Rarely has class been considered a variable in research seeking to identify specific effects resulting from television viewing. This research tradition has concentrated on generalizations about psychological processes rather than on group differences. In a major bibliography of almost 3,000 studies of audience behavior only seven articles on television effects and thirteen on use patterns examined class differences. Joseph Klapper’s classic summary of effects research, *The Effects of Mass Communication* (1960), did not even mention class as a factor. The few studies that have considered class found that there were no class differences in children’s susceptibility to violence on television, in contrast to the usual stereotype of working-class children being more likely to be led into such behavior.

Studies of family television use patterns have looked more broadly at people’s behavior with the television set. But even in these class is often peripheral. Books on television audiences seldom include social class as a topic in their indexes. One traditional research technique, however, has been to distinguish class differences in television use, usually with an evaluative preference for the patterns established in “higher” classes. Ira Glick and Sidney Levy’s *Living with Television* (1962) firmly established the tradition from their 1950s market surveys. The working-class family tended to use TV as a continuing background, with children and parents doing other things while the TV was on. They did not plan viewing, but watched whatever was available at the time they had to watch. They were defined as indiscriminate users, the term suggesting an unhealthy habit. Middle-class families tended to turn on the TV for a specific program and then turn it off. They planned a schedule of activities, including when and what to watch on television. The middle-class pattern was defined as intellectually superior and as approved child-rearing practice. Other researchers adopted this description of working-class viewers, confirming popular critics prejudices about the working class, and favoring of the middle class. Recent family communication research has continued to distinguish these class differences, but has avoided the evaluative tone.

Buried within the 1950s and 1960s sociological literature on working-class lifestyle are a few ethnographic observations on working-class uses of and responses to television. These have confirmed the working-class pattern of using the TV as filler and background to family interaction. They also revealed distinctive responses to program content. Working-class men preferred shows featuring a character sympathetic to working-class values. They identified with working-class types even when those types were written as peripheral characters or villains. They contradicted the notion of working-class viewers as passive and gullible.

These results are consistent with effects research which indicated that audiences tend to reject as unrealistic television portrayals that they can compare to their own experience. Thus working-class viewers would not be likely to
accept stereotypic portrayals of their class such as described above. Indirect evidence suggests that working-class viewers tended to perceive Archie Bunker as winning arguments with his college-educated son-in-law. In a recent study of soap operas and their viewers (Remote Control: Television Audiences and Cultural Power), working-class women viewers of daytime serials rejected the affluent long-suffering heroines in favor of villainesses who transgressed feminine norms and thus cast off middle class respectability.

British researchers have given more attention to class [e.g., Piepe]. Cultural studies in particular have popularized the methods of talking with working-class viewers about their reactions to television. Studies of British working-class viewers have painted a more complicated picture of working class viewing than popular stereotypes, encouraged by the portrayals of class on television, would suggest. As with the earlier American studies, working people construct their own alternative readings of television programs.

This wide range of studies over decades provide consistent evidence that working-class viewers are not the passive dupes with their eyes glued to the screen, that popular television criticism has concocted. Nor are they the bumbling, ineffectual clowns often constructed in television comedies. Rather, they use television to their advantage, and interpret content to suit their own needs and interests.

SOCIETY FOR MOTION PICTURE AND TELEVISION ENGINEERS

While the emergence of motion pictures and television is typically linked to the rise of commercial culture and mass entertainment, the extent of industry growth cannot be adequately explained without acknowledging the extensive benefits that came from technical standardization. Incorporated in July 1916, the Society for Motion Picture Engineers (SMPE) sought to act as a professional forum for its members, and to publish technical findings "deemed worthy of permanent record." The impact of the society, however, extended far beyond the research reports published...
Although American industry continued among VTR precipitous death, published victual of the color television corporations—
ated collusion rather than engineering as a network oligopoly would dominate of that limited black-and-white bandwidth of NTSC—a system that had itself been hastily (and some would say prematurely) adopted in 1941. Or again, despite the open-ended, forward-thinking proposals put forth by Jenkins for theatrical television, pay per view, and set-licencing subsidies in 1923, the harsh regulatory realities of the FCC licensing freeze from 1948 to 1952 effectively deferred development of alternative delivery technologies for decades. A three network oligopoly would dominate for almost thirty years as a result of the freeze; enabled by economic and regulatory collusion rather than engineering wisdom.

While such actions demonstrate the provisional nature of the society’s recommendations—SMPTE is not a government regulatory body like the FCC, but an association of professionals representing a wide range of proprietary corporations—subsequent breakthroughs mark key points in the history of television technology. Standards for the eventual victor in the color television race (NTSC) were finally published in April 1953. Engineers from Ampex disseminated information on the first commercially successful videotape recorder in April 1957—an event that led to the precipitous death of the kinescope, initiated intense competition among VTR developers in the years that followed, and altered forever the way viewers see liveness (live-on-tape). Although American industry lagged behind foreign competitors in the race for viable “digital” video systems, SMPTE began to disseminate engineering standards for a spate of new digital television recording formats developed in Europe and Japan starting in December 1986.

The international battle over high-definition television (HDTV) demonstrates the strategic role a standardizing organization can take in the international arena. NHK in Japan had produced and begun marketing an HDTV system in the early 1980s—long before American corporations entered the fray with working prototypes. European corporations soon offered a competing system. U.S. broadcasters, however, resisted HDTV development given the tremendous costs involved in changing-over from current transmission systems. Eventually, however, SMPTE worked on and proposed a third HDTV system. Unlike the analog systems from NHK and Europe, SMPTE’s late start allowed them to propose an all digital system. When the FCC started competitive trials between three American-centered consortia—and then cancelled the trial before rendering a verdict on the winner—the implications were clear. Government intervention meant that the U.S. would produce a single “consensus” HDTV system. The resulting “grand alliance” minimized the risk of losing an expensive R and D race, and affirmed SMPTE’s all digital lead. The foreign trade journalists howled at the prospect of what many now considered—given America’s late HDTV entry and government muscle—the odds-on international favorite. Engineering standards, then, can be political footballs used for economic leverage and technological nationalism. They also frequently provide a demilitarized zone for manufacturers; especially for those corporations that wait on the sidelines to apply the
lessons of the proprietary risk-takers; that wait, in short, until the corporations that are first off the technological runway go down in flames. Japanese equipment manufacturers—Sony and Matsushita—stood on the sidelines and watched pioneers Ampex and RCA in the 1960s. Computerized video and HDTV now show that the process works in other directions as well.

SMPTE's future influence will depend upon how well it comes to grips with several substantive changes. It must respond to the technological “convergence” blurring boundaries between film and electronic media; it must continue to demonstrate the value of common technical ground within the proprietary world of multinational corporations; and it must engage a membership that increasingly lies outside of the confines of engineering. As studios are reduced to computerized desktops, and practitioners with technical backgrounds cross-over into creative capacities (and vice versa), technological discourses will become no less important or problematic. Given the inevitable capital-intensive nature of electronic media—and the public shift to paradigms of decentralization, entrepreneurial imperative, and market volatility—issues of standardization and technological “order” will be more crucial to the future of television than ever.

**SOME MOTHERS DO ‘AVE ‘EM**

British Comedy Series

_Some Mothers Do ‘ave ‘em_ was a hugely popular British comedy series, broadcast by the BBC in the 1970s. Initially considered unlikely to succeed, the series triumphed through the central performance of Michael Crawford as the hapless Frank Spencer and became one of the most popular comedy series of the decade, attracting a massive family audience.

Frank Spencer was the ultimate “loser”, unemployable, unable to cope with even the simplest technology, and the victim of his surroundings. Every well-meaning attempt that he made to come to terms with the world ended in disaster, be it learning to drive, getting a job, or realizing some long-cherished dream. What saved him, and kept the story comic, was his innocence, his dogged persistence, and his outrage at the injustices he felt he had suffered.

The theme of the naive innocent comically struggling in an unforgiving world is an old one, but in this incarnation the most obvious antecedents for the slapstick Spencer character were such silent movie clowns as Charlie Chaplin’s tramp and, some three decades later, British cinema’s Norman Wisdom. Writer Raymond Allen insisted, however, that he based the character on himself, quoting as his qualifications as the original Frank Spencer his outdated dress sense, complete lack of self-confidence, and overwhelming inability to do anything right. As proof of the character’s origins, Allen recalled how he had bought himself a full-length raincoat to wear to the first rehearsals of the series in London—and was dismayed to see Crawford acquire one virtually the same as the perfect costume to play the role. The mac, together with the beret and the ill-fitting tanktop jumper, quickly became visual trademarks of the character.

It was Michael Crawford (really Michael Dumble Smith), complete with funny voice and bewildered expres-

sion, who turned Frank Spencer into a legend of British television comedy, employing the whole battery of his considerable comic skills. Disaster-prone but defiant, the little man at odds with a society judging people solely by their competence and ability to fit in, he turned sets into battlefields as he fell foul of domestic appliances, motor vehicles, officials, in-laws, and just about anyone or anything else that had the misfortune to come into his vicinity.

Some Mothers Do 'ave 'em was essentially a one-joke escapade, with situations being set up chiefly to be exploited for the admittedly often inventive mayhem that could be contrived from them. What kept the series engaging, however, was the pathos that Crawford engendered in the character, making him human and, for all the silliness of many episodes, endearing. In this Crawford was ably abetted by Michelle Dotrice, who played Frank Spencer's immensely long-suffering but steadfastly loyal (if occasionally despairing) girlfriend, and later wife, Betty.

In the tradition of the silent movie stars, Crawford insisted on performing many of the hair-raising and life-threatening stunts himself, teetering in a car over lofty cliffs, dangling underneath a helicopter, and risking destruction under the wheels of a moving train in a way that would not have been tolerated by television companies and their insurers a few years later. The professionalism that he displayed in pulling off these stunts impressed even those who balked at the show's childish humour and overt sentimentality. It is not so surprising that Crawford himself, after six years in the role, was able to escape the stereotype that threatened to obscure his talent and to establish himself as a leading West End and Broadway musical star.

SONY CORPORATION
International Media Conglomerate

A n innovative Japanese consumer-electronics company founded by Masaru Ibuka and Akio Morita in 1946, Sony started out manufacturing heating pads, rice cookers, and other small appliances, but soon switched to high technology, bringing out Japan's first reel-to-reel magnetic tape recorder in 1950 and then its first FM transistor radio in 1955. Sony's later innovations in consumer electronics included the Trinitron color television picture tube (1968), the Betamax videocassette recorder (1975), the Walkman personal stereo (1979), the compact disc player (1982), the 8mm video camera (1985), and the Video Walkman (1988).

Sony's success in marketing its products worldwide rested on distinctive styling and "global localization," a practice that retained product development in Japan, while disbursing manufacturing among plants in Europe, the United States, and Asia. To maintain quality control, Sony dispatched large numbers of Japanese managers and engineers to supervise these plants.

Under the leadership of Norio Ohga, who joined the company 1959 and ran Sony's design center, Sony pursued the course of marrying Japanese consumer electronics with American entertainment software. After purchasing CBS Records for $2 billion in 1987, Sony initiated the Japanese invasion of Hollywood by acquiring Columbia Pictures Entertainment (CPE) from Coca-Cola for $3.4 billion in 1989. The following year, Sony's Japanese rival Matsushita Electric Industrial Company, the largest consumer-electronics company in the world, purchased MCA for $6.9 billion. The two takeovers led to charges that the Japanese were about to dominate American popular culture, but the controversy soon died out when it became apparent that Sony and Matsushita would have to stay aloof from production decisions if their studios were to compete effectively.

In 1989, the year Sony acquired CPE, Sony generated over $16 billion in revenues from the following categories: (1) video equipment other than TV—$4.3 billion; (2) audio equipment—$4.2 billion; (3) TV sets—$2.6 billion; (4) records—$2.6 billion; and (5) other products—$2.5 billion. The CPE acquisition, which included two major studios—Columbia Pictures and TriStar Pictures—home video distribution, a theater chain, and an extensive film library, brought in an additional $1.6 billion in revenues.

By becoming vertically-integrated, Sony hoped to create "synergies" in its operations, or stated another way, Sony wanted to stimulate the sales of hardware by controlling the production and distribution of software. The company may have been reacting to the so-called "format wars" of the 1970s when Sony's Betamax lost out to Matsushita's VHS video tape recorder. Industry observers believed that the greater availability of VHS software in video stores naturally led consumers to...
choose VHS machines over Betamaxes. Sony would not make the same mistake again and found a way to protect itself as it contemplated introducing the 8-millimeter video and high definition television systems it had in development.

To strengthen CPE as a producer of software, Sony spent an added $1 billion and perhaps more to acquire and refurbish new studios and to hire film producers Peter Guber and Jon Peters to run the company, which it renamed Sony Entertainment. Sony performed reasonably well under the new regime until 1993, but afterwards, Columbia and TriStar struggled to fill their distribution pipelines. Virtually all of Sony’s hits had been produced by independent producer affiliates and when these deals lapsed, Sony lagged behind the other majors in motion picture production and market share. Some industry observers claimed Sony lacked “a clear strategy” for taking advantage of the rapid shifts in the entertainment business. After top production executives left Columbia and TriStar in 1994, Sony took a $3.2 billion loss on its motion picture business, reduced the book value of its studios by $2.7 billion, and announced that “it could never hope to recover its investment” in Hollywood.

SOUL TRAIN

U.S. Music-Variety Show

Soul Train, the first black-oriented music variety show ever offered on American television, is one of the most successful weekly programs marketed in first-run syndication and one of the longest running syndicated programs in American television history. The program first aired in syndication on 2 October 1971 and was an immediate success in a limited market of seven cities: Atlanta, Cleveland, Detroit, Houston, Los Angeles, Philadelphia and San Francisco. Initially, syndicators had difficulty achieving their 25-city goal. However, Soul Train’s reputation as a “well produced” and “very entertaining” program gradually captured station directors’ attention. By May 1972, the show was aired in 25 markets, many of them major cities.

The show’s emergence and long-standing popularity marks a crucial moment in the history of African-American television production. Don Cornelius, the show’s creator, began his career in radio broadcasting in Chicago in November 1966. At a time when African Americans were systematically denied media careers, Cornelius left his $250-a-week job selling insurance for Golden State Mutual Life to work in the news department at WVON radio for $50 a week. It was a bold move, and clearly marked his committed optimism. By seizing a small opportunity to work in radio broadcasting, Cornelius was able to study broadcasting first hand. His career advancement in radio included employment as a substitute disc jockey and host of talk shows. Radio broadcasting techniques informed Cornelius’ vision of the television program Soul Train.

By February 1968, Cornelius was a sports anchorman on the black-oriented news program, “A Black’s View of the News” on WCIU-TV, Channel 26, a Chicago UHF TV station specializing in ethnic programming. Cornelius pitched his idea for a black-oriented dance show to the management of WCIU-TV the following year. The station agreed to Cornelius’ offer to produce the pilot at his own expense in exchange for studio space. The name Soul Train was taken from a local promotion Cornelius produced in 1969. To create publicity, he hired several Chicago entertainers to perform live shows at up to four high schools on the same day. The caravan performances from school to school reminded the producer of a train.

Cornelius screened his pilot to several sponsors. Initially, no advertising representatives were impressed by his idea for black-oriented television. The first support came from Sears, Roebuck and Company, which used Soul Train to advertise phonographs. This small agreement provided only a fraction of the actual cost of producing and airing the program. Yet, with this commitment, Cornelius persuaded WCIU-TV to allow the one-hour program to air five afternoons weekly on a trial basis. The program premiered on WCIU-TV on 17 August 1970, and within a few days youth and young adult populations of Chicago were talking about this new local television breakthrough. The show also had the support of a plethora of Chicago-based entertainers. As an independent producer of the program, Cornelius acted as host, producer and salesman five days a week. He worked without a salary until the local advertising community began to recognize the program as a legitimate advertising vehicle, and Soul Train began to pay for itself.

The Soul Train format includes guest musical performers, hosts, and performances by the Soul Train dancers. Set in a dance club environment, the show’s hosts are black entertainers from music, television and the film industries. The dancers are young women and men, fashionably dressed, who dance to the most
popular songs on the Rhythm and Blues, Soul, and Rap charts. The show includes a game called "The Soul Train Scramble," in which the dancers compete for prizes. The program's focus on individual performers, in contrast to the ensemble dancing more common in televisal presentation, has been passed down to many music variety shows such as American Bandstand, Club MTV, and Solid Gold.

The television show's success can be linked to the increasing importance of black-oriented radio programs taking advantage of FM stereo sound technology. With that support soul and funk music exploded in popularity across the nation. Black record sales soared due to the increased radio airplay, and the opportunity to view popular performances without leaving home became the appeal of Soul Train.

The popularity of the show in Chicago prompted Cornelius to pursue national syndication of the program. One of the nation's largest black-owned companies, the Johnson Products Company, agreed to support the show in national syndication. Sears, Roebuck and Company increased their advertising support. In 1971 Cornelius moved the production of the Soul Train to Hollywood. The show continued to showcase musical talent and to shine the spotlight on stand up comedians. The program's presentation of vibrant black youth attracted viewers from different racial backgrounds and ethnicities to black entertainment. The show has been credited with bringing 1970s black popular culture into the American home.

In 1985, the Chicago-based Tribune Entertainment company became the exclusive distributor and syndicator of Soul Train. In 1987, the Tribune company helped to launch the "Soul Train Music Awards." This program is a live two-hour television special presented annually in prime-time syndication and reaches more than 90% of U.S. television households. The Soul Train Music Awards represent the ethos of the Soul Train program, which is to offer exposure for black recording artists on national television.

PROGRAMMING HISTORY
Syndicated, Various Times
1971–

SOUTH AFRICA

The South African television service, launched in 1976, is among the youngest in Africa, but by far the most advanced on the continent. Propped by the country's large economy and high living standards among the minority populations, South Africa's television industry developed rapidly to become one of the first satellite-based broadcasting systems on the continent, with the most widely-received national service.

The industry is dominated by a state organization, the South African Broadcasting Corporation (SABC), which was established in 1936 by an act of Parliament. The corporation however concentrated on radio broadcasting during its first 40 years of operation, as the racist National Party in power during most of this period opposed the introduction of television under the pretext of preserving cultural sovereignty. The launching of the communication satellite Inte-
sat IV in 1972 by Western countries ushered in new fears about the dangers of uncontrolled reception of international television via cheap satellite dishes. The South African government, fearing imperialism, swiftly resolved to introduce a national television service as an anti-imperial device.

Between 1976 and 1990, the SABC-TV service was state-controlled and heavily censored, and functioned as an arm of the government. SABC was banned from broadcasting pictures or voices of opposition figures, and its editorial policy was dictated through an institutional censoring structure.

The blackout on politically-dissenting voices was discontinued in 1990 as the corporation purged itself of racial bias, and shifted its focus to public service broadcasting. Since then, SABC-TV has balanced its programs to reflect the country's cultural and political diversity and embraced a policy of affirmative action in staff recruitment.

At inception, SABC-TV operated four national television channels: TV-1, TV-2, TV-3, and TV-4. This configuration was revised in a 1992 restructuring program; TV-1 retained its autonomy and the rest were merged into a new multicultural channel called Contemporary Community Values Television (CCV-TV). The two national channels now compete for audiences and advertising with M-Net, a highly successful privately-owned pay channel.

TV-1, the largest and most influential, was directed at the minority white population, with all programs broadcast in Afrikaans and English. Since mid-1986, the channel's 18-hour daily programming has been relayed through a transponder on an Intelsat satellite to 40 transmitting stations with an ERP of 100Kw, and 42 stations with an ERP range of between 1Kw and 10Kw. These transmissions are augmented by 63 gap fillers and an estimated 400 privately-owned low power transmitters, enabling the channel to be received by three quarters of the country's population.

The CCTV channel broadcasts in nine local languages via fourteen 100Kw terrestrial stations, nine 1 to 10Kw stations, and 33 gap fillers. The channel's programming is received by 64% of the country's population.

SABC's domination of radio and television has enabled it to develop advanced products and services for its audience. The corporation offers simulcasting of dubbed material on television with the original sound track on radio Teledata, a teletext service initially established as a pilot project on spare TV-1 signal capacity, has been expanded to a 24-hour service with over 180 pages of news, information, and educational material. Selected material from the Teledata database is also copied onto TV-1 outside program transmission to provide an auxiliary service that is available on all TV sets countrywide.

The Electronic Media Network, widely known by its acronym, M-Net, is South Africa's only private television channel. Funded by a consortium of newspaper publishers in October 1986 to counter the growing threat that the commercially-driven SABC-TV posed to the newspaper industry, M-Net has grown into the most successful pay-TV station in the world outside the United States. Its nearly 850,000 subscribers (1995 estimate) received 120 hours a week of entertainment, documentaries, film, series, and miniseries. The large national audience is accessed through a number of leased or rented SABC terrestrial reception facilities.

The subscription service is offered on an internationally-patented decoder originally developed from the American Oak Systems decoder technology. M-Net's subscriber management subsidiary, Multichoice Ltd., markets the programming services to individual subscribers across Southern Africa. It also markets the Delta 9000 Plus decoders to pay-TV operations elsewhere; by 1994, it was marketing the technology to Pelepiu pay-TV system in Italy. Another of its subsidiaries, M-Net International, has been actively seeking subscribers in tropical and northern Africa after successful operations in Namibia, Lesotho, and Swaziland. Through the use of two transponders on C-band satellites, the channel has a footprint covering the entire African continent and parts of the Middle East. During 1994, Multichoice Ltd. signed an agreement with a private TV station in Tanzania to relay programming across the country via satellite. At the same time, M-Net International began broadcasting across Africa on a channel shared with the BBC World Service Television. Plans were also afoot to extend rebroadcast services to sub-Saharan African countries, and to expand satellite services and individual subscriptions.

Three small regional television stations are operated in the former homelands of Bophuthatswana, Transkei, and Ciskei. The Bophuthatswana television, Bop-TV, is a commercial operation that is aired via 18 small transmitters (all with ERP below 1Kw), and relay stations in Johannesburg and Pretoria. The Transkei Broadcasting Corporation operates a television service which competes with the pay service of M-Net Transkei. M-Net Transkei is a scrambled service except between 3:00 P.M. and 5:00 P.M. when its signal is unscrambled. The Rhena Church of South Africa runs two private TV stations in Ciskei and Transkei, which broadcast in English via two small stations. Plans were underway in 1994 to install two 1Kw transponders.

Since the early 1980s, South Africa has been considering venturing into satellite communications. The first involvement in satellite-aided broadcasting came in mid-1986 when a transponder was fitted on an Intelsat satellite to relay TV-1 to terrestrial transmitting stations. In early 1992, the C-band satellite service was upgraded from a hemispherical beam to a zonal beam to enhance the establishment of cellular transmitters in remote areas of the country. At the same time, the transmission standards were upgraded from B-MAC to PAL System 1. Together with the introduction of transmissions in the Ku-Band range, these modifications are expected to provide television coverage to the entire country. The Ku-Band satellite service is also expected to be utilized in telecommunication applications.

With over 150 production houses, South Africa has the largest broadcasting production industry on the continent. Local productions, from SABC teams and independent production houses, account for about 50% of airtime of SABC-TV and between 10 and 30% on M-Net. Both organizations have laid heavy emphasis on Afrikaans lan-
guage productions. However, independent producers, brought together by the Film and Television Foundation (FTF), have in the past lobbied for higher local content quotas. However, such proposals have been contested by M-Net on the grounds that pay-TV service is customer-driven. The FTF suggests that where a broadcaster is unable to offer local content quotas, a levy should be introduced on the turnover to finance local productions.

—Nixon K. Kariithi

FURTHER READING

SOUTH KOREA

In the past half century, television broadcasting has been introduced in the majority of Western nations. In the 1950s, when television broadcasting evolved into the dominant electronic medium in the West, some Asian countries established their own television services. Korea, the fourth adopter in Asia, began television broadcasting on 12 May 1956 with the opening of HLKZ-TV, a commercially operated television station. HLKZ-TV was established by the RCA Distribution Company (KORCAD) in Seoul with 186-192 MHz, 100-watt output, and 525 scanning lines.

Korean television celebrated its 40th birthday in 1996 and a great deal has changed in the past four decades. In 1956 there were only 300 television sets in Korea, but that number has climbed to an estimated 6.27 million by 1980 and television viewing has become the favorite form of entertainment or amusement for the mass audience. As of 1993, Koreans owned nearly 11.2 million television sets, a penetration rate of nearly 100 percent.

The early 1960s saw a phenomenal growth in television broadcasting. On 31 December 1961 the first full-scale television station, KEWS-TV, was established and began operation under the Ministry of Culture and Public Information. The second commercial television system, MBC-TV, following the first commercial televisions, TBC-TV, made its debut in 1969. The advent of MBC-TV brought significant development to the television industry in Korea and after 1969 the television industry was characterized by furious competition among the three networks.

The 1970s were highlighted by government intervention into the media system in Korea. In 1972, President Park’s government imposed censorship upon media through the Martial Law Decree. The government revised the Broadcasting Law under the pretext of improving the quality of television programming. After the revision of the law, the government expanded its control of media content by requiring all television and radio stations to review programming before and after transmission. Although the government argued that its action was taken as a result of growing public criticism of broadcasting media practices, many accused the government of wanting to establish a monopoly over television broadcasting.

The 1980s were the golden years for Korea’s television industry. Growth was phenomenal in every dimension: the number of programming hours per week rose from 56 in 1979 to nearly 88.5 in 1989; the number of television stations increased from 12 in 1979 to 78 by 1989; and the number of television sets grew from 4 million in 1979 to nearly 6 million in the same period. In 1981 another technological breakthrough happened, the introduction of color television. Color broadcasting, however, occasioned a renewal of strong competition among the networks.

As the decade progressed, more controversial entertainment programming appeared, prompting the government to establish a new broadcasting law. With the Broadcasting Law of 1987, the Korean Broadcasting Committee was established to oversee all broadcasting in the country. The most important feature of this law was that it guaranteed freedom of broadcasting. However, one of its main provisions required that television stations allocate at least 10% of their broadcasting hours to news programming, 40% to cultural/educational programming, and 20% to entertainment programming. At the time of the imposition of these new regulations, the three networks broke new ground by successfully broadcasting the 1988 Seoul Olympics. The coverage of the 24th Olympiad was the product of technological prowess and resourceful use of manpower by the Korean broadcasting industry.

Since the early 1980s, the structure of the Korean television industry has remained basically unchanged. The government ended the 27-year-long freeze on new commercial licenses by granting a license to SBS-TV in 1990. This breakthrough paved the way for competition between the public and the private networks.

Another technological breakthrough took place in the beginning of the 1990s with the introduction of cable television. In 1990, the government initiated an experimental
multi-channel and multi-purpose cable television service. In addition, Korea launched its first broadcasting/communication satellite, Mungungwha, to 36,000 km above the equator in 1995. The development of an integrated broadband network is expected to take the form of B-ISDN immediately after the turn of the century.

The decade of the 1990s is likely to be a period of great technological change in the Korean broadcasting industry, which will make broadcasting media even more important than in the past. In this decade the Korean broadcasting industry will maximize the service with new technological developments such as DBS, satellites, and interactive cable systems, all of which will allow Korea to participate fully in the information society.

Regulation of Broadcasting

The aim of the latest Broadcasting Act, legislated on 1 August 1990, is to strive for the democratic formation of public opinion and improvement of national culture, and to contribute to the promotion of broadcasting. The act consists of six chapters: (1) General Provisions; (2) Operations of the Broadcasting Stations and Broadcasting Corporations; (3) The Broadcasting Commission; (4) Payment and Collection of the Television Reception Fee; (5) Matters to be observed by the Broadcasting Stations; and (6) Remedy for Infringement.

In the article on the definition of terms, "broadcast" is defined as a transmission of wireless communication operated by a broadcast station for the purpose of propagating to the general public, news, comments and public opinion on politics, economy, society, culture, current events, education, music, entertainment, etc. Accordingly, cable television is not subject to this act.

Article Three of the act states: (1) The freedom of broadcast programming shall be guaranteed, and (2) No person shall regulate or interfere with the programming or operation of a broadcasting station without complying with the conditions as prescribed by this act or other acts.

Regarding the operation of broadcasting stations, it is prescribed that no person may hold stocks or quotas of the same broadcasting corporation, including stocks or quotas held by a persona having a special relation, in excess of one-third of the total stocks or quotas.

No broadcasting corporation may concurrently operate any daily newspaper or communication enterprise under the control of the Registration of Periodicals. Inflow of foreign capital is also prohibited. That is, no broadcasting corporation shall receive any financial contribution on the pretext of donation, patronage, or other form of foreign government or organization, except a contribution from a foreign organization having an objective of education, physical training, religion, charity or other international friendship, which is approved by the Minister of Information.

Any person who has a television set in order to receive a television broadcast, shall register the television set and pay the reception fee of 2500 Won (about $3) a month. Black-and-white television sets are not subject to the reception fee.

An Overview of Television Programming in Korea

Currently, the four networks (KBS-1TV, KBS-2TV, MBC-TV, and SBS-TV) offer four hours of daytime broadcasting beginning at 6:00 A.M., then resume broadcasting from 5:30 P.M. to midnight. There is no broadcasting between 10:00 A.M. and 5:30 P.M. on weekdays. However, the four networks operate an additional 7.5 hours on Saturday and Sunday.

A typical programming schedule for Korean television networks begins at 6:00 A.M. with either a "brief news report" or "a foreign-language lesson" (English or Japanese). Early morning programs offer daily news, information, and cultural/educational programs. Each network begins its evening schedule at 5:30 P.M. with an afternoon news brief, followed by a time slot reserved for network children's programming. After this another news brief at 7:00 P.M. introduces prime-time. The four networks fill the next three hours with programs ostensibly suitable for family viewing, including dramas, game shows, soap operas, variety shows, news magazines, situation comedies, occasional sports, and specials. Traditionally, networks also broadcast 40 to 50 minutes of "Nine O'Clock News" during prime-time. This news broadcast attracts many viewers and produces extremely high ratings. Over the course of the evening, each network also provides brief reports and sports news. Late evening hours are usually devoted to imported programs, dramas, movies, and talk shows. Weekend programming is similar to weekday programming except that it is designed to attract specific types of viewers who are demographically desirable to advertisers.

In its early years, Korean television networks depended heavily on foreign imports, most from the United States, for their programming. Overall, imported programs averaged approximately one-third of the total programming hours in 1969. In 1983, 16% of programming originated outside the country. By 1987 imported programming had decreased to 10%, though in March 1987, the networks did still broadcast programs such as Love Boat, Hawaii 5-0, Mission Impossible, "Weekend American Movies," and cartoons.

In addition to watching imported television programs on Korean television networks, many Koreans also watch AFKN-TV, which is an affiliate of the American Forces Radio and Television Service, the second largest of five networks managed by the Army Broadcasting Service. AFKN has been broadcasting for 39 years as an information and entertainment medium for 60,000 United States military personnel, civilian employees, and dependents. AFKN-TV also plays a significant role for many young Koreans. No one is quite sure of the size of the Korean "shadow audience" for AFKN-TV. However, it is watched by so many ordinary people that all Korean newspapers and most television guides carry AFKN-TV along with Korean program schedules.
Research by Drs. Won-Yong Kim and Jong-keun Kang has mapped the "cultural outlook" of Korean television. Their sample includes all prime-time dramatic programming on three Korean television networks aired during 1990. It demonstrates that the world of Korean prime-time television significantly under-represents children and adolescents. It grossly over-represents adult groups, however — those who are between the ages of 20 and 39, who constitute one-third of the Korean population, comprise 56.7% of the fictional population. In sum, age distribution in the world of Korean television is bell shaped as compared to the diagonal line of the Korean population.

Another significant difference between Korean prime-time drama and reality is that farmers and fishermen, who constitute 25% of the population, make up only 7.4% of television characters. Social class distribution among characters reveals that nearly half of all television characters appear in the "lower" part of a three-classification.

With regard to violence, among 49 characters who are involved in violence, 44.9% commit violence and 55.1% suffer it. Among them, mostly adult groups of both sexes are involved with violence. Children and adolescents of both sexes are never involved in violence and young female adults are the most frequent victims in all age groups.

Although these findings show somewhat different patterns between Korea and other countries, they are not strictly comparable with each other, due to the differences among their media systems.

**The Korean Television Audience**

According to Media Service Korea, each household in Seoul has an average of 1.6 television sets. A poll conducted by KBS shows that Korean television viewers watch an average of a little over three hours on weekdays, 4.5 hours on Saturday, and about 5.5 hours on Sunday. When broken down by demographic information, men watch more television than women. On weekends there were no differences in television viewing among age groups.

In terms of ratings, the most popular time slot is between the hours of 9:00 P.M. and 10:00 P.M. and the highest-rated program is the 9:00 P.M. evening news. Approximately 70% of the adult audience watches the news program every night. The second highest rated time slot is between the hours of 7:00 and 8:00 A.M. The average ratings are 31 points on weekdays and 20 points on weekends.

Korean adults frequently watch news and comedy programs, while teenagers watch comedy programs more frequently and people in the 30-50 age group watch the news more. Men tend to watch more sports, but women tend to watch soap operas and movies.

In terms of information provided by audiences with reference to their stated uses and gratifications, the motive for watching television is most often described as intentions: "to get information" and "to understand other opinions and ways of life," "to get education and knowledge," and "to relax." Another study done by the KBS Broadcasting Culture Center indicates that many viewers considered watching television as a news providing function. Others thought of it as a "craving for refreshment," a "social relation function," or "identification." The motives for watching television news are cited variously as a way to "get information from around the world," a practice done "out of habit" or with the intent "to listen to expert opinions and commentary." For soap operas, the stated reasons for viewing include "because they are interesting," "to kill time," and for some "they seem useful." People watch comedy "to alleviate stress" and "to have fun."

Television ratings and audience viewing information is studied by most broadcasting companies as well as research firms and in Korea, ratings have been measured by diary and people-meter. Currently, a people meter is generally used for gathering ratings and Media Service Korea is engaged in the business of providing the people meter ratings.

**SPACE PROGRAM AND TELEVISION**

The American Space Program and the American television industry contributed mightily to each other's growth. Space missions have matched Hollywood productions for drama, suspense and excitement, and have consistently pulled in some of the medium's largest audiences. America's first astronauts were among television's first celebrity heroes. Some television journalists, such as Walter Cronkite and ABC's Jules Bergman (1930–1987), became famous for their chronicalling of the space program. The 69-year-old Cronkite even applied to become an astronaut.
in 1986 (as part of NASA's short-lived "journalist in space" program).

The Soviet Union's Sputnik satellite launch in 1957 was one of the earliest big stories for television news, then growing rapidly in popularity and influence. With the framing of the Sputnik story as crisis, an affront to American superiority and a military threat, the U.S. government justified a strong response, a crash program to beat the Soviets to space. Unfortunately, several of the earliest uncrewed U.S. rocket tests did just that—crash—further heightening the crisis atmosphere as each major attempt was anxiously reported on the 15-minute national evening newscasts.

Eventually American satellites were launched successfully, and in 1959 seven military pilots were chosen for the astronaut corps. Television, egged on by the print press, elevated the astronauts to hero status, as celebrated as Hollywood's leading stars. Publicists from NASA, the new civilian space agency, worked to fuel that perception. They schooled the seven in on-camera behavior and prohibited military uniforms, to the astronauts' discomfort but to the benefit of the program's all-civilian image.

Immediately after the triumphant sub-orbital flight of Alan Shepard in May 1961 (following the orbital flight of Cosmonaut Gagarin), Vice President Johnson, with Defense Secretary Robert McNamara and NASA Administrator Webb, sent a report to President John F. Kennedy justifying the eventual forty billion dollar investment in a moon landing program. "The orbiting of machines is not the same as orbiting or landing of man...," they wrote; "It is man in space that captures the imagination of the world." So from its inception, the crewed space program had at its core a propaganda objective—capturing the world's imagination. With Johnson's report as ammunition and the political goal of justifying massive government projects and fulfilling his vision of a "new frontier", Kennedy went before Congress to challenge the nation to land a man on the moon before 1970.

The remaining five Mercury space flights (1961–1963) and ten Gemini flights (1965–1966) were covered virtually from launch to splashdown by adoring TV networks. Each mission promised new accomplishments, such as Ed White's first American spacewalk. For television news it was a welcome reprieve from the 1960s morass of assassination, war, and inner-city unrest. A favorite theme of television—the "horse-race"—here between the Soviet and American space programs, was prominent. However, by 1965 it was apparent that the Soviet's had no hope of putting someone on the moon, a fact that rarely entered the "space race" discourse.

The ideal marriage of space and television was not merely the result of political and ideological agendas nor technical and logistical circumstance, but of more resonant connections between the program and American cultural mythology. The space program was a Puritan narrative, with its crew-cut NASA technocrats tirelessly striving toward the Moon, and a Western narrative, with lone heroes conquering a formidable new frontier (from mostly western facilities). And as the parallel narrative to the Vietnam war, it offered a reassuringly benign, yet pow-

ceful government, while simultaneously reinforcing cold war fear (and the need for military spending) in demonstrating the awesome power of rockets.

In 1967 three astronauts died in an early Apollo program test and the theme of astronaut as hero was tragically revived, and the public reminded of the risks of conquering space. But the first of the Apollo flights (1968–1972) were enormously successful, including the Christmas, 1968, first lunar orbits by Apollo 8. The astronaut's reading from the Book of Genesis while in lunar orbit made for stirring television, but firmly anchored the NASA TV spectacular as a believers-only enterprise. In July 1969, the space TV narrative reached its climax, as the networks went on the air nearly full time to report the mission of Apollo 11, the first lunar landing. 528 million people around the world—but not in the Soviet Union—marvelled at Apollo 11 on TV.

As with other Apollo missions providing TV coverage from the spacecraft, informal visits with the astronauts were highly scripted, using cue cards. Second moon walker Edwin Aldrin suggested the United States Information Agency scripted Apollo Eight's Bible reading and Neil Armstrong's first words from the lunar surface. Whether Armstrong said, "That's one small step for man," or "a man", as he intended (with the article "a" lost to static), has never been resolved. The blurry black-and-white images of Armstrong jumping onto the lunar surface and the short surface explorations by Armstrong and Aldrin are widely regarded as television's first, and perhaps greatest, example of unifying a massive worldwide audience in common wonder and hope.

After the Apollo 11 television spectacular, coverage of the following moon missions became increasingly brief
and critical. Under considerable pressure to begin cutting back, NASA eliminated the last three planned Apollo missions, terminating the program with Apollo 17 in 1972. NASA actually paid the networks to cover the last Apollo mission (NASA official Chris Kraft, Jr., quoted in Hurt, 282). Coverage was spectacular nonetheless, from the nail-biting return of the explosion-crippled Apollo 13 spacecraft, to the lengthy moon walks and moon buggy rides of the last Apollos, covered live with color cameras. Such a part of American culture was NASA of the 1960s that it routinely provided technical assistance and advice to Hollywood, as with the many permutations of Star Trek, or provided entire series storylines, as with I Dream of Jeannie. Footage from NASA’s massive film library appears in all manner of productions.

Television coverage of the long-duration Skylab missions (1973–1974) provided entertaining images of astronaut antics in weightlessness, but was overshadowed by the Watergate hearings. Watergate signalled an end of the trust of government and hero worship characterizing the 1960s space program. NASA could no longer sell its heroes and expensive programs to the public. The heroism of ex-astronauts was often dismantled by the same media which had constructed it, as astronauts were exposed in shady business deals or dysfunctional lives, criticized for making commercials, or doubted in new corporate and political roles. Television could not accept the astronaut as human.

Interest in space was occasionally revived in the 1970s by spectacular NASA accomplishments. In 1976 America enjoyed the extraordinary experience of seeing live pictures of the Martian surface as they arrived from the Viking lander—a visual thrill rivalling coverage of Apollo 11. In subsequent years the Voyager and Pioneer spacecraft had close encounters with the outer planets of the solar system, sending back dazzling images. But television coverage outside of regular newscasts was minimal. As Johnson’s report had predicted, television reported the accomplishments of NASA’s incredible robot explorers, but reserved its greatest excitement for crewed missions.

Between the last Skylab mission and the first Space Shuttle orbital mission in 1981, the only crewed space flight was Apollo-Soyuz in 1975, an odd public relations stunt intended as a tangible demonstration of detente with the Soviet Union. The orbital link up of three astronauts with two cosmonauts was entertaining if unimpressive by lunar mission standards, but NASA public relations was heavy handed. The mission was highly scripted and choreographed for a potential international television audience of a half billion. As Walter Cronkite noted, “This is one mission where we can truly say the television picture is as important as the mission itself, because that is the picture of detente.” It was important in the Soviet Union, where it was the first space mission on live television.

The first Space Shuttle test landings over California were covered live, with NASA providing remarkable pictures from chase planes as Enterprise (named after pressure from Star Trek fans) separated from its 747 mother plane and glided to Earth. Coverage of the long delayed first Shuttle space flight in 1981 was as abundant as in 1960s missions, and occasionally reminiscent of 1960s coverage for its cold war rhetoric—including the breathless reporting of a Soviet spy ship lurking off the coast as the Shuttle Columbia returned from orbit.

Coverage of the space shuttle rapidly diminished, and live coverage of missions had ended long before the 25th shuttle mission on 28 January 1986. On that day the shuttle Challenger, with a crew of seven including school teacher and media darling Christine McAuliffe, exploded after lift off like a daytime fireworks display. As President Reagan would speculate and the media would faithfully repeat, TV became America’s “electronic hearth,” a common gathering place to seek understanding and solace. Television was unprepared for such a tragedy, with speechless anchors, an unfortunate tendency to repeat the videotape of the explosion constantly, and irresponsible speculation about the possibility of survivors. But as shared national tragedy, it was an event like none other.

Thanks in part to television, the history of the American space program and its role in American life (including the dramatic acceleration of technological development which resulted, to which the television industry itself owes much), has never been completely written. Television presented fleeting spectacles, devoid of analysis, perspective, and retrospective. Because America saw the Space Program as television program, there was little demand for deeper analysis in journalism and literature. Only since the 1970s have writers and scholars attempted to specify the place of the space program in American culture. While television may have obscured issues, it presented such unforgettable images that few people who witnessed Apollo 11, Viking, or Challenger on TV have forgotten where they watched. But with nearly seventy space shuttle missions to date, the space program has now become too ordinary for television.

**FURTHER READING**

Five national channels now serve a Spanish population of 39.4 million and a television audience of 29.2 million. Of these five, two, TVE-1 and TVE-2, are state-owned, financed by subsidy and advertising. Antena-3 and Telecino are private channels, financed by advertising; Canal+ is private and financed by subscription.

Eight regional channels also contribute to the Spanish television environment: TV-3 and Canal 33 (financed by advertising and subsidy of the Cataltan government); Canal Sur (financed by advertising and subsidy of the Andalusian government); TeleMadrid (propriety of the Madrid regional government, financed by advertising and bank loans); Canal 9 (financed by advertising and subsidy of the Valencian government); TVG (financed by advertising and subsidy of the Galician government); ETB-1 and ETB-2 (financed by advertising and subsidy of the Basque government). Projects for cable television in the year 2000 speculate that 3 million TV households will be connected with 1 million subscribers. By that year, Spain will have exceeded nine decades of broadcasting.

In 1908, the Spanish government enacted a law that gave the central state the right to establish and exploit "all systems and apparatuses related to the so-called 'Hertzian telegraph,' 'etheral telegraph,' 'radiotelegraph,' and other similar procedures already invented or that will be invented in the future." Scattered experiments in radiowave communication evolved into regular broadcasts by 1921 with such events as Radio Castilla's program of concerts from the Royal Theater of Madrid. In 1924, the first official license for radio was granted, and all experimental stations were ordered to cease broadcasting and request state authorization. The first "legal" radio broadcast began in Barcelona and, like most radio programs that preceded the Spanish Civil War (1936-39), it was started up by private investors to make a profit. The broadcasting law of 1934 defined radio as "an essential and exclusive function of the state" and was amended in 1935 to confirm that all "sounds and images already in use or to be invented in the future" would be established and exploited by the state.

The government of the Second Republic (1931-39) kept centralized control over spectrum allocation and the diffusion of costly high-power transmitters, while it encouraged independent operators to install low-power transmitters for local radio. Radio spread with investments in urban zones, and only one significant private chain, the Union Radio, showed signs of economic concentration. The conditions of the Spanish Civil War (1936-39) halted the growth of independent radio when broadcasters were transformed into voices of military propaganda on both sides of the conflict. The leader of the fascist insurgents, Francisco Franco, ordered the nationalization of all radio stations under the direction of the new state, and the existing collection of transmitters merged into a state-controlled network called Radio Nacional de Espana. Use of the distinct idiom of Basque, Catalan, Galician was outlawed, and new laws aimed at the press gave the Ministry of the Interior full power to suppress communication which "directly, or indirectly, may tend to reduce the prestige of the Nation or Regime, to obstruct the work of the government of the new State, or sow pernicious ideas among the intellectually weak."

The first public demonstration of television took place in Barcelona in 1948 as part of a promotion by the multinational communications firm Philips. Experiments continued until October 1956, when the first official TV broadcast appeared on an estimated six hundred television sets in Madrid—the program consisted of a mass conducted by Franco's chaplain, a speech by the Minister of Information and Tourism commemorating the twenty year regime, and a French language documentary. Much of the early programming came from the U.S. Embassy, but there were also five transmissions of variety and children's shows, and a news program was started in 1957. By 1958 there were approximately thirty thousand TV sets in Madrid. From the beginning, Televisión Española (TVE) was supported by advertising, although it also received subsidies derived from a luxury tax on television receivers. In 1959, TVE reached Barcelona via terrestrial lines, where a second studio was soon installed. At the end of the decade, there were fifty thousand sets in use. Through Eurovision, Spanish viewers joined European viewers in an audience of some fifty million, and one of the first images they shared was the historic meeting in Madrid between Franco and Eisenhower. By 1962, TVE claimed its sole VHF channel covered 65% of the Spanish territory and was viewed regularly by one percent of the population.

Television was a strictly urban phenomenon at this time, and there were only two production centers, one in Madrid and one in Barcelona. Transmissions originated in Madrid and were relayed in one direction to the rest of the territory. In 1964, a modern studio and office building were erected in Madrid to commemorate the 28th anniversary of the regime, and a year later, a second channel (TVE-2, UHF) with production studios located in Madrid and Barcelona, began testing. In 1965, the luxury tax on television sets was eliminated, making advertising...
the major resource for TVE-I and TVE-2. Estimates put yearly advertising income in television at $1 million by the early 1960s, while time increased from 28 to 70 hours a week between 1958 and 1964, rising to 110 hours in 1972. Advertising income for TVE multiplied one-hundred times between 1961 and 1973, reaching estimated totals of over $100 million.

In the early 1970s, new regional centers were constructed in Bilbao, Oviedo (Asturias), Santiago de Compostela (Galicia), Valencia, and Seville (Andalusia). The entire system was finally united with radio in 1973 and was placed under the management of one state-owned corporation, Radio Television Española (RTVE). The regional circuit was wired into a highly centralized network in which all regional broadcasts were obliged to pass through Madrid. The only centers with the capacity to produce programs of any length were those in Barcelona and the Canary Islands. Though the records of RTVE management during the Franco dictatorship are unreliable, one study for 1976 reported that the Barcelona center contributed 3% of the total broadcast hours, followed by the center at Las Palmas in the Canary Islands at 2.9%. The rest transmitted a negligible amount of 1.8 to 1.85% of the total. The one way flow from the center to the regions was an effect of the Franco regime's centralism, which kept the regional centers (other than Barcelona and Las Palmas) from connecting with Madrid.

Television in Spain changed radically in the years following the death of Francisco Franco in 1975. In 1980, the government enacted a reform statute which established norms to ensure that a plurality of political parties would control RTVE. The Statute of RTVE also stipulated that broadcasting should be treated as an essential public service and that it should defend open and free expression. The Statute called for the upgrading of the regional circuit with a view to this becoming the basis for a network of television stations operated by regional governments, whose recognition in the constitution of 1978 was part of the reorganization of Spain as a “State of the Autonomies.” The parliaments of the newly formed autonomous governments of the Basque Country and Catalonia founded their own television systems—the Basques in May 1982, the Catalans a year later. These actions resulted in the most decisive change in the broadcast structure since radio was nationalized during the Spanish Civil War, as they contravened existing laws that gave the central state the right to control all technology using the electromagnetic spectrum. In response, the central government enacted the Third Channel Law in 1984 in order to regulate the establishment of any additional networks in the regions.

The Third Channel Law was designed to stabilize the process of decentralization of the television industry, and it was based in the principle of recognition for the cultures, languages, and communities within the Spanish territory—suppressed during the forty-year Franco dictatorship. The law stipulated that regional networks remain under the state's control and within the RTVE infrastructure. Parliaments in Catalonia, the Basque Country, and Galicia resisted control by the central state and set up technical structures that ran parallel to, but separate from, the national network. Despite ongoing legal battles between the central state and the regions over rights of access to regional airwaves and rights of ownership of the infrastructure, eleven autonomous broadcast companies have been founded, six of which were broadcasting regularly by 1995. In 1989, the directors of these systems agreed to merge into a national federation of autonomous broadcasters, known as the Federation of Autonomous Radio and Television Organizations (FORTA).

Between 1975 and 1990, Spanish television emerged from a system of absolute state control to a regulated system in which both privately- and publicly-owned channels compete for advertising sales within national and regional markets. This structure was completed with the development of the 1988 law and technical plan for private television. The law furnished three licenses for the bidding of private corporations, a three-phase framework for the extension of universal territorial coverage, and restrictions on legal ownership to promote multiple partnerships, rather than monopoly control, and to limit foreign ownership. The technical plan created an independent public company, Retevision, to manage the network infrastructure, abolishing RTVEs economic and political control over the airwaves. Today all broadcasters must pay an access fee to use the public infrastructure. Regular transmissions from the private companies began in 1990.

The signals of state-owned Television Española cover 98.5% of the territory with its first channel and 94.7% with its second. Privately owned stations, Antena-3 and Telecinco, cover 80% of the territory, as does the subscription service Canal+, which has 1 million subscribers. On the regional scale, TV-3 and Canal 33 cover Catalonia with Catalan language programs, having significant spillover into contiguous regions and parts of France, reaching beyond their official audience of 5.8 million. Canal Sur covers the Andalusian audience of 6.7 million.

Telemadrid, owned by the regional government of Madrid, reaches an official audience of 4.8 million. Valencia’s Canal 9’s 3.7 million viewers can watch programs in Valenciano, a language similar to Catalan. Signals of TVG in Galicia spill over into northern Portugal and parts of Asturias in Spain, taking Galician language programming to more than the region’s 2.6 million viewers. ETB-I and ETB-2 cover the Basque Country, and parts of surrounding provinces to reach beyond the official audience of 2 million; notably ETB-I broadcasts in the Basque language (Euskera), while ETB-2 does so in Spanish.

Ninety-eight percent of Spanish households have a television set, 86% have a color receiver (in contrast, 76% have a radio). In 1980, only one percent of Spanish households had a VCR, today 42% of them do, and in over 10% of them a video is watched each day. On average, Spaniards watch about three and a half hours of television a day, mostly in the afternoon and late evening hours. They are shown films 25.9% of the time, followed by series (15.4%), kids
programs (12%), news (11.2%), musicals and variety shows (10%), sports (9.2%), and game shows and other programs (16.3%). Since 1993, the categories of programs they watched most often were soccer, sitcoms, reality TV shows, tabloid interview shows, and films or teleseries. The largest audience in every yearly account watches a soccer match on TVE. In 1993, the second and third largest audiences watched live broadcasts of political debates between the Spanish president and the opposition leader on private TV channels. A reality TV show on TVE-1, Quien sabe donde, based on the American sensationalist format of true crime and human curiosities, consistently ranks among the top five most watched programs. Also among the leading formats is Lo que necesitas es amor, which spotlights "plain folks" and their concerns and pleasures about intimacy and sexuality. The American films or teleseries most watched in 1994 were Pretty Woman, Scarlett, Doctor Quinn, and Police Academy Two; a Spanish teleseries bettered the American competition once in 1994, though with a smaller audience than Pretty Woman. Spaniards also like to watch a situation comedy called Farmacia en guardia, about neighborhood life that centers around a family-run pharmacy. These preferences vary in each of the six regions where regional broadcasters compete with national programming.

The period 1990 to 1994 shows a trend of equalization of audience shares among the major national networks, with decreases in TVE-1 and TVE-2 probably caused by increases in Antena-3 and Telecinco. TVE-2's decline began with the establishment of the regional systems, though in the most recent "war over audiences," TVE-2 lost significant numbers to the private channels. On the regional scale, the companies of the autonomous communities have retained a stable audience, though the aggregate figures hide the dominance of the Catalan (TV-3 and Canal 33) and Madrid (Telemadrid) systems within FORTA. Figures for municipal and local television stations (there are over 100 in Catalonia alone) are as they are as yet insignificant on the national register.

TVE-1, Telecinco, and Antena-3 attract over 70% of the advertising investments made in commercial television in Spain. Antena-3 rose to the top of the ratings in 1994, an advance that translated into a 65% increase in its advertising revenues over figures for 1992. TVE's subsidy has not helped it overcome the growing debt of the company, despite its stable position in the market. In contrast, the private firms have been profitable. One reason for this is the presence of foreign and finance capital in their ownership structure, which support the firms with larger film and video libraries and easier access to foreign currencies. This support became increasingly important following the inflationary spiral that was initiated when European financial markets destabilized in June 1992—by the end of 1994, the value of the peseta had fallen about 30% against the values of the dollar and the deutsche mark, and the trend continued into 1995.

Telecinco is owned by Silvio Berlusconi (25%), the Leo Kirch Group of Munich (25%), Radiotelevision Luxembourg (19%), the French investor Jacques Hachuel (10%), the Bank of Luxembourg (8%), and Spanish investors, who hold the remainder. The ownership of Antena-3 TV is more complicated with Grupo Zeta and Renvir holding 25% each, the bank Banesto with 10%, the French company, Bouygues, with 15%, and Invacor and Corpoban sharing 25%. The Spanish investor, Antonio Asensio, controls nearly 70% of Grupo Zeta, while the banks which helped him finance this control, Banco Central Hispano and Banesto, hold about 12.5% each. Banesto's media holdings were being divested in 1995 after its president was arrested and charged with fraud and illegal trading. The British conglomerate Cable and Wireless is also a major shareholder of Bouygues Telecom. Antonio Asensio also has indirect holdings of Antena-3 through his investment shell companies Renvir, Corpoban, and Invacor. Canal+ has remained stable since its founding: 25% belongs to the Spanish media conglomerate, PRISA, 25% to Canal Plus France, with about 42% divided among Spanish banks. PRISA owns the largest daily newspaper in Spain, El País, as well as a leading popular commercial radio station. PRISA also has holdings in Britain (The Independent), Portugal, France, Germany (with Bertelsmann in the German pay-TV service, Premiere), and Mexico (La Prensa).

In anticipation of the enactment of a 1995 cable regulation, foreign and national firms are forming large consortia. Among the national firms positioning themselves for the future cable market are the leading banks, the largest electrical power companies, the national phone company, the national network Retevision, construction firms, regional press groups, the regional governments, and the private TV operators. Among foreign investors are Time Warner, US West, Sprint, TCI, Bell Atlantic, Cable and Wireless, and the various investors active in the commercial television market. Notable aspects of the draft legislation include municipal control over the demarcation of markets within cities, protection of intellectual property rights, and the stipulation that operators must carry and pay for the terrestrial output of all national and regional channels.

Audiovisual production from the U.S. accounts for practically all the imported programs on the public and private networks. Estimates for 1993 are that one out of every five programs on TVE-1, TVE-2, and Telecinco is from the United States, the rest are Spanish. For Telecinco and Antena-3, two out of every five programs are from the United States, the rest are Spanish. These ratios show an improvement over 1990 figures when imports took up 40% of the program schedule on TVE-1, 33% on Andalusia's Canal Sur, 34% on Catalonia's TV-3, 35% on Galicia's TVG, and 39% on the Basque ETV-1. In 1990, Telecinco showed twice as many U.S. programs as it did Spanish ones, while a ratio of one to one could be seen on Valencia's Canal 9, the Basque ETV-2, and the two private channels.

Language is a key characteristic of the Spanish TV culture. The regional firms in the Basque Country, Galicia, Catalonia, and Valencia were founded with the objective of fomenting the language and culture in the regions. In Galicia, 99% of the people understand Gallego, but only 14% actually prefer to watch TV in Gallego. Estimates are
that 95% of the people in Catalonia understand Catalan, though only a third of the Catalans watch programs exclusively in the idiom. Up to 90% of the people in Valencia understand Valenciano, a linguistic cousin of Catalan, but 12% like TV only in Valenciano. In the Basque County, as many as half of the people claim to understand Euskera, but only one-fifth of the Basques show strong preferences for their TV in Euskera. These figures are dwarfed by the scale of the national population, where practically 100% of the people understand Spanish. Despite the linguistic, territorial, and financial limitations affecting the regional networks, they manage to retain a stable audience of viewers because of the political and cultural history of centralism in Spanish communication. Both for the managers and audiences of these systems, the presence of the local idioms alongside Spanish recalls the multilingual identity of the regions and helps sustain a sense of place as Spain positions itself within the European Union and opens its borders to globalized audiovisual production.

SPANISH INTERNATIONAL NETWORK

The Spanish International Network (SIN) was the first Spanish language television network in the United States. From its inception in 1961, SIN was the U.S. subsidiary of Televisa, the Mexican entertainment conglomerate, which today holds a virtual monopoly on Mexican television, and is the world's largest producer of Spanish language television programming.

From the point of view of a U.S. entrepreneur in the early 1960s, the U.S. Spanish speaking population was so small and so poor a community that it was not considered a viable advertising market. The 1960 Census counted 3.5 million Spanish surnamed U.S. residents. The vast majority of this population were Mexican immigrants and Mexican-Americans living in the United States. (Large scale immigration from Puerto Rico, Cuba and other Latin American countries had not yet begun.) Spanish language advertising billed through the U.S. advertising industry amounted to $5 million dollars annually, less than one-tenth of one percent of all advertising expenditures at that time. From the perspective of a Latin American entrepreneur, however, this U.S. Latino audience was one of the wealthiest Spanish language markets in the world.

SIN was founded by Emilio Azcárraga, the "William Paley of Mexican broadcasting." Azcárraga was an entrepreneurial visionary, and owner of theaters and recording companies, who first built a radio, then a television empire in Mexico, before expanding it north of the border. SIN began with two television stations, KMEX, Los Angeles and KWEX, San Antonio, and from the beginning had national ambitions. In fulfilling these aims SIN pioneered the use of five communications technologies, the UHF band, cable television, microwave and satellite interconnections and repeater stations. All these applications contributed to rapid growth in the 1960s and 1970s, and by 1982 SIN could claim it was reaching 90% of the Spanish speaking households in the United States with 16 owned and operated UHF stations, 100 repeater stations and 200 cable outlets.

In these first decades, virtually every broadcast hour of each SIN affiliate was Televisa programming produced in Mexico: telenovelas (soap operas), movies, variety shows and sports programming. The vertical integration of Emilio Azcárraga's transnational entertainment conglomerate gave tremendous economic advantages to early U.S. Spanish language television. The performers under contract to Azcárraga's theaters and recording companies also worked for his television network. In other words, SIN programming had covered costs and produced a profit in Mexico, before it was marketed in the United States.

After 1981, and the start of satellite distribution of its programming, SIN began producing programs in the United States. The network created a nightly national newscast, the Noticiero Uninación, and national public service programming such as voter registration drives. It also provided coverage of U.S. national events such as the Tournament of Roses parade and the Fourth of July celebrations. The larger network-owned stations also began airing two hours a day of locally produced news and public affairs programming. This programming represented a limited recognition by SIN that the United States and Mexican television audiences had different needs and interests. Moreover, it was an attempt to modify the SIN audience profile from that of a "foreign" or "ethnic" group interested only in Mexican programming, to that of a more "American" community participating in the same national rituals as the mainstream consumer market. Perhaps SIN's most enduring contribution to U.S. culture was its leading institutional role in the creation of a commercially viable, panethnic, national Hispanic market.
The entrepreneurial financial and marketing acumen displayed by Emilio Azcárraga (and since 1972 by his son and heir Emilio Azcárraga Milmo) in the creation and development of SIN, were matched by his legal skills in maneuvering around U.S. communications law. The Communications Act of 1934 simply and explicitly bars "any alien or representative of any alien . . . or any corporation directly or indirectly controlled by . . . aliens" from owning U.S. broadcast station licenses. For Azcárraga and his SIN associates, perhaps the most salient part of this law is what it did not address. It does not prohibit the importation or distribution of foreign broadcast signals, or programming. In other words, U.S. law does not limit foreign ownership of broadcast networks; it does bar foreign ownership of the principal means of dissemination of the programming, the broadcast station. On paper, and in files of the Federal Communications Commission (FCC), none of the SIN stations or affiliates was owned by Emilio Azcárraga or Televisa. Rather, the foreign ownership prohibition was avoided by means of a time-honored business stratagem known, in Spanish, as the "presta nombre," which translates literally to "lending a name," or in colloquial English, a "front." SIN stations were owned by U.S. citizens with long professional and familial ties to Azcárraga and Televisa, with Azcárraga retaining a 25% interest (the limit permitted by law) in the SIN network.

Though long a subject of criticism by Latino community leaders and would-be U.S. Spanish language television entrepreneurs, the foreign control of SIN was not successfully challenged until the mid-1980s when a dissident shareholder filed a complaint with the Federal Communications Commission. In January 1986 the FCC ordered the sale of SIN. The FCC action was met with much excited anticipation by U.S. Latino groups who felt that for the first time since its creation 25 years earlier, there was a possibility that U.S. Spanish television would be controlled by U.S. Latino interests.

Several U.S. Latino investor groups were formed, but ultimately the bid (for $301.5 million) of Hallmark, Inc., of Kansas City, Missouri, the transnational greeting card company, received FCC approval. Hallmark changed the network's name to Univision, pledging to keep the network broadcasting in Spanish. Under the terms of the sale, Televisa, in addition to cash, was given a guaranteed U.S. customer (the new network, Univision, was given a right of first refusal for all Televisa programming), free advertising (for its records and tapes division) on Univision for two years, and 37.5% of the profits of its former stations for two years. After a quarter century, SIN, the Spanish International Network, ceased to exist as a corporate entity, leaving a significant cultural and economic legacy: a commercially viable U.S. Spanish language television network, and a new U.S. consumer group, the Hispanic market.

SPECIAL/SPECTACULAR

The television special is, in many ways, as old as television itself. Television specials are (usually) one-time only programs presented with great network fanfare and usually combining music, dance, and comedy routines (or "bits") presented in a variety format. When television was still new, specials were common, in that weekly, ongoing shows were expensive to produce and not yet proven as tools for securing long-term viewer loyalty. Hence, early television schedules did contain many one-time presentations, such as "The Damon Runyon Memorial Fund" (1950, TV's first telethon hosted by Milton Berle), the "Miss Television USA Contest" (1950, won by Edie Adams), "Amahl and the Night Visitors" (1951, the first Hallmark Hall of Fame program), and the "Ford 50th Anniversary Show" (1953, featuring duets between stage stars Mary Martin and Ethel Merman).

But the TV special entered its greatest and most prolific phase in 1954 when genius programmer Sylvester "Pat" Weaver conceptualized what he called television "spectaculars." These one of a kind, one-night broadcasts were Weaver's attempt to bring new and larger audiences and prestige to the television medium and to his network, NBC.
Breaking with the format of television at that time, the spectaculars regularly pre-empted the normal network program schedule of sponsored weekly shows. Weaver's move was a controversial gamble—to forgo sponsorship by single companies (basically money in the bank for the network) on these nights in order to regain air time on the Mondays, Saturdays and Sundays of every fourth week for the presentation of his spectaculars. Instead, following his trademark "magazine" formula for sponsorship, Weaver sold different segments of each spectacular to different sponsors, in the process laying the foundation for the future of multiple sponsorship and commercials on all of U.S. television.

In creating his spectaculars, Weaver drew on the talents of three producers—Fred Coe, Max Liebman, and Albert McCleery. Coe created his works for Producer's Showcase, airing on Mondays, Liebman for his series Max Liebman Presents on Saturdays, and Albert McCleery on Sundays for Hallmark Hall of Fame. Under Weaver and his team of producers, the spectacular could be a musical extravaganza (such as Peter Pan, with Mary Martin repeating her Broadway triumph), or a play (such as Coe's Our Town with Paul Newman, Eva Marie Saint and Frank Sinatra), or a dramatic film (such as Olivier's Richard III).

In time, spectaculars became known by the less hyperbolic term "special" and generally they were shortened in length; most lasting only one hour as opposed to the ninety minutes to three hours sometimes taken by NBC. For the most part, specials took on a lighter tone, becoming variety oriented, with the emphasis on music, dance and elaborate production numbers. This era of the special saw the presentation of such benchmark television offerings as Astaire Time with Fred Astaire and Barrie Chase (1960), Julie and Carol at Carnegie Hall with Julie Andrews and Carol Burnett (1962), My Name Is Barbra starring Streisand (1964), and Frank Sinatra: A Man and His Music (1964).

These types of programs continued successfully into the late 1960s and 1970s featuring such diverse talents as Carol Channing, Bill Cosby, Elvis Presley, Liza Minnelli, Lily Tomlin, Shirley MacLaine, Bette Midler, Ann-Margaret, Olivia Newton-John, Tom Jones and Carol Burnett, who often paired herself with the other performers such as Beverly Sills, Dolly Parton or Julie Andrews. Throughout this period, stars of contemporary television programs such as Lynda Carter, Cheryl Ladd and Ben Vereen also headlined occasional hour-long specials, frequently with substantial ratings success.

As the weekly variety show all but disappeared from network television (The Carol Burnett Show, TV's last successful variety show, ceased in 1978), the trend also signaled the beginning of the decline for the television music-dance special. As audiences began to select their musical entertainment from other media, or in shorter forms such as the music video, the hour-long, star centered special began to appear dated. At the same time, the shows were proving too expensive to produce in relation to their ratings.

Currently, with the exception of such yearly traditions as award shows, Christmas specials, pageants such as Miss USA, annual NBC installments by the unsinkable Bob Hope, and NBC's This Is... series (which have so far spotlighted Michael Bolton and Garth Brooks, among others), the television special/spectacular is now the domain of channels other than ABC, CBS, FOX, or NBC. PBS, for example, at times presents films of Broadway musicals and pay-cable stations such as HBO, the site of Barbra Streisand's most recent concert special, will air the highly touted entertainment event. Increasingly, pay-per-view is becoming the purveyor of the made-for-television extravaganza, having so far offered audiences the musical talents of David Hasselhoff and an extremely popular and profitable concert by the country music duo the Judds. In the world of 50-channel television, then (not to speak of the 500 channel universe), it is difficult to know what events might qualify as "special," harder still to identify the truly "spectacular."

SPEIGHT, JOHNNY
British Writer/Producer

Johnny Speight is the creator of the BBC series Till Death Us Do Part, upon which the U.S. series All in the Family (CBS) was based. As controversial in its time and place as was All in the Family, Speight's creation spawned a generation of relevant, hard-hitting sitcoms both in the United States and England.

A former factory worker and jazz musician, Speight began writing for television in 1956. In 1966, after serving as head writer for the Arthur Haynes Show, Speight launched Till Death Us Do Part. The series revolved around the different values and beliefs held by blue-collar bigot Alf Garnett and his liberal son-in-law Mike. Originally committed to shows about the family itself, Speight maneuvered Till Death to more relevant social issues. Norman Lear, who was working in feature films at the time, saw the series, and, with partner Bud Yorkin, he optioned the series for their com-
pany Tandem Productions. The resulting hit was *All in the Family*, which debuted on CBS in 1971.

Speight’s more controversial episodes prompted the Conservative Central Office to ask for advance copies of the *Till Death* scripts. When Speight refused, the matter was soon dropped. In 1968, Speight produced a BBC movie version of the series, and, in 1972, he also penned a short-run revival of the series. During that run, the series reached 24 million viewers, making it the most popular show in Britain.

Speight has written several plays, including *If There Weren’t Any Blacks You Would Have to Invent Them*, which was produced in seventeen countries. He has also won numerous awards.

**SPELLING, AARON**

U.S. Producer

A aron Spelling is one of television’s most prolific and successful producers of dramatic series and made-for-television films. Spelling began his career as a successful student playwright at Southern Methodist University, where he won the Eugene O’Neill Award for original one-act plays in 1947 and 1948. After graduating in 1950 and spending a few years directing plays in the Dallas area, and then trying less than successfully to make his way on Broadway, Spelling moved to Hollywood. There he initially found work as an actor and later as a scriptwriter for such anthology and episodic series as *Dick Powell’s Zane Grey Theater*, *Playhouse 90*, *Wagon Train*, and *The Jane Wyman Theater*. Within a few years, Spelling had become a producer at Four Star Studio Productions, where he created *The Lloyd Bridges Show* (1962–63), *Burke’s Law* (1963–66), *Honey West* (1965–66), and helped develop *The Smothers Brothers Show* (1967–75).

Spelling’s first really successful series, *Mod Squad* (1968–73), was produced after he left Four Star and formed a partner-

---
ship with Danny Thomas. During its five-year run, *Mod Squad* earned six Emmy Award nominations, including one for outstanding dramatic series of the 1969–70 season. In 1972, Spelling formed a new partnership with Leonard Goldberg, which lasted until 1977 and produced such hits as *The Rookies, Starsky and Hutch* (1972–76), and *Charlie’s Angels* (1976–81).

Spelling’s series featuring both wealthy crime fighters and regular cops continued in the 1980s with *Hart to Hart* (1979–84), *Matt Houston* (1982–85), *Strike Force* (1981–82), *T.J. Hooker* (1982–87), and *McGruder and Loud* (1985). But Spelling also ventured into new genres with his innovative hour-long comedy, *Love Boat*, and the prime-time serial *Dynasty*. Reminiscent of the 1960s anthology comedy, *Love, American Style*, Spelling’s *Love Boat* turned the three separate comedy stories into three intertwined storylines. Intercutting three separate plots in short scenes which recapitulated and advanced each storyline plot was a brilliant strategy that enabled the series to appeal to different sets of viewers, each of whom might be attracted to a particular storyline, within a format that was admirably suited to the fragmented and distracted way that most people view television. Another Spelling innovation which first appeared in *Love Boat* was the ritualized introductory sequence that formally presented the multiple plots in each week’s episode as well as the series’ main characters.

In 1980s television, Spelling was king. In 1984, Spelling’s seven series on ABC accounted for one-third of the network’s prime-time schedule, leading some critics to rename ABC “Aaron’s Broadcasting Company.” Spelling’s 18-year exclusive production deal with ABC ended in 1988, but his ability to create hit series did not; in the 1990s, he introduced *Beverly Hills 90210* and *Melrose Place*.

Among the recurring thematic features that have characterized Spelling’s productions over the years are socially relevant issues such as the disaffected militant youth of the 1960s, institutional discrimination against women, racism, and homophobia; altruistic capitalism; conspicuous consumption and valorization of the wealthy; the optimistic, moralistic maxims that people can be both economically and morally successful; good ultimately triumphs over evil; the grass often looks greener but rarely is; and the affirmation of the “caring company” work family (e.g., in *Hotel*) as well as the traditional kinship family. Stylistically, his productions have included high-key lighting, gratuitous displays of women’s bodies, heavily orchestrated musical themes, lavish sets, and what Spelling himself thinks is the most important element in television—“style and attention to detail.”

One Spelling series which stands out as truly anomalous among this auteur’s prime-time and movie ventures is *Family* (ABC, 1976–80). Spelling and Mike Nichols co-produced this weekly hour-long drama, which many consider to be his best work. During the four years that this serious portrayal of an upper-middle-class suburban family was in first run, it won four Emmy Awards for the lead performers and was twice nominated for outstanding drama series.

“Innovator,” “over-achiever,” “spin doctor,” “angel,” “king of pap,” “ratings engineer,” “TV’s glitzmeister,” winner of six NAACP Awards—whatever other label Spelling’s critics and admirers have used to describe this prolific, successful producer, one which certainly describes the unique signature Aaron Spelling has left on four decades of television is that of television auteur. —Leah R. Vande Berg

SPIN-OFF

The spin-off is a television programming strategy that constructs new programs around characters appearing in programs already being broadcast. In some cases the new venue is created for a familiar, regular character in the existing series (e.g. Gomer Pyle, U.S.M.C. from The Andy Griffith Show). In others, the existing series merely serves as an introduction to, and promotion for, a completely new program (Mork and Mindy from Happy Days).

The most famous examples of the spin-off surround the work of producer Norman Lear and that of the pro-
ducers working at MTM Productions during the 1970s. A list of the originating programs with their spin-offs reads like a genealogy of popular television comedy. Thus, All in the Family begat Maude, which begat Good Times, and The Jeffersons, which begat Checking In. All in the Family also begat Gloria, which lasted only one season and begat nothing.

The Mary Tyler Moore Show begat Phyllis, Rhoda, and Lou Grant, and though none of these "offspring" engendered specific shows of their own, their producers went on to create numerous programs with the distinctive style of these earlier works.

Other prolific sources of spin-offs were The Danny Thomas Show, the source of The Andy Griffith Show, which led to Gomer Pyle, U.S.M.C., and Mayberry, R.F.D. From Happy Days the list includes Laverne and Shirley, Joannie Loves Chachi, Mork and Mindy, and Out of the Blue. As should be clear from these lists, a spin-off is no guarantee of success. For every Wanted: Dead or Alive (from Trackdown), there is a Beverly Hill Buntz (from Hill Street Blues).

The existence of spin-offs can lead to puzzling problems when one considers the relations among programs across the schedule. The long-running prime-time serial, Knots Landing, for example, was a spin-off of Dallas, the most famous example of that genre. During the famous 1985-86 season of Dallas, the season that was "dreamt" by Pamela Ewing (Victoria Principal), various events on Knots Landing occurred in response to Bobby Ewing's (Patrick Duffy) "death." Yet no one on Knots Landing troubled to explain how the history of their own fictional world might be altered by the fact that a "year in the life of Dallas" never occurred.

In any instance, spin-offs attest to television's constant demand for new, if not always different, material. This demand often leads to mindless repetition and the most meager attempts to cash in on previous success. While spin-offs may lead to new sources of creativity in their own right, the result of applying this strategy is often no more than a program that temporarily fills a time slot.

Indeed, it should be noted that spin-offs often result from producers' financial arrangements. Successful producers frequently contract for future commitments from studios or networks. New shows constructed around proven, popular characters offer obvious advantages in these arrangements. Similarly, the existence of a successful program offers the producer and the network a ready-made billboard for advertising new work. Characters from the new production may appear in no more than a single episode of the ongoing program in order to be introduced to a large audience.

A final version of the spin-off is related to variations on a program franchise or formula, variations that often cross national boundaries. It is important to remember that All in the Family and Sanford and Son, two of the most highly acclaimed shows produced by Norman Lear, were copies of British productions, Till Death Us Do Part and Steptoe and Son, respectively. Currently, the most prominent examples in the United States are the international versions of Wheel
of Fortune. Licensed by the parent company, Merv Griffin Productions, to producers in other countries, some form of Wheel is popular from France to Taiwan, from Norway to Peru. In each country small variations are created to express particular cultural expectations and attitudes. Because game shows are cheaply and easily produced, this type of the spin-off concept is likely to expand.

—Horace Newcomb

SPITTING IMAGE

British Puppet/Satire Programme

The premiere of Spitting Image opened with a puppet caricature of Israel’s prime minister Menachem Begin wearing a magician’s outfit. With a flourish, he produced a dove of peace from his top hat, then announced, “For my first trick . . .”—and wrung its neck.

This was the first of many outrages perpetrated on the British public, who were either offended or delighted each Sunday evening from 1984 to 1992. Spitting Image was roundly condemned for its lampooning of the Royal family: the queen was portrayed as a harried housewife, beset by randy, dullard children and screaming grandkids. Britain’s most cherished figure, the Queen Mother, appeared as a pleasant, if somewhat boozy great-grams.

The Conservative leadership was a constant target: Margaret Thatcher’s puppet was a needle-nosed Reagan groupie who consulted with Hitler on immigration policy and sold off England’s infrastructure to baying packs of yuppies and her eventual successor, John Major, was portrayed as a dull, totally grey man who ate nothing but peas. The opposition Labour leaders, including Neil Kinnock as “Kinnochio,” were pilloried for their inability to challenge decades of Tory rule.

Spitting Image originated with Peter Fluck and Roger Law, who first met at Cambridge School of Art. They became involved in the liberal politics favored by art students, through which they met another student, Peter Cook. In 1961, Cook fronted England’s flowering of political satire by starring with Dudley Moore in the revue “Beyond the Fringe,” which inspired the TV program That Was the Week That Was. Cook employed Law as an illustrator for his projects such as the satire magazine Private Eye and a political comic strip in the Observer newspaper. Fluck and Law built separate careers in magazine illustration, and Law took two commissions in the music business that

Peter and Roger each began working with sculpted caricatures, creating several images that appeared in London's Sunday Times Magazine, where Law had become an artistic director and reporter. In 1975, they formed a partnership, spooneristically named Luck and Flaw, to turn out their 3-D portraits for outlets like The New York Times Sunday Magazine, Germany's Stern, international editions of Time, and the National Lampoon. The work proved barely profitable until 1981, when Martin Lambie-Nairn invited them to lunch.

Lambie-Nairn was a graphic designer at London Weekend Television. He thought a political television program using puppets or animation might be a good investment, and he proposed to front Fluck and Law the capital for a pilot episode (thus the credit at the end of each episode: "From an original lunch by Martin Lambie-Nairn."). The pilot took two years to complete.

The pair quickly decided the show should use puppets, which, like the Muppets, required two operators, for the face and one arm. Jim Henson, in fact, turned down an offer to collaborate on the puppet workshop. The first puppet designs were bogged down by expensive, heavy electronics needed just to make their eyes move. After several months without any film being shot, Fluck cobbled together a simple mechanism using steel cable and air bulbs. They also picked up Tony Hendra of the National Lampoon (and later of Spinal Tap) as a writer, and their producers: Jon Blair, a producer of current affairs programming, and John Lloyd of the Not the Nine O'Clock News. Spitting Image, the pilot's title, exhausted the resources of several backers, including computer executive Clive Sinclair, before it was completed at a cost of 150,000 pounds, a record for a light entertainment program.

In its first season, Spitting Image focused exclusively on politics, and played to mediocre ratings. For the next round, Fluck and Law were obliged to caricature entertainment and sports figures as well, and the show's fortunes immediately improved. They worked out a schedule in which they spent the off-season stockpiling non-topical segments such as music video parodies (in one, Barry Manilow was all nose; another showed off Madonna's singing belly button). Each episode had a window of six minutes for fresh political commentary, written and taped the night before its broadcast.

The Spitting Image parodies reached a status not unlike that of Mad magazine in the early 1960s, when many of those whom the show caricatured took it as a sign that they had "made it." While Thatcher has only commented, "I don't ever watch that program," members of the House of Commons had tapes of each show delivered to them the following Monday, and former Tory Defense Minister Michael Heseltine tried to purchase his puppet.

The commercial broadcaster Central Television gave Spitting Image few censorship problems. BBC radio, however, refused to play their first spin-off record, with a Prince Andrew

---

Spitting Image
imitator boasting "I'm Just a Prince Who Can't Say No." "The Chicken Song," however, a single that parodied the singalong ditties that infest pub jukeboxes and vacation discotheques every summer, reached number one on the charts.

The influence of U.S. politics on the British scene was apparent in frequent lampoons of Ronald Reagan. American news outlets excerpted a video with Ron and Nancy as Leaders of the Pack, singing "Do Do Ron Ron." The befuddled Reagan also appeared in a serial thriller, "The President's Brain is Missing," and was featured prominently in the Spitting Image-produced video for Genesis' song, "Land of Illusion." In September 1986, NBC aired a two-part original Spitting Image special in which the secret arbiters of fame, including Bill Cosby and Ed McMahon, hatch a clandestine plot to have an over-muscled Sylvester Stallone elected president.

Spitting Image projects continue to appear on both sides of the Atlantic. American VCRs can play a compilation of their music videos, a puppet production of "Peter and the Wolf," and a mock documentary, "Bumbledown: the Life and Times of Ronald Reagan" (a double-feature with the musical, "The Sound of Maggie"). Most recently, the group has collaborated with American cable channel, Comedy Central, to illustrate a book by Glenn Eichler, Bill and Hillary's 12-Step Recovery Guide. The book is promoted through a series of commercial cutaways on the cable channel, featuring the puppet Clinton family.

SPONSOR

Telelevision in the United States is a profit-maximizing set of entities, an industry whose success is largely measured by its ability to deliver viewers to advertisers. The lure of television is its programs; commercial broadcasters seek shows of optimal value (be it in terms of ratings generated or demographics attracted) in order to maximize advertising revenue. The sponsor—the organization, corporation, institution, or other entity willing to pay the broadcaster revenue in exchange for the opportunity to advertise on television—stands at the center of program strategies. This situation requires recognition of the complex interrelationship between television networks and advertisers, two industries whose differing responsibilities and sometimes conflicting needs produce the programming that draws the audience to the advertisement. In U.S. television, the economic and industrial systems supporting these arrangements have their beginnings in radio broadcasting.

The emergence of radio in the early 1930s as an astonishingly effective means of delivering consumers to producers attracted an array of enthusiastic advertisers, and soon
the radio schedule was dominated by shows named for their sponsors—the Chase and Sanborn Hour, the Cliquot Club Eskimos, and the Maxwell House Concert, for example. Produced for their clients by such advertising agencies as J. Walter Thompson and Young and Rubicam, the single-sponsored program was a staple of commercial broadcasting; it was an article of faith that if a listener identified a show with its sponsor, he or she was more likely to purchase the advertised product.

Although agency involvement in television was little more than tentative prior to 1948, advertisers soon embraced the new medium with great fervor; Pabst Blue Ribbon Bouts, Camel Newsreel, and the Chesterfield Supper Club were testimony to the steadfast belief in sponsor identification. However, as program costs soared in the early 1950s, it became increasingly difficult for agencies to assume the financial burdens of production, and even the concept of single sponsorship was subject to economic pressure.

By the 1952–53 season, television’s spiraling costs (an average 500% rise in live programming budgets from 1949 to 1952) threatened to drive many advertisers completely out of the market. Many sponsors turned to a non-network syndication strategy, cobbling together enough local station buys across the country to approximate the kind of national coverage a network usually provided. Television executives—most notably Sylvester L. “Pat” Weaver at NBC—countered sponsor complaints by championing the idea of participation advertising, or the “magazine concept.” Here, advertisers purchased discrete segments of shows (typically one- or two-minute blocks) rather than entire programs. Like magazines, which featured advertisements for a variety of products, the participation show might, depending on its length, carry commercials from up to four different sponsors. Similarly, just as a magazine’s editorial practice was presumably divorced from its advertising content, the presence of multiple sponsors meant that no one advertiser could control the program.

Even as agencies relinquished responsibility for production, they still maintained some semblance of control over the content of the programs in which their clients advertised, a censorship role euphemistically referred to as “constructive
influence." As one advertising executive noted, "If my client sells peanut butter and the script calls for a guy to be poisoned eating a peanut butter sandwich, you can bet we're going to switch that poison to a martini." Still, this type of input was mild compared with the actual melding of commercial and editorial content, a practice all but abandoned by the vast majority of agencies by 1953.

Despite Madison Avenue's initially hostile reaction, participation advertising ultimately became television's dominant paradigm for two reasons. One was purely cost; purchasing 30- to 60-minute blocks of prime time was prohibitively expensive to all but a few advertisers. More importantly, participations were the ideal promotional vehicle for packaged-goods companies manufacturing a cornucopia of brand names. While it is true that the magazine concept opened up television to an array of low-budget advertisers, and thus expanded the medium's revenue base, it was companies like Procter and Gamble that catalyzed the trend (ironically, given that Procter and Gamble today has operational control over two soap operas, the last vestige of single-sponsored shows on television). Further, back-to-back recessions in the mid-1950s provided an impetus for the producers of recession-proof goods to scatter their spots throughout the schedule; their subsequent sales success solidified the advent of participation on the schedule. Without the economic rationale of single sponsorship, most advertisers chose to circulate their commercials through many different shows rather than rely on identification with a single program.

By 1960, sponsorship was no longer synonymous with control—it now merely meant the purchase of advertising time on somebody else's program. While sponsor identification remained important to such advertisers as Kraft and Revlon, most sponsors prized circulation over prestige; as a result, fewer agencies offered advertiser-licensed shows to the networks. The quiz scandals of 1958-59, often identified as the causative factor in network control of program procurement, were in actuality only a coda.

Ironically, it was the networks' assumption of programming control that resulted in a narrower and more conservative conception of program content, with a greater reliance on established genres and avoidance of technical or narrative experimentation. In an effort to provide shows that would offend no sponsor, network television's attempts to be all things to all advertisers drained the medium of its youthful vigor, plunging it into a premature middle age. By appealing to target audiences—at least in the early 1950s—advertisers were in many ways more responsive and innovative than the networks.

While the vestiges of single sponsorship remain in, of all places, public television—Mobil Masterpiece Theater, for example—advertisers still wield enormous, if indirect, influence on program content. For example, in 1995 Procter and Gamble, the nation's largest television advertiser, announced that it would no longer sponsor daytime talk shows whose content the company considered too salacious. Today's marketers believe they can influence programs through selective breeding, bankrolling the content they support and pulling dollars from topics they do not.

