## National Music Week

**T**HE week of May 6th to 12th has been designated Music Week. It is particularly fitting that the radio public should help to celebrate this week. Radio and broadcasting without music would be like a railroad train without the engine or an automobile with no gasoline. We should all get tired in a very short time of listening in to just talk.

Music, since the early days of history, has always entered into the culture of all nations. Most countries have music that is distinctive. It is easy to distinguish an Italian, Spanish, Irish, Scotch air as soon as you hear it, and it seems to fit the natures of those inhabiting these countries. So we have music for all moods and fancies. Music can inspire us when we hear our national anthems, and can make us sad when we hear funeral dirges. The stirring tones from a military band have won many a battle, and the soothing notes of a hymn have saved many a soul. We all remember with reverence the songs with which our mothers used to lull us to sleep as children, and who has not felt the inspiration of the wedding march when some friend has left the ranks of the bachelors?

Of all the arts, music is held in the most reverence and is enjoyed by all peoples under all climes.

Probably radio has done more in its short existence to educate the public in music than any other medium in its history, and the composer and publisher owe much to the broadcaster for the means he provides for delivering new music and songs to the buying public.

## Copyrights and the Ether

Whether copyright laws will apply to compositions broadcast in the ether, requiring payments of royalties to the authors, composers and publishers by the broadcasting stations, is now up to the Senate Patent Committee. Considering the mass of testimony, pro and con, given in two days of hearing on the amendment to the Copyright Laws proposed by Senator C. C. Dill, which would eliminate broadcasters from paying fees to copyright holders, it may be some time before the Committee can digest the matter and make a report.

Senator Dill says he is personally interested in keeping radio free to the people, and he means it. Like free speech, religion and the freedom of the press, he wants radio un-handicapped and un-controlled. If moving pictures and automobiles took their people out of their homes, radio, he asserts, has a tendency to bring them back. He believes the listener-in should not be taxed, and is confident that through radio a universal language will develop which will better unite people of all nations, and may prevent future wars.

Opposition to his measure, the Dill Bill, S. 2600, is strong, however, and his ideals may be defeated in committee or later on the floor.

Leading musicians, authors, composers and publishers appeared before the Senate committee on April 17, in opposition to the Dill Bill. In general they were members of the American Society of Composers, Authors and Publishers, but some independents also testified.

Those present included Gene Buck, president of the society; Victor Herbert, vice-president; E. C. Mills, chairman of the administrative committee; Ellis Barker Butler, president of the Authors' League; John Philip Sousa, Augustus Thomas and Nathan Burkam, attorney for the Composers' Society.

Mr. Buck in an attempt to refute the testimony given to the committee recently by the National Broadcasters' Association, referred particularly to the so-called "war chest" of his society, which he said was for the prevention of adversity. He spoke of the organization and its work, stating that both he and the association have great regard for radio. He said he was appearing in opposition to the Dill Bill "for the life of song writing," and flatly denied that the Publishers' Association was a monopoly or trust of any kind. Questioned, Mr. Buck answered that the association, in asking broadcasters to pay for using songs, does not differentiate between a station operated by a radio manufacturer or one operated by a newspaper. He contended that when people hear a song over the radio they do not care to buy it, and said that the continual use of a song in the air made the people "sick of it."

Victor Herbert and John Philip Sousa also opposed the bill, contending that the present copyright law should not be changed.

E. C. Mills of the Publishers' Association explained that no well balanced broadcasting program could be made up of songs by one publisher or author, and that the radio advertised songs to death. Mr. Mills is looking forward to the time when radio fans will have to pay a fee for their amusement, and believes that radio is an unfair competitor of every form of amusement.

Ellis Parker Butler, on behalf of the Authors' League, told the committee that he did not think the Dill Bill should be considered for five or ten years, be-

cause of the newness of the radio art, and that the bill would be a step backwards.

Augustus Thomas, playwright, stated that radio is eating into the proceeds of the legitimate stage. He believes the bill is unconstitutional and unwise.

Nathan Burkam, attorney for the association, went into the legal phases of the bill, contending that Congress gave a monopoly to song writers and authors through the copyright law.

During the second day's hearing Nathan Burkam for the Composers' Association; Charles Butler of the Authors' Association; Frank A. K. Boland for the American Hotel Association; Sidney S. Cohen, president of the Motion Picture Owners' Association of America, and Charles H. Tuttle appeared in rebuttal on behalf of the National Association of Broadcasters.

Mr. Tuttle stated that radio was the greatest blessing that science ever had given to man. He riddled the case of the composers, saying that they were anxious to pass the buck to the listener-in, but that they failed to show the broadcasters how this was possible even if they desired to do it. He claimed that the composers wanted the broadcasters to join with them in an agreement to charge the public, in which case it would be one of the greatest monopolies ever realized. He denied that radio was emptying the moving picture houses. The Composers' Association was said to be trying to tax the radio broadcasters and not the individual songs which they send out. He believes that the music publisher is opposing the bill and not the writers and authors.

Nathan Burkam, on behalf of the Composers' Association, accused all the broadcasters of broadcasting for profit, referring to them as "organized pirates," but declared that the composers were not monopolists.

Mr. Boland, speaking for the hotel owners, explained that exclusive rights in copyright law means legalized monopoly and, therefore, that the Composers' Association was a monopoly. He said that the association had commandeered all of the worth while music, but that radio was putting writers and songs on the map.

Mr. Cohen of the Motion Picture Association asked for certain amendments to the bill, claiming that the Composers' Association was making the copyright law a "blackjack."

## Hearings on Radio Monopoly Soon

Within about ten days, the Federal Trade Commission will issue a call for hearings on the alleged radio monopoly, and summon witnesses to testify in connection with the answers filed recently.

Attorneys of the Commission are now going through the seven voluminous reports filed last Thursday, setting forth denials to the charges that the Radio Corporation of America and its affiliated companies had used unfair methods in competition and that a monopoly in radio communication had been created. The answers, practically all alike, deny the charges of the Commission, claiming that their agreements were not set forth fairly in the complaint. In one reply it is stated that the Radio Corporation was created at the request of the Government to develop communication in America. Replies were filed by the General Electric Company, A. T. & T. Company, Radio Corporation of America, Western Electric Company, International Radio Telegraph Company, Westinghouse Electric & Manufacturing Company, United Fruit Company and Wireless Specialty Apparatus Company.

## Phusiformers Used in Tuned "R.F." Set

Unusually Quiet Operation is Result of Using These New Devices—Convert Standard R.C. Set Into Equivalent of Five-Tube Neutrodyne

By J. M. SCHWARTZ

The first circuit shown is one employing five tubes, two for radio frequency, one detector and two providing amplification at audio frequency. This combination makes for simplicity, selectivity and long range. Length of aerial used should not exceed seventy-five feet, including the lead-in.

