STEVENSON'S BULLETIN OF RADIO BROADCASTING STATIONS is published quarterly. Publication dates are September, December, March and June. The subscription price is \$1.00 per year. All subscriptions are payable in advance. Unless otherwise directed, new subscriptions will begin with current issue. When changing an address, give the old address as well as the new.

Entered as Second Class matter at the Post Office at Washington, D. C., under the Act of March 3, 1879.

(Copyright 1927 by National Publishing Company)

Stevenson's Enlarged With Many New Features Added

REVISED broadcasting log; air line mileage chart; operating time of larger broadcasting stations, and editorial review of outstanding radio developments among new features.

ALL North American broadcasting stations of 100 watts or more power are included in the new STEVENSON'S log or list of stations by wave lengths. Additionally, the power of each station is given, enabling listeners to determine at a glance which broadcasters may be tuned in and where they can be found on the dials.

This is one of the new features of the enlarged STEVENSON'S BULLETIN OF BROADCASTING STATIONS. Here are some of the other new features:

An air line mileage chart giving distances between principal cities of the United States.

Operating hours or time on the air of the larger broadcasting stations.

Enlargement of the list of cities having stations; every city in North America is listed with the call of the station.

Editorial summary of important developments in the broadcasting field with a review of activities of the Federal Radio Commission.

The enlarged STEVENSON'S sells for 25 cents per copy. The yearly subscription price is \$1.00.

Subscriptions received prior to September 1, 1927, are not affected by the increased price.

STEVENSON'S, in its new form, provides a complete service to listeners who are most interested in what they can get out of their set. It is indispensable to complete radio enjoyment.

Publication dates are September 1, December 1, March 1, and June 1.

Wave Vagaries Prevent Perfection

BUT they may be overcome, says prominent physicist, and broadcasting advanced to point where it can be counted on for reliability of telephone. Radical improvements in receiving sets not expected.

By DR. J. H. DELLINGER

Chief, Radio Laboratory, BUREAU OF STANDARDS

To day's problem in radio is how to control or circumvent the vagaries of radio waves, and the improvement of reception thereby.

Radio history turns on two major problems. The first was the development of sets with which programs could be received with the full volume and quality of the original. By and large this has been accomplished.

But the results of years of intensive work on the improvement of transmitting and receiving apparatus have frequently been spoiled by the things that happen to the radio waves in passing from the transmitter to the receiver.

That brings up the second great problem which scientists are

investigating—wave vagaries.

The vagaries to which radio reception are subject include intense variation, fading or fluctuation of received signal, atmospherics or static, variation of wave direction and polarization, and interference of various kinds.

Further advance in radio depends on a better knowledge of these subjects. It has led to studies which have revealed many facts regarding the nature and cause of fading, signal variation, atmospherics and other vagaries of radio signals.

I believe radio engineers will eventually overcome most of the outstanding problems and that broadcasting service may become as reliable as the telephone.

But future improvements in broadcasting will be in the transmitting end. The newest and most recently designed sets on the market cannot be improved to any considerable extent.

Radio Commission Ignores DX Demand

*Commissioner
HENRY A. BELLOWS,
of Minneapolis*

Believing that reliable reception night and day, winter and summer, is the important thing in radio, the Commission takes for granted that the actual service range of a broadcasting station is very small indeed.

"We are not trying to handicap distance reception," says Commissioner Henry A. Bellows, speaking for the Commission. "In fact, I have been able to pick up more distant stations during the past month than during any previous summer. Last summer there was so much interference that it was

Distance reception did not enter into the calculations of the Federal Radio Commission when the new assignments of wave lengths were made.

hard to get distance with any degree of satisfaction.

"But we must remember that the important thing in radio is reliability of reception and quality of programs. Moreover, I do not believe that there are as many people interested in distance reception as there used to be.

"I know it is thrilling to pick up stations thousands of miles away. It is great sport to try to bring those stations in. But the Commission does not regard that as the real service of radio. The thing that people buy sets for is to hear good programs with fair reliability."

