and a heck of a lot more!**

Get the news before it's news... with a "behind-the-scenes" Scanner Radio from

Radio Shack!

Pocket-size Realistic scanners seek and lock-in on exciting police, fire and emergency calls, even continuous weathercasts*. There's one to cover the action in your area — 11 models in all.

PRO-6 — VHF-Hi and VHF-Low

Electronically scans up to 4 crystal-controlled channels on 148-174 or 30-50 MHz. Stops on each active channel until conversation ends, then resumes scanning. You don't miss a thing—it's like 4 radios in one. Lighted channel indicators, switches for bypassing any channels, scan/manual switch, variable volume and squelch, built-in antenna, earphone jack. With 4 "AA" cells. Requires up to 4 crystals. #20-171. **119⁹⁵**

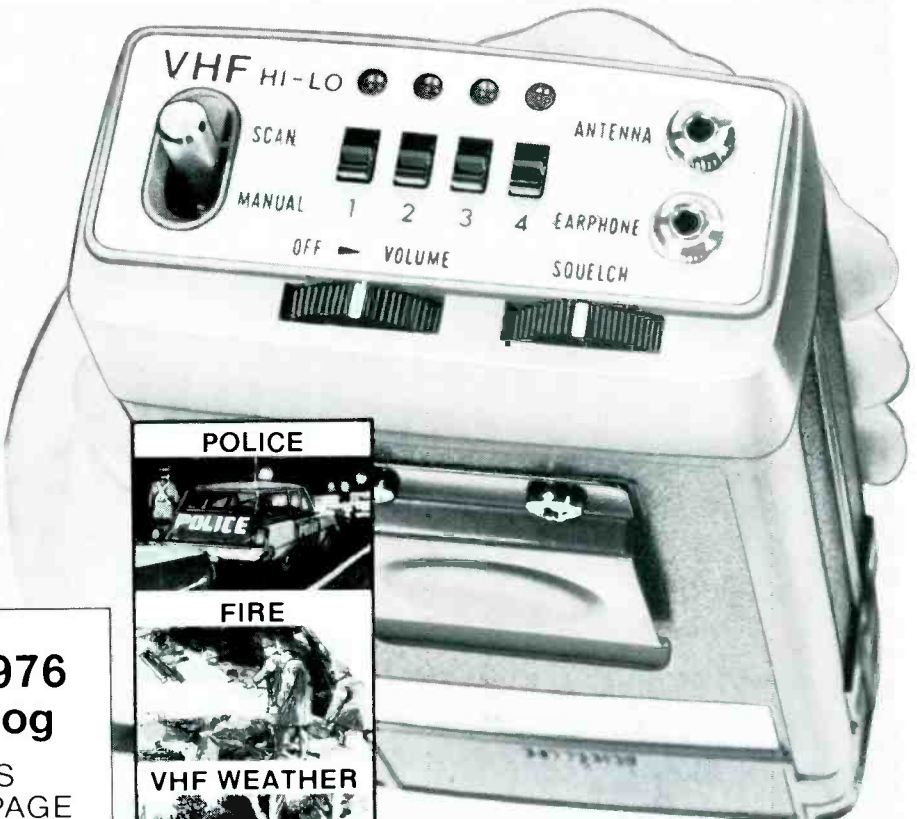

PRO-4A — VHF-Hi Band

Like the PRO-6, but covers VHF-Hi only. #20-174 **99⁹⁵**

PRO-5 UHF "Metro" Band

Same as the PRO-4A, but covers 450-470 MHz used in many larger cities. #20-169. **119⁹⁵**

Accessories Available. Plug-in antenna. 12VDC adapter. AC adapter/battery charger, rechargeable batteries.

*On VHF-Hi band in over 70 localities

The chances are excellent that... You have a talent other people are willing to pay for!

You're "handy" around your house, have the ability to fix things, and "make them work right"...that's why there may be a rewarding career for you in Electronics.

A career in Electronics?

Absolutely. Because you're interested in *things*. How they work. Why they work. How to take them apart and put them back together. Plus . . . you've got a head for detail work.

Your chances are excellent

With the right kind of *specialized* technical training, you can have a challenging, financially rewarding future waiting for you in Electronics. Think of the career opportunities . . . computers, aerospace, 2-way radio communications, radio/TV broadcasting, medical electronics, to name just a few.

And, surprisingly, you don't need a college degree!

All you need to do to qualify for one of these exciting career fields is to build upon the technical aptitude you already have . . . just put your hands and your head to work with a CIE Electronics career course.

You learn by doing

The CIE method of instruction is the refinement of over 40 years of Electronics, independent home-study experience. It works. And you don't need *any* prior electronics experience. A CIE *career* course can take you from ground zero right up to training in Lasers, Microminiaturization, Radar, Analog Computers, and various applications in Communications.

In some CIE courses, you'll perform "hands on" experiments and tests with your own CIE Experimental Electronics Laboratory. And, if TV technology and digital Electronics are your main interest, you can select from several courses that result in constructing and

troubleshooting a TV. (And the TV is yours to keep, too!) This combination of "head and hands" learning *locks in* your understanding of the crucial principles you'll use on-the-job in your new career. But, don't kid yourself . . .

Electronics is not an "easy" science and CIE courses are not "snaps." Subject matter is technical, thorough, and challenging. It has to be. We're training you for a *career*. So the presentation of ideas is logical, written in easy-to-understand language . . . you progress step-by-step, at your own pace.

CIE Education by mail

There is no need to "go back to the classroom" with CIE. Because you learn at *home* or wherever else is convenient. You keep your present job and income. No cross-town commutes. *You* decide when and where *you* study best.

Your eventual success . . . at CIE and in your electronics career . . . will be determined by your own motivation and self-discipline. You *can* do it. And CIE can show you how.

Put your talent to full use

We believe that you may be a "natural" for Electronics, and we'd like to tell you more about potential career fields and our school. We'll be glad to send you our complete package of FREE career information if you'll send in the card or coupon. For your convenience, we'll try to have a school representative contact you to review various educational programs and assist in course selection. As soon as we receive your request, we'll mail you our school catalog, complete G.I. Bill details, and special information on government FCC License preparation.

There's no obligation.

Let's discuss your new career in Electronics, NOW! Send for your FREE school catalog and career information TODAY.

3-CHANNEL COLOR ORGAN KIT

Easy to build low-cost kit needs no technical knowledge. Completed unit has 3 bands of audio frequencies to modulate 3 independent strings of colored lamps (i.e. "lows"-reds, "middles"-greens, "highs"-blues. Just connect hi-fi, radio, power amp etc. & plug ea. lamp string into own channel (max. 300w ea.). Kit features 3 neon indicators, color intensity controls, controlled individ SCR circuits; isolation transformer; custom plastic housing; instr.

BUILD A SOLAR HOME AND SAVE!

Beat the energy crisis—build a modern 10 room solar heated & air conditioned home designed by famous ecological architect Malcolm B. Wells! Its 10-yr.-proven Thomason "Solaris System" can cut conventional heating costs as much as 2/3! Your builder can modify or use as-is the complete blueprints included with "Solar House Plans III" (by Edmund, Homan, Thomason & Wells). Estimated \$40,000 building cost. 48-pg book shows all pro's and cons. Illustrated. No. 9469GW (8 1/2" X 11" PPRBK)... \$24.95 Ppd.

ELECTRONIC DIGITAL STOPWATCH: \$69.95

A price breakthrough! New pocket size 4 oz. timer acc. to $\pm 2\%$ of last digit (1/100 sec. increments). Compares with others twice the price! Instant error-free readouts to 9999.99 sec. (over 2 1/2 hr). Starts, stops, re-starts (accumulates). Mechanical pushbutton & electrical remote on/off's w/ any 3.5-150v AC/DC source. Plug-in jack. Incls. 9v batt. Solid state. No. 1943GW (2 1/4" X 4 1/2" X 7/8")... \$69.95 Ppd. DELUXE 2 EVENT STOPWATCH ($\pm 0.01\%$ OF LAST DIGIT) No. 1653GW... \$149.95 Ppd.

EDMUND FACTORY STORE

SUPER POWER FOR ANY AM RADIO

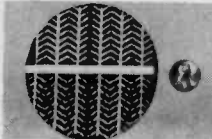

"Gangbusters"! Terrific for sportsmen, vacationers. Great for clearing weak signals in radio depressed areas, off-coast islands, stations in crowded frequencies. Solid state—uses no electricity, batts., tubes. Works almost forever. Stock No. 72,095GW... \$15.95 Ppd.

AM RADIO FITS IN/ON YOUR EAR!

Wear it inconspicuously everywhere, listen as you work (lawn, yard, office), watch (game, beach) or wait. Instant music, news, sports. No gimmick—6/10 oz. technological wonder w/integrated circuit, 11 transistors, patented ferrite antenna/tuner/volume dial. Works best outdoors. Uses hearing aid batt. (incl.)—up to 100 hrs. playing. New batt. to slip in avail. at drug stores (about 50¢). No lengthy wires, bulky cases, or power-packed! Stock No. 42,275GW... \$14.95 Ppd.

The MOST POWERFUL SOLAR CELL!

World's biggest (3" dia.), strongest silicon cell delivers over 1 amp. @ .5v D.C. or 1/2W. 5 times more efficient per cost than ever before! Only 1 mil thick. Tab leads for any circuit, 100's of applications. Hook in series for more voltage; parallel—more current. Real breakthrough! No. 42,270GW... \$19.95 Ppd. 2" DIA. 500 mA. @.5v No. 145GW... \$ 9.95 Ppd. PIE-SHAPED 1/4" DIA. 100 mA. @ .5v No. 42,146GW... \$ 5.50 Ppd.

PRO ELECTRONIC SOUND CATCHER

Parabolic mike w/ 18 3/4" reflecting shield & 2 i.c.'s in amplifier magnifies signals 100X that of omni-directional mikes. Catch a songbird 1/2 mile off; QB's huddle strategy; sounds never before heard. Super directivity gives highest signal to noise ratio poss. Safe; auto. cuts off ear damaging noises. Earphones, tape recorder output, tripod socket. Req. two 9v trans. batt. (not incl.) No. 1649GW (5 1/2" LB.)... \$299.00 Ppd. BIG EAR "TOY" MODEL #80,176GW... \$ 32.25 Ppd.

KNOW YOUR ALPHA FROM THETA!

For greater relaxation, concentration, listen to your Alpha-Theta brainwaves. Ultra-sensitive electrode headband slips on/off in seconds—eliminates need for messy creams, etc. Atch'd to amplifier, filters brainwaves, signals beep for ea. Alpha or Theta wave passed. Monitoring button simulates Alpha sound; audio & visual (L.E.D.) feedback. Reliable, easy-to-use unit comparable to costlier models. Completely safe. Comprehensive instruction booklet. No. 1635GW (8x3x4"; 24 oz.)... \$144.50 Ppd. LOW COST "Starter" UNIT, No. 71,809GW... \$ 55.00 Ppd. No. 1652EK DELUXE "ON" TIME MONITOR—Measures & Records %... \$375.00 Ppd.

New Products

Weather Alarm Monitoradio

Here's something new. Regency has introduced a low-price weather radio with a built-in severe weather alarm. This radio is unique because it offers crystal-controlled accuracy on all VHF weather frequencies without adjustment or modification. The alarm function on the new receiver is activated by the National Weather Service in the event of impending hazardous weather conditions. A flip

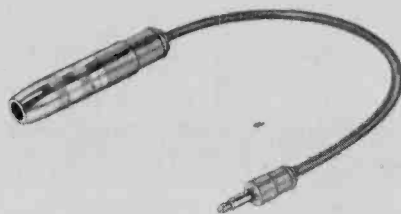

CIRCLE 13 ON READER SERVICE COUPON

of a slide switch takes the radio off alarm status to receive continuous weather information and forecasts. The new model, designated the ACT-C 1W, will carry a suggested retail price of \$49.95. A built-in battery pack will be offered as an option for use during power failures, a common occurrence in severe weather. Get more facts by writing to Regency Electronics, 7707 Records St., Indianapolis, IN 46226.

Headphone Adapter for Mono Sources

A special adapter is now available from Switchcraft, for use in connecting stereo headphones to monaural program sources such as cassette recorders/players, radios, TV, etc. The listener plugs in his

CIRCLE 14 ON READER SERVICE COUPON

stereo headphone to the extension jack on one end of the Model 396PL adapter. He plugs in the other end of the adapter to the phone jack on the mono source. The plug end has a molded-on Switchcraft "Tini-Plug" miniature commercial phone plug. The plug is fully shielded

and has built-in strain relief. The extension jack on the other end of the 6-inch cable also is fully shielded and has built-in strain relief. Jack accommodates 3-conductor commercial phone plug (2-conductor plugs should never be plugged into the extension jack; equipment could be damaged by shorting of ring spring to sleeve of 2-conductor plug). Request New Product Bulletin No. 291, Sales Dept., Switchcraft, Inc., 5555 No. Elston Ave., Chicago, IL 60630.

"No Crystal" Scanning Monitor

Here's a scanner capable of receiving all 6,000 public service frequencies without crystals. The unit is factory programmable because no batteries are needed for frequency retention. It's called the Bearcat 101 and it's totally synthesized, featuring a re-programmable custom-integrated circuit. The Bearcat 101, in addition to receiving the low (30-50 MHz), high (148-174 MHz), UHF (450-470 MHz) and T (470-512 MHz) bands, will also receive the 2-meter ham band (146-148 MHz), as well as UHF frequencies from 416-450 MHz. The nerve center of the Bearcat 101 is provided by two exclusive integrated circuits: one for scanning and the second for a non-volatile memory system. With

CIRCLE 15 ON READER SERVICE COUPON

the memory chip, the radio retains all frequencies programmed without the need for a battery. This feature allows retailers to order sets fully programmed with frequencies from the factory and assures users of program retention, even if the unit is unplugged or if there is a power outage. The Bearcat 101 scans 16 channels. Individual lock-out switches are provided for each channel and these are also used in programming frequencies. Channel indicators are light-emitting diodes, providing a scan rate in excess of 20 channels per second. Priced at \$349.95. The Bearcat 101 is made by The Electra Company, a division of Masco Corporation of Indiana, 300 South on East County Line Road, Cumberland,

Free-New Heathkit Catalog

over 400 electronic kits —
world's largest selection

You can build any Heathkit product! For over 28 years we have made superb electronic equipment that anyone can build — even if they have no knowledge of electronics or kitbuilding experience. Heathkit step-by-step assembly manuals, famous for their clarity, leave nothing to chance or your imagination. They show you exactly what to do and how to do it — even how to solder like a professional.

And we back every Heathkit purchase with expert help just for you. Technical consultants at the factory and at Heathkit Electronic Centers from coast to coast are ready and willing to help you every step of the way. As hundreds of thousands of satisfied Heathkit customers will attest — we won't let you fail.

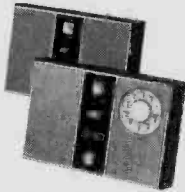

A finished Heathkit product is one of the finest available — kit or assembled. But you don't have to take our word for it; independent reviewers, and our customers, consistently praise their quality. Enjoy the satisfaction and savings of building fine products with your own hands — with a little help from Heath.

New Products

Indiana 46229. Write to them for more info on the Bearcat 101.

Hi-Lo Silver

New-Tronics, in its search for better antenna performance, has recently converted a major part of the Hustler product line to silver plated components. This change gives a notable advantage

CIRCLE 16 ON READER SERVICE COUPON

over conventional plating in voltage and current conductivity at radio frequencies and results in lower SWR, higher signal radiation efficiency, and long term peak performance. Most recent models incorporating this improvement are the short, high efficiency antennas and the 48-in. white armored stainless steel series. Further information may be obtained by writing directly to New-Tronics Corporation, 15800 Commerce Park Drive, Brookpark, Ohio 44142.

ESP Tester

The Amazing Kreskin, working with researchers at Edmund Scientific Co., Barrington, New Jersey, helped develop a solid-state, quiet, portable ESP test ma-

CIRCLE 17 ON READER SERVICE COUPON

chine. All of the guesswork is gone, because the machine can't be beaten by memorizing. At the push of a button, the random circuitry lights one of four lamps indicating the subject's choice. Four symbols, as well as four colors, make selection simple enough even for young chil-

dren. Random circuit and readout will spark the imagination of those working on science fair projects. If you have ESP, you or your subject will guess correctly a significant number of times. Everyone can test for precognition, telepathy, and probability. The new ESP machine is compact and comes with sturdy bakelite case, instructions, and a pad of 50 test record sheets so that group tests can be made at one time. Kreskin's ESP Machine is available by mail postpaid from Edmund Scientific Co., 380 Edscorp Bldg., Barrington, NJ 08007 (Stock No. 72,090) for only \$29.95. Extra pads for 250 tests (Stock No. 72,092) are \$3.50 each.

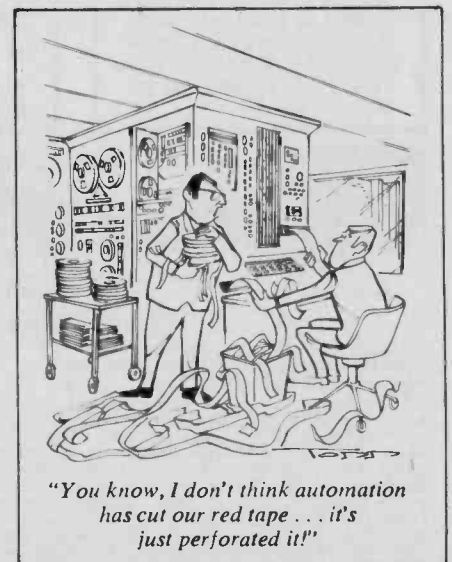

Programmable Scanner

The new Surveyor 10-P Programmable Scanner features all solid state dual conversion, narrow band VHF Hi-Lo or UHF-FM receiver with integrated circuitry. Scanning lights depict the search for an

CIRCLE 18 ON READER SERVICE COUPON

active signal. The 10-P is programmable for use throughout the country. Surveyor's exclusive programmable, top level switch control allows any combination of frequency or band. A priority switch is also featured. This enables the search of Channel 1 every 1.75 seconds with impulses of only 50 milliseconds. Channel 1 will lock in its signal even though a signal is being received on another channel

"You know, I don't think automation has cut our red tape... it's just perforated it!"

LITERATURE LIBRARY

153. *MFJ* offers a free catalog of amateur radio equipment—CW and SSB audio filters, electronic components, etc. Other lit. is free.

101. Kit builder? Like weird products? *EICO's* 1975 catalog takes care of both breeds of buyers at prices you will like.

102. *International Crystal* has a free catalog for experimenters (crystals, PC boards, transistor RF mixers & amps, and other comm. products).

103. See brochures on *Regency's* 1975 line-up of CB transceivers & scanner receivers (for police, fire, weather, & other public service emergency broadcasts).

104. *Dynascan's* new B & K catalog features test equipment for industrial labs, schools, and TV servicing.

105. Before you build from scratch, check the *Fair Radio Sales* latest catalog for surplus gear.

106. Get *Antenna Specialists'* cat. of latest CB and VHF/UHF innovations: base & mobile antennas, test equipment (wattmeters, etc.), accessories.

107. Want a deluxe CB base station? Then get the specs on *Tram's* super CB rigs.

108. Compact is the word for *Xcelite's* 9 different sets of midjet screwdrivers and nut-drivers with "piggyback" handle to increase length and torque. A handy show case serves as a bench stand also.

115. *Trigger Electronics* has a complete catalog of equipment for those in electronics. Included are kits, parts, ham gear, CB, hi fi and recording equipment.

111. *Midland's* line of base & mobile CB equipment, marine transceivers & accessories, and scanner receivers are illustrated in a new full-color 16-page brochure.

112. The *EDI (Electronic Distributors, Inc.)* catalog is updated 5 times a year. It has an index of manufacturers literally from A to X (ADC to Xcelite). Whether you want to spend 29 cents for a pilot-light socket or \$699.95 for a stereo AM/FM receiver, you'll find it here.

113. Get all the facts on *Progressive Edu-Kits* Home Radio Course. Build 20 radios and electronic circuits; parts, tools, and instructions included.

116. Get the *HUSTLER* brochure illustrating their complete line of CB and monitor radio antennas.

110. *Turner* has two booklets on their Signal Kicker antennas. They give specifications and prices on their variety of CB base and mobile line. Construction details help in your choice.

117. *Teaberry's* new 6-page folder presents their 6 models of CB transceivers (base and mobile): 1 transceiver for marine-use, and 2 scanner models (the innovative "Crime Fighter" receiver and a pocket-size scanner).

118. *CBers, GC Electronic's* 8-page catalog offers the latest in CB accessories. There are base and mobile mikes; phone plugs; adaptors and connectors; antenna switchers and matchers; TVI filters; automotive noise suppressor kits; SWR Power and FS meters, etc.

152. Send for the new, free descriptive bulletin from *Finney Co.* It features the Finco line of VOM multi-testers (and accessories) for electronics hobbyists and service technicians.

128. A new free catalog is available from *McGee Radio*. It contains electronic product bargains.

119. *Browning's* mobiles and its famous Golden Eagle base station, are illustrated in detail in the new 1975 catalog. It has full-color photos and specification data on Golden Eagle, LTD and SST models, and on "Brownie," a dramatic new mini-mobile.

120. *Edmund Scientific's* new catalog contains over 4500 products that embrace many sciences and fields.

121. *Cornell Electronics'* "Imperial Thrift Tag Sale" Catalog features TV and radio tubes. You can also find almost anything in electronics.

122. *Radio Shack's* 1975 catalog colorfully illustrates their complete range of kit and wired products for electronics enthusiasts—CB, ham, SWL, hi-fi, experimenter kits, batteries, tools, tubes, wire, cable, etc.

123. Get *Lafayette Radio's* "new look" 1975 catalog with 260 pages of complete electronics equipment. It has larger pictures and easy-to-read type. Over 18,000 items cover hi-fi, CB, ham rigs, accessories, test equipment and tools.

154. A government FCC License can help you qualify for a career in electronics. Send for information from *Cleveland Institute of Electronics*.

125. *RCA Experimenter's Kits* for hobbyists, hams, technicians and students are the answer for successful and enjoyable projects.

127. There are *Avanti* antennas (mobile & base) for CB and scanner receivers, fully described and illustrated in a new 16-page full-color catalog.

129. *Semiconductor Supermart* is a new 1975 catalog listing project builders' parts, popular CB gear, and test equipment. It features semiconductors—all from *Circuit Specialists*.

130. There are over 350 kits described in *Heath's* new catalog. Virtually every do-it-yourself interest is included—TV, radios, stereo & 4-channel, hi-fi, etc.

131. *E. F. Johnson* offers their CB 2-way radio catalog to help you when you make the American vacation scene. A selection guide to the features of the various messenger models will aid you as you go through the book.