No neutralizing condensers are used, as all oscillations are eliminated by the patented winding of the coils. The chief advantages resulting from the use of Phusiformers in this circuit are unusually quiet operation and increased volume on long distance reception.

Where non-oscillating tuned radio frequency has been attained in the past, it has been accomplished through the use of a considerable amount of special and complicated apparatus, which has been found necessary in order to overcome the tendency of circuits of this type to break into oscillation or "squeals." These precautions against regeneration or the tendency to squeal naturally complicate the wiring and raise the cost of construction.

When Phusiformers are used, the howls and "squeals" are absent without loss of volume, reception being unusually clear.

The parts required for the hook-up shown are as follows:

- Three Phusiformers.
- Three rheostats.
- One filament switch.
- One open circuit jack.
- Five sockets.
- Two mica fixed condensers, .006 Mfd. capacity.
- One mica grid condenser, .00025 Mfd. capacity, with grid leak clips.

One two megohm tubular grid leak.

Two audio frequency transformers of standard make.

All wiring should be done in as neat a manner as possible, and it is advisable that the multiple connections of "A" and "B" batteries be made as shown in the wiring diagram.

**PHUSIFORMERS AS CONVERTERS OF REGENERATIVE SETS.  
"CAN BE EASILY MADE NON-OSCILLATING AND NON-RADIATING."**

It is impossible for mere man to calculate the innumerable number of receiving sets in use in radio reception today. There are hundreds of types of receivers, embodying hundreds of types of circuits, many of these employing regeneration in one form or another. It makes relatively little difference, for the purpose of this discussion, just what type of receiver or circuit is employed, so long as it has a detector tube and one or more stages of audio frequency amplification.

The popularity of non-oscillating tuned radio frequency amplification has overwhelmed the manufacturers in the past few months, with every indication of indefinitely continuing ascendancy. One of the foremost thoughts in the mind of every radio fan possessing a receiving set, not operating on this principle, is "How can I possess the new type of advanced receiver without taking a complete loss on the equipment I now have?"

Figure 1—Rear view of the Cosmopolitan Conversion Phusiform set which when used in conjunction with a standard R.C.A. and any other receiver employing a detector and two steps of audio frequency makes these sets non-oscillating and Super-sensitive.

It is the object of this article to present the remarkable new method, and, in

## FADA "ONE SIXTY" Neutrodyne Radio Receiver

\* \* \*

### *CLARITY*

Clarity of tone is a feature that has made hosts of friends for the FADA "One Sixty" radio receiver. No matter where the station tuned in may be located—in the East, or in the West, the clarity of tone produced by the "One Sixty" is remarkably lifelike and pure. And so powerful is this wonderful receiver that the majority of broadcasting stations, both local and distant, can be heard clearly and plainly on a loud speaker.

In selectivity, volume, distance getting, clarity and fine appearance, the FADA "One Sixty" is unsurpassed. To hear it perform is to be convinced. It will be well worth your while to visit your dealer and see this receiver. Price \$120. This does not include tubes, batteries or phones.

Los Angeles and San Francisco

fact, the only one, through which this very desirable result can be achieved. The subject matter in the present installment will show a specific application to a well-known make of regenerative receiver, the Westinghouse R.C.

Figure 1 shows a picture perspective wiring diagram of a Cosmopolitan Phusiform Conversion set attached to the detector amplifying panel of the Westinghouse R.C. set. It will be noticed that the Westinghouse panel containing the present unit is not shown. This entire unit is abolished in the new arrangement. It is not necessary to remove this unit from the housing, but only to disconnect the straps on the lock connecting the tuning unit with the detector-amplifier panel. This illustration shows the preferred system of connections, and it is suggested that this wiring plan be followed in detail.

Figure 1 -- Schematic wiring diagram of the Phusiform Conversion set, designed to convert existing receivers to Phusiform type, non-oscillating tuned radio frequency.

Figure 2--Schematic wiring diagram of the Phusiform Conversion set, designed to convert existing receivers to Phusiform types, non-oscillating tuned radio frequency.

Figure 2 is a schematic wiring diagram of the Cosmopolitan Phusiform Conversion set itself, and this, in conjunction with the perspective view of the constructed set in Figure 1, showing the terminal arrangement, will enable any constructor to build and wire this complete outfit.

**MAKING OVER YOUR PRESENT SET**

In order to make this same adaptation of any circuit other than the R.C., it is only necessary to follow the diagrams as shown herewith, connecting the terminal marked "Grid" on the conversion set to the tuning element side of the grid condenser in the existing receiver. Where common "A" and "B" batteries are used for the operation of both the conversion set and the existing receiver, it is not necessary to wire from the terminal marked "filament" on the conversion set to the detector and audio frequency amplifiers.

**R. C. RECEIVER**

Fortunately the design of the R. C. set is one which lends itself admirably to such a conversion. In this specific application it is not necessary to alter or

touch any of the interior wiring of the receiver, it being only necessary to disconnect the connecting straps on the back which serve to link the tuning element to the detector-amplifier panel.

Schematic of the Phusiform Conversion set illustrating its connections to the receiver with which it is to be used.

Figure 3—Schematic of the Phusiform Conversion set, illustrating its connections to the receiver with which it is to be used.

While the general procedure is the same in any existing receiver, this adaptation is sometimes found to be more difficult than in the particular case of the R. C. for the tuning element in many of the popular receivers is directly connected in the cabinet to the grid condenser. In the case of a receiver constructed along these lines, the wire leading from the grid condenser to the tuning unit must be disconnected, and the wire from the grid terminal of the Cosmopolitan Phusiform conversion set directly connected to the former tuning unit side of the grid condenser. Fortunately, also, in the R. C. set, the by-pass condenser in the plate circuit of the detector tube for by-passing the radio frequency currents (when it is operated as a regenerative receiver) around the primary of the audio frequency transformer, is so connected from the plate directly to the "A" battery that it serves as a by-pass condenser for reducing the tendency to oscillate when used in the Cosmopolitan Phusiform combination, as explained in the previous articles dealing with this subject.

#### WIRING NOTES

In the case of existing receivers in which a similar by-pass is not provided, it is advisable to connect a .006 microfarad condenser from the plate of the detector tube to the negative "A" battery lead. This has been clearly shown and explained in previous articles on this subject in the Evening Mail.