Commissioner Bellows was asked if distance reception was not more or less necessary in order that service might be furnished to rural districts which do not have their own broadcasting stations.

He said he does not believe there are many sections which do not get service of some kind from nearby stations.

BELIEVES real service of radio depends on reliability of reception and quality of programs and that actual service range of stations is very small; did not consider distance reception.

Commission Assignments Have Decreased Radio Interference

BUT ideal reception cannot be attained until there is a reduction in the number of stations; Commission doubts constitutionality of such a step; present plan discriminates against rural districts.

By THOMAS STEVENSON

WHAT has been accomplished by the Federal Radio Commission since it took over regulation of broadcasting stations?

Any discussion of the achievements of the Commission involves three all-important questions. They are:

Has station interference been decreased by the new assignment of wave lengths?

Has the Commission done the best it could with the present radio law?

Is additional legislation necessary before ideal reception may be attained?

Most people believe that reception has been improved by the Commission. When the Commission began to function, there was no sense nor system to the distribution of wave lengths. The stations selected their own wave lengths with resulting confusion and disorder. Many stations operated on split frequencies and were

separated from other stations by only a few kilocycles.

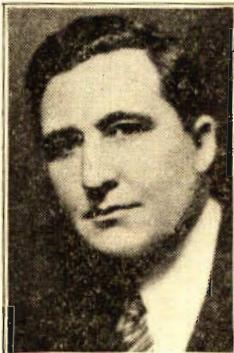

That has been rectified. A more or less scientific assignment of channels has been made. Stations are no longer permitted to operate on split frequencies. A very considerable amount of interference has been eliminated thereby. No doubt when stations can be made to stick to the wave lengths assigned them, there will be an even further improvement.

But the fact remains that there are too many broadcasting stations for the limited number of wave lengths. Members of the Commission freely admit there are too many stations. But they don't think they can do anything about it. They do not believe they have the legal authority to refuse licenses to existing stations unless they violate the law. Such a step, they say, would be unconstitutional.

It is a mooted question. A number of very able people think the

(Please turn to page 33)

Ultra-Jazz Craze Will Disappear

ALLEN MCQUHAE,
Irish Tenor

Atwater Kent radio concerts. McQuhae bases his opinion on thousands of letters he has received during his twenty-one recent radio concerts. The songs most frequently requested, he says, are "Mother Machree," "Absent," "I Hear You Calling Me," "Kathleen Mavourneen," "Danny Boy," Where the River Shannon Flows," "At Dawning," "I'll Take You Home Again Kathleen," "Love's Old Sweet Song," and "My Wild Irish Rose."

"Radio will in time effect the

"Radio is gradually de-throning jazz and bringing about a return to the songs of heart and home, the ballads and story songs."

So says Allen McQuhae, popular Irish tenor of the

death of the present popular craze for suggestive and ultra-jazz songs," declares the singer, "though it will not do away entirely with jazz, since there has always been some similar form of syncopated music.

"Song writers have unfortunately come under the spell of the dance enthusiasts, the jazz-mad crowd of youngsters throughout the country, forgetting that the great music-loving population of America is middle-aged.

"The steady increase in radio concerts by the world's greatest opera and concert stars, and the constant improvement in broadcasting generally is marking a swing back to the kind of songs that have gone down through the ages, the old folk songs, ballads and popular lyrics.

"The reason is that broadcasting stations and those sponsoring radio entertainment must present programs of the broadest possible appeal to warrant the tremendous investment."

ALLEN MCQUHAE, popular radio artist, basing opinion on thousands of letters received from listeners, declares old folk songs, ballads and popular lyrics are replacing jazz in public fancy.

Listeners Asked to check Stations

Most of the interference on the radio at present is caused by the failure of broadcasting stations to stay on the wave length or frequency assigned them by the Federal Radio Commission.

Such is the opinion of Chairman William H. G. Bullard, of the Commission, after a careful check of the situation. Chairman Bullard thinks that nearly one-half of the broadcasting stations are failing to live up to the Commission requirement that they keep within one-half kilocycle of their assigned frequency.