150. Send for the free *NRI/McGraw Hill* 100-page color catalog detailing over 15 electronics courses. Courses cover TV-audio servicing, industrial and digital computer electronics, CB communications servicing, among others. G.I. Bill approved, courses are sold by mail.

132. If you want courses in assembling your own TV kits, *National Schools* has 10 from which to choose. There is a plan for GIs.

133. Get the new free catalog from *Howard W. Sams*. It describes 100's of books for hobbyists and technicians—books on projects, basic electronics and related subjects.

134. *Sprague Products* has L.E.D. readouts for those who want to build electronic clocks, calculators, etc. Parts lists and helpful schematics are included.

135. The latest edition of *Tab Books'* catalog has an extensive listing of TV, radio and general servicing manuals.

137. *Pace* communications equipment covers 2-way radios for business, industrial and CB operations. Marine radiotelephones and scanning receivers are also in this 18-p. book.

138. *Shakespeare's* new pocket-size catalog lists and describes their full line of fiberglass CB antennas, mounts and accessories offered in 1975.

144. For a packetful of material, send for *SBE's* material on UHF and VHF scanners, CB mobile transceivers, walkie-talkies, slow-scan TV systems, marine-radios, two-way radios, and accessories.

145. For *CBers* from *Hy-Gain Electronics Corp.* there is a 50-page, 4-color catalog (base, mobile and marine transceivers, antennas, and accessories). Colorful literature illustrating two models of monitor-scanners is also available.

147. *Telex's* 4-page, 2-color folder illustrates their new line of boom microphone head-sets for *CBers* and hams, as well as their line of communications headphones.

142. *Royce Electronics'* new full-color catalog updates information on their CB transceivers (base, mobile, handheld). It also describes new product lines—CB antennas and a VHF marine radiotelephone.

New Products

simultaneously. A listener is assured of hearing transmissions on Channel 1, regardless of which channel is in operation. The 10-P is priced to sell at \$189.00. For more information, write to Surveyor Manufacturing Corp., 29245 Stephenson Highway, Madison Heights, MI 48071.

Amplifier Booster for Scanner

Fanon/Courier has added Model SCMA-1, to expand the utility of its Cop-Scan 4 channel hand-held FM monitor scanners. With the new unit, Cop-Scan users can adapt their hand-held units to mobile operation. The SCMA-1 amplifies output audio to 2.5 watts and provides sound output through a large built-in speaker. The new Courier Mobile Amplifier also provides operating power for and can charge an internal Nicad battery pack in Cop-Scan units. In use, Cop-Scan hand-helds are placed into the front panel slot

CIRCLE 19 ON READER SERVICE COUPON

and a one-piece molded connector is plugged into the power, charger, and external speaker jacks located on Cop-Scan's side. The Cop-Scan then operates in a normal manner. Scanners may be quickly removed for portable operation. Sells for only \$34.95. Get all the facts by writing to Fanon/Courier Corp., 990 South Fair Oaks Avenue, Pasadena, CA 91105.

Multi-Band

Panasonic's latest in its Tech series of multi-band portables is an AC/battery-powered FM/AM/VHF Public Service

CIRCLE 20 ON READER SERVICE COUPON

Band-High for police, fire, and continuous weather reports. Model RF-1080/Tech 500 also offers a tuning/battery meter that indicates signal and battery strength, dial light for night viewing, AFC for drift-free FM reception, squelch control on PSB that helps eliminate between-station static, continuous tone control for easy balancing of bass and treble, and a 4-in. PM dynamic speaker. Other features include a telescoping antenna, indicator switch and fold-down handle. Complete with Panasonic batteries, AC power cord and earphone, the RF 1080/Tech 500 has a manufacturer's suggested retail price of \$59.95. Available at appliance dealers, department stores and chains nationwide.

Cord Hider

Wind up your cord problem. Get that unsightly mess off the floor and out of sight. Snap-lock on cover protects children from electrical outlet. Simple, safe, sure, clears area of cord, makes vacuuming easier, gets rid of that excess appliance cord. Make any cord just the

right length. Easy installation. Loosen screw in wall socket, slide Hide-A-Cord base behind plate and tighten. Wind excess cord around base and replace cover. Sold with a money back guarantee. To order send \$1.50 plus 50¢ postage and handling to James R. Bell Co., 2453-D Montrose Avenue, Montrose, CA 91020.

"A hip-pocket transmitter?"

So Watt?*

How big you succeed in electronics today—bigger pay...better job...personal enjoyment—depends on how far you take the basics!

* Your reading this page now gives you the head start you need. And we'll match it with a Special Introductory Offer to keep you ahead

It always has been a matter of *knowing the basics*. Of the thousands of opportunities that are open to you in the electronics field today, you can be sure that all depend on *your understanding of basic electronics theory*. New electronic advances are triggered by yesterday's basics...just as tomorrow's amazing breakthroughs will spring from today's fundamentals.

Your taking advantage of the offer shown in the coupon below puts you in a better position to get the rewards electronics gives you today—and will offer you in the years ahead!

For Beginner or Expert—Elementary Electronics is valuable!

It shows a novice where to begin—an expert where to improve. Each issue features a *Basic Course* in an important area of electronics. Written by experts in an easy-to-follow style, with clear illustrations and diagrams, you get a practical understanding of special circuits...semiconductors...power supplies...transformers...transistors...pulse circuitry, much more. You'll see general rules of electronics, develop trouble-shooting techniques, know how to calculate changing effects.

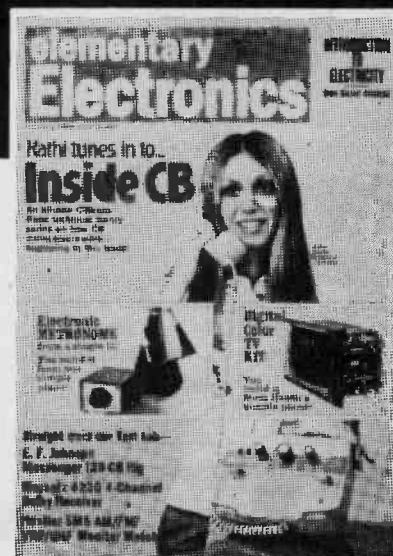

You may be earning an income now in electronics and hope to increase it soon. Or you may be an electronics hobbyist looking for new ideas to use at home and for recreation. Either way, for pleasure or profit, you shouldn't be without Elementary Electronics.

HI-FI • CB Radio • Shortwave • New Products • Projects in every issue!

You'll find a lot more in Elementary Electronics—a fantastic variety of new

and exciting electronic information. More on today's CB activities and Shortwave Listening...expanded coverage on Product Testing from batteries and cells to stereo...new Build-It Projects for home and shop...portable music centers, weekend experiments, new products, bonus construction projects, electronic gadgets for fun and profit.

Try it. Try Elementary Electronics under the no-risk subscription offer shown in the coupon. Just fill in and mail the coupon to Elementary Electronics, 229 Park Avenue S., N.Y., NY 10003. Send in your order TODAY.

ELEMENTARY ELECTRONICS

229 Park Avenue South
New York, New York 10003

YES! Please send, without cost or obligation, my get-acquainted copy of ELEMENTARY ELECTRONICS. If I find it is everything you say it is, bill me for a year's subscription (5 additional issues, for a total of 6 in all) at just \$3.49. If I don't wish to subscribe, I will write "Cancel" across your bill, return it, and that will end the matter. Either way, the complimentary copy is mine to keep.

H5F203

New Products

High and Low Band

Cop-Scan VHFHL is a new Fanon/Courier dual band 4-channel portable FM monitor receiver for public safety, weather or other broadcasts on low band VHF (25-54 MHz) or high band VHF (146-175 MHz). The new Courier design uses dual

CIRCLE 19 ON READER SERVICE COUPON

crystal sockets to permit any channel to be assigned to either high band or low band use. All Cop-Scan units exhibit superior protection against intermodulation and feature superior selectivity and sensitivity with excellent adjacent channel rejection characteristics. Cop-Scan VHFHL utilizes dual conversion superheterodyne circuitry with both high frequency crystal filter and ceramic IF filter.

A screw mounted flexible antenna is provided as standard equipment and the unit comes equipped with provision for earplug, 6-volt power supply, and external battery charger operation if an optional nickel-cadmium package is employed. Priced at \$134.95. Get additional information by writing to Fanon/Courier Corp., 990 South Fair Oaks Avenue, Pasadena, CA 91105.

Rig with Weather Monitor

What's the weather forecast? Your Pace CB 145 with fully synthesized 23 channel AM transceiver can tell you because it packs two weather channels: WX-1 at 162.55 MHz and WX-2 at 162.40 MHz.

CIRCLE 21 ON READER SERVICE COUPON

The CB 145 is equipped with a noise blanking for suppressing impulse noise interference, RF gain control for receiver sensitivity adjustment, delta tune for compensating off-frequency transmitting of other party, S/R meter for monitoring incoming signal strength and relative power output, transmit and receive mode indicator lights, plug-in mike. PA system and a jack for an external speaker have also been provided. The CB 145 is engineered for positive and negative ground applications. Suggested retail price: \$199.95. Get the facts from PACE Communications, 24049 So. Frampton Ave., Harbor City, CA 90710.

New Bearcat

Scanning up to eight fixed frequencies in any one or two public service bands, the BEARCAT III is built for the future with its interchangeable RF module system. New bands (low, high, UHF) can be added to the existing circuitry via plug-in modules to enable the user to change bands or to add authorized future bands. One set can do it all! Ideal for home, office or mobile use anywhere, the BEARCAT III may be purchased as a single-band unit, or a dual-band unit—buy only what is required for the locale. Its patented "track tuning" searches, locks in, and then moves on to other active channels for on-the-scene action. Weather, fire, police, business, marine, and civil defense transmissions are monitored at 25 times per second with incoming signals processed through sophisticated components, such as quartz crystal filters. The BEARCAT III comes equipped with mobile mounting bracket,

CIRCLE 22 ON READER SERVICE COUPON

12-VDC/117-VAC power supplies and telescoping antenna. Crystals are not included. Suggested retail price: Dual-Band, \$159.95; Single-Band, \$139.95. The BEARCAT III is manufactured by the Electra Company, Cumberland, IN 46229 and they'd be happy to hear from you.

Top Dog Mixer

Bozak, Inc., has announced the Model 919 Audio Signal Processing Center which will give the home music-lover "all the essential facilities of a small-scale studio console." The Model 919 permits

Which of these fascinating electronic gadgets would you like to build?

A photo print-timer that does everything but turn out the lights! Designed by a darkroom craftsman, it features instant reset, backlighted digit-set dials, pushbutton stop and start.

A battery-operated dickey flasher—guaranteed to liven up any party! Suddenly, your shirt buttons start flashing sequentially! Some people laugh. Others just stare. But it's funniest when they try to ignore you!

Elementary Electronics features low-cost, practical projects like these in every issue!

Mail coupon today for your complimentary copy!

Yes, every issue of **ELEMENTARY ELECTRONICS** brings you step-by-step instructions, with photos and diagrams, for all kinds of devices you'll enjoy building—and be proud to own!

But that's not all. You also get instructive articles on electronics, CB and shortwave. Lively columns. Exciting features that make **ELEMENTARY ELECTRONICS** America's most absorbing, down-to-earth magazine for the electronics and radio hobbyist.

Invaluable Basic Courses in electronic theory!

For example, you get the fundamental training you need to construct your projects successfully—or lay the groundwork for an electronics career.

Each issue presents a Basic Course that helps you master an important aspect of electricity or electronics. Recent subjects included: *Resistors in Combination*. *Understanding Transformer Action*. *Introduction to Alternating Current*. And *Understanding Semiconductors*.

Our readers tell us these Basic Courses are one of the magazine's most popular and valued features.

A magazine with a personality all its own!

You'll meet a lot of interesting people in the pages of **ELEMENTARY ELECTRONICS**. Like Hank Scott, our Workshop Editor. He conducts a regular letters-from-readers

A shortwave station finder/ marker. Suppose you pick up an interesting but elusive station in Papeete, Kuwait or Kinshasa. This stable wide-band oscillator lets you relocate it any time you like—without hours of searching.

A nostalgic crystal radio set—just like the one your grandad had. You make it with a Quaker Oats box.

A futuristic pulse-width modulated mini-audio amplifier. It can boost the volume of a pocket radio to dancing level!

column called "Ask Hank, He Knows!"

If you have any trouble on a project—or with *anything* electrical—just ask Hank. He knows!

And Kathi Martin, KGK3916, our Citizens Band Editor. She writes "Kathi's CB Carousel"—the most entertaining and informative CB feature you'll find anywhere!

Plus the people who contribute our columns on shortwave, antique radio, new products, electronics news tid-bits—and much, much more!

All our writers, editors and columnists know their stuff backwards and forwards. And they know how to make it interesting! With the same kind of straightforward language you use yourself when discussing electronics or radio.

What's more, they have fun. Which means *you'll* have fun, too!

SPECIAL INTRODUCTORY OFFER:

Just mail this coupon, and we'll send you a complimentary copy of **ELEMENTARY ELECTRONICS**.

Send no money now. We'll bill you later for a year's subscription—a total of six bimonthly issues for \$3.49. But if you don't agree the magazine is everything we say it is, simply write "Cancel" across the face of the bill. Send it back to us, keeping the complimentary copy. And you won't owe a cent.

Act today. We're confident that once you see your first copy of **ELEMENTARY ELECTRONICS**, you'll wonder how you did without it for so long!

A solid-state wind-chill factor meter that can tell you instantaneously just how cold you feel!

A compact, portable gas alarm for home, trailer, car or boat. It detects many kinds of dangerous fumes—and could easily save your life!

CB MEETS SWL IN GOOF-PROOF PROJECT see page 47

elementary Electronics

FUTURISTIC
Pulse-width modulated mini-audio amplifier boosts pocket radio sound to dancing level.

NOWADAYS
Buck stretcher clock gives time, date, and alarm, plus two options in simplest design yet!

YESTERYEAR
It's the real thing! Build your own Quaker Oats box crystal radio just the way granddaddy did, using identical materials for a perfect duplicate.

New Products

the user to blend three different two-channel stereophonic input signals with separate level and bass, mid-range and treble controls on each input. The standard input channels include a phono input, a microphone input and a switch-selected choice of tape, tuner or auxiliary input. A "panning" circuit permits the operator to locate the apparent position

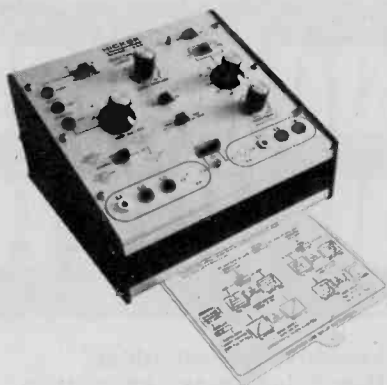

CIRCLE 23 ON READER SERVICE COUPON

of a microphone input anywhere he chooses between left and right channel outputs, even give the illusion of an announcer walking across the front of a recorded symphony. Stereo blend control permits the selection of the width of the output, all the way from mono to extra-wide, in which case an orchestra has a wider frontal area. A "cue selector" makes it possible to monitor each of the inputs separately. Wide dynamic range and frequency response, Bozak claims, contribute to minimal distortion for the unit—less than 0.1% over a frequency band of 20 to 20,000 Hz with full 10-volt output into a 200-ohm load. The unit, which sells for \$797, is 7 in. high, 17 1/4 in. wide and 10 1/2 in. deep without the cabinet. Weight is 21 lbs. Also available is an optional true-walnut enclosure for shelf mounting. Complete technical specifications are available from Bozak, Inc., Box 1166, Darien, CT.

Curve Tracer

Hickok's new model 440 Curve Tracer dynamically tests all types of semiconductors under actual conditions, in or out of circuit. Used with any scope having external horizontal input, it generates calibrated "characteristic curves" that can be accurately scaled right from the screen. It safely tests J-FETs, MOS-FETs, diodes, zeners, transistors, UJTs and SCRs—silicon or germanium, power or signal. Insta-Beta takes the guesswork out of transistor beta and FET parameter calculations. In the transistor mode, Insta-Beta displays a single, full range I/c I/B curve from which AC and DC beta can be instantly determined without interpolation. This curve also shows beta linearity at a glance. In the FET mode, Insta-Beta displays the entire transfer curve including pinch-off voltage, full-on current, and the active portion for easy calibration of Gm. In normal semiconduc-

tor testing, a variable step control provides characteristic curve displays with up to ten steps per family (steps of base current for transistors and steps of gate voltage for FETs). A Horiz V/Div control changes horizontal sensitivity without requiring scope recalibration. Maximum sensitivity of 1V/div is especially useful

CIRCLE 24 ON READER SERVICE COUPON

for measurements in the semiconductor threshold or turn-on region. Controls are logically arranged on the front panel and use color-coding and fast set-up marks where applicable. A handy pull-out card provides ready reference information for calibration, set-up and operation of the instrument. Sells for \$165.00. For more information on the model 440 Curve Tracer contact Instrumentation & Controls Div., Hickok Electrical Instrument Co., 10514 Dupont Avenue, Cleveland, Ohio 44108.

Discriminating Detector

White's Electronics now offers a new discrimination feature on all of its "Series II" TR metal detectors. Representing a big advance in detector efficiency, the discriminator reduces time wasted digging up tin foil, bottle caps, gum wrappers and other types of junk items. Two of the most popular Series II detectors are the Goldmaster 66 TR-4B and The Alaskan TR-4B, which have suggested retail prices of \$309.50 and \$309.50, respectively, with discriminator.

CIRCLE 25 ON READER SERVICE COUPON

New circuitry added to the Series II circuit accomplishes the discrimination. Instead of Low—High—Auto, the discriminator TR units have Normal—Auto—Discriminate modes, plus a separate control for adjusting the degree of discrimination desired. Discriminator-equipped detectors can be easily adjusted to reject beverage-can pull-tabs and still detect most coins, making prospecting on beaches and other areas where there is public access much more productive than with standard units. From White's Electronics Inc., 1012 Pleasant Valley Road, Sweet Home, OR 97386.

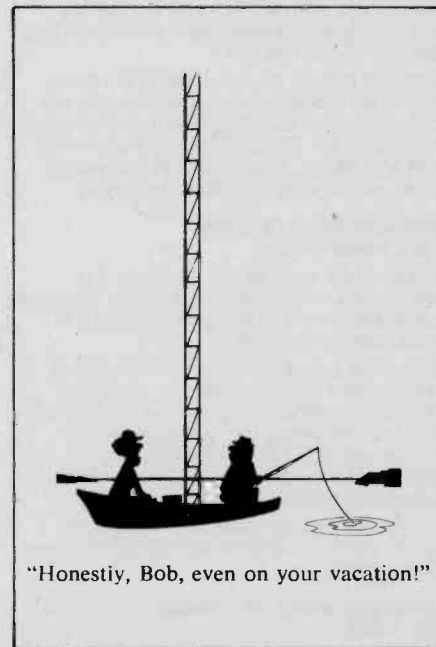

MATV Crimper

Channel Master has developed a new crimping tool whose unique jaw configuration eliminates the danger of crushing 75-ohm fittings, a common cause of signal loss in MATV installations and other antenna installations using 75-ohm cable. The new Crimp-O-Matic, model 7188C, is made so that its jaws "bottom

CIRCLE 26 ON READER SERVICE COUPON

out" (close down) on each other instead of on the fitting. When a fitting has too large an outside diameter, the tool will deflect at the handle end, again preventing undue pressure on the fitting, no matter how hard the technician squeezes the tool. Specially designed jaws further protect the fitting. List price for model 7188C is \$16.30. For further information, contact MATV Department, Channel Master, Ellenville, NY 12428.

Ham Radio Is the Answer

I am 11 years old and I have started a radio club with some friends. I would like to know what I could do to talk or write to other radio clubs?

—S. F., Lakewood, NJ

Congratulations on starting the Radio and DXers Club of Lakewood. As for learning about radio, take a double-barreled approach—read and study books on radio and electronics, and get your novice ham license as soon as possible.

The Real Smokey the Bear!

I was wondering, do the U.S. Forest Service Ranger stations and fire towers monitor CB channels for emergency calls inside the parks? And if so, what channels?

—M. C., Miami, FL

This would have to be answered by the Chief Ranger from each National and State Park. Write to the park you plan to visit and ask them what CB channels they monitor.

You Got Some Case!

I live right behind a hospital and at certain times of the day I get so much static I can't turn my SW radio on. Is there something I can do about this?

—T. B., Hastings, NE

You should complain, and the FCC should take action. But who ever heard of anyone forcing a hospital to close down its vital medical equipment?

Oh Boy

I'm one of those great CBers, and I want to know how I can get my picture in COMMUNICATIONS WORLD.

—J. O., Rome, NY

What makes you one of those great CBers? Do you have a kilowatt linear, use a handle like "Big Bad Joe," or are you credited for the most consecutive hours broadcasting a dead carrier on channel 9? Anyway, if you want your picture in COMMUNICATIONS WORLD, just take one alongside your shortwave receiver and send it to the editor. Please, black and white only!

TV from Audio Unit

Is it possible to utilize a regular tape recorder unit in constructing a video tape unit for recording and viewing television transmissions.

—D. S., Brooklyn, NY

Anything is possible, but don't try it. You'll need a new transport mechanism, record and playback head, and electronic circuits. In other words, you may be able to use one 10k resistor from the original unit and the walnut case, if it's large enough.

From Thumb to Toe

Is it possible to hook up a footswitch to a Messenger 223 CB made by Johnson so when you press it you transmit? The footswitch is from a cassette tape recorder.

—G. P., Grinnell, IA

The push-to-talk circuit in the microphone is a normally-open switch circuit that activates the transmitter. All you have to do is trace the circuit in the microphone to the jack on the front panel, and connect two leads behind the jack to the footswitch. Then, when the footswitch is stepped on, it closes the circuit as would your thumb on the microphone. Now all you need is a mike boom and headset (Telex sells them) and you have hand operation.

Loaded Question

Hank, I've got a question. Since a lot of CBers run power and think they know all about radio, why aren't they radio amateurs? Or do you have to have 3 kW to be a "fine CBER out there?"

—R. D., Kansas City, MO

Hey, pal, seems like you're taking a shot at the CBers. Well, what you say is very near to the truth for too many CBers, but there are many CBers who live by the book. And believe me, if they wanted to be hams, they would be hams. Ham radio is not the ultimate answer to radio 2-way communications. Because the bulk of the hams obey the law doesn't mean that ham radio is the only answer. I would like to point out that the breed of ham I knew is vanishing. They are not appliance buyers and band snobs who refuse to chat with novices. There is much in your house to clean up, so don't worry about the CBER.

20 Million Is Enough

I notice that in all digital volt-ohm meters they only test up to 10 or 20 megohms. Why?