As mentioned in Figures 1 and 2, it is advisable to keep the length of the wire connecting the grid terminal of the conversion set to the grid condenser as short as possible. One of the wiring arrangements which facilitates this through a proper disposition of the apparatus is shown in photograph Figure 3. Here the R. C. set is mounted directly on top of the Cosmopolitan Phusiform conversion set, thus permitting the grid connection from the last Phusiformer to be wired to a Fahnestock clip mounted on the base board as shown in Figure 1. In this way a relatively short wire can be run to the grid terminal on the R. C. set. The grid terminal post on the R. C. set provides the connection to the former tuning element side of the grid condenser.

The third article in this series will discuss the use of the Phusiformer as a Wave Filter.

## Vacuum Tube-Making an Exacting Process

### STEPS OF ASSEMBLY NECESSARY BEFORE RADIO DEVICE IS COMPLETED

Although hundreds of thousands of dry cell vacuum tubes are now in use by radio enthusiasts, it is safe to say that only a very small percentage of the users know anything at all about their process of manufacture.

These little tubes, because of their convenience and low operating cost, added tremendously to the interest in broadcasting, and gave to the great general public an opportunity to obtain tube receivers. Before the coming of radiotrons WD-11 and UV-199, the greater number of receiving sets used the crystal detector and thus were limited in range.

Great care is necessary in the manufacture of these tubes, which, despite the fragile character of the material, are sturdy bits of apparatus, well adapted to stand fair handling and give constant service during long periods.

There are thirteen steps or processes of assembly before the tube, starting as raw material, takes its completed shape. There is also a test made after each assembly and still further tests after the tube is completed. These tests are so severe that once a tube has passed through them, it is rarely returned because of failure in operation.

#### THE FIRST STEP

The raw material from which the tube is assembled consists of the following: A glass blank, a thin glass stem, a short tube of glass, the filament, the plate and grid. The plates are shaped from rectangular bits of metal and the grid wires are wound into the spiral form they take in the completed tube.

The first step in the assembly process is spinning a flare on the end of the short glass tube. This tube is then called the flare.

Next is the inserting of the five wires in the flare. Looking at the WD-11 one can see five wires on the inner unit though there are but four leads at the base. The fifth wire is a blind insert to act as a support for the plate. The five wires are inserted in the end of the glass tube opposite the flare and the glass

## Behind the Scenes in a Broadcast Studio

NUMBER TEN—APPLAUSE

By DR. RALPH L. POWER, "The Sky Crier," Los Angeles Examiner Radio

When studio announcers ask you to write to the station so your applause letters and cards can be forwarded to the artists, I wonder if you realize that it is a small service which you can render in comparison to what they do for you.

In addition to trying rehearsals, together with the time of performances, there is many times an actual expense incurred by the artists, for which they are not reimbursed.

Way down in Texas one of the agricultural colleges not long ago sent a glee club, band and a lecturer about two hundred miles to entertain radioland for an hour from one of the stations. The expense of travel amounted to somewhat over \$400.

Many of the soloists who sing for you from Southern California stations live in the suburbs and travel from twenty to sixty miles to and from the studio.

Not long ago a community program was arranged for a city up the coast and the entire town, it seemed, motored to the studio and provided an hour's entertainment.

Artists, therefore, not only expend their time and effort for you, but in a good many instances they actually spend a considerable sum of travel money, for which they receive no return other than the applause cards from the large invisible audience.

So, when you are comfortably seated in your home or at the club, don't put it off until tomorrow, for tomorrow never arrives. "Do it now" has become a trite slogan perhaps, but it is still a good one.

One of the New York stations now has a charge of \$400 an hour for firms that ask to put on a program which, in an indirect way, advertise the concern. Of course direct publicity is forbidden over the radio.

It is naturally difficult to forecast the trend of the problem of radio entertainment of five years away. It is certain, however, that there must be a medium between the commercial concerns which produce program hours with paid artists and the individual artists who perform without payment.

Whether it is the elimination of either one or a tax, either direct or indirect, upon radio equipment or sets rests largely with the public rather than with the stations.

melted to the shape seen in the completed tube, thus holding firmly in place the wires. The glass tube with its wires inserted is now called the press.

The five wires are next cut to their proper lengths so that the plate, grid and filament can be mounted. These units are spot-welded in place by girl operators, each of whom is a highly skilled worker. The filament used in the WD-11 is a metal wire coated with oxides.

Now the glass blank is tubulated, or in other words, the thin glass tube is placed on its end after a small hole has been melted in the glass blank with a gas flame.

Next the press is sealed to the bottom of the blank. In this process the flare is held tightly to the bottom of the blank and a flame melts the glass sufficiently so that they weld together.

As the long glass stem is placed on the blank for the purpose of exhausting the tube, this process is the next in order. The long glass stem is inserted into a piece of rubber tubing which leads directly to the pumps which are two in number. An oil pump and a mercury vapor pump are used to exhaust the tube down to the required vacuum. Before the pumps are turned on, a covering which serves as an oven is pulled down over them and they are subjected to a high temperature to drive gases from the glass walls and metal parts.

Then the pumps are turned on and the tubes exhausted to a very low pressure which is at a much higher point of exhaustion than that given the electric lamp.

A coil of wire surrounds the tube when placed in the exhausting machine and by means of a high tension spark the vacuum is tested. Next the plate of the tube is heated red hot by a high frequency oscillating current generated from transmitting tubes to remove the gas from the plates and metal supports. The plate oscillations are next turned off and the filament heated to obtain the proper chemical reaction on the filament oxide and thus increase the possible electron emission. The pumps are turned off and a gas flame run around the bottom of the long glass tube until it melts off and forms the tip of the vacuum tube.

The tube is now completed except for the base, which is baked on by a machine, and then the tips which contain the leads from the inner unit of the tube are neatly soldered and surfaced.

### Amplifier Data—Continued

HALL BERRINGER

The precautions given in last week's Radio Doings apply specifically to prevention of audio frequency oscillations. They also apply to the prevention of radio frequency oscillations, which way cause howling and which always reduces the efficiency of the amplifier system. A further precaution in the case of radio frequency oscillations is in the use of very small choke coils of a few turns in the grid leads of the amplifiers, or a small resistance in the grid leads. These act to prevent the circuits from oscillating.

## New Neutroflex Models - 3 Tube

*De Luxe Model V carries a wonderful piano finish of light walnut. All metal gold plated. This model is self-contained, with storage batteries and loud speaker built in. When not in use the lid folds down, giving enclosed cabinet effect.*

De Luxe Model V—Price \$250.00 (Complete)

**NEUTROFLEX—The Most Beautiful Radio Set in America Is Now Ready for Delivery**

When you buy or build your next set, you must consider Volume, Tone, and Distance. All these are combined in the Neutroflex. Never before has a receiver given such volume and at the same retained such quality of tone.