SPORTS AND TELEVISION

The history of sports on U.S. television is the history of sports on network television. Indeed, that history is closely related to the development and success of the major television networks. "Television got off the ground because of sports," reminisced pioneering television sports director Harry Coyle. He continued, "Today, maybe, sports need television to survive, but it was just the opposite when it first started. When we (NBC) put on the World Series in 1947, heavyweight fights, the Army-Navy football game, the sales of television sets just spurted."

With only 190,000 sets in use in 1948, the attraction of sports to the networks in its early period was not advertising dollars. Instead, broadcasters were looking toward the future of the medium, and aired sports as a means of boosting demand for television as a medium. They believed their strategy would eventually pay off in advertising revenues. But because NBC, CBS and DuMont manufactured and sold receiver sets, their more immediate goal was to sell more of them. Sports did indeed draw viewers, and although the stunning acceptance and diffusion of television cannot be attributed solely to sports, the number of sets in use in the U.S. reached ten and a half million by 1950.

Technical and economic factors made sports attractive to the fledging medium. Early television cameras were heavy
and cumbersome and needed bright light to produce even a passable picture. Boxing and wrestling, contested in confined, very well-lit arenas and baseball and football, well-lit by the sun and played out in a familiar, well-defined spaces, were perfect subjects for the lens. Equally important, because sporting events already existed there were no sets to build, no writers and actors to hire. This made sports inexpensive to produce, a primary concern when the audience was small and not yet generating large advertising revenues.

The first televised sporting event was a college baseball game between Columbia and Princeton in 1939, covered by one camera providing a point of view along the third base line. But the first network sports broadcast was NBC's *Gillette Cavalcade of Sports*, which premiered in 1944 with the Willie Pep vs. Chalky White Featherweight Championship bout. Sports soon became a fixture on prime-time network programming, often accounting for one third of the networks' total evening fare. But in the 1950s, as television's other genres matured and developed their own large and loyal (and approximately 50% female) followings, sports began to disappear from network prime-time, settling into a very profitable and successful niche on weekends. This, too, would change, like so much else in television, with alterations in the technology and economics of the medium.

*Gillette Cavalcade of Sports* stayed on the network air for 20 years, a prime example of sporting events presented by a single sponsor. By the mid-1960s, however, televised sports had become so expensive that individual advertisers found it increasingly difficult to pay for sponsorship of major events by themselves. Still, the number of hours of sports on network television exploded as the audience grew and the multiplying ranks of spot-buying advertisers coveted these valuable minutes. This mutually beneficial situation persisted until well into the 1980s when the historically increasing amounts of advertising dollars began to decline, and networks experienced diminishing profit margins on sports.

But the economics of televised sports had begun to unravel earlier. In 1970, for example, the networks paid $50 million to broadcast the National Football League (NFL), $2 million for the National Basketball Association (NBA) and $18 million for major league baseball. In 1985 those figures had risen to $450 million, $45 million and $160 million respectively. These large increases were fueled by growing public interest in professional sports, in part as a result of more and better television coverage. But equally important, the networks saw the broadcasting of big time sports as the hallmark of institutional supremacy in broadcasting. Major league sports meant major league broadcasting—not an unimportant issue for the networks now challenged by VCR, the newly empowered independent stations, and cable. Many of these cable channels were themselves carrying sports (WGN, WTBS, and HBO, for example), and one, ESPN, offered nothing but sports. Seemingly unconcerned, the CBS, NBC, and ABC attitude could be described as "Who cares about Australian Rules Football?" (a high point of early ESPN programming).

But rising fees for rights to major sporting events were not, in themselves, bad for the networks. They could afford them, and the cable and independent channels could not. But increasing rights fees, accompanied by falling ratings, proved to be disastrous. From 1980 to 1984, broadcasts of professional football lost 7% of their viewership (12% among men 18 to 34 years old) and baseball lost 26% of its viewers, showing a 63% decline among young males. Non-sports programming on cable, home video use, and the independents took many of these viewers. In addition, sports on the competing channels further diluted the remaining sports audience. To make up for falling revenues on all its programming as they began to lose audience, the networks began to raise the price of advertising time on sports shows to cover the huge rights fees contractually owed to the sports leagues.

Advertisers balked. Not only were they unwilling to pay higher prices for smaller audiences, but the once attractive male audience was becoming less desirable as working women came to control even larger amounts of consumer capital. Rather than pay what they saw as inflated rates for a smaller and now less prized set of viewers, many advertisers bought commercial time away from sports altogether, feeling they could reach their target audiences more efficiently through other types of shows. Car manufacturers turned to prime-time drama to reach women, who were increasingly making car-buying decisions; beer makers were turning to MTV to attract young women and young men.

Finally, in order to make the most of their expensive contracts with the major sports leagues, the networks began broadcasting more sports. But spots on sports shows would have been easier to sell had there been fewer of them on the market. The three networks together showed 1,500 hours of sports in 1985, double what they programmed in 1960. With about eight minutes of commercials an hour, the addition of even relatively few hours of programming had a noticeable effect on the supply-and-demand balance of the commercial spot market.

It was during this same period that superstations WTBS and WGN, and premium channel HBO began national, cable-fed sports programming. ESPN was launched in 1979 and by mid-1980 reached 4 million homes. By 1986, 37 million households subscribed. The glut of sports on television was abetted even more by crucial court decisions affecting intercollegiate competition. Universities, desirous of their own access to broadcast riches, successfully challenged the National Collegiate Athletic Association (NCAA) and, at times their own regional athletic conferences, to be free of what they considered restrictive television contracts and broadcast revenue-sharing agreements. College basketball and football, once local or regional in appeal, began appearing on the television dial in a complex array of syndication packages and school-centered or conference-centered television networks.

While the history of televised sports may have been directly related to network television, the current and future
states of the genre certainly are not. There are more televised sports today than ever before and they continue to draw a large total audience, but it is an audience fragmented among many available choices. Sports on television, then, is decreasingly likely to originate on a national network. Despite the Super Bowl’s annually growing audience and increases in the price of a 30-second spot ($1.3 million for some aired during the 1995 San Francisco/San Diego mismatch), it remains a television anomaly, unique as a television and cultural event. Ratings for individual television sports programs generally continue to decline in the 1990s. The 1993 World Series, for example, had a cumulative rating for all its games of slightly more than 16, surpassing only the 1989 Series interrupted by the Loma Prieta earthquake. Game 1 of the 1993 contest between Toronto and Atlanta was the lowest rated World Series game ever recorded by Nielsen. When CBS’ four-year, $1.06 billion deal with major league baseball ended with that Series, the best network deal that the leagues could make was an arrangement with both ABC and NBC tying baseball’s income to the amount of advertising sold. Baseball was forced into the business of selling advertising time for the networks (and therefore, for itself). Hockey’s ratings on its ABC and ESPN/ESPN2 telecasts, never big, also declined, from 0.9 in 1992 to 0.8 in 1993. The pattern is the same for football, basketball and the Olympics.

**The Industrial Benefits of Televised Sports**

This does not mean, however, that viewers no longer watch sports on television. But they have ceased to watch the big marquee events in numbers as great as they once did. Now cable channels and local independent stations have joined the networks as primary outlets for sports programming, and sports remains valuable and attractive to programmers for several distinct reasons:

Except for the big ticket events like the NCAA Basketball Championships, the Super Bowl, the World Series, the National Basketball Association (NBA) Championships and the major college football bowl games, televised sports generally produce smaller audiences than prime-time network programming. Of course, for independents and cable channels sports contests may often draw their biggest viewership. But regardless of the size of the audience for a sports telecast, it is audience composition that is important—this is the demographically attractive audience for advertisers who want to reach males, 18 to 49 years old. Certain sports also
bring with them even more narrowly defined audience segments. The products advertised during a bowling match, a game of golf or an auto race, make it immediately clear that a particular demographic group is being targeted. And advertising rates for these events are usually well below those charged on more general-interest programming.

When the new technologies began to divide the television audience, huge rights fees to big sports leagues became a burden for the networks. But for cable channels, local broadcasters and even for certain events on the networks, sports are often cheaper to buy and air than much first-run programming. This is why many regional sports networks such as the Boston Red Sox Baseball Network have developed. This is why team- and conference-centered ad hoc networks (groups of stations that come together in a network for specific programming like the Pac-10 Football Network or the Big East Game of the Week) have grown in number. And this is why ballgames or boxing matches are programmed on cable channels such as HBO, WTBS, WGN, and TNT.

Sports is the only programming that has successfully attracted large audiences on a weekend day. This creation of regularized audience behavior enables the medium to maintain its role as a familiar aspect of "everyday" life.

Sports also link the medium into a system of cross-promotion. Newspapers, radio stations, even stations in competition with a channel airing the weekend's big game all provide free advertising in the course of their usual sports coverage.

Ultimately, the reason sports are popular with broadcasters is that they are popular with viewers. Even the 1993 "low rated" World Series drew an average of fourteen and a half million households a game. The National Hockey League's (NHL) tiny 0.8 rating per game translates into three-quarters of a million homes. And, as FOX Television's 1994 acquisition of the pro football rights from CBS makes clear, the networks still see the ownership of the rights to major league sports as tantamount to being in the Big Time. Owner Rupert Murdoch dismissed the $350 million loss for FOX Television in its first year of NFL broadcasts as "an investment" in altering audience perceptions of his low-rated fourth network.

The Appeals of Televised Sports

But why are these contests of skill, originally designed to test the abilities of the participants and then to delight those who attend, so popular from a distance, on an illuminated iridescent screen? A range of possible appeals may be involved in gathering the large audiences for sporting events.

Viewers identify with their team, their favorite players, those warriors who carry the good name of their city, college, conference, nation, ethnic heritage, or other characteristic, into battle. Sports offer real heroes and villains, as opposed to the fictional characters of televised drama and comedy. Fans become familiar with those real individuals and their teams, following them, learning about them, living and dying with them, or, in the immortal words of ABC Wide World of Sports, experiencing with them the "joy of victory and the agony of defeat."

Sports on television is live television, it is history in the making, it is being "up close and personal" (again, thanks to ABC) as possibly momentous events unfold. To thrill in the victory of a favorite, to join the excitement of the moment in an exhilarating game or to learn more about the teams, players or games on television are among possible satisfactions that are obviously specific to sports on television.

The Aesthetics of Televised Sports

And no doubt a fourth reason why people watch televised sports is that the contests often make great television. Carlton Fisk's famous 1975 World Series homer, the American hockey victory over the Soviet Union team at the Lake Placid Olympics and the camera's sad attention to Thurman Thomas in the last quarter of the 1994 Super Bowl, its focus on the individual miscues that had led to a fourth straight Buffalo Bills defeat, are only three examples of the wonder that can be sports on television.

But what, specifically, makes an individual sporting event "good television?" As Channels writer Julie Talen wrote, "All sports are not created equal. The most popular sports on TV are those best served by the medium's limitations." What she means is that even if there are 20 cameras and 40 microphones at an event, the viewer still receives one picture and one set of sounds. Together these must convey a sense of what is happening in the actual contest. Monday Night Football's long-time director, Chet Forte, argued, "It's impossible to blow a football game... Football works as a flattened sport. Its rectangular field fits on the screen far more readily than, for example, golf's far-flung woods and sand traps. The football moves right or left on the screen and back again. Its limited repertoire—kick, pass, and run—sets it apart from, say, baseball, where the range of possibilities for the ball and the players at any given moment is enormous." And CBS' top football director, Sandy Grossman, says, "The reason (the gridiron) is easier to cover is because every play is a separate story. There's a beginning, a middle, and an end, and then there's 20 or 30 seconds to retell it or react to it."

There are, in other words, certain characteristics of the different sports that make them better dramatic and visual matches for television, and in doing so, render them more popular with audiences.

The camera, and therefore the fans' attention, is repeatedly redirected to a specific starting point for each new play, serve, or pitch. This is what CBS' Grossman above called a "separate story." Therefore, football and baseball are better than hockey and soccer in providing a discrete starting point. Tension can be sustained and viewer interest maintained if something crucial can occur at any moment. Any pitch can result in a home run or a fine running catch by the center fielder. Any pass can produce a touchdown or an interception. In contrast, the first three quarters of a basket-
ball game usually serve only to set up the last three minutes and much of soccer’s action happens at mid-field, yards and yards away from the goal (and a potential exciting save or game-changing score).

Baseball has innings, football has time-outs and quarters. Those covering and those watching the event can establish a rhythm that allows for the more-or-less natural insertion of commercials and visits to the refrigerator. Soccer has continuous action, as does hockey, which makes commercial insertion more complex.

Cameras and viewers have to be able to follow the object of interest on the field and on the small screen, respectively. Basketball and football are big while hockey pucks and golf balls are quite small.

Television is a visual medium; it lives by the pictures it offers its viewers. Baseball and football offer spectacle—big, full, beautiful stadiums, lovely playing surfaces, the blimp, cheerleaders (football) and the bullpen (baseball). Golf presents the manicured scenery of country club settings and the occasional glimpse at windswept Scottish headlands. Tennis, by contrast, has a small rectangular court and bowling has a skinny lane of wood (though each has the beginning-middle-end story structure so desirable to directors).

Nothing adds to visual variety like physical action, people moving and competing. Basketball is ballet above the rim. In football there are incredible tests of strength and aggression. Tennis demands action defined by precision and endurance.

Fans follow players as well as teams and the camera is well versed in the close-up. Roone Arledge of ABC called this “sports as soap opera.” Baseball gives us the tight shot of the pitcher’s anxiety as he holds the runners on first and third or zooms in on the concentration in the basketball player’s eyes as she shoots two from the charity stripe with the game on the line. In hockey it’s much more difficult to provide close-up, personal video images because the players wear helmets and skate at 30 miles an hour, but fans can still be attached to individual personalities, waiting for the grudge-induced fistfight on the ice. And as the celebrity status of Arnold Palmer or Jack Nicklaus, or the glamorous intensity of a John McEnroe, a Martina Navratilova, or a Jimmy Connors attest, even the more sedate sports create a cult-like status for their superstars.

Of course, television prefers sports with wide interest because it assures more viewers and ad revenue; but this is a plus for sports fans as well. Surely many fans watch games between teams they would not typically follow. The outcome might affect their home-town favorites or they want to see that scrappy second baseman they’ve read so much about.

**Televised Sports and “Real World” Sports**

Fans may watch televised sports for many of these reasons, but this involvement is not without its costs. Here the difference between sports and television’s other forms of programming becomes clearer. That is, unlike soap operas and situation comedies, sports exist apart from television. Major league baseball, for example, was born before radio was invented and developed its rules, traditions, nature and character apart from television. Moreover, sports are played in front of and for paying customers. This produces two important tensions. First, what have sports lost and gained from their wedding to television? Second, what have fans lost and gained?

The gains might be obvious. The leagues and athletes have prospered. More and more teams and tournaments are played in more and more cities and fill more and more television screens. Television has helped create tremendous interest and excitement for the public, turning the Super Bowl, for example, into something akin to a national celebration.

The losses, however, might be less obvious. Trying to explain dips in television ratings and attendance at games in the 1993 NFL season, for example, sports reporter Bud Geracie of the San Jose Mercury News wrote, “Terry Bradshaw (former NFL quarterback and Hall of Fame inductee) says that although Dallas is ‘as good as any team that’s ever played, the league as a whole isn’t fun to watch.’ Is this a temporary lull in the action, or a permanent condition? Is this (1993) NFL season the product of fluky misfortunes, or is it the beast born of parity... . The NFL wanted parity—and took measures to achieve it—and you can’t argue with the logic or the success of the concept. The NFL wished to maximize the number of teams in play-off contention late in the season, thereby maximizing fan interest, TV ratings, revenues and the rest. This is what the NFL bosses sought, and this is what they got. What they seem to have lost in the process is the big game. ‘There are no big games between 5–4 teams vying for wildcard spots,’ said Bob Costas of NBC.”

Television has also been instrumental in changing sports in other not-so-obvious ways, for example in the alteration, even the destruction, of traditional college sports conferences. In February 1994 four schools, the University of Texas, Texas A and M, Texas Tech and Baylor, left the 80 year old Southwest Conference to join another regional conference, the Big Eight. One goal was to cash in on ABC’s promise to pay the newly expanded league between $85 million and $90 million for the next five years, with the promise of an additional $10 million if this new football “super-conference” developed a play-off.

Other schools in the former Southwestern Conference were left behind. Bubba Thornton, alumnus and track coach of one of the jilted schools, Texas Christian University, lamented in a *Sports Illustrated* interview, “What the Southwest Conference was about was small towns and big cities, Texans against Texans, wives and girlfriends dressing up, bragging rights, the Methodist preacher talking Sunday morning about beating the Christians [Church of Christ], all the things that keep you going. We were about tradition all these years instead of instant gratification and egos. This decision will come back to haunt us.”

Such a view might be attributed to no more than nostalgia, a common aspect of sports in any medium. And
Certainly different critics' lists might vary. But here are several other "concessions" that fans and the games themselves have made to television: 1) games moved to awkward times of day to satisfy television schedules, ignoring fans who've bought tickets; 2) giant video screens in arenas and stadiums; 3) alteration of game rules, as in the creation of the "TV time-out" for television commercials; 4) free agency for players and consequent moves to the "highest bidder;" 5) pro teams moving to better "markets;" 6) wild-card games designed to increase playoff participants; 7) expanded playoffs; 8) the 40-second shot clock in the NBA; 9) the designated hitter in the American League; 10) over-expansion in the professional leagues; 11) salary caps; 12) umpire and officials strikes; 13) recruiting abuses as college teams chase television riches; 14) the playing of World Series games at night in freezing October weather (Game 7 of the 1994 Series was scheduled for October 30); 15) electric lights in Wrigley Field; and 16) players strikes and lock-outs.

The 1994 World Series fell victim to baseball's labor problems, but at the root of the dispute that also killed the last half of that season was the inability of the sports' owners to resolve "revenue disparities" between the small and large television market teams. The 1994-95 National Hockey League season lost nearly half its contests as well as its All-Star Game to precisely the same dispute among its franchise owners.

Still, the future of sports on television is certainly one that promises more contests on the screen and more transformation of both the games and the medium. It's widely accepted, for example, that one reason the networks paid such large rights fees to the professional sports leagues throughout the 1980s was to keep them out of the hands of pay-per-view television programmers. In the short term the strategy was successful. But virtually every cable system in America offers at least boxing on a pay basis and the Sports Channel, for all intents and purposes, pay television. What will happen to competitiveness, franchise stability, and scheduling as individual teams become star attractions? What will happen to the look of the broadcasts and the nature of the games if television "tickets" rather than advertising become the basis of program support? What will changes in the economics of the sports-television marriage mean to the teams, the medium and to the fans? What technological innovations (in covering the games and in distributing them) will we see and what might be their impact?

Answers to these questions are neither immediate nor obvious. But as a sports reporter might put it, one thing is certain—sports will continue to be closely intertwined with developments in television. Major events will continue to serve as national rituals. And audiences will continue to follow favorite teams and celebrity players, watching from a distance as the skills, the strength, the speed, and the tactics of athletes, coaches, and owners are pitted against one another on the screen in the home.

—Stanley J. Baran

SPORTSCASTERS

The history of sportscasting, like almost everything else on television, is rooted in radio. Radio’s first generation of great sportscasters—Graham McNamee, Ted Husing, Tommy Cowan, Harold Arlin, Ford Frick, and Grantland Rice—transformed the airwaves into an “arena of the mind” in which hyperbole would become honored as an art. McNamee, regarded as the first well-known play-by-play announcer, was unapologetic about sacrificing accuracy for excitement. His emphasis on enthusiasm, of course, lives on in the television performance of John Madden.

The radio days of sportscasting are notable as a period when sporting events would be "re-created" from bare-bones wire service reports. Announcers located in studios sometimes hundreds of miles away from the game site used sound effects and imaginative language to manufacture the impression that they were actually on location and describing the play-by-play action as it unfolded on the field of play. Perhaps the most notable conjurer of the illusion of sport re-creation landed his first job in the entertainment industry at WOC in Davenport, Iowa, as a football announcer. The year was 1932 and Ronald "Dutch" Reagan, who 48 years later would ride his oratorical skills into the White House as the 40th president of the United States, was paid $5 a game for his services. Many of the second generation of distinguished radio sportscasters—Mel Allen, Red Barber, Jack Brickhouse, Clem McCarthy, Lindsay Nelson, and Bill Stern—would later be prominent voices in television’s first decades as a mass medium. Two of this group, Allen and Barber, were the first broadcasters to be enshrined in the Baseball Hall of Fame.

Sports programming played a central role in transforming television into a mass medium in the late 1940s, stimulating much of the initial demand for this expensive new technology. As much as 30% of the prime-time schedule was devoted to sports programming during this period.

In urban centers, many Americans’ first television experience was watching an athletic contest on a set prominently displayed at the local tavern. Although roller derby and bowling also played well on the small screen, the sports best suited to the limitations of primitive television sets were boxing and professional wrestling. During this period when most television programs were sponsored by a single company, Gillette Cavalcade of Sports stayed on the air for 50 years, the longest continuous run of any television boxing show. The prototypical wrestling announcer, Dennis James, would become one of the first sportscasters to become known solely for his performances on television.

Sportscasting in the 1950s basically followed the radio pattern of enthusiasm. Sportscasters, and their employees, conceived of their role as being ambassadors of the game. As exemplified by the partisan commentary of Chicago Cub’s announcers Bert Wilson and Harry Caray, many operated as boosters for a franchise. Point men in the team’s public relations efforts, these sportscasters are often identified as the beloved “voice” of their organizations.

In the 1960s, television sports would be revolutionized by the advent of instant-replay technology. Introduced on 31 December 1963, during the Army-Navy football game, instant replay would figure prominently in enabling the phenomenal rise in popularity of televised football during the 1960s. Unseating boxing as the supreme made-for-TV sport, slow-motion replay technology made chaotic combat on the gridiron into an aesthetic experience in which even the most grotesque display of brutality (for example, the snapping of Joe Theismann’s leg) became a thing of beauty, a kind of improvised ballet of violent masculinity. In 1964, immediately after the advent of instant replay technology, CBS paid an unprecedented $28 million dollars for television rights for NFL games and instantly recouped its investment with two $14 million sponsorship contracts—one with Ford Motor Company, the other with Philip Morris.

Establishing Sunday afternoons, once considered a “cultural ghetto,” as a showcase for the masculine melodrama of professional football would set the stage for premiering what would eventually become the single most significant regularly-scheduled special event of the television year—the Super Bowl. Known then as the World Championship Game, the first match-up between the top teams in the AFL and NFL was played on 15 January 1967, and did
not attract enough paying customers to fill the Los Angeles Coliseum game site—even with a local blackout of televised game coverage. The game was carried by both CBS and NBC. In pre-game promotions, both networks emphasized the excellence of their sportscasters. CBS offered its regular NFL announcer/analyst staff of Ray Scott, Jack Whitaker, Frank Gifford, and Pat Summerall, while NBC featured Curt Gowdy and Paul Christman. However, The New York Times found that the much ballyhooed competition between the two sportscasting staffs “proved to be malarkey . . . never were two networks more alike.” Despite such negative reviews, the Super Bowl quickly caught on. In 1972, Super Bowl VI established a new record for the largest audience ever to watch an American TV program, a record since surpassed by several other Super Bowl telecasts.

An account of sportscasting in the 1960s and 1970s would not be complete without acknowledging the influence of Roone Arledge, the man who first penned the lines (on the back of an airline ticket), “the thrill of victory, the agony of defeat.” In the early 1960s, as the architect of what was destined to become the longest running sports program on television, Arledge hired a young Baltimore announcer named James K. McManus to host ABC’s Wide World of Sports. After McManus changed his name to Jim McKay, he would go down in broadcast history as the man who first informed the world about the tragic terrorist attack that took the lives of ten Israeli athletes at the 1972 Olympics in Munich, West Germany. As an ABC vice-president, Arledge played an instrumental role in the adoption and refinement of instant replay. Then, after being promoted to president of ABC Sports, Inc., Arledge would author yet another American institution, Monday Night Football. When Arledge’s salary reached the one-million-dollar mark in 1975 he was considered the television industry’s highest-paid executive.

Arledge’s philosophy of sportscasting was established early on when, in 1961, he adopted a policy of not signing contracts that included the traditional announcer-approval clause. This policy made ABC the first network to allow critical commentary to accompany the play-by-play, a clear break with the obligatory boosterism of sportscasting’s past. This philosophy is perhaps most clearly embodied in Arledge’s underwriting of Howard Cosell’s stormy career. Arledge designed the innovative narration of Monday Night Football around Cosell’s quasi-journalistic commentary. Thanks to the Cosell factor, the bantering of the most memorable stars of Monday Night Football—Cosell, Frank Gifford, and Don Meredith—was both controversial and tremendously successful. Often humorous and sometimes rancorous disputes between Cosell and Meredith, referred to a certain extent by Gifford, made even the most lopsided contest entertaining. While the public loved it when Meredith won an argument with a well-placed zinger, Cosell, near the end of his life, got the last laugh. In 1994, Cosell joined the elite ranks of Jim McKay, Lindsay Nelson, Curt Gowdy, Chris Schenkel, and Pat Summerall when the National Academy of Television Arts and Sciences recognized his accomplishments with a Lifetime Achievement Award. In the post-Cosell era, the mantle of the sportscaster that Americans love to hate is now worn by Brent Musburger.

Although former Miss America Phyllis George is generally credited with breaking sportscasting’s gender barrier in 1975 when she joined The NFL Today on CBS, at least one woman performed as a color commentator in the 1950s. Her name was Myrtle Power and she was signed by CBS after achieving brief celebrityhood as a baseball expert on The $64,000 Question. While women have continued to make inroads into sportscasting, it has not been without struggle. Perhaps the most confounding obstacle involves female access to male locker rooms, the subject of much controversy during the 1980s and 1990s. Jocko Maxwell, an African American who went to work as a sports announcer in 1935 for WHOM in Jersey City, New Jersey, is recognized as the person who first crossed sportscasting’s color line. Recently, several African Americans have distinguished themselves as announcers and commentators, the most noteworthy and notorious being Irv Cross, Bryant Gumbel, Jayne Kennedy, Joe Morgan, Ahmad Rashad, and O. J. Simpson. Even so, racism, like sexism, is still alive in the world of television sportscasting as demonstrated in 1988 in a racist comment by Jimmy “the Greek” Snyder. A well-known odds-maker, Snyder’s career as a game analyst on CBS was curtailed when it was reported that he attributed the competitive excellence of African American athletes to selective breeding.

With the launching of ESPN in 1979, sportscasting entered a new era. ESPN quickly became the first profitable basic cable network and is currently available in over 59 million U.S. television households making it the largest cable network. As the dominant national supplier of sports-related programming to cable systems, ESPN has had a profound impact on both the economic and stylistic dimensions of sportscasting. Largely because of ESPN’s “March Madness” coverage, NCAA basketball’s annual 64-team national championship tournament has joined the World Series and the Super Bowl as a mega-event on the television calendar. ESPN coverage is also responsible for cultivating a larger following for women’s basketball and men’s baseball at the collegiate level.

Stylistically, the ESPN era in sportscasting has been marked by what media critic Leslie Savan calls “the ironic reflex.” This style, associated with the postmodern turn in popular culture, appeals to the “Bud Bowl” generation—a generation that pays more attention to the Super Bowl commercials than to the game itself. Rightfully or wrongly, this generation believes that being conscious of the contrivances of television’s commercialism makes it somehow immune to its manipulation. NBC’s Bob Costas surely ranks as the most sophisticated and celebrated member of the new wave of hyper-cool sportscasters. Earning five Sports Emmy Awards between 1987 and 1994, Costas’s postmodern credentials were validated when NBC scheduled his interview show, Later with Bob Costas, in the time
Sacrificing in a style for stage, television. John Madden’s most familiar sportscasters put very different spins on the postmodern style. Chris Berman impersonates Cosell’s “He...could...go...all...the...way!” when narrating football highlights on Sportscenter, the terrifically popular sports news show that appears daily on ESPN. However, Berman is best known as a purser whose nicknames for baseball players (e.g., Roberto “Remember the” Alomar, Greg Gagne “with a spoon,” Wally “Absorbine” Joyner) command their own page on the World Wide Web. In contrast to Berman’s playfulness, Keith Olbermann, another regular on Sportscenter, is the epitome of postmodern cynicism. As a sportscaster with an attitude, Olbermann carries on the Cosell tradition of opinionated commentary, but inflects it with the Costa-esque smirk or the Groucho-Marxian raised eyebrow. On ESPN’s college basketball beat, Dick Vitale takes enthusiasm over the edge, the excessiveness of his hyperkinetic performance making Vitale a parody of himself.

And, yet, amidst all the winks, nudges, insincerity and excess of contemporary sportscasting, there is still a profitable place for good, old-fashioned enthusiasm. In 1993, after FOX outbid CBS for the rights to broadcast NFC football, John Madden negotiated a contract with Rupert Murdoch that would pay Madden $30 million over four years. With that deal, Madden, a sportscaster who emotes the no-nonsense style. Berman’s-esque attitude, but opinionated commentary, builds to “play the gallery,” and her work in a diverse set of television genres. Listed among her credits are the particularly noteworthy roles of the long-suffering and self-sacrificing wife and mother, Connie Fox, in the drama series Fox Harvey Moon’s no-nonsense and strong-willed mother in the situation comedy series Shine on Harvey Moon, the God-fearing gossip, May, in the critically acclaimed and highly popular drama, Oranges Are Not the Only Fruit, and the wayward and wonderfully funny nurse, Saigey Gamp, in the much-praised BBC adaptation of Martin Chuzzlewit. While to a great extent subject to the standard type casting of older actresses, Spriggs takes the crones, gossips, and suffering matriarchs and transforms them with her engagingly strong and rooted presence. In doing so, she imbues the usual fare with additional weight and dimension. Although there has been interest, particularly within feminist television criticism, in analysing the representations of older female characters and the contributions of actresses to these characterisations, most of the attention has been paid to the soap opera genre. The wider terrain remains largely unexplored and unevaluated within television studies.

SPRIGGS, ELIZABETH

British Actor

Elizabeth Spriggs is among Britain’s most established and well-loved character actors. An Associate Artiste with the Royal Shakespeare Company, her illustrious work in the theatre has run parallel with her lengthy and successful career in television. Work in the two media converged with her characterisation of Sonia in Wesker’s Love Letters on Blue Paper, a role she originally created for television and then transferred to the stage, winning her the West End Managers Award for 1978.

Her versatility is revealed by both her skill at adapting her style for television, resisting the tendency of many actors with a theatrical background to “play to the gallery,” and her work in a diverse set of television genres. Listed among her credits are the particularly noteworthy roles of the long-suffering and self-sacrificing wife and mother, Connie Fox, in the drama series Fox Harvey Moon’s no-nonsense and strong-willed mother in the situation comedy series Shine on Harvey Moon, the God-fearing gossip, May, in the critically acclaimed and highly popular drama, Oranges Are Not the Only Fruit, and the wayward and wonderfully funny nurse, Saigey Gamp, in the much-praised BBC adaptation of Martin Chuzzlewit.

While to a great extent subject to the standard type casting of older actresses, Spriggs takes the crones, gossips, and suffering matriarchs and transforms them with her engagingly strong and rooted presence. In doing so, she imbues the usual fare with additional weight and dimension. Although there has been interest, particularly within feminist television criticism, in analysing the representations of older female characters and the contributions of actresses to these characterisations, most of the attention has been paid to the soap opera genre. The wider terrain remains largely unexplored and unevaluated within television studies.

SPY PROGRAMS
Although individual series have enjoyed enormous popularity and cult followings, the spy genre overall has never been as successful nor as ubiquitous in American television as westerns, medical dramas, and detective programs. Nevertheless, espionage-themed programs can boast a number of firsts, most notably the first African-American lead character in a regular dramatic series (JSpy); the first female action lead character in an hour-long American dramatic series (The Girl From U.N.C.L.E.); and the first Russian lead character in an American dramatic series (The Man From U.N.C.L.E.), the latter appearing less than three years after the Cuban Missile Crisis.

Except during the so-called “spy craze” period of the mid-1960s when it seemed that every action/adventure show borrowed elements from James Bond, spys as television action heroes have been far outnumbered by the more traditional figures of policemen and private investigators. Even when they do appear, television spies (or “secret agents”) are often presented as international crime fighters rather than as true undercover operators, with the emphasis on justice and law enforcement rather than on clandestine activities. As a result, there are few “pure” spy programs and most of the long-running ones can be classed in other genre
categories, including westerns (The Wild, Wild West), situation comedy (Get Smart), and science fiction (The Avengers and The Prisoner).

The boundaries between the spy and other television genres are extremely fluid, and the elements of the typical spy program are variable and not easily defined. On television, spies and detectives have a great deal in common. Both are tough, sometimes world-weary individuals who live and work on the edges of normal society. Their antagonists are rich, powerful, clever, and often apparently "respectable." In both genres, because of the wealth and resources of the villain, the heroes must use extra-legal means in order to triumph. Before they do, they must progress through various narrative situations including the assignment of the case/mission, investigation of the crime, abduction by the villain, interrogation and/or torture, at least one long, complicated chase and a final shoot-out or brawl.

The average secret agent tends to be more cerebral and sophisticated than the average detective and if not wealthy himself, at least comfortable with the trappings of wealth. Money is not an important incentive, however. The secret agent's motives are personal and philosophical, a dedication to certain moral or political ideals, or simply a taste for the game of espionage itself. In its focus on the "game"—the hero's intellectual ability to decipher clues, solve complex mysteries, and outmaneuver the bad guys—the television spy plot may resemble the classical detective story. Indeed, the chess metaphor appears often in each.

Nevertheless, there are several subtle differences that distinguish the television secret agent from the detective and these can be seen in the transformation of Amos Burke, the title character of the popular series Burke's Law. For the first two years of the series' run, Burke (played by Gene Barry) was a Los Angeles chief of detectives who also happened to be a millionaire. In solving his homicide cases, Burke was chauffeured around in a silver Rolls Royce. His cases were typical whodunits involving the rich and glamorous portrayed by large casts of guest stars.

Then in 1965, in order to cash in on the spy craze, Captain Amos Burke, detective, became Amos Burke—Secret Agent. Since he was already suave, sophisticated, witty, and charming, no character tinkering was needed. However, several important changes were made. Burke left the L.A.P.D. to work for a U.S. government intelligence agency, with his only contact, a mysterious character called simply, "The Man" (played by Carl Benton Reid). Burke's operating milieu subsequently expanded from the confines of the Los Angeles area to include the entire world. No longer a local millionaire sleuth, Burke became a continent-hopping agent and his quarry changed from small time murderers to international criminals whose schemes and machinations had global consequences.

These changes, then, define the essential elements of the television spy series: (1) The active presence of a government or quasi-government agency in the life of the protagonist. The agency is shown to be involved in clandestine and/or espionage activities. (2) Villains who are often foreign, unusually eccentric, and whose crimes have larger political consequences. Most commonly, these villains desire either to take over the world or to destroy it. (3) An expansion of the plot setting beyond local and even national boundaries to include a variety of countries and exotic locales.

Since James Bond appeared on the literary and later, cinematic scene, spy stories have also incorporated a literary of stylistic motifs of his creator, Ian Fleming. These include ironic humor; the use martial arts techniques for self-defense; a preoccupation with expensive clothes, cars, food, accommodations and leisure pursuits; the presence of beautiful women either as agents, antagonists, or innocent bystanders caught up in the plot, and a fascination with weaponry and high technology.

The importance of these motifs should not be underestimated. For example, Honey West was essentially a series about a female detective similar to the later Remington Steele. Yet, critics have always categorized it as a spy program simply because of its stylistic trappings, most notably, Honey West's pet ocelot and the one-piece black jumpsuit worn by the star, Anne Francis, so reminiscent of the wardrobe of The Avengers' Emma Peel (Diana Rigg). On the other hand, series like Tightrope and the later Wiseguy, which both feature lead characters working undercover, are not considered spy programs because the international reach of the enemy

The Man from U.N.C.L.E.
crime syndicates is not emphasized, and because the heroes appear and function as police officers.

The primary reason why spy shows are so few and far between on television is that the genre does not adapt well to the production and aesthetic needs of medium. In their book, *The Spy Story* (1987), John G. Cawelti and Bruce A. Rosenberg delineate two subcategories of spy fiction, both of which can be applied to spy stories on television.

The first, originating with James Buchanan (The Thirty-Nine Steps) and other "clubmen" writers and re-invented by Ian Fleming, consists of colorful, imaginative adventures with roving, honorable heroes, dastardly villains and exotic settings. By comparison, the second subcategory, identified with Eric Ambler, Graham Green and more recently, John Le Carré, contains tales of espionage more realistically presented. Concerned with corruption, betrayal and conspiracy, these stories feature a grayer mood, more circumscribed settings and ordinary protagonists who seem, at first glance, not much different than the people they oppose. The plotting is complicated and subtle, and the endings are often downbeat, leaving the agent sadly disillusioned or dead. The chief difference between the two subcategories is the moral base of the narrative. In the first group, good and evil is rendered in stark black and white. In the second, the morality is ambiguous.

As with their literary equivalents, television spy stories may be similarly divided into the romantic and the realistic, although as one might expect, there is considerable overlap. Both types present problems in adapting to the television medium.

The romantic spy adventure, while meeting the aesthetic needs of the medium for simplicity in storytelling, escapist interest and fast paced excitement, requires foreign locations, numerous props, expensive wardrobes, and other production details that can severely strain a limited television budget. On the other hand, although the realistic espionage story is likely to be less expensive to produce, the difficult themes, depressive mood, and often unattractive characters do not lend themselves to the medium, particularly to the demands of a weekly network series.

As a result, to be produced for television, both types of spy stories must be "domesticated", both literally and figuratively. For the romantic spy program, elements of the so-called Bond formula of "sex, snobbery, and sadism" must be toned down to small screen standards. The intensity of torture sequences may be tempered by the use of outlandishly humorous devices and Perils-of-Pauline-style narrow escapes. Weapons may fire sleep inducing darts (The Man From U.N.C.L.E.) or the hero may not carry a gun at all (as in the quasi-espionage series, MacGyver).

Location shoots must also be kept to a minimum. Both The Man and The Girl From U.N.C.L.E. filmed on the MGM backlot used an ingenious swish-pan technique to get from one location to another. I Spy traveled overseas but filmed a number of episodes in each country it visited. The Prisoner was shot at an actual resort village at the Hotel Portmeiron in North Wales. Adderly was fortunate enough to find Canadian locations that could mimic the landscape of the Soviet Union and other European countries. More recently, series like *The Scentcrow and Mrs. King* confine themselves to U.S. settings, saving stories set in foreign locales for season finales and sweeps weeks.

Several realistic, even dyspeptic, espionage series like *Danger Man, Callan,* and *Sandbaggers* enjoyed healthy runs in the United Kingdom but only one of these, *Danger Man,* ever crossed the Atlantic to be seen in the States. To make the plotlines and characters of realistic spy programs more appealing to American audiences, television producers have employed a number of different strategies. For example, *Danger Man* was retitled *Secret Agent* and a snazzy Johnny Rivers song was added to the opening and closing credits. Both *I Led Three Lives* in the 1950s and *The Equalizer* in the 1980s exploited anxieties that were close to home for the audience, mining Red Scare paranoia in the case of the earlier show and fears of urban crime in the later.

Another strategy used by creators of realistic spy programs is to make the central character morally certain. Although he was often surrounded by double-crossing colleagues and double agents in *Secret Agent*, John Drake's (Patrick McGoohan) own loyalty was never in question. In *The Equalizer,* Edward Woodward, who earlier played a lonely, cold-blooded assassin in *Callan,* returned as Robert McCall, a retired CIA operative. McCall clearly had a past career similar to Callan's, but now deeply regretted it. To expiate his past sins, McCall became the self-styled Equalizer of the title, dedicating his life and skills to protecting the weak and innocent free of charge. McCall was also given a family—an estranged son, a dead wife and a daughter whose existence he discovered during the run of the series.

Surrounding the usually isolated secret agent with family, colleagues, and friends is yet another television strategy for domesticating both strains of the genre. Humor and a fraternity boy camaraderie between Kelly Robinson (Robert Culp) and Alexander Scott (Bill Cosby) lightened *I Spy's* sometimes bleak Cold War ideology, while the developing romance between the two lead characters (Bruce Boxleitner and Kate Jackson) kept interest high between chases in *The Scentcrow and Mrs. King.* In *Under Cover,* an intensely realistic series which featured plotlines drawn directly from recent world events, the husband and wife agents (Anthony John Denison and Linda Purl) were forced to juggle the dangerous demands of their profession with the everyday problems of home and family life. Finally, those spy stories that, for whatever reason, could not be domesticated, such as adaptations of bestselling spy thrillers, generally ended up on cable or PBS, or on network television as TV movies and miniseries.

The history of the spy on television reflects this continuing tension between the genre and the medium, and between romantic and realistic tendencies. Whenever public interest in foreign affairs is on the rise, spy programs of both types proliferate, with fictional villains reflecting the country's current political enemies.

The first regular spy series appeared on U.S. television in the early 1950s. A handful, including an early series also called
I Spy (hosted by Raymond Massey) and Behind Closed Doors (hosted by Bruce Gordon) were anthologies. Others, like Biff Baker (Alan Hale Jr.) and Hunter (the first of four series called Hunter, this one starring Barry Nelson), featured gentlemen amateurs caught up in foreign intrigue through chance or patriotism. The rest, which usually had the word “danger” in their titles (Doorway to Danger, Dangerous Assignment, Passport to Danger) were undistinguished half-hour series about professional agents battling Communists. These series lasted, with only three exceptions, a year or less.

Those exceptions were I Led Three Lives, Foreign Intrigue and Five Fingers. I Led Three Lives was an enormously popular hit series based on the real-life story of FBI undercover agent Herbert Philbrick who infiltrated the American Communist Party. A favorite of J. Edgar Hoover (who considered it a public service), the show reportedly was taken so seriously by some viewers that they wrote the producers to report suspected Communists in their neighborhood. Foreign Intrigue, a syndicated series boasted colorful European locations but replaceable stars (five in four years played varying wire service correspondents and a hotel owner) who stumble across international criminals. Only the last, Five Fingers, starring David Hedison as double agent Victor Sebastian, even hinted at the cool, hip style that was to be the hallmark of spy shows in the sixties.

An interesting oddity during this period was an adaptation of Ian Fleming's Casino Royale for the anthology series, Climax, in which the British James Bond is transformed into an American agent, “Jimmy” Bond (Barry Nelson) confronting a French Communist villain named Le Sheef (originally Le Chiffre). After a tense game of baccarat, Le Sheef (played by a sleepwalking Peter Lorre) captures Bond, confines him in a hotel bathtub, and rather bizarrely tortures him by twisting his bare toes with pliers.

There is no doubt that the mid-1960s was the high water mark for the spy genre. Spies were everywhere—in books, on records, on the big screen and the little screen, and their images were emblazoned on countless mass produced articles from toys to toiletries. Most were hour-long color shows which featured pairs or teams of professional agents of various races, genders and cultural backgrounds. The pace was fast, the style, cool, with lots of outrageous villains, sexual innuendo, technical gadgetry, and tongue-in-cheek humor. A third subcategory of the genre, the spy “spoof”, developed during this time (Get Smart, created by Mel Brooks and Buck Henry, is the quintessential example) but there was so much humor in the “serious” shows that it was often difficult to distinguish spoofs from the real thing.

By 1968, the high spirits had soured and the spy craze came to a fitting end with the unsettlingly paranoiac series, The Prisoner, created and produced by its star, ex-Secret Agent Patrick McGoohan. Still, many of the shows of this period, including The Man From U.N.C.L.E., The Avengers, I Spy, The Wild, Wild West, Mission: Impossible and even The Prisoner, have enjoyed continued life in periodic film and television revivals and in cult fan followings throughout the world.

The decade of the 1970s saw a few sporadic attempts to breathe new life into a moribund genre. All the spy series introduced during this period featured gimmicky characters who worked for organizations identified by acronyms. Among the gimmicks were an agent with a photographic memory (The Delphi Bureau), agents fitted with electronic devices connected to a computer (Search), an agent accompanied by a giant assistant with a steel hand filled with gadgets (A Man Called Sloane) and a superhuman cyborg (The Six Million Dollar Man). With the exception of the last, which appealed primarily to children, all were quickly cancelled.

The beginning of the next decade saw several “return” movies of 1960s’ favorites like Get Smart, The Wild, Wild West, and The Man From U.N.C.L.E. as well as quality television adaptations of John Le Carré's Tinker Tailor Soldier Spy and Smiley's People by the BBC (shown on PBS in the U.S.). This eventually led to a mini-revival in spy programs in the mid-1980s, which included serious, gritty series like The Equalizer and adaptions of bestselling spy novels including Le Carre’s A Perfect Spy, Len Deighton's Game Set Match, Ken Follett's Key to Rebecca and Robert Ludlum's The Bourne Identity. As with Amos Burke in the sixties, action series like The A-Team began to boost their ratings by injecting espionage elements into their formulas.

However, unlike their predecessors of twenty years previous, the spies of the 1980s were less fantastic and more pragmatic, with believable technology and a post-modern sensibility. Even romantic adventure series like Airwolf and Scarecrow and Mrs. King were given a realistic edge. Indeed, this trend towards intense realism reached its culmination in Under Cover, a series so realistic that it was cancelled by a nervous ABC network after less than a month on the air. In January 1991, a two-part episode of Under Cover, in which Iraq planned to fire a virus-carrying missile at Israel, was pulled from the schedule when the war in Kuwait broke out.

For the 1994–95 season, the fledgling Fox network offered two spy series, Fortune Hunter, a James Bond clone, and a revival of Get Smart starring an aging Don Adams and Barbara Feldon. Both series were cancelled after extremely abbreviated runs.

STANDARDS

Recorded video signals are rather complex and tightly structured. The standard unit of video is a frame. Similar to film, motion video is created by displaying progressive frames at a rate fast enough for the human eye and brain to perceive continuous motion. The basic means by which video images are recorded and displayed is a scanning process. When a video image is recorded by most cameras, a beam of electrons sweeps across the recording surface in a progressive series of lines. This basic technology is simple enough, widely understood, and, after a certain point, easily manufactured. The concept can be applied and the effect of a video image can be achieved, however, in various ways, with varying rates of electronic activity. Line frequencies and scanning rates are flexible, determined in part by a level of user (producer and viewer) satisfaction, in part by concerns of equipment manufacturers and broadcasters. Consequently, not all video or television systems are alike. The variations among them are defined in terms of “standards.”

In the United States industry-wide agreement on engineering standards for television did not come until 1941, when the Federal Communications Commission (FCC) decided to adopt a black-and-white standard (postponing the issue of color). The FCC accepted the National Television System Committee (also referred to as the National Television Standards Committee and referred to as NTSC) recommendations, and set line frequency at 525 per frame scanned at a rate of approximately 30 frames per second (29.97 to be exact). In 1953, corporate interests (CBS and RCA/NBC) agreed to another proposal which allowed the NTSC to establish color television standards; these standards were compatible with those already set for black-and-white transmission.

These standards are not, however, uniformly accepted elsewhere. There are presently three world standards for transmitting a color video signal. The NTSC recommendations accepted by the FCC as a national standard for the United States in 1953 are used in several other countries including Canada, Chile, Costa Rica, Cuba, El Salvador, Guatemala, Honduras, Japan, Mexico, Panama, Philippines, Puerto Rico, South Korea, and Taiwan.

PAL (phase alternating line) and SECAM (sequential couleur a memoire) are the two other major worldwide television standards. PAL is a modified form of NTSC, and specifies a different means of encoding and transmitting color video designed to eliminate some NTSC problems, specifically a shift in chroma phase (hue). PAL uses 625 lines per frame (versus NTSC’s 525) scanned at a rate of 25 frames per second (versus NTSC’s 29.97), and operates at a 50Hz frequency (versus NTSC’s 60Hz frequency). The PAL system is standard in more countries than NTSC or SECAM, including Argentina, Australia, Belgium, Brazil, China, Denmark, Finland, Great Britain, India, Indonesia, Ireland, Italy, Norway, New Zealand, the Netherlands, Portugal, Spain, Sweden, Switzerland, and Turkey.

SECAM is a video color system developed by the French; though it differs from PAL, it too uses 625 lines per frame, scanned at a rate of 25 frames per second, and operates at a 50Hz frequency. SECAM is used in France, as well as several other countries, including Egypt, Germany, Greece, Haiti, Iran, Iraq, North Korea, Poland, and parts of the former Soviet Union.

There are enough differences between these three standards so that a videotape recorded using PAL will not play on a VCR set up for NTSC or SECAM, and vice versa. NTSC, PAL and SECAM are thus incompatible with each other. Standards converters can convert video from one standard to another, but the resultant image is often poor. Digital standards converters can provide better quality converted video. Productions intended to be broadcast or released in different video standards are often shot on film, which can be converted to any video standard with reasonably good quality.

Recent developments in high-definition television (HDTV) have closed the gap between the technical quality of broadcast television and motion pictures. HDTV doubles the current broadcast NTSC number of scanning lines per frame—from 525 to 1050 or 1125, depending on the specific system—with a fourfold improvement in resolution (and a change to a wide-screen format).

STANDARDS AND PRACTICES

Standards and Practices is the term most American networks use for what many, especially in the creative community, refer to as the "network censors." Standards and Practices Departments (known as Program Practices at CBS) are maintained at each of the broadcast and many of the cable networks. The concept came about as a direct outgrowth of the trusteeship model: broadcasters were said to have a responsibility to the public interest as a result of their having access to a scarce resource. Another factor was the fear of propaganda, deemed to have been so effective in World War I. The most important consideration, however, was the unprecedented reality that radio, and later television content, came into the home, unforeseen, often unbidden, and sometimes unwelcome. Historically, therefore, lest an offended audience demand government intervention, Standards and Practice's charge has been to review all non-news broadcast matter, including entertainment, sports and commercials, for compliance with legal, policy, factual, and community standards.

The broadcasters' insistence on setting and maintaining their own standards goes back to the very beginning of the medium in 1921, when engineers were instructed to use an emergency switch in the event that a performer or guest used language or brought up topics which were held to be unsuitable. One early memoir describes the use of the button when a distinguished ballerina launched into a discussion of birth control. During radio's first decade, taboos also included any mention of price or even the location of a sponsoring store. Later, the networks would have an activist at the ready in a standby studio. A noted incident is said to have occurred in 1932 when a major administration spokesman was reporting on the government's progress in dealing with the Great Depression. He allegedly used the word "damn," a light went on in the standby studio, and the nation heard organ arpeggios for the length of time it took to be assured that he wouldn't do that again.

By the late 1930s, the networks had established so-called continuity acceptance procedures to assure that their advertising policies and federal law were adhered to. Later, as the role of radio in American life became more clearly understood, a body of written policy was articulated, generally on a case by case basis, to guide not only advertisers and their agencies but also programmers and producers in entertainment and other programming.

More than 67% of all television stations subscribed to the NAB (National Association of Broadcasters) Code adopted in 1950 (a similar radio code had been in operation since 1935). In addition to provisions which addressed historic concerns respecting the "advancement of education and culture," responsibility toward children, community responsibility, and general program standards, the NAB Code also included advertising standards and time limits for non-program material defined as "billboards, commercials, promotional announcements and all credits in excess of 30 seconds per program." In 1982, in settlement of an anti-trust suit brought by the U.S. Department of Justice, the NAB and the federal government entered into a consent decree abolishing the time standards and the industry-wide limitations on the number and length of commercials they provided. The Code program standards had been suspended in 1976 after a federal judge in Los Angeles ruled that the Family Hour violated the First Amendment. After the demise of the Code, the networks, which had already developed their own written standards, took over the entire burden.

Standards, and the broadcasters' efforts to implement them, come to the fore whenever an apparent breach of the implicit obligation to respect the public trust occurs. The celebrated 1938 broadcast by Orson Welles' Mercury Theater of "The War of the Worlds" which simulated a radio broadcast interrupted by news reports describing the landing of Martians; the quiz show scandals of the 1950s; Congressional hearings into violence, and concern over the possible blurring of fact and fiction in early docudrama, are notable examples of perceived abuse which resulted in expanding the duties and enlarging Standards and Practices operations, generally throughout the industry. By 1985, one of the traditional network's department had no fewer than 80 persons on its staff. Each episode of every series was reviewed in script form and as it was recorded.

With the changes in ownership of the traditional networks, the emergence of the cable networks, and the deregulatory climate, there has been considerable relaxation of the process—not every episode is reviewed once a series is established—but the essential responsibilities of the editors remain the same. These include, in addition to compliance with the law, serving as surrogates for the network's affiliates who are licensed to be responsive to their local communities; reflecting the concerns of advertisers; and, most important, for their employers, the networks themselves, assuring that the programming is acceptable to the bulk of the mass audience. This involves serving as guardians of taste with respect to language, sexual and other materials inappropriate for children, and the suitability of advertising, especially of personal products.

Commercial clearance involves the close screening of more than 50,000 announcements a year, falling into about 70 different product categories. The Federal Trade Commission's statements in the early 1970s which not only permitted but virtually mandated comparative advertising, resulted in the establishment of courtlike procedures to adjudicate between advertisers making conflicting claims. By the mid-1980s, at least 25% of all commercials contained comparisons to named competitor's products or services.

Critics contend, with some justification, that standards and practices is anachronistic paternalism at best, and most often a form of censorship; the networks claim the publisher's right to exercise their judgment as to what is appropriate for broadcast to the American public. The affil-
iated stations sometimes complain but are generally, though not always, satisfied that the network are sufficiently vigilant as their surrogates. Network and sales executives worry that the very process of vetting leads to pettifoggery and rigidity. Advertisers rail at the scrupulous insistence that all claims be substantiated, as the law requires. By far the most frequent complaints, however, are heard from the creative community which argues that the networks are too accommodating of the most conservative members of the audience and that only by "pushing the envelope" with respect to sex, violence, or language, can the medium advance.

Standards and Practices’ primary purpose has always been to maintain the networks’ most precious asset, its audience-in-being — the delivery of a significant share of television households, hour after hour, to the advertising community. Secondary purposes historically, have included protecting the networks’ images as responsible and responsive institutions, as sources of reliable information and satisfying entertainment for the entire family, and even as precious national resources. In the final analysis, if the concern for not giving offense has contributed to blandness, it must also be credited for making a commercially supported national system possible.

—George Dessart

STANTON, FRANK
U.S. Media Executive

Frank Stanton is a distinguished broadcast executive known for the leadership he brought to CBS, Inc., during his twenty-five-year presidency (1946–71). His guidance gave CBS crucial stability during the company’s critical growth period. More than just a corporate president, however, Stanton acquired a reputation as the unofficial spokesperson for the broadcasting industry. His opinions were routinely sought, his speeches repeatedly quoted, and his testimony before Congress recognized as a major part of any debate in the broadcasting field.

Stanton was fascinated with radio from his days in graduate school at Ohio State, chiefly by the question of why people reacted positively to certain radio shows but negatively to others. He used his doctoral research in the psychology department to answer this question, examining why and how people perceive various stimuli. He analyzed the audio and visual effectiveness of information transmission and established test procedures for making rough measurements of their effectiveness. His dissertation, “A Critique of Present Methods and a New Plan for Studying Radio Listening Behavior,” caught the attention of CBS, and launched his career in the audience research department in 1935.

In 1937, Stanton began a collaboration with Dr. Paul Lazarsfeld of Columbia University. They devised a program analysis system nicknamed “Little Annie.” While Stanton tends to downplay the importance of the machine, others have credited it with being the first qualitative measurement device. “Little Annie” determines the probability of a program’s appeal by suggesting how large an audience that program would be likely to attract. The system was devised for radio, but continues to be used for television, reporting an accuracy rate of 85%.

Stanton was promoted to vice president of CBS in 1942, and in 1946, at the age of 38, to the presidency. In this position, he guided CBS through a period of diversification and expansion. He reorganized the company in 1951, creating separate administrations for radio, TV and CBS Laboratories, a plan that served as a model for other broadcast companies. He helped CBS expand its operations by decentralizing its administration and creating autonomous divisions with a range of new investments, including the purchase of the New York Yankees in 1964. CBS also bought the book publisher Holt, Rinehart and Winston, and Creative Playthings, manufacturer of high quality educational toys. Diversification paid off for CBS; the company earned $1 billion in annual sales in 1969.

See also Censorship; United States: Networks
As president of CBS, Stanton concentrated on organizational and policy questions, leaving the entertainment programming and the discovering and nurturing of talent to chair, William S. Paley. Stanton was also responsible for the political issues growing out of the network’s news department. He was instrumental in bringing about the 1960 Kennedy-Nixon televised presidential debate and is known for his efforts to repeal Section 315 of the Federal Communications Act, which requires networks to grant equal time to all political candidates. A staunch proponent of broadcast journalism and defender of broadcasting’s First Amendment rights, he led campaigns before Congress and in the courts on behalf of the broadcast industry for access and protection equal to that of the printed press.

Stanton’s greatest battle with the government occurred in 1971, and focused on just this parallel to print press rights. The controversy surrounded The Selling of the Pentagon, a CBS News documentary, which exposed the huge expenditure of public funds, partly illegal, to promote militarism. The confrontation raised the issue of whether television news programming deserved protection under the First Amendment. Against threat of jail, Stanton refused the subpoena from the House Commerce Committee ordering him to provide copies of the outtakes and scripts from the documentary. He claimed that such materials are protected by the freedom of the press guaranteed by the First Amendment. Stanton observed that if such subpoena actions were allowed, there would be a “chilling effect” upon broadcast journalism.

But long before this particular case, and long before Watergate or Vietnam, CBS was the first broadcasting network to seriously examine the negative side of Washington politics on television. One of the earliest of these explorations occurred on the news program See It Now, in which host Edward R. Murrow confronted U.S. Senator, Joseph McCarthy. The program was constructed using film clips of McCarthy’s accusatory speeches and Murrow refuting his charges. McCarthy demanded, and was granted, time for a response, and in that blustery performance many observers see the downfall of McCarthyism. In retrospect, the two programs were among the most important in the history of television.

Documentaries, even of this immediate sort, however, had a more difficult time attracting sponsors than did entertainment programs and for this reason See It Now was canceled following the 1958 season. Appalled by what the broadcasting industry had become, Murrow spoke before the Television News Directors Association and delivered what was to become known as one of the most famous public tongue lashings in media history, aimed directly at Stanton and Paley. The relationship between Stanton and Murrow soured into accusations and name-calling and was widely reported in the press.

Stanton received the title of vice chair in 1972, one year before the mandatory retirement age of 65. Upon retiring Stanton still held $13 million worth of CBS stock and he remained a director of CBS and consultant to the corporation under a contract that lasted until 1987.

STAR TREK
U.S. Science-Fiction Program

With the premiere of Star Trek on NBC in September 1966, few could have imagined that this ambitious yet often uneven science-fiction series would go on to become one of the most actively celebrated and financially lucrative narrative franchises in television history. Although the original series enjoyed only a modest run of three seasons and 79 episodes, the story world created by that series eventually led to a library of popular novelizations and comic books, a cycle of motion-pictures, an international fan community, and a number of spin-off series that made the Star Trek universe a bedrock property for Paramount Studios in the 1980s and 1990s.

Star Trek followed the adventures of the U.S.S. Enterprise, a flagship in a 23rd-Century interplanetary alliance known as "the Federation." The ship's five-year mission was "to seek out new life and new civilizations, to boldly go where no man has gone before," a mandate that series creator and philosophical wellspring Gene Roddenberry described as "Wagon Train in space." Each episode brought the crew of the Enterprise in contact with new alien races or baffling wonders of the universe. When not exploring the galaxy, the crew of the Enterprise often scrapped with the two main threats to the Federation's benevolent democratization of space, the Hun-like Klingons and the more cerebral yet equally menacing Romulans.

The program's main protagonists, Captain James T. Kirk (William Shatner), Mr. Spock (Leonard Nimoy), and Dr. Leonard McCoy (DeForest Kelly), remain three of the most familiar (and most parodied) characters in television memory. As commander of the Enterprise, the hyper-masculine Kirk engaged in equal amounts of fisticuffs and intergalactic romance, and was known for his nerves of steel in negotiating the difficulties and dangers presented by the ship's mission. McCoy was the ship's cantankerous chief medical officer who, when not saving patients, gave the other two leads frequent personal and professional advice. Perhaps most complex and popular of the characters was Spock. Half-human and half-Vulcan, Spock struggled to maintain the absolute emotional control demanded by his Vulcan heritage, and yet occasionally fell prey to the foibles of a more human existence. In addition to the three leads, Star Trek featured a stable of secondary characters who also became central to the show's identity. These included the ship's chief engineer, Scotty (James Doohan), and an ethnically diverse supporting cast featuring Uhura (Nichelle Nichols), Chekov (Walter Koenig), Sulu (George Takei), Yeoman Rand (Grace Lee Whitney), and Nurse Chapel (Majel Barrett).

Scripts for the original series varied greatly in quality, ranging from the literate time-travel tragedy of Harlan Ellison's "City on the Edge of Forever" and the Sophoclean conflict of Theodore Sturgeon's "Amok Time," to less inspired stock adventure plots, such as Kirk's battle to the death with a giant lizard creature in "Arena." With varying degree of success, many episodes addressed the social and political climate of late-1960s America, including the Vietnam allegory, "A Private Little War," a rather heavy-handed treatment of racism in "Let That Be Your Last Battlefield," and even an encounter with space hippies in "The Way to Eden."

NBC threatened to cancel Star Trek after its second season, but persuaded in some degree by a large letter-writing campaign by fans to save the show, the network picked-up the series for a third and final year. Canceled in 1969, Star Trek went on to a new life in syndication where it found an even larger audience and quickly became a major phenomenon within popular culture. Beginning with a network
of memorabilia collectors, fans of the show became increasingly organized, gathering at Star Trek conventions to trade merchandise, meet stars from the show, and watch old episodes. Such fans came to be known as “trekkies,” and were noted (and often ridiculed) for their extreme devotion to the show and their encyclopedic knowledge of every episode. Through this explosion of interest, many elements of the Star Trek universe made their way into the larger lexicon of popular culture, including the oft heard line, “Beam me up, Scotty” (a reference to the ship’s teleportation device), as well as Spock’s signature commentary on the “logical” of human culture. Along with Spock’s distinctively pointed ears, other aspects of Vulcan culture also became widely popularized as television lore, including the Vulcan “mind-meld” and the Vulcan salute, “live long and prosper.”

As “trekkie” culture continued to grow around the show during the seventies, a central topic of conversation among fans concerned rumors that the series might one day return to the airwaves. There was talk that the series might return with the original cast, with a new cast, or in a new sequel format. Such rumors were often fueled by a general sense among fans that the show had been unjustly canceled in the first place, and thus deserved a second run. Initially, Paramount did not seem convinced of the commercial potential of resurrecting the story world in any form, but by the late seventies, the studio announced that a motion picture version of the series featuring the original cast was under development. Star Trek: The Motion Picture premiered in 1979, and though it was a very clumsy translation of the series into the language of big-budget, big-screen science-fiction, it proved to be such a hit that Paramount developed a chain of sequels, including Star Trek II: The Wrath of Khan (1982), Star Trek III: The Search for Spock (1984), and Star Trek IV: The Voyage Home (1986).

By the mid-1980s, the Star Trek mythos had proven so commercially viable that Paramount announced plans for a new Star Trek series for television. Once again supervised by Roddenberry, Star Trek: The Next Generation debuted in first-run syndication in 1987 and went on to become one of the highest rated syndicated shows in history. Set in the 24th century, this series followed the adventures of a new crew on a new Enterprise (earlier versions of the ship having been destroyed in the movie series). The series was extremely successful in establishing a new story world that still maintained a continuity with the premise, spirit, and history of the original series. On the new Enterprise, the command functions were divided between a more cultured captain, Jean-Luc Picard (Patrick Stewart), and his younger, more headstrong “number one,” Commander William Riker (Jonathan Frakes). Spock’s character functions were distributed across a number of new crew members, including ship’s counselor and Betazoid telepath, Deanna Troi (Marina Sirtis), the highly advanced android, Lt. Commander Data (Brent Spiner), who provided the show with “logical” commentary as ironic counter-point to the peculiarities of human culture, and finally, Lieutenant Worf (Michael Dorn), a Klingon raised by a human family who struggled to reconcile his warrior heritage with the demands of the Federation. Other important characters included Lt. Geordi La Forge (LeVar Burton), the ship’s blind engineer whose “vision” was processed by a high-tech visor, Dr. Beverly Crusher (Gates McFadden), the ship’s medical officer and implicit romantic foil for Picard, and Wesley Crusher (Wil Wheaton), the doctor’s precocious son.

Running for 178 episodes, Star Trek: The Next Generation was able to develop its characters and storylines in much more detail than the original series. As with many other hour-long dramas its era, the series abandoned a wholly episodic format in favor of more serialized narratives that better showcased the expanded ensemble cast. Continuing over the run of the series were recurring encounters with Q, a seemingly omnipotent yet extremely petulant entity, the Borg, a menacing race of mechanized beings, and Lor, Data’s “evil” android brother. Other continuing stories included intrigue and civil war in the Klingon empire, Data’s ongoing quest to become more fully human, and often volatile political difficulties with the Romulans. This change in the narrative structure of the series from wholly episodic to a more serialized form can be attributed in some part to the activities of the original series’ enormous fan following. A central part of fan culture in the 1970s and 1980s involved fans writing their own Star Trek based stories, often filling in blanks left by the original series and elaborating incidents only briefly mentioned in a given episode. Star Trek: The Next Generation greatly expanded the potential for such creative elaboration by presenting a more complex storyworld, one that actively encouraged the audience to think of the series as a foundation for imagining a larger textual universe.

Despite the show’s continuing success, Paramount canceled Star Trek: The Next Generation after seven seasons to turn the series into a film property and make room for new television spin-offs, thus beginning a careful orchestration of the studio’s Star Trek interests in both film and television. The cast of the original series returned to the theater for Star Treks 5 and 6, leading finally to Star Trek: Generations, in which the original cast turned over the cinematic baton to the crew of Next Generation. Star Trek: Deep Space Nine premiered in January of 1993 as the eventual replacement for Next Generation on television. In contrast to the usually optimistic and highly mobile structure of the first two series, Deep Space Nine was a much more claustrophobic reading of the Star Trek universe. Set aboard an aging space-station in orbit around a recently liberated planet, Bajor, the series generated its storylines from the aftermath of the war over Bajor and from a nearby “wormhole” that brought diverse travelers to the station from across the galaxy.

Hoping to compete with Fox and Warner Brothers in creating new broadcast networks, Paramount developed a fourth Star Trek series as the anchor for their United Paramount Network. Star Trek: Voyager inaugurated UPN in January 1995, serving as the network’s first broadcast.
sponding perhaps to the stagebound qualities and tepid reception of Deep Space Nine, Voyager opted for a premise that maximized the crew’s ability to travel and encounter new adventures. Stranded in a distant part of the galaxy after a freak plasma storm, the U.S.S. Voyager finds itself seventy-five years away from earth and faced with the arduous mission of returning home.

Both Deep Space Nine and Voyager attracted the core fans of Star Trek, as expected, but neither series was as popular with the public at large as the programs they were designed to replace. Despite this, at century’s end, there would seem to be every indication that Star Trek will survive into the new millennium.

STAROWICZ, MARK
Canadian Broadcast Journalist/Producer

During his 25 years in radio and television with the Canadian Broadcasting Corporation, Mark Starowicz has produced a number of the more influential current affairs and documentary programs in Canadian broadcast history.

After beginning his career in newspaper journalism, Starowicz assumed the role of producer within the current affairs division of CBC radio at the age of 24. During the 1970s, Starowicz produced a total of five CBC radio programs, including Radio Free Friday, Five Nights, and Commentary. Starowicz received particular critical acclaim for his reworking of As it Happens (1973–76) and creation of Sunday Morning (1976-80), a three-hour weekend review.

CBC news programming chief Peter Herrndorf provided Starowicz’s entry into television in 1979 by appointing him chair of a committee examining the corporation’s news programming strategies. This resulted in the controversial move of The National news broadcast to 10:00 P.M. from its 11:00 P.M. slot, and the creation of The Journal, a current affairs and documentary program with Starowicz as executive producer. These decisions sought to take advantage of the larger audience numbers available at 10:00 P.M. (a difference between 10 and 4.5 million), and were part of CBC’s strategy in the 1980s to invest its decreasing resources in its traditionally strong area of news and current affairs.
Despite Starowicz’s lack of experience in television journalism, *The Journal* was a great success—both critically and in terms of viewship—and served to establish him as Canadian television journalism’s new star. *The Journal* achieved an average 1.6 million viewers in its first year and comparable numbers during its ten-year run. Rather than decreasing the audience shares of its competitors, *The National* (22 minutes) and *The Journal* (38 minutes) combination actually increased the number of total viewers during the 10:00 P.M. time slot.

To deliver *The Journal*, Starowicz compiled a young staff, many of whom, like Starowicz, had previously only worked in radio. Hosts during the broadcast’s life included Barbara Frum (formerly of *As It Happens*), Mary Lou Finlay, Peter Kent, and Bill Cameron. Under Starowicz’s leadership *The Journal* produced a total of 2,772 broadcasts between 1982 and 1992, consisting of 5,150 interviews and an amazing 2,200 documentaries. *The Journal* was notable for the depth with which it would develop stories, dedicating an entire broadcast to a single documentary if the subject required. For the interview segment of the show, Starowicz successfully re-invented the “double-ender” technique, (originally employed during the 1960s on CBS’ *See it Now*), wherein the anchor would interview guests that appear to the viewing audience to be projected on an in-studio screen. The high quality and volume of material were made possible by factors such as a staff of over 100, a budget of approximately $8(CDN) million per year (1980 dollars), and producer-reporter teams with as much as one month lead time for story preparation.

With the cancellation of *The Journal* in 1992, Starowicz accepted the position of executive producer of documentaries at the CBC. Starowicz oversees the weekly documentary prime-time series *Witness* (1990–), as well as CBC’s new documentary unit. This one-hour broadcast consists of acquired, co-produced, and in-house documentaries dealing with a diverse array of often socially and politically charged issues. Although Starowicz’s role as executive producer utilizes his capacity to orchestrate talent, he has produced and directed his own documentaries, including *The Third Angel* (1991) and *Red Capitalism* (1993), and is expected to contribute a minimum of two per year for *Witness*. Starowicz sees this series as an opportunity for the CBC to aggressively continue the strong documentary tradition in Canada started in the 1940s by John Grierson and the National Film Board. Significantly, Starowicz was able to get the CBC management to agree to the broadcasting of “point-of-view” documentaries, breaking free of the somewhat mythological pursuit of journalist “objectivity.”

In numerous magazine and newspaper articles and public lectures, Starowicz has expressed his concern about the erosion of a uniquely Canadian sense of identity. He cites the absence of Canadian content in its own mass media and the dangers posed by U.S. cultural industries as key threats. To remedy this, he has proposed the introduction of a tax on U.S. media imports, continued public support for the CBC, the development of a second public national network, and the extended financing of independent film and television production. Starowicz has argued that public television should not be produced for a small cultural and political elite, leaving private television to the “masses.” Perhaps in illustration of his own goals, Starowicz is currently working on a co-production with the BBC on the history of public broadcasting.

**STARSKY AND HUTCH**

**U.S. Police Drama**

At first glance, *Starsky and Hutch* (1975–79, ABC) seems of a piece with *Baretta*, *The Streets of San Francisco*, or even producer Aaron Spelling’s own *Charlie’s Angels*—one more post-1960s police series with Street Smarts and social cognizance, one that expresses at least a passing familiarity with youth culture. Yet on closer inspection, swarthy Dave Starsky (Paul Michael Glaser) and sensitive surfer Ken Hutchinson (David Soul), confirmed bachelors and disco-era prettyboys, seem to have taken the cop show maxim “Always watch your partner’s back” well past their own private Rubicon.

The series was originally part of a logical progression by Spelling (with and without partner Leonard Goldberg) that traced the thread of the detective drama through the fraying social fabric at the end of the 1960s. Beginning with *The Mod Squad* (cops as hippies), this took him in logical sequence to *The Rookies* (cops as hippie commune), *S.W.A.T.* (cops as hippie commune turned collectivist cell/paramilitary cadre), and finally *Charlie’s Angels* (ex-cops as burgeoning feminists/Manson Family pinups). This was before he jettisoned the cop show altogether and simply leached the raw hedonism out of 1960s liberalism—with *The Love Boat, Fantasy Island, Family* (sauteed in hubris), and ultimately, the neo-Sirkian *Beverly Hills 90210* and *Melrose Place*.

In this context, the freewheeling duo might seem the perfect bisecting point on a straight line between *Adam-12*’s Reed and Malloy and *Miami Vice*’s Crockett and Tubbs. *Butch Cassidy and the Sundance Kid* (1969) had ushered in the “buddy film” cycle, just then reaching its culmination with *All the President’s Men*, and, in fact, the pair physically resemble no one so much as the high-gloss Redford and Hoffman assaying the golden boys of broadsheet expose, Woodward and Bernstein.

Yet viewed in retrospect, their bond seems at very least a curious one. Putting aside the ubiquitous costumes and leather, or Starsky’s Coca-Cola-striped Ford Torino and Hutch’s immense .357 Magnum handgun, which McLuhan or Freud might well have had a field day with, the drama always seems built around the specific gravity of their friendship. There is much of what can only be termed flirting—compliments, mutual admiration, sly winks, sidelong glances, knowing
smiles. They are constantly touching each other or indulging in excruciating cheek and banter—or else going “undercover” in various fey disguises. All of the women who pass between them—and their number is considerable, including significant ones from their past—are revealed by the final commercial break as liars or users or criminals or fatal attractions. And should one wind up alone with a woman, the other invariably retreats to a bar and drowns his sorrows. Following the inevitable betrayal, it is not uncommon for the boys to collapse sobbing into each other’s arms.

This apparent secret agenda is perhaps best demonstrated in the opening credits themselves. Initially, these merely comprised interchangeable action sequences—Hutch on the prowl, Starsky flashing his badge. But by the second season, the action footage had been collapsed into a few quick images, followed by split-screen for the titles. To the left are three vertically stacked images: Hutch in a cowboy hat, both in construction outfits, and Starsky as Chaplin and Hutch in whiteface. Meanwhile, to the right, Starsky takes Hutch down in a full romantic clinch, the looks on their faces notably pained.

Next follows a series of quick clips: Starsky waits patiently while Hutch stops to ogle a bikini-clad dancer, and finally only gets his attention by blowing lightly on his cheek. Both gamble in a casino decked out in pinstripe Gatsby suits and fedoras, a la The Sting. Starsky, in an apron, fastidiously combs out a woman’s wig, while Hutch sits dejectedly, shoulders squared, a dress pattern pinned around him. Hutch watches straight-faced while Starsky attempts the samba, festooned in thick bangles, flowing robes, and a Carmen Miranda headdress. Each is then introduced individually—Soul shouting into the camera in freeze-frame, his mouth swollen in an enormous yawning oval, and Glaser as he ties a scarf foppishly to one side, frozen randily in mid-twinkle. Finally, a boiler-room explosion blows Starsky into Hutch’s arms.

The entire sequence takes exactly one minute, with no single image longer than five seconds. And each scene is entirely explained away in context. Yet in the space of 60 seconds, these two gentlemen are depicted in at least four cases of literal or figurative transvestism, four cases of masculine hyperbole (encompassing at least two of the Village People), several prominent homosexual clichés (hairdresser, Carnival bacchanalian), a sendup of one of filmdom’s most famous all-male couples, a wealth of Freudian imagery (including the pointed metaphor of fruit), two full-body embraces, two freeze-frames defining them in both homoerotic deed and dress, and one clearcut instance where the oral stimulation of a man prevails over the usual stimulation of a woman. This would seem to indicate a preoccupation on the part of someone with something. (And this doesn’t even begin to address their dubiously named informant: Huggy Bear—a flamboyant and markedly androgynous pimp.)

The tone of all this is uniformly playful, almost a parlour game for those in the know (not unlike Dirty Harry, whose most famous sequence—the bank robbery—is bookended on one side by Clint Eastwood biting into a hot dog, and on the other by a fire hydrant ejaculating over the attendant carnage). Meanwhile, the rather generic storylines consistently play fast and loose with gender.

Altogether, Starsky and Hutch is a fascinating digression for episodic television—especially considering that it was apparently conducted entirely beneath the pervasive radar of network censors.

STAR-TV
Asian Satellite Delivery Service

Star-TV is one of the most prominent regional satellite and cable television operations in the world. Its coverage footprint reaches from the Arab world to South Asia to East Asia. It carries global U.S. and British channels as well as channels in Mandarin and Hindi targeted at regional audiences defined by language and culture, and in so doing has helped define a new type of geo-cultural or geo-linguistic television market that stands between the U.S. dominated global market and national television markets. Fully acquired by Rupert Murdoch by the end of 1995 Star now forms a central part of his global media empire. In both news and culture, Star-TV is as challenging to some governments as United States imported programs and news have been. In 1995, Star-TV reached 53.7 million television households in 53 countries in English, Mandarin, and Hindi.

In April 1990, China’s Long March III rocket launched a C-band satellite called AsiaSat-1. China International Trust and Investment Corp. (CITIC), Cable and Wireless of Britain and Hong Kong’s Hutchison Whampoa, jointly owned AsiaSat, making it Asia’s first privately owned satellite. By picking up signals on parabolic dishes on the ground in an area under the satellite’s footprint, regional broadcasting in Asia became possible.

In December 1990, Hong Kong granted a license to Hutchison Whampoa’s satellite broadcasting arm, HutchVision, to begin a Direct Broadcast Satellite (DBS) service via AsiaSat. In a $300 million venture, the Satellite Television Asia Region operation, (Star-TV), began transmissions in August 1991. In July 1993, News Corp.’s Chairman Rupert Murdoch, already a power in Australia, Britain and America, bought into Star for $525 million (a 63.6% stake), forming a partnership with business tycoon Li Ka-shing, whose family owned the company. With the purchase, Murdoch’s FOX studio and network had access to a successful Asian window in which to distribute programming. In July 1995, Rupert Murdoch’s News Corp. paid $346 million to buy the remaining 36.4% of Star-TV.

Using AsiaSat for Star-TV created a problem, however, because the satellite was never meant to be used for broadcasting. Under the jurisdiction of the International Telecommunications Union (ITU), it was begun as a telecommunications satellite only. Little has been done about this situation, but criticism has developed in the scholarly community. In a 1992 paper for the International Communication Association, Seema Shrikhande asserted that, “Using telecommunications satellites for broadcasting goes against the ruling that national sovereignty includes the state’s control over television within its borders and that satellite footprints should be tailored to national boundaries as far as possible.” Following these assumptions, several countries have attempted to place restrictions on reception of Star-TV but have found them difficult to enforce.

Working with the idea of providing regionally-focused niche or genre-focused programming, Star-TV originally transmitted five channels 24-hours a day. These included MTV Asia (Viacom), British Broadcasting Corporation’s World Service Television (WSTV), Prime Time Sports (a joint venture with the Denver-based Prime Network), entertainment and cultural programs through Star Plus, and a Mandarin Chinese-language channel. Subsequently MTV has withdrawn to offer its own wholly owned channels via satellite. Star-TV has replaced it with Channel V. More focused on Asian videos, Channel V has become quite popular and now competes favorably with MTV in the region.

In 1994, Murdoch removed the BBC World Service news from the northern part of Star’s coverage area over China because its content offended news-sensitive China. In an earlier speech, Murdoch had said, “Advances in the technology of communications have proved an unambiguous threat to totalitarian regimes; Fax machines enable dissidents to bypass state-controlled print media; direct-dial telephone makes it difficult for a state to control interpersonal voice communication; and satellite broadcasting makes it possible for information-hungry residents of many closed societies to bypass state-controlled television channels.” Despite this view, China subsequently demanded and received the removal of the BBC in order to permit reception of Star-TV in China.

Star-TV represents a very direct challenge to several Asian governments that have tended to restrict the inflow of information. Burma, Singapore, Saudi Arabia and Malaysia have made reception of Star essentially illegal. China requires a restrictive license for satellite reception dishes, although many individuals and cable systems continue to receive Star’s offerings. India and Taiwan supposedly require licenses but permit both individuals and cable systems to receive it openly. Most other countries regulate redistribution via cable TV or apartment building antenna systems (SMATV) but are essentially open to Star and other satellite channels.

After its initial phase with five channels, Star has begun to target audiences more narrowly in terms of genre, language, and culture. For example, Star-TV is half-owner of its sixth channel, Zee TV, which offers Indian-produced Hindi-language programs. Zee reaches more than 25% of the total TV households in India and a significant viewership in the United Arab Emirates, Oman, Kuwait, Saudi Arabia and Pakistan. Another example of channel targeting by audience and culture comes as Star-TV has begun to refine several versions of its Channel V music channel for different regions of Asia.

In early 1996, Star-TV had 14 channels targeting various genres, languages and cultures, particularly in Hindi-speaking India and Mandarin Chinese-speaking areas. It expected to have a total of 30 channels in operation before the end of 1996, with most of the new ones concentrating on Japan, Indonesia, and other smaller markets. Its pattern
as of 1996 in Japan and Indonesia is to start with one country-focused channel, including movies, sports, music and general entertainment, then to expand these into separate genre-based channels focused at that country.

Star's audience was originally concentrated in Taiwan, China and India, but has been steadily growing as its programming begins to target other cultures and languages as well. All of Star's channels are advertiser-driven; thus, they are free to viewers. This tends to give Star-TV a much larger audience than pay-TV operations. Star-TV takes programming from a number of sources, principally the United States, Hong Kong, China, Taiwan, India and Japan. It has tended to reduce non-Asian programming somewhat over time, responding to an apparent audience preference for what it calls "localized" programming. Star and similar regional operations add a new layer of complexity to discussions of concepts such as media imperialism, the globalization of culture, and the international flow of television. The system's emphasis on intra-regional cultural flows—across national borders but within language and cultural boundaries—assumes that audiences will respond to the cultural similarity or proximity of the programming. Given further satellite developments in other regions, Star-TV may be an example of one form of future television.

STATION AND STATION GROUP

A television station is an organization that broadcasts one video and audio signal on a specified frequency, or channel. A station can produce or originate its own programming, purchase individual programs from a program producer or syndicator, or affiliate with a "network" that provides a partial or complete schedule of programming. The term "station" is usually used to designate a local broadcast facility that includes origination or playback equipment and a transmitter, with the station being the last link between program producers and the viewer. Because the number of television channels available is limited, permission to operate a television station must be obtained from a governmental agency (in the United States, television stations are licensed by the Federal Communications Commission) and must operate within technical limitations to avoid interfering with signals from other television stations.

Television stations can be classified as "commercial" or "public" depending upon whether their source of funding is advertising revenue or government subsidy (although some stations rely upon both). Most television stations are divided into departments according to the primary functions of the station. The programming department is responsible for procuring or producing programming for the station and arranging the individual programs into a program schedule. The engineering department is responsible for the technical upkeep of station equipment, including transmitters, video
recorders, switching equipment, and production equipment. The production department is responsible for producing local programs, commercial announcements, and other materials needed for broadcast. Many stations also have a news department that specializes in the production of news broadcasts. Commercial stations have a sales department responsible for selling commercial advertisements; many noncommercial stations have a similar “underwriting” department responsible for soliciting funds for the station. The promotions department is responsible for informing the audience about the program schedule using announcements on the station and in other media, such as newspapers and radio. Finally, many stations also have a business department responsible for collecting and distributing the revenues of the station. These departments are usually supervised by a station manager, general manager, or both.

An organization that owns or operates more than one station is known as a station group. There is a great deal of diversity in the manner in which groups operate individual stations. Some groups operate all the stations as a single unit, buying and scheduling programming for the station group as a unit in order to take advantage of economies of scale in negotiating the purchase price of programming or equipment. Other groups operate each station autonomously, with minimal group control over the daily operation of each station.

In the United States, the size of a station group is limited by federal regulations. As a result, the concentration of ownership of local television stations is extremely low, with 1,181 commercial television stations being operated by more than 150 station groups, as of early 1996.

Many stations and stations groups are owned by companies with interests in other media. For example, the Tribune Company owns ten television stations, including WPIX (New York), KTLA (Los Angeles), and WGN (Chicago), as well as four radio stations, four daily newspapers (including the Chicago Tribune), and a television syndication company. Changes in broadcast ownership restrictions in the United States are expected to lead to larger station groups and increasing cross-ownership of broadcast and other media. (As of mid-1996, a station group was limited to 12 or fewer stations serving a maximum of 25% of the U.S. population.)

STEADICAM

In 1976 Cinema Products (CP), producer of motion picture support technologies, introduced Steadicam, a camera control device that profoundly influenced the look of both feature film and television in the years that followed. Developed by cinematographer Garrett Brown, the camera support mechanism was used on thousands of feature films worldwide and earned an Oscar from the Academy of Motion Picture Arts and Sciences for technical achievement.

Steadicam wowed cinematographers and viewers alike with its apparent ability to “float” through space without physical constraints. At the center of this hand-held “revolution” was the patented use of gyroscopic motion to counter any irregularities in the camera operator’s movement. For Steadicam was not just a body-brace that strapped a camera to an operator. It was a motorized, multi-directional, DC-powered mechanical arm that linked a padded vest on the operator’s body with a sensitive “gimble” used for fingertip control of the camera head’s pans and tilts. Without the gravity-bound lock of traditional camera supports (e.g. a tripod), Steadicam relied on the operator’s physical skills to move nimbly through sets. Operators likened the task to the demands of ballet or long distance running.