—W. M., Ironton, OH

FALL-WINTER 75

COMMUNICATIONS WORLD

A DXER?" "Do you transmit?" "Are you a ham operator? Do you talk to people all over the world on your radio?" These are the sorts of questions every DXer hears when he lets it be known that his hobby is radio.

One of the facts of life DXers must face is that relatively few people have the faintest idea what the DXing hobby is all about. Friends and co-workers, the guy down the street, Cousin Bertie and Uncle Fred, if they know anything about radio at all, except how to twist a transistor's dial, will blithely assume you're a radio amateur, a "ham." A few in this day and age, more knowledgeable than the rest, will guess you're a CBer and toss you a cheery "10-4."

And when they find out that you don't "send," they'll be more puzzled than ever. "You mean you just *listen*?" your buddy Joe asks. "How can you hear *anything* with all that noise?" queries Aunt Selma, casting a knowing look at the rest of the family assembled. In the family tree, you've just been assigned to the branch on which uneasily perches your second cousin's jobless brother-in-law.

If your family doesn't understand, can you expect more of your neighbors? "Gee, ya sure got a lot of wires hanging over the backyard, Sam. Watcha tryin' to do, trip tall birds? Hawhawhaw!" Or worse yet. . . "Hey, Sam, that radio set of yours sure messed up my TV reception last night!"

It may not be exactly a hostile world the DXer faces, but it's one in which the average guy you meet will think a "killuh-cycle" is a Hell's Angel's Honda.

So with your sanity in question and your reputation on the line, you really have only two choices.

You can become a DX hermit. Retire to your DX shack to listen, undisturbed by an unsympathetic world. Venture into the outside world only on rare occasions, when you can expect to have women stare, children snicker, and dogs flee whimpering.

Or you can brave it out and try to explain to others why DXing is the most interesting, entertaining, educational, and enjoyable hobby around.

Your mission, if you choose to accept it, is to help bring DXing to the world. And since COMMUNICATIONS WORLD understands DXing and your problem, we've got some informational ammo to help you out. Not only will this issue of CW not self-destruct in ten seconds, we'll be around twice a year in case your Mission Impossible strikes a snag.

DX DIALOGUE. Let's start out with a not-so-imaginary dialogue—questions by a typical non-DXer; answers—concise, clear-cut and, yes, clever—by *You*.

Just what is DXing anyway? DXing is, simply, the hobby of listening to distant radio signals.

That's all there's to it? It's that simple . . . and that complex. That is the basic theme of DXing, but there are many variations. For instance, the radio frequency spectrum is very broad, ranging from the very low frequencies to the ultra high frequencies and beyond. There are many different types of signals that can be received on many different frequency ranges.

It's not all shortwave then? Righto! A large segment of the DXing population does tune the shortwave frequencies, generally accepted by those in the hobby as including stations operating between about 1,605 and 30,000 kilohertz. But that's only part of the DXing scene.

Hold it just a minute! Kill a what? That sounds like a

threat by that number two auto rental outfit. Hertz . . . kilohertz! A hertz is a unit of measure basic to radio. A radio frequency is the number of times a radio wave "vibrates" each second. It used to be measured in "cycles per second," but more recently hertz, which means the same thing, has become the widely accepted term.

The prefix kilo comes from the basic metric system and means thousand. Mega, also a metric prefix, stands for million. Thus, kilohertz (kHz) means a thousand cycles per second; megahertz (MHz), a million cycles per second.

Take your favorite AM radio station . . . the big, big, big sound of WZAP! You know its frequency is "1040 on the dial." That's 1,040 kHz. On a small transistor portable it may show up just above the "10" mark on the dial. That "10" is just a manufacturer's shorthand way of indicating "ten-hundred" (or 1,000) kHz.

A typical shortwave frequency might be 9,650 kHz; a radio wave fluctuating 9,650,000 times each second. You could express the same frequency as 9.650 MHz, 9.65 million times a second.

Let's get back to the different kinds of DXing, OK? I mentioned those who favor shortwave. Shortwave DXers are also known as SWLs, shortwave listeners. But there are those who specialize in listening to distant medium wave stations . . . medium wave, that's your standard AM broadcast band (BCB), about 540 to 1600 kHz.

Hey, I heard some station in Salt Lake City on my car radio one night. Does that make me a medium wave BCB DXer? It's a start, chum. There are BCB DXers who have heard thousands of domestic AM stations, in the U.S. and Canada. And this may surprise you, but there are those who have managed to hear foreign BCB stations, not only from Latin America but from Europe, Africa, Asia, and other remote spots on the globe.

Unreal, man! But true! And that's not all. There are DXers who tune the very low and low frequencies, those below the 540 kHz bottom of the BCB dial. And above shortwave, above 30 MHz, are the very and ultra high frequencies. These include the channels

used by police, fire and other public service and commercial communicators . . . plus the FM and TV broadcasters. All these ranges are the hunting grounds of one or more groups of DXers.

DXers can also be categorized by the types of stations they tune within given frequency ranges. There are the so-called "broadcast" stations. . .

I thought all stations "broadcast." In DXer lingo "broadcast" type stations are those which transmit some type of program material, whether it's music, news, entertainment, or what have you, for a general listening audience.

Examples, please! Well, there's your WZAP, for one. On shortwave broadcast, SWBC if you please, there's our Voice of America, the BBC, Radio Moscow. There are some low frequency (long wave) broadcast stations overseas, though not on our side of "The Pond." TV and FM outlets are examples of broadcast type stations.

There are other types of stations besides "broadcasters"? You've heard of amateur radio? The hams?

They're the guys who "send," er,

transmit, right? Righto! Amateur radio operators. They are private, non-commercial, non-government, radio hobby communicators. And there are DXers, who although they are not licensed to transmit, enjoy listening in on the hams' conversations and try to hear as many stations in as many countries as they can. Some eventually will become hams themselves . . . they are serving a sort of unofficial apprenticeship as amateur radio monitors. Others have no interest in transmitting and are content just to listen to the hams.

Are there other types of DX stations? You bet your bird, friend. There is one more category, by DXer definition. This is a catch-all group that hobby listeners call utility stations. In short, these are all the other stations that don't fall into the two previous categories, the broadcasters and the hams. They include, but are not limited to, police and other public service signals, military communications, ship-to-shore radio, aeronautical transmissions, radiotelephone and other point-to-point communications, CW (that's continuous wave, not COMMUNICATIONS WORLD) signals in International Morse Code, and, well, the list goes on.

Robert Kinney is a retired Army master sergeant, presently a small-town police officer. His main DXing receiver is a Zenith Transoceanic Royal D7000 portable. Robert is a member of the American SWL Club but is planning to join another shortly.

And you DX all those different kinds of stations on all those frequencies? Not me . . . and not 99 and 99/100ths of the rest of the world's DXers. The world of DXing is just too broad for that. Most hobbyists focus attention on one or several types of DXing. My bag happens to be shortwave broadcast DX and listening to the VHF (very high frequency) public service "action" bands. But I don't put down the guy who favors another brand of DXing.

OK, then tell me about shortwave broadcast DXing. What's the big deal? Deal-schmeal! Let me ask you one. What's the furthest you've ever traveled?

I went to Cincinnati one summer. And then there was the convention of the Amalgamated Steamfitters and Stationary Engineers in . . . And I went to Tahiti last night! And Morocco! And last week it was Spain and Santo Domingo and Saigon. The armchair travel bit appeals to me . . . and to many SWBC DXers. I can travel the globe without ever leaving home, and you can't beat the price. DXing is a terrific way to experience the music, the culture and customs of all sorts of far-off places. Like most SWLs, I get a thrill from just knowing that the signal I'm tuning has spanned half the world!

Are all the programs in English? Many of those specifically beamed to the U.S. and Canada are! These usually are aired by powerful shortwave signals and come in loud and clear. Many other stations are directed to audiences in those stations' home countries. Depending on the country, those programs could be in English, Spanish, French, Arabic, Chinese, or any number of foreign languages and dialects.

You know all those languages?! Certainly not! When I first started I stuck to the English speakers. And many SWLs don't venture beyond those outlets.

When it comes to SWBC, there are those who consider SWLs to be those listeners who tune stations for program content, for music, entertainment, news. These persons are less apt to stray away from English language programming. But, if you buy this sub-definition, true DXers are those who are less interested in programming content than in the mere fact of hearing a difficult, distant low-powered SW station. The more difficult to hear, the more treasured a logging it is.

Fifteen-year-old David Whitehead is a veteran of two years in the DX hobby. The Nevada, MO, SWL has received 150 QSLs from stations he has logged with his Realistic DX-150A and Realistic VHF Hi-Lo Scanner.

To use those distinctions between an SWBC DXer and an SWL, it is clear that the non-English-speaking station is going to be a prime target for the DX fan. And eventually this type of listener is going to learn a smattering of a number of foreign languages, enough to identify the rare DX catch.

However, you can learn a language by shortwave if you wish. A number of overseas broadcasters have special language courses to teach you, by radio, at least the basics of their lingos. In addition, a student learning French, Spanish, German or some other language in school will find shortwave programs in those languages a useful learning aid.

And other reasons why a DXer listens to SWBC? News and sports are two other reasons for me. But, of course, everyone has his own reasons. I find it interesting to hear first-hand news reports on major breaking events directly from the country in question. And, for example, it is also fascinating to learn how different countries present their views on the same political news event. In sports, I listen to Canadian hockey broadcasts, various U.S. sporting events via our American Forces Radio and TV Service, Olympic sports direct from the host country.

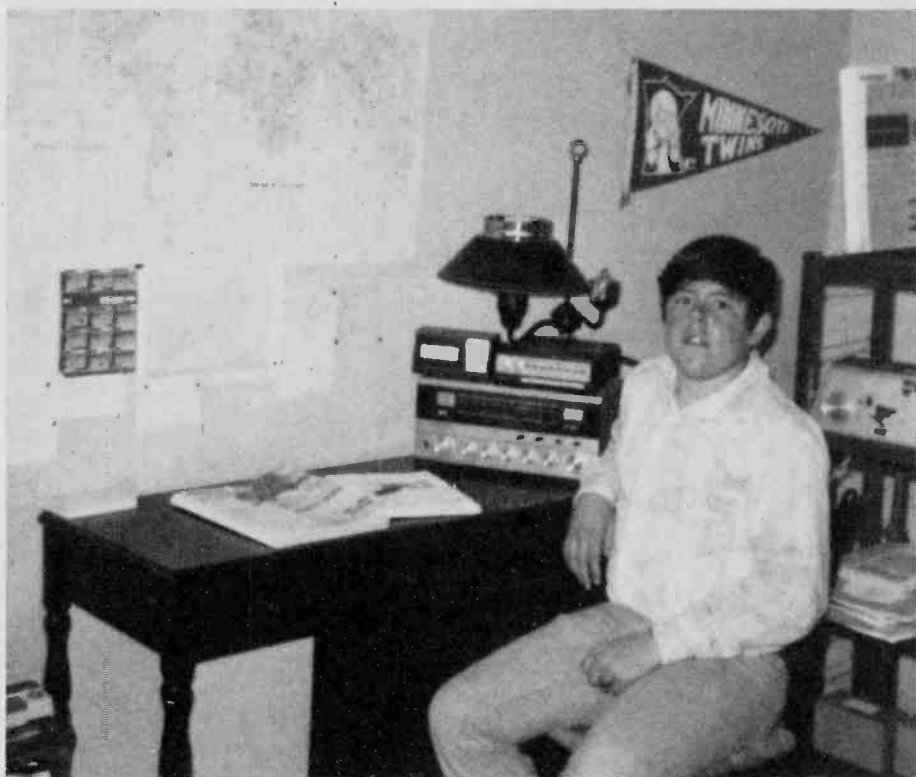

What happens after you hear a station? Well, for quite a few DXers, the SWBC type or whatever, hearing the station is just part of the hobby. The second aspect is collecting verifications or QSLs from the stations he hears.

QSLs are letters or cards, sent by many stations in reply to listeners' reception reports, verifying or confirming that those reports were correct and that the DXers did hear those programs. In short, QSLs are a proof of sorts that a DXer did hear the stations he says he did.

Upon tuning a new station, a listener takes notes of what he heard and how well he heard it. This data is sent to the station. If the program items reported match those broadcast by the station at the time in question, often the station will reply with an attractive QSL postcard or letter confirming the reception.

Many DXers collect QSLs both as proof of their loggings and as mementos. Hobbyists sometimes consider the number of different countries and stations verified as a rough indicator of their progress and proficiency in the DX hobby.

I'm beginning to see why you're so hung up on DXing. Now tell me. . . . Just a mo', Bo! You're not going to get all the answers in just one cram session. DXers always talk about a mysterious little critter known as the "DX Bug." It is the carrier of the DX virus and when he sinks his fangs into you, you're apt to be stuck on this hobby for years, maybe a lifetime. I see one of them perched on your left shoulder right now, ready to chomp. Any more of this Q and A business and you may be hooked. Now, if you'll pardon me, I'm going to

get back to my rig for a little DXing. See ya!

The World Above 30 Megs. A constantly growing number of DXers are discovering the fascination of monitoring the very high and ultra high frequencies. Frequency-wise, VHF covers the span from 30 to 300 MHz, while UHF picks up at 300 MHz and soars far above the point where the average Joe can readily obtain commercial receiving gear.

I have a theory that the relatively recent popularity of VHF and UHF DXing really began with the fantastic growth of citizens band operations. Beginning in the '60s and continuing to the present, millions of persons who'd never demonstrated an interest in radio hobbying discovered CB. They invested many millions of dollars, collectively, in citizens band transceivers and, although contrary to the intent and regulations of the Federal Communications Commission, began to view their radio interest as a hobby.

Unfortunately, there were many who viewed CB as an unlicensed "license" to play ham, working distant "skip" stations and otherwise violating the intent and spirit of citizens band operation.

The more law-abiding, however, began to look to legitimate avenues of

using their CB equipment. This led to the formation of radio emergency teams, REACT groups and the like, which in many areas offer aid to motorists and otherwise assist, on a volunteer basis, local law enforcement and emergency services.

Working closely in many communities with police and sheriff's departments, these CBers soon found an interest in monitoring those departments' VHF and UHF communications signals. To do this, they purchased the necessary VHF and UHF receivers... since normal shortwave receivers and CB rigs, operating on the shortwave frequencies, don't tune the police channels.

One thing led to another and before long those CBers were finding that the world above 30 MHz contained not only police communications but a variety of other action band signals.

As in the case in SWling, you can find all three basic type of stations—broadcast, ham, and utility—on UHF/VHF frequencies. Among the utility types, first—and to many monitors, foremost—are the police communications transmissions. But there are also other governmental uses of these frequencies. Besides law enforcement agencies, from local police and county sheriff's or highway patrols to the FBI, Customs and Treasury Agents and the Border

Patrol, you'll find fire department, highway crews, and other public service users.

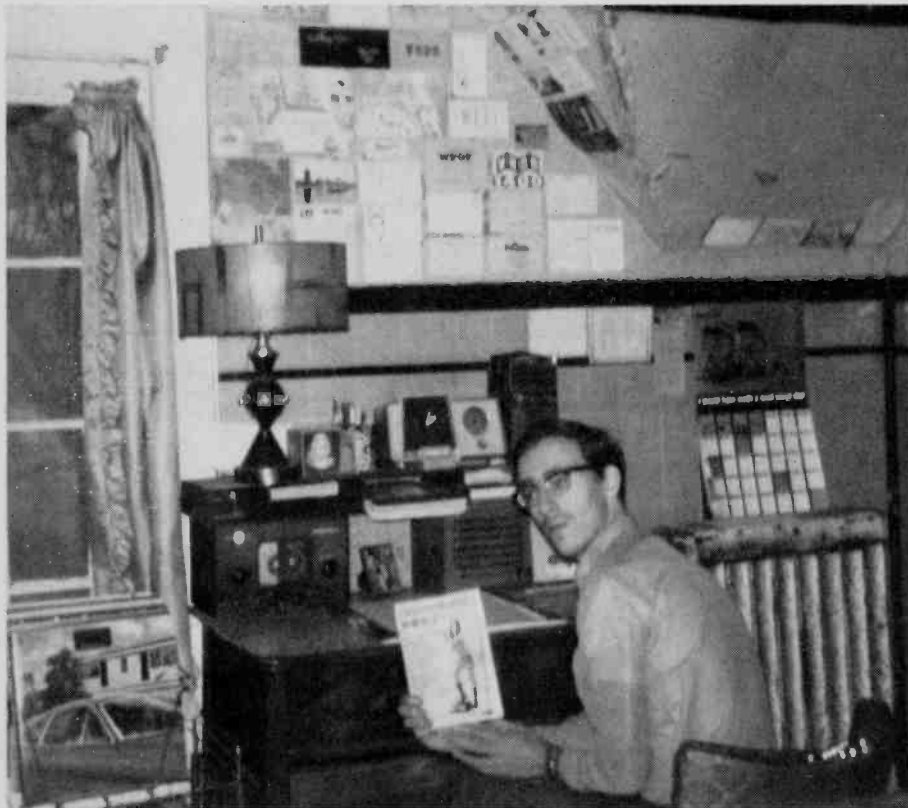

At one time, police departments used "barely-shortwave" frequencies around 1600 to 2000 kHz. But today most police radio traffic is on VHF/UHF. More than 20,000 law agencies use frequencies in the very high frequency range, mostly in two specific "bands." These are the VHF "low" band, 37.02 to 46.42 MHz, and the VHF "high" band, 151.45 to 159.21 MHz. Besides these frequencies, an increasing number of police departments, especially in metropolitan areas, are using ultra high frequency channels in the 450 to 470 MHz range.

These frequencies can be both the duller and the most exciting sort of places to hunt for the radio enthusiast. Much of the radio "traffic" of police agencies is routine, checking in of patrolling squads, dispatching of officers to handle traffic. But, when the police really go into action, reacting to an accident or answering a robbery call, you can be in on the excitement.

Two points are worth considering now. The first is a legal question: *Is it against the law to eavesdrop on police communications?* The answer is *no!* COMMUNICATIONS WORLD wouldn't be advocating this form of DXing if it were against the law. But there are some things to remember. The FCC does not prohibit listening to police or any other type of radio signals. But in the case of the utility-type communications, non-broadcasts not specifically intended for a general listening audience, you cannot use the results of your monitoring for personal profit in any way. And you are not supposed to divulge to any other person the content of any messages you overhear.

Beyond this, specifically where police band receivers are concerned, several states and some municipalities have laws that prohibit installation of radios capable of tuning those frequencies in vehicles. In a few places, mobile installations require a state-issued license. Generally, though, our readers report these restrictions are seldom enforced but remain on the books to deal with troublemakers if and when the need arises.

I may be prejudiced, but I like to think that the copy of CW in Massachusetts DXer Bill Wyllie's hands was a factor in his logging of 195 AM medium wave stations. But undoubtedly his Hallicrafters S-41G receiver played a part. Bill and others may be interested in knowing that your CW Communications Editor heard his first DX on an identical receiver back in 1947.

The second point deals with the matter of radio signal propagation, that is, the way in which a radio signal gets from the transmitter to the receiver. The question: *How far will VHF and UHF signals travel?* Here, if your previous DXing experience has been with shortwave, is where you may be surprised. Transmission distances above 30 MHz tend to be considerably shorter than on SW.

For the reason for this, let's take a quick look at propagation of radio signals in general.

All radio signals travel in a straight line away from the transmitting antenna, but the earth is round and from any given point on the globe the signal broadcast will continue outward into space as the earth below curves gradually away at the horizon. But circling the earth, several score to several hundred miles up, are electrically dense layers of ionized gasses. These tend to act as mirrors, bouncing the radio signals back to the ground, many hundreds or thousands of miles from the point of origin.

At frequencies below about 30 MHz, this "bounce" effect is commonplace and is the reason we can hear worldwide signals on shortwave and, on occasion, even the medium wave frequencies. But this is a less common phenomenon in the VHF range, and less so on UHF. And even when it happens, distances are shorter. You can receive, on occasion, VHF and UHF signals hundreds to several thousand miles away. But don't expect to hear the French fuzz or the Hong Kong constabulary on VHF/UHF!

So, for day in and day out action band listening, you can count mostly on your local and semi-local area stations. On occasions when the ionospheric "E" layer sporadically is ionized, when weather conditions cause a sort of signal duct, or under another of several special propagation conditions, you may hear more distant signals.

Police communications form only part of the community of signals on VHF/UHF. There are public safety stations, industrial and business com-

munications, land transportation, including the Railroad Radio Service, radio paging, taxicabs, broadcasting remote pickups, and the like.

In some regions, the local fire departments share a single channel with the law enforcement agencies, but in more populous areas, where there is more radio activity, the uniformed services generally have separate channels. And often, each has a number of channels available when traffic becomes heavy.

A Closer Look at the Bands. Communicators who use the VHF "low" band for business purposes can be found in the area of 31 MHz. Up the dial, around 33 MHz, you may find fire department signals; and also around 166 MHz in the VHF "high" band and near 459 MHz, UHF. Another point where you may find the fireladdies communicating is around 46 MHz.

Some hotspots for police and other law enforcement agencies are those frequencies around 37, 42, 154, 155, 159, 166 MHz VHF and 453 and 458 MHz UHF, but of course such signals are not limited to these few areas.

Radio on wheels? In megahertz, try these areas for the following type action band stations: Taxis—152 and 452; trucks—45 and 160; highway repair crews—37; private police and security agencies—159 and 460; power and light company trucks—46 and 456. In some larger cities, reporters and TV camera crews communicate with their studios on frequencies around 172-173 MHz.

On both the VHF low and high bands you'll find a group of stations known as radio pagers. Radio paging stations serve a unique purpose. They allow a person-on-the-go to remain in touch with his home, business or office, regardless of where, within the range of the transmitter, he may be.

The person subscribing to the service carries a small pocket-sized VHF receiver. This receiver is tone-activated, "turned on" only by a special combination of tones transmitted by the paging transmitter.

In the older types of radio paging, the subscriber hears a beep, which alerts

"I enjoy CW and look forward to every issue," says Steven Fernkopf, Holton KS. Sixteen-year-old Steve uses a Realistic DX150B (top) and a Hammarlund SP400SX for his DXing. His favorite loggings include Radio Grenada in the Windward Islands and Radio Malaysia Sarawak.

him to the fact that a message is waiting for him. He must then go to a phone and call in to get the word.

Other systems operate with voice communication. After the tone combination "unlocks" the subscriber's receiver, the paging operator is able to pass along the communication. Still more modern systems allow anyone with a special access number to dial directly from any phone and the call, patched through the VHF transmitter, can be heard by the subscriber, by-passing the paging operator.

Most paging firms are businesses operated solely for that purpose. The American Telephone and Telegraph Corporation's Belboy service is said to be the nation's largest. But other outfits are known by such names as Radio Paging, Aircall, and Air Page. Some large industries operate paging services for their own employees, and hospitals and clinics sometimes have paging operations for affiliated doctors.