### MODEL III

*This is the same built receiver as the De Luxe Model V, but not self contained. The finish comes in black walnut, light walnut, red and brown mahogany.*

Price \$100.00 (Less Equipment)

*Come in and listen to the Neutroflex before you buy*

## Claire Forbes Crane

We know many in radioland like to see pictures of the artists who entertain them. Claire Forbes Crane, concert pianist, whose picture appears here, has delighted many of us with her talent. Mrs. Crane has charge of the matinee programs from KHJ, which have been put on by Barker Brothers, Los Angeles. There are few better qualified to talk on music in all its branches than Mrs. Crane, and her rendering of operas and classical music has, we are sure, inspired all who have heard her.

When such talent is available to the broadcast station the listening-in public can be assured of the highest class of music and entertainment. Mrs. Crane's voice is particularly fitted for broadcasting and we are never tired of listening to her.

**Can You Do This?**

RESISTOR →

THE DAVEN COMBINED RESISTOR-CONDENSER MOUNTING DOES BOTH

*This may be the trouble with YOUR set—*

You can probably change your grid leak for higher **Detecting Efficiency**

The highest efficiency can only be obtained by changing both resistor and condenser

# Buy a Kellogg Radio Kit!

Here is an opportunity to build a good receiving set, using your own hook-up, at a nominal price.

The Kellogg Radio Universal Panel Kit contains all the apparatus for assembling a two-stage amplifying unit with the detector tube socket and rheostat. The only parts necessary to complete a radio set of the best grade are the Kellogg tuning units, for which the panel is already drilled.

Solder, spaghetti, both liquid and tubing, screws, nuts, etc., are all included. No time lost buying each part separately. Can't forget anything; everything there except, of course, the tuning units, and they depend on the kind of circuit used.

Money saved buying a compact outfit of this kind, packed in an attractive cardboard box,  $17\frac{1}{2} \times 12\frac{3}{4} \times 3\frac{1}{4}$  inches.

Ask your dealer to show you the

**No. 501 Kellogg Radio Universal Panel Kit . . . . . List, \$43.00**

(Continued from Page 23)

Stray fields, which spread out and cause coupling and transfer of energy between different parts of circuits depend upon the size and shape of coils used in the set. Naturally, large coils will spread the electric and magnetic fields considerably farther than small coils. Hence, small coils should be used wherever possible. This will explain why radio frequency transformers are gradually being more and more reduced in size. The coils on them are becoming smaller and smaller, so that the electric and magnetic fields are concentrated in the space around the coils themselves. The shape of the coil often influences coupling. Certain types of coils have very little leakage, and the lines of force are concentrated in the coil itself. Of these types the toroidal coil is the best example. In this type of coil the external field is reduced to a minimum, and hence coupling and transfer of energy is in a minimum. Wherever this type of coil can be effectively used it will be found to help considerably in reducing howling.

There are other types of noises, not due to regeneration and coupling, which often cause considerable annoyance. These are due to causes which result in small variations in plate current, which are considerably magnified by the amplifier before they reach the telephones. Some of these causes are:

1. Bad "B" batteries and run-down storage batteries. Any variations in battery voltage naturally make themselves felt, either as lower filament current or lower plate voltage, hence the final result is a varying plate current which produces noises. A run-down storage battery is apt to do this and an old "B" battery. But if one cell of the "B" battery is bad, it will make itself felt in harsh and grinding noises in the phones. Hence the solution is to watch your batteries and see that they are always in good condition.

2. Noises due to microphonic contacts. Anything which causes a variation in plate current will cause a noise in the phones. Poor contacts, which vary, and thereby alter the resistance in the circuit ultimately cause a variation in plate current and, hence, noises. All contacts should be firmly and securely soldered to avoid any such occurrence.

3. Noises due to gas and ironization. The presence of gases always results in somewhat erratic operation. Any variation in voltage may produce abnormal changes in currents due to presence of gas and ironization of the gas. These cannot, of course, be guarded against. However, by careful operation of the tube a good operator can secure excellent results by operating with proper potential.

4. Mechanical vibration of the tube. Whenever the tube is jarred or vibrates, noises are heard. This is due to the fact that the elements in the tube are also jarred and hence the relative distance between the element varies and the plate current varies in accordance. The best way to avoid noises due to mechanical vibration is to mount the tube either on springs which take up the vibration or on heavy rubber bases.

These are the principal causes of howling and tube noises and for best results should be eliminated as far as possible. The methods here outlined will yield satisfactory results if carefully observed.

**W D A F SPEAKING!!!**

Kansas City, Mo., April 4th, 1924.

Cosmopolitan Radio Co., Inc.,  
 15 West 18th Street,  
 New York, N. Y.

Gentlemen:

I have had the pleasure of testing out one of your demonstrating sets containing three Phusiformers. I wish to state that during the entire test I noticed no regeneration or oscillation and that the stations in Massachusetts and California came in with great volume on a Loud Speaker. The Clarity of tone was remarkable.

In view of the result of this test we are building a five-tube set containing three Phusiformers, to use in our operating room.

Very truly yours,

DON D. JOHNSON,

Radio Operator, Kansas City Star, Kansas City, Mo.

*Following is a partial list of its uses:*

Inductively coupled crystal circuit

Tuned plate Ultra Audion circuit

Single control regenerative circuit

Wave Trap—one or two circuit

Tuned Radio Frequency

Radio Frequency ahead of Standard Regenerative Sets

Neutralized 5 or 6 tube Radio Frequency

Does not require separate instrument for neutralizing the circuit.

The moment you hook up your circuit it is automatically neutralized, which means no squeals or howls, just the natural music as broadcasted, flowing clear as a bell from your loud speaker.

## ANNOUNCEMENT EXTRAORDINARY

The New "LASCO" Reflex Receiver

ALTERNATING current from any electric light socket sup-  
plies power for the tubes in the "LASCO" set instead of the both-  
ersome, expensive "A" battery. **No Hum, perfect reproduction,  
tremendous volume, simple to operate, no squeals or howls.** The  
"LASCO" set is guaranteed indefinitely.

Think what it means to eliminate the "A" battery. No  
charging, no acids to spill, no unsightly battery setting around.

The "LASCO" is a Two-Tube Reflex known as the "Cage"  
circuit.

We can build a "LASCO" into your phonograph.

Call and see this wonder set and arrange for a demonstra-  
tion in your home.

*We can apply our A. C. System to most any Radio Set.  
Ask about it.*

## KFOA—Pacific Northwest Station—455 Meters

RHODES DEPARTMENT STORE, ARCADE SQUARE, SEATTLE, WASH.

