medium, improving standards and relations with other groups in the industry, and in doing everything possible to help see to it that the part agencies play in radio measures up to their responsibilities.

●

Our A.A.A.A. Special Committee on Television has been working for some time in the fluid field of this infant industry and while the future of T-V as a bright and shining new advertising medium is still in the process of laying its foundations, through the work of our Television Committee, the A.A.A.A. looks forward to co-operating in the development of television as an advertising medium as we have with all other media.

Radio has great opportunities and responsibilities ahead in 1946!

(*Continued from Page* 45)

RECONVERSION -- *By Brigadier General David Sarnoff*

great success and have received public acclaim for a new service and convenience.

New Uses Of Television "Eyes"

Industry too will find considerable use of radio sight as "eyes" in factories—means of co-ordinating and controlling complicated manufacturing processes, observing and directing vital operations from start to finish. Industrial television will furnish the means for looking into chemical reaction chambers and other areas of production, dangerous or inaccessible to the human eye.

War made vision a vital part of electronic communications. Airborne television perfected by RCA has been demonstrated to reveal how an "eye" in the nose of a plane scans the terrain while a small portable transmitter flashes the panorama to a distant screen on which observers see it exactly as the pilot. And now radar—a direct offspring of television—will be applied commercially, especially to aviation and navigation, for it is a new all-seeing "eye" for the pilot, whether in the cockpit of a plane or on the bridge of a ship. Radar in the control towers at airports, will bring the sky, the runways, and nearby planes, into view whether the weather be thick or the night cloudy and dark, with all lights obscure.

In the field of air navigation, RCA has devised a complete system for preventing collisions, controlling traffic, performing instrument approaches and in the general navigation of aircraft. Unique in its combination of television and radar techniques, this new system is called Teleran.

The miracle of radar and the advent of postwar television, make 1945 a year to be remembered as beginning the third cycle in the evolution of radio; First, there was wireless telegraphy; second, broadcasting of the human voice and music, and now the world enters the third cycle—the era of radio sight.

Radio Expanding Rapidly On Coast

By RALPH WILK, West Coast Representative—RADIO DAILY

LOS ANGELES stations and Hollywood headquarters of national networks are preparing for a busy year in radio. Three of the webs have sites for new homes, and at this writing NBC is constructing a $630,000 one-story addition to its Sunset and Vine building. The new NBC structure will provide two additional studios, with 340 seats each, and will conform with the architecture of the main building. NBC's Western division recording department will be moved to the basement of the addition. Thirty t.c. commercial and two t.c. sustaining shows emanate from NBC's Hollywood home, and the additional quarters will provide six audience studios in all.

Mutual-Don Lee's new home will be erected on Vine street, between Fountain and Homewood, with the structure and equipment to represent an outlay of $1,250,000. It will contain four large audience studios, six medium-sized and six intimate studios. It will require nine months to complete the new structure. Six t.c. sponsored shows and two t.c. sustainers emanate from Mutual's Hollywood headquarters.

CBS is expected to build an addition on ground adjoining Columbia Square. At present it has five audience studios, with 29 t.c. shows emanating from its Hollywood home.

Although ABC spent a considerable sum in preparing its present quarters on Highland, near Sunset, it still is using studios at NBC and is expected to purchase a site for a new building. It airs 15 t.c. commercial programs prepared here, in addition to eight t.c. sustaining shows.

Associated Broadcasting System, which has moved to 6000-Sunset Blvd., is airing five t.c. commercial programs from the Southland, in addition to special events.

KGFJ has moved to new quarters at Sunset and Vine, while at this writing approval is expected shortly from the FCC on the New York Post-KMTR deal. The New York Post-KYA (San Francisco) agreement was approved last year, and Don Fedderson, who manages KYA, has also been supervising KMTR pending approval of the pact.

Dick Joy and Donald C. McBain have opened their new station, KCMJ, at Palm Springs, with Clinton Jones, a Columbia Pacific executive for several years, as manager.

The Universal Broadcasting Co., which will operate the Universal network, of which KSFO, San Francisco, and KXLA, Pasadena, formerly KPAS, are the nucleus, took a long-lease on the two-story building at 6757 Hollywood Blvd., Hollywood. The cost of remodeling the structure and installing new equipment represents an outlay of $250,000. Several years ago the structure housed the famous Montmarte cafe, which was one of Hollywood's show places.

Universal Recording Co., which will produce and sell package shows, is allied with the Universal Broadcasting Company. E. J. Broman is vice-president and general manager of the organization. Universal Sales has also been organized to represent the Universal web, which has made a deal for KXA, Seattle, subject to the approval of the FCC. The network also plans to acquire other outlets on the Pacific Coast.

W. I. Dumn, who is the head of the Universal Broadcasting Co., is the owner of KSFO, and is president of KXLA, in which he holds a large interest.

J. Frank Burke, Sr., veteran Southland broadcaster, has built a radio center building at 6000 Sunset Blvd., which recently opened. It serves as the Pacific Coast headquarters of the Associated Broadcasting System, and in addition, is the home of advertising agencies and other concerns allied with the radio industry.

Washington Looks Toward Busy 1946

By ANDREW H. OLDER, Staff Correspondent, RADIO DAILY

RADIO spent 1945 waiting for 1946. Although no year has seen a greater volume of historic broadcasts or a better all-around coverage of global news, broadcasters had had a glimpse of the technical promises in store for them.

The FCC, too, knew what was ahead. Just as anxiously, but with a plentiful supply of aspirin on hand, its key officials were busy trying to clear the decks for the commission's busiest year yet. More than a thousand new applications for broadcast licenses—AM, FM and tele—were on hand, with additional dozens coming in weekly.

Radio was establishing itself as one of the important factors in shaping the future. Aside from the military uses of radio, it was never clearer that what the White House, Congress and the executive agencies of government decide depends in large measure upon what the American people hear over the air. More than ever before the American people relied upon radio for their initial news, and more than ever they relied upon radio to bring them the opinion of leaders on the various national and international issues. Although this a natural development, the newsprint shortage has emphasized it.

Rarin' To Go

But what radio was waiting for was the opportunity to go ahead and take full advantage of the revolutionary technical advances perfected just before or during the war. Important improvements in AM transmission were on hand, the relatively new FM transmission, television and facsimile—as well as new equipment to improve the quality of various local programming.

Now, while newsprint is still short, broadcasters are beginning to be able to take advantage of these new developments. Deliveries on FM transmitters, new tubes and various other equipment items designed for better radio service are being made.

Washington is the center of all these developments. All, or nearly all, pass through the FCC, with the commission responsible for authorizing and encouraging their use. FM, of course, has been most in the news, with a year-long battle over the location of the FM band finally settled by commission decision that the service should be moved to the 88-106 megacycle strata from its prewar position at 44-50 megacycles. Although the industry reaction to this decision was mixed, there was general approval for the far greater number of channels made available.

There was general agreement also that these channels will be needed, with estimates of the number of FM stations to be built ranging from two to four thousand for the next four-year period. Rather surprising has been the flood of new AM applications—which at the end of the year touched close to 500.

FCC Stiffens

Discernible during the year was a new and stiffer attitude by the FCC toward infringement of its rules. Several licenses revocations were ordered—and it is probable that the commission, which for years would not order a revocation, will refuse renewals far more frequently now that enough broadcasters will be on the air so that service is still available when offenders are cut off. Congress has still made no move to equip the FCC with any penalty other than revocation—in fact, Congress has shown no interest in amending the communications act, and there is no indication of such interest for 1946.

Truman-Miller

A surprise to most broadcasters was the failure of President Truman to reappoint to the commission former Governor Norman Case of Rhode Island, Republican veteran held in high esteem by the entire trade. His successor is Governor William R. Wills of Vermont, a businessman thus far prevented by illness from pointing to any important estimate of his capabilities.

Chicago Contends For Radio Honors

By BILL IRVIN, Staff Correspondent, RADIO DAILY

THE coming twelve months, the first full peacetime year since 1941, will see Chicago emerge as the important radio and television center it is potentially capable of being by virtue of its favored geographical location and because of its already great contributions to broadcasting, both in techniques and talent. The fact that already under way are several postwar projects looking to the improvement and expansion of facilities, in television as well as radio, is enough on which to base a prediction that the city, which has virtually been the hub of broadcasting for more than two decades, will make even greater contributions to radio and assume an increasingly more important place in the broadcasting picture in the months to come.

Construction Programs

NBC's $100,000 modernization program for its Merchandise Mart studios is well advanced. When completed, the acoustical and decorative face-lifting will put the network's Chicago studios on a par with anything New York or Hollywood has to offer, both from the standpoint of acoustical engineering and streamlined splendor.

Construction also is well under way on the new six-story addition to the WGN plant which, on completion, will make possible a substantial expansion of WGN activities.

Listener interest in Chicago-originated programs showed a marked increase in 1945 over the preceding year, according to figures released by several Chicago stations having audience broadcasts. WGN, for instance, played host to more than a quarter of a million persons in 1945, most of whom viewed the opera and operetta performances of the Chicago Theater of the Air. Attendance at programs requiring tickets totaled 270,792, an increase of 31,149 over the record attendance of 1944. In addition 15,000 persons attended programs which required no tickets for admission. Approximately 149,000 persons attended the American Broadcasting Company's Chicago-originated shows during 1945. Greatest attendance record for ABC programs was set by the Breakfast Club with 78,677 ticket requests. Runnerup was the Quiz Kids with more than 20,000 requests. A total of 124,800 persons attended the WLS National Barn Dance broadcasts at the Eighth Street theater during the year.

More Studio Audiences

With plans in the offing for the use of available legitimate theaters as radio playhouses, and with the launching of more Chicago-originated audience shows, including a possible four or five by ABC, an even greater interest in local studio audience broadcasts is expected during 1946.

The action of the FCC in allotting Chicago seven television channels, along with several other factors, makes the Windy City's tele outlook equally as promising. WBKB, the Balaban and Katz station, has taken the lead in television activity, principally with the signing of a five-year pact with the management of the Chicago Coliseum for exclusive coverage of all events taking place there, mainly sports spectacles such as basketball tourneys, ice shows, prize fights, wrestling matches and roller derbies.

Additional Tele Plans

P. K. Wrigley, owner of the Cubs, has announced plans for televising Cub games at Wrigley Field this summer if proper television equipment is available.

Summing it up, no less an authority than Paul Whiteman, who has more discoveries to his credit among the top stars of radio than probably any other individual, foresees a great future for Chicago as a radio center, if Chicago will fight for it. Himself a Chicago radio personality for many years, Whiteman recently recalled how many of the top names and programs in radio today got their start in Chicago. This development of talent and program ideas, Whiteman believes, may be expected to continue.

Canadian Radio Is On The March

By T. ARTHUR EVANS, Secty.-Treas. Canadian Association of Broadcasters

IN ANY consideration of what is in store for Canadian broadcasting stations during 1946, Frequency Modulation must be given a top position. As in other countries, World War II delayed the development of FM in Canada but since the cessation of hostilities Canadian radio stations have turned their attention to this most important phase of radio broadcasting too find out what is wanted from FM and how best it will fit into the Dominion broadcasting scheme. All broadcasters recognize that the establishment of FM will make for better performance of broadcasting than is now obtained from the use of the Standard Broadcasting Band.

Recommendations

The Canadian Association of Broadcasters has, in cooperation with its member stations, submitted to the Canadian Broadcasting Corp. and to the Department of Transport of the Government certain recommendations regarding FM which, in its opinion, will best serve the people of Canada. Briefly these recommendations are:

1. That the same frequency band as used in the United States be adopted.
2. A treaty should be concluded with the United States to take care of border interference.
3. Present AM broadcasters should be licensed for operation on FM—others where it is shown to be in the public interest.
4. Broadcasters should be permitted but not required to broadcast the same programs over both systems.
5. The call letters should consist of 4 letters with no figures.

Undoubtedly, these recommendations will result in a method of FM broadcasting best suited to serve the Canadian public.

In 1944 permission was granted to 33 privately operated Canadian radio stations to increase power to a maximum of 5,000 watts where suitable channels were available. It was, of course, not possible to obtain the necessary equipment during 1944 and 1945 but this difficulty has been largely overcome and a number of stations will, during 1946, increase their signal strength to the 5,000 watts allowed, with a consequent better service to the public.

Audience Main Factor

The Canadian Association of Broadcasters has long recognized that in the final analysis the listening audience is the controlling factor in the operation of any broadcasting station and that the likes and dislikes of commercial programs by the listener is of paramount importance to the broadcasting industry. With this thought in mind, the Association in 1943 authorized the formation of a joint committee to be known as the Commercial Radio Research Committee.

Spring Report

The Committee will be in a position to present a reasonably complete report to the Annual Meeting of the Canadian Association of Broadcasters in May, 1946, and its conclusions will be of interest to all who are engaged or interested in radio broadcasting both in Canada and in the United States.

Rate Schedules

The Canadian Radio Station Rate Schedules brochure, which is well known in the industry, will continue to receive the attention of the committee responsible for its production.

The Bureau of Broadcast Measurement is now firmly established and is providing accurate statistical data regarding the coverage of Canadian radio stations.

The year 1946 presents problems to Canadian broadcasters, but these problems are by no means insurmountable. The members of the Canadian Association of Broadcasters will, with the cooperation of the Canadian Broadcasting Corporation, continue to serve the public, mindful of their obligations, and conscious of the responsibilities imposed upon them by being licensed to broadcast.

New Developments In Electronics

By S. P. TAYLOR, Mgr.-Distributor Sales, Radio Div. Western Electric

DURING one of the most critical stages of the recent war when the shores of America were yet open to the threat of foreign invasion, Mr. F. R. Lack, Vice-President of the Western Electric Company, was called upon to address the annual meeting of the FMBI. He was asked to paint a word picture of the new developments and techniques Western would offer FM broadcasters in the postwar world. Worthy of repetition are the following words Mr. Lack used as he summed up industry's responsibility to a nation at war by stating Western's policy, "I am happy to say that we have nothing new to show you and nothing new to talk about. I am happy because I do not have to tell a soldier named Joe, who needed a radio very badly last month, that we could not deliver because we diverted some engineers and shop people to building the model of a new superdooper FM equipment to show you and thus strengthen our postwar position. I am sorry that I can't tell you when we will be able to talk. But, no one can tell me when the war will be over."

●

Knowledge and experience gained as a pioneer in research, development, and production in all phases of communications, including radio broadcasting and sound transmission, particularly qualified Western to undertake the gigantic task of developing a multitude of complex devices required to wage modern war.

When the thunder of war finally ceased with V-J Day in 1945, the Western Electric Company, as manufacturing and supply unit of the Bell System, then concentrated its full resources on the production of telephones and associated equipment to relieve the shortage accumulated during nearly four years of war.

●

A complete line of AM transmitters ranging from 250 watts to 50 kilowatts is currently in production and now being delivered. Also designed and in production to take care of all directional antenna array requirements for AM broadcasting are line branching, phase shifting, phase monitoring, and antenna coupling equipments. By the end of 1945 designs were well under way and production had already begun on FM equipment to serve the needs of FM broadcasters. When the FCC assigned the new higher frequency FM allocations, Western promptly proceeded with conversion of customers equipment purchased for operation in the old 42-50 megacycle band to operate in the new 88-108 megacycle portion of the frequency spectrum.

●

New techniques in modern radio broadcasting have imposed more exacting requirements on that vitally important portion of the broadcasting plant—Speech Input equipment.

In the peace of today as in the war of yesterday the telephone still represents the indispensable symbol of speedy and efficient communications for linking together the world's common interests whether they are afloat, in the air, on the highways, or in the quiet of a rural community. For ship to shore through established shore stations, or ship to ship, Western Electric's Marine Radio Telephone Equipment has for years provided instant and dependable two-way communications.

"In conjunction with Bell System Mobile Service, Western's recently announced 238A Mobile Radio Telephone will make contact from any equipped vehicle to any telephone connected to Bell Telephone lines."

In addition, with many new and improved products—some, the outgrowth of developments made during the war, such as the Primary Frequency Standard, Thermistors, Silicon and Germanium rectifiers, and a host of new vacuum tubes—Western Electric confidently faces the future better equipped than ever to master any communications problem.

Advantages Of ET Programs

By AARON S. BLOOM, Treasurer and Director, Kasper-Gordon, Inc.

THE old adage that "you can't teach an old dog new tricks" has been blasted as thoroughly and effectively as were two Japanese cities by the atomic bomb. For plenty of long-time advertisers have discovered the practicability of the transcribed program—the custom-built transcription series built specifically for their use, as well as the open-end syndicated recorded program series.

There are advantages to the transcribed program which no network or regional network show can compete with, and legion are the advertisers who now know the worth and value of the e.t. program.

For example, can't you clear time on a network? Don't let that bother you. Put the show on transcriptions, and select the best available time in the markets you wish to cover. Or perhaps you can't buy a split network. You must buy some cities you don't want, or where you don't need coverage. Just put the program on transcriptions and choose the markets you wish. Then again, maybe you'd like to use a different station in some markets, than the network affiliates in those cities. Don't pull your hair out by the roots. Disc the show and buy time on the stations you want.

Product-Test

Suppose you don't want to build an expensive custom tailored show to test a product in a certain market, or group of markets. In that case, there are many good open-end transcribed syndicated shows to use—shows which cost a lot of money to produce, but which the individual sponsor in a market may purchase (lease) to make the test — shows which range from gospel songs to variety, from sports programs to mystery drama, from musical to juvenile strip programs. There are shows with well-known names at a fraction of the expense a custom--built show would cost — shows without "big names" but which have a proven record of success in building and holding audiences, and selling merchandise. Actually, many such shows without those "big names" have pulled greater results per dollar of expenditure for time and program than some of the more costly shows with the so-called "stars." The payoff isn't always in the "big name," or even in the ratings. It's in the jingle of the sponsor's cash register.

Safe For Small Markets

In many instances, the syndicated transcribed show is safer for sponsors to use than some locally produced "live" talent programs—as far as smaller markets are concerned. Aside from the cost to the advertiser being less, usually, there is no worry about the talent doing the job—no worry about rehearsals, timing, script, production. That is all done. The sponsor knows in advance what the 15th or 50th program in a series will sound like, for it's all there on disc for him to hear. Reputable producers are as careful of the production that goes into their packages as (as a rule) are network producers. The syndicated program producer depends upon the success of a series for a sponsor to be able to sign station, agency, and sponsor again on a continuation of the series, its use in other markets, or for a new show.

Producer Is Important

That's why it's important to know the producer you are doing business with, how long they have been in business, their experience, etc. If they offer a series of programs, the reputable producer willingly offers the chance to select any program in the series for audition. That way, you know you are not being offered only the best program in the series, the sample they want you to hear.

The advantages of the syndicated transcribed program, are making themselves felt more and more. The results may not be as sensational and as sudden as was the atomic bomb. But who wants to break down sales resistance and destroy the customer at the same time?

Forecasting Sportscasting

By BILL SLATER, President, Sports Broadcasters Association

FEW contrasts can be made between sportscasting in Post War World II and Post War World I. True, sports broadcasting was a noteworthy part of the roaring twenties that marked our earlier postwar period. Likewise, sports reporting by air, radio or video or both, will be a part of the reconverted American life into which we are now stumbling. But the magnitude of air sportscasting will be so much greater than anything ever before known, that any possible contrast with a previous radio era fades.

Postwar Status

Sportscasting in this postwar era is starting far from scratch. It is destined to enjoy a terrific momentum born of the role sports-by-air played in the lives of the millions of men who left our shores to win the victory for freedom. The short-waving of sports events procided a strong link between home and the battle-front and returning veterans will form a large part of the coming greater audience for sportscast events. In the enlarged sports following made possible by wartime wages, many new sports radio fans were created. Over all, spreads the fact that an innately sportsminded nation beomes more so after a period of great physical combat. Too, there is the thought that sports does play a big role in evolving the psychological equivalents of war which, of necessity, become part of the life of any nation in the wake of a complete dedication to armed conflict.

Trends

Trends in sports broadcasting, initiated before the war and continued substantially through the duration, are now being accentuated and developed into broader fields. Chief among these is the increasing commercial sponsorship of athletic events. This trend is today most marked in football, boxing, and baseball but is rapidly spreading to other sports. Network sustaining coverage of athletics has dwindled sharply in the past decade and will shrink further. Sports promoters and advertisers are aware of sports' huge listenership and now that the promoters have outgrown the fetish, clung to by some, that radio hurt the gate, the sky is the limit in the matter of deals for packaging product promotion and sport thrills.

Nor will commercial sportscasting be confined, as in the past, primarily to professional and collegiate events. A significant straw in the whirlwind is the recent move of one large advertiser, now followed by others, into broadcasting school sports. The teen age audience has become important to purveyors of products and these busy and eager gentlemen have awakened to youth's unquenchable zest for athletics. Look for bigger and better sports coverage of high school contests.

Expansion

However, the things which may happen in radio sports reporting, form only a small part of the immediate expansion of sportscasting. For that heretofore perennial infant (sometimes born of fancy and hope) has outgrown its swadling clothes and today in its late, potent adolescence is now known, without tongue acheek, as "television." Much is said these days about the sensational future of sports caught by the tele-camera. The exact form and scope of this future is hard to predict with reasonable certainty, though it does seem safe to say that it is going to be a lusty factor in video's future.

En route to this stage, nonetheless, there are hurdles to be taken. And these hurdles are not all mechanical. The mechanics of video sports are gradually being mastered, thanks to the cooperation of sport moguls who have been willing to have a hand in the early experimentation. The possibility is great that we shall soon know more about how to telecast sports than we know about the profitable way to do it.

Uses Of Radar In Peacetime

By PROF. A. M. LOW, English Scientist, Inventor, Author

THE full story has now been told of the development of radar before and during the war. This spectacular invention played as important a part in gaining victory as the atom bomb. If it had not in the first place been prepared by British scientists for the detection of enemy aircraft the key device that made thousand bomber raids possible in any weather would never have been discovered either. The question now arises as to what use radar will be in peace. For the ten years of its past existence there has been complete concentration on its military applications. A great deal of the apparatus will be scrapped never to be used again, but the knowledge gained and the skill developed by many thousands of scientists and technicians in Britain will not be wasted.

Advances in Electronics

Their research has resulted in great advances in the new science of electronics—the harnessing of electrons for control and communications. The effect on television will be far-reaching. A thousand devices for the automatic control of intricate factory operations for chemical and physical analysis of samples and for the testing of finished products will be the indirect result of radar research. It has even taken us a considerable step towards the economic transmission of power by radio.

One day we may need no wires to carry electricity to our homes for light and heat. We may have lamps that require no wire connecting them to a plug in the wall. Such a lamp would be put down anywhere and swtched on, the power being received by its own minute aerial. Ultimately we might even have transport vehicles drawing their motive power from the ether or at least by induction cables laid underground as in some Russian factories today.

Peactime Needs

In the more immediate future many radar devices will be directly adapted to peacetime needs. The apparatus which enables a ship to be picked up with great accuracy in pitch darkness or in the thickest fog will enable great liners to travel at full speed in the worst conditions with perfect safety.

It is worth recalling that when Mr. Churchill was aboard the "Renown" after signing the Atlantic Charter, the battleship was able to steam at twenty-seven knots in a thick fog thanks to its radar installations. Collisions in fogs or danger of running ashore—fruitful causes of shipwreck in pre-war days—will be largely eliminated when all ships are radar equipped.

Adaptations of military radar installations will be equally useful in the air.

Saver of Time

Radar devices will also reduce the number of hours during which an airfield is "fog bound." Time lost from this cause has done much in the past to rob commercial aviation of its full advantage of speed. At present it is not always possible for an aircraft to make a completely blind landing, but radar will bring an aircraft to the runway with an error of only about forty feet and it is almost certain that research in a few years will result in eliminating even this margin of error.

The possibilities of using radar to assist the blind are being tested. It is hoped that in time a device may be developed which gives the blind person a picture in sound of his surroundings. The picture will be crude as is the picture given by H.2s of the ground below, a simple distinction being made between houses, land and water. But even this would be of immense value to a blind person particularly in conjunction with the special sensitivity to sound which the blind develop. Sound and touch reading from ordinary books have both formed the subject of many experiments.

Many Uses

As an example of the unexpected developments of radar we may quote its experimental use for the rapid finding of the queen in a hive of bees. A technician has found that a minute speck of radio-active substance inserted under the wings of the queen enables her to be found instantly at any future time with a comparatively simple amplifier.

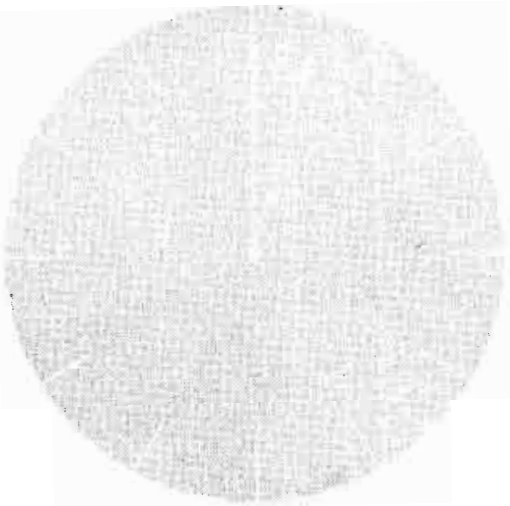
year out...year in



MUTUAL

www.americanradiohistory.com

1945 IS OUT...

Let us give it no further thought than this: constant intelligent effort has brought Mutual a year nearer to recognition as a leader among networks.

This recognition is based upon bold programming which has multiplied listeners...upon increased value to advertisers which has attracted many new sponsors, including 5 of the Top Ten radio advertisers...upon improved service to stations which has won us new affiliates and expanded coverage...upon a policy and a philosophy of doing business which have created an increasingly favorable opinion of the Mutual Network.

1946 IS IN...

All our thoughts and efforts will be directed toward making this an even better Mutual year for listeners, advertisers, and stations.

The things we did last year, we shall do better this year: to present more instructive, more popular programs for more millions of listeners...to enhance the value of Mutual as an advertising medium for more old and new sponsors...to broaden our service to affiliates...to accept and meet new challenges—to live up to our full responsibilities to the American people.

Building a network is a job that goes on 24 hours a day—52 weeks a year: we are working at it steadily, year in . . . year out.

Overseas Press Club In War And Peace

By W. W. CHAPLIN, President, Overseas Press Club of America

THE Overseas Press Club of America was founded in 1939 to furnish some meeting place for Americans who had worked abroad for American newspapers and magazines.

Radio was not included in the club's name, or in the thinking of its founders, because up to that time radio from abroad consisted largely of an occasional pickup of Big Ben or the Sistine Choir. It still had to make its grand entry into the newsfield.

When the war clouds began rolling across Europe, radio entered with flourishes and voices like Ed Murrow's and Bill Shirer's were eagerly listened for in every American home. Since then of course radio has come into its own in the overseas news field and now has an established position which only the confirmed pessimists believe will dwindle in the post-war years.

As the radio foreign and war correspondent took his place beside his colleagues of the press it was only natural that the membership of the Overseas Press Club began to include a large number of radio news men.

●

The record now shows that of the club's 7 (seven) Presidents two have already been radio men, Lowell Thomas and myself, and several others have been officers or committee chairmen, like H. V. Kaltenborn, Bill Downs, Larry Leseuer, and Morgan Beatty. At present the club's membership includes 30 radio reporters.

When the club was first founded its chief purpose was a haven for men and women who had served as foreign correspondents and then returned to the domestic field. They all had similar interests and the club gave them a good meeting place for discussion of past experiences. Long before the war started, however, the scope of the club was changing. Already the field of foreign correspondence was expanding and the ex-correspondents were soon out-numbered by men and woment who were virtually commuting between America and innumerable points East and West. During the war the chief difficulty has been to select officers who with some degree of certainty would remain in the country long enough to do their club chores. I, for instance, was informed of my election as President when I was covering the German surrender at Gen. Eisenhower's headquarters in France.

●

Right now our members are covering the war criminal trials at Neurnberg, the UNO meeting in London, the developments in Japan, and in a dozen capitals throughout the world. Among those are a goodly percentage of radio men.

The Overseas Press Club is not a club in the same sense as the National Press Club in Washington, with restaurants and lounges and bar. Our only space is a one-room office in the Lotos Club building at 110 West 57th Street, though there is hope of larger quarters as soon as there is any easing of the hotel situation.

Requirements for active membership are at least one continuous year of foreign news work or two years total made up of shorter assignments. Associate members are eligible with six months foreign service.

●

End of the war has brought a rapid growth in the Overseas Press Club, as was inevitable because of the large number of reporters who became eligible through service as press and radio war correspondents in every theater. During the club year now drawing to a close the organization has welcomed 54 new members, all of them men and women who covered the war in some foreign field.

●

It is expected that the membership will continue to increase rapidly as eligibility has been extended to foreign correspondents who were attached to service organizations, like Yank and the seven Stars and Stripes, and to combat correspondents who were actually members of the armed services.

One important feature of the Overseas Press Club is its Correspondents' Fund, founded by H. V. Kaltenborn.

Main Street--1945 Radio Reflections

By SID WEISS, Staff Writer, RADIO DAILY

● ● ● Any annual record of the activity of an industry usually offers as its pet theme: "Our Industry—Whither Is It Heading?"

We have no quarrel with economic specialists who anticipate trends via intricate charts—but, somehow, in the entertainment business, there is seldom so violent a change that it can be noted in advance.

Unless we're very much mistaken, a situation by no means new, radio 1946 will be the same as radio 1945 . . . and '44. Quiz shows, which insiders freely predicted were doomed to an early demise, will continue to have their listeners and their points. The latter applies to their ratings. In back of their success are many reasons—not the least of which is the fact that something is given away for free. In short, give 'em and you'll get 'em.

There will continue to be "good music" programs and sponsors who are satisfied with a minor rating anda high cultural rep. Mystery shows will continue in favor, flavor and sameness. Only in comedy is there a move afoot for reformation.

The trend in comedy is toward "story" ideas. Variety shows will continue to be popular, but the musical comedy formula, with slight story line, situation jokes and music by the people in the cast seems to constitute the over-all for the comedy shows now being readied.

It's a pretty smooth step in what might very easily be the right direction, for the straight variety musicals have seen their best days and their best jokes.

☆ ☆ ☆

● ● ● Time Capsule, 1946: We have selected the following as worthy of inclusion in our Time Capsule of 1946. Come 2046, if a gent is digging in the ruins of today's civilization, we want him to know the radioddities and kilocycle trivia of the Atomic Age.

First, we'd include that character without any—Sen. Claghorn, Fred Allen's Allen's Ally. The good Sen. is today's version of Will Rogers, spoofing the greats and reducing the inflated egos of the lawmakers to kin's size.

For good-natured joshing, we'd include reference to the "I Can't Stand Jack Benny" contest, a new and much needed departure in radio sell-ebrating.

Singing commercials would get a place—but we still think they've got more c-rime than reason.

Bob Hope's one-man war effort gets a 21-gun salute. Robert kept his nose to the grindstone and as Bing has said, it sure looks it.

The theme song of half a dozen sponsors, Kraft included, was "It Might As Well Be Bing."

The high I.Q. of radio's "Information, Please"—intelligentertainment.

Wooden-headed Charlie McCarthy, who proved that a member of the male sex can get someplace by sitting on the boss' lap, too.

Walter Winchell, one of radio's best excuses for being, who tells off the nuts who are off theirs.

☆ ☆ ☆

● ● ● The oddity that is Fiorello (the Little Flower who became a clinging vine to radio). Mayor of a town, he read the comics on the air to get himself a spot in the pages of history.

Eddie Cantor, the pop-eyedol of the airwaves, who's entertained more generations than he has daughters.

And we'd include the fact that DeMille, earning millions via the mike, left the air and gave a radio career the air because of a one-dollar dispute . . . And a nod to the first brain that ever invented quizzes, paving the way for a million Phil Bakeractors who discovered that success was theirs for the "asking" . . . We'd fill some space with the Uncle Don's—the men with a million nephews and nieces—and that much in the bank from their various sponsors . . . And the "Truth or Consequences" incident wherein one prize-winner, guessing the name of an identified Mr. Hush, went home with $3,500 in prizes. . . .

Nickle, Nickle, Nickle, There's Good News Tonite—this then was radio back in 1945-6 and the American public got it all for nothing. And, verily, that's what much of it was worth.

Music In Radio— A Powerful Factor

By HERMAN PINCUS, Staff Writer, RADIO DAILY

EVER since the "crystal set days" of radio when the earphones dimly reproduced sound, much of that sound was music. One of the pioneers in the transmission of radio programs was a singer, Vaughn de Leath, heard on station KDKA, Pittsburgh's great gift to radio. In the time elapsed, radio has grown to maturity, bringing into the home the story of the earth's events as they happen and often at the points of origination. In like manner music has kept pace, its expansion and increased importance in radio, a substantiation of the theory that "music is the international language." It's a far cry from the tinny, scratchy and static-filled reception of the songs of the "early twenties" to the currently beamed programs of today; the superb concerts broadcast by the symphony orchestras of America; the matchless programs of the world's most famous operas and operettas direct from the stage of the famed Metropolitan Opera House in New York. Nevertheless the transition was effected and the music and affiliated industries are to be congratulated for their invaluable efforts which played so prominent a role in the advancement of radio.

•

Transcending by far its achievements for world art, was the successful completion of the great task which confronted America on that fateful day Dec. 7, 1941. The task of transforming a nation at peace into an aroused nation at war. It was "later than most people thought" and any delay in the instantaneous accomplishment of this transformation might have been catastrophic. The situation called for speed and action.

Radio cleared the desks for action, assuming the role of "sounding the alarm" for the Government. The music industry likewise shouldered its great responsibility. Within twenty-four hours music publishers and songwriters delivered to radio stations throughout the country thousands of martial airs and patriotic songs. Orchestra leaders and singers hopped aboard the bandwagon and programmed stirring music. A solemn people, stunned by the infamous sneak attack at Pearl Harbor, found in their saddened hearts, responsive chords to the "American Marseillaise"—comprised of scores of inspired songs. Forgotten for the moment were the songs of "home," "mother," "baby," "love." Instead, composers both professional and amateur poured out WAR songs, fervent appeals designed to quicken the beating of men's hearts to synchronize with the staccato-like cadence of marching feet—Soldiers', Sailors', Marines' feet.

•

A centuries-old Chinese proverb has it that "one picture is worth 10,000 words." So with one stirring song. Radios, theaters, dance-halls, restaurants and public squares resounded the "call to arms" utilizing songs like "Praise the Lord and Pass the Ammunition" (Famous Music), "Comin' in on a Wing and a Pray'r" (Robbins), "The Caissons Go Rolling Along," "Anchors Aweigh" (Robbins), "Halls of Montezuma" (E. B. Marks), "Army Air Corps Song" (Carl Fischer), George M. Cohan's immortal "Over There" and hundreds of official and semi-official songs dedicated to the various branches of service. Irving Berlin's "This Is the Army" and Moss Hart's "Winged Victory," not only entertained servicemen on the far-flung fronts but also raised millions of dollars for servicemen's relief societies. Music organizations, Ascap, BMI, SESAC, Associated Music Publishers, Songwriters' Protective Association and other groups, cooperated with the Music Division of the War Activities Committee (headed by Oscar Hammerstein 2nd) in collecting and forwarding songs, playets, skits and other entertainment designed to bolster and maintain the morale, military and civilian.

•

The American people, of all walks of life, of every denomination, representing the laborer, the farmer, the businessman and the banker, united as the "Scrubs" to back up the Varsity Team (Fighting Men). That team won victory. The music industry proved itself a powerful faction among its fellow-scrubs.

News-By-Radio Grows Day-By-Day

By OLIVER GRAMLING, Assistant General Manager, AP Radio

THE year of 1946 finds news-by-radio in a strong position, but obviously a new orientation is in the making.

In spite of the run-for-cover boys who bemoaned the quick demise of radio news interest during the late summer of 1945, surveys show that popularity is undiminished from the war-needled news of the past several years. As a matter of fact, the popularity of news-by-radio not only has been sustained, but has increased.

During the war, news was fabulous and fantastic. The slightest or least report from any battle area was exciting drama, though tragedy was the overtone. For the most part, news today does not have the adventurous, swashbuckling, heroic background of that wartime period. It is solid, meaty, thought-provoking. Yet happenings that scarcely received mention during the Blitz, or the Battle of the Bulge, or Iwo Jima, are now getting the play.

If news was vital and important during the war, it is doubly so now, and will continue to be as the world struggles through disillusionment, cynicism, and conflict between countries, peoples, classes and groups. Mankind emerged with obvious shell-shock from the climactic and terrifying events of six years of total war, gripped by new fears in a new age—the Atomic Age. In this period of readjustment, misunderstandings can quickly brew distrust, suspicion and hatred. Therein lies a challenge to all of us in radio, as far as news is concerned, because never before has the world been in such desperate need of honest, unbiased news as now.

In order to safeguard this objectivity in the news reporting of the future, we must re-evaluate news interests all along the line.

In the field of exciting, fast-breaking "spot" news, we must make sure that harum-scarum, melodramatic, boyish competition to be merely "first" does not endanger radio's position as a foremost medium of dissemination of news.

In the field of important, significant news, we first must realize that this type of news, by all odds, is much more important and much more significant than it ever was. Although much of it may lack the drama and excitement of gains and losses on the battlefield, it is the "meat and potatoes" of the everyday existence. This is the news which, more than any other, requires supreme craftsmanship in presentation. It must be told interestingly because it requires such presentation to hold listeners. It must be told understandingly because such news is too important to be misunderstood. What the Ernie Pyles did to personalize World War II, we must do in order to report effectively this type of news.

In the field of pure human interest, we must not lose any of the color or any of the comedy of like in the reporting. On the contrary, we should find more color and better comedy. But we must never be merely interesting at the expense of accuracy, honesty or objectiveness.

On top of all this, new fields of interest are opening. Science is an example. Our job is to be constructively progressive, to lead the way in exploring these untapped sources.

Already radio is showing that it can do as good a news job, if not a better one, than it did in wartime. But the task for the future is infinitely more difficult. With the end of war, interest in domestic news is revived. But the interest in what is happening *all over the world* is intensified. The work of the "leg man" is foreign reporting is ended. Coverage of the world becomes a finer art. It requires the specialist.

So, to satisfy a public's broadened news interest, radio and the newsgatherer now have before them an all-important dual responsibility—concentrated coverage of both the domestic and world scenes. There must be an expert balance between vicinage and world news. News must satisfy the personal interest of the individual and his community. It is an interest that is more mature and more significant than it was before World War II.