Steadicam offered television directors and cinematographers benefits that were both logistical (speed of use, streamlined labor) and aesthetic (a film look that was deemed dynamic and high-tech). The cinematic fluidity that became Steadicam’s trademark was not limited to features. The device helped make exhibitionist cinematography a defining property of music videos after MTV emerged in 1981. Indeed, it became an almost obligatory piece of rental equipment for shoots in this genre. Most music videos, like primetime television, were shot on film and the Steadicam became a regular production component in both arenas. Miami Vice’s much celebrated hybridization of music video and the cop genre (1984-1989) made use of Steadicam flourishes even as it cloned music video segments within individual episodes. What critics of the show termed “overproduction” (stylized design, “excessively lensed” photography, and over-mixed sound tracks), fit well Cinema Product’s pitch that Steadicam was “the best way to put production value on the screen.” Postmodern stylization like that of Miami Vice defined American television in the 1980s, and Steadicam became a recognizable tool in primetime’s menu of embellishment and “house looks,” the signature visual qualities of individual production companies. ATAS
(Academy of Television Arts and Sciences), following AMPAS's lead, acknowledged Steadicam's impact on television with an Emmy.

Although orthodox production wisdom held that any given technique brought with it this type of distinct stylistic function, many practitioners in the early 1980s simply embraced CP's more pragmatic hype: that Steadicam was also a cost effective substitute for dolly or crane shots. Not only could the device preempt costly crane and dolly rentals, and the time needed to lay track across a set or location, but it cut to the heart of the stratified labor equation that producers imported to primetime from Hollywood. On scenes demanding Steadicam, the Director of Photography, the "A" camera operator, the focus-puller, and one or more assistants would merely stand aside as a single Steadicam operator executed lengthy moves that could previously consume inordinate amounts of program time. Steadicam was, then, not just a stylistic edge; it was also offered concrete production economies.

The popularity of Steadicam was also affected by the growth of electronic field production. By the late 1980s CP had begun marketing its "EFP" version, a smaller variant better suited for 20-25-pound camcorder packages like the Betacam, and for the syndicated, industrial, and off-prime programming that embraced camcorders. At nearly 90 pounds loaded and at a cost of $40,000, the original Steadicam still represented a major investment. Steadicam EFP, by contrast, allowed tabloid and reality shows to move "showtime glitz" quickly into and out of their fragmentary exposes and "recreations." As channel competition heated up, and production of syndicated programming increased, Steadicam was but one stylistic tactic used to push a show above the "clutter" of look-alike programming. By the early 1990s, CP also marketed a "JR" version intended for the home market and "event videographers." At 2 pounds, and costing $600, CP hoped to tap into the discriminating "prosumer" market, a niche that used 8mm video and 3 pounds cameras. But video equipment makers were now building digital motion reduction systems directly into camcorders and JR remained a special interest resource.

While the miniaturization of cameras might imply a limited future for Steadicam, several trends suggest otherwise. HDTV (High Definition Television) cameras remain heavy armfuls, and Steadicam frequently becomes merely a component in more complicated camera control configurations. As a fluid but secure way of mounting a camera, that is, Steadicam is now commonly used at the end of cranes, cars, trucks, and helicopters—in extensions that synthesize its patented flourish into hybrid forms of presentational power.

While CP argued that the device made viewers "active participants" in a scene rather than "passive observers" it would be wrong to anthropomorphize the effect as a kind of human subjectivity. The Steadicam flourish is more like an out-of-body experience. A shot that races 6 inches above the ground over vast distances is less a personal point-of-view than it is quadrupedal or cybernetic sensation; more like a Gulf-war smart-bomb than an ontological form of realism. A stylistic aggression over space results, in part, because Steadicam worked to disengage the film/video camera from the operator's eyes; to dissociate it from the controlling distance of classical eye-level perspective. Video-assist monitors, linked to the camera's viewfinder by fiber-optic connections, made this optical "disembodiment" technically possible on the Steadicam and other motion control devices in the 1970s and 1980s, and liberated cameras to sweep and traverse diegetic worlds. Because running through obstruction-filled sets with a 90 pound apparatus myopically pressed to one's cornea could only spell disaster, operators quickly grasped the physical wisdom of using a flat LCD (liquid crystal display) video-assist monitor to frame shots. Yet the true impact of Steadicam, video-assist, and motion-control has less to do with how operators frame images, than with how film and television after 1980 turned the autonomous vision of the technologically disengaged eye into a stylistic index of cinematic and televsional authority.

An unheard of 75% of the scenes in ER—NBC's influential series that ranked number 1 or number 2 for all the 1994-95 season—were shot using the Steadicam. Many
of these were included in the spectacular and complicated "one-er" sequences that defined the show, complicated flowing actions shot in one take with multiple moves and no cutaways. Citing these astonishing visual moments, trade magazine recognition confirmed that Steptoe's autonomous techno-eye now also provided a acknowledged programming edge.

STEPTOE AND SON

British Situation Comedy

*Steptoe and Son* was the most popular situation comedy in British television history, and one of the most successful. At the height of its fame in the early 1960s, it regularly topped the ratings and commanded audiences in excess of 20 million. In 1966, Labour Prime Minister Harold Wilson asked the BBC to delay the transmission of a repeat episode on election day until after the polls closed, because he was worried that many of his party’s supporters would stay in to watch it rather than going out to vote.

Its creators, Ray Galton and Alan Simpson, were already well known and highly successful as the scriptwriters for *Tony Hancock*. Indeed, it was Hancock’s decision, the most disastrous of his career, to sever his links with Galton and Simpson which brought about the birth of *Steptoe and Son*. The BBC offered them a series of ten separate half-hour comedies, to be cast and produced according to their wishes, which they grabbed with alacrity, keen to produce more diverse material after such a long time working with the same star.

The most successful of these, transmitted in January 1962 under the banner title of *Comedy Playhouse*, was "The Offer", featuring a father and son firm as "totters", or rag-and-bone men. As soon as he saw it, head of Light Entertainment Tom Sloane knew it was a natural for a whole series. Galton and Simpson resisted at first, reluctant to commit themselves to another long-term venture, but were worn down by Sloane’s persistence and the fact that he was clearly right.

The first series of *Steptoe and Son* was transmitted in June and July 1962 and consisted of five episodes. A further three series, of seven episodes each, followed in the next three years. The producer of all four series was Duncan Wood.

The basic plot line of *Steptoe and Son* is very simple and most episodes are in some way a variation on it. Albert Steptoe is an old-time, rag-and-bone man, a veteran of the Great War, who inherited the family business of the title from his father. He is a widower and lives with his son, Harold, and together they continue the business, with Harold doing most of the work. Albert is settled in his life and his lowly position in society, but Harold has dreams of betterment. He wants to be sophisticated and to enjoy the "swinging sixties". Above all he wants to escape from his father and make a life of his own, something which Albert is prepared to go to any lengths to prevent. The comedy thus comes from the conflict of the generation gap and the interdependency of the characters. However hard he tries, we know that Harold will never get away. So, in his heart, does he, and that is his tragedy. Apart from anything else, his father is by far the smarter of the two.

The success of this formula was partly the result of the universality of the theme and partly the casting of the two leads. Galton and Simpson believed that they should cast straight actors rather than comedians and so signed up Wilfrid Brambell to play Albert and Harry H. Corbett as Harold. Between them, the writers and actors created two immortal characters and some extremely poignant drama, as well as the hilarious comedy. The television correspondent of *The Times* wrote in 1962: "*Steptoe and Son* virtually obliterates the division between drama and comedy."

A typical episode would see Albert ruining Harold’s plans, whether it be in love, business or cultural pursuits. In "The Bird," Harold brings home a girl, only to find his father taking a bath in the main room. In "Sunday for Seven Days," Albert ruins Harold’s choice of Fellini’s *8 1/2* for an evening at the cinema. His father’s generally uncouth behaviour frequently provokes Harold to utter the only catchphrase of the series: an exasperated "You dirty old man!"

In 1965, Galton and Simpson decided to stop writing the show while it was still an enormous success, although radio versions were produced in the following two years and the format was introduced to American television as *Sanford and Son*. However, with the arrival of colour television in Britain in 1967 and increased competition in comedy from the commercial network, the BBC decided in the early 1970s to bring back some of its top comedy successes of the middle 1960s. *Steptoe and Son* returned in 1970 for a further four series, a total of thirty episodes, between then and 1974.

The effectiveness of the show was in no way diminished. Indeed, the familiarity of the characters allowed the show to carry on where it had left off and achieve the same quality as before. Two feature films were also made of *Steptoe and Son*, though without the success of the television shows.

No more shows were made after 1974, but there is a footnote to the *Steptoe* story. Many programmes made on
videotape were wiped by the BBC for purposes of economy in the early 1970s, including virtually all of the fifth and sixth series of Steptoe and Son. However, Ray Galton had made copies from the masters on the very first domestic video format, which became the only surviving copies. In 1990 he handed them to the National Film and Television Archive, which restored them to a viewable form and publicised the find with a theatrical showing. Although the technical quality was poor and they only played in black and white, the BBC transmitted a few of them to enormous success. The rest of the restored episodes were then transmitted, followed by all the black-and-white episodes from the 1960s, breaking the BBC’s usual resistance to repeating black-and-white programmes.

Alas, the two leads were not around to witness the revival. Brambell died in 1985, following his screen son Corbett, who had died in 1983.

THE STEVE ALLEN SHOW
(AND VARIOUS RELATED PROGRAMS)

U.S. Comedy Variety Program

One of the most famous ratings wars in television history began on 24 June 1956. That night NBC debuted The Steve Allen Show opposite the eighth anniversary program of what had become a television institution, The Ed Sullivan Show on CBS. The two hosts were markedly different. Sullivan was a rigorous master of ceremonies, known for enforcing strict conformity for both his guests and the members of his audience. Allen, too, served as host, but he was also innovative, funny and whimsical. Whereas Steve Allen liked to improvise and ad lib on his program, creating material and responding to guests and audience on the spot, The Ed Sullivan Show followed a strict format.

The appearances of Elvis Presley on the two programs serve to illustrate the differences between them. When Presley appeared on The Ed Sullivan Show, Sullivan instructed the camera operators to shoot the picture from the waist up only. On The Steve Allen Show, Presley appeared in a tuxedo and serenaded a bassett hound with his hit "You Ain't Nothing But a Hound Dog." Both strategies appeared nervous network censors, but each is emblematic of the show it served.

Relations between the two prominent hosts were not cordial and reached a low point in October 1956. Allen scheduled a tribute to the late actor, James Dean, for his 21 October program. When he learned that Sullivan planned his own tribute to Dean for his 14 October program, Allen charged that Sullivan had stolen his idea. Sullivan denied the charges and accused Allen of lying. Allen moved his segment to October 14 when both programs paid tribute to the late actor and showed clips from his last movie, Giant.

Much of Allen's work on The Steve Allen Show resembled previous performances on The Tonight Show, which he had hosted since 1954. He often opened the program casually, seated at the piano. He would chat with the audience, participate in skits, and introduce guests. Television critic Jack Gould considered the new program merely an expanded version of The Tonight Show and characterized it as "mostly routine stuff." Gould did concede that "more imagination could take the program far." The Steve Allen Show offered Allen a natural setting for what Gould termed his "conditioned social gift" of "creating spontaneous comedy in front of an audience in a given situation."

Allen also continued something else he had begun on The Tonight Show, discovering new talent. Andy Williams, Eydie Gorme and Steve Lawrence got their starts on The Tonight Show. And on the new show, Allen's man in the street interview segments launched the careers of comedians Bill Dana, Pat Harrington, Louis Nye, Tom Poston and Don Knotts. Dana played the timid Hispanic José Jiminez, and Harrington the suave Italian golfer Guido Panzino.

Characters created by Nye, Poston and Knotts were the best known of the group. Nye portrayed the effete and cosmopolitan Gordon Hathaway whose cry "Hi Ho Steverino" became a trademark of the program. Tom Poston was the sympathetic and innocent guy who would candidly answer any question but who could never remember his name. Probably the best remembered character was the nervous Mr. Morrison portrayed by Don Knotts. Often Morrison's initials were related to his occupation. On one segment he was introduced as K.B. Morrison whose job in a munitions factory was to place the pins in hand grenades. When asked what the initials stood for, Knotts replied, "Kaa Boom!" Invariably Allen would ask Knotts if he was nervous and always got the quick one word reply, "No!!!" Allen characterized the cast as the "happiest, most relaxed professional family in television."

The Steve Allen Show
Photo courtesy of Steve Allen
Allen became known for the outrageous. He conducted a geography lesson using a map of the world in the shape of a cube. He opened a program by having the camera shoot from underneath a transparent stage. Looking down at the camera, Allen remarked, "what if a drunk suddenly staggered into your living room and saw this shot?"

Although Allen won some of the ratings battles with Sullivan, he ultimately lost the war. In 1959 NBC moved *The Steve Allen Show* to Monday nights. The following year, it went to ABC for a fourteen week run. In 1961 Allen renamed the program *The Steve Allen Playhouse* and took it into syndication where it ran for three years.

STREET LEGAL
Canadian Drama

When Street Legal completed its eighth and final season, one TV journalist called it “unblushingly sentimental, unblinkingly campy, unabashedly Canadian and completely addictive.” The one-hour CBC drama series about a group of Toronto lawyers stands as a landmark event in Canadian broadcasting history. After taking two years to find its niche, it became extremely popular. In its last six seasons, it regularly drew about one million viewers, the benchmark of a Canadian hit.

The series debuted in 1987 with Maryke McEwen as executive producer. It experienced a rocky start, with good story ideas but weak execution, lacking style in directing, and consequently suffering low ratings. The theme music, however, was immediately identifiable—a distinctive, raunchy, rollicking saxophone piece by Mickey Erbe and Maribeth Solomon. At that time the show revolved around just three lawyers—Carrie Barr (played by Sonja Smits), Leon Robinovitch (Eric Peterson), and Chuck Tchobanian (C. David Johnson). Carrie and Leon were the committed, left-wing social activists and Chuck the motorcycle-riding, reckless, aggressive, 1980s lawyer.

From the third through the seventh seasons Brenda Greenberg was first senior producer, and then executive producer, with Nada Harcourt taking over for the final season. As CBC’s director of programming in 1987, Ivan Fecan hired a Canadian script doctor at CBS, Carla Singer, to work with the producer on improving the show. It was after this that Street Legal began to find its niche, introducing aggressive, sultry, high-heeled, risk-taking Olivia Novak (played by Cynthia Dale) to contrast the niceness of the Carrie Barr character. Olivia became the most memorable and best-known, but other characters were also added. Alana (Julie Kanter) played a confident and compassionate judge, married to Leon, who confidently battled sexism in the workplace. Rob Diamond (Albert Schultz) handled the business affairs of the firm. In the fourth season, the first African-Canadian continuing character was introduced—crown prosecutor Dillon (Anthony Sherwood). He had a love affair with Carrie, and then with Mercedes (Alison Sealy-Smith), the no-nonsense black Caribbean secretary, and later joined the firm. New lawyer Laura (Maria Del Mar) clashed with Olivia and romanced Olivia’s ex-husband and partner, Chuck. Ron Lea played a nasty crown prosecutor called Brian Maloney, an in-joke to Canadians, who immediately connected him to the Conservative Prime Minister, lawyer Brian Mulroney. The enlarged ensemble cast allowed for more storylines and increased conflict.

The usual prime-time soap-opera shenanigans ensued, with ex-husbands and ex-wives reappearing, romances beginning and ending, children being born and adopted, promotions and firings, firings and quittings, all against the backdrop of the Canadian legal system and the Toronto scene. The lawyers all wore gowns and addressed the court in Canadian legal terms, giving a different feeling from its American counterpart, L.A. Law, though the two shows were coincidentally developed and aired at the same time.

The issues dealt with were also definably Canadian as well as international. Leon fought an employment equity case for an RCMP candidate, as well as representing an African-Canadian nurse in front of the Human Rights Commission. Olivia became a producer of a Canadian movie. Chuck defended a wealthy Native cigarette smuggler on conspiracy to commit murder. Leon represented the survivors of a mine disaster and then ran for mayor of Toronto. Leon and Alana became involved with a Mexican refugee, eight months pregnant, who got in trouble with CSIS, the Canadian intelligence agency. Human-interest stories intertwined with the political issues and the characters’ personal lives.

Street Legal represented a very important step in the Canadian television industry. Along with the CTV series E.N.G., set in a Toronto television newsroom, the series established Canadian dramatic television stars. Cynthia Dale, who played vixen Olivia, has become nationally famous and has gone on to star in another series, as a Niagara Falls private eye in Taking the Falls. She has said that she gets letters from young girls who want to grow up to be just like Olivia. In one episode, when ogled and harassed by a construction worker as she passed his job site, Olivia knocked him off his sawhorse with her hefty briefcase. The scene was then inscribed into the new credit sequence.

The rest of the cast members have also gone on to other work, but the problem of a Canadian star system remains.
There are few series produced, even among all the networks, and often their stars will return to theatre or radio or, it has been noted, to auditioning again for TV parts. One reason *Street Legal* ended was that CBC could not afford to have two dramatic series on air at the same time, and the older program was supplanted by *Side Effects*, a medical drama. The show wrapped up with a two-hour movie in the spring of 1994 which drew a whopping 1.6 million viewers.

STUDIO

Studies are an integral part of independent television production, providing television programming created either by independent producers or, at times, the studio itself.

Studies have a long history with television. In 1944, three years before the FCC approved commercial broadcasting, RKO Studios announced plans to package theatrical releases and programming for television. Five years later, Paramount explored the profit potential of the new medium. By the early 1950s, Columbia and Universal-International had also started television subsidiaries. However, these early efforts were merely false starts. Low ad revenues and overall industry instability resulting from the 1948 anti-trust action against studio-owned theater chains made it difficult for studios to profit.

Toward the mid-1950s, after the networks successfully wrestled programming control away from commercial sponsors, however, studios provided the link between programming and a new breed of independent producers and syndicators. The most significant of these early studios—which began as an independent production company—was Desilu, founded in 1951 by Lucille Ball and Desi Arnaz. On the strength of its hit sitcom I Love Lucy, Desilu became a production empire that, by the late 1950s, rivaled the size and output of the largest motion picture studios. The company also solidified the position of the telefilm and independent producer’s role in the medium. Under the leadership of Arnaz, Desilu hosted numerous successful independent producers, including Danny Thomas and Quinn Martin.

By this time, other studios were getting into the act, with Universal providing studio services for Jack Webb’s Mark VII productions, and MCA’s Revue Studios filming such series as Alfred Hitchcock Presents and Leave It to Beaver, although the Revue program’s were quite diverse, they shared many studio qualities, including the same catalog of incidental and transitional music.

Warner Brothers studios became central to the rise of the action-oriented telefilm with its string of hit Westerns, including Cheyenne, Sugarfoot, and Bronco Lane. These shows were paired with a group of slick, contemporary detective shows such as 77 Sunset Strip and Hawaiian Eye. In many ways Warner Brothers, the studio, was instrumental in discovering the techniques, the narrative strategies, and the modes of production needed for a large film studio to shift into the production of series television.

Another prolific 1960s independent producer/studio was Filmways, which began as a commercial production company. The studio’s fortune grew when it joined with independent producer Paul Henning, creator and producer of such hits as The Beverly Hillbillies, Green Acres, and Petticoat Junction.

As the rural sitcom’s corn-pone silliness gave way to the 1970s new age of relevance, Filmways was eclipsed by another major studio which also began as an independent—MTM Enterprises. Run on the fame of actress Mary Tyler Moore and the business-sense of her then-husband Grant Tinker, MTM became a major television studio that provided everything from writers and producers to stages and cameras. At the same time, the television divisions of Twentieth-Century-Fox and Paramount Pictures were turning out such hits as M*A*S*H and Happy Days.

Today, producer/studios such as Desilu and MTM have faded, with most major television production provided by independents working in contractual relations with major studios such as Twentieth-Century Fox, Paramount, MCA-Universal and Warner Communication. For example, The Simpsons, which is independently produced by James L. Brooks’ Gracie Films, is filmed by Twentieth Century-Fox (which, in the case of The Simpsons, farms out much of its animation to overseas production houses). In the sea of production logos flooding the end credits of most modern series, the final credit is usually that of a major film studio.

STUDIO ONE
U.S. Anthology Drama

Studio One was one of the most significant U.S. anthology drama series during the 1950s. Like other anthology series of the time—Robert Montgomery Presents, Goodyear Television Playhouse, Philco Theatre, Kraft Television Theatre—the format was arranged around the weekly presentation of a one-hour, live, television play. Several hours of live drama were provided by the networks per week, each play different: such risk and diversity is hard to come by today.

Writing about television, Stanley Cavell has argued, “What is memorable, treasurable, criticisable, is not primarily the individual work, but the program, the format, not this or that day of I Love Lucy, but the program as such.” While this admonition might admirably apply to the telefilm series that came later, the 1950s drama anthologies were premised on the fact that they were different every week. Yet the one-hour live format was one they had in common with each other, and because of that very fact they had to distinguish themselves from each other. They worked to develop a “house style,” a distinctive reputation for a certain kind of difference and diversity, whether based on quality writing, attention to character over theme or, more typically, technical and artistic innovation which developed the form. A full assessment would necessarily consider each distinctive anthology series (and assess its “distinctiveness” from others) as a whole, and the failures and achievements of individual productions.

Studio One provides an emblematic continuity for the 1950s drama: it was the longest running drama anthology series, lasting ten years from 1948 to 1958, from the “big freeze” through the “golden age” to the made-in-Hollywood 90-minute film format: in all over 500 plays were produced. From the beginning Studio One’s “house style” was foregrounded not only by the quality of its writers, but primarily by its production innovations, professionalism and experimentation within the limits of live production.

Studio One began as a CBS radio drama anthology show in the mid-1940s until CBS drama supervisor, Worthington Miner translated it to television. Its first production was an adaptation by Miner of “The Storm” (7 November 1948). Miner’s control emphasised certain “quality” characteristics: adaptation (usually of classical works, e.g. Julius Caesar, 1948) and innovation (“Battleship Bismarck,” 1949). Studio One adopted a serious tone under Miner, but also a pioneering spirit. For example, “Battleship Bismarck” made advanced use of telecine inserts, three-camera live editing within a confined and waterlogged set. Miner left to join NBC in 1952, but the show regained an even clearer sense of identity and purpose when Felix Jackson became the producer in 1953. Jackson used two directors, Paul Nickell and Franklin Schaffner, each with his own technical staff, who would alternate according to the material. Nickell would be given the more “sensitive” scripts, Schaffner the epics, the action. Both directors were committed to pushing the live studio drama to the limits. Nickell in particular has to stand as one of the greatest—and unsung—television directors: he never made the mistake of thinking a good TV drama has to look like a film.

By the mid-1950s the emphasis of production material had turned from adaptation to new works written for television, often giving attention to contemporary issues. Studio One followed this trend. Often the same writers, such as Reginald Rose, who had adapted for Studio One, now wrote originals. Rose worked as an adapter until 1954 when he wrote “12 Angry Men” (1954) and the controversial “Thunder on Sycamore Street” (1954). This story, about racial hatred, was modified to satisfy southern television station owners, replacing a black protagonist with a convict. By 1955 Studio One was receiving over 500 unsolicited manuscripts per week.

However, it was Studio One’s technical innovation, rather than its coterie of writers, which made the series distinctive. Its chief rival in the ratings, Fred Coe’s Philo-Goodyear Theatre, although it had a superior stable of writers (Paddy Chayefsky, Rod Serling, Horton Foote, Robert Alan Aurthur, Tad Mosel—most of who later worked for Studio One), could not match Studio One’s technical daring. Philo-Goodyear Theatre developed a reputation for plays which explored the psychological realism of character, using many close-ups, but this was influenced by other factors. As Tad Mosel has said: “I think that began because the sets were so cheap, if you pulled back you’d photograph those awful sets. Directors began moving in to faces so you wouldn’t see the sets. Studio One had much more lavish productions, they had more money.”

After 1955 Studio One joined the general decline of the other New York based dramas. The formats began to favour 90-minute slots (such as CBS Playhouse 90), and drama shot on film, often in Hollywood. Eventually Studio One joined the drift to Hollywood and film. By 1957 the anthology was renamed Studio One in Hollywood—and the sponsors, Westinghouse, withdrew from the series.

Studio One’s achievements have to be measured in terms of technical and stylistic superiority over their rival anthologies. With plays such as “Dry Run” and “Shakedown Cruise” (both set on a flooded submarine, built in the studio) and “Twelve Angry Men”, they were the first to use four-walled sets, hiding the cameras behind flying walls, or using portholes to conceal cameras between shots. The freedom to innovate was in part due to CBS’ policy of giving directors relative autonomy from network interference and the stability of the Schaffner-Nickell partnership, but it is also a pioneering quality which can be traced back to Worthington Miner and the late 1940s. Miner was quite clear that he wanted Studio One to advance the medium via its experimental storytelling techniques: “I was fascinated by the new medium and convinced that television was somewhere be-
between drama and film ... a live performance staged for multiple cameras.

However, with the mature Studio One productions of the early and mid-1950s, one has the sense that the movements of the cameras were not subordinate to the requirements of the performance; quite the opposite. For example, "The Hospital" was an adaptation produced during the 1952 season, and directed by Schaffner. This play seems to achieve the impossible: it literally denies the existence of live studio time. Flashbacks and other interruptions could be achieved with some narrative jigging to allow for costume and scene changes. Still, unlike film, live studio time was real time, and the ineluctable rule of live drama was that the length of a performance was as long as it took to see it. But Schaffner had a reputation for thinking that nothing was impossible for live television. Most other anthologies of the period used a static three camera live studio set up, where two cameras were used for close-ups and the other for the two-shots. In such an arrangement the television camera acted as a simple, efficient, relay. Schaffner favoured instead a mobile mise-en-scene; his cameras were constantly on the move, with actors and props positioned and choreographed for the cameras.

This play concerns the drama of a local hospital, following the various staff and patients through typical medical crises. Although the transmitted play lasts 50 minutes, the story-time takes up only 18 minutes. Some scenes are therefore repeated during the three acts, using a different viewpoint, and requiring the actors to re-stage precisely their initial scenes. As some scenes are lengthened, or modified in the light of what we have seen before we gain a greater understanding of the events from each character's viewpoint. Whilst this would be relatively simple to achieve on film, for live drama it involved complex methods of panning and camera movement to capture and expand the chronicity of events and repeat them exactly as it had gone before. Schaffner achieves this by using several cranes to snake through the various sets as the scenes are played and repeated, often in a different order. Doing what seems technically impossible is therefore foregrounded in this drama, and the complexity of this achievement is emphasised by the ironic commentary of one of the hospital patients who, with head bandaged, is able to explain at the end, as the sponsors shout for their adverts, "Time? There is no time. Time is only an illusion." And Studio One could prove it.

SUBTITLING

Subtitling is the written translation of the spoken language (source language) of a television program or film into the language of the viewing audience (the target language); the translated text usually appears in two lines at the foot of the screen simultaneously with the dialogue or narration in the source language.

This simultaneous provision of meaning in two different languages, one in oral and the other in written text, is thus a new form of language transfer created by film and further developed by television. It combines the two ancient forms of interlingual communication, i.e., "interpretation," involving speaking only, and "translation," involving writing only. The concept is sometimes used synonymously with "captioning." In terms of technical production and display on the screen, there is no difference between the two, although it is useful to reserve the term "caption" for the screen display of writing in the same language.

Subtitling is, together with dubbing, the main form of translation or "language transfer" in television, which is increasingly developing into a global medium in a world fragmented by about 5,000 languages. The scope of language transfer activity depends on the relative power of the television market of each country, its cultural, linguistic and communication environment, and audience preferences. Compared with North America, the countries of the European Union, for example, have a larger population, more TV viewers, TV households and program production. However, linguistic fragmentation has undermined their ability to effectively perform in the global market, and compete with the powerful, monolingual audiovisual economy of the United States. As a step toward the building of a "European single market," the Council of European Communities took measures in 1990 to overcome the "language barrier" by, among other means, promoting dubbing, subtitling, and multilingual broadcasting (see the text of the decision in Luyken, p. 208; Kilborn, p. 654). The deregulated market of Eastern Europe, too, is linguistically fragmented, and heavily dependent on imports. The annual total of foreign programs broadcast in Eastern Europe was estimated to be 19,000 hours in 1992 (Dries, p. 35). English has emerged as the largest source language in the world. Many countries prefer to import programs from the Anglophone audiovisual market in part because it is more economical to conduct language transfer from a single source language.

The ideal in subtitling is to translate each utterance in full, and display it synchronically with the spoken words on the screen. However, the medium imposes serious constraints on full text translation. One major obstacle is the limitations of the screen space. Each line, recorded on videotape, consists of approximately 40 characters or typo-
graphic spaces (letters, punctuation marks, numbers and word spaces) in the Roman alphabet, although proportional spacing (e.g. more space for “M” and less for “I”) allows more room for words, which average five letters in English. Another constraint is the duration of a subtitle, which depends on the quantity and complexity of the text, the speed of the dialogue, the average viewer’s reading speed (150 to 180 words per minute), and the necessary intervals between subtitles. Taking into account various factors, the optimum display time has been estimated to be four seconds for one line and six to eight seconds for two lines. As a result, the subtitler often presents the source language dialogue or narration in condensed form. Loss or change of meaning also happens because the written text cannot transfer all the nuances of the spoken language. Other problems relate to the reception process. Unlike the printed page, the changing screen does not allow the viewer to re-read a line, which disappears in a few seconds. Audiences have to divide the viewing time between two different activities, reading the subtitles and watching the moving picture, and constantly interrelating them. Thus, subtitling has created not only a new form of translation, but also new reading processes and reading audiences. This type of reading demands different literacy skills, which are individually and, often, effectively acquired in the process of viewing.

In spite of the limitations of subtitling, selectively outlined above, some broadcasters and viewers prefer it to dubbing in so far as it does not interfere with the source language. Although viewers of subtitled programs are not usually familiar with the source language, it is argued that they derive more authentic meaning by hearing the original speech. Preference for one or the other form of language transfer depends on the cultural, political, linguistic, and viewing traditions of each country as well as economic considerations such as audiovisual market size, import policies and the relative cost of each transfer method. It is known (Luyken, p. 181), for example, that Europe is divided into “subtitling countries” (e.g., Belgium, Cyprus, Finland, Greece, the Netherlands, Portugal, and Scandinavia) and “dubbing countries” (France, Germany, Italy and Spain). Dubbing is usually more expensive, more complex and time-consuming than subtitling or voice-over. Still, some of the economically troubled countries of Eastern Europe (Bulgaria, Czech Republic, Hungary, and Slovakia) dubbed the majority of their imported programs in 1992. In these countries, as in others, the professional community of actors supports the dubbing process as a source of employment.

Language transfer involves more than facilitating the viewer’s comprehension of unfamiliar language. The European Commission has, for example, recommended subtitling as a means of improving knowledge of foreign languages within the European Union. Technological innovations are rapidly changing the production, delivery and reception of subtitles. Some satellite broadcasters provide multilingual subtitling by using a teletext-based system, which allows the simultaneous transmission of up to seven sets of subtitles in different languages. The viewer can choose any language by dialling the assigned teletext page. Subtitling has usually been a post-production activity but real-time subtitling for live broadcasting is already available. An interpreter watches a live broadcast, and provides simultaneous translation (interpretation) by speaking into a microphone connected to the headphone of a high-speed “audio typist.” The interpreted text appears on the screen while it is keyed on the adapted keyboard of a computer programmed for formatting and boxing subtitles (Luyken, p. 64-65, 68). This kind of heavily mediated subtitling will no doubt be simplified when technological advance in voice recognition allows the direct transcription of the interpreted text. The demand for subtitling was growing in the mid-1990s outside North America, especially in Europe. In 1994, one company, the Subtitling International Group centered in Stockholm with branches in six capital cities, produced 26,000 hours of subtitles for cinema, video and television.

SULLIVAN, ED

U.S. Variety Show Host

Anyone who watched television in America between 1948 and 1971 saw Ed Sullivan. Even if viewers did not watch his Sunday night variety show regularly, chances are they tuned in occasionally to see a favorite singer or comedian. Milton Berle may have been “Mr. Television” in the early years of TV, but for almost a quarter-century Sullivan was Mr. Sunday Night. Considered by many to be the embodiment of banal, middle-brow taste, Sullivan exposed a generation of Americans to virtually everything the culture had to offer in the field of art and entertainment.
Sullivan began as a journalist. It was his column in the New York Daily News that launched him as an emcee of vaudeville reviews and charity events. This led to a role in a regular televised variety show in 1948. Known as the Toast of the Town until 1955, it became The Ed Sullivan Show, in September of that year. According to CBS president William S. Paley, Sullivan was chosen to host his Sunday night program because CBS could not hold anyone comparable to Berle. Ironically, Sullivan outlasted Berle in large measure because of his lack of personality. Berle came to be identified with a particular brand of comedy that was fading from popularity. On the other hand, Sullivan simply introduced acts, then stepped into the wings.

Ed Sullivan’s stiff physical appearance, evident discomfort before the camera, and awkward vocal mannerisms (including the oft-imitated description of his program as a “reeeeeelly big shoe”) made him an unlikely candidate to become a television star and national institution. But what Sullivan lacked in screen presence and personal charisma he made up for with a canny ability to locate and showcase talent. More than anything else, his show was an extension of vaudeville tradition. In an era before networks attempted to gear a program’s appeal to a narrow demographic group, Sullivan was obliged to attract the widest possible audience. He did so by booking acts from every spectrum of entertainment: performers of the classics such as Itzhak Perlman, Margot Fonteyn and Rudolf Nureyev; comedians such as Buster Keaton, Bob Hope, Henny Youngman, Joan Rivers, and George Carlin; singers like Elvis Presley, Mahalia Jackson, Kate Smith, the Beatles, James Brown and Sister Sourire, the Singing Nun. Sports stars appeared on the same stage as Shakespearean actors. Poets and artists shared the spotlight with dancing bears and trained dogs. And then there were the ubiquitous “specialty acts” such as Topo Gigio, the marionette mouse with the thick Italian accent enlisted to “humanize” Sullivan, and Senor Wences, the ventriloquist who appeared over twenty times, talking to his lipstick-smeared hand and a wooden head in a box. Sullivan’s program was a variety show in the fullest sense of the term. While he was not so notable for “firsts,” Sullivan did seem to convey a kind of approval on emerging acts. Elvis Presley and many other performers had appeared on network television before ever showing up on the Sullivan program, but taking his stage once during prime time on Sunday night meant more than a dozen appearances on any other show.

Although Sullivan relented to the blacklist in 1950, apologizing for booking tap dancers and alleged Communist sympathizer Paul Draper, he was noted for his support of civil rights. At a time when virtually all sponsors balked at permitting black performers to take the stage, Sullivan embraced Pearl Bailey over the objections of his sponsors. He also showcased black entertainers as diverse as Nat “King” Cole, Leontyne Price, Louis Armstrong, George Kirby, Richard Pryor, Duke Ellington, Richie Havens and the Supremes.

Sullivan attempted to keep up with the times, booking rock bands and young comedians, but by the time his show was canceled in 1971 he had been eclipsed in the ratings by “hipper” variety programs like Rowan and Martin’s Laugh-In, and The Flip Wilson Show. Sullivan became victim to his own age and CBS’ desire to appeal to a younger demographic, regardless of his show’s health in the ratings. He died in 1974.

Since The Ed Sullivan Show ended in 1971, no other program on American television has approached the diversity and depth of Sullivan’s weekly variety show. Periodic specials drawing from the hundreds of hours of Sullivan shows, as well as the venue of the Late Show with David Letterman, continue to serve as tribute to Sullivan’s unique place in broadcasting. Ed Sullivan remains an important figure in American broadcasting because of his talents as a producer and his willingness to chip away at the entrenched racism that existed in television’s first decades.

SUPERSTATION

A superstation is an independent broadcast station whose signal is picked up and redistributed by satellite to local cable television systems. Within its originating market, the station can be received off the air using a home antenna. Once uplinked to a satellite, however, the station functions as a cable program service or cable "network."

The origins of modern superstations can be traced back to the start of distant signal importation by early cable (CATV) systems using microwave relays. At first the relays simply brought signals to communities too remote to receive them using rooftop or community antennas, but as cable systems began to penetrate television markets with one or more local stations, operators often would import the signals of popular, well-financed stations from major metropolitan areas to make their service more appealing to potential subscribers. In effect, the distant signals were combined with local signals to create a distinct cable programming package. All of today’s superstations were carried by microwave at one time; however, the actual term "superstation" was not used until the late 1970s, shortly after Ted Turner’s Atlanta station, WTBS, became the first independent station to be carried by satellite.

Not only was Turner’s station the first satellite-delivered independent station (and the second satellite-delivered cable program service overall), it was an innovator in the type of programming that would be most successful on cable. As with many cable-only program services, the popularity of superstations stems largely from their numerous movie screenings and extensive sports coverage—program types available in much smaller quantities from the broadcast networks and their affiliates. Superstation status also gives an independent station an economic advantage when competing with other stations for the broadcast rights to popular syndicated series. The evolution of WTBS’s successful program schedule represents an aggressive effort to acquire these sorts of programs.

The existence of WTBS dates back to 1968, when Turner purchased a failing UHF station. He quickly changed the fortunes of his new station (which he called WTCG during its early years) by using old movies and syndicated television series to counterprogram network affiliate stations, going after such audience segments as children and people not watching the news. By the early 1970s, Turner's station also offered local sports programming—first professional wrestling and later baseball, basketball, and hockey. As of 1972, WTCG had become popular enough in the Atlanta metropolitan area that its signal had begun to be carried by microwave to cable systems throughout Georgia and northern Florida. In 1976, when Turner uplinked

SUPERSTATION

TBS

Courtesy of TBS
his signal to a communications satellite, WTCG's potential coverage was extended to locations as distant as Canada and Alaska. The station was renamed WTBS (for Turner Broadcasting System) in the late 1970s to reflect the scope of its new operations.

Within the next few years, the signals of other major-market independent stations began to be carried on satellite, as well. However, the stations that followed WTBS to satellite carriage represent a different category of superstation. WTBS is considered to be an "active" superstation because it pursues superstation status as part of day-to-day operations: programming targets a nationwide market more than a local market, and national advertising is sought. WTBS currently is the only active superstation.

"Passive" superstations, by contrast, traditionally have done little or nothing to acknowledge themselves as superstations. Satellite common carriers such as United Video, Inc. and EMI Communications Corp. retransmit the stations' signals without any formal consent, sometimes against the stations' wishes. In spite of their potential to be viewed thousands of miles away, passive superstations have continued to direct the greater portion of their programming and advertising toward local or regional markets. As with any cable program service, cable operators pay per-subscriber fees for the use of passive superstations' signals. However, the fees are paid to the common carriers, not to the stations.

As cable's popularity continues, passive superstations are giving more recognition to their own superstation status, often having an employee who functions as a liaison to the satellite carrier and possibly to the cable systems taking the service. Nonetheless, most continue to feel that their priorities remain with their local markets.

The five "passive" superstations currently in operation are: WOR and WPIX, New York; WSBK, Boston; WGN, Chicago; KTLA, Los Angeles; and KTVT, Dallas. It is worth noting that this group includes some of the country's most long-standing broadcast stations. Like WTBS, these stations have been extremely successful in counterprogramming other stations. All carry local sports, for example. WOR features Mets baseball; WPIX the Yankees; WSBK the Red Sox; WGN the Cubs; KTLA the Dodgers; and KTVT the Rangers. Other sports teams also are carried by all of these stations. Most also feature regularly scheduled movie programs, often with well-known hosts.

The popularity of independent stations as cable program services has surprised many, particularly those who have touted cable's potential to provide programming substantially different from that of broadcast television. This popularity indicates quite a lot about the economics of satellite-served cable, a new vehicle for television programming that has had to compete with the established and resource-laden broadcast networks. In many instances, the formula for success has been found in program schedules that are familiar to television audiences, but which nonetheless differ from those of the "big three"—a formula independent stations have been following for decades.

**SUSPENSE**

**U.S. Anthology Series**

*Suspense*, an anthology drama featuring stories of mystery and the macabre, was broadcast live from New York on Tuesday evenings from 9:30-10:00 P.M. over CBS. The original series began on 1 March 1949 and continued for four seasons until August 1954. It was revived briefly between March and September 1964.

_Suspense_ was based on the famous radio program of the same name and was one of many early television shows that had its origin in the older medium. The radio program began in 1942 and was broadcast weekly from Hollywood. Scripts were generally of high quality and featured at least one well-known stage or film performer. The famous broadcast of 1948 entitled "Sorry Wrong Number" starred Agnes Moorehead in a thrilling tale of an invalid woman who accidentally overhears a telephone conversation in which arrangements for her own murder are being discussed. For the rest of the program, she tries frantically to telephone someone for help. A stunning concept for the aural medium, the episode was later made into a film. In addition to such fine writing, the radio _Suspense_ featured outstanding music by Bernard Herrmann and excel-
lent production values. The program attracted a loyal following of listeners until September 1962. When it left the air, Suspense was the only remaining regularly scheduled drama on commercial network radio.

The television version of this popular show attempted to create the atmosphere of its radio predecessor by using the same opening announcement—"And now, a tale well calculated to keep you in... SUSPENSE!"—accompanied by the Bernard Herrmann theme played on a Hammond organ rather than by an orchestra. The television version, however, was not able to attain the generally high quality of the radio program. Part of the problem was the program's length. Thirty minutes hardly allowed sufficient time to develop characters of any subtlety. And the fact that the program was broadcast live from a New York studio severely restricted the mobility of its actions. It seemed too that writers sometimes offended public tastes by presenting subjects considered to be too violent for the conservative tastes of the early 1950s.

The first broadcast entitled "Revenge" was given a very negative review by New York Times radio and television columnist Jack Gould. He candidly stated that the program had more "corn than chill" and that the drab story about a man who stabs his wife while she is posing for a photograph gave actors "little opportunity for anything more than the most stereotyped portrayals." Gould noted that the most interesting thing about the program was its interspersing of live studio material with film to show exterior actions. Despite the interesting technique, Gould felt that the exteriors could have been dispensed with entirely without doing harm to the story.

He also complained of the excessive verbal explanation, and dialogue that was too simplified. He believed that the presence of pictures should free the dialogue from exposition and allow it to be more eloquent. As he put it, "with the pictures saying so much, the dialogue can afford to have more substance and be more subtle." His review concluded
with a telling observation on the new medium: "The lesson of the first installment of 'Suspense' is that among all the mass media, television promises to demand a very high degree of compact and knowing craftsmanship for a mystery to be truly successful."

Gould continued to attend to the series, however, and became incensed about another episode entitled "Breakdown." Written by Francis Cockrell and Louis Polloch, the episode starred Ellen Violet and Don Briggs. The story focuses on a cruel and tyrannical office boss who breaks his neck in a plane crash and is taken for dead until just before his body is cremated.

Gould did not object so much to the story as to its mode of presentation. He was particularly upset by what he called "the unrelieved vividness of the details of death which no war correspondent would think of mentioning even in a dispatch from a battlefield." In closing Gould stated, "Both the sponsor, an auto accessories concern, and CBS should be thoroughly ashamed of themselves for their behavior last night. Mystery, murders, and suspense certainly have their place in any dramatic form. But a sustained and neurotic preoccupation with physical suffering for its own sake has nothing whatever to do with good theater. It is time for everyone concerned with 'Suspense' to grow up."

Most 'Suspense' episodes were more conventional than "Breakdown." The program entitled "F.O.B. Vienna" of 28 April 1953 was fairly typical. It starred Walter Mathau and Jayne Meadows in the story of an American businessman who has accompanied a shipment of lathes to Austria and is trying to keep them out of the hands of Communists. The shipment ends up in Hamburg, and Mathau tracks it there with the help of Meadows who plays a newspaper reporter. At the last minute, he is able to destroy the shipment as the police arrive to round up the Communists. The ordinary script was not, in fact, very suspenseful and much of it cried for action impossible to depict within the confines of the studio.

A more successful broadcast was "All Hallows Eve" of 28 October 1952. Based on the story "Markheim" by Robert Louis Stevenson, this is the account of a man who murders his pawnbroker and is then visited by the devil, who urges him to kill the man's housekeeper in order to cover up his crime. In an attempt to atone for his utterly delinquent life, the man draws back at the last moment and tells the housekeeper to call the police because he has just murdered her master. Thwarted in his efforts to gain another soul, the devil disappears. Produced by Martin Manulis, this episode made excellent use of the pawnshop set. With its peculiar artifacts and many mirrors which reflect the face of the murdered as he thinks guiltily about his deed, the sense of confined space becomes central to the tale. Franchot Tone gave an outstanding performance as the main character. 'Suspense' broadcast a number of other adaptations during its four years on the air. The program drew heavily on classic mystery and suspense offerings, including "The Suicide Club," "Dr. Jekyll and Mr. Hyde," by Stevenson, "The Mystery of Edwin Drood," and "The Signal Man" by Charles Dickens, and "The Cask of Amontillado" by Edgar Allen Poe.

On 26 May 1953, 'Suspense' broadcast its only Sherlock Holmes story. "The Adventure of the Black Barone" was written by Arthur Conan Doyle and John Dickson as an extension of the original Sherlock Holmes stories. The television adaptation was by Michael Dyne and starred Basil Rathbone as Holmes and Martyn Green as Dr. Watson. Jack Gould gave the program an unfavorable review, saying that much subtlety and brilliance of the Holmes character had been sacrificed by the compression of the story into thirty minutes. He added that Rathbone seemed unhappy with his part and that Martyn Greene was not as effective as Nigel Bruce who had played Dr. Watson to Rathbone's Holmes on the radio. The production was only one of many instances in which the television version of 'Suspense' paled in comparison to its radio counterpart.

SUSSKIND, DAVID
U.S. Producer/Talk-Show Host

David Susskind was a key "mover-and-shaker" in the television industry during the medium's golden age and continued to take a high profile as a media personality long after the gold turned to waste, through some kind of reverse alchemy. In the process of leaving his mark on the histories of both live drama and television talk, Susskind would be honored with a Peabody, a Christopher, and 47 Emmy awards.

As Jack Gould observed in 1960, there were "virtually two Susskinds." One was a behind-the-scenes figure who was a major force, perhaps the major force, in the East-Coast branch of the television industry in the 1950s; the other
Susskind was the public man who would first achieve celebrityhood as the moderator-interviewer of Open End, a Sunday night discussion series aired by WNTA-TV in New York City. Some might say that his achievements were only surpassed by his arrogance. Described by his critics as "combative," "controversial," "blunt," "endearingly narcissistic," Susskind once aspired to be "the Cecil B. DeMille of television." As a self-styled "iconoclast" and "rebel," Susskind cultivated a reputation as a television insider who was an outspoken critic of the medium and its mediocrity. According to Susskind, "Ninety-five percent of the stuff shown on it [TV] is trash."

Susskind's ability to get things done, his genius as a logistically, was honed in the Navy during World War II. Serving as a communications officer aboard an attack transport, Susskind saw action at Iwo Jima and Okinawa. By the time he was discharged in 1946, he had given up his old ambition of landing a "job at Harvard as a teacher," and set his sights on show business. He actually went looking for his first job in his Navy uniform and quickly found a position as a press agent for Warner Brothers studios.

It was as an agent, that most despised, parasitic, and necessary of show business professionals, that the behind-thescenes Susskind would first encounter success. After a brief stint as a talent scout for Century Artists, Susskind worked his way into the Music Corporation of America's television program department, where he managed such personalities as Jerry Lewis and Dinah Shore. In the early 1950s, he came to New York and joined Alfred Levy to form Talent Associates, Ltd., an agency that would represent creative personnel rather than actors and specialize in packaging programs for the infant television industry. The new firm's first package sale was the Philco Television Playhouse, a live, one-hour drama series on which Susskind would later find his first job as producer filling in for one of his clients, Fred Cooke. After this heady experience, Susskind re-invented himself as a producer whose horizons extended far beyond the small screen, producing over a dozen movies and over a half-dozen stage plays in his forty-year career. As to television, in addition to serving as a producer on The Kaiser Aluminum Hour, The DuPont Show of the Week, and Kraft Television Theatre (among others), he was also the executive producer of Armstrong Circle Theatre. During this period, Talent Associates, Ltd., also thrived. In 1959, Susskind's company contracted for nine million dollars in live shows, more than the combined efforts of the three major television networks.

From the 1960s to the 1980s, Susskind would come into his own. Open End, a forum which sometimes lasted for hours, went on the air in 1958. Called "Open Mouth" by Susskind's detractors, the show originally started at 11:00 P.M. and ran until the topics—or the participants—were exhausted. In 1961 the show was cut to two hours and went into syndication; in 1967 the title was changed to The David Susskind Show. Susskind's most significant interview, by far, was with Soviet Premier Nikita S. Krushchev. Broadcast in October 1960, during the chilliest days of the Cold War, the interview dominated the headlines across the nation. Although station breaks featured a spot for Radio Free Europe depicting an ax-wielding communist soldier smashing a radio set, most observers scored the event as a propaganda coup for the impish Krushchev. As Jack Gould put it, "The televised tête-à-tête terminated in an atmosphere of Russian glee and Western chagrin."

In his twenty-nine years as a talk-show host and moderator, the abrasive Susskind would often rub a guest the wrong way resulting in what he termed "awkward moments." Tony Curtis even threatened to punch him "right on his big nose" after Susskind characterized Curtis as "a passionate amoeba." Susskind courted controversy by addressing such hot-button subjects as civil rights, abortion, terrorism, drugs, and a number of exotic or alternative lifestyles. His guests were as wide-ranging as his discussion topics. The roster of people who accepted invitations to appear on his show includes Harry S Truman, Richard M. Nixon, Robert F. Kennedy, Vietnam veterans, even a skier-masked professional killer.

Susskind continued to be intermittently involved as a producer of prestige programming, including Hedda Gabler.

SUSTAINING PROGRAM
U.S. Programming Policy

In the United States broadcasting industries a program which does not receive commercial sponsorship or advertising support is known as a sustaining program. When the term was first used, sustaining programming included a wide variety of non-commercial programming offered by radio stations and networks to attract audiences to the new medium. Currently, most sustaining programming on commercial television is confined to public affairs, religious, and special news programs which are unsponsored.

At its inception radio programming was envisioned by many, including industry leaders (such as David Sarnoff, a guiding force behind the development of RCA and NBC), and government officials (such as then-Secretary of Commerce Herbert Hoover) as sustaining, i.e. provided by stations or networks as a public service. Since programming was needed in order to sell radio transmitters and receivers, it was expected that the stations and networks established by manufacturers such as RCA would provide this programming and finance it from the profits on the sale of equipment. Programming provided by stations not associated with manufacturers was expected to be supported through endowments or municipal financing.

The vision of a commercial-free, public-service medium was short lived as AT and T began exploiting the commercial potential of radio in 1922. However, the public service responsibility of stations licensed to operate on scarce, public broadcast frequencies was affirmed in the Radio Act of 1927 and reaffirmed in the Communications Act of 1934 (Section 303), which states that the Federal Communications Commission (FCC) shall regulate the industry as required by "public conve-
nience, interest, or necessity”. The “public interest” standard was further delineated by the FCC in a 1946 document entitled Public Service Responsibility of Broadcast Licensees, commonly known as the “Blue Book”. It states that devoting a reasonable percentage of broadcast time to sustaining programs is one criterion for operating in the public interest. Sustaining programming was deemed to be important, because it helped the station to maintain a balance in program content and provided time for programs not appropriate for sponsorship, programs serving minority interests or tastes, and non-profit and experimental programs. All licensees were expected to broadcast sustaining programs throughout the program schedule at times when the audience was expected to be awake. Thus, the importance of sustaining programming was firmly established before television began operation, and these standards were applied to the new medium.

Sustaining programming also became important in network affiliate contracts. In the early days of radio, NBC charged its affiliates for the sustaining programs they accepted and paid affiliates a small flat fee for broadcast of sponsored programs. In the early 1930s, William Paley, President of CBS, used sustaining programs to secure greater carriage of sponsored programs, offering the sustaining schedule free in return for an exclusive option on any part of the affiliate’s schedule for sponsored programs. Thus, sustaining programming became a bargaining point in network affiliate contracts.

When experimental television was launched in the late 1930s, only sustaining programming was authorized by the FCC. The NBC schedule in 1939 included films supplied by outside sources; in-studio performances including interviews, musical performances, humorous skits, and educational demonstrations; and remote broadcasts, mostly of sporting events. Although NBC did not receive compensation to air these programs and shouldered much of the live and remote production costs, advertisers still had an influence on sustaining programming. In the January 1941, issue of The Annals of the American Academy David Sarnoff, then President of RCA and Chairman of the Board of NBC, wrote, “...invitations have been extended to members of the advertising industry to work with us in creating programs having advertising value, at no cost to the sponsors during this experimental period.” When commercial operation was authorized in July 1941, NBC was prepared to convert many of its sustaining programs to commercially sponsored programs; however, World War II curtailed the development of television and of commercial and sustaining programming.

As television regrouped after the war, sustaining programming became an important part of the industry’s push to sell television receivers and transmitters. Since the financial strategy of many organizations was to use radio profits to provide funds for the fledgling television medium, a side effect of increased sustaining programming on television was the decrease in sustaining programming on radio as programs were dropped in favor of sponsored programming. Sustaining programming on television was varied, including dramatic series, educational programs, political events, and public affairs programs. However, many programs (such as The Howdy Doody Show) which began as sustaining, quickly found sponsors once they became popular. As a result, the amount of sustaining programming on commercial television quickly diminished.

Further, after the freeze on the allocation of station licenses was lifted in 1950, channel space was allotted for educational stations. Industry leaders began to argue that much of the public service responsibility of broadcasting was being shouldered by these stations.

One of the more remarkable recent sustaining programs on commercial television was Cartoon All-Stars to the Rescue (an animated, anti-drug program), which was aired without advertisements in 1990 simultaneously on the ABC, CBS, NBC, FOX, Telemundo, Univision, Canadian Broadcasting Corp., CTV, Global Television (Canada), Televisa (Mexico), and Armed Forces Television networks; several hundred independent stations; plus the Black Entertainment Network, the Disney Channel, Nickelodeon, the Turner Broadcasting System, and the USA Network on cable. However, this program is the exception.

With the deregulatory push of the 1980s and the argument that non-profit, experimental, and minority programming is being provided by educational and public television, little regulatory attention is given to sustaining programming on commercial television. Currently, many programs...
which fulfill the FCC requirement for "public service" programming are sponsored and are, therefore, not sustaining.

SUZUKI, DAVID

Canadian Scientist/Television Personality and Host

A household name in English-speaking Canada, David Suzuki has almost single-handedly popularized some of the most complex scientific issues of our times largely through the medium of television. While students, teachers and heads of state continually laud his attempts to demystify contemporary science and nature, some in Canada's science community argue that Suzuki's work on environmental issues in particular is politically biased. Politics aside, Suzuki's awards of recognition clearly speak for themselves: Canada's most prestigious award, the Order of Canada; UNESCO's Kalinga Prize, and the United Nations Environmental Program Medal.

Such recognition, particularly awards bestowed to him in his native Canada, are in hindsight quite ironic. Growing up as a third-generation Japanese Canadian, Suzuki, his sisters and mother were placed in internment camps in 1942 by the Canadian government. After the war Suzuki and his family were forbidden by law to return to their Vancouver home.

On the faculty at the University of Alberta, Edmonton, Suzuki as a young academic began his illustrious television career by teaching science on campus TV. Some ten years later this experience, coupled with his scientific expertise, eventually landed Suzuki a host position on the weekly television program Suzuki on Science, broadcast by the Canadian Broadcasting Corporation (CBC). Suzuki would later extend his skills to radio where in 1975 he launched the CBC science affairs program Quirks and Quarks.

Although Suzuki continued on radio, his impact clearly remains in the sphere of Canadian public television. In 1974 he embarked upon his most successful broadcasting position, first as host of the CBC's television series Science Magazine. More importantly, five years later he became host of the well-established series, The Nature of Things. The longest-running science and nature television series in North America, The Nature of Things is the CBC's top-selling international program. Established in 1960, the program is seen by viewers in over ninety countries, including on the Discovery Channel in the United States. The program's mandate is to cover a broad range of topics, including natural history and the environment, medicine, science and technology.

David Suzuki

It is widely recognized that *The Nature of Things*, as with Suzuki's work in general, surveys the scientific landscape though a critical, humanistic lens. Such an approach has increasingly lent itself to investigations of controversial contemporary issues of social importance. Suzuki's outspoken views on the clearcutting of old growth forests on Canada's west coast, for example, has gained him many friends (and enemies) in logging and environmentalist circles. Whatever one's opinion of his views, however, it would be safe to say that Suzuki remains the voice of popular science on the Canadian airwaves.

**SWALLOW, NORMAN**

**British Producer/Media Executive**

Norman Swallow's career in British broadcasting, from his joining the BBC in 1946 through to his continuing involvement in independent production, is that of a major pioneer of the British television documentary and, more broadly, a significant contributor to public service television.

Swallow went to school in Manchester and studied history at Oxford, before entering wartime military service. His first work for the BBC was in radio "drama-documentary" where he tackled a number of historical and social themes as a writer and producer. After moving to television, Swallow was a producer of the general election broadcast of 1951, which marked a decisive shift in television's treatment of elections, to their own distinctive form of extended national coverage and commentary. One year later he became the series director of *Special Enquiry*, a BBC-documentary series which concerned itself primarily with investigation into contemporary social issues. The series ran from 1952 to 1957 and was undoubtedly one of the most important innovations in television journalism of the period, acting as an influence upon a whole range of later work. In devising the series with his colleagues, Swallow was influenced both by the work of the 1930s British documentary film movement (particularly in films such as *Housing Problems*, 1935) and by the kind of feature journalism, making extensive use of location interviews, developed within BBC radio.

*Special Enquiry* started with a programme investigating life in the slum tenements of Glasgow. The program caused widespread and positive appreciation of the new series in the newspapers. It went on to engage with a variety of issues to do with housing, poverty, health, ageing, education, etc. As quoted in *Popular Television in Britain*, Swallow remarked on the response which the first programme caused, "we had many phone calls, even letters, from people who, because they knew nothing about it, hadn't seen that sort of thing before, wouldn't believe it. They thought we were lying. That it was somehow fiction. So this was a television breakthrough."
One of the most controversial programmes in the series was entitled *Has Britain a Colour Bar?* and investigated racial prejudice against immigrants, taking the city of Birmingham as an example. Like all of the programmes, it consisted of a filmed report by an on-location investigative reporter (here Rene Cutforth), together with interview sequences. Following a convention of the period, interviews were often presented as direct-to-camera testimony, giving the series something of the feel of an "access programme" and linking it back to the precedent of direct address by ordinary people in the 1930s "classic" *Housing Problems*. The "colour bar" edition caused extensive public discussion, not least for the frankness with which racial prejudice was revealed in the speech of some of the participants, including trade union officials. There was also a powerful, and partly dramatized, scene in which a newly arrived immigrant looked for lodgings, to be repeatedly turned away by landladies, sometimes with the reason made perfectly clear. The *Daily Express* thought the programme to be "one of the most outspoken...ever screened."

At the time, Swallow was also the series producer of *The World Is Ours*, made in cooperation with the United Nations and produced within the BBC's new documentary department, headed by the distinguished filmmaker Paul Rotha. In 1960, Swallow became assistant editor of *Panorama* at a time when this series was establishing itself as the leading current-affairs programme on British television. Three years later he resigned to set up an independent company with Denis Mitchell, one of the most brilliantly original documentary directors ever to work for British television. Together, the two did a series for Granada called *This England*, which further extended television’s exploration of working-class life through a relaxed approach that kept commentary to a minimum. During this period Swallow made *A Wedding on Saturday*, a film about a wedding in a northern mining village, which won the Prix Italia in 1965.

Going back to the BBC in 1968, after a period of work which included the first Anglo-Soviet co-production, *Ten Days that Shook the World* (on the Russian revolution) for Granada, Swallow became series editor of the arts programme, *Omnibus*. During his first year, editions of this series included Ken Russell's much admired biographical film on Delius and Tony Palmer’s pathbreaking programme on popular music, *All My Loving*. He went on to become the BBC’s head of arts features before shifting northwards again, to rejoin Granada where, among other things, he worked on the 1985 series *Television*, an ambitious attempt at tracing the history and significance of the medium across the world.

Swallow has written extensively on the medium for newspapers and journals and his widely-cited book *Factual Television* remains one of the most thoughtful and sustained reflections on its subject by a practitioner. He was Television Advisor for the planning of the British Film Institute’s Museum of the Moving Image, established in London’s South Bank arts complex.

The career of Norman Swallow is both distinctive and representative. It is distinctive in his contribution (particularly in the shaping and supportive role of series editor) both to the investigative documentary and to arts programming, where his interests, enthusiasms, and creative empathy have extended well beyond the confines of southern middle-class England. It is representative insofar as his ability to be both popular and serious, intellectually engaged, yet fully aware of the need to address a general audience, displays the best qualities of British public service television across four decades.

**THE SWEENEY**

British Police Drama

*The Sweeney* was the top-rated British police series of the 1970s, bringing a new level of toughness and action to the genre, and displaying police officers bending the rules to beat crime. The series was created by Ian Kennedy-Martin and produced by Ted Childs for Euston Films (a Thames Television subsidiary) and went out mid-week in prime time on ITV, the main commercial channel. In all, 54 episodes were made, and the programme ran for four seasons.

*The Sweeney* focused on the exploits of Jack Regan, a maverick detective inspector attached to the Flying Squad, the metropolitan police's elite armed-robery unit, and featured John Thaw in the leading role. The programme, which derived its title from “Sweeney Todd,” the Cockney rhyming slang for “Flying Squad,” was a spin-off from the successful 1974 TV film, *Regan*, which had first introduced the protagonist. It had also established his professional relationships with his assistant, DS George Carter (played by Dennis Waterman), and his “governor,” DCI Haskins (played by Garfield Morgan). Each episode in the series adopted the same basic narrative format—a three-act structure (with acts separated by adverts) preceded by a prologue that triggered the crime narrative. The first two acts were devoted to obtaining intelligence about a forthcoming robbery, often through tip-offs from informers or surveillance; the third involved the capture of the robbery gang, characteristically involving adrenaline-pumping action with car chases, screaming tyres, spectacular smashings, and hand-to-hand fighting. The narrative was often further complicated through the addition of an anti-authority thread when Regan challenged Haskins’ “rule-book” approach, or through the introduction of casual sex relationships when one of the detectives became involved with an available woman.

The programme’s realism was considerable, and few other crime series have achieved so authentic an impression of the policing of London’s underworld. To an extent, this was achieved by adopting the same visual style, fast action, and cynical outlook as contemporary rogue-cop films, such as *Dirty Harry* and *The French Connection*. Equally though, the programme relied on detailed inside-knowledge of the actual circumstances in which the Flying Squad operated and the sometimes rather dubious means used to secure prosecutions. The series’ storylines frequently blurred the sharp distinctions that are normally drawn between good and evil characters in crime melodrama. Regan and Carter were shown inhabiting the same sleazy world as the criminals, mixing with low-life to obtain their leads, and adopting the same vernacular. Both law-enforcers and law-breakers indulged in womanising and heavy drinking, and used physical violence to achieve their objectives. The extent to which Regan was prepared to bend and break the rules to “nick villains” was well established in the pilot film, when he threatened a suspect with a longer sentence if he did not co-operate: “My sergeant is going to hit me, but I am going to say it’s you.” Throughout the series, however, the viewer’s sense of Regan’s integrity remained secure. Even though he might need to beat up suspects, strike deals with criminals and—on one occasion—burglarize the office of the DCI to read his own personal file, such actions were legitimised in the narrative as the only means available to the serious crime-fighter to keep on top, and to cut through the dead weight of bureaucracy that continually threatened to impede the cause of justice.

Unsurprisingly, the series provoked fierce controversy, chiefly because of its potential to influence the public image of the police at a time of considerable social upheaval. However, the dark (if not confused) moral world that the series represented was difficult to fault on purely realistic grounds as, at the time of transmission, a prominent officer in the Squad was under investigation and was eventually imprisoned for corruption. Considered in wider cultural terms, the programme has been viewed as part of the general ideological shift to the right that occurred in the 1970s in Britain, as the post-war social-democratic consensus broke down. James Donald, notably, has argued that *The Sweeney* was fuelled by popular anxieties about law and order stimulated by the press campaign on mugging, and that episodes
provided a "mapping fantasy" for the acting out of unconscious authoritarian urges.

_The Sweeney_ had sold to 51 countries by 1985, and had also stimulated two successful feature films. It also established Dennis Waterman and John Thaw as household names with the British public. The series secured the reputation of Euston Films as a leading production company, and created an influential model in Britain not just for crime series on ITV, but for the production of cost-effective, high-quality drama in general. The lean and efficient production operation that Euston pioneered in _The Sweeney_, relying on short-term contracts and shooting wholly with 16mm-film, has been generally adopted across the industry; with the exception of soap opera, the great majority of drama projects today are manned by freelance crews and produced on film.

**SWITZERLAND**

Switzerland, surrounded by Germany, Italy, France, Austria and the small country of Liechtenstein, is a multilingual and multicultural society. Due to its unique topography—a total of 41,293 square miles, most of it unpopulated mountain ranges—Switzerland is highly segmented. Nearly seven million inhabitants speak different languages and live in completely different surroundings. From industrialized cities such as Basel or Zurich to remote locations in closed-off valleys, they share a somewhat vague notion about what it means to be "Swiss." Still, commonalities have succeeded in overcoming the ever-present language barriers. So far, they have proven strong enough to keep Switzerland one of the few countries in Western Europe out of the European Union.

Television in Switzerland began in 1949 with an official delegation of Swiss technicians (and some staff members of General Electric) watching an experimental program, broadcast from Torino in Italy about 90 miles away. The first programs produced in Switzerland, in 1953, were received in Zurich only. By 1955, there were 8,600 television sets in Switzerland, 2,300 of them in public rooms and 6,300 in private households. In 1994 there were 2.6 million television licence fee holders in Switzerland.

Television, as developed in the 1950s and 1960s, was meant to be a tool of public communication and education. The technical objective was reception in all Swiss households (a goal still not attained, due to topography), but television broadcast had a political and social mission as well. "Audiovision," as it was termed, was supposed to play an important part in the national integration of different languages, regions, religions, generations and ways of living. Since there was, until 1992, only one network officially assigned with the mission to broadcast television programs, politicians of all parties kept an eye on content and on those responsible for developing and managing the broadcasting system.

The date 20 July 1953 marked the official beginning of Swiss broadcasting. Programming that night consisted of a demonstration of traditional Swiss woodcrafts and the recitation of a poem, "The Blind." Older Swiss citizens often remember broadcasts of live sports events that were viewed in crowded restaurants rather than at home. At the time, television was a social event.

Early viewers were especially interested in nature programs. And though educational programs rarely dealt with social problems, news and documentaries were something else. "Objectivity" was the key word during the 1970s and
some television programmers, labeled as left-wing radicals by more conservative parties were constantly accused of undermining Swiss democracy.

When the French-speaking and Italian-speaking communities received their own television programs, news was still produced in one place, with different crews using the same facilities and sharing a single set until 1982. Heidi Abel began announcing programs in 1954, and went on to present many different kinds of programs. She finally found her place as a talk-show host covering the most sensitive topics with wit and courage.

Fiction programs, expensive to produce, did not develop for some time. Early production included Swiss plays, mostly comedies, that were adapted for the stage and televised, rather than true television productions. All other types of fiction required co-production with wealthier neighbors. Some miniseries and series have been developed, including Die Sechs Kameraden, Heidi, and Die Direktorin. The animated children’s series Pingu achieved worldwide fame.

In the 1990s, family sitcoms based on American examples have become popular in all regions. In the German-speaking region, the popular program is Fascht e Famille, while in the French region, the favorite is La petit Famille. It is worth noting that some of the local stations have begun to produce experimental fiction. The Eden Family, for example, is a “dark” family sitcom, a parody of The Addams Family in which the characters live in a gay community.

The Swiss Broadcasting Company (SBC) is still organized as a private nonprofit association, not as a state institution. It is supported with licence fees paid every month. Advertising on television was introduced in 1965 and proved to be a most important additional source of income.

The system appears as complex as its political structure and its somewhat fragmented cultural identity. Radio and television stations are commercially or non-commercially organized. Yet the public broadcaster SBC (radio and television) is still by far the biggest distributor of programs, beating other (foreign) stations in ratings. The SBC provides programs for a mainly German-speaking audience (64%) as well as the considerably smaller French-speaking (19%) and Italian-speaking (8%) communities. There is also a tiny Romansch-speaking audience in the east of the country (0.6% in 1990) counting on at least one weekly news-magazine being broadcast. There are four SBC television channels and nearly a dozen SBC radio channels altogether, all of them distributed terrestrially. 76% of all Swiss television and radio households are cabled.

A considerable number of small, local television-stations and/or text services were registered by 1995, most of them experimental and with very limited frequency ranges each. This domestic competition has been less influential than that caused by international developments such as the ongoing deregulation process in the European television market. More and more commercial television stations have emerged throughout Switzerland since the 1980s, changing viewing habits and taking a toll on the ratings. When legislation changed in 1992, allowing private television broadcasters to find (or at least search for) their specific segments in a more open market, those broadcasters were waiting in the wings, thus urging the public broadcaster SRG to develop market-oriented strategies as well.

SYKES, ERIC
British Comedy Actor

Eric Sykes, who cultivated his talent for comedy whilst serving in the army in World War II, worked as a writer on radio and a writer-performer on television through the 1950s before having his greatest success, the long running BBC sitcom Sykes Versus TV which debuted in 1960. The services had proved to be fertile ground for aspiring entertainers and many of Britain’s favourite stars of the 1950s had discovered their performing skills whilst on wartime duty. Following the end of hostilities, these talents found themselves taking their acts on stage before getting the chance to do radio or television. Sykes was one such talent. He wrote comedy scripts as well as performing and eventually scripted one of radio’s most popular comedies, Entertaining Archie, which was a prolific breeding ground for comic talent. His many appearances on TV were usually comedy-variety specials and he developed a format for such one-offs which featured himself as a harassed producer struggling to put on a show and meeting with various obstacles.

But it was in 1960 that Sykes enjoyed his most enduring success. Comedy writer Johnny Speight collaborated with Sykes on the idea of a sitcom based loosely on Sykes existing stage persona. In the idea, Sykes would live in suburbia with his wife, getting involved in simple plots centering on everyday problems. However, Sykes soon realised that by making his partner his sister, rather than his wife, he would have more scope in storylines, with either or both of them able to get romantically entangled with other people. Comedy actor Hattie Jacques, who had worked with Sykes on the radio, was chosen as the sister and the first series, written by Speight, proved to be a success. The
second series, written by Sykes and other writers from storylines suggested by Speight, consolidated that success. Subsequent series were all written by Sykes alone. The TV character Sykes was a proud, rather work-shy individual with somewhat childish habits; as if part of him hadn't grown up. His sister Hattie was formidable in stature but timid by nature, and was easily inveigled into her brother's schemes. It was a departure for a big woman to be portrayed on TV in this way but it was probably Hattie Jacques' radio career which had allowed her to formulate such characters, as her gentle voice belied her size allowing her to portray, on radio, small, timorous women.

The format was simple but enduring. Each week a single idea would be taken and every possible comedic situation of the theme would be exploited. For example, in one episode Sykes gets his toe stuck in the tap whilst having a bath and the entire programme revolves round efforts to free him; in another, highly memorable segment, Sykes and his sister accidently get handcuffed together and spend the whole episode trying to do cope with ordinary domestic situations whilst remaining connected. By concentrating on this technique, Sykes was able to come up with seemingly endless storylines in which to place his characters.

The series was called simply Sykes Versus TV but each week bore a subtitle which began with "and", for instance "Sykes ...and a telephone," "Sykes... and a Holiday" with the subtitle referring to that episodes particular theme to be milked. Sykes became the longest running sitcom of its time, continuing, with one notable seven-year break between 1965 and 1972, for 127 episodes until Hattie Jacques' death in 1980.

During the run of the sitcom Sykes also made a series of short dialogue-free films for the cinema, utilising the same structure as the TV show: that is one idea exploited to the limit, comically. Most famous of these was called The Plank (1967) and just focused on the mishaps caused by a man carrying a large plank around— incidentally one of the Sykes episode also used this concept. Later he re-made two of these short films, The Plank and Rhubarb (1969) for television: The Plank (Thames 1979) and Rhubarb, Rhubarb (Thames 1980). Subsequently Sykes, now a huge comedy star due to the success of the famous sitcom, appeared in specials and the odd series but never managed to recreate the popularity of Sykes. His long-lasting top flight career is even more remarking considering he has been dogged by hearing problems since 1952. The problems increased with the passing of time eventually leaving him completely deaf in one ear and with very poor hearing in the other.

Noeline and Laurie's unwed status, Noeline's drinking problem, Laurie's racism, their materialism, and the family's routine domestic disputes, all became issues discussed widely in the Australian media.

A particularly passionate public debate erupted over the question of whether executive producer of *Sylvania Waters*, Paul Watson, who also produced *The Family* for the BBC, had chosen an Australian family which pandered to a British stereotype. Writing in *The Sydney Morning Herald*, popular cultural critic Richard Glover summed up these concerns when he wrote that the family was "hardly a surprising British choice: in Noeline and Laurie, every British preconception about the Aussies comes alive...Meet Australia's new ambassadors: a family whose members are variously materialistic, argumentative, uncultured, heavy drinking and acquisitive."

The debate intensified when the series screened in Britain and became the subject of widespread commentary in the press there. The tabloid newspaper *The Sun* headlined a story on the series "Meet Noeline. By Tonight You'll Hate Her Too," while *The Guardian* criticised "Noeline's bigotry and gruesome materialism." Critics of *Sylvania Waters* argued that this adverse publicity was proof that the producers of the series had effectively "set up" the Donaher/Baker family to feed British prejudices about Australians.

During the screening of the series, Noeline Baker, Laurie Donaher, and their extended family, also became the subject of intense media interest. While a number of family members claimed that the series had caused a family rift, they continued to give numerous press, radio, and television interviews and guest-hosted radio and television programs, both in Australia and in the United Kingdom.

On the level of genre, *Sylvania Waters* was also widely understood as representing a new trend dubbed "reality" television. This ambiguous term—generally identified by the use of unembellished documentary style footage of ordinary people for entertainment purposes—has been used to describe a number of programs which debuted in Australia in the early 1990s, including *Cops*, which showed footage of police arresting suspects, and *Hard Copy*, a current-affairs program which made frequent use of amateur video material.

**SYNDICATION**

Syndication is the practice of selling rights to the presentation of television programs, especially to more than one customer, such as a television station, a cable channel, or a programming service such as a national broadcasting system. The syndication of television programs is a fundamental financial component of television industries. Long a crucial factor in the economics of the U.S. industry, syndication is now a worldwide activity involving the sales of programming produced in many countries.

A syndicator is a firm which acquires the rights to programs for purposes of marketing them to additional customers. The syndication marketplace in fact provides the bulk of programming seen by the public. For the internal U.S. market, for example, syndication is the source of the "reruns" often seen on network television, and of much material seen on cable networks. Internationally, large amounts of American television programming are sold through syndication for programming alongside material produced locally. Material not available in syndication includes current network prime time programs, live news programs and live coverage of sporting and other special events. Even current U.S. programs, however, may be syndicated in international markets, and American viewers may sometimes see imported programs, usually from England, currently programmed in other countries.

The price for a syndicated television series is determined by its success with audiences and the number and type of "run" in which the program appears. A national run is the presentation of a film or program one time to a national audience. This notion of national run has been borrowed from the history of distributing theatrical films. Any number of theaters or communities may be included in the first run of a production. But as soon as any location receives a second presentation, the second national run has begun. Generally speaking, the cost of rights to present a television series declines as it is presented in later and later runs although, as indicated below, that rule does not always hold in the international market.

Repeated sales of television programs, both within the United States and throughout the world, has long been central to the profitability of the American television industry. Soon after U.S. television production shifted from live performance to film in the late 1950s, shrewd sales personnel realized that television products had additional life. Audiences would, in fact, watch the same program a second time, and perhaps return for repeated viewing. Moreover, many countries found it far more economical...
to purchase the syndicated rights to American television programs than to produce their own, opening a vast market for American products.

The cost of U.S. television programming in the international market place is generally based on whatever those markets will bear. Costs for programs in Europe are often far higher than in Africa or Latin America. No matter how small the syndication fee, however, the sales of programming produce additional income for their original production companies. In abstract economic terms this is an example of "public good theory," in which new profits are gained at no additional costs or at the marginal costs incurred in the marketing process.

Historically, syndication, whether domestic or international, served to underwrite the risky process of producing for American network television. From the late 1960s through the mid-1990s special regulations (the Financial Interest and Syndication Rules) governed relations between television networks and independent production companies. Under these rules ownership of the rights to the programs reverted to the producer/production company after a specified number of network runs. Profits from any other sales, including syndication, generally benefited the production community. For this reason many production companies were willing to produce original programs at a loss, betting on the enormous income that might rise from successful syndication. Many "failed" programs could be created with the profits from one or two successfully syndicated shows.

One way of classifying television programs in the syndication marketplace is by the first national run of the program. If the first run of a program was as part of a national network schedule, then as the program is marketed for subsequent runs to other programmers, it is referred to as "off-network syndication." Thus a cable programmer who buys the rights to presentation of a situation comedy presented by NBC is buying off-network syndication. Dallas, presented in first run on CBS in the 1978 season, was heavily programmed throughout the world as an off-network syndication.

If a program is initially made to be sold to programmers other than the major networks, however, then the program is known as "first run syndication." An example would be the weekly program, Star Search with Ed McMahon, pro-

Annual NAPTE syndicators convention
Photo courtesy of NAPTE
syndication can be used to produce other material on a speculative basis and to bolster the production of the first-run production process. As television distribution channels proliferate throughout the world and the demand for product to fill those channels grows, it is likely that more and more producers in more and more contexts will create materials for sale to the syndication market.

TABLOID TELEVISION

"Tabloid television" is the name often used to describe a group of journalistic program formats that achieved high visibility and great popularity during the middle to late 1980s and early 1990s. Generally used with derisive intonations, the label designates a loosely delineated collection of related genres rather than a singular cohesive one. It has typically been taken to include three primary types of popular journalism. The first is so-called "reality TV," which inserts minicams into a variety of ordinary scenarios like urban law enforcement, and extraordinary ones like spectacular accidents and rescues. Examples include COPS, American Detective, and Rescue 911. In "reality TV," however, post-hoc reenactments may substitute for "actual footage," and "actual footage" might itself be carefully orchestrated and edited in a variety of ways to match social expectations regarding the characteristics of cops and criminals, for example, and the conventions of television narrative. Tabloid television's second primary type includes unconventional newscasts and documentary programs such as A Current Affair, Sightings and Unsolved Mysteries. Each of these shows simultaneously embodies and violates television's established journalistic conventions. A Current Affair, for instance, copies the structure of the evening newscast, at times apparently only to parody it by transgressing norms of realistic representation or substituting mockery and laughter for high seriousness and reverentially solemn tones. The third primary type of tabloid television is the issue-oriented talk show, including Donahue, Oprah and The Ricki Lake Show. Like the other kinds of tabloid TV programs, these differ from "serious journalism" both in form and content. They typically value confrontation over "impartiality" and "objectivity" and include a multiplicity of contesting voices that challenges the traditional central role of the journalistic commentator or anchor. Additionally, they often deal with issues considered too "offensive" or "trivial" for serious journalism (such as marginalized sexual practices or the politics of romance and family life).

Tabloid television's explosion was abetted by a number of significant changes in American broadcasting that occurred during the 1980s. Among the most important of these were the expansion of cable television, a threefold increase in the number of independent broadcasting stations operating in the United States and the appearance of the FOX Network, owned by tabloid newspaper mogul Rupert Murdoch. One consequence of these industrial changes was an unprecedented level of demand for new programs designed specifically for syndication. Because of their relatively low production costs compared to fictional television, tabloid shows began to look increasingly attractive to producers of syndicated programming. Moreover, a long writers' strike in 1988 enhanced the value of "reality TV" and was directly responsible for tabloid style FOX Network shows like COPS and America's Most Wanted. These shows, produced with a minimum of narration or dialogue, were considered "writer proof," unaffected by unplanned production interruptions such as strikes.

The forms of tabloid television that emerged and became popular in the 1980s were not merely products of industrial dynamics and economics, though. They were also inevitably linked to the social context of the period, much of which was defined by Reaganism. As social historian Paul Boyer puts it, "Reaganism was a matter of mood and symbolism as much as of specific [government] programs." Assuming that the media do not "reflect" social history so much as they increasingly become an arena within which it is struggled over and played out, it is possible to find both congruence and dissonance between tabloid television and Reaganism.

Among the significant currents of meaning that Reaganism brought to the surface of American culture during the 1980s were those swirling around our collective anxieties over crime, drugs and, ultimately, race. For example, Reaganism helped popularize both a "war on drugs" and a politically successful "victims' rights" movement. The "war on drugs" saturated the electronic media with images of an urban battleground steeped in violent criminality that all-too-often struck at "innocent victims." Tabloid television played a significant role in both the circulation of images associated with the "drug war" and in the articulation of a populist sense of "victimhood." FOX's America's Most Wanted, for example, specialized in cinematically sophisticated reenactments of "actual crimes" followed by an open call for audience members to phone in whatever tips they might be able to provide the police that would help track down missing suspects or escaped fugitives. This premise implies not only a supportive stance toward police departments and crime victims, but also suggests that, in and of themselves, official institutions are incapable of ensuring social order. This was a premise that was extended in local as well as network broadcasting.
Thus, questions about the politics of these programs, which are quite contradictory and therefore difficult to assess, are unavoidable. On the one hand, the popularity of the shows indicates a level of popular distrust toward social institutions from which many people feel alienated. This distrust is often articulated as a class antagonism directed against "the system." Much crime-fighter tabloidism therefore appeals to the populist perception that only the people are capable of looking after their own interests, for "the system" is too often concerned with the narrow interests of the socially privileged. Thus, programs like COPS, whose minicams follow "the men and women of law enforcement" into dangerous situations, aren't interested in the upper echelons of police management and administration, but rather focus on the rank-and-file. In their emphasis upon the working conditions inhabited by "ordinary" cops, such programs resonate powerfully with a working class awareness that blue-collar folks inevitably labor under treacherous and difficult conditions and are poorly rewarded for it. As well, they appeal to a very real sense of vulnerability produced by a society in which the socially weak are far more likely to be criminally victimized than the powerful and the privileged.

On the other hand, these programs are part of a contemporary form of white racism that substitutes coded words and issues like "crime" and "drugs" for explicit ways of talking about race. As John Fiske has argued, this facilitates the exertion of racial power while enabling its agents to deny that race is involved at all. So, even though the individual criminals and suspects represented in these programs may often be white (albeit lower-class "white trash"), an emphasis on rampant urban disorder appeals to deeply rooted anxieties in the white imagination regarding people of color presumed to be "out of control" and therefore in need of stepped-up policing. One of the primary responses to these white anxieties in contemporary America has been a massive expansion of urban surveillance systems. Such systems have the two-fold aim of "visibilityizing" especially nonwhite populations, and therefore making them available for social discipline, and of encouraging people to police themselves with greater circumspection and vigor. There is much justification for the view that reality-based "tabloid TV" is partly an extension of such surveillance practices. The case of Stephen Randall Dye, a fugitive who turned himself over to police after agonizing for two weeks over a story about him on America Most Wanted, provides anecdotal evidence in support of this position (Barcley, 1990).

Tabloidism's partial and populist distrust toward institutions of law and order is extended to the judicial system in the programs Final Appeal and Trial and Error. Like America's Most Wanted, these shows produce reenactments of crimes, but these are supplemented by further reenactments of the trials of the people accused and convicted of those crimes. Rather than supporting these convictions, Final Appeal and Trial and Error reexamine and question the validity of those criminal verdicts that have resulted in actual incarcerations. The voice-over narration from Trial and Error's opening segment encapsulates the logic these programs follow:

"Beyond a reasonable doubt." This is the guardian phrase that empowers juries to protect the innocent in America.... The most conservative estimates say that we wrongfully convict and imprison between six and seven thousand people every year. Two half-brothers were within sixteen hours of being executed when it was discovered that the prosecution's star witness was actually nowhere near the crime scene, and she'd only seen it in a dream. A couple in Southern California was convicted of a murder that never even occurred. The alleged victim was found alive and well and living in San Francisco years later.... Witnesses sometimes lie, confessions are sometimes coerced, lawyers are sometimes incompetent, and sometimes juries make mistakes.

Final Appeal and Trial and Error ultimately question whether our courts ever operate "beyond a reasonable doubt." In doing this, they appeal to a form of popular skepticism that, at particular times and in particular contexts, turns against the judicial system and resists its discursive power to produce authoritative truths. The first trial of Rodney King and the urban uprisings that answered its verdict provide the most obvious examples of this sort of popular skepticism erupting explosively and demonstrate that faith in American criminal justice is largely a consequence of one's position in American society. In turn, programs like Final Appeal and Trial and Error demonstrate one of the ways in which tabloid television is capable of tapping into widespread suspicions of officedom shared by many people who occupy positions of social subordination.