The Commission is preparing to mete out drastic punishment to the offenders. Already, the Commission has notified some two dozen

C H A I R M A N BULLARD, of Radio Commission, believes most of present-day interference is caused by failure of broadcasting stations to stay on wave lengths assigned them; wants listeners to report instances of violation.

stations to show cause why their licenses should not be revoked for violation of the regulation.

But the facilities of the Commission for checking up on the stations are limited because of the failure of Congress to pass the deficiency appropriation bill at the last session. As a result, the Commission is short of money.

Chairman Bullard would like very much for listeners to report to the Commission whenever stations fail to keep on their assigned wave length. He would like to have an army of listeners checking up on the broadcasters to see that they live up to the regulations.

"I am sure," says Chairman Bullard, "that when we drive the persistent offenders off the air, and when all stations keep on their wave length as required by the Commission, we will experience much better reception than we have known for a long time."

Forecasts of Radio Reception Soon

HYDROGRAPHIC expert, after three years' observations and experiments, predicts forecasts of radio reception may be achieved. Thinks there is definite relationship between static and weather.

By EARL H. KINCAID

Lieut., HYDROGRAPHIC OFFICE, U. S. NAVY

Forecasts of radio reception by the Government, somewhat along the lines of daily weather reports, may be possible in the near future.

For a long time it has seemed to us that there is some relation between static and the bad weather which frequently accompanies or follows shortly after unusually heavy static interference.

Just what the relationship is we hope to determine by experiments and observations which are in progress.

Due to the cooperation of other Government agencies, private individuals and corporations, we have already obtained these results!

(1) Static under certain circumstances indicates the formation of secondaries. Secondaries to major disturbances that generally form in the afternoons are difficult to forecast by bidaily barometer readings alone. Yet secondaries have been indicated by the static bearings eight hours in advance.

(2) Approaching hailstorms have been indicated by increasing static 12 to 14 hours in advance.

(3) Static is mild in homogeneous highs.

(4) Static is heavy in lows.

(5) Observations thus far have shown that static has a sufficiently definite relationship to the atmosphere as plotted on the daily weather map to enable one by proper observations to make use of present weather-forecasting methods in static forecasting and to make use of static observations in weather forecasting.

Engineers Dislike Commission Plan

REFLUSE to criticize Commission scheme for eliminating radio interference but point to their report which recommends reduction of stations and suggests 64 national and several hundred local broadcasters.

SIGNIFICANT, indeed, is the refusal of prominent radio engineers to comment on the scheme of the Federal Radio Commission for restoring order and eliminating radio interference.

About the only thing they will say is that "The Radio Commission has a tough job on its hands, one that requires a lot of time and patience to handle."

The engineers do not want to place themselves in the position of criticizing the Commission. They prefer that the Commission learn of its mistakes from some other source.

Several months ago the Radio Broadcasting Committee of the American Engineering Council made a complete study of the broadcasting situation. The results of the survey were presented to the Radio Commission.

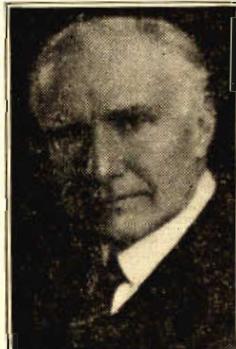

The report had the approval of most of the outstanding radio engineers and it is unlikely that they have changed their minds about it.

Here is an extract from the report which shows why they do not care to comment on the present Commission plan:

"Sixty-four national stations and several hundred local stations can be provided for without interference or time division. Such a national array of stations can readily provide not only adequate but 'fair, efficient, and equitable radio service' to every community in the United States, as required by the Radio Act of 1927.

"Any plan which provides for a greater number of stations will evidently diminish rather than increase the actual radio service to the several communities of the United States. If the whole 733 stations now operating were allowed to continue, it would have to be done either by restricting the power, diminishing the geographical separation for a given frequency separation, or dividing time, any of which would diminish service to the listeners of the country."