BMI

More and better service to the Broadcasting Industry is BMI's pledge for 1946

COPYRIGHT RESEARCH—thorough, up-to-the-minute information on music clearance, a complete basic catalogue, and regular supplements of newly published music provided at all times.

BMI FIELD MEN—experienced radio men, trained to aid broadcast personnel, regularly visiting all stations.

CONTINUITY SCRIPTS—wide variety of select programs that are entertaining and saleable.

DISC DATA—valuable reference to records, transcriptions and biographical data of outstanding performers. Constantly up to date.

BMI MUSIC MEMO—weekly informational bulletin. The radio man's guide to BMI music.

MUSIC DISTRIBUTION—music of every type, published by BMI and affiliated publishers, mailed to stations regularly.

BMI PIN-UP SHEET—convenient and timely reference to the current song hits and promising tunes licensed by BMI.

NEWSLETTER—personal monthly message to the BMI family. An exchange of radio and music ideas.

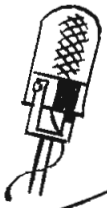
HOLIDAY MUSIC—suggestions of timely and appropriate music for seasonal and holiday events.

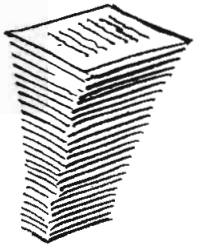
BMI, the arm of the broadcasting industry, is at your service

BMI IS YOURS—For Radio and By Radio

www.americanradiohistory.com

REPORTS
TO THE INDUSTRY





FACTS AND FIGURES . . .

99% of the dollar volume in the industry is represented by BMI licensees . . .

1,022* commercial licensees in the United States and Canada . . . embracing all networks and the important FM and Short-wave broadcasters.

800* music publishers, affiliated with BMI, are creating many of the nation's top song hits consistently . . . BMI has the exclusive performing rights to the large catalogues of these publishers as well as of the performing rights societies of Argentina, Brazil, Chile, Cuba, Mexico and Uruguay.

760,000 selections are listed as available for use in the latest BMI catalogue . . . music which ranges from the venerable classics to the newest in boogie-woogie.

30,000 phonograph records performable under the BMI license . . . and thousands more available in the libraries of the electrical transcription companies.

*As of February 1, 1946.

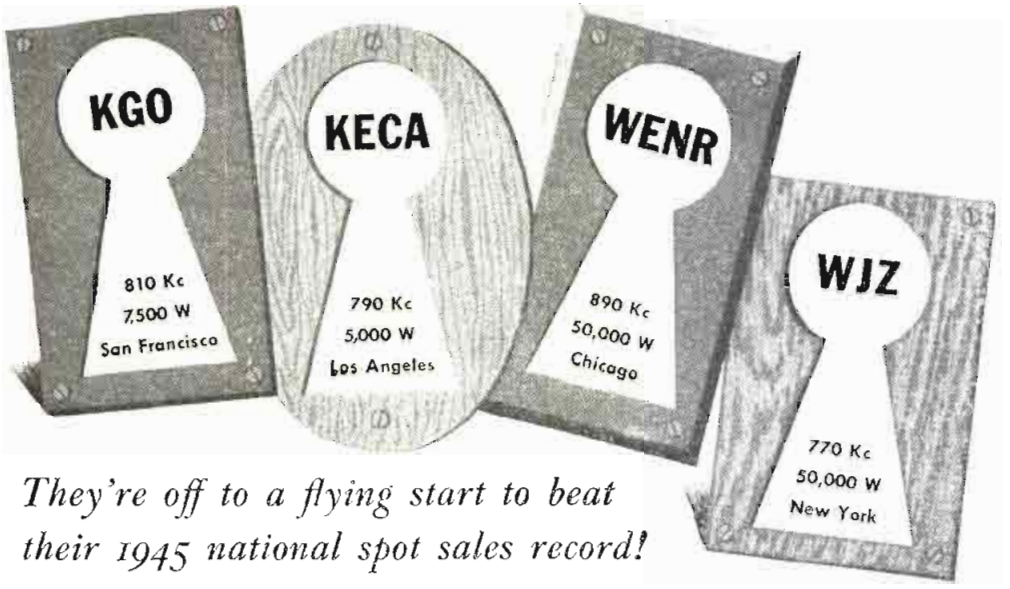
Keep your eye on ABC's Key Stations!



They're off to a flying start to beat their 1945 national spot sales record!

LAST YEAR was a BIG year for ABC's owned and operated stations! During the first eleven months of 1945, their national spot billing increased 24.4% over the same period in 1944—a clear indication that advertisers who want to reach the nation's most important markets in the most economical way are swinging to ABC.

Thanks to ABC programming and ABC spot sales representation, KECA, our most recently acquired station, had over five times the spot billing in 1945 that it had the year before. And ABC spot representation did a grand job for other than owned and operated stations, too. WMAL, the Washington Star's station in the nation's capital, enjoyed a 25% increase in national spot sales over a *banner* 1944—and the American Pacific regional network had its spot billing upped 45.5%!

Last year was a big year for ABC spot sales offices. 1946 will be even bigger. But the thing that gratifies us more than anything is the fact that during 1945 we made so many new friends who will go along with us this coming year confident that we are able to do a job for them—and in that way help to make *their* 1946 successful.

Hollywood As Tele Production Center

By HARRY R. LUBCKE, Dir. of Television, Don Lee Broadcasting System

YOU hardly need me to tell you that Hollywood will become a great television production center, but you might like to hear about some of the details which I think will bring this about.

There is a lot of talent in Hollywood. For several decades the motion picture industry has attracted entertainment talent from all over the world. You have heard of the performers who do not make a picture during their whole contract and you have heard of those who do not get contracts. There is room for only so many stars in the motion picture industry. There is sufficient talent in the area for a fine group of television stars as well.

Play Is the Thing

It may not be fully realized as yet, but in television, "the play's the thing". This does not mean that television should present the drama alone, but it does mean that it must skillfully handle its several vehicles of expression. Television is a discerning medium; artificiality on the part of its performers is immediately recognized. This is because the important attribute of "immediacy" probes into the very life of the performer as it is lived; there are no retakes.

And, of course, in Hollywood, we have *glamour*. This is probably only the difference in a person before and after having his morning cup of coffee; but it has become a great item of merchandise in the motion picture industry. It is hard to define and to control, but as long as we are supposed to have it, I guess we do not have to worry.

Wealth of Production

Behind the glamorous performers there is a whole industry of writing, costuming, production, staging, and technology. This industry has been grappling for years with the intangible factors which differentiate between showmanly and unshowmanly presentations. Television will reach its fullest stature when nationwide television networks become a reality. It is then that Hollywood's abilities will be clearly recognized. There will be only one competitor, a large aggregation of burroughs on the East Coast.

Until the day of networks adds the third, Hollywood television is already blessed with two natural advantages. These are high mountains near large centers of population and an equitable climate, the latter being conducive to the scheduling and television pick-up of outdoor spectacles.

In this region there is a whole range of mountains well over a mile high immediately adjacent to an area populated with several million people. The prime television service area is over 200 miles in diameter. The signal strength for a given transmitter power is, of course, proportional to the height of the transmitting antenna above the service area. In order to realize the maximum natural potentials of television production the Don Lee Broadcasting System has recently announced application to the F.C.C. for permission to install the highest power television transmitting station which can be manufactured upon this very high Mt. Wilson range.

Conditions Ideal

For many years the nation has doubted the claims of the Los Angeles Chamber of Commerce about the weather. This was in spite of the fact that the motion picture industry located here because of the relatively large number of satisfactory outdoor "shooting" days throughout the year. Fortunately now, the thorough displacement of persons brought about by military operations has created a considerable army (and Navy) which lends credence to these perennial claims. Some are doing even more than that. One of the most pressing present problems is the housing shortage.

The job of making Hollywood a great television production center is not going to be easy. It will take everything that Hollywood has and all that it can become, television-wise, to satisfy the great maw that is television programming.

Radio's Weekly Payroll Showed Increase in '45

ACCORDING to the FCC average 1945 weekly wage in the broadcasting industry was $65.40, an increase of eight per cent over the same weekly period in 1944. Excluding the motion picture industry, radio leads all other professions in average weekly wages. Employment in 1945 increased 10 per cent over the year before, making a total of 29,405 full time employees.

Table below was prepared in January 1946, based on full time employees for the week beginning October 14, 1945.

Class of employes (1)	Total 9 networks and 876 stations			9 networks including 10 key stations of nationwide networks			866 other standard stations

FOR THE RECORD:

item 1

"This is it!"

On January 31, 1946 the Columbia Broadcasting System in a private showing before a group of leading newspaper and magazine radio editors demonstrated the fact of full color television broadcast on a commercial transmitter in the higher frequencies.

As this book goes to press nearly 1000 leaders in business, industry, arts and science have witnessed the same demonstration. Their enthusiasm is now a matter of record. Here is how *Tide*, the news magazine of advertising, summed it up on February 8: "The general reaction (was): 'This is it.' "

The story of this miracle of modern science goes back to prewar days when CBS led the radio industry in the first pioneering experiments in color television in the low frequencies. The next historic date occurred on April 27, 1944 when CBS first publicly urged the use of the higher frequencies and wider wave bands, promising vastly improved pictures in both full color and black and white within a short time. The skeptics greeted the proposal by estimating the "short time" as "five years from V-J Day".

Less than 6 months after V-J Day, Columbia made good its promise.

and again for the record . . . . . .

www.americanradiohistory.com

item 2

Radio's most complete coverage of history's greatest year of news

A SOLDIER FALLS. Between 5:49 p.m. EWT on April 12, 1945 when John Daly at CBS news headquarters flashed the first bulletin of President Roosevelt's death and midnight Sunday, April 15, CBS broadcast a total of 21 hours and 51 minutes of report, tribute and discussion plus 24 hours and 35 minutes of special music from 51 different places scattered throughout the world. *(photo: burial at Hyde Park)*

NATIONS UNITED. From San Francisco where the delegates of 51 nations gathered between April 22 and June 26, 1945 in a security conference, CBS broadcast daily reports from its correspondents, including Norman Corwin's notable hour-long program *Ward from the People* which picked up voices from points scattered across five continents. In addition CBS broadcast 31 special discussion programs bringing to the microphone the leading statesmen and delegates of the participating nations. *(photo: delegates in session)*

www.americanradiohistory.com

FOR THE RECORD:

VICTORY IN EUROPE. At 12:05 a.m. May 9 EWT Russia's Foreign Minister Molotov speaking from San Francisco concluded the network's 150th broadcast reporting the defeat of Germany. CBS solidly filled 25 hours of broadcasting with the news, comment and flourish of victory. On Moy 7 and 8 the size of the CBS audience swept ahead af all other networks by margins ranging from 5% to 211%. *(photo: the German surrender at Rheims)*

VAPORIZED. At 11:15 a.m. EWT August 6, 1945 CBS announcer Harry Kramer broke into a regularly scheduled network program to report President Truman's announcement of Hiroshima's destructian by atomic bomb. From that moment thraugh the next three doys Columbia broadcast o steady flow of commentary by atomic scientists, world leaders, and laboratary and factory workers throughout the nation who took part in the development and constructian of bath the Hiroshima and Nagosoki bombs. *(photo: Hiroshima)*

IT'S OVER. At 3 a.m. EWT August 15 nearly 112 hours had elapsed since the first tentative flutter of Tokyo's white flag. Americans who tuned in CBS during this period went abrood 77 times to 10 points on the earth's surface, heard 514 separate reports and analyses from 32 CBS correspondents and analysts. Robert Trout was on the air 58 times; Allan Jackson 39; John Daly 28. Thus CBS measured the length and breadth of final victory. *(photo: New York hails V-J Day)*

and now . . . . . .

www.americanradiohistory.com

Let's look ahead . . .

No amount of looking ahead can accurately forecast the events of the coming months. But one thing is certain: wherever, whenever and however the news breaks, Columbia's staff of trained, responsible, world-tested correspondents, analysts and reporters will be right on top of it, conscious of their continuing obligation to the American people to present an accurate objective picture of the march of events. For only with such equipment, can Americans confidently meet the challenges of a swiftly changing world.

this is CBS . . .

THE FINAL BALLOT

Delivery of the 1091st and final ballot by B. E. Jolley, director of research for the Ross Federal organization, to Frank Burke, editor of Radio Daily, signalized completion of the 1945 survey to select the nation's "All American Radio Program." The survey entailed three months canvassing of the nation's press by 136 Ross researchers working out of 35 cities. It was the most comprehensive radio popularity survey ever conducted with 1091 newspaper men and women throughout America participating.

Radio From The Business Side

By M. H. SHAPIRO, Managing Editor, RADIO DAILY

RADIO ADVERTISING as a whole, reflected more or less, the crises that confronted industry throughout the nation due to strikes, reconversion, battle over price ceilings and the resultant lack of manufactured goods. Which of course was particularly true of the latter part of 1945. Its usual revenue increase, although definitely a net rise, did not attain to the percentage to which it is accustomed. Final figures may reach close to an eight per cent increase in net time sales, which compares to the accustomed 20-odd per cent of other years. Major networks and not a few stations may attribute some of the lowered gross to such emergencies as the passing of President Roosevelt and the marking of victories in Europe and Japan, when considerable time was cancelled. Still, national network billings claimed more than 40 per cent of the total of all dollars spent for broadcast advertising. Local business was around 30 per cent of the total and national and regional spot business over 25 per cent. Regional networks are expected to account for an approximate three per cent of radio time sales.

•

Actual gross increase in billings for all types of radio advertising when completely tabulated for 1945, will reach a possible $20,000,000, for a grand total of nearly $412,000,000. Exactly 10 years ago, radio's total gross billings were approximately $88,000,000. The forward march is inevitable.

Close to $75,000,000 went to talent during the year 1945. This includes both independent payments or purchases and those of the networks, national and regional, also local deals. Network increases from a percentage basis was up less than any other form of radio advertising. Various reasons hold the answer including general postwar conditions and unavailability of good time slots for everybody.

•

Drugs and toilet goods were far and away in topping the gross billings as to networks, while food and food beverages made a strong second. Other commodities advertised via radio showed huge increases in billings but comparatively speaking, their total volume is in the lower brackets compared to the leaders. Tobacco products showed a substantial rise in billings not only during 1945 but over a period of five years. Actual greatest increase over any commodity advertised on the air are the billings in the beer and wine category. Despite the increase, the total billings are not great. Stationers, publishers, building materials also show a sizeable upsurge in billings and again the grand total is small.

•

Optimism however, is rampant throughout the industry. as to future business. Some sources, while agreeing the time is a little way off, believe that television and FM will be a potent factor in additional revenue from the broadcasting angle. Spot business looks exceedingly good for the 1946-47 season, from the viewpoint of the station representatives. With the settlement of most of the major strikes, the worst was believed over and industry ready to produce goods which must be advertised. Many brands, off the market during the war are overdue on their return.

•

No actual reconversion problem exists for radio as to broadcasting, yet it remains a problem upon which the broadcaster's welfare is contingent. This applies to the availability of new equipment as well as to sources of additional clientele. As a whole, radio business continued its gains, well managed by the men and women in back of the industry. This group grows in numbers constantly, as witnessed by the constantly increasing number of applications for new stations of every description, revealing a confidence probably exceeded by no other great American industry.

www.americanradiohistory.com

10%

Ten percent commission buys one hundred percent efficiency in the counseling and sale of talent and the development and production of radio programs that sell.

* *VITELLIUS — Roman Spendthrift of 60 A.D. paid this huge sum to the chief priest of Flamen Province to extend Spring by one minute. Thus proving he could buy the most priceless of all commodities—TIME!*

* $250,000,000 for ONE MINUTE of *TIME!*

Today the buying of time is no whim — but BIG Business . . . a mighty BIG Business.

Let the Adam Young Organization help you make your sales problems easier. Adam Young serves a limited number of selected "top-notch" radio stations in major markets. They have ten outstanding sales representatives — all specialists in their field — to give you fast, efficient service. This is the type of operation for which the Adam Young Organization stands.

"We Know the West— We Sell the West"

THE HOMER GRIFFITH COMPANY is — The Only Representative Organization with headquarters in the West —

The Only Representative Organization with ALL offices manned by men who have lived long in the West — have the West in their blood — Know the diversity of the West — know its topography — its people — its crops — its beauty — its great wealth.

The Only Representative Organization who can honestly, intelligently help you choose your Western Spot Markets with an "I've Been There" attitude.

www.americanradiohistory.com

UNITED PRESS RADIO NEWS

Foremost because it offers most—

24 hours a day, from coast to coast, at high speed, over wires carrying radio news only, United Press brings broadcasters in every one of the 48 states—

26 news roundups a day, punctuating a steady flow of datelined dispatches . . .

14 regional reports a day. These flow into stations for a total of four and a half hours, cover every big broadcast period of the day, from six in the morning until eleven at night. They go into both the roundups and datelined news . . .

24 special features. Seventeen of them are daily, including four on sports . . .

3000 words a day of spot sports bulletins—enough to make two 15-minute newscasts in addition to the four features.

United Press has more radio news clients than all other services combined. Because it offers more than any other service.

TEAM-WORK BRINGS RESULTS In The METROPOLITAN ITALO-AMERICAN MARKET

YOU tell us what to say to these 1,500,000 Italo-Americans who listen daily to our programs; we'll deliver your message to them, the way they understand it . . . like it . . . and act on it. We learned how to do it the hard way . . . and now with fourteen years behind us we have the solid experience to offer you the benefit of our successful system.

THE LAMP LIGHTER

TODAY, as in the past, New England has its lamp lighters in a few localities, retained because of tradition. For tradition, in New England, is stronger perhaps than in any other part of the country.

The local community, the bank, church, town hall and its own radio station are linked together traditionally.

The Yankee Network, in turn, with its 23 local hometown stations, serves these key communities as only local stations can serve them—linking them together to form New England's greatest radio market.

For over all coverage, with direct impact in each trading area, Yankee is your only buy.

Acceptance is THE YANKEE NETWORK'S *Foundation*

LOOK IT UP

In The Market Data Book!

WHENEVER you want facts about a market and the media serving that market, reach for your copy of The Market Data Book.

There you will find data based on official federal, state, county and city statistics, broken down by classes of business conducted, giving the number of outlets, and the number of employees.

Near each market you will find the factual, basic story of the media serving that market—filed where it can't be lost or separated from the editorial material on the market.

Get into the habit of doing as thousands of sales, merchandising, advertising and marketing executives do. Look for facts in The Market Data Book; facts on markets, facts on media. Because all editorial data are based on official sources you can compare two markets of equal size and really determine which is the better for your product, your sales setup, your merchandising plans.

Distributed to all national and regional advertisers expending $25,000 or more annually, and to all advertising agencies placing such business, a copy should come to your office if you fall within these categories. The 1946 edition will be distributed soon.

THE MARKET DATA BOOK

to advertise regularly in

STANDARD RATE & DATA SERVICE

With shifting markets and sales-manpower shortages, large numbers of advertisers are maintaining liquid budget reserves . . . are prepared to pour it on wherever promotion possibilities loom the largest.

This widespread policy involves an unprecedented volume of day-by-day decisions . . . offers radio many more opportunities than ever before to sell its services . . . makes "constant buyer contact" the golden rule of advertising today.

To pull more business, sell every day through Standard Rate & Data Service, used constantly by your prime advertising prospects — account executives, time buyers, advertising and sales managers, and all other important advertising officials — for planning, budgeting, scheduling and scores of other necessary operations.

Put this subtle power of hour after hour usership into your advertising appeals. Knock over sale after sale by punching hard from every angle — market data to broadcasting facilities. Jolt orders out of big buyers with timely, telling blows - - when their use of the Service leaves them wide open for your sales-winning story. Rule out any chance of being overlooked in today's augmented advertising market. Make regular monthly use of Standard Rate & Data Service your advertising rule.

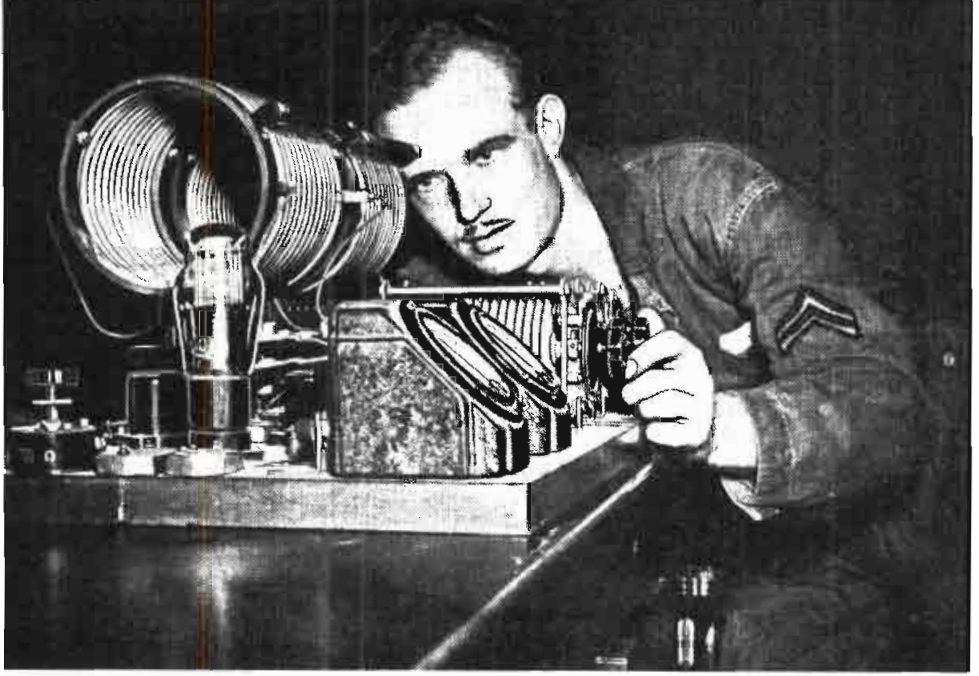
A MESSAGE TO RADIO-ELECTRONIC MANUFACTURERS

RIGHT ON THE NOSE!



TUNE-IN ON THE TECHNICIANS

with the aid of

RADIO CRAFT

(Official Photograph, U. S. Army Air Corps.)

57,394 Net Paid Circulation

Try this pin-point selectivity in reaching out for prospects. At the same time benefit by one of the largest circulations in the radio-electronic industry.

Space buyers have little difficulty in media selection when they carefully analyze the readership of RADIO-CRAFT. This leading magazine enables you to tune-in economically on 57,394 influential technicians — the very men who control the buying for industry, stores, and government.

The readers of RADIO-CRAFT will listen to your message avidly because they are hungry for the information they invariably find in this publication — their favorite technical magazine. If you wish to learn more about the readers of RADIO-CRAFT consult our READER ANALYSIS SURVEY. It contains additional data on the industry which you will find useful.

NEW VALUE OF LOW FREQUENCIES

Advertising & Selling is the magazine of the advertising profession with the lowest frequency, 12 times a year. Subscribers dial it habitually and read it for 30 uninterrupted days. They profit from the stimulation of its expert research, copy and management ideas. They rate its articles on advertising trends and sales techniques Hooper high.

Assist these readers in analyzing your market. Promote the advantages of your story in the best spot on the advertising-magazine dial Advertising & Selling. You get deeper impressions at lower frequencies.

We Are Justifiably Proud of our *"Associate Editors"*...

AMONG the many notable Advertising Executives who have written articles for past issues of the ADVERTISER and MARKETS of AMERICA are the famed Chairmen and a host of members of the Association of National Advertisers and American Association of Advertising Agencies respectively. We like to call them our "Associate Editors," for they have immeasurably enriched our editorial fare.

Like their many confreres, they have written pertinent articles of interest and lasting value to the men and women who read The ADVERTISER—the nation's advertising and merchandising executives and their advertising agency personnel.

Both of our widely read publications are the products of the men who create and place advertising . . . control the billion and more dollars spent in all media and notably radio.

In each instance we select an authority to write on his subject . . . not a long-haired theorist. Thus our readers are fully informed and appreciative of the contents of our publications. Thus, too, they prove to be every broadcaster's best advertising prospects. Many of them are now clients—yet there are many more to reach! Reach them quickly and keep them sold on your station or network, via the advertising pages of The ADVERTISER (monthly) and MARKETS OF AMERICA, (Annual).

The ADVERTISER

Space rate in The ADVERTISER and in MARKETS of AMERICA, Vol. 10 is $185. *per page.* ★ Only $160. *per page* on 12 time contract.

MUSICAL COURIER

World Authority on Music Since 1880

Sixty-six years old, the Musical Courier has the distinction of being America's oldest, major music magazine which presents an over-all international panorama of the world's music.

The Musical Courier is an active and vital exponent in all the fields of music, reflecting in text and picture, the activities in Opera, Concert, Symphony, Ballet, Recordings, Radio and Motion Pictures.

In every issue throughout the year, a comprehensive survey is given of radio and television: program reviews, feature articles, interviews and general news of the broadcasting studios and radio personalities.

Published on the 1st and 15th of the month; 20c a copy; $3.00 a year (20 issues), Canada $4.00, Foreign $4.50. Subscription includes all special issues.

119 WEST 57th ST., NEW YORK 19, N. Y.

RADIO HOMES

Major Markets For 1946

•

Metropolitan Districts—Counties

•

Other Cities Of 25,000 Population And Over

www.americanradiohistory.com

Radio's Major Markets For 1946

By WILLIAM NOBLE, President, Noble & Swars, Inc.

ESTIMATED number of Radio Homes for all Metropolitan District Counties, other counties with cities of 25,000-50,000 population as well as for all other counties with cities having radio stations, are presented in the 1946 RADIO ANNUAL. State and national totals are also given. These figures are based upon the total number of United States Families, 37,786,000, as estimated by the Bureau of the Census for the year 1946, and on previous estimates made in past years by RADIO ANNUAL.

Population Figures

Latest civilian population figures for all Major Market Counties as well as for all other counties have been published in previous issues of RADIO ANNUAL. These population figures are listed in the 1945 ANNUAL, pages 274-287 and in the 1944 ANNUAL, pages 235-286. Civilian population figures are based upon War Ration Number 4 and no new estimates of county populations have been made by the Bureau of the Census since 1943. Other pertinent data including population change, number of farms and Retail-Service Stores and Sales are also included in previous issues.

Last year, for the first time, RADIO ANNUAL took cognizance of the fact that many homes under wartime conditions had become "dead" or without operating radios. The total number of such homes, as revealed by all surveys studied, was sizeable and, for the first time, estimates of total U. S. Radio Homes declined from the previous year. Estimates for this year are based upon the expectation that these inoperative homes will again be able to procure receiving sets. With the natural increase in number of families and with the above homes operative again, RADIO ANNUAL estimates that Radio Homes in 1946 will reach a new high level of 34,398,302—a national coverage of 91.0 per cent of all United States families.

Projected figures for Radio Homes, by counties, are shown to the last digit, not because they are assumed to be accurate to the last digit, but for summation convenience. This follows the pattern set by the Bureau of the Census in estimating civilian population and permits greater accuracy in comparative compilations.

New Estimate

The new estimate of total U. S. Radio Homes for 1946 has a significance which should not be lost upon research departments nor upon advertisers generally. With a 91.0 per cent family coverage, radio is approaching the saturation point of "selective families"—or those who are receptive to the impact of national advertising effort. Such national coverage, today, represents what might well be termed the optimum of radio's goal; to reach all families who will at some time respond to the force of radio's voice.

It must be borne in mind that the estimated figure of 34,398,202 Radio Homes for 1946 is dependent upon unlimited production of sets by manufacturers and also upon these sets being available to the public. Various estimates on units of production have been made by leading set manufacturers in late 1945, and, if these figures are only partially attained during 1946, it should assure the radio public of a sufficient volume of sets from which to make purchases in 1946.

In past years RADIO ANNUAL has presented United States Bureau of the Census figures for Radio Homes, similar figures as released by the National Association of Broadcasters, and RADIO ANNUAL's estimates of Radio Homes for all U. S. counties and for Metropolitan Districts. This year's figures include estimates for Metropolitan Districts and for all other cities (counties) with a population of 25,000 or more.

MARK WOODS
President

LOOKING forward to 1946 as the year of peace with all the plans of the country, its people and industry in general pointing toward a further expansion along all lines, Mark Woods, president of the American Broadcasting Company, Inc., adds that ABC feels the deepest gratification from the year 1945 from its part in helping to bring the country through to the end of a great conflict.

ABC helped directly through utilizing its facilities and talents to spread messages that helped to curb inflation, sell victory bonds and keep war workers on the job; indirectly, by carrying news back from the battlefields to the main streets of America.

It was for radio and the nation a convulsive year of tragedy and exultation, seeing casualties and victory, the death of a great president and the birth of the United Nations. It brought forth a new energy which—like so many developments in this age—is only as constructive or destructive as we decide to make it.

ABC devoted thousands of hours in these 365 days to unfolding the magic story of a magic year in world history. Our correspondents lived in bizarre corners of the earth and reported what they saw. Our writers, actors and producers turned domestic studios into colorful stages to enact the story of civilization at a crossroad.

•

Our thanks goes from ABC to its 195 affiliated stations which carried the story to the people.

Part of the thanks must go to ABC's advertisers, who brought programs of comfort, enlightenment and comedy to the people. In any balance sheet of broadcasting they represent far more than the approximately $40,000,000 of gross sales that they placed with the ABC network during 1945. For these advertisers are the life-blood of American commerce. They promoted their business through our business, and still afforded millions of listeners a chance to laugh or learn or find relief from their cares for at least a few hours of every day.

Much credit goes to those specialists whom we welcomed to our microphones to review sports events, deliver sermons, conduct great music, create great dramatic roles. Without them radio in 1945 would have been mechanical rather than inspirational.

For 1946 the American Broadcasting Company has plans to expand its operations in Television, Research, Programs and Sales.

Television will see new ABC programs produced with greater frequency and ever better program technique as the art develops.

Research in the qualitative field will begin in January on a scale and in a manner not heretofore attempted by the American Broadcasting Company.

•

New programs are to begin during January, including F. H. LaGuardia; two new series of mystery shows—Dashiell Hammett's "The Fat Man" and William Gargan's "Ideal in Crime"; the program, "Forever Tops!", starring Paul Whiteman and his entertainers; a comedy show starring Jimmy and Lucille Gleason entitled "Jimmy Gleason's Diner"; and "The American Farmer," a new series of service to the agricultural regions.

In addition, public affairs will find new platforms on ABC. Our service in news will continue to improve in accordance with plans for still better coverage in world news capitals, and on the domestic scene.

It is to be hoped that the country's economic condition during 1946 will enable us to expand even beyond present plans. We look forward with confidence to the New Year.

No other broadcaster can make this claim!

Only way to reach the 5,000,000 radio listeners of Michigan is with the Michigan Radio Network

www.americanradiohistory.com

PAUL W. KESTEN
Vice-Chairman of Board

ALTHOUGH radio broadcasting celebrated its twenty-fifth birthday in 1945, a large part of its "growing up" was packed into the years between Pearl Harbor and V-J Day. Those few years placed a greater responsibility on broadcasting that it had ever had before. They also advanced our technical knowledge farther than we had traveled during the whole course of the preceding 20 years.

•

As we move now into our first full peacetime year since 1940, we have opportunities far different than we could have imagined even as recently as a year ago. The experience gained from our wartime duties gives us an opportunity for a more important peacetime role than we played before the war. Our inheritance from wartime research laboratories, moreover, gives us an opportunity for faster technical development than we ever enjoyed before.

•

Today's radio audience is, in my opinion, a direct reflection of the kind of job broadcasting did during the war. It is not the same kind of audience we had in 1940. It, too, did some growing up between Pearl Harbor and V-J Day. Americans are more aware of and more interested in world affairs than they were five years ago. We are a better-informed people. Credit for these facts, in part, belongs to broadcasting.

Not only do we have a different kind of audience than we had before the war, we have—or soon will have—an uncounted number of new adult listeners in our audience. Millions of young Americans, coming home from distant parts of the world, are bringing with them a great liking for American radio and radio entertainers. As they join the ranks of the regular audience, they offer broadcasting a fresh source of audience interest and loyalty. This is an immediate opportunity broadcasting cannot afford to ignore.

•

Still another opportunity lies in those parts of the world from which our young men now return. In thousands of foreign cities, towns and hamlets through which these men have passed, an eager interest in things American has been deeply implanted. Looking toward our country's future international interests, we in radio have an obligation to see that the seed thus planted is not left to wither in the ground.

•

It took less than two months to reveal television as radio's greatest hoped might be accomplished in a year of peacetime effort—high-definition, full-color television in the ultra-high frequencies — was achieved only 60 days after V-J Day. We, and others since ourselves, have clearly demonstrated that better pictures can be broadcast through use of wider channels in the higher frequencies. To this extent, post-war television is running well ahead of the most optimistic schedule that might have been set for it a year ago.

EDGAR KOBAK
President

SAID President Truman in his first radio speech of the year — "1946 is our year of Decision." True of the United States as a nation, the statement is equally true of radio as an industry — but, more importantly, as a service to the people of America and the world.

It is probably no hyperbole to say that what radio does in this coming year—as well as what it fails to do — will become the yardstick wherewith people will measure broadcasting. Upon this will depend whether people look upon radio as a force for peace and advancement or merely as a Punch-and-Judy show to which people turn when, in an idle moment, they seek a little amusement and laughter.

Look at it this way. During the war, radio reached heights of service to the war fronts and the home front which earned the respect and confidence of the people: it demonstrated that, properly used, it had power to fight a war and help bring about a peace. People expect that radio, having developed such influence and technique, should continue to use its power to help the world find its way out of the darkness that presently engulfs it.

•

That expectation on the part of the public is a responsibility, one that we, if we are to be worthy of our job as broadcasters, cannot shirk. And the first step toward use of the power we possess, is the realization that it has a strange and inescapable parallel to atomic power. We have seen the devastation which can be wrought by atomic power and by the power of broadcasting — when misused. We have yet to know what atomic energy can do for the benefit of mankind. By the same token, we do not yet know to what extent radio—properly used—can advance the good of mankind. Our first responsibility is to find out.

Suppose we assume that radio is to be used to promote peace — which, let Is say, translates, in practical terms, to informing and enlightening radio's listeners the world over. How to start? Perhaps the first step is to educate ourselves. To open our minds — and our air—to the knowledge without which there can be no peace and prosperity.

Next, let us asume that only the truth will make the people free—and the world free from wars. It then behooves us to be honest with outselves and with our listeners—to play fair with them—to present the current scene and its significance—as it is and not merely as it is viewed by partisans in the one camp or the other.

•

All this is a matter of programming. A matter of a new, an earnest, a searching, an humble approach to the entire question of programming. We have come far in our first twenty-five years, yes: but who knows how much farther we can go—how much farther we must go—before we shall have fulfilled our responsibility in the use of a power that is as devastating (and could be as beneficial) at atomic energy.

But programs can accomplish nothing unless they are heard—are listened to—are understood and are taken to heart.

And we get down to the regions of practical and vexing problem. How to hold the listener? Perhaps it is not the smart thing to do—to admit that there is a possibility that the public may become — nay, has become — radio-weary.

•

What would happen if people did really become radio-weary? You can visualize the situation as well as I. And here is where we have another responsibility—to make radio so new, so fresh, so different, so interesting that people will not readily weary of it. Until we do that—or approach it measurably — we will find that the great impact which we expect we can exercise upon the eager, hungry and groping minds of a war-weary population will merely fizzle like a V-2 dud that has buried itself in the ground.

What we broadcasters make of radio in 1946 is in our hands—in our heads—in our hearts. This is the year of decision for us.

NOW more information

about listening in the WLW Merchandise-able Area . . . more accurately measured by the

NIELSEN RADIO INDEX

What is this . . .

NIELSEN RADIO INDEX

Nielsen Radio Index is a method of audience measurement by means of the Audimeter, a mechanical recorder installed in radio sets in selected homes throughout the area. This device charts tuning against time, and produces a record of every minute of every day. From this record, representing the listening of a stratified cross-section, every type of audience measurement information is available. NRI has been in operation for the past five years and has been accepted and used by most major advertisers, agencies and radio networks.

● Because WLW-land is a big, BIG market, it is important to every advertiser to know how well he is covering that market with his radio advertising ● Recognizing this increasing need for more FACTS, the Nation's Station, in the Fall of 1945, engaged the A. C. Nielsen Co., to record and tabulate, by means of Nielsen audimeters, properly distributed in parallel with U. S. Bureau of Census figures for the area, a continuous record of all radio listening in the WLW Merchandise-able Area ● In addition to the usual measurements of Homes Using Radio (sets-in-use), Average Audience and Share of Audience, for every quarter-hour from 6 A.M. to midnight, for every day of the week, WLW now offers additional yardsticks, such as Total Audience (percentage of total radio homes that heard any part of a program) and Holding Power (the ratio between Total Audience and Average Audience, in percentage of total minutes of listening) ● And besides this regular information, WLW now can show you much more general information about coverage, circulation, penetration . . . about the relative audiences of individual stations and groups of stations in this area . . . about total minutes of listening . . . about frequency of tuning to WLW and to other stations and groups ● All this, and more, is available now through the Nielsen Radio Index, separately tabulated for the WLW Merchandise-able Area, to help you plan your radio advertising in this big, BIG market more intelligently and more effectively.

WLW

THE NATION'S MOST MERCHANDISE-ABLE STATION

DIVISION OF THE CROSLEY CORPORATION

www.americanradiohistory.com

NILES TRAMMELL
President

THE start of 1946 finds radio, like every other industry, at the crossroads. Policies adopted this first year of peace will establish the pattern for many years to come. Therefore it is fitting that we pause now for a review of our position at this historic jumping off place.

The Broadcasters of the United States are now better able to serve their listeners than at any time in radio history. We have at our command the world's greatest entertainment and finest music. Radio, which during the war gave the public the "News Listening Habit" through its extensive coverage, will now provide news of the world on a scale never before envisioned. Public affairs will continue to be covered thoroughly through special public service programs with authoritative speakers representing many viewpoints.

●

Probably best demonstrating the past and future of news and special events are the "Army Hour" and "National Hour" programs. During the war, the "Army Hour" was the public's closest radio link to its loved ones all around the world, giving listeners up-to-the-second news of our fighting men, and describing vividly the life they led. When the "Army Hour" became a "peace casualty," NBC replaced it with the "National Hour," which is designed to dramatize vital problems of the day closest to the public's welfare. Comparative ratings show audience interest continuing on a high plane.