The view that tabloid television circulates beliefs that appeal to a popular skepticism toward official truths receives anecdotal support from Dan Lungren, California's attorney general. Lungren has coined the term "Oprahization" to describe changes in American juries that many prosecutors feel have increased the difficulty of securing criminal convictions. Says Lungren, "people have become so set on the Oprah view, they bring that into the jury box with them" (Gregory, 1994). According to a professional jury consultant, "talk-show watchers . . . are considered more likely" than others "to distrust the official version" of events produced by prosecuting attorneys in courtrooms across the land (Gregory, 1994). Los Angeles District Attorney Gil Garcetti has gone so far as to pronounce that the criminal justice system is "on the verge of a crisis of credibility" due to these changes in the sensibilities of jurors (Gregory, 1994).

Talk shows, then, also appeal to a popular skepticism toward official truths. And like the other tabloid programs, their emergence and success bear no small relationship to Reaganism. In Elayne Rapping's words, "the people on these
shows are an emotional vanguard, blowing the lid off the idea that America is anything like the place Ronald Reagan pretended to live in." It's no coincidence that tabloid talk shows achieved their highest visibility and popularity in the wake of Reagan, for Reaganism's widening of gaps between such groups as rich and poor, men and women, whites and Blacks brought social differences into clear definition and sharpened the conflicts around them (Fiske, 1994). If Reaganism entailed a widespread cultural repression of voices and identities representing social difference, Reaganism's repressed others returned with a vengeance on TV's tabloid talk shows, which invite the participation of people whose voices are often excluded from American commercial media discourse, such as African Americans, Latinos and Latinas, sex industry workers, "ordinary" women, blue and "pink" collar laborers, the homeless, the HIV positive, people living with AIDS, youths, gay men, lesbians, cross-dressers, transsexuals, convicted criminals, prison inmates, and other socially marginalized groups. This is not to say that tabloid talk shows have a political agenda of anti-racism, anti-sexism, anti-classism, or anti-homophobia, but rather that in opening themselves to the participation of a very broad range of voices, they necessarily encourage potentially progressive conflicts over cultural, racial and sexual politics. In particular, these shows often emphasize what we might call "the politics of normality." A number of prominent commentators such as Erving Goffman and Michel Foucault have examined the role of norms as instruments of power that facilitate the efficient identification of deviance, which is typically punished or subjected to "treatment" and social discipline. But tabloid talk shows are marked by a level of discipline that often disrupts the enforcement of norms and allows people who are disadvantaged by those norms to talk back against them.

The last genre of tabloid television includes unconventional newscasts and documentary programs like A Current Affair and Sightings. It is difficult to generalize about these programs, though often they utilize approaches to storytelling that violate the norms of mainstream journalistic practice in a number of ways. One is to disavow the seriousness of conventional journalism. For example, A Current Affair, one of the early definers of American television's tabloid style, was originally anchored by Maury Povich, a refugee from "serious" news whose style was playfully irreverent. This gave much offense to conventional journalists like Philip Weiss, who writes of Povich that "the rubber-faced lewdness his role calls for, the alacrity with which he moves through a half-dozen expressions and voices (from very soft to wired and mean) is a motility reminiscent of the veteran porn star." In his autobiography, Povich writes that his own scorn for the pretensions of the quality press shaped the agenda at A Current Affair, which he describes as a "daily fix of silliness, irony, and tub-thumping anger" infused with "an odor of disrespect for authority." He explains that "somehow the notion had come about that news was church business and had to be uttered with ponderous and humorless reverence; instead news was a circus delivered by clowns and dancing bears and should be taken with a lot of serious skepticism."

The significance of A Current Affair's frequent disavowal of the seriousness of more traditional or "respectable" journalistic forms is suggested in Allan White's observation that "seriousness always has more to do with power than with content. The authority to designate what is to be taken seriously (and the authority to enforce reverential solemnity in certain contexts) is a way of creating and maintaining power." Official definitions of "serious journalism" such as those taught in university courses and circulated by the "respectable press" seemed to reinforce an established vision of "that information which the people need," often as prescribed by a community of experts whose lives are quite removed from those of ordinary people. Consequently, analysts like Fiske argue that tabloid television's negotiated refusal of mainstream journalistic seriousness embodies an irreverent, laughing popular skepticism toward official definitions of truth that serve the interests of the socially powerful despite their constant appeals to "objectivity."

Besides mocking the seriousness of mainstream news, some tabloid programs like Sightings and Unsolved Mysteries confer seriousness upon issues that would likely be treated with laughing dismissal, if at all, in traditional newscasts. Thus, Sightings has featured stories about house hauntings, werewolves in the British countryside, and psychic detectives, while Unsolved Mysteries has delved into the paranormal terrain of UFO sightings and alien abductions. Popular interest and "belief" in such issues persists despite, or perhaps because of, official denials of their "truth" and "seriousness," and this antagonism between popular belief and official truth is part of the more general antagonism between the social interests of ordinary people and those of the powerful. Sightings opens each broadcast with a refreshing disclaimer that nicely encapsulates the difference between its attitude toward the process of informing and that which guides more conventional journalistic enterprises: "The following program deals with controversial subjects. The theories expressed are not the only possible interpretation. The viewer is invited to make a judgment based on all available information."

By transgressing certain norms of conventional journalism, tabloid television has drawn the scorn of a great many critics who feel that journalistic TV should address "loftier" issues in more "tasteful" and serious ways. And it has shown that television can be quite adept at speaking to a variety of forms of popular skepticism toward some of our social institutions and the versions of truth they pronounce.

**TAIWAN**  

The birth of the television era in Taiwan began when China Broadcasting Corporation (CBC) brought the Presidential Inauguration live to 50 television screens in May 1960. This event also marked the beginning of the extensive political influence of the three terrestrial broadcasting systems on all facets of life in the country. Taiwan Television Enterprise (TTV), the first network, was established in 1962 with a significant transfer of Japanese expertise and an initial 40% investment by the four leading Japanese electronic firms. China Television Company (CTV) was launched with exclusively domestic financing in 1969, and Chinese Television System (CTS) was transformed from an educational to a general broadcasting service in 1971. Two-and-a-half decades later, these three networks remain dominated by their stockholders which are, respectively, the Taiwan Provincial Government, the political party Kuomintang, and the Ministries of Defense and Education. Ideological control, exercised by these major underwriters, remains apparent in both news and entertainment programming. In order to claim its political legitimacy over local Taiwanese politics, for example, the KMT government pronounced Mandarin as the official language in Taiwan and restricted the use of Fukienese to only 20% of television programming, despite the fact that it was used by the vast majority of the population in the 1960s. Since the development of a political movement by the opposition party in the early 1980s, the KMT government has been under pressure to begin relaxation of its media monopoly. Opposition leaders sought for alternative voices with a massive wave of print media publications, followed
by the creation of numerous underground radio broadcasting stations. Government crackdown on these activities proved ineffective when many opposition party members were voted into the legislature and the movement was backed by a significant number of intellectuals. In 1995, the Taipei city government, headed by a renowned Democratic Progress Party (DPP) leader, fought for a 30% share of TTV by threatening to block a signal license renewal. Ultimately, the attempt was dropped in exchange for a goodwill promise on the part of TTV to tone down its political partisanship. Furthermore, the legislature passed a regulation in 1996 which raised every terrestrial station's annual license fee from NT$60,000 to NT$10 million (exchange rate USD=NT$27.5), effective immediately.

These recent developments signal a passing of a television monarchy controlled by the three networks, which coincides with the emergence of the Fourth Channel, an abbreviated name for all underground cable systems and channels. This Fourth Channel surfaced as a powerful media alternative in 1994 with the official launch of TVBS and its landmark call-in program, 2100 All Citizens T-lik. A fourth official national television network is also in development, its license granted to People's Broadcasting Corporation, which consists largely of supporters of the opposition party, DPP. It is scheduled to be on air in February 1997, one year earlier than originally planned.

When the fourth channel begins programming, like the other broadcasters, it will turn to one of three types of sources for content: internal production by the networks, contracted domestic production by independent production companies, and foreign imports. The government ruled that foreign imports should not exceed 30% of the total daily programming hours and all foreign programs are required to use either Mandarin voice-over or Mandarin subtitles. CTS is particularly known for its effort in "localizing" its entertainment programming: the network wrote television history in 1994 when it first mixed Mandarin with Fukienese in its 8:00 P.M. prime-time drama series, When Brothers Meet. Instead of the neverending Romeo and Juliet-style of love and hate romance, this program established a brand new drama genre in which real-life conflicts were recreated in the context of real-life societal events. When Brothers Meet not only took the lead in the television prime-time ratings, it also began a continuing success in television drama for CTS.

With the exception of news, all television programs are subject to review by the Government Information Office (GIO). Even in newsrooms, however, self-censorship is practiced. Commercial air time—advertising—is limited to ten minutes per hour on terrestrial systems. Cable systems are limited to six minutes per hour, and coalition efforts are underway for some regional satellite broadcasters to unite in protesting the government's preferential treatment of the free-to-air terrestrial. In other areas, however, cable has its own advantages. Cigarette and liquor commercials are barred from free-to-air stations, yet in 1996 commercials for liquor have been allowed on cable after 9:00 P.M.

Such regulations are truly significant in economic terms. While 99.9% of the country receives broadcast television and 67% of the homes own at least two television sets, cable has penetrated 76% of the 5.6 million television households, according to Nielsen-SRT's second quarterly Media Index Report, released in July 1996. It is receivable in over 4.4 million homes and, since 1994, the channel share of all cable stations has surpassed the combined share of the three terrestrial systems. As of June 1996, cable homes or cable individuals spent two-thirds of their viewing time with cable. Certainly, the phenomenal cable growth in Taiwan from 18% of market penetration in 1991 to 50% in 1993 and the current 76% coincides with the economic well-being of the country.

Not surprisingly, the cable industry has been considered a highly lucrative market by both domestic and foreign investors. The Cable Law, however, passed in August 1993, explicitly outlawed foreign shareholding. Cross-media ownership is disallowed among newspaper owners, free-to-air broadcasters, and cable operators and programmers. Further regulations restrict any shareholder to no more than 10% of the total assets value.

Other regulations focus more precisely on cable systems. In the area of programming, for example, domestically-produced programs must represent at least 20% of the total programming hours. Nevertheless, in light of the fact that the Cable Law is designed exclusively to bring the system operators under control, cable programmers have often tested the limit of the law and frequently go their own way. The constant power struggles between system operators and cable program suppliers have left the GIO powerless most of the time.

In one area, however, the cable industry finally came under restriction in the fall of 1994 after severe protests by the U.S. copyright organizations. Cable operators engaged in extreme violations of copyright laws, airing literally everything from movies to sitcoms and variety shows without payment, which resulted in substantial revenue loss to the program copyright owners. Under threat from the U.S. government, authorities in Taiwan finally began an all-out effort to crack down on the illegal cable operators. The resulting rising costs for program purchases drove some operators out of business and contributed to a significant consolidation of cable systems in recent years.

Financial concerns also affect the terrestrial systems. Despite the fact that all three are financially dominated by the different government offices, they are essentially commercial rather than public stations. In 1995, they garnered 5% of the total NT$29.6 billion (or U.S.$1.1 billion) advertising revenues, with TTV slightly edging ahead of CTS by 3% and CTV by 6%. In the same year, television advertising revenues accounted for approximately 40% of the total advertising expenditures, topping newspapers by nearly 10%. With the significant cable growth, 90% of the top 300 advertisers replied in a 1995 survey that they were prepared to invest 15-20% of their advertising dollars in cable.
Essentially, the TV-advertising market has changed from a seller's market to a buyer's market. The three terrestrial networks are predicted to lose a quarter of net television advertising to other channels in 1997 and, by 2005, less than half the net total will go to the terrestrial systems. On the other hand, TV advertising is predicted to nearly double between 1995 and 2000 to U.S.$1.8 billion, and will almost triple to U.S.$2.7 billion in 2005. International advertisers dominate the top 20 list of largest advertisers in Taiwan. Ford leads the category with total annual billings of NT$1,592 million, followed by Proctor and Gamble with NT$1.103 million, Toyota with NT$1,005 million, and Mavibel, Kao, Matsushita, Hong Kong Shanghai Bank, AC Johnson, and Nestle among the biggest spenders.

These advertisers present their products in one of the most complex, multicultural media environments in the world. In a country with a population of 21 million, more than 180 satellite channels and 130 cable operators compete for audiences. A typical cable household receives 70 channels, all as part of the basic tier. In the movie category alone, more than 12 channels show movies originating from the United States, Spain, France, Italy, the United Kingdom, Russia, Japan, China, Hong Kong, and other countries.

In the face of this 70-channel environment, all regional satellite channels have made "channel localization" an integral part of their programming effort. They have created specific channel "identities" related to specific Asian countries and regions. Such localization has gone beyond the use of specific languages and has led regional broadcasters to produce "locally correct" cable content by teaming up with the local production entities or houses in the various Asian countries. The Discovery Channel, HBO, ESPN, MTV, and Disney are all prime examples of entities competing against these local cable channels and their localized content. Much of the programming effort by these "global" suppliers was, in fact, launched as an attempt to use the Taiwan market as a test for eventual programming in China.

The influx of new local and international cable channels is far from over. For every type of channel already in place, another is in formation. The Scholars' Corporation announced the launch of a five-channel package in May 1996; a very popular local channel, SanLi, is preparing for the release of its third channel; the Videoland Group is getting ready for its fourth channel; and the general-interest Super Channel, which came on the scene in October 1995, has added another channel devoted to sports.

The cable attraction has resulted in a large decline of viewership on the three terrestrial networks. Even the 7:00-8:00 P.M. news hour on the networks, dominant for almost three decades, is losing an audience share to cable. Individual ratings among viewers aged four and above have generally declined among all program genres.

On the other hand, almost every regional satellite channel and cable station has steadily gained viewership and momentum. Cable's niche programming orientation has led to the creation of many channels with clearly definable audience profiles. When analyzed within target audiences, some cable channel ratings even surpass those of the three networks. The current television climate may be summarized as follows: (1) A typical viewer spends an average of 2.2 hours daily watching television. Individuals with cable spend more time watching television than their non-cable counterparts. (2) "Program loyalty" has replaced "channel loyalty" in describing the viewer's logic of television choice. Viewers select specific programs and move among channels to do so. (3) Related to this development, a cable channel is recognized oftentimes because it carries a few popular programs. It is "programs" which define the character of any channel, not the channel itself, even for the 24-hour news channel. (4) Prime time on cable is virtually 23 hours a day; the only hour excluded is the 8:00-9:00 P.M. daily drama series time. (5) The new television ecology has gradually given rise to new sales and marketing concepts. Program suppliers can no longer emphasize the reality of "how many" viewers are watching; instead, it is the determination of "who" is watching that helps deliver the audience to the advertiser.

Behind this multi-channel, multicultural viewing environment is a series of questions baffling the policy-makers. The seemingly vast program choices conceal the reality that programming homogeneity still outweighs its heterogeneity. Not only are schedules for the three terrestrial networks similar across all dayparts, the same high level of competition is also frequently observed within and among the cable channels. One hundred thirty cable operators spend a great deal of money to buy channels only to find that such operations are virtually the opposite of the principle of "natural monopoly" normally used to describe the cable industry. The government is busy making cable laws only to find that participants in the industry have invented new games which defy the regulations. While new channels continue to be rolled out on a monthly basis, new communication technologies such as the Internet are aggressively pursued and applied by many programmers to add to their marketing effort and competitive edge. The television market in Taiwan is far from saturated. It is instead loaded—with selection, repetition, excitement, energy, and challenges.

TALK SHOWS

The television talk show is, on the face of it, a rather strange institution. We pay people to talk for us. Like the soap opera, the talk show is an invention of twentieth century broadcasting. It takes a very old form of communication, conversation, and transforms it into a low cost but highly popular form of information and entertainment through the institutions, practices and technologies of television.

The talk show did not originate overnight, at one time, or in one place. It developed out of forty years of television practice and antecedent talk traditions from radio, Chataqua, vaudeville and popular theater. In defining the talk show it is useful to distinguish between “television talk” (unscripted presentational address) and “talk shows”—shows organized principally around talk. “Television talk” represents all the unscripted forms of conversation and direct address to the audience that have been present on television from the beginning. This kind of “live,” unscripted talk is one of the basic things that distinguishes television from film, photography, and the record and book industries. Television talk is almost always anchored or framed by an announcer or host figure, and may be defined, in Erving Goffman’s terms, as “fresh talk,” that is, talk that appears to be generated word by word and in a spontaneous manner. Though it is always to a degree spontaneous, television talk is also highly structured. It takes place in ritualized encounters and what the viewer sees and hears on the air has been shaped by writers, producers, stage managers and technical crews and tailored to the talk formulas of television.

Thus, though it resembles daily speech, the kind of talk that occurs on television does not represent unfettered conversation. Different kinds of television talk occur at different times of the broadcast day, but much of this talk occurs outside the confines of what audiences and critics have come to know as the “talk show.” Major talk traditions have developed around news, entertainment, and a variety of social encounters that have been reframed and adapted for television. For example, talk is featured on game shows, dating or relationship shows, simulated legal encounters (People’s Court) or shows that are essentially elaborate versions of practical jokes (Candid Camera). All of these shows feature talk but are seldom referred to as “talk shows.”

A “talk show,” on the other hand, is as a show that is quite clearly and self-consciously built around its talk. To remain on the air a talk show must adhere to strict time and money constraints, allowing time, for instance, for the ad-
vertising spots that must appear throughout the show. The talk show must begin and end within these rigid time limits and, playing to an audience of millions, be sensitive to topics that will interest that mass audience. For its business managers the television talk show is one product among many and they are usually not amenable to anything that will interfere with profits and ratings. This kind of show is almost always anchored by a host or team of hosts.

**Host/Forms**

Talk shows are often identified by the host's name in the title, an indication of the importance of the host in the history of the television talk show. Indeed, we might usefully combine the two words and talk about host/forms.

A good example of the importance of the host to the form a talk show takes would be *The Tonight Show*. *The Tonight Show* premiered on NBC in 1954 with Steve Allen as its first host. While it maintained a distinctive format and style throughout its first four decades on the air, *The Tonight Show* changed significantly with each successive host. Steve Allen, Ernie Kovacs, Jack Paar, Johnny Carson, and Jay Leno each took *The Tonight Show* in a significant new direction. Each of these hosts imprinted the show with distinctive personalities and management styles.

Though many talk shows run for only weeks or months before being taken off the air, once established, talk shows and talk show hosts tend to have long runs. The average number of years on television for the thirty-five major talk show hosts listed at the end of this essay was eighteen years. Successful talk show hosts like Mike Wallace, Johnny Carson, and Barbara Walters bridge generations of viewers. The longevity of these "superstars" increases their impact on the forms and formats of television talk with which they are associated.

Television talk shows originally emerged out of two central traditions: news and entertainment. Over time hybrid forms developed that mixed news, public affairs, and entertainment. These hybrid forms occupy a middle ground position between news and entertainment, though their hosts (Phil Donahue, Oprah Winfrey, and Geraldo Rivera, for example) often got their training in journalism. Approximately a third of the major talk show hosts listed at the end of the essay came out of news. The other two-thirds came from entertainment (comedy in particular).

Within the journalistic tradition, the names Edward R. Murrow, Mike Wallace, Ted Koppel and Bill Moyers stand out. News talk hosts like Murrow, Koppel, and Moyers do not have bands, sidekicks, or a studio audience. Their roles as talk show hosts are extensions of their roles as reporters and news commentators. Their shows appear in evening when more adult and older aged viewers are watching. The morning host teams that mix "happy talk" and information
also generally come from the news background. This format was pioneered by NBC’s Sylvester “Pat” Weaver and host Dave Garroway with the *Today* show in the early 1950s. Hosts who started out on early morning news talk shows and went on to anchor the evening news or primetime interview shows include: Walter Cronkite, John Chancellor, Barbara Walters, Tom Brokaw, and Jane Pauley. Each developed a distinctive style within the more conversational format of his morning show.

Coming from a journalism background but engaging in a wider arena of cultural topics were hosts like Phil Donahue, Oprah Winfrey, and Geraldo Rivera. Mixing news, entertainment, and public affairs, Phil Donahue established “talk television,” an extension of the “hot topic” live radio call-in shows of the 1960s. Donahue himself ran a radio show in Dayton, Ohio, before premiering his daytime television talk show. Donahue’s Dayton show, later syndicated nationally, featured audience members talking about the social issues that affected their lives.

Within the field of entertainment/variety talk, it was the late-night talk show that assumed special importance. Late-night talk picked up steam when it garnered national attention during the talk show “wars” of the late 1960’s and early 1970’s. During this time Johnny Carson defended his ratings throne on *The Tonight Show* against challengers Joey Bishop, David Frost, Dick Cavett and Merv Griffin. Late-night talk show wars again received front page headlines when Carson’s successors, Jay Leno, David Letterman, Chevy Chase, Arsenio Hall, Dennis Miller, and others engaged in fierce ratings battles after Carson’s retirement. Within the United States these talk show wars assumed epic proportions in the press, and the impact that late night entertainment talk show hosts had over their audiences seemed, at times, to assume that of political leaders or leaders of state. In an age in which political theorists had become increasingly pessimistic about the possibilities of democracy within the public sphere, late-night talk show hosts became sanctioned court jesters who appeared free to mock and question basic American values and political ideas through humor. Throughout the 1960s, 1970s and 1980s Johnny Carson’s monologue on the *Tonight show* was considered a litmus test of public opinion, a form of commentary on the news. Jay Leno’s and David Letterman’s comic commentary continued the tradition.

The ratings battle between Leno and Letterman in the early 1990s echoed the earlier battles between Carson, Dick Cavett, and Griffin. But it was not just comic ability that was demanded of the late night hosts. They had to possess a lively, quick-paced interview technique, a persistent curiosity arising directly from their comic world views, lively conversational skills, and an ability to listen to and elicit information from a wide range of show business and “civilian” guests. It was no wonder that a relatively small number of these hosts survived more than a few years on the air to become stars. Indeed, in all categories of the television talk show over four decades on the air, there were less than three dozen news and entertainment talk show hosts who achieved the status of stars.

While entertainment/variety talk dominated late night television, and the mixed public affairs/entertainment audience participation talk shows with hosts like Phil Donahue and Oprah Winfrey increasingly came to fill daytime hours, prime time remained almost exclusively devoted to drama.

### Talk Formats

While talk show hosts represent a potpourri of styles and approaches, the number of talk show formats is actually quite limited. For example, a general interest hard news or public affairs show can be built around an expert panel (*Washington Week in Review*), a panel and news figure (*Meet the Press*), a magazine format for a single topic (*Nightline*), a magazine format that deals with multiple topics (60 Minutes), or a one-on-one host/guest interview (*Bill Moyers’ World of Ideas*). These are the standard formats for the discussion of hard news topics. Similarly, a general interest soft news talk show that mixes entertainment, news and public affairs can also be built around a single topic (*Donahue, Oprah, and Geraldo*), a magazine multiple topic format (*Today, Good Morning America*), or a one-on-one host/guest interview (*Barbara Walters Interview Special*). There are also special interest news/information formats that focus on such subjects as economics (*Wall Street Week*), sports (*Sports Club*), homemaking/fashion (*Ern Westmore Show*), personal psychology (*Dr. Ruth*), home repair (*This Old House*), literature (*Author Meets the Critic*), and cooking (*Julia Child*).

Entertainment talk shows are represented by a similarly limited number of formats. By far the most prevalent is the informal celebrity guest/host talk show, which takes on different characteristics depending upon what part of the day it is broadcast. The late night entertainment talk show, with the publicity it received through the “talk show wars,” grew rapidly in popularity among viewers during its first four decades on the air. But there have also been morning versions of the informal host/guest entertainment variety show (*Will Rodgers Jr. Show*), daytime versions (*The Robert Q. Lewis Show*), and special topic versions (*American Bandstand*). Some entertainment talk shows have featured comedy through satirical takes on talk shows (*Fernwood Tonight, The Larry Sanders Show*), monologues (*The Henry Morgan Show*), or comedy dialogue (*Dave and Charley*). Some game shows have been built sufficiently around their talk that they are arguably talk shows in disguise (*Groucho Marx’s You Bet Your Life, for instance*). There are also a whole range of shows that are not conventionally known as “talk shows” but feature “fresh” talk and are built primarily around that talk. These shows center on social encounters or events adapted to television: a religious service (*Life is Worth Living*), an academic seminar (*Seminar*), a talent contest (*Talent Scouts*), a practical joke (*Candid Camera*), mating rituals (*The Dating Game*), a forensic event (*People’s Court*), or a mixed social event (*House Party*). The line between “television talk” and
what formally constitutes a talk show is often not easy to draw and shifts over time as new forms of television talk emerge.

How To Read a Television Talk Show

There are many approaches to understanding a television talk show. It may be viewed as a literary narrative, for instance, or as a social text. As literary texts, talk shows contain characters, settings, and even a loosely defined plot structure which re-enacts itself each evening in the talk rituals that take place in front of the camera. These narratives center on the host as the central recurring character who frames and organizes the talk. Literary analysis of talk shows is relatively rare, but Michael Arlen’s essay on the talk show in The Camera Age, or Kenneth Tynan’s profile of Johnny Carson in The New Yorker, are superb examples of this approach.

Talk shows can also be seen as social texts. Talk shows are indeed forums in which society tests out and comes to terms with the topics, issues and themes that define its basic values, what it means to be a “citizen,” a participating member of that society. The “talk television” shows of Phil Donahue or Oprah Winfrey become microcosms of society as cutting-edge social and cultural issues are debated and discussed. By the early 1990s political and social analysts began to pay increasing attention to these forms of television and a number of articles were written about them.

Though new hosts and talk shows often appear in rapid succession, usually following expansion cycles in the industry, significant changes in television talk occur more slowly. These changes have traditionally come about at the hands of a relatively small number of influential talk show hosts and programmers and have occurred within distinct periods of television history.

Cycles of Talk: The History of the Television Talk Show

The term “talk show” was a relatively late invention, coming into use in the mid-1960s, but shows based on various forms of spontaneous talk were a staple of broadcasting from its earliest days. Radio talk shows of one kind or another made up 24% of all radio programming from 1927 to 1956, with general variety talk, audience participation, human interest, and panel shows comprising as much as 40-60% of the daytime schedule. Network television from 1949 to 1973 filled over half its daytime program hours with talk programming, devoting 15 to 20% of its evening schedule to talk shows of one kind or another. As the networks went into decline, their viewership dropping from 90% to 65% of the audience between the 1980s and the 1990s, talk shows were one form of programming that continued to expand on the networks and in syndication. By the summer of 1993 the television page of USA Today listed seventeen talk shows and local papers as many as twenty-seven. In all, from 1948 to 1993 over two hundred talk shows appeared on the air. These shows can be broken down into four cycles of television talk show history corresponding to four major periods of television history itself.

The first cycle took place from 1948 to 1962 and featured such hosts as Arthur Godfrey, Dave Garroway, Edward R. Murrow, Arlene Francis, and Jack Paar. These hosts had extensive radio experience before coming to television and they were the founders of television talk. During this time the talk show’s basic forms—coming largely out of previous radio and stage traditions—took shape.

The second cycle covers the period from 1962 to 1972 when the networks took over from sponsors and advertising agencies as the dominant forces in talk programming. A small but vigorous syndicated talk industry grew during this period as well. In the 1960s and early 1970s three figures established themselves on the networks as talk hosts with staying power: Johnny Carson, Barbara Walters, and Mike Wallace. Each was associated with a program that became an established profit center for their network and each used that position to negotiate the sustained status with the network that propelled them into the 1970s and 1980s as a star of television talk.

The third cycle of television talk lasted from 1970 to 1980. During this decade challenges to network domination arose from a number of quarters. While the networks themselves were initiating few new talk shows by 1969, syndicated talk programming exploded. Twenty new talk shows went on the air in 1969 (up to then the average number of new shows rarely exceeded five). It was a boom period for television talk—and the time of the first nationally publicized “talk show wars.” New technologies of production (cheaper television studios and production costs), new methods of distribution (satellite transmission and cable), and key regulatory decisions by the FCC made nationally syndicated talk increasingly profitable and attractive to investors.

Talk show hosts like Phil Donahue took advantage of the situation. Expanding from 40 markets in 1974 to a national audience of 167 markets in 1979, Donahue became the nation’s number one syndicated talk show host by the late 1970s. Other new talk show hosts entered the field as well. Bill Moyers’ Journal went on the Public Broadcasting Service (PBS) in 1970, and William Buckley’s Firing Line, which had appeared previously in syndication, went on PBS a year later. Both Moyers and Buckley, representing liberal and conservative viewpoints respectively, were to remain significant figures on public broadcasting for the next two decades. During this time independent stations and station groups, first-run syndication, cable and VCRs began to weaken the networks’ once invincible hold over national audiences.

The fourth cycle of television talk took place in the period from 1980 to 1992, a period that has been commonly referred to as the “post-network” era. Donahue’s success in syndication was emulated by others, most notably Oprah Winfrey, whose Donahue-style audience participation show went into national syndication in 1986. Winfrey set a new record for syndication earnings, grossing over a hundred
million dollars a year from the start of her syndication. She became, financially, the most successful talk show host on television.

By the early 1980s the networks were vigorously fighting back. *Late Night with David Letterman* and Ted Koppel's *Nightline* were two network attempts to win back audiences. Both shows gained steady ratings over time and established Koppel and Letterman as stars of television talk.

Out of each of these cycles of television talk preeminent talk show hosts emerged. Following the careers of these hosts allows us to see how talk shows are built from within by strong personalities and effective production teams, and shaped from without by powerful economic, technological, and cultural forces.

**Paradigm Shifts in Late Night Entertainment: Carson to Letterman**

Johnny Carson, for thirty years the “King of Late Night,” and his successor, David Letterman, were in many ways alike. Their rise to fame could be described by the same basic story. A young man from America’s heartland comes to the city, making his way through its absurdities and frustrations with feckless humor. This exemplary middle American is “square” and at the same time sophisticated, innocent, though ironic and irreverent. Straddling the worlds of common sense and show business, the young man becomes a national jester—and is so annotated by the press.

The “type” Johnny Carson and David Letterman represent can be traced to earlier archetypes: the “Yankee” character in early American theater and the “Toby” character of nineteenth century tent repertory. Carson brought his version of this character to television at the end of the Eisenhower and beginning of the Kennedy era, poking fun at American consumerism and politics in the late 1950s and 1960s.

Letterman brought his own version of this sharp-eyed American character to the television screen two decades later at the beginning of the Reagan era. By this time the “youth” revolts in the 1960s and 1970s were already on the wane, and Letterman replaced the politics of confrontation represented by the satire of such shows as *Saturday Night Live* and *SCTV* with a politics of accommodation, removal, and irony. His ironic stance was increasingly acknowledged as capturing the “voice” of his generation and, whether as cause or effect, Letterman became a generational symbol.

The shift from Carson to Letterman represented not only a cultural change but a new way of looking at television as a medium. Carson’s camera was rooted in the neutral gaze of the prosenium arch tradition; Letterman’s camera roamed wildly and flamboyantly through the studio. Carson acknowledged the camera with sly asides; Letterman’s constant, neurotic intimacy with the camera, characterized by his habit of moving right up to the lens and speaking directly into it, represented a new level of self-consciousness about the medium. He extended the “self-referentiality” that Carson himself had promoted over the years on his talk show.

Indeed, Letterman represented a movement from what has been called a transparent form of television (the viewer taking for granted and looking through the forms of television: camera, lighting, switching, etc.) to an opaque form in which the technology and practices of the medium itself become the focus of the show. Letterman changed late night talk forever with his post-modern irreverence and mocking play with the forms of television talk.

**Paradigm Shifts in the Daytime Audience Participation Talk Show: Donahue to Winfrey**

When Oprah Winfrey rose to national syndication success in 1986 by challenging Phil Donahue in major markets around the country and winning ratings victories in many of these markets, she did not change the format of the audience participation talk show. That remained essentially as Donahue had established it twenty years before. What changed was the cultural dynamics of this kind of show and that in turn was a direct reflection of the person who hosted it.

The ratings battle that ensued in 1986 was between a black woman raised by a religious grandmother and strict father within the fold of a black church in the South against a white, male, liberal, Catholic Midwesterner who had gone to Notre Dame, and been permanently influenced by the women’s movement. Just as Jackie Robinson had broken baseball’s color barrier four decades earlier, Oprah Winfrey broke the color line for national television talk show hosts in 1986. She became one of the great “Horatio Alger” rags-to-riches story of the 1980s (by the early 1990s *People Weekly* was proclaiming her “the richest woman in show business,” with an estimated worth of $200 million), and as Arsenio Hall and Bob Costas ended their six and seven year runs on television in the early 1990s, it became clear that Oprah Winfrey had staying power. She remained one of the few prominent talk show hosts of the 1980s to survive within the cluttered talk show landscape of mid–1990s.

Several factors contributed to this success. For one thing, Winfrey had a smart management team and a full-press national marketing campaign to catapult her into competition with Donahue. The national syndication deal had been worked out by Winfrey’ representative, attorney-management Jeffrey Jacobs, and thanks to King World’s management, her marketing plan was a classic one. Executives at King World felt the media would pounce on “a war with Donahue” so they created one. The first step was to send tapes of Oprah’s shows to “focus groups” in several localities to see how they responded. The results were positive. The next step was to show tapes to selected station groups—small network alliances of a half-dozen or more stations under a single owner. These groups would be offered exclusive broadcast rights. As the reactions began to come in, King World adjusted its tactics. Rather than making blanket offers, they decided to open separate negotiations in each city and market. The gamble paid off. Winfrey’s track record
proved her a “hot enough commodity” to win better deals through individual station negotiation.

To launch Winfrey on the air King World kicked off a major advertising campaign. Media publications trumpeted Oprah’s ratings victories over Donahue in Baltimore and Chicago. The “Donahue-buster” strategy was tempered by Winfrey herself, who worked hard not to appear too arrogant or conceited. When asked about head-on competition with Donahue she replied that in a majority of markets she did not compete with him directly and that while Donahue would certainly remain “the king,” she just wanted to be “a part of the monarchy.” By the time The Oprah Winfrey Show went national in September 1986 it had been signed by over 180 stations—less than Donahue’s 200-plus but approaching that number.

As well as refined marketing and advertising techniques, cultural issues also featured prominently in Winfrey’s campaign. Winfrey’s role as talk show host was inseparable from her identity, as an African American woman. Her African American heritage and roots surfaced frequently in press accounts. One critic described her in a 1986 Spy magazine article as “capaciously built, black, and extremely noisy.” These and other comments on her “black” style were not lost on Winfrey. She confronted the issue of race constantly and was very conscious of her image as an African American role model.

When a USA Today reporter queried Winfrey bluntly about the issue of race in August of 1986, asking her “as someone who is not pencil-thin, white, nor blond,” how she was “transcending barriers that have hindered many in television,” Winfrey replied as follows:

I’ve been able to do it because my race and gender have never been an issue for me. I’ve been blessed in knowing who I am, and I am a part of a great legacy. I’ve crossed over on the backs of Sojourner Truth, and Harriet Tubman, and Fannie Lou Hamer, and Madam C.J. Walker. Because of them I can now soar. Because of them I can now live the dream....

Winfrey’s remarks represent the “double-voiced” identity of many successful African American public figures. Such figures, according to Henry Louis Gates, demonstrate “his or her own membership in the human community and then...resistance to that community.” In the mid-1980s, then, the image of Oprah Winfrey as national talk show host played against both white and black systems of values and aesthetics. It was her vitality as a double-sign, not simply her role as an “Horatio Alger” figure, that made her compelling to a national audience in the United States.

Hosts like Letterman and Winfrey played multiple roles. They were simultaneously star performers, managing editors, entrepreneurs, cultural symbols, and setters of social trends. Of all the star performers who dot the landscape of television, the talk show host might have the most direct claim to the film director’s status as auteur. Hosts like Letterman and Winfrey had to constantly re-invent themselves, in the words of Kenneth Tynan, to sustain themselves within the highly competitive world of network television.

Conclusion

The talk show, like the daily newspaper, is often considered a disposable form. The first ten years of Johnny Carson’s Tonight shows, for example, were erased by NBC without any thought of their future use. Scholars have similarly neglected talk shows. News and drama offered critics from the arts, humanities, and social sciences at least a familiar place to begin their studies. Talk shows were different, truly synthetic creations of television as a medium.

Nonetheless, talk shows have become increasingly important on television and their hosts increasingly influential. They speak to cultural ideas and ideals as forcefully as politicians or educators. National talk show hosts become surrogates for the citizen. Interrogators on the news or clown princes and jesters on entertainment talk shows, major television hosts have a license to question and mock—as long as they play within the rules. An investigation of the television talk show must, finally, delineate and examine those rules.

The first governing principle of the television talk show is that everything that occurs on the show is framed by the host who characteristically has a high degree of control over both the show and the production team. From a production point of view, the host is the managing editor; from a marketing point of view, the host is the label that sells the product; from an power and organizational point of view, the host’s star value is the fulcrum of power in contract negotiations with advertisers, network executives, and syndicators. Without a “brand-name” host, a show may continue but it will not be the same.

A second principle of television talk show is that it is experienced in the present tense. This is true whether the show is live or taped “as-if-live” in front of a studio audience. Live, taped, or shown in “reruns,” talk shows are conducted, and viewers participate in them, as if host, guest, and viewer occupy the same moment.

As social texts, television talk shows are highly sensitive to the topics of their social and cultural moment. These topics may concern passing fashions or connect to deeper preoccupations. References to the O.J. Simpson case on television talk shows in the mid-1990s, for example, reflected a preoccupation in the United States with domestic violence and issues of gender, race, and class. Talk shows are, in this sense, social histories of their times.

While it is host-centered, occurring in a real or imagined present tense, sensitive to the historical moment, and based on a form of public/private intimacy, the television talk show is also a commodity. Talk shows have been traditionally cheap to produce. In 1992 a talk show cost less than $100,000 compared to up to a million dollars or more for a prime time drama. By the early 1990s developments in video technology made talk shows even more economical to produce and touched off a new wave of talk shows on the air. Still, the rule of the marketplace prevailed. A joke on Johnny
Carson’s final show that contained 75 words and ran 30 seconds was worth approximately $150,000—the cost to advertisers of a 30-second “spot” on that show. Each word of the joke cost approximately $2000. Though the rates of Carson’s last show were particularly high, commercial time on television is always expensive, and an industry of network and station “reps,” time buyers and sellers work constantly to negotiate and manage the cost of talk commodities on the television market. If a talk show makes money over time, its contract will be renewed. If it does not, no matter how valuable or critically acclaimed it may be, it will be pulled from the air. A commodity so valuable must be carefully managed and planned. It must fit the commercial imperatives and time limits of for-profit television. Though it can be entertaining, even “outrageous,” it must never seriously alienate advertisers or viewers.

As we can see from the examples above, talk shows are shaped by many hands and guided by a clear set of principles. These rules are so well known that hosts, guests, and viewers rarely stop to think about them. What appears to be one of television’s most unfettered and spontaneous forms turns out to be, on closer investigation, one of its most complex and artful creations.

TARSES, JAY
U.S. Writer/Producer

Jay Tarses, a self-proclaimed outsider from the mainstream Hollywood television industry, achieved a reputation in the 1970s and 1980s as a “maverick” writer-producer—a maverick generally is described as brilliant, bold, outspoken, outrageous, and innovative. Tarses has been critically praised for introducing a bold new form of half-hour comedy series, often called character comedy or “dramedy,” which achieved a radical stylistic break from the traditional sitcom formula. Tarses has had an ambivalent relationship with the three major networks, who often criti-
criticized—and frequently canceled—his shows for being too dark, inaccessible, and not "funny" enough for traditional sitcom audience expectations.

Beginning as a writer and actor with a Pittsburgh theater company, Tarses reportedly worked as a New York City truck driver for the Candid Camera series before beginning a career in advertising. In the late 1960s, he teamed with Tom Patchett as a stand-up comedy duo performing dry, semi-satirical material on the coffeehouse circuit. The Patchett-Tarses team turned to television writing, gaining credits on musical variety shows and assorted sitcoms prior to working on the writing staff of The Carol Burnett Show, for which they won an Emmy in 1972. The two went on to become collaborative executive producers for MTM Enterprises, where they achieved their first major impact on television history—as writers-producers for the original Bob Newhart Show (CBS 1972–78), in which Newhart played an introverted psychologist, surrounded by a circle of interesting and quirky eccentric characters.

Building upon their success with Newhart, they developed The Tony Randall Show (ABC/CBS 1976–78), another MTM series, starring Randall as a widowed Philadelphia judge surrounded by his children, housekeeper, secretary, friends and legal associates. Apparently this sitcom was the site of great tension between the producers and the networks over the nature and style of the type of innovative "character comedy" that Tarses and Patchett were trying to introduce. During this period, they also produced several other short-lived and often-controversial series, including We've Got Each Other (CBS 1977–78), a domestic sitcom about the personal and professional lives of a professional couple, their colleagues and neighbors, and Mary (CBS 1978), a comedy/variety hour attempting to revive the televisual charisma of Mary Tyler Moore. However, Mary was a ratings disaster of such magnitude that it was canceled after three episodes, and its embarrassing failure "drummed us out of the TV business for a while," according to Tarses. During a hiatus from television during this time, the Patchett-Tarses team turned to writing screenplays, including two Muppet movies. The writing/producing team returned to television with the poorly-received Open All Night (ABC 1981–82), a sitcom about a convenience store with an ensemble of eccentric customers, and the notable Buffalo Bill (NBC 1983–84), about an unlikable, egomaniacal talk-show host, Bill Bittinger (played by Dabney Coleman), and his ensemble of television station coworkers.

During this period, Tarses split from Patchett and developed The Faculty (1985, canceled after one episode on ABC), about embattled high-school teachers, characterized by its black humor and mock documentary interviews. The ABC network reportedly asked Tarses to reshoot the pilot because they felt it was too dark and they wanted more emphasis on the students rather than the faculty; when he refused, the series was dropped.

Tarses achieved a critical comeback as producer and occasional writer/director of the controversial "dramedy" The Days and Nights of Molly Dodd (NBC/Lifetime 1987–91). Originally produced for NBC, this series starred Blair Brown as a divorced woman living alone on New York City's Upper West Side, surrounded by an ensemble of quirky and likable characters representing her family, friends and lovers. After it was canceled by NBC, the series was picked up by the Lifetime cable network, which continued production of the series, reshaped to be aimed strategically at a female audience of a certain age, class and income level. The same year that Molly Dodd debuted, Tarses also introduced (on another network) The Slap Maxwell Story (ABC 1987–88), another critically-acclaimed "dramedy" about the professional and personal tribulations of an arrogant, provocative sports writer, played by Dabney Coleman.

In addition to writing and producing, Tarses has occasionally played cameo roles in his series—as a neighborhood cop in Open All Night and a garbage collector in Molly Dodd—as well as playing a writer for a cartoon studio in a 1984 MTM sitcom, The Duck Factory.

The dramatic/character comedies written and produced by Tarses have operated in what has been considered "uncharted territory" in the television industry. In terms of production style, they have generally not been shot as traditional sitcoms (four cameras, on videotape, in a studio before a live audience, with an added laugh track). Tarses has generally worked independent of the studio system, shooting in a cinematic style in warehouses or on location, and using a single 35mm film camera. He has characterized his work as low-budget, preferring to put his money into writing and actors rather than sets. Tarses' characters are distinguished as not always sympathetic or charismatic (an example is Bill Bittinger on Buffalo Bill). His dialogue is markedly low-key and "quirky," with a humor best described as biting and often darkly satirical, sometimes surreal, and written in a subtle comedic rhythm that eschews punch lines. Unlike traditional episodic sitcoms which attempt to solve problems in one episode, the narrative elements of Tarses' dramedies are serial, continuing from episode to episode.

Perhaps Tarses' two greatest contributions to the television industry have been his creativity in constantly pushing the limits of television style—both cinematically and narratively, and his willingness (often eagerness) to go to battle with the networks to champion the broadcasting of innovative and non-formulaic forms of narrative television at the expense of audience ratings. Tarses has increasingly refused to play the Hollywood programming "game", yet has produced what have been some of the freshest and most daring television series of the 1970s and 1980s.

TARTIKOFF, BRANDON
U.S. Media Executive/Producer

An independent producer and former president of Paramount Pictures, Brandon Tartikoff served from 1980 to 1991 as the youngest and most accomplished president of NBC's Entertainment division. During his tenure at NBC, Tartikoff developed a blockbuster Thursday night lineup which helped the ailing network rank number-one in primetime for the first time in 30 years.

Tartikoff, an admitted "child of television," confesses that he once dreamed of being the next Ed Sullivan, but his television career began at the local level. After undergraduate work in broadcasting at Yale, Tartikoff broke into the business at WTNH in New Haven, Connecticut. Driven to make it to the big leagues, he soon landed a job at the ABC owned-and-operated WLS in Chicago, the third largest market in the country. He worked under the tutelage of Lew Erlicht, his eventual rival.

In the mid-1970s, ABC President Fred Silverman was impressed by Tartikoff's high-camp promo for a series of "monkey-movies" dubbed "Gorilla My Dreams." Silverman recruited Tartikoff for manager of dramatic development at ABC. Three years later, the up-and-coming 30-year-old "boy wonder" of television was snatched by third-place NBC, where Silverman had become president in 1978. Tartikoff was named head of the entertainment division, where he stayed for the next 12 years, the longest any individual has held that position.

NBC's rating's breakthrough came in 1984, when Tartikoff happened to catch Bill Cosby doing a monologue on The Tonight Show. Convinced Cosby's family-based banter would make for an excellent sitcom, Tartikoff recruited the comedian and producers Tom Werner and Marcy Carsey. The resulting Cosby Show not only helped resurrect the failing sitcom format, but became the building block for a
Thursday night schedule which included *Family Ties, Cheers*, and *Night Court*.

Tartikoff was at the helm for the development of MTM Entertainment Inc., series *Hill Street Blues*, which exploded in popularity in its second season after receiving critical acclaim and an armload of Emmy awards in its first. And he shepherded as well *An Early Frost*, the first made-for-television movie about AIDS. *Miami Vice* was also conceived under Tartikoff; according to executive producer Michael Mann, the head of entertainment presented him with a short memo which read: "MTV. Cops."

By 1991, when Tartikoff left NBC to head Paramount Pictures, the network had been ranked first in the ratings for six consecutive years. Tartikoff was replaced by Warren Littlefield. A series of organizational changes at Paramount and a near-fatal auto accident later led Tartikoff out of the studio arena and into the realm of independent production.

TAXI

U.S. Situation Comedy

*Taxi*’s television history is filled with contradictions. Produced by some of television comedy’s most well-regarded talent, the show was canceled by two different networks. Despite winning fourteen Emmy Awards in only five seasons, the program’s ratings were rock-bottom for its final seasons. Although it thrives in syndication and is still well-
loved by many viewers, *Taxi* will be best remembered as the ancestral bridge between two of the most successful sit-coms of all time: *The Mary Tyler Moore Show* and *Cheers*.

In the mid-1970s, MTM Productions had achieved huge success with both popularity and critical appraisal. So it was an unexpected move when four of the company's finest writers and producers, James L. Brooks, Stan Daniels, David Davis, and Ed Weinberger, jumped off the stable ship of MTM in 1978 to form their own production company, John Charles Walters Company. To launch their new ven-
tured, they looked back to an idea that Brooks and Davis had previously considered with MTM: the daily life of a New York City taxi company. From MTM head Grant Tinker they purchased the rights to the newspaper article that had initiated the concept and began producing this new show at Paramount for ABC. They brought a few other MTM veterans along for the ride, including director James Burrows and writer/producers Glen and Les Charles.

Although Taxi certainly bore many of the trademark signs of “quality television” as exemplified by MTM, other changes in style and focus distinguished this from an MTM product. After working on the middle-class female-centered worlds of The Mary Tyler Moore Show, Rhoda, and Phyllis for years, the group at John Charles Walters wanted to create a program focusing on blue-collar male experience. MTM programs all had clearly defined settings, but Taxi’s creators wanted a show that was firmly rooted in a city’s identity—Taxi’s situations and mood were distinctly New York. Despite MTM Productions innovations in creating ensemble character comedy, there was always one central star around which the ensemble revolved. In Taxi, Judd Hirsch’s Alex Rieger was a main character, but his importance seemed secondary to the centrality of the ensemble and the Sunshine Cab Company itself. While The Mary Tyler Moore Show proudly proclaimed that “you’re going to make it on your own,” the destitute drivers of Taxi were doomed to perpetual failure; the closest any of them came to happiness was Rieger’s content acceptance of his lot in life—to be a cabbie.

Taxi debuted on 12 September 1978, amidst a strong ABC Tuesday night line-up. It followed Three's Company, a wildly-successful example of the type of show MTM “quality” sit-coms reacted against. Taxi used this strong position to end the season ninth in the ratings and garner its first of three straight Emmys for Outstanding Comedy Series. The show’s success was due to its excellent writing. Burrows’s award-winning directing using his innovative four-camera technique, and its largely unknown but talented cast. Danny DeVito’s Louie DePalma soon became one of the most despised men on television—possibly the most unredeemable and worthless louse of a character ever to reside on the small screen. Andy Kaufman’s foreign mechanic Latka Gravas provided over-the-top comedy within an ensemble emphasizing subtle character humor. But Kaufman sometimes also brought a demonic edge to the character, an echo of his infamous appearances on Saturday Night Live as a macho wrestler of women and Mighty Mouse lip-syncher. In the second season Christopher Lloyd’s Reverend Jim Ignatowski was added to the group as television’s first drugged-out ’60s burn-out character. But Lloyd’s Emmy-winning performance created in Jim more than just a storehouse of fried brain cells; he established a deep, complex humanity that moved far beyond mere caricature. The program launched successful movie careers for DeVito and Lloyd, as well as the fairly-notable television careers of Tony Danza and Marilu Henner; Kaufman’s controversial career would certainly have continued had he not died of cancer in 1984.

In its third season ABC moved Taxi from beneath Three’s Company’s protective wing to a more competitive Wednesday night slot; the ratings plummeted and Taxi finished the next two years in 53rd place. ABC canceled the show in early 1982 as part of a larger network push away from “quality” and toward the Aaron Spelling-produced popular fare of Dynasty and The Love Boat. HBO bid for the show, looking for it to become the first ongoing sitcom for the pay channel, but lost out to NBC, which scheduled the series for the 1982–83 season. Ironically, this reunited the show’s executive producers with their former boss Tinker, who had taken over NBC. Tinker’s reign at NBC was focused, not surprisingly, on “quality” programming which he hoped would attract viewers to the perennially last-place network. Taxi was partnered with a very compatible show on Thursday night—Cheers, created by Taxi veterans Charles, Burrows, and Charles. Although this line-up featured some of the great programs in television history—the comedies were sandwiched by dramas Fame and Hill Street Blues—the ratings were dreadful and Taxi finished the season in 73rd place. NBC was willing to stick by Cheers for another chance, but felt Taxi had run its course and canceled it at the end of the season. Had Taxi been given another year or two, it would have been part of one of the most successful nights on television, featuring The Cosby Show (co-created by Taxi creator Weinberget), Family Ties, Hill Street Blues, L.A. Law, and eventual powerhouse Cheers.

Taxi lives on in syndication, but its most significant place in television history is as the middle generation between The Mary Tyler Moore Show and Cheers. It served as a transition between the star-driven middle-class character comedy of MTM programs and the location-centered ensemble comedy inhabited by the losers of Cheers and Taxi. Considered one of the great sit-coms of its era, Taxi stands as a prime example of the constant tension in television programming between standards of “quality” and reliance on high ratings to determine success.

TEASER

A teaser is a television strategy for attracting the
audience's attention and holding it over a span of time.
Typically a teaser consists of auditory or visual information,
or both, providing the viewer a glimpse of what he or she
can expect as programming continues. Teasers are used in
several types of programming.

In news broadcasts, for example, a newscaster may
address viewers in a fashion such as, "The state legislature
gets ready for a showdown on taxes. Details when we return." The audience is being teased with information, and
the purpose is to keep a viewer tuned to the station during
a commercial. Similarly, teasers can also be used to keep a
viewer tuned to a newscast. An anchor may begin a newscast
with a tease for an upcoming story, like the state legislature
story above, then shift the focus: "But first, we bring you our
top story...."

According to Cohler, there are two types of news
teasers. The first is best described as a headline, which
contains the essential information about a story. In sports
the headline may be, "Angels shut-out Pirates. Highlights
when we return." The second type of teaser is more vague
and leaves the reader wondering what exactly the news
is about to report, as in the "showdown on taxes" example
mentioned above.

For Yoakam and Cremer, there is little difference be-
tween "teasers" and "bumpers" since both are designed to
promote upcoming stories. Thus a simple "We'll return in
a moment" would qualify as a teaser as well as a bumper. So
would a short video clip of a dramatic moment or a humor-
ous exchange of words taken from the segment coming up
after some commercials. Thus anything designed to get the
attention of viewers and hold their attention through some
span of time may be referred to as a teaser.

This is clearly the case in other types of programming.
Daytime talk shows, for example, often open with provoca-
tive summaries of their content, then cut to commercials.
The teaser is designed to titillate the audience and entice it
into returning.

Teasers for dramatic programming are similar. Short
clips from the upcoming program can be used to highlight
the most powerful or humorous moments. Bits of tense
dialogue, jokes, tender moments can all be excerpted for use
as an immediate promotion of the program at hand.

A related programming strategy uses the pre-commer-
cial sequence to remind the audience of past events at the
same time it pulls them into the current program. These
summaries are often introduced with a voice-over announce-
ment: e.g. "Previously on Hill Street Blues." In many cases
(Dallas is a good example) the summary-teaser also serves as
a prologue, indicating which stories, from the ever-growing
collection of interrelated narratives, will be explored in the
upcoming episode.

In the age of the remote control device a number of
programs have abandoned teasers, plunging directly into
the dramatic action of the narrative, sometimes without
even an intervening commercial. Still, however, in some
cases it is a prologue or a teaser, selected from the most
powerful moments of previous and new material that is
presented to the fickle audience. This strategy, it is hoped,
prevents viewers from instantly changing the channel to
"surf" between programs.

TELCOS

Telephone companies (telcos) have always figured in the history of U.S. television. By the end of the 20th century they may attain the broadcast role they hoped for as long ago as the 1920s.

The earliest involvement of telephone companies in broadcasting dates to AT and T's interest in radio. Before World War I, AT and T was one among several companies actively experimenting with the hertzian waves with a view to controlling what seemed to be an imminent wireless communication era. AT and T's stake in the government-formed Radio Corporation of America (RCA) in the early 1920s seemed to guarantee the phone company a role in radio broadcasting, specifically with respect to developing the international market, selling transmitters, and providing anything that seemed to be telephony. Yet AT and T's definition of telephony broadened in that era: in 1922 it offered a special toll broadcasting service allowing people to use its "radio telephony" channels to send out their own programs—for a fee. At that time AT and T eschewed any interest in controlling content, although it did use its long distance lines to broadcast sports events, music, and certain other entertainment, avowing it desired only its rightful opportunity to transmit. Nevertheless, by 1924 the phone company had a regular radio programming schedule.

Its early control over broadcasting was broken up, however, by federal government (Federal Trade Commission) objections to the apparent growing monopoly power in radio. In 1926 a new structure was created to answer the monopoly charges, relegating the phone company to a role in transmission only while other companies involved in radio (General Electric, Westinghouse and RCA) would form the National Broadcasting Company and develop programming and an audience-oriented service.

AT and T, America's regulated, dominant national telephone carrier, operated in that capacity for several decades, conveying first radio and later television signals across the country, enabling the formation of national networks through its long distance links. The carriage fees it accumulated were enormous, and as the sanctioned, monopoly inter-state common carrier, AT and T had the business to itself, a monopoly role that was at times contested. In 1948, for example, the FCC debated procedures concerning inter-city video carriage. At that time the Commission espoused a rule reserving permanent microwave frequencies to common—not private—carriers. This rule thus sanctioned a de facto continued monopoly transmission role in television for AT and T. The company's first serious setbacks, however, did not occur until the mid-1970s.

In the 1970s regulatory liberalizations in two realms undermined AT and T's control of transmission services essential to television. First, communication satellites, an outgrowth of the U.S. space program, provided efficient and economical ways to transmit messages or signals over long distances. Although AT and T retained a major role for itself in international satellite communication through provisions in the 1962 Communication Satellite Act, the stage was set for other companies to enter into satellite services. Ultimately, this development would provide crucial alternatives to television's (and cable television's) continued reliance on AT and T for transmission. In particular, telephone companies were unable to control domestic satellite services, which became the preferred and cost-effective method for broadcast and cable television networks to deliver their signals, thus ending their dependence on AT and T for interconnection. The successful launch of HBO nationwide on RCA's Satcom satellite in 1975 bypassed AT and T and illustrated a future independent of the telcos. The Public Broadcasting Service moved to satellite distribution of its signal in 1978, followed by the major television networks' migration from AT and T to satellites in the mid-1980s.

Second, skirmishes between telcos and the young cable television industry prompted the Federal Communications Commission (FCC) and Congress to limit telcos' ability to own and operate cable television systems. The FCC ruled in 1970 that telcos could operate systems only in small, rural populations. In 1978, affirming that AT and T had abused its power in overcharging companies that wished to use its poles to establish cable television service, Congress enacted the Pole Attachment Act authorizing the FCC to "regulate the rates and conditions for pole attachments," and effectively removing the telcos' control over a key access and right-of-way issue and allowing cable television to expand under more favorable terms. Telephone company ability to enter into or otherwise control this new television medium clearly would be restrained. The cable television industry's insistence on this is in part reflected in a section of the 1984 Cable Communications Act that reiterated the 1970 telco-cable cross-ownership ban and explicitly forbade telephone companies from offering cable television services.

However, telephone companies' interest in video services never died. If the aforementioned two new communication technologies ultimately underscored telcos' limited hold on an expanding set of services, they can also be counted among the causes of a massive restructuring of the U.S. telephone system under the 1982 Modification of Final Judgment (MFJ), a federal court ruling that broke up AT and T's monopoly telephone service in the United States. The result of a long-standing inquiry into AT and T's vertical integration and possible abuse of power under antitrust laws, the MFJ separated competitive long-distance (interexchange) service from monopoly-provided local service. AT and T restructured, spinning off the "Baby Bells," regional companies restricted to the provision of local telephone service (local exchange companies). Both sets of companies, AT and T and other long-distance service providers (interexchange carriers), as well as the local service providers, again eyed the provision of video services as one among other competitive possibilities.
The MFJ put several restrictions on AT and T. The most notable was a seven-year restriction from 1984 (effective date of the MFJ), on entering into "electronic publishing." But in the late 1980s and 1990s AT and T, as well as several other telcos, quickly constructed a number of strategic liaisons with cable television, computer, software and even movie companies in order to position themselves for new video and multimedia services. Such liaisons built on the telephone companies’ long standing interest in new media and their abortive history of attempting to provide teletext or videotext services in conjunction with publishers.

In 1988, amid the deregulatory fever of the 1980s, the FCC recommended lifting the cable-telco cross-ownership ban, but the requisite Congressional action was not forthcoming. Nevertheless, continued restructuring proceeded, allowing the convergence of what had been conceived as quite separate video, voice and data industries. In 1992 the FCC issued its "Video Dialtone" order allowing telcos (such as the "Baby Bells" or other local exchange companies) to provide the technological platforms for video service to subscribers. Essentially this also allowed them to enter the video services business, albeit without permitting them to directly own programming. One year later, in response to separate suits brought by telcos, several district courts began lifting the cable-telco cross-ownership ban. The first such suit was brought in 1993 (Chesapeake and Potomac Telephone Co. of Virginia v. U.S., 830 F. Supp. 909) by Bell Atlantic, a telco which also announced that same year a proposed merger with the largest cable company in the United States, TCI, a deal which later collapsed. Additionally, in the mid-1990s several telcos announced plans to provide video services as cable companies (which would allow them to own programming) rather than as telephone companies operating a video dialtone platform.

With new emphasis on creating a national information infrastructure, the role of telephone companies in providing an array of new services, including television, seems certain. Deregulating telcos and allowing them to offer video services, alone or in conjunction with already-established providers, has set the stage for a new television service and an entirely new set of corporate powers.

TELEFILM CANADA

Canadian Television and Film Development Corporation

Telefilm Canada is a Crown Corporation of the federal government. Its mandate is to support the development and promotion of television programs and feature films by the Canadian private sector. Telefilm is neither a producer nor a distributor and it is not equipped with a production studio; instead, it acts primarily as a banker and deals principally with independent Canadian producers. To this end, Telefilm invests over $100 million annually through a variety of funds and programs that encompass production, distribution and marketing, scriptwriting, dubbing and subtitling, festivals and professional development. Telefilm Canada also administers the official co-production treaties that exist with more than twenty countries, including France, Great Britain, Germany, Australia and New Zealand.

Until 1984, Telefilm Canada was known as the Canadian Film Development Corporation (CFDC). The CFDC began operations in 1968 with a budget of $10 million and a mandate to foster and promote the development of a feature film industry in Canada through the provision of loans, grants and awards to Canadian producers and filmmakers. Unlike the National Film Board of Canada (NFB), or the Canadian Broadcasting Corporation, the CFDC was expected to become a self-financing agency, interested as much (if not more) in the profitability of the films it supported as in their contribution to Canada’s cultural life.

By 1971, the CFDC had exhausted its original budget and recouped barely $600,000, or roughly 9%, of its investments in 64 projects. In keeping with its commercial orientation, the CFDC contributed to a number of films that came to be referred to as "maple-syrup porn", movies like Love Is a Four Letter Word. At the same time, the CFDC invested in a number of films that have come to be regarded as early Canadian classics, films such as Goin' Down the Road.

The federal government approved a second allotment of $10 million in 1971 and for the next six years the CFDC
and industry representatives struggled to establish a clear set of corporate objectives. One option, which would have transformed the CFDC into something of an arts council for feature films, and brought it closer in line with the mandate of the NFB, was to rechannel its money into a system of grants that would provide for the production of a small number of Canadian films a year. The other option was to rechannel the CFDC’s priorities toward the production of feature films with strong box-office potential, in particular films that would be attractive to the Hollywood majors.

This second option became viable after changes in tax regulations were accompanied by a change in the CFDC’s financial practices. In 1974 the capital cost allowance for Canadian feature films was extended from 30% to 100%. In 1978, the CFDC shifted its focus from the provision of equity financing for low and medium-budgeted Canadian films, to the provision of bridge financing for projects that were designed to take advantage of the tax shelter. Both the number of productions and average budgets soared. Measured in terms of employment and total dollars spent, the tax-shelter boom was a success. But many of the films produced during this period were never distributed; many of the ones that did receive distribution were second-rate attempts at films that mimicked Hollywood’s standard fare (notable examples include Meatballs and Running). By 1980, there was growing criticism of the direction taken by the CFDC, particularly from French-Canadian producers and filmmakers who benefited far less than their English-Canadian counterparts from the CFDC’s shift in investment priorities. The tax-shelter boom came to a crashing halt in 1980.

The establishment of the Canadian Broadcast Program Development Fund in July 1983 dramatically shifted the CFDC’s priorities from feature films to television programming. To reflect this shift in investment priorities the CFDC was renamed Telefilm Canada in February 1984. The Broadcast Fund has four overall objectives: a) to stimulate production of high quality, culturally relevant Canadian television programs in targeted categories, i.e. drama, children’s, documentary and variety programming; b) to reach the broadest possible audience with those programmes through scheduling during prime time viewing hours; c) to stimulate the development of the independent production industry; d) to maintain an appropriate regional, linguistic and private/public broadcaster balance in the distribution of public funds. The fund had an initial budget of $254 million spread over five years. Since 1988, Telefilm has invested more than $60 million annually in television programming. On average its participation represents 33% of the total production budget.

The Broadcast Fund has been enormously successful in achieving its original objectives. Between 1986 and 1990, for example, the Fund helped finance close to $800 million in total production volume in 2,275 hours of original television programming, of which more than 1,000 hours consisted of dramatic programming exhibited during peak viewing hours. Some of these were Anne of Green Gables; the Degrassi series, E.N.G., Danger Bay, Love and War, Due South and The Boys of St. Vincent. In terms of audience reach, viewing of Canadian programs in peak time has increased substantially. The Broadcast Fund has also played a crucial role in providing independent Canadian producers with the leverage to expand into export markets.

As a banker, Telefilm Canada is still a failure. It recoups only a small percentage of its annual investments. As a cultural agency and a support structure to Canada’s independent producers, Telefilm has been remarkably successful, especially in terms of television programming. It is still the case that Canadians view far more foreign than domestic programming, but without Telefilm’s presence there would be virtually no production of Canadian dramatic programming. In many respects, Canadian television is a function of Telefilm Canada.

TELEMUNDO
U.S. Spanish-Language Network

Telemundo Group Inc. is the second largest Spanish-language television network in the United States. It reaches 86% of Hispanic households in 53 U.S. markets as well as over 19 countries in Latin America through its owned-and-operated stations, affiliates, and syndication.

Telemundo Group Inc. was formed in December 1986 by Saul Steinberg and Henry Silverman of Reliance Capital Group L.P., who were interested in moving into the Spanish-language market. They began by purchasing stations in Los Angeles, California, Miami, Florida, New York City, and Puerto Rico. In 1987, Telemundo began network broadcasting with Noticiero Telemundo, a world and national news program produced by Hispanic American Broadcasting Company in Miami. Later that year, Deportes Telemundo, a weekly two-hour round-up of sports highlights from around the world, premiered. Between 1988 and 1991, the network expanded both its station holdings, affiliates, and programming. Stations and affiliates in Houston, Dallas/Ft. Worth, McAllen/Brownsville, El Paso, Lubbock, and San Antonio, Texas; Albuquerque, New Mexico; Tucson and Phoenix, Arizona; and Yakima, Washington increased Telemundo's coverage to 78% of the Hispanic households in the United States. Meanwhile, U.S.-produced programming also expanded, including Noticiero Telemundo/CNN, a joint venture with CNN to produce a nightly national news program; Cocina Crízco, the first Spanish-language cooking show produced in the United States; Angelica Mi Vida, the first Spanish-language telenovela (soap opera) produced in this country, based on the lives of Hispanic Americans; Cara a Cara, a talk show starring Maria Laria; and Ocavrio Asi, a tabloid news program with sensational stories from the United States and Latin America. By 1991, Telemundo was producing 54% of its programming in the United States.

In 1992, Joaquin F. Blaya, a 22-year veteran of Spanish-language media and formerly president and chief executive officer of Univision Holdings, Inc., joined Telemundo as president and chief executive officer. Under his leadership, Telemundo continued its expansion. New programming targeting younger audiences and second-generation Hispanics, such as Rito Internacional and Padristino, was developed. In a joint venture among Telemundo, Univision, and Nielsen Media Research, Blaya also created the first nation-wide rating service focused on the Hispanic community's viewing habits. In another joint venture with Reuters and British Broadcasting Corporation World Television, in December 1994 he launched a 24-hour Spanish-language television news service called Telenoticias. By mid-1993, Telemundo filed for bankruptcy under Chapter 11 of the Bankruptcy Code. Through a subsequent financial restructuring, Apollo Advisors L.P. became the major shareholder in late 1994. In March 1995, corporate restructing began with the naming of Roland A. Hernandez as president and chief executive officer. A native of Los Angeles, Hernandez is the founder and owner of Interspan Communications, which established KFWD-TV, the Telemundo affiliate in Dallas/Ft. Worth, Texas, and a member of the board of directors of Telemundo Group Inc. One of his original moves was opening Telemundo's first West Coast production facility in Hollywood's famed Raleigh Studios in order to attract Spanish-speaking talent on both coasts so that Telemundo's programming would reflect the full cultural spectrum that is Hispanic America.

As of 1995, Telemundo Group Inc. consisted of six full-power owned-and-operated stations in Los Angeles, New York, Miami, San Francisco/San Jose, San Antonio, and Houston/Galveston. The company also operated low-power stations in five other markets, and one station in Puerto Rico. In addition, 18 full-power and 32 low-power stations were affiliated with Telemundo, and 614 cable systems carried Telemundo's signal. This represented a coverage of 53 markets and 86% of Hispanic households in the United States.

As of 1995, Telemundo produced 50% of its programming in the United States, at the network's production facilities in Hialeah, Florida, Los Angeles, California, and Puerto Rico. Programming consisted of telenovelas, movies, game shows, variety shows, sports programs, talk shows, and news programs. Movies and telenovelas represented the bulk of the imported programming. In April 1995, Telemundo added Dando y Dando to its game show line-up, along with El Gran Juego de la Oca. Also in 1995, La Hora Lunatica variety show was added to the noon hour. Telemundo capitalized on interest in sports with the weekend programming of Boxeo, Futbol Telemundo, and Marcador Final. Talk shows, Lo Mejor de Sevecc and El y Ella,
TELENOVELA

The telenovela is a form of melodramatic serialized fiction produced and aired in most Latin American countries. These programs have traditionally been compared to English-language soap operas and even though the two genres share some characteristics and similar roots, the telenovela in the last three decades has evolved into a genre with its own unique characteristics. For example, telenovelas in most Latin American countries are aired in prime-time six days a week, attract a broad audience across age and gender lines, and command the highest advertising rates. They last about six months and come to a climactic close.

Telenovelas generally vary from 180 to 200 episodes, but sometimes specific telenovelas might be extended for a longer period due to successful ratings. The first telenovelas produced in Latin America in the 1950s were shorter, lasting between 15 and 20 episodes and were shown a few times a week. As they became more popular and more technologically sophisticated, they were expanded, becoming the leading genre in the daily prime-time schedule.

Unlike U.S. soap operas that tend to rely on the family as a central unit of the narrative, Latin American telenovelas focus on the relation between a romantic couple as the main motivator for plot development. During the early phases of their evolution in Latin America, until the mid-1960s, most telenovelas relied on conventional melodramatic narratives in which the romantic couple confronted opposition to their staying together. As the genre progressed in different nations at different rhythms it became more attuned to local culture. The Peruvian telenovela Simplemente María, for example, a version of the Cinderella story, dealt with the problems of urban migration. The Brazilian telenovela, Beto Rockfeller, presented the story of an anti-hero who worked as a shoe shop employee and pretended to be a millionaire getting simultaneously involved with two women, one rich and one poor. This telenovela appears to have led to the most dramatic changes in that nation's genre. It became an immedi-
the lead and imposed these new trends upon the telenovela market. Indeed, Globo owes its international recognition and economic powerhouse status to the telenovela. In the 1970s, Globo invested heavily in the quality of its telenovelas, using external locations traditionally avoided because of production costs. And Globo's export success forced other producers in the region to implement changes in production values and modernize their narratives to remain competitive. Mexico, for example, after dominating the international market for several years, had to adapt its telenovelas according to the influences of the main competitors, especially Argentina, Brazil and Venezuela.

There are important national distinctions within the genre in the areas of topic selection, structure and production values and there are also clear distinctions between the telenovelas produced in the 1960s and the 1990s, in terms of content as well as in production values. As Patricia Aufderheide has pointed out, recent telenovelas in Brazil "dealt with bureaucratic corruption, single motherhood and the environment; class differences are foregrounded in Mexican novelas and Cuba's novelas are bitingly topical as well as ideologically correct." In Colombia, recent telenovelas have dealt with the social violence of viewers' daily lives, but melodramatic plots that avoid topical issues are becoming more popular. In Brazil the treatment of racism is surfacing in telenovelas after being considered a taboo subject for several years.

The roots of the Latin American telenovelas go back to the radio soap operas produced in the United States, but they were also influenced by the serialized novels published in the local press. The origins of the melodramatic serialized romance date back to the sentimental novel in 18th-

century England, as well as 19th-century French serialized novels, the “feuilletons.” In late 19th and early 20th centuries, several Latin American countries also published local writers’ novels in a serialized form. However the proliferation of radionovelas that would later provide personnel as well as expertise to telenovela producers started in Cuba in the late 1930s. According to Katz and Wedell, Colgate and Sydney Ross Company were responsible for the proliferation of radionovelas in pre-Castro Cuba. In the beginning stages of telenovelas in Latin America, in the 1950s, Cuba was an important exporter of the genre to the region, providing actors, producers and also screenplays. U.S. multinational corporations and advertising agencies were also instrumental in disseminating the new genre in the region. Groups such as U.S. Unilever were interested in expanding their market to housewives by promoting telenovelas which contained their own product tie-ins. Direct influence of the United States on the growth and development of telenovela in the region subsides after the mid-1960s, and the genre slowly evolved in different directions in different countries. In the 1950s and early 1960s, telenovelas were primarily adaptations of novels and other literary forms, and only a few Latin American scriptwriters constructed original narratives. By the late 1960s local markets started producing their own stories, bringing in local influences, and shaping the narratives to particular audiences.

Presently the leading telenovela producers in the region are Televisa, Venevision, and Globo, the leading networks in Mexico, Venezuela and Brazil respectively. These networks not only produce telenovelas for the local market but also export to other Latin American nations and to the rest of the world. Televisa, for instance, is the leading supplier of telenovelas to the Spanish-speaking market in the United States. By 1988, Brazil had exported telenovelas to more than 128 countries. The more recent trend among telenovela producers in the region is to engage in co-productions with other nations, to guarantee better access to the international market.

TELEROMAN

As a television genre, the weekly, prime-time teleroman can be defined as “A television program, fictitious in character with a realistic descriptive style which is comprised of a series of continuous episodes, diffused with fixed periodicity and characterized by a sequentiality which is either episodal, overlapping, or both” (author’s translation).

The genre is generally recognized, both at home and abroad, as being specific to the French language television industry in Canada, located in the province of Quebec and intimately associated with Quebec society and its dominant francophone culture (82% of nearly 7 million inhabitants).

The term literally means “tele-novel,” which strongly suggests its direct lineage with the modern, especially the nineteenth century, popular novel. The serial character of the teleroman makes it a descendant of Charles Dickens, Alexandre Dumas and Eugene Sue, whose works were published as series, one chapter or episode at a time, in the popular daily penny-press of their time. The upshot was of course to build customer loyalty for the supporting print media, a function not unlike that of the teleroman for the visual medium of television.

Next came the serial novel (the French feuilleton), a work of fiction written for the popular press. In this case authors, such as Honoré de Balzac, would write individual chapters which were then massively distributed and read at regular intervals; in other words, the “novel” was only produced in book form when each individual chapter had already been published. This new literature testifies to the technologies of modern mass communications in a liberal, urban, industrial, capitalist society. Because of its proximity to the United States, Quebec has benefitted and profited from these new technologies and even produced a cottage
industry of popular serial novels, both within the pages of the popular press and between the covers of chapbooks.

With the advent of radio, both public and private, the serial novel became a permanent fixture of programming with such favorite radioromans (radio drama or radio-novel) as La Pension Velder, Jeunesse dorée, La famille Plouffe and the grandaddy of them all, Un homme et son pêché. These of course developed under the far reaching shadow of the U.S. radio soap opera. While importing many of its basic characteristics, the Quebec radioroman showed the imprint of local cultural moorings, particularly in its reference to the history of this French speaking population on the North American continent dating back to the early seventeenth century (1604), its nationalistic fervor, its agrarian heritage and its forced adaptation to accelerated industrialization, urbanization and modernization.

There were no in-house writers for these radio plays; one could not earn a decent living writing radioromans or, for that matter, any type of novel. Still, many of the first telenovelists were radionovelists who were also established literary novelists. A literary profession of successful, independent novelists and telenovelists only emerged some ten years ago.

With the advent of television, classical and modern theatre (also prominent on radio—as in the United States), moved onto the small screen along with the radioroman. As elsewhere, theatre was shortlived on TV while the radioroman went on to become the teleroman. The teleroman, building on the loyal following of the radioroman by bringing “to life” the main characters of two of the best loved and most enduring radio productions, Un homme et son pêché and La famille Plouffe, was able to experiment with new themes and new styles of writing. It thus adapted the century old popular novel to this modern medium without sacrificing tradition and its most endearing qualities.

As an indication not only of the rapid growth of the teleroman, but of the centrality of the position it holds within

The Plouffe Family

both the television industry and the public discourse on television itself, one can cite the following figures. A recent repertoire lists nearly 600 titles of original works of fiction, including teleromans, produced by Quebecois screenwriters to the delight of tens of millions of television viewers from 1952 to 1992. A comparable feat is not to be found in any other French language television industry, including France’s. Nor is the popularity of locally produced television fiction in Quebec to be equaled anywhere, particularly in terms of the loyalty that the teleroman commands. The “Who Killed JR” episode of Dallas set a new standard in American television market research with its 54 point market share, in the early 1980s, and it has rarely been challenged since. In Quebec a 50-point market share is considered the basic standard of a successful show with the yearly best-sellers, reaching the high 70s and low 80s.

Not surprisingly the teleroman has spawned some small but vibrant secondary commercial ventures and represents some notable investments by other communications industries. For example, a glossy magazine Teleroman is published four times a year with a readership of some 50,000. The well established television guides such as TV Hebdo, with nearly a million readers, often feature well known faces of actors or characters of the popular teleroman on its cover. Each year moreover, it devotes a special edition of the current lineup of best and least known teleromans. Every major daily newspaper publishes the weekly schedule of television programming and has a television critic whose main subject is the teleroman: its costs, production, writers, actors, characters, intrigues, and audience rates. Talk shows quite regularly invite authors, actors and TV characters to meet live studio audiences. Even “serious” public affairs television shows, magazines and newspapers give thoughtful attention to the phenomenon. Of course the teleroman, with its well-known and loved characters, is a bonanza for advertising agencies selling everything from sundries, to soft drinks, to automobiles; they are the spokespersons for industries; they appear on public announcements and telethons for the sick and the needy. But most importantly, these well-known and well-loved actors and characters have contributed to the birth and growth of a thriving, creative, French language Quebec-based advertising industry. Not too many years ago, this industry’s main revenue was translating English language, Toronto or New York conceived, television commercials. Today French language advertisements for national Canadian and American brand names are conceived and produced in Quebec. The most eloquent product example is Pepsi, which failed miserably in the Quebec market until some 10 years ago when the company agreed to hire a local agency to build its campaign around a well-known fictitious comic figure. It has become a remarkable success story in its own right. Other examples abound and include, for example, campaigns by Bell Canada and General Motors.

Another commercial spinoff, besides the inevitable merchandizing of effigies on dolls, lunch boxes, and posters, is the phenomenon of “living museums.” Here the sets, whether original or reconstructed, of teleromans such as Un homme et son péché, Le temps d’une paix, Les filles de Caleb, or Cormoran are rebuilt in their “natural” outdoor surroundings. These teleromans are historically grounded, either in a specific time frame such as the 1930s or 1940s, or in the lives of past public and semi-public figures. The actual historical site on which these sets are built, the authentic dwellings upon which they are grafted, even the now-permanent presence of actual descendants of the romanticized characters in these reconstructed settings, all lend a “museum” and educational quality to these commercial enterprises. The teleroman is thus much more than a television genre, it is also an industry in itself and a generator of economic activities in industrially related sectors.

One of the recurring themes in the teleroman is the city, and this city is Montreal, the largest French language city in North America. It is a character in its own right in the same manner as the London of Charles Dickens, Paris in the novels by Balzac and Zola, or New York and San Francisco for the modern American teleseries. The teleroman often looks and sounds like an indictment of the city with its wealth of social problems—anonymous violence, racketeers, abused children, battered women, drug abuse, solitude, poverty, homelessness. But it is also an ode to the city’s magnetism—riches, arts, adventure, beauty, fulfillment, empowerment, enlightenment, and above all, the chance for true love. The teleroman exudes both a sense of déjà vu and elsewhereism.

The teleroman focuses on the ordinary, even on the anti-hero who is allowed to fail, sometimes disastrously. It reaches into the banality of everyday life to gather the stuff out of which characters of flesh and blood appear on the television screen, live and evolve, cry and laugh, cheat and repent, love and hate, and sometimes disappear. The fact that ordinariness can be both enticing and serialized and still command loyalty from seasoned viewers of some forty years of television fiction, is the greatest homage that can be paid to these writers, producers and actors. Such skill is attested to by the popularity, for example, of Chambres en ville, an exploration of the pains and joys of growing up as a teenager in Montreal.

Another remarkable feature of the Quebecois teleroman lies in its distinctive mixture of gendered world views. This particular mixture can be traced to the presence and influence of the women working in the teleroman’s creative communities. Telenovelist include women such as former journalist Fabienne Larouche, former journalist and Quebec cabinet minister Lise Payette and her daughter Sylvie. Renowned women actors of both theatre and screen play lead roles in the teleroman. And women novelists whose best-selling novels have been adapted to the television genre, such as Arlette Cousture (Les filles de Caleb) and Francine Ouelt (Au nom du père) often contribute to the creative process.

The teleroman, like other works of fiction in many other societies, is a testimony to the creative use of technology, in this case a technology to transmit at a distance
and in real time, images and sounds. Through the efforts and talents of many artists, professionals, and technicians a world of fiction is created. It is a world in which reality takes on certain meanings for a geographically, socially, historically and culturally designated community. That the teleroman succeeds in achieving this is not unique; what is unique is that it does so in a unique fashion. It thus contributes a small but original viewpoint, or narrative, to the accumulated human legacy of past efforts to give meaning to the lives of ordinary people.

—Roger de la Garde and Gisèle Tchoungui

TELETEXT

Teletext is the term commonly applied to electronic systems that transmit to specially equipped television receivers. This technology makes use of normal broadcast signals to distribute data to television sets or designated monitors. The data is provided in the form of "pages" made up of screens of colorful text and graphic information. The broadcasted data may contain information such as news headlines, sports scores, and traffic and financial reports.

Although the signals may sometimes be transmitted as a subcarrier on an FM radio signal, teletext systems usually
transmit digital data by placing messages in the unused lines of the standard television signal. These unused lines are called the Vertical Blanking Interval or VBI: this can be seen as the black bar that appears when the vertical hold is defective on a television set. A special decoder is required to retrieve and display the text and graphic content: this decoder may be built into a television set or cable decoder or it may be installed as a peripheral device. The teletext information may be displayed in a superimposed format or full screen image, or it may be relegated to the lower part of the video display. Viewers are able to control the display of this information with a handheld remote control device. In some systems special printers may be connected to the sets which are able to reproduce provide hard copies of the broadcasted data.

In contrast to videotext services which are fully interactive, teletext has traditionally has been a one-way system. Because of the limitations of the broadcast signal, the user must access the information in order, page by page, as the station chooses to transmit it.

Teletext services have operated quite successfully in European markets since the late 1970s. In Great Britain, for example, several million sets have been equipped with decoders that allow users access to Ceefax, the British Broadcasting Corporation's teletext service, and to Oracle, a teletext service provided by Independent TV. However, teletext has had little success in the United States, in part because the Federal Communications Commission chose not to designate a national standard for teletext decoder devices. The resulting proliferation of incompatible equipment created confusion in the marketplace which ultimately contributed to the low adoption of teletext among U.S. television owners.

—Aviva Rosenstein

TELETHON

A telethon is a marathon-length televised program devised for raising money for national and local charities or non-profit organizations. While The Jerry Lewis Muscular Dystrophy Association Labor Day Telethon is perhaps the most notable, numerous examples of the form have raised billions for various causes.

The first telethon, a 16-hour event broadcast by NBC and hosted by Milton Berle in 1949, raised $1,100,000 for the Damon Runyan Memorial Cancer Fund. Berle's pioneering effort set the tone for years to follow; a big-name star at the fore, a battery of telephone operators to collect pledges, and stage, film, and TV personalities appearing among impassioned pleas for donations. Jerry Lewis was one of the personalities to appear with Berle during the first telethon.

Without doubt, the Jerry Lewis MDA effort is the quintessential telethon. Hosted by Lewis since 1966, it is broadcast internationally, free of charge, by local stations signing on as part of the annual Labor Day "Love Network." The event, along with Lewis' off-key, emotional rendition

The MDA Labor Day Telethon
*Photo courtesy of MDA*
of the song “Walk On,” have become synonymous with Labor Day itself.

Telethons began showing their age in the early 1990s, when various groups representing the disabled argued that telethons, with their accent on cures, paint a helpless and pathetic picture of people with disabilities. Lewis, a fervent campaigner for finding a cure for Muscular Dystrophy, has dismissed such complaints and continues his traditional approach. As of September 1995, the MDA telethon had raised over $1.4 billion for muscular dystrophy.

In addition to the MDA event, other annual telethons include those for Easter Seals, The Arthritis Foundation, United Cerebral Palsy, and the United Negro College Fund. On the local level, Public Television stations have borrowed from the form to raise money during their viewer pledge drives.

TELEVISION CRITICISM (JOURNALISTIC)

From the early 1900s, U.S. newspapers carried brief descriptions of distant reception of wireless radio signals and items about experimental stations innovating programs. After station KDKA in Pittsburgh inaugurated regular radio broadcast service in 1920, followed by hundreds of new stations, newspaper columns noted distinctive offerings in their schedules. In 1922 The New York Times started radio columns by Orrin E. Dunlap, Jr. From 1925 Ben Gross pioneered a regular column about broadcasting in the New York Daily News, which he continued for 45 years. Newspapers across the country added columns about schedules, programs, and celebrities during radio’s “golden age” in the 1930s and 1940s. During those decades experiments in “radio with pictures” received occasional notice; attention to the new medium of television expanded in the late 1940s as TV stations went on the air in major cities, audiences grew, and advertisers and stars forsook radio for TV networks.