There are six paging channels worth checking. Designated Channels P-1 through P-6, they are 35.22, 35.58, 43.22, and 43.58 on VHF low band; 152.24 and 158.70 MHz, high band.

Going hand in hand with the radio

BIRD'S-EYE VIEW OF THE HIGHER HERTZ

Very High Frequency

Frequency Range (MHz)	Type of Radio Service
30 to 50	Public Service (Low Band)

471.25 to 889.75	TV Broadcast (Chans. 14-83)

paggers is radio common carrier (RCC), mobile telephone.

Mobile telephone shouldn't be totally unknown to TV spy and private-eye program watchers. Mannix makes regular use of the mobile phone in his car to keep in touch with his secretary, Peggy. And, going back a few years, Maxwell Smart, played by Don Adams, used to carry his mobile phone in his shoe!

If you think there'd be nothing interesting to hear on mobile telephone channels, consider this comment by one of our readers, Jimmy Rosenbluth, operator of a small radio repair service in Silver Spring, Maryland: "Hearing the radio paggers doesn't do too much for me. But mobile telephone is something different. One day I heard a voice say, to whom I don't know, 'Get over to the White House right away. The Vice President has resigned!' Exciting things go on like this every day."

Things may not be quite so exciting if you don't happen to live in the greater District of Columbia vicinity, but mobile phone can make interesting listening. Again, though, remember the caveat . . . keep what you hear to yourself! In the case of Jimmy's example, that's history now, and the FCC is not apt to mind this bending of the rule.

There are 21 channels used by the RCC stations across the country. The services provided by the radiotelephone systems vary from location to location. Not all firms permit transient use, that is by persons passing through an area. Others operate only during daylight hours.

VHF on Land, Sea, and Air. At something like 60 locations in the U.S., the National Weather Service operates transmitters broadcasting 24 hours a day. These stations continuously transmit weather information, regularly updated. Most of these stations use transmitters running about 300 watts and are intended to cover an area about 50 miles or so from the station.

NWS employs two VHF high band frequencies, 162.40 and 162.55 MHz. On the former frequency are stations at Atlantic City, Baltimore, Boston, Dallas, Eden (MD), Erie (PA), Eugene (OR), Akron, Astoria (OR), Milwaukee, Monterey (CA), Cape Hatteras (NC), Hartford, New Bern (NC), Savannah, Sacramento (CA), San Diego, Sandusky (OH), Pharr (TX), St. Joseph (MO), Pensacola, West Palm Beach (FL), Kauai (HI), and Mt. Haleakala (HI).

Sharing 162.55 MHz are: Anchor-

age, Chicago, Corpus Christi (TX), Brownsville (TX), Des Moines, Denver, Galveston (TX), Detroit, Cleveland, Indianapolis, Atlanta, Buffalo (NY), Charleston (SC), Hilo (HI), Honolulu (HI), Los Angeles, Kansas City, Minneapolis, Ft. Worth, Hyannis (MA), Jacksonville (FL), Norfolk (VA), Portland (ME), Lake Charles (LA), New York, Portland, San Francisco, Seattle, San Francisco, Salt Lake City, Phoenix, Wichita (KS), New Orleans, St. Louis, Miami, Tampa (FL), and Wilmington (NC).

On the sea, and on inland lakes and rivers, there is VHF traffic to monitor.

One of the most active frequencies for marine traffic is 156.80, a channel which the U.S. Coast Guard monitors. Boats and ships equipped with two-way radio are required to monitor this frequency, known by the designator Channel 16, as well.

Although most VHF communication makes use of the frequency modulation (FM) transmission mode, one service uses AM (amplitude modulation). Domestic aeronautical traffic, giant jetliners and private aircraft, use the VHF channels between about 108 and 136 MHz.

Because these frequencies can't be tuned on most public service bands VHF receivers, you'll need to invest in another set, but there are a number of transistorized receivers, even portables, that will bring this aero action to you at bargain prices.

Among the aero frequencies to monitor are the International Aircraft Distress channel, 121.50 MHz, and the Civil Air Patrol emergency frequencies used for search-rescue missions, 123.1, plus 148.15 MHz.

Daniel Flak of Highland, CA is one CW reader who knows what aeronautical DXing is all about. He should! Dan is an Air Force pilot and a DXer with a dozen years experience.

"Listen in on Delta 148 or Kennedy Tower," he writes. "Or just listen to 'Joe Private Pilot' flying into your local airport. Although VHF is line-of-sight, that can be several hundred miles when the broadcaster's plane-mounted antenna is at 35,000 feet!

"Some of the call signs you will hear are 'Center' (high altitude controllers), 'Approach/Departure' (low altitude controllers), 'Radio' (used by Flight Service Stations which give out all kinds of information), and, of course, 'Tower.' You can also hear General Aviation aircraft, such as Cessna or Piper, followed by the aircraft's tail

number. Commercial Aviation planes use designators such as Eastern 148 or Delta 947. Or you might hear military craft (such as MAC 90407 and Air Force 12345).

"In any case," Capt. Flak continues, "listen to 121.5 MHz, the VHF emergency frequency, or 123.45 MHz, the airlines' 'party line.' Most towers use frequencies between 118 and 120 MHz, and if you live near an Air Force base, try 126.2 for the tower frequency.

"Airport Ground Control is usually on 121.X, with 121.7 and 121.9 MHz the most popular. Other busy frequencies are 122.6 and 123.6 MHz, where most of the Flight Service Stations (FSS) hang out. If the airport near you doesn't have a tower, try 122.8 and 123.0 MHz. These frequencies are called 'Unicom,' among the busiest in terms of aero traffic."

One source of aeronautical radio frequency information is your own local airport. A complete list of frequencies is contained on the sectional map used by pilots. A request and a few minutes with pencil and paper and you can jot down all the pertinent ones. Or note

RADIOTELEPHONE (RCC) FREQUENCIES

These VHF and UHF frequencies are used by mobile telephone systems across the country.

those frequencies mentioned by aircraft controllers on the air.

Scanning the Top Bands. After that taste of the utility type stations that operate topside in the VHF and UHF bands, it is time to look at other types of signals that can be logged above 30 MHz.

First a quickie glance at the two amateur radio bands that may be of interest to DXers. Ham radio is a bit out of COMMUNICATION WORLD's line, and we recommend that the serious monitor of amateur radio signals consult one of the many ham manuals available; but for the sake of completeness, we'll skim across the 6 and 2 meter bands.

In terms of activity, operations, and interest, the ham high bands are similar to the shortwave ham frequencies. But there are differences too. Six meters, covering the frequencies between 50 and 54 MHz, acts, propagationally, much like the VHF "low" public service band, just below it. And, not surprisingly, two meters, 144 to 148 MHz,

except for the type of "traffic" you'll hear, is not unlike the "high" action band, just a little higher in frequency.

One of the fastest growing areas of ham interest is in two meter FM and repeater operation. For the amateur, "two" has much to recommend it. Much of its attraction comes from the size dimension. With the advent of solid state gear, transceivers can be miniaturized and compact; hand-held portable equipment is common. At the very high frequencies used, antennas, too, can be made very compact. The one major drawback, theoretically at least, is the limited range normally experienced on VHF.

One answer, for the hams, has been the construction of repeater stations which can, in effect, allow two meter signals to cover a much wider area than normally would be the case. These repeater stations are automatically-operated receiver/transmitter installations, usually located at high locations, atop mountain peaks or high metropolitan buildings. A signal, even from a

"walkie-talkie" type transceiver, is received by the repeater's receiver, translated to another frequency about 600 kHz away, and rebroadcast. With the repeater station's high altitude, this re-radiated signal can cover quite an area.

A more exotic type of repeater station used by VHF ham operators is OSCAR. OSCAR, and in fact there have been a series of OSCARs, stands for Orbiting Satellite Carrying Amateur Radio.

These unique repeaters are the work of highly skilled amateurs of the non-profit Amateur Satellite Corporation (AMSAT) and cooperating hams around the world. A series of highly sophisticated and compact repeater stations have been launched into orbit around the world, piggybacked aboard U.S. Air Force satellites. Hams use the repeater receiver-transmitter in a manner similar to that used with the mountain-top earth stations. And since with VHF signals height means increased radio range, some truly exciting DX is possible.

GREAT LAKES VHF MARINE FREQUENCIES

Ship Freq. MHz	Coast Freq. MHz	Channel No.	Normally Used For
156.3	—	6	Intership safety
156.5	156.6	10	Ship to harbor facilities
156.6	156.6	12	Ship to U.S. Coast Guard
156.8	156.8	16	Distress, safety, calling
156.9	156.9	18	Intership safety and commercial
157.3	161.9	26	*Public correspondence
157.4	162.0	28	*Public correspondence

(*) Note: Public correspondence (Marine Telephone) makes use of "duplex" system, with each party using a separate frequency. Two receivers are needed to follow both ends of such conversations. An exception is Coastal Station WAY, Chicago (Lake Bluff, IL). An antenna relay enables a listener to follow "duplex" traffic without changing frequency.

One of the toughest types of ham radio communication involves VHF and another sort of satellite . . . nature's own moon. With moon-bounce DX, the ham's radio signal is not rebroadcast, but rather is reflected from the lunar surface back to earth. Again, resourceful amateurs have found a way to overcome the short-range, line-of-sight limitations of very high frequency signals.

Finally, across the country there are hams who use the allocated 420 MHz UHF frequencies for experimental television transmission. Because of frequency requirements, the picture transmitted is not "scanned" as rapidly as a commercial TV signal. They use what is termed "Slow Scan" TV, in which a complete picture is transmitted every seven seconds. This means, naturally, that the image sent must be a fixed, not a moving one. But it works perfectly well for transmitting photographs, drawings, pictures of QSL cards, or identification slides.

All of this tends to be more than a bit technical, and the necessary equipment is generally either quite costly or must be constructed by the enthusiast himself. However, there is no reason why a technically competent DXer could not avail himself of the same techniques to monitor these exotic amateur radio transmissions. In practice, however, the fellow with that much interest and expertise will probably not

be content with receiving alone and will work to obtain his ham ticket.

Turning to the "broadcast" aspect of VHF/UHF, we come to TV and FM DXing.

Snowband DXing. There is something mindblowing about the idea of not only hearing but *seeing* a DX signal from a thousand or more miles away. For many inveterate boob tube watchers the thought that there's a world of DX available right there on the screen is a bit too much to accept. But it perfectly true!

The reasons why long haul TV DX is possible are no different than those behind other distant VHF and UHF transmissions already considered.

One phenomenon responsible for TV DX reception is known as sporadic E skip. The "E" refers to one of the ionospheric layers above the earth's atmosphere—remember we talked about that earlier—which reflects, under some conditions, the TV signal back to the ground a considerable distance from the transmitting point.

With just a single "bounce," stations from about 500 to 1,400 miles can be viewed. Rarely, two and three "bounces" between earth and ionized layer have been noted, doubling or tripling the distance.

DX signals propagated by the sporadic E conditions may be extremely strong, but are often subject to deep

fading. Such reception can last for minutes or a number of hours.

Depending on the opening, signals on TV channel 2 (video frequency, 55.25 MHz; audio frequency, 59.75 MHz) through channel 6 (video, 83.25; audio, 87.75 MHz) can come "skipping" in. E-skip also has been noted on the lower "high band" (channels 7-13), but this is rare. Sporadic E reception conditions are unpredictable, but most commonly occur during the summer months, especially June, July, and early August.

Though less useful to the TV DXer, other natural phenomena, including the aurora borealis (northern lights), meteor showers, and plain old lightning, can effect the ionization of the reflecting layers above the earth, causing distant signals to skip in. But because of the very short term duration of such effects, this sort of signal reception tends to be in bursts too short for identification of the "skip" station. Further, the flutter of aurorally produced signals results usually in badly garbled signals.

Another natural condition producing distant TV reception is known as tropospheric bending (termed "tropo" or "trops" by snowbanders). Unlike the previous conditions, which involved changes in the ionosphere, tropo occurs because of factors within our atmosphere. It is related to weather conditions, when a temperature inversion, influenced by a high pressure area, occurs. When inversion occurs—a warm layer overriding a cooler region lower in altitude, often along the edge of a weather front—TV signals in the VHF/UHF frequencies can reach out many hundreds of miles.

Trops involves the creation of a signal "duct" which guides the radio wave along the curvature of the earth, rather than allowing it to continue in a straight line into space at the horizon.

Tropospheric bending of TV signals can be observed on all TV channels, from 2 through the UHF band. It is characterized by steady signals, without the deep fades experienced with E-skip propagation. It can occur any time during the year, but autumn is an especially favorable time, TV DXers have noted.

Worth noting in passing is yet another DX-producing phenomenon. It is called F-2 skip. The name comes from another ionospheric layer which can at times affect VHF signals. It is usually only experienced during periods of heavy sunspot activity. Although European TV stations use different video standards and audio techniques than do our own television broadcasters, there have been instances in the past when the audio from British and French TV

Did you know that there are persons who monitor shortwave radio signals and get paid for it? Yes, most major nations of the world maintain professional monitoring stations. This one, at Stanley Corners, Ontario, belongs to the Canadian Broadcasting Corporation and was photographed by DXer George Schnabel, Rochester, NY. On request from Canadian government offices, the CBC monitors pick up the latest news from overseas shortwave broadcasting stations.

Around town and across the country the big rigs are rolling. And helping them "keep on truckin'" is VHF radio. Communications monitors may find these over-the-road utility signals around 45 MHz on the low band and near 160 MHz, high band.

stations has been heard around 41 MHz stateside (on a VHF radio, not a standard TV set, however). And, nearly 20 years ago, an Australian received, via the F-2 skip mode, the sound portion of a British TV program at a distance of over 10,000 miles!

Assuming that the prospect of grabbing some TV DX has caught your fancy, the next question is how to do it. First, you really don't need any special equipment to accomplish the feat, at least for starters. Your Communications Editor has identified TV signals, traveling via E-skip, from 1,100 miles away, using only a small portable TV set with "rabbit-ears."

The thing to remember about E-skip signals is that while often unstable, fluctuating in intensity, they are usually quite strong during "peaks." Thus, distant signals can be received without an elaborate antenna system. Any television set in good repair which gives you a good signal on local channels will bring in TV DX.

Naturally, a good exterior antenna will help. And an antenna rotor will be a big help since it will allow you to beam the antenna toward the incoming signal for maximum strength and minimum interference from local or semi-local stations on the same or adjoining channels.

Second, TV DX is unlike tuning shortwave stations in that you can't ever be certain of just when to try to log distant stations. The thing is to be alert for those indicators which suggest TV DX is possible, and then make the most of them.

A couple of examples follow: It is a warm late afternoon in July. You are watching your local channel 2 TV station. Suddenly the picture is marred by a series of black "bars" across the screen, the picture loses "sync" and begins to roll, audio may be somewhat garbled and, overall, interference is heavy on both video and audio. The non-DXer, with disgust, may assume something is wrong with his set. He'd be just about ready to call his friendly TV repairman when, just as suddenly, the interference subsides. Shortly, the same pattern repeats itself. More "interference." This cycle could repeat itself for a few minutes or perhaps throughout the rest of the afternoon and evening. The non-DXer gives up his TV watching.

You, however, recognize the symp-

oms as E-skip and your TV DXing instincts come to life. You recognize this thus far unrecognizable "interference" as being caused by a distant TV signal trying to "break through" your local station's programming.

It may be that your "local" is just too powerful to permit real reception of the "intruder." However, if you have a rotor-mounted exterior antenna, run it through a 360 degree turn, hoping to minimize the local and maximize the skip signal. Frequently you will be rewarded with a viewable picture and intelligible audio.

If you can't pull it in, switch to your closest "clear" channel, say Ch. 3 or Ch. 4. There, without strong local TV signals, you may find another skip signal making it.

Now, there can also be too much of a good thing. Not infrequently the sporadic E layer ionization can be so extensive that two or three distant stations' signals on the same channel will be received, causing an incredible mess of garbled audio and video.

Or, in another hypothetical case, on an autumn evening, you're idly spinning the channel selector. As you hit a normally clear channel 10... surprise! a picture, an old Edward G. Robinson movie. That's not supposed to be there! The picture is somewhat weak and snowy, but as you watch it improves in strength. You're puzzled, sure, but after a few minutes you're hooked enough to stick around for a while to see if the governor will really pardon Eddy G. in time to save him from the "chair." Nine minutes later there is a commercial break and some unfamiliar announcer comes on the screen to extol the virtues of Honest Al's Chrysler-Plymouth deals. Then the address of Al's auto emporium

... it's in a city some 500 miles away.

Friend, you've just experienced TV DX via the tropospheric bending mode. And everything we've said about TV DX holds for FM DXing, except, of course, the signals have only one component—the audio portion.

Both E-skip and tropo propagation is possible in the FM broadcasting range between 88 and 108 MHz. That frequency block, incidentally, falls in the spectrum "hole" between TV channels 6 and 7. Sporadic E-skip, as it becomes more intensive, spreads upward in frequency, first noticeable on TV channel 2. If you note indications of E-skip as high as TV channel 6, it will be worth your while to check for similar conditions on the low end of the FM band. Tropo, on the other hand, will usually first become apparent on the higher VHF TV channels or on UHF and, if sufficiently pronounced, will spread downward. When TV shows signs of tropo propagation, try first the higher FM channels. FM DX signals will follow the TV reception pattern in terms of distance and direction, with E-skip signals generally subject to fading and fluctuation, and tropo signals steadier.

In terms of signal propagation there is an obvious interrelationship between all types of signals occupying the same general portions of the VHF and UHF frequency ranges. Thus, if you note long-haul police communications on the "low" VHF public service band, it will be worth your while to check for TV DX on Ch. 2 and 3. If you find a distant FMer on 107.1 MHz, bring out your aero band portable and see what you can get in the way of jet-set DX.

TV and FM DXers, in many cases, are just as hung up about getting QSLs, verifying their VHF/UHF loggings as

It takes more learn about

Bell & Howell Schools introduces three fascinating learn-at-home programs featuring some of the finest equipment available as your "teachers". Choose the program you prefer—then mail card for free details today!

Experience is the best teacher, without a doubt. And when it comes to learning electronics, we feel it's hands-on experience with state-of-the-art equipment that counts the most. That's why with Bell & Howell Schools' learn-at-home programs you work with some of the most up-to-date equipment. Equipment that's being used today—and will be used tomorrow. So the skills and knowledge you acquire will be useful for years to come.

Of course, with all our learn-at-home programs you'll have plenty of lab manuals and basic principles to work with. And you'll also get exciting "teachers" to help make electronics come alive...

Lab Starter Kit gives you hands-on experience with the very first lesson.

We get you started with the basics in an exciting way! At the very beginning you get a fully-assembled volt-ohm meter as well as design panels, modular connectors, experimental parts and battery. So you don't just read about electronics principles, you actually see them at work!

You build your own Electro-Lab® electronics training system.

Whatever program you choose, you get your own home laboratory including oscilloscope, digital multimeter and design console to give you actual experience in wiring, soldering, assembling, testing, trouble-shooting and circuit analyzing.

I. Learn new skills in the field of Home Entertainment Electronics including building the new generation color TV.

What better or more exciting way to learn digital electronics! Once you have the basics under your belt and get into color theory and service, you'll build a 25" diagonal color TV and probe into the digital technology behind digital channel numbers that flash on the screen... a digital clock that flashes the time to the second and an automatic channel selector.

As you put the set together, you'll discover how advanced integrated circuitry works, how to trouble-shoot it and much more. Upon completion of the program you'll have gained the specialized occupational skills to service color TV's plus the principles that you can apply to repair a variety of home electronic equipment. And you'll have the foundation to understand and work with new product applications as they're developed, too!

II. Use professional communications equipment as you delve into Communication Electronics.

Here's how to pick up skills in the vital field of two-way radio, widely used in public safety, marine, industrial and transportation areas. Bell & Howell Schools Communication Electronics Program can help prepare you for the FCC licensing exam, right through to 1st class radiotelephone operator. And teach you skills in two-way radio, radar or commercial broadcasting.

For a refundable deposit, you get to use the special two-way radio equipment lab featuring an FM transceiver, frequency meter, and modulation meter. All regular, first-rate commercial grade test equipment.

"Electro-Lab" is a registered trademark of the Bell & Howell Company.
Simulated TV Test Pattern.

than books to electronics.

III. Digital Trainer helps you learn the latest in Industrial Digital Electronics.

Digital technology is setting new standards of accuracy and beginning a revolution in industry. For example, more precise control in refining, manufacturing plants, food processing and transportation. And now you can learn about this technology with Bell & Howell Schools unique Digital Trainer. You'll analyze and experiment with various types of

integrated circuits so you'll have a solid background in modern digital electronics and its applications to industry.

You study at home in your spare time ... with help as close as the telephone.

Because these are home study programs, you can learn electronics without missing a day of work or a single paycheck.

You study at your convenience—without being a classroom captive. If you ever have any questions, you can call our toll-free number for help.

You can also meet and talk shop with fellow students and instructors at "help sessions" held in 50 cities at various times throughout the year. Bell & Howell Schools tries to give you more personal attention than any other learn-at-home program.

Decide which exciting program you're interested in...you can check more than one. Then mail postage-paid card today for full information!

Taken for vocational purposes, these courses are approved by the state approval agency for Veterans' Benefits. Please check box on card for more information. Naturally, we cannot offer assurance of income opportunities.

1. Power Output Meter 2. Design Console 3. Modulation Meter 4. Digital Multimeter 5. Triggered Sweep Oscilloscope 6. Lab Starter Kit Multimeter 7. Frequency Meter 8. FM Transceiver 9. 25" Diagonal Color TV 10. Alignment Generator 11. Lesson Tape Player 12. Digital Trainer

BELL & HOWELL SCHOOLS

4141 Belmont, Chicago, Illinois 60641

are other radio hobbyists. The same general techniques apply: a report to a station should include date, time and conditions of reception, plus enough program items heard or seen to establish that it really was the station in question which you received.

In the case of TV DX, it is possible to get an instant verification. How? With your camera, that's how! TV DXers frequently photograph identification slides of their DX catches, proof positive of reception.

There is no great trick to taking a photo of a video signal, but it may take a bit of experimentation to get the technique down pat. A tripod mount is helpful, but not essential. Usually Tri-X film is a good choice. For a simple camera with a leaf shutter, a shutter speed of about 1/30th of a second is advisable. You might try a somewhat slower setting, but certainly no faster, as it takes a thirtieth of a second for a complete image to form on the screen. Shorter exposures will catch only a portion of the picture. Experiment with an f/5.6 setting and vary that depending on your results. With a focal plane camera, an f/8 setting with an eighth to a tenth of a second exposure is a good starting point.

Do not use a flash! The light from the flashbulb will only bounce off the picture tube's glass face and ruin your photograph. The screen's own illumination is more than adequate.