●

Our staff is constantly being strengthened by the returning stream of key men from the armed forces. Others are being encouraged to enter the radio industry through our "Welcome Home Auditions."

The National Broadcasting Company has been planning technical as well as program advances and already some of those preparations are being set in motion. Our Engineering Department, busy with many secret projects during the war which only now are coming to light, has begun the job of modernizing facilities worn by war service.

Many wartime discoveries now are being incorporated in our regular service, with AM, FM and television all represented. We have completed plans and field surveys for post war television and FM transmitting facilities and have filed applications with the FCC for television licenses at Chicago, Los Angeles, Washington and Cleveland, and FM licenses at Washington, Chicago, Cleveland, Denver and San Francisco.

●

A new transmitter will be installed this year atop the Empire State Building for our television station WNBT. We will operate a network between New York and Washington in 1946, and New York and Boston in 1947. Other regional networks will be established as soon as possible. The program service also will be enlarged.

●

Construction of a new wing housing two audience studios was launched recently in Hollywood. Modernization of our Chicago studios is in progress. In New York's Radio City a studio incorporating many new developments in acoustical control was completed.

The National Broadcasting Company is entering with confidence what I predict will be the greatest year in broadcasting history —truly an auspicious time for NBC to mark its 20th anniversary.

SERVICES OFFERED: Keystone Broadcasting System is a transcription network principally covering BEYOND-METROPOLITAN markets from coast to coast. Its affiliated stations are joined together in a national system by means of transcriptions, eliminating wire charges. At time of going to press, the network includes 200 affiliated stations. The network supplies its stations with 48 fully scripted sustaining shows per week filling 2 hours per day, seven days each week, to a total of 14 hours per week. This is the only national, full-sized network in the United States offering national radio advertisers the opportunity to cover the BEYOND-METROPOLITAN markets intensively, in a single transaction, by means of electrical transcription. The system offers its facilities in network time periods from one hour down to five minutes and also makes available announcement periods down to twenty-five word length.

Follow-Thru...

ESSENTIAL IN

RADIO ADVERTISING, TOO

KBS

please follow through

www.americanradiohistory.com

Complete the local tieup to sell Mighty Main Street

More and more national radio advertisers now realize the importance of bringing their network programs *directly* into the homes of the 28 million small town and rural inhabitants who get No signals, or INFERIOR signals, from major wired networks.

Surveys show that, in the absence of this immediate, *local* tieup, many "BEYOND-METROPOLITAN" listeners had never *heard* of the so called "nationally radio-advertised" product. When they *had* heard of it over a remote station, they never thought of it as being available in their OWN neighborhood stores.

This current attitude is reflected in indifference among "BEYOND-METROPOLITAN" DEALERS. In the absence of the necessary follow through, neighborhood dealers fail to push, promote, or display

THIS IS THE KEYSTONE

www.americanradiohistory.com

FOLLOW THROUGH

the items which are not known or demanded locally.

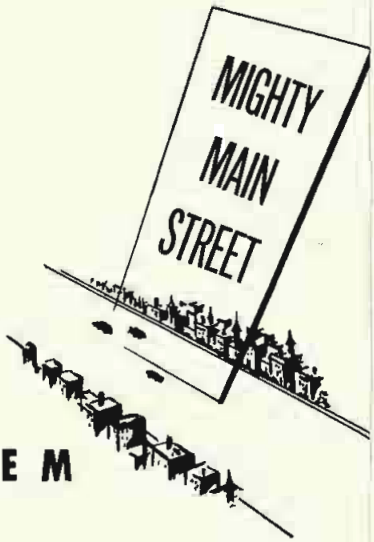
To provide this necessary "FOLLOW THROUGH," extend your wired-network programs to K B S . . . the ONLY network concentrating upon "BEYOND-METROPOLITAN" America *exclusively!*

Via the K B S, transcription network, you can annex this huge market — *in* ONE streamlined operation — with NO production headaches — at remarkably low cost per *actual listener*.

QUANTITY PLUS QUALITY

Prosperity in "BEYOND-METROPOLITAN" America is at an all-time high, — and is based on a FIRM FOUNDATION that assures its continuation.

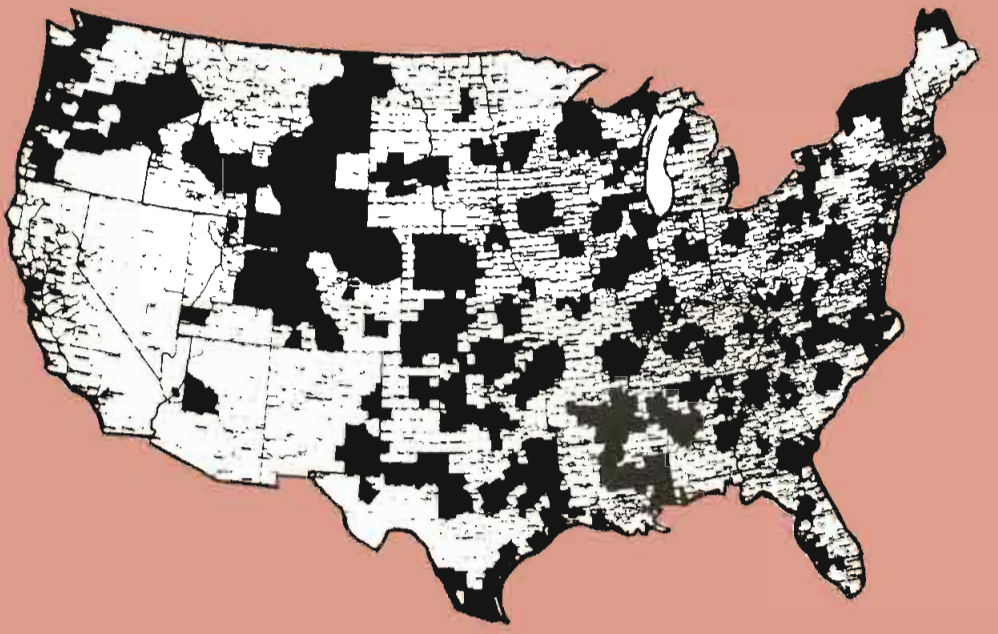
KEYSTONE listeners are CONSTANT AND LOYAL. New Ross-Federal surveys prove they listen up to 289% as much as to all other stations in their areas *combined!* (complete survey upon request.)



BROADCASTING SYSTEM

www.americanradiohistory.com

THIS IS "BEYOND-METROPOLITAN" AMERICA



"TOP AD COIN TO SMALL OUTLETS"

This headline from Variety acknowledges the tremendous surge of interest in "BEYOND-METROPOLITAN" AMERICA among leading national radio advertisers, ALKA-SELTZER, GENERAL FOODS, BROMO SELTZER, WILD-ROOT, CORONET, STERLING DRUGS . . . are a few of the outstanding national advertising successes on KBS facilities . . . scooping 200 stations in ONE transaction instead of 200 . . . with ONE Time order, One Time Clearance — One schedule — One mechanics operation . . . One source for affidavits — One invoice. May we help YOU to "FOLLOW THROUGH" . . . by custom-fitting a list of KBS STATIONS to suit your requirements.

WEST COAST REPRESENTATIVE
Pacific Northwest Broadcasters

www.americanradiohistory.com

They said it couldn't be done!

In 1936, when WQXR set out upon its unique policy of broadcasting only the best in music and strict adherence to quality and good taste in advertising, most radio experts sagely shook their heads.

But they overlooked one thing—within reach of WQXR's signal there are concentrated more lovers of fine music than in any similar area in the world. And WQXR is their only consistent means, day in and day out, of getting the kind of programs they like.

Grateful listeners from Canada to Carolina and as far west as Ohio were so interested in our programs and policy that many of them requested detailed information on WQXR's daily schedule WQXR complied with a pragram booklet which still sells for 10¢ a copy or $1.00 a year. The total current paid circulation is more than 25,000 a month. Surveys indicate that the number of our regular listeners in the New York Market exceeds our program subscribers more than 25 to 1, which means a total audience in this area of some 500,000 families an audience with abave-average taste and income that advertisers find highly profitable.

We'd like to tell yau more about WQXR. Write today for your copy of our "Program Booklet Circulation Report" and the folder giving the esults of o study of "Regular Listening to New York Radio Stations."

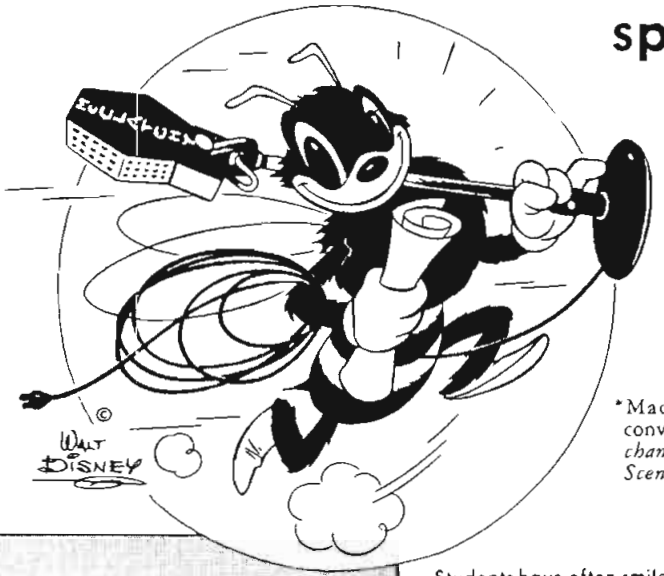
*"With all convenient speed"...



*Madam, I go with all convenient speed —*Merchant of Venice, Act IV, Scene 3*

Students have often smiled over Shokespeore's use of the word "convenient" in this instance. But the dictionary soys another meaning is "adapted to requirements".

Advertisers know that the *Beeline* is adapted to any requirements that they might have in their radio broadcosting—from chain-breaks to remote contral programs.

The *Beeline* with its forty-two primary counties is the only combination of stations that properly can caver the California Central Valleys plus Western Nevada.

WHAT THE *Beeline* IS . . not a regionol network but a group of lang-established key stations, each the favorite in its community . combined for national spat business.

See the McClatchy *Beeline* rate listing, first under California in Standord Rate and Data.

In **5** years (by official census)

OAKLAND GROWS

31.6% . . . to 401,257

(Metropolitan Oakland near million)

It's official . . . just certified to the U. S. Bureau of Census. A special count places Oakland fourth (possibly third) among Coast cities . . . at least 26th in the nation! Oakland is increasingly *a market all its own.* And you can't overlook the fact that . . .

"STAR TIME"

Intensely interesting dramatizations of personalities of interest to women.

Through the unique, new "Cue-In" technique, the station's local women's program editor participates with the star.

"Cue-In" localizes and personalizes the program—15-minutes, transcribed.

Exclusive in Any Market

Connecticut has a great inheritance: the first democratic constitution, adopted in 1636. Above: Seat of government in Hartford.

EVERYTHING HERE IS CAPITAL . . .

1. **THE CAPITAL CITY** of Connecticut, Hartford is the center of the busy political, financial and industrial life of the state.

2. **THE CAPITAL MARKET** of the country, the Hartford Trading Area is the Major Market in a state which leads all others in Effective Buying Income per family.

3. **THE CAPITAL STATION** in this market, WDRC is a capital buy, with one low uniform rate for all advertisers, national, regional and local.

TRY SOME?

During the past eight years, Peter Paul, makers of chocolate-coconut MOUNDS—through their agency, Platt-Forbes, Inc.—have consistently employed the facilities of WTIC to sell their famous candy bar to the Southern New England Market. As a result, Southern New Englanders *have* tried this delicious confection, and they keep coming back for more.

Peter Paul is typical of the many advertisers who have found it both profitable and pleasant to do business with WTIC.

ONE-FOURTH OF FLORIDA'S RADIO HOMES ARE SERVED BY THE 5000 WATTS OF FLORIDA'S ONLY 24 HOUR STATION LOCATED IN ORLANDO, THE CENTER OF THE SUN EMPIRE.

WDBO CBS 580 ON YOUR DIAL
COLUMBIA NETWORK

In our twenty-one years of continuous operation, we have learned the 'know-how' of providing those uncontracted services of Promotion and Publicity — those important added services which make clients happy.

Maybe that's why our advertisers continue to renew contracts for our complete facilities again, and again, and again!

Clear and Strong

A radio station's effectiveness starts with the power to be heard — *in the right places*. WAGA's 5,000 watts on 590 kilocycles assures dependable coverage of a market which, according to our latest figures, accounts for 41% of Georgia's population — 49% of its radio homes and 49.5% of its retail sales.

Add to the *power to be heard* the appeal of *something worth hearing* and a tested plan for stimulating the *desire to listen* and you have the formula through which WAGA has become one of the South's most successful stations

. . . *The favorite programs are heard over* **WMAQ!**

FIRST in CHICAGO

50,000 watts

Represented by NBC SPOT SALES

A Service of Radio Corporation of America

Independent surveys prove that year after year the nation's favorite programs are heard over WMAQ. These NBC shows are the combined result of NBC program direction, top-flight talent and expert production facilities—all made possible by America's leading radio advertisers and their capable agencies.

Through the station coverage afforded by WMAQ these astute advertisers reach our country's number two market, Chicagoland, where 2,855,700 families annually spend over $3,500,000,000. And the same advantages await those interested in either local or spot campaigns. For WMAQ—morning, noon or night—is the Chicago station that reaches the people who listen and buy.

The Chicago station most people listen to most of the time

LIKE THE TAILOR fitting a suit, WLS program builders plan their programs to fit the needs of Midwest listeners. They know the WLS listening family and their requirements. In educational, spiritual and entertainment features, WLS serves the interests of a friendly, growing audience.

"School Time" brings progressive education to one million youngsters in 50,000 classrooms . . . Dr. John Holland, WLS staff pastor, gives daily inspiration to listening millions. There are the farm features: Art Page's Dinnerbell Time, radio's oldest farm service program; a quarter hour of farm news at 6 a.m. and again at 11:45; frequent daily market reports; and an evening quarter hour of rural service with different subjects from day to day: farming in other lands, questions and answers, livestock, new farm equipment, and similar information.

This combination of service, inspiration and entertainment is planned to fill a need, to fit the pattern of daily living in Mid-west America. It's one of the reasons why *WLS Gets Results!*

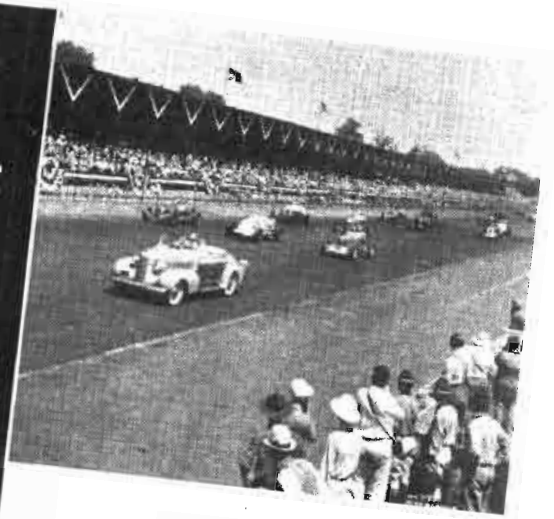
DEAR TO THE HEART OF HOOSIERLAND



THE 500 MILE RACE

In 1946, Memorial Day means the gasoline mounts again resume the internationally famous chase around the 2½ mile brick oval—now Hoosier owned.

SOLDIERS' AND SAILORS' MONUMENT

The hub of Indiana—built of Hoosier limestone—and beloved by Hoosiers and Indianapolis visitors the world over.

WFBM—INDIANA'S *First* RADIO STATION

Happily married to the rich central Indiana market since October, 1924. An old and trusted friend to more than 400,000 radio set owners in its PRIMARY coverage area. Consistent programming—merchandising—promotion—assures results as dependable and as solid as Indiana landmarks.

IN CENTRAL IOWA KSO
IS DOING A TERRIFIC JOB

Folks in our own backyard . . .
who know *which* Central Iowa station
is really delivering the goods . . .
choose KSO.
More than 147
Des Moines advertisers used KSO
last year . . and it's hard to fool
your neighbors, especially when
they know what's going on here at KSO.

"STAR TIME"

Intensely interesting dramatizations of personalities of interest to women.

Through the unique, new "Cue-In" technique, the station's local women's program editor participates with the star.

"Cue-In" localizes and personalizes the program—15-minutes, transcribed.

FAITHFULLY SERVING AMERICAN AGRICULTURE

At its opening twenty years ago, WIBW was dedicated to the service of American agriculture . . . to farmers, stockmen, and small town residents whose livelihood revolved around the production and distribution of farm products.

Unwavering adherence to this policy has won us millions of staunch friends and eager listeners throughout Kansas and adjoining states. Because they appreciate our sincere services in their interests, they are quick to follow the purchasing suggestions of WIBW advertisers. Can *you* use such whole-hearted buying response?

KCKN's MARKET COVERAGE

And for radio advertising that pays off in RESULTS, hire KCKN to deliver your sales messages to Kansas Citians. KCKN, and *only* KCKN, programs specifically and exclusively for the Greater Kansas City market. Result is that Kansas Citians look to KCKN for the kind of radio entertainment *they* like—day and night.

Thus, thru KCKN, you may sell a substantial share of Greater Kansas City's nine hundred million dollar buying power *without* the rate penalty of outstate coverage.

KANSAS WHEAT INDUSTRIAL CATTLE OIL MONEY

KANS-WICHITA

The NBC Station in KANSAS' No. 1 Market

General Information:

KANS is owned by THE KANS BROADCASTING COMPANY (a corporation); Herb Hollister, President; Jack Todd, General Manager.

KANS operates on a power of 250 watts, day and night, on a frequency of 1240 kilocycles.

KANS has been in operation since September, 1936.

KANS does a big local coverage job on all civic events including local sports.

Network Affiliations:

KANS is affiliated with the National Broadcasting Company

Program Facilities:

KANS maintains two transcription libraries — the NBC "Thesaurus" and Standard. **KANS** has both AP and UP news service day and night.

Hours on the Air:

6:30 A.M. to Midnight.

Merchandising Facilities:

Bus cards in all local buses (135 in all) for a two-week period at the start of a campaign of programs. Feature articles and pictures in "The KANSan," monthly **KANS** merchandiser mailed to most retail outlets in Wichita.

"STAR TIME"

Intensely interesting dramatizations of personalities of interest to women.

Through the unique, new "Cue-In" technique, the station's local women's program editor participates with the star.

"Cue-In" localizes and personalizes the program—15-minutes, transcribed.

Exclusive in Any Market

Let's see your license

That's Sadie and her four Black Bear Cubs. It was taken just about the time we opened up W-I-T-H. And it seems out there in the Great Smoky National Park they stopped the show . . . literally stopped traffic to get snacks from passing motorists.

Know the comparison we're going to make? That's right.

We've been stealing the radio show down here in Baltimore.

Because today W-I-T-H, the successful independent, produces more listeners-per-dollar-spent than any other station in this big five-station town.

Facts that back up our license to say that are available. Glad to show them to you.

W-I-T-H

and the FM Station W3XMB

Character

...is the combination of qualities that distinguishes WWJ from all other radio stations. The esteem in which WWJ is held by the community and by the nation, is based on a pioneer spirit that has motivated each milestone of WWJ's progress. As America's *first* commercial radio station, WWJ offers an impressive record of "firsts" . . . reflected in the influence exerted by WWJ's leadership, in the public interest and in the interest of advertisers.

Your sales message on WWJ is enhanced by the prestige achieved through 25 years of progressive broadcasting service.

PARLOR MAGIC

● Myrtle Labbitt's *"Homechats,"* after a solid ten-year run, is a morning institution in thousands of Greater Detroit homes. Myrtle's program is probably one of the most unique and informally simple shows in the country . . homey as a parlor rocker, smart as a new Spring bonnet. *"Homechats"* is just another sample of CKLW programming that sends listeners merrily off to pay cash for things on dealers' shelves. PROOF? On a recent food recipe-request campaign placed on nine nation-wide homemaker programs, our own "Homechat" show clocked *second* on the list in low net costs per inquiry . . . and, mind you, *five of the 9 stations were 50,000 watters!* How'd you like CKLW to sell YOUR wares that way for so little? For fast facts, write our Executive Sales Office, now!

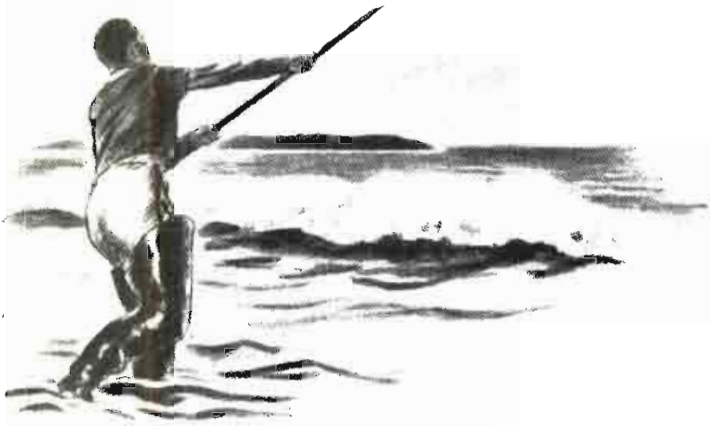
YOU MAY BE ABLE TO SURF-CAST 623 FEET*—



BUT—YOU CAN'T BEAT WKZO-WJEF FOR BROADCASTING IN WESTERN MICHIGAN!

For many, many years, most time buyers have accepted WKZO as the top station for greater Western Michigan. The only exception they *ever* made was for Grand Rapids and Kent County. But now the WKZO-WJEF combination has more than taken the "except" out of the exception!

Let's take net circulation figures. The CBS standard for listening areas is the toughest of all. Most stations keep strictly mum on the subject. Not *us*, however! For WJEF, Columbia gives 48,493 radio homes—for WKZO, 111,022. The total is 159,515. *But the CBS mail formula gives 248,090!*

In Grand Rapids, WJEF carries more than 50 categories of public service programs, for almost all the top-notch local-service organizations—carries most of the top CBS network shows—has the best frequency in Grand Rapids, delivering 25 microvolts throughout the entire city!

Enough said?—Or will you ask Lewis H. Avery, Inc. for more?!?

** 623 feet 10 inches: record held by August F. Livenois, San Francisco.*

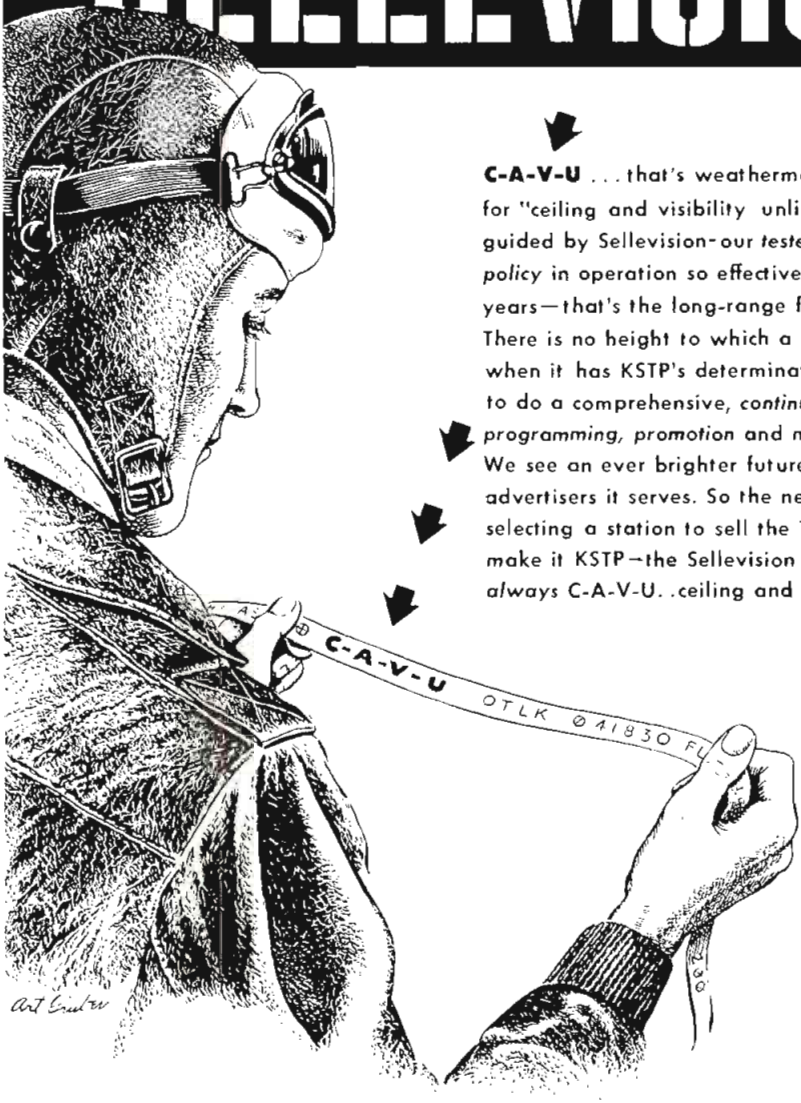
SELLEVISION



C-A-V-U . . . that's weatherman-to-pilot parlance for "ceiling and visibility unlimited." And, guided by Sellevision-our *tested station Betterment policy* in operation so effectively the past four years—that's the long-range forecast for KSTP. There is no height to which a station can not rise when it has KSTP's determination and know-how to do a comprehensive, *continuing* jab of *programming, promotion* and *merchandising.* We see an ever brighter future for KSTP and the advertisers it serves. So the next time you're selecting a station to sell the Twin Cities' Market, make it KSTP—the Sellevision Station—where it's *always* C-A-V-U. .ceiling and visibility unlimited!

50,000 WATTS—CLEAR CHANNEL

WGCM VOICE OF THE MISSISSIPPI GULF COAST

COVERS MISSISSIPPI'S SECOND MARKET

You'll get good results from WGCM because this station covers a vital growing market. For instance, last year Harrison County (Gulfport-Biloxi) led the entire state of Mississippi in Food Sales; retail sales in the WGCM area totaled more than $130,000,000, and radio homes in the area almost doubled from 1940 to 1945. Write for schedules and rates.

Why YOU Will Prosper in GREATER KANSAS CITY

© 1945 H M CO

A report by Greater Kansas City Business concerning future planned employment for this area. These facts and figures were collated and analyzed by the Research Department of the Federal Reserve Bank of Kansas City. Here is a true picture of the job opportunities ahead—and thereby an insight into tomorrow's business conditions for Kansas City. Employment planned for September, 1946, compared with the employment of fall, 1945, and of 1940, is as follows:

PLANNED EMPLOYMENT INCREASE

Business Classification	% Over Fall, 1945			% Over 1940		
	Total	Men	Women	Total	Men	Women
All Classifications	23.9	32.6	10 3	40.5	40.2	41.0
Manufacturing	27.7	29.3	23.5	39.3	41.4	33.9
Trade	12.7	41.3	2.6*	32.0	22.5	40.5
Transportation, Communications and Public Utilities	37.1	40.9	27.5	88.8	62.0	246.5
Service	14.8	22.4	4.5	21.3	32.5	7.0
Finance and Insurance	21.4	85.1	12.3*	50.3	58.2	42.4

LOOKING INTO THE PAST, PRESENT, FUTURE

For years, KXOK has grown steadily and impressively, gaining appreciative audiences and selling important markets.

Today, KXOK's vast daytime audience covers 114 counties—the rich oil fields of central and southern Illinois; the bounteous agricultural areas of northwest Kentucky, southwest Indiana, central and eastern Missouri, and several cities throbbing with industry.

KXOK's present important standing has been gained through top programs with all-round appeal and complete, award-winning promotional activities.

KXOK's sturdy past and present make a strong foundation for a mighty future. The "blueprints" for its future now include the conditional FM grant and applications for television and facsimile*—and, of course, tops in programs and energetic, consistent promotional activities.

"STAR TIME"

Intensely interesting dramatizations of personalities of interest to women.

Through the unique, new "Cue-In" technique, the station's local women's program editor participates with the star.

"Cue-In" localizes and personalizes the program—15-minutes, transcribed.

The Formula For Coverage

POWER + FREQUENCY + CONDUCTIVITY

POWER	**5000 W.**	No station in Montana or Wyoming has greater power than KGHL.
FREQUENCY	**790 kc.**	KGHL is the only station in Montana and Wyoming with a frequency under 1200 kc.
CONDUCTIVITY	**FAVORABLE**	The KGHL signal encounters less soil resistance than any other regional channel station in Montana.
COVERAGE	**MAXIMUM**	No other station can match KGHL's coverage* of Montana and Northern Wyoming. KGHL Primary Area *Population ..... 326,777 Retail Sales ..... $180,033,000 Radio Homes ..... 72,630 Source: Katz Research Bureau

AP RADIO PRODUCTIONS

PRESS ASSOCIATION, INC.
50 ROCKEFELLER PLAZA
NEW YORK 20, N. Y.

www.americanradiohistory.com

THIS IS WOR *in 1946*

In which one of America's great stations sums up a partial declaration of intent

IN this, our twenty-fourth year, we start again—as always—with a declaration of serious purpose, but with a concomitant declaration that WOR's program personalities shall play the major part in executing it.

Whatever the big things WOR might say, or the big things we might TRY to think, we'd be mute fumblers without the names and voices of those artists who so uncannily mirror the thoughts and desires of millions of people in one of the greatest listening territories on the Eastern Seaboard.

In this new year there'll be nothing particularly original about the programs that these WOR personalities will conduct. But their astute formulas which have charmed and moved millions of listeners for almost a quarter-century will—as always—accurately reflect changing times in a changing world.

However, there'll be new talent, too. WOR will carefully watch, listen to and talk with those artists, writers and whatever released from the Army, Navy and Marines; from the Spars, Waves, and all the services which have contributed to a world a United Nations bled to build.

As usual, there will be advice for the farmer and the bees he hives; the dairyman, truck-gardener and the produce they must sell. There will be the winds judged accurately, and the warning finger raised to signal the hurricane that tentatively nudges the sunsplashed rooftops of a drowsy Jersey town.

WOR's artists will discuss the theory and probable future of the energy called atomic, and describe a dusty courtroom in which a fascist

culprit sulks. There will be talk of recipes and why marmalade won't run in frost. There will be Beethoven, too: and Stravinsky, and Harry James, and The Duke and . . . Oh, you know, whatever good music's got to give. Comedy? Oh, yes. Corn maybe; but there will be the subtle mimic, too.

People will hear the news (we're famous for it) as accurately and often as they've always heard it. Telephone lines, like gloved fingers, will reach into American cities far away and bring back what vivid events they offer. Moscow, London, Budapest, Athens, Warsaw, Paris . . . Again the once-dimmed but brightening voices of these and other great cities shall enter the homes of millions.

These—VERY briefly—are some of the almost intangible things that have long been part of WOR's amazingly successful growth. Collectively, it is a sensitive awareness of what people want sympathetically reflected in the voices and the actions of the WOR artists who have always more than fulfilled those wants. It is a more than ordinary alertness to the see-saw of world and home events, and an immeasurable degree of honest friendliness, as well as an intelligent and imaginative way of presenting the times in which we live.

This, then, is WOR in 1946 . . . partially.

WOR . . . that power-full station at 1440 Broadway, in New York

HOT TIP ON THE DAILY DOUBLE . . . . .

CONSULT your ratings and you'll agree that here are two sure bets for sales in the New York market . . . the consistent daytime audience and the consistent evening audience that listen to WOV. Our daily program schedule results in balanced broadcasting that has won and holds two distinct metropolitan New York markets . . . two markets that combine, in their respective listening hours, to give this important station a continuous around-the-clock coverage . . . In the daytime WOV overwhelmingly dominates metropolitan New York's Italian-speaking audience of 520,000 radio homes. And, in the evening between the Hooper Hours of 7:30 and 10:00 p.m., WOV delivers one of the largest average metropolitan audiences of any New York independent station . . . at less than half the cost of the next ranking station.

More Listeners for you in Central New York

✓ Check any authoritative data source for facts on Syracuse and Central New York as a market.

✓ Check the following facts on WFBL as the best medium to sell this market.

WFBL is the only radio station with mobile unit facilities to cover special events throughout Central New York.

WFBL is the only radio station with a separate agricultural studio.

WFBL is the only radio station that provides an early morning live talent show.

WFBL is the only radio station in Syracuse to have won a George Foster Peabody award during 1945.

✓ Check again this 24-year-old station, first in Central New York to have a network affiliation (Charter member of CBS), first to operate on 5,000 watts day and night; first to be granted FM broadcasting privilege; first to have its own building with complete broadcasting facilities all under one roof; first in audience, day and night, first with advertisers both national and local . . . WFBL should be your first consideration if you want to sell Central New York and get the most for your radio dollar.

From Cradle to College

WHEN the late Scott Howe Bowen took over the active management of Radio Station WIBX, Utica, N.Y., in 1938, he inaugurated a series of programs of an educational character to better inform the parents, and the public, of the good work that the schools in Central New York were doing in educating the citizens of tomorrow.

SINCE 1938, the Educational Department of WIBX, with Betty Cushing Griffin as Director (with the full co-operation of the Principals and Teachers of all schools—and the guiding genius of our President and General Manager, Mrs. Scott Howe Bowen) has written, produced and broadcast every week the following series of educational programs.

"Youth Presents" Variety Show, Drama and Music	Saturdays 3 30 P M.
"Wizard and Witch of Quiz"	Saturdays 9:30 A.M.
"Young America Speaks"	Mondays 4.30 P M.
"Cavalcade of Choirs" . ..	Fridays 4.45 P M

DURING 1945, an additional program was conceived —called "Let's Go to School" and is exactly what the name implies—a broadcast direct from the classrooms of Utica and vicinity schools. Each week WIBX takes its recording equipment into a classroom and records an actual classroom lesson—grades from kindergarten thru 6th. This recording is then placed at the disposal of the Board of Education and Parent-Teachers Organizations for use as deemed advisable.

HERE is a typical classroom scene taken Monday, October 10, 1945, at the Hughes School, Utica — 2nd grade studying social studies and broadcast Tuesday, October 16, 1945, at 3 P.M. All subsequent programs were recorded on Monday and broadcast Tuesday

THEN AGAIN, to perpetuate the memory of her late husband, Mrs. Bowen in March, 1945, offered a Radio Scholarship Award of $500 in cash to the student—senior or post-graduate—who best answered the question "Why I want to make radio my life work!" The contest was eminently successful and the winner is now attending Syracuse University.

ANOTHER FEATURE of this educational series is the Scholastic All-Star Football Team Contest and the Most Valuable Football Player Contest conducted by the WIBX Sports Department with Michael Sandy, Director. Coaches and players on the teams were asked to vote for players who played during the 1945 football season. Thirteen schools in the area were eligible. Score sheets were sent to all coaches and cards to be filled out and returned. At the conclusion of the Contest, 4278 postcards were returned out of a possible 5000. The program is broadcast Tuesdays and Thursdays at 4.30 P.M. (this is in addition to the 11.15 P.M. nightly Sports Program by Michael Sandy Sundays thru Fridays).

WFAS...

"Six Weeks in Westchester..."

Do you know that in 1945, WFAS programmed a total of 1021 hours of live Westchester features? These included News, Civic, Religious, War Effort, Educational and other categories. That's the equivalent of more than *six* weeks, 7 days a week, 24 hours a day! This blends the 'local interest' appeal with WFAS' 10 year policy of fine music. (More than 2300 hours in '45). All of it adds up to results for WFAS advertisers. So much so that better than 70% of them renewed in the last 12 months!

No other Southern state equals North Carolina in combined rural and urban prosperity. The value of North Carolina's manufactured products is nearly *triple* the average for the nine other Southern states. North Carolina's cash income to farmers is nearly *twice* the Southern average. Result: the kind of Southern market most advertisers want!

With 50,000 Watts at 680 k.c.—and NBC—Station WPTF is by long odds the No. 1 radio salesman in North Carolina. Let us send you the complete facts and availabilities. Or just call Free & Peters!

★ HEART OF EASTERN NORTH CAROLINA
BRIGHT LEAF TOBACCO BELT

this WASHINGTON★ IS IN NORTH CAROLINA

In Case you didn't know!

This Washington, in the heart of Eastern North Carolina, is the home town of WRRF! Also perhaps you didn't know that Eastern North Carolina Bright Leaf Tobacco farmers sold their 1945 crop for over $175,000,000.

We want you to know . . . that WRRF serves this market completely . . . a market of over 600,000 population . . . with 6,188 retail stores that do over $100,000,000 annual sales volume.

You should know . . . that 67,144 radio homes depend primorily on WRRF for their favorite national and local programs.

Then you will know that WRRF is the only "buy" to cover Eastern North Carolina . . . WRRF will sell your product in one of Amerıco's richest agricultural belts . . . So remember WRRF . . . **This** Washington in North Carolina — and this "as good as gold" . . . market.

TELL
SOUTHWESTERN
OHIO
your sales message

WHIO Dayton covers Southwestern Ohio — where the Great Miami and Little Miami rivers flow through the prosperous farm lands of a $100 million agricultural market richly studded by progressive manufacturing centers. This ready market is supported by diversified industries with sound progress in reconversion and having projected expansion plans amounting to more than $50 million!

Dayton and Montgomery County voters recently passed levies and bond issues to finance a unified capital improvement program amounting to $28 million!

Tell your sales story through WHIO Dayton, the local station with the largest listening audience, plus complete, reliable local news coverage: UP, INS, PA.

Louis Bromfield addresses annual Marion Chamber of Commerce Banquet.

Billy Southworth and baseball veterans Hank Gowdy, Jess Haines, Cy Young and Bob Ewing, at the annual "Southworth Dinner" given by The Kenton Elks.

W-M-R-N's listeners hear Miss Mary Jean Rankin, 1945 Corn Queen of the Bucyrus Annual Corn Show.

W-M-R-N covers the Little Brown Jug Futurity whose lush $40,000 purse in 1946 will draw the nation's best pacers and drivers to Delaware.

WMRN

Marion OHIO

The Friendly Neighbor

to 200,000 OHIOANS

W-M-R-N is happy to co-operate with its more than 200,000 listeners in promoting and publicizing their many and varied activities . . . more than 200,000 listeners who live in the heart of one of the richest agricultural and industrial areas in all Ohio.

On this page are illustrated a few of the many rural and city events that are broadcast annually over W-M-R-N.