Chronicling those early developments were Jack Gould of The New York Times and John Crosby of the New York Herald Tribune, in addition to reviewer-critics of lesser impact in other metropolitan areas. From 1946 to 1972 Gould meticulously and even-handedly reported technical, structural (networks, stations), legal (Congress and Federal Communications Commission), economic (advertising), financial, and social aspects of TV as well as programming trends. Crosby began reviewing program content and developments in 1946 with stylistic vigor, offering a personalized judgment that could be caustic. As the medium matured in the 1960s and 1970s, Lawrence Laurent of The Washington Post joined the small group of influential media critics writing for major metro newspapers. He explored trends and causal relations and reported interrelations of federal regulatory agencies and broadcast corporations while also appraising major program successes and failures. On the West Coast where TV entertainment was crafted, the Los Angeles Times’ Hal Humphrey and Cecil Smith covered the creative community’s role in television, emphasizing descriptive reviews of individual programs and series. Other metro dailies and their early, influential program reviewer-critics included the San Francisco Chronicle’s Terrance O’Flaherty, Chicago Sun-Times’ Paul Malloy, and Chicago Tribune’s Larry Wolters.

Meanwhile most newspapers carried popular columns about daily program offerings, reported behind-the-scenes information, and relayed tid-bits about TV stars. Some referred to this kind of column as “racing along in shorts,” a series of brief items each separated by three dots. Complementing local columns were syndicated wire services, featuring a mix of substantive pieces and celebrity interviews. Among long-time syndicated columnists, in addition to New York Times and Washington Post columnists distributed nationally, were Associated Press’ Cynthia Lowrey and Jay Sharbut.

Weekly and monthly magazines also published analyses of broader patterns and implications of television’s structure, programming, and social impact. They featured critics such as Saturday Review’s Gilbert Seldes and Robert Lewis Shayon, Time’s “Cyclops” (John McPhee, among others), John Lardner and Jay Cocks in Newsweek, Marya Mannes in The Reporter, and Harland Ellison’s idiosyncratic but trenchant dissections in Rolling Stone. Merrill Pannitt, Sally Bedell Smith, Neil Hickey, and Frank Swerdlow offered serious analysis in weekly TV Guide; often multi-part investigative reports, those extended pieces appeared alongside pop features and interviews, plus think-pieces by specialists and media practitioners all wrapped around massive TV and
TELEVISION CRITICISM (JOURNALISTIC) 1643

cable local listings of regional editions across the country. Reporter-turned-critic Les Brown wrote authoritatively for trade paper Variety, then The New York Times, then as editor of Channels of Communication magazine. Weekly Variety published critical reviews of all new entertainment and documentary or news programs, both one-time-only shows and initial episodes of series; the newsmagazine’s staff faithfully analyzed themes, topics, dramatic presentation, acting, sets and scenery, including complete listings of production personnel and casts. Reflecting shifting perspectives on the significance of modern mass media, Ken Auletta (Wall Street Journal, New Yorker) monitored in exhaustive detail the media mega-mergers of the 1980s and 1990s.

In the 1950s, TV columnists tended to be reviewers after the fact, offering comments about programs only after they aired, because almost all were “live.” (Comedian Jackie Gleason quipped that TV critics merely reported accidents to eye witnesses.) They could also appraise continuing series, based on previous episodes. As more programs began to be filmed, following I Love Lucy’s innovation, and videotape was introduced in the late 1950s for entertainment and news-related programs alike, critics were able to preview shows. Their critical analyses in advance of broadcast helped viewers select what to watch. Producers and network executives could monitor print reviewers’ evaluations of their product. Those developments increased print critics’ influence, though their authority never approached New York drama critics’ impact on Broadway’s theatrical shows. Typically, many of a season’s critically acclaimed new programs tend to be driven off the schedule by mass audience preferences for other less challenging or subtle programming. Praised, award-winning new series often find themselves cancelled for lack of popular ratings. Some might apply to television movie-critic Pauline Kael’s aphorism about films; she cynically described the image industry as “the art of casting sham pearls before real swine.”

Television critics often use a program or series as the concrete basis for examining broader trends in the industry. Analyzing a new situation comedy or action-adventure drama or documentary-like news magazine is more than an exercise in scrutinizing a 30- or 60-minute program; it serves as a paradigm representing larger patterns in media and society. The critical review traces forces that shape not only programming but media structures, processes, and public perceptions. Often reviewers not only lament failures but question factors influencing success and quality. They challenge audiences to support superior programming by selective viewing just as they challenge producers to create sensitive, authentic, depictions of deeper human values. Yet, Gilbert Seldes cautioned as early as 1956 that the critic must propose changes that are feasible in the cost-intensive mass media system; this would be “more intellectually honest and also save a lot of time” while avoiding pointless hostility and futility.

Over the decades studies of audiences and program patterns, and surveys of media executives, have generally discounted print media criticism as a major factor in program decision-making, particularly regarding any specific program content or scheduling. But critics are not wholly disregarded. Those published in media centers and Washington, D.C. serve as reminders to media managers of criteria beyond ratings and revenues. Critics in trade and metropolitan press are read by government agency personnel as well, to track reaction to pending policy moves. The insightful comments of critics come in many forms: courteous and cerebral (veteran John O’Connor since 1971 and Walter Goodman, The New York Times), stylistically sophisticated and witty (Tom Shales, The Washington Post), sometimes abrasive (Ron Powers, Chicago Sun-Times), even cynical (Howard Rosenberg, Los Angeles Times). Each of these may illuminate lapses in artistic integrity or “good taste” and prod TV’s creators and distributors to reflect on larger aesthetic and social implications of their lucrative, but ephemeral, occupations. Those published goadings enlighten readers, serve as a butt under the saddle of broadcasters/creators, and provide an informal barometer to federal law-makers and regulators.

At the same time television criticism published in print media serves the publisher’s primary purpose of gaining readership among a wide and diverse circulation. That goal puts a premium on relevance, clarity, brevity, cleverness, and attractive style. The TV column is meant to attract readers primarily by entertaining them, while also informing them about how the system works. And at times columns can inspire readers to reflect on their use of television and how they might selectively respond to the medium’s showcases of excellence, plateaus of mediocrity, and pits of meretricious exploitation and excess. Balanced criticism avoids blatant appeals and gratuitous savaging of media people and projects. The critic serves as a guide, offering standards or criteria for judgment along with factual data, so readers can make up their own minds. A test of successful television criticism is whether readers enjoy reading the articles as they grow to trust the critic’s judgment because they respect his or her perspective. The critic-reviewer’s role grows in usefulness as video channels proliferate; viewers inundated by dozens of cable and over-air channels can ensure optimum use of leisure viewing time by following critics’ tips about what is worth tuning in and what to avoid.

Reflecting the quality of published television criticism in recent years, distinguished Pulitzer Prizes have been awarded to Ron Powers (1973), William Henry III (1980, Boston Globe), Howard Rosenberg (1985), and Tom Shales (1988). Early on, influential Times critic Jack Gould set the standard when in 1957 he won a special George Foster Peabody Award for his “fairness, objectivity and authority.” Prerequisites for proper critical perspective outlined by Lawrence Laurent three decades ago remain apt today: sensitivity and reasoned judgment, a renaissance knowledge, coupled with exposure to a broad range of art, culture, technology, business, law, economics, ethics, and social studies all fused with an incisive writing style causing commentary to leap off
the page into the reader’s consciousness, possibly influencing their TV behavior as viewers or as professional practitioners.

TELEVISION NORTHERN CANADA

In 1983, after a decade of lobbying, the Canadian federal government established a Northern Broadcasting Policy which laid out the principles for the development of Northern native-produced programming for communities North of the 55th latitude line. With the policy was an accompanying program vehicle called the Northern Native Broadcast Access Program. This program was given $40.3 million to be distributed over a four-year period to 13 regional Native Communications Societies in the North in order to produce 20 hours of regional radio and/or five hours of television per week in First Peoples' languages, reflecting their specific cultural perspectives. Although funding has eroded over time, the policy and programs are still operational.

One of the key problems identified quite soon after the Program was initiated was that of program distribution via satellite. Transponder rental costs were prohibitive and it became apparent early in the implementation process that a dedicated Northern transponder would be the solution to the negotiation problems involved in piggybacking on existing distribution services, such as that of the Canadian Broadcasting Corporation's Northern Services or CANCOM (a commercially-based Northern distribution service).

In January 1987, in response to the issue of distribution, Canadian aboriginal and Northern broadcasters met in Yellowknife, Northwest Territories to form a non-profit consortium with the goal of establishing a Pan-Northern television distribution service. In 1988, the Canadian government gave the organizers $10 million to establish Television Northern Canada (TVNC). In 1991, Canada's regulatory agency, the Canadian Radio-television and Telecommunications Commission (CRTC) approved TVNC's application for a native television network license to serve Northern Canada for the purpose of broadcasting cultural, social, political, and educational programming. On 21 January 1992, TVNC began broadcasting.

TVNC's network is owned and programmed by 13 aboriginal broadcast, government and education organizations in Northern Canada. Members include: the Inuit Broadcasting Corporation (Ottawa, Iqaluit) the Inuvialuit Communications Society (Inuvik), Northern Native Broadcasting, Yukon (Whitehorse), the Okalakitiget Society (Labrador), Taqramiut Nipingat Incorporated (Northern Quebec), the Native Communications Society of the Western N.W.T. (Yellowknife), the Government of the Northwest Territories, Yukon College, and the National Aboriginal Communications Society. Associate Members are CBC Northern Service, Kاتik School Board (Quebec), Labrador Community College, Northern Native Broadcasting, Terrace, Telesat Canada, and Wawatay Native Communications Society (Sioux Lookout). Services extend to Labrador, Arctic Quebec, Nunavut (formerly the Inuit regions of the Northwest Territories), Western Northwest Territories, and Yukon. Programming is produced in at least seven aboriginal languages, as well as in English and French. The TVNC's mission statement elaborates its goals:

Television Northern Canada shall be (is) a dedicated northern satellite distribution system, for the primary benefit of aboriginal people in the North, by which residents of communities across northern Canada may distribute television programming of cultural, social, political, and educational importance to each other, increasing communications access and promoting dialogues among their remote and underserved homelands (TVNC, 1 March 1993).

As a primary level of service for the North, TVNC spans five time zones and covers an area of over 4.3 million kilometers (one-third of Canada's territory). The organizations involved broadcast approximately 100 hours per week to 94 communities. TVNC is not a programmer, but a distributor of its members' programming. Core Northern programming consists of:

- 38 hours per week of aboriginal language and cultural programming;
• 23 hours per week of formal and informal educational programming;

• 12 hours per week of produced and acquired children’s programming, over half of which is in aboriginal languages.

As seen from the number of programming hours scheduled, the Native Communications Societies cannot afford to produce enough materials for round-the-clock broadcast. Consequently, TVNC is wrapped around with Environment Canada weather forecasts, as well as newstexts from Broadcast News.

Despite funding cutbacks, TVNC is the only aboriginal television network in the world which broadcasts such a high volume of programming from indigenous sources. As a Pan-Arctic distribution undertaking, it is theoretically in a position to forge connections with Inuit and aboriginal groups in other countries, such as Greenland, Alaska, Finland, Russia (Siberia), Australia, New Zealand, Brazil, and Bolivia (among others). This could be achieved through program exchanges and uplink-downlink satellite arrangements, but TVNC administration faces two problems: incompatible video/electrical standards and financial barriers. What TVNC does do is offer Northern viewers limited access to programming about activities of indigenous peoples from around the globe, when this is feasible.

In May 1995, TVNC applied to be placed on the Revised Lists of Eligible Satellite Services to be picked up by cable operators throughout Canada. Approval was granted in November 1995. Availability of Northern-produced programming on Southern channels expands Northern broadcasting to a new dimension. It represents the completion of the Canadian broadcasting mandate—permitting broadcasting to move in all directions from the South to the North, North-to-North, and North-to-South. This is a leap forward from the unidirectional importation of Southern culture to the North which began in 1973. By permitting TVNC to be broadcast in the South, the Canadian regulatory body is attempting to ensure that all Canadians have an opportunity to acquire a more coherent understanding of the North and its residents.

In December 1995, the CRTC approved a deal between Arctic cooperatives Limited (ACL) and NorthwesTel to split up the northern cable TV market between them. At the same time, the CRTC noted that it expects, but does not require, ACL and NorthwesTel to pay 55 cents per cable TV subscriber into a special programming fund to be administered by TVNC. The money is intended to pay for the development and distribution of First Peoples television programs. Hopefully, these expectations will be met without resistance.

The most current initiative of TVNC is their participation with ACL and Northwestern in the creation of a new company for the purpose of constructing an affordable and accessible high-speed communications network in Northern Canada.

The granting of a license to TVNC and the integration of TVNC in the Northern information highway infrastructure represents Canada’s recognition of the importance of
Northern-based control over the distribution of its own native and Northern programming and telecommunications services. TVNC is the vehicle through which First Peoples are able to represent themselves and their concerns across Canada's expansive territories. First Peoples are no longer restricted by the geography of diffusion technology to local or regional self representation and identity-building. In this sense TVNC constitutes a de facto recognition of the communication rights of First Peoples in Canada's North.

TELEVISION STUDIES

Television studies is the relatively recent, aspirationally disciplinary name given to the academic study of television. Modeled by analogy with longer established fields of study, the name suggests that there is an object, "television", which, in courses named, for example, "Introduction to Television Studies", is the self-evident object of study using accepted methodologies. This may be increasingly the case, but it is important to grasp that most of the formative academic research on television was inaugurated in other fields and contexts. The "television" of television studies is a relatively new phenomenon, just as many of the key television scholars are employed in departments of sociology, politics, communication arts, speech, theatre, media and film studies. If it is now possible, in 1996, to speak of a field of study, "television studies" in the anglophone academy, in a way in which it was not in 1970, the distinctive characteristics of this field of study include its disciplinary hybridity and continuing debate about how to conceptualise the object of study "television." These debates, which are and have been both political and methodological, are further complicated in an international frame by the historical peculiarities of national broadcasting systems. Thus, for example, the television studies that developed in Britain or Scandinavia, while often addressing U.S. television programmes, did so within the taken-for-granted dominance of public service models. In contrast, the U.S. system is distinguished by the normality of advertising spots and breaks. In the first instance then, television studies signifies the contested, often nationally inflected, academic address to television as primary object of study—rather than, for example, television as part of international media economies or television as site of drama in performance.

There have been two prerequisites for development of television studies in the "West"—and it is primarily a western phenomenon, which is not to imply that there is not, for example, a substantial literature on Indian television (cf. Krishnan and Dighe, 1990). The first was that television as such be regarded as worthy of study. This apparently obvious point is significant in relation to a medium which has historically attracted distrust, fear and contempt. These responses, which often involve the invocation of television as both origin and symptom of social ills, have, as many scholars have pointed out, homologies with responses to earlier popular genres and forms such as the novel and the cinema. The second prerequisite was that television be granted, conceptually, some autonomy and
specificity as a medium. Thus television had to be regarded as more than simply a transmitter of world, civic or artistic events and as distinguishable from other of the "mass media". Indeed, much of the literature of television studies could be characterised as attempting to formulate accounts of the specificity of television, often using comparison with, on the one hand, radio (broadcast, liveness, civic address) and on the other, cinema (moving pictures, fantasy), with particular attention, as discussed below, to debate about the nature of the television text and the television audience. Increasingly significant also are the emergent histories of television whether it be the autobiographical accounts of insiders, such as Grace Wyndham Goldie's history of her years at the BBC, *Facing the Nation*, or the painstaking archival research of historians such as William Boddy with his history of the quiz scandals in 1950s U.S. television or Lynn Spigel with her pioneering study of the way in which television was "installed" in the U.S. living room in the 1950s, *Make Room for TV*.

Television studies emerges in the 1970s and 1980s from three major bodies of commentary on television: journalism, literary/dramatic criticism and the social sciences. The first, and most familiar, was daily and weekly journalism. This has generally taken the form of guides to viewing and reviews of recent programmes. Television reviewing has, historically, been strongly personally voiced, with this authorial voice rendering continuity to the diverse topics and programmes addressed. Some of this writing has offered formulations of great insight in its address to television form—for example the work of James Thurber, Raymond Williams, Philip Purser or Nancy Banks-Smith—which is only now being recognised as one of the origins of the discipline of television studies. The second body of commentary is also organised through ideas of authorship, but here it is the writer or dramatist who forms the legitimation for the attention to television. Critical method here is extrapolated from traditional literary and dramatic criticism, and the television attracts serious critical attention as an "home theatre". Indicative texts here would be the early collection edited by Howard Thomas, *Armschair Theatre* (1959) or the later, more academic volume edited by George Brandt, *British Television Drama* (1981). Until the 1980s, the address of this type of work was almost exclusively to "high culture": plays and occasionally series by known playwrights, often featuring theatrical actors. Only with an understanding of this context is it possible to see how exceptional Raymond William's defence of television soap opera is in *Drama in Performance* (1968), or Horace Newcomb's validation of popular genres in *TV: The Most Popular Art* (1974).

Both of these bodies of commentary are mainly concerned to address what was shown on the screen, and thus conceive of television mainly as a text within the arts humanities academic traditions. Other early attention to television draws, in different ways, on the social sciences to address the production, circulation and function of television in contemporary society. Here, research has tended not to address the television text as such, but instead to conceptualise television either through notions of its social *function* and *effects*, or within a governing question of *cui bono?* (whose good is served!). Thus television, along with other of the mass media, is conceptualised within frameworks principally concerned with the maintenance of social order; the reproduction of the status quo, the relationship between the state, media ownership and citizenship, the constitution of the public sphere. With these concerns, privileged areas of inquiry have tended to be non-textual: patterns of international cross-media ownership; national and international regulation of media production and distribution; professional ideologies; public opinion; media audiences. Methodologies here have been greatly contested, particularly in the extent to which Marxist frameworks, or those associated with the critical sociology of the Frankfurt School have been employed. These debates have been given further impetus in recent years by research undertaken under the loose definition of cultural studies. The privileged texts, if attention has been directed at texts, have been news and current affairs, and particularly special events such as elections, industrial disputes and wars. It is this body of work which is least represented in "television studies", which, as an emergent discipline, tends towards the textualisation of its object of study. The British journal *Media, Culture and Society* provides an exemplary instance of media research—in which television plays some part—in the traditions of critical sociology and political economy.

Much innovatory work in television studies has been focused on the definition of the television text. Indeed, this debate could be seen as one of the constituting frameworks of the field. The common-sense view points to the individual programme as a unit, and this view has firm grounding in the way television is produced. Television is, for the most part, made as programmes or runs of programmes: series, serials and miniseries. However, this is not necessarily how television is watched, despite the considerable currency of the view that it is somehow better for the viewer to choose to watch particular programmes rather that just having the television on. Indeed, BBC television in the 1950s featured "interludes" between programmes, most famously, "The Potter's Wheel", a short film showing a pair of hands making a clay pot on a wheel, to ensure that viewers did not just drift from one programme to another. It is precisely this possible "drifting" through an evening's viewing that has come to seem, to many commentators, one of the unique features of television watching, and hence something that must be attended to in any account of the television text.

The inaugural formulation is Raymond William's argument, in his 1974 book, *Television: Technology and Cultural Form*, that "the defining feature of broadcasting" is "planned flow". Williams developed these ideas through reflecting on four years of reviewing television for the weekly periodical *The Listener*, when he suggests that the separating of the television text into recognisable generic programme units, which makes the reviewer's job much easier, somehow
misses "the central television experience: the fact of flow" (1974). Williams's own discussion of flow draws on analysis of both British and U.S. television and he is careful to insist on the national variation of broadcasting systems and types and management of flow, but his attempt to describe what is specific to the watching of television has been internationally generative, particularly in combination with some of the more recent empirical studies of how people do (or don't) watch television.

If Williams's idea of flow has been principally understood to focus attention on television viewing as involving more viewing and less choosing than a critical focus on individual programmes would suggest, other critics have picked up the micro-narratives of which so much television is composed. Thus John Ellis approached the television text using a model ultimately derived from film studies, although he is precisely concerned, in his book *Visible Fictions*, to differentiate cinema and television. Ellis suggests that the key unit of the television text is the "segment", which he defines as "small, sequential unities of images and sounds whose maximum duration seems to be about five minutes" (1982). Broadcast television, Ellis argues, is composed of different types of combination of segment: sometimes sequential, as in drama series, sometimes cumulative, as in news broadcasts and commercials. As with Williams's "flow", the radical element in Ellis's "segment" is the way in which it transgresses common sense boundaries like "programme" or "documentary" and "fiction" to bring to the analyst's attention common and defining features of broadcast television as a medium.

However, it has also been argued that the television text cannot be conceptualised without attention to the structure of national broadcasting institutions and the financing of programme production. In this context, Nick Browne has argued that the U.S. television system is best approached through a notion of the "super-text". Browne is concerned to address the specificities of the U.S. commercial television system in contrast to the public service models—particularly the British one—which have been so generative a context for formative and influential thinking on television such as that of Raymond Williams and Stuart Hall. Browne defines the "super-text" as, initially, a television programme and all introductory and interstitial material in that programme's place in a schedule. He is thus insisting on an "impure" idea of the text, arguing that the programme as broadcast at a particular time in the working week, interrupted by ads and announcements, condenses the political economy of television. Advertising, in Browne's schema, is the central mediating institution in U.S. television, linking programme schedules to the wider world of production and consumption.

The final concept to be considered in the discussion about the television text is Newcomb and Hirsch's idea of the "viewing strip" (1987). This concept suggests a mediation between broadcast provision and individual choice, attempting to grasp the way in which each individual negotiates his or her way through the "flow" on offer, putting together a sequence of viewing of their own selection. Thus different individuals might produce very different "texts"—viewing strips—from the same nights viewing. Implicit within the notion of the viewing strip—although not a pre-requisite—is the remote control device, allowing channel change and channel surfing. And it is this tool of audience agency which points us to the second substantial area of innovatory scholarship in television studies, the address to the audience.

The hybrid disciplinary origins of television studies are particularly evident in the approach to the television audience. Here, particularly in the 1980s, we find the convergence of potentially antagonistic paradigms. Very simply, on the one hand, research traditions in the social sciences focus on the empirical investigation of the already existing audience. Research design here tends to seek representative samples of particular populations and/or viewers of a particular type of programming (adolescent boys and violence; women and soap opera). Research on the television audience has historically been dominated, particularly in the U.S., by large-scale quantitative surveys, often designed using a model of the "effects" of the media, of which television is not necessarily a differentiated element. Within the social sciences, this "effects" model has been challenged by what is known as the "uses and gratifications" model. In James Halloran's famous formulation, "we should ask not what the media does to people, but what people do to the media." (Halloran, 1970). Herta Herzog's 1944 research on the listeners to radio daytime serials was an inaugural project within this "uses and gratifications" tradition, which has recently produced the international project on the international decoding of the U.S. prime time serial, *Dallas* (Liebes and Katz, 1990).

This social science history of empirical audience investigation has been confronted, on the other hand by ideas of a textually constituted "reader" with their origins in literary and film studies. This is a very different conceptualisation of the audience, drawing on literary, semiotic and psychoanalytic theory to suggest—in different and disputed ways—that the text constructs a "subject position" from which it is intelligible. In this body of work, the context of consumption and the social origins of audience members are irrelevant to the making of meaning which originates in the text. However—and it is thus that we see the potential convergence with social science "uses and gratifications" models—literary theorists such as Umberto Eco (1979) have posed the extent to which the reader should be seen as active in meaning-making. It is, in this context, difficult to separate the development of television studies, as such, from that of cultural studies, for it is within cultural studies that we begin to find the most sophisticated theorisations and empirical investigations of the complex, contextual interplay of text and "reader" in the making of meaning.

The inaugural formulations on television in the field of cultural studies are those of Stuart Hall in essays such as "Encoding and Decoding in Television Discourse" (1974).
(Hall, 1997) and David Morley’s audience research (1980). However this television specific work cannot theoretically be completely separated from other cultural studies work conducted at Birmingham University in the 1970s such as the work of Dick Hebdige and Angela McRobbie which stressed the often oppositional agency of individuals in response to contemporary culture. British cultural studies has proved a successful export, the theoretical paradigms there employed meeting and sometimes clashing with those used, internationally, in more generalised academic re-orientation towards the study of popular culture and entertainment in the 1970s and 1980s. Examples of influential scholars working within or closely related to cultural studies paradigms would by Ian Ang and John Fiske. Ang’s work on the television audience ranges from a study of Dallas fans in the Netherlands to the interrogation of existing ideas of audience in a postmodern, global context. John Fiske’s work has been particularly successful in introducing British cultural studies to a U.S. audience, and his 1987 book, *Television Culture* was one of the first books about television to take seriously the feminist agenda that has been so important to the recent development of the field. For if television studies is understood as a barely established institutional space, carved out by scholars of television from, on the one hand, mass communications and traditional Marxist political economy, and on the other, cinema, drama and literary studies, the significance of feminist research to the establishment of this connotationally feminised field cannot be underestimated, even if it is not always recognised. E. Ann Kaplan’s collection, *Regarding Television*, with papers from a 1981 conference gives some indication of early formulations here.

The interest of new social movements in issues of representation, which has been generative for film and literary studies as well as for television studies, has produced sustained interventions by a range of scholars, approaching mainly “texts” with questions about the representation of particular social groups and the interpretation of programmes such as, for example, *thirtysomething*, *Cagney and Lacey*, *The Cosby Show*, or various soap operas. Feminist scholars have, since the mid-1970s, tended to focus particularly on programmes for women and those which have key female protagonists. Key work here would include Julie D’Acci’s study of *Cagney and Lacey* and the now substantial literature on soap opera (Seiter et al., 1989). Research by Sut Jhally and Justin Lewis has addressed the complex meanings about class and “race” produced by viewers of *The Cosby Show*, but most audience research in this “representational” paradigm has been with white audiences. Jacqueline Bobo and Ellen Seiter argue that this is partly a consequence of the “whiteness” of the academy which makes research about viewing in the domestic environment potentially a further extension of surveillance for those ethnicized by the dominant culture.

Television studies in the 1990s, then, is characterised by work in four main areas. The most formative for the emergent discipline have been the work on the definition and interpretation of the television text and the new media ethnographies of viewing which emphasise both the contexts and the social relations of viewing. However, there is a considerable history of “production studies” which trace the complex interplay of factors involved in getting programmes on screen. Examples here might include Tom Burn’s study of the professional culture of the BBC (1977), Philip Schlesinger’s study of “The News” (1978) or the study of MTM co-edited by Jane Feuer, Paul Kerr and Tise Vahimagi (1984). Increasingly significant also is the fourth area, that of television history. Not only does the historical endeavour frequently necessitate working with vanished sources—such as the programmes—but it has also involved the use of material of contested evidentiary status. For example, advertisements in women’s magazines as opposed to producer statements. This history of television is a rapidly expanding field, creating a retrospective history for the discipline, but also documenting the period of nationally regulated terrestrial broadcasting—the “television” of “television studies”—which is now coming to an end.

TELEVISION TECHNOLOGY

The technology that makes television work is a complex subject, explained here in a basic, introductory fashion. Though television seems a thoroughly modern invention, available only since mid-20th century, the concept of recreating moving images electrically was developed much earlier than is generally thought. It can be traced at least to 1884 when Paul G. Nipkow created the rotating scanning disk which provided a way of sending a representation of a moving image over a wire using varying electrical signals created by mechanically scanning that moving image.

Mechanical scanning of an image involved a spinning disk, with a spiral grouping of holes, located at both the sending and receiving ends. At the sending end, a photocell-like device varied the strength of an electrical signal at a rate representing the amount of light hitting the cell through the holes in the disk; the greater the amount of light, the greater the strength of the electrical signal. At the receiving end, a source of light varied in intensity at the rate of the electrical signal it received and could be seen through the holes in the rotating disc, thereby recreating a crude copy of the image scanned at the sending end. Today, moving images are scanned electronically as described below and the varying electronic signal representing the scanned images can be transmitted or sent through wire to be recreated at the receiver or monitor.

The earliest practical mechanical scanning and transmitting of moving images occurred in the mid-1920s, and by the early 1930s electronic scanning had generally replaced the mechanical scanning methods. At first the images were crude, little more than shadow-pictures, but as the potential for television as a profit-making medium became apparent, more money and effort went into television experimentation and improvements continued through the 1930s.

By 1941, technical standards for the scanning and transmission of television images in America had been agreed upon and these standards have, in general, been maintained ever since. The American standard, known as National Television System Committee (NTSC), utilizes 525-line, 60-field, 30-frame, interlaced scanning. This means that images are scanned in the television camera and reproduced in the television receiver or monitor 30 times each second. Each full image, or frame, is scanned by dividing the image into 525 horizontal lines, and then sequentially scanning first all the even lines (every other line) from top to bottom, creating one field, and then scanning the odd numbered lines in the same manner, creating a second field. The two fields, when combined (inter-
laced), create one frame. Therefore, 30 complete images or frames, each made up of two fields, are created each second. Because it is not possible to perceive individual changes in light and image happening so quickly, the 30-times-per-second scanned images are perceived as continuous movement, a trait known as "perception of vision," similar to motion picture viewing. The NTSC standard is used in Canada, parts of Asia, including Japan, and much of Latin America as well as in the United States. But there are two other "standards" in common use today. The PAL systems, a 25-frame-per-second standard with a number of variants, are used throughout most of Western Europe and India, as well as other areas. The SECAM 25-frame-per-second standard is used in many parts of the world, including France, Russia and most of Eastern Europe. Countries that use 60 Hertz (cycles per second) A.C. (alternating current) power have adopted a 30-frame-per-second television system. Countries that utilize a 50 Hertz (Hz.) power system have a 25-frame-per-second television system. In all these television systems the frame-per-second rate is equal to half the A.C. power frequency.

The aspect ratio of the television screen, the ratio of the horizontal dimension to the vertical dimension, is 4:3. For instance, if a TV receiver screen is 16 inches wide, the screen will be 12 inches high. (TV picture tubes are defined by their diagonal measurement, so in this example the screen would be described as a 20-inch TV.) Often, motion pictures are shown on television in a "letter-box" format. Because motion pictures are usually shot in an aspect ratio greater than 4:3, it is necessary to leave a black space at the top and bottom of the television screen so that the film can be viewed in a form resembling its theatrical dimensions, without cutting off the sides. "High Definition" television also utilizes a greater aspect ratio, generally 16:9.

The television camera consists of a lens to focus an image onto the front surface of one or more pick-up-devices, and, within the camera housing, the pick-up-device(s) and the electronics to make the camera work. A viewfinder to monitor the camera's images is normally mounted in or on the camera. The pick-up-device, either a camera tube or charge-coupled device (CCD), reads the focused visual image and converts the image into a varying electronic signal that represents the image. On high quality cameras, three pick-up-devices are often utilized; one to pick up each of the three primary colors (blue, green and red) that make up the color image.

The face of the camera tube has a photoemissive material that gives off electrical energy when exposed to light. The stronger the light at any given point, the more energy created. By reading the amount of energy on the surface of the camera tube at each point, an electronic representation of the visual image can be created. The camera tube "reads" the amount of energy created on its surface by the focused image by scanning the image, both horizontally and vertically, with a moving electronic beam. The scanning occurs because of precise magnetic deflection of the beam.

The CCD replaces the camera tube in most modern cameras, commonly called chip cameras. This solid-state device measures the energy at the points on its surface, known as pixels, converts and stores this information and then sends out this varying electronic signal that represents the image. CCD image pick-up-devices are becoming more popular due to their small size, long life, greater sensitivity and light tolerance, minimal power requirements, less image distortion, and ruggedness.

In the receiver's, or monitor's, picture tube, the camera tube process is essentially reversed. The face of the picture tube is coated with a phosphor-like material that glows when struck by a beam of electrons. The glow lasts long enough to make the scanned image visible to the viewer. An electron gun shoots the thin beam of electrons at the face of the screen from within the picture tube. The beam's direction is varied in a precise manner by magnetic deflection in a way that matches or synchronizes with the original image scanned by the television camera. Color picture tubes can have one electron gun, such as in the Trinitron, or three guns, one for each primary color. One major difference between a receiver and a monitor should be mentioned here. A receiver is able to tune in a television station frequency and show the images being transmitted. A monitor does not have a tuning component and can receive video signals by wire only.

At a television station, the electronic signal from a television camera can be combined or mixed with video signals from other devices such as video tape players, computers, film chains or telelines (motion picture and slide projector units whose outputs have been converted to video signals) using what is known as a switcher. The switcher is also used to create various special visual effects electronically. The video output from the switcher can then be recorded, sent to another studio or master control room, or sent directly to a transmitter.

The complete video signal sent to a transmitter or through wire to a monitor consists of signals representing the picture (luminance), color (chrominance), and synchronization. Synchronizing signals force the receiver to correctly lock onto (sync-up) and reproduce the original image correctly. Otherwise, for example, the receiver might begin to scan an image that begins half-way down the screen.

Television stations are assigned a specific transmitting frequency and operating power. In the United States, VHF (very-high frequency) television, channels 2–13, occupies a portion of the frequency spectrum from 54–216 MHz (million Hertz or cycles-per-second). Channels 2–6 are located between 54 and 88 MHz. The F.M. radio band, 88–108 MHz, is located between television channels 6 and 7. Channels 7–13 are located between 174 and 216 MHz. UHF (ultra-high frequency) television, originally channels 14 to 83, was assigned the frequency range from 470 to 890 MHz. In 1966 the Federal Communications Commission (FCC) discontinued issuing licenses for UHF television stations above channel 69. In 1970 the FCC took away the frequency range from 807 to 890 MHz for other communication uses and so the UHF band now consists of channels 14–69, from 470 to 806 MHz. The upper end of this current range is being coveted for other frequency spectrum uses and it
appears that the number of available channels in the UHF band will continue to decrease. Each television channel has a frequency bandwidth of 6 MHz. So, for instance, channel 2 has a frequency bandwidth from 54 MHz to 60 MHz. Within its assigned band each station transmits the video signal as described earlier, an audio signal, and specialized signals such as closed-captioning information.

In the television transmitter a carrier wave is created at an assigned frequency. This carrier wave travels at the speed of light through space with specific transmission or propagation characteristics determined by the individual frequency. The video signal is piggy-backed onto the much higher frequency carrier wave using a process known as modulation. Modulation, in the simplest terms, means that the carrier wave is modulated, or varied slightly, at the rate of the signal being piggy-backed. In a television transmission the video signal varies the amplitude or strength of the carrier wave at the rate of the video signal. This is known as amplitude modulation (A.M.) and is similar to the method used to transmit the audio of an A.M. radio station. However, the television station audio signal is piggy-backed onto the carrier wave using frequency modulation (F.M.). With television audio the carrier wave’s frequency (instead of its amplitude) is varied slightly at the rate of the audio signal.

The modulated television station carrier wave is sent from the transmitter to an antenna. The antenna then radiates the signal out into space in a pattern determined by the physical design of the transmitting antenna. Traditionally the transmitter and antenna were terrestrially located, but now television signals can be radiated or delivered by transmitters and antennas located on satellites in orbit around the earth. In this case the television signal is transmitted to the satellite on a specific frequency and then retransmitted at a different frequency by the satellite’s transmitter back to the earth.

Besides delivery by carrier wave transmission, television is often sent through cable directly to homes and businesses. These signals are delivered by satellite, over-the-air from terrestrial antennas, and sometimes directly from video players to the distribution equipment of cable television (CATV) service providers for feeding directly into homes. The signals are sent at specific carrier wave frequencies (sometimes called R.F., or radio frequencies) as chosen by the cable service provider.

A television receiver picks up the transmitted television signals sent over-the-air or by cable or satellite, removes the necessary video and audio signals that had been piggy-backed on the carrier wave, discards the carrier wave, and amplifies and converts the video and audio signals into picture and sound. A television monitor accepts direct video and audio signals to provide pictures and sound. As mentioned above, a monitor cannot receive carrier waves.

From primitive experimentation in the 1920s and 1930s through the advent of commercial television in the late 1940s, to color television as the standard by the mid-1960s, television has grown quickly to become perhaps the most important single influence on society today. From a source of information and entertainment to what some have dubbed the real "soma" of Alex Huxley's Brave New World, television has become the most influential medium of the second half of the twentieth century. While the medium continues to evolve and change, its importance, influence and pervasiveness appear to continue unabated. How will new technology change the face of television? Once the realm of science fiction, we are now seeing new delivery systems, on-call access, a greater number of available channels, two-way interaction, and the coupling of television and the computer. We are in the process of experiencing better technical quality including improved resolution, HDTV, the convenience of flatter and lighter television receivers, and digital processing and transmission. And yet, the basic standard for television broadcast technology has been with us, with only minor changes and improvements, for well over 50 years.

TERRORISM

"Terrorism" is a term that cannot be given a stable definition; to do so forstalls any attempt to examine the major feature of its relation to television in the contemporary world. As the central public arena for organizing ways of picturing and talking about social and political life, TV plays a pivotal role in the contest between competing definitions, accounts and explanations of terrorism.

Politicians frequently try to limit the terms of this competition by asserting the primacy of their preferred versions. Jeanne Kirkpatrick, former U.S. representative to
the United Nations, for example, had no difficulty recognising "terrorism" when she saw it, arguing that "what the terrorist does is kill, maim, kidnap, torture. His victims may be schoolchildren,... industrialists returning home from work, political leaders or diplomats". Television journalists, in contrast, prefer to work with less elastic definitions. The BBC's News Guide, for example, advises reporters that "the best general rule" is to use the term "terrorist" when civilians are attacked and "guerrillas" when the targets are members of the official security forces.

Which term is used in any particular context is inextricably tied to judgements about the legitimacy of the action in question and of the political system against which it is directed. Terms like "guerrilla," "partisan," or "freedom fighter" carry positive connotations of a justified struggle against an occupying power or an oppressive state; to label an action as "terrorist" is to consign it to illegitimacy.

For most of the television age, from the end of World War II to the collapse of the Soviet Union, the deployment of positive and negative political labels was an integral part of Cold War politics and its dualistic view of the world. "Terrorism" was used extensively to characterise enemies of the United States and its allies, as in President Reagan's assertion in 1985, that Libya, Cuba, Nicaragua and North Korea constituted a "confederation of terrorist states" intent on undermining American attempts "to bring stable and democratic government" to the developing world. Conversely, friendly states, like Argentina, could wage a full scale internal war against "terrorism", using a definition elastic enough to embrace almost anyone who criticised the regime or held unacceptable opinions, and attract comparatively little censure despite the fact that this wholesale use of state terror killed and maimed many more civilians than the more publicised incidents of "retail" terror—assassinations, kidnappings and bombings.

The relations between internal terrorism and the state raise particularly difficult questions for liberal democracies. By undermining the state's claim to a legitimate monopoly of force within its borders, acts of "retail" terror pose a clear threat to internal security. And, in the case of subnational and separatist movements which refuse to recognise the integrity of those borders, they directly challenge its political legitimacy. Faced with these challenges, liberal democracies have two choices. Either they can abide by their own declared principles, permit open political debate on the underlying causes and claims of terrorist movements, uphold the rule of law, and respond to insurgent violence through the procedures of due process. Or they can curtail public debate and civil liberties in the name of effective security. The British state's response to the conflict in Northern Ireland, and to British television's attempts to cover it, illustrate this tension particularly well.

Television journalism in Britain has faced a particular problem in reporting "the Irish Question" since the Republican movement has adopted a dual strategy using both the ballot box and the bullet, pursuing its claim for the ultimate reunification of Ireland electorally, through the legal political party, Sinn Fein, and militarily, through the campaign waged by the illegal Irish Republican Army. Added to which, the British state's response has been ambiguous. Ostensibly, as Prime Minister Thatcher argued in 1990, although "they are at war with us,...we can only fight them with the civil law." Then Home Secretary Douglas Hurd admitted in 1989 that, in his view "with the Provisional IRA...it is nothing to do with a political cause any more. They are professional killers....No political solution will cope with that. They just have to be extirpated". Television journalists' attempts to explore these contradictions produced two of the bitterest peacetime confrontations between British broadcasters and the British state.

Soon after British troops were first sent to Northern Ireland in the early 1970s, there were suspicions that the due process of arrest and trial was being breached by a covert but officially sanctioned shoot-to-kill campaign against suspected members of Republican paramilitary groups. In 1988, three members of an IRA active service unit were shot dead by members of an elite British counter terrorist unit in Gibraltar. Contrary to the initial official statements, they were later found to be unarmed and not in the process of planting a car bomb as first claimed. One of the leading commercial television companies, Thames Television, produced a documentary entitled Death on the Rock, raising questions about the incident. It was greeted with a barrage of hostile criticism from leading Conservative politicians, including Prime Minister Thatcher. The tone of official condemnation was perfectly caught in an editorial headline in the country's best-selling daily paper The Sun, claiming that the programme was "just IRA propaganda."

The representation of the Provisional IRA was at the heart of the second major conflict, over a BBC documentary entitled At the Edge of the Union. This featured an extended...
profile of Martin McGuiness of Sinn Fein, widely thought to be a leading IRA executive responsible for planning bombings. The programme gave him space to explain his views and showed him in his local community and at home with his family. Then Home Secretary Leon Brittan (who had not seen the film) wrote to the chairman of the BBC's Board of Governors urging them not to show it, arguing that "Even if [it] and any surrounding material were, as a whole, to present terrorist organisations in a wholly unfavourable light, I would still ask you not to permit it to be broadcast". The governors convened an emergency meeting and decided to cancel the scheduled screening. This very public vote of no confidence in the judgement of the corporation's senior editors and managers was unprecedented and was met with an equally unprecedented response from BBC journalists. They staged a one-day strike protesting against government interference with the Corporation's independence.

In his letter, Brittan had claimed that it was "damaging to security and therefore to the public interest to provide a boost to the morale of the terrorists and their apologists in this way." Refusing this conflation of "security" with the "public interest" is at the heart of television journalism's struggle to provide an adequate information base for a mature democracy. As the BBC's assistant director general put it in 1988, "it is necessary for the maintenance of democracy that unpopular, even dangerous, views are heard and thoroughly understood. The argument about the 'national interest' demanding censorship of such voices is glib and intrinsically dangerous. Who determines the 'national interest'? How far does the 'national interest' extend?" His argument was soundly rejected by the government. In the autumn of 1988, they instructed broadcasters not to transmit direct speech from members of eleven Irish organisations, including Sinn Fein. This ban has since been lifted, but its imposition illustrates the permanent potential for conflict between official conceptions of security and the national interest and broadcasters' desire to provide full information, rational debate and relevant contextualisation on areas of political controversy and dispute. As the BBC's former director general, Ian Trequethan, pointed out, the basic dilemma posed by television's treatment of terrorism is absolutely "central to the ordering of a civilised society: how to avoid encouraging terrorism and violence while keeping a free and democratic people properly informed."

Television's ability to strike this balance is not just a question for news, current affairs and documentary production however. The images and accounts of terrorism offered by television fiction and entertainment are also important in orchestrating the continual contest between the discourse of government and the state, the discourses of legitimised opposition groups, and the discourses of insurgent movements. This struggle is not simply for visibility—to be seen and heard. It is also for credibility—to have one's views discussed seriously and one's case examined with care. The communicative weapons in this battle are unevenly distributed however.

As the saturation coverage that the U.S. news media gave to the Shi'ite hijacking of a TWA passenger jet at Beirut in 1985 demonstrated very clearly, spectacular acts of retail terror can command a high degree of visibility. But the power to contextualise and to grant or withhold legitimacy lies with the array of official spokespeople who comment on the event and help construct its public meaning. As the American political scientist, David Paletz, has noted, because television news "generally ignores the motivations, objectives and long-term goals of violent organisations" it effectively prevents "their causes from gaining legitimacy with the public." This has led some commentators to speculate that exclusion from the general process of meaning making is likely to generate ever more spectacular acts designed to capitalise on the access provided by the highly visible propaganda of the deed.

Bernard Lewis, one of America's leading experts on the Arab world noted in his comments on the hijacking of the TWA airliner, that those who plotted the incident "knew that they could count on the American press and television to provide them with unlimited publicity and perhaps even some form of advocacy," but because the coverage ignored the political roots of the action in the complex power struggles within Shi'ite Islam, it did little to explain its causes or to foster informed debate on appropriate responses. As the television critic of the Financial Times of London, put it; "There is a criticism to be made of the coverage of these events, but it is not that television aided and abetted terrorists. On the contrary, it is that television failed to convey, or even to consider, the reasons for what President Reagan called 'ugly, vicious, evil terrorism.'"

News is a relatively closed form of television programming. It privileges the views of spokespeople for governments and state agencies and generally organises stories to converge around officially sanctioned resolutions. Other programme forms, documentaries, for example, are potentially at least more open. They may allow a broader spectrum of perspectives into play, including those that voice alternative or oppositional viewpoints, they may stage debates and pose awkward questions rather than offering familiar answers. Television in a democratic society requires the greatest possible diversity of open programme forms if it is to address the issues raised by terrorism in the complexity they merit. Whether the emerging forces of technological change, in production and reception, channel proliferation, increased competition for audiences and transnational distribution, will advance or block this ideal is a question well worth examining.

THAT GIRL
U.S. Situation Comedy

That Girl was one of the first television shows to focus on the single working girl, predating CBS' Mary Tyler Moore Show by four years. This situation comedy followed heroine Ann Marie's adventures as she struggled to establish herself on the New York stage while supporting herself with a variety of temporary jobs.

That Girl was reputedly inspired by the life of its star, Marlo Thomas. The daughter of famous television comedian Danny Thomas wanted success on her own merits, so she moved to England where her father was unknown. After five years struggling, she won acclaim in Mike Nichol's 1965 London version of Barefoot in the Park. Returning home, she starred in an ABC pilot, Two's Company, about a model married to a photographer. Although it was not picked up, ABC head Ed Sherick offered Thomas other roles, including the lead in My Mother, the Car. She rejected these parts and instead approached the network with an idea for a show called Miss Independence centered on the life of a young, single career girl. ABC was interested, but wanted some kind of chaperone as a regular character.

Like The Patty Duke Show, Peyton Place, and Gidget, That Girl was one of many shows ABC targeted at the young, female audience during the mid- to late-1960s. The network had successfully turned to this up-and-coming demographic as early as 1963, capitalizing on the nascent women's movement and youth revolution. Like most of these shows, That Girl followed an already established trend, offering a diluted and sanitized version of the glamorized single girl lifestyle popularized by the likes of Helen Gurley Brown, Mary McCarthy, and Jacqueline Susann. Unlike their heroines, though, Ann Marie remained, at the behest of network standards and practices offices, chaste. The executives even wanted her to marry steady boyfriend, magazine executive, Don Hollinger (whom she met in the first episode) but Thomas resisted, consenting only to a September 1970 engagement.

While it focused on a self-supporting woman, That Girl did not center on the workplace (unlike The Mary Tyler Moore Show), largely because Ann's employment was essentially itinerant. Instead, her efforts to succeed revealed the
merger of public and private life. The erratic nature of her employment undermined everyday routines of working life, positioning her independence as highly precarious—particularly when contrasted to the steady rituals of Don's career. Ann's temporary jobs presented comedic opportunities as she struggled to retain her dignity in the face of often demeaning circumstances while foregrounding her continued reliance on her parents and Don. Female independence was thus presented as a site of struggle—both against the restrictions of the male-dominated workplace and the social and familial pressures for marriage. Meanwhile, her very choice of profession—the stage—undermined her desire for success, casting it in terms of fantasy. This lack of realism was evident from the start. Even Thomas noted that her struggling actress heroine never changed or developed. This refusal of change ultimately led to the show's 1971 cancellation: despite good ratings Thomas announced that she could not face playing the same character for eternity.

THAT WAS THE WEEK THAT WAS

British Satirical Review

The idea for That Was the Week That Was (which familiarly became known as TW3) came partly from the then director-general of the BBC, Hugh Greene, who wanted to "prick the pomposity of public figures"—but it was the team of Ned Sherrin, Alasdair Milne and Donald Baverstock that was responsible for developing its successful format. The trio had previously worked on the BBC's daily early-evening news magazine show Tonight (1957–65—revived and revamped version, 1975–79) and the light-hearted style and wide-ranging brief of that show often allowed certain items to be covered in a tongue-in-cheek, irreverent or even satirical way. TW3, in its late-night Saturday slot, moved those elements a stage further, and, taking a lead from the increased liberalism of theatre and cinema in Britain, was able to discuss and dissect the week's news and newsmakers using startlingly direct language and illustration. Whereas Tonight was gentle, TW3 was savage, unflinching in its devotion to highlight cant and hypocrisy and seemingly fearless in its near libellous accusations and innuendos. It became an influential, controversial and ground-breaking satire series, which pushed back the barriers of what was acceptable comment on television. Complaints poured in, but so did congratulations, and, despite enormous political pressure, Hugh Greene—determined in his quest to see a modern, harder BBC through the 1960s—stood by his brainchild.

Stylistically the show broke many rules: although it was commonplace on "live" shows of the 1950s (like the rock 'n' roll show 6-5 Special) to see the cumbersome cameras being pushed from one set to the next, TW3 went beyond that. A camera mounted high up in the studio would offer a bird's-eye view of the entire proceedings, showing the complete studio set-up with the flimsy sketch sets, the musicians, backroom personnel, the audience, other cameras, etc. It seemed to indicate that the viewing audience was to be treated as equals—that both creator and viewer knew it was a studio, knew the sketches weren't really set in a doctor's waiting-rooms but in a three walled mock-up, knew that
make-up girls would wait in the wings with powder and paint—so why hide it? The format of the show was simple, rigid enough to keep it all together, flexible enough to let items lengthen or shorten or disappear altogether, depending on time. Millicent Martin (the only permanent female member of the team) would sing the title song (music by Ron Grainer with Caryl Brahms providing a new set of lyrics each week relating to the news of the past few days) then David Frost, as host, would introduce the proceedings and act as link man between the items and often appearing throughout in sketches or giving monologues. (Originally John Bird was to be host but declined; Sherrin saw Frost at a club, doing an act where he gave a press conference as Prime Minister Harold MacMillan, and offered him the role of co-host with Brian Redhead who dropped out after doing the untransmitted pilot.) Bernard Levin interviewed people in the news or with strongly held views and his acid wit added an edge which occasionally produced flare-ups both verbal and physical. (A member of the studio audience once punched him, rather ineffectually, following a scathing review he had written.) Lance Percival acted in sketches and sang topical calypso (a device used on Tonight) many of which were ad libbed. David Kernan was a resident singer whose strength was his ability to parody other singers and styles, Timothy Birdsall drew cartoons, Al Mancini pulled faces and the engine room was provided by Willie Rushton, Kenneth Cope and Roy Kinnear who fleshed out the sketches and comic chatter. The show occasionally featured guest artistes, most famously comedian Frankie Howerd whose popularity had waned somewhat. His one appearance on TW3 managed to dramatically resurrect his career, as his humour seemed to work for both traditionalists and this new, younger, harder generation.

The writing credits for the show read like a Who's Who of the sharp young talent of the time: John Albery, John Antrobus, Christopher Booker, Malcolm Bradbury, John Braine, Quentin Crewe, Brian Glanville, Gerald Kaufman, Herbert Kretzmer, David Nathan and Dennis Potter, David Nobbs, Peter Shaffer, Kenneth Tynan, Stephen Vinaver, Keith Waterhouse and Willis Hall—plus contributions from the show’s creative staff: Sherrin, Frost, and Levin.
Memorable moments from the series include Gerald Kaufman’s list of silent MPs which highlighted politicians who hadn’t spoken in the House of Commons in ten or fifteen years. The sketch caused a furore when it was read out by the team, despite the fact that the information was readily available. Kenneth Cope’s “confession” monologue (written by John Braine) featured a figure, hidden in shadows, who confesses to being heterosexual and relates the misery it can cause. Frost’s scathing profile of Home Secretary Henry Brooke insinuated, amongst other things, that his intractability in an immigration case had led to the murder of the subject. Millicent Martin sang with black-faced minstrels about racism in the Southern States. And most memorable of all was the truly serious edition immediately following President Kennedy’s assassination. The whole show was given over to the subject, tackling the shock felt and the implications of the shooting with rare solemnity and dignity. (That episode was lodged at the Smithsonian Institute.)

A U.S. version of the series (also featuring Frost) debuted 10 January 1964 on NBC and ran until May 1965. Singer Nancy Ames took the Millicent Martin role and Buck Henry, Pat Englund and Alan Alda were among the regulars. The show proved equally groundbreaking in the United States, and, like the British version, was no stranger to controversy.

THAW, JOHN
British Actor

A versatile and successful British actor, John Thaw has worked in television, theatre, and cinema. But the small screen has guaranteed him almost continual employment throughout his exceptional career.

After training at the Royal Academy of Dramatic Art, at a 1960 stage debut he was “discovered” and promoted by Granada TV. His first TV outing was in 1961; since then he has taken the lead role in an impressive array of series. He has had parts ranging from The Avengers to Z Cars, and the lead in the series Redcap before his big break in The Sweeney (1974–78), a landmark in the police-action genre. Thaw played rough-mannered detective Jack Regan of the Flying Squad. The Sweeney was described as a U.S.-influenced imitation of West Coast shows, and was prominent in debates about the levels of violence and bad language on television, criticised for glamourising guns and car chases. Its superiority over standard violent fare, however, owed much to Thaw’s performance, along with the growing rapport between his and Dennis Waterman’s characters and the show’s constant originality.

For years after The Sweeney, Thaw found it difficult to throw off the Jack Regan image, but in 1987 he began another long-running detective series for which he is perhaps best known. Inspector Morse was remarkably popular with critics and audiences internationally. Its ITV ratings in Britain were second only to those of Coronation Street. Again, the show owed much of its success to Thaw’s central BAFTA-winning performance. He holds together Morse’s eccentricities—the irascible, world-wearied, and introspective crossword and classical music lover. Julian Mitchell, writer of several episodes of Morse, sees Thaw as the consummate TV actor: “His technique is perfect, and by seeming to do very little he conveys so much.” In this way he suggests hidden depths to Morse, and conveys his troubled morality. The tranquility and gentle English manner associated with Morse are a far cry from The Sweeney. It has gained fans as an antidote to violent American TV, and has established Thaw as the thinking woman’s trumpeter.

Audiences are accustomed to Thaw’s downbeat manner in gloomy roles, but he claims to prefer doing comedy. He played the lead in the sitcom Home to Roost, appeared with Sweeney
partner Waterman in the 1976 Morecambe and Wise Christmas Show, and starred in the widely derided A Year in Provence, which lost a record ten million viewers during one series.

Despite this hiccup, Thaw remained a very bankable star. Kavanagh QC, a part written especially for him after Provence, was another big hit. He was back on familiar territory as a barrister reconciling principle and his working-class roots with a lucrative law practice.

Thaw sees himself as a “jobbing actor, no different from a plumber.” Part of his success may be his ability to play everyman roles that people can relate to easily. Despite a distinctly unclassical repertoire, he has continued to act on stage whenever his busy TV career has allowed, latterly in “special guest star” roles. He has also appeared in several feature films, including two Sweeney films, and Cry Freedom.

THIRTY SOMETHING

U.S. Drama

Winner of an Emmy for best dramatic series in 1988, thirtysomething (ABC, 1987–1991) represented a new kind of hour-long drama, a series which focused on the domestic and professional lives of a group of young urban professionals—a socio-economic category of increasing interest to the television industry. The series attracted a cult audience of viewers who strongly identified with one or more of its eight central characters, a circle of friends living in Philadelphia. And its stylistic and story-line innovations led critics to respect it for being "as close to the level of an art form as weekly television ever gets," as The New York Times put it. When the series was canceled due to poor ratings, a Newsweek eulogy reflected the baby boomers' sense of losing a rendezvous with their mirrored lifestyle: "the value of the Tuesday night meetings was that art, even on the small screen, reflected our lives back at us to be considered as new." Hostile critics, on the other hand, were relieved that the self-indulgent whines of yuppydom had finally been banished from the schedules.

The show thirtysomething spearheaded ABC's drive to reach a demographically younger and culturally more capital-rich audience. Cover stories in Rolling Stone and Entertainment Weekly explored the parallels between the actors' and characters' lives, as well as the rapport generated with the audience, who were seen as sharing their inner conflicts. Michael Steadman, an advertising copywriter struggling with the claims of his liberal Jewish background, and his wife Hope, a part-time social worker and full-time mother are the "settled" couple. The Steadmans were offset against Elliot, a not-really-grown-up graphic artist who was Michael's best friend at Penn, and his long-suffering wife Nancy, an illustrator who separated from him and developed breast cancer in subsequent seasons. Three unmarried friends also date back from college days: Ellyn is a career executive in city government; Gary teaches English at a liberal arts college; and Melissa, a freelance photographer, is Michael's cousin. While the two couples wrestle with their marriages and raising their children, the three others have a series of love affairs with outsiders to the circle. For Gary, after a quasi-incestuous relation with Melissa, fate holds a child out of wedlock with temperamental feminist Susanna, the college's denial of tenure, his life as a househusband, and finally—in one of the most publicized episodes—sudden death in a cycling accident.

The title, referring to the age of the characters, was written as one word (togetherness) and in lower case (ee cummings and the refusal of authority). "Real life is an acquired taste" was the network promo for the series, as its makers explored the boundaries between soap operatics and verisimilitude, between melodrama and realism. Co-creators Edward Zwick and Marshall Herskovitz (who had met at the American Film Institute) claimed a "mandate of small moments examined closely", dealing with "worlds of incremental change", loosely modeled on their own lives and those of their friends. Central to their sense of this fictional world was a high degree of self-consciousness and media awareness. "Very Big Chill", as one character put it, referring to Lawrence Kasdan's 1983 film. The movie was often seen as a progenitor of the series, defining a generation through their nostalgia for their fancy-free days before adulthood. The Big Chill focuses on a "reunion of friends" in turn refers to the small budget Return of the Secaucus Seven made by John Sayles in 1980. And yet another cinematic touchstone for the ciné-literate makers was It's a Wonderful Life (Capra, 1946), the perennial favorite of American movie-goers, to which homage was paid in the production company ("Bedford Falls") logo. Capra's political liberalism emerged in the series in the distaste for patriarchal and capitalist power (embodied in Miles, the ruthless CEO of the advertising company), while the film aesthetic carried over into the cinematography, intertextual references and ambitious story-lines, which occasionally incorporated flashback, daydream and fantasy sequences. This complex mixture of cinematic and cultural antecedents can be summed by suggesting that in many ways thirtysomething's four seasons brought the sophistication of Woody Allen's films to the small screen.
Although in the vanguard for centering on “new” (postfeminist) men, for privileging “female truth,” and dealing with touchy issues within sexual relations, with disease and death, the series never really challenged gender roles. While the problem of the domestication of men, of defining them within a familial role without lessening their desirability and their sense of self-fulfillment was one of its key preoccupations, in the end the traditional sexual division of labor was ratified. Although it was the first series to show a homosexual couple in bed together, it posed very gingerly any alternative to the heterosexual couple. Nevertheless, the prominence of a therapeutic discourse, the negotiation of identity in our postmodern era, won it an accolade from professional psychologists.

The series was occasionally criticized, too, for its social and political insularity, for not dealing with problems outside the affluent lifestyle and 1960s values of its characters. Zwick and Herskowitz described it as “a show about creating your own family. All these people live apart from where they grew up, and so they’re trying to fashion a new sense of home—one made up of friends, where holidays, job triumphs, illnesses, and gossip all take on a kind of bittersweet significance.”

The series’ influence was evident long after it moved to syndication on the Lifetime cable network and its creators moved on to feature film careers. That influence was evident in everything from the look and sound of certain TV advertisements, to other series with feminine sensibilities and preoccupations with the transition from childhood to maturity (Sisters), to situation comedies about groups of friends who talk all the time (Seinfeld). My So-Called Life (ABC, 1994), a later and less successful series produced by many of the same personnel, even extended the subjectivity principle to a teenage girl caught between her family and school friends. That series was perhaps an indication of a new shift in the targeting of “generational audiences,” the new focus now on “twentysomethings,” as television searched for a way to reach the offspring of the baby boomers.

THIS HOUR HAS SEVEN DAYS
Canadian Public Affairs Series

This Hour Has Seven Days has repeatedly been cited as the most exciting and innovative public affairs television series in the history of Canadian broadcasting. It was certainly the most popular, drawing more than three million viewers at the time of its controversial cancellation by CBC management, which was unable to withstand the cries of outrage from offended guardians of public morality and the growing insurgence of the Seven Days production team. The creation of two young producers, Patrick Watson and Douglas Leiterman, the series debuted on 4 October 1964 and came to its well-publicized end after 50 episodes on 8 May 1966.

Watson and Leiterman had worked together as co-producers on two previous public affairs series, Close-Up and Inquiry. Given the go-ahead to create a new public affairs series, they envisioned a show that would be stimulating and exciting for the Canadian public, and that would develop a wider and more informed audience than previous public affairs shows. Both producers were deeply committed to the importance of public service broadcasting and to the import-
ance of pushing the boundaries of television journalism to reflect the techniques of investigation and advocacy more prevalent in print journalism. Leiterman in particular argued against the prevailing ideology of CBC journalistic practice that called for adhering to the strict tenets of objectivity and "studious neutrality." Watson brought a more intellectual approach to the show, having studied English literature and linguistics in undergraduate and graduate school.

The show was launched with great fanfare in the fall of 1964 with a relatively large budget by the CBC of over $30,000 per show, about twice the average of other public affairs programs. The first year’s shows were co-hosted by John Drainie, Laurier LaPierre, an academic historian turned TV talent, and Carole Simpson, soon replaced by Dinah Christie. The role of the women was limited primarily to songs or satire. Upon Drainie’s illness at the start of the second year, Watson was persuaded to abandon his producer role to join the on-air team in a move that CBC management thought would reduce the controversial style of the program. A very talented and energetic young team of producers, reporters, interviewers, and filmmakers was recruited. They included some of the prime future talent in Canadian documentary film and television, such as Beryl Fox, Donald Brittain, Allan King, Daryl Duke, Peter Pearson, Alexander Ross, and Larry Zolf.

Clearly inspired by the earlier British satirical review of the news, That Was the Week That Was, Seven Days utilized a one-hour, magazine format that combined satirical songs and skits with aggressive “bear pit” style interviews, investigative reports and mini-documentaries. On an irregular basis the entire show would be devoted to an in-depth documentary film under the title “Document.” Several important award-winning films were produced and shown. One of the most noted was Beryl Fox’s “Mills of the Gods,” a moving examination of life for American soldiers and Vietnam peasants during the Vietnam War. A distinct point of view, which was new to public affairs TV, was often very present in these productions.

A concrete example of one show’s line-up might best illustrate the basic elements of the magazine format and explain why the series made CBC executives nervous and upset the more traditional journalists and members of the public. The episode for 24 October 1965 opened with a satirical and irreverent song by Christie about the Ku Klux Klan, followed by preview cuts of later show segments, credits and a welcome of the live studio audience by LaPierre. (Live audiences were a staple of the program, contributing to its actuality impact.) The first story was a filmed report on the funeral for a Sudbury, Ontario, policeman, including an interview with his family and a colleague. It underscored the important role of the unrecognized policemen across Canada. The second story focused on the current Federal election featuring sometimes irreverent street interviews from Toronto and Vancouver, and finishing with a shot of an empty chair and the question of whether the party leaders will show up to be questioned. The next segment was a satirical sketch portraying Harold Wilson, then prime minister of England, in conversation with Lester Pearson, then prime minister of Canada running for reelection. The fourth story was a short feature on Penthouse magazine with pictures, interviews with the publisher and two British clergy, and commentary about the objectification of women. The fifth story was an on-location interview of Orson Welles by Watson. The sixth story was a filmed, almost lyrical, portrait of the Canadian boxer George Chuvalo. Running almost twenty-two-and-a-half minutes was the final story on the Ku Klux Klan (KKK). After an introduction by Christie, a satire of the Ku Klux Klan appearance before the U.S. House Un-American Activities Committee, and a short film of the civil rights struggle in the United States, two members of the Klan were invited into the “hot seat” to be interviewed in full costume. About halfway through the interview and after a question as to whether the Klansmen would shake hands with a black man, a black civil rights leader from the United States was invited to join the interview. There was some exchange of views, then the interviewer tried to get the KKK members to shake hands with the black leader, at which time they stood up and left the set. The show closed with a request for feedback and a reprise of the Christie song.

The fast pace, the topicality of many of the segments, the portrayal and incitement of conflict, the irreverence of songs and skits, and the occasional emotionalism of the on-air team members, all added to the popularity and the controversy that built around Seven Days. LaPierre was once shown wiping away a tear after one filmed interview—a gesture that the then CBC President Ouimet remembered angrily years later as one more affront to appropriate journalistic practice. The production team was proud of its non-traditional approaches to portraying the news, selecting guests, and even the way it gathered material.

This Hour Has Seven Days
for the show. At different times “regular” journalists accused Seven Days reporters of stealing material or of poaching on their territory. One of the final straws for the program was going behind the scenes of a “Miss Canada Pageant” to film and interview contestants in their hotel rooms and bedclothes, despite the fact that the rival CTV network had an exclusive coverage contract with the pageant. This and other journalistic “improprieties” led to a memo from Bud Walker, vice president of the CBC that foreshadowed the demise of the series.

The cancellation of Seven Days and the firing of Watson and LaPierre in the spring of 1966 (Leiterman was later forced out) was met with a large public outcry, probably the largest in Canadian history for any TV program, and certainly for any public affairs program. Partly orchestrated by Watson, Leiterman and LaPierre, there were public demonstrations, thousands of letters and phone calls, indignant editorials, threats to resign by CBC staff, and calls for Parliamentary inquiries. As a result, a Parliamentary committee hearing that favorably featured the Seven Days team stretched over several weeks. Prime Minister Pearson appointed a special investigator, which kept the program in the news for several more weeks. The final reports seemed to chastise both sides in the dispute, but was harshest with the CBC for its heavy handedness and bureaucratic timidity. Watson, Leiterman and LaPierre were public heroes for a time. Several members of management resigned, at least two in protest at the handling of the show and its principals. Vice president Walker lost his job ostensibly for the way he handled the dispute but also as a demonstration to politicians that the CBC had gotten the message.

Despite its non-traditional approaches, Seven Days usually dealt with mainstream concerns and issues, taking a slightly left-leaning perspective on social issues. It might have challenged members of the Canadian elite but it rarely went outside the frame of dominant beliefs. It was often creative in the way that it visualized stories originating in studio, considering the available technology; further, it imaginatively took advantage of the recent breakthroughs in hand-held cameras and portable sound recording in its filmed stories and documentaries. Watson, Leiterman, and the Seven Days team often seemed to achieve the goal of involving the viewer in the emotion and actuality of television while innovating on and stretching the conventions of TV journalism. It is also clear that the team was often seduced by the power of television to embarrass guests or sensationalize issues through manipulative set-ups like the KKK interview. The series often entertained, perhaps more than it informed, foreshadowing the current concern and debate over the line between news and entertainment. While the program demonstrated ways to attract, provoke, and stimulate a mass audience for current affairs, the conflict and ultimate sanction that resulted made it difficult for television journalists to experiment or take on controversial issues for several years after. In the years since Seven Days aired it has taken on the mythic mantle of “that was the way it was in the good old days” of Canadian TV journalism. While much of that reputation is deserved, the series also needs to be appreciated with a critical eye and ear.

THIS IS YOUR LIFE
U.S. Biography Program

This Is Your Life, which was broadcast from 1952 to 1961, is one of the best remembered television series from the 1950s. The format of This Is Your Life was based on a rather simple principle—guests were surprised with a presentation of their past life in the form of a narrative read by host Ralph Edwards and reminiscences by relatives and friends. But the format was also quite shrewd in its exploitation of television’s capacity for forging intimacy with viewers through live transmission and on-air displays of sentimentality.

This Is Your Life was the creation of host Ralph Edwards, who was also the host of radio’s popular Truth or
Consequences. In a 1946 radio broadcast of the latter program, Edwards presented a capsule narrative of the past life of a disabled World War II veteran who was having difficulties adjusting to post-war life. Edwards received such positive feedback from this show that he developed the formula for a separate radio program called This Is Your Life. It began airing on radio in 1948 and became a live television program in 1952, running on the NBC network until 1961, and reappearing in syndicated versions briefly in the early 1970s and 1980s (during this last period, it was hosted by actor Joseph Campanella).

In its network television years, This Is Your Life alternated in presenting the life stories of entertainment personalities and "ordinary" people who had contributed in some way to their communities. Edwards always insisted that the theme of "Love thy neighbor" was clear no matter who was the subject of a particular program. The host was often quoted as saying that the lives under examination must represent something "constructive," must have been "given a lift above and beyond the call of duty and...in turn, he or she has passed on the help to another." For that reason, the emotion expressed by the guest, who having first been surprised by Edwards with the on-air announcement "this is your life!" and then with the appearance of people from his or her past, was justified as a source for audience inspiration rather than voyeurism.

Entertainment personalities who were subjects of the program ranged from broadcast journalist Lowell Thomas (who displayed obvious anger and embarrassment over the "surprise") to singer Nat "King" Cole, from the famous silent film star Gloria Swanson to contemporary movie favorite Debbie Reynolds. While Edwards claimed that there were few "leaks" to the subjects about the show (if there were leaks, that subject was immediately dropped), there were several notable occasions when guests were informed in advance of their tributes—for example, Eddie Cantor was told because his heart trouble worried producers regarding the show's "surprise factor," and singer-actress Lillian Roth and actress Frances Farmer were told because their well-known troubled pasts were considered subjects too delicate (and perhaps unpredictable) for the program's usual spectacle of surprise.

When This Is Your Life reviewed the lives of "ordinary people," Edwards and the show staff relied on help from the individual's community. In some ways the program's coverage of individuals who achieved despite handicaps was ahead of its time when indicating how the subject had surmounted societal bigotry. Not surprisingly, the show shared with its times a Cold War fervor towards conformity and patriotism. For example, in a 1958 program featuring a Japanese-American druggist who had been sent to an internment camp during World War II, the life narrative recounts his struggle to establish a pharmacy practice in a bigoted community. But Edwards praises the subject's behavior in the internment camp when he squelched a camp uprising protesting forced labor. At the end of the show, members from his most recent community embrace him and Edwards announces that Richard Nixon has donated an American flag and Ivory soap has donated money for a flag pole for the town which has overcome racial prejudice.

In the late 1980s, Edwards and his production company made many of the episodes featuring Hollywood celebrities available for re-broadcasting. American Movie Classics cable network channel aired these for several years to accompany screenings of movies from studio-era Hollywood.

THOMAS, DANNY
U.S. Comedian/Actor

Danny Thomas was one of television's most beloved and enduring entertainers. His comedic talents were surpassed only by his shrewd production activities and his well-known philanthropy. Thomas began his career as the stand-up comic Amos Jacobs, developing his story-telling shtick into a familiar routine of lengthy narratives peppered with a blend of Irish, Yiddish, Lebanese and Italian witticisms. Quite often these routines tended toward sentimentality, only to be rescued in the end by what Thomas called the "treacle cutter," a one-liner designed to elevate the maudlin bathos into irony.
Like many early television comics, Thomas developed his routines touring in a variety of clubs. Restricted mostly to his home environs of the midwest, he secured a three-year deal at Chicago's 5100 Club, where he was spotted by the powerful head of the William Morris Agency. "Uncle" Abe Lastfogel was to become Danny's mentor, overseeing his New York night-club appearances, arranging a USO tour for him with Marlene Dietrich and landing him a part on Fanny Brice's radio show. By 1945, he was declared "best newcomer in radio" by the trade papers and Joe Pasternak cast him in his film, The Unfinished Dance. Refusing the advice of three different studio heads to surgically alter his trademark nose, Thomas' film career was short-lived, but fairly respectable. In the early 1950s, he left the film industry to good reviews for his title role appearance in the 1951 Warner Brothers release of The Jazz Singer, and his co-starring role in the Doris Day vehicle I'll See You in My Dreams.

Meanwhile, tired of the night-club circuit, Thomas was anxiously pursuing a television series. His first television appearance was on NBC's Four Star Revue, where he co-starred with Jimmy Durante, Jack Carson and Ed Wynn. The variety show format, with its fast-paced, three-minute sketches, was ill-suited to Danny's comedic style which depended upon expository monologues and lengthy narratives. For the series' second season, the network ordered a format change wherein the four rotating hosts were replaced by a procession of headliners. With all but Ed Wynn's departure, the program became the All Star Revue.

Thomas obtained his own program when agent Abe Lastfogel pressured fledgling network ABC into accepting Thomas as part of their terms for acquiring the much-coveted Ray Bolger. ABC, familiar with Thomas' previously ill-received television performances, insisted upon a sitcom. It was during a prolonged brainstorming session with producer Lou Edelman and writer Mel Shavelson that Thomas inadvertently came up with the autobiographical premise that was to become Make Room for Daddy. As the three worked futilely into the night, Thomas grew impatient and pleaded that he simply wanted a series so that he could stay put with his family for awhile. The result was Make Room for Daddy, a show which revolved around the absentee-father dilemmas of traveling singer-comic "Danny Williams." The title was suggested by Thomas' real-life wife, Rose Marie, who, during Danny's frequent tours, allowed their children to sleep with her. Upon her husband's return, the children would have to empty dresser drawers and leave the master bed to, quite literally, "make room for Daddy."

Incorporating Thomas' singing and story-telling talents, the program was a blend of domestic comedy and variety program (during Danny's fictionalized "nightclub engagements"). It became one of television's most successful comedies, winning numerous awards, including best new show for the 1952-53 season. Despite its success, the program underwent a number of transformations, most notably when Jean Hagen, who played the part of wife Margaret, left the series to attend to her film and stage careers. For the fourth season, Danny played a widower, and a succession of guest stars appeared as potential replacement wives. In the 1956 season finale, Danny proposed to guest star Marjorie Lord who, along with child star Angela Cartwright, joined the Williams' family for the program's remaining seven years. The start of the 1957 television season also saw the program on a new network (CBS) when ABC president (and Hagen ally) Robert Kintner lost interest in the series. The newly titled Danny Thomas Show slid into the spot formally occupied by CBS' mega-hit I Love Lucy, where it remained in the top ten until voluntarily leaving the network when the performers sought new avenues of creative expression.

While starring in Make Room for Daddy, Thomas met Sheldon Leonard, a former gangster-type actor with aspirations for directing. Leonard took over as director for the program midway into its first season, eventually becoming executive producer. Together, Thomas and Leonard established Thomas-Leonard Productions, a powerhouse production company, based on the Desilu lot that was responsible for a multitude of successful series, including The Real McCoys, The Andy Griffith Show, The Joey Bishop Show, The Bill Dana Show and The Dick Van Dyke Show. In 1965 when Leonard left to develop I Spy, Thomas continued independently, producing The Danny Thomas Hour, an anthology series for NBC, and joining with Aaron Spelling to create and produce The Mod Squad and other programs. While a
1967 attempt to buy Desilu from Lucille Ball was unsuccessful, Thomas continued to create and produce programs under the banner of Danny Thomas Productions.

Thomas had an enormous positive impact upon the growing medium. The off-camera stand-up routines he performed for the in-studio audience just prior to filming each episode of Make Room for Daddy were imitated on other programs and institutionalized as the now commonplace "warm-up." The Andy Griffith Show was the first real spin-off for network television, originating in a 1960 episode of The Danny Thomas Show. As a producer Thomas read scripts and supervised a plethora of top rated programs and was personally responsible for casting Mary Tyler Moore as Laura Petrie in The Dick Van Dyke Show. His influence as producer continued not only in his own projects but through the work of his children, notably daughter Marlo, who became a renowned actress-producer-director, and his son Tony, who with partners Susan Harris and Paul Junger Witt is responsible for a veritable catalogue of 1970s and 1980s hit programs, including Soap and The Golden Girls.

Thomas' personal integrity is as well known as his acting and producing talents. In the 1950s he successfully protected two blacklisted writers who continued to write for his television series under assumed names. And, in 1983, he was rewarded with the Congressional Medal of Honor for his work in establishing the St. Jude’s Children’s Research Hospital, a cause he continued to promote and support until his death in 1991.

—Nina C. Leibman

DANNY THOMAS. Born Muzyad Yakhoob in Deerfield, Michigan, U.S.A., 6 January 1914. Married: Rose Marie Cassaniti, 1936; two daughters and one son. Began career in radio, Detroit, 1934; worked as master of ceremonies in night club, 1938–40; appeared on Chicago radio, 1940; worked as master of ceremonies, 5100 Club, Chicago, 1940–43; developed own radio, television programs, performed in clubs and theaters worldwide, through 1940s; performed overseas during World War II with Marlene Dietrich and company, and solo; performed with Fanny Brice on radio, 1944; made motion picture debut in The Unfinished Dance, 1946; starred in long-running television series, Make Room for Daddy; produced successful television series such as The Dick Van Dyke Show. Honorary degrees: L.H.D., Belmont Abbey, International College, Springfield, Massachusetts; Christian Brothers College, Memphis, LL.D., Loyola University, Chicago; D. Performing Arts, Toledo University, Loyola-Marymount University, Los Angeles. Founder, St. Jude Children's Research Hospital, 1962, Memphis. Recipient: Emmy Award, 1954; Layman’s Award from the American Medical Association; Better World Award from the Veterans of Foreign Wars, 1972; Michelangelo Award from Boys Town of Italy, 1973; Humanitarian Award from Lions International, 1975; Father Flanagan-Boys Town Award, 1981; Murray-Green-Meany Award, AFL-CIO, 1981; Hubert H. Humphrey Award, Touchdown Club, 1981; American Education Award, 1984; Humanitarian Award, Variety Clubs International, 1984; Congressional Medal of Honor, 1984; Sword of Loyola Award, Loyola University, Chicago, 1985; decorated Knight Malta; knight commander with star, Knights of Holy Sepulchre, Pope Paul VI. Died in Los Angeles, 6 February 1991.

THOMAS, TONY

U.S. Producer

Tony Thomas, a native of California and member of one of U.S. television’s leading families, began his own TV career as an associate producer at Screen Gems and moved from that position to become a producer at Spelling/Goldberg Productions. These associations brought Thomas into early contact with his future partner, Paul Junger Witt, who also started his career at Screen Gems. Indeed, their first significant venture together was the award-winning made-for-television movie, Brian’s Song, which Witt produced. The Academy of Television Arts and Sciences recognized Brian’s Song with six Emmys, including one for Outstanding Single Program.

In 1975 Thomas and Witt formed their own company, Witt/Thomas Productions, and a year later the two men joined with the talented writer, Susan Harris, to form a second entity, Witt/Thomas/Harris. The three launched their first series in 1977, the highly acclaimed Soap. Brutally attacked by a reviewer for Newsweek, who had not even seen the show, Soap quickly drew fire from uninformed conservative religious leaders who threatened to boycott the ABC comedy. As Thomas recalls, it was very close to the time of the first broadcast before a full complement of sponsors was assembled. And sponsorship was a continuing difficulty for the network. The producers credit Fred Silverman of ABC for standing firmly behind their creation in spite of the attacks.

There followed a string of successes, including Empty Nest, Benson, and The Golden Girls, for which Thomas, along with Witt and Harris, received Emmys in 1985-86 and 1986-87. In the 1996-97 season, Witt/Thomas began its fourth year of producing The John Larroquette Show, and introduced two new series, Pearl and Common Law.

Through the company, Thomas also began producing feature films with Witt. Working with Touchstone Pictures, they produced the Oscar-winning film Dead Poets’ Society. Their feature work also included the 1992 release Final Analysis, and continued in 1996 with three films in production in association with Warner Brothers.

Tony Thomas is active in fundraising efforts on behalf of St. Jude’s Hospital, founded by his father Danny in 1961. It is the world’s largest childhood cancer research center.

The Thorn Birds

U.S. Miniseries

The miniseries *The Thorn Birds*, based on Colleen McCullough’s 1977 best-selling novel, was broadcast on ABC for 10 hours between 27 and 30 March 1983. Set primarily on Drogheda, a fictional sheep station in the Australian outback, the melodrama focused on the multi-generational Cleary family, and spanned the years from 1920 to 1962.

At the outset, the family—patriarch Paddy Cleary (Richard Kiley), his wife, Fiona (Jean Simmons), and children—moved from New Zealand to Australia to help run Drogheda, owned by Paddy’s wealthy sister, Mary Carson (Barbara Stanwyck). Over the years, numerous deaths and disasters—fire, a drowning, a going by a wild boar—were to befall the family.

While the saga recounted the story of the entire Cleary clan, it focused primarily on the lone Cleary daughter, Meggie (Rachel Ward) and her relationship with Father Ralph de Bricassart (Richard Chamberlain). Although they met when she was just a child, Meggie grew up and fell in love with the handsome, young Catholic priest who had been banished to the outback for a previous disobedience. Father Ralph was torn between his own love for Meggie, his love for God, and his ambition to rise in the Catholic hierarchy. Spurred on by the spiteful Mary Carson—who was herself attracted to the priest—Father Ralph was forced to choose between his own advancement in the church and his love for Meggie. He chose the former, and soon found himself at the Vatican. As Father Ralph rose quickly through the hierarchy of the Catholic Church (eventually becoming a cardinal), Meggie married a sheep shearer named Luke O’Neill (Bryan Brown), bore a daughter (played as an adult by Mare Winningham), and ended up working as a maid in Queensland.

Years later, de Bricassart returned to Australia and to Meggie, who eventually left her husband. In the controversial third episode, the two consummated their relationship in what *Newsweek*’s Harry F. Waters called “the most erotic love scene ever to ignite the home screen,” but de Bricassart still was unable to give up the church. Unbeknownst to him, Meggie gave birth to his son (played as an adult by Philip Anglim), who in an ironic twist of fate himself became a priest before dying in a drowning accident. As in McCullough’s novel, the key underlying message of this miniseries was that each generation is doomed to repeat the missteps and failures of the previous generation.

While winning the 1983 Golden Globe Award for Best Miniseries, *The Thorn Birds* was not without its controversy. The subject matter—a priest breaking his vow of celibacy—was contestable enough, but the fact that ABC chose to broadcast the program beginning on Palm Sunday and running through Holy Week raised the ire of the United States Catholic Conference. In response, McDonald’s Corporation initially requested that its franchisees not advertise during the broadcasts. In the end, however, the company simply advised its franchisees to advertise only before Father Ralph and Meggie consummated their relationship.

Despite its controversial subject matter (or perhaps because of it), *The Thorn Birds* garnered an average 41 rating and 59 share over the course of its four-night run, making it the second highest rated miniseries ever, second only to *Roots* (1977). Its controversial third episode, in which Meggie and Father Ralph consummated their relationship, was at the time the fourth highest rated network entertainment show of all time (preceded only by the final episode of *M*A*S*H*, the “Who Shot JR?” episode of *Dallas*, and the eighth episode of *Roots*). In the end, an estimated 110 million to 140 million viewers saw all or some of the miniseries. *TV Guide*, in fact, has listed *The Thorn Birds* as one of the top 20 programs of the 1980s.

Produced for an estimated $21 million, *The Thorn Birds* appeared during the heyday of the network television miniseries, from the late 1970s to the mid-1980s, when the form was seen as “the salvation of commercial television.” In this context *The Thorn Birds* stood out for both its controversial qualities and its success. Like *Roots* and *The Winds of War* before it, *The Thorn Birds* exemplified the miniseries genre—family sagas spanning multiple generations, featuring large, big-name casts, and laden with tales of love, sex, tragedy, and transcendence that kept the audience coming back night after night. In 1996 ABC broadcast a sequel to *The Thorn Birds* in which Father Ralph and Meggie are again separated, and again struggle with their passion and their consciences. Though widely promoted, the program received far less attention from both critics and audiences.

THREE’S COMPANY

U.S. Situation Comedy

Three’s Company, an enormously popular yet critically despised sitcom farce about a young man living platonically with two young women, aired on ABC from 1977 to 1984. After a spring try-out of six episodes beginning Thursday, 15 March 1977, Three’s Company ranked number 11 among all TV shows for the entire 1976–77 season—at that time, an unheard-of feat. The next year Three’s Company moved to Tuesdays behind ABC powerhouses Happy Days and Laverne and Shirley, which it also followed that year as number three in the ratings. In 1978 and 1979, Three’s Company nudged out Happy Days for the number two spot, and late in this season moved its caustic landlords onto their own short-lived spin-off, The Ropers (which ranked number eight among all network shows after a spring tryout of six episodes, but was cancelled in 1980 after a dismal second season). In 1979 and 1980, Three’s Company shot past both of its lead-ins to become the highest-rated TV comedy in America. That summer, ABC ran back-to-back reruns of the show in its daytime line-up, foreshadowing huge success in syndication, which the series entered in 1982, two years before its network demise.

Three’s Company entered the television scene in the midst of TV’s “jiggle era” that began in 1976 with ABC’s Charlie’s Angels, and was the medium’s response to the sexual revolution and the swinging single. Three’s Company, though otherwise apolitical in content, was the first sitcom to address the sexual implications and frustrations of co-ed living, which in 1977 was still somewhat taboo. In the minds of many, male-female cohabitation was anything but innocent and, apparently, would lead only to the evils of premarital sex. Three’s Company toyed with this dilemma in its premise, an Americanized version of the 1973-76 British TV comedy Man About the House.