Pacific Time

CARL E. HAYMOND, Program Announcer

**MONDAY, MAY 5**—  
 8:30 p. m. The Carnation Milk Products Company of Seattle in their second monthly program will present Bab's B. B. Ladies' Orchestra. Margaret Dicken, leader. This orchestra during a recent broadcast from KFOA received hundreds of special requests during the course of their program, which proves their ability to please the listeners.

**WEDNESDAY, MAY 7**—  
 8:30 p. m. A program of orchestra and vocal music featuring two employees of the Seattle Municipal Railway; Cecil Kennedy, "The Singing Motorman," and Harlowe Spurling, "The Singing Conductor," both of whom have excellent tenor voices.  
 The five-piece orchestra, "Watt's Commonunadors," will furnish a special one-hour dance program.

**FRIDAY, MAY 9**—  
 8:30 p. m. The program will consist of a soprano and violin recital given by Mrs. Herbert V. Preeg, talented lyric soprano, and Mr. Herbert V. Preeg, accomplished violinist, now playing with the Seattle Civic Symphony Orchestra.

Review of New Books, Miss Alice L. Webb.

Mr. Dealer: Could you profitably use additional Capital? See Page 79

*could hardly believe that it was my own set*

“Put three UNIVERNIERS on my Neutrodyne last night and got 20 stations I never heard before!” An enthusiastic fan told us that the other day. He had tried 3", then 4" dials. But even the added inch didn't help much. Finally he tried UNIVERNIERS. Their 12-to-1 ratio, giving the equivalent of a 2 foot dial, enabled him to tune-in and log accurately DX stations  $\frac{1}{2}$  apart. No wonder he heard 20 new stations!

**Costs no more than a good dial—** which it simply replaces without otherwise altering set. The UNIVERNIER'S single knob gives either direct or continuous 12-to-1 control at will—Micro-selective control of the whole Condenser, Variometer, Potentiometer, etc., throughout the entire range of the set. Rigidly attached pointer always indicates true position and assures accurate logging.

At your dealer or postpaid upon receipt of purchase price.

## Letters to the Editor

Dear Sirs:

I have seen the answers received by the other fellows, so I thought I would try my luck.

Friday night, April 18, I heard Calgary, Canada. They were playing an organ recital, and quite often people would sing. The piece I heard lasted almost a half hour, when they finally stopped. The announcer gave the name of the station, but I only caught three words of the call, because of the code which started. I thought I heard the last letter. It sounded like CKCS, or KCKX. He said the next program would be next Tuesday.

If any of the readers of the "Radio Doings" can let a little light upon my question, I will thank them through Radio Doings.

Yours for Radio Doings,  
CHARLES SWANSON,  
Box 593, Exeter, Calif.

Gentlemen:

In answer to the question asked by Mr. Louis J. Ward, I think his station must have been CFCN, Calgary, Canada. The Canadian National Railway was broadcasting a program from this station on about that date. They operate on a 440 meter wave length.

As to question of Mr. Roy Higginson in the same issue, I think his station was WLAG, Minneapolis, Minn. I heard them on about that date. They operate on a 417 meter wave length.

Yours truly,  
C. T. BUSHNELL,  
Banning, Calif., April 21, 1924.

Dear Sir:

I would appreciate it very much if one of your readers could tell me what station at Oceanside and La Jolla were talking to each other on April 22 from 6:30 to 7:00 p. m., on about 445 meters. One would tell the other that he had one minute to go, then thirty seconds. This was repeated several times.

Yours respectfully,  
ORVAL L. McADAMS,  
288 N. 8th St., Colton, Calif.

Dear Sir:

Can you tell me what station on Monday evening, between 8:30 and 9, was broadcasting a talk on bird calls and songs? My set was working poorly, and I could catch only occasional words. They seemed to be working on about 400 meters.

Yours truly,  
DEWITT B. WILLIAMS,  
3219 Mission Drive, San Diego, April 22..

Thames.

*Grow with Radio. See Page 79*

### MR. AND MRS. RADIO FAN:

You, with that small amount of idle money, may profit by listening in on the following information. Don't scorn those few dollars because they seem insignificant. Do you realize their power? You are as entitled to the cream of investments as the \$5,000 or \$10,000 man. If an investment as small as \$200 would show you a probable 20 per cent earning, would you make it? Start in with as little as a two-cent stamp, and write for information. That costs but little effort that (take my word for it) you'll never regret it. Address: Mr. G. R. Clarke, Box 586, Long Beach, California.

## Letters to the Editor

Hamlin, Kansas, April 22, 1924.

Editor, Radio Doings.

"TNX" for April 20 Radio Doings and for giving my letter to proper persons. Some questions in this issue rather indefinite. Mr. Baume, Palms; likely a Canadian station, selection, God Save the King. GKCH, Canadian National Railway, Ottawa, recently (April 19), gave this selection as their last. L. J. Wood, Colton; note above. A. Burrell; WMC, WL, 500 m., uses a river steamer whistle between selections. R. Higginson; WLAG, 417 m., sometimes has lady announcer, WBAH, 417, nearly always has.

Two more new Canadian stations: CHCM, Riley & McCormick, Ltd., Calgary. CKCX, Burns J Co., Ltd., Calgary.

Who owns CYX, Mexico City? About 380 meters, I think. Where is VMG?

Hope this letter will be of help to some of the readers.

73'S & C U L.,

J. A. BROCKHOFF, Hamlin, Kansas.

P. S.—Received answers to my first published letter from Pomona, Pasadena, San Diego and Boise, Idaho.

Dear Sir:

I would appreciate it if any of your readers could tell me what station was broadcasting between 2:30 and 3 o'clock, Wednesday morning, April 16th? There were men singing, who called themselves the "Broncho Busters." They sang "Turkey in the Straw." I could hear the singing real plain, but could not get the call letters. There seemed to be four letters.

Yours truly,

B. S. HEAD, 1557 Munson Ave.

Editor, Radio Doings,  
Van Nuys Bldg., Los Angeles, Calif.

Dear Sir:

The writer is only one of thousands in whose radio life "Radio Doings" plays a vital part. And he finds the "Letters to the Editor" very interesting. It is wonderful to know that on Monday night John Doe heard ABC, BVD, PDQ, and XYZ. And think of the thrill Mr. Doe gets when he reads his literary accomplishment in print next week and sees his own delightfully familiar name set in capitals at the bottom.