Public service like this makes real friends of the local folks in our seven-county service area . . . whose buying power is valued at almost $200,000,000 annually.

Get your share of this rich market . . . tell your story to these in-the-money, willing-to-buy listeners.

REMEMBER . . .

Big BOX-OFFICE in Toledo

WTOL shows in Toledo are big box-office . . . every day and every night. Locally owned, locally operated . . . the station plays to an audience with a first-hand understanding of what its particular audience most enjoys. Local interest. Plus national prestige. Local merchants prefer and use WTOL. Its local wallop offers a great opportunity for national advertisers to tie in for results.

1926-1946

Twentieth Anniversary Year*

IF YOU COULD CHOOSE ONLY 25 U. S. MARKETS... YOU WOULD HAVE TO CHOOSE YOUNGSTOWN--WKBN

A stable, concentrated market area which ranks among the nation's top 25 means both peak buying ability and peak buying habits. Effectively served by one medium of proved selling power, this area is the "must market" of Youngstown—WKBN. The leading purchasing power of this third largest U. S. Steel Center is revealed conclusively by available statistics... total wage earners, annual wages, retail sales per family, etc. (Full information is available to advertisers in WKBN's Brochure on "The Youngstown Industrial Area"). This large and attentive buying audience falls within the primary coverage of one Radio station only... WKBN.

As repeated case histories throughout this pioneer station's 20-year history attest, such an exclusive situation has placed WKBN in the position of a powerful merchandising and sales force... the respected source of information and entertainment for a major market area of over half a million consumers... plus the bonus coverage area of over 6,000,000.

YOUNGSTOWN, O.

5000 watts
570 kc

Represented by
PAUL H. RAYMER COMPANY

* *WKBN delivered its first broadcast to Youngstown earphones and speakers on September 26, 1926. The station's first bid for listeners was made with a 7½ watt transmitter. An ever-progressive policy has existed from the beginning and today's modern, powerful equipment... situated on forty-five acres of landscaped beauty in Youngstown's South Side residential section... brings Columbia Network and local entertainment to listeners in five states and Canada.*

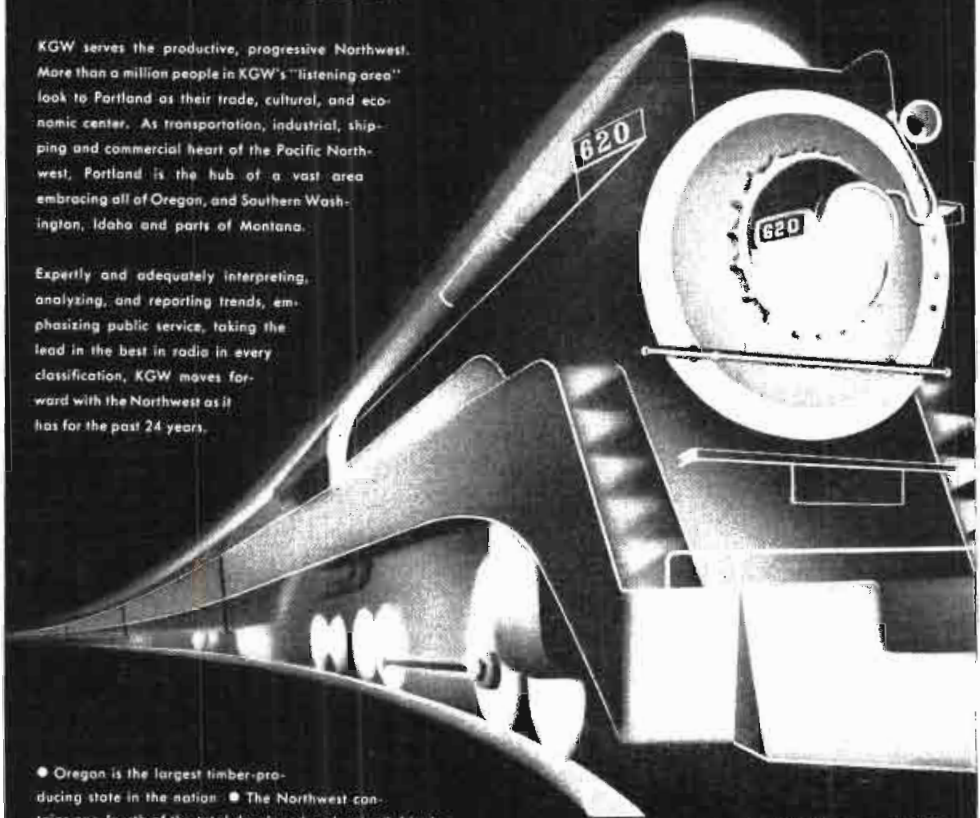
KEEP PACE WITH PACIFIC PROGRESS

KGW serves the productive, progressive Northwest. More than a million people in KGW's "listening area" look to Portland as their trade, cultural, and economic center. As transportation, industrial, shipping and commercial heart of the Pacific Northwest, Portland is the hub of a vast area embracing all of Oregon, and Southern Washington, Idaho and parts of Montana.

Expertly and adequately interpreting, analyzing, and reporting trends, emphasizing public service, taking the lead in the best in radio in every classification, KGW moves forward with the Northwest as it has for the past 24 years.



● Oregon is the largest timber-producing state in the nation ● The Northwest contains one-fourth of the total developed and potential hydro-electric power of the United States ● Portland ranks second in volume of shipping tonnage handled on the coast, is center of the meat-packing industry of the Northwest, and is the nation's second largest wool-shipping city.

ONE OF THE GREAT STATIONS OF THE NATION

Distinguished

Broadcasting Stations, like people, develop individual characteristics. Each in its own way creates a definite impression. However, one because of marked differences, soon distinguishes itself from all others. In a person, that mark of distinction is personality; in a broadcasting station it is programming, promotion and service in the public interest.

WFIL's alert programming continues to build wider listening acceptance, its hard-hitting promotion follow-through is constantly gaining new advertisers and its public service to the community is universally recognized. Truly in Philadelphia, the nation's third largest market, WFIL is distinguished.

We Gave Them THE BIRD ...and they Liked it!

About eight years ago . . . in the middle of the night . . . WIP's Pep Boys Dawn Patrol played a special selection, "BLUEBIRD OF HAPPINESS." The listeners liked it. Liked it so much they recently insisted that it be made available for playing at home.

RCA-VICTOR engaged the same Metropolitan Opera star Jan Peerce, who made the original under a nom de song, to make a record of the "BLUE-BIRD" and it's selling BIG!

More proof of the fact that they want what they hear on WIP!

Scoop!

WPEN-FM GETS ROOF RIGHTS TO PHILADELPHIA'S HIGHEST COMMERCIAL BUILDING!

Philadelphians expect a lot of *The Evening Bulletin,* America's largest evening newspaper, and its up-to-the-minute stations, WPEN and WPEN-FM.

Now these stations take another big step forward with the purchase of roof rights to Philadelphia's tallest office building—The Philadelphia Saving Fund Society. This is right in line with the WPEN—WPEN-FM policy to give Philadelphians the finest possible service. It is what they expect of *The Evening Bulletin* stations.

Every day, more and more listeners in the Philadelphia area turn to WPEN for *The Evening Bulletin* news. They know that only WPEN brings them complete local and national news every hour on the hour.

Listening to WPEN—in the middle of the dial—is getting to be as much a Philadelphia custom as scrapple for breakfast!

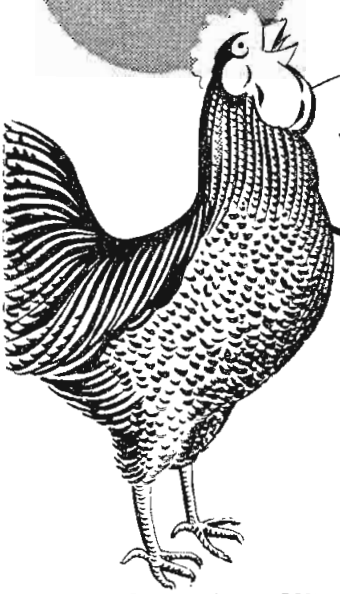
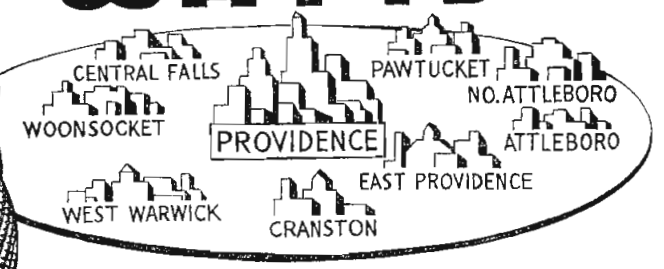
WE'RE CROWING HAPPILY about the Construction Permit, now granted, that early in 1946 will shower down

5000 WATTS





SATURATING 9 BIG COMMUNITIES in a 15 MILE RADIUS

—and scores of others well beyond!

Early in 1946 we'll be pouring advertisers' stories —yours, we hope—in intensified volume into this compact, densely-populated, RICH region; the kind of an area that time-buyers build reputations on and sales-managers dream about!

1 MEDIUM...

5,000,000 PEOPLE

It would require an elaborate combination of media to cover the listening area of WSM's clear-channel signal. WSM has bound itself to the hearts of five million Americans over a twenty year period of honest, sincere service to them—and is everlastingly at it, keeping old friends and making new ones every day.

You Can Carve Turkey in TEXAS with "T.S.N."

. . . Because "T.S.N." is close to the people of Texas . . .

Surveys bear out the fact that the folks in the "Texas State Network" area listen more hours of the day to their nearby home-town "T.S.N." stations because of the top quality programs being fed their stations by "Mutual" and "A.B.C." . . . and, Texas folks listen to these strategically located stations because these grand programs are delivered with less interference. Good programs . . . easy listening . . . makes "T.S.N." a good buy!

Remember, when you get away from the four major markets in Texas (which accounts for only 17.3% of the population) you are in the small communities and rural area which make up 82.7% of Texas radio listeners. "T.S.N." serves all four major TEXAS CITIES, plus 12 other important Texas towns.

The "T.S.N." market covers 149 Texas Counties, 11 in Oklahoma and 7 in Arkansas . . . a total population of 5,063,876 with $1,435,980,000 in Retail Sales.

Beaty Fans Buy!

Happy Sponsors Know That Beaty's Farm Friends Buy Merchandise . . .

Layne Beaty, Farm Program Director, WBAP. Member of Committee on Farm Broadcasting, National Association of Broadcasters. Officer, State-Wide Cotton Council. Member, Texas Chemurgic Council. Officer, Radio Farm Directors

Here's Proof That *Powerful* WBAP *Sells* the Rural *Buyers* of the Great Southwest!

A SPONSOR SAYS:

". . . it seems from all of the evidence to be doing a very good job for us over your station" (He must have meant it, for he is still a sponsor.)

A RANCHER WROTE:

"First I wish to thank you for your 6 to 7 a. m. program, which for country people living in the Southwest cannot be improved upon and none should miss it. The timing is right, the information and advice needed and the news the latest and best selected. Also what you say about American Fence is so have used many miles of it. P. S. Please send me one of your Farm and Ranch Handbooks and oblige." (This is an example of what we mean by "Beaty Fans Buy.")

A FARMER WRITES:

I want to take two combines to the maize harvest. Can you tell me where it will be in full swing in two or three weeks, and the approximate route you would take across the state? I want to know where to go and when to start. Please draw me a map." (Beaty could . . . would and did.)

FROM THE STATE BOARD OF AGRICULTURE:

"I am convinced that you are selecting the most vital topics to discuss with farmers, and may I express to you my deep appreciation for the services rendered to farmers, not only in Oklahoma and Texas, but in other states within your listening range." (With 50,000 watts, that listening range is plenty.)

A 4-H CLUB BOY SAID:

"I enjoy your program very much every morning. It is very helpful to all farmers, because you keep us informed of what is going to happen, what is happening and what has happened. Keep up the good work." (Great kids in the great Southwest.)

If you have something to sell, and want to tell it to the big rural audience of the Great Southwest, let WBAP do it for you. Chances are that your nearest Edward Petry Company representative is waiting for your call right now. Get the complete story with all the sales producing facts. Better call him now.

Cover This Half Billion Dollar TEXAS Market with KFJZ

5000 WATTS
1270 KC

Serving TEXAS *Most Important Market*

KFJZ is located in the heart of the rich North-Central part of Texas and is serving a million and a quarter people who have a half billion dollar purchasing power. KFJZ is serving a very progressive section of the Southwest that is "paying-dividends" in the post-war era.

Key Outlet for Mutual

KFJZ's tremendous audience has been attracted by a well balanced schedule of local shows and the Cream of Mutual's Humorous, Musical and Dramatic programs, interspersed with Mutual's great array of Ace News Analysts. KFJZ is Mutual's Key Outlet for Texas.

KFJZ
Market Data

Population 1,487,000

Native White	1,291,000
Families	409,097
Retail Outlets	19,873
Retail Sales	$499,303,000
Food Stores	5,606
Food Store Sales	$19,233,000
Drug Stores	817
Drug Store Sales	$22,013,000
Gen. Mds. Stores	745
Gen. Mds. Sales	$87,746,000
Apparel Stores	715
Apparel Sales	$26,865,000
Lbr. & Hdw. Stores	921
Lbr. & Hdw. Sales	$32,639,000

PROGRAM FACILITIES

KFJZ has a complete staff of veteran writers, production men, announcers and talent who produce shows locally that "sell" the Southwest. Wire Recorder fur on the scene events . . . . Remote broadcast facilities . . . Latest in transcription eqnipment.

NEWS & SPORTS

KFJZ being recognized as the news and sports station of this area . . . naturally KFJZ has Texas' most popular reporters in Zack Hurt (sports) and Porter Randall (news).

MAIL PULL

KFJZ has hit the "jack-pot" time after time for advertisers who wanted to "check" their program and KFJZ's pulling power. One advertiser received 1572 requests from one cold announcement at 6:45 A. M. . . . heard from 198 Texas towns and 14 other states.

TIME ON AIR

KFJZ is serving the people of this area 18½ hours a day—Monday through Saturday, 5:30 A. M. to 1:00 A. M., on Sunday 5:30 A. M. to Midnight. KFJZ is a listening habit of the people in this important market.

KFJZ is a MUST on any schedule planned to cover the Fort Worth trade area.

KFJZ . . . FORT WORTH . . . SERVES ONE OF THE SOUTHWEST'S MOST IMPORTANT INDUSTRIAL AND AGRICULTURAL AREAS.

SAYS . . .

PERFORMANCE COUNTS

Some people pick horses by name, some by superstition, but those "in the know" bet on performance. Performance is the most important factor in radio advertising, too.

WRNL has held the majority of daytime listeners for many years in the Richmond area. You can count on WRNL for top performance—and results.

MANY THINGS

Make Milwaukee Famous!

"Because of the wide diversification of products manufactured in Milwaukee, its industrial balance is maintained through abnormal times and seasonal fluctuations."*

The top eight of these industries* producing nearly a billion dollars worth of goods annually are as follows:

Metal products (not machinery)	$106,437,947
Motor vehicles, bodies, parts, accessories	93,125,243
Machinery	86,231,492
Tractors . . .	68,493,028
Food products (general) .	67,135,473
Meat packing	54,918,235
Leather and leather products	42,868,324
Malt liquors (beer)	39,754,531

If you have a product or service to sell, you'll want to know how you can best reach this prosperous market. For full information, call or write the Katz Agency, Inc., or WISN, Milwaukee.

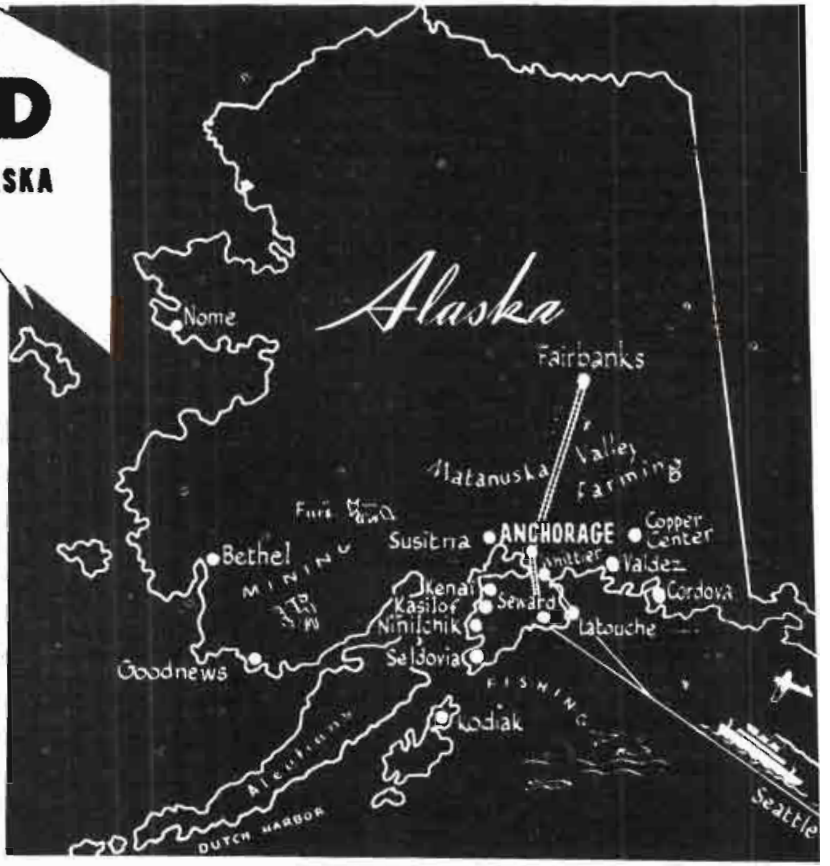
It's so Good and True—Again We Advis

Get into America's newest, undeveloped market throug

KFQD

ANCHORAGE, ALASKA

790 KC
1000 W



First in Alaska!

Here's the opportunity you've dreamed about — a booming territory with large buying power and a need for every kind of product. Reach it through Station KFQD.

KFQD blankets Alaska's most important metropolitan - industrial area. Anchorage, the "News Center of Alaska," is the hub of a heavily populated railbelt . . . headquarters of the Alaska Railroad, Alaska Airlines,* Civil Aeronautic Authority, Alaska Defense Command and many other major industries of Alaska which include: Fishing, canning, fur trapping, mining, lumbering, shipping and transportation.

The oldest station in Alaska (May, 1924), KFQD has proved to be the Territory's most outstanding advertising medium. It's a "must" on the list of every forward-looking advertiser

*Government figures show that the Anchorage Municipal Airport handled in one month recently 7,695 airplane landings and departures. This exceeded the air travel handled by LaGuardia Field (N. Y.), Los Angeles, San Francisco and many other leading airports for the same period.

Puerto Rico

IS MORE THAN JUST AN ISLAND SURROUNDED BY WATER . . .

Here indeed is a market that should not be overlooked. There are 2,000,000 **American Citizens** in PUERTO RICO. Their yearly purchases from the United States amount to the impressive figures of $125,000,000.00. And more impressive is the fact that their preferred dial spot is WIAC. WIAC offers **Full Coverage of Puerto Rico, The Virgin Islands** as well as partial coverage of all the West Indies.

STATIONS OF
CANADA

The following list of stations is arranged in call letter alphabetical order giving page number for complete station data.

Every effort has been made to present accurate and complete information in a self-explanatory method. Data was obtained from questionnaires sent to the stations early in the year and corrections were made up to the time of going to press.

Call Letters	City	Frequency in Kilocycles	Power in Watts	See Page

Chief Engineer .....H. R. McLaughlin

ARE YOU READY TO EXPAND?

In these post-war days, markets everywhere are growing apace! And, along with the general increase in demand, comes a welcome decrease in the problems of supply and distribution.

Through All-Canada, you can reach the limits of your market today and pave the way for further growth tomorrow. The thirty All-Canada stations dominate key areas from coast to coast. So, in mapping out your campaign, ask the All-Canada man.

Just playing hours—

or Paying hours?

ASSOCIATED offers MOST Hours of the Best RADIO Music... program material that really pays off!

WHEN YOU COMPARE transcribed libraries, it's not just the big names that count...it's topnotch showmanship *all along the line*. That's how a library helps *you* sell—helps your *clients* sell!

Break down the number of playing hours into *paying* hours and you'll find ASSOCIATED ranks first! For ASSOCIATED gives you these powerful advantages:

1. You can offer advertisers *greater program value* than other local stations...more and bigger *proven attractions*, on ASSOCIATED'S incomparable, *vertically-cut* transcriptions.

2. With these features, you can hold big audiences *at low cost* against high-budget network competition.

Yes, there are a lot of good reasons why ASSOCIATED has gained more new subscribers in the past few months than in any period in its history. Today, write for the new ASSOCIATED BOOKLET. Plenty of worthwhile information—no obligation.

www.americanradiohistory.com

"This is the NBC Radio-Recording Division" . . .

NBC THESAURUS, NBC SYNDICATED PROGRAMS . . . NBC CUSTOM-BUILT RECORDING—three distinct services to the radio industry, advertising agencies and advertisers . . . and in all three of these NBC Radio-Recording fields it's easy to recognize the same incomparable talent, casting, directing, engineering and ultra-modern facilities identified with NBC Network shows . . . the same unfailing popularity.

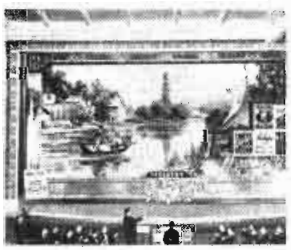
Just a few of the shows produced and recorded by NBC in each of these classifications is shown on these pages . . . all combine superb entertainment and mass appeal for the mass medium—radio. For example:

NBC *Thesaurus*—AMERICA'S NO. 1 MUSICAL PROGRAM SERVICE

THE MUSIC OF MANHATTAN . . . every feature of top network variety shows from 30-piece dance orchestra to jazz combos

ALLEN ROTH AND THE SYMPHONY OF MELODY . . brilliant orchestral arrangements . . . superb vocals.

THE JUMPIN' JACKS WITH PATTI DUGAN . . one of the greatest assembloges of jazz musicians on the air today.



MUSIC HALL VARIETIES . . . early and delightful vaudeville arrangements directed by "Professor" Patrick Cirillo

THE SALON CONCERT PLAYERS . . . Max Hollander and 25 network musicians present concert favorites.

NORMAN CLOUTIER AND HIS MEMORABLE MUSIC with 25 outstanding strings of NBC Symphony Orchestra.

NBC THESAURUS provides, at low cost, expensive vocalists, "name" musicians and arrangements equaling big commercial nighttime shows plus this unmatched service: Exclusive artists and arrangements . . . enough selections by every artist for long-range programming . . . full-range NBC Orthacoustic recording . . . non-breakable vinylite records for noiseless reception . . complete cataloging system for records and selections. This is NBC THESAURUS . . . perfect for the exacting standards of FM and for greater latitude in AM broadcasting.

www.americanradiohistory.com

NBC Syndicated Programs

THE PLAYHOUSE OF FAVORITES... dramatizations of the stories of Dickens, Tolstoy and others.

THE HAUNTING HOUR . . . "Mystery at its Best" . . . original stories and best radio talent.

ART VAN DAMME QUINTET WITH LOUISE CARLYLE . . . the biggest, little musical on record.

FIVE MINUTE MYSTERIES . . . midget package with a giant punch . . . clever production pattern.

TOBE'S TOPICS . . . Tobe, fashion authority, discusses subjects of feminine interest.

MERCER McLEOD, THE MAN WITH THE STORY . . . dramatizes strange and unusual tales.

NBC SYNDICATED PROGRAMS build local prestige for *national* advertisers who want to spot certain markets . . . *regional* advertisers whose distribution prohibits the use of networks . . . *local* advertisers who want "name" shows at nominal cost.

IN THE PROGRAM CENTER OF RADIO, advertisers who want their own custom-built programs . . . from spot announcements to half-hour productions . . . specify the facilities of the Recording Sales Department. An experienced staff does the entire job . . . from idea to finished pressing. Recording Sales also furnishes such services as stndio rental, recording and manufacturing of agency-produced shows, instantaneous recording or off-the-line recording for advertisers, agencies and talent.

REMEMBER—Unexcelled radio-recorded programs and the most complete recording service available for every type of client—"*This is the NBC Radio-Recording Division*" . . .

How to measure the best

For transcriptions
For high-speed processing
For vinylite pressings
For phonograph records

. . . there are two reasons why Muzak rates tops with so many leading agencies, transcribed show producers and radio stations:

1. Fastest service in the world
2. Finest quality obtainable

Try Muzak . . . and see if any other service measures up to Muzak standards!

Unexcelled in modern facilities and master craftsmanship, Muzak is equipped to supply both Vertical and Lateral Cut transcriptions . . . reference recordings . . . line recordings for supplemental radio coverage.

Send us your "acetate" masters for top-speed, top-quality processing and pressing. We use only gold sputtering, high-speed plating, and press exclusively from highest grade Vinylite resin.

Next time . . . make it Muzak. A *plus* for AM, a *must* for FM!

SERVICES OFFERED: Keystone Broadcasting System is a transcription network principally covering beyond-Metropolitan markets from coast to coast. Its affiliated stations are joined together in a national system by means of transcriptions, eliminating wire charges. At time of going to press, the network includes 210 affiliated stations. The network supplies its stations with 84 fully scripted sustaining shows per week filling 4 hours per day, seven days each week, to a total of twenty-eight hours per week. This is the only national, full-sized network in the United States offering national radio advertisers the opportunity to cover the beyond-Metropolitan markets intensively, in a single transaction, by means of electrical transcription. The System offers its facilities in block network time periods from one hour down to five minutes, and also makes available announcement periods down to twenty-five word length.

STRADIVARIUS

STERLING

ASCAP

Names That Command Respect!

When you think of good silver—you think in terms of STERLING.

When you think of a perfect violin—you think of STRADIVARIUS.

Among the performing right societies of the world, ASCAP—the initials of the American Society of Composers, Authors and Publishers—is a symbol of quality in the music field.

For ASCAP represents a growing association of musically creative American men and women who have produced—and are producing—the foremost works in our musical literature.

ASCAP, as a symbol of quality, makes available to its licensees the finest repertoire of popular, folk, serious and religious music.

And, through its affiliation with the leading foreign performing right societies, ASCAP provides the foremost musical works of all nations.

ASCAP is *the* symbol of quality in music.

The American Society of Composers, Authors and Publishers

30 Rockefeller Plaza, New York 20, N. Y.

www.americanradiohistory.com

A · S · C · A · P

By JOHN G. PAINE

General Manager, American Society of Composers, Authors and Publishers

THE American Society of Composers, Authors and Publishers, the leading performing right society in the United States, is an unincorporated, non-profit, voluntary association. The Society, which is the oldest American performing right society, has a total membership of 1,707 writers and 234 publishers; during the past year 91 writers and 20 publishers have become active members.

•

During 1945 the Society renegotiated contracts with the leading performing right societies of Europe, and was also successful in obtaining agreements with Latin-American societies. In this way Ascap continues to provide a richer and more comprehensive repertoire of music, not only of the native American field, but also the music of other nations.

•

The Society has completed its first year of licensing in the symphonic, concert and recital field. In accordance with its regular policy, it is the goal of the Society to provide through its licensing activities in this field of music, sufficient financial encouragement to those talented men and women writing the serious music of our country, so that they may continue in their chosen profession.

•

The Members of the Society have, during 1945, turned over to Ascap their television rights. Although these rights have yet to be fully defined, it is the conclusion of the membership that their society act on teir behalf in obtaining watever rights accrue to them.

•

On December 9th the Society, through the cooperation of the Electric Hour and the Prudential Family Hour, paid tribute to the memory of its beloved member, the late Jerome Kern. The program, which was headed by Oscar Hammerstein II, included Nelson Eddy, Bing Crosby, Judy Garland, Hildegarde, Patrice Munsel, Dinah Shore, Frank Sinatra, Jack Smith, Earl Wrightson, and the orchestras of Robert Armbruster and Al Goodman. No finer tribute could be paid to the memory of a music man than the one which President Harry S. Truman sent to Oscar Hammerstein II in the following wire, which was read over the CBS Network:

"I am among the grateful millions who have played and listened to the music of Jerome Kern, and I wish to be among those of his fellow Americans who pay him tribute today. His melodies, surviving him, will live in our voices and warm our hearts for many years to come for they are the kind of simple, honest songs that belong to no time or fashion. The man who gave them to us has earned a lasting place in his nation's memory."

•

The following are the officers of the Society: Deems Taylor, president; Gustave Schirmer and Oscar Hammerstein II, vice presidents; George W. Meyer, secretary; Donald Gray, assistant secretary; J. J. Bregman, treasurer; Irving Caesar, assistant treasurer; Schwartz & Frohlich, general counsel.

The twenty-four directors are: Stanley Adams, Fred E. Ahlert, Louis Bernstein, Saul Bornstein, J. J. Bregman, Gene Buck, Irving Caesar, Max Dreyfus, Walter S. Fischer, Donald Gray, Oscar Hammerstein II, Otto A. Harbach, Ray Henderson, John Tasker Howard, A. Walter Kramer, Geo. W. Meyer, Jack Mills, John O'Connor, J. J. Robbins, Richard Rodgers, Lester Santly, Gustave Schirmer, Herman Starr and Deems Taylor.

The administrative officers are John G. Paine, general manager; Herman Greenberg and Richard F. Murray, assistant general managers; George A. Hoffman, controller; Richard F. Frohlich, director of public and customer relations; Herman Finkelstein, resident counsel.

ASSOCIATED MUSIC PUBLISHERS, INC. (AMP)

By GRETL URBAN

Vice-President and Manager of Music Department

FOUNDING OF AMP: Associated Music Publishers, Inc., was founded as a private corporation in the State of New York on December 22, 1926. Radio licenses have been issued since August, 1928. The corporation conducts a music publishing business and is exclusive agent for numerous foreign music publishers.

Scope: The AMP repertoire, representing 45 U. S. and European catalogs, has now been increased to include 500,700 titles, of which approximately 18,700 are copyrights. Copyright registration in Washington is in the name of AMP as owner. Ranging from symphonic works to dance music, including concert works for ensemble, solo instruments and voice, its repertoire constitutes a flexible and rich source of distinctive music for radio program builders.

AMP licenses: Licenses cover performing rights, "small" (i.e., strictly musical) and "grand" (i.e., musical-dramatic.) AMP's radio license is unique in that it covers "small" and "grand" rights under a single fee. The radio license stipulates that: (1) the monthly fee shall be equal to a station's highest quarter-hour rate card; (2) that AMP will sell the licensee any music (covered by the license) which is for sale, and rent such music as is not for sale; (3) that AMP will indemnify the licensee against claims arising from the use of music covered by the license.

AMP licensees: The national networks, the principal regional networks and most of the important independent radio stations are holders of AMP licenses.

AMP headquarters: 25 West 45th Street, New York City. Telephone BRyant 9-0845. Cable address: MUSICPUB—NEWYORK.

AMP officers: H. E. Houghton, President; John R. Andrus, Vice-President and Treasurer; Gretl Urban, Vice-President and Manager of Music Department; Anna M. Kerner, Secretary; Alexander J. Sayles, Assistant Secretary and Assistant Treasurer.

BROADCAST MUSIC, INC.

By M. E. TOMPKINS

Vice-President and General Manager

IN a very real sense Broadcast Music, Inc. is an important arm of the entire broadcasting industry. For BMI was organized by the broadcasting industry in 1939 and is completely owned by broadcasters.

And as the "arm of the industry" BMI plays a vital role in both music and radio. Now in its sixth year of actual service to the industry, BMI, which had enough music for the entire needs of broadcasters back in 1940, today has greatly extended its catalogue. At present more than 1,000 publishing firms clear their music to broadcasters through BMI.

More than 760,000 titles, ranging from the venerable classics to the current Hit Parade favorites, are listed in the latest BMI catalogue. All but a handful of the broadcasting stations in the United States and Canada today (1,034 as of March 1, 1946) as well as all national and regional networks, are licensees of BMI, and all of them make a very substantial use of the BMI repertory.

But BMI does not limit its services to the granting of music rights only. It distributes to licensees, without cost, a variety of sheet music and recordings which constitute a valuable portion of any station's music library. It furnishes script services adopted to the specific needs of broadcasting stations, and regularly makes available to its licensees a wide range of helpful information resulting in better musical programming.

Bulletins are sent periodically, listing vital changes in the basic BMI catalogue, so that stations are always aware of music available to them under their BMI license.

An experienced staff of field representatives, specially trained radio men, is constantly visiting the stations with helpful suggestions for better programming and continually gathering opinions and suggestions from station men in order to make possible even better progress in BMI's service.

Many other special services provided by BMI are all designed to aid program and production men, music directors, librarians and every person in the broadcasting station concerned with the use of music. The BMI monthly Pin-Up Sheet of Hit Tunes, Disc Data, Music Memo, Holiday Music bulletins, Record Index and monthly News Letters which reach the broadcaster regularly comprise an integral part of this overall service to the industry.

In the field of educational and standard music, BMI is consistently building, through its own publications and those of its affiliate publishers, an extensive and valuable library of distinctive music which will never be out of public favor.

By continuing to render the same valuable service to the broadcasting industry in the future, and by maintaining honest competition in the licensing of music for broadcast purposes, BMI will be upholding its position as a permanent protection against injustice to the industry as a whole.

S·E·S·A·C, Inc.

By PAUL HEINECKE

President

SESAC acknowledges with appreciation and gratitude the wide acceptance, by every branch of the Entertainment Industry, of SESAC Music —

The year 1945 has shown an unprecedented increase in the use of SESAC Music. The exacting and ever mounting demands for diversified music from radio, motion pictures, record and transcription companies as well as the concert stage, have been fully and satisfactorily met by the almost inexhaustible storehouse of SESAC musical compositions.

More than 1,000 radio stations throughout the United States and Canada are now licensed by SESAC.

•

Major motion picture studios have readily found in the wide range of SESAC compositions the right piece of music to depict a particular era — establish a mood or to underscore a difficult scene.

Leading phonograph record companies have substantially increased their releases of SESAC numbers and thousands of recordings are now available on transcribed commercial programs as well as library services.

Last June we launched our own SESAC Transcribed Library Service. It was fashioned on suggestions and requirements of the broadcasters themselves. In the few months since its announcement, an astounding number of stations have subscribed, definitely establishing it as the fastest growing library in the field. The subscribing stations, in every state, are of all types . . . from 100 to 50,000 watters in urban and metropolitan centers, including networks.

The artists, who have contributed to making the SESAC Library outstanding, are topnotch in their fields and have been expertly directed. Each and every composition has been selected for its melody and standard popularity . . . further adding a valuable feature to the SESAC Library . . . every number will be as "welcome listening" many years to come as it is today. The playing time of each selection averages 1½ minutes, one of the must suggestions from the broadcasters. The very low fee for the library, of course, is also responsible for its success . . . it is so reasonable that it is well within the budget of any station, regardless of size or location.

•

The Program Guide which goes to each library subscriber has been praised by all reviewers. It is an entirely new departure in cataloguing the library contents — making the use of the library one of extreme simplicity, in addition to providing invaluable program notes.

With these and many more features, the SESAC Transcription Library will continue to make transcription history.

Our plans for further advancement in 1946 and the years to come are motivated by our pledge for better service to the Entertainment Industry with greater production of "The Best Music In America."

BOB BURNS

May I express my sincere thanks to the directors and agencies for thinking of me when casting their shows. I am grateful to them, not only for calling me so often, but for giving me the opportunity of playing so varied a number of parts. Once again many thanks.

Sincerely,

Tony Barrett

Our

PROGRAM

is something tangible, something that your customer can see and feel. Something that will be remembered through constant association and reference. Something that will supplement your Radio Program and help people remember your name and buy your products.

We are printers of trade magazines, books and catalogs that will tell the story of your business in a manner in which it should be presented to your customers so they will remember your name and buy your products.

Complete Listing of Major Networks — Commercial Programs of 1945 —

Following pages contains a complete listing of four national network commercial programs heard during the 12-month period ending Dec. 31, 1945. Listing includes program title, sponsor and product, network and the advertising agency handling the account. Compilation has been made through the cooperation of ABC, CBS, MBS and NBC. Abbreviations: PC, Pacific Coast. Where a change in agencies has taken place during the year both are listed with the second one being the new agency.

A

NAB STANDARDS OF PRACTICE

Adopted by the BOARD, Aug. 7, 1945, Amended, Jan. 3, 1946

FOREWORD

BROADCASTING is dedicated to freedom of expression, limited only as prescribed by law and by considerations of decency and good taste.

The National Association of Broadcasters formulates and publishes the following Standards of Practice as a guide to assist the licensee in operating in the public interest.

Determination of what shall be broadcast rests entirely with the station licensee and this responsibility may not be delegated.

Public Questions

Station licensees should provide time for the presentation of public questions. Such time should be allotted with due regard to the value and interest of the subject to the public.

Treatment of Political and Public Question Broadcasts

Broadcasts designed for the presentation of political, economic, social or philosophic questions or the candidacy of any person for public office or a measure to be voted upon should be presented by straightforward statement appealing to intelligence and reason.

News

News should be presented with fairness and accuracy and the station licensee should be satisfied that the arrangements made for obtaining news insure this result. News should not be selected for the purpose of furthering or hindering either side of any public question nor should it be colored by the opinions or desires of the station management, the editor or others engaged in its preparation or the person actually delivering it over the air, or, in the case of sponsored news broadcasts, the advertiser.

The fundamental purpose of news dissemination in a democracy is to enable people to know what is happening and to understand the meaning of events so that they may form their own conclusions.

Children's Programs

Programs designed specifically for children reach impressionable minds and influence social attitudes, aptitudes and approaches and, therefore, they require the closest supervision of broadcasters in the selection and control of material, characterization and plot.

This does not mean that the vigor and vitality common to a child's imagination and love of adventure should be removed. It does mean that programs should be based upon sound social concepts and presented with a

www.americanradiohistory.com

superior degree of craftsmanship; that these programs should reflect respect for parents, adult authority, law and order, clean living, high morals, fair play and honorable behavior. Such programs should not contain sequences involving horror or torture or use of the supernatural or superstitious or any other material which might reasonably be regarded as likely to over-stimulate the child listener, or be prejudicial to sound character development. No advertising appeal which would encourage activities of a dangerous social nature should be permitted.

To establish acceptable and improving standards for children's programs, the National Association of Broadcasters will continuously engage in studies and consultation with parent and child study groups. The results of these studies will be made available for application to all children's programs.