Damrosch to Give 24 Music Talks

WALTER DAMROSCH

“I can change the musical taste of America.” So declares Walter Damrosch, who resigned after 41 years of continuous service

as conductor of the New York Symphony Orchestra, to accept the position of Musical Counsel of the National Broadcasting Company.

During the coming winter Damrosch will give 24 orchestral concerts with explanatory comments on the works presented and the instruments of the symphony orchestra. The present plan contemplates three series of eight concerts each, with carefully graded programs adapted to elementary schools, high schools and also colleges and institutions of high learning.

The concerts will be broadcast by a large hook-up of stations so that every school and college in

FORMER conductor of New York Symphony Orchestra to broadcast three series of eight concerts each, with graded programs adaptable to schools and colleges; thinks can change American musical taste.

the United States may be able to receive them.

According to Frank A. Arnold, director of development of the National Broadcasting Co., it is the first step toward the “University of the Air,” which is bound to come into complete realization as one of the leading possibilities of radio.

“Much is yet to be done in this country by way of educating the masses to an appreciation of good music,” said Arnold. “It is true that splendid service has been performed in many cases by introducing music into the curriculum of our public schools, but the final limitations governing all public school appropriations are such as to forbid to any great extent the employment of outside artists or high priced professional talent.

“After a complete survey of the entire situation, Damrosch plans to give 24 orchestral concerts which will be broadcast to every school and college in the country which chooses to accept them.”

International Programs Soon

By THOMAS STEVENSON

"All the world's a stage."

So said Shakespeare many years ago. Could he but realize the significance that has been given to his words by chain broadcasting.

Through the net-work system of stations, the four walls of the broadcast theater have been moved to the boundaries of the United States. If the dream of David Sarnoff, Vice President of the Radio Corporation of America, comes true, they will take in the entire world. Sarnoff plans an international exchange of programs.

It seems a safe prophecy that the time is not far distant when listeners will be able during an ordinary evening to hear features originating at many points throughout the United States, all combined into a program which will shift rapidly from one pick-up to the next without perceptible pause.

A program made up of the best that can be offered by a half-dozen cities scattered throughout the

United States is something to look forward to with considerable anticipation.

New Mastery Over Life

Sir Philip Gibbs, English writer, says that radio is going to change the mind of man, is going to give him a mastery over life beyond all previous dreams.

"Again we stand only on the threshold of a new age," says Sir Philip, "and yet already we are conscious of newly revealed wonders which in the old days would have been thought miraculous and are indeed taking us into a region beyond mere matter, in the sanctuaries of eternal force."

It sounds like a learned opinion from the deep recesses of a laboratory.

But it recalls the story of the colored man who had been a spectator at a street-corner fight.

"Did you witness the fracas?" asked the Judge.

(Please turn to page 34)

BROADCAST theater walls to take in entire world. Radio to give man new mastery over life. Factory production of singers questioned. Public needs radio manners. Radio none too kind to President's voice.

COMMISSION ASSIGNMENTS HAVE DECREASED RADIO INTERFERENCE

(Continued from page 5)

Commission could reduce the number of stations without involving the constitutionality of the radio law. Others take an opposite view.

Until the number of stations is decreased, or the number of wave lengths increased, there is going to be interference and reception of distant stations will be handicapped.

Most of the wave lengths have been duplicated in different parts of the country. That is to say, the same wave length has been assigned to stations in different parts of the country. In many cases, four or more stations are using the same wave length for simultaneous broadcasting.

Local listeners of these stations may not be bothered because the local broadcaster will drown out the others. But listeners located a few hundred miles from either of the stations will not be able to receive any of them without interference.

Of course, if the Commission is interested only in providing good reception to local listeners, then it can be satisfied. But how about the districts which do not have local stations and which must depend on distant stations for programs?

It would appear that the present plan discriminates against the rural districts of the United States.

The natural step would seem to be for the Commission to test its authority under the radio law. If it has the authority, it should reduce the number of stations for it has committed itself to the desirability of such a step. If it has not the authority, then Congress should be apprised of the fact so that additional legislation might be considered.

