© 2025 International Radio Club of America. All rights reserved.

DESCRIPTION OF COLUMNS AND TERMS USED IN THIS LIST:

H: Use this column to track Mexican Stations which you have heard.

FREQ: This is the assigned frequency of a station on the AM Band

CALL: This is the call letters assigned to the station in the AM Band.

CITY/STATE: Exact city-of-license is given where known. The following abbreviations are used for Mexican states:

Agua - Aguascalientes	Chia - Chiapas	Hdgo - Hidalgo	NL - Nuevo León	Son - Sonora
BC - Baja California	Chih - Chihuahua	Jal - Jalisco	Oax - Oaxaca	Tab - Tabasco
BCS - Baja California Sur	Coah - Coahuila	Mex - Estado de México	Pueb - Puebla	Tama - Tamaulipas
Camp - Campeche	Col - Colima	Mich - Michoacan	Qtro - Querétaro	Tlax - Tlaxcala
CDMX - Ciudad de México	Dur - Durango	Mor - Morelos	QRoo - Quintana Roo	Ver - Veracruz
	Gjto - Guanajuato	Nay - Nayarit	SLP - San Luis Potosí	Yuc - Yucatán
	Guer - Guerrero		Sin - Sinaloa	Zac - Zacatecas

POWERS: "-1" = station power is unknown. Other negative numbers indicate presumed, suspected, or estimated powers. Many of these listings are a result of the fact that stations seldom publicize their night powers, and night powers are often missing from station license documents and construction permits ("CPs"). Directional antenna patterns (U2, U3, etc.), when known, are listed in the "Notes" column.

SLOGANS: May include frequently-used network names. For new CPs, the licensee organization is listed here if known. For FM frequencies, the decimal point "." is *punto*. Some stations will identify by their call letters, and this is not always listed under slogans.

SCHEDULES – ALL TIMES ARE IN UTC (Coordinated Universal Time), also known as GMT (Greenwich Mean Time), except for the supplemental spreadsheet where local times are used to describe the time(s) at which stations broadcast the national anthem. All Mexican states use UTC minus 6 hours (GMT-6) except Quintana Roo (GMT-5), Baja California Sur, Nayarit (except Bahía de Banderas), Sinaloa, and Sonora (GMT-7); and Baja California (Norte) (GMT-8). ***Note that all of Chihuahua has changed to GMT-6/CST, and Mexico no longer observes Daylight Savings Time, except for Baja California (Norte) and certain cities along the US border*** (Ciudad Acuña and Piedras Negras in Coahuila, Anahuac in Nuevo Leon and Matamoros, Nuevo Laredo and Reynosa in Tamaulipas; for stations in these cities, subtract 1 hour from listed schedules from the second Sunday of March (2 am local time) to the first Sunday of November). ">" in place of a dash means that the station stays on later than the second time listed, but exact sign-off time is unknown. Similarly, "<" indicates that the station is on the air by the first time listed, but the exact sign-on time is unknown. Many stations in Mexico now broadcast 24 hours a day. However, many also sign on at 0500/0600 hours local time and run to 2300/2400 hours local time. The schedule column has been updated when a schedule is known. Please keep in mind that this column isn't absolute in some cases, and the actual schedule may differ from the listed schedule.

FORMATS:

AC - Adult Contemporary	EDU - Educational	MER - Merengue	ROM - Romántica (Love Songs/
BAL - Ballads	EX - Exitos (classic hits – S	NEW - New Age/Light "Jazz"	Ballads or Pop AC)

CUL - Cultural	JUV - Juvenil (Teen CHR –	REL - Religious Teaching	VAR - Variety
E: - English Language	E/S)	ROK - US Classic Rock music	
Announcers or songs	MAR - Mariachi		

Music may be in English (E), Spanish (S), or English-Spanish (E/S). "STUNTING"= temporary programming between format changes.