Education

While all radio programs possess some educative values, broadcasters should endeavor to assist specific educational efforts. In cooperation with educators and other appropriate groups, broadcasters should search for improving applications of radio as a medium of education.

Religion

Broadcasting, which reaches men of all creeds and races simultaneously, should not be used to convey attacks upon another's race or religion. Rather it should be the purpose of the religious broadcast to promote the spiritual harmony and understanding of mankind and to administer broadly to the varied religious needs of the community.

Commercial Programs and Length of Commercial Portion

Acceptance of programs and announcements should be limited to products and services offered by individuals and firms engaged in legitimate commerce; whose products, services, advertising, testimonials and other statements comply with pertinent legal requirements, fair trade practices and accepted standards of good taste.

Brief handling of commercial copy is recommended procedure at all times, with special consideration being given to the effect on the listener of the manner of presentation.

Member stations should hold the length of the commercial portion, including that devoted to contests and offers, to the following number of minutes and seconds:

Five minute programs	***1:30***
Five minute news programs	***1:00***
Ten minute programs	***2:00***
Fifteen minute programs	***2:30***
Twenty-five minute programs	***2:45***
Thirty minute programs	***3:00***
Sixty minute programs	***6:00***

www.americanradiohistory.com

In participation programs, announcement programs, "Musical Clocks," shoppers guides and other programs of fifteen minutes or longer falling within these general classifications, the commercial portion should not exceed 20% of the total time utilized.

The 20% limitation does not apply when a fifteen minute or longer segment is sold to one sponsor. The commercial portion should then be the same as given in the table on page 905.

"Standards of Good Taste"

The following are deemed to be generally unacceptable under these Standards of Practice:

1. Unfair attacks upon competitors, competing products, or upon other industries, professions or institutions.

2. Misleading statements of price or value or misleading comparisons of price or value.

3. Continuity which describes repellently any functions or symptomatic results of disturbances, or relief granted such disturbances through use of any product.

4. Cures and products claiming to cure.

5. Advertising statements or claims member stations know to be false, deceptive or grossly exaggerated.

6. Any remedy or other product the sale of which or the method of sale of which constitutes a violation of law.

7. Any spirituous or "hard" liquor.

8. Any fortune-telling, mind-reading, or character-reading, by handwriting, numerology, palm-reading, or astrology, or advertising related thereto.

9. Schools that offer questionable or untrue promises of employment as inducements for enrollment.

10. Matrimonial agencies.

11. Offers of "home work" except by firms of unquestioned responsibility.

12. Any "dopester," tip-sheet or race track publications.

13. All forms of speculative finance. Before member stations accept any financial advertising, it should be fully ascertained that such advertising and such advertised services comply with all pertinent federal, state and local laws.

FUNCTIONS

To provide a common forum and a central medium for cooperative effort on behalf of all individuals and groups interested in advertising.

To elevate the standards of advertising practice and to combat any unfair competitive methods in its sale.

To help increase the effectiveness of advertising as an instrument of distribution, with its resulting benefits to business and the general public.

To determine and disseminate more accurate knowledge of the functions of advertising in business, and its social and economic values.

To aid in raising the standards of education and training for advertising practitioners.

Asst. Exec. Secty.	Richard Turnbull
Asst. Treasurer	O. Karl Giesen
Director of Service	L. W. MacKenzie

FUNCTIONS

The American Association of Advertising Agencies was formed in 1917 by the amalgamation of the New England, New York, Philadelphia, Southern and Western Advertising Agency Associations—to promote the interests and raise the standards of advertising and of the advertising agency business.

It welcomes to membership any advertising agency qualified to aid in this purpose by reason of its ability to serve the cause of advertising, its financial soundness and its demonstrated desire to adhere to sound and ethical business practices.

The aims of the Association are partly ethical and partly economic. It is a professional body and also a trade association. It aims to raise standards, to improve technique, to ascertain values, to safeguard relations, and to cooperate with other organized effort in related fields.

One of the major aims of the Association is to keep advertising agency practice on a high level, in order that it may be most useful to the advertiser, most helpful to the publisher and respected by business men.

Early in its career the Association adopted for the guidance of its members two official statements. One is entitled "Agency Service Standards," in which agency service is defined, so that advertisers and publishers may know what to expect and agencies may know what should be required of them, thus discouraging the incompetent and encouraging those equipped to render effective service.

The other statement, entitled "Standards of Practice," deals with agency relations with media, clients and the public, with fair and ethical agency competition, and other professional ethics.

Jerry Walker, WBKB, Chicago; Judith Waller, NBC, Chicago; J. Oren Weaver, WBBM-CBS, Chicago.

FUNCTIONS

The Radio Council of the Chicago Public Schools operates a non-commercial FM station and is a producing group primarily interested in presenting in-school broadcasts for classroom use. The Council also produces many out-of-school programs over standard Chicago stations of a public service or adult education nature.

The School Broadcast Conference will hold its 10th annual meeting in 1946, and is a permanent national meeting to discuss the use of radio in education. An advisory committee, made up of some 50 educators and radio executives throughout the nation assist the executive committee in preparation of the annual program. The Conference, in connection with its annual meeting, holds an exhibit of new equipment for school use, and serves as a clearing house for information about equipment, classroom use of radio, availability of scripts and such other information for schools throughout the year.

FCC Regulations Non-Profit Stations

Rule In Effect For Non-Profit Educational Outlets

The term "non-commercial educational broadcast station" means a station licensed to an organized non-profit educational agency for the advancement of its educational work and for the transmission of educational and entertainment programs to the general public.

Operation and Service

The operation of, and the service furnished by, non-commercial educational broadcast stations shall be governed by the following regulations:

(a) A non-commercial educational broadcast station will be licensed only to an organized non-profit educational agency and upon a showing that the station will be used for the advancement of the agency's educational program particularly with regard to use in an educational system consisting of several units.

(b) Each station may transmit programs directed to specific schools in the system for use in connection with the regular courses as well as routine and administrative material pertaining to the school system and may transmit educational and entertainment programs to the general public.

(c) Each station shall furnish a non-profit and non-commercial broadcast service. No sponsored or commercial program shall be transmitted nor shall commercial announcements of any character be made. A station shall not transmit the programs of other classes of broadcast stations unless all commercial announcements and commercial references in the continuity are eliminated.

Power Requirements

The operating power of non-commercial education broadcast stations shall be not less than 100 watts or greater than 1000 watts unless a definite need for greater power is shown.

The transmitter of each non-commercial educational broadcast station shall be equipped with automatic frequency control apparatus so designed and constructed that it is capable of maintaining the operating frequency within plus or minus 0.01 percent of the assigned frequency.

Non-commercial educational broadcast stations are not required to operate on any definite schedule or minimum hours.

The transmitting equipment, installation, and operation as well as the location of the transmitter shall be in conformity with the requirements of good engineering practice as released from time to time by the Commission.

Frequencies Allotted

The following frequencies are allotted for assignment to non-commercial educational broadcast stations:

42,100 kc.	42,300 kc.
42,500	42,700
42,900	

Stations serving the same area will not be assigned adjacent frequencies.

Frequency modulation shall be employed exclusively unless it is shown that there is a special need for the use of amplitude modulation.

Only one frequency will be assigned to a station.

WHEN CAN TELEVISION TURN A PROFIT?

Facts, figures and "television know-how" are needed when considering this important question. Du Mont is qualified to help you find the answer. Du Mont has marched in the forefront of radio and electronic progress for the past 15 years. Du Mont has contributed importantly to television broadcasting and receiving equipment design. Du Mont has built more tele-stations than any other company. Du Mont has operated Station WABD and commercially programmed its time since 1942.

From this deep reservoir of television experience, Du Mont has drawn a pattern which you can use to plan your television future. This pattern is presented in detail in our new booklet, "The Economics of Du Mont Television." This booklet sharpens but one axe—the tested superiority of Du Mont station equipment. This is another Du Mont contribution to the development of a great new medium. Please request it on your firm letterhead.

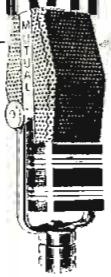
LEADERSHIP REQUIRES VISION



First in the West with

★ ALL-TELEVISION STATION ★ TELEVISION BROADCASTING ★ ALL-TELEVISION BUILDING

★ FREQUENCY MODULATION ★ ALL-FM BUILDING

First on the Pacific Coast with

★ NETWORK RADIO BROADCASTING

★ COMPLETE RADIO COVERAGE (39 Stations)

NOW – Don Lee has acquired a television site of the height considered most advantageous for both Television and Frequency Modulation Broadcasting. Don Lee's purchase of a site on the top of Mount Wilson, home of the world-famous Mount Wilson Observatory, will give KHJFM and W6XAO a transmitter height of 5,900 feet for Television and Frequency Modulation Broadcasting. No finer location could be obtained in all Southern California.

TELEVISION

Radio Daily presents the first edition of the Year Book of Television . . . a mellowed reflection of the past, a colorful show window of today and a happy preview of things to come.

We believe that Television will soon break through the dam of reconversion difficulties. . . . Its place in the sun, alongside of the stage, screen and radio is already assured.

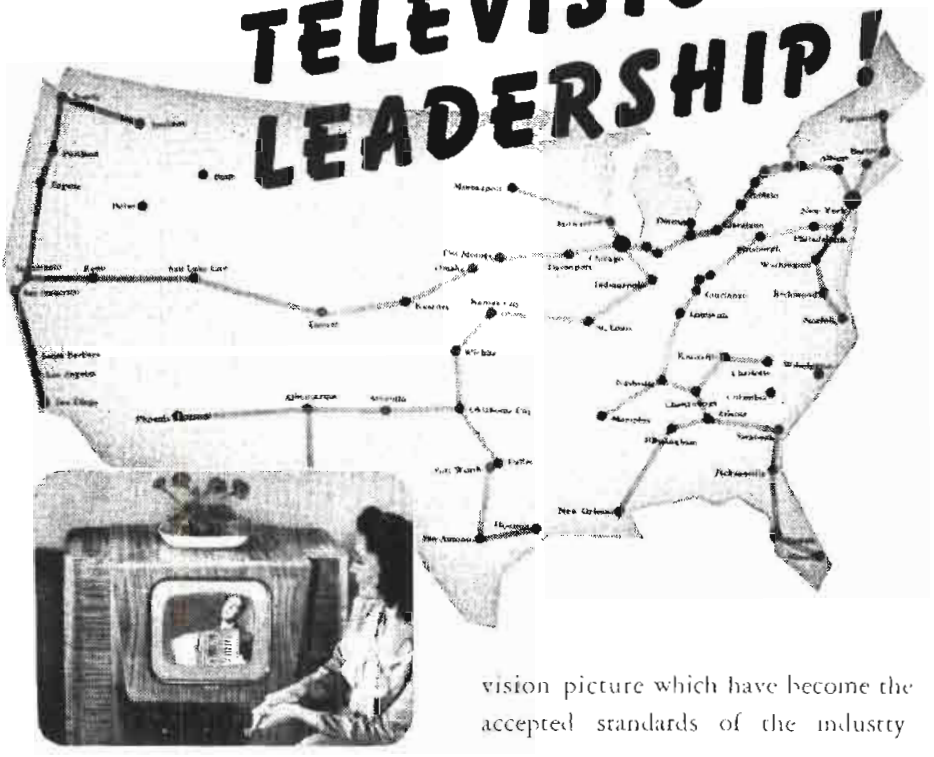
In the meantime it is hoped that the pages that follow will be of help to the explorer in the field of video . . . To those who have helped we are indeed deeply appreciative.

JACK ALICOATE
Editor

www.americanradiohistory.com

Setting the Stage for

TELEVISION LEADERSHIP!



SINCE 1928, Philco's pioneer contributions have played a leading part in the progress of television

In *television reception*, perhaps the most important factor will be the quality of the picture. And Philco scientists and engineers . . . more than any other research group . . . have been responsible for constant improvement in the clarity, sharpness and detail of the television picture which have become the accepted standards of the industry

In *television transmission* . . . Philco engineers designed and constructed the world's first multiple-relay television system to link two major cities . . . Washington and Philadelphia. Rapid development of nationwide networks can follow the pattern of this Philco relay system . . . thus bringing television entertainment to *national* audiences!

Look to Philco for continued pioneering . . . for leadership . . . in television.

PHILCO

Famous for Quality the World Over

Television To-Day —and Tomorrow

By FRANK BURKE, Editor, RADIO DAILY

TELEVISION—lusty infant of the electronic age—which suffered growing pains during 1945 now stands on the threshold of a boom era.

Despite the production setbacks and delays incident to channel allocations, television progressed during 1945 with leaders laying the foundation for network development, standardizing equipment, and educating the public on the potentialities of the new visual art.

Among the important developments of the past year was the FCC's action in allocating television channels in 140 major markets throughout the country, the completion of a coaxial cable network linking Washington and New York and the experimental networks using microwave relays and booster stations.

•

Applications received by the FCC indicate approximately 150 television stations are sought by broadcasters throughout the country. Most of the applications come from key center cities, and if production of transmitters gets underway it is expected that at least 10 new television stations will take to the air during 1946.

Television set manufacturers view 1946 as a banner production year with OPA difficulties eased. One manufacturer predicts that 200,000 new television receivers will be in the hands of consumers before the end of the year and that a potential market of millions of receivers awaits production and sales schedules.

•

The battle of frequencies continues with two schools of thought airing their views on whether television should develop immediately in the low frequencies with an acceptable black-and-white image or wait until ultra high frequency color television is fully developed for commercial acceptance. In the black-and-white field RCA recently demonstrated an excellent image using the new image orthicon camera and improved receivers. On the other hand CBS staged press previews of color television using a new transmitter and a vastly improved mechanical scanning system.

Production Gets Underway

While the battle of the frequencies is being waged RCA, Philco and General Electric are going right ahead with the manufacture and merchandising of black and white receivers which are expected to range in price from $150 to deluxe models as high as $1,000. Proponents of color, while not geared at present to produce receivers, forecast that color television sets will be available within six months and that the cost of these receivers will not exceed 10 per cent more than the conventional black-and-white sets.

•

As the industry gets in the stride the ranks of the so-called "experts" continues to grow. Television institutes and schools are springing up in New York, Chicago and the west coast and layman interest in video continues to grow. In many instances "experts" have talked and written themselves out on the subject of television and left advertising agency executives, potential sponsors and others wanting more specific information on the visual art.

Intra-store television looms as an important phase of video merchandising with experimental installations having been tried out in Philadelphia and Jamaica, L. I. The Philadelphia demonstration, staged by Gimbel's store in collaboration with RCA, attracted large crowds and proved that visual merchandising was practical. Similar results were obtained in Jamaica with the demonstration operating on a smaller scale.

•

In conclusion the best appraisal of the future of television was made by Paul Porter, ex-FCC chairman, during the inauguration of the coaxial link between Washington and New York on Lincoln's Birthday. Porter said that communications, including television, would become a $6,000,000,000 industry, would create many new jobs and carry "a great reconversion load in the next few years."

Television Gains Via Wartime Use

By D. F. SCHMIT, Director of Engineering, RCA Victor Division

UNLIKE many of the newer wonders which are ushering in the Electronic Age, television is not a "war baby." Television graduated from the laboratory to the state of a limited public service some years before the war. Many public demonstrations were given, transmitters went on the air in several of the larger American cities, and television receivers were purchased and used in some 10,000 American homes.

It has been during the war and the few months since its close, however, and partly as an outgrowth of wartime research for military purposes, that television has come of age. Having now attained its majority, it promises in the next year or two to become at least one of the most important, if not the most important, of all electronic services, in point of both its economic significance and its effect on the living of America.

Major Developments

Several major developments contributing to the technical advancement of black-and-white television have come out of the RCA Laboratories and the various engineering development laboratories of the RCA Victor Division of the Radio Corporation of America during the war years. These include a new super-sensitive camera, new picture tubes that greatly increase the brilliance and clarity of the televised image, a large-screen projection system for home receivers, and new tubes and circuits which improve image quality and, at the same time, make it possible to design cameras, studio and control equipment, and receivers that are smaller, lighter in weight, and more compact than pre-war units.

Before the war, outdoor program material was limited by weather and the time of day, and indoor material required intensely brilliant artificial lighting. A screen image of adequate brilliance could be obtained only in a darkened room, and even then, definition left something to be desired. Home receiver viewing screens, occupying the face of the picture tube, were restricted in size by physical limitations on the size of tube it was practicable to build, with the usual screen size about 7 by 9 inches.

Program Possibilities

Today, with the super-sensitive RCA Image Orthicon in a lightweight, compact field camera, television producers have entered upon a vast new field of program possibilities, encompassing round-the-clock coverage of news and special events in any kind of weather, by sunlight, twilight, streetlight, or the ordinary indoor lighting of theaters, auditoriums, schools, churches, courtrooms, concert halls, and sport arenas.

With the new and improved RCA Kinescopes, set-owners may see television images possessing brilliance, definition, and contrast equal to those of motion pictures in a normally lighted room.

Prospective set-owners contemplating the purchase of de luxe television receivers for large rooms or relatively large family or social groups of observers may look forward to a screen image approximately as large as a full page of a newspaper, provided by the RCA Victor large-screen projection-type receiver.

The RCA Image Orthicon is possessed of light-sensitivity 100 times greater than that of prewar camera tubes and approaching that of the human eye. This extreme light-sensitivity is achieved by interposing a series of electron multiplier stages between the photocathode on which the light image is focused and the signal output, thereby amplifying the initial response to low light levels.

The vastly improved brilliance and definition of images obtained on new RCA Kinescopes have been achieved through advances in the design of electron guns and the development of luminescent materials providing increased efficiency and picture contrast.

Large Screens

RCA Victor's projection-type receivers employ a reflective optical system, consisting of a spherical mirror, which picks up the image from the face of the pic-

www.americanradiohistory.com

ture tube, and a molded plastic aspherical lens, which brings the reflected and enlarged image to a sharp focus on a rear-projection type viewing screen built into the receiver cabinet.

In the new RCA Projection-Kinescope to be used in these large-screen receivers, light losses are minimized by means of a very thin metallic film behind the fluorescent screen, which acts as a mirror to keep light generated by the fluorescent screen, which acts as a mirror to keep light generated by the fluorescent material from radiating back toward the inside of the tube.

Although color television cameras and receivers employing mechanically driven color filters have been demonstrated experimentally by RCA, and promising results have been obtained, the company feels that this phase of television is still in the laboratory stage. RCA does not plan to market equipment in this field until a non-mechanical, all-electronic color system can be perfected to provide images equal in clarity to those obtained with the present RCA black-and-white all-electronic system.

Present uncertainties in the manufacturing situation preclude the fixing of a specific date for the begining of distribution on new RCA Victor television receivers, but it is expected that the first table models will come off the production lines about the middle of this year, with console models following next autumn.

RCA Victor's manufacturing schedule embraces a variety of television receivers, ranging from a direct-viewing type employing a 7-inch kinescope (picture size about 4½ x 6 inches) to a de luxe large-screen projection-type console providing a picture about 15 x 20 inches. Auxiliary services such as AM and FM radio reception and record reproduction will be included in some models. Prices are expected to range from about $200 for a table model to approximately $500 for a large-screen projection model with AM and FM reception.

RCA Victor, which has supplied more television broadcast equipment than any other company in the world, expects to have the first of its new television transmitters and other station equipment items ready for distribution by late summer or early autumn of this year.

Be Wise...
FILMS DON'T TELEVISE

Unless.... produced by the methods and techniques required for Telescanning, as against the present form of "movie" production that has been unsuccessfully applied, they will not conform to technical and electronic requirements and the exacting standards that should govern quality Television presentation.

As pioneer producers of Television Film Transcriptions, exclusively, TransVideo is prepared to place at the disposal of sponsors, agencies and stations, its unique "know how" in the production of films for Television.

Color Television Of Tomorrow

By DR. PETER C. GOLDMARK, Dir. Engineering Research-Development, CBS

THE science of radio has continually probed for realism. In the aural field the fidelity of the sound has been improved bit by bit over the years until we can transmit over the air the full frequency range of the sound just as it would be heard by a listener on the spot. In the development of television, we have been following the same path. Now we are able to transmit a picture of a scene faithfully and completely, in natural colors, as it would appear to an observer on the spot.

In the field of electronics, the impulses carried on the air waves have been developed from the comparatively simple vibration of the wireless telegraph instrument, until today in the ultra-high frequencies around 500,000,000 impulses per second we are able to transmit the full, natural colors of objects before the television camera.

•

War research and employment of electronic discoveries, plus prior experience in field and laboratory, are the ingredients that make possible the new television in full color which the Columbia Broadcasting System has demonstrated and brought to the point of public commercial practicability.

By imposing the three primary colors one on top of the other in a rapid succession of impulses, the exact hues of the original object are transmitted to the eye of the viewer at the home receiver.

The ultra-high frequencies not only have brought us high definition color television, but because they permit the use of highly directional receiving antennas, they have made possible the absolute elimination of secondary images, known as "ghosts."

•

On the lower frequencies, these "ghosts" are the result of reflections. The image-carrying beam from the transmitter, strikes a high building or other obstruction and "bounces" off. In many instances both the primary wave, as well as the image that has bounced off the obstruction, are picked up by the antenna and shown on the television screen at the receiver, thus giving a blurred image.

The directional antenna consists of a ten-inch horizontal bar, and a parabolic reflector six feet wide by eighteen inches high. The antenna can be turned in an arc to obtain the best image. The rotation of the antenna is controlled automatically by the station selector switch. On the low frequencies a directional antenna of similar properties would have to be sixty feet wide—obviously too heavy and clumsy to be practical.

•

The same characteristic of the ultra-high frequency which makes possible compact directional receiving antennas also makes it possible for us to achieve high gain in the transmitting antenna. Again the physical dimensions of the antenna are in favor of the ultra-high frequency. On the 71st floor of the Chrysler Building we now have installed an antenna with a gain of twenty which gives an effective power of 20 kilowatts to the CBS one-kilowatt ultra-high frequency transmitter.

•

On the subject of color fidelity of the CBS system, a number of questions have been raised as to the relative color quality of electronic and so-called mechanical systems. At the present time the CBS system includes mechanical elements. We have been and are working on an electronic system as well, but for the near future we see little hope of successful results. Moreover, it can be proven mathematically that the color quality of any electronic system cannot be superior to that inherent in the present CBS system. The reason for this is that the colors are today produced by filters of high mathematical and optical precision.

Moreover, when and if an electronic color system arrives, there is no reason why it need make obsolete any color receiver employing the CBS color system and in use at that time.

www.americanradiohistory.com

TALK ABOUT IMPACT!...

Just recently we invited the press to a preview of full color television in the ultra-high frequencies. Of course, we had planned running an ad on the event. What we hadn't planned was that the ad should be entirely (and glowingly) written for us. Here's what the press says about CBS color television.

SAYS "TIDE"

...CBS did not overlook the increased advertising potential of color. A women's style show, almost meaningless in monochrome, came to life in color. Even little things, like packages of cigarettes, do much better when seen in their familiar colors....

...The significance to the television industry of last week's demonstration would be hard to overstate....

The general reaction: "THIS IS IT!"

SAYS THE "DAILY NEWS"

...the demonstrations prove that 3 great obstacles, once regarded by many as insuperable, have been overcome. First, CBS is able to generate sufficient power in frequencies above 300 megacycles to transmit satisfactory color images. Secondly, it modulates a 10 megacycle video band, which most authorities said could not be done. Third, it has eliminated the bothersome reflections known as "ghosts", which have hitherto marred television pictures.

Ultra-high frequency color television, without annoying "ghost" reflections, is a reality....

SAYS THE "WORLD-TELEGRAM"

CBS color video, in debut, proves beautiful beyond description.

...The image is sharp, distinct and completely realistic. Dr. Goldmark has given us a magic casement, and the vistas it will open should have a profound effect on every phase of the advertising and entertainment business, not to mention the arts, letters and sciences. It is a medium that

www.americanradiohistory.com

here's how CBS full color television struck the press

calls for the best in all these fields. ...those who watched the CBS demonstration feel sure there will be a mad rush to buy television sets as soon as the public has a glimpse of natural color video.

SAYS THE "HERALD TRIBUNE"

There were several new things about the demonstration. The signal was being transmitted in a full 360-degree arc from the Chrysler Building, rather than in a directional beam; one transmitter was sending both sight and sound, instead of a separate transmitter being used for each; there were no multiple reflections, or "ghosts" on the viewing screen; the colors appeared real. There was clear definition in the images as well....

SAYS "TIME"

It was clearly—and colorfully—the most notable television demonstration of the year....The reception, as vivid as a Van Gogh painting, made black-and-white television look antiquated....

SAYS THE "WALL STREET JOURNAL"

Television in color is a lot closer than most people had believed, it was conceded over the week-end by experts in the industry....

The pictures shown by CBS were clear and the color contrasts as good as those of the best color moving pictures....

The CBS demonstration left little doubt that color television has reached the perfection of black and white....

SAYS "P.M."

The long-awaited press showing of CBS color television demonstrated without doubt that they have achieved a dramatic refinement on image transmission....

Tele Sportscasting

By BILL SLATER, President, Sportscasters Assn.

AS I started to say in an earlier article in this Year Book, television has become so good in catching the sports picture that many sports executives are beginning to develop fears. In this field we may easily fall into what has become almost an occupational disease of the modern, scientific era—namely we can produce more than we can market without upsetting the economic apple cart.

Such an academic-flavored statement should be brought down to cases. That is easy. Consider the men who own professional baseball clubs. Their business has been built up through two generations of devising ways and means of getting John Q. Public to plunk down his money and make those turnstiles click. To these persons the question of whether or not television will keep fans away from the game is a vital matter. Granting that it might be hard to find sponsors rich enough to pay the bill for a heavy loss in gate-receipts, and you have the makings of a first-rate impasse. On the question of what effect telecast baseball might have on the gate, there are, of course, two sides and you will find groups able to defend each side strenuously and with some logic.

There naturally follows the question of how feasible it might prove to have the games telecast from the park into movie houses, where it is easy to tax the customers as they come in.

Mike Jacobs has hopes of telecasting his fights—the best of all video sports bill-of-fare so far—into a string of theaters.

However it all works out, both radio-wise and video-wise, there are busy days ahead for sports spielers. And these days will be more than just busy ones.

Video Variations—Facts and Figures

Tomorrow's television holds promise of getting in stride during 1946 with boom years ahead. The following is factual data on this new electronic industry:

ESTIMATED 7,500 to 8,000 pre-war television receivers now in use in the United States with about 5,000 of these located in Greater New York.

•

Applications for new commercial, television stations reached 143 on January 1 with the FCC adopting an allocation plan providing for 400 transmitters in the first 140 markets.

•

Leading manufacturers estimate new television sets will be priced from $200 to over $1,000 and it is anticipated that from 250,000 to 300,000 will be sold during 1946.

•

Seventy-five manufacturers, according to TBA, are ready to manufacture television receivers, transmitters and their components.

•

Network television developments include the opening of the Philadelphia-New York coaxial cable link of A.T. & T. on December 1 and the recent completion of the coaxial line between New York and Washington.

•

Television surveys indicate that the service will reach 64,754,900 persons within two years of full commercialization and over 72,000,000 persons with five years.

•

Paramount Pictures is expected to demonstrate large screen television for theaters in New York in August of 1946.

•

Use of television in education already being undertaken by the public school systems of New York and Chicago.

•

Television in Great Britain, discontinued in 1939, has been resumed on the 405-line standard.

•

Number of new television stations going on the air in 1946 is dependent upon availability of equipment from manufacturers and action by FCC in approving construction grants.

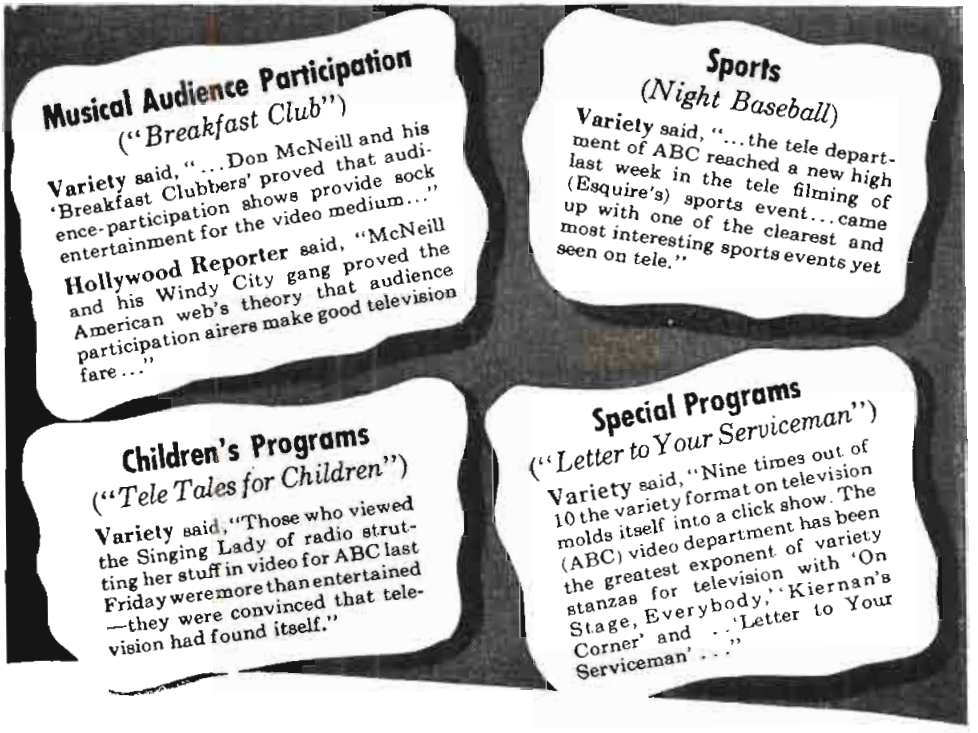
•

Controversy on merits of black-and-white television as compared to the ultra high frequency color television continues with RCA declaring monochrome ready and CBS reporting color past the experimental stage.

•

Programming schedule on nine operating commercial stations calls for 28 hours a week per station beginning in July, according to FCC regulations.

www.americanradiohistory.com



Trade reviews tell you...

Why ABC is on the

When we started in television, we knew that to make a success of it we had to establish a basic pattern in order to build television that was above all *practical.* In outline, it was something like this:

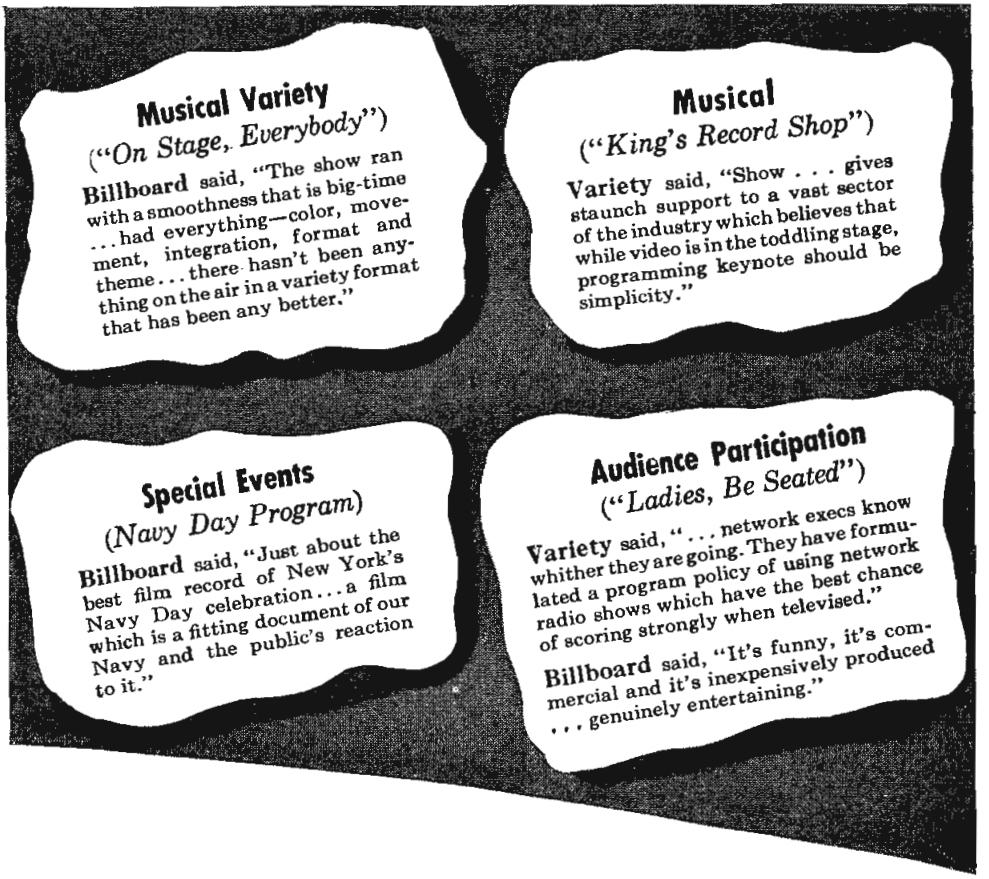
1 America's *advertisers* had a lot to do with making radio the success it is today. By competing among themselves for larger audiences, they made programs increasingly better, with the result that they, the public and the radio industry all benefited.

2 Advertisers and their agencies will play just as important a part in commercial *television.* For that reason, the best approach to television is from the standpoint of making it a *practical, economical medium for advertising.*

3 The logical place to begin the development of television is with what has already been learned about *listening audiences.* New and costly experimental work in new types of programs will play its part. *But right now the adaptation of proved, successful, economical radio shows with assured listening audiences is the industry's best bet in developing practical television.*

4 Shows should be televised on regular weekly schedules, just as they are in radio, in order to build and hold television audiences. Just as radio listeners

www.americanradiohistory.com



Right Track in Television

look forward to hearing their favorite shows every week, so will video audiences expect continuity in their entertainment.

The Plan Really Works!

How far that philosophy has taken us in just the past few months is best told in trade reviews of ABC video shows. Some of them are on this page. Read them closely. What they say, in effect, is that in *all* types of video programs—audience participation, children's shows, night baseball, special events—ABC is not only on the right track, but off to a good start as well. That's why advertisers who want to get into television on a practical, economical basis are getting set on ABC today.

Schenectady folks enjoyed special ABC Christmas television programs December 21, 24, 26, 27 and 28 on Station WRGB.

A NETWORK OF 195 RADIO STATIONS SERVING AMERICA

www.americanradiohistory.com

Television Status In Great Britain

By H. BISHOP, Chief Engineer of British Broadcasting Corp.

IN 1943 the British Government appointed a Committee under the chairmanship of Lord Hankey to prepare plans for the reinstatement and development of the television service after the war. The Committee submitted their report early this year, and the Government have now announced that they have given general approval to the Committee's recommendations. The Committee conducted a comprehensive review of the pre-war television service, war-time research, and the steps which should be taken to provide and develop a post-war service.

Committees

A similar Committee was set up in 1934 by the Government of the day to report how a television service might be started in Great Britain. It was as a result of this Committee's report that a regular daily service of high definition television was started by the British Broadcasting Corporation on the 2nd November 1936 from a television station erected at Alexandra Palace in the north of London. Two systems employing different technical standards were used, the Marconi-EMI and the Baird. They were using them during alternate weeks until February 1937 when it was decided that the technical standards used in the Marconi-EMI system should be adopted for all public transmissions from the London station. From February 1937 to the 1st September 1939, when the service was closed down due to the war, the standards remained unchanged, and were 405 lines, 50 frames interlaced, giving 25 complete pictures per second. The number of lines are a measure of the definition of the picture, and the number of frames, or complete pictures, determines the absence or otherwise of flicker.

These standards were chosen to give adequate picture definition with imperceptible flicker for ordinary domestic viewing. If a worthwhile improvement in definition is required, then the number of lines must be considerably increased, and this means that the technical complication, both at the transmitting and receiving ends, is also increased. The standards we adopted were a compromise and represented what was economically practicable from the technical point of view at that time.

Development

It may be of interest to say something about the development of television in Great Britain. With the aid of apparatus developed by Baird, the BBC started daily television transmissions of a somewhat primitive kind as far ack as 1929. Research from that date to 1936 permitted the establishment of a television service which the Television Committee of 1934 felt would be acceptable to the public. The system employed and the design of the London Television Station at Alexandra Palace have been fully described in technical literature (principally in BBC publications and in the Journal of the Institution of Electrical Engineers) published before the war. The period between 1936 and 1939 was itself one of development, but of rather a different kind. The apparatus remained substantially the same but there were big improvements both on the technical and program sides in the utilization of the medium for the presentation of public entertainment.

Over 2½ hours' program a day was regularly transmitted, the time being divided between afternoon and evening sessions. In addition there were morning test transmissions for the set retailers. A wide variety of programs was produced both in the studios and outside in the grounds of Alexandra Palace. Initially these programs were of a simple character, but as time went on they became more ambitious, and producers learned how to make the best use of the technical facilities at their disposal. The studio programs ranged from tap-dancing and the lightest type of variety act to grand opera and drama. They included illustrated talks, music, ballet, revue, art exhibitions, fashion parades and frequent appearances in person of people in the news. Current newsreels were shown daily and cartoon films were frequently included.

www.americanradiohistory.com

Topicality

Topicality is one of the essentials of a television service. With the development of the necessary technical equipment, it became possible to transmit a wide range of entertainment from places in the London area where intresting events, both in buildings and in the open-air, were taking place. There were for example successful transmissions of Royal Processions, the arrival of distinguished visitors at Victoria Station, the international tennis championship at Wimbledon, boxing, cricket and football matches, performancs from London theaters, and many other notable events.

For these outside events two sets of mobile equipment mounted in trucks and completely self-contained were in constant use. The programs were conveyed to the transmitter at Alexandra Palace by land line or mobile radio link. For the former a special cable was laid round London, but where the point of broadcast did not lie on the route of this cable a method of using ordinary 40-lb. telephone pairs was developed to give the wide band-width necessary for television transmission.

This was the stage that television in Great Britain had reached at the beginning of the war. We were on the point of increasing substantially the studio facilities in London, and it was also our intention to extend the service as quickly as possible to provincial cities such as Birmingham and Manchester.

The war put a stop to it all, and it was the task of the Hankey Committee to recommend how the service should be restarted. There are two principal ways in which this might be done. It could begin again as it was in September, 1939, with minor improvements which have become possible since that time, or the resumption of a public service could be delayed until such time as a new and improved system could be brought into service.