Set in Santa Monica, California, the series chronicled the innuendo-laden, slapstick-prone misadventures of the affably klutzy bachelor Jack Tripper (played by John Ritter) and the two single, attractive women—one a cute, down-to-earth brunette named Janet Wood (Joyce DeWitt), the other a sexy, dimwitted blonde named Christmas “Chrissy” Snow (Suzanne Somers). The three shared an apartment in order to beat the high cost of living, but Jack was also present to provide “manly protection.” Though he never broke his vow of keeping a “strictly platonic” relationship with his roommates, the three were really best friends who always looked after each other, the series was rife with double entendre suggesting they were doing much naughtier stuff. Antagonists in this domestic farce were the trio’s downstairs landlords—first the prudish Stanley Roper, an Archie Bunker-type played by Norman Fell, and later the comically swaggering “ladies man” Ralph Furley, played by Don Knotts. The landlords were so suspicious of the “threesome” arrangement that they would not permit it until after Jack told them he was gay, a “lifestyle” against which, ironically, neither discriminated by refusing housing. Though Jack was a heterosexual with many girlfriends, he masqueraded as an effeminate “man’s man” around the near-sighted Roper, who called him “one of the girls,” and Furley, who often tried to “convert” him; this comic device played heavily at first but was toned down considerably by the show’s fourth season. When out of Roper’s and Furley’s reach, Jack and his upstairs buddy, Larry Dallas (Richard Kline), leered at and lustred after every female in sight, including, in early episodes, Janet and Chrissy. Chrissy, especially, was prone to bouncing around the apartment braless in tight sweaters when she wasn’t clad in a towel, nightie, short-shorts or bathing suit. The irony here was that even though sex was so ingrained in the Three’s Company consciousness, nobody on the show ever seemed to be doing it—not even the show’s only married characters, the sex-starved Helen Roper (Audra Lindley) and her impotent handyman husband, Stanley, the butt of numerous faulty plumbing jokes.

Three’s Company’s sexiness and libidinal preoccupation helped gain the show tremendous ratings and media exposure. A February 1978 Newsweek magazine cover story on “Sex and TV” featured the trio in a sexy, staged shot. 60 Minutes presented an interview with Somers, who, in the
tradition of *Charlie's Angels*'s Farrah Fawcett, became a sex symbol and magazine cover-girl with top-selling posters, dolls and other merchandise. TV critics and other intellectuals rallied against the show, calling its humor sophomoric, if not insulting. Feminists objected to what they called exploitative portrayals of women (namely Chrissy) as bubble-brained sexpots. And while *Three's Company* was not as harshly condemned among conservative educators and religious organizations as its ABC counterpart *Soap* (a more satirical comedy with a shock value so high ABC almost delayed its premiere in fall 1977), it received low marks from the Parent-Teacher Association and was targeted in a sponsor blacklisting by the Reverend Donald Wildmon's National Federation for Decency.

Though *Three's Company* would become notorious as titillation television, its origins are that of British bedroom farce and America's "socially significant" sitcoms. In 1976, *M*A*S*H* writer/producer Larry Gelbart penned an initial *Three's Company* pilot script borrowing scenario and characterizations from Thames Television's *Man About the House*. But that pilot, with Ritter, Fell, Lindley and two other actresses, didn't sell. Fred Silverman, programming chief at ABC, requested a revamped pilot for a show he believed would be a breakthrough in sexiness the same way CBS' *All in the Family* was in bigotry. So show owners Ted Bergman and Don Taffner commissioned *All in the Family* Emmy-winning head writers and *Jeffersons* producers Don Nicholl, Michael Ross and Bernie West to rewrite the pilot. The roommates, in Gelbart's script an aspiring filmmaker and actresses, took on more bourgeois jobs in the new pilot—Jack became a gourmet cooking student, Janet a florist and Chrissy an office secretary. The female leads were recast (DeWitt was added for the second pilot, and Somers for a third), the chemistry clicked and ABC bought the series.

Most critics called *Three's Company* an illegitimate attempt to use the TV sitcom's new openness for its own cheap laughs. But Gerard Jones, author of *Honey, I'm Home: Sitcoms: Selling the American Dream*, notes that the minds behind *Three's Company* intelligently responded to the times. He suggests that producers Nicholl, Ross and West recognized that even the highly praised work of producer Norman Lear's shows "had always been simple titillation." The producers simply went a step further. They "took advantage of TV's new hipness" to present even more titillation "in completely undemanding form," thus creating "an ingenious trivialization that the public was waiting for."

Though *Three's Company* juggled beneath the thin clothing of titillation, the show was basically innocent and harmless, a contradiction that annoyed some critics. Its comedy, framed in the contemporary trapping of sexual innuendo, was basically broad farce in the tradition of *I Love Lucy*, very physical and filled with misunderstandings. (Lucille Ball loved *Three's Company* and Ritter's pratfalls so much she hosted the show's 1982 retrospective special). As fast-paced, pie-in-your-face farce, *Three's Company* spent little time on characterization. But underlying themes of care and concern among the roommates often fueled the comedy and occasionally led to a tender resolve by episode's end.

Behind the scenes three was company until fall 1980, when Somers and her husband/manager, Alan Hamel, asked for a raise from $30,000 per episode to $150,000 per episode plus 10% of the show's profits. Co-stars Ritter and DeWitt, confused and angry, refused to work with Somers, whose role was reduced to a phone-call from a separate soundstage at the end of each episode (Chrissy had been sent to take care of her ailing mother in Fresno). For the remainder of the 1980-81 season, Jenilee Harrison performed as a "temporary" roommate, Chrissy's clumsy cousin Cindy Snow. By fall 1981, Somers was officially fired, and Priscilla Barnes was cast as a permanent replacement, playing nurse Terri Alden, a more sophisticated blonde (Harrison's character moved out to attend a university but occasionally visited through spring 1982). Though viewership dropped when Somers left, *Three's Company* remained very popular, focusing more on Ritter's physical abilities and his character's transition from cooking student to owner of Jack's Bistro, a French cuisine restaurant.

*Three's Company*, weathering key cast changes and America's waning interest in sitcoms, remained a top ten hit through the 1982-83 season. But in 1984, after 174 episodes, a final People's Choice Award as Favorite Comedy Series and an eighth, embattled season in which it dropped out of the top thirty in the face of competition from NBC's comically violent *The A-Team*, *Three's Company* changed its format. A final one-hour episode saw Janet get married, Terri move to Hawaii and Jack fall in love and move in with his new girlfriend, Ritter, who won an Emmy for Outstanding Male Lead in a Comedy in 1984, was the only *Three's Company* cast member to remain when production resumed in the fall with a new cast and new title. Recycling much of its parent show's comic formula, *Three's a Crowd* focused on Jack Tripper's consummated relationship with his live-in girlfriend (Mary Cadorette), whose disapproving father (Soap's Robert Mandan) became their landlord. This incarnation lasted one season.

*Three's Company*, though later considered tame television, pushed the proverbial envelope in the late 1970s, opening the door for sexier, if not sillier, comedies offering audiences both titillation and mindless escape.

TIANANMEN SQUARE

Tiananmen Square will forever be remembered as a political rally that turned into a bloody massacre viewed on live television. The square in Beijing, China, was the site of a pro-democracy student demonstration in the spring of 1989, a demonstration violently crushed by the Chinese military. Scenes of the brutal crackdown were broadcast throughout the world. These images embittered the international public toward the Chinese government and had profound impact on subsequent foreign policy decisions. The demonstrations presented the media with an opportunity for a telegenic foreign story that was also easy for viewers to identify with. All of the major American networks and news organizations from many other countries had previously stationed prime-time news anchors and camera crews in Beijing in order to provide live broadcasts of Soviet President Mikhail Gorbachev's visit to the city. That visit marked a step toward rapprochement between China and the Soviet Union.

Thousands of students comprising China's pro-democracy movement also planned to use the state visit and the obligatory media coverage for their purposes. They had assembled and camped in the Square for two weeks in late May and early June. Among their demands were the rights to free speech and a free press, and they erected a symbolic Statue of Liberty named the "Goddess of Democracy." Their cause and the images they employed were very familiar to Americans and to other audiences around the world.

However, this hopeful demonstration came to a sudden and horrifying end. On the night of 3 June and into the early morning hours of 4 June, the army launched an assault on the unarmed civilians in the square. They stormed the area with tanks and machine guns, firing into the crowd at random. Hundreds of young students were killed and thousands wounded in the attack. Scenes of brutality and chaos were broadcast from Tiananmen Square, and there were reports of students and civilians being imprisoned in other parts of China.

The fear inspired by the government's crackdown was so powerful that, almost immediately, students and demon-
The student uprising in Tiananmen Square

and international news broadcasts commemorating the event are interrupted and blocked. Hotels have all been instructed to unplug their satellite connections to CNN.

Despite the government’s attempts at censorship, the images broadcast from Tiananmen Square cannot be erased from public memory. Few who watched the coverage will ever forget the sight of a lone student standing defiantly against a column of army tanks, or of soldiers clubbing demonstrators until they were bloody and lifeless, or the panic-stricken faces of the people in the Square. Although the Chinese government would like to strike Tiananmen Square from the record books, television has insured that its lessons will be taught for many years to come.

TILL DEATH US DO PART

British Situation Comedy

O

e of the first British shows to take a serious and
sustained interest in race themes was Till Death Us Do
Part, originally broadcast in the mid-1960s on BBC1. Five
weeks into the first series, the show had already topped its
immediate competitor, Coronation Street, in the ratings war.
Although the idea for the series had been in the mind of its
creator, Johnny Speight, for several years, it wasn’t until
Frank Muir took over comedy at the BBC that production
began, initially as a pilot but subsequently as a fully-fledged
series. The comedy centred on the Garnett family, with the
main “star” of the show in the person of the patriarch “Alf,”
sometimes known as “Chairman Alf” for his ready willing-
ness to engage in scurrilous diatribes against the Conserva-
tive party. The other significant target of his rantings were
black people and it is for the extreme views expressed by Alf
on issues of race that the programme is most remembered
(and denounced).

Although Alf’s creator argued at the time of the original
broadcasts (and since) that his intention was to expose racist
bigotry through the exaggerated utterances of Alf, such an
intention has back-fired for many commentators. The
enormous popularity of the show signified that there was
something about it which appealed to a significant propor-
tion of the viewing public. Wherever the series has been
shown—in Great Britain or in the United States or Ger-
many (the last two in local adaptations)—the effects have
by no means always been what the author intended. Alf’s
rhetoric was not always seen as the voice of the ignorant
bigot, but often as the stifled cry of the authentic (white)
working class. While the Garnett family, and Alf in partic-
ular, were clearly represented as disgraceful and abject
characters, extreme even as caricatures, many critiques of
the show suggest that part of its fascination for the audience
was the kernel of truth buried in the lunatic wailings. Thus,
the crucial difference between Alf’s grotesque soliloquies
and the viewers’ beliefs was that Alf was simply too stupid
to understand that racist sentiment must be concealed
beneath a sheen of respectability: the persuasive and pol-
ished performance of Alessandra Mussolini in her Italian
political career is more credible than Alf’s degenerate ram-
blings but contains much the same message.

The inflammatory and controversial subject matter of
the show and its American counterpart, All in the Family,
ensured that they both became the focus of academic
enquiry. Research findings were mixed, some suggesting
that such shows had a neutral effect on viewers while others
claimed that viewers identified heavily with the xenopho-
bic ravings of Alf/Archie. It is likely that many British
viewers, worried by the alleged “immigrant avalanche”
constant reported in the media during the 1960s and
fuelled by Irish Protestant leader Enoch Powell’s rabid
jingoism, found a certain resonance in the racist bigotry
espoused by Alf. Although Alf was challenged in his more
ludicrous diatribes by his daughter Rita and son-in-law
Mike, with the odd wry observation from his long-suffer-
ing wife “Old Moo”, Warren Mitchell’s powerful perfor-
mance as Alf relegated the rest to mere bit players, as
deserving butts of his wild wit.

Through Alf, a cascade of fear and prejudice was given
unique prime-time exposure and articulated with such
passion that during its transmission, 12 million viewers
(then half the adult British population) tuned in to watch.
It is highly unlikely that all these viewers were laughing at
rather than with Alf, that they were all making wholly
satirical readings of Alf’s obscene racism and applauding
Speight’s clever exposition as they cackled at the “jokes”.
Looking again at the show with a 1990s sensibility, the
virulent racism stands out as extraordinary and its nature
and extent have never been repeated on British television.
Till Death Us Do Part may have been written as brave social
commentary, but thirty years later, it looks seriously
flawed and gives the lie to the notion that what the writer
intends is always “correctly” interpreted and understood
by her/his audience.

There is little evidence to support the claim of pro-
gramme producers and writers that mixing humour with
bigotry will automatically underline the stupidity of the
latter through the clever device of the former. If bigots do
not perceive such programmes as satire, and much of the
research effort so far seems to indicate that a satirical
reading is by no means universal, then they are unlikely
to become less prejudiced as a result of watching these shows.
At the end of the 1980s, an Alf Garnett exhibition was
staged at the Museum of the Moving Image in London,
where visitors pressed buttons representing particular so-
cial problems and Alf appeared on video to opine on the
selected subject. It is a strange idea and exemplifies the ease
with which TV characters can make the transition from
one medium to another, in this instance mutating from
demon to sage in one easy movement. If it is a little too
glib, from the smug security of the 1990s, to label Till
Death Us Do Part as a straightforwardly racist text, it is
nonetheless instructive to consider the limits of acceptabil-
ity which prevail in any given decade and to continue the
campaign for equality and respect while at the same time
supporting the radical take.

TILLSTROM, BURR

U.S. Puppeteer

Burrr Tillstrom, the creative talent behind the extraordinarily successful Kukla, Fran and Ollie, was one of television’s earliest pioneers and a principal participant in a number of television “firsts.” In the late 1930s, Tillstrom joined the RCA Victor television demonstration show for a tour throughout the Midwest. At the completion of the tour, he was invited to present his Kuklapolitan Players at the 1939 New York World’s Fair, where he demonstrated the new medium at the RCA Victor exhibit. In the spring of 1940, RCA sent Tillstrom to Bermuda to do the first ship-to-shore telecasts. The Kuklapolitans were also featured on the 1941 premiere broadcast of the Balaban and Katz station WBKB in Chicago. By drawing large audiences for television puppetry, Tillstrom opened the door for future puppeteers and their puppets, such as Paul Winchell and Jerry Mahoney, Shari Lewis and Lamb Chop, and Jim Henson and the Muppets.

Tillstrom demonstrated his improvisational talents at an early age when he entertained neighborhood children using teddy bears, dolls, and any other objects that he could animate to mimic performances and film stories. Following one year of college during the mid-1930s, he joined the Chicago Parks District’s puppet theater, created under the auspices of the Works Progress Administration (WPA), and developed his own puppets and characters after work. Kukla, the puppet who was the first member of the Kuklapolitan Players, was actually designed and constructed by Tillstrom for a friend in 1936, but Tillstrom found he couldn’t part with his creation. The character remained nameless until a chance meeting with Russian ballerina Tamara Toumanova who, upon seeing the puppet, called him “kulda” (Russian for “doll” and a term of endearment).

The format for Kukla, Fran and Ollie had its roots in Tillstrom’s work at the 1939 World’s Fair. His puppets, who served as an entr’acte for another marionette group, made comments to the audience, and interacted with actresses and models (spokespersons for the new medium) invited onto the stage. Tillstrom performed more than 2,000 shows at the fair, each performance different because he disliked repetition.

Tillstrom continued to hone his craft by performing with other marionette troupes and managing the puppet theatre at Marshall Field’s department store in Chicago. He performed benefits for the USO during World War II and at local hospitals for the Red Cross. During a bond-selling rally in Chicago, Tillstrom met a young radio singer and personality, Fran Allison, who joined his troupe for a trial 13-week local program, a trial that lasted for many years and attracted millions of fans.

Tillstrom created each puppet on Kukla, Fran and Ollie by hand and was the sole manipulator and voice for 15
characters. He shifted easily—usually with only a momentary pause—among characters and created unique personalities and voices for each “kid” (as he referred to his creations), ranging from the sweet voice of Kukla, a baritone singing voice for Ollie, the flirtatious Buelah Witch, to the indistinguishable gibberish of Cecil Bill. Standing behind the small stage, Tillstrom could observe the on-stage action through the use of a small monitor, a technique that was later adopted and expanded by Jim Henson for The Muppet Show.

Although he is most closely identified with Kukla, Fran and Ollie, Tillstrom was featured on the series That Was the Week That Was (TW3) in 1964 without the Kuklapolitanis. He won a special Emmy Award for a hand-ballet symbolizing the emotional conflicts caused by the Berlin Wall crisis. His work on TW3 was cited by the George Foster Peabody committee which, in 1965, decided to recognize distinguished individual achievements rather than general program categories after chiding the radio and television industry for “a dreary sameness and steady conformity” in its programming.

Following his success on television in various reincarnations and syndicated specials of Kukla, Fran and Ollie, including a Broadway production, annual holiday productions at Chicago’s Goodman Theater, and a sound recording (for which he was nominated for a Best Recording for Children Grammy in 1972), Tillstrom brought his characters to the printed page in his 1984 work The Dragon Who Lived Downstairs. A generous spirit who enjoyed sharing his knowledge and experience with future performers, Tillstrom served as an artist-in-residence at Hope College in Holland, Michigan. At the time of his death in December 1985, he was working on a musical adaptation of his story for television. In March 1986, he was inducted posthumously into the Hall of Fame of the Academy of Television Arts and Sciences for his significant contributions to the art of television.

TIME SHIFTING

The practice of recording a television show onto video tape with a video recorder (VCR) for the purpose of playing the tape back later at a more convenient time for the viewer is known as time shifting. By law, with few exceptions, a person is not permitted to make an unauthorized copy of a copyrighted work like a television show. One exception to this is the concept of "fair use." Fair use allows copying and using copyrighted material for certain nonprofit, educational and/or entertaining purposes.

The VCR was introduced into the home television market in the United States during the mid-1970s. As the sale of VCRs increased in the early 1980s, more and more viewers began taping programs off-the-air. Program producers and other copyright owners went to court to stop what they believed to be infringement of their copyrights.

Universal Studios sued Sony Corporation, the inventor and patent holder of the Betamax VCR, in hopes of stopping home taping of television programs, or of charging royalties for such copying. A U.S. Court of Appeals ruled in Universal's favor, but the matter went to the U.S. Supreme Court which issued its famous "Betamax" decision in 1984. Central to that decision was the granting of permission to home television viewers to record television shows for purposes of viewing them later at a more convenient time (i.e. time shifting.) The high court ruled that such copying constituted fair use, and would not hurt the market value of the programming itself to program producers. The court's decision was vague on the issue of warehousing tape copies. For example, if a viewer is a fan of a soap opera such as As The World Turns, and makes copies of each and every episode with the intention of building a library of the entire program series for repeated playback in the future, that would be warehousing. The court may have left this matter deliberately vague, however, because it would be virtually impossible to enforce a ban on such warehousing without violating a person's right to privacy.

The unauthorized copying issue is raised again each time a new electronic media technology is introduced to the public. The courts are likely to continue to support the concept of time shifting and other, similar personal uses of these technologies in the future.

TIME WARNER

U.S./International Media Conglomerate

This vast media conglomerate was created in 1989 when Warner Communication and Time, Inc., merged. Through the 1990s it ranked as the largest media company in the world, owning assets in excess of $20 billion, and generating revenues also measured in billions of dollars. In late 1995, in the stormy climate of corporate media mergers begun when the Disney Company bought Capital Cities/ABC, Time Warner set out to create another huge company merger with the purchase of the Turner Broadcasting Company. Eclipsed in size by the Disney deal, the combination with Turner would once again make Time Warner the largest media conglomerate in the industry. Even before the latest mergers, however, Time Warner has functioned as a major player in the television business. Its Warner Brothers' studio produces a vast array of TV programs and distributes them around the world. Its cable television division counts millions of subscribers, and owns and operates leading networks such as HBO and Cinemax. Each year Time Warner also sells millions of home video recordings. Fully half its massive revenues come from television-related subsidiaries. The rest flow from moviemaking, owning and operating one of the top six major music labels, and publishing a string of magazines including Time, Fortune, and Money.

Time Warner is everywhere in the television business of the 1990s. The conglomerate owns 23% of the Turner Broadcasting Company and holds three memberships on the board of that organization. Additional representatives sit on the boards of WTBS-the SuperStation, CNN, and TNT, as well as the boards of Black Entertainment Television, and the Comedy Central. In 1995 it counted more than eleven million cable subscribers to its own systems, and planned for more expansion. In short, as the 20th century drew to a close, Time Warner could count rival Tele-Communications, Inc., as its only true competitor in the cable television industry and only the other five major Hollywood studios as serious rivals in making television shows.

The Warner of the company side entered television production first. During the mid-1950s Warner Brothers served as the site for the creation of such early hits as Cheyenne and 77 Sunset Strip. Since then, in various configurations, the company has been involved in the production,

The 1989 merger linked these assets and pushed Time Warner toward becoming the biggest television company in world history. The organization truly hit its corporate stride when refashioned in the 1970s into Warner Communications under Steven J. Ross.

Ross created Time Warner, and as much as a single person can be responsible for merging a multi-billion dollar world-wide media conglomerate, the credit has to go to him. Ross sought to create an American company that could stand up to Japanese conglomerates Sony and Matsushita, then buying into Hollywood and taking over other media businesses in the United States. The merger was advertised as a combination of equals and at first Ross and J. Richard Monro of Time, Inc., were listed as Co-Chief Operating Officers. But this "sharing of power" proved short-lived; within a year Ross stood alone atop his media colossus.

When Ross died in December 1992, the actual day-to-day running of Time Warner fell to his protege, Gerald M. Levin. Levin inherited and thereafter expanded some of Ross' bold experiments. In September 1992, for example, Ross initiated *New York 1 News*, a 24-hour local cable channel for one million subscribers living on Manhattan Island. Ross knew such a proposition would be expensive, but New York City was his home town and he planned for journalistic giant, Time, Inc., to help make a 24-hour local cable TV news operation profitable. *New York 1 News* represents an experiment on a grand scale only Time Warner could attempt. Here the largest media company in the world, in the largest media market in the United States, under the close glare of Madison Avenue's advertising experts, tries to make "the future" profitable now. With the close involvement of *The New York Times*, *New York 1 News* represents one significant case by which future "information superhighway" watchers will judge the success (or failure) of the new age of mass communications.

Another telling experiment is Time Warner's Orlando, Florida, trial, providing full service, 500-channel cable television to 4000 homes. The offering is complete with video games and movies on demand, multiple interactive shopping channels, and information including news and reference guides. All these options are available to individual homes as desired.

Technical innovation and corporate synergy stand at the center of Time Warner's future. Can the company truly bring the world of 500 channels to the 100 million living rooms in the United States and then to billions more around the world? Can Time Warner's book and magazine divisions really generate new television shows and make long promised corporate synergy profitable? And can Gerald Levin negotiate these future forays while still paying off the billions of dollars of corporate debt accumulated as part of the Time Warner merger? Most importantly, can the company successfully implement still greater expansion? The 1996 merger with Turner Broadcasting propels Time Warner into yet another level of corporate complexity, filled with potential for even greater involvement in the construction of world-wide media systems—and with potential financial disaster.

The jury is still out. The future of Time Warner is unclear as the 20th century ends. Gerald M. Levin, the hand picked successor, will need all his skills to navigate the new promised land of 500 cable TV channels. He has announced that Time Warner will offer telephone service to businesses in New York City and has formed an alliance with "Baby Bell" U.S. West to offer both cable and telephone service in the Rocky Mountain states. Other possible investments in foreign cable TV businesses and new television networks have also been mentioned. Levin will be judged on whether these ventures turn profitable.

In the meantime we must judge Time Warner as a bold corporate experiment in progress. Is it a venture successful only in building huge debt or a farsighted sequence of mergers which resulted in a new type of media conglomerate that redefined the television industry?

—Douglas Gomery

Grant Tinker
U.S. Producer/Media Executive

While Grant Tinker's career in television spans more than 30 years and a number of positions in network programming and production, he is best known for his work in the 1970s and 1980s as founder and president of MTM Enterprises, and as “the man who saved NBC” when he served as the network’s chair and chief executive officer from 1981 to 1986. Throughout his career, he has been associated with literate, sophisticated programming usually referred to as “quality television.”

Tinker and wife Mary Tyler Moore formed MTM Enterprises in 1970 to produce The Mary Tyler Moore Show when Moore was offered a 13-episode series commitment from CBS. Tinker put into practice his philosophy of hiring the best creative people and letting them work without interference from executives at the networks or at MTM. He built MTM into a “writers’ company” that produced some of the most successful and award-winning series of the 1970s and 1980s. Beginning with the writer-producer team of James Brooks and Allan Burns, who created The Mary Tyler Moore Show, Tinker and MTM nurtured the talents of a host of top writers and producers whose work would go on to dominate network television schedules and the Emmy Awards through the 1990s. The staff included Gary David Goldberg, Steven Bochco, Bruce Paltrow, Mark Tinker, Hugh Wilson, Joshua Brand, and John Falsey. MTM’s early hits were primarily sitcoms in the Mary Tyler Moore mold (including spin-offs Rhoda and Phyllis) as well as The Bob Newhart Show and WKRP in Cincinnati. Beginning in the late 1970s and 1980s, however, MTM produced a number of network television’s most successful and innovative dramas, including Lou Grant, The White Shadow, Remington Steele, Hill Street Blues, and St. Elsewhere, shows which benefited from Tinker’s combination of benign neglect in creative matters and tenacious support in dealing with the networks.

In 1981, Tinker left MTM to become chair and chief executive officer of NBC, the perennial last-place network. With no shows in the Nielsen top ten, and only two in the top 20, NBC had suffered through a season of dismal profits (one-sixth the level of ABC’s or CBS’s) and affiliate defections. Based on the belief that good-quality programming makes a strong network, Tinker worked with programming chief Brandon Tartikoff to revitalize NBC’s prime-time schedule. They allowed low-rated but promising series to remain on the schedule until they built an audience, and courted the best producers to supply the network with programs. Under this philosophy, NBC recovered first the upscale urban audience prized by advertisers, then industry approval with more Emmy Awards than CBS and ABC combined, and finally rose to first place in the ratings with blockbusters like the famed Thursday night lineup—Cosby, Family Ties, Cheers, Night Court, and Hill Street Blues—billed as “the best night of television on television.” That his programming strategy relied heavily on work from MTM (Hill Street Blues, St. Elsewhere, and Remington Steele) and MTM alumni (Goldberg’s Family Ties, Charles Burrows and Glen and Les Charles’ Cheers) eventually cost Tinker his share of MTM, when NBC’s parent company RCA ordered him to sell in the early 1980s. In any case, NBC’s turnaround helped shore up the network system in an era when new
programming alternatives such as cable and VCRs had begun eroding the once-monolithic network audience. Tinker left NBC in 1986, shortly after it had been acquired by General Electric.

His stint as chair and chief executive officer was not Tinker's first experience with NBC. In 1949, after graduation from Dartmouth, he became the network's original executive trainee, learning about each of its departments before settling into a job in the station's night operations. He left the network in 1951 for employment in a series of production and programming jobs in radio, television, and advertising. He served as director of program development at McCann Erickson in the early 1950s, when advertisers were responsible for producing much of the networks' schedules, and at Warwick and Legler, where he rehabilitated Revlon's corporate image after it had been tarnished in the quiz show scandals. He also served as Benton and Bowles' vice president in charge of programs, where he was involved in developing Proctor and Gamble's The Dick Van Dyke Show and where he met his second wife, Mary Tyler Moore.

Tinker returned to NBC in the early 1960s as West Coast head of programs, with responsibility for program development of a number of popular series, including Bonanza, I Spy, Dr. Kildaire, and The Man from U.N.C.L.E. After returning to New York to serve as the network's vice president in charge of programs, he left NBC to work as a production executive at Universal (where he was instrumental in birthing It Takes a Thief and Marcus Welby, M.D., as well as The ABC Movie of the Week) and 20th Century-Fox, before forming MTM in 1970.

After serving as NBC chair and chief executive officer, Tinker tried to repeat the success of MTM Enterprises by forming GTG (Grant Tinker-Gannett) Entertainment with the communications giant Gannett, producer of the syndicated news-magazine USA Today on TV and the dramatic program WIOU, which aired for a short time on CBS. The partnership was dissolved in 1990.

TINKER TAILOR SOLDIER SPY

British Miniseries

When first broadcast in September 1979, Tinker Tailor Soldier Spy was greeted with opposing voices as "turgid, obscure, and pretentious" or as "a great success." It is in keeping with the ambiguous nature of John Le Carré's narratives that one can simultaneously agree with both formulations without contradiction. As Roy Bland, paraphrasing Scott Fitzgerald, observes: "An artist is a bloke who can hold two fundamentally opposing views and still function." The obscurity is a consequence of the themes of deception and duplicity at the centre of the narrative: to those who, like Sir Hugh Greene, prefer the moral certainties of Buchan's version of British Intelligence, Le Carré's world will not only be difficult to follow but morally perplexing. On the other hand, the success of the serial was not only demonstrated by good audience ratings but by general critical acclaim for the acting, a judgment ratified by subsequent BAFTA awards for best actor (Alec Guinness) and for the camerawork of Tony Pierce-Roberts. Ambiguity persisted in America where the serial won critical acclaim when shown on PBS but failed to be taken up by the networks.

Although Le Carré published his first novel, Call For the Dead, in 1961, and his first major success, The Spy Who...
Came in from the Cold (1963), was turned into a film in 1966. Tinker Tailor Soldier Spy was his first venture into television. He rejected the project of turning it into a film because of the compression, but felt the space afforded by TV serialization would do justice to his narrative. He was also impressed with the skill of Arthur Hopcraft's screenplay which extensively reordered the structure of the novel to clarify the narrative for a television audience without violating its essential character (Hopcraft for example begins the narrative with the debacle in Czechoslovakia which only begins to be treated in the novel in chapter 27). Le Carré was even more taken by the interpretation of Smiley provided by Alec Guinness, so much so that as he was writing Smiley's People he found himself visualizing Guinness in the role and incorporated some of the insights afforded by the actor in the sequel to the trilogy. A trivial example will stand for many. During the production of Tinker Tailor, Guinness complained that the characterizing idiosyncrasy of Smiley, polishing his glasses with the fat end of his tie, cannot be done naturally because the cold weather in London means that Smiley will be wearing a three-piece suit, thus a handkerchief has to be substituted. At the end of Smiley's People Le Carré includes a teasingly oblique rejoinder:

> From long habit, Smiley had taken off his spectacles and was absently polishing them on the fat end of his tie, even though he had to delve for it among the folds of his tweed coat [emphasis added].

The story of Tinker Tailor has an archetypal simplicity reminiscent of the Odyssey: the scorned outsider investigates the running of the kingdom, tests the loyalty of his subjects and kin by means of plausible stories before disposing of the usurpers and restoring right rule. In Le Carré's modern story the elements are transposed onto the landscape of conflicted modern Europe in the thrones of Cold War.

A botched espionage operation in Czechoslovakia ensures that Control (Head of British Intelligeince) and his associates are discredited. Shortly after, Control dies, George Smiley his able lieutenant is retired and the two are succeeded by Tinker Tailor Soldier Spy: Percy Alleline, Bill Haydon, Roy Bland and Toby Esterhaze. Six months later, Rikki Tarr, a maverick Far Eastern agent, turns up in London with a story suggesting there is a mole (a deeply concealed double agent) in the Circus (intelligence HQ, located at Cambridge Circus). Laco of the Cabinet Office entices Smiley out of retirement to investigate the story. Smiley gradually pieces together the story by analyzing files, interrogating witnesses and trailing through his own memory and those of other retired Circus personnel, notably Connie Sachs (a brilliant cameo role played by Beryl Reid), until he finally unmasks the mole "Gerald" at the heart of the Circus.

The mood of the story, however, is far from simple. Duplicity and betrayal, personal as well as public (Smiley's upperclass wife is sexually promiscuous, betraying him to "Gerald"), informs every aspect of the scene. While the traitor is eventually unmasked the corrupt nature of the intelligence service serves as a microcosm of contemporary England: secretive, manipulative, class-ridden, materialistic and emotionally sterile. Thus, if the Augean stables have been cleaned, they will be soon be soiled again. This downbeat tone accounts for the serial not being taken up by the American networks and marks it off from the charismatic spy adventures of James Bond, but it also accounts for its particular appeal to British middle-brow audiences.

The spy genre is virtually a British invention: although other countries produce spy writers, the centrality of the genre to British culture is longstanding and inescapable. John Buchan, Somerset Maugham, Graham Greene, Ian Fleming, Frederick Forsyth, Len Deighton, as well as John Le Carré, have all achieved international success for their spy stories—not to mention television dramas by Dennis Potter (The Blade on the Feather) and Alan Bennett (An Englishman Abroad and A Question of Attribution). To account for this obsession with spies, we only have to consider the political circumstances of Britain in the twentieth century: a declining Imperial power, whose overseas possessions have to be ruled and defended more by information than by outright physical force; an offshore island of a divided Europe, seeing itself threatened by German, then Soviet, military ambitions. Perhaps even more significant than these external threats are those from within. A ruling class which maintains its grip on power by exclusion—a public school and Oxbridge educated elite hold a disproportionate share of positions of power in Cabinet, Whitehall, the BBC and government institutions—is liable to marginalize or demonize those who openly challenge its assumptions. The result is liable to be subversion from within—a tactic fostered by the duplicitous jockeyings for power of rival gangs in the enclosed masculine world of the public schools. The symbolic and emotional link between the world of the public school and that of the circus is established in Tinker Tailor by Jim Prideaux. The injured and betrayed agent teaches at a prep school after his failed Czech mission and enlist the aid of a hero-worshipping pupil as his watchter. Thus the fictions that Le Carré invented have their counterpart in the real world and tap familiar English fears and obsessions. In the same year, 1979, that saw the serialization of Tinker Tailor, the BBC also produced two documentary series Public School Spy, reinforcing the connections with Le Carré's work. "The Climate of Treason" concerned itself with speculating about the Fourth Man of the Burgess, MacLean, Philby double agents within M15. On 15 November 1979 Margaretr Thatcher identified Sir Anthony Blunt, adviser of the Queen's Pictures and Drawings, as the Fourth Man who had been recruited by the Russians in the 1930s. Le Carré's novel was read as a fictionalized version of these events.

The success of Tinker Tailor lies in the realism, not only of character portrayal—and the acting of Alec Guinness has achieved as definitive a performance as Olivier's Richard III or Edith Evans as Lady Bracknell—but of the way in which
intelligence institutions work. But the claim for realism must not be pressed too far: Le Carré has admitted that the vocabulary used was invented: babysitters, lamplighters, the Circus, the nursery, moles—though he was also amused to discover that real agents had begun to appropriate some of his vocabulary once the stories were published. Moreover, much intelligence work is bureaucratic and boring: Smiley’s reflections turn the drudgery of reading files into a fascinating intellectual puzzle which, unlike the real experience, always produces significant information.

At the symbolic level, however, the portrayal of the workings of bureaucracy is authentic: bureaucracies serve those who govern by gathering, processing and controlling access to information. In a world increasingly governed by means of information, those who control it have power and wealth, so that the resonance of Le Carré’s story will carry beyond the cold war setting that is its point of departure.

TISCH, LAURENCE
U.S. Media Mogul

In 1986 Laurence Tisch, a fabled Wall Street investor, took control of CBS, often considered the crown jewel of American broadcasting. Tisch ran the TV network, the owned and operated television stations, and other corporate properties until 1995. Throughout the decade, he manipulated and modified CBS, looking to cash in with an eventual sale of the property. In 1995 the deal came through. Westinghouse offered $5 billion for CBS; Tisch made an estimated $2 billion.

In the view of many television critics and media industry observers, Tisch badly mismanaged the former “Tiffany network” with policies that caused ratings to drop, earnings to fall, and affiliates to defect. In a stunning pair of 1994 deals, fellow mogul Rupert Murdoch contracted broadcasting rights for the National Football League (NFL) and tempted a number of CBS affiliates to switch to the FOX Broadcasting Company. CBS was further embarrassed when Tisch demoted Connie Chung from her position as co-anchor position with Dan Rather. And media pundits lambasted Tisch for CBS’ Sunday afternoon golf coverage in May 1995 when ABC and NBC carried President Bill Clinton’s address to the mourners of the Oklahoma City bombing. CBS opted to stay with the golf tournament to save $1 million in advertising.

Andy Rooney, long a fixture on CBS’ highest rated show, 60 Minutes, stated openly what many in the industry felt about Tisch’s negative impact on CBS’ long-fabled news division. On rival network ABC’s Primetime Live Rooney castigated Tisch for allowing CBS to slip: “We need a hero in the business. I don’t see why someone like Larry Tisch . . . doesn’t say: ‘I’ve got all this money, why don’t I just make the best news division in the world.’”

Tisch’s relations with CBS had not begun on such a rancorous note. During the mid-1980s, when Ted Turner tried to make a hostile bid for CBS, longtime CBS chief William S. Paley looked for a “white knight” to save his beloved company. In October 1985, Paley and his hand-chosen corporate directors asked Tisch to join the CBS board and thwart Turner. Before his takeover, Tisch had simply been another faceless New York City multimillionaire, making money in tobacco, insurance, and hotels. His rescue of CBS made him a media celebrity.

After serving in the U.S. Army’s intelligence office during World War II, Tisch joined forces with his younger brother Bob and began his rise to corporate power and profit with the 1949 purchase of Laurel-in-the-Pines, a New Jersey hotel. For the next decade the brothers bought and sold hotels, particularly in Miami Beach and Atlantic City. In 1959, the Tisch brothers bought the Loews theater chain from Metro-Goldwyn-Mayer, and changed the name of their company to Loews Corporation.

From this base they continued to expand their investment efforts and by the mid-1980s Loews Corporation ranked as a multibillion dollar conglomerate success story. Loews was built by acquiring other companies through tender offers, beginning...
with the takeover of Lorillard, a tobacco products company, in 1968. In early 1974 Loews announced it had acquired just over 5% of an insurance subsidiary CNA Financial, then an independent company. Before the end of that year Loews had successfully completed a hostile tender offer for the company’s stock, and CNA became the principal source of Loews’ success. In the case of both Lorillard and CNA the Tisch brothers reversed the fortunes of ailing companies and made millions in the process.

Privately, Laurence Tisch then began to undertake philanthropic causes. He managed the investments of the Metropolitan Museum of Art, provided endowment and buildings for New York University, and led fund-raising for the United Jewish Appeal.

In 1986 William S. Paley stepped aside and Tisch became not only CBS’ major stockholder, but chief executive officer as well. To no one’s surprise, Tisch restructured the company into a “lean and mean” operation. Within months, he had launched the biggest single staff and budget reduction in network TV history. When the dust had settled, hundreds had lost their long secure jobs, news bureaus had been shuttered, and CBS was a shell of its former self.

On a larger corporate scale, Tisch systematically began to sell every CBS property not connected to television. First sold was CBS’ educational and professional publishing, which included Holt, Rinehart and Winston, one of the country’s leading publishers of textbooks; and W.B. Saunders, a major publisher of medical tomes. CBS picked up $500 million in the deal.

But that sum proved small change compared to the $2 billion paid by Sony Corporation of Japan for the CBS Music Group. One of the world’s dominant record and compact disc companies, CBS Music boasted a stable of stars that then included Bruce Springsteen, Michael Jackson, the Rolling Stones, Billy Joel, Cindy Lauper, Paul McCartney, and James Taylor. This single 1987 sale enabled the new CBS to earn a substantial profit that year.

With the layoffs, budget cuts, and sales of CBS properties completed, Tisch faced the need to improve TV programming. This proved difficult, and speculation began about precisely when Tisch would cash in his CBS stock. Potential buyers for the network included MCA/Universal Pictures, Disney, Viacom, and QVC, a television home-shopping company. Throughout the early 1990s, Tisch quietly engineered stock repurchases by CBS, and by selling much of his own stock back to the corporation he covered his original investment. Whatever he would receive for his remaining 18% of the company would be pure profit. Thus the 1995 Westinghouse deal moved Tisch from the status of a multimillionaire to a multibillionaire.

In television history, however, Laurence Tisch would be remembered for how he had decimated the once dominant television network.

**THE TOMMY HUNTER SHOW**

Canadian Country Music Program

K
nown as "Canada’s Country Gentleman", Tommy Hunter was for many years one of Canada’s most popular and well-known television personalities. He became a fixture on Canadian television as the host of *The Tommy Hunter Show*, one of North America’s longest-running variety shows, and is also one of the few figures in Canadian popular music to have evolved through television rather than through recording and radio airplay. He has received numerous awards for his role in television, in country music, and in Canadian cultural life.

The Ontario native’s career in television started when he was 19 years old on *Country Hoedown*, a weekly country music program produced and aired at the Canadian Broadcasting Corporation (CBC), where Hunter would spend the rest of his television career. The show was an on-stage revue with a house band and featured various musical guests both from Canada and the United States. Starting out as a rhythm guitarist, Hunter soon became a featured performer on the show, leading to his own daily noontime CBC radio program, *The Tommy Hunter Show*; it became a television series in 1965.

Much of *Country Hoedown*'s format and tone were carried over into *The Tommy Hunter Show*. Over its 27-year run on CBC (1965–92)—rerun three times a week on the Nashville Network between 1983 and 1991—the show was noted for nurturing Canadian country music, which it showcased alongside big-name American country stars. Hunter wanted to break with the hokey, country-hick feel characterized by shows like *Hee Haw*, though, and tried to present country music as "respectable". The result was a program that some labelled a country version of Lawrence Welk’s show. Inspired by television variety-show hosts such as Johnny Carson and Perry Como, Hunter felt that the host should have a relaxed, comfortable style, establishing a certain rapport with the audience. By sticking to his country purist approach, he was able to establish such a rapport, building up an intensely loyal fan base which planned its Saturday evenings around *The Tommy Hunter Show*. Over the years, Hunter sustained an ongoing battle with CBC producers who wanted to rely on demographics and "slickify" the show. He maintained that targeted programming precluded establishing a real relationship with the audience. His show relied upon the on-stage revue format, which mixed various musical sequences with dance and other coun-

![Tommy Hunter](Photo courtesy of the Country Music Foundation)
country entertainment. Despite attempts to alter the program by incorporating other styles and sensibilities, Hunter persevered in maintaining the show's traditional country tone. It was this purist approach that would ultimately sound the show's death knell, however, and a lack of younger viewers and slipping audience ratings led to its cancellation in 1992.

As a long-running music television program, The Tommy Hunter Show demonstrated how television's imbrication with popular music dates back long before the rise of MTV and the music video. Hence, while it provided country music fans with entertainment each week, it also helped to rearticulate a brand of country music many associated with Nashville as a Canadian popular music genre, in a period which saw the rise of an anti-American Canadian cultural nationalism. Indeed, through the program's year-in, year-out presence on the CBC, the state-owned broadcaster and self-styled "national network," the country music of The Tommy Hunter Show became a national symbol for many Canadians, and Tommy Hunter a figure of Canadianness. This ability of television to reach around the generic division of popular music into record or radio formats, then, helped shape a "Canadian country music" genre which would combine the traditional music of Canadian folk performers with the country music of artists like Tommy Hunter.

As much as The Tommy Hunter Show displayed how television intervenes into other areas of popular culture such as popular music, though, it also threw into relief the tensions that arise between them. The behind-the-scenes conflict between CBC television workers and Tommy Hunter, a country musician, derived from their emergence from two separate cultural formations: on the one hand, the "world" of television production, with its own sensibilities and its own priorities; and on the other hand, the "world" of country music, with its internal organization and logic. Thus, CBC personnel wanted to target specific demographic ranges by "updating" the show with natty set designs and a wider variety of musical styles. But Hunter's desire for austere sets and traditional country music, and his concern with providing family entertainment for a country audience, derived from the emphases on "sincerity" and "authenticity" which underpin country music as a genre and define fundamental aspects of the country music "world". Indeed, the conflicts behind The Tommy Hunter Show foreshadowed a later reticence towards music videos on the part of the country music industry as a whole, wary of the videodip format's "slickness" that is so antithetical to country music's "authenticity".

The privileged role played by authenticity in country music, with its accompanying stress on "ordinary people", was central to The Tommy Hunter Show. Although based in Toronto, the show went on the road frequently, playing to sold-out audiences across Canada. Hunter's insistence that the set in each city reflect the locale of the taping illustrated his constant striving to reinsert a local feel into the globalizing pull of television. A harsh critic of the television industry even as a television star, Hunter felt that TV programmers had little understanding of country music audiences; for Hunter, the institutional imperatives of a mass-mediated country music compromised his audience's position. These views carried over to his recording career. Hunter preferred to record albums independently rather than with major record labels, reasoning that this would allow him to aim at pleasing country audiences, rather than radio stations. And in 1992, following cancellation of The Tommy Hunter Show, he toured Canada with a stage version of the show, playing to sold-out audiences, meeting his fans from the other side of the television screen.

The only program to survive a wave of rural, family-oriented CBC programming in the 1950s and 1960s that included shows like Don Messer's Jubilee, The Tommy Hunter Show was a country show produced in an urban environment. It was a family-oriented show in an age of splintering demographics. It made a country singer into a television star. And in the process it had a profound impact on the Canadian popular music landscape. By the end of the show's run, Hunter had won three Juno Awards as Canada's best male country singer (1967-1969) and become the fifth Canadian to be inducted into the Country Music Hall of Fame's Walkway of Stars (1990) for his music; he received an award from the Broadcast Executive Society as well as a Gemini Award for best Canadian variety show (1991); and was named to the Order of Canada for his part in Canadian cultural life.

TONIGHT
British Magazine Programme

Tonight was a 40-minute topical magazine programme which went out every week-day evening between 6:00 P.M. and 7:00 P.M., and was first broadcast by the BBC in February 1957. The programme was produced under the aegis of the BBC's Talks Department by Alasdair Milne and edited by Donald Baverstock, who later went on to occupy a senior position within the BBC. It was presented by Cliff Michelmore, who had already collaborated with Baverstock and Milne on Highlight, a shorter, less ambitious version of Tonight. With Tonight, Michelmore quickly acquired status as a broadcaster, picking up an award for artistic achievement and was twice named Television Personality of the Year. Indeed Tonight was significant for its ability to attract and cultivate new broadcasting talent and over its eight-year run managed to launch a number of notable careers including those of Alan Whicker, Ned Sherrin, Julian Pettifer and Trevor Philpott.

The programme was conceived by the BBC as their response to the ending of the "toddlers' truce"—the hour in the evening when television closed down to allow parents to see their children off to bed. As such, Tonight went out to a new and untried audience, an audience who, at this time of the evening, would be quite active rather than settled, who would be busy preparing food, putting kids off to bed or getting ready to go out. Tonight was designed around the needs of this audience and its style reflected this: the tone was brisk and informal, mixing the light with the serious and items were kept short allowing audiences to "dip in" at their convenience. This emphasis on the needs of the audience was something of a departure for the BBC who had tended to adopt a paternal tone with its viewers, giving them not what they wanted but what they should want. Tonight was going to be different. It wasn't to talk down to the viewer, but would, as the Radio Times put it, "be a reflection of what you and your family talk about at the end of the day" (Watkins: 29). In Baverstock's words, Tonight would "celebrate communication with the audience", and indeed the programme came across not as the institutional voice of the BBC but as the voice of the people.

Tonight was recognised by many to be evidence of the BBC's fight back against the new Independent Television companies who were quickly gaining ground and by 1957
had overtaken the BBC with a 72% share of the audience. But if Tonight was largely a result of competition and the breaking of the monopoly, which in effect forced the BBC to adopt a more populist programming philosophy, the style and content of the programme also reflected broader social and cultural changes. Tonight seemed to capture an emerging attitude of disrespect and popular scepticism towards institutions and those in authority. Furthermore, the adjectives which were often used to describe the programme at the time, such as “irreverent”, “modern”, and “informal”, could have easily described the mood that was beginning to inform other areas of the arts and popular culture.

Tonight introduced a number of innovations to British television. It was one of the first programmes to editorialise and adopt a point of view, flaunting the Public Service demands of balance and impartiality. The programme also introduced a new (some might say aggressive) style of interviewing where guests would be pushed and harassed if it was thought they were being evasive or dishonest. Tonight eschewed the carefully prepared question and answer type format that had prevailed in current affairs programming until then. Furthermore, broadcasters had tended to fetishise the production process, concealing the means of communication and carefully guarding against mistakes and technical breakdowns which threatened to demystify the production. Tonight, though, kept in view such things as monitors and telephones. Its interviews were kept unscripted and any technical faults or mistakes were skillfully incorporated into the programme flow giving Tonight an air of spontaneity and immediacy.

Tonight was meant to be a temporary response to the ending of the “toddler’s truce” and was initially given a three-month run. It quickly proved popular however and within a year was drawing audiences of over 8 million. In addition the programme won critical acclaim, receiving the Guild of Television Producers Award for best factual programme in 1957 and 1958. The programme generated other material as well, including feature length documentaries and was the inspiration behind That Was the Week That Was, a show that stepped up Tonight’s irreverent, hard-hitting approach for a late night adult audience.

Baverstock left Tonight in 1961 to become assistant controller of programmes and his place was taken by Alasdair Milne. Milne proved to be a capable editor and indeed oversaw a number of innovations including the feature length documentaries.

However, the programme would not be the same without Baverstock whose leadership and vision had made Tonight something of an individual success. By 1962 it was felt the programme had become rigid and stale. As is the case with many innovative and ground breaking enterprises, the programme could not sustain the pace of its initial inventiveness. The final edition went out in June 1965. Nevertheless in its eight-year run it had established a format for current affairs programming which mixed the light with the serious, which blurred distinctions between education and entertainment and which managed in the process to soften the image of the BBC, transforming it, as Watkins has noted, from an “enormous over-sober responsible corporation”, to something that looked “more like a man and a brother”.

THE TONIGHT SHOW
U.S. Talk/Variety Show

A long-running late-night program, The Tonight Show was the first, and for decades the most-watched, network talk program on television. Since 1954 NBC has aired a number of versions of the show which has, as of the mid-1990s, seen four principle hosts and one consistent format except for a brief diversion in its early days. What started out as a music, comedy and talk program first hosted by Steve Allen became, for a time, a magazine-type program,
broadcasting news and entertainment segments from various correspondents located in different cities nationally. That short-lived format, however, lacked the appeal of a comedy-interview show revolving around one dynamic host. From mid-1957 until the present, Jack Paar, Johnny Carson and Jay Leno have all three followed Allen’s lead and hosted a show of celebrity interviews, humor and music, each host leading his show with signature style. Late night talk in the first three decades of television was dominated by The Tonight Show, and for the majority of that time by Johnny Carson. However, during the 1980s and early 1990s the late-night landscape began to change as more talk shows took to the air. Change was accelerated by the appeal of David Letterman and a combination of other factors, including inexpensive production, audience interest in celebrity and entertainment gossip, and an overall increased reliance on the talk show as forum for information and debate about the important as well as unimportant issues of the day. The late-night talk genre expanded as network competitors and comrades sought the kind of success that was originally the province of The Tonight Show.

Each of The Tonight Show principal hosts brought his own unique talent and title to the program. All of the shows featured an opening monologue, a sidekick or co-host, in-house musicians and cadre of guest hosts. Steve Allen’s Tonight! featured his musical talents and penchant for unique comedy. He was well known for performing his own musical numbers on the piano and for humorous antics such as on-the-street improvisations and bantering with the audience, both of which were forerunners to the kinds of comedy stunts that became a staple much later on Late Night with David Letterman, also on NBC. In 1957 Allen left Tonight! to concentrate on another variety show he hosted on Sunday evenings. Allen’s version of the show was immediately followed by the unsuccessful magazine format, Tonight: America After Dark, which lasted only a few weeks. That show was led by Jack Lescoulie, but he was never the central figure Allen had been. Essentially,
Lescoulie introduced the segments and correspondents around the nation.

In July 1957 Jack Paar took over as new host of The Jack Paar Tonight Show. Paar brought the show back to its in-studio interview format. More a conversationalist than comedian, audiences were drawn to Paar’s show because of the interesting guests he brought on, from entertainers to politicians, and for the controversy that occasionally erupted there. Paar did not shy away from politics or confrontation, and often became emotionally involved with his subject matter and guests. He had a few stormy run-ins, both on camera and off, and finally left the show following controversy surrounding his broadcast from the Berlin Wall in 1962. With another change in hosts came a complete change in tone and style.

In October 1962 Johnny Carson took over as host of The Tonight Show Starring Johnny Carson. Carson was more emotionally detached and less political than Paar. He, like Allen, was a comic. Named the king of late night, Carson hosted the show for thirty years, from 1962 to 1992. During that time the show moved from New York City to Burbank, California. Carson was known for his glib sense of humor and his middle-American appeal, and quickly recognized his increasing popularity as well as the strain of doing comedy and talk five nights a week. He threatened to leave the show, but was lured back with a generous offer that included a huge salary increase and more time off. Guest hosts during Carson’s tenure included comedians Joan Rivers, Jay Leno and David Letterman.

When Carson retired, Jay Leno was appointed the next principal host of The Tonight Show with Jay Leno. Leno, a well-known stand-up comedian, brought to the show his own writers and comic style, showcasing it in his opening monologues and banter with guests.

Changes in Leno’s show reflected other major changes in television since its earlier days. By the late 1980s late-night talk had become slightly less a white male domain. Joan Rivers hosted her own talk show for a short time, and popular black comedian Arsenio Hall had his own show which enjoyed a wide following, attracting mostly a young black audience, a segment previously ignored in late-night talk. The first leader of Jay Leno’s late-night studio band was the accomplished black jazz musician Branford Marsalis. The second band leader and Leno sidekick was Kevin Eu- banks, also black. A big change for The Tonight Show during Leno’s tenure was its first serious competition.

Starting in the mid- to late-1980s, television talk shows, both daytime and late-night, multiplied in number. The in-studio talk program was inexpensive to produce and audiences were increasingly drawn to the sensationalism and celebrity showcased each day and night on television. Some late-night talk shows—including those hosted by Joan Rivers, Chevy Chase and Pat Sajak on the FOX network—came and went quickly. Arsenio Hall’s show was on the air for several years before cancellation. Especially successful in late night was the up-and-coming David Letterman. Late Night with David Letterman started out on NBC, airing immediately after The Tonight Show.
from 1982 until 1993. Passed over for the host position on The Tonight Show when Leno was chosen for the post, Letterman moved to CBS where his new show ran in direct competition with Leno.

For the first time The Tonight Show shared the late-night spotlight. The two host/comedians, Leno and Letterman, were polished performers with large audiences. They became, as Carson had been, the gauge by which mainstream entertainment and politics were measured. On both programs comedy was delivered—and guests and issues of day treated—the same way, as gossip and light entertainment. After four decades The Tonight Show was still outlining and defining, even when not at the forefront of, the essence of contemporary televised culture.

TOP OF THE POPS

British Music Programme

Top of the Pops is Britain's longest running pop music programme. It was first broadcast in January 1964 and since then has occupied a prime-time slot on BBC television. Its primary value has been in introducing generations of youngsters to the pleasures and excitement of pop music, while for older people the show has become a reassuringly familiar item in the television schedules.

The key to the show's success lay in its revolutionary new format. Before 1964 (and to a large extent after), pop shows tended to respond to emerging trends and fashions. Earlier shows such as The Twist and The Trad Fad were a response to current dance and music styles while the highly popular Ready Steady Go was largely a Mod programme and tended to showcase Mod lifestyles and tastes. The problem with this type of show was that its life cycle was bound to the fashion or style that it reflected: when it passed so did the show. What was unique about the Top of the Pops format was that it was based round the top 20 music chart—expanding to the top 40 in 1984. This meant that the show was not associated with a fashion or a trend; it had no angle on pop music but was merely responding objectively to whatever was popular at that moment. In this way Top of the Pops was always going to be current, it was always going to be at the cutting edge of pop music.

The format of the chart "countdown", coupled with the policy of only featuring records moving up the charts, provided the show with a certain structure and dynamism. Unlike many other pop shows Top of the Pops contained the narrative ingredients of development, anticipation and closure: with each episode, as the countdown commenced, the audience would be kept in suspense by the big question, "who will be top of the pops this week?"

In many respects the Top of the Pops format was informed by radio, the medium that had been closer to the pulse of teen tastes and pop trends. The top 20 format was already an established feature of radio and Top of the Pops presenters were nearly always radio DJ's. To this end early episodes of the programme tended to show a DJ putting the disc on the turntable with a fade to the performer miming to the song. The programme was about records and hits, and even when the performer was unavailable for the show the record would still go on, a policy that sometimes meant using improvised, and often innovative, visual effects to cover the absence of the performer.

Another factor contributing to the show's continuing popularity is its accessibility: while ostensibly aimed at a fairly small teenage audience, Top of the Pops has nevertheless always thought of itself as a family show. Indeed, audience research carried out in the 1980s found that the majority of the viewing constituency was over 25 years old. This appeal to a wider family audience has no doubt contributed to the show's continuing success and buoyant ratings; however it has also left the show open to charges of conservatism and policing standards in musical taste; proof of this is usually offered by pointing to the show's infamous banning of the Sex Pistols and Frankie Goes to Hollywood.

Top of the Pops has been an important actor in the music business, with immense ability to make or break a performer. An appearance on the show could almost guarantee an immediate leap up the charts. Similarly pop music retailers have found that their sales often peak the day after the show is broadcast. There is no doubt therefore that Top of the Pops has functioned as a powerful gatekeeper to the industry and performers and promoters continue to clamour for a spot on the show.

Although the basic format of the chart countdown has remained constant over the years, the show has introduced many changes to keep itself up to date. Innovations such as the video chart, the "breakers" spot, Europarade and the introduction of live broadcasts have all functioned to keep Top of the Pops in step with new audiences and a changing music scene.

The programme's high point was the mid-1970s when audience figures regularly reached 16 million. This undoubt-
edly reflected trends in the music industry which saw record sales peak at roughly the same period. However, the acts that were appearing on the show were peculiarly televisual and complemented perfectly the medium’s newly acquired colour: the dominance of television inspired novelty acts such as the Goodies and the Wombles plus the emergence of Glam Rock with its theatricality and glitz, seemed to return pop music to the values of showbiz and entertainment.

Viewing figures have steadily declined since the mid-1970s. Some blamed the initial shock of Punk music which lacked the kind of “razzmatazz” that *Top of the Pops* thrived on. Punk re-introduced notions of authenticity and its anti-commercial stance sat uneasily with the show’s emphasis on glamour and entertainment. Even though the 1980s saw the return of flamboyant pop performers, led by New Roman-ticism and the New Pop, the decline nevertheless continued. This was partly to do with a decline in the singles market and an increase in television channels dedicated to the music scene. This, combined with the general competitiveness of the television industry in the 1980s, has led to a severe drop in viewing figures.

By the early 1990s audience figures had fallen to 5 million. Nevertheless, *Top of the Pops* has continued to fend off all rivals, and competitors have found the show to be an immovable fixture in the schedules. The history of British television has seen a host of music shows come and go, but while they often achieved fleeting success, none of them has been able to match the staying power or the popularity of *Top of the Pops*.

**A TOUR OF THE WHITE HOUSE WITH MRS. JOHN F. KENNEDY**

U.S. Documentary

On the night of 14 February 1962 three out of four television viewers tuned to CBS or NBC to watch a *A Tour of the White House with Mrs. John F. Kennedy*. Four nights later, ABC rebroadcast the program to a sizable national audience before it then moved on to syndication in more than fifty countries around the globe. In all, it was estimated that hundreds of millions of people saw the program, making it the most widely viewed documentary during the genre’s so called golden age. But the White House tour is also notable because it marked a shift in network news strategies, since it was the first primetime documentary to explicitly court a female audience.

Between 1960 and 1962 most network documentaries focused on major public issues such as foreign policy, civil rights, and national politics. These domains were overwhelmingly dominated by men and the programs were exclusively hosted by male journalists. Yet historians of the period have shown that many American women were beginning to express dissatisfaction with their domestic roles and their limited access to public life. Not only did women’s magazines of this period discuss such concerns, but readers seemed fascinated by feature articles about women who played prominent roles in public life. Jacqueline Kennedy was an especially intriguing figure as she accompanied her husband on diplomatic expeditions and was seen chatting with French President De Gaulle, toasting with Khrushchev, and delivering speeches in Spanish to enthusiastic crowds in

---

*Jacqueline Kennedy with Charles Collingwood Photo courtesy of the John F. Kennedy Library*
Latin America. She even jetted off to India on her own for a quasi-official good will visit. Kennedy quickly became a significant public figure in popular media, her every move closely followed by millions of American women.

Consequently, Jacqueline Kennedy’s campaign to redecorate the White House with authentic furnishings and period pieces drew extensive coverage. Taking the lead in fundraising and planning, she achieved her goals in a little over a year and, as the project neared completion, she acceded to requests from the networks for a televised tour of the residence. It was agreed that CBS producer Perry Wolff, Hollywood feature film director Franklin Schaffner, and CBS correspondent Charles Collingwood would play leading roles in organizing the program, but that the three networks would share the costs and each would be allowed to broadcast the finished documentary. The weekend before the videotaping, nine tons of equipment were put in place by fifty-four technicians and cutaway segments were taped in advance. The segments featuring Jacqueline Kennedy were recorded during an eight hour session on Monday.

The final product, though awkward in some regards, effectively represents changing attitudes about the public and private roles of American women. For here was Jacqueline Kennedy fulfilling her domestic duty by providing visitors a tour of her home. Yet she also was performing a public duty as the authoritative voice of the documentary: providing details on her renovation efforts, informing the audience about the historical significance of various furnishings, and even assuming the position of voice-over narrator during extended passages of the program. In fact, this was the first prime-time documentary from the period in which a woman narrated large segments of the text. Kennedy’s authoritative status is further accentuated by her position at the center of the screen. This framing is striking in retrospect because correspondent Charles Collingwood, who “escorts” Kennedy from room to room, repeatedly walks out of the frame leaving her alone to deliver descriptions of White House decor and its national significance. Only at the very end of the program, when President Kennedy “drops in” for a brief interview, is Jacqueline repositioned in a subordinate role as wife and mother. Sitting quietly as the two men talk, she listens attentively while her husband haiuls her restoration efforts as a significant contribution to public awareness of the nation’s heritage.

The ambiguities at work in this program seem to be linked to widespread ambivalence about the social status of the American woman at the time of this broadcast. Jacqueline Kennedy takes a national audience on a tour of her home, which is at once a private and public space. It is her family’s dwelling, but also a representation of the nation’s home. Furthermore, she is presented both as a mother—indeed, the national symbol of motherhood—and as a modern woman: a patron of the arts, an historical preservationist, and a key figure in producing the nation’s collective memory. In these respects, she might be seen as symbolic of female aspirations to re-enter the public sphere, and this may help to explain the documentary’s popularity with female viewers.

The White House tour was soon joined by a number of similar productions, each of which drew prime-time audiences as large as those for fictional entertainment. For example, The World of Sophia Loren and The World of Jacqueline Kennedy each drew a third of the nightly audience, while Elizabeth Taylor’s London drew close to half. In general, elite television critics reviewed these programs skeptically, noting that entertainment values were privileged at the expense of a more critical assessment of their subject matter. Yet the appeal of these programs may have had less to do with the dichotomy between entertainment and information per se than with the way in which they tapped into women’s fantasies about living a more public life while largely maintaining their conventional feminine attributes. As numerous feminist scholars have argued, one of the fundamental appeals of television programming is the opportunity it affords for the viewer to fantasize about situations and identities which are not part of one’s everyday existence. In the early 1960s, such fantasies may have been important not only for women who chafed at the constraints of domesticity, but also for women who were imagining new possibilities.

TRADE MAGAZINES

The television industry is analyzed and reported on by a variety of trade magazines reflecting the perspectives of producers, advertisers, media buyers, networks, syndicators, station owners, and new technology developers. The general television trade press is complemented by coverage of television in the advertising and entertainment industry trade press. Additional specialty magazines cover cable television, satellites, newsgathering, and religious programming. The advent of satellite distribution and the expansion of transnational media corporations has led to a growing internationalization of television industry press coverage, especially in the television trade press of Canada and Great Britain.

Broadcasting and Cable, subtitled The Newsweekly of Television and Radio, covers top stories of general industry
interest, including regulatory issues, ratings, company and personnel changes, advertising and marketing strategies, and programming trends. Aimed at broadcast executives, Broadcasting and Cable's concise journalistic coverage has been recognized as an authoritative source for industry news. Originating as a radio trade paper named Broadcasting in 1931, the weekly eventually expanded its coverage into the media of television and cable. Along the way, it was also known as Broadcasting-Telecasting (1945-57), and absorbed other important trade publications such as Broadcast Advertising (in 1936) and Television (in 1968). Currently, Broadcasting and Cable consists of sections that cover the top weekly stories, broadcasting, cable, and technology. Additional columns treat federal lawmaking, personnel moves, and station sales. Recently, Broadcasting and Cable has expanded coverage of new media technologies; its "Telemedia Week" section covers the World Wide Web, interactive media, CD-ROMs, and Internet developments. Broadcasting and Cable International, a companion magazine, provides more international television industry coverage.

Electronic Media (1982-), a tabloid-size weekly, covers American visual electronic media (television, cable, and video). Aimed at managerial executives, Electronic Media reports on technological changes, advertising strategies, management methods, regulatory developments, and programming. Electronic Media often draws on perspectives from throughout the industry when it covers such debates as the relative effectiveness of advertising on network television versus cable television, or the appropriateness of talk show subjects. With its regular features such as "The Insider," "Who Is News," and sections on international television, technology, ratings, and finance, Electronic Media is an excellent source for tracking current events in the television industry.

Advertising industry trades Advertising Age (1930-) and Adweek (1960-) cover television from the perspective of media buyers. Advertising agencies buy time on television for their clients' commercials and thus seek up-to-date and accurate information on ratings, programming strategies, schedule shifts, regulatory changes, and personnel moves. Pertinent articles in both weeklies concern specific commercial campaigns, sponsorship issues, demographic research, effectiveness of network versus cable television advertising, advertising agency activities, production company news, and ratings information. Since media buyers are customers of station managers and network executives, the editorial opinions of Advertising Age and Adweek sometimes differ from those of Broadcasting and Cable and Electronic Media.

The long-lived show business trade periodicals Variety, Daily Variety, and Hollywood Reporter also report on the television industry. The tabloid-size weekly Variety has covered entertainment industries such as vaudeville, films, television, radio, music, and theater since 1905. In addition to extensive hard news coverage of show business and insider "Buza," Variety is renowned for its headline style (for example, "Comcast Laddies Beans for Frank" heads an article on the hiring of a new chief executive named Rich Frank by a cable production company).

Variety's television section includes news about program production, ratings, regulatory issues, syndication deals, Nielsen ratings, and network and cable company activities. Variety's "World View" section also includes articles on international broadcasting. Additionally, in-depth television program reviews provide production information, analysis of production values, and predictions of a program's potential success or failure. Daily Variety, the daily counterpart to the weekly Variety, has covered the entertainment business since 1933, reporting production news, personality news, and entertainment stock prices.

Hollywood Reporter has been a daily newspaper for the entertainment industry since 1930, reporting on production deals, program budgets, distribution arrangements, personalities in show business, entertainment stocks, and upcoming entertainment industry events. Additionally, Hollywood Reporter's television program reviews include behind-the-scenes production information. Like Variety, Hollywood Reporter is well-known for its journalistic coverage and commentary on the business end of show business.

As cable television has developed into a major competitor for network television audiences, trade publications devoted to the cable industry also have grown. Cablevision (1975-) serves cable television managers by providing articles on federal cable regulation, technological developments, original cable programming, pay-per-view programming, and customer service. Cablevision is especially concerned with cable operators' relations with local governments and increasing advertiser interest in cable.

Since 1980 the tabloid-size weekly Multichannel News has sought to provide breaking news to cable industry management. Covering cable industry conventions, regional cable systems, and regulatory changes, Multichannel News is also a clearinghouse for cable industry employment. The semimonthly Cable Television Business (1982-) reports on cable programming trends and financial strategies, profiles cable executives, and covers cable industry associations and conventions.

Cable World, a weekly since 1989, emphasizes the international nature of cable television financing, construction, programming, and management. Cable World editors have noted that U.S. personnel manage certain European cable systems, that Belgians financed the cable system in Hong Kong, and that Cable News Network is carried internationally. Aimed at the cable executive with little spare time, Cable World provides concise news sections on cable operations, technology, financing, advertising, and programming.

Cable and broadcast networks' reliance on satellite delivery systems has increased interest in satellite news. The monthly Via Satellite (1986-) covers the applications of satellite technology to international broadcasting. In addition to satellite company and personnel news, articles in Via Satellite address the financial and technological issues of satellite broadcasting, the changing policy and regulatory environments worldwide, and potential future applications of satellite broadcasting. Likewise, Satellite Week (1979-) reports on the satellite broadcasting industry, its changing international markets and regulatory environments.

For historical research purposes, several now-defunct trade publications offer much information on the earlier decades of the television industry. In addition to *Broadcasting-Telecasting* mentioned above, *Sponsor* (1946–68) and *Television* (1944–68) are excellent sources for articles on evolving programming strategies, regulatory issues, financing, advertising techniques, and intra-industry competition. Early issues of *Television* include many “how to” articles, often designed for the advertising agencies then in charge of much program production. Likewise, early issues of *Sponsor*, which was subtitled *Buyers of Broadcast Advertising*, trace the attitudes of advertisers and sponsors toward the decline of national network radio and the rise of network television, reflecting shifts in programming strategies and increased network control of television programming.

The biweekly *Television/Radio Age*, which originated as *Television Age* in 1953, provided analytic coverage of television industry issues until 1989. Arguing that few other industries had grown as rapidly or faced as many problems as television, the magazine’s editors sought to provide in-depth analysis with which to address the television industry’s regulatory, financial, and programming concerns. In addition to publishing articles written by major broadcasting executives, many *Television/Radio Age* articles closely examine specific advertising campaigns, ratings trends and techniques, network programming strategies, and Wall Street financing.

The discontinued *Channels* (1981–90) is also a good source for analytic articles on the television industry of the 1980s. Originally subtitled “of Communications” and edited by well-known television journalist Les Brown, *Channels* was later subtitled *The Business of Communications*, and sought to analyze the expanding role of television in society while reporting on the regulatory environment, production deals, programming strategies, and media markets.

Trade publications in Canada, Australia, and Great Britain not only cover national television industries but also report on the international aspects of the television industry. The Canadian monthly *Broadcaster* (1942–) often addresses issues such as how to develop and sustain Canadian-produced programming that can be competitive with well-financed and well-distributed programming from the United States. Aimed at broadcast managers, *Broadcaster* reports on developments in technology, financing, advertising, and programming, in addition to news about the state-owned Canadian Broadcasting Corporation. Information about the Canadian cable television industry can be found in *Cable Communications Magazine*, which began as a journal on telephony in 1934. Designed for cable managers, *Cable Communications Magazine* offers international news while emphasizing Canadian issues. *Cablecaster* (1989–) covers the management, technology, regulation, and programming of Canadian cable television. A more technical perspective on Canadian broadcasting is provided by *Broadcast Technology* (1975–), also known as *Broadcast + Technology*. Although originally designed for technicians, *Broadcast Technology* has expanded into business reporting and includes articles on programming, marketing, and personnel changes.

The Australian television industry is covered by *Encore*, which reports on all audiovisual production industries in Australia. *Encore* emphasizes production news, including stories on new program series and financing arrangements, but it also covers new technology developments and regulatory issues. *B and T* (1950–), formerly known as *Broadcasting and Television*, covers Australian media markets, ratings, new productions, network strategies, and media personnel moves, as does the more advertising-trade oriented *AdNews*.

British television trade press maintains a strong international slant and is a useful source for news about European television industries. The weekly *Broadcast* (1973–), formerly known as *Television Mail*, covers British television and cable programming, regulation, financing, technology, and ratings, in addition to articles on the international scope of trends in programming and technology. *Screen Digest* (1971–) provides summaries of world news of the film, television, video, satellite, and consumer electronics industries. *Screen Digest* covers industry events and conventions, publications, and market research data for “screen media worldwide.” *TBI* (or *Television Business International*, 1988) covers international broadcast, cable, and satellite markets for the broadcast executive, including articles in English, German, and Japanese. *TV World* (1977–), subtitled *Award Winning International Magazine for the Television Industry*, focuses on programming, usually profiling the trends in a particular country for a section of each issue, in addition to reviewing specific productions and festivals. Designed for executives in broadcast production and distribution, as well as those in governmental broadcast organizations, *TV World* also covers the technological developments in satellite and cable delivery systems, the shifting alliances among transnational media companies, and international conventions such as NATPE and VIDCOM. *TV World*’s truly international scope makes it an excellent source for information on the television industry worldwide.

The diversity of these trade magazines reflects the multifaceted nature of today’s television industry. Since its beginnings the television industry has been closely tied to the film and advertising industries. Now television has expanded beyond broadcasting into cable, satellites, and interactive
technologies. An examination of trade publications reflecting these different perspectives should provide the reader with insights into the history and future of the rapidly changing international television industry.

TRANSLATORS

Television translators are broadcast devices that receive a transmitted signal from over the air, automatically convert the frequency, and re-transmit the signal on a separate channel. Closely related are TV boosters, that amplify the incoming channel and re-transmit it, but without translating from one frequency to another.

In the United States, television stations originally were assigned to specific channels and communities, in a pattern designed to distribute service as widely as possible to all communities. The distribution plan adopted by the Federal Communications Commission in 1952 utilized a highly simplified model of physical terrain, and predicted desired coverage in a fairly smooth radius outward from the transmitter location. In reality, an obstacle such as a 9,000 foot peak would completely block any reception.

TV boosters began as a practical self-help solution to this problem wherever the terrain was mountainous, but especially in the inter-mountain West from the Front Range of the Rockies to the Cascades and through the Sierra and Coastal ranges of California. Typically, a local TV repairman or appliance salesman offering the latest in console TV sets would install a sensitive receiver on the other side of the ridge, bring the signal to the near side, and boost the signal on channel from high above the community into the valley floor.

The first booster probably was built by Ed Parsons in 1948, to extend the reach of his cable system in Astoria, Oregon. Other boosters in the Pacific Northwest soon followed. In 1954, an FCC inspector went out to Bridgeport, Washington, and ordered the local booster shut down, because it was operating without a license. It soon was returned to extra-legal operation, under the auspices of the Bridgeport Junior Chamber of Commerce. The FCC issued a cease and desist order, and on appeal, the Circuit Court of Appeals for the D.C. Circuit refused to enforce the order, holding that the FCC had a statutory duty to make provision for the use of broadcast channels, and had been remiss in not devising a means for boosters to be licensed (C. J. Community Services v. FCC, D.C. Cir., 1957).

In Colorado, Governor Ed Johnson began issuing state "licenses," appointing the local operators to his communication "staff," and ordering them to continue their efforts to boost television signals on channel. By 1956, there already were some 800 unlicensed boosters and translators known to be in operation. The first stirrings of cable television, or community antenna television, as it was then known, were in the same interval after 1948. As an alternate delivery mechanism, cable was the natural competitor of boosters and translators. Where cable gained initial inroads, as in Pennsylvania, it had the advantage that each home user was connected and could be charged a monthly fee. The boosters were typically supported by donations, and were a broadcast service with no toll-keeper. As cable took its initial steps as a fledgling industry, it sought protection from the FCC, urging that translators and boosters be restricted or outlawed.

Because of this early rivalry, and especially because the FCC was wedded to its pre-conceived plan for the orderly development of television in accord with the assignments it issued, the FCC refused to approve boosters and authorized translators in 1956, only to the virgin territory of UHF Channels 10-83. Power was limited to 10 watts. The rural residents essentially ignored this action, and continued to offer VHF service on Channels 2 through 13, increasingly moving away from the primitive booster, in favor of cleaner translator technology.

In 1958 the FCC announced that it was stepping up enforcement efforts, intent on to get the extra-legals off the air in 90 days. Congress was deluged with protests of this action, and the Senate Committee on Interstate and Foreign Commerce conducted field hearings during 1959 in Montana, Idaho, Colorado, Utah, and Wyoming. In July 1960 Congress amended the Communications Act to waive operator requirements and otherwise authorize booster and translator operations, including those already on the air. Three weeks later, the FCC authorized VHF translators for the first time.

Translators continue to be an important component of rural TV delivery, especially in the West. As of 31 December 1995 the FCC reported 4,844 licensed translators, slightly over one-half operating on UHF. All of these re-broadcast a primary TV station. In 1982, the FCC made provision for them to originate their own programs, as low power television stations, and an additional 1,787 LPTV's have been licensed.

TRODD, KENITH
British Producer

Few television producers ever gain name recognition beyond their industry, but Kenith Trodd is arguably one who has. Described as the most successful of all British television drama producers, he is the winner of countless awards for the many one-off plays and films he has shepherded to the screen, and a figure seen as indispensable to the health of the Drama Department of the BBC, out of which he has worked almost continuously for over 30 years. Trodd's career is also unusual in that it has spanned the history of British television drama—from its golden age of experimentation in the 1960s to today's more hard-nosed era of cost-efficiency and ratings imperatives.

Trodd is perhaps best known for his work with the doyen of television playwrights, Dennis Potter. Both came from similar working-class and Christian fundamentalist backgrounds. (The son of a crane driver, Trodd was brought up as a member of the Plymouth Brethren.) Both did National Service as Russian-language clerks at Whitehall where, during the height of the Cold War, they became firm friends with shared left-wing convictions. It was only at Oxford, from 1956 to 1959, that they found a convenient outlet for their political views, rising to become stars of a radical network of working-class students which gained national media coverage and taught them about the value of courting public controversy.

Originally, Trodd had intended to become an academic, and it was only after returning from a stint of teaching in Africa in 1964 that he received an offer from another ex-Oxford friend, Roger Smith, that would change his life. Smith had been appointed story editor of the innovative Wednesday Play slot and desperately needed two assistants to help him recruit as many new writers to television as possible. Along with Tony Garnett, Trodd joined the BBC just at the time the single television play was entering a radical phase of experimentation and permissiveness, as a new generation of talent began to make its presence felt. Working as a story editor on The Wednesday Play and Thirty Minute Theatre (a shorter experimental play slot), Trodd became central to this wave of innovation in the 1960s, nurturing writers such as Potter, Jim Allen, and Simon Gray.

In 1968, Trodd gained his chance to become drama producer when, along with Tony Garnett, he was lured to the rival commercial company, London Weekend Television (LWT), on the promise of forming an autonomous collective within the organisation. Notable as the first independent drama production company in British TV, Kestrel scored some successes during its two-year association with LWT, but the arrangement ended in acrimony, with Trodd eventually decamping back to the BBC, where he became producer of the Play for Today slot throughout the 1970s.

Never any stranger to trouble, he returned to a Drama Department in political turmoil, as managers cracked down on the freedoms programme-makers had enjoyed during the 1960s. While producing some of Dennis Potter's most controversial work, Trodd often had to make a public fuss to defend the writer's freedom, most notably in 1976 when Brimstone and Treacle was banned. He also found himself blacklisted by the BBC as a suspected Communist sympathiser for his support of a range of radical left-wing practitioners.

Though these difficulties were eventually resolved, Trodd continued to campaign for greater independence within the BBC, particularly after the success of his Potter serial, Pennies from Heaven, in 1978. In marked contrast to Potter, he became a passionate advocate for TV drama filmed on location rather than recorded in the studio (the dominant practice up to that time). This drive for change came to a head in 1979, when he again left the BBC for LWT, as part of a deal involving the formation of an independent production company with Potter. Once more, the arrangement ended in acrimony. Trodd returned to the BBC, but this time on the eve of the foundation of Channel Four, the network that would do so much to legitimise the concept of the independent producer in British television.

In the early 1980s, Trodd became chair of the Association of Independent Producers as one of the new breed of "indepependents," although he continued to work within the very heart of institutional television at the BBC. Under his influence, however, things were changing there, too. He had finally achieved his goal of remaining within the corporation while being able to produce independent projects as well. This ideal soon became accepted practice, as did his campaign for shooting on film.

In 1984, Trodd formed part of a BBC working party convened to examine how the corporation should respond to the feature film-making for TV and theatrical release that
Channel Four had pioneered. The outcome was the abandonment of the old concept of the studio Play for Today and the introduction of new BBC film slots, Screen One and Screen Two, with Trodd helping to oversee the first batch of films in 1985.

Despite the success of his campaigning, Trodd's recent career raises uncomfortable questions about whether he has not made himself somewhat redundant by the changes he helped bring about in the 1980s. The decline in the annual number of single drama slots due to the increased costs of film-making, plus the corresponding decline in writers and directors required to fill these slots, indicates a much tougher and more competitive environment than the one which allowed him to experiment with new ideas and untired talent in the 1960s. Nor, despite the success of a few of his BBC "single films," such as After Pilkington (1987) and She's Been Away (1989), has there been anything like the constant stream of outstanding material that secured his reputation in the 1970s. A rift with Potter in the late 1980s (not healed until the writer's death in 1994) also did not help matters in this respect. Certainly, Trodd's function has changed from the days when, as a BBC tyro, he filled his many play slots with a motley crew of young writers and directors—the question is whether for the best.

TROUGHTON, PATRICK

British Actor

Patrick Troughton was the second actor to take on the mantle of British television's Doctor Who in the long-running science-fiction series of the same name, playing the role for three years, from 1966 to 1969. This was by no means the only part he played on television, and he also had a full and varied career as an actor in the theater and in the cinema, but it is for his flamboyant and quixotic portrayal of BBC's celebrated Time Lord that he is usually remembered.

Troughton followed William Hartnell as Doctor Who after his predecessor, suffering from multiple sclerosis and disillusioned with the changing character of the programme (which had originally been intended to have a strong educational content), withdrew from the series. Troughton determined at once that his Doctor would be in marked contrast to the white-haired dotty professor-type depicted by Hartnell, and in his hands the Doctor became a colourfully whimsical and capricious penny-whistle-playing eccentric who could be testy, courageous, and downright enigmatic as the mood took him. Such a radical change in character was made possible within the confines of the programme through the introduction of the concept that the Doctor underwent a mysterious regenerative metamorphosis at various stages of his centuries-long existence.

Troughton settled quickly into the role, and children throughout Britain cowered behind the sofa as his Doctor did weekly battle with such fearsome alien foes as the Daleks and the Cybermen. After three years, he finally passed the responsibility for playing television's famous Time Lord on to Jon Pertwee.

By the time he was selected to play Doctor Who, Troughton had long established his reputation as a performer in a wide range of roles and productions, being particularly well regarded as a Shakespearean actor. Among the most acclaimed of his previous appearances had been his performance as Hitler in the play Eva Braun at Edinburgh's Gateway Theatre in 1950 and supporting roles in Laurence Olivier's Shakespearean film epics Hamlet and Richard III. On television he had made appearances in such enduringly popular series as Coronation Street, in which he was George Barton, and Doctor Finlay's Casebook. Notable among his later credits on the small screen were the series The Six Wives
of Henry VIII, in which he was cast as the Duke of Norfolk, the World War II prison camp drama Colditz, and the sitcom The Two of Us, in which he gave his usual good value as Nicholas Lyndhurst’s grandfather Perce (after Troughton’s death, Tenniel Evans took over the role). Always a jobbing actor who was ready to turn his hand to a variety of roles of contrasting sizes, his familiar face would pop up in all manner of series, and he guested on Special Branch, The Protectors, The Goodies, Churchill’s People, Minder, and Inspector Morse, to name but a few.

But it was with Doctor Who that Troughton’s name was destined to remain indelibly linked in the last years of his life. His death occurred while he was actually attending a Doctor Who convention in the United States.

TURNER, TED

U.S. Media Mogul

Ted Turner is one of the entrepreneurs responsible for rethinking the way we use television, especially cable television in the 1970s, 1980s and 1990s. But Ted Turner is known, loved, or hated as much for his unique personal style as for any particular accomplishment. He is a flamboyant Southern businessman in industries normally run from New York and Los Angeles. Turner’s penchant for wringing every possible use from his corporations has enabled him to establish a corporate empire that touches virtually every area of the entertainment industry. In 1995, in what could be the most significant personal and financial deal of his career, he agreed to merge his holdings with those of international media conglomerate Time Warner. Turner linked his corporation to an unusually powerful managing partner.

Turner’s career in broadcasting began in 1970, when Turner Communications, a family billboard company, merged with Rice Broadcasting and gained control of WTCG, Channel 17, in Atlanta. WTCG succeeded under Turner’s ownership losing $900,000 before the merger in 1970, to making $1.8 million in revenue in 1973. Turner made WTCG cable’s first “superstation,” broadcast by satellite to cable households around the United States. Renamed WTBS (for Turner Broadcasting System) in 1979, the station remained one of the most popular basic cable options through the growth in cable households in the 1980s. The program schedule featured a mixture of movies and series produced by Turner subsidiaries, reruns from Turner’s vast entertainment libraries, broadcasts of Turner-owned Atlanta Braves’ and Hawks’ games, and shows related to Turner’s interest in the environment, such as explorer Jacques Cousteau’s Undersea Adventures and Audobon Society specials.