For more tips on snapping TV DX, write for Eastman Kodak's free pamphlet AC-10, "Photographing Television Images." The address is Eastman Kodak Co., Consumer Markets Division, Rochester, NY 14650.

And that should give you an idea of all the fascinating DX possibilities—including VHF low and high band public service signals, marine and aero communications, two and six meter hams, TV and FM DX, plus the various ultra high frequency signals—there to be logged on the frequencies above 30 MHz.

Old but New DX. If the trend toward DXing on the very and ultra high frequencies is of relatively recent origin, medium wave broadcast band (BCB) listening is an old time facet of the hobby that remains alive and well in the 1970s.

A half century ago, this is where DXing was really at. In the '20s and early '30s, nearly every home in America had some member who tried, with a cat's whisker crystal set (later, a

superhet receiver) and headphones, to hear weak and scratchy radio signals from Pittsburgh, Schenectady, Cincinnati, or anywhere a pioneer broadcaster had set up camp.

As radio grew up, cross-country networks were established, and the thrill of hearing a distant signal dimmed for most Americans. No longer did medium wave DXing command a widespread following. But there remained a hard core of DX fans. Some of those BCB DXers from the '20s and '30s are still active in the hobby today. And they've been joined by many hobby listeners, sons, grandsons, and even great-grandsons of some of the original DXers.

BCB medium wave DXing is still as fascinating as it was in the days when hearing KDKA and KGY provided thrills. BCB listening is perhaps the easiest way to start DXing. After all, you won't have to invest in a pennyworth of equipment. Any FM radio you have around the house will get you off the mark. Better equipment, more suited to hearing the more distant, the weaker and harder to hear stations, can come later if you wish.

There is no lack of BCB DX targets. In the United States and Canada alone there are more than 5,000 different stations on the air. Even international DX is possible on the frequencies between 540 and 1600 kHz. It is possible to log

ALL STATES ON MEDIUM WAVE

It is possible to hear all states on the AM medium wave broadcast band . . . but it's hard, especially after you reach 40 or 45, to log the final few. Veteran BCBers differ on which stations can be considered best bets, but here's CW's selection:

kHz	Call	City	State	kHz	Call	City	State
550	KFYR	Bismarck	North Dakota	1000	WHWB	Rutland	Vermont
560	WQAM	Miami	Florida	1020	KDKA	Pittsburgh	Pennsylvania
570	WNAX	Yankton	South Dakota	1030	WBZ	Boston	Massachusetts
620	KTAR	Phoenix	Arizona	1040	WHO	Des Moines	Iowa
630	KOH	Reno	Nevada	1070	WTSO	Madison	Wisconsin
630	WPRO	Providence	Rhode Island	1080	WTIC	Hartford	Connecticut
650	WSM	Nashville	Tennessee	1090	WBAL	Baltimore	Maryland
650	KORL	Honolulu	Hawaii	1090	KAAY	Little Rock	Arkansas
700	WLW	Cincinnati	Ohio	1110	KFAB	Omaha	Nebraska
750	KFQD	Anchorage	Alaska	1110	WBT	Charlotte	North Carolina
750	WSB	Atlanta	Georgia	1120	KMOX	St. Louis	Missouri
760	WJR	Detroit	Michigan	1140	KGEM	Boise	Idaho
770	WABC	New York	New York	1140	WRVA	Richmond	Virginia
770	KOB	Albuquerque	New Mexico	1160	KSL	Salt Lake City	Utah
830	WCCO	Minneapolis	Minnesota	1170	WWVA	Wheeling	West Virginia
840	WHAS	Louisville	Kentucky	1190	KEX	Portland	Oregon
850	WYDE	Birmingham	Alabama	1190	WOWO	Ft. Wayne	Indiana
850	KOA	Denver	Colorado	1200	WOAI	San Antonio	Texas
870	WWL	New Orleans	Louisiana	1250	WREN	Topeka	Kansas
890	WLS	Chicago	Illinois	1290	WKNE	Keene	New Hampshire
930	WPAT	Paterson	New Jersey	1370	KXLF	Butte	Montana
970	WCSH	Portland	Maine	1390	WCSC	Charleston	South Carolina
				1410	WDOV	Dover	Delaware
				1410	KWYO	Sheridan	Wyoming
				1510	KGA	Spokane	Washington
				1520	KOMA	Oklahoma City	Oklahoma
				1530	KFBK	Sacramento	California
				1550	WOKJ	Jackson	Mississippi

Sixteen years old and a member of two DXing clubs—SPEEDX and the North American Shortwave Association—that's Tony Van Himbergen, Cheboygan, MI. Tony listens to a Realistic DX-160, on which he's heard 35 countries on SWBC.

stations in over 100 different countries. Several experienced BCBers have done just that!

Without a doubt there are more medium wave stations on the air than you'll hear in a lifetime. If you think that hearing domestic stations (U.S. and Canadian stations, as defined by BCB listeners) is easy you are both right and wrong. Yes, in an evening you can log and identify a number of stations from coast to coast. With some effort you can probably knock off a hundred or so in short order with some concentrated effort. But then, tuning new stations becomes progressively harder.

According to international agreements, stations in the United States, Canada, Mexico, and some smaller western hemisphere countries, are located on frequencies ten kilohertz apart, from 540 to 1600 kHz. Most of these stations are authorized to operate with powers between 250 watts (there are a few rare 100 watters) and 50,000 watts (save again for a handful of Mexican superpower outlets). And, as another exception to this rule, there are some unmanned Canadian relay stations operating with as little as 20 watts for local coverage.

To minimize co-channel and adjacent channel interference where so many stations are involved, the 107 different frequencies between 540 and 1600 kHz are divided into three basic categories, each with its own restrictions on those stations which occupy those channels. The categories are known as clear, regional, and local.

The best bets for beginning BCBers are the 60 different clear channels allocated in North America. The reason is clear: there is minimal interference to the primary stations assigned. On most of these threescore frequencies the dominant station is American, but on some the primary outlet is a Canadian, Mexican, Cuban, or Bahamian broadcaster.

Clear channels they may be called, but, in the strictest sense, only one MW frequency is truly clear. That's 700 kHz, where WLW, the Cincinnati station pioneered by Crosley, goes it alone. On the rest of the "clears," secondary stations are allowed to operate during the daylight hours, or with restrictive antenna transmission patterns that offer protection to the primary stations.

The second frequency category on

the medium wave band is the regional channel. There are 41 different regional channels, each of which is the radio home of between 25 to 50 different broadcasters. These stations are limited to 5,000 watts of power—considerably less than the maximum 50,000 watts allowed the clear channel outlets. And, many of the regionals broadcast only during the daytime.

But most domestic AM medium wave stations are packed into the smallest space imaginable, the half dozen local channels. The six local frequencies are 1230, 1240, 1340, 1400, 1450, and 1490 kHz. These few frequencies account for nearly a quarter of all American stations, with about 175 different operations assigned to each.

These are the local stations, low powered, and intended to cover only a small radius. Many are restricted to daylight broadcasting only. The daylight-only restriction is imposed because of the nature of signal propagation on the medium waves. During the day, the signals from MW stations are more or less limited to a relatively short ground wave range. At night, as you have no doubt already noted, the signals of even relatively low powered broadcasters reach many times further. Though the sunset signoff of many of the local channel stations helps, many are permitted to continue transmitting after dark. Un-

less one of these stations is very near your DXing location, you'll find a terrific mixing of signals at night. So, plagued with co-channel interference, the six local frequencies are known to DXers as "The Graveyarders." BCB DXing on them is, therefore, tough, but challenging!

What causes this diurnal change in BCB DXing characteristics? Hopefully, you'll remember the earlier mentions of the reflective ionospheric layers high above the earth that "bounce" radio signals back to earth some considerable distance from their starting point at the station's transmitting antenna. Previously mentioned were the E and F ionospheric regions. Well, there's another that plays a major role in MW BCB DXing. This is the D layer.

The D layer, thick and closest of the layers to the earth's surface, absorbs rather than reflects radio signals. Thus, when it exists, it gobbles up signals, preventing them from reaching the higher ionized layers, and therefore eliminating distant reception. Cut off at the pass, medium wave signals never get the opportunity to reach the reflecting layers above . . . thus no DX.

Fortunately, the D layer is a daytime phenomenon. When the sun sets, the D disappears, but returns shortly after daybreak. And so, longhaul BCB possibilities exist only at night, or during

the light-dark transition periods of dawn and dusk.

When to tune for BCB DX? There are three natural cycles to consider, one of which, the daily day-night pattern, has already been mentioned. In a practical sense, sunset is a good time to hunt for stations located to the eastward. There it is already dark. Some of the daytime-only broadcasters have left the air, cutting at least some of the potential interference on a channel. A near path of darkness exists between you and the eastern stations, the D layer is dead or dying along those signal routes, and good DXing possibilities exist.

About dawn, when the buildup of the absorbing D layer has wiped out reception to the distant east but hasn't yet adversely affected you locally, try stations to the west, where darkness still reigns.

Remember too that stations to the east sign off earlier and sign on earlier than do those to your west. In the morning, while it is still dark over all of the U.S., look for eastern stations. The more westerly stations won't sign on until later, so interference will be less. The reverse situation may be true late at night, when still-broadcasting stations in the west are freed of interference from those to the east which have signed off the air for the night.

Medium wave DXing is affected by a second natural cycle. This is the annual change from summer to winter. Generally, DXing conditions are better in winter than in summer. There are fewer hours of daylight in winter, hence that nasty old D-layer has less of an opportunity to play spoiler. Also, the summer months bring more static and band noise.

A third cyclical factor is the sunspot cycle. Sunspots are violent eruptions on the sun's face that cause heavy solar radiation. Such radiation has a big effect on the ionosphere. During maximum sunspot years the reflecting layers

of the ionosphere have less bounce to the ounce as far as radio waves are concerned and begin acting somewhat like the absorbing D layer. The number of sunspots varies over a cycle that very roughly runs 11 years. Recently there has been much research into the sunspot cycle but a number of questions still remain to be completely answered. At the moment the cycle is on its downhill run. As a result, some few years of good BCB DX are expected.

There are also some man-made factors that may influence when you will tune for medium wave BCB stations for optimum results. In North America, many broadcasters, even those which are termed 24-hours-a-day'ers, reserve the early hours on Monday mornings for transmitter maintenance work and testing. On those Monday mornings when they are silent, DXers forego some sleep to tune for other stations on the same frequencies, whose signals are blocked at other times, or for overseas broadcasters which can't normally be heard when the dominant stations are transmitting. Many a rare station is heard between midnight and dawn on Monday mornings.

There are DXing clubs—and you'll hear more about them later—who arrange special tests with various hard-to-hear stations. These stations cooperate with the hobby clubs to schedule special transmissions during the relatively quiet Monday morning hours. When a station's normal broadcasting day excludes these optimum times, the so-called Courtesy Programs often give DXers their only real shot at a rare logging.

Other times to hear those BCB stations whose regular broadcasting schedules normally make reception tough are during frequency checks and equipment tests. The Federal Communications Commission insists that AM broadcasting stations operate on their assigned frequencies . . . and that means *right* on frequency, with a tolerance of only

20 Hz, plus or minus. U.S. broadcasting standards are strict; there is virtually none of the casual approach to frequency assignment familiar to short-wave listeners.

To make certain that their frequencies are on the button, stations contract with commercial monitoring stations to check their transmitting frequencies regularly. Such frequency checks are made during early morning hours when interference from other stations on the frequency is minimal. Frequency checks usually last about 15 minutes or so. The station being checked broadcasts audio tones and there are announcements identifying the call letters. The signals are monitored by the radio frequency measuring lab using sophisticated gear.

These special checks also give DXers the opportunity to hear some stations they might not otherwise log. Often frequency checks are conducted at regularly scheduled dates and times. DX clubs keep track of frequency check schedules of many stations for the convenience of members hunting those outlets.

Equipment tests usually aren't scheduled in advance, but random early morning tuning may allow you to hear the testing stations. These tests usually run longer than frequency checks. The tests, outside regular broadcasting hours, allow engineers to peak up their transmitters on-the-air.

Up the Ladder. A brand new beginning BCB DXer will probably check out the local and semi-local medium wave stations in his area first. This accomplishes two purposes. It gets the log book off to a good start and gives the listener a feel for BCB DXing. Since these stations are relatively "close in," this can even be done in daylight hours.

Secondly, it gives the DXer the opportunity to begin to know the band. Before long he will realize that nabbing the more elusive DX stations is a matter of separating the wheat (DX) from the chaff (the "regulars," the "pests" that tend to block reception from really wanted stations). When the BCBer

SPANISH ABCs

Many Latin American stations use slogans, rather than call letters, for identification. Some—particularly the Mexican medium wave outlets—also refer to call letters, in full or in part. To help you identify these stations, here is the way the Spanish spoken letters and numbers sound.

1 = OO-noh
2 = dohs
3 = tress

4 = KWAT-roh
5 = SING-koh
6 = seh-ees
7 = syeh-teh

8 = OH-choh
9 = NWEH-bee
0 = CEH-roh

A = ah	G = heh	N = EH-neh	U = oo
B = beh	H = AH-cheh	O = oh	V = veh
C = seh	I = ee	P = peh	W = DOH-bleh-veh
D = deh	J = HOH-tah	Q = koo	X = EH-kees
E = eh	K = kah	R = EH-reh	Y = ee-gree-EH-gah
F = EH-feh	L = EH-leh	S = EH-seh	Z = SEH-tah
	M = EH-meh	T = teh	

knows what usually can be heard, he's more apt to recognize when something irregular is coming through.

Your first 20 or 30 stations logged will probably fall into the local and semi-local types. Then, when you are more or less familiar with these stations and where they operate, try for the easier-to-hear clear channel stations. Now you'll get your first taste of distant BCB reception.

Some of your best bets among the "clears" are WSM, 650 kHz, Nashville; WNBC, New York on 660 kHz; Chicago's 670 outlet, WMAQ, and WGN on 720; WWL, 870, New Orleans; WBX, 1030, Boston; KSL, 1160, Salt Lake City; WOAI, 1200, San Antonio, TX; and others.

You can quickly add three more countries to your log with the more powerful Canadian outlets, broadcasting in either French or English; and a few strong Mexican and Cuban stations transmitting in Spanish.

As you hear more and more BCB stations, and place check marks against them in CW's White's Radio Log, you'll turn your attention to the busier regional channels, where you'll meet more co-channel interference. Sharpen your ears and DXing skills on regional operations such as WNAX, 570, Yankton, SD; KABC, 790, Los Angeles; WRC, Washington, DC on 980 kHz. The regional stations you hear at the outset will depend on where you live and those frequencies in your area which are not heavily QRM'd (interfered with by other stations).

Next you'll concentrate on the jam-packed "graveyard" frequencies where the pileup of stations can cause a real welter of noise from mixing signals. Here it can be really difficult to get intelligible reception, but because propagational factors change from day to day you may find some stations logable one day, and completely different stations possible on another day.

The lowest powered stations in North America—but audible at times in the northern parts of the U.S.—are the Canadian LPRTs, the so-called "icebox" broadcasters.

These are unmanned 20- and 40-watt relay transmitters located in rural Canadian regions. In many cases they are

little more than refrigerator-sized "boxes" mounted on telephone poles. These tiny broadcasters don't, of course, originate programming, but relay the signals of more distant stations. They provide an answer to the problem of serving rural audiences with local-quality radio signals.

Though assigned call letters of their own, they are not announced. A DXer hearing one of these "icebox" broadcasters is apt to recognize it as such when he finds the programs of a known Canadian medium wave station, but not on that station's listed channel. For example, CBN, St. John's, Newfoundland, has an LPRT (low powered relay transmitter), CBNC at Gloverton, Newfoundland, broadcasting on 1090 kHz.

Foreign BCB. Most MW DXers sooner or later will take a crack at tuning foreign BCB stations. An added problem here is the language difficulties; but, as with the shortwave listener, careful monitoring and experience will bring you a smattering of various languages and help you to identify the stations.

When hunting foreign DX, remember that North American and many Latin American operations broadcast on frequencies which are multiples of 10 kHz. However, the Europeans, Afri-

cans, and Asians, plus some Latins, use "split" frequencies. In those areas, stations are not separated by 10 kHz spaces, hence their assigned frequencies fall "in the cracks" between domestic channels. An east-coast listener may find that two of his best bets for European reception are the British Broadcasting Corporation's signals on 1214 kHz and the 782 kHz station at Miramar, Portugal.

Listeners along the eastern seaboard will find it less difficult to tune European BCB outlets than is the case for those in the central and western parts of the country. But reception of some European and North African stations is possible anywhere from Maine to California. Likewise—and considerably easier than Europe for most DXers—stations in the West Indies, Central and South America can be heard throughout the continent. On the Pacific coast, BCBers hear Hawaii and some of the mid-ocean islands, Japan, Korea, Asiatic USSR, and other oriental outlets which easterners find more difficult to hear.

Tune carefully, watch the "split" frequencies between the domestic BCB channels, and don't jump to conclusions. Many U.S. broadcasters feature programs in Spanish and other languages for local ethnic minority groups. Not

Bill Paschke, Beloit, WI, says he "loves" DXing. That love has helped him log 122 countries and 257 stations on shortwave. Bill also enjoys listening to BCB medium wave stations. Disabled and on a pension, he has served as assistant director of the Handicapped Aid Program (HAP). His monitoring is done with a Galaxy R530 receiver.

every foreign language station is located in a foreign land.

Your first foreign DXing attempts may be non-productive, but with time and experience you should be able to add at least 10, 20, or more foreign loggings to your totals.

Broadcasting on Shortwave. While there is only one medium wave band on which the broadcast type AM stations operate, there are an even dozen frequency ranges used by the shortwave broadcasters.

Technically, the shortwaves (high frequency, HF) include the frequencies from 3,000 to 30,000 kHz. But, commonly, DX hobbyists also include the frequencies between 1,605 and 3,000 kHz as well in their definition of SW.

There is a span of 28,395 kilohertz from the top to the bottom of the shortwave range. But only about 11 percent of these frequencies are included in the dozen SWBC bands. Between these bands you'll find all sorts of other radio activity, the hams and the utility type non-broadcast stations. So just tuning at random for the SW broadcasters may be a rather ineffective approach to SWling. Concentrate your tuning efforts in the following SWBC bands:

● **120 METER BAND (2,300-2,495 kHz)**—"120" is the lowest frequency of the twelve SW bands. Together with the 60 and 90 meter bands, they comprise what are known as the Tropical Bands.

Why Tropical? The reason is that 60, 90, and 120 are rarely used by the major international broadcast stations, those that direct their programs at foreign audiences. Instead, most of the inhabitants of the lower SW frequencies are local or regional stations whose programs are intended for audiences in their home countries. And as most of them are located in the latitudes near the equator, in Africa, Asia, and Latin America, they're dubbed Tropical.

Frankly, there aren't too many stations that operate in the 120 MB area, but those that do can generally be considered good to excellent DX. During the daylight hours the band is dead, except perhaps for the time signals of WWV, Ft. Collins, CO, on 2,500 kHz (technically just above the band). At night, on occasion, you may find a few Latin Americans, a rare Venezuelan or Brazilian. Pre-dawn, several Guatemalan outlets and, if you are still luckier, a handful of Papua-New Guinea stations might be heard.

● **90 METER BAND (3,200-3,400 kHz)**—This is the second of the three Tropical Bands. It also is a "night" band. During the daylight hours, probably the only station you'll manage to hear is CHU, the Canadian time station at Ottawa, on 3,330 kHz.

From dusk through dawn, with the exception of the middle-of-the-night period when they're off the air, you can find a number of Central and South American shortwave broadcasters in Spanish and Portuguese (Brazilians, of course). Late night hours will see some African stations coming on the air. It's early morning on the other side of the Atlantic, and these broadcasters are then signing on to start their daily schedule. Also, from shortly before your local dawn until just after the sun rises, Asian and Pacific area stations filter through.

● **75 METER BAND (3,900-4,000 kHz)**—The next in line as we head up the frequency spectrum is 75 meters. This is not considered a broadcasting band in the western hemisphere, but it is in other parts of the world. Propagationally, it is similar to 90 meters, but it is plagued with heavy interference because it is shared with the radio hams.

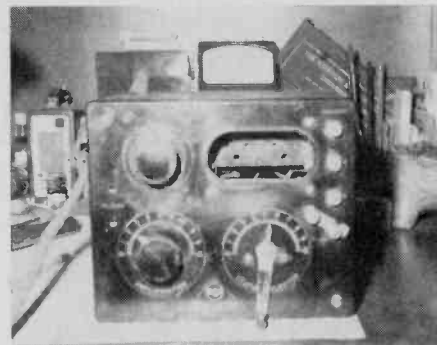

Not too much SWBC radio activity on 75 MB, but the better DX possibilities here include the Cape Verde Islands, off Africa's west coast, Greenland, a number of local service Indonesian stations, and the ultra-rare Falkland Islands.

● **60 METER BAND (4,750-5,060 kHz)**—The third of the Tropical Bands is a hotbed of DX activity, making it a favorite of veteran SWLs. The band opens somewhat earlier than the lower frequencies and remains active a bit longer after sunrise, but still it is essentially a "night" band.

Most of the stations you find here will be the local and regional home service outlets, but these days some of the International Broadcasters also can be found.

The basic pattern found on 90 MB holds on "60." There are many more stations to be heard though, stations in Central and South America, Africa, Asia and the Pacific, plus some home service Soviet operations.

● **49 METER BAND (5,950-6,200 kHz)**—Crowded! That's the word for "49." One basic reason is that on this band collide a number of local service and international broadcasting stations. On one hand you'll find the big guys, the British Broadcasting Corporation,

Now here's a radio receiver that has been around for many a year. It is an RCA-manufactured Radiola III, Type R1, covering the frequencies between 220 and 550 meters. It belongs to reader Garfield Trudeau, Rt. 1, Middlebury, VT, who would like to hear from old timers who could give him some information about the receiver.

West Germany's Deutsche Welle, the VOA, and many more, aiming programs in English and a variety of other languages to overseas audiences.

And you're going to log those broadcasters who don't have their sights set on foreign audiences, but whose programs can be logged by DXers nonetheless. There are African countries, Nigeria, Ethiopia, Burundi, and others. Among the Latins represented are Columbian, Venezuelan, and Chilean stations. You can hear Australian and Asian signals as well.

Forty-nine meters opens up earlier in the afternoon, closes somewhat later in the morning, but still it is essentially a darkness band.

● **41 METER BAND (7,100-7,300 kHz)**—Like 75 meters, "41" is shared with the ham radio operators, a fact which neither DXers nor amateurs are too crazy about since mutual interference can be severe in portions of the band.

Outside our hemisphere, the frequencies are used by a number of shortwave broadcasters in the USSR, Europe, Africa, and Asia. Not much Latin American activity here, though.