Guiding Delay

At first sight, it seems obvious that, provided the delay is not too great, the opportunity should be taken to restart with a new and improved system so that the public may have the benefit of a better service at the earliest moment and not be persuaded to buy sets which wil be unsuitable for the improved system which will come eventually. However, the crucial point is whether in fact there is an improved system ready to be put into public service now. The answer is that there is not, although experimental systems are being tried out. The Hankey Committee considered that it was of the utmost importance that there should be no avoidable delay in restarting a service in Great Britain and consequently they favored opening on the basis of the pre-war system rather than waiting for the development, manufacture and installation of a new system.

Critics will say that this new system has in fact already arrived and has been demonstrated. This is true, but as every engineer knows there is a vast difference between a laboratory demonstration and the operation of a regular service for reception by the public. The Committee quoted several reasons for their decision to start up again on the old system. They felt that th pre-war transmissions had achieved a high degree of reliability and afforded a consistently good entertainment value in the home. Moreover, with certain minor refinements and particularly with receivers of better design and quality, the good entertainment value of the 1939 service would soon be surpassed. It is a fact too that radio developments during the war, great as they have been, have not materially affected the television position. War developments are not immediately applicable to the production of a better picture in the home, and, consequently, if the reopening of the service were to be delayed until an improved system were available there might be a long gap without any service at all. Finally, the Alexandra Palace equipment fortunately escaped damage by bombing and can soon be made ready for service when the skilled staff (both program and engineering) again become available.

Recommendations

The Hankey Committee recommended that plans should be made for extension of television to possibly six of the most populous provincial centers as soon as possible after the reinstatement of the srvice in London. These extensions would of course employ the London system. While this work was in progress they hoped that vigorous research on an improved system, having a standard of definition approaching that of the cinema and possibly incorporating color and stereoscopic effects, would be pursued with the intention that, when the new system was available, it should be introduced side by side with the existing system and evntually replace it. Finally the Committee discussed the financing of the television service, the aim being to make it self-supporting as soon as possible.

These are the recommendations which the British Government have accepted. It will not fall to the BBC, with the guid-

www.americanradiohistory.com

ance of an Advisory Committee, to carry out the work. It is inevitable, of course, that television should be compared with the cinema. Technically the definition of a cinema picture is far greater than a 405 line television picture, but on the other hand television has an actuality value which is lacking in the cinema. Moreover it is available in one's own home by the turn of a switch.

Problems

The problem which confronted the BBC and the radio trade before the war will certainly confront them again. The number of television receivers sold in the London area before the war was about 30,000. Remebering that the Alexandra Palace station gave up a service up to a radius of about 40 miles embracing a population of some 10 millions, the number of those who bought receivers was small. Several reasons can be suggested for this slowness to buy on the part of the British public, but there were certainly two important ones. The first was that there was an unjustified air of experiment surrounding television. People were inclined to hold back until teething troubles had been overcome and until they thought that the service had been fully established. The second rason was the comparative high cost of a television receiving set. It is true that in 1939 receivers with a screen measuring about 7" by 5" and cost about $100 were beginning to come on to the market, but a receiver with a screen af about 10" by 8", in my opinion a much more suitable size, cost about $200 or more. This was a large sum for the British listener to spend, and he was unwilling to do so because he felt, quite wrongly that there was a doubt about the service being a permanent one and that there was a possibility that the set would become out of date in a very short time.

However, few of those who spent their money regretted their decision. Television was a nightly source of entertainment; it appealed to both grownups and children and its unique character took an increasing hold on those who participated in it. In passing I might mention that in my experience it was not easy to convert a doubtful purchaser by just one or two demonstrations. Visitors who came in to see the programs expressed great interest, but did not rush to their radio dealers the next day to play an order. Those, however, who eventually did so became confirmed television fans when they had had the set in their own homes for a week or so. This experience suggests that some kind of extended trial period in the home of the prospective purchaser will be necessary, at any rate, until television sets become more common than they are at present.

Technical Standards

When television begins again in 1946 the British viewer will find that the service will not have changed because the technical standards will be the same as before the war. There will undoubtedly be developments in the design of television sets within the limits of the present standards. Pre-war receivers did not always make full use of the whole of the transmitted band width and the picture suffered accordingly. One looks forward to improved cathode ray tubes, more reliable components, larger screens, and perhaps the application of miniaturization to enable the overall size of television sets to be made smaller without reducing the size of the picture. There are many difficulties to be overcome in extending television to the provincial cities.

Question of Costs

Apart from technical problems, the over-riding question associated with television is cost. In Great Britain we consider, as a yardstick, that everything connected with television, programs, equipment, number of staff and so on, is ten to fifteen times as expensive as the equivalent requirement for sound broadcasting. Before the war, the BBC operated sound broadcasting and television with the income received from receiving licenses which all listeners have to have. During the war, special arrangements were made and the BBC was financed by grants voted by Parliament. No decision as yet been made on post-war finance, but whatever is done provision for meeting the cost of television must be included. The Hankey Committee recommended that the aim should be to make television self-supporting as early as possible, but they felt that the precise manner by which this was to be achieved was one for further consideration. There is certainly some hard thinking to be done on this subject. The pre-war television frequencies were 45Mc/s for vision and 41.5Mc/s for sound. It is our intention to restart the service on the same frequencies so that no changes will be necessary to the receivers already in the hands of the public. When an improved system is introduced, higher frequencies will be used. Vigorous steps are being taken to overcome electrical interference with reception and it is hoped that there will soon be legislative powers to enforce suppression.

Television Ready For Biggest Year

By JOHN F. ROYAL, V.-P. in Charge of Television, NBC

TELEVISION is fast shaping up for its biggest year. Programmers are readying for the day when 28 hours of telecasting a week will be routine. Receiver manufacturers are gearing up for the largest sale of sets in the industry's history. Hundreds of new groups—advertising agencies, sponsors, cooperating groups—either now are in television or preparing to enter it soon. Networks and stations are recruiting personnel for jobs in an expanded industry—an industry that will doubtless come nearer its full flowering in 1946 than in any year prior to this.

This is the status of television today: there is in existence a complete television system, capable of being flung across the nation to form a countrywide network. Black-and-white network television is no longer a dream. Telecasts between long distances have already been made and are out of the laboratory, experimental stage. There is a known system of television transmission, of television distribution, of television reception. Vast new electronic developments in transmission —like the RCA Image Orthicon camera— in distribution, like the Bell System's coaxial cable—and in reception—like the greatly enhanced black-and-white sets recently demonstrated by RCA—assure the viewer of greatly improved pictures comparing favorably with home movies.

●

Through television in 1946 we will become familiar with every gesture of our Congressman as he rises for debate on Capitol Hill, we will learn to know and respect our neighbors in other lands, we will see the televising of important news events, of great Broadway plays, of developments in science, in education.

Turn for a moment to two recent new program developments that will find their way to the television screen through the facilities of NBC's television station WNBT. Look first at the first permanent series of regularly-scheduled educational programs ever attempted in television. These are being produced in cooperation with the New York City Board of Education and stress the fields of physical sciences. Groups of students and teachers each week witness these programs in our studios and comment upon them with an eye toward giving the broadcaster and the educator an indication of how the two agencies can cooperate.

Second of these new developments is the recent agreement made between NBC and the Dramatists Guild. This series, expected to start in the fall, will be titled "Broadway Preview" and will have a two-fold aim: to expand the market for new writers who otherwise would be unable to bring their plays to the attention of Broadway stage producers, and to provide needed material for television by good writers. Material—good material—is the bread-and-butter of any entertainment medium. Nowhere is this more true than in television—which will doubtless eat up material even faster than any of its predecessors in the entertainment field.

●

Under the agreement, NBC will televise plays written for Broadway production by members of the Dramatists Guild. Producers will be invited to attend these previews of plays by television.

With these immediate new developments—and a host of others in preparation—NBC Television is well-prepared to pioneer further and to expand its program operations. Last year, the station more than doubled its time on the air—jumping its weekly output from ten to twenty hours. This is more than twice as much as any other operating station in the country. This year, 1946, will see a steady accretion of program time which will reflect an increase in all three types of television broadcast techniques: studio, outside pickup and films.

●

The Dramatists Guild arrangement, as well as numerous other dramatic plans will bring an appreciable increase in variety, dramatic, and educational shows from the studio.

This is the outlook for the year 1946—the year that is certainly providing the springboard for the greatest activity in television this country has ever seen.

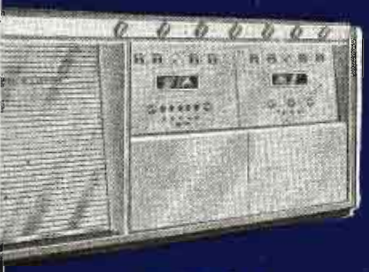
- Power Equipment and Switchgear
- Station Lighting, Heating, Air-Conditioning



The New G-E Television Transmitter

GENERAL ELECTRIC offers to the broadcast industry a most comprehensive line of station equipment—FM, Television, AM, and International transmitters, complete aural and visual equipment for studios, antenna systems, electronic tubes, studio-to-transmitter relay equipment, Micro-Tel and Intra-Tel systems, station lighting, heating, air-conditioning, power equipment, and switchgear.

● Here is broadcast equipment that opens a brilliant era with new basic accomplishments in modulation quality, extended frequency response, and lower carrier noise levels. Circuits, backed by extensive research and long experience, are your guarantee of reliable operation. Complete accessibility, simplified control systems, fewer tubes, and fewer parts are your assurance of minimum supervision and lower maintenance.

● For maximum on-the-air reliability, for lower equipment cost per hour of service, specify G.E. throughout your station. You buy one standard of high quality backed by one source of responsibility. *Electronics Department, General Electric Company, Schenectady 5, N. Y.*

Call your nearest G-E broadcast equipment sales engineer for information and help. In addition to General Electric offices in all principal cities, G-E broadcast Sales Engineers are located for your convenience in General Electric offices in the following cities:

Denver, Colo.
650-17th St.

Dallas, Texas
1801 Lamar St.

Philadelphia, Pa.

TELEVISION TALK

A MODERN GLOSSARY

(*Courtesy Caldwell-Clements, Inc.*)

A

AMPLITUDE—The magnitude of any quantity, particularly voltage or current.

AMPLITUDE MODULATION—The periodic variation of the voltage or current in a circuit in accordance with some signal being transmitted.

ANTENNA—An electrical circuit for radiating or receiving electromagnetic waves (radio).

ASPECT RATIO—The ratio of picture width to picture height. Now 4:3.

AUDIO—(I hear.) A term applied to any part of a radio or electrical system handling frequencies in the audible range.

B

BAND-PASS FILTER—An electric circuit which will transmit frequencies between two limits and reject others outside those limits.

BANDWIDTH—The number of cycles per second required to convey the information being transmitted either visual or aural.

BLACKER-THAN-BLACK—A portion of the television signal devoted to synchronizing. These synchronizing signals are transmitted at a higher power than the blackest part of the picture, so that they will not appear on the screen.

BLANKING—The process of cutting off the cathode ray during the time it is not forming a part of the picture. This occurs when the spot returns from the far right to begin the next line and from to bottom to the top of the picture.

BLOCKING OSCILLATOR—A type of oscillator which generates intermittent signals used for scanning in cathode ray tube.

BLOOM—The condition of overall bright illumination of the picture tube obscuring any picture detail.

BOOSTER ANODE—A conductive coating placed inside a cathode-ray tube near the screen and because of a high positive voltage applied to it, causes a brighter picture.

BRIGHTNESS CONTROL—A control on the receiver for regulating the overall brightness of the picture.

C

CAMERA TUBE—The electron tube used to translate a scene into electrical impulses.

CARRIER—The term applied to the high frequency radio wave which is modulated by the audio and video signals.

CATHODE—The electrode in a tube from which electrons are obtained, usually by heating or by photoelectric effects.

CATHODE RAY TUBE—An electron tube in which streams of electrons from a cathode are formed into a pencil-like beam and directed by means of electric or magnetic fields over a target, usually a fluorescent screen which glows wherever the beam strikes.

CHARACTERISTIC IMPEDANCE—The input impedance of a transmission line infinitely long or a short line terminated in its characteristic impedance. The impedance is independent of length and depends on size of conductor and spacing.

CLIPPER—A circuit used to separate sigals of different amplitudes. In television these circuits are used to separate the synchronizing pulses to the video and signal.

COAXIAL CABLE—A particular type of cable capable of passing a wide range of frequencies without the usual prohibitive losses. Such a cable in its simplest form consists of a hollow metallic conductor with a single wire accurately confined along the center of the hollow conductor.

CONTRAST—This refers to the ratio of black to white portions of a picture. Pictures having high contrast have very deep blacks and brilliant whites, while a picture with low contrast has an overall gray appearance.

CONTRAST CONTROL—A control on the receiver which regulates the video signal strength. This has the effect of changing the ratio of the black and white portions of the picture. It corresponds to the volume control in an aural receiver.
is performed.

www.americanradiohistory.com

CONTROL ROOM—Studio facilities from which television cameras, lighting, shading and mixing is performed.

CYCLE—One complete set of values in any series of phenomena which repeats periodically. In radio this usually refers to one complete range of values for either voltage or current.

D

DAMPING CIRCUITS—These circuits are used to prevent high voltages from being induced in the deflection coils when the current changes suddenly.

DC RESTORER—This circuit regulates the average brightness of the television picture tube to correspond with the average brightness of the scene being transmitted.

DC TRANSMISSION—This term applies to circuits which will pass zero frequency.

DEFLECTION—The movement of the cathode ray beam by electric or magnetic fields.

DEFLECTION YOKE—The combination of coils uesd to direct the cathode ray up-and-down and right-and-left to form the image.

DELAY SCREEN—A fluorescent screen used in cathode ray tubes, which has the property of phosphorescence. The light intensity of any particular spot dies out gradually after the ray moves to a new position when this material is used.

DIFFERENTIATING CIRCUITS—These circuits respond to the rate of change of a pulse and are used in synchronizing the receiver scanning.

DIODE—A vacuum tube having two elements, one of which emits electrons (the cathode) and the other the anode. It is used for rectification (detection), that is the conversion of alternating currents into direct currents.

DIPOLE ANTENNA—An antenna consisting of two conductors, usually of equal length extending in the same straight line, with a pair of lead or feeder wires connected at or near the inner ends, is known as a doublet. For short waves the physical dimensions are such that self-supporting metal rods or tubes can be used.

DIRECTOR—A section of an antenna used to increase the pick-up from the side on which the director is placed.

DISSECTOR TUBE—The special type of television tube used in the pick-up camera in the Farnsworth system.

DISTORTION—Any change in the original frequency, amplitude or phase of a radio signal.

DIVERGENCE—The spreading of a cathode ray stream due primarily to the mutual repulsion between the electrons that compose it. The function of the focusing arrangement in the tube is to counteract this effect.

DOLLY—The movable stand upon which the television camera is mounted.

DOUBLE SIDE BAND—When a carrier is modulated by a plurality of signal frequencies, two distinct bands of frequencies appear, due to the modulation process, one o neach side of the carrier frequency.

E

ELECTRODE—A metallic conductor introduced into a vacuum tube for a specific purpose. It must be electrically connected t othe external sircuit. In general each electrode is referred to by its specific use, such a cathode, grid, anode, etc.

ELECTROMAGNETIC FOCUSING—A system in which magnetic fields parallel to the motion of the electrons are used to confine them to a narrow beam.

ELECTRON GUN—That part of a cathode ray tube in which the electrons are emitted, formed into a beam and deflected.

ELECTRON LENS—A systematic arrangement of electromagnetic or electrostatic fields, having symmetry about the axis of a cathode ray tube, as to their radial components, established for the purpose of controlling the divergence and convergence of the electron ray.

ELECTRON MULTIPLIER—An evacuated amplified tube in which one or more anodes have photoelectric surfaces which are exceedingly active as to secondary emission. The original electron emission is cascaded by the secondary effects.

ELECTRON TUBE—A device employing a cathode, an anode and possibly additional electrodes for controlling the volume and direction of flow of electrons which constitute electric current.

ELECTROSTATIC FOCUSING—A system in which electric fields are employed to confine the electrons into a thin stream.

www.americanradiohistory.com

EMISSION—The continuous liberation of electrically charged particles, either ions or electrons, into space (usually evacuated) from a surface. The most important case practically is where these particles are negatively charged, i.e., electrons.

EQUALIZING PULSES—These are signals transmitted after each vertical synchronizing pulse to insure correct start of horizontal sweep circuit.

F

FACSIMILE TRANSMISSION—The electrical transmission over wires or radio circuits of printed records and pictures. While this term originally referred to black-and-white reproductions only, it is now considered to include processes producing half-tone and shaded effects as well.

FADE-OUT—A camera technique in which a scene is gradually dimmed from view.

FIDELITY—The faithfulness with which a system reproduces audio or video signals.

FIELD—This term refers to one set of scanning lines making up a part of the final picture. In present standards, pictures are transmitted in two fields of 262½ lines which are interlaced to form 30 complete frames per second.

FLUORESCENT SCREEN—A chemical coating on the inside of a cathode ray tube which emits light at the point where a cathode ray beam strikes.

FLYBACK—In scanning, the spot is moved across the screen at a definite rate in one direction for each scanning line, thereupon, it is necessary to restore it to start of the next line in a very short interval of time, say three or four millionths of a second. This return time is termed flyback.

FOCUS—In a cathode ray tube this refers to the size of spot of light on the screen. The tube is said to be focused when the spot is smallest. This term also refers to the optical focusing of the camera lenses.

FRAME—One of a series of complete pictures that are succesively viewed so as to simulate moving scenes.

FRAME FREQUENCY—The rate at which frames are sent each second in the various moving picture and television applications.

FRAMING CONTROL—This control on a receiver adjusts the picture repeat rate to that of the transmitter. It is also called the vertical hold control.

FREQUENCY—A term applied to the rate of repetition of voltage or current or other periodic functions.

FREQUENCY MODULATION—A process by which the carrier frequency is modulated in accordance with the information to be transmitted.

FUNDAMENTAL—The basic frequency of a wave or sound. It is sometimes referred to as the "first" harmonic.

G

GAS-FILLED TRIODE—A type of vacuum tube in which the elements operate in an atmosphere of gas, such as mercury, argon, helium, etc.

GHOST—A secondary picture formed on a television receiver because the signal from the transmitter reaches the antenna by more than one path. Ghosts are usually caused by the radio signal being reflected from objects within approximately one mile of the receiver antenna.

H

HALATION—The ring of illumination which surrounds the point at which the electron beam strikes the fluorescent screen.

HALFTONE—A method whereby photographs having various degrees of lights and shadows can be reproduced in ordinary printing, using a system of dots which are substantially undistinguishable to the unaided eye. However, the dots are graded as to size or density so as to produce the highlights and shadows of the pictures.

HARMONICS—In electrical and radio circuits the fundamental current waves are usually accompanied by others whose frequencies are equal to some whole number multiple of that fundamental. These multiples are also called harmonics.

HEAVISIDE LAYER—The ionosphere. A region of ionized air some fifty miles above the surface of the earth. Its lower boundary acts as a reflective surface or "mirror" for radio waves. Rapid changes in the height of this lower boundary and its contour causes much of the radio interference and fading.

HETERODYNING—The process of changing frequency by combining the received signals with the output of an oscillator tube in the receiver.

HORIZONTAL CENTERING—The position of the picture with respect to the axis of the cathode ray tube. This is accomplished by a control on the receiver.

www.americanradiohistory.com

HORIZONTAL HOLD CONTROL—A control on the receiver for adjusting the number of lines per second to correspond with that of the transmitter.

I

ICONOSCOPE—A designation used by RCA for a particular type of cathode ray tube developed for the purpose of picking up the scenes to be televised. It is the essential part of a studio camera.

IMAGE DISSECTOR—A television camera tube developed by P. T. Farnsworth in which the photoelectrons are moved past pickup aperture by deflection circuits.

INTEGRATING CIRCUITS—Circuits used to add up the energy of a number of repeated pulses. These circuits are used in the receiver for synchronization.

INTERFERENCE—Random electrical signals which cause noise in the audio system and disrupt the picture in television. This includes automobile-ignition impulses, some diathermy apparatus, neon signs, etc.

INTERLACING—A system whereby the odd numbered lines and the even numbered lines of a picture are sent as two separate fields and superimposed to create one frame or complete picture.

ION SPOT—A discoloration on the center of the screen of a cathode ray tube caused by heavy negative ions striking it.

K

KERR CELL—A chemical solution which changes its light transmission characteristics when electric fields are applied to the solution. An early form of a television reproducer system no longer used.

KEYSTONE EFFECT—A distorted field or background noticed in some cases with television pictures, where the opposite edges are not parallel.

KINESCOPE—A name applied to the cathode ray tubes used in the television receivers built by RCA.

L

LENS—A radial field (electrostatic or magnetic) applied concentric with a cathode ray to concentrate the diverging electrons into a single slender beam, is called a lens.

LINE—The path covered by the moving electron spot. The intensity of the spot along this path is altered to create that portion of the picture. In present system 525 lines make up the complete picture.

LINEARITY—A term used to refer to the straightness of a characteristic curve, or a portion of that curve, that shows the relation between two quantities or circuit factors. The uniformity of distribution of a regular pattern on a picture tube.

LINE FREQUENCY—The number of lines scanned each second. In any system it is equal to the number of scanning lines per frame, multiplied by the framing frequency.

LINE OF SIGHT—A straight, unobstructed path between two points.

LIVE TALENT—"On-the-spot" televising of events and people in contrast to transmission of film material.

LUMEN—A lumen is a unit of light flux. A foot-candle is equal to the illumination that falls on a screen that is placed one foot away from a standard candlepower. One foot-candle is equal to the lumen per square foot of surface.

M

MEGACYCLE—A total of one million cycles.

MICROPHONE BOOM—The arm which carries the microphone above the area being televised.

MICROWAVE—This term generally refers to radio waves having a wavelength of less than one meter, that is, one having a frequency greater than 300 megacycles.

MODULATION—A process of altering the amplitude, phase or frequency of a radio carrier in accordance with the information to be transmitted.

MODULATION GRID—An electrode interposed between the cathode and focusing electrodes in a cathode ray tube, to control the amount of emission and thereby the brilliance of the spot. This controlling effect is produced by altering the voltage of this grid with respect to the cathode.

www.americanradiohistory.com

MONITORING—The technique of controlling, at the transmitter, the picture shading, and other factors involved in the transmission of both the scene and the accompanying sound.

MONOSCOPE—A television camera tube which contains a simple picture or pattern used for test purposes.

MOSAIC—The screen used in an Iconoscope so called due to its similarity to that form of art wherein a great many bits of colored tile are combined so as to form a picture.

MULTIGRAPH TRANSMISSION—The condition in which the radio signal from the transmitter travels by more than one route to a receiver antenna usually because of reflections from obstacles. This condition usually results in ghost pictures.

N

NEGATIVE GHOSTS—Ghost pictures in which the black and white areas are opposite to those of the real picture.

NEGATIVE TRANSMISSION—This has to do with the polarity of transmission of a television signal, or the direction of modulation to produce the light and dark parts of the picture. In negative transmission a white area corresponds to a decrease in the carrier amplitude.

O

ORTHICONOSCOPE—A television camera tube combining some of the features of the image dissector and Iconoscope.

P

PANNING—(From panorama). A camera technique in which a large arc of the scene is shown by swinging the camera around a central point.

PEAKING—A technique of increasing the response of amplifiers at some particular range of frequencies.

PEDESTAL—A portion of the television video signal used to brank out the cathode ray beam as it flies back from the right edge of the picture to the left.

PHASE—A term used to designate the time relation between the maximum points of two recurrent electrical quantities such as voltage, current, etc. It is expressed in degrees of a circle, one complete revolution of which represents one cycle of one of the waves.

PHASE SHIFT—Any change in the phase relations of current or voltage.

PHOTOELECTRIC EMISSION—The phenomena of electrons being emitted from certain materials when they are exposed to light.

PHOTOELECTRIC TUBE—A tube in which electrons can flow to a charged anode when light falls on the tube causing emission.

PICTURE ELEMENT—A small section of a given scene as reproduced by the cathode ray spot at any instant.

PICTURE NOISE—Interference signals causing spots of light and other irregular patterns on the received picture.

POLARIZATION—A term usually applied to the position of the transmitting antenna, that is horizontal or vertical. The receiver antenna should correspond in most instances to that of the transmitter. At the present time horizontal polarization is standard.

POSITIVE TRANSMISSION—A television system in which maximum radiated power from the transmitter corresponds to maximum white area in the picture. Not used in this country.

R

RADIO CHANNEL—The "space" in the frequency spectrum allotted to each station. In present television standards the channel is 6 megacycles.

RASTER—A term applied to the group of lines appearing on the cathode ray tube in the absence of an incoming video signal.

REFLECTOR—A part of an antenna system used to prevent pick-up of signals in one direction and increase it in the opposite direction.

RELAXATION OSCILLATOR—A type of circuit which oscillates periodically. Used to generate scanning voltages.

RETURN TRACE—The lines on the cathode ray screen formed as the cathode day beam moves back to its starting position.

www.americanradiohistory.com

S

SAW-TOOTH—A voltage or current whose variation with time follows a saw-tooth outline.

SCANNING—The process of forming a picture by a spot of light of changing intensity moving at high speed from left to right and in a sequence of rows or lines from top to bottom.

SCANNING LINE—One line from left to right of a picture being transmitted.

SENSITIVITY—A measure of the ability of a receiver or other device to produce a given output for a given input.

SHADING—The process of correcting the light distribution of the image produced by the television camera. This is a part of the station monitoring job.

SIDE BANDS—The groups of frequencies higher and lower than the carrier which contain the information being transmitted and produced by the process of modulation.

SIGNAL—The electrical impulses which represent the sound or picture elements being transmitted.

SPECTRUM—A band or range of frequencies.

SPOT—The light produced by the slender beam of electrons on the fluorescent screen.

SWEEP—The uniform motion of the electron beam across the face of the cathode ray tube.

SYNCHRONIZATION—The process of keeping the moving beam of electrons at the picture tube in the exact relative position with the scanning process at the transmitter.

T

TELEVISION—Literally, seeing at a distance. A system of transmitting a scene by dividing it, by a scanning process, into a great number of elemental areas and representing each area by an electrical signal. The electrical signals are received and used to control the intensity of a spot of light to correspond to the light and shade of each original picture area as the spot is moved over a screen, in synchronism with the scanning at the transmitter.

TELEVISION CAMERA TUBE—A cathode ray tube used to convert light and shade portions of a scene into electrical signals.

TELEVISION PICTURE TUBE—A cathode ray tube in which a picture being transmitted is recreated by a moving beam of electrons.

TEST PATTERN—A drawing containing a group of lines and circles, etc. transmitted for receiver and transmitter test purposes.

TRAP—A circuit used to reject unwanted signals.

TRIMMER—A device which permits a resonant circuit to be tuned over a limited frequency range.

V

VESTIGIAL SIDE BAND TRANSMISSION—A method of suppressing part of one side band to limit bandwith requirements.

VERTICAL CENTERING—The control which regulates the position of the picture vertically on the screen.

VERTICAL HOLD—A control on the receiver to adjust the field rate of the scanning to that of the transmitter.

VIDEO—(I see.) The portion of the television signal which contains the picture information.

VIEWING MIRROR—A mirror used to reflect the image formed on the picture tube at a convenient viewing angle.

Y

YOKE—A set of coils used around the neck of a cathode ray tube to produce horizontal and vertical deflection of the electron beam.

www.americanradiohistory.com

American Tele. Society Awards For 1943-4-5

1943 PLAQUES

To WRGB, General Electric, Schenectady
For the station contributing most to programming in 1942
To WNBT, National Broadcasting Co., New York
For the station contributing most to television as a public service

1944 PLAQUES

To WABD, DuMont, New York
For the station contributing most to the art of commercial television
To WRGB, General Electric, Schenectady
For the station contributing most to the art of television programming
To W6XYZ, Television Productions, Inc., Los Angeles
Honorable mention for adaptation of motion picture techniques to television
To Norman D. Waters, ATS President, 1941-1944
Special Service Award

1945 PLAQUES

To Ruthrauff & Ryan, Inc., New York, for Lever Bros. show
For the most consistent effort in developing effective television commercials
To WNBT, National Broadcasting Co., New York
For the most consistent sports programming
For the outstanding television program, "Men in White,"
directed by Ed Sobol
To WCBW, Columbia Broadcasting Co., New York
For the best educational program, "Opinions On Trial"
For the outstanding news program, "CBS Newscast," with Everett Holles

1945 SPECIAL AWARDS

To WABD, DuMont, New York
For the development of television commercially
To W6XAO, Don Lee, Hollywood
For making television facilities available for commercial development
on the West Coast
To WBKB, Balaban & Katz, Chicago
For preparing the midwest for commercial television
To Klaus Landsberg, W6XYZ, Television Productions, Inc., Los Angeles
For constant technical excellence in television production
To WRBG, General Electric, Schenectady
For the best institutional commercial, "Conquest Over Darkness"
For the outstanding contribution to children's programming
To Paul Alley, WNBT, National Broadcasting Co., New York
For the outstanding editing of news films, "The War As It Happens"
To WPTZ, Philco, Philadelphia
For developing football television technique
To Paul Mowrey, American Broadcasting Co., New York
For preparing the American Broadcasting Co. for television
To Dan Halpin, ATS President, 1944-1945
Special Service Award

www.americanradiohistory.com

Television Acting Viewed by Expert

By DR. JOHN REICH, Dir. of Video, Studio Dramatic Arts, N. Y.

THERE are two principal groups of radio actors today: a larger and younger group which grew up in radio and has little stage experience or none at all; and a smaller and older group which received its training on the legitimate stage, but has grown rusty in many years of radio work. The number of radio actors who are also active on stage and in pictures is small, indeed.

Television today is like a theater an hour before the performance: Money in hand, the audience is waiting to obtain seats. The technicians are ready. The stage is set. As yet the curtain is down, but already the cashier is lighting the box office. Sooner than the public expects, the play will begin—only to reveal the inadequacy of the actors.

Situation Analyzed

The present situation of the radio actors is not as bad as was the plight of the silent picture actors when sound was introduced; for unlike the silent film, the old, blind, simple medium will continue alongside the new, visual complex one. Yet there are similarities between screen players then and radio players now. Just as some silent picture stars were not really actors but merely photographic models, so many radio performers today are not actors but merely "voices." Then as now, the advent of the new medium favored those who had learned their profession the hard way: on the legitimate stage. Television's coming of age will force radio "voices" to study acting, or else restrict them forever to the narrowing confines of sound broadcasting alone.

New Skills Needed

Whereas radio's dramatic performers can use in television little more than a certain intimacy of speech and a sense of timing, they have to acquire new skills which cannot be mastered overnight. The radio "voice" must develop into an actor who "acts all over," i.e. with his emotion, his intellect, his body, and his voice. The television actor's principal skills to be acquired through careful instruction and constant practice are: Memorization, physical behavior, concentration, imagination, observation, co-ordination, and communion.

The first time the radio player surrenders his script and starts acting, he feels like a student of swimming when the teacher slackens the rope: Reproducing every speech from memory seems as difficult as remaining afloat. Not only are there one's own lines to memorize, but also many of the partners as well as gestures, movements, the handling of props and costumes. Like every serious student of acting, the radio player soon finds out that it is not a part the way he learned a poem or geography lesson at school. Those actors who claim they knew their lines at home but cannot remember them on the stage are not lying. The strain which results from being watched by colleagues and directors, together with the manifold distractions in the studio, account for a considerable loss in the memory's efficiency. Only with a 150 per cent sure-fire memorization can proper performance of the memory be assured.

Physical Attitude Important

For his characterizations the radio player need not develop a physical attitude beyond watching his distance from the microphone. In television he is faced with the task of making his body both receptive and suggestive of thought and emotion. The sheer physical task is considerable. He must learn how to sit, to stand, to walk gracefully, to be well poised and balanced in every movement as seen from every angle. Unlike the human spectator, the television camera checks up on the placing of the feet, the gesture of the hand, the carriage of head and shoulders. The "voice" turned actor needs to acquire a sense of space, the ability of maneuvering between pieces of furniture and of expertly handling objects which seem like as many gremlins to the beginner. And all these requirements are only preliminary to the creation of behavior patterns not one's own, but suggestive of a character in a play. More specifically, television's standards of physical behavior are set not only by the actor's expressive body and by the requirements of his part, but also by certain studio conditions which vary not only with the studio but also with each program at the same studio. Thus, the actor's performance may be influenced

www.americanradiohistory.com

by the number and position of cameras and floor lights, the nature of the preceding and following programs, the size and number of locations, and the size and number of studios available for the production.

Concentration Essential

Reading a well-typed script to a microphone in a comfortable sound studio is one thing; living a part before the cameras under the pressure of time and technical difficulties, is another. Only the exercise of full concentration can insure good video acting. Any scattering of concentration may produce a derailment of the actor's train of memory which cannot be rightened because there is no prompter. The player in television has to maintain his concentration despite many distractions of both an acoustical and a visual nature. The sound and music on the floor, whispered conversation in the corner, and the signal language of the floor manager; the ever-shifting cameras and individual lights; the cramped space and the (now improving) heat from the lamps: all that makes it hard, especially for radio actors, to maintain the artistic discipline so necessary for the delivery of their parts. While following prearranged directions, signals on the floor and, to a certain extent, the movements of all cameras, the performer must at all times stay completely in character, either in his own or in the one suggested by the author.

Imagination, Observation Needed

In a blind medium which tends to characterize by voice and diction only, the radio actor's imagination is often content to suggest barely the speech habits of a dramatic character. In training for television, the broadcaster needs to develop his powers of imagination and observation in order to create all the physical aspects of a dramatic character: facial expression, posture, movement, gesture, attire, and the mode of handling properties. These physical aspects must be closely integrated with the character's speech and inner life. The radio actor has to learn how to create an image derived from the playwright's material and his own sum of instinctive and experienced emotions. Then he must transform himself into that image, so that the character's situations, objectives, and adaptations become his own. Seasoned with selected bits of observed reality, the imaginative approach by which the actor puts himself into the character's place, will make for honest and natural television acting. Radio's speech cliches will not work in television because the new medium exposes any insincerity of emoting, any crude pretension to being somebody else. If the actor lives the part, he will forget his own stage fright and all the distractions around him. Only then will the camera be his friend.

"Motor Responses" A Factor

The radio actor is not obliged to heed certain laws of psychophysics to which we are subject in our daily lives and which must be recreated in truthful acting. Because of his nearness to the reality of the viewer's home, the video actor -more than the stage actor—must learn how certain motor responses precede speech and how a sudden shock may freeze it. He must be able to reproduce that perfect co-ordination of emotion, thought, speech, and physical reaction which we easily possess in our daily lives but which is so difficult to obtain in acting. Because of the viewer's nearness to the set, and because of the frequent camera closeups, every flaw in the actor's co-ordination is easily detected on the home screen.

Must Forget Mike

The average radio actor's real partner is the microphone. Most of the time he addresses that static little machine and gives but scant attention to the members of the cast. A radio performer of this type cannot become a good television actor unless he learns the art of communion; for by a constant stream of give and take the video actor, even more than the stage performer, keeps in ever-changing rapport with an animate or inanimate partner. The statement that the theater calls for action, the screen for reaction applies also to the television screen. The better the video player's nervous system is attuned to that of his partner or else pitched against it, the more convincingly will his reaction register on the magic tube. To be most effective, this communion of actor and partners must be physical, mental, emotional.

Actors Must "Think"

Some radio actors will soon find out how dangerous television is to those who speak without thinking and think without feeling. The finest speech, the most graceful gesture, the keenest mind will fail to please unless the actor also exhibits an essential human quality of his own. Not only must he play the instrument of his personality with expert co-ordination; his personality must be a fine instrument. On the screen a face which fails to reflect an ever-changing kaleidoscope of thought and emotion like a still picture can hold attention only for three seconds. If radio actors can be made to act not from the depth of their voices but from the depth of their hearts, television may give us what the movies so rarely offer: a face mirroring a great emotion, a body transparent with the soul shining through.

www.americanradiohistory.com

Chicago And Its Television Future

By BILL IRVIN, Staff Correspondent, RADIO DAILY

"CHICAGO has a television future if it realizes it. It has every possibility New York has for becoming a tele center. It just got started a little later, that's all. With the advent of a few hundred more tele receivers in Chicago we'll be in the big time in television here."

In those words no less an authority than William C. Eddy, director of television and FM for Balaban and Katz, sums up the Chicago television outlook. In his capacity as B&K tele director, Bill Eddy supervises tele station WBKB with a daily schedule which adds up to approximately 11 operational hours weekly. A television pioneer and long noted for his wizardy in radio and electronics, Bill Eddy knows whereof he speaks when he predicts a bright outlook for television in Chicago. His words also command attention when he says:

"It's more logical for Chicago to be the television center of the country because of its geographical location."

•

Aside from the geographical factor, Eddy points out that Chicago has the vitality, the wherewithal and the talent to make it a television center.

"We have set our goal to be the biggest and most important television station in the country," says Eddy, speaking of his plans for WBKB. "We at B&K are showmen. Our angle is not selling receivers. We are going to be salesmen of shows. We're taking advantage of every possible thing to increase quality and standards of programs. We have found a marked increase in sponsor interest, and also a marked increase in the use of professional talent. In the near future 90 per cent of the shows over WBKB will be commercial."

In line with his announced objective of making WBKB the biggest and most important tele station in the country, and indicative of his faith in Chicago's future place in television, Bill Eddy took the first step in his wide-scale expansion program for WBKB immediately after his retirement from the Navy a couple of months ago with the rank of captain. Until he put away his Navy blues for the second time, the job of helping to make Chicago a television center second to none had had to wait while Bill Eddy finished his wartime job of training three-quarters of a million American boys in the intricacies of radar. His efforts after Pearl Harbor to get back into the Navy a second time met with repeated failure because of several physical defects, including deafness. It was the deafness, incurred during experimental depth diving tests after his graduation from the U. S. Naval Academy at Annapolis, that caused a naval board to put him on the retired list in 1932. It was his suggestion, however, that the navy needed a radar training center which finally paved the way for his return to navy blues for the second time.

•

Eddy's first move after returning to his civilian job at WBKB was to add a new hour-long program to its daily schedule, Mondays through Fridays. The time period is devoted mainly to experimental commercial and sustaining shows, with emphasis on spot plugs. The new period was added primarily to aid manufacturers in the Chicago area in the development of new type receivers. Increased demands for time as a result of greater agency interest in the development of new video programming techniques also was a factor, according to Eddy.