NETWORKS: The networks below range from satellite-fed simulcasts (eg, Radio Fórmula) to stations which do not simulcast but use identical jingles and promotional announcements (eg Nucleo Radio Mil). Smaller regional networks of 2 to 5 stations may simulcast at times. These networks are often identified by a common slogan in the "Slogans" column (e.g., Radio Sistema Zacatecas). Groups of stations which merely use the same advertising agency (Corporadio, Sociedad Mexicana de Radio) are no longer listed as networks, because the names of these "networks" are virtually never mentioned on the air. There are many more minor local ownership groups and networks than listed here, but these have been selected mostly because they may be mentioned on air.

Regional affiliates and lesser-known national affiliates are listed in the "Notes" column. SA, "EH-she ah," is widely used in corporation names in Mexico, and means roughly the same as "Inc" in the US or "Ltd" in Canada.

NOTES: This column includes regional networks, FM parallels, and other details to help identify a station, as well as the station's FM migration status if known. The following abbreviations are used in the "Notes" column:

// - parallel to simulcast	ex-- formerly	kW- kilowatt, 1000 watts	SW - shortwave
+/- - plus or minus	FB - football	OC - open carrier, "dead air"	w - Watts
24h - 24 hours a day	FM- FM band (88.1 – 107.9 MHz)	R - radio	
BB- baseball	freq - frequency	s/off - sign off	
CP- construction permit		s/on - sign on	

The following abbreviations describe directional antenna patterns:

U = unlimited time	U2 = unlimited, DA at night only	U5 = unlimited, DA day, ND night	All stations in Mexico operate with U1 unless noted.
D = daytime only	U3 = unlimited, same DA day and night	D1 = daytime only, non-directional	
DA= directional antenna	U4 = unlimited, two different DA's day and night	D3 = daytime only, directional	
ND= non-directional			
U1 = unlimited time, non-directional			

Web Pages: The following additional web sites may be useful for cross referencing or additional information:

IRCA Home Page (www.ircaonline.org)

IFT (Instituto Federal de Telecomunicaciones, Mexico's new equivalent of FCC) (<http://www.ift.org.mx/>); this site is likely to be replaced as the IFT is phased out in 2025.

INE (agency governing Mexico's elections) – AM coverage maps dated December 2016: <https://tinyurl.com/Mexico-AM-maps-2016>

In 2008, Mexico adopted IBOC as the standard for digital radio and initially authorized 11 AM stations and 10 FM stations to use it. At present, no Mexican AM stations are believed to still be broadcasting in IBOC, but it is definitely used by a number of FM stations.

Obtaining accurate information from BC Sur and the Rio Grande Valley ("RGV") is challenging. Most stations in these regions have little or no web presence. Some have web pages that have not been touched in years, and web streams that have not worked in a long time. The Brownsville, Texas SDR, which helped us monitor RGV stations, has been offline for long periods of time and generally does not get as good reception as it had in the past. The situation in BC Sur remains as frustrating as ever.

WHAT'S NEW THIS YEAR?

The IFT, which has served as a primary regulatory agency for radio for just over a decade, is going away. Mexico's congress voted to dissolve the agency, and 70% of the their funding was promptly cut. Initially it was reported that the IFT's regulatory authority would be returned to the SICT (renamed from SCT) and a few other agencies, and some aspects of the regulatory reforms that accompanied the IFT's creation would remain in place. This would not have been good. The IFT was certainly pedantic, and far from perfect, but they did introduce some good policies, and they brought some much-needed transparency to the radio licensing process. As a reminder, back when the SICT (SCT) was in charge:

- They never published any reliable station license data. (The IFT published a station list, and updated it very frequently, but was hit-and-miss when it came to publishing licensing details such as transmitter locations, night powers, etc.).
- They seemed to grant a lot of stations 1 kW night power (mostly in the 1990s) without any formal process.
- They consistently failed to honor the terms of Mexico's treaty with the US regarding negotiating the licenses for any station within 250 miles of the Mexican border. (The IFT has been exceeding the requirements of this treaty, reviewing virtually all new station CPs and parameter changes for existing stations with the FCC, and initially licensing stations as daytimers until night powers are negotiated with the FCC).
- They also failed to send updated station lists to the FCC, leaving the FCC's data decades out of date. (This was a frequent source of embarrassment for non-Spanish speaking DXers, who used the FCC station lists to "log" stations that never actually existed). The FCC will only accept additions and corrections from the Mexican government, not from the radio club community.
- They whitewashed the fraudulent cloning and moving of the 3 Bonilla stations in Ensenada and Tecate to Tijuana in 2004.

In late June, it was announced that a new agency, Comisión Reguladora de Telecomunicaciones (CRT), was being created. We will have to wait and see if this new agency bears more resemblance to the pedantic IFT or the lawless SICT/SCT.

Licenses continue to be granted for new stations:

Freq	Call	State	City	Licensee/Notes
670	XECSJG	JAL	Guadalajara	New social station. Carlos Martinez Macias, Fundacion Educacional de Medios, Radio Cultural de Zapotten (2022 application, frequency assigned 12/24).
1390	XECPCC	CHIA	Comitán	New public station, replaces XEMIT-540 whose license lapsed a few years ago.

The following new stations have reportedly come on the air: XECCBS-610 (5/25), XECCCN-640 (testing 5/25), XECCCG-1020 (believed active 7/25, live stream added to W Radio web page), XECSEZ-1330 (first logged in 2024, noted again 5/25), XECSAH-1630 (began testing 3/25, relaying co-owned XHSCHP-99.9 "Stéreo Cien 99.9 FM"... but on the incorrect frequency of 1620! They had

moved to the correct frequency of 1630 by 4/25). XECCBU-1290 is confirmed testing 4/25; they are reportedly using the facilities of the former XEFAC-1290. XECCBB-1590 was reported by one DXer in México 7/25.

The following stations have reportedly left AM and/or finally surrendered their AM licenses after being silent for some time: XEQAA-560 (silent for years, and had a social licensee ready to take over its AM license, but an IFT continuity review 5/25 decided that the AM would not need to remain on the air), XEVG-650 (11/24), XEDP-710 (confirmed by station 3/25), XEHN-1130 (confirmed by station 8/25), XETB-1350 (presumed; they were allowed to leave AM in 2024, and have not been logged since), XEDI-1360 (4/25), XEACE-1470 (license surrendered 5/25), XEQI-1510 (license surrendered 1/25).

XECSAC-1210, which was granted an initial 12-year license in 2021, was listed as "surrendered by RPC" 7/25. The station web site has since been hacked, but the web stream is somehow still available via zeno.fm, so it is likely that the station is still operating.

XEMEFM-1240 has been silent for a few years and has been removed from the Log.

The Tamaulipas state radio network's stations have mostly been silent in recent years, and despite the government's claim that a major "upgrade" was in progress, the network's situation seemed to get even worse, with the old web site being offline for months before the new one (which so far contains only a web stream) appeared around 4/25 (it was offline again 8/25). The one FM station which is allegedly on the air is listed on the web site as the "pilot" station for the network, essentially confirming the other licensed AMs are still not operating.

The CP for XECSCI-790 has been surrendered.

XEZON-1360, which had been silent due to massive flood damage since 8/23, returned to the air 11/24.

In addition to XEACE-1470 and XEAGR-810 (the latter of which had been off since at least 7/23, before Hurricane Otis hit the area), Radio Fórmula also informed the IFT 5/25 that they had turned off XEE-590, but XEE was still on the air 8/25 per Durango SDR monitoring.