Turner’s second great innovation in cable, the Cable News Network (CNN), was launched in 1980. Turner’s personal involvement in CNN appeared to handicap the network from the start, since WTBS’s joke-filled late-night news program and CNN’s shoestring budget suggested that Turner would not commit to serious journalism. But CNN’s 24-hour news programming gained viewer loyalty and industry respect as it challenged—and often surpassed—the major networks’ authority in reporting breaking events such as the Persian Gulf War. Turner, as well, refashioned himself as a global newsmen as CNN expanded into new markets (by 1995, it reached 156 million subscribers in 140 countries around the world), banning the word “foreign” from CNN newscasts in favor of “international.” And following Turner’s philosophy of finding as many outlets for his products as possible, the CNN franchise has grown to include CNN International, CNN Headline News, CNN Radio and CNN Airport Network, as well as a variety of computer on-line services.

Turner’s holdings are not limited to cable networks, although he also owns Turner Network Television (TNT), Turner Classic Movies, Sportsouth, and the Cartoon Network. His Turner Entertainment Company manages one of the world’s largest film libraries, including the MGM library, with licensing rights for Hollywood classics such as Gone with the Wind, The Wizard of Oz, and Citizen Kane. Production companies include New Line Cinema, Castle Rock Entertainment (which produced Seinfeld), Hanna-Barbera Cartoons, and Turner Pictures Worldwide; all provide programming sources for his cable and broadcast outlets. His Turner Home Entertainment manages the video release of titles from the Turner library, as well as overseeing a publishing house, educational services company, and a division devoted to exploring ways to bring Turner titles on-line. And throughout his career, Turner has endeavored to purchase one of the three major networks, targeting each for takeover as it has become financially vulnerable.

Turner’s possessions cannot begin to capture the essence of the personality which has made him one of the entertainment industry’s most recognizable figures. He earned the nickname “Captain Outrageous” during his yachting days (capturing America’s Cup in 1977 and losing it in 1980), but his reputation for eccentric behavior has not been limited to the sporting arena. When his efforts to “colorize” films from his extensive black-and-white movie
library—thereby broadening the films’ appeal to audiences who prefer color—raised the hackles of film lovers and prompted congressional hearings on the authorship and ownership of cinematic texts, Turner threatened to add color to Citizen Kane, the 1941 Orson Welles classic which has been lauded as the greatest film ever made. (Although Turner owns the film, he didn’t.)

Turner has actively sought publicity both for himself and for a number of causes he supports, such as the environmental movement and world peace, especially when they have been associated with Turner’s media or sports holdings. Two examples are WTBS’s Captain Planet environmental cartoon and the Goodwill Games between United States and Soviet athletes to which Turner has broadcasting rights. And with his third wife, former actress, fitness guru, political activist, and multimedia mogul Jane Fonda, Turner has added support for Native American causes (including a series of original films on TNT) to atone for his earlier racist promotions of the Atlanta Braves. Long accustomed to his role as “captain of his own fate,” it remains to be seen how he will arrange a position in a corporate structure he arranged for but does not control.

—Susan McLeland

TED (ROBERT EDWARD) TURNER. Born in Cincinnati, Ohio, U.S.A., 19 November 1938. Educated at Brown University. Married: 1) Judy Nye, 1960 (divorced); one daughter and one son; 2) Jane Shirley Smith, 1965 (divorced, 1988); one daughter and two sons; 3) Jane Fonda, 1991. Account executive, Turner Advertising Company, Atlanta, Georgia, 1961–63; president and chief operating officer, 1963–70; president and chair of the board, Turner Broadcasting System, Inc., Atlanta, since 1970; chair of the board, Better World Society, Washington, 1985–90. Honorary degrees: D.Sc. in Commerce, Drexel University, 1982; L.L.D., Samford University, Birmingham, Alabama, 1982, Atlanta University, 1984; D. Entrepreneurial Sciences, Central New England College of Technology, 1983; D. in Public Administration, Massachusetts Maritime Academy, 1984; D. in Business Administration, University of Charleston, 1985. Board of directors: Martin Luther King Center, Atlanta. Recipient: America’s Cup in his yacht Courageous, 1977; named yachtsman of the year four times; outstanding Entrepreneur of the Year Award, Sales Marketing and Management Magazine, 1979; National Cable Television Association President’s Award, 1979 and 1989; National News Media Award, Veterans of Foreign Wars (VFW), 1981; Special Award, Edinburgh International Television Festival, Scotland, 1982; Media Awareness Award, United Vietnam Veterans Organization, 1983; Special Olympics Award, Special Olympics Committee, 1983; World Telecommunications Pioneer Award, New York State Broadcasters Association, 1984; Golden Plate Award, American Academy of Achievement, 1984; Silver Satellite Award, American Women in Radio and Television; Lifetime Achievement Award, New York International Film and Television Festival, 1984; Tree of Life Award, Jewish National Fund, 1985; Golden Ace Award, National Cable Television Academy, 1987; Sol Taishoff Award, National Press Foundation, 1988; Chairman’s Award, Cable Advertising Bureau, 1988; Directorate Award NATAS, 1989; Paul White Award, Radio and Television News Directors Association Award, 1989; numerous other awards.

## TURNER BROADCASTING SYSTEM

U.S. Media Conglomerate

Over the course of three decades, Turner Broadcasting System (TBS) has grown from a regional outdoor advertising firm into one of the world's largest and most successful media conglomerates. Beginning in the late 1960s, Ted Turner changed his father's company, Turner Advertising, first into Turner Communications Company and then into Turner Broadcasting System. Each name change represented a stage in the building of an empire that would come to encompass broadcast television and radio, cable program services, movie and television production companies, home video, and sports teams.

TBS began with Turner's purchase of failing Atlanta UHF station, WJRJ, in 1968. He immediately renamed the station WTCG (for Turner Communications Group) and began to look for programming. What Turner found were old movies and syndicated television series, many of which he purchased outright with a view toward unrestricted future showings. He used these to counterprogram the network affiliates, going after such audience segments as children and people who did not watch the news. By the early 1970s, WTCG also offered local sports programming—first professional wrestling and then Atlanta Braves baseball, Atlanta Hawks basketball, and Atlanta Flames hockey. In 1976, Turner purchased the Braves, securing long-term access to his single most critical source of programming.

The old movies and TV programs combined with the sports coverage proved to be a formula for success. By 1972, WTCG boasted a 15% share of the Atlanta audience, and the station's signal had begun to be carried by microwave to cable systems in the Atlanta region. When Turner heard about Home Box Office's groundbreaking satellite debut in 1975, he quickly began preparations to use the same technology to extend WTCG's signal. Through a series of adroit negotiations, Turner set up (as a business separate from Turner Communications) a company called Southern Satellite Systems, Inc. to uplink WTCG's signal to an RCA communications satellite. In 1976, WTCG became the second satellite-delivered cable program service and the first satellite superstation.

The superstation was renamed WTBS in the late 1970s. In 1981 Cable News Network (CNN), the first of Turner Broadcasting System's cable-only program services, was launched. Throughout the following decade CNN branched into specialized news services, including CNN Radio, CNN International, CNN Headline News, and CNN Airport Network.

During the 1980s, strategic programming acquisitions led to more new cable ventures for Turner Broadcasting. In 1986 Turner added the entire MGM film library to his existing stock of old movies. Two years later Turner Network Television (TNT), a general-interest cable program service that features many movies, was launched. The Turner film library also supplies Turner Classic Movies, launched in 1994. Turner's 1991 acquisition of Hanna-Barbera Cartoons, both the production studio and the syndication library, ensured a continuous supply of programming for both the TBS superstation and the Cartoon Network, launched in 1992. Several foreign-language versions of the Cartoon Network either exist or are being developed. Finally, in addition to the TBS superstation's established market position as a sports programming outlet, Turner Broadcasting also owns Sportsouth, a regional sports programming service.

From the earliest efforts to revamp WTCG, much of Ted Turner's television success has lay in his and his employees' ability to acquire innovative and inexpensive sources of programming and to make that programming available through as many outlets as possible. Thus Turner Broadcasting System's current holdings represent both program material—in the form of film and television libraries, production houses, and sports teams—and the means of distributing that programming.

In 1995 TBS began what may yet be its most significant negotiations when it entered into an agreement to become
part of the Time Warner media conglomerate. If approved by courts and regulatory agencies TBS would add its resources, its staff—and Ted Turner to one of the largest media organizations in the world.

THE 20TH CENTURY
U.S. Historical Documentary Program

From the one-hour premiere episode "Churchill, Man of the Century" (20 October 1957) to its last episode The 20th Century unit produced 112 half-hour historical compilation films and 107 half-hour "originally photographed documentaries" or contemporary documentaries. Narrated by Walter Cronkite, the series achieved critical praise, a substantial audience, and a dedicated sponsor, the Prudential Insurance Company of America, primarily with its historical compilation films. The compilation documentaries combined film footage from disparate archival sources—national and international, public and private—with testimony from eyewitnesses, to represent history. Programs averaged 13 million viewers a week, but periodically reached 20 million with action-oriented installments. The series foreshadowed the production and marketing strategies of weekly compilation and documentary series that populate cable television today.

Irving Gitlin, CBS vice president of public affairs programming, originally conceived the series as broad topic compilations based on Mark Sullivan's writings, Our Times. Burton Benjamin, whose career at CBS News began as the series' producer and progressed to executive producer, radically revised the concept. He stressed compilations focused on one man's impact on his times or an event ("Patton and the Third Army," "Woodrow Wilson: The Fight for Piece"). These were to be interspersed with more traditional biographical sketches of individual lives ("Mussolini," "Gandhi," and "Admiral Byrde"). Benjamin also added a mix of "back of the book" stories, or historical episodes receiving scant attention in history texts and unfamiliar to the general public. These "essays" dealt with individuals, such as Mustafa Kemal Ataturk ("The Incredible Turk"), and topics, such as the Kiska campaign ("The Frozen War"), and the Danish resistance movement ("Sabotage"). The series' researchers, both literary and film, were instructed to pursue detailed factual information that would add the unknown to the familiar. Information such as the $8.50 price levied on those who wished to watch Goering's wedding parade or the details of Rommel's visit to his family on D-Day surrounded primary story elements. With the assistance of associate producer Isaac Kleinerman, editor and film researcher for Victory at Sea (NBC, 1952-53) and Project XX (NBC, 1954-73), the series established a successful formula by stressing pivotal dramatic incidents in battles, conflicts, political uprisings, and the repercussions of actions by great male leaders. Accounting for the many battle-oriented programs, Benjamin admitted that the series was "as much a show biz show as any dramatic half-hour." But when the availability of dramatic and unusual footage of personalities existed for an historical period or event, such as "Paris in the Twenties" and "The Olympics," the unit produced broad-canvas compilation films. On a weekly basis audiences stayed with the series, expecting the unique and unfamiliar even in recognizable topics.

When the series started to look familiar, Benjamin revised. In the third season the series shifted to the individual in history and more contemporary topics. The biographical form slowly expanded to contemporary men in the arts and sciences, law, and politics while giving "eyewitnesses" a more complex role in the compilation films. The successful use of German Captain Willi Bratg in "The Remagen Bridge," dramatically describing how an American shell changed...
history’s course by accidentally severing a detonation cable, led the production team to search out figures with strong emotional and informational ties to the past. From 1961 through the series’ end, the most innovative compilations used central, compelling personalities to weave a dramatic structure. These included Countess Nina Von Stauffenberg and Captain Axel Von Dem Bussche in “The Plots Against Hitler,” and Mine Okubo, author of *Citizen 13360* in “The Nisei: The Pride and the Shame.” But as the series progressed, contemporary documentaries gradually outnumbered compilation films. Contemporary documentaries depicted the enduring value of democracy’s struggle against Communism, the modernization of America, and the pioneering human spirit facing adversity.
Although accepted by the public, 28 contemporary documentaries over the nine years were greeted with criticism. These depicted U.S. military defense systems and hardware, and functioned as publicity releases for the Department of Defense by equating liberty with technology. By filming documentaries such as "Vertijet" and "SAC: Aloft and Below," the producers received extraordinary military assistance in declassifying footage in government archives for the compilation films. Still, Benjamin strove for journalistic integrity in a politicized atmosphere, even canceling biographies on General MacArthur and Curtis Le May when the military requested final script approval.

Social and political change overseas dominated the list of contemporary subjects. Although evident in the compilation films, the series' anti-Communist ideology and commitment to democratic modernization was blatant in programs such as "Poland on a Tightrope" and "Sweden: Trouble in Paradise." Periodically, the producers sought new approaches to the contemporary documentary, in response to waning critical reception and audience desire for the dramatic. When Sam Huff was outfitted with a microphone and transmitter, in "The Violent World of Sam Huff," the landscape of television documentary shifted. Other experiments in quasi-cinema-verite documentaries such as "Rhodes Scholar" and "Duke Ellington Swings through Japan" illustrated new approaches for television. But strong diversions from the series' dominant form and content, such as the grim Appalachian conditions depicted in "Depressed Area, U.S.A.," were rare and usually came from freelance film directors such as Willard Van Dyke and Leo Seltzer.

CBS executives admired the series' meticulous production process. The producers allocated 24 weeks for a program's production, with each stage such as literary research, film research, location shooting, editing, script writing, and music allocated a specific time parameter on a flow chart. By the sixth season the series ran itself, allowing Benjamin to work simultaneously on other CBS news projects. Into this production mechanism, Benjamin periodically added the attraction of established journalists and historians, including John Toland, Robert Shaplen, Sidney Hertzberg, and Hanson Baldwin. Although Alfredo Antonini composed music for 50% of the programs, Franz Waxman, Glen Paxton, George Kleinsinger, George Anthell, and others contributed original scores, working with Antonini and the CBS Orchestra within strict time limitations. This would be the last time a documentary series turned consistently to talent outside a network.

Prudential supported the series' use of these film, literary, and musical figures, but became a restraint on the series' creative potential. The company approved and prioritized each year's topics, submitted by Benjamin and Kleinerman, and admitted not wanting controversial programs on social and religious topics. The sponsor—and the Department of Defense—also expected a conservative and uncritical representation of military activity, past and present. Certain subjects such as gambling, the labor movement, and U.S. relations with Canada were rejected by Prudential. Even though Benjamin was aware of the corporate perspective, he fought several years for the approval to air biographies on "Lenin and Trotsky" and "Norman Thomas." Prudential directly limited the boundaries of subjects and investigation of any issue potentially upsetting to a large audience. Unknown to many, the series, particularly the compilation films, were tools for insurance agents who screened them at conventions and community events. Prudential withdrew sponsorship after the ninth season, when sports programming reduced the number of available time slots to 18, and the production unit's value to new directions in news and documentary could not assure Prudential the recognizable and dramatic compilation film and documentary subjects deemed suitable for its audience.

TWILIGHT ZONE

U.S. Science-Fantasy Anthology

The Twilight Zone is generally considered to be the first real "adult" science-fiction anthology series to appear on American television, introducing the late 1950s TV audience to an entertaining and at the same time thought-provoking collection of human condition stories wrapped within fantastic themes. Although the series is usually labeled a science-fiction program, its true sphere was fantasy, embracing elements of the supernatural, the psychological, and "the almost-but-not-quite; the unbelievable told in terms that can be believed" (Rod Serling).

During the show's five-year, 155-episode run on CBS (1959–64) the program received three Emmy Awards (Rod Serling, twice, for Outstanding Writing Achievement in Drama, and George Clemens for Outstanding Achievement in Cinematography), three World Science Fiction Convention Hugo Awards (for Dramatic Presentation: 1960, 1961, 1962), a Directors Guild Award (John Brahm), a Producers Guild Award (Buck Houghton for Best Produced Series), and the 1961 Unit Award for Outstanding Contributions to Better Race Relations, among numerous other awards and presentations.

The brain-child of one of the most successful young playwrights of his time (with such "Golden Age" TV successes as "Patterns" and "Requiem for a Heavyweight"), Rod Serling's The Twilight Zone began life as a story called "The Time Element," which Serling had submitted to CBS, where it was produced as part of the Westinghouse-Desilu Playhouse anthology. Although it was little more than a simple time-warp tale, starring William Bendix as a man who believes he goes back in time to the attack on Pearl Harbor, the TV presentation received an extraordinary amount of complementary mail and prompted CBS to commission a Twilight Zone pilot for a possible series. With his "Time Element" script already used, Serling prepared another story which would be the pilot episode for the series. "Where Is Every-body?" opened The Twilight Zone on 2 October 1959, and featured a riveting one-man performance by Earl Holliman as a psychologically stressed Air Force man who hallucinates that he is completely alone in a deserted but spookily "lived in" town while actually undergoing an isolation experiment. It was this hallucinatory human stress situation placed in a could-be science-fiction landscape, complete with an O. Henry-type "snapper ending", that was to become the standard structure of The Twilight Zone. "Here's what The Twilight Zone is," explained Serling to TV Guide magazine in November 1959. "It's an anthology series, half hour in length, that delves into the odd, the bizarre, the unexpected. It probes into the dimension of imagination but with a concern for taste and for an adult audience too long considered to have IQs in negative figures."

Serling's contract with the network stipulated that he would write 80% of the first season's scripts which would be produced under Serling's own Cayuga Productions banner. The prolific Serling, of course, ended up writing well over 50% of the entire show's teleplays during its five years on the air. This enormous output was for the most part supported by two other writers of distinction in the science-fiction genre: Richard Matheson and Charles Beaumont. Matheson's literary and screenplay work before and during the series ran parallel to that of Beaumont, not surprisingly, since they were personal friends and often script-writing collaborators during their early days in television. Matheson's early writing had included the short story collection, Born of Man and Woman, and a novel, I Am Legend (both published 1954), and later the screenplays for The Incredible Shrinking Man (1957; from his own novel), House of Usher (1960), and The Pit and the Pendulum (1961). Beaumont's work included similar science-fiction and horror-fantasy writings, with the short story collections Shadow Play (published 1957) and Yonder (1958), as well
as screenplays for *Premature Burial* (1962) and *The Haunted Palace* (1963), alongside others in a similar vein. Their individual scripts for *The Twilight Zone* were perhaps the nearest in style and story flavor to Serling's own work. George Clayton Johnson was another young writer who, emerging from Beaumont's circle of writer friends, produced some outstanding scripts for the series, including the crackling life-or-death bet story "A Game of Pool", featuring excellent performances from Jack Klugman and Jonathan Winters. Earl Hamner, Jr., later to be creator and narrator of the long-running *The Waltons*, supplied eight scripts to the series, most of which featured good-natured rural folk and duplicitous city slickers. The renowned science-fiction author Ray Bradbury was asked by Serling to contribute to the series before the show had even started, but due to the richness of Bradbury's written work, he contributed only one script, "I Sing the Body Electric", based on his own short story.

As an anthology focusing on the "dimension of imagination" and using parable and suggestion as basic techniques, *The Twilight Zone* favored only a dozen or so story themes. For instance, the most recurring theme appeared to be Time, involving time warps and accidental journeys through time: a World War I flier lands at a modern jet air base (Matheson's "The Last Flight"), a man finds himself back in 1865 and tries to prevent the assassination of President Lincoln (Serling's "Back There"), three soldiers on National Guard maneuvers in Montana find themselves back in 1876 at the Little Big Horn (Serling's "The 7th Is Made Up of Phantoms"). Another theme explored the Confrontation with Death/the Dead: a girl keeps seeing the same hitchhiker on the road ahead, beckoning her toward a fatal accident (Serling's "The Hitchhiker", from Lucille Fletcher's radio play), an aged recluse, fearing a meeting with Death, reluctantly helps a wounded policeman on her doorstep and cares for him overnight before she realizes that he is Death, coming to claim her (Johnson's "Nothing in the Dark"). Expected science-fiction motifs regarding Aliens and Alien Contact, both benevolent and hostile, provide another story arena: a timid little fellow accustomed to being used as a doorman by his fellow man is endowed with super-human strength by a visiting scientist from Mars (Serling's "Mr. Dingle, the Strong"), visiting aliens promise to show the people of earth how to end the misery of war, pestilence and famine until a code clerk finally deciphers their master manual for earth and discovers a cook book (Serling's "To Serve Man", from a Damon Knight story). Other themes common to the series were Robots, with Matheson's excellent "Steel" a standout; the Devil, Beaumont's "The Howling Man"; Nostalgia, Serling's "Walking Distance" and "A Stop at Willoughby"; Machines, Serling's "The Fever"; Angels, Serling's poetic "A Passage for Trumpet"; and "Premonitions/Dreams/Sleep", Beaumont's "Perchance to Dream". The general tone of many *Twilight Zone* stories was cautionary, that humans can never be too sure of anything that appears real or otherwise.

In 1983 Warner Brothers, Steven Spielberg and John Landis produced *Twilight Zone—the Movie*, a four segment tribute to the original series presenting pieces directed by Landis (also written by Landis), Spielberg (written by George Clayton Johnson, Richard Matheson, Josh Rogan, based on the original 1962 episode "Kick the Can"), Joe Dante (written by Matheson, based on the original 1961 episode "It's a Good Life"), and George Miller (written by Matheson from his own story and original 1963 episode "Nightmare at 20,000 Feet"). From 1985 onwards CBS Entertainment produced a new series of *The Twilight Zone*. Honored science-fiction scribe Harlan Ellison acted as creative consultant under executive producer Philip DeGuere; the series is particularly noted for the participating name directors, such as Wes Craven, William Friedkin, and Joe Dante. In more recent times, *Twilight Zone: Rod Serling's Lost Classics* presented a two-hour TV movie based on two unproduced works discovered by the late writer's widow and literary executor, Carol Serling: Robert Markowitz directed both "The Theater" (scripted by Matheson from Serling's original story) and "Where the Dead Are" (from a completed Serling script).

With its subtext of escape from reality, a nostalgia for more simple times, but generally a hunger for other-worldly adventures, it seems appropriate that the original *The Twilight Zone* series appeared at about the right time to take viewers away, albeit briefly, from the contemporary real-life fears of the Cold War, the Berlin Wall, the Cuban Missile Crisis, and, eventually, the tragic events of Dallas. That *The Twilight Zone*, directly or indirectly, inspired such later fantasy and science-fiction anthologies as *Thriller* (1960–62), with its dark Val Lewtonesque atmosphere, and, following that, the superb *The Outer Limits* (1963–64), a delicious tribute to 1950s science-fiction cinema when it was at its most imaginative, remain testimony to both Rod Serling and his *Twilight Zone*’s spirit of poetry and principle.

TWIN PEAKS

U.S. Serial Drama

Scheduled to appear as a limited-run, mid-season replacement series on ABC, Twin Peaks attracted considerable critical attention even before its premiere in spring 1990. Both the network and national critics aggressively publicized the show as an unprecedented format of television drama, one that promised to defy the established conventions of television narrative while also exploring a tone considerably more sinister than previously seen in the medium. In short, critics promoted the series as a rare example of television "art," a program that publicists predicted would attract a more upscale, sophisticated, and demographically desirable audience to television. Upon its premiere, the series generated even more critical admiration in the press, placed higher than expected in the ratings, and gave Americans the most talked-about television enigma since "Who Shot J.R.?

The "artistic" status of Twin Peaks stemmed from the unique pedigrees of the series' co-creators, writer-producer Mark Frost and writer-director David Lynch. Frost was most known for his work as a writer and story editor for the highly acclaimed Hill Street Blues, where he had mastered the techniques of orchestrating a large ensemble drama in a serial format. Lynch, meanwhile, had fashioned one of Hollywood's more eccentric cinematic careers as the director of the cult favorite Eraserhead (1978), the Academy Award-winning The Elephant Man (1980), the epic box-office flop Dune (1984), and the perverse art-house hit Blue Velvet (1986). A prominent American auteur, Lynch was already well-known for his oblique narrative strategies, macabre mise-en-scenes, and obsessive thematic concerns.

Twin Peaks combined the strengths of both Frost and Lynch, featuring an extended cast of characters occupying a world not far removed from the sinister small town Lynch had explored in Blue Velvet. Ostensibly a murder mystery, the series centered on FBI agent Dale Cooper and his investigation of a murder in the northwestern community of Twin Peaks, a town just a few miles from the Canadian border. The victim, high-school prom queen Laura Palmer, is found wrapped in plastic and floating in a lake. Cooper gradually uncovers an ever more baroque network of secrets and mysteries surrounding Laura's death, all of which seem to suggest an unspeakable evil presence in town. Quickly integrating himself into the melodramatic intrigues of the community, Cooper's search for Laura's murderer eventually leads him to track "Killer Bob," a malleable and apparently supernatural entity inhabiting the deep woods of the Pacific Northwest.

Although the enigma of Laura's killer was pivotal to the series' popularity, so much so that TV Guide featured a forum of popular novelists offering their own solutions to the murder mystery, Twin Peaks as an avowedly "artistic" text was in many ways more about style, tone, and detail than narrative. Many viewers were attracted to the series' calculated sense of strangeness, a quality that led Time to dub Lynch as "the czar of bizarre." As in Lynch's other work, Twin Peaks deftly balanced parody, pathos, and disturbing expressionism, often mocking the conventions of television melodrama while defamiliarizing and intensifying them. The entire first hour of the premiere episode, for example, covered only a single plot point, showing the protracted emotional responses of Laura's family and friends as they learned of her death. This slow yet highly wrought story line was apparently considered so disruptive by ABC that the network briefly discussed airing the first hour without commercial interruption (although this could have been a strategy designed to promote the program as "art"). Throughout the run of the series, the story line accommodated many such directorial set-pieces, stylistic tours-de-force that allowed the "Lynchian" sensibility to make its

See also Science-fiction Programs; Serling, Rod
artistic presence felt most acutely. The brooding synthesizer score and dreamy jazz interludes provided by composer Angelo Badalamenti, who had worked previously with Lynch, also greatly enhanced the eerie, bizarre, and melancholy atmosphere.

As the series progressed, its proliferation of sinister enigmas led the viewer deeper into ambiguity and continually frustrated any hope of definitive closure. Appropriately, the first season ended with a cliffhanger that left many of the major characters imperiled, and still provided no clear solution to Laura Palmer’s murder. Perhaps because of the series’ obstinate refusal to move toward a traditional resolution, coupled with its escalating sense of the bizarre, the initially high ratings dropped over the course of the series’ run. Despite such difficulties, and in the face of a perhaps inevitable critical backlash against the series, ABC renewed the show for a second season, moving it to the Saturday schedule in an effort to attract the program’s quality demographics to a night usually abandoned by such audiences. After providing a relatively “definitive” solution to the mystery of Laura’s killer early in the second season, the series attempted to introduce new characters and enigmas to reinvigorate the story line, but the transition from what had essentially been an eight-episode miniseries in the first season to an open-ended serial in the second had a significant, and many would say negative, impact on the show. The series attempted to maintain its sense of mystery and pervasive dread, but having already escalated its narrative stakes into supernatural and extraterrestrial plotlines, individual episodes increasingly had to resort to either absurdist comedy or self-reflexive commentary to sustain an increasingly convoluted world. After juggling the troubled series across its schedule for several months, ABC finally packaged the season’s concluding two episodes together as a grand finale, and canceled the series after just 30 total episodes.

Exported in slightly different versions, Twin Peaks proved to be a major hit internationally, especially in Japan. In the United States, the brief but dramatic success of Twin Peaks inspired a cycle of shows that attempted to capitalize on the American public’s previously untested affinity for the strange and bizarre. Series as diverse as Northern Exposure (CBS), Picket Fences (CBS), The X-Files (FOX), and American Gothic (CBS) have all been described in journalistic criticism as bearing the influence of Twin Peaks. The series also spawned a devoted and appropriately obsessive fan culture. In keeping with the program’s artistic status, fan activity around the show has concentrated on providing ever closer textual readings of the individual episodes, looking for hidden clues that will help clarify the series’ rather obtuse narrative logic. This core audience was the primary target of a cinematic prequel to the series released in 1993, Twin Peaks: Fire Walk with Me. Again directed by Lynch, Fire Walk with Me chronicled Laura Palmer’s activities on the days just before her death. Freed from some of the constraints of network standards and practices, Lynch’s cinematic treatment of Twin Peaks was an even more violent, disturbing, and obsessive reading of the mythical community, and provided an interesting commentary and counterpoint to the series as a whole.

227
U.S. Domestic Comedy

The show 227, initially aired in September 1985, played five seasons on NBC before its final episode in July 1990. Based on a play of the same name, this situation-comedy was set primarily around an apartment building (number 227) located in a racially-mixed neighborhood of Washington, D. C. Featuring an ensemble cast that included such noted African-American television personalities as Marla Gibbs, Hal Williams, Alaina Reed Hall, and Jackee (Harry), 227 succeeded in becoming a top-rated television program. Surviving criticisms and early comparisons to other television programs with predominantly African-American principals, 227 proved a successful comedy, humorously portraying the everyday lives of apartment building 227.

The original play, 227, had been written by Christine Houston of Chicago, and performed by Marla Gibbs' own Cross Roads Academy, a local community theater troupe in Los Angeles. After its successful theatrical debut, 227 was soon adapted and produced for television by Lorimar. In its earliest episodes, 227 was criticized as being too much like The Cosby Show, another highly successful, predominantly African-American situation-comedy broadcast on NBC at the same time. However, even in its first year 227 proved successful in its own right, earning top ratings that opening season. While Cosby portrayed an image of upper-middle class success, 227 supporters argued, 227 depicted a more working-class image of the same strong community and family values.

Most episodes taking place within and around the apartment building, from the front steps, to the laundry room, to the individual apartments, 227 invited the viewer within the most mundane and personal aspects of its characters' lives. The Jenkins, Mary and Lester, were one of the families struggling day by day to survive their various duties and commitments. Mary, played by Marla Gibbs whose eleven seasons as the feisty, verbally aggressive maid Florence on The Jeffersons no doubt prepared her for this similarly outspoken character, was a mother of one, juggling the numerous responsibilities of household, family and personal life with invariably humorous results. Lester, played by Hal Williams, was a father and small-time contractor struggling to stay on top of his own family and job responsibilities. Together, Mary and Lester had their hands full with daughter Brenda, a studious, talented, and mostly well behaved young woman just beginning adolescence.

Other important characters included Rose Holloway, Mary's confidante and cohort in gossip, portrayed by Alaina Reed Rose. Rose, the landlady of building 227, often sat with Mary on the front steps, the two laughing and gossiping about various other residents. In particular, Rose and Mary enjoyed discussing and berating sexually outspoken tenant Sandra Clark, the building's resident vamp. Played by Jackee, the one-named wonder who made Sandra, and herself, famous, Sandra's whining voice and wiggling, tight-dressed body became staple features of 227. Her many men friends and sexually oriented antics a source of constant humor, Sandra sauntered through episode after episode, occasionally eliciting help from Mary for some dilemma she was experiencing. Another frequent front porch gossip was Pearl Shay, an older woman who often leaned out her front window to comment on Rose and Mary's discussions. The grandmother of young Calvin Dobbs, the burgeoning love interest of Brenda Jenkins, Pearl's time was frequently spent scolding and disciplining this gangly adolescent grandson.

Successful in depicting the everyday aspects of its many characters' lives, 227 offered an interesting working class version of African-American values and images. The program brought the viewer within its characters' lives, providing a personal look within this entertaining apartment complex.

THE UNCOUNTED ENEMY: A VIETNAM DECEPTION

U.S. Documentary

The CBS Reports documentary The Uncounted Enemy: A Vietnam Deception, which aired on 23 January 1982, engendered one of the most bitter controversies in television history. The 90-minute program spawned a three-year ordeal for CBS, including disclosures by TV Guide that the report violated CBS News standards, an internal investigation by Burton (Bud) Benjamin, and an unprecedented $120 million libel suit by retired U.S. Army General William C. Westmoreland.

Westmoreland sued producer George Crile III, correspondent Mike Wallace, and others for alleging that Westmoreland participated in a conspiracy to defraud the American public about progress in the Vietnam War. The suit was dropped, however, before reaching the jury, with CBS merely issuing a statement saying the network never meant to impugn the general’s patriotism.

CBS subsequently lost its libel insurance. The controversy was also drawn into the debate over repeal of the financial interest and syndication rules. CBS chair Tom Wyman twice admonished his news division in 1984 for hindering broadcast deregulation. In part as a result of the controversies, fewer CBS documentaries were produced than ever before.

The lawsuit generated an abundance of literature, as well as soul-searching among broadcast journalists regarding ethics, First Amendment protection, libel law, and the politicization of TV news. Unlike the case for a similar, but lesser, controversy over The Selling of the Pentagon, The Uncounted Enemy failed to uplift TV news, and instead contributed to the documentary’s decline.

The program states that the 1968 Tet Offensive stunned Americans because U.S. military leaders in South Vietnam arbitrarily discounted the size of the enemy that was reflected in CIA reports. Former intelligence officers testify that field command reports withheld information from Washington and the press, ostensibly under orders from higher military command, and that a 300,000-troop ceiling was imposed on official reports to reflect favorable progress in the war. This manipulation of information was characterized as a “conspiracy” in print ads and at the top of the broadcast.

The first part of the documentary chronicles the CIA-MACV dispute over intelligence estimates. Part two reports that prior to Tet, infiltration down the Ho Chi Minh Trail exceeded 20,000 North Vietnamese per month. Again, the report alleges, these figures were discounted. The last segment charges that intelligence officers purged government databases to hide the deception.

The most provocative scene features correspondent Mike Wallace interviewing Westmoreland. An extreme close-up captures the general trying to wet his dry mouth as Wallace fires questions. The visual image in conjunction with other program material suggests that Westmoreland engineered a conspiracy, and, as viewers can see, he appears guilty. Westmoreland publicly rebuked these claims and demanded forty-five minutes of open airtime to reject The Uncounted Enemy assertions. CBS refused the request.

In the spring of 1982, a CBS News employee disclosed to TV Guide that producer George Crile had violated network standards in making the program. The 24 May story by Sally Bedell and Don Kowet, “Anatomy of a Smear: How CBS News Broke the Rules and ‘Got’ Gen. Westmoreland,” stipulated how the production strayed from accepted practices. Significantly, TV Guide never disputed the premise of the program. The writers attacked the journalistic process, pointing out, for instance, that Crile screened interviews of other participants for one witness and then shot a second interview, that he avoided interviewing witnesses who would counter his thesis, and that answers to various questions were edited into a single response.

CBS News president Van Gordon Sauter, who was new to his position, appointed veteran documentary producer Burton Benjamin to investigate. His analysis, known as the “Benjamin Report,” corroborated TV Guide’s claims.

According to a report in The American Lawyer, several conservative organizations, such as the Richard Mellon Scaife Foundation, the Olin Foundation, and the Smith Richardson Foundation, financed Westmoreland’s suit in September 1982. One goal of the Smith Richardson Foundation was to kill CBS Reports. Another was to turn back the 1964 New York Times vs. Sullivan rule, which required that public officials prove “actual malice” to win a libel judgment. The Westmoreland case went to trial two years later and was discontinued in February 1985.

One of the significant by-products of the controversy is the “Benjamin Report.” Benjamin’s effort remains widely respected within the journalistic community for revealing unfair aspects of the program’s production. Some observers, however, criticized the report for having a “prosecutorial tone,” for failing to come to terms with the producer’s purpose, and for measuring fairness and balance by a math-
The production flaws, however, overshadowed the program's positive attributes. The Uncounted Enemy helps explain an aspect of Tet and gives voice to intelligence officers who were silenced during the war. But the program tried unsuccessfully to resolve a complex subject in ninety minutes, and it fails to convey the context of national self-delusion presented in lengthier treatments, such as the thirteen-hour PBS series, Vietnam: A Television History or Neil Sheehan's book A Bright Shining Lie. CIA analyst George Allen, who was interviewed in the documentary, explained in a letter to Burton Benjamin in June 1982 his belief that the intelligence dispute was "a symptom of a larger and more fundamental problem, i.e. the tendency of every American administration from Eisenhower through Nixon toward self-delusion with respect to Indochina." Allen reasserted his support for The Uncounted Enemy as a valid illustration of the larger issue and subsequently used the program as a case study in politicized intelligence.

Although many works disprove the conspiracy charge, General Westmoreland did subsequently acknowledge the potential significance of a public disclosure of intelligence information prior to Tet. Appearing on the NBC Today show in May 1993, Westmoreland explained: "It was the surprise element, I think, that did the damage. And if I had to do it over again, I would have called a press conference and made known to the media the intelligence we had."

UNIONS/GUILDS

The television industry is one of the more highly organized, or, unionized, in the United States. Qualified candidates are numerous for a few available jobs. Producing and airing programs lend themselves to odd working hours, location shoots, holidays, weekends, long working days and often short-term temporary employment. Such conditions would normally permit management to exploit employees by offering low wages, few fringe benefits, and no job security to employees. Historically, unionization in U. S. industry began to eliminate such exploitation, and the television industry is no exception.

Although some of the unions in television and film today grew out of earlier creative guilds like Actors’ Equity and the Dramatists’ Guild, the primary reference point for effective unionization of the industry was passage of the National Labor Relations Act in 1935. Known as the Wagner Act, in honor of its congressional sponsor, it was a major piece of “New Deal” legislation passed during the Franklin D. Roosevelt administration. The NLRA made it legal for workers to form unions. It set up the National Labor Relations Board as an arm of government to enforce it. Unions could bargain for wages and working conditions.

Today, unions and guilds representing employees in television and film bargain with networks and production companies for minimum wage scales, pension funds and other fringe benefits. A major bargaining issue in recent years between producers and creative guilds has been residuals. Residuals is the term used to describe royalties paid to actors, directors, and writers for airing programs originally and in subsequent replays and re-runs, and for cassette sales and rentals.

The degree of unionization in television today varies considerably by geographic region. Television stations and cable systems in most of the larger media markets, like New York City, Los Angeles, and Chicago, are almost totally unionized. Local television stations and cable systems in small markets, however, may not be unionized. Networks and major production companies are all unionized, whereas small independent producers tend not to be.

The term “union” in the television industry describes labor organizations that represent technical personnel, and are referred to as “below-the-line” unions. The term “guild” describes labor organizations that represent creative personnel, and are referred to as “above-the-line” unions. These designations result from their actual position on the pages of production budgets in which “creative” and “technical” costs are divided by a line. In a typical television show production budget, below-the-line costs are fixed, whereas above-the-line costs are flexible. For example, the budget for a one-hour drama enters a camera operator’s wages below-the-line because there is a standard wage scale in the union contract with management for camera operators shooting a one-hour drama. The salary for the show’s leading actor is entered above-the-line because there is considerable disparity between a relatively unknown actor’s salary and the salary of a major TV star like Tim Allen or Angela Lansbury.

Four very large unions represent most below-the-line technical personnel in television and cable today: the National Association of Broadcast Employees and Technicians (NABET), the International Brotherhood of Electrical Workers (IBEW), the International Alliance of Theatrical and Stage Employees (IATSE), and the Communication Workers of America (CWA).

NABET began as a union of engineers at NBC in 1933. It is the only union among the four devoted exclusively to representing workers employed in broadcasting, film, recording, and allied industries. Today it is the exclusive bargaining agent for below-the-line personnel at the ABC, NBC, FOX, and PBS networks, as well as at many local independent television stations in large cities.

IBEW is one of the largest unions in the United States and represents workers in construction, manufacturing, and utilities, in addition to below-the-line personnel at CBS, Disney, independent TV stations, and some cable companies.

IATSE was founded in New York City in 1893 as the National Alliance of Theatrical State Employees. Today, it is organized primarily along craft lines with over 800 local chapters, each representing specialized occupations within the union’s overall national membership of more than 70,000 workers. In the Los Angeles area alone, some of the occupations represented by separate local chapters are: set designers-model makers, illustrators-matte artists, costumers, makeup artists-hair stylists, film editors, film cartoonists, script supervisors, film set painters, studio electricians, stagehands, and story analysts. IATSE represents almost every
below-the-line occupation at the major production studios and many independent production companies that produce shows on film for theaters, television, and cable.

CWA, historically, has represented workers in the telephone industry and other common carrier fields. In recent years, it has increased its membership and influence in the cable television industry, and represents below-the-line personnel in cable multiple system operators, cable networks, and local cable companies.

There are many above-the-line guilds representing creative workers in television. The major guilds with the most influence are: the American Federation of Television and Radio Artists (AFTRA), the Screen Actors Guild (SAG), the Directors Guild of America (DGA), the Writers Guild of America (East and West; known as WGAE and WGAW), and the American Federation of Musicians (AFM). Most members of these unions do not work full time or regularly, and those who do almost never work for minimum wage scale.

AFTRA grew out of the American Federation of Radio Artists, founded in 1937. It added television performers and "television" to its name in 1952. Today, AFTRA represents over 70,000 performers nationally who appear on television or cable programs that are produced on videotape or broadcast live. In addition to actors this number includes many performers such as announcers, dancers, newscasters, sportscasters, game show emcees, and talk show hosts, stunt people, and sound effects artists. AFTRA has about 30,000 members in its Los Angeles area alone, a small percentage of whom earn their living primarily from performing on radio, cable, or television. Most television performers work other jobs to support themselves while seeking occasional temporary employment as a television, cable, film, or radio performer.

SAG represents performers who appear on television or cable programs produced on film. These include feature films produced for theatrical release and later aired on television in addition to film programs produced expressly for television exhibition. Related to SAG is the Screen Extras Guild (SEG), which represents bit performers who appear in programs produced on film. Most celebrities and successful performers belong to both AFTRA and SAG, so they are not limited from performing in all three production modes of live, tape, or film.

The DGA was organized originally in 1936 as the Screen Directors Guild by a group of famous film directors, including King Vidor and Howard Hawks. Television directors were admitted in 1950, and the name Directors Guild of America was adopted in 1960. Today, it has a West chapter in Hollywood and an East chapter in New York City. It represents directors, associate directors, unit production managers, stage managers, and production assistants in television, and directors, assistant directors, and stage managers in film. Both chapters work cooperatively to represent their members regardless of the location of a production or shoot. The East chapter, for example, represents most play directors, and the West chapter represents most film directors.

The WGAE (East) and the WGAW (West) are incorporated separately because of differing laws of incorporation in New York and California. WGAE is located in New York City, and WGAW is located in Los Angeles. Though incorporated separately, they function as a single organization that represents the interests of over 8,000 members nationally, although the WGAE has only half the membership of the WGAW, and has a significant number of playwrights among its membership, whereas WGAW is dominated by screenwriters. In 1962, WGA also joined with sister guilds in Great Britain, Canada, Australia, and New Zealand to form an international union alliance among these English-speaking nations.

The AFM began in 1896, and represents musicians, including vocalists and instrumentalists who perform live or on film, tape, record, or disk. It has local chapters throughout the United States that bargain with local television stations and cable systems in geographic regions they cover.

With computers, satellites, and digital technology globalizing electronic communication, unions and guilds will continue to add new occupational groups to their membership and become increasingly more international in scope. In a democratic society like the United States, viable unions remain necessary to provide oversight of big business and management policies and practices toward their employees.

UNITED STATES: CABLE TELEVISION

In its short history, cable television has redefined television in many ways. It became a cultural force that profoundly altered news, sports and music programming with services such as Cable News Network (CNN), C-SPAN (Cable Satellite Public Affairs Network), ESPN (Entertainment and Sports Network), and Music Television (MTV). It spawned a huge variety of "narrowcast" programming services as well as new broad appeal services, including 94 basic and 20 premium services by 1994. It altered the structure of the programming industry by developing new markets for both very old and very new program types. It became an entertainment service that contributed to changed viewing practices, suggested by the proliferating use of remote controls to "surf" along the now extensive channel lineup. And it began an important debate concerning the ability of citizens to control, and contribute to, local media. Cable's organizational development, economic relationships, and regulatory status profoundly altered the video landscape in ways entirely unforeseen, and in the course of its growth and development many accepted notions about First Amendment rights of speakers and listeners or viewers, and about the functions and obligations of communication industries, have been challenged. The cable television industry eclipsed broadcasting's asset and revenue values by the late 1980s as it created moguls and empires that joined the largest media firms in the United States. The first of many communication systems to stretch the meanings and boundaries established in the Communication Act of 1934, cable television has had a pivotal role in altering conceptions about television.

Now the dominant multi-channel provider in the United States, cable television contributed to the substantial drop in the broadcast network viewing from 1983 to 1994 when weekly broadcast audience shares dropped from 69 to 52 while basic cable networks' shares rose from 9 to 26 during the same period, according to A. C. Nielsen as of 1995. Cable television service is available to 95% of all television households in the United States, and about two-thirds of all television households subscribe to it. Most of those systems offer at least 30 channels (57% have between 30 to 53 channels and 13% have 54 or more channels according to the 1995 Television and Cable Factbook). Even with this number of channels, however, broadcast fare carried over cable is still among the most heavily viewed, and most viewers regularly spend their time with only from five to nine of those many cable channels.

Cable service comprises a collection of several industries. Primary among them are the distributors of video product called operators or sometimes "multiple system operators" (MSOs). Cable operators establish and own the physical system that delivers television signals to homes using coaxial cable, although in the 1990s optical fiber began to replace much of the traditional coaxial cable in portions of the network. Programming services produce or compile programming and also sell their services to cable as well as to direct broadcast satellite (DBS) operators. Other entities and institutions connected to the cable industry include investors underwriting distribution or production efforts, the creative community, and loosely coupled groups such as advertisers, local community groups and producers, recording companies, equipment suppliers, satellite and terrestrial microwave relay companies, and telephone companies.

Cable service relies on three fundamental operations. The first is signal reception, using satellite, broadcast, microwave and other receivers, at a "headend" where signals are processed and combined. Second, signals are distributed from that head-end to the home using coaxial cable or optical fiber or microwave relays, abetted by amplifiers and other electronic devices that insure quality of signal to households. Third, components at the home or near the home such as converters must change cable signals into tunable television images, descramblers must be able to decode encrypted programming, and still other equipment may be used to allow for delivery of services on demand, a process called "addressability." Cable television's traditional tree-and-branch system network design typifies one-way delivery services, in contrast to telephone services' star design which maximizes interconnection. Its huge and always-growing channel capacity or bandwidth enables cable television to support a variety of programming services and has always left it favorably positioned to expand into other service areas, such as high definition television, compressed video, and pay-per-view channels. However, the tree-and-branch network limits its interactive potential, a factor that became significant in the 1990s as interactive services were explored more intensively.

Programming on cable television began with retransmitted broadcast fare, but evolved to services unique to cable, some targeted at specialized audience groups such as children, teenagers, women, or ethnic groups, and some providing only one type of programming—weather, news, or sports for example. Such narrowcast programming that appeals to specific demographic groups rather than to broadcast television's wide audience attracts advertisers who require more targeted approaches.

Traditionally cable operators organized their programming into "tiers," with different subscriber charges accruing at different levels. At the base was the least expensive "basic
tier" which includes retransmitted broadcast channels. Moving up leads to special cable-only packages of channels often called "expanded basic." And on the most expensive tier are single-channel premium services such as Home Box Office (HBO), Showtime, Disney or Playboy with separate fees. Programming in each of these levels has expanded because cable television's surplus of channel space and low costs helped to spawn several new formats after the early 1970s, including infomercials, 24-hour news and weather services, music video services, home shopping channels, arts channels, and a host of other narrowly targeted programming. Federal regulations of the 1970s that required cable operators to support community access channels dedicated to public, educational and governmental programming likewise led in many cases to distinctive public service programming. Although cable systems have always been engineered as predominantly one-way delivery systems, they have some capability to provide limited two-way services and could be designed to offer more interactivity. Future cable systems will focus on developing two-way services, even though one-way programming has been the foundation service.

Because cable systems must lay cable in the ground or string it along telephone or electric poles, they must negotiate for the use of poles and rights of way. This is the crux of cable television's dependence on municipalities since cities and towns control their own rights-of-way and in many cases also own the utility poles used by cable companies. Cable operators must negotiate franchises with municipalities that entitle them to use rights-of-way in exchange for fees, capped at 5% of revenues, to the city. A conventional franchise lasts for 15 years. Several aspects of cable television resemble those of traditional utilities: it uses public rights-of-way and deploys a capital intensive network; it conveys but does not create content; it bills subscribers on a monthly basis. These utility-like aspects encouraged communities to treat it as a utility in early years generally only one cable company has been franchised in a single municipality, effectively rendering it a monopoly. Rates charged to subscribers (and sometimes even rates of return) have been regulated differently at different points in time. And service quality is monitored. One source of long-standing friction between cities and cable companies often develops in the area of franchise conditions, particularly the designation of specific services a municipality may expect a cable operator to provide (e.g., specialized channels or funds for public, educational or government access). These controversies have been attributable, in part, to cable television's common carrier or utility characteristics.

Cable television, like home video, taps viewers' willingness to pay directly for programs, a source of revenue untouched by traditional broadcasters. Subscribers pay a monthly fee for programming to the operators, and the operators in turn pay programming networks such as ESPN or MTV for the right to use the services. The price of the programming depends on the specific programming (ESPN is more expensive generally, for example, than the Learning Channel) and the size (subscribership) of the MSO or operator, although the very largest MSOs take advantage of their economies of scale to obtain smaller unit prices on programming. Most basic programming services carry advertisements, and also allow local cable operators to insert ads (called "ad avails") during designated programming segments. Advertising revenues, both national and local, were slow to develop for programming services, awaiting significant subscriber levels and solid ratings data that could indicate viewer levels. Nevertheless, ad revenues grew steadily and have proved to be an important part of programming services' revenues. Premium services such as HBO, Showtime, and the Disney Channel eschew ads and instead rely on higher, separate subscription fees assessed to subscribers.

Cable television's development was very dependent on the regulatory treatment and economic models developed for predecessor systems of telephony and broadcasting. As a hybrid communications system unanticipated in the Communication Act of 1934, cable television challenged regulators' conceptions of what it should be, how it should operate in a landscape already dominated by broadcasters, and how it might take advantage of its delivery system and capacity. The consequences of this uncertainty included some dramatic shifts in ideas of cable obligations to the public and to the communities it serves, and in the scope of cable television's First Amendment rights. The changing shape of cable television has four distinct phases. The first slow growth period, from cable television's inception through 1965, predates any major regulatory efforts. During the second phase, from 1965 to roughly 1975, the Federal Communications Commission (FCC) attempted to restrict cable television to non-urban markets and to mold it into a local media service. In the third phase, from 1975 to 1992, a series of judicial, legislative and regulatory acts including the Cable Communications Policy Act of 1984 catalyzed cable television's expansion across the country and promoted dozens of new satellite-delivered programming services. The fourth phase, signaled by the Cable Television Consumer Protection and Competition Act of 1992 and the Telecommunications Act of 1996, re-regulated certain aspects of cable television and deregulated others, even as new competitors to the service appeared in the form of MMDS, direct broadcasting satellites and new telephone company ventures into video media. As cable television moves into a more competitive environment in which many different delivery systems can duplicate its services, its separate identity is fading as very large, merged telephone-cable-entertainment conglomerates move into video programming and transmission.

I. Rural Roots and Slow Growth

Although cable television systems are now present in many regions of the globe, they began in the rural areas of North America. A product of both the geographic inaccessibility of terrestrial broadcast signals and a television spectrum allocation scheme that favored urban markets, cable systems, also called "community antenna television" or CATV, grew out of simple amateur ingenuity. Retransmission apparatuses such as extremely high antenna towers or microwave repeater stations, often erected by television repair shops or
citizens groups, intercepted over-the-air signals and redelivered them to households that could not receive them using regular VHF or UHF antennas. The earliest cable television systems, established in 1948, are usually credited to Astoria, Oregon, or Mahoney City, Pennsylvania, both mountainous, rural communities. Such retransmission systems spread across remote and rural America throughout 1950s and 1960s. According to *Television Factbook 1980–81*, there were 640 systems with 650,000 subscribers in 1960. By 1970 these numbers had grown to 2,490 systems with 4,500,000 subscribers. The systems were generally "Mom-and-Pop" operations with 12 channels at best, although the MSO form of cable system ownership, in which one company owned several cable distribution systems in different communities, was already spreading.

When cable systems began importing signals from more distant stations using microwave links, broadcasters’ objections to the new service escalated. Many broadcasters had never been happy with cable service, claiming that such systems "siphoned" their programming since cable operators had no copyright liability and therefore never paid for the programming. In 1956 broadcasters petitioned the FCC to generate a policy regarding cable television. The Commission initially declined; it did not possess clear regulatory authority over CATV because the technology did not use the airwaves. The agency reconsidered, however, and finally asserted jurisdiction over cable television in 1962 in the *Carter Mountain Transmission Corporation v. FCC* case. Its rationale for regulating CATV focused on cable’s impact on broadcasters: to the extent that cable television’s development proved injurious to broadcasting—an industry the FCC was obligated to sustain and promote—cable television required regulation. While this justification sustained the FCC’s position throughout the second phase of cable television’s development, it later crumbled under judicial scrutiny.

II. Restricted Expansion and Localism, 1965–1975

While the case addressed only the microwave—and hence over-the-air—portion of CATV service, the FCC eventually extended its authority to all aspects of cable television, and issued two major policy statements, the *First Cable Television Report and Order*, 1965, and *Second Cable Television Report and Order*, 1966. In these orders the FCC, hoping to prevent any deleterious effects of broadcasting, required cable operators to carry local broadcast signals under “must-carry” rules. With its ruling on “nonduplication” the Commission required cable companies to limit imported programming that duplicated anything on local broadcast. A set of 1969 rules deliberately kept cable television from growing toward urban markets or from attaining the capital or benefits of entrenched industries by placing ownership prohibitions or limitations on television and telephone companies and by preventing cable television from entering the top 100 markets. Programming mandates instituted channels for local public access and created a prohibition on showing movies less than 10 years old and sporting events that had been on broadcast television within the previous five years. These rules were intended to promote cable’s local identity and prevent it from obtaining programming that might interest or compete with broadcasters.

Although cable operators continued to press for limitations on the FCC’s ability to impose such program obligations, the courts rebuffed their claims. For example, when Midwest Video Corporation challenged the FCC’s requirement that it originate local programming, the Supreme Court found that such a rule was “reasonably ancillary” to the FCC’s broadcasting jurisdiction (*U.S. v. Midwest Video Corp.*, 440 U.S. 689, 1972).

The net effect was to severely constrain the programming options for cable television operators, and in particular to diminish opportunities for a pay television service that would show movies or sports. During the 1960s the FCC conceived of cable television as an alternative to broadcasting and promulgated the must-carry, nonduplication, and other rules with the intention of enhancing cable television’s community presence and possibilities and at the same time protecting broadcasters from competition with the new delivery system. The agency positioned cable television as a hybrid common carrier—broadcasting service, one limited to mandatory channels (the must-carry rules, local access channels, constrained non-local programming) with regulated rates. This fettered opportunities for networking, for national distribution, and for direct competition with broadcasters.

By the late 1960s and early 1970s, more public interest in cable television fueled by a coalition of community groups, educators, cable industry representatives, and think tanks such as Rand Corp. heralded cable television’s potential for creating a wide variety of social, educational, political and entertainment services beneficial to society. These constituencies objected to the FCC’s policies because they seemed to inhibit the promise of the “new technology.” Ralph Lee Smith’s 1972 book, *Wired Nation*, captured many people’s imaginations with its scenarios of revolutionary possibilities cable television could offer if only it were regulated in a more visionary fashion, particularly one that supported developing the two-way capabilities of cable and moving it toward more participatory applications. The discourse of cable as a cornucopia, as progress, as an electronic future captivated many.

In 1970 and 1971 the White House’s Office of Telecommunication Policy spearheaded a series of meetings among cable, programming and broadcast companies that culminated in the FCC revising its cable rules. This 1972 *Cable Television Report and Order* issued new rules that softened some of the restrictions on cable television’s expansion to new markets, particularly with respect to importing distant signals (“leapfrogging”). However, it continued several rules and standards that the industry found onerous, such as mandatory two-way cable service in certain markets and local origination rules requiring operators to generate
programs. Still more programming restrictions on movies and sporting events adopted in 1975 chafed at the cable industry's desires to offer something new and appealing to subscribers.

Nevertheless, in the wake of the 1972 Report and Order, as cable delivered more than just local broadcast signals to viewers by importing programs from distant markets via microwave, its attractiveness and profitability grew. Two significant events spurred even more growth in the late 1970s. First, HBO became a national service in 1975 by using a communications satellite to distribute its signal, at once demonstrating the ability to bypass telephone companies' expensive network carriage fees (commercial television networks depended on AT&T's lines for their national transmissions) and the possibility for many new program services to cost-effectively form national networks. Second, a series of judicial decisions sanctioned the cable industry's rights to program as it pleased, to enter the top television markets, and to offer new services. This third phase was cable television's highest growth period.

As early as 1972 HBO had offered, on the East coast, event programming such as sports on a "pay cable" basis using a microwave relay, but with satellite feeds it could reach cable operators across the country. HBO wanted to switch from microwave relays to the new RCA satellite Satcom I, which would take its signal across the entire country once the satellite launched in 1975. There were two major impediments to this plan. First, FCC required each cable operator to use large, nine meter dish antennas to receive a satellite feed, and these receiver dishes were expensive. Second, the restrictive FCC programming rules still prevented cable services from acquiring certain types of programming. HBO helped pay for the receiving dishes cable operators needed to receive its signal, and became Satcom I's first television customer. Just two years later the service was being taken by 262 systems around the nation, yet the best programming, current movies and sporting events, was still off limits. HBO then took the commission to court, claiming that the FCC had exceeded its jurisdiction in limiting programming options. Supporting HBO's position in HBO v. FCC, the District of Columbia Court of Appeals concluded that the FCC's broadcast protectionism was unjustifiable and, perhaps more important, that cable television service resembled newspapers more than broadcasting and consequently deserved greater First Amendment protections. This reasoning paved the way for the cable industry to argue against other government rules, which fell aside one by one after the strong message sent by the HBO case to the FCC.

Even as the agency stripped away federal syndicated exclusivity rules, reduced the size and consequently the cost of allowable satellite dishes, and eliminated remaining distant signal importation rules, the courts underscored cable television's rights to expand as it wished and to use any programming it desired. On the heels of the HBO case, the 1979 United States v. Midwest Video Corp. decision found that the FCC's rules imposed unacceptable obligations on cable operators, undermining the earlier Midwest Video decision. Insofar as those rules required cable operators to function as common carriers with the access channels—operators had no control over the content of access channels and they had to carry community programs on a first-come, first-served basis—and insofar as they prescribed a minimum number of channels, they violated cable's First Amendment rights. The industry claimed these court decisions affirmed its status as an electronic publisher, and has continued its fight against regulatory obligations under this banner ever since. The cable industry has advanced its electronic publisher label to underscore its First Amendment status: like print publishers, cable television selects and packages materials for exhibition, and like print, should be under no obligation to exhibit material that regulatory powers prescribe.

With the regulatory barriers to entry now reduced, cable systems experienced huge growth from the late 1970s through the early 1980s: The 3,506 systems serving nearly 10 million subscribers in 1975 leaped to 6,600 systems serving nearly 40 million subscribers just ten years later. Programming services likewise emerged. Ted Turner's UHF station WTG, renamed superstation WTBS (and later just TBS), followed HBO's lead in national satellite delivery in 1976, as did Christian Broadcast Network's CBN Cable (later the Family Channel). The Showtime movie service and sports service Spotlight followed suit in 1978. Two other superstations, New York's WOR and Chicago's WGN, began around the same time. Warner launched the children's service Nickelodeon and the Movie Channel in 1979, while Getty Oil began the Sports Programming Network (later called ESPN). Turner's Cable News Network launched in 1980, to the jeers of broadcast network news operations who dubbed it the "Chicken Noodle Network" and claimed an upstart like Turner could not do justice to the news. Other programmers rushed to satellite distribution, so that by 1980 there were 28 national programming services available, according to National Cable Television Association records.

These programming innovations affected broadcasting and related industries in several ways. For example, Turner's CNN, though it lost money for about five years before moving into profitability, had a substantial audience even in its earliest years. In fact, many network affiliates contracted with Turner for late night news in the early 1980s, prompting the broadcast networks to launch their own competing late night news shows such as NBC's News Overnight, CBS' Nightwatch, and The CBS Early Morning News. MTV, a popular music program service which began in 1981, prompted copycat programming on the part of the broadcast networks as well, and even episodes of popular NBC police drama Miami Vice were likened to one long music video. Music videos also assumed a new and critical role in establishing popular hits for the music industry. Program competition between broadcasting and cable drove up the cost of certain program categories, especially sports, and cable networks eventually outbid broadcasters for certain offerings even as they developed cost-effective ways to deliver regional
operators moved quickly to claim new markets in suburban and urban areas. Their systems finally had something new to offer these urban areas already used to several over-the-air broadcast signals, and they sought to wire the most lucrative areas as fast as possible. The MSO ownership form bought out many independent cable systems even as they sought new territories to wire. The period of time between roughly 1978 and 1984, often called the “franchise war” era, saw cable companies competing head to head with each other in negotiating franchises with communities, often promising very high capacity, two-way cable systems in order to win contracts, only to renege on these promises later. Warner Amex’s QUBE system, a highly publicized but actually very limited, two-way cable service that the company promised to develop in many of its markets, was one such casualty, as were security systems, special two-way institutional networks called I-Nets, and a host of other cost-inefficient services, including public access channels. Most large, urban markets were franchised at this time, and several were promised 100 channel systems with two-way capabilities plus extensive local access facilities although few ended up with such amenities. Companies such as Time’s American Television and Communications Corporation, Warner-Amex, TelePrompTer, Jones Interchangeable, Times-Mirror, Canada-based Rogers, Cablevision Systems, Cox, United, Viacom, Telecommunications, Inc. (TCI), and other large MSOs garnered much of these franchises. In spite of their historically harsh rhetoric against cable television, broadcasters too became convinced of cable television’s profitability. They invested in transmission systems and ultimately made substantial investments in programming as well, with ABC’s acquisition of ESPN a notable early success and CBS Cable, launched in 1981, a notable failure.

Expanded markets and new programming services abetted by favorable judicial decisions contributed to the cable industry’s power to lobby for more favorable treatment in other domains. The industry’s pleas met favorable response within the Reagan administration, and Mark Fowler, the Reagan-appointed chair of the FCC from 1981 to 1987, supported a marketplace approach to media regulation that would essentially put cable on a more equal footing with broadcasting.

The Cable Communications Policy Act of 1984 addressed the two issues that still hindered cable television’s growth and profitability: rate regulation and the relative uncertainty surrounding franchise renewals. Largely the result of extensive negotiation and compromise between the cable industry’s national organization, the National Cable Television Association, and the League of Cities representing municipalities franchising cable systems, the act provided substantial comfort to the cable industry’s future. Its major provisions created a standard procedure for renewing franchises that gave operators relatively certain renewal, and it deregulated rates so that operators could charge what they wanted for different service tiers as long as there was “effective competition” to the service. This was defined as the presence of three or more over-the-air signals, a very easy standard that over 90% of all cable markets could meet. The act also allowed cities to receive up to 5% of the operator’s revenues in an annual franchise fee and made some minor concessions in mandating “leased access” channels to be available to groups desiring to “speak” via cable television. Other portions of the act legalized signal scrambling, required operators to provide lock boxes to subscribers who wanted to keep certain programming from children, and provided subscriber privacy protections. When in the following year must-carry rules were overturned in *Quincy Cable TV v. FCC* (1985), the cable industry’s freedom from most obligations and regulatory restraints seemed final.

With rate deregulation and franchise renewal assured, the cable industry’s value soared, and its organization, investments, and strategies changed. MSOs consolidated, purchasing more independent systems or merging, even as they expanded into new franchises, with large MSOs getting even bigger. The growth of TCI, shepherded by John Malone to become the largest MSO for many years, garnered a great deal of criticism. Several systems changed hands as large MSOs sought to “cluster” their systems geographically so they could reap the benefits of economies of scope by having several systems under regional management. More finances poured into the industry after 1984 since its future seemed assured, and the industry’s appetite for expansion made it a leader in the use of junk bonds and highly leveraged transactions, questionable financial apparatuses that later received Congressional scrutiny. Many of the largest companies such as Time (later Time Warner), TCI, and Viacom acquired or invested in programming services, leading to a certain degree of vertical integration. The issues both of size and vertical integration became the subject of Congressional inquiries in the late 1980s, but resulted only in warnings to the industry. Investments in programming, operators argued, justified higher rates, and after 1984 rates jumped tremendously—according to Government Accounting Office surveys, an average of 25% to 30% from 1986 to 1988 alone, vastly greater than the inflation rate. Subscription charges increased so much so quickly that a backlash among consumer groups grew. As the industry’s market penetration and control over programming escalated, its growth strategies targeted new markets, predominantly in Europe and Latin America, and also focused on thwarting new domestic competitors such as direct broadcasting satellites, multipoint distribution service (MDS) and its offspring system called multichannel-multipoint distribution service (MMDS). The multichannel capabilities of MMDS and direct broadcast satellites could provide real competition to cable television.
In this profitable decade many new programming services launched and flourished. The 28 national networks in 1980 grew to 79 in 1990. New systems were built, bringing cable television to 60 million television households by 1990; channel capacity expanded, making the 54-channel system common (in about 70% of all systems). Although pay service subscriptions leveled off as most American households purchased videocassette recorders (VCRs), and although offerings such as pay-per-view—single programs or events subscribers could order for a premium fee on a one-time basis—never worked well technologically or economically, cable services quietly grew, so that by 1992 they were in over 60% of all American households.

However, several issues simmered on throughout the 1980s. One concerned the rate increases that many consumers and policy makers felt escalated too rapidly. Another was the availability of reasonably priced programming to rural viewers who expected to receive them using their own satellite dishes; that such newly scrambled services (after the 1984 act that legalized scrambling) were unavailable to them or only available at what they considered very high prices created an especially heated exchange in Congress. The size and vertical integration of several MSOs worried some policy makers, who felt the companies had undue opportunities to exercise their power over a captive market. Broadcasters continued their cry for remuneration for the three major network channels carried by cable television. Even though most cable subscribers still spent much of their viewing time with network channels, operators paid nothing for that programming. Moreover, as cable operators' power grew, concerns rose about the convention of municipalities authorizing only one cable system for a given territory, thus creating a de facto monopoly. One company, TCI, for example, was singled out for criticism because its systems served more than half of all television households in some states, a situation some critics felt conceded too much power to large cable operators. Finally, the growing deregulation of telephone companies made cable television services a target of their expansion desires.

IV. Re-regulation, 1992 and Beyond

The cumulative weight of these criticisms swung back the regulatory pendulum when the Cable Television Consumer Protection and Competition Act of 1992 attempted to resolve some of these issues. The act re-regulated rates for basic and expanded services, and required that the FCC generate a plan (called must-carry/retransmission consent), by which broadcasters would receive compensation for their channels. The retransmission consent portion of this legislation was the culmination of years of lobbying by the broadcast industry, and effectively forced cable operators to financially acknowledge the importance of broadcast programming on their tiers. The act called for new definitions of effective competition and for supervised costing mechanisms for other aspects of cable service such as installation charges, and it decreed that programming services must be available to third-party distributors such as satellite systems and MMDS providers. However, portions of this legislation, the only legislation during Presi-
Time Warner merges with the Ted Turner empire, and as Disney merges with Capital Cities/ABC, the large, vertically-integrated and multi-faceted company with international holdings seems to be the new industry template for survival. The cable industry remade the television world of the “Big Three” networks, upsetting their hold on programming and viewers and initiating a 24-hour, tumultuous and changeable video domain. As the larger video media industry changes, the cable industry’s boundaries, roles and influences will likewise be reshaped, but the historical legacy of its accomplishments will surely continue to be felt.

UNITED STATES: NETWORKS

Networks are organizations that produce or acquire the rights to programs, distribute these on systems of interconnection, and secure uniform scheduled broadcast on a dispersed group of local outlets. In commercial broadcasting, "networking" was recognized at an early date as the clearest path to profitability, because the costs of program production were—and are—fixed, and revenue turned on securing the maximum degree of efficient distribution and exposure to mass audiences.

In the United States, the number of broadcast networks existing at a particular time, and the prospects for entry by new networks, have always been the combined result of the current state of technology, in tension with an extensive role for government regulation. Television broadcasting, tentatively begun prior to the American entry to World War II in 1941, was suspended for the duration of the war, and did not resume until the first wave of station activations in 1946 through 1948. By then, the dynamics of technology and
regulation in radio broadcasting already had shaped the possibilities for television networks.

Beginning in 1920, radio entrepreneurs had developed an array of informational and entertainment fare, originated in live performances at local stations, and increasingly at network studios in New York City, from which feeds to stations could be disseminated in real time over telephone lines. Commercials, like other copy, were read and performed live. Strong local stations prospered in this system, but the highest return was enjoyed by two major networks, Columbia Broadcasting System (CBS), and the National Broadcasting Company (NBC) unit of a premier radio equipment manufacturer, Radio Corporation of America (RCA). RCA operated dual networks, the Red and Blue. In radio, as was to be the case in television, industry leadership was exercised by a charismatic executive and founder, Robert Sarnoff at NBC, William S. Paley at CBS, Allen B. DuMont and a few others.

The first comprehensive radio law, the Radio Act of 1927, did not confer on government any express power to regulate networks directly, but empowered it to regulate stations engaged in "chain broadcasting." This served to consolidate industry control by the network organizations already underway. The law mandated that radio broadcasting stations be allotted in a manner that equitably served the various states and localities, but withheld actual station ownership of broadcast channels, in favor of renewable licenses for limited times. It also prohibited the licensing of a person or entity that had been convicted of unfair competition or monopolization. These precepts carried over with the Communications Act of 1934, and shaped the relationship among stations, networks and the government throughout the emergence of television.

At the eve of American entry to the war, the Federal Communications Commission (FCC), acting under its powers to investigate and regulate stations, concluded a probe of "chain broadcasting" and announced a series of prohibited practices in radio. These included contracts that permitted networks to command and resell advertising time for their own account, or to option time. The rulings also prohibited the specific ownership of dual networks by a single entity, NBC being the singular example. The Supreme Court's decision upholding these actions in 1943 prompted the divestiture of NBC Blue, acquired that year by Lifesaver magnate Edward J. Noble, and renamed the American Broadcasting Companies (National Broadcasting Co. v. U.S., 319 U.S. 190, 1943).

After 1945, as Americans turned to peace time pursuits, including the realization of television, commercial radio already was settled into a pattern with program fare dominated by two or, generously, perhaps three networks, each of them fortified against hard times by the ownership of a handful of highly-profitable local stations in the largest trading areas. The critical determinant of the number of networks that could be supported was—as it is today—the number of local outlets that could be assured for network audience, by ownership or by contract.

By 1945 the FCC preliminarily had allotted some 19 VHF Channels, 1 through 19, for television broadcasting. Almost immediately Channels 14 through 19 were reallocated to the military, and Channel 1 was put aside for two-way radio. By the end of 1946, seven stations were broadcasting (all on Channels 2 through 6), and approximately 5,000 household receivers were in use. From that point, and even in the absence of detailed technical standards to guard against mutual interference, or other standards, applications for new stations poured in. The FCC imposed a freeze on new applications on 30 September 1948. Virtually all pre-freeze filers actually built broadcasting facilities, so that by the time the freeze was lifted on 13 April 1952, some 107 VHF stations had been activated in 63 markets, and receivers in use had grown to 15.5 million. Denver led the list of many important markets that had no television at all. During the freeze, NBC moved aggressively to apply for and activate stations in the top markets. CBS got a late start, and proceeded to acquire its first stations by purchase. ABC and a fourth network, DuMont Laboratories, participated actively in the FCC proceedings, but were unable or unwilling to initiate major station investment, pending resolution of the knotty regulatory issues.

The framework adopted by the FCC in 1952 allotted television channels to specific communities throughout the United States, roughly in proportion to market size. VHF Channels 2 through 13 and UHF channels 14 to 83 were utilized, but as of 1952, virtually all TV sets were capable of VHF reception only. The first UHF set-top converter was introduced in March 1952. The decision also sacrificed efficiency, and reduced the potential number of stations, by grandfathering the existing 107 outlets, helter-skelter wherever they had started. Practically speaking, the FCC’s allocations provided only enough VHF outlets to provide two-channel service to about 90% of the population, and third-channel service to substantially less. NBC and CBS, each emerging with five powerful owned-and-operated stations, and program offerings spun off from their popular radio fare, quickly expanded affiliations.

The Emmy Awards, first presented on 25 January 1949, were an accurate barometer of network emergence. A local station, KTLA in Los Angeles, dominated the awards for year 1948, with the most popular program (Pantomime Quiz Time), most outstanding personality (Shirley Dinsdale and her puppet, Judy Splinters), and the station award. By the second year, with KTLA still prominent, NBC cracked the line-up, jointly with its New York flagship KNBH, winning best kinescope show (Texaco Star Theater) and personality (Milton Berle). A network spot for Lucky Strike won best commercial. In the third presentation, for 1950, Alan Young and Gertrude Berg were best actor and actress, for CBS jointly with Los Angeles independent KTTV, and their co-produced Alan Young Show was recognized for best variety show. Outstanding personality was NBC/KNBH's Groucho Marx. By the end of the FCC's freeze these networks had unqualified leadership of program origination.
In the complex fight over regulation DuMont Laboratories had advocated a plan with a minimum of four VHF’s allotted to each of the 140 largest trading areas. Rebuffed at the FCC, DuMont never achieved more than 10 primary or full schedule network affiliates. As the few UHF operators incurred mounting losses, DuMont folded its network in 1955. These by-products of the freeze and subsequent FCC decision to grandfather incumbent stations and intermix VHF and UHF channels have been harshly criticized.

Throughout this period, ABC was barely operating, and Noble stated that he had never declared a dividend nor taken a salary through 1952. In 1955, however, ABC received FCC approval to merge with United Paramount Theaters. The chain had been spun off from Paramount Pictures Corp., under court decree that followed the Supreme Court’s antitrust decision of 1948, upholding divestment of theatrical production from exhibition. The significance of government involvement could not be more clear, with ABC’s very existence jeopardized by one government action, and resolved favorably by another. ABC used its Hollywood connections adroitly, teaming with a studio to co-venture a break-through program, to date the most expensively produced in history, Disneyland.

Collectively the networks could have only so many affiliates as there were stations on the air. Commercial VHF stations grew from 233 in 1954 to 458 in 1962. Commercial UHF stations stood at 121 in 1954, and struggled against the lack of UHF receivers. Many UHFs went dark and returned their licenses for cancellation, and by 1962 their numbers had shrunk to 83. In total, the commercial station universe as it grew roughly from 350 to 550 was adequate to support approximately two-and-a-half national networks. Local stations, in the enviable position of having multiple suitors, frequently left ABC with no local outlet. Congress enacted a law in 1962 mandating that all receivers be capable of UHF tuning, but it was only by the mid-1970s that local stations were plentiful enough for ABC to achieve full comparability.

As the networks consolidated their control of station time during the 1950s, a broad shift occurred in their relationship with the sponsor, enhancing their control even further. In the early part of the decade, shows typically were produced by the sponsor live, or contracted for by the sponsor and delivered to the network on expensive film or kinescope. Production centered in New York. With the introduction by Ampex of quadruplex videotape recording in 1956, it became possible for programs to be produced and recorded anywhere, and the new orders for entertainment fare shifted to the concentration of expertise in Hollywood studios. Increasingly, the network replaced the sponsor in development, acquisition, and revision to final programming form. From the 1950s can be charted the realization of core concepts in prime time programming, including the ensemble situation comedy, cop shows, westerns, and regularly scheduled newscasts. The interval often is referred to as the Golden Age of television, perhaps precisely because of its experimental flavor. But while major market stations achieved immediate and impressive profitability, network- ing was still a gamble, the program performance remained uneven, and in 1961 critic-for-a-day Newton N. Minow derided the totality as a "vast wasteland."

The true golden age of three-network hegemony probably traces from 1963, when each network inaugurated a half-hour prime-time newscast, and network television drew the entire nation together in grief after the assassination of President Kennedy. From 1963 until the late 1970s, the networks created a refracted version of the significant events of the day that was shared by all. This cohesion intensified with expanding use of color transmissions and color set sales during the 1960s. One nation resonated with the networks' triune voice, in a manner unparalleled in the past, and likely never again to be seen in the future. ABC, gradually shoring up its group of strong affiliates, and hiring a visionary programmer in Fred Silverman, finally took the Summer Olympics to its first full-season ratings victory in 1976-77. The "third network's potential had been clear for years, but several attempts to acquire ABC during the 1960s were rebuffed, and an attempted buyout by IT and T floundered in 1968, after criticisms were vetted during two years of FCC proceedings.

The membership quota for this elite club of three networks, however, was eventually dismantled by a technology developing quietly during these same years—their television. The FCC's original framework of 1952 did not assure three-network or any network service, to all households, and was particularly deficient where terrain obstacles degraded reception over the air. Community antenna television (CATV) was a local self-help response, tying hilltop repeaters to wires into the home. Because cablers did not utilize the broadcast spectrum, the government was uncertain of its jurisdiction until a Supreme Court decision came down in favor of a broad authority to regulate, U.S. v Southwestern Cable Co., 392 U.S. 157 (1968). Thereafter broadcasters, well aware of the potential competition, leaned on the FCC to retard cable, specifically by forbidding the importation of distant signals that were not available in the local market over-the-air. By 1970, a regime of anti-cable regulation was firmly in place and for ten years it served to retard competition and preserve the networks' position. A newer technological device again led to significant change in this arrangement.

Domestic communications satellites were authorized in 1972, and by 1975 RCA and Western Union had space satellites launched and working. In 1975 RCA sold time on its Satcom I for Home Box Office, the first program service designed to bypass conventional delivery channels, and offer a unified program lineup directly to cable systems and thus to the home—in the true sense a network. The following year, uncertainties surrounding the re-sale of broadcast programs to cable were resolved, with passage of a new Copyright Act, requiring broadcasters to license to cablers under
certain conditions, at below-market rates to be established through a bureaucratic process.

The opportunity presented by the resolution of the two knottiest issues—distribution and rights—was first recognized by Ted Turner, not a cabler but a broadcaster, operator of WTGC in Atlanta (later, WTBS), an independent UHF on Channel 17. By 1978, the FCC had been having second thoughts about the heavy hand it had placed on cable development. Turner approached the agency with a plan to offer Channel 17 to a common carrier he created for the purpose, Southern Satellite Systems. In turn, Southern would deliver the station by satellite to cable head-ends, charging five cents per household per month. Because imbedded in FCC common carrier regulation was the idea of nondiscriminatory rates, for large and small customers (or cable systems) alike, Southern needed a waiver to charge by the number of local subscribers. Astonishingly, the FCC said yes. The debut of Channel 17 as the first "super station" in 1980 assured, year by year, that the three-network share of the program universe would continue to shrivel inexorably. By 1981 the FCC also was in process of a cable "deregulation," abandoning its 10-year folly of attempting to re-bottle the genie of cable program origination. The networks, barred by FCC rules from owning cable systems, began to invest in new cable program services side-by-side with cable companies, Turner, and others.

With President Ronald Reagan taking office in 1981, the deregulatory thrust continued. The former actor, when he thought about such matters, was willing to favor Hollywood studios in their primordial battles with the television networks, and to endorse the expansion of channels for program delivery. A cable television bill, passed in 1984, pre-empted local rate regulation, and so gave the cable industry working capital to continue its strides as program creator and distributor.

These strides were being matched with the opening of a wholly new channel into the home. Sony had introduced a practical, consumer videotape player recorder, the Beta VCR, in 1976, at suggested retail of $1,295. Recording time was one hour. Sony's Japanese rival, Matsushita, which markets under the name Panasonic, followed shortly with an incompatible format that eventually became standard, VHS. Hollywood studios, led by Universal Pictures and Disney, promptly brought a challenge in Federal Court, claiming that the device inherently was useful only for stealing copyrighted material. The issue oscillated in court until 1984, when the U.S. Supreme Court ruled that home taping for home use was not an infringement of copyright (Sony Corp. v. Universal City Studios, Inc., 464 U.S. 417 [1984], called the "Betamax case"). From that date, sales of home recorders and the rental of tapes exploded. The studios have come to enjoy greater revenue from cassette sales and rentals than from theatrical exhibition, and must look back in wonder at their temporary insanity when the player-recorders first were sighted in North America. But for the networks, this technology presents long-term problems. The rating services have assumed so far that programs can be credited as viewed if they are recorded, but it may become apparent in time that the facts of actual audience behavior are otherwise. VCRs in their most typical use occupy the household's attention for non-network fare such as movies, just coming off their initial theatrical run.

As cable and cassettes continued to splinter the market, Reagan's FCC abolished many of the rules and policies that had stood in the background of television broadcasting also. In 1984, the rule restricting each television network to the ownership of a maximum five VHF stations, and seven VHF plus UHF, was replaced with a quota of up to twelve VHF so long as the station grouping did not exceed 25% of all TV households. While this liberalization was still at the discussion stage at the FCC, Thomas S. Murphy, chairman of the Capital Cities station group, approached ABC about a merger. Once the rule was finalized, Capital Cities in 1986 announced the acquisition of the much larger network, for $3.5 billion, with financing from Warren E. Buffett and Berkshire Hathaway, Inc.

By 1986, RCA was a diminished echo of the industrial giant of the post-war. It had departed the computer mainframe business in the early 1970s with massive losses, and its equipment markets had been overtaken by Japanese manufacturers. Its television network remained competitive and highly successful, but in no position to refurbish from working capital for the intensified program battles ahead. RCA and its NBC network were sold to General Electric in 1986 for $6.3 billion. General Electric had been instrumental in creating RCA in the 1920s before David Sarnoff, and now closed the circle in an era more receptive to combinations.

CBS entered this period smarting from a lengthy battle with General William C. Westmoreland over the CBS Reports documentary, *The Uncounted Enemy: A Vietnam Deception*. The advocacy group, Accuracy in Media, and Senator Jesse Helms in 1985 were urging their constituencies to take over CBS by stock purchase, with the ultimate goal to fire Dan Rather. Seeing an opportunity, Ted Turner announced the intention to do his own hostile take-over, to be financed with junk bonds. The network beat back this effort with a $1 billion stock repurchase, but was left with more debt, little working capital, and a reduced stock valuation. The board and the aging founder, Paley, passed leadership, and thereafter effective control of the stock, to Loews Corp. and its proprietor, Lawrence Tisch. By a combination of ill-fated acquisitions and divestments, and under competitive pressure, CBS had to focus on cost containment. The news division, successors of Edward R. Murrow, was pruned by 230 people. In 1987 CBS dropped to third place in the season ratings for the first time.

Ever since the sputtering start for UHF in the first two decades of television, FCC commissioners had spoken
longingly of the desire, first to assure three-network service to every corner of the nation, and next to somehow realize the dream of a fourth network. By the time the fourth network arrived, conditions had so changed as to raise the question, four of what? In any given household at any given time, two or three television sets could be in use, watching network fare; or independent stations; or movies, sports, original fare and reruns on cable; or first-run movies on premium, pay cable; or movies or exercise videos on cassette; or possibly computer games. Nevertheless, the fabled fourth network did indeed come in 1990, when an Australian publisher, naturalized as a U.S. citizen, Rupert Murdoch, acquired the strong major-market grouping of Metro Media stations, and placed them under the same roof with the Twentieth Century-Fox studio. Murdoch eschewed ABC's original 1950s approach—programming mostly cannon fodder against its rivals on a full seven nights—instead making a staged entry with two nights, then three, four. The FOX network finally attained a full-time run, and in less than five years from launch, FOX could be seen actually winning a time period here and there. In 1994 FOX purchased rights to the National Football Conference, building from sports, and luring affiliates in NFC territories, all exactly as dictated by the ancient scripting of ABC.

During the 1990s the FCC continued to chip away at rules intended to adjust the playing field between Hollywood studios and other program suppliers on one hand, the networks on the other. Rules had evolved that imposed a quota on network self-produced fare, that forbade the networks to own rights for secondary distribution of the programs they originated (called the Fin-Sin Rules), and that kept an hour of prime time out of the hands of networks, reserved for local stations to program (the Prime Time Access Rule). Because FOX combined a network with a studio, some of these rules had the perverse effect of thwarting development of a fourth network, and for a time the FCC liberally accorded waivers to FOX alone.

Other rules no longer served a purpose in the multi-channel environment. By 1994, the liberalization of ground rules emboldened three more Hollywood studios to try their hand at networking directly. Warner Brothers launched a network in its own name, and Universal, which had grown to eminence as a prime source for NBC, teamed with Paramount, proud source of the inexhaustible Star Trek, to form UPN (United Paramount Network). The aspirations of these mini-networks remain ad hoc, choosing their nights and their time periods with care. It is obvious that there are too few local television broadcast stations to support five, six or more full-time networks. The immediate impact of these entrants was to drive up the prices of television stations, as too many programs chased too few outlets. In time, a new wave of consolidations is assured.

In 1995, Westinghouse, a strong group owner, acquired CBS, in a transaction that echoed the Cap Cities take-over of ABC ten years earlier. Also in 1995, Capital Cities/ABC agreed to be acquired by Walt Disney Studios for $19 billion in cash and stock. In the long view, the CBS sale is likely to appear as but one more episodic reorganization. The Disney combination with CapCities prefigures a new level of competition among how few great communications trusts equipped to provide multiple channels of information, entertainment and merchandising in coordinated fashion throughout the world. Such networks are difficult to describe, because none yet exists. The largest multiple system cable operator, TCI, which has diverse program interests, is poised to be one in the future. Viacom, as owner of Paramount, impresario of UPN, owner of Blockbuster Video, and cable programmer in other capacities, may be another.