● **31 METER BAND (9,500-9,775 kHz)**—This "middle" band may well be the best range of frequencies for the beginning DXer. Many of the large international broadcasting stations operate here. During the early to middle evening hours in North America, many of them beam English language broadcasts to the U.S. and Canada. These stations include powerful transmitters in Europe, Africa, Asia, and Oceania, plus U.S. and Canadian broadcasters. A few local-type Latin Americans also can be found operating on "31."

Thirty-one meters is useful for at

least a portion of the daylight hours, though not usually during the local mid-day period. The evening hours are good, but later at night the band usually "goes out."

● **25 METER BAND (11,700-11,975 kHz)**—This band has some of the characteristics of 31 meters. The same sort of international broadcasters use this band rather extensively and it can be a busy place to tune for SWBC signals. A few South American outlets, especially the Brazilians, can put in good signals as well.

It can be a rather crowded band especially during the afternoons and early evenings. But it is something of a transitional area, neither fully a daylight hunting ground nor a haunt for night-owl SWLs.

● **19 METER BAND (15,100-15,450 kHz)**—"19" is a good band to tune during the daylight hours, though signals die out in the evening. During our day, you can find a number of the more powerful European broadcasters and some Mid-Eastern stations, such as Kuwait, plus some nice African signals.

Early evenings a number of Brazilian outlets can be heard. A DXer favorite is Radio Tahiti on 15,170 kHz, at mid-evening if the band holds up that long. During the earlier part of the evening, you can find Radio Japan and Radio Peking among the audible Asian outlets.

● **16 METER BAND (17,700-17,900 kHz)**—This is a daylight band, pure and simple. It opens after dawn and signals fade out about sunset. It is used mainly by some of the large international broadcasters. There isn't as much activity as there was a few years back when the sunspot count was high and stations shifted all their frequencies upward. But there are still a number of stations to be heard days.

● **13 METER BAND (21,450-21,750 kHz)**—The story is much the same here as it was on "16." A daytime band with international broadcasters, mostly, but less activity than there was seven or eight years ago.

Still, DXer Glenn Hauser made a band survey of 13 meters not too long ago. He came up with around 60 different stations, including broadcasters in Belgium, Morocco, Madagascar, Hungary, the Soviet Union, Switzerland, Italy, the Philippines, Finland, Saudi Arabia, Norway, Kuwait, Australia, and other nations.

● **11 METER BAND (25,600-26,100 kHz)**—This "sun" band is the highest of the twelve SW ranges and, really, there

just isn't much broadcasting activity to be heard up here. When propagation conditions are optimum there are some international broadcasters to hear on "11," but for now it's rather quiet. Give eleven meters a few years, though, and then check it out during the sunspot maximum. It will be a different story then!

The bulk of the shortwave broadcast signals are to be found in these dozen SWBC bands. But there are exceptions. Amid the utility type, non-broadcast transmissions in the "holes" between the SWBC bands will be found some broadcasters.

The choice is deliberate for a share of them, including Mainland China and North Korea. Also inhabiting these between-band areas are a number of local service Indonesian outlets, especially the low powered "county" government stations. Some of these Indonesian stations have been heard stateside on frequencies between 3,400 and 3,800 kHz.

There are some South American stations broadcasting out-of-band, including some Bolivians in the 4,400-4,750 kHz territory. It is not entirely clear if these stations are assigned by their country's government to operate on those frequencies or if questionable technical standards and an ignorance of international broadcasting conventions are the causes.

The power race begun some years ago by the large international broadcasters is continuing. There was a day when 50 kW was considered high power. Today there are 300 kW short-wave transmitters operated by a number of countries. And there's talk about a new explosion in broadcasting power on SW, perhaps up to 2,500 kW! With all this "shouting to be heard," interference has taken a quantum leap in the

international broadcast SW bands. This has led some stations to crowd the band edges and, in some cases, spill outside the designated frequency blocks to find a relatively clear channel. So don't consider the formal band limits as rock solid.

Feedback. One of the best things about writing a magazine for DXers is the response from readers. Frankly, here at COMMUNICATIONS WORLD's DX Central, we want you to write back!

By the very nature of the hobby, DXing has a tendency to be a lone wolf sort of activity . . . one listener, one receiver. The social opportunities are few unless you have the good fortune of living in a community with other DX fans. So, generally DXers must communicate via mail and through the pages of club bulletins and, yes, CW.

Here at CW we welcome your letters, with comments and questions. We want to hear from you and we'd like to have your photograph. Many of your pictures appear in these pages. After all, it is our chance to get to know you, what you're doing, what you're hearing and what you (and your listening gear) look like.

We get so much mail that it isn't always possible to answer you personally by mail. There just isn't the time or manpower to research all those questions we get . . . and boy, do we get questions!

Many of the answers can be found in standard reference sources, books about DXing, radio club bulletins and the like. Later on we'll have something to say about those information sources and some guidance on building a DX reference library for your listening den.

But for now, however, let's look at some of the questions that CW has received recently. If possible we'll try to provide some answers to the ones that

Since 1968 the programs of the Finnish Broadcasting Co. have originated from this modern building in Helsinki.

seem to be plaguing a number of you readers. Longwave DXing, tuning the low and very low frequencies below 540 kHz, seems to be a phase of the hobby that interests a number of readers.

Stephen Post, Brooklyn, NY writes that he recently heard a station on 355 kHz while scanning the longwave band on his radio. "It seemed to give weather. Could you find out about this station?" Steve, there are a number of low frequency weather stations that broadcast reports at 15 and 45 minutes after each hour. It is impossible to say just which one you received, but here's a mini-list of them which you, and other longwave fans might look for.

BOS	Boston, MA	382 kHz
LGA	New York, NY	209 kHz
MIV	Millville, NJ	365 kHz
NGU	Norfolk, VA	269 kHz

JAX	Jacksonville, FL	344 kHz
NSY	New Orleans, LA	338 kHz
SAN	San Diego, CA	224 kHz
SFO	San Francisco, CA	227 kHz

And Ralph K. Davis, Ft. Plain, NY, and Harry A. Weber, Chicago, are among those readers interested in longwave DXing. Reader Davis, who "started in wireless" back in 1920, reports reception of the "eight Omega tones" on VLF.

Omega, for budding longwave listeners, is a radio navigation system operated by the U.S. Navy in partnership with six other nations. The system's purpose is to provide global all-weather navigation. According to official information, "... Eight VLF transmitting stations will be distributed around the globe. Each station will transmit for about one second in turn at precisely

the same radio frequency. Positioning of a receiver will be established by intersection of hyperbolic contours defined by the relative radio frequency phase of the transmissions of suitably chosen pairs of the eight stations."

Simply put, Omega will allow a navigator aboard a ship or plane anywhere in the world to determine, with a high degree of accuracy, just where in the heck he is! The eight Omega stations are located in Norway, Liberia, Hawaii, North Dakota, Reunion Island, Argentina, Australia, and Japan. The Omega station at Liberia recently replaced a temporary facility on the West Indian island of Trinidad. In their early stages of development, Omega signals have been reported on such frequencies as 10.2, 12.2, and 12.85 kHz.

Mr. Davis also inquires about other VLF signals, such as GBR. This is a British operation located at Rugby, England, which transmits time signals on

TIME AROUND THE WORLD

When your clock indicates 8:00, what time is it in Australia? In Mozambique? In Ankara? To compute the time anywhere in the world, add (+) or subtract (−) the number of hours indicated to or from GMT. The parenthetical figures show daylight savings time during the particular country's summer months. Remember that south of the equator the seasons are reversed.

16 kHz.

Higher up in the longwave range, several listeners, members of the National Radio Club (Box 127, Boonton, NJ 07005), Bob Foxworth and Charles Clayton, note reception of several foreign LW broadcasters, including Radio Monte Carlo, 218 kHz; Radio Luxembourg, 236 kHz; Europa 1, in West Germany on 180 kHz; and Radio France, 164 kHz.

A CW reader in Seattle, John Lauer, suggests DXers interested in this "low-down" listening contact the Longwave Club of America, c/o John Clements, 11425 Albers No. 5, North Hollywood, CA 91601. A good thought, John!

"Hey, doesn't CW know that there are space freaks out here in readerland?" queries Len Johnson, San Francisco. "How about some dope on monitoring the satellites?" Better yet, Len, we'll put you in touch with a group of satellite DXers. A group known as the Kettering Group, founded by a British science teacher, has been monitoring Russian and American space shot signals, both telemetry and voice, for ten years now.

According to James E. Oberg, secretary of the North American branch of the Kettering Group, some of the most interesting accomplishments in 1974 were the receiving of signals from the Soviet Luna-22 probe in lunar orbit, plus monitoring of the launchings of Soyuz-14 and 15 and the last days of the Salyut-3 space station. Oberg says, with understandable pride, that when the press refers to "radio amateurs" as the source of information on space signals they are "talking about the 'Kettering Group.'"

New members are always needed, adds Oberg. "This activity can be enjoyable and educational . . . even for those with only a simple receiver tuned to 20 MHz. It can be the basis for radio clubs or science classes who want to try something more advanced. It involves real space detective work and a lot of unexpected surprises."

If this sounds like a new angle to DXing that you'd like to try, send a stamped, self-addressed envelope to James E. Oberg, P.O. Box 46, College Park, MD 20740. In your letter, mention the radio gear you're using, your phone number and, if you know it, your latitude and longitude. "We're going to have a lot of fun!" Oberg concludes.

The Radio Peking building, right foreground, is spectacularly illuminated by a fireworks display during a nighttime celebration in the Chinese capital.

Duane Bentley, Omaha, asks if CW can't have more information on CW stations. That may be a bit confusing, so we'd better note here that CW, in addition to being our shorthand abbreviation for COMMUNICATIONS WORLD, stands for continuous wave international Morse code signals.

"I'm sure there must be quite a few SWLs who copy code and want to tune CW stations other than the hams," observes Duane. OK, Duane, we'll have to go into that aspect of DXing in a later issue of the magazine. For now, though, just a rough overview of some of the types of non-ham CW signals on shortwave.

There are a number of foreign military transmissions. Frequency ranges worth trying are 6,400 to 6,800 kHz. Examples: CFN, the Canadian Navy radio at Halifax, Nova Scotia, 6,449.5 kHz, and GZC3, British Royal Navy, 6,519.5 kHz, on the island of Mauritius in the Indian Ocean. Other spots to tune are 8,500 to 8,800 kHz and various areas of the 10, 11, 12, and 13 MHz ranges.

A good place to look for CW signals is in the block of frequencies between the regular shortwave broadcast bands. There are commercial radiotelegraph stations transmitting in a number of areas on your SW dial. Duane cites a number of these which he's logged: KOK, KLB, WAX, WCC, and WOE included.

The first two stations belong to ITT World Communications, Inc., and are located at Cerritos, CA and Seattle, WA, respectively. WAX, at Ft. Lauderdale, FL, is operated by Tropical Radio Telegraph Co. RCA Global Communications operates WCC from North Chatham, MA and WOE from Lake

Worth, FL. There are, of course, many more, plus CW stations operated by our own military forces.

If you are a whiz with code, none of them will give you any difficulty in "reading." If your code speed is a bit on the slow side, here's a tip. All you need is a tape recorder with two speeds.

Many CW stations, when they're not actually transmitting code traffic, send a marker signal. This usually consists of a number of Morse letter "V's" (di-di-di-dah), the letters "de" (meaning "from"), and the station's call letters. Sometimes the general call, "CQ" replaces the "V's." This marker is repeated over and over.

While not sent at extremely high speed, it may be too fast for novice code-readers. The trick is to tape the marker at fast speed and play it back at slow. Then it is no problem to mark down the individual di's and dah's, and the translation to English is easy.

Snooping on the Spies. COMMUNICATIONS WORLD readers often write in to ask about strange shortwave stations they receive whose broadcasts consist mostly of a man or woman reading series of numerals, usually in groups of four or five digits. Solid information about these transmissions is difficult to obtain, but it is believed that most such stations are broadcasting coded messages to agents operating in other countries. It is said that the number groups aired are one-time-use numerical codes and these are nearly impossible to break, even by computer analysis. Some of these stations are located in East Germany, it is known. But other countries, including presumably the U.S., also are involved. Most transmissions are in Spanish, English, or German. Here are a few frequencies (in kHz) to try:

Spanish	English	German
3,204	4,308	3,220
3,270	5,810	4,050
3,450	6,722	4,665
4,556	8,413	5,020
4,680	9,072	6,400
5,810	9,117	7,450
6,690	11,250	7,850
6,725	12,405	11,400
8,413		17,590
9,920		19,460
9,990		
11,400		
14,775		

Frequently, COMMUNICATIONS WORLD gets letters from readers who ask which shortwave receiver they should buy. . . . Frankly, this is an area we shy away from. We're sympathetic; it's not that. You plan to invest some hard earned cash in a SW rig and you don't want to make a mistake. But there are many factors to take into consideration. We can't put ourselves into your shoes.

There is no *one* best receiver. Experienced DXers can't agree. One swears by one manufacturer, another wouldn't touch that brand with a ten foot pole. Even among different models by the same maker, opinions vary. It's like asking a half dozen people which auto or TV set you should buy. You'll probably get six different answers. And who's right, and who's wrong?

In a recent mail, for instance, there were two letters from purchasers of a well-known medium-priced communications receiver. One writer gave it rave reviews; the other panned it horribly and vowed he'd never buy that manufacturer's products again.

One specific shortwave receiver that has drawn considerable mail is a South African import, the Barlow-Wadley XCR-30 portable. Among those seeking more information about the B-W are Mark Kirschenbaum, Union, NJ; L. J. Demers, Saginaw, MI; and Charles Hajek, Baltimore. To these readers, and others who haven't been able to locate a stateside source, we suggest you write to the importer, Gilfer Associates, Inc., P.O. Box 239, Park Ridge, NJ 07656, for information.

The Shortwave Receiver. While not anxious to have some readers out for our blood for recommending a communications receiver which for some reason, real or imagined, doesn't live up to their expectations, there are some general tips that may help you reach your own decision.

A beginning listener may not have to invest a nickle to get started in DXing. As noted earlier, the BCBer can start with almost any radio that covers the AM medium wave band. For shortwave listening it might be a multi-band portable you already own, or that old all-wave console in the attic.

Don't get in over your head. Don't "overbuy." Nothing will sour a novice DXer faster than spending "mucho dinero" with the expectation that he will, overnight, be able to hear anything and everything.

Yes, a receiver is probably the single most important piece of equipment a DXer can buy. But in our not so humble opinion, experience and know-how, which come only after one serves a learning apprenticeship in the hobby, count for at least half of the game. The receiver is no better than the guy twisting the dial.

So, whatever receiver you use for your DXing, learn to use it, tax it to its maximum DX potential, then trade up to a better set. In this day and age it is more than likely that you'll be able to sell or trade the old jobbie and move up without too great an additional investment. And, by the time you get that set you've been dreaming about, you'll have built up your DX skills to the point where you can use the new rig to best advantage.

Price is one factor that for many of us is the critical one. A new communications receiver doesn't sell for pennies. Yet, I don't think DXing can fairly be called an expensive hobby.

Yes, the initial outlay, whether it's \$100 or \$4,000 or somewhere in between, is not peanuts. But with proper attention and care, periodic replacement of tubes, perhaps, a realignment when that's called for, there is no reason why it shouldn't continue to perform well for a decade or two.

The state of the electronics art is advancing, to be sure. But much of today's electronic design work is very specialized. Receivers of the future probably will have fancy digital electronic read-outs. Top of the line models have that feature today. Sets may become even more compact.

There are some mighty good communications receivers on the market today . . . not as wide a selection as there was a few years back, perhaps, but those sold today are fine DX machines. Yet it is also true that some very experienced SWLs, who very likely could afford a new multi-kilobuck beauty, choose to

operate with a good 15-to-20-year-old receiver. This suggests two things: there's a lot of life in a DX receiver and, in radios, one man's meat is another man's dogfood!

It is doubtful that you'll hear anything on a \$3,000 rig that you won't on a \$300 model—if the operator is sufficiently skilled and has patience. The fancy high priced set may make it easier, may make real DX loggings more regular, or simply make listening more fun. But don't let the fact that you've only got a hundred or several hundred bucks to spend get you down. DXing can be a great pastime even if you've got the simplest gear.

Basically there are three or four things to look for in a communications receiver. One, and probably not the most important these days, is stability. This means the ability of the radio to stay tuned to the desired frequency without "drifting." The two major causes of instability are heat and mechanical shock, which can alter the actions of delicate circuitry. As there is no appreciable heat generated in a solid state transistorized design, thermal stability is not an important factor.

Vacuum tubes do generate heat and every tube-designed set will drift. However, a good unit will stabilize on frequency and not drift after about a half-hour warm-up. Thermal stability usually is only worth worrying about in the case of an inexpensive tube set.

Manufacturers can lick the mechanical shock problem by using solid construction techniques, a sturdy chassis, and heavy-duty components. Again, it is the less expensive sets, where corners are cut to meet a price, that this is worth considering.

Sensitivity is more important. This is the ability of the communications receiver to bring in a weak radio signal . . . what DXing is all about, after all. One way to obtain sensitivity is to design a set with a tuned radio frequency (RF) amplifier stage. Again, except for the budget units, most communications rigs have an RF stage.

A sensitive receiver is one thing, but it's not enough. The electronics of a receiver creates at least some internal noise. But proper design can minimize this. Too much internal receiver-generated noise will mask an incoming signal, no matter how sensitive a radio might be. You want a good signal to signal-plus-noise ratio (S/S+N) to make the most effective use of your receiver's available sensitivity.

Here's a quick and easy test you can make, even in a dealer's showroom if he has some sort of suitable antenna

available. With the antenna connected, tune across all the bands. Don't be concerned about the stations you can hear; listen instead for the background noise "between" stations. Next, disconnect the antenna and make the same check. A set without antenna connected should produce significantly less background noise. The noises you hear with the antenna disconnected are produced by the receiver's circuitry.

It is possible to boost the sensitivity of an inexpensive receiver. Adding an outboard auxiliary preselector can be a big help by increasing signal gain and rejecting images, unwanted false signals that crop up where they don't belong. But we'll talk more about preselectors at another time.

There are two more factors to look for in choosing a communications receiver, perhaps the most important. They are selectivity and frequency readout. Selectivity means being able to bring in the wanted station but rejecting all or most other signals on adjoining frequencies (in short, rejecting interference). Today's shortwave frequencies are crowded and it takes a good receiver to sort out the desired signal from the unwanted ones. Without adequate selectivity, station will seem to pile up on station, creating a bedlam of noise and unintelligibility. And, in most cases, much of what you are paying for in an expensive set is circuitry to provide selectivity.

This can be done in a number of ways or in a combination of ways. A superheterodyne receiver makes use of an intermediate frequency amplifier—the so-called IF stage—to produce basic selectivity. A double or triple conversion model with multiple IF stages will provide better selectivity and, of course, cost more.

Some receivers use the notch filter technique. This device, built into the set, suppresses a narrow range of frequencies. This "dead" notch is tunable a few kilohertz on each side of the frequency to which you are tuned. Tune the "dead spot" right on top of an adjacent undesired signal and you go a long way toward attenuating that interference.

There are several types of filters employed in receivers today. A crystal filter is a bit of quartz ground to reso-

nate at the IF amplifier frequency. It "narrows the gate" and shaves off most of the interference on either side of the tuned frequency. Other receivers use ceramic or mechanical filters, which generally perform the same function. Mechanical filters, which employ a series of resonant discs instead of quartz or ceramic devices, are considered superior if well made. But mechanical filtering, done properly, really kicks up the price of a receiver!

But all the selectivity and sensitivity in the world won't help you bring in wanted DX signals unless you are able to tune your receiver to exactly the frequency where your station transmits, so frequency readout becomes very important. In the '70s, the problem of poor frequency readout has been licked . . . but to get it you have to pay!

Top-of-the-liners usually feature an electronic digital readout. You want to tune to 15,220 kHz? You just tune the receiver until its little illuminated numeral readout indicates you're tuned right on the button. You can have tuning accuracy to a fraction of a kHz! Some less costly sets—but still costing a couple of hundred dollars at least—will give you a highly accurate mechanical type readout of frequency, at least to the nearest kilohertz and, with interpolation, to fractional kHz. In terms of practical DX operation, the mechanical type direct frequency readouts are no less satisfactory than the electronic types.

But, with the inexpensive sets, nor-

mally you get a sliderule-type system, in which a bar-marker moves across a marked dial plate. Often these are poorly marked, and with a fairly small dial plate it is hard to tell, for instance, if you're tuned to 9,600, 9,650 or 9,700 kHz. Unless you can tell a frequency far more accurately than that, your DX-ing will be a rather hit or miss proposition.

Some sets have a built-in frequency determining aid called a crystal calibrator. This device spots audio tones, usually every 100 kHz (though external crystal calibrators producing tones every 50, 25, 10, etc. kHz can be added to your listening setup). Using the frequencies of certain regular, known stations, plus the marker tones, it is possible to make homemade graphs of each DX band to help you find the frequencies you want to tune. This will give a fair degree of accuracy.

The Pre-Used Set. Since communications receivers have a long life, but because many listeners choose from time to time to trade up to a classier rig, there are used receivers on the market. Like an auto that's been "pre-driven," a used communications set can be a real buy . . . or a lemon. Many dealers take in older but perfectly good radios in trade. Many will recondition the set before reselling it. Others will simply sell "as is." If it needs work, but is basically okay, you can recondition it yourself (with some electronics know-how) or pay to have it done.

There may be a bit of a gamble in

This attractively paneled DX den belongs to Leland Swenson of Scandinavia, WI. A DXer for about five years, Leland's listening gear includes, from left, a Zenith Transoceanic portable, a Radio Shack DX-190 with a Realistic Patrolman 6 on top, and a Realistic DX150A communications set.

buying a used set. But you can minimize the risks by dealing with a reputable dealer, buying it from someone you know and trust, getting a guarantee from the seller that it is in the condition he purports it to be, or by taking along a knowledgeable friend—perhaps a local ham radio operator—when you go shopping.

And most American manufacturers will realign and recondition an older set they once manufactured, and the result will be more than satisfactory. This service will cost a modest amount, but if you buy at the right price you can afford it.

Depending on the condition, and the demand for a particular used set, you can probably save a quarter or a half of the original price. Norman Sims, one of our faithful readers, found a well-used Hallicrafters SX-28 Super Sky-rider at a flea market not long ago. True, it is a very old model, at least 30 years old, but it worked. The price? Two dollars!

We know of an early '50s receiver, once Hallicrafters top line, an SX-62, in very good shape, that recently sold for

about one-tenth of its new price. And finding aging but adequate beginner sets for under \$20 at amateur radio ham-fests is not uncommon. So, new or used, cheap or expensive, go get yourself a receiver and get in on the DXing fun.

More DXing Questions. A few quickies next on unidentified stations readers have been hearing.