XEMIT-540, which went off the air after its license expired 4/23, had a continuity obligation to keep their AM on the air to prevent a massive 126,000 people in Chiapas from losing their only viable radio or TV signal. As expected, the IFT allocated a replacement for this license... but not on 540. The CP for XECPCC-1390, the replacement for XEMIT-540, was already granted in 2024, but it wasn't clear that this was the replacement for XEMIT-540. It is hard to see how the 126,000 listeners who were theoretically left with no viable radio or TV signal when XEMIT-540 went off will all be served by a new station on 1390.

XEFW-810, mostly silent since 2021, was reported back on the air 1/25, seemingly with very low power, per a local listener.

XELFFS-980, silent since 2022, has been sold and may return to the air at some point.

XETE-1140, which had turned off their AM 9/24 after finding a social licensee to take over the continuity obligation, may be forced to turn their AM back on at some future date, as the social licensee has abandoned the license.

KEYTM-1490 was expected to leave AM and apply for FM migration when their AM license expired 6/25. They were granted a new social community CP for XHSCMK-106.5 9/24 but also obtained a new social community license for the AM, which is now XESCAL.

Ownership of XHEBCS-99.9 is being transferred from the BC Sur state government to the Universidad Autónoma de Baja California Sur, which operates XEUBS-1180. It is not yet known whether XEUBS, which operates almost as a daytimer, signing off at 8 pm local time, will remain on the air.

INPI indigenous station XEQIN-1160, which had been off the air after copper theft, was reported back on the air by 6/24. INPI's XETLA-930 seems to be running very little indigenous content in 2024. They even reverted to one of the standard Spanish-language versions of the national anthem used by many non-indigenous stations. (Most INPI stations use anthems sung by small children in indigenous languages, as XETLA previously did).

DXers attempting to use the web streams of INPI stations to verify what they are hearing over the air should be aware of the following issue: If you attempt to play the web stream of a INPI station that is not currently on the air (either because it is experiencing an outage, or simply because it is not currently broadcasting – recall that INPI stations generally only broadcast 12 hours per day), then you will be redirected to a web stream of generic INPI programming, which may include network programs such as "Écos Indígenos" or programs from individual INPI stations). A DXer in the western US who is trying to catch an INPI station at 6 am sign-on will have a difficult time matching the web stream to the actual station. If you connect to the web stream prior to 6 am local station time, you will be directed to the generic INPI web stream **and remain connected to that generic stream even after the individual station has signed on**. Thus, what you hear on the web stream will not match what you are hearing over the air until you refresh the INPI station's web page and get connected to the actual station's web stream.

The situation in the Tijuana market remains as convoluted as ever:

- XEWW-690 is owned by PSN, licensed for 77/50 kW, but announces 100 kW.
- XEAZ-1270 is owned by PSN, but is no longer //the other PSN stations, and runs a format of older Mexican music mis-branded as "Romántica."
- XEC-1310 is owned by Enciso, leased to PSN, and pointlessly runs the same programming as XEWW-690. (Whereas XEWW is famously heard "from Baja to the Canadian Rockies!", XEC is not strong enough to stop the "scan" button on car radios in nearby San Diego).
- XEXX-1420 is owned by Radiorama, leased to Enciso, operated by PSN, and runs programming from IMER (XEB-1220), RASA, and possibly still PSN. They are licensed for 2 kW, but they announce 10 kW. (Like XEC-1310 and XEBG-1550, their local signal does not even cover all of San Diego, so the 10 kW claim is doubtful).
- XERCN-1470 is owned by Uniradio, leased to Enciso, but runs programming from RASA (the old XENK-620's web stream) and IMER (XEB-1220), plus some old programs from XEHC-1590 Ensenada, which moved to FM over a decade ago. IDs for XEB and XEHC have been widely heard on XERCN. (Any programming that airs on XERCN-1470 is likely airing on XED-1050 too).
- XEPE-1700 is owned by PSN and runs TuDN Deportes programming. They have a history of running well over their licensed power, but whereas they once were heard midday as far north as Oakland, their signal seems weaker in 2025 and no longer stops the scan button on a car radio in most of the San Diego area. Presumably the licensee is no longer interested in running over the licensed power now that the station is not broadcasting his personal political "news."
- The status of XESS-620 and XESDD-1030 remains unclear. These stations have been silent since May 2023, and a reporter in Baja California reported 4/25 that their transmitter site had been demolished and the land cleared. Their licenses, which seemed to be granted retroactively(!) after the stations were illegally cloned and moved in 2004, should seemingly have expired in 2024, but both stations still appear in IFT lists as of 7/25, raising the possibility that the licenses were renewed despite the stations being off the air for so long.