Meantime, Congressional sponsors of the 1927 Radio Law are keeping in close touch with the situation in order to determine whether additional legislation is necessary.

There appears to be little doubt that an effort will be made in Congress to extend the active life of the Commission beyond one year, the time specified in the Dill-White Law.

A number of Senators and Representatives would like to see the establishment of a permanent Commission which would have jurisdiction over radio, telephone, telegraph and cable communications.

Moreover, these legislators do not believe the Commission can dispose of the broadcasting problem in one year and they do not want to see broadcasting regulation turned over to the Department of Commerce until present complications are disposed of.

INTERNATIONAL PROGRAMS SOON

(Continued from page 11)

"No sah," he replied. "But I seed the fight."

Factory Production of Singers

True artists are bemoaning what they call the modern tendency toward "factory production of singers." They blame radio broadcasting and music critics.

The art of singing has been possessed and will be possessed by those who are endowed by nature with the necessary qualities—healthy vocal organs, uninjured by vicious habits of speech; a good ear; a talent for singing; intelligence; industry, and energy.

Formerly, eight years were devoted to the study of singing at some well-known conservatory. Most of the mistakes and misunderstandings of pupils were discovered before engagements were undertaken, and teachers spent so much time in correcting them that pupils learned to pass judgment on themselves.

But art today, like everything else, is pursued by steam. Artists are turned out in factories, that is, in so-called conservatories, by teachers who give lessons 10 or 12 hours a day. In two years they receive a certificate of competence or at least a teacher's diploma of the factory.

All of the inflexibility and unskillfulness, mistakes and deficiencies, which formerly were dis-

closed during a long period of study, do not appear under the factory system until the student's public career has begun. There can be no question of correcting them, for there is no time, no teacher, no critic, and the execuant has learned nothing whereby he could undertake to distinguish or correct them.

Radio broadcasting is partly responsible, for it has greatly increased the demand for vocal artists.

Music critics are most to blame, for they have praised where praise was not due—the artists have been convinced by newspaper applause that there was no further need for study.

Radio Manners Needed

The time is about here when radio etiquette should be of as much importance as good manners in other matters.

Probably there are more family quarrels about the sort of entertainment that is to be brought in than there ever was about bridge. Men and women who "cannot bear to listen" to certain selections should begin to learn that their likes and dislikes are strictly personal with themselves and must not be inflicted upon the rest of the family.

Sunday Programs

A proposal has been made to the Federal Radio Commission that broadcasting stations should be

permitted to send out only religious programs on Sunday.

The Commission listened sympathetically. The author was gently reminded that the law did not authorize censorship of programs.

The idea is not new. It crops up ever so often. No doubt an attempt will be made to incorporate it into law.

Sponsors for the scheme have yet to learn that the surest way to popularize anything is to prohibit it. The human race cannot be led by the nose. The individual public is bound to rebel against anything that is crammed down its throat.

Public Soon Dissatisfied

"The day has almost arrived," says Merlin Hall Aylesworth, president of the National Broadcasting Co., "when broadcasting will have no more worlds to conquer in the field of musical achievement. We cannot put on the air stars greater than the greatest operatic singers which the world now knows. We can go no further than to present the most distinguished artists of the concert stage. We cannot broadcast greater symphony orchestras than those which we have put on the air."

There is food for thought in Aylesworth's statement. It is an echo of public dissatisfaction with programs. Because a statue has not been erected in his honor for furnishing the best that can be obtained, he is scratching his head in bewilderment.

Aylesworth might stop commiserating himself and spend the time persuading advertisers that use his stations to inject a little more variety into their programs.

International Programs

Inter-continental rebroadcasting of radio programs is not only possible, but American listeners soon may expect to receive entertainment from foreign countries.

This is the announcement of Martin P. Rice, manager of broadcasting for the General Electric Company, who has been experimenting for two years on the exchange of international programs. During that time Schenectady programs have been rebroadcast regularly by stations in South Africa, Australia, England, France and Cuba.