From Steven Macko, Northlake, IL: "On Feb. 2 at 1702 GMT on a frequency of 15.23 MHz I heard a station called Radio France Int. I'm pretty sure it broadcasts out of Africa. It was in English and had news and music. I'd like to know what country it comes from." Steve, you're going to hate yourself on this one. It comes from France. The former French government broadcasting corporation, ORTF, was broken up at the end of '74. The radio division is now called Radio France and at least part of the program you heard seems to be France Inter, a relay of a home service broadcast. But you are right in suggesting an African connection. The transmission is beamed *to*, not from, Africa. The frequency probably was

15,300 kHz, although 15,165 and 15,120 were in use at the time also.

Another query with a Gallic flavor—no Bunky, I didn't say garlic—comes from Tim Fisher, Columbus, OH. "I picked up a broadcast at about 9,680 kHz, repeating a statement that went something like, 'Ici Cayenne, Radio . . . Terminal of the Administration . . . this is a test transmission. . . .'" Tim wants to know what the station is and can he get a verification.

Though I don't have the station listed on that frequency, undoubtedly you heard a voice mirror (repeated identification announcement) from a transmitter of the French Telecommunications Service at Cayenne, French Guiana. The station has been known to verify, but with utility outlets it is never a sure bet. Reports can be sent to Le Chef de Centre, Centre Radioelectrique de Cayenne, Boite Postal 1001, Cayenne, Fr. Guiana.

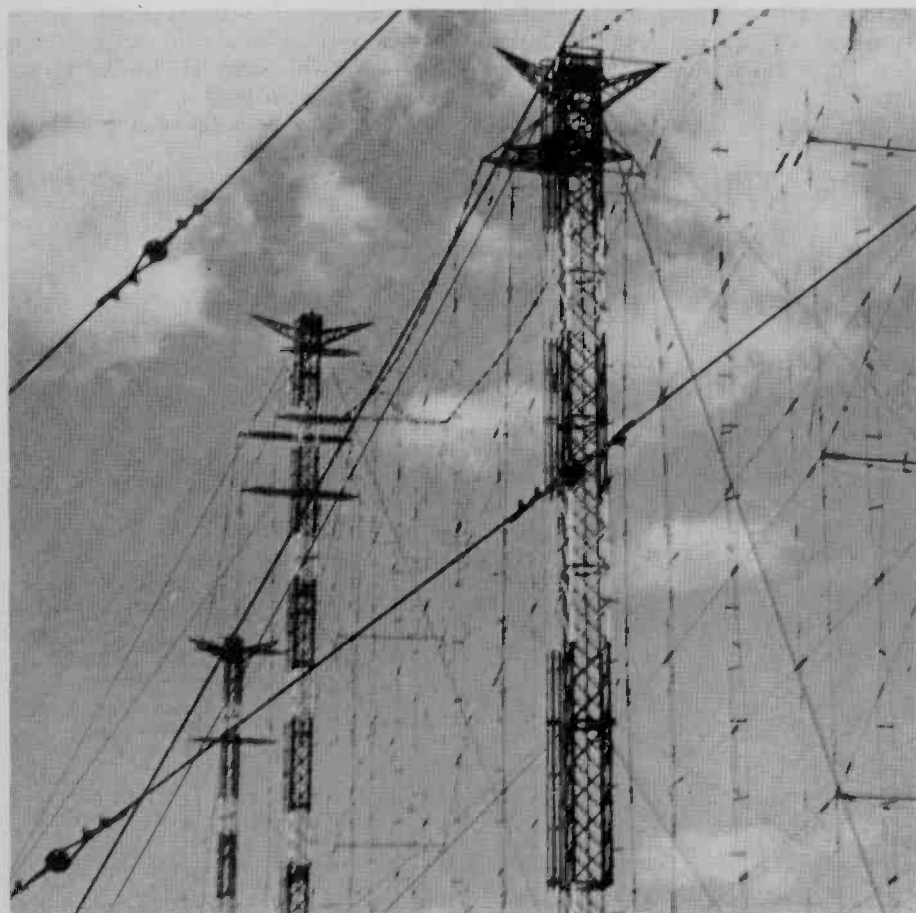

"Whatever happened to Radio Nordsee International?" asks Robert Bohlman, Hartford, WI. Radio Nordsee International was an unlicensed pirate commercial broadcaster which operated from shipboard off the Dutch coast. A number of North American DXers logged its shortwave signals on a frequency that varied from 6,205 to 6,210 kHz.

What happened to RNI was that the Dutch government finally acted and made it illegal for advertisers to buy radio time from the station. Also, efforts to get logistical support, food, and fuel, were hampered. So the pirate station closed up shop just a little less than a year ago. There was word that the ship station would be rechristened Radio Nova and would move to an anchorage off Italy. As of this writing it hasn't happened.

We have an answer now to a question asked in the last issue of CW by Texan Scott Strentzsch about a mysterious "Radio VIP" heard on "about 1450 kHz." We blew the answer, but Tom Sundstrom, Willingboro, NJ, came through. Though Scott missed the correct frequency, Tom says Radio VIP is the identification of the all-English-speaking XEVIP, Mexico City, on 1560 kHz. Tom reports hearing it after about 0600 GMT. Unhappily for Scott, Tom reports that the station won't QSL "out of fear that Mexico's 'FCC' will clamp down on apparent widespread signals."

Are you handicapped? Do you know

Radio Canada International is a widely heard, popular shortwave voice. One reason the SW signals get out so well is this elaborate antenna system at the CBC's transmitting center at Sackville, New Brunswick.

someone who is and would like some help in getting started in DXing? Then you should know about the Handicapped Aid Program (HAP). This organization, made up of DXers, does all it can to assist physically handicapped persons get started or advance in the hobby. In some cases this might involve the loan of receiving gear, free radio club memberships, or perhaps just a friendly helping hand, in person or by correspondence.

Anyone interested in more dope on the HAP operations may write to HAP Director, International Coordinating Committee, c/o Gene Moser, 6805 Woodland Court, Coloma, MI 49038. CHAP, the Canadian chapter of HAP is chaired by Harold T. Sellers, 20-122 Giroux St., North Bay, Ont. P1B 7Y7, Canada. And if any non-handicapped DXers would like to contribute unused DX equipment to the program, which will be loaned out to HAPIes and CHAPIes, Gene and Harold would be delighted to hear from you!

The Impossible Dream. Frank M. Little Jr., Bossier City, LA writes that he has three receivers which combined give him frequency coverage of the BCB medium waves, shortwave from 160 to 10 meters, FM broadcast, VHF low and high bands, plus UHF. "I want to be able to hook up all three receivers to one antenna," Frank says. "It would be great to be able to pull in AM and FM stations from Alaska and Hawaii; also pick up police calls from different parts of America and be able to tune in on all the shortwave meter bands from 160 to 10 meters."

Sorry to say this, Frank, but you've set your expectations too high! There just is no single antenna that can perform effectively over the huge span of frequencies from 540 kHz (the low end of the medium wave band) to 470,000 kHz (the top of the 450-470 MHz UHF band). A simple long wire antenna would work reasonably well for medium and shortwave. Your reluctance to go to an exterior antenna does complicate things, but you could get some reception by stringing it around the interior walls of your room, unless you live in a steel-framed apartment building. We'd suggest you stick to the built-in whip

antennas for VHF and UHF if you don't wish to go "outdoors."

But, regardless of the antennas, it is unreasonable to expect to receive FM DX from Hawaii and Alaska down there in Louisiana. BCB reception of Alaska and Hawaii is possible, but rare. Under E-skip conditions you should receive some distant police calls on the VHF public service bands. We suggest that, for now at least, you scale down your DX hopes.

Next, three letters from listeners in different parts of the U.S. "I am a merchant seaman," writes Dana Hitchcock, Newtown Square, PA. "I would like to find a source of information on the AFRTS (American Forces Radio TV Service) frequencies and schedules. These programs are also of interest to those of us on the merchant ships. Also, I'd like to find the same information on the Voice of America and any other U.S. shortwave broadcast stations."

And from Tom Wraight, Kewanee, IL, "I'd like to know how I can get Russia, the Far East, Japan, India, Australia, New Zealand, Iceland, and other foreign shortwave stations around the world."

And, finally, from John Gesell, Tucson, AZ, "I would like to lay hands on a good, complete-as-possible log of in-

ternational shortwave stations."

Though different in specifics, there is a common theme in these and similar letters from readers. It is a need to know when and where to hear various stations. At the outset, some tub-thumping for our own White's Radio Log, which you'll find, if you haven't already, at the back of this (and every) issue of COMMUNICATIONS WORLD. But, admittedly, it is only a sampling of the shortwave broadcast offerings available.

We're glad that reader Gesell qualified his question about a shortwave guide with the words "complete as possible." In nearly 30 years of DXing, we've yet to come across the list with the ultimate in completeness. Things in the SW world change too fast to make any sort of logbook totally complete or correct. With that point in mind, let's look at those DX information sources that do exist and which will probably answer most of your questions about when and where to tune on SWBC.

There is one absolutely indispensable source that should be in every SW DXer's library. This is the annual World Radio TV Handbook, published each year in Denmark. It includes frequencies and schedules of most of the world's shortwave broadcasting stations, plus languages used, transmitter powers,

The heart of Steve Weyhrich's listening post is his Heathkit GR-64 receiver. To give this receiver some added selectivity Steve has added a Heathkit GD-125 Q-multiplier, which he's "peaking" in this photo. On top of the receiver this Chicago SWL has a Heathkit HD-20 100 kHz crystal calibrator. As we note elsewhere in the text, this is the way to upgrade some basically simple receivers.

the names of station authorities and addresses, and much, much more. The current 1975 issue runs some 440 pages and the price is about \$9. It is available through Gilfer Associates, Inc., P.O. Box 239, Park Ridge, NJ 07656, and Glen Mueller, Billboard Publications, Inc., 2160 Patterson St., Cincinnati, OH 45214. In Canada it is handled by some local booksellers in Toronto, Vancouver, Montreal, and Sudbury, Ont. Or it can be purchased direct from the publisher, World Radio TV Handbook, Soliljevej 44, 2650 Hvidovre, Denmark.

Another listing of shortwave broadcast stations (which like WRTVH also has similar information on longwave, medium wave, FM, and TV stations) is the series of four volumes of Broadcasting Stations of the World. The data in this book series, published by the U.S. government, is compiled by FBIS, the

A 16-year-old Canadian listener, Pierre Mongeau of Verdun, Quebec, uses a Radio Shack AX-190 receiver and a SONY TFM-1600 portable for his hobby listening. Pierre says he studies hard at school and also studies code and electronics at home. His goal is to pass his federal exams this year and get his ticket.

Foreign Broadcast Information Service, the radio monitoring branch of the CIA. In some areas it is quite complete, but not so complete or accurate when dealing with areas of the world which seem to figure less prominently in U.S. foreign affairs.

Perhaps the most useful of the four volumes is Part II, which lists stations from 150 kHz to 26 MHz in ascending frequency order. It costs \$2.65 and can be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

In addition to these reference works, Gilfer Associates (address above) handles a series of useful books for the DXer, including the "SWL Address Book" authored by ace DXer Gerry Dexter, which includes station addresses and helpful QSLing data for some 600-plus shortwave broadcast outlets.

There are other important reference books for persons interested in other phases of DXing. A good booklet, which costs only a buck, for TV and FM DXers is "Beyond Shortwave," published by the Worldwide TV-FM DX Association, Box 163, Deerfield, IL 60015. WTFDXA also should have a TV station listing guide, complete with maps, available by the time you read this. Pre-publication information available suggests it to be a dandy!

A wealth of information about FM stations and FM DXing can be found in the updated third edition of the "FM Atlas and Station Directory" written by Dr. Bruce F. Elving, generally recognized as the nation's top FM DXer. The 96-page book costs \$2.50 from FM Atlas, Box 24, Adolph, MN 55701.

Among several publications for medium wave BCB fans published by the National Radio Club (Box 127, Boonton, NJ 07005) is the latest edition of the "NRC Domestic Log,"

which lists by frequency all U.S. and Canadian AM stations, plus address information, power, and much other useful data.

Foreign BCB information, based on actual loggings by medium wave DXers in North America, is contained in the third volume of the "IRCA Foreign Log." It is compiled by well-known BCB club editor Father Jack Pejza. The cost is \$3.75 postpaid from the International Radio Club of America, 12536 Arabian Way, Poway, CA 92064.

A more specialized book useful to more advanced DXers is available through SPEEDX, P.O. Box E, Elsinore, CA 92530. It lists sunset-sunrise times for over 200 different countries worldwide. Since DX reception on the medium and lower shortwave ranges is mostly a "darkness" phenomenon, it is useful to know just when a nighttime path exists between your location and that of a distant station. The SPEEDX Sunrise-Sunset booklet, costing \$1, will allow you to determine such times with great accuracy.

Though there are many other DX-related publications that may be helpful to hobby listeners, including a good world atlas, antenna construction books, foreign language dictionaries and the like, we'll mention only one more for now. It is a leaflet detailing times and frequencies to tune for English language shortwave programs from a number of the major international SW broadcasters. It is yours free, except for a large-size self-addressed, stamped envelope, from the North American SW Association, Box 8452, South Charleston, WV 25303. NASWA makes the offer with the hope that you will give some consideration to joining that radio hobby club... but there is no obligation to do so.

Club Information. We've already mentioned some of the DXing clubs as publishers or sources of data on DX stations. And that brings us to our final letter this time. It comes from Nathan Cupingood, Old Bridge, NJ, who asks, simply, "Could you give me the names and addresses of the leading DX clubs in the U.S. that publish bulletins?"

It's a good question, Nat, because, with the volatile nature of broadcasting

Michele Golder is 12 and her brother, Michael is 10. They live in Killbuck, NY. They have just begun DXing, although their Dad has been interested in DX and ham radio since 1960. Since brothers and sisters rarely agree, is it any surprise that Michele favors SWBC listening and Mike likes the BCB band? They use their father's listening gear, right photo, including Radio Shack SX190 and A250 receivers.

the only way to keep really current on which stations are broadcasting, when and where, is to join one or more DX clubs.

There are many DXing clubs in North America and abroad, ranging in size from just a handful to many hundreds of members. Most publish regular bulletins containing up-to-date data on stations and other useful information for DXers. Except in very special cases, **COMMUNICATIONS WORLD** lists only those stable enough to join the Association of North American Radio Clubs (ANARC), an organization affiliating the major hobby organizations of this continent. Some smaller regional clubs have ANARC associate memberships. A list of those club groups is available for a stamped, self-addressed envelope to ANARC Executive Secretary, David Browne, 557 N. Madison Ave., Pasadena, CA 91101.

The ANARC affiliated clubs differ in several ways. Some are general type organizations, catering to DXers interested in a number of different aspects of the hobby, from medium and short-wave to FM/TV/VHF/UHF. Others specialize in only one phase of DX activity. There are clubs which publish monthly bulletins and a few which publish as often as 34 times a year, weekly during the prime DX season. Some publish mimeographed bulletins, others have offset printed papers complete with illustrations. Annual memberships vary in cost, depending on the club and the type of mailing desired, 1st class or air, up to around \$15 a year. All are non-profit groups that operate on a voluntary basis of "share the DX information."

Information and a sample copy of the club bulletin can be obtained from any or all of the following full members of ANARC. In most cases there is a nominal fee, usually about 50 cents, to cover postage and handling of the request for a sample bulletin copy.

- American Shortwave Listeners Club, 16182 Ballad Lane, Huntington Beach, CA 92649. A general coverage club specializing in SWBC, BCB and utility DX data.

- Canadian International DX Club, 169 Grandview Ave., Winnipeg 16, Man., Canada. This is another general coverage club. Membership is not restricted to Canadians.

Mike Fuzie, Mastic Beach, NY is 17 and hopes for a career in radio electronics. Mike says he has one DXing thrill, but finds the entire hobby—which has occupied him for two years—thrilling. His DXing receivers are a Hallicrafters S-125 and A GE World Monitor portable.

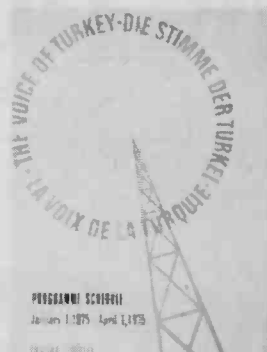

OY. YLEISRADIO AB.

The Finnish Broadcasting Co. Ltd.

Phone 010-26, Finland

No.3/1969

PAKISTAN CALLING

Most international SW broadcasting stations publish regular schedule booklets which not only contain information on their current broadcasting schedule and frequencies but often include feature stories about their stations and countries. Here are several of these booklets, which are sent free of charge to any SWL who requests to be placed on the stations' mailing lists.

- International Radio Club of America, 12536 Arabian Way, Poway, CA 92064. Coverage is exclusively medium wave domestic and foreign.

- National Radio Club, P.O. Box 127, Boonton, NJ 07005. This is another medium-wave-only club.

- Radio USA, 1602 West Pierson Avenue, #231, Phoenix, AZ 85015. Club bulletin covers shortwave and BCB medium wave.

- SPEEDX, P.O. Box E, Elsinore, CA 92530. SPEEDX, which stands for, believe it or not, The Society to Preserve the Engrossing Enjoyment of DXing, covers SWBC and utility DXing.

- World Wide TV FM DX Association, P.O. Box 163, Deerfield, IL 60015. This club specializes in TV/FM and VHF/UHF utility DXing.

- SWL International, 4375 De Lorimier Avenue, Montreal, Quebec, Canada H2H 2B3. Club bulletin covers short-wave broadcast only.

In addition to these ANARC-affiliated clubs, one more of possible interest is the general DX coverage Newark News Radio Club, P.O. Box 539, Newark, NJ 07101. Though not part of ANARC, NNRC has been publishing DX bulletins regularly as clockwork since the 1930s and is stable as the Rock of Gibraltar.

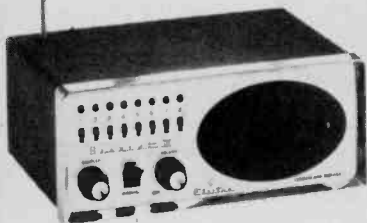

In addition to their bulletin publishing activities, a number of the above clubs stage annual conventions in various parts of the U.S. and Canada. These gatherings provide a wonderful opportunity to get together with other DXers to socialize and learn more about the fascinating hobby of DXing. ■

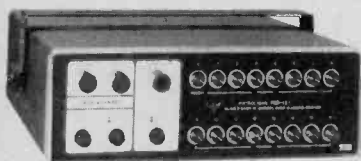

ACTION BAND RECEIVERS

They come in all sizes and styles—here are just a few . . .

4, 3, 2, OR 1

4 bands, 8 channels: Electra Bearcat IV.
\$179.95 for 30 to 50, 150 to 174, 450
to 470, and 470 to 512 MHz.

3 bands, 16 channels:
Radio Shack PRO-16. \$229.95
for VHF Lo, VHF Hi, and UHF.

2 bands, 8 channels: Midland 13-940.
\$209.95 for VHF Hi and VHF Lo.

1 band, 8 channels: Heath GR-110.
\$99.95 for VHF Hi in a kit.

COMBO-BAND

Midland's 13-908,
AM BCB plus
crystal controlled
VHF Hi, \$47.95.

Electra's Jolly Roger JR-1 H,
AM BCB plus 2-channel scanner, \$79.95.

ACTION BANDS are now. Transmissions are real and up to date. It's a fact. Many news gathering organizations provide their employees with monitors covering local police, fire, aero and/or public safety channels because they know that action band channels carry firsthand information of law enforcement, government, medical, business and other organizations.

Some of you may have read about the "remote control" bank bomber who detonated a charge in the lobby of a New York City bank after being refused, so the story goes, a ransom. At the scene, as people stood and watched from across an intersection a plainclothes detective went bounding across Park Avenue South to an unmarked police car where this editor was standing. He grabbed the 2-way radio mike through the front window and barked (just like TV), "There's another bomb in an identical bag that hasn't gone off yet."

Well, being around a real-life bank bombing was one thing, but standing

there when another bomb might go off was enough to start my feet moving the three blocks to our 10th floor editorial office. As it turned out, that extra bag was for loot he never got.

No one was seriously hurt, and the alleged bomber was picked up a few months later. But that didn't last long; apparently this guy had talent (such as it is), for he soon escaped—James Bond style—by crawling through an air duct and lowering himself to the street. I'm sure local residents could have heard about that first hand too—by monitoring the right police channel.

There are probably many interesting happenings on the radio where you live. Some representative receivers are shown. And, if you do tune the action bands, keep in touch with ELEMENTARY ELECTRONICS, COMMUNICATIONS WORLD's bi-monthly sister publication. e/e presents articles on a wide range of action band subjects in every issue, as well as a wealth of information for all you shortwave listeners and DXers out there.

FOUR IN HAND

E. F. Johnson Mini-Scan,
VHF Hi, \$119.95.

Regency Monitoradio,
VHF Hi, \$119.95.

Midland Model 13-904,
VHF Hi, \$129.95.

Teaberry "T" Scan,
UHF, \$139.95.

Fanon Scanfare,
VHF Hi, \$206.95.

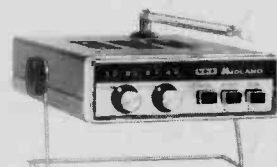

FOUR ON VHF

Regency ACT-C4H, \$89.95, AC
powered for base use w/whip.

Pace Scan 10-4H, \$99.95, DC
powered for portable, mobile.

Midland 13-916, \$102.95, DC
powered, AC adaptor available.

16 ways to move ahead in electronics!

Choose the one that's just right for you...the one that can make your future more rewarding, more secure, more enjoyable...starting now! These ways to move ahead are yours from Electronics Technical Institute...the finest electronics home study courses and programs ever offered!

Fundamental Electronics

Get a solid foundation for entering the fast-moving world of electronics where today is great, and tomorrow will be greater. Learn it the simple, easy, step-by-step, programmed way called *Autotext*, exclusive with ETI!

Electronics Drafting

Learn a vitally needed specialty that translates new technological concepts and developments to the practical drawing board. Become a specialist-in-demand, through ETI's training. Learn it at home...get your future moving now!

Color TV Servicing

There's a real future waiting for the established color television technician. You become that technician through this program that takes you step-by-step to *theoretical and practical* mastery of color TV. Get your tomorrow started today!

Master TV/Radio Servicing

Here is true "master" preparation for a career that can take you as far as you want to go into radio and television servicing, both black and white, and color. The helpful, practical ETI way can be your way to more money, security, success!

Communications

ETI's communications program opens up a whole range of career development possibilities in electronics. Solid-state receivers, solid-state audio equipment, communications equipment, CATV, as well as preparation for FCC-licensed positions in commercial broadcasting and mobile communications. You can find a real future here!

Industrial Electronics

You open great career opportunities through this program, as instrumentation technician, electronic equipment maintenance technician, electronic calculating machine technician and audio technician. It also prepares you to move into and up in communications, automation and industrial electronics!