GENERAL NOTES:

There are 5 basic station types in México:

1. Commercial.
2. Public (government agencies and public educational institutions at all levels).
3. Social (private people in some cases, civil associations, and private educational institutions).
4. Social community.
5. Social indigenous.

Initial licenses are generally granted for 20 years, and unlike the US, there is no deadline for getting a new station on the air. Stations can be silent for years at a time without any fear of losing their license. This makes it especially difficult to know when a station is truly gone. A unique provision of social licenses is that the license is canceled if the licensee dies.

Social licenses can be distinguished from social/community licenses as follows: Any station with a XECS** call sign (that is not XECSA, XECSIA/B/C, or XECSGU) is social. XECSIA/B/C are classified as social/indigenous. Stations whose call signs begin with XESC** are social/community. In 2025 there appears to be a new designation for Afro-American Social stations, XESA** (excluding existing stations such as XESAL and XESAME).

Community and indigenous stations have to meet certain extra requirements (indigenous concessions must be owned by indigenous communities; community stations by civil associations that pledge to meet various standards). In exchange, they get:

- Availability of spectrum in the Article 90 reserved band (1610–1700 kHz + 106–108 MHz) (that's Article 90 as in the chapter of the LFTR that created it).
- Access to a pie of 1% of government advertising spending not available to "pure" social stations (XECSxx).
- Can file for a station any time of year, including if the IFT has not formally designated a frequency for their area, instead of for given frequencies in specified filing windows.

The issuance of CPs for existing AM stations to move to FM has seemingly stopped, as almost everything that can be done to make room for existing AMs on the FM dial has been done. Applications for brand-new AM licenses are still being accepted and granted, and new AM allocations are still being added. In addition to the periodic IFT auctions, social community and indigenous applicants can file new applications at any time. If a station's move to FM would leave even one person with no viable radio or TV signal at their home, the station is required to leave their AM on the air after activating their FM. This is known as a "continuity obligation." These obligations are re-validated from time to time. A station may transfer their AM continuity obligation to a social license applicant or can seemingly even place their AM in an IFT auction in the hope that someone will bid for it.

National newscasts are far more common today than they were even ten years ago, and government PSAs airing nationwide often promote tourism in individual states that need help bolstering their tourist industry. DXers with little or no Spanish language skills are especially cautioned not to fall into the bad habit of hearing (for example) "mentions of Chiapas" on a station and concluding that the station heard was the one in Chiapas. Mis-identification of Mexican stations by DXers with poor Spanish language skills is more common than many of us would like to believe. DXers who rely on web streams to help them identify stations are cautioned not to use this method on late Sunday nights (especially the 10 pm Central Standard Time hour), when about 90% of the stations in Mexico are running the National Hour and other related programs.

DXers are further cautioned not to use the FCC database (or popular web sites which primarily get their data from the FCC database) as a source for information on Mexican stations. The FCC database only accepts Mexican station information directly from the Mexican government, and over the decades, the flow of this information has been extremely sporadic. Thus, even though it may contain some up-to-date information, and may even contain information about proposed new Mexican stations before the IFT has published the same information on its own web site, the FCC database is also riddled with old allocations (some dating back to the 1950s), never-built CPs, and recent proposed allocations that may have since been abandoned or changed to a different call sign and/or frequency. DXers with marginal Spanish skills have unfortunately used these lists to "log" stations that never actually existed.