Let's hear from some of you fans on some of the bigger more vital topics of radio. We are facing a thunderbolt being hurled at the very foundation of this great new industry that means so much to every one of us, in the recent demand of the "Un-American Society of Composers, Authors and Publishers," made upon the broadcasters. And not a word has appeared in "Letters to the Editor," to indicate that we listeners are even interested. And how many of us have taken

## Letters to the Editor

the trouble to write a line to Uncle John just to say we are back of him. We are all too busy tooting our own little horns!

Let's get together and elevate this column of ours out of the cloudy realms of selfish interest into the sunlight of bigger things more vital to the industry and to us listeners as a whole.

The enclosed copy of the writer's letter to Uncle John may start the ball rolling.

Very truly yours,

SBK.

SANFORD B. KELLOGG.

Radio KHJ, The Times,  
Los Angeles, Calif.  
Dear Uncle John:

I am not a singer or a musician, just one among millions of lovers of good music and, therefore, lovers of radio. But there is much music in my home, and I therefore purchase not a little sheet music, just for the home pleasure. There are thousands like me.

Last night, on going over my pile of sheet music, I discovered that every single piece, without exception, which I have purchased since the advent of radio into the home a year ago was introduced to me by radio. My library also contains three books introduced to me by radio, the only books bought during the year.

If this "Un-American Society of Composers, Authors and Publishers" would investigate facts, they would find that radio is their most effective advertising medium by over one hundred per cent. And it costs them nothing! **THEY**, and **not** the Broadcaster, are the ones who should pay toll on the ether highways. Their demand that the Broadcaster pay is the most grotesquely absurd idea that modern American business has ever been asked to swallow! Why do not the manufacturers of musical instruments form a "Society" and try to force these same publishers to pay, instead of charge, for space in their columns? The idea is not a whit more absurd!

The enclosed envelope contains a copy of this letter which I will ask you to kindly address and mail for me to the American Society of Composers, Authors and Publishers. I want them to know whose music I am not buying, whose music I will not buy.

Yours very truly,

SBK.

SANFORD B. KELLOGG.

# We Are Moving!

We wish to announce that we will be closed on Saturday, May 3rd, as we are moving on that date to our new location in the RADIO BLDG., located at Eleven Eleven Wall St.

For the present our telephone numbers will remain the same: VAndike 4353 and TRinity 6464. Our new switchboard will not be installed by the telephone company for several weeks.

We will be open for business Monday, May 5th. We invite every dealer, jobber or agent in this section to meet us in our new quarters.

Shipping facilities have been added that will enable us to give you far superior service to that maintained in the past. Many new lines have been added. Our stock has been materially increased. With our new equipment and added facilities for handling merchandise, we believe that we have the largest and best equipped radio house West of the Mississippi River.

We take this opportunity of thanking the many hundreds of dealers and friends who have made this move possible.

## The Wholesale Radio Electric Co.

---

Sutter, Calif., April 15, 1r24.

Dear Editor:

Question.—Have an exceptionally fine set built up by myself. It is an ultra-audion hook-up, but modified somewhat. Det. and 2-stage, but cannot get my B battery voltage low enough for tube. as it clicks off and I cannot get distant stations. This is a new tube. The old one worked fine, but I have it topped on 16 volts, but it is not low enough yet. Please answer in Question and Answer Department soon.

HARRIE R. EACHUS.

Answer.—Exchange your tube. It is very soft.

San Bernardino, Calif., April 21, 1r24.

Editor, "Radio Doings:"

Question.—I am a reader of "Radio Doings," and have been for quite a spell. I take this opportunity to express my appreciation of this wonderful little publication. I don't think I can get along without it. Also I have a question to ask. Would like to know what Pacific Coast broadcasting station broadcast a marine band concert on the evening of Saturday, April 19th, between seven-thirty to a quarter to nine, on a wave length of about 425 meters?

Note:—This station either had no call letters assigned or neglected to announce them at all.

I remains a Booster for "Radio Doings."

EMMET H. EDWARDS, Care County Hospital, San Bernardino, Calif.

P. S.—Please answer in "Radio Doings."

Answer.—Perhaps some of our readers can help you.

McFarland, Calif., April 22, 1924.

Dear Sir:

Question.—I have a 4-tube Lee-Crossey model XJ., and have this difficulty when I tune in with a distant station, some nearby station comes in and will not be tuned out. Is there any way to overcome this?

Very truly yours,

L. B.

Answer.—Decrease length of antenna. If this does not help, use wave-trap.

## A MESSAGE FROM M.-A.-R.-S.

The PHUSIFORMER added to your single Circuit Set—CR-5 or RC—will make a real distance set of it. Let us show you.

Complete set of Parts for "BEST" SUPER-HETERODYNE described in May "RADIO."

### MANUAL ARTS RADIO & ELECTRIC SHOP

4154 S. Vermont Ave., Los Angeles, Calif.

Phone VERmont 7836

?? ??

Dear Sir:

Question.—I have an airline grand four-tube receiving set. It has C-300 detector tube, one UV-200 radio frequency amplifier and 2-stage UV-200 amplifier. For the first month I did not have noise; got Cincanitia stations in Wisconsin, Kentucky, KFI, KHJ, KPO, KLX, KGO, all California stations good and loud. It don't work right now. I can't get distance; get California, but it has a gushing or frying sound; don't pick up stations good. Can you tell me the reason of the noise?

I have 120 feet aerial, 35 feet high, use a 90 volts B battery; have changed all tubes, but don't make any difference; can't find loose connections. I am a subscriber to Radio Doings. I will send envelope. Please tell me what I can do to stop noise. I have a wave trap; helps some.

JOHN W. EMPEY, Bloomington, Washington County, Utah.

P. S.—I don't know what kind of a hook-up. I'm wiring diagram.

Answer.—Your tubes have gone soft. Purchase A tubes for radio and audio frequency amplification.

Dear Editor:

Question.—I have a little home-made single-circuit set and have had fair results. I am using a New York 43-plate and vernier condenser, a Pearlco coupler and a No. 199-tube. My aerial is about thirty feet from the ground and sixty-five feet in length. On account of electric wires in the vicinity it was necessary for me to build my aeria at a distance of forty feet from the house and connect the lead-in near the lengthwise center of the aerial, and to prevent its coming in contact with a near-by roof I keep the wires taut as I have tried to show in the above sketch. There are no high voltage lines in or near our block. I get KGO, KHJ and KFI very loud and distinct, especially the first named. I can't seem to get Sacramento or Santa Barbara, or any of that class of stations on the coast. Hardly ever get KPO, and have never had Portland or Seattle. Had KFKX a number of times, but hardly loud enough to enjoy. I have been getting KFON recently, and, of course, the local broadcast and the two churches in Los Angeles. Can you give me a hint as to why I don't get the small stations along the coast, and why I can't bring in Portland or Phoenix? Do you think I would have better luck with a 23-plate condenser? I know this is too long for an answer in the column, so will enclose self-addressed envelope. I get your most excellent magazine every week and couldn't get along without it. It's a bigger nickel's worth than the Saturday Evening Post.