Another step taken by Eddy was the signing of a five-year pact between B&K and the management of the Chicago Coliseum for the exclusive televising by WBKB of all events taking place there during the next five years, particularly sports events such as ice shows, prize fights, basketball tourneys, roller derbies and wrestling matches.

Further assurance of Chicago's future dominant role in television is found in the FCC's allotment to the city of seven tele channels. As one television executive pointed out, that action by the FCC is a "challenge to Chicago to be a major television center."

www.americanradiohistory.com

Chicago also is a major link in a proposed television network in the middle west, the first step in the establishment of which the American Telephone and Telegraph Company recently took with the filing of applications with the FCC for authorization to build and operate micro-wave relay stations which would link the Windy City with Milwaukee. Such a system would cost approximately $500,000 and, in the event of favorable FCC action on the applications, would probably be ready for tests early in 1947. Terminals of the system would be the Illinois Bell Telephone Company's long distance center in Chicago and the Wisconsin Telephone Company's toll building in Milwaukee. Three radio repeater stations would be built along the way, one near Barrington, Ill., another in Illinois but near Wilmot, Wis., and the third near Prospect, Wis. During the experimental period the system would be used for tele transmission in cooperation with tele station WMJT in Milwaukee and any other broadcaster who might be able to use the facilities.

•

Paul Mowery, director of television for the American Broadcasting Company, said that the network's plans for television activity in Chicago, while hinging on FCC action, are ready to be put into operation with the greatest possible speed.

"We are prepared to give television service in Chicago just as fast as possible," said Mr. Mowery.

How fast that will be is more a question of mechanics than training, he emphasized. The training of skilled television crews already is under way, so there will be no delay from the standpoint of competent personnel.

Station WGN long has had experimental television equipment on order. The date for starting such experimental operation, station officials said, depends wholly on when the equipment becomes available.

•

Marshall Field and Company, Chicago department store, has a post-war top priority for the purchase and installation of a General Electric tele system to be used as an intra-store selling and promotion medium. The Chicago store was the first to order a tele system of the non-commercial type. However, plans for the installation of the intra-store system have not yet been made. But store officials have indicated a strong interest in the possibilities of television as a sales medium. They believe it holds tremendous potentialities, both inside the store as a service to customers and outside as an advertising medium to consumers.

TELEVISION HIGHLIGHTS—1945

(From the Files of RADIO DAILY)

A review of the past year's television events indicates the tremendous possibilities of the sight-and-sound medium. Increasing momentum is evident from the upward surge of activity reported in the columns of RADIO DAILY.

JANUARY

10—Keen interest in television as an important factor in displaying and merchandising goods as leaders in the industry discussed its various phases at the National Retail Dry Goods Association convention in New York.

12—A last minute request for permission to televise the inauguration of President Roosevelt was turned down by the White House because arrangements for press, radio and pix coverage had already been worked out.

16—Slicing by one-third the number of six-megacycle channels for television, the FCC announced that it believed the current monochrome service should not be scrapped on the promise that a new color tele system would someday be ready. Instead of the present 18 channels below 294 megacycles, there would be 12 according to the allocation system announced by the commission. These channels would be shared with non-interfering services.

17—Approval of the action by the FCC in its "decision favoring the continuance of commerical television in that portion of the spectrum currently used by television broadcasters" was voiced by J. R. Poppele, president of Television Broadcasters Association.

22—Tele and FM applications will not be served on a "first come, first served" basis, FCC Chairman Paul A. Porter told the FCC Bar Association.

26—Robert L. Gibson, vice-president and member of the board of directors of TBA resigned because his firm, GE, had shifted him to another department in the company. F. J. Bingley, chief television engineer for Philco, and a TBA board member was elected to the post of vice-president. The board vacancy was not filled.

30—At a meeting of Canadian Broadcasting Corp. governors, Dr. Augustin Frigon, general manager, in discussing television prospects in Canada, said that CBC had obtained a site in Toronto for the purpose of building a television station and, he added, that other stations would be established across Canada in due time.

FEBRUARY

2—Juan Trippe, Pan-American World Airways president announced the sponsorship of a new 15-minute world-travelogue television show titled, "Wings of Democracy."

7—Forecasting the possibilities of subscription television as a method of creating "box-office" for video, Arthur Levey, president fo Scophony Corp. of America, announced that SCA was contemplating production of home tele receivers for that purpose.

9—Technical employers of CBS were accorded the privilege of attending a special 60-week course in the operation of television studio and transmitter equipment beginning Feb. 12. Arranged in three 20-week segments, the tripartite course was given by the Division of General Education and College of Engineering of NYU under the direction of Dr. Peter Goldmark, CBS director of engineering research and development department, and Robert Serrell, member of CBS' television engineering operations, assisted by Mason Escher, technical staffer representing the IBEW.

14—Development of a new television technique known as "Tele-Minicatures" affording greater speed in production and increased economy, was announced by Patrick Michael Cunning, head of P. M. Cunning Tele. Products.

19—Newsreels and television were on an equal footing insofar as release dates of footage from the War Department was concerned. Only reason the tele pool received War Department footage later than the newsreel pool was that the department, in order to speed handling, did not copy the film itself.

20—Television, discontinued in Great Britain shortly after the start of the war, was resumed on a private-showing basis.

23—Maintaining their position that only the use of wide bands in the higher frequencies could provide television pictures with twice

www.americanradiohistory.com

the detail of television sets operating on pre-war standards, CBS filed a brief with the FCC.

27—Blue Network inaugurated television from New York in addition to launching its regular schedule of tele broadcasts with programs from Schenectady. This advent marked the first time a broadcasting company originated and presented regularly broadcast network programs over more than one station.

MARCH

2—Col. William A. Roberts, appearing for TBA, presented the FCC with a suggested plan for allocation of television facilities in the major market areas of the country to provide at least 398 stations. This plan was designed to utilize the 12 six-megacycle channels proposed for commercial sale.

6—First web V-E Day planning was announced by the Blue Network when it revealed that arrangements had been made with the Du Mont Television Laboratories for the use of the entire facilities of WABD for tele broadcasts on victory day in Europe.

13—Formation of a company to produce films exclusively for television was announced by the Bond-Charteris Enterprises. The films, to be commercially sponsored, deal primarily with visualization of products for inclusion in televised advertisements. Other tele products will include 15 to 30-minute packaged television entertainments

15—RCA showed a postwar model television receiver which projects an image of 16 x 21-1/3 inches and with FM and standard broadcast receiving facilities which will cost approximately $395. The new receiver was a decided improvement over the pre-war sets, and displayed an image of brilliance and clarity indicative of the progress made in electronic research.

19—Applications for licenses to construct and operate a national network of television and broadcasting stations to be linked via micro-wave, were filed on March 15 with the FCC by the Raytheon Mfg. Co., a subsidiary of the Raytheon Products Corp. of Boston, manufacturers of radio and tele equipment.

23—DuMont Laboratories highlighted their entertainment of the Television Broadcasters Association with a private showing of a new 20-inch cathode ray tube which had a flat surface and produced a direct view tele image 18 x 13½ inches.

26—Addressing a joint meeting of the American Institute of Electrical Engineers and the Institute of Electrical Engineers, Dr. C. B. Jolliffe, head of RCA Laboratories envisaged television as a five to ten billion dollar enterprise which would revolutionize the present way of life.

27—CBS stockholders were advised that the corporation had contracted with Federal Telephone and Radio Corp., for the first experimental transmitter for use in color transmission.

28—Television Producers Association adopted a standard form of television script along with a standard cue sheet, the latter using a three-column method.

APRIL

1—Twentieth Century-Fox leased from General Television Corp., the inactive tele station, WIXBG, Boston. The film company asked for an experimental license to operate the station. Plans include programming and the use of sound films for entertainment purposes.

2—Commercial sponsorship of the time breaks on the special V-E Day television programs of the Blue Network on WABD, was announced by Paul B. Mowry, manager of the web's tele department. Sponsor will be Waltham Watch Co.

11—Considered the first French-American program in television history, CBS tele station WCBW televised "Soldiers Without Uniforms," a drama based on the Paris resistance movement obtained from material brought to this country by Pierre Schaeffer and Pierre Garrigues, representatives of the French Broadcasting Service.

17—First multiple-relay television network in the world linking two major cities was proven technically practical in a demonstration between Washington and Philadelphia. This scientific demonstration revealed that it is entirely practical and possible to connect distant cities for television by a series of micro-wave tele relay transmitters.

26—John Ballantine, president of Philco Corp. announced that all Philco telecasting activities would be brought under one head. Ernest B. Loveman was appointed vice-president in charge and with the formation of the television broadcasting division of Philco Radio and Television Corp., every phase of the activity would be centralized under Loveman.

MAY

1—Paul L. Chamberlain, GE sales exec. told the Ad Club of Boston at a luncheon that television will supplement other forms of advertising to maintain the national income needed to keep American workmen on the job, and that a new dimension will be added to home entertainment which will provide one of the most powerful advertising media ever developed.

7—Bell System of the AT & T expects that some 2,000 miles of coaxial cable suitable for television and other long distance transmission will have been manufactured by the end of 1945 and that at least three-fourths of this cable mileage will be under ground by the same time.

15—Speaking before the Society of Motion Picture Engineers, Ralph B. Austrian, executive vice-president of RKO Television Corp.,

www.americanradiohistory.com

said he believed that it would be perfectly possible and feasible to release a tele show on film over a "first-run" group of stations and then re-release it in the same locality at a later time to a "second-run" group and finally a "subsequent run" group. He pointed out that any given locality can be fairly and completely covered.

18—Seven channels between 174 and 216 megacycles were definitely assigned television by the FCC, with the 480-920 mc. band also reserved for the new wide-band color tele. Six additional tele bands would be provided in the 44-108 mc. region—apportioning of which would be delayed pending further testing.

23—IT & T received a telegram from Guy Rabuteau, French scientist in charge of the laboratories of Le Materiel Telephonique, Paris, IT & T associate, which stated that despite German occupation, French research organizations had continued developing television and manufacturers were in a position to deliver pick-up equipment, transmitters, receivers suitable for black and white high definition tele and later on full color television.

27—First of a series of television programs covering the world of science and using both "live" talent and film, was inaugurated by the American Museum of Natural History in conjunction with NBC's station WNBT.

28—Senators Emil A. Bartunek and Lawrence A. Kane, formally introduced into the Ohio state legislature their bill which amended the Ohio censorship statutes to include television, along with motion pictures and other eligible productions. Proposed amendments included a fee of $3 for each 10 minutes of televised screen time or fraction thereof. This was the first tele censorship measure and levied fee as well.

30—As a contribution to the advancement of television production, George A. Hirliman, prexy of the Internation Theatrical and Television Corporation, announced that they would sponsor a national contest on July 1st offering 11 prizes which would include a $10,000 cash award to the best amateur film production submitted.

JUNE

5—A new type of experimentation looking toward development of a broad-band microwave relay system was approved when the FCC granted the Raytheon Mfg. Co., construction permits for five experimental relay stations to be installed between Boston and New York.

7—IATSE issued a charter to a new union in the field designated as Television Broadcasting Studio Employees, Local 794 of the Alliance. The new union, having been granted its charter, was expected to launch an intensive drive to unionize tele employees in New York.

11—In a move to further its activities in the field of commercial television, CBS revealed the appointment of George Moskovics as commercial manager of television operations, a newly created post made in anticipation of experimental commercial activities in the video field.

14—New television plastic lens and receiver, developed by RCA Victor from materials manufactured by Dun Pont, is expected to provide an image five times as large as those obtained with pre-war models, also, brighter images and reduced cost of the receiving sets are indicated, all based on discs of "Lucite" composition as basic material.

14—American Television Society held its final official meeting of the season in the auditorium of the Museum of Modern Art, with George T. Shupert, of Paramount Pictures taking over the reins as newly elected president. Awards for television activity during the season were made to various network and inde tele outlets as well as individual effort.

18—CBS tele facilities and personnel were made available to network clients on a "working basis" for testing, development and broadcasting of commercial video programs. While there would be no charge for time on the air, there would be a charge of $150 an hour for use of major studios, personnel and equipment.

20—Philco Radio applied to the FCC for three experimental relay broadcast stations to operate in New York, Philadelphia and Washington. Assignment of frequencies between 42 and 10,000 megacycles by the FCC chief engineer was asked.

25—John F. Royal, NBC vice-prexy in charge of television, speaking at the opening of the fourth annual NBC-Northwestern U summer radio institute, forecast that television would be a great force for peace during the coming years.

26—First large scale relay experiments for tele and FM to be undertaken between Los Angeles and San Francisco were forecast by the application to the FCC of the International Business Machines for relay terminal stations with 15 watts power in those two cities.

27—FCC announced the assignment of the first six tele channels. Channel No. 1, 44-50 mc.; channels No. 2 3 and 4, 54-60, 60-66 and 66-72 mc.; channels No. 5 and No. 6, 76-82 and 82-88 mc.

www.americanradiohistory.com

27—A large screen tele receiver, which produced a picture 16 x 22 inches and included a radio-phonograph unit was unveiled by GE at a press showing held in New York.

29—A RADIO DAILY survey revealed that tele industry leaders were pleased by the FCC's channel allocations.

JULY

9—CBS was reported to have obtained the American rights for 1,000 line television as developed in France and also new foreign patents covering colored television.

10—Experimental tele transmission in England will get under way in January, and the commercial aspects of the media, dormant since the outbreak of the war will be stressed in accordance with an ambitious developmental program already mapped out.

13—Little criticism was expressed at the informal engineer hearing on FCC's proposed standards and regulations for tele stations.

17—Zoning Adjustment Board of the District of Columbia following a seven-hour hearing, denied the Bamberger Broadcasting Service, Inc., permission to locate a rtansmitting station and 300-foot tele tower in a residential area selected in the northwest section of Washington.

18—The FCC released to the industry its proposed technical specifications for tele operation on the 13 six-megacycle bands presently allocated for commercial operation. The industry in general was well pleased with the Commission proposals.

19—George E. Markham, manager of WRGB, Schenectady, speaking before a two-day symposium on tele and the future at the University of Michigan, declared that television would supplement the newspapers, radio, theater and the movies, but would not replace them.

20—Plans for the first full-fledged television field tests in the New York metropolitan area using higher frequencies as proposed by the FCC reallocations to be conducted by NBC in collaboration with RCA Laboratories, were announced by Dr. C. B. Joliffe, vice-president in charge of the RCA Labs.

25—Music Corporation of America announced that it had added a new television department, to be under the head of Roger Carlin, former legit theater producer and Paramount man.

AUGUST

1—Television department of NBC and the New York City Board of Education have readied plans to launch the first comprehensive experiment in the adaptation of tele to classroom education. Announcement was jointly made by John E. Wade, Superintendent of Schools and John F. Royal, NBC v.p. in charge of television.

3—Bob Feiner, Jr., program assistant for WCBW, CBS tele station, was named assistant director of television programs for CBS.

7—Purchase for post-war delivery of a 40 kilowatt television transmitter was announced by Harry R. Lubcke, tele director of Don Lee Tele and Don Lee Broadcasting Systems. The west coast web has filed with the FCC for permission to install the transmitter 5,800 feet above sea level on Mt. Wilson.

9—A plan for utilizing stratosphere airplanes cruising six miles in the air for the transmission of television and FM was revealed by execs. of the Westinghouse Electric Corp. in collaboration with the Glenn L. Martin Company.

20—CBS announced that it would install a new ultra-high frequency television transmitter in the Chrysler Bldg. in December. The transmitter would broadcast tele in high definition color, on a frequency of 485 megacycles. A coaxial cable carrying the 10-megacycle signal would connect the transmitter to the labs at Madison Ave., via the studios in Grand Central Terminal.

24—Television stations will have a total national payroll of over 16 million dollars, Paul E. Carlson, merchandising manager of Allen B. Dumont Laboratories, Inc., predicted in an address before the opening session of the Board of Education sponsored War Industries Training Program in New York.

27—The Chicago public school system will use television as an integral part of its educational program for the first time, starting the week of September 17, it was announced by George Jennings, director of the Radio Council of the Board of Education. In cooperation with Balaban and Katz tele station, WBKB, Jennings has arranged a weekly series of 13 experimental telecasts to originate in the station's studios. The shows will be picked up on special receivers to be installed in two schools.

30—John Wanamaker Company announced that a deal has been consummated with the Allen B. DuMont Laboratories, Inc., for the installation of three complete television studios in the main New York store.

SEPTEMBER

11—Announcement was made of the resignation of Gilbert Seldes, director of CBS television programs, effective as of September 28, in order to be free to do independent work in the video field. No successor was appointed.

11—Ted Collins, Kate Smith manager and partner, confirmed rumors that he would undertake a $1,000,000 tele laboratory enterprise in Jacksonville, Fla.

18—WABD, DuMont television station in New York, left the air until December 15 in order

www.americanradiohistory.com

to make the switchover from Channel 4 to Channel 5. The suspension of tele transmission of activities during the period of technical readjustment was approved by the FCC.

19—The American Broadcasting Company announced that following the conclusion of telecasting activities at DuMont's station WABD, television operations would be carried on from station WRGB, Schenectady.

20—Recalling its statement of May 25th that insufficient frequencies are available below 300 mc. to provide "a truly nation-wide and competitive television system," the FCC issued its proposed allocation of frequencies among the rural, metropolitan and community telecasters.

24—Technical operations of CBS television are being integrated with the web's other New York broadcasting operations. Progress of various phases of CBS television research under Dr. Peter Goldmark's department of engineering research and development has made integration possible.

25—The FCC threw out 16 applications for experimental tele and developmental FM facilities on the grounds that clear need for these stations to carry on meritorious research plans was not shown.

27—Edward Sobol, NBC tele producer told a panel and members of the American Television Society that the script is the most important part of the television program, and script writers would become a very important cog in the machine of television production.

OCTOBER

1—The Motion Picture Producers and Distributors Association does not plan to inject itself into the television scene, new prexy Eric Johnston declared during his first press conference after succeeding Will Hays.

4—Revision of the tentative assignments of channels for commercial television, including changes in the number of metropolitan stations permitted in many communities, as well as changes in the channel numbers assigned in some cases, were reported by the FCC.

5—DuMont Television signed a five-year contract with the Television Studio Broadcasting Employees Union, Local 794 of the IATSE.

11—Paul Kesten, CBS vice-president, announced at the FCC Television hearing in Washington that his company would be ready in a few weeks for public demonstrations of its wide-band polychrome tele service, thereby raising the question as to the extent to which sponsors of the narrow-band service would be willing to invest in the monochrome tele. The second challenge came from TBS, which announced a new allocation setup which would provide seven tele stations for New York City, which was allocated only four under the FCC plan announced earlier, and, in all, 401 stations for 135 cities—59 more stations than provided in the FCC plan.

17—Return to native shores of the U. S. Fleet was covered by television both in New York and San Francisco and televised in the East over WNBT by NBC and WCBW by CBS.

19—Motion picture film promises to furnish much valuable source material for video programs, what with the constant new developments occurring in the field of research and manufacturing, according to an address by John Flory, of Grant, Flory and Williams, film manufacturers.

23—Dr. C. B. Joliffe, v.p. in charge of RCA Labs, revealed that utilization of the recently announced super-high-frequency radio relay system for network television, was not engineered to permit television transmission.

25—A revolutionary new development in the camera technique of television was demonstrated to the press and electronics engineers by RCA using a super-sensitive pick-up tube known as the "image orthicon." The demonstration proved conclusively that a good image could be obtained through the use of the new electronic eye under ordinary lighting conditions.

30—Application for construction of a tele transmitter and studios in San Francisco was filed with the FCC by Television Productions, Inc. Plans of the company also included a West Coast relay network embracing the Hollywood and San Francisco coast-to-coast television web projected by Paramount.

NOVEMBER

1—Extensive television coverage of New York's first peacetime municipal election in six years was scheduled by network video stations, with audiences being provided with newsy, on-the-spot scenes of events taking place during Election Day on November 6.

6—The first major intra-store television demonstration undertaken by RCA-Victor in Gim-

www.americanradiohistory.com

bel's Department Store in Philadelphia was proven "eminently successful" and definitely established tele as a powerful selling medium, representatives of both RCA and Gimbels indicated. An RCA representative said that plans were being completed to take the intra-store video unit on a nation-wide tour of the largest department stores of America.

7—The Studio of Dramatic Arts offered a 16-week course in television acting, designed to "retrain radio actors for the visual medium." Director of the course was John Reich, professor at New York U. and former dramatic director of CBS television.

13—The first Television contract in Chicago was signed by International Photographers of the Motion Picture Industries and Television Film Shorts, Inc.

15—Keith S. McHugh, vice-president of A T & T, announced that a coaxial cable between Washington and New York would be made available, without charge, to television broadcasters early in January. The first program over the new cable will be a co-operative venture with WNBT, DuMont and WCBW participating in the historic telecast.

16—CBS has applied for a license for its new experimental Tele Station to operate on the higher frequencies between 480 and 496 megacycles. CBS disclosed it was "ready to go" on its wider band, full-color broadcasting. Dr. C. B. Jolliffe, vice-president in charge of RCA laboratories, speaking before a meeting of the Radio Executives club in New York, said "Television is ready to go." Dr. Jolliffe stated that the time is here when management must take television out of the engineering laboratory and give it a chance to grow.

20—Victory Loan films will be broadcast over nine tele stations for the first concerted drive of its kind, the Treasury Department has announced.

23—FCC's Television rules issued. As a whole, FCC followed many industry recommendations in issuing the new rules. Granted seven channels in New York and relaxed its original minimum operating order but did not change its order making chain broadcasting regulations applicable to tele stations.

26—Roundup of applications for construction of new commercial television stations now on file with the FCC shows a wide-open scramble is in the making for new tele channel designations. The demand for frequencies far exceeds the supply in major cities.

26—A telegraphic survey of the industries reaction to the FCC tele allocations, conducted by Radio Daily, shows, in most instances, the allocations were interpreted as the signal to go ahead with manufacturing and station developments.

DECEMBER

3—Washington was selected as "testing ground" for wide-open scramble for television stations in large cities Friday, when the FCC announced a consolidated hearing on nine applications for the capital's four channels. No date for the hearing has been set.

5—Intra-store tele shown by RCA. First New York demonstration draws big merchandising interest. Manufacturers and retailers of consumer goods believe television will play a highly important role in the merchandising of such commodities in the near future.

6—Consolidated hearing on nine applications for Washington's four television channels will begin on Jan. 21. The ten-day hearing will end on Feb. 1, the Commission announced in setting the date.

7—RCA's tele patents and others in the radio field are to be made generally available to manufacturers, Henry A. Wallace, Secretary of Commerce, announced yesterday.

13—A. T. & T. announces construction plans for video relay outlets linking Milwaukee and Chicago.

14—RCA demonstrates color television. About five years will elapse before practical home color tele will be available to the public, they said.

26—The FCC has announced assignment of channels for six commercial tele licenses and for ten experimental stations.

27—President Truman's appearance before Congress next month to deliver his annual message will be televised for the first time in the nation's history. NBC, CBS and DuMont will telecast the event

Washington Natural Television Center

By ANDREW H. OLDER, Staff Correspondent, RADIO DAILY

AS PEACE broke out the future of television was more confused than ever. Only one thing was certain—that pre-war estimates of the eventual importance of tele will be not only borne out but actually surpassed. It will be many years before motion pictures and sound broadcasting are displaced by television—if ever—but it will not be so very long before tele takes equal rank in importance alongside these two great media of news and entertainment.

Here in Washington, through the war years, two agencies—War and Navy—have been primarily concerned wit television.

•

With the war over, the new technical developments will again be announced from Camden, Chicago, New York, Philadelphia and the other homes of leading private tele manufacturers. How much of value the industry will gain as German techniques are released by the Department of Commerce is questionable—thus far it seems that American technicians were far ahead of the Nazi researcers in tele. Some aid in color projection may be realized from the enemy processes.

The biggest headache, insofar as overall regulation is concerned, lies with the FCC. For the past two years the FCC has been squarely in the middle as the proponents of "downstairs" and "upstairs" video carry on their battle. Although there are signs that a commission majority believes tele will approach its full utility only on the wider bands above 480 megacycles, a policy of strict impartiality has been maintained as proponents of the two systems battle it out with press releases and feverish experimental work.

•

The commission has simply insisted that television—without specifying which system—is coming out of its swaddling clothes.

The "downstairs" television interests were not overly pleased with the apportionment of the spectrum below 300 megacycles, justly pointing out that 13 video channels is insufficient for full-magnitude development of the service. Although the FCC revised its allocation of these channels to make more stations possible in New York and other major centers than it had originally provided, the fact is that so long as licenses are confined to the 13 "downstairs channels" video will not achieve the competitive development scheduled for it.

A year-end development of uncertain importance was the anti-trust suit filed by the Department of Justice against the Scophony Corporation and affiliates of Twentieth Century-Fox and Paramount Pictures. Of far-reaching importance in the development of theater television on a broad nation-wide basis, the importance of the suit as it affects home video could not be clearly established. There are those who believe that the larger projections embodied in Scophony's "supersonic" system might provide an important improvement for home video sets if inclusion of the necessary design in the sets were freely permitted.

It is claimed also that the "skiatron" system developed by Scophony makes possible use of the subtractive principles of color employed in Technicolor and Kodachrome photography. No commercial sets embodying these principles have been developed, although Paramount—one of the controllers of the patents for the Western Hemisphere—is half owner of the Allen B. DuMont Laboratories.

•

The big question is what the next year will bring in the line of regulatory policies on television. Most important question, of course, is the extent to which the FCC will indicate its superior faith in the "upstairs" system. And that is a decision which must be reached not on the basis of investments in the two systems but rather on the basis of public interest.

On March 7, 1946, the FCC awarded three of the four Washington television channels to NBC, Bamberger Broadcasting Co., and the Evening Star Broadcasting Co. The fourth channel, sought by both Du Mont and Philco, will be settled at another commission hearing. Both applicants have been invited to present additional arguments.

Classification of Television Stations and Allocations Of Frequencies

RULES Governing Television Broadcast Stations. Subpart D. Sections 4,201 through 4,281, are repealed, and the following is substituted (by the FCC) therefor:

§3.601 *Numerical Designation of Television Channels.* — The channels or frequency bands set forth below are available for television broadcast stations.

Channel No.	*Megacycles*
1	44—50
2	54—60
3	60—66
4	66—72
5	76—82
6	82—88
7	174—180
8	180—186
9	186—192
10	192—198
11	198—204
12	204—210
13	210—216

§3.602 *Sharing of Television Channels.* —Channels 1 through 5 and 7 through 13 are available for assignment to radio services other than television upon a showing that no mutual interference will result.

§3.603 *Community stations.* — (a) A Community station is designed primarily for rendering service to the smaller metropolitan districts or principal cities. Television channel No. 1 is assigned exclusively for Community stations. Channels 2 to 13, inclusive, can also be used for Community stations provided such use complies with Section 3.606.

(b) The power of a Community station may not exceed an effective radiated peak power of 1 kilowatt. The maximum antenna height for such stations shall be 500 feet above the average terrain as determined by methods prescribed in the Standards of Good Engineering Practice concerning Television Broadcast Stations.

(c) The main studio of a Community station shall be located in the city or town served and the transmitter shall be located as near the center of the city as practicable.

§3.604 *Metropolitan stations.* — Metropolitan stations may be assigned to television channels 2 through 13, both inclusive. They are designed primarily to render service to a single metropolitan district or a principal city and to the rural area surrounding such metropolitan district or principal city.

(b) Metropolitan stations are limited to a maximum of 50 kilowatts effective radiated peak power with antenna having a height of 500 feet above the average terrain, as determined by the methods prescribed in Standards of Good Engineering Practice concerning television broadcast stations. Where higher antenna heights are available, they should be used but in such cases the Commission may authorize less than 50 kilowatts effective radiated peak power so that the coverage (within the 5000 uv/m contour) shall be substantially similar to that which would be provided by 50 kilowatts effective radiated peak power and a 500 foot antenna. Where it is shown that an antenna height of 500 feet is not available, the Commission may authorize the use of a lower height antenna but will not permit an increase in radiated power in excess of 50 kilowatts. The service area of Metropolitan stations will not be protected beyond the 5000 uv/m contour and such stations will be located in such a manner as to insure, insofar as possible, a maximum of television service to all listeners, whether urban or rural.

(c) The main studio for Metropolitan stations shall be located in the city or metropolitan district with which the sta-

Station Director .....Klaus Landsberg

FACILITIES

Equipment includes complete apparatus for studio as well as field operation. Cameras and transmitters were built by Allen B. DuMont Laboratories, Inc. and many additional units, including electronic special-effect equipment, were designed and built by Television Productions, Inc. A relay transmitter, W6XLA, to operate in conjunction with W6XYZ, was also developed and constructed by the company. A special antenna system combining a double-cone type of antenna for video and a special four di-pole antenna for audio of its own design and construction are used. Studio facilities also include a flexible lighting arrangement, slide and background projection apparatus and screens.

ACTIVITIES

W6XYZ has operated regularly since February 1, 1943, each Wednesday and Friday night and has been producing a weekly total of four to six hours of live-talent programs. These programs were entirely dedicated to the training of Civilian Defense volunteers until the summer of 1943, since which time entertainment as well as educational programs have been aired.

FACILITIES

SYSTEM IN USE: 525 line 30-60 frame F.C.C., Standard, all electronic cathode-ray. Horizontal Polarization. Three Studio Cameras and film equipment. Two cameras of Orthicon type. Complete 100 ft. square two story television building housing one 100 ft. x 60 ft. x 30 ft. television stage, one 46 ft. x 26 ft. x 16 ft., stage, monitor, film, transmitter, makeup, and lounge rooms, offices, shop, transformer vaults, etc. Three hundred foot tower, antenna elevation 2000 ft.

The Pasadena Community Playhouse and other organizations have presented plays such as Ibsen's "Master Builder," "Alice in Wonderland" and others.

RECEIVERS: There are some 400 television receivers in the service area of W6XAO, some as far as Pomona at 35 miles away, a number in Long Beach at 25 miles away and many in cities at lesser distance. The predominant commercially manufactured television receiver is the TRK12 or 120 of RCA. There are some RCA TRK9, and approximately 50 TT5 RCA television receivers. A number of the latter are operating satisfactorily in Long Beach at 25 miles from W6XAO.

Chief Engineer. . . . . Sal Patreimo
Chief Operating Engineer. . . . . Otis Freman

FACILITIES

The 160-foot tower of WABD atop a 42-story building raises the antenna to 650 feet above sea level. Covering a service range of 35 to 50 miles, the station has regular viewers as distant as 100 miles. It is completely equipped by Du Mont Laboratories. WABD has two studios for live talent shows as well as film-projection facilities. It operates on a commercial license.

ACTIVITIES

This outlet serves not only as a commercial telecast service but also as a laboratory for practical experience. Engineering, programming and advertising sponsorship aspects of television broadcasting are being worked out in actual practice. Broadcasters, engineers, producers, performers, advertisers, advertising men and others interested in television have been granted use of station facilities.

FACILITIES

Technical facilities of Station WRGB include a direct pickup studio for live talent productions, located at 60 Washington Ave., Schenectady. It is fitted with five camera channels. A film scanning room has two cameras and three motion picture projectors—two for 35 mm. and one for 16 mm. films. Film slide, lantern slide and projectors of small opaque pictures and objects are also available.

Signals from the WRGB transmitter, located in the Helderberg mountains, New Scotland, N. Y., near Schenectady, are received over a service area with a radius of approximately 50 miles, which includes the Troy-Albany-Schenectady area.

WRGB claims the first television relay station, picking up programs from NBC in New York City, 129 miles away, and relaying them to the Capitol district.

ALLOCATION (*Continued from Page* 1009)

tion is associated and the transmitter should be located so as to provide the maximum service to the city or metropolitan district served.

§3.605 *Rural stations.*—(a) Licensees of Metropolitan stations or applicants who desire to qualify as licensees of Rural stations must make a special showing to the Commission that they propose to serve an area more extensive than that served by a Metropolitan station and that the additional area proposed to be served is predominantly rural in character. In addition, a showing must be made that such use of the channel will not cause objectionable interference to other television stations or prevent the assignment of other television stations where there is reasonable evidence of the probability of such station being located in the future.

(b) Channels 2 through 13 are available for assignment to Rural stations. The service area of Rural stations will be determined by the Commission.

(c) The main studio of Rural stations shall be located within the 500 uv/m contour:

§3.606 *Table Showing Allocation of Television Channels to Metropolitan Districts in the United States.*—(a) The Table below sets forth the channels which are available for the areas indicated. The table below will be revised from time to time depending upon the demand for television stations which may exist in the various cities. Where it is desired to use a different channel in any such area, or to use one of the channels in another area conflicting therewith, it must be shown that public interest, convenience, or necessity will be better served thereby than by the allocation set forth in the table.

(b) Only the first 140 metropolitan districts are listed in the table below. Stations in other metropolitan or city areas not listed in the table will not be assigned closer than 150 miles on the same channel or 75 miles on adjacent channels, except upon an adequate showing that public interest, convenience, or necessity would be better served thereby or that by using lower power or by other means equivalent protection is provided.

(c) Persons desiring to enter into a voluntary sharing arrangement of a television channel may file application therefor with the Commission pursuant to the provisions of Section 3.661(c).

www.americanradiohistory.com

Rules Governing Video Broadcast Stations

RULES Governing Television Broadcast Stations as promulgated by the FCC, include Administrative Procedure and those relating to Licensing Policies. Both these are given below in full.

Subpart D. of the Commission's Rules, also include Designation of Television Channels, Community and Metropolitan Stations and Table Showing Allocation of Television Channels to Metropolitan Districts in the United States. These will be found in the preceding pages of Television Year Book.

Administrative Procedure

§ 3.611 **Application for television stations.**—Each applicant for a construction permit for a new television broadcast station, change in facilities of any existing television broadcast station, or television station license or modification of license shall file with the Commission in Washington, D. C., three copies of applications on the appropriate form designated by the Commission and a like number of exhibits and other papers incorporated therein and made a part thereof. Only the original copy need be sworn to. If the application is for a construction permit for a new television station, Form FCC No. 330 should be filed; for a television station license, Form FCC No. 331 should be filed; and for modification of a television station license or for change in facilities of an existing television station, Form FCC No. 333 should be filed.

§ 3.612 **Full disclosures.**—Each application shall contain full and complete disclosures with regard to the real party or parties in interest, and their legal, technical, financial, and other qualifications, and as to all matters and things required to be disclosed by the application forms.

§ 3.613 **Installation or removal of apparatus.**—Applications for construction permit or modification thereof, involving removal of existing transmitting apparatus and/or installation of new transmitting apparatus, shall be filed at least 60 days prior to the contemplated removal and/or installation.

§ 3.614 **Period of construction.**—Each construction permit will specify a maximum of 60 days from the date of granting thereof as the time within which construction of the station shall begin, and a maximum of six months thereafter as the time within which construction shall be completed and the station ready for operation, unless otherwise determined by the Commission upon proper showing in any particular case.

§ 3.615 **Forfeiture of construction permits: extension of time.**—(a) A construction permit shall be automatically forfeited if the station is not ready for operation within the time specified therein or within such further time as the Commission may have allowed for completion, and a notation of the forfeiture of any construction permit under this provision will be placed in the records of the Commission as of the expiration date.

(b) An application (Form FCC No. 701) for extension of time within which to construct a station shall be filed at least thirty days prior to the expiration date of such permit if the facts supporting such application for extension are known to the applicant in time to permit such filing. In other cases such applications will be accepted upon a showing satisfactory to the Commission of sufficient reasons for filing within less than thirty days prior to the expiration date. Such applications will be granted upon a specific and detailed showing that the failure to complete was due to causes not under the control of the grantee, or upon a specific and detailed showing of other matters sufficient to justify the extension.

www.americanradiohistory.com

§ 3.616 **Equipment tests and proof of performance.**—(a) Upon completion of construction of a television station in exact accordance with the terms of the construction permit, the technical provisions of the application therefor and the rules and regulations and standards of good engineering practice governing television stations and prior to filing of application for license, the permittee is authorized to test the equipment for a period not to exceed 90 days: **Provided,** that the inspector in charge of the district in which the station is located and the Commission are notified 2 days in advance of the beginning of tests.

(b) The Commission may notify the permittee to conduct no tests or may cancel, suspend, or change the date of beginning for the period of such tests as and when such action may appear to be in the public interest, convenience, and necessity.

(c) Within the 90-day period prescribed by this section for equipment tests, field intensity measurements in accordance with the methods prescribed in the Standards of Good Engineering Practice Concerning Television Broadcast Stations shall be submitted to the Commission. The Commission may grant extensions of time upon showing of reasonable need therefor.

§ 3.617 **Program tests.**—(a) When construction and equipment tests are completed in exact accordance with the terms of the construction permit, the technical provisions of the application therefor, and the rules and regulations and standards of good engineering practice governing television stations, and after an application for station license has been filed with the Commission showing the equipment to be in satisfactory operating condition, the permittee is authorized to conduct program tests in exact accordance with the terms of the construction permit for a period not to exceed 30 days: **Provided,** That the inspector in charge of the district in which the station is located and the Commission are notified 2 days in advance of the beginning of such tests.

(b) The Commission reserves the right to cancel such tests or suspend, or change the date of beginning for the period of such tests as and when such action may appear to be in the public interest, convenience, and necessity by notifying the permittee.

(c) The authorization for tests embodied in this section or Section 3.616 shall not be construed as constituting a license to operate but as a necessary part of the construction.

§ 3.618 **Normal license period.**—All television broadcast station licenses will be issued so as to expire at the hour of 3 a.m. E.S.T. ad will be issued for a normal license period of 1 year.

§ 3.619 **License, simultaneous modification and renewal.**—When an application is granted by the Commission necessitating the issuance of a modified license less than 60 days prior to the expiration date of the license sought to be modified, and an application for renewal of said license is granted subsequent or prior thereto (but within 30 days of expiration of the present license) the modified license as well as the renewal license shall be issued to conform to the combined action of the Commission.

§ 3.620 **Renewal of license.**—(a) Unless otherwise directed by the Commission, each application for renewal of a television station license shall be filed at least 60 days prior to the expiration date of the license sought to be renewed (Form FCC No. 311). No application for renewal of license of a television broadcast station will be considered unless there is on file with the Commission, the information currently required by Sections 1.301-1.304, reference to which by date and file number shall be included in the application.