Information in this Log (and the supplemental spreadsheet described below) is updated to August 19, 2025. Thanks to all the DXers who report their loggings to the IRCA, NRC and ABDX. Those loggings were used to help verify slogans and FM migration status. Some data, especially night powers and the status of several stations in BC Sur, continue to be elusive. Stations with missing/unknown powers were re-checked against publicly available IFT documents on September 1, 2024. In most cases, the IFT had not still published those missing values. A few previously-unknown transmitter locations have been found.

SUPPLEMENTAL SPREADSHEET – With this edition of the Mexican Log we are once again adding a spreadsheet with supplemental information that may be useful to DXers trying to identify weak signals from Mexican stations. This spreadsheet comes from the editor's personal station list. It shows the URLs (when known) for each station's web page, live stream, Facebook page, and program schedule page (if any), as well as any phone numbers found on those pages. The links can be especially useful for DXers using SDRs on their own laptops, to quickly check a web stream (or program name) to see if it matches a signal being heard on the radio. Phone numbers can be useful since they may be numerically close to the numbers heard in the station's ads. Although México is on the same area code system as the US and Canada, phone numbers are often still recited in traditional Latin American fashion, one or two digits at a time (eg, "5-55-12-12" instead of "555-1212"). Users are cautioned that we have occasionally found station web sites to be hacked, and it is the sole responsibility of each user to ensure they have adequate virus protection on their computers before clicking on any link in this spreadsheet. A good number of these URLs change each year, due to web site overhauls, re-branding, changes in a station's choice of streaming vendors, etc. The spreadsheet also reflects the editor's efforts (DXing from Chula Vista CA and near Baker NV, as well as monitoring station web streams and listening to the Brownsville, Texas, Durango, and Juriquilla, Querétaro SDRs) to learn what type of national and/or state anthems each station plays in the morning and evening (typically, but not always, around 6 am and/or Midnight local time). With some frequencies having only a few stations left, knowing the type of anthem played on each station can be valuable in helping to identify the station being heard. Users are cautioned not to employ this technique on Sunday evenings, when most stations air a common version of the national anthem from the National Hour program around 11 pm local time, and to remember that there are a few US stations such as KNRV 1150 and KNUV 1190 which also air the Mexican national anthem as part of the Radio Fórmula network feed from México. Finally, we have noted that web streams for Mexican stations may perform very poorly (excessive buffering), have extended outages, be well out of synch with the on-air broadcast, and not work on mobile devices. Please note that (just as in the US and Canada), some web streams (especially those hosted by iHeartRadio) often cut away from the station's actual programming during ad breaks (and top-of-hour ID breaks!), substituting ads that are local to the listener's perceived location. For such stations, SDRs may be more useful than the stations' live streams (or perhaps using a VPN that allows one to pretend to be in some distant part of the world, for which no local ad content would be available?).

NOTES FOR SUPPLEMENTAL SPREADSHEET: The following abbreviations are used in the "WEB", "LIVE", "FB" and "SCHED" columns:

Defunct	- Last time we checked, web site was no longer there (or owner had not paid annual domain registration fees?).
DJ	- The station does not seem to have a current Facebook page; the page in this link belongs to an individual announcer.
EMPTY	- The last time we checked, this web page was essentially "empty" (contained no useful information).
FB	- (LIVE column): This live stream must be accessed via Facebook.
FM	- Site is for the station's FM, and may or may not contain useful information about the AM.
Hacked	- Page may have been hacked, infected with malware, or purchased by an "opportunist" when the domain license lapsed.
IHR	- Live stream is on iHeartRadio, and has the bug described above; try mouse-copying the URL into your browser.
INDIV	- Station has set up an individual Facebook page instead of a business page.
MENU	- This feature is reached via a menu on the given web page.
NET	- Page or live stream is for the entire network or ownership group, not just this station.
NEWS	- The page is for the station's news department.
NG	- The last time we visited this URL, it was not working. Generally this implies the page has worked in the past.
STALE	- The last time we checked, this site seemed well out of date. Watch for format/slogan changes and new pages.
TI	- Live stream uses Tuneln.com , which may be unreliable or present an infinite loop of ads without ever loading the stream.
UC	- Web page was under construction the last time we checked.

