World-Wide Short-Wave Stations

■ **The World-Wide Short Wave Stations** section of *White's Radio Log* is, as its name implies, a *log*, that lists stations actually monitored by listeners in the United States, Canada and overseas. It is *not* intended to be a listing of *all* shortwave transmitters licensed as such listings contain numerous inactive transmitters, and low powered stations which are rarely heard by DX'ers. The stations listed here, therefore, are those most often reported and consistently heard during the past few months. Many have been monitored by DX CENTRAL the official RADIO-TV EXPERIMENTER monitoring post in New York City.

In our listings, a station or frequency marked with an asterisk (*) indicates a non-broadcast station or frequency. This might include aeronautical, maritime, military, or other type of transmission, either in regular AM or single sideband (SSB). In instances where many non-broadcast stations use the same frequency, we have given you a clue as to the type of stations to be found there, rather than pin down only one station.

Let Us Know. Listeners are invited to submit their loggings to us for publication in the Shortwave section of *White's Radio Log*. Be sure to include the following information for each station you report: approximate frequency, callsign and/or station name, city and country, and time heard in Eastern Standard Time, 24 hour clock. Address your reports to: **DX CENTRAL, White's Radio Log, c/o RADIO-TV EXPERIMENTER, 505 Park Avenue, New York, N. Y. 10022, U.S.A.**

Time To Listen. All times shown in *White's Radio Log* are in the 24 hour EST

clock system. For example, 0800 is 8:00 AM EST, 1200 is noon EST, 1800 is 6 PM EST, and so on. For conversion to other time zones, subtract 1 hour for CST (0800 EST is 7 AM CST), 2 hours for MST, 3 hours for PST.

The following abbreviations are used in our listings: BC—Broadcasting Company, Corporation, or System; E—Emissora; R—Radio or Radiodiffusion; V—Voice or Voz.

TNX. We are indebted to the following DX'ers who added their loggings to those of DX CENTRAL, the official RADIO-TV EXPERIMENTER monitoring station in New York City, to bring you this month's listings:

Roll-A-Way

Continued from page 70

dicate just which circuits are hot.

Finishing Touches. Rubber-tired chest type casters were fitted to the bottom of the pedestal making the entire unit *roll-away*. A wooden rack mounted on the lower inside portion of the door easily accommodated the log and the call book. Ample space was available below the bottom shelf for a generous drawer fitted with a handle and in which a supply of QSL cards, stationery, extra pencils and various other miscellaneous station supplies were kept. The final *paint and polish* was added by labelling all controls external to the transmitter and receiver with the neat little AMI-CAL dry transfer titles.

Sand and paint the pedestal before installing your rig. Choose your own color scheme, of course; we used an olive green exterior to match the door and window trim in Jerry's abode. The interior was done in a cream buff which contrasted nicely with the equipment. The top of the pedestal and the top surface of the shelves as well as the front of the drawer were covered with a pale grey adhesive-backed shelf paper and $\frac{1}{2}$ " x $\frac{1}{2}$ " aluminum angle was fitted around the pedestal top and on the facing edges of the shelves for finished appearance. And last, but by no means least, the station and operator license card in a small frame, was secured to the inside of the door near the top. Handbooks, manuals and current ham magazines found a neat resting place at the bottom of the pedestal below the drawer.

The result was an absolutely complete ham station with all accessories and supplies, safely enclosed and attractive in appearance both when in use and in storage and readily *mobile* by merely unplugging the RG58U antenna coax and the main AC cord. The coax feeder from the antenna entered through a window board and, when not connected to the gear, was wound in a coil of a few turns and hung behind the window drapes, completely concealed. Grounding of course was present in the copper braid shield of the coax.

Jerry can now dash from school, pull his *roll-away* shack out of the closet, plug in the AC and antenna connector, pull up his typewriter stand operating desk and in five minutes from the time he drops his school books on the bed, he's ON-THE-AIR!

For the Big Rigs Too. And now, before we wind up this little saga which puts the ham shack on a rolling pedestal, a few words to you older hams who say, "Sure; that's fine for the novice with little gear but what about us who have more sizeable equipment and other gadgets?" I think I can answer that one too, with an example. After a number of local hams had admired Jerry's *ham shack in a box*, Gene, a ham of the General class and in his middle thirties with quite a few on-the-air years behind him, decided that the roll-away set-up was for him too. With just a two-room apartment for he and his wife, he had been setting up some rather heavy gear on the kitchen table, manipulated various plugs and cords, hunted up his log and call book, dug his key, mike and phones out of a bureau drawer and about half an hour later was set up for business among a scattered bunch of gear. After looking over Jerry's compact *shack*, he saw no reason why he could not follow suit.

Carpenter work however, was not for him. He had no shop, no woodworking tools and claimed his woodcraft ability was something he'd rather not talk about! So . . . he had a local metal shop cut and drill a few pieces of aluminum angle ($\frac{1}{2}$ " x $\frac{1}{2}$ " and of suitable lengths) and the local cabinet shop cut him out a plywood top and bottom and masonite panels for the four sides of the pedestal. With a small handful of machine screws and nuts he assembled the whole *shebang* in less than half an hour and in another fifteen minutes he had the whole assembly painted in a pleasing color from a spray can! Incidentally, his pedestal was a bit larger than Jerry's to accommodate his Johnson Ranger II transmitter and his Hammarlund receiver, which it did superbly. Fitted with rubber tired casters he simply had a big brother model of the roll-away we built for Jerry and every bit as convenient to use or store. A unit like this can be rolled alongside an available table or, as Gene later did, fitted with a drop leaf operating shelf on the right hand side. OK, so you say you're left-handed, then put the shelf on the left side and hinge the door on the right. Before you do anything though, it's best you give your quarters a close look to check out dimensions.

And now . . . who said they had a limited-shack-space problem? With a bit of ingenuity and resourcefulness and using the foregoing ideas, is there any good reason why you can't get your equipment together in a Roll-Away Shack? ■

Circuit Breaker

Continued from page 62

following manner. Plug in an electric cord and momentarily touch the bare ends together. This will make a short circuit and the circuit breaker should act in a short time. The action of most circuit breakers depends on the current flow through a piece of bi-metal. As the bi-metal heats beyond its critical point it will bend and break contact with the circuit. After waiting a few seconds for the bi-metal to cool the breaker can be reset by pushing the reset button. Most circuit breakers are made so they can't be defeated by holding in the reset button. As long as you hold the button down no current will flow.

You should be able to find many uses for the Circuit Breaker Box in your shop. You could even build the same components into a wall outlet box, if you prefer, and have a permanent installation. Any way you do it, this go-between circuit breaker will save fuses and time.