Very truly, CHAS. B. WELCH.

Answer.—Location, geographical conditions affect your reception from certain directions. No. 43-plate condenser is O. K.

Our one, two and three tube Harkness Sets are built with the best of parts and the most careful workmanship, and give perfect results, in clarity of tone, volume, selectivity and distance.

ECHOPHONE—RADIOLA—NEUTRODYNE—REFLEX SETS

???

341 N. Normandie Place, Los Angeles, Calif., April 19, 1924.

Radio Doings,  
Van Nuys Building.  
Gentlemen:

Question.—I wonder if any of the "DZ" fans could tell me what station broadcasted what I think was a play on evening of Monday, April 8, about 11 p. m. I caught the words "Burton"—and "gold has no value" and "tired of going around when gold has no value," an orchestra played several selections and a woman spoke at some length, but I couldn't get the announcer's call.

Also would appreciate very much answers to the following questions:

1. I have a 3-circuit regenerative 3-tube set, using 2-variometers, 1 vario coupler, 2 condensers, use dry batteries. Please advise whether wet batteries would give me greater distance?
2. Would a step radio frequency give added distance? I have one of radio and one of audio at present.
3. Which is the more selective, a single or double wire aerial?
4. If aerial is parallel to electric light wires would it prevent receiving distant stations?

Thanking you in advance for the courtesy of answers in Radio Doings.

Yours truly,

A. S. BARNEY.

Answer.—Storage battery would give greater volume and distance—used with A tubes. A one wire antenna is advisable. No.

Santa Maria, Calif., April 19, 1924.

I am a regular reader of your wonderful magazine. Please answer me the following questions:

A.—Have Benjamin set, 3 tubes operating on dry cells. Can I use 6-volt tubes without having to change rheostats?

B.—My condenser is 23-plate venier, how long should my aerial be?

C.—What is the external detector jack in this set for, and how used?

D.—What is the best wire aerial? Stranded copper or bare telephone wire? Which gives more volume?

E.—How much "B" battery should be used on this set if 6-volt tubes were to be used?

F.—What are the ohms resistance on rheostats using UV-199 tubes—and on rheostats using C-301 6-volt tubes?

B. E. CROSS,  
Santa Maria, Calif.

A.—Yes.

B.—Must have more data to give you this data.

C.—Stranded wire will give best all around results.

D.—22½ to 45 volts on detector, 90 on amplifier.

E.—Six-volt tubes, 6 ohm rheostat.

F.—Thirty to sixty ohms for UV-199 tubes.

**DURKEE-THOMAS Products Co.**

1228 Folsom Street, San Francisco

DEALERS:—Write for Special Dealer Proposition

(703)

Los Angeles, Calif., April 21, 1924.

Gentlemen:

Enclosed please find my check for \$2.00, for which please send to my home address, 887 South Bronson, the "Radio Doings" for one year.

Will you please tell me how I can increase my radiola portable No. 2 for using one more stage of amplification? I thought of putting this in where the batteries are as my batteries are separate from the set.

Also, is it possible to change this set in any way so it can be used with a loop?

Yours very truly,

GEORGE D. NORDENHOLT, 1216 Pacific Mutual Building,

Answer.—It is possible to add one step of audio frequency in same box. To use with loop one or two steps of radio frequency amplification must be added.

2225½ H Street, Sacramento, Calif., April 21, 1924.

Gentlemen:

Question.—I have a three-tube single circuit receiver with the X side of my A battery grounded. Would grounding the negative be any improvement?

KFIA at Seattle was the station Mr. Hanson heard.

Louis J. Wood heard CFCF at Montreal, Canada, operating on 440 meters.

I think D. L. Brown heard WJAZ at Chicago, operating on 448 meters.

Roy Higginson probably heard WLAG, at 417 meters

2. What is the proper B battery voltage for a C-00 and 2 C-310 A's?

Sincerely yours,

ALBERT R. VANDERCIOK.

Answer.—Ground negative of A battery.

C-300 tubes take from 16 to 22½ volts.

C-301-A tubes take from 22½ to 90 volts.

## The Radio Building

During the past three or four years we have noted, as everyone else has, the vast change and improvement in radio and radio conditions in general. We have witnessed the transformation of a loose coupler mineral detector, and headphone of two or three years ago, into the modern sets of today—a work of art—the mere pressing of a button frees the air, with crystal clarity the fascinating strain of some dance orchestra; or with the turn of a dial, the voice of a master will hold you spellbound with his golden voice.

The broadcasting station—an experiment three or four years ago, consisting of a 10 or 50 watt transmitting set, broadcasting phonograph music, has been replaced by the giant commercial transmitting station of today, 500 and 1000 watt in power, capable of being heard thousands of miles, operated by skillful, experienced operators, under the supervision of experts, the highest class and types of artists. From a small insignificant business of 1922, radio has rapidly advanced until it has achieved a high status among the important industries of this country today. Quoting a report made by Roger W. Babson, economist and business authority, it has been estimated that the people in America will spend \$350,000,000.00 for radio in 1924. The report goes on to state that it is interesting to see how radio industry compares in dollars and cents with other large industries. Available figures on sporting goods, cameras, etc., show a value of about \$185,000,000.00 annually. Sales of radio equipment are running nearly twice as large as all kinds of sporting goods.

The value of radio business is nearly twice as big as that of the carpet and rug business. For every dollar spent on furniture, thirty-three cents are spent on radio. For every dollar spent on boots and shoes, twenty-five cents is spent for radio. For every dollar spent on musical instruments, including phonographs, pianos, etc., seventy-five cents is spent for radio. The value of radio business amounts to nearly three-fourths of the jewelry business as a whole, including clocks, watches and novelties. Of the many changes and improvements in the radio sets, broadcasting, etc., there has also been a great deal of change and building up of the merchandising houses handling radio. Small stores of yesterday have become large, substantial business houses of today. Fortunes have been won and lost in radio. The experimenters and men interested in wireless, and later in radio at its conception a few years ago, have become executives and men of high standing in this profession today.