We welcome your comments, suggestions, additions, and corrections regarding this list. Please write to Mexican Log editor Tim Hall at TimHall1@gmail.com. Thank you!

A QUICK GUIDE TO THE SPANISH LANGUAGE

By Bill Hardy, revised by Guillermo Glenn Hauser, 2019

When you hear Mexican radio stations, you may hear letters, numbers and slogans. If you know a little basic Spanish, you'll be ahead of the game. Spanish pronunciation in Mexico is fairly straightforward. While ``long`` vowels in English are actually diphthongs, in Spanish each vowel letter has one pure sound: a = "ah", e = "eh", i = "ee", o = "oh", u = "oo",

Consonants mostly resemble their English language counterparts, with some notable exceptions. "H" is silent. "J" sounds like our "h," but stronger, as in "José". "X" may sound like our "x," as in "éxitos," but in Mexican place names such as México (MEH-hee-koh) or Oaxaca (wah-HAH-kah), it sounds like our "h." "ñ," enye, has the "ny" sound of "Señor" (seh-NYOR). Double "l" sounds like "y," as in "Vallarta" (bah-YAR-tah). "B" and "V" sound the same in two different ways depending on whether they are initial in a word: like our B; or amid a word, like our V. R is slightly trilled especially if initial, and more trilled if double. Like "radio" (RAAH-dhee-oh). D unless initial sounds like "th" in our word "the". Better rendered as "dh", also as in "ciudad" (twice).

The sounds of some consonants depend on the next letter. For instance, "g" can sound like the hard "g" sound of "Gómez" (ga, go, gu) or our soft "h" sound of the Spanish "j" (ge, gi). "C" can sound like "k" (ca, co, cu) or "s" (ce, ci). "Cu" plus a vowel (cua, cue, cui) makes a "kw" sound, as in "frecuencia." "Ch" equals English "ch," as in "mucho." "Qu" (que, qui) sounds like "k".

Accents in Spanish are very regular. A word ending with a vowel (a, e, i, o, u), or "n" or "s," is stressed on the next-to-last syllable, such as "cinco" (SEEN-koh) or "Variedades" (bah-ree-eh-DHAH-dhehs) without any acute accent mark. Words ending with any other consonant are stressed on the last syllable, such as "festival" (fehs-tee-VAHL) or "Ciudad" (cee-oo-DHAHDH). If a word is stressed on any other syllable, an accent mark is required, such as "éxitos" (EX-ee-tohs).

On this page are charts of Spanish letters and numbers. These should help you pronounce station call letters, plus numbers such as "5-70" (cinco setenta) in the slogan column. Note that B and V sound alike, and there are two ways to pronounce the letters V, W and Y. Also note that numbers 21-29 are compound words and not separated by a "y" (and). This combining applies only to the 20's (21-29)

Letters of the alphabet as they are individually pronounced in callsigns:

750	XEJMN	NAY	JESUS MARIA	MST	XEJMN uses at least two unusual versions of the Mexican anthem. One is a cacophonous mashup of the Mexican anthem and the more martial Mexican flag ceremony song (both including rather blatty brass instruments), and another is a woman singing in a flat, tired voice over instruments. Sign-on (5:55 am) may begin with the anthem or with a minute or so of folk music first. The anthem is followed by a lively fiddle tune followed by a woman giving the announcement in Spanish while backed by folk music. After a rooster crow, a man continues.	Sign-off (shortly before 6 pm) begins with a call ID by an apparently small girl speaking Spanish, and much of the rest of the announcement is in the voices of children.