Digital Technology

Join the digital revolution which is radically altering our lives today and tomorrow. Get solidly trained in the new digital specialties that can lead to a real future as a digital control technician, electronic calculating machine technician, field representative, computer sales representative, manufacturer's representative.

Electronics Technology

Learn electronics across the board! You'll be ready for real career advancement with training that can lead to technical positions in communication, automation and industrial electronics, and can also help you in sales positions, management and administration.

Computers

ETI offers training opportunities in Computer Technology and Computer Programming. Learn at home, and get ready to enter a field where incredible developments are sure to continue. It's practical, useful—the step-by-step ETI way!

Advanced Electronics

Want greater challenges and career advancement? This course is for you. It can be valuable preparation not only for a technical career, but also for the fields of sales, management and administration. Make your move now!

Digital Electronics—Advanced

Here's a special course for those already in the field of digital electronics, ready to move into more advanced areas. This is how to move up in sales, management and administration. Here's your tomorrow!

Black and White TV Servicing—Advanced

This can be your own "advance" course to black-and-white TV competence from A to Z. You'll construct a receiver yourself, if you wish. A key to lifetime success!

Industrial Instrumentation—Advanced

Move up in the world...the wonderful electronics world! This course opens up a whole range of careers in the industrial field, as instrumentation technician, laboratory technician, process control technician or electronic calculating machine technician. Get ready...and go!

Color TV Servicing—Advanced

Here is the "graduate" course in color TV for those who already know television fundamentals. You'll learn color TV from top to bottom, build your own set if you choose. A great way to build your future!

Solid-State Electronics—Advanced

Applications of transistors are increasing all the time and the transistor may be a breakthrough

comparable in importance to the development of nuclear energy. Solid-state can mean your solid career development, too, through ETI!

FCC License Preparation

Here is real down-to-earth practical preparation to take your 3rd, 2nd or 1st class Federal Communication Commission Radio-telephone License examinations. Get yourself ready now for any of the FCC-licensed positions involving broadcasting, mobile communications, microwave communications links, marine communications equipment or in many other positions in solid-state, communications, CATV. Get ready for tomorrow...today!

Get all the facts...free!

Send the coupon now for ETI's colorfully illustrated new

44-page catalog giving you all the details. You owe it to yourself. There's no obligation, and no salesman will call. Send for yours today!

Our 10 Best Selling Craft Projects

NOW YOU CAN ENJOY CLASSIC-DESIGN FURNITURE AT A FRACTION OF STORE RETAIL PRICE! BUILD WITH CRAFT PLANS! Craft Plans are the hottest thing going today! Yes, thousands of spare-time craftsmen are finding they can easily move up to making a style of furniture they believed beyond their ability to handle. Well-known designers have now created a variety of plans that are exceptionally easy to follow and will assure you beautiful, finished pieces, at tremendous savings!

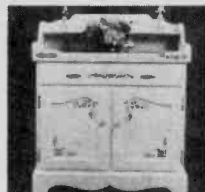

Get started today by ordering one or more of these award-winning Craft Plans.
Only \$2.50 each!

D-3

Child's Footlocker

No specialized tools are required to make this attractive child's footlocker. Spindles are assembled from stock items and except for some scroll cuts made with a saber saw, construction is done with hand tools. Lumber-plywood combination eliminates the usual craftsmen problems.

D-18

Colonial Dry Sink

You can build this versatile and serviceable piece of Americana inexpensively from pine. With its recessed lined well, it can be used as a bar, a buffet-server, a plant stand, or a simple storage cabinet. Easy to work with pine. Stain or antique it.

D-8

Colonial Hutch

This fair-sized hutch is dimensioned so that it can be built by using one panel of 4' x 8' plywood for the main assembly. Basic colonial design is revised so it blends in with any decor. Upper section has two good-sized shelves and a wide single drawer disguised as a double one.

D-22

Captain's Trundle Bed

Common lumber is used to build this fine piece of furniture which has a lower drawer that rolls out to be used as an extra bed or as a bin for clothes, bedding, toys or whatever. Both upper and lower sections take a 39" x 75" mattress (standard twin size).

D-10

Trestle Table Set

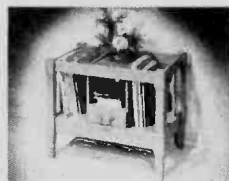

This Early American table and bench set sells for well over \$250 in fine furniture stores, but you build it for about \$60, even less! Carefully select lumber, choosing boards that are fairly flat and avoid those with sap streaks.

D-23

Elegant Bar

Originally built from plywood for less than \$27! It would cost you about \$125 to buy this handsome bar ready-made! Special features include padded vinyl rails, padded front panel and a brass foot rail. Decorative self-adhesive plastic can eliminate finishing.

D-13

Magazine End Table

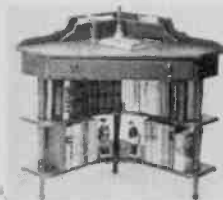

You build this fine piece of furniture from pine or the wood of your choice without fancy equipment—just with simple tools. Even the Italian provincial legs are not difficult; they are built-up using a technique called post blocking.

D-25

Wall-Hung Sewing Center

This attractive colonial wall-hung sewing center stores all things needed for a well organized sewing room. It also delights those sewers who have limited floor space. There is no stooping to find things as drawers and storage shelves are at eye-level.

D-16

Corner Bookcase-Desk

This dual-purpose piece fits neatly into wasted corner space. Easy to build from pine with ordinary tools and ready-made turnings. Desk top has ample writing space and storage for stationery supplies. Two bottom shelves hold books within easy reach.

D-26

Colonial Desk with Book Rack

This attractive and functional desk enhances any room in your home. It has four roomy drawers, the largest one at the bottom made to hold letter-size folders. Pedestal support serves as book rack to hold a good supply of reading materials.

New! Money-saving, Easy-to-build Craft Plans!

SURPLUS EQUIPMENT

GIANT Bargain Packed Canadian Surplus Catalogs \$1.00. Etco Electronics-DC, Box 741, Montreal "A"

ASK HANK, HE KNOWS!

(Continued from page 16)

In any transistor radio, hang a 20 megohm resistor between any two points in the circuit and the radio will continue to function normally. You see, for most electronic circuits 20 megohms is equivalent to an open circuit. In fact, I can't think of a service measurement in a radio or TV where an indication of 22, 33, or 47 megohms is critical. Did you ever notice that most VOMs can't measure 50,000 volts?

Look What He Stepped On

After finding several weather balloons, I would like to know where I can get a receiver to tap Uncle Sam's Radiosondes. Can you help?

—G. A., Richmond, TX

I don't know. But why don't you ask the people to whom you return the Radiosondes. Their name and address are printed on each unit. The few receivers I saw in operation were special units featuring a self-tracking parabolic antenna system. I guess the signals from these small balloon transmitters are too weak for conventional antenna systems to sense and send to a receiver.

Wants Many

Hank, I need several schematic diagrams of television receivers from time to time. You see, my hobby is fixing TVs for friends. Where is there a good source I can go to for a diagram without buying a whole book?

—E. D., Mobile, AL

A diagram and service material for practically any television, radio, or stereo set can be secured from Supreme Publications for a very reasonable price. I understand that this firm supplies such material from its own manuals, Sams' Photofacts, old Rider's, and its bulging files of original factory data accumulated over many years. Such data goes all the way back to antique radios and early TVs, as well as material of all manufacturers of recent past, and right up to sets of the '70s. Supreme Publications promises to quote by return mail. Most prices are about \$2, some lower, and a few higher. Supreme Publications' address is 1760 Balsam Road, Highland Park, IL 60035.

Sheet Metal

The classroom in which I work is located in a preengineered metal building. Because of the metal shell, I am not able to receive any AM radio waves. How can I get a strong enough signal to enter the classroom so that the repairing of AM radios can be practiced?

—S. G., Attica, MI

Erect a long-wire antenna on the roof with suitable lightning protection. This is a common problem in many new metal and air conditioned structures with few, if any, windows.

Can You Help Out?

▲ Bill Forehand wants a service manual or copy of one for the Precision Vacuum Tube V Multi-Meter, Series EV-10A. Write to Bill at 706 Plaid Street, Burlington, NC 27215.

▲ Anyone have a schematic diagram for a B&K Cathode Ray Tube Tester and Rejuvenator, Model 400 and its adaptor, Model C40? Then write to Lester W. Kroepel, 803 North Morrison St., Appleton, WI 54911.

▲ Juan Rivera, 8417 Trumbull S. E., Apt. A, Albuquerque, NM 87108 picked up a Silvertone radio made by RCA of 1930 vintage in good working order at a flea market. He would like to get a schematic diagram and spare tubes (just in case). Help him out, boys.

▲ A Bell 2325 Amplifier schematic diagram is wanted by Mark Harris, 901 Dixon, Missoula, MT 59801. Can anyone help?

▲ P. J. Carroll across the border is looking for the diagram for an Andrea Radio, serial No. 11606. If you can help, write to him at P.O. Box 5220, St. John's, Nfld., Canada A1C 5W1.

▲ Tommy Reagan can't seem to locate a copy of the schematic diagram for a tube-type multi-band Blaupunkt-Naivobi with case No. 2372-723068. Write to Tommy at 312 East French, Temple, TX 76501.

▲ F. H. Heberling of Bakerstown, PA 15007 would like to know battery requirements, connection and tube types for the Remler Infradyne Amplifier, Type 700, manufactured by Gray & Danielson Mfg. Co.

▲ Anybody have diagrams for the Decca Model DR-343 and International Transistor Corp. Model FAP-314 radios? If so, write to Emanuel Cattolica, 7861 Barbi Lane, La Palma, CA 90623.

▲ Here's an odd request—John Fiorino would like to obtain blank recording discs so he can use his General Instrument Record Cutter. He prefers 10- or 12-in. blanks. Write to 518 85th Street, Brooklyn, NY 11209.

▲ Got a Service Manual for a Webcor Royalite Tape Recorder, Model EP-2001-1? Donald Richard of 101 Cumberland St., Manchester, NH would like it or a copy. Write to Don.

▲ Urgent request: Chase Ambler would like to obtain silver-oxide/zinc batteries, or information on where they can be obtained. Write to him in care of Physics Dept., Asheville School, Asheville, NC 28806.

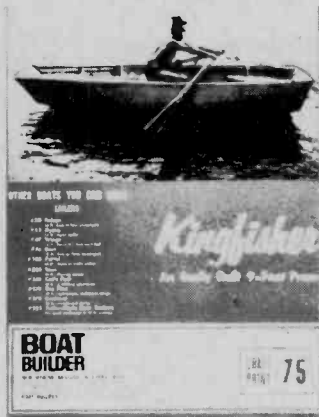

▲ Can anyone spare a National HRO-60 operator's manual? If yes, write to Dennis Gibbs, 9214 Venetian Way, Richmond, VA 23229.

Build the REAL THING—Yourself!

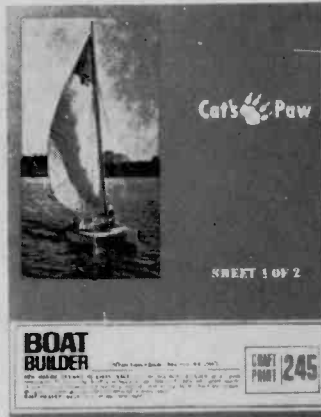

Get top mileage from your own craft skills

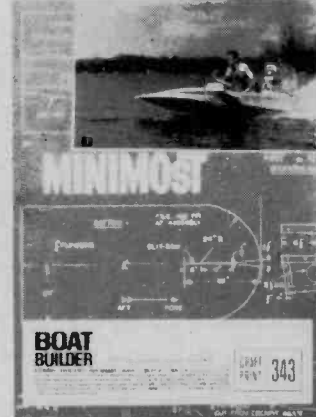

367. ROBIN is a versatile skiff that can be used for hunting or fishing, as a yacht club tender, or a work boat. It is rugged, yet its plywood construction makes it easy to build; no special jig or tools are needed. It can take a motor of 7-10 hp. L.O.A., 12'; beam, 5'1". **\$5.00**

75. KINGFISHER is a modern version of the Scandinavian pram developed hundreds of years ago. It rows easily, sails well, and propels nicely with a small outboard motor. Its 90 lb. weight and small size make it ideal to car-top; construction is plywood. L.O.A., 9'; beam, 4'. **\$5.00**

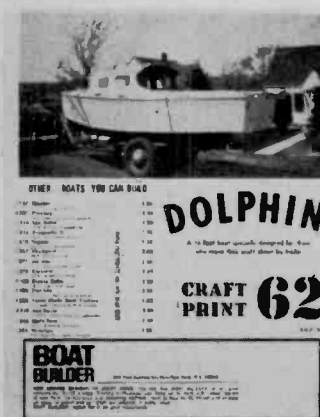

245. CAT'S PAW catamaran provides a stable base for a lot of sail area to make for fast sailing. And she's easy to build because of her straight-sided hulls, flat sheer, and straight bow and stern. It's an ideal boat in which to learn sailing. L.O.A., 12', beam, 6'2"; sail area, 85 sq. ft. **\$6.00**

343. MINIMOST is an 8' outboard sports hydro you can build in just 15 hours, and at a cost of less than \$25 for materials. Its advanced underhull design makes speeds in the 30 mph range possible with a 10 hp motor. L.O.A., 8'. **\$5.00**
Full-size pattern set 344 **\$15.00**

Make it with Craft Prints and save hundreds of \$\$!

62. DOLPHIN is small and light enough to be transported anywhere by trailer, yet it will accommodate two persons for extended cruising or a party of four on day trips. Plywood is used throughout, and the hull is designed to get the most from modest power. L.O.A., 16'; beam, 5'9". **\$5.00**

356. TABU gets up on plane, just like an outboard, to provide speeds up to four times higher than those possible with a conventional hull of the same size. Hull is of plywood, covered with resin and Dynel cloth. L.O.A., 16'; beam, 4'8"; draft, centerboard down, 2'6"; sail area, 165 sq. ft. **\$5.00**

371. JAMAICAN is a sailing surfboard of unique construction. Fiberglass and Dynel cloth are stretched and stapled in place over a wooden framework, then resin is applied. No special building jigs or forms are needed. Foamed-in-place polyurethane adds stiffness. L.O.A., 12'; beam, 3'. **\$5.00**

36. CHUM is a speedy little runabout that can be built as a single cockpit or double cockpit model. Use a light-weight engine of no more than 100 hp for top performance. Construction is of marine plywood over hardwood frames. Decks are of mahogany-faced plywood. L.O.A., 15'6". **\$5.00**

Citizen's Band, 2-way Radio could be your career field. Learn now at home with NRI's... **COMPLETE COMMUNICATIONS COURSE**

Citizen's Band radio is moving towards a billion dollar market in equipment sales. Think of the career opportunities that will create . . . in CB design, installation and maintenance. If you'd like to qualify for one of those openings, now's the time to start training, and the NRI method lets you study at home, in your spare time, on real professional equipment designed for learning.

Get your own Johnson Transceiver & Power Source

The NRI Complete Communications Course teaches you to service and/or adjust CB equipment, using your own 23-channel Johnson Transceiver and AC power supply. Mounted in your car or used as a base station, the Transceiver gives you "hands-on" experience that puts your course theory into practice. The complete program includes 8 training kits, with your own 3½ digit digital multimeter for digital experiments and precise measurements.

A wide choice of career opportunities for Trained Men

The NRI Complete Communications Course covers AM and FM Transmission Systems, Teletype, Radar Principles, Marine Electronics, Mobile Communications, and Aircraft Electronics. You will qualify for a First Class Commercial License or you get your money back!

Over a million men have trained the NRI way.

Send for the free NRI catalog and discover why more than a million men like yourself have found the NRI way the right way to get ahead. Read how you learn from bite-size lessons, progressing at your own speed to your FCC license and then into the communications field of your choice. There's no obligation and **NO SALES-MAN WILL CALL.**

PROGRESSIVE HOME RADIO-T.V. COURSE

Now Includes

- ★ 12 RECEIVERS
- ★ 3 TRANSMITTERS
- ★ SQ. WAVE GENERATOR
- ★ SIGNAL TRACER
- ★ AMPLIFIER
- ★ SIGNAL INJECTOR
- ★ CODE OSCILLATOR

- ★ No Knowledge of Radio Necessary
- ★ No Additional Parts or Tools Needed
- ★ EXCELLENT BACKGROUND FOR TV
- ★ SCHOOL INQUIRIES INVITED
- ★ Sold In 79 Countries

**YOU DON'T HAVE TO SPEND
HUNDREDS OF DOLLARS FOR A RADIO COURSE**

The "Edu-Kit" offers you an outstanding PRACTICAL HOME RADIO COURSE at a rock-bottom price. Our Kit is designed to train Radio & Electronics Technicians, making use of the most modern methods of home training. You will learn radio theory, construction practice and servicing. THIS IS A COMPLETE RADIO COURSE IN EVERY DETAIL.

You will learn how to build radios, using regular schematics; how to wire and solder in a professional manner; how to service radios. You will work with the standard type of punched metal chassis as well as the latest development of Printed Circuit chassis.

You will learn the basic principles of radio. You will construct, study and work with RF and AF amplifiers and oscillators, detectors, rectifiers, test equipment. You will learn trouble-shooting, using the Progressive Signal Tracer, Progressive Signal Injector, Progressive Dynamic Radio & Electronics Tester, Square Wave Generator and the accompanying instructional material.

You will receive training for the Novice, Technician and General Classes of F.C.C. Radio Amateur Licenses. You will build Receiver, Transmitter, Square Wave Generator, Code Oscillator, Signal Tracer and Signal Injector circuits, and learn how to operate them. You will receive an excellent background for television, Hi-Fi and Electronics.

Absolutely no previous knowledge of radio or science is required. The "Edu-Kit" is the product of many years of teaching and engineering experience. The "Edu-Kit" will provide you with a basic education in Electronics and Radio, worth many times the low price you pay. The Signal Tracer alone is worth more than the price of the kit.

THE KIT FOR EVERYONE

You do not need the slightest background in radio or science. Whether you are interested in Radio & Electronics because you want an interesting hobby, a well paying business or a job with a future, you will find the "Edu-Kit" a worth-while investment. Many thousands of individuals of all

ages and backgrounds have successfully used the "Edu-Kit". In more than 79 countries of the world, the "Edu-Kit" has been carefully designed, step by step, so that you cannot make a mistake. The "Edu-Kit" allows you to teach yourself at your own rate. No instructor is necessary.

PROGRESSIVE TEACHING METHOD

The Progressive Radio "Edu-Kit" is the foremost educational radio kit in the world, and is universally accepted as the standard in the field of electronics training. The "Edu-Kit" uses the modern educational principle of "Learn by Doing." Therefore you construct, learn schematics, study theory, practice trouble shooting—all in a closely integrated program designed to provide an easily-learned, thorough and interesting background in radio.

You begin by examining the various radio parts of the "Edu-Kit." You then learn the function, theory and wiring of these parts. Then you build a simple radio. With this first set you will enjoy listening to regular broadcast stations, learn theory, practice testing and trouble-shooting. Then you build a more advanced radio, learn more advanced theory and techniques. Gradually, in a progressive manner, and at your own rate, you will find yourself constructing more advanced multi-tube radio circuits, and doing work like a professional Radio Technician.

Included in the "Edu-Kit" course are Receiver, Transmitter, Code Oscillator, Signal Tracer, Square Wave Generator and Signal Injector Circuits. These are not unprofessional "breadboard" experiments, but genuine radio circuits, constructed by means of professional wiring and soldering on metal chassis, plus the new method of radio construction known as "Printed Circuitry." These circuits operate on your regular AC or DC house current.

THE "EDU-KIT" IS COMPLETE

You will receive all parts and instructions necessary to build twenty different radio and electronics circuits, each guaranteed to operate. Our Kits contain tubes, tube sockets, variable, electrolytic, mica, ceramic and paper dielectric condensers, resistors, tie strips, hardware, tubing, punched metal chassis, Instruction Manuals, hook-up wire, solder, selenium rectifiers, coils, volume controls and switches, etc.

In addition, you receive Printed Circuit materials, including Printed Circuit chassis, special tube sockets, hardware and instructions. You also receive a useful set of tools, a professional electric soldering iron, and a self-powered Dynamic Radio and Electronics Tester. The "Edu-Kit" also includes Code Instructions and the Progressive Code Oscillator, in addition to F.C.C. Radio Amateur License training. You will also receive lessons for servicing with the Progressive Signal Tracer and the Progressive Signal Injector, a High Fidelity Guide and a Quiz Book. You receive Membership in Radio-TV Club, Free Consultation Service, Certificate of Merit and Discount Privileges. You receive all parts, tools, instructions, etc. Everything is yours to keep.

PRINTED CIRCUITRY

At no increase in price, the "Edu-Kit" now includes Printed Circuitry. You build a Printed Circuit Signal Injector, a unique servicing instrument that can detect many Radio and TV troubles. This revolutionary new technique of radio construction is now becoming popular in commercial radio and TV sets.

A Printed Circuit is a special insulated chassis on which has been deposited a conducting material which takes the place of wiring. The various parts are merely plugged in and soldered to terminals.

Printed Circuitry is the basis of modern Automation Electronics. A knowledge of this subject is a necessity today for anyone interested in Electronics.

SERVICING LESSONS

You will learn trouble-shooting and servicing in a progressive manner. You will practice repairs on the sets that you construct. You will learn symptoms and causes of trouble in home, portable and car radios. You will learn how to use the professional Signal Tracer, the unique Signal Injector and the dynamic Radio & Electronics Tester. While you are learning in this practical way, you will be able to do many a repair job for your friends and neighbors, and charge fees which will far exceed the price of the "Edu-Kit." Our Consultation Service will help you with any technical problems you may have.

FROM OUR MAIL BAG

J. Stataitis, of 25 Poplar Pl., Waterbury, Conn., writes: "I have repaired several sets for my friends, and made money. The "Edu-Kit" paid for itself. I was ready to spend \$240 for a Course, but I found your ad and sent for your Kit."

Ben Valerio, P. O. Box 21, Magna, Utah, writes: "The Edu-Kits are wonderful. Here I am sending you the questions and also the answers for them. I have been in Radio for the last seven years, but like to work with Radio Kits, and like to build Radio Testing Equipment. I enjoyed every minute I worked with the different kits; the Signal Tracer works fine. Also like to let you know that I feel proud of becoming a member of your Radio-TV Club."

Robert L. Shuff, 1544 Monroe Ave., Huntington, W. Va.: "Thought I would drop you a few lines to say that I received my Edu-Kit, and was really amazed that such a bargain can be had at such a low price. I have already started repairing radios and phonographs. My friends were really surprised to see me get into the swing of it so quickly. The Trouble-shooting Tester that comes with the Kit is really swell, and finds the trouble, if there is any to be found."