Among the pioneers in the radio industry of Southern California is Mr. Wm. A. Breniman. Before and after the war Mr. Breniman served on commercial ships

Our New and Complete Price List Now Ready

as a wireless operator, purser and super-cargo, and has traveled or touched at practically every important port of the world. During the war Mr. Breniman served in the U. S. Navy overseas. When the opportunity of radio merchandising presented itself, Mr. Breniman was one of the first to realize the possibilities and to take advantage of this great opportunity, and started the Radio Concert Equipment Company. On March 1st the name Radio Concert Equipment Company was changed to the Wholesale Radio Electric Company. To meet the requirement for larger quarters, due to the expansion of business, the Wholesale Radio Electric Company has constructed a building located at 1111 Wall Street, Los Angeles.

This building is two stories in height, Class "A," and will contain over 15,000 square feet of floor space, which will be devoted entirely to radio. Every convenience and labor-saving device will be installed to enable this company to take care of its orders and transact business in the shortest possible time. Very elaborate displays have been arranged to present merchandise to the dealers in an attractive manner. Demonstration arrangement has been worked out very carefully. The entire first floor will be taken as a salesroom and shipping room of the Wholesale Radio Electric Company. Offices of this company will be located in the fore part of the second floor. The balance of the second floor for the present time has been partitioned off into very attractive offices, which will be occupied by agents of practically every well-known, advertised line of radio merchandise on the market today, including a few of the following: Dubelier Condenser Mfg. Co., Electrad, Inc., C. D. Tusca Co., Rauland Mfg. Co., Charles Freshman & Co., Electrical Research Lab., Consolidated Instrument Co. of America, F. A. D. Andrea, Inc, Chelton Elec. Co., Ross Braid Co., R. Mitchell & Co., The Modern Electric Mfg. Co., Sydnor Electric Co., Trimm Radio Mfg. Co., Bell Mfg. Co., Shamrock Mfg. Co., Durham & Co., King Sewing Machine Co., Fahnstock Electric Co., Baldwin Pacific & Co., M. M. Fleeron & Co., Inc., Chelsea Radio Co., The Hartford Inst. Co., Dixie Supply Co., United Mfg. & Distributing Co., Coto Coil Co., A. C. Brady Co., Fansteel Products Co., and many, many others will be represented.

The following well-known concerns in the radio trade will be located in the Radio Building: Carl Stone Co., Room 208; Cloyd Marshall Co., Room 207; N. S. Lewis Co., Room 203; F. L. Tomlinson Co., Room 205. It is expected that the Atlantic-Pacific Agencies Corp., Yale Electric Corp., and Pacific Agencies will also maintain offices in this building. A very well-arranged demonstration room will be constructed for the convenience of representatives and agents in this building, to enable them to test out sets and experiment.

The Wholesale Radio Electric Company will move into their new quarters on Saturday, May 3rd, being closed that day, and expect to be open for business the following Monday at noon.

We have just been informed that the Western Radio, Inc., are going to construct a one-story building, to be located at 1224 Wall St., 100 yards to the south, the Leo J. Meyberg Co. is located at 1022 Wall St., 100 yards to the north. The Electric Corporation is located about 200 yards to the west, and the Lincoln Radio will soon occupy new quarters about two blocks to the southwest. It will be seen that this section is fast becoming the radio center of Los Angeles, and we believe it will be a great help to the dealers in having these large houses centralized.

## THE CHANCE OF A LIFETIME FOR SALE

A well established, profitable Radio Retail Business in the heart  
of Los Angeles.

Owner will sacrifice stock and good will at a loss

## A new battery charger, noiseless and indestructible

*The Fansteel Balkite Battery Charger for Radio "A" (6 volt) Batteries is an entirely new type of rectifier, based on the use of Fansteel Balkite, a new and rare metal developed for this purpose.*

1. It is entirely noiseless.
2. It cannot deteriorate through use or disuse.
3. It has no moving parts.
4. It has nothing to adjust or get out of order.
5. It cannot discharge or short-circuit the battery.
6. It requires no attention other than an occasional filling with distilled water.
7. It will not overcharge.
8. It cannot fail to operate when connected to the battery and line current.
9. It is unaffected by temperature or fluctuations in line current.
10. It is simple, efficient and indestructible except through abuse.
11. Without added attachments the charger may also be used to charge "B" storage batteries.
12. *It can be used while the radio set is in operation.*

**FANSTEEL**  
**Balkite**  
PATENTS

## "Out of the Air"

By LISTENER-IN

Here is a summary which shows how big radio already has grown. At the beginning of 1924 there were in this country approximately 3,000,000 radio receiving sets, 10,000,000 listeners, 543 licensed broadcasting stations, 250,000 persons directly and indirectly connected with the industry, 3,000 manufacturers of radio apparatus, 1,000 wholesale dealers in radio sets.

Great Britain has 580,000 broadcasting listeners compared with 30,000 a year ago.

Life of a vacuum tube is from 1,000 to 3,000 burning hours.

A Washington amateur has built a miniature crystal set small enough to place within a single radio head-phone.

On April 22nd at Geneva, an international conference of broadcasting experts convened to discuss terms of an agreement to regulate broadcasting, eliminating conflicts between stations.

The Radio Sales and Service Company, 826 West Seventh street, Los Angeles, have installed a broadcast station for the benefit of their customers so that they can have music at any time desired, and also for the testing of sets at times when local stations are silent. The call letters are KFPG, wave length 238 meters and power 100 watts.

At the regular monthly meeting of the Radio Division of the Music Trades Association held at the City Club, Los Angeles, Mr. H. N. Sessions, commercial engineer for the Southern California Edison Company, gave a most interesting and humorous lecture on a new circuit. Mr. Sessions has been good enough to promise Radio Doings an article on his interesting "circuit," which we hope to print in an early issue with a diagram.

A new company has been formed to handle radio "paper" from dealers. This concern will fill a long felt want in the trade and we feel sure that many of those engaged in the radio trade will welcome it. The officers are well known to radio dealers and will inspire their confidence. Offices have been opened in room 708 Farmers & Merchants Bank building, Long Beach. The officers are: R. M. Woods, president; C. R. Kierulff, vice-president; W. D. Rios, secretary; H. K. Smith, treasurer.

KGO—General Electric Co., Oakland, Calif. Every Monday from 8 o'clock on, are now broadcasting lectures and instructions on agriculture, language, music, economics, and literature. This will be of great help and interest to many located in out-of-the-way places. This station is one of the most powerful in the country and most any kind of tube set, within reasonable distance of Oakland, should have no trouble in picking them up.

The Yale Radio Electric Company has been appointed exclusive distributor for the well-known Garod Neutrodyne Received in Los Angeles and surrounding territory.

Tuesday evening, while our radio expert, Dea Andrews, was trying to get Boston on his crystal set, he heard some very wierd whistling coming through the air. It was so uncanny that his curiosity was aroused. He would like to know if any other fan has had similar demonstrations.—"Wolf Howls."