(b) Whenever the Commission regards an application for a renewal of a television station license as essential to the proper conduct of a hearing or investigation, and specifically directs that it be filed by a date certain, such application shall be filed within the time thus specified. If the licensee fails to file such application within the prescribed time, the hearing or investigation shall proceed as if such renewal application had been received.

§ 3.621 **Temporary extension of station licenses.**—Where there is pending before the Commission any application, investigation, or proceeding which, after hearing, might lead to or make necessary the modification of, revocation of, or the refusal to renew an existing television license, the Commission may, in its discretion, grant a temporary extension of such license: **Provided, however,** That no such temporary extension shall be con-

www.americanradiohistory.com

strued as a finding by the Commission that the operation of any radio station thereunder will serve public interest, convenience, and necessity beyond the express terms of such temporary extension of license: **And provided further**, That such temporary extension of license will in no wise affect or limit the action of the Commission with respect to any pending application or proceeding.

§ 3.622 **Repetitious applications.**—(a) Where an applicant has been afforded an opportunity to be heard with respect to a particular application for a new television broadcast station, or for change of existing service or facilities, and the Commission has, after hearing or default, denied the application or dismissed it with prejudice, the Commission will not consider another application for a station of the same class to serve in whole or in part the same area, by the same applicant or by his successor or assignee, or on behalf of or for the benefit of the original parties in interest, until after the lapse of 12 months from the effective date of the Commission's order.

(b) Where an appeal has been taken from the action of the Commission in denying a particular application, another application for the same class of broadcast station and for the same area, in whole or in part, filed by the same applicant or by his successor or assignee, or on behalf or for the benefit of the original parties in interest, will not be considered until the final disposition of such appeal.

§ 3.623 **Assignment or transfer of control.**—(a) **Voluntary**: Application for consent to voluntary assignment of a television station construction permit or license or for consent to voluntary transfer of control of a corporation holding a television station construction permit or license shall be filed with the Commission on Form FCC No. 314 (assignment of license) or Form FCC No. 315 (transfer of control) at least 60 days prior to the contemplated effective date of assignment or transfer of control.

(b) Involuntary: In the event of the death or legal disability of a permittee or licensee, or a member of a partnership, or a person directly or indirectly in control of a corporation, which is a permittee or licensee:

(1) the Commission shall be notified in writing promptly of the occurrence of such death or legal disability, and

(2) within thirty days after the occurrence of such death or legal disability, application on Form FCC No. 314 or 315 shall be filed for consent to involuntary assignment of such television station permit or license or for involuntary transfer of control of such corporation to a person or entity legally qualified to succeed to the foregoing interests under the laws of the place having jurisdiction over the estate involved.

Licensing Policies

§ 3.631 **Exclusive affiliation of station.**—No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied with a network organization[1] under which the station is prevented or hindered from, or penalized for, broadcasting the programs of any other network organization.

§ 3.632 **Territorial exclusivity.**—No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which prevents or hinders another broadcast station serving substantially the same area from broadcasting the network's programs not taken by the former station, or which prevents or hinders another broadcast station serving a substantially different area from broadcasting any program of the network organization. . . .

§ 3.633 **Term of affiliation.**—No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which provides, by original terms, provisions for renewal, or otherwise for the affiliation of the station with the network organization for a period longer than two years: **Provided**, that a contract, arrangement, or understanding for a period up to two years, may be entered into within six months prior to the commencement of such period.

§ 3.634 **Option time.**—No license shall be granted to a television broadcast station which options[1] for network programs any time subject to call on less than 56 days' notice, or more time than a total of three hours[2] within each of four segments of the broadcast day. . . .

www.americanradiohistory.com

§ 3.635 **Right to reject programs.**—No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied, with a network organization which (a), with respect to programs offered pursuant to an affiliation contract, prevents or hinders the station from rejecting or refusing network programs which the station reasonably believes to be unsatisfactory or unsuitable; or which (b), with respect to network programs so offered or already contracted for, prevents the station from rejecting or refusing any program which, in its opinion, is contrary to the public interest, or from substituting a program of outstanding local or national importance.

[1] As used in this section, an option is any contract, arrangement, or understanding, express or implied, between a station and a network organization which prevents or hinders the station from scheduling programs before the network agrees to utilize the time during which such programs are scheduled, or which requires the station to clear time already scheduled when the network organization seeks to utilize the time.

[2] All time options permitted under this section must be specified clock hours, expressed in terms of any time system set forth in the contract agreed upon by the station and network organization. Shifts from daylight saving to standard time or vice versa may or may not shift the specified hours correspondingly as agreed by the station and network organization.

[3] These segments are to be determined for each station in terms of local time at the location of the station but may remain constant throughout the year regardless of shifts from standard to daylight saving time or vice versa.

§ 3.636 **Network ownership of stations.**—No license shall be granted to a network organization, or to any person directly or indirectly controlled by or under common control[1] of a network organization, for a television broadcast station in any locality where the existing television broadcast stations are so few or of such unequal desirability (in terms of coverage, power, frequency, or other related matters) that competition would be substantially restrained by such licensing.

§ 3.637 **Dual network operation.**—No license shall be issued to a television broadcast station affiliated with a network organization which maintains more than one network of television broadcast stations: **Provided,** that this regulation shall not be applicable if such networks are not operated simultaneously, or if there is no substantial overlap in the territory served by the group of stations comprising each such network.

§ 3.638 **Control by networks of station rates.**—No license shall be granted to a television broadcast station having any contract, arrangement, or understanding, express or implied with a network organization under which the station is prevented or hindered from, or penalized for, fixing or altering its rates for the sale of broadcast time for other than the network's programs.

§ 3.639 **Use of common antenna site.**—No television license or renewal of a television license will be granted to any person who owns, leases, or controls a particular site which is peculiarly suitable for television broadcasting in a particular area and (1) which is not available for use by other television licensees; and (2) no other comparable site is available in the area; and (3) where the exclusive use of such site by the applicant or licensee would unduly limit the number of television stations that can be authorized in a particular area or would unduly restrict competition among television stations.

§ 3.640 **Multiple ownership.**—(a) No person (including all persons under common control)[2] shall, directly or indirectly, own, operate, or control more than one television broadcast station that would serve substantially the same service area as another television broadcast station owned, operated, or controlled by such person.

(b No person (including all persons under common control shall, directly or indirectly, own, operate, or control more than one television broadcast station, except upon a showing (1 that such ownership, operation, or control would foster competition among television broadcast stations or provide a television broadcasting service distinct and separate from existing services, and (2 that such ownership, operation, or control would not result in the concentration of control of television broadcasting facilities in a manner inconsistent with public interest, convenience, or necessity; provided, however, that the Commission will consider the ownership, operation, or control of more than five television broadcast stations to constitute the concentration of control of television broadcasting facilities in a manner inconsistent with public interest, convenience, or necessity.

[1] The word "control" as used herein, is not limited to full control but includes such a measure of control as would substantially affect the availability of the station to other networks.

[2] The word "control" as used herein is not limited to majority stock ownership, but includes actual working control in whatever manner exercised.

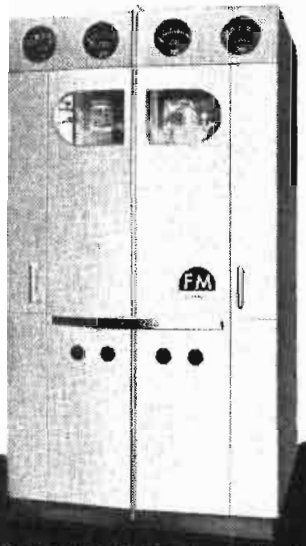
FOR BETTER BROADCASTING

AM *or* FM

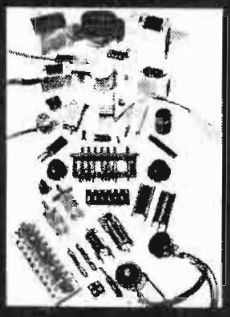
More and more broadcasters are turning to Western Electric for better broadcasting equipment. From microphones through amplifiers and transmitters to antenna coupling units—AM or FM—Western Electric has a complete line of products to serve the broadcasting industry.



AM TRANSMITTERS—A complete line from 250 watts to 50 KW for all AM broadcasting needs.

FM TRANSMITTERS—A complete line of FM transmitters to meet the most exacting standards.

COMPONENTS—Many miscellaneous elements such as plugs, jacks, condensers, thermistors, relays and vacuum tubes to help you "roll your own."



AMPLIFIERS—For pre-mixing, line, program and monitoring. A complete line to fulfill every requirement.

AUDIO FACILITIES—For all studio applications including standard console, remote, and special "custom" designed studio and master control equipment.

ANTENNA EQUIPMENT—including phasing, coupling, and monitoring equipment.

MICROPHONES—that will continue to set the standard for better broadcasting.

Distributed by Graybar

For deliveries, check your nearest Graybar house. Many items are carried in stock.

Proper Equipment For Television

By P. G. CALDWELL, Television Equipment Sales Manager, GE

AT THE outset, may I remind the reader, that proper master control equipment is necessary in planning for the development of your television station. This article briefly explains why the initial purchase of flexible equipment is necessary for orderly expansion from a small community television station to the larger metropolitan type as this new medium grows.

A study of the probable growth of commercial television, with full regard for the economic problems involved, indicates that a new television broadcaster will be interested primarily in purchasing equipment initially which will allow for easy future expansion. Only a few of the over 400 possible licensees in this country will be able to justify elaborate facilities at the start.

Basic Equipment

It is of interest, therefore, to examine the basic equipment needed for a television station and see how flexibility may be built in and future expansion made easy.

A small community station undoubtedly will derive most of its programming from motion picture film (16 mm), outside pickup of special events, and perhaps a very limited studio operation capable of handling news reports and commercials. These announcements can be made with a permanently installed camera channel or by studio operation of the outside pickup cameras. Later, when network program service will be available, this will obviously be an immediate and rich source of new programs.

To carry out a program service such as described in the preceding paragraph, a small station will obviously require a visual and aural transmitter, an antenna system, an outside pickup unit, and film projector equipment. It will also need a flexible master control system capable of monitoring and switching. Monitoring must be available to at least watch the outgoing program and the program coming next. General Electric has designed a master control desk which basically provides facilities for switching and monitoring (a) outside pickups, (b) networks, and (c) programs from as many as six studios. (Film would be fed through one of the studio channels.) This master control desk incorporates a distribution console to provide switching of the above program sources, and also two monitor consoles allowing the basic monitoring described agove. Extra monitor consoles may be added as desired. All of these monitors will handle composite television signals.

Other Facilities

In addition to the facilities necessary for monitoring and switching the picture, the master control desk has provision for switching the audio portion of the program simultaneously with the picture. This feature simplifies the operator's job and minimizes errors in handling the program. Conveniently located on the distribution console is a talk-back microphone for calling any desired portion of the station as well as a telephone handset for private conversations.

As previously mentioned, the master control desk provides for expansion to handle the output from as many as six studios. In this expansion process each studio should have its own control room with camera monitors and program console* so that it may operate as an individual program unit, independent of any other studio in the building. The program from each studio may then be fed to the master control desk where the final output of the station is determined.

Adding Studios

A television broadcaster who has purchased this flexible type of master control equipment for a community type station is automatically in a position to add one or more studios, or extra outside pickup circuits without additional expenditure for master control equipment.

When the decision has been made to add one or two fully-equipped studios to the small station, thus bringing it to the status of a metropolitan station, careful study should be given to the equipment

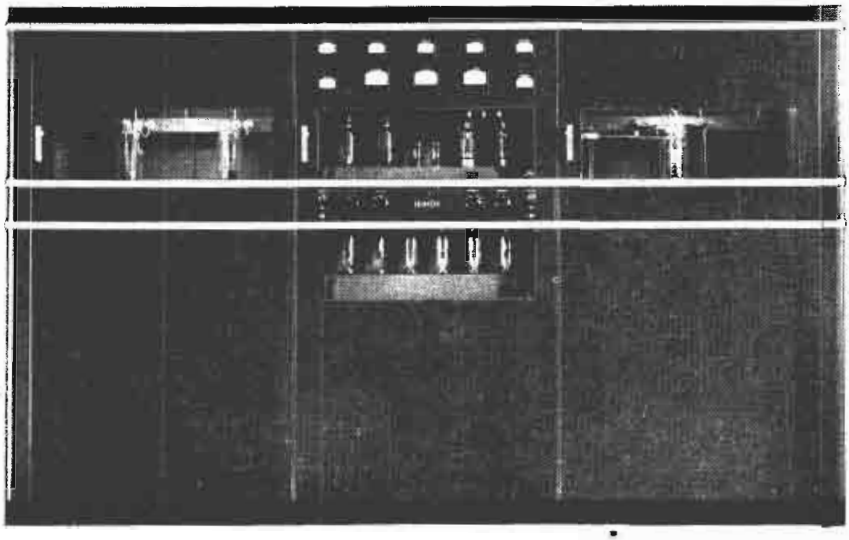
The New Collins 21A, 5kw Broadcast Transmitter



Fulfilling the Tradition of Collins Quality Leadership

THE 21A is a thoroughly developed 5 kw AM broadcast transmitter, and an excellent example of characteristically superior Collins engineering and construction.

Based on sound, well-proved principles of design, the 21A has been completely modernized within recent months. New components of improved design, with longer life and higher safety factors than were previously available, assure reliable continuous operation.

The response curve is flat, within ± ½ db. from 30 to 10,000 cycles Reduced power to 1 kw is obtained by instantaneous lowering of plate voltages, permitting uninterrupted program transmission.

We will be glad to send you detailed information regarding the 21A, other Collins transmitters, the 12Y remote amplifier, the 12Z four channel remote amplifier and Collins high quality studio equipment. Collins Radio Company, Cedar Rapids, Iowa; 11 West 42nd Street, New York 18, N. Y.

FOR BROADCASTING QUALITY, IT'S . . .

COLLINS

Collins equipment is sold in Canada by Collins-Fisher, Ltd., Montreal.

The Collins 12Y Remote Amplifier

A one channel remote amplifier for unattended operation from a 115 volt a.c. power source, the 12Y provides the advantages of quick set-up, small size, light weight, high fidelity, simple operation, utmost reliability and low cost. It is practically hum free due to the removal of the isolation transformer, which is in the power cable.

www.americanradiohistory.com

New Tubes-Circuits FM-AM '46 Feature

By MEADE BRUNET and J. B. ELLIOTT, RCA Victor Division

BROADCAST equipment of new and improved commercial design for both standard broadcast and frequency modulation radio stations has been placed in production by the Engineering Products Division of the Radio Corporation of America and initial units are scheduled to come off production lines during the first part of 1946.

Limited quantities of new RCA Victor table model radios and Victrola radiophonographs, and a pocket-size Personal Radio, have already been shipped from the company's plants to its distributors throughout the country, and production is being increased as rapidly as possible.

RCA Victor will supply, as it did before the war, all of the equipment needed for radio broadcasting stations, from microphone to antenna.

•

Initial units of FM equipment, to be available in the spring, will include transmitters with output power ratings of 250 watts, 1 kilowatt, and 3 kilowatts, while 10-kilowatt and 50-kilowatt FM transmitters are scheduled to be ready for delivery later.

Standard broadcast (AM) transmitters, the first of which are also due to leave production lines during the first quarter, will include units with output power ratings of 250 watts, 1 kilowatt, 5 kilowatts, 10 kilowatts, and 50 kilowatts.

•

Among numerous design and circuit improvements in the company's initial postwar line of broadcast equipment, an outstanding feature is a new grounded-grid amplifier circuit which is being incorporated in all FM transmitters. This circuit provides a marked improvement in amplifier stability at the high frequencies used for FM broadcasting. It also permits the use of smaller tubes than those required in pre-war FM transmitters, making possible a reduction in operating costs.

Increased transmitter efficiency and reduced operating costs have also been achieved in the new AM transmitters through the use of new type tubes which were not available before the war. To meet special demands of the armed services, RCA designed and built 200 entirely new types of electron tubes, many of which will have applications in new radio transmitters, control and monitoring units, and receivers.

•

The market which is waiting represents the pent-up demand accumulated during four years of war work. There are now before the Federal Communications Commission a total of more than a thousand applications for new frequency allocations for radio broadcast purposes alone, exclusive of television—about 675 for FM stations and 425 for AM.

•

A design and engineering achievement featured in RCA Victor promotion of all of its postwar home instruments is the "Golden Throat," signifying exact coordination of the three basic elements essential to convert inaudible radio waves into audible sound waves—the electronic amplifier system, the loudspeaker, and acoustical qualities of the cabinet. The perfect matching of these requisites for life-like, balanced reproduction is declared to be the result of 26 years of RCA engineering research, blended with Victor's 47-year musical heritage.

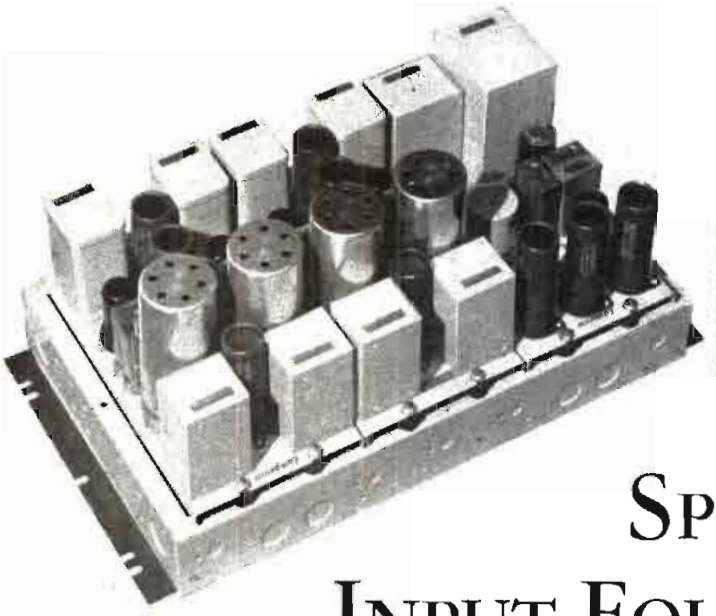
Production is continuing on receivers and combination instruments at a pace limited only by the supply of materials.

RCA Victor will also offer a comprehensive line of FM radio receivers, including both table models and consoles, all featuring a new "ratio detector" circuit which is insensitive to electrical interference of all kinds, whether man-made by ignition systems, oil burners, or domestic appliances, or natural, such as atmospheric static. These receivers will also be equipped for standard broadcast reception.

•

Not only is the new circuit free of a critical threshold signal level, operating effectively regardless of the strength of the received signal, but its use eliminates the need for special tubes and parts formerly required.

www.americanradiohistory.com



AT LEFT. Two Langevin Type 111-A Dual Pre-Amplifiers and one Langevin 102-A Line-Amplifier mounted on a 3-A Mounting Frame. This unit provides four pre-amplifiers and one line-amplifier, or three pre-amplifiers, one booster-amplifier and one line-amplifier, all in 10½" of rack mounting space. External power supply such as the Langevin 201-B Rectifier, as shown below is required.

SPEECH INPUT EQUIPMENT

Worthy of an Engineer's Careful Consideration

TYPE 102A Amplifier is one of the 102 Series Line Amplifiers of which four different types are available. The "A" is mostly used to drive the line after the master gain control. It is quiet, has excellent frequency characteristic and ample power output with low distortion products.

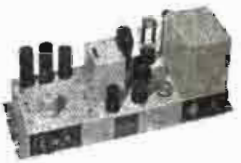
The 201-B Rectifier is one of the 201 Series Rectifiers, of which two types are available, the "B" having additional filtering, thereby giving a slightly lower ripple content than the "A." This unit is capable of supplying power for one 102 Series Line Amplifier and three 111 Pre-Amplifiers (six pre-amplifiers).

Every unit of Langevin speech input equipment is held to a rigid standard of performance. These units may be cascaded in accordance with good engineering practices and still be well within the allowable limits of FM requirements as to frequency response, noise and distortion products.

All Langevin speech input equipment units are mounted on standard 5¼" x 10½ chassis. Three of these units can be mounted on a Langevin 3-A Mounting Frame, which occupies 10½" of space on any standard rack. Wall mounting steel cabinets for housing these units are also available.

We are proud of the products which bear the name ***Langevin***. It will only appear on good apparatus.

The 111-A Amplifier consists of two individual pre-amplifiers on a single chassis for use in high quality speech input equipment. Its compact unitized construction saves rack space. Input impedances of 30, 250 and 600 ohms; output impedance 600 ohms. It is quiet and has excellent frequency characteristics and ample power output with low distortion products.



The 108-A Amplifier is one of the 108 Series Monitor Amplifiers, of which four different types are available. The "A" is ordinarily used to drive a monitor system from a 600 ohm or bridging source. Its distortion is low for this type of service. It is quiet and has ample power with excellent frequency characteristics.

Expanded Facilities Is The 1946 By-Word

By RALPH C. POWELL, General Sales Mgr., Presto Recording Corp.

AS THIS is written, radio broadcasting and communication facilities are about to experience the greatest expansion in their history.

New frequency channels have been opened for use by FM and Television Stations. Additional stations are being licensed in the standard broadcasting band, radio relay links spanning the country are about to replace or augment our wire communication system. International short-wave broadcasting facilities, built for war-time services, are making American entertainment available throughout the world.

Walky-talkies will shortly be in private use as well as radio communication equipment for private automobiles, planes and boats. Pocket radios no larger than your hand are in production.

Most important from an economic standpoint will be the expansion of our broadcasting facilities. It has been estimated that over 2,000 FM broadcasting stations and 250 television stations, will be placed in operation during the next three years. Assuming that a total of 2,500 stations, standard, FM and television are erected, we can produce some interesting figures on equipment and services that will be required in addition to the broadcasting equipment itself. For example, the erection of each of these stations will call for the erection and/or alteration of 3000 to 3500 buildings, the fabrication and erection of 2,500 steel towers, legal and engineering services, pianos, furniture, office equipment, telephone, electric power, water services and employment of possibly 30,000 additional technical, program, sales and administrative personnel.

•

According to recent figures, the cost of placing a local standard (250 watt) broadcasting station on the air with all equipment ready for business with reasonable allowance for working capital to start operation, will be between 25 and 30 thousand dollars. The cost of a community FM station ready for business will be between 35 and 50 thousand dollars, the metropolitan FM station 100 thousand dollars, the community television station assuming that their operation will include mainly the broadcasting of motion picture entertainment and the relaying of programs from nearby metropolitan television stations 200 to 250 thousand dollars, metropolitan television stations, other than those in the major talent centers, 500 thousand dollars.

Taking average figures for existing stations as compiled by the FCC the annual revenue of a local standard broadcasting station will be between 55 and 60 thousand dollars and the profit on operations about 8.5 per cent. In the case of the community FM station, the revenue, after it becomes established, may approach the same figure, but such earnings will have to await the general distribution and use of high frequency FM receivers in their locality. Local FM broadcasting service is the key to home receiver sales and conversely receiver sales are essential to the profitable operation of an FM station.

The community television station operating mainly to rebroadcast programs from other stations along with motion pictures, will operate at an expense of around 120 thousand dollars annually, and the operating revenue at such time as a sufficient number of receivers are in use to provide a commercial advertising medium, might approach 160 thousand dollars a year.

•

The figures for revenue and operating expense for a metropolitan television station may vary over an extremely wide range, depending upon the availability of a network connection and the working capital available for production of live talent programs during the period in which television receivers are coming into use. It has been variously estimated that the minimum cost would be 350 thousand dollars annually and that if an ambitious program schedule were undertaken including live studio programs and pickup of outside events, this cost might increase to over 750 thousand dollars annually. The revenue will be proportional to the program service rendered.

RMA Converting To Peacetime Role

By BOND GEDDES, Executive Vice-President, RMA

THE Radio Manufacturers Association represents all phases of the radio manufacturing industry. It includes in its membership—now at a record peak of more than 300—most set manufacturers and a large representation of the component producers: radio parts, tube, transmitter, and amplifier and sound equipment manufacturers.

Having achieved a remarkable wartime production, during which the productive capacity of the industry was multiplied about 1200 per cent, the radio industry is resuming its peacetime job with bright prospects despite current handicaps which have retarded reconversion several months.

To better serve the industry, RMA is reviving many of its pre-war services and establishing new aids necessitated by post-war conditions. Among the pre-war services being resumed on a more extensive scale are industry statistics on both end equipment and components.

•

One of the principal new services is an industrial relations program to provide a variety of information to RMA members on wages, hours, labor practices, collective bargaining technique, and the like.

Besides the long-established engineering standards service carried on by the RMA Engineering Department, RMA has recently inaugurated a uniform system for identifying the source and the date of production of radio products.

Civilian radio production in 1945 was disappointingly small. Only about 300,000 radio sets were manufactured between V-J Day and the end of the year despite an optimistic forecast of the War Production Board that the industry's capacity would permit a production of 3,500,000 sets during that period. Pricing difficulties, particularly in the radio parts field, plus some material shortages and labor readjustments, were chiefly responsible for this failure of the industry to get going as quickly as had been hoped.

Indicative of the determination of many of the war-born radio manufacturers to remain in the post-war industry of FM, television and industrial electronics is the growing membership of RMA. At the first quarterly meeting of the RMA Board of Directors this year 35 new members were admitted, and others are being received constantly. There are more than twice as many radio set manufacturers licensed now than there were before the war, and the parts industry is equally expanded.

•

While it is too early to estimate 1946 production, due to the many uncertainties, manufacturers agree that the first full year of production after volume output is achieved will far surpass the peak pre-war of 1941 when nearly 14,000,000 sets were sold. In addition to a tremendous backlog of would-be buyers whose radios are outmoded or outworn, FM and television broadcasting as they develop will open new markets. Practically every family in the United States is a potential buyer of an FM or AM-FM set and a television receiver once the transmitting services are available.

RMA is a trade association which not only is made up of radio manufacturers but is governed by them as well. Besides a Board of Directors, a third of which is elected annually for three-year terms, the Association includes numerous committees charged with responsibilities of studying and acting upon problems confronting their segments of the industry.

There are five divisions with RMA: the Set, Tube, Transmitter, Parts, Amplifier & Sound Equipment. A sixth division probably may be formed later this year out of a newly-organized section of the Parts Division. This is the Amateur Radio Activities Section which is concerned with servicing and promoting the interests of the growing army of radio amateurs.

•

RMA is ever alert to the interests of the radio industry as recently when certain government agencies threatened to discard manufacturer-agent contracts for the disposal of radio and electronic war material Surpluses.

Extensive Gains In Communications

By WES SUMMERFIELD, Chief Sales Researcher, Press Wireless Mfgr.

VISITORS at the Winter Technical Meeting of the Institute of Radio Engineers held at the Hotel Astor in New York City last January saw an imposing display of radio telecommunications equipment in the spot-lit stage exhibit of Press Wireless. They saw a radio teleprinter circuit in actual simultaneous operation with voice broadcast on a single radio-frequency carrier; facsimile equipment transmitting and recording together with line and compressor amplifiers, dual-diversity radio receivers, a newly developed frequency shift keyer and monitor, single receivers, tone keyers, electronic rectifier-drivers, VT keyers and many other high-grade radio communications apparatus constituting nearly a score of equipment engineered and manufactured by Press Wireless Manufacturing Corporation. This represented a few of the important items developed by this aggressive young company and brought to their present state of perfection over a scant sixteen years. Huge fifty-kilowatt, ten-ton PW radio transmitters and their smaller twenty-kilowatt companions were not shown nor were many other units including the five, two-and-a-half kilowatt or the famous four-hundred watt transmitters. But this display marked a significant page in the history of PW.

•

During and immediately following World War I the strangle hold of an international cartel on cable services bottle-necked press traffic to paralyzing proportions. Enjoying a higher tariff rate commercial messages moved with top priority while the world waited anxiously for news dispatches that piled high in cable traffic offices for days of delay and often were never transmitted at all. To break this hold on the transmission of international news a small group of energetic United States publishers made an experiment. They tried trans-Atlantic radio! Their humble but diligent efforts met instantly with a great promise of success. Seven of these publishers and four world-wide news services formed and incorporated Press Wireless in 1929. The following year this new enterprise was under way with an intercept service between Halifax, Nova Scotia, and New York City. This was soon followed by the installation of New York to Chicago and Los Angeles circuits, then a service to Mexico City and Paris. Growth of this service has been rapid and continuous until today Press Wireless operates 27 major press circuits reaching more than 90 per cent of the civilized world. In sixteen years PW has advanced from a humble experiment to a significant global telecommunications operation. Last year alone PW handled over 154-million words of news dispatches together with an amazing volume of radio-photos besides thousands of hours of program transmission service for the broadcasting networks.

•

To accomplish and maintain these world-wide circuits required the design and development of new equipment and methods. Press Wireless has pioneered in the development of entire systems for 24-hour-a-day 365-days-a-year telecommunications circuits over long and short haul distances around the globe and during World War II initiated a manufacturing operation to supply our Armed Forces with high quality dependable radio equipment.

Landed on the Normandy beach in France D-Day-plus-4 a PW crew unloaded and installed directly behind the front lines a Press Wireless 400-watt transmitter which was destined to make international communications history. This transmitter and another "400" mounted on army trucks followed the allied armies through France, Belgium, Holland and to Germany transmitting directly to the United States war correspondents' dispatches from directly behind the lines. Another famous "Fighting 400" was installed on Leyte immediately after the beginning of the Philippine invasion and again carried to the world "news in the making."

•

Among the outstanding achievements of PW engineers has been the successful

www.americanradiohistory.com

and practical development of Radio Frequency Carrier Shift or "Frequency Shift" transmission which presages a tremendous advancement in the science of radio communications. The advantages of this new FS system of transmission is evidenced in the rapidly increasing number of installations throughout the world.

On December 1, 1945, the Manufacturing Division of Press Wireless, Inc., was re-formed and re-organized into a separate operation set up as Press Wireless Manufacturing Corporation with Executive and Sales Offices in the Times Square Building, New York City. Manufacturing facilities have been considerably expanded at Hicksville, Long Island, providing for mass production of communications equipment from small line-operating units up to huge 50,000 watt radio transmitters.

•

A new modern engineering laboratory containing approximately 18,000 square feet, located in Long Island City, houses the PW engineering staff which is designing and developing diversity remote-controlled radio receivers, FS keyers, FS converters, precision tunable h-f oscillators, monitors, electronic drivers, facsimile and photo transmission units, high and medium powered radio transmitters and scores of other telecommunications apparati all of modern design and founded solidly on years of significant radio communications engineering experience and know-how in meeting the toughest specifications anywhere—those of the press of the United States.

Tomorrow Press Wireless, Inc., will transmit and receive many thousands of words of press traffic across the oceans and continents of the world, and tomorrow Press Wireless Manufactnring Corporation, with its newly expanded facilities for engineering and manufacturing, will build radio communications equipment for entire network systems for commercial airlines and foreign governments on every continent.

TELE EQUIPMENT

...(*Continued from Page* 1037)

purchased for this purpose, and to its location in the broadcast plant.

A television station with even a single studio requires a considerable number of equipment racks—some for sound and some for picture equipment. (There is one rack, for example, for each studio camera.) Experience at General Electric's television station WRGB has shown that these racks should be located in an equipment room separate from any studio. This room would also include the studio-to-transmitter link equipment plus any other required terminal apparatus. In some cases the equipment room might also house the master control desk.

Additional Space

There are several advantages in having a separate room for the bulk of the apparatus needed in the studio building. For one thing, maintenance can be carried on without interfering with any of the program personnel. Also, the heat generated by the large number of tubes in the various chassis is kept away from performers, producers, and technical operators.

Use of a separate equipment room allows each studio to be a self-contained unit with only the cameras, microphones, accessories and other necessary control room equipment. The program and technical personnel of a particular studio may thus operate independently of any other studio or of the master control room. This makes for smooth programming as a given studio becomes simply an additional program source added to the station's facilities.

Undoubtedly each television station will have problems and possibilities peculiar to its own service area.

To meet these demands, and to allow for future expansion, the G.E. television equipment has been designed with an inherent flexibility that assures an orderly growth from a small community station to one of the larger metropolitan types.

* See "Versatile Multichannel Television Control Equipment" by Norgaard and Jones, May, 1941, Proceedings of I.R.E.

FM Position Solidified In '45

By ROBERT BARTLEY, Director, FM Dept. NAB

THE past year seems destined to become known as the one in which the foundations were solidified for the future of American broadcasting, FM. The merger of the Frequency Modulation Broadcasters, Inc., with the National Association of Broadcasters set the pattern for self-administration in the traditional American system, and the assignment of the 88-108 mc. band gave FM its long-awaited permanent position in the radio spectrum.

•

At a meeting held in Washington last October, representatives appointed by the FMBI and NAB boards worked out final details of the merger under which FMBI activities were transferred to the newly created FM Department of the NAB, with NAB memberships provided for FMBI members. The joint committee of the two organizations became the executive committee of the NAB's FM Department, with Walter Damm, FMBI president, as chairman.

Robert Bartley, the first secretary of FMBI and for the past two years director of government relations for NAB, was named director of the new department, which will have headquarters in the old FMBI offices at 1730 I Street, N.W., in Washington.

As one of its primary objectives, the NAB's FM Department is called upon "to seek to secure the assignment of sufficient additional channels for FM so that broadcasting may develop in the public interest to its fullest potentialities . . ." In one of its first official acts, the Department helped bring about the new system of consecutive numbering for FM channels.

•

Announcement of the switch to the higher frequencies brought about renewed protests by Edwin H. Armstrong, inventor of FM, and the Zenith Corp., both of whom objected to the 88-108 band on grounds that it would not provide satisfactory rural service. Following several stormy sessions with the FCC, Zenith's proposal that both the 88-108 and the 44-50 bands be used was dropped by the commission.

During the year, FM licenses were sought by many newcomers to radio. Outstanding among these was the International Ladies Garment Workers Union, which has applied for licenses in New York, Philadelphia, Boston, Los Angeles, Chattanooga (conditional permit granted) and St. Louis. The union, which has retained Morris Novik, former director of WNYC, as radio consultant plans to operate the stations on a non-profit, community basis, with heavy public service programming. Conditional grants have been awarded also to the United Auto Workers, CIO, in Detroit, and to the Amalgamated Clothing Workers, CIO, Rochester, N. Y.

•

While some labor organizations sought to hasten the advent of FM, James C. Petrillo's American Federation of Musicians threw a wrench into the works by demanding added musicians where AM musical shows were duplicated on FM outlets. The edict, in effect, forced network-owned FM stations off the air. Settlement of the dispute is hoped to result from the NAB-AFM meetings slated for April.

With the first twenty FM channels—between 88 and 92 mc.—reserved for non-commercial educational operations by the FCC, the educational aspects of FM took on added importance. Traditionally the leader in educational radio, the Mid-West has again taken the lead with state-wide educational FM webs planned for Wisconsin and Ohio.

•

As of Mar. 8, 1946, the FCC had granted conditional licenses to 352 FM stations, with about 400 additional applications still pending, and Commission officials forecast several thousand FM outlets throughout the country "in a few years time."

FM Networks For Educational Use

By GEORGE JENNINGS, Assoc. Dir., Radio Council, Chicago Public Schools

THE year 1946 will see a great increase in the number of Frequency Modulation stations, owned and operated by school systems, universities, schools and colleges, and in some instances by "radio councils" reporting directly to state universities or state superintendents of education.

Under the leadership of the United States Office of Education and through such organizations as the Chicago School Broadcast Conference and the Association for Education by Radio interest in FM for educational use has been greatly stimulated. And this interest, now that equipment is again available, is being translated into specific action by local and state groups.

•

The University of Wisconsin in the summer of 1945 announced the organization of a state-wide Radio Council to implement the setting up of a state-wide FM network, and late in 1945 the Council, through Harold McCarty, Director of station WHA, announced that funds had been granted by the state legislature and applications had been presented to the FCC for the installation of two FM transmitters, the first "leg" in a six station relay system which will cover the state.

In Michigan, under the chairmanship of Joseph E. Maddy of the University of Michigan, a state-wide plan of FM coverage has been worked out, and the coming year will probably see the start of that service to the people of the state. Louisiana, Kentucky, Illinois, Ohio, Iowa and some twenty other states have evinced enough interest in FM state-wide coverage for educational purposes to have surveys made of possible transmitter locations.

•

All this activity is a healthful sign, providing in the plans the problem of programming such stations and networks is thoroughly considered.

•

According to some of the plans for state-wide network operation, various schools or universities within the state are to assume responsibility for certain programs to be fed to the network; in other words, the local stations will do the bulk of their local programming, taking from the net and feeding to the net only those programs of state-wide interest. This plan might cast a heavier burden on the larger institutions, such as state universities, and it might also be a source of friction within the network; i.e. the smaller schools might possibly present the question, "Is the state-wide FM network being hogged by the University or by the state department of education?"

•

In so far as hook-ups between states is concerned, there is no reason whatever that such might not be done. This is particularly true in the Middle-west, where there already have been, from time to time, hook-ups between the state owned stations, such as WILL at Urbana; WSUI, at Iowa City; and WHA at Madison. It is quite conceivable that when and if Ohio, Michigan, Indiana, Illinois, Wisconsin and Iowa have state-wide FM networks various stations within the net may take responsibility for specific series of programs in definite subjects: for example, WBOE in Cleveland might very well assume the responsibility of doing an elementary art program for the six state area; WBEZ in Chicago might assume the responsibility of doing a series in American history; WHA at Madison might very well do a science program.

•

Network operation is going to involve several problems the local school stations do not at present have to cope with. The problem of integrating schedules, clearing time, different hours of operation, wire or relay costs, all enter the picture.

Ideally, a network programming division should be set up to operate within the educational field exactly as the network operates within the commercial field. This presents the problem of financing, headquarters, and the employment of staff. Somewhere in the picture there would have to be a "Czar" (as the sports-writer puts it) of educational broadcasting in the network area.

AIR PRESS
TELEFAX ILLUSTRATED NEWS

Pictures and printing broadcast to homes

With Finch Facsimile equipment, illustrated printed matter such as newspapers or magazines can be sent by radio to homes. Stations are now being licensed to render this service. Home recorders and recording paper will be moderately priced. Broadcasts will include all news and features such as cartoons, market reports, photographs, and maps besides illustrated and printed advertisements. In one hour, the equivalent of more than twenty pages of tabloid size can be transmitted and received.
