EXPLANA-

OF KEY TO BROADCASTING SCHEDULE

Suppose a broadcasting station's schedule is "Daily excepting Sunday" from 8 P. M. until Broadcast: Music—Monday, Wednesday and Friday, from 4 to 5 P. M., a "Matinee Musicale".

You will find the above, listed on this log, after the call letters, etc., in the last column, as 9-I-U-Z-22. 1-3-5-QQ-UU-Z-42.

Look at the left hand column of numbers below. You find 9 means daily excepting Sunday. Look at the time chart, using the column, that shows the kind of time used where you are. Using Eastern time as an illustration, you will find I means 8 and U means 11, and Z means P. M. Number 9 find is music. This transposed means daily excepting Sunday from 8 P. M. until 11 P. M., Music. Look up 1-3-5 and you find MONDAY, WEDNESDAY, and FRIDAY. On the chart, look up QQ and you find 4, and UU is 5, Z is P. M. This transposed is Monday, Wednesday and Friday, from 4 to 5 P. M. 42 is Matinee Musicale.

ET stands for Eastern Time, CT, Central Time, etc. This shows the kind of time the stations are broadcasting on, and by using the column that designates your time, you do not have to allow for the difference in time. This will show when the station is on the air in your time.

EQUIDISTANT ZENITHAL PROJECTION MAP

Reprinted Through the
Courtesy of General Electric
Co., Schenectady, N. Y.

If you have ever tried to figure the distance between any point in North America and a city in Asia, or South Africa making due allowance for the curvature of the earth, you will appreciate this distorted map which was drawn for the convenience of radio engineers of the General Electric Company in interpreting transmission tests.

It is known as an "equidistant zenithal projection," which means that you don't have to resort to spherical trigonometry or a slide rule to get either direction or distance between two points on the face of the earth, one point of which is the center of the map.

This map is drawn with Schenectady as a center and all measurements, to be accurate must be from or to Schenectady. An entirely different distortion would be produced if the map were drawn with London or Melbourne as a center.

The projection has three main uses. First it gives the straight line distance between Schenectady and any other point on the earth's surface. This is obtained by measuring the distance from Schenectady to the point in question and converting this measurement in inches into miles by means of the scale at the bottom of the map.

The map is valuable, in the second place, as it shows the nature of the intervening territory between Schenectady and

any other point. This is highly important for the radio engineer for, as is well known, the distance over which radio signals can be transmitted depends, among other things, on the nature of intervening territory, that is whether it is land or water. Distance transmission over territory three-fourths of which is water and one-fourth land is not so difficult as transmission over the same distance three-fourths land and one-fourth water.

In the third place the map gives the exact bearing or direction from Schenectady to any other point on the earth's surface. This bearing is obtained by extending a straight line through Schenectady and the point in question to the scale on the periphery of the map which reads directly in degrees. It would not be supposed, for example, that radio signals from Schenectady would travel within a few degrees of the North Pole to reach Manila. The average person would not expect a radio wave, traveling in a straight line and the shortest distance to Calcutta, to take a north-easterly route.

NOTICE—This map is accurate only for determination of distances between two places, one of which is Schenectady, N. Y. Because of the distorted nature of the map, very great variations arise. In other words the distance from San Francisco to London would not be accurate, but from Schenectady to London would. Use the other map to determine distances from Schenectady to where you live.

DIRECTIONS FOR USE OF MAP ON REVERSE SIDE
To Get Distance, cut out Scale and fasten on your town with brass paper fastener.

AIR LINE RADIO MAP AND LOG

AIR LINE RADIO MAP, LOG AND DIRECTORY

Listing All Stations Whether Five or Fifty Thousand Watts

— BY —

CALL LETTERS, KILOCYCLES, METERS AND TOWNS, having a unique broadcasting schedule, enabling the user to see at a glance who is on the air, and with what class of entertainment.

AN INDIVIDUAL LOG FOR EACH STATION WITH TIME ALLOWANCES MADE.

COMPLETE LISTING OF ALL WORLD STATIONS from two hundred to six hundred meters,

INCLUDING

THE ORIGINAL PATENTED AIR LINE MAP, WITH MOVABLE MILE SCALE, giving distance instantly, and a generous supply of APPRECIATION CARDS.

A FREE SUPPLEMENTAL SERVICE.

The information contained in this book is compiled from official sources, supplemented by correspondence to the stations, and our many friends who send in changes from their localities.

DIRECTIONS FOR USING AIR LINE MAP AND LOG

Remove Map and Postals From Center of Book

With a sharp knife or scissors, cut out the mile scale. Next make a small hole in the map at your town, and put the scale over this hole, placing a paper fastener through the scale and map. Now bend the arms of the scale over. When you hear a distant station it is only necessary to swing the scale around to the city where the station is located and read the approximate distance by air, on the scale. If you live in the country or in a city that has no broadcasting station fasten the scale on the nearest city to you that has a station and add or subtract the mileage from where you live to city where you have the scale fastened. Only towns having broadcasting stations appear on the map. This allows you to find the town you are looking for without confusion. After you hear a station, fill in the white space in the circle, with a colored pencil, and you have a record of towns heard. As all radio logs get out of date in a short time, we advise you to read the coupon that entitles you to a FREE supplemental service. You will find it with the appreciation cards. SEND THIS IN NOW, WHILE YOU THINK OF IT.

NOTICE TO USERS

they will appreciate it.

MULTIVIDER MFG. CO., 713 Baltimore, Kansas City, Mo.
The only praise the Radio Casting Stations receive is when you wire, phone or write.

Air Line Radio Map and Log Appreciation Card

Station _____ Date _____

I tuned in your station
Between the hours of _____ and _____ Kind of time
Your modulation was
Your program was
The kind of set I used was

Number of tubes _____ Kind of batteries _____

The Kind of Broadcasting I Prefer:

- Talks
- Dance
- News Bulletins
- Organ Music
- Band Music
- Popular Music
- Classical Music
- Special Varied Features
- Church Services
- Educational Programs

Please send me the following:

- Catalogue of your product.
- Your broadcasting schedule.
- Verification of the above.
- Put my name on your mailing list.

With the many changes that occur in radio you will find our supplemental service invaluable.

Our service consists of changes in wave lengths, power, new stations and stations that have quit broadcasting. Send this coupon in now while you think of it.

FOREIGN BROADCASTING STATIONS

Showing Stations using from 200 to 600 meters only.