"I expect within a short time American stations will be able to pick up and rebroadcast programs from other countries," says Rice. "I have information from foreign countries that they expect to develop short wave transmitters which will enable American stations to pick up their programs.

"Vagaries of weather may interfere and transmitting sets near the receiving point may smear the received signal, but under average conditions we can predict results. It should be possible to announce in advance a rebroadcast program and carry through that program successfully."

Operating Hours of American Broadcasters

(CENTRAL STANDARD TIME)

This schedule of operating time of stations is based on Central Standard Time. Eastern Standard Time is one hour earlier; Mountain Standard Time one hour later, and Pacific Standard Time two hours later.

BROADCASTING LOG WITH STATIONS *Listed by* WAVE LENGTHS

ALL North American broadcasting stations of 100 watts or more power are here listed according to frequency in kilocycles and wave length in meters, with the power of each station in parenthesis following the location. Since it is unusual with most sets to pick up distant stations of less than 100 watts power, they are not included in this list.

Freq. Kilo.	W. L. Mets.	Station Call, Location and Power	Dial Setting No. 1	No. 2	No. 3

DON'T MISS YOUR COPY

A new issue of STEVENSON'S will be on the news stands Nov. 15. It will contain, among other features, a new log and a revised list of all broadcasting stations, including Federal Radio Commission changes.

Earn \$50 to \$200 a Week in RADIO

You can! Hundreds of ambitious men are already earning thousands of dollars in this wonderful new industry—you, too, can get your share. Mail coupon below for Free Book which describes fully the amazing money-making opportunities in Radio and tells you how YOU can earn from \$5,000 to over \$10,000 a year.

THE astounding growth of Radio has created thousands of big money opportunities. Millions of dollars were spent during the past year on Radio, and thousands of young men are needed right now to meet the ever-increasing demand of work.

Men are needed to build, sell and install Radio sets—to design, test, repair—as Radio engineers and executives—as operators at land stations and on ships traveling the world over—as operators at the hundreds of broadcasting stations. And these are just a few of the wonderful opportunities.

Easy to Learn Radio at Home in Spare Time

No matter if you know nothing about Radio now, you can quickly become a Radio expert, by our marvelous new method of practical instruction—instruction which includes all the material for building the latest up-to-date Receiving Sets.

Scores of young men who have taken our course are already earning from \$75 to \$200 a week. Emett Welch, right after finishing his training, started earning \$300 a month and expenses. Still another graduate, only 16 years old, is averaging \$70 a week in a Radio store.

Doubles Salary

I can very easily make double the amount of money now than before I enrolled with you. Your course has benefited me approximately \$3,000 over and above what I would have earned had I not taken it.

T. WINDER,
Grand Junction, Colo.

From \$15 to \$80 a Week

Before I enrolled with you I was making \$15 a week on a farm. Now I earn from \$2,000 to \$4,420 a year, and the work is a hundred times easier than before. Since graduating a little over a year ago, I have earned almost \$4,000, and I believe the course will be worth at least \$100,000 to me.

(Signed) GEO. A. ADAMS,
Tamaqua, Pa.

Wonderful Opportunities

Hardly a day goes by without our receiving urgent calls for our graduates.

Take advantage of our practical training and the unusual conditions in Radio to step into a big paying position in this wonderful new field. Radio offers you more money than you probably ever dreamed possible—fascinating, easy work—a chance to travel and see the world if you care to, or to take any one of the many Radio positions all around you at home. And Radio offers you a glorious future!

SEND FOR FREE RADIO BOOK

Learn more about this tremendous new field and its remarkable opportunities. Learn how you can quickly become a Radio expert and make big money in Radio.

We have just prepared a new 48-page book which gives a thorough outline of the field of Radio—and describes our amazing, practical training in detail. This Free Book, "Rich Rewards in Radio," will be sent to you without the slightest obligation. Mail coupon for it now!

For a short time we are offering a reduced rate to those who enroll at once. Act promptly and save money.