In 1996 Congress passed and the president signed a new telecommunications act. It reduces or eliminates historic barriers that have separated telephone long distance companies and the regional Bell operating companies from the local cable television companies. In broadcasting, it abolishes the numerical limit on television stations in common ownership, and provides a liberalized cap of 35% of national audience for any one station owner. It abolishes the "dual network" ban that diverted NBC Blue in 1941, and invites the FCC to undertake proceedings, looking to the authorization of more than one local TV station in common ownership (now forbidden). Since the advent of television in 1941, there never has been a regulatory change—permitting combinations not previously allowed—that did not trigger moves by the affected parties, to the full, lawful outer limits. The turn of the century is bound to witness the additional three networks (now a college of four) dropping below that point where they own even so much a majority of prime time viewing attention. But that development, in steady process for thirty years, will be overshadowed by the emergence of new network forms, rendering the classical shape of the three no longer recognizable.

**UNIVISION**

**U.S. Network**

Univision (in Spanish, *Univisión*), the largest Spanish language television network in the United States with more than 600 affiliates, has historical roots in Mexican broadcasting. Since 1992, Univision has been owned by a consortium headed by Jerry Perenchino, an entertainment financier who once owned a New Jersey Spanish language television station. Twenty-five% of the network is owned by Venevision, a Venezuelan media company, another 25% by the Mexican entertainment conglomerate, Televisa, the largest producer of Spanish language television programming in the world.

This structural configuration is often viewed as but a marginal variation in Televisa’s long-standing domination of U.S. Spanish language television. The majority of Univision programming is produced in Mexico, by Televisa, as it has been since the first Spanish language television stations were established in the United States in 1961. The network was then called SIN, the Spanish International Network. In 1986 the Federal Communications Commission (FCC) found SIN to be in violation of the U.S. law that prohibits foreign ownership of U.S. broadcast stations. Televisa was ordered to divest itself of its U.S. subsidiary and SIN was sold to Hallmark Cards of Kansas City, Missouri, and renamed Univision.

*Courtesy of Univision*
Under Hallmark ownership, about half of Univision programming was Televisa rebroadcasts (telenovelas or soap operas, sports, movies and variety programming), and half was produced in the United States. The U.S. produced programming, which included a telenovela, a situation comedy and greatly expanded national U.S. news and public affairs programming, proved popular with U.S. Latino audiences. Nonetheless, between 1986 and 1992, Hallmark, which had financed its purchase of the Spanish language network with junk bonds, was unable to recover its initial investment in Univision. In 1992 Hallmark sold the network to the Perenchino group, which prominently featured Televisa. Among the new owners’ first moves was the firing of about a third of the network’s Miami based staff. This resulted in the cancellation of most of the U.S. produced programs, and the recreation of a broadcast day largely comprised of Televisa programs.

Univision has been at the forefront of the creation of a national “Hispanic Market,” the notion that U.S. Latinos are an attractive, commercially viable market segment, and so an audience that advertisers should attempt to reach. Previous to the mid-1980s the Hispanic population was configured as three markets: Puerto Rican in the eastern United States, Cuban in south Florida and Mexican in the southwest. Advertising agencies, accordingly, produced three separate Spanish language advertising campaigns. Univision’s extensive market and audience research persuaded Madison Avenue that these three audiences should be considered one national audience. This effort was given a major boost by the Hispanic Nielsen Survey, a specially designed methodology for measuring U.S. Spanish language television audiences, commissioned by Univision and Telemundo, and implemented by the A.C. Nielsen Company in the early 1990s. This new audience measurement system found a U.S. Spanish language television audience 30 to 40% larger than had previously been identified.

Network research conducted by Univision shows that most of its audience are recent Latin American immigrants. Another group is made up of those who have lived in the United States for years, who, because of a myriad of factors, prefer to view television in the Spanish language. Most of these immigrant audience members are from Mexico, though an increasing proportion are Central American. A smaller portion of the Univision audience are more acculturated, bilingual U.S. Latinos, a generally wealthier group much sought after by network planners. Overall, Univision research shows that about 70% of the Univision audience is Mexican or Mexican American, 10% each Puerto Rican and Cuban American, with the remainder from other Latin American countries.

The most watched Univision programs are Televisa telenovelas, serialized melodramas which, in contrast to U.S. soap operas, usually end after two or three months. Also, notably present in the Univision top ten (at number six) is the nightly U.S. national newscast, the Noticiero Univisión. Apparently the Univision immigrant audience, while maintaining its links to “the old country” through the traditional telenovelas, is also seeking our knowledge of its adopted U.S. home. Each year the U.S. Spanish speaking audience has more television programs to choose amongst. Telemundo, another U.S. Spanish language television network founded in 1986, has grown to several hundred affiliates. Galavision and Showtime en Espanol, two premium cable channels, as well as several regional Spanish language cable networks, including Spanish language ESPN and MTV, are challenging Univision’s previously uncontested hold on U.S. Spanish language television.

THE UNTOUCHABLES
U.S. Crime Series

Based on the 1947 novel by Eliot Ness and Oscar Fraley, *The Untouchables* was the first dramatic series created at Desilu Productions, the studio owned by Desi Arnaz and Lucille Ball, and famous for providing situation comedies to U.S. television. Airing on ABC from 1959 to 1963, the series was panned for what critics at the time deemed "excessive and senseless violence." But it was enormously popular with audiences and made names for producer Quinn Martin and actor Robert Stack.

The series centered on a greatly embellished version of the real-life Eliot Ness, played by Robert Stack, and his incorruptible treasury agents whom Chicago newspapers had dubbed "the Untouchables." Their battles against organized crime served as the source material for the television series. While the fictional Ness and his Untouchables were somewhat lifeless characters, the back-stories and motivations established for the series' criminals were incredibly well-defined. This was due, in large part, to the talented actors, including Robert Redford, William Bendix, Lloyd Nolan, J. Carroll Naish and Peter Falk, guest actors who played the series' criminal kingpins. This, of course, led to one of the basic problems of the series—the criminals appeared more human than the heroes.

The series began as a two-hour made-for-television movie documenting Ness's fight against Chicago-mob leader Al Capone. The movie, and its episodic counterpart, maintained an earthy grittiness with its stark sets and dark, studio backlot exterior sequences. A realistic mood was added by narrator Walter Winchell (who had, incidentally, a few years before, broken the real-life scandal of Lucille Ball's alleged communist ties during the McCarthy-era blacklisting period). Winchell's staccato delivery of introductory background material set the stage for each week's episode.

ABC justified the series' violence on grounds of historical accuracy, yet the network often violated the same rule by having their fictional Ness responsible for nabbing mob leaders such as George "Bugsy" Moran and Ma Barker, figures with whom he had no actual dealings. Indeed, a number of FBI agents complained about their real-life victories being credited to the fictionalized Ness. Such pressure eventually forced ABC to create additional FBI characters to more accurately portray the people involved in the show's historically-based cases.

*The Untouchables* also drew controversy for its stereotyped ethnic characters. The Italian-American community protested the series' use of Italian names for criminal characters. The Capone family also brought a million-dollar lawsuit against producer Desi Arnaz for using the Capone likeness for profit. This was particularly upsetting for Arnaz, a classmate and friend of Al Capone's son.

The show was tremendously successful in its second season, but its popularity rapidly declined when NBC countered with the musical variety program *Sing Along with Mitch*. Producer Quinn Martin built his *Untouchables* success into an impressive string of cop-based dramatic hits, including *The FBI* (1965) and *The Streets of San Francisco* (1972). Robert Stack became a popular TV actor and has since starred in other successful dramas in which he has played similar crime fighters and adventurers. Since 1988 he has been most visible as the host of *Unsolved Mysteries*, a popular "reality" program. *The Untouchables* inspired two revivals—a 1980s movie version as well as a 1990s syndicated series.

### UPSTAIRS, DOWNSTAIRS

**British Serial Drama**

*Upstairs, Downstairs,* originally produced in England by Sagitta Productions for London Weekend Television (LWT), became one of the most popular programs in the history of *Masterpiece Theatre* on the U.S. Public Broadcasting Service and was beloved throughout much of the world. The series presents the narrative of the upper-class Bellamy family and their servants during the turbulent first third of this century in Britain. Their stories, focused individually but always illustrative of complex and intertwined relationships, unfold chronologically, highlighting members of both the upstairs biological family and the downstairs "work family" of servants.

The series accurately represented and mirrored the societal milieu of its time and has been greatly acclaimed for the producers’ and authors’ meticulous attention to accurate period detail. Historical events served as the context for the characters’ situations and actions in a narrative that carried them from 1903 Edwardian England, through World War I and the political upheavals of the 1920s, to a conclusion set soon after the stock market crash in the summer of 1930. *Upstairs, Downstairs* captured and held a rapt television audience through 68 episodes in Britain and 55 in America. It was the most extensive series on *Masterpiece Theatre* and brought a new and refreshing image of British television to many Americans whose only conception of British programming, not necessarily correct, was of ponderous adaptations of dated British literature. In so doing, the series brought a great many new viewers to PBS and *Masterpiece Theatre.*

According to long-time *Masterpiece Theatre* host Alistair Cooke, quoted in Terrence O’Flaherty’s *Masterpiece Theatre,* “I loved *Upstairs, Downstairs.* When I first saw it, my reaction was, ‘I’ll be amazed if this thing doesn’t really hit the headlines. It’s marvelous. It allows you to identify with the downstairs people while vicariously enjoying the life of the upstairs people.’” Followed closely episode by episode, the upstairs and downstairs families became a part of “our” family. The audience genuinely cared about the characters, came to know them intimately and developed a strong empathy for them.

The Bellamys and their staff of domestic servants resided in a five-story townhouse at 165 Eaton Place, Belgravia, in London, an address well known to the series’ many fans. The upstairs family includes Lord Richard Bellamy (David Langton), his first wife Lady Marjorie (Rachel Gurney) who dies tragically on the Titanic, their two children James (Simon Williams) and Elizabeth (Nicola Pagett), Richard’s second wife Virginia (Hannah Gordon), James’ wife Hazel (Meg Wynn Owen) who dies in a flu epidemic, and cousin to James and Elizabeth Georgina Worsley (Lesley-Anne Down). Among the most memorable of the downstairs staff are Hudson the butler (Gordon Jackson), Mrs. Bridges the cook (Angela Baddeley), Rose (Jean Marsh), Ruby (Jenny Tomasin), Edward (Christopher Beeny) and Daisy (Jacqueline Tong).

Among the many other characters who appeared in a number of episodes, perhaps Sarah (Pauline Collins), Watkins (John Alderton), Sir Geoffrey the family solicitor (Raymond Huntley), and Lady Pru (Joan Benham) are the most fondly remembered by viewers. The large cast, only partially noted here, is considered to include some of the best actors from British stage, film and television. The series earned the respect of professional peers as well as that of the audience. Its cast won numerous awards, both in Britain and America, including eight Emmys, Writers Guild of Great Britain Awards, American Drama Critics Circle Awards, Golden Globe Awards, and a Peabody Award.

Angela Baddeley (Mrs. Bridges) received the C.B.E. (Commander of the British Empire), awarded in the Queen’s 1975 New Year’s Honours List. According to Queen Elizabeth II, *Upstairs, Downstairs* was her favorite program in 1975 and Mrs. Bridges her favorite character. In addition, Gordon Jackson (Hudson) received the coveted Queen’s Order of the British Empire Award.
The idea for the series came from actresses Jean Marsh (who played the role of house-parlour maid Rose) and Eileen Atkins. The series was developed by John Hawkesworth, whose long and distinguished career in film and television extends from art director on the film *The Third Man* to producer of the well regarded *Sherlock Holmes* series featuring Jeremy Brett. This was the first program from LWT to be purchased for *Masterpiece Theatre* and only the second non-BBC program to be scheduled. *Upstairs, Downstairs* was one of the first series of its type to be produced on videotape rather than film (though certain scenes, mainly exteriors and location shots, were shot on film). It was one of the first series on *Masterpiece Theatre* that was not biographical or based on a written work. It was created purely for television. As originally produced for British television each episode in the series was written in three acts. On *Masterpiece Theatre* each episode was shown without interruption.

Significant confusion was created when the series was shown on American television because thirteen episodes of the first 26 produced for British television were not shown. This created a rather bizarre lack of continuity. Six of the first original British episodes had been taped in black and
white due to a strike. *Masterpiece Theatre* only wanted episodes in color and so the first episode ("On Trial") was revised and reshot in color for American television. Of the first 26 original episodes shot for British TV, Episodes 2 through 9, 11 and 12, 16, 19 and 20 were not shown on American television. These "lost" episodes were not made available for American viewing until 1989. The original black-and-white version of Episode One has never been made available to American television.

*Upstairs, Downstairs* was first shown on British television in 1971 and continued through four series of 13 episodes each (two Edwardian series, a later pre-war series, and a World War I series) and a fifth series of 16 episodes (post-war), making a total of 68 episodes produced and broadcast. On *Masterpiece Theatre* the original 26 Edwardian period episodes, pared down to 13, were first shown 6 January to 31 March 1974. From 3 November 1974 to 26 January 1975, the post-Edwardian pre-war series of 13 episodes was broadcast. The 13 World War I episodes were shown 1 January to 28 March 1976. The final series of 16 post-war episodes was broadcast 16 January to 1 May 1977 making, in all, 55 episodes shown on *Masterpiece Theatre*. The 55 episodes were later repeated on *Masterpiece Theatre* and selected episodes were shown as a part of a "10th Anniversary Season Festival of Favorites" and as a part of the "Twentieth Anniversary Favorites" series early in 1991. *Upstairs, Downstairs* was the inspiration for the short-lived CBS television series *Beacon Hill* that concerned a well-to-do Boston family and their domestic staff during the 1920s (broadcast fall 1975).

*Upstairs, Downstairs* is one of the highest rated programs in the history of PBS. The series has been syndicated to both commercial and non-commercial stations in America and is one of the most successful and watched dramatic series in television history. It is estimated that approximately one billion people in over 40 countries have enjoyed *Upstairs, Downstairs* and the series is still in active syndication.

**U.S. CONGRESS AND TELEVISION**

The first effort to link the United States Congress and broadcasting occurred in 1922 when Representative Vincent M. Brennan introduced a bill to allow radio cover-
cover hearings of the Senate Armed Services Committee. Since few Americans had television receivers in 1948, it was not until the early 1950s that televised congressional hearings generated any viewer interest.

Two televised Senate hearings during the 1950s caused a sensation. Hearings conducted by the Senate Special Committee to Investigate Organized Crime in Interstate Commerce brought the faces and words of notorious mobsters into millions of U.S. homes via coast-to-coast network television. A short time later, Americans once more were drawn to their television screens to watch the hearings of a Senate Committee on Government Operations subcommittee investigate alleged communist infiltration of the U.S. Armed Forces. The hearings were better known as the Army-McCarthy Hearings, identified closely with subcommittee chairperson, Senator Joseph McCarthy.

Two decades later, in 1973, the Senate Select Committee on Presidential Campaign Activities conducted what became known as the Watergate Hearings. Evidence of misdeeds by President Richard Nixon led the next year to House Judiciary Committee hearings on articles of presidential impeachment. Nearly all public deliberations of both of these committees were televised gavel-to-gavel.

Serious attention to allowing television coverage of actual congressional floor proceedings arose once more with the 1973 formation of the Joint Committee on Congressional Operations. The Committee’s charge was to examine means by which Congress could better communicate with the American public. The Committee’s subsequent recommendation that television be allowed in the U.S. House and Senate chambers met with resistance in the latter body, but House members seemed more receptive. As a result, House Speaker Thomas (Tip) O’Neill, Jr., ordered testing of a House television system to begin in March 1977. Remote controlled cameras placed at strategic locations in the House chamber were to be used so as not to disrupt House decorum. The television test proved a success. However, full implementation of House television coverage awaited a decision from the House Rules
argue that television has led to more grandstanding and contentious rhetoric on the House floor, whereas Senate debate appears more disciplined and more substantive. However, there is general agreement that persons who view televised House and Senate proceedings are introduced to a vast array of issues and debates unimaginable before television arrived.

U.S. POLICY: COMMUNICATIONS ACT OF 1934

U.S. Communications Policy Legislation

This legislative act remains the cornerstone of American television policy six decades after its initial passage. Though often updated through amendments, and itself based on the pioneering Radio Act of 1927, the 1934 legislation which created the Federal Communications Commission has endured remarkably well through an era of dramatic technical and social change.

Congress first specifically regulated broadcasting with its 1927 Radio Act which created a Federal Radio Commission designed to regulate in "the public interest, convenience, or necessity." But federal regulation of communications was shared by the Department of Commerce and the Interstate Commerce Commission. By 1934 pressure to consolidate all telecommunication regulation for both wired and wireless services prompted new legislation with a broader purpose.

President Franklin Roosevelt's message requesting new legislation was published in January 1934, the Senate held hearings on several days in March while the House held a single day of hearings in April, a conference report melding the two differing bills together appeared in early June, and the act was passed on 19 June. Given the act's subsequent longevity, it generated little controversy at the time it was considered. Few proposed substantial alteration of the commercially-based broadcast system encoded in the 1927 law. Some critics expressed concern about educational radio's survival—and though Congress mandated the new FCC to consider setting aside some frequencies for such stations, this only occurred in 1941 with approval of FM service.

Running some 45 pages in the standard government printed version as originally passed, the act is divided into several dozen numbered sections of a paragraph or more which were originally divided into six parts called titles (a seventh was added in 1984 concerning cable television). The first title provides general provisions on the FCC, the second is devoted to common carrier regulation, the third deals with broadcasting (and is of primary concern here), the fourth with administrative and procedural matters, the fifth with penal provisions and forfeitures (fines), and the sixth with miscellaneous matters.

The act has been updated through amendment many times—chiefly with creation of public television in 1967 (provisions on the operation and funding of the Corporation for Public Broadcasting expanded title III), and the cable act of 1984 (which created a new title VI devoted to cable regulation, sections of which were expanded in cable legislation of 1992).

Attempts to substantially update or totally replace the act have arisen in Congress several times, most notably during a series of "rewrite" bills from 1977 to 1982, and again in the mid-1990s. Such attempts are driven partly by frustration with legislation based upon analog radio and telephone technology still in force in a digital era of convergence. They are driven as well by increasing rivalries among competing industries—broadcast, cable, telephone and others. They are also driven by political ideology that argues government should no longer attempt to do all things for all people—and by economic constraints that force government to operate more efficiently. The 1934 act, despite its many amendments, is increasingly seen as an anachronism needing replacement to match today's needs.

—Christopher H. Sterling

U.S. POLICY: TELECOMMUNICATIONS ACT OF 1996

U.S. Communications Policy Legislation

The Telecommunications Act of 1996, the first successful attempt to rewrite the sixty-two-year old Communications Act of 1934, was passed on 1 February 1996. The act refocuses federal communications policymaking after years of confused, multi-agency and intergovernmental attempts to regulate and make sense of a burgeoning telecommunications industry. The bill relies on increased competition for development of new services in broadcast-
ing and cable, telecommunications, information and video services while it reasserts Congress' leadership role as the dominant communications policymaker.

Portions of the act became effective immediately after President Clinton signed the bill into law on 8 February 1996. Other sections of the act will be implemented as the Federal Communications Commission (FCC) promulgates new rules and regulations to meet provisional requirements of the act. Noting the historic nature of the bill, President Clinton stated that the legislation would "stimulate investment, promote competition, provide open access for all citizens to the Information Superhighway." However, many public interest groups are concerned that the act undermines public interest values of access. The act includes several highly controversial provisions that various interest groups claim restrict speech or violate constitutional protections. One section of the bill prohibits the transmission of indecent and obscene material when the material is likely to be seen or read by a minor, and another provision requires broadcasters to formulate a ratings scheme for programs. After nearly four years of work, the bill's passage was eagerly awaited by government and industry leaders alike. Public interest and various industry groups, upset with provisions that would restrict First Amendment rights of telecommunications users vowed to challenge the constitutionality of those provisions in court. Within hours of the bill's passage, a number of civil liberties groups led by the ACLU sought an injunction against provisions of the act.

The Telecommunications act of 1996 is a complex reform of American communication policymaking that attempts to provide similar ground rules and a level playing field in virtually all sectors of the communications industries. The act's provisions fall into five general areas:

- radio and television broadcasting
- cable television
- telephone services
- Internet and on-line computer services
- telecommunications equipment manufacturing

The act abolishes many of the cross-market barriers that prohibited dominant players from one communications industry, such as telephone, from providing services in other industry sectors such as cable. New mergers and acquisitions, consolidations and integration of services previously barred under FCC rules, antitrust provisions of federal law, and the "Modified Final Judgment," the ruling governing 1984 "break-up" of the AT and T telephone monopoly, will be allowed for the first time, illustrating the belief by Congress that competition should replace other regulatory schemes as we enter a new century.

Radio and Television Broadcasting

The act incorporates numerous changes to the rules dealing with radio and television ownership under the Communications Act of 1934. Notably broadcasters have substantial regulatory relief from old and sometimes outdated federal restrictions on station ownership requirements. Broadcast ownership limits on television stations have been lifted. Group owners can now purchase television stations with a maximum service area cap of 35% of the U.S. population, up from the previous limit of 25% established in 1985. Limits on the number of radio stations that may be commonly owned have been completely lifted, though the bill does provide limits on the number of licenses that may be owned within specific markets or geographical areas. Also amended are previous restrictions on foreign ownership of stations.

Terms of license for both radio and television have been increased to eight years and previous rules allowing competing applications for license renewals have been dramatically altered in favor of incumbent licensees. New provisions under the act prevent the filing of a competing application at license renewal time unless the FCC first finds that a station has not served the public interest, or has committed other serious violations of agency or federal rules. This provision will make it increasingly difficult for citizen's groups to mount a license challenge against a broadcast station. The act requires licensees to file a summary of comments and suggestions received from the public while prohibiting the commission from requiring licensees to file information not directly pertinent to the renewal question. However, the bill gives the FCC no guidance as to how it should interpret service in the "public interest" in light of the new legislative mandates. Public interest groups who oppose relaxing ownership provisions claim that the combined effect of the new rules will be to accelerate current trends toward increased control of most media outlets by a few communications conglomerates.

The Telecommunications Act of 1996 makes significant changes in FCC rules regarding station affiliations and cross-ownership restrictions. Stations may choose affiliation with more than one network. Though broadcasting networks are barred from merging or buying out other networks, they may start new program services. For the first time, broadcasters will be allowed to own cable television systems, but television licensees are still prohibited from owning newspapers in the same market. The act affirms the continuation of local marketing agreements (LMAs) and waives the previous restrictions on common control of radio and television stations in the top fifty markets, the one-to-a-market rule.

While broadcasters won new freedoms in licensing and ownership, the act mandates that the industry develop a ratings system to identify violent, sexual and indecent or otherwise objectionable programming. The Communications Decency Act of 1996, embedded in the Telecommunications Act, requires the FCC to devise a rating system if the industry fails to develop such a system within one year of passage of the act. However, early indicators appear to signal a desire on the part of the industry to develop its own ratings system rather than allow government to define pro-
gram standards. Although development of a ratings system is required under the act, application of the system is voluntary. In conjunction with the establishment of a ratings system, the Telecommunications Act requires television set manufacturers to install a blocking device, called the V-chip, in television receivers larger than 13 inches in screen size by 1998. Recognizing the potential for constitutional challenges of these provisions, the Act allows for accelerated judicial review by a special three-judge federal district court panel. Other provisions of the Communication Decency Act require programmers to limit minors’ exposure to objectionable material by scrambling channels depicting explicit sexual behavior and blocking access channels that might contain offensive material.

Perhaps the biggest concession to the broadcast industry centers around provisions for allowing, but not mandating, the FCC to allocate extra spectrum for the creation of advanced television (ATV) and ancillary services. Eligibility for advanced television licenses is limited to existing television licensees, insuring current broadcasters a future in providing digital and enhanced television services. However, Senate Majority Leader Bob Dole (R-Kansas) expressed reservations about giving broadcasters extra spectrum without requiring payment for the new spectrum. Thus, the bill includes a provision that allows Congress to revisit this issue before the FCC awards any digital licenses. Broadcasters vehemently oppose the notion of paying for spectrum, but the act includes provisions that would allow the Commission to impose spectrum fees for any ancillary (non-broadcast) services that broadcasters may provide with these new allocations.

Generally, though the act provides for new possibilities for broadcasters and calls for the FCC to eliminate unnecessary oversight rules, a substantial portion of regulation implemented since the passage of the 1934 Act remains. Thus, while FCC Chairman Reed Hundt issued a statement that claimed that the ubiquitous world of telecommunications had changed forever, analysts and industry experts, remind us that the act amends, but does not replace, the Communications Act of 1934.

Cable Television

Dramatic changes in rate structures and oversight contained within the Telecommunications Act of 1996 are meant to provide new opportunities and flexibility as well as new competition for cable service providers. Under the provisions of the act, uniform rate structure requirements will no longer apply to cable operators where there is effective competition from other service providers including the telephone company, multichannel video, direct broadcast satellites and wireless cable systems. However, for the new effective competition standards to apply, comparable video programming services would have to be available to the franchise community. For smaller cable companies, programming tier rates and basic tier rates would be deregulated in franchise areas where there are fewer than 50,000 sub-

scribers. Additionally, states and local franchise authorities are barred from setting technical standards, or placing specific requirements on customer premise equipment and transmission equipment. Sale or transfer of licenses are expedited under the act. Franchise authorities are required to act upon requests for approval to sell or transfer cable systems within 120 days. Failure to comply with the 120 window will provide an “automatic” approval of the sale unless interested parties agree to an extension.

Common carriers and other operators that utilize radio communications to provide video programming will not be regulated under cable rules if the services are provided under a common carriage scheme. Common carriers who choose programming for their video services will be regulated as cable operators unless the services are provided under the “open video systems” provision of the Telecommunications Act. Open video systems operators can apply to the Commission for certification under section 653 of the act which will provide the operator with reduce regulatory burdens. Local Exchange Carriers (LECs) can provide video services under the open video provisions. Further, LECs are not required to make space on their open video systems available on a non-discriminatory basis. Joint ventures and partnerships between local exchange carriers and cable operators are generally barred unless the services qualify under provisions for rural exemptions, or LECs are purchasing a smaller cable system in a market with more than one cable provider, or the systems are not in the top 25 markets.

In an attempt to spur competition between cable operators and local exchange carriers, Congress provided incentives for cable operators to compete with local telecommunications companies. Under the act, cable systems operators are not required to obtain additional franchise approval for offering telecommunications services.

Telephone Services

The Telecommunications Act of 1996 contains sweeping provisions that will restructure the telephone industry in the United States. As noted, LECs can offer video programming services themselves or carry other video programming services under the “open video systems” provisions of the act. In addition to allowing telephone companies to offer video services, important structural barriers erected under the Modified Final Judgment (MFJ) have been swept away. The act allows the seven regional Bell operating companies to offer long-distance telephone service for the first time since the 1984 breakup of AT and T. At the same time, long distance companies and cable operators are allowed to provide local exchange service in direct competition with the regional Bell operating companies, but the act prohibits cross subsidies from non-competitive services to competitive services. Representative Thomas Bliley (R-Virginia) stated, “we have broken up two of the biggest government monopolies left: the monopolies in local telephone service and in cable television.” While investors and legislators hailed a new era of competition in the telephone industry, it now becomes
the task of the FCC to work out details of the act with state public utilities commissions (PUCs) to ensure a smooth transition of services. The act preempts all previous state rules that restrict or limit competition in telephone services for both local and long distance services.

The act requires regional telephone companies (regional Bell operating companies) to undertake a series of reforms designed to open competition in their service areas. Companies must implement these reforms in order to "qualify" for providing long distance service outside their regional areas. LECs are also required to interconnect new telecommunications service providers and to "unbundle" their networks to provide for exchange access, information access, and interconnection to their systems. In order to provide customers continuity of service, LECs must provide number "portability" by allowing customers to keep their telephone numbers when switching from one service provider to another. The FCC has the task of assessing whether RBOCs and LECs have met the necessary requirements in order to offer long distance services while state public utilities commissions (PUCs) are charged with implementing local telephone competition.

Section 254 of the act defines the nature of "universal service" as "an evolving level of telecommunications services" that take into account telecommunications service advancements. The FCC and a working group of PUC officials are charged with designing policies to promote universal service, especially among rural, high cost and low-income telecommunications users. Also included in the act is a provision that directs the FCC to create discounted telecommunications services for schools and libraries.

Regional telephone companies are now free to manufacture telephone equipment once the FCC qualifies and approves their applications for long distance services. The act prohibits Bellcore, the research arm of the RBOCs from manufacturing as long as it is owned by one or more regional operating companies.

Internet and On-line Computer Services

The Telecommunication Act of 1996 includes Title V, called the Communications Decency Act of 1996 (CDA). The inclusion of the CDA culminates more than a year of debate by members of Congress over the degree to which government could regulate the transmission of objectionable material over computer networks. It creates criminal penalties for anyone who knowingly transmits material that could be construed as indecent to minors. The act criminalizes the intentional transmission of "any comment, request, suggestion, image, or other communications which is obscene, lewd, lascivious, filthy, or indecent..." Enforcement of the CDA includes the filing of criminal charges against any person who uses the computer network for such a transmission. Additionally, the CDA establishes an "anti-flame" provision by prohibiting any computer network transmission for the purpose of annoying or harassing the recipients of messages. If enforced, penalties under the CDA could range as high as $250,000 for each violation.

The act exempts commercial on-line services that engage in "blocking" from prosecution if they have demonstrated "good faith, reasonable, effective and appropriate" actions to restrict or prevent access by minors. In addition, the CDA contains provisions for a "Good Samaritan Defense" against civil liability for on-line service providers who voluntarily restrict access or availability of material that the provider considers "obscene, lewd, lascivious, excessively violent or otherwise objectionable." The act does not authorize the FCC to enforce the statutory requirements as written.

Various free speech advocates and First Amendment scholars claim that the language in the Communications Decency Act of 1996 is overly broad. Computer experts express concern over whether government should regulate the flow of information on the Internet and other computer-based networks. On the day the President signed the bill into law, the ACLU and other plaintiffs filed suit against Attorney General Janet Reno seeking to enjoin the enforcement of the provisions of Title V on the grounds that it was unconstitutional. Judge Ronald L. Buckwater, a federal judge in Philadelphia, ruled that the language in the law regulating indecent material was unconstitutionally vague but upheld parts of the law regulating obscene and patently offensive information. The Justice Department has stated that it would not prosecute anyone under the law until the challenges mounted against the act were resolved in court. This suit and a companion suit filed by the American Library Association may ultimately go to the Supreme Court for resolution.

The Telecommunications Act of 1996 has garnered substantial praise as a pro-competitive bill designed to allow anyone to enter any communications business and to let any communications business to compete in any market against other competitors. Supporters of the bill predict job creation and lower telecommunications costs as two benefits likely to accrue as a result of its passage. Other experts say the Telecommunications Act will allow smaller telephone companies to successfully compete with larger companies for telephone, paging and cellular services. Manufacturers of cable modems and network connectivity devices should benefit from rapid advances as a result of increased competition.

Critics of the act claim its extensive deregulatory provisions coupled with relaxed restrictions on concentration of media ownership dilute the public responsibility guarantees built into the Communications Act of 1934 and tilt the preference in favor of private market forces. Critics claim that in many areas of the country which are not likely to see real competition, the cost of telecommunications and video services are likely to rise dramatically. Other critics oppose giving broadcasters extra spectrum at a time when the government could reap hundreds of millions of dollars for those frequencies through spectrum auction.
At this time it is too early to predict the outcomes of the
Telecommunications Act of 1996. Analysts and financial
experts views are mixed but they predict market shake-outs
and consolidations are likely to radically transform the tele-
communications industry in the next few years as a result of
the implementation of the act.

—Fritz J. Messere

U.S. PRESIDENCY AND TELEVISION

Ten dates, some momentous, some merely curious, tell
the story of presidential television. In its own way, each
date sheds light on the complex relationship between the
U.S. presidency and the American television industry. Over
the years, that relationship has grown complex and tempest-
uous (virtually every president from Harry Truman
through Bill Clinton has become disaffected with the
nation's press). More than anything else, however, this rela-
tionship has been symbiotic—the president and the press
now depend upon one another for sustenance. Ten dates
explain why:

September 23, 1952 — Richard Nixon's "Checkers"
Speech

Oddly, it was Richard Nixon who discovered the political
power of the new medium. Richard Nixon, who was pillo-
ried by the press throughout his career, nonetheless discov-
ered the salvific influence of television. Imaginatively,
aggressively, Nixon used television in a way it had never been
used before to lay out his personal finances and his cultural
virtues and, hence, to save his place on the Republican
national team (and, ultimately, his place in the American
political pantheon). That same year, 1952, also witnessed
the first televised coverage of a national party convention
and the first TV advertisements. But it was Nixon's famous
speech that turned the tide from a party-based to a candidate-
controlled political environment. By using television as
he did—personally, candidly, visually (his wife Pat sat de-
murely next to him during the broadcast)—Nixon single-

handedly created a new political style.

January 19, 1955 — Dwight Eisenhower's Press
Conference

When he agreed to let the television cameras into the White
House for the first time in American history, Dwight Ei-
senhower changed the presidency in fundamental ways.
Until that point, the White House press corps had been a
cozy outfit but very much on the president’s leash or, at
least, the lesser partner in a complex political arrangement.
Television changed that. The hue and cry let out by the
deans of U.S. print journalism proved it, as did television's
growing popularity among the American people. More
proof awaited. It was not long after Dwight Eisenhower
opened the doors to television that American presidents
found themselves arranging their work days around net-
work schedules. To have a political announcement receive
top billing on the nightly news, after all, meant that it had
to be made by 2:00 P.M., Eastern Standard Time. If the
news to be shared was bad news, the slowest news days—Saturday and Sunday—would be chosen to carry the announcement. These may seem like small expediencies but they presaged a fundamental shift of power in Washington, D.C. After Eisenhower, television was no longer a novelty but a central premise in all political logic.

January 25, 1961 — John Kennedy’s Press Conference
Before Ronald Reagan and Bill Clinton there was John F. Kennedy. No American president has better understood television than these three. By holding the first live press conference in the nation’s history, Kennedy showed that boldness and amiability trump all suits in an age of television. In his short time in office Kennedy also showed: (1) that all communication, even presidential communication, must be relational; (2) that the substance of one’s remarks is irrelevant if one cannot say it effortlessly; (3) that being “on line” and “in real time” bring a special energy to politics. Prescient as he was, Kennedy would therefore not have been surprised to learn that 50% of the American people now find television news more believable and more attractive than print news (which attracts a mere quarter of the populace). Kennedy would also not be surprised at the advent of CNN, the all-news, all-day channel, nor would he be surprised to learn that C-SPAN (Congress’ channel) has also become popular in certain quarters. Being the innovator he was, Kennedy fundamentally changed the temporal dimensions of American politics. Forever more, his successors would be required to perform the presidency during each moment of each day they held office.

February 27, 1968 — Walter Cronkite’s Evaluation of the Vietnam War
Lyndon Johnson, we are told, knew he had lost the Vietnam War when CBS news anchor Walter Cronkite declared it a quagmire during an evening documentary. To be sure, Cronkite’s hard-hitting special was nuanced and respectful of the presidency, but it also brought proof to the nation’s living rooms that the president’s resolve had been misplaced. Cronkite’s broadcast was therefore an important step in altering the power balance between the White House and the networks. CBS’ Dan Rather continued that trend, facing-down Richard Nixon during one cantankerous press
conference and, later, George Bush during an interview about the Iran-Contra scandal, Sam Donaldson and Ted Koppel of ABC News also took special delight in deflating political egos, as did CNN’s Peter Arnett who frustrated George Bush’s efforts during the Gulf War by continuing to broadcast from the Baghdad Hilton even as U.S. bombs were falling on that city. Some attribute the press’s new aggressiveness to their somnolence during the Watergate affair, but it could also be credited to the replacement of politics’ old barter system, which featured material costs and rewards, by an entertainment-based celebrity system featuring personal achievements and rivalries. In this latter system, it is every man for himself, the president included.

November 25, 1968 — Inauguration of the White House’s Office of Communication

One of Richard Nixon’s first acts as president was to appoint Herb Klein to oversee a newly enlarged unit in the White House that would coordinate all out-going communications. This act, perhaps more than any other, signalled that the new president would be an active player in the persuasion game and that he would deal with the mass media in increasingly innovative ways. Perhaps Nixon sensed the trends scholars would later unearth: (1) that citizens who see a political speech in person react far more favorably than those who see it through television reporters’ eyes; (2) that the average presidential “soundbite” has been reduced to 9.8 seconds in the average nightly news story; and (3) that negative news stories about the president have increased over time. This is the bad news. The good news is that 97% of CBS’ nightly newscasts feature the president (usually as the lead story) and that 20% of a typical broadcast will be devoted to comings and goings in the White House. In other words, the president is the fulcrum around which television reportage pivots; hence, he is well advised to monitor carefully the information he releases (or refuses to release).

September 17, 1976 — Gerald Ford’s Pasadena Speech

Neither Gerald Ford’s address nor the occasion were memorable. His was a standard stump speech, this time at the annual reception of the Pasadena Golden Circle. The speech’s sheer banality signalled its importance: Ford spoke to the group not because he needed to convince them of something but because their predictable, on-camera applause would certify his broader worthiness to the American people. Ford gave some 200 speeches of this sort during the 1976 campaign. Unlike Harry Truman, who spoke to all-comers on the village green during the 1948 election, Ford addressed such “closed” audiences almost exclusively during his reelection run. In addition, Ford and his successors spoke in ritualistic settings 40% of the time since hunting, too, photographs well. The constant need for media coverage has thereby turned the modern president into a continual campaigner and the White House into a kind of national booking agency. It is little wonder, then, that the traditional press conference, with its contentiousness and unpredictability, has become rare.

January 20, 1981 — Inauguration of Ronald Reagan

Ronald Reagan and television have become American cliches. Reagan grew up with television and television with him. By the time he became president, both had matured. Reagan brought to the camera what the camera most prized: a strong visual presence and a vaunted affability. Reagan was the rare kind of politician who even liked his detractors and television made those feelings obvious. Reagan also had the ability to concretize the most abstract of issues—deficits, territorial jurisdictions, nuclear stalemates. By finding the essential narrative in these matters, and then by humanizing those narratives, Reagan produced his own unique style. Television favors that style since it is, after all, the most intimate of the mass media, with its ability to show emotion and to do so in tight-focus. So it is not surprising that political advertising has now become Reaganesque—visual, touching, elliptical, never noisy or brash. Like Reagan, modern political advertising never extends its stay; it says in thirty seconds all that needs to be said and then it says no more.

January 16, 1991 — George Bush’s Declaration of the Gulf War

From the beginning, George Bush was determined not to turn the Gulf War into another Vietnam. His military commanders shared that determination. But what, exactly, are the lessons of Vietnam? From the standpoint of television they are these: (1) make it an air war, not a ground war, because ground soldiers can be interviewed on camera; (2) make it a short war, not a long war, because television has a short attention span; and (3) make it a technical war, not a political war, because Americans love the technocratic and fall out with one another over ends and means. Blessedly, the Gulf War was short, and, via a complex network of satellite feeds, it entertained the American people with its visuals: SCUD missiles exploding, oil-slicks spreading, yellow ribbons flying. Iraq’s Saddam Hussein fought back—on television—in avuncular poses with captured innocents and by staying tuned to CNN from his bunker. The Gulf War therefore marked an almost postmodern turn in the history of warfare, with the texts it produced now being better remembered than the deaths it caused. What such a turn means for the presidency, or for humankind, has yet to be determined.

October 25, 1992 — Richmond, Virginia Debate

Several trends converged to produce the second presidential debate of 1992. In the capital of the Old South, Bush, Clinton and Perot squared off with one another in the presence of two hundred “average Americans” who questioned them for some ninety minutes. The debate’s format, not its content, became its headline: the working press had been cut out of the proceedings and few seemed to mourn their passing. The president of the United States face-to-face with the populace—here, surely, was Democracy Recap-
tered. The 1992 campaign expanded upon this theme, with the candidates repairing to the cozy studio (and cozy questions) of talk-show host Larry King. Thereafter, they made the rounds of the morning talk-over-coffee shows. The decision to seek out these friendly climes followed from the advice politicians had been receiving for years: choose your own audience and occasion, forsake the press, emphasize your humanity. Coupled with fax machines, E-mail, cable specials, direct-mail videos, and the like, these "alternative media formats" completed a cycle whereby the president became a rhetorical entrepreneur and the nation's press an afterthought.

April 20, 1993 — Bill Clinton’s MTV Appearance

Not a historic date, perhaps, but a suggestive one. It was on this date that Bill Clinton discussed his underwear with the American people (briefs, not boxers, as it turned out). Why would the leader of the free world unburden himself like this? Why not? In television’s increasingly postmodern world, all texts—serious and sophomoric—swirl together in the same discontinuous field of experience. To be sure, Clinton made his disclosure because he had been asked to do so by a member of the MTV generation, not because he felt a sudden need to purge himself. But in doing so Clinton exposed several rules connected to the new phenomenology of politics: (1) because of television’s celebrity system, presidents are losing their distinctiveness as social actors and hence are often judged by standards formerly used to assess rock singers and movie stars; (2) because of television’s sense of intimacy, the American people feel they know their presidents as persons and hence no longer feel the need for party guidance; (3) because of the medium’s archly cynical worldview, those who watch politics on television are increasingly turning away from the policy sphere, years of hyper-familiarity having finally bred contempt for politics itself.

For good and ill, then, presidential television grew apace between 1952 and the present. It began as a little-used, somewhat feared, medium of exchange and transformed itself into a central aspect of American political culture. In doing so, television changed almost everything about life in the White House. It changed what presidents do and how they do it. It changed network programming routines, launched an entire subset of the American advertising industry, affected military strategy and military deployment, and affected how and why voters vote and for whom they cast their ballots. In 1992, Ross Perot of Dallas, Texas, tested the practical limits of this technology by buying sufficient airtime to make himself an instant candidate as well as an instantly serious candidate. History records that Perot failed to achieve his goal. But given his billions and given television’s capacity to mold public opinion, Perot, or someone like him, may succeed at some later time. This would add an eleventh important date to the history of presidential television.

THE VALOUR AND THE HORROR

Canadian Documentary

Aired on the publicly owned Canadian Broadcasting Corporation (CBC), *The Valour and the Horror* is a Canadian-made documentary about three controversial aspects of Canada’s participation in World War II. This three-part series caused a controversy almost unprecedented in the history of Canadian television. Canadian veterans, outraged by what they considered an inaccurate and highly biased account of the war, sued Brian and Terence McKenna, the series directors, for libel. An account of the controversy surrounding *The Valour and the Horror* with statements by the directors, the CBC ombudsman and an examination of the series by various historians can be found in Bercuson and Wise’s *The Valour and the Horror Revisited*.

*The Valour and the Horror* consists of three separate two-hour segments aired on consecutive Sunday evenings in 1992. In the first, “Savage Christmas Hong Kong 1941,” the McKennas explore the ill-preparedness of the Canadian troops stationed in Hong Kong, the loss of the city to the Japanese, and the barbarous treatment of Canadian troops interned in slave labour camps for the duration of the war. Arguably the most moving of the three episodes, it was the least controversial. The eyewitness testimony of two surviving veterans, combined with archival photographs and
reenactments of letters written by prisoners of war, testifies to the strength of emotion which can be generated by television documentary.

The second episode, “Death by Moonlight: Bomber Command,” proved to be the most controversial of the three episodes. It details the blanket bombing of German cities carried out by Canadian Lancaster bombers, including the firestorm caused by the bombings of Dresden and Munich. The McKennas claim that the blanket bombing, which caused enormous casualties among both German civilians and Canadian aircrews, did nothing to hasten the end of the war, and was merely an act of great brutality with little military significance. In particular British commander Sir Arthur “Bomber” Harris is cited for his bloodthirstiness.

“In Desperate Battle: Normandy 1944,” the third episode, deals primarily with the massive loss of Canadian troops at Verriers Ridge during the assault on Normandy, citing the incompetence and inexperience of Canadian military leadership as the cause for the high casualty rate. This episode also accuses the Canadian forces of war crimes against German soldiers—war crimes which were never prosecuted after the war.

All three episodes consist of black-and-white archival footage of the war, combined with present-day interviews with both allied and enemy veterans. Each episode has a voice-over narration by Brian McKenna, and is accompanied by music taken from Gabriel Fauré’s Requiem of 1893. The sections taken from the Requiem are those sung primarily by young boys. The accompaniment was perhaps chosen because the McKennas emphasize, throughout each episode, the youthfulness of the combatants, and the terrible but preventable waste of Canada’s young men.

The youthfulness of the soldiers is also emphasized in some very controversial reenactments in which actors speak lines taken from the letters and diaries of Canadian and British military personnel. Although these reenactments are well marked as such, the veterans have claimed that they are misleading and extremely selective about what they include. Reenactments, which are more characteristic of “Reality TV,” like America’s Most Wanted and Rescue 911, are problematic in conventional documentary practice. As Bill Nichols argues in Representing Reality, “documentaries run some risks of credibility in reenacting an event: the special indexical bond between image and historical event is ruptured.” Certainly reenactments are more conventional in television than in cinematic documentary.

The battle which ensued over The Valour and the Horror is a battle over the interpretation of history and the responsibilities of publicly funded television. The McKennas have argued, in the tradition of investigative journalism, that they wished to set aside the official account of the war and examine events from the point of view of the participants. They have also argued that the real story has never been told, and that their own research has shown gross incompetence, mismanagement and cover-ups on the part of the Canadian government. Historians and veterans have argued that The Valour and the Horror is a revisionist history which is both historically inaccurate and poorly researched.

The major complaints against The Valour and the Horror by historians are its lack of context, poor research, and bias which led to misinterpretation and inaccuracy. The McKennas, in defending themselves, have to a degree been their own worst enemies. By claiming that their series is fact, and contains no fiction, and also claiming that their research is “bullet proof,” they have set themselves up for all kinds of attacks—attacks which have also affected the status of publicly funded television in Canada. Publicly funded institutions are particularly vulnerable to attacks by powerful lobbies, whose animosity can and does jeopardize their financial stability. The Valour and the Horror can be seen as a particularly acrimonious chapter in the continuing battle between a publicly funded institution and the taxpayers who support it. In this, it is not unlike the battle waged in the United States between veterans and the Smithsonian Institute over the representation of the bombing of Hiroshima and Nagasaki.

VAN DYKE, DICK
U.S. Actor

Dick Van Dyke’s entertainment career began during World War II when he participated in variety shows and worked as an announcer while serving in the military. That career has continued, with five decades of work as an actor on network and local television, the stage and in motion pictures. The television work started with his role as host of variety programs in Atlanta, Georgia, and his first foray into network television came in 1956 as the emcee of CBS Television’s Cartoon Theatre.

It was his role as Rob Petrie on the classic CBS situation comedy The Dick Van Dyke Show that insured his place in television history. He was cast by series creator Carl Reiner and series producer Sheldon Leonard in the role of a television comedy writer (Reiner himself played this role in the series pilot Head of the Family). He was selected over another television pioneer, Johnny Carson. Plucked from a starring role on the Broadway stage in Bye Bye Birdie, Van Dyke used his unique talent for physical comedy, coupled with his ability to sing and dance, to play Robert Simpson Petrie, the head writer of the Alan Brady Show. Complementing Van Dyke was a veteran cast of talented comedic actors including Rose Marie, Morey Amsterdam, Jerry Paris, Carl Reiner (as Alan Brady), as well as a newcomer to television, Mary Tyler Moore, who played Rob’s wife Laura Petrie.

In many ways The Dick Van Dyke Show broke new ground in network television. The series created quite a stir when, in the early 1960s, husband and wife, though still sleeping in separate beds, were shown to actually have a physical relationship. Mary Tyler Moore was even shown wearing Capri pants, unheard of at the time. But the quintessential example of the innovations offered by The Dick Van Dyke Show occurred when, after the series rejected the script, only an appeal from Sheldon Leonard himself secured permission to film the episode “That’s My Boy??” In this episode, Rob (Van Dyke) is convinced that the baby he and Laura brought home from the hospital was not theirs, but a baby belonging to another couple, the Peters. Constant mix-ups with flowers and candy at the hospital, caused by the similarity in names (Petrie and Peters), convinced Rob that the babies were somehow switched, and he decided to confront the Peters family. Only when the Peters show up at Rob and Laura’s house does Rob learns that the Peters are African American. Some have speculated that the overwhelming positive reaction by audiences to this episode led Sheldon Leonard to eventually cast another future television megastar, Bill Cosby, in I Spy.

Dick Van Dyke won three Emmy Awards for his role in TDVDS, and the series received four Emmy Awards as outstanding comedy series. The series, which began in 1961, ended its network television run in 1966, although audiences have enjoyed the program through its extended life in syndication.

Although Dick Van Dyke went on to star in such feature films as Chitty Chitty Bang Bang, Mary Poppins and The Comed, he has continued to be a staple on network television with The New Dick Van Dyke Show, Van Dyke and Company (for which he received his fourth Emmy) and a critically-acclaimed and Emmy-nominated dramatic performance in the made-for-television movie The Morning After. In his fifth decade in television, Van Dyke has been seen in the 1990s prime-time series Diagnosis Murder for CBS, in which he co-starred with his son Barry Van Dyke.

**VARIETY PROGRAMS**

Variety programs were among the most popular prime-time shows in the early years of American television. _Texaco Star Theater_ starring Milton Berle was so popular for its first two or three years in the late 1940s and early 1950s that restaurants closed the night it was on, water usage plummeted during its hour, and in 1949, almost 75% of the television audience watched it every week. Whether emphasizing musical performance or comedy, or equal portions of each, the variety genre provided early television with the spectacular entertainment values television and advertising executives believed was important to its growth as a popular medium.

Variety shows almost always featured musical (instrumental, vocal, and dance) performances and comedy sketches, and sometimes acrobatics, animal or magic tricks, and dramatic recitations. Some had musical or comedy stars as hosts, often already known from radio or the recording industry, who displayed their talents solo or with guest performers. Others featured personalities, such as Ted Mack or Ed Sullivan, who acted as emcees and provided continuity for what was basically a series of unrelated acts. This genre was produced by both networks and local television stations. Some of the most popular musical variety programs, such as _The Lawrence Welk Show_ and _The Liberace Show_, began as local productions for Los Angeles stations. The form has its heritage in 19th-century American entertainment—minstrel, vaudeville, and burlesque shows—and the 20th-century nightclub and Catskills resorts revues (where such
This Is Tom Jones

Perry Como's Kraft Music Hall

The Sonny and Cher Comedy Hour

The Judy Garland Show
talents as Sid Caesar, Imogene Coca, and Carl Reiner were found).

These forms of entertainment emphasized presentational or performative aspects—immediacy, spontaneity, and spectacle—over storyline and character development. Performers might develop a "persona," but this character mask would usually represent a well-known stereotype or exhibit a particular vocal or dance talent, rather than embody a fleshed-out character growing within the context of dramatic situations. The vaudeville show, which had achieved a middle-class following by the 20th century, presented a series of unrelated acts, featured stars or "headliners," in addition to supporting acts. Many of the form's most important stars made the transition to radio or films in the 1920s and 1930s, and some of these, such as Ed Wynn, were also among the stars of television's first variety shows. Two of the most significant "headliners" of vaudeville and stars of radio, Jack Benny and Burns and Allen made a successful transition to television, but while their shows retained aspects of vaudeville and variety (especially Benny's program with movie star guests and the regularly featured singer Dennis Day), they also combined those elements with the narrative features of situation comedy. A less successful radio comedian, Milton Berle, brought vaudeville back in a much bigger way (his and other television variety-vaudeville shows were called "vaudeo") because his performances emphasized the visual spectacle of the live stage impossible on radio.

The spontaneous, rowdy antics and adult humor of Milton Berle, or of Sid Caesar and company on Your Show of Shows, were most popular on the east coast, where they could be aired live (before the co-axial cable was laid across the country), and where an urban population might be familiar with their styles from nightclubs and resorts. As demographics and ratings from other parts of the country became more important to advertisers and networks, as telefilm programming (usually sitcoms and western dramas) became more successful, and as moral watchdog groups and cultural pundits criticized the genre for its "blue" jokes, some comedy-variety shows fell out of favor. The gentle, child-like humor of Red Skelton became more popular than the cross-dressing of Berle, just as the various comic "personas" of Jackie Gleason (such as the Poor Soul, Joe the Bartender, Ralph Kramden) proved more acceptable to wide audiences than the foreign movie spoofs performed by Caesar and company. While Berle and Caesar stayed on the air for most of the 1950s, it was these other comics and their variety hours that made the transitions into the 1960s.

Variety shows emphasizing music, such as The Dinah Shore Show, The Perry Como Show, The Tennessee Ernie Ford Show, The Lawrence Welk Show, Your Hit Parade, The Bell Telephone Hour and The Voice of Firestone (the latter two emphasizing classical music performance), had long runs and little controversy. Nat "King" Cole, the first major black performer to have a network variety series, had a great difficulty securing sponsors for his show when it debuted in 1956 and most of the important black musical stars of the time—and many of the white ones as well—appeared for reduced fees to help save the show. NBC cancelled it a little over a year after its debut.

Besides several of the above mentioned shows, The Smothers Brothers Show, The Carol Burnett Show, and The Ed Sullivan Show (which would leave the air in 1971 after 23 years) found success in the 1960s, even as the prime-time schedule became more and more filled with dramatic programs and situation comedies. The Smothers Brothers Show caused some controversy with its anti-Vietnam war jokes, and the brothers tangled with CBS over Pete Seeger's singing of "Waist Down in the Big Muddy." Ed Sullivan stayed popular by booking rock acts, such as the Beatles and the Rolling Stones, and Carol Burnett continued the delicious spoofing of film that Your Show of Shows had started. But for the most part, the cultural changes in the late 1960s and 1970s overtook the relevance of the variety form. The Glen Campbell Goodtime Hour, The Sonny and Cher Comedy Hour, Tony Orlando and Dawn—all shows featuring popular music stars with a youth culture following—achieved some popularity in the 1970s. Rowan and Martin's Laugh-In, a different type of variety program, prefigured the faster, more culturally literate and irreverent style that would survive, in limited form, into the 1990s. Clearly more oriented toward satire and sketch comedy than to the music-variety form of other programs, Laugh-In in its way recalled the inventiveness of Your Show of Shows.

Only one other show from the 1970s, with the focus on the youth demographic, has lasted into the 1990s—NBC's Saturday Night Live. This program, mainly emphasizing satirical comedy and featuring a different host and musical guest or group every week, captured the teen, college, and young adult crowd with a late-night airing (11:30 P.M. Eastern and Pacific time). Although periodically critics cry for its demise as the quality of writing waxes and wanes, the show has created film and television stars out of many of its regular performers. Although this network variety show hangs on into the 1990s, the lack of the genre on television despite the proliferation of cable channels, perhaps suggests its permanent eclipse. Now, the viewer with a remote control can create his or her own variety show, switching from stand-up comedy on A and E or the Comedy Central to ballet and opera on PBS or Bravo, from rock and roll on MTV to country music on the Nashville Network (TNN).

**VICTORY AT SEA**

**U.S. Compilation Documentary**

*Victory at Sea*, a 26-episode series on World War II, represented one of the most ambitious documentary undertakings of early network television. The venture paid handsomely for NBC and its parent company RCA, however, in that it generated considerable residual income through syndication and several spinoff properties. It also helped establish compilation documentaries, programs composed of existing archival footage, as a sturdy television genre.

The series premiered on the last Sunday of October 1952, and subsequent episodes played each Sunday afternoon through May 1953. Each half-hour installment dealt with some aspect of World War II naval warfare and highlighted each of the sea war's major campaigns: the Battle of the North Atlantic, the attack on Pearl Harbor, the Battle of Midway, antisubmarine patrol in the South Atlantic, the Leyte Gulf campaign, etc. Each episode was composed of archival footage originally accumulated by the United States, British, Japanese or German navies. The footage was carefully edited and organized to bring out the drama of each campaign. That drama was enhanced by the program's sententious voice-over narration and by Richard Rogers's stirring musical score.

*Victory at Sea* won instant praise and loyal viewers. Television critics greeted it as breakthrough for the young television industry: an entertaining documentary series that still provided a vivid record of recent history. *The New York Times* praised the series for its "rare power"; *The New Yorker* pronounced the combat footage "beyond compare"; and *Harper's* proclaimed that "*Victory at Sea* [has] created a new art form." It eventually garnered 13 industry awards, including a Peabody and a special Emmy.

The project resulted from the determination of its producer Henry Salomon and from the fact the NBC was in a position to develop and exploit a project in compilation filmmaking. Salomon had served in the U.S. Navy during the war and was assigned to help historian Samuel Eliot Morison write the Navy's official history of its combat operations. In that capacity, Salomon learned of the vast amounts of film footage the various warring navies had accumulated. He left military service in 1948, convinced that the footage could be organized into a comprehensive historical account of the conflict. He eventually broached the idea to his old Harvard classmate Robert Sarnoff, who happened to be the son of RCA Chairman David Sarnoff and a rising executive in NBC's television network. The younger Sarnoff was about to take over the network's new Film Division as NBC anticipated shifting more of its schedule from live to filmed programming. A full documentary series drawn entirely from extant film footage fit perfectly with plans for the company's Film Division.

Production began in 1951 with Salomon assigned to oversee the enterprise. NBC committed the then-substantial sum of $500,000 to the project. Salomon put together a staff of newsreel veterans to assemble and edit the footage. The research took them to archives in North America, Europe, and Asia through 1951 and early 1952. Meanwhile Salomon received the full cooperation of U.S. Navy, which expected to receive beneficial publicity from the series. The crew eventually assembled 60 million feet of film, roughly 11,000 miles. This was eventually edited down to 61,000 feet. Salomon scored a coup when musical celebrity Richard Rogers agreed to compose the program's music. Rogers was fresh from several Broadway successes, and his name added prestige to the entire project. More important, it offered the opportunity for NBC's parent company RCA to market the score through its record division.

When the finished series was first broadcast, it did not yet have sponsorship. NBC placed it in the line-up of cultural programs on Sunday afternoon. The company promoted it as a high-prestige program, an example of history brought to life in the living room through the new medium of television. In so doing, the company was actually preparing to exploit the program in lucrative residual markets. As a film (rather than live) production, it could be rebroadcast indefinitely. And the fact that *Victory at Sea* dealt with a historical subject meant that its information value would not depreciate as would a current-affairs documentary.

*Victory at Sea* went into syndication in May 1953 and enjoyed a decade of resounding success. It played on 206
local stations over the course of ten years. It had as many as 20 reruns in some markets. This interest continued through the mid-1960s when one year's syndication income equalled the program's entire production cost. NBC also aggressively marketed the program overseas. By 1964, Victory at Sea had played in 40 foreign markets. Meanwhile, NBC recut the material into a 90-minute feature. United Artists distributed the film theatrically in 1954, and it was subsequently broadcast in NBC’s prime-time schedule in 1960 and 1963. The Richard Rogers score was sold in several record versions through RCA-Victor. By 1963, the album version had grossed four million dollars, and one tune from the collection, “No Other Love,” earned an additional $500,000 as a single.

The combination of prestige and residual income persuaded NBC to make a long-term commitment to the compilation documentary as a genre. NBC retained the Victory at Sea production crew as Project XX, a permanent production unit specializing in prime-time documentary specials on historical subjects. The unit continued its work through the early 1970s, producing some 22 feature-length documentaries for the network.

Victory at Sea demonstrated the commercial possibilities of compilation documentaries to other networks as well. Such programs as Air Power and Winston Churchill: The Valiant Years directly imitated the Victory at Sea model, and the success of CBS' long-running historical series The 20th Century owed much to the example set by Salomon and his NBC colleagues. The fact that such programs still continue to play in syndication in the expanded cable market demonstrates the staying power of the compilation genre.

—Vance Kepley Jr.

NARRATOR Leonard Graves

PRODUCER Henry Salomon
Three broad historical phases characterize the development of video editing that followed: physical film/tape cutting, electronic transfer editing, and digital non-linear editing. Even before the development of a successful videotape recording format in 1956 (the Ampex VR-1000), time zone requirements for national broadcasting required a means of recording and transporting programs. Kinescopes, filmed recordings of live video shows for delayed west coast airing, were used for this practice. Minimal film editing of these kinescopes was an obligatory part of network television.

Once videotape found widespread use, the term “stop-and-go recording” was used to designate those “live” shows that would be shot in pieces then later edited together. Physically splicing the two-inch quad videotape proved cumbersome and unforgiving, however, and NBC/Burbank developed a system in 1957 that used 16mm kinescopes—not for broadcasting—but as “work-prints” to rough-cut a show before physically handling the videotape. Audible cues on the film’s optical sound track allowed tape editors to match-back frame for frame each cut. Essentially, this was
the first "offline" system for video. Known as ESG, this system of rough-cutting film and conforming on tape (a reversal of what would become standard industry practice in the 1990s), reached its zenith in 1968 with Rowan and Martin's Laugh-In. That show required 350 to 400 tape splices and 60 hours of physical splicing to build up each episode's edit master.

A cleaner way to manipulate prerecorded video elements had, however, been introduced in 1963 with Ampex's all electronic "Editec." With VTRs (videotape recorders) now controlled by computers, and in- and out-points marked by audible tones, the era of electronic "transfer editing" had begun. Original source recordings were left unaltered, and discrete video shots and sounds were re-recorded in a new sequence on a second generation edit master. In 1967, other technologies added options now commonplace in video editing studios. Ampex introduced the HS-100 videodisc recorder (a prototype for now requisite slow motion and freeze frame effects) that was used extensively by ABC in the 1968 Olympics. "Helical-scan" VTRs (which threaded and recorded tape in a spiral pattern around a rotating head) appeared at the same time, and ushered in a decade in which technological formats were increasingly miniaturized (enabled in part by the shift to fully transistorized VTRs like the RCA TR-22 in 1961). New users and markets opened up with the shift to helical: educational, community activist, and cable cooperatives all began producing on the half-inch EIAJ format that followed; producers of commercials and industrial video made the three-quarter inch U-matic format pioneered by Sony in 1973 its workhorse platform for nearly two decades; newsrooms jettisoned 16mm newfilm (along with its labs and unions) for the same videocassette-based format in the late 1970s; even networks and affiliates replaced venerable two-inch quad machines with one-inch helical starting in 1977.

The standardization of "time-code" editing, more than any other development, made this proliferating use viable. Developed by EECO in 1967, time-code was awarded an Emmy in 1971, and standardized by SMPTE shortly thereafter. The process assigned each video frame a digital "audio address," allowed editors to manage lists of hundreds of shots, and made frame accuracy and rapidly cut sequences a norm. The explosive growth of non-network video in the 1970s was directly tied to these and other refinements in electronic editing.

Nonlinear digital editing, a third phase, began in the late 1980s both as a response to the shortcomings of electronic transfer editing, and as a result of economic and institutional changes (the influence of music video, and the merging of film and television). To "creative personnel" trained in film, state-of-the-art online video suites had become little more than engineering monoliths that prevented "cutting-edge" directors from working intuitively. In linear time-code editing, for example, changes made at minute 12 of a program meant that the entire program after that point had to be re-edited to accommodate the change in program duration. Time code editing, which made this possible, also essentially "quantified" the process, so that the "art" of editing meant merely managing "frame in/out" numbers for shots on extensive edit decision lists (EDLs). With over 80% of primetime television still shot on film by the end of the 1980s, the complicated abstractions and obsolescence that characterized these linear video formats also meant that many Hollywood television producers simply preferred to deliver programs to the networks from film prints—cut on flats and conformed from negatives. The capital intensive nature of video post-production, also segregated labor in the suites. Directors were clients who delegated edit rendering tasks to house technicians and DVE artists. Online linear editing was neither spontaneous nor user-friendly.

Nonlinear procedures rejected videotape entirely and attacked the linear "straight-jacket" on several fronts. Systems were developed to "download" or digitize (rather than record) film/video footage onto video discs (CMX 6000) or computer hard-drive arrays (Lightworks, the Cube). This created the possible of random access retrieval as an "edited" sequence. Yet nonlinear marked an aesthetic and methodological shift as much as a technological breakthrough. Nonlinear technologies desegregated the editing crafts; synthesized post-production down to the "desktop" level, the personal computer scale; allowed users to intervene, rework, and revise edited sequences without recreating entire programs; and enabled editors to render and recall for clients at will numerous stylistic variations of the same show. Directors and producers now commonly did their own editing—in their own offices. The trade journals marvelled at the Avid's "32 levels of undo," the ability to restore extensive changes to various previous states. Nothing was locked in stone.

This openness allowed for a kind of presentational and formal "volatility" perfectly suited for the stylistic excesses that characterized contemporary television in the late 1980s and 1990s. When systems like the Avid and the Media 100 were upgraded to "online" mastering systems in the 1990s—complete with on-command digital video effects—the anything-can-go-anywhere premise made televisual embellishment an obligatory user challenge. The geometric growth of hard-disc memory storage, the pervasive paradigm of desktop publishing, and the pressure to make editing less an engineering accomplishment than a film artist's intuitive statement sold nonlinear procedures and technologies to the industry.

Video editing faces a trajectory far less predictable than that in the 1950s, when an industrial-corporate triumvirate of Ampex/RCA/NBC controlled technology and use. The future is open largely because editing applications have proliferated far beyond those developed for network oligopoly. Video is everywhere. Nonlinear established its beachhead in the production of commercials and music videos, not in network television. Still, by 1993 mainstream ATAS (Academy of Television Arts and Sciences) had lauded Avid's nonlinear system with an Emmy. By 1995, traditional television equipment manufacturers like Sony, Panasonic, and Grass Valley were covering their bets by selling user-friendly, non-linear Avid-clones even as they continued slugging it
out over digital tape-based electronic editing systems. At the same time, program producing factories like Universal/MCA Television continued to use a wide range of editing systems for their series—film, linear, and nonlinear.

Hollywood’s obsession with “digital interactivity” in the 1990s, means that sequencing video imagery in “postproduction” will remain central to the fabrication of entertainment “software.” Storage formats (film, tape, video disc) will, clearly, continue to change. Yet industry forays into the “information superhighway,” now suggest a prototype for interactive editing that is closer in spirit to television’s historic paradigm of multi-source “switching.” Many now envision the “video server”—networked by wide bandwidth fiber-optic cable—as a bottomless, digitized, motion picture storage pit, as an image-sound repository that does not even need to reside in the sequencing platform of the digital video editor. If this server-network model survives, the role of the nonlinear digital editor might then stand as the very model for all video-on-demand consumers in the domestic sphere as well. Viewers will become their own editors.

VIDEOCASSETTE

In 1956, the Ampex company announced that it had developed a new device: the videocassette machine. This large reel-to-reel tape machine used four record heads (and was for this reason given the name “quad”) and two-inch wide tape. The invention was quickly embraced by the broadcasting community, and on 30 November 1956, CBS broadcast the first program using videotape. Videotape is very similar in composition to audiotape. Most videotape consists of a Mylar backing, a strong, flexible plastic material, that provides a base for a thin layer of ferrous oxide. This oxide is easily magnetized and is the substance that stores the video and audio information.

In 1969, Sony introduced its EIAJ-standard three-quarter-inch U-Matic series, a videocassette system. Although there were earlier attempts to establish a standard cassette or cartridge system, the U-Matic format was the first to become solidly accepted by educational and industrial users. Similar in construction and function to the audiocassette, the videocassette is a plastic container in which a videotape moves from supply reel to take-up reel, recording and playing back short program segments through a videocassette recorder (VCR). This form of construction emerged as a distinct improvement on earlier, reel-to-reel videotape recording and playback systems. The cassette systems, especially after they were integrated with camera and sound systems, enabled ease of movement and flexible shooting arrangements. The new devices helped create a wave of video field production ranging from what is now known as “electronic news gathering” to the use of video by political activist groups, educators, and home enthusiasts.

This last group was always perceived by video hardware manufacturers as a vast opportunity for further sales. After several abortive attempts to establish a consumer market with a home cartridge or cassette system, Sony finally succeeded with its Betamax format. Sony’s success with Betamax was followed closely by other manufacturers with VHS (the “video home system”), a consumer-quality 1/2-inch videocassette system introduced by JVC. Although the VHS format still dominates the home entertainment field, several competing formats are vying for both the consumer market and the professional field. The greatly improved Super-VHS (S-VHS) format has technical specifications that equal broadcast and cable TV quality. The S-VHS system is in turn being challenged by two 8mm cassette formats—Video 8 (a consumer-grade video format developed by Sony that uses eight-millimeter-wide tape) and Hi8 (an improvement on Sony’s Video-8 format that uses metal

VIDEODISC

Videodiscs are records that play high-fidelity sound and pictures through conventional television receivers. The dominant videodisc technology is the LaserDisc (LD), a replay-only video disc system based upon the same laser-read optical disc technology used by the compact disc digital audio format. LaserDisc has also been referred to by the terms LaserVision, DiscoVision, and CD-Video. The competing format, known as Capacitance Electronic Disc (CED), has become obsolete in the home market.

Videodiscs produce a picture with 400 horizontal lines, imparting a clearer, sharper image than the 240 lines displayed by conventional videotape. The LaserVision system has two speeds: Constant Linear Velocity discs play for 60 minutes per side, and Constant Angular Velocity discs play for only 30 minutes per side. Both CLV and CAV discs can be played on all LV machines, but the CLV format does not support freeze-frame and other special effects. The obsolete CED system employed discs with a capacity of one hour per side.

The first consumer videodisc players were developed in Britain during the late 1920s by John Logie Baird. Baird's system, known as "phonovision", had only 30 lines of resolution. The capacitance system was developed in the 1960s and was used in commercial broadcasting applications prior to the development of videotape. Capacitance systems were able to play full bandwidth images by means of a stylus riding in the grooves of the videodisc that translated variations in electrical capacitance into video and audio signals. Laser optical disc technology, which uses a laser beam rather than a stylus to play back sound and video images, was developed jointly by MCA and N.V. Philips in the early 1970s. Their collaboration resulted in the DiscoVision system under the Magnavox label.

Initially, videodisc players failed to be widely adopted by consumers. This was due in part to the small number of prerecorded titles offered that could be played on the systems, and in part to the competing technology of video cassette players which allowed consumers the additional ability to record video as well as play back prerecorded products. Their recent resurgent popularity may be traced to improvements in videodisc players, large screen television sets, and improved home sound systems, as well as by increased demand by consumers for a better quality picture. Film buffs and collectors are also attracted to the longer product life of videodiscs: since the audio and video information is protected under an acrylic shield and no stylus or head makes physical contact with the laser disc surface, it is less subject to wear and tear than conventional videocassettes. There are just under one million videodisc players in home use in the United States (compared to 85,000,000 VCRs), and over 2 million units in Japan.

Although the LD videodisc's shiny acrylic surface resembles that of digital audio compact discs (CDs), the laser disc differs in that it may be encoded with both analog and digital data. Most videodisc players are thus able to playback both digital and analog sound. Many videodiscs released now incorporate a digital-audio soundtrack which uses exactly the same standard used by compact discs. However, most players still support the analog soundtracks of older discs released from between 1978 and 1986. Many LD format videodisc players are also able to play conventional digital audio compact discs.

Videodisc players do have features similar to those found on CD players, such as track numbers (known as "chapters" in videodisc terminology), real-time counters and rapid random access or direct access to any chapter on the side by chapter number or by specific time.

In comparison with North America and Japan, the market for videodisc players in PAL territories is still small. Since videodisc players must store a complete video signal, they are engineered in accordance with one of two incompatible formats, either the 525-line NTSC system or the 625-line PAL system. Fortunately the further sub-division of the 625-line based systems into the PAL and SECAM color systems was avoided: color information that is recorded on the disc in the PAL color system is internally decoded into SECAM by players meant for this market.

NTSC videodisc players are the norm in many Southeast Asian countries despite their use of the PAL standard for local television broadcasts. However, domestic videodisc releases for the PAL color system are made in Europe and Australia, but this small market is not well developed and fewer titles are available on disc. This has encouraged the videodisc player manufacturers to begin the production of dual standard players.

VIDEOTAPE

By the late 1990s videotape was familiar to most television viewers in developed countries. The videocassette was a central product throughout the home video market and in various formats was widely used as a consumer item for home recording. Despite these widespread and common uses, however, videotape is of relatively recent origin. Its immediate antecedent is, of course, audiotape.

The processes of recording audiotape and videotape work on the same principle. An audio or video recording head is a small electromagnet containing two coils of wires separated by a gap. An electrical current passing through the wires causes a magnetic charge to cross the gap. When tape, coated with metal particles, passes through the gap, patterns are set on the material. On audiotape, each syllable, musical note, or sneeze sets down its own distinct pattern. For videotape, which carries several hundred times as much information as audiotape, each image has its own pattern.

In the late 1940s and early 1950s the explosive growth of television created an enormous demand for a way to record programs. Until links could be established through television lines or microwave broadcast relay, a blurry kinescope was the only means by which a network program could be recorded and replayed on different local television stations. As a result, “television” programs were unstable, ephemeral events. Once transmitted electronically they were, for the most part, lost in time and space, unavailable for repeated use as either aesthetic, informational, or economic artifacts.

In 1951, engineers at Bing Crosby Enterprises demonstrated a black-and-white videotape recorder that used one-inch tape (tape size refers to tape width) running at 100 inches per second. At that rate a reel of tape three feet in diameter held about fifteen minutes of video. Crosby continued to fund the research, driven not only by a sense of commercial possibilities for videotape, but reportedly also by his wish to record television programs so that he could play golf without being restricted to live performances. Two years later RCA engineers developed a recorder which reproduced not only black-and-white but color pictures. However, tape ran past the heads at a blinding 360 inches per second, which is 20 miles per hour. Neither machine produced pictures of adequate quality for broadcast. It simply was not possible to produce a stable picture at such a high tape speed.

During this same period, Ampex, a small electronics firm in California, was building a machine on a different principle, spinning the recording head. They succeeded in 1956 with a recorder the size of two washing machines. Four video heads rotated at 14,400 revolutions per minute, each head recording one part of a tape that was two inches wide. One of the engineers on the project, Ray M. Dolby, later became famous for his tape noise reduction process.

The quality of Ampex recordings was such an improvement over fuzzy kinescope images that broadcasters who saw the first demonstration, presented at a national convention, actually jumped to their feet to cheer and applaud. The television industry responded so enthusiastically that Ampex could not produce machines fast enough. It was the true beginning of the video age.

West Coast television stations could now, without sacrificing picture quality, delay live East Coast news and entertainment broadcasts for three hours until evening prime time, when most viewers reached their homes after work. By 1958 the networks were recording video in color and by 1960 a recorder was synchronized with television studio electronics for the familiar film editing techniques of the “dissolve” and “wipe.”

Large “two-inch” reel-to-reel Ampex machines survived for a generation before they were replaced by more compact and efficient “one-inch” reel-to-reel machines and “three-quarter-inch” cassette machines. By 1990 most of the bigger recorders had been retired.

While American companies were manufacturing two-inch, four-head, quadruplex scan machines, Japanese engineers were building the prototype of a helical scan machine that employed a single spinning head. Toshiba introduced the first helical scan VTR machine in 1959. JVC soon followed. The picture quality produced by these machines would remain inferior to “quad” machines for another ten years, unsuitable for the broadcast industry. But the smaller, more “user-friendly” helical scan machines, costing a fraction of the price of larger machines, quickly dominated the industrial and educational markets.

FURTHER READING

In 1972 Sony introduced the "Port-a-pak" black-and-white video recorder, weighing less than 10 pounds. The tape had to be threaded by hand, but the "Port-a-Pak" was an important step on the way to electronic news gathering, known in the television industry as ENG. The next big step, Sony's U-matic three-quarter inch tape machine which played tape cassettes, eliminated physical handling of tape. CBS-TV News sent a camera team equipped with an Ikegami video camera and a U-Matic tape recorder to cover President Richard Nixon's trip to Moscow. News stories were soon being microwaved back to stations for taping or live feeds. Prior to these developments the visual portion of news broadcasts had been produced on film. Videotape was the far superior medium for news. It needed no developing time, was reusable, and was more suited to the television's sense of immediacy. With the coming of videotape, television news editors replaced razor blades with electronic editing devices.

With broadcasting, educational and industrial markets in hand, Japanese video companies turned their attention to the potentially vast home market. Hobbyists had already shown the way. With slightly modified portable reel-to-reel machines, they were taping television programs at home to play again later.

Sony, whose research was led by Nobutoshi Kihara, had considered the home market from the start. Recognizing that not only television stations but viewers ought to be able to time-shift programs, Sony president Akio Morita said, "People do not have to read a book when it's delivered. Why should they have to see a TV program when it's delivered?" Sony introduced its half-inch Betamax machine in 1975. A year later rival Japanese companies, led by JVC, brought out VHS machines, a format incompatible with Betamax. VHS gradually captured the home market. People at home could simply and inexpensively record television programs, and could buy or rent tapes. At last it was possible to go to the movies without leaving home.

Tape renting began when businessman Andre Blay made a deal to buy cassette production rights to fifty Twentieth Century-Fox movies. Blay discovered that few customers wanted to buy his tapes, but everyone wanted to rent them.

The motion picture industry considered the videodisc a better way to bring a movie into the home, pointing out its sharper picture image, stereo sound, lower cost, and copy protection. However, the public wanted recording capability, not so much to copy rented films illegally as to record movies and television programs off the air for later playback. Videodisc players could not match the flexibility of videocassette recorders for time-shifting. In the battle over competing disc and tape formats, VHS tapes emerged the clear winner.

The simplicity, flexibility, low cost, and high quality of tape technology created new worlds of visual production. In the final decade of the twentieth century, one hundred years after motion pictures were invented, millions of users could "make a movie." Video cameras found their way into schools as learning tools. The high-school library is now often referred to as "the media center," and the video yearbook has joined the printed version. Even in elementary schools, curious fingers are pushing camera buttons.

Videotape has also introduced specific changes at a very different level, expanding the production community in the professional arena. It is possible to produce a motion picture of technically acceptable quality at modest cost. The phrase desktop video has become part of our language, often in relation to desktop publishing.

Videotape has had wide impact everywhere on earth, including remote villages, where inexpensive tapes bring information and entertainment. A truck carrying a videotape player, a television set, and a portable generator is not an uncommon sight in many parts of the world. Peoples living as far from urban centers as the Kayapo of the Brazil rain forest and the Inuit of northern Canada have been introduced to video, and have themselves produced tapes to argue for political justice and to record their cultural heritage.

Several Third World governments have actively promoted videotape programs for adult education. For example, the Village Video Network in several countries provides an exchange for tapes on such subjects as farming, nutrition, and population control. International groups have given some villages video cameras and training to produce their own films, which are later shown to other villages.

Another result of video diffusion has been a widening of video journalism capability. The taping of the Rodney King beating was just one example of how ordinary citizens are making a difference not only in news coverage but in the course of events. The potential for a "video vigilantism" by "visualantes" has not gone unnoticed, with its effects not only on journalism but on law enforcement itself.

Far less significant uses of videotape technology have also developed. Replacing the traditional matchmaker, for example, is the video dating club. Participants tell a video camera of their interests, their virtues, and the type of person they would like to meet. They look at other videotapes and their videotape is shown to prospects.

Serious social and legal problems are also directly related to the easy use of this technology. Video piracy is rampant. A vast underground network feeds millions of illegal copies of videotape movies throughout the world. The national film industries of a number of countries have been battered both by the pirating of their own films and by the influx of cheap illegal copies of Western films.

Some of these issues may be resolved with the development of still newer technologies. For both the video and computer industries, the future of information storage and retrieval may lie not with tape but with such optical media as CD-ROM and CD-I, which offer the advantages of high density, random access and no physical contact between the storage medium and the pickup device. As with the earlier videotape "revolution," the television and film industries are now shifting their investments and altering their industrial...
practices to deal with the newer, digitally-based devices. The results of these changes for consumers, educators, and journalists are not easily predicted, yet there is no question but that all these groups will experience alteration in media use akin to that caused by the introduction of videotape.

VIDEOTEXT/ONLINE SERVICES

The term “videotext” refers to any interactive electronic system which allows users to send and receive data from either a personal computer or a dedicated terminal. The term “videotext” is often used interchangeably with appellations such as “online service” or “interactive network.” Videotext systems deliver information and transactional services such as banking and shopping. These systems differ from broadcast media delivery systems due to the special qualities of interactivity engendered by the technology which allow the user to personalize his media use rather than act as a passive member of an aggregate audience.

Traditionally, videotext systems displayed information only in text format, but as color monitors became more commonplace during the early 1990s, these services began to offer graphical user interfaces (GUIs) which incorporated sound and visually striking computer graphic displays. Although users connected to early videotext systems on dedicated terminals, most online services can now be accessed by the user via a phone line and a personal computer equipped with a modem or Ethernet connection. Videotext users may pay a per-use charge or a monthly subscription fee to access the service.

The first videotext systems were developed in Europe in the 1970s by government-owned telephone companies. The world’s largest videotext service is the French Teletel system, which boasts approximately eight million users. This system was launched in the early 1980s as part of an economic plan aimed at making France a leader in information technology. Free “Minitel” terminals were distributed by the French government (in lieu of paper versions of phone directories) and the service was promoted widely as a matter of public policy. Smaller videotext systems in Italy, Ireland, and other countries have made use of the French technology, whereas Germany, Japan, Korea, Britain and other nations have chosen to develop their own videotext technologies.

In the United States, videotext systems were initially launched by the newspaper publishers who made news and advertisements through special terminals hooked up to television monitors, but most of these services met with little commercial success. However, the increased diffusion of personal computers into the home eventually enabled consumer-oriented videotext systems to succeed in the mass marketplace. By the mid-1990s, more than four million households had subscribed to one or more of the largest consumer-oriented U.S. videotext systems: America Online, Prodigy, CompuServe, and Genie. Currently these providers are incorporating gateways to Internet applications within their services, including World Wide Web browsers, Usenet newsgroups and electronic mail.

Television broadcasters are making increasing use of online information services to promote their programming; furthermore, several information services aimed at providing services related to the broadcasting industry have been sponsored by the major service providers mentioned above. On CompuServe, for example, users may access the Hollywood Hotline, which provides news and information about the entertainment industry, or they may obtain daily summaries of soap operas or printed transcripts of selected television shows. The CompuServe Broadcast Professionals Area contains information about publications and trade associations related to broadcast engineering, programming and television production. On America Online several networks and cable services have sponsored areas where fans can get information, register their opinions, or obtain sound samples or photos from their favorite programs.

Services provided by videotext fall into one of three areas: information retrieval services such as obtaining stock prices or weather forecasts, transactional message services which enable the purchasing of merchandise over the network, and interpersonal message exchanges which may include conferencing, chat channels or electronic mail. This last application has been the most successful, indicating that consumers are more interested in using the services to talk to other people than to retrieve information.

New developments in broadband television delivery, with its ability to display high-quality video and its incorporation of stereo sound, has encouraged some developers to experiment with providing videotext services over interactive TV systems.

—Aviva Rosenstein
VIETNAM: A TELEVISION HISTORY

U.S. Compilation Documentary

Vietnam: A Television History was the most successful documentary produced by public television at the time it aired in 1983. Nearly 9% of all U.S. households tuned in to watch the first episode, and an average of 9.7 million Americans watched each of the 13 episodes. A second showing of the documentary in the summer of 1984 garnered roughly a 4% share in the five largest television markets.

Before it was aired in the United States, over 200 high schools and universities nationwide paid for the license to record and show the documentary in the classroom as a television course on the Vietnam War. In conjunction with this educational effort, the Asian Society's periodical, Focus on Asian Studies, published a special issue entitled, "Vietnam: A Teacher's Guide" to aid teachers in the use of this documentary in the classroom.

The roots of the documentary reach back to 1977 when filmmaker Richard Ellison and foreign correspondent Stanley Karnow first discussed the project. Karnow had been a journalist in Paris during the 1950s and a correspondent in French Indochina since 1959. Karnow and Ellison then signed on Dr. Lawrence Lichty, professor at the University of Wisconsin at the time, as director of media research to help gather, organize and edit media material ranging from audio and videotape and film coverage, to still photographs and testimonial. As a result, Vietnam: A Television History became a "compilation" documentary relying heavily on a combination of fixed moments (photographs, written text) as well as fluid moments (moving video and film).

The final cost of the project totaled approximately $4.5 million. At the time of its broadcast in 1983, it was one of the most expensive ventures ever undertaken by public television. While the initial funding came from WGBH-TV Boston and the National Endowment for the Humanities, the Corporation for Public Broadcasting refused financial support. Ellison and Karnow sought additional backing abroad, gaining support from Britain's Associated Television (later to become Central Independent Television). Co-production with French Television (Antenne-2) enabled access to important archives from the French occupation of the region. Antenne-2 produced the earliest episodes of the documentary, and Associated Television partially produced the fifth episode.

Karnow and Ellison saw the documentary as an opportunity to present both sides of the Vietnam War story, the American perspective and the Vietnamese perspective. Throughout the 1960s and 1970s, documentaries and films on the Vietnam War tended to look solely at American involvement and its consequences both at home and in the region. Karnow and Ellison sought a more comprehensive historical account that traced the history of foreign invasion and subsequent Vietnamese cultural development over sev-
eral hundred years. Both producers believed that to gain a more comprehensive view of Vietnam would enable the documentary to become a vehicle for reconciliation as well as reflection.

The series aired first in Great Britain to good reviews, although it did not receive the high ratings it achieved in the United States. At the time of its broadcast in the United States in the fall of 1983, the documentary received very positive reviews from The New York Times, The Washington Post and Variety. Furthermore, both Time magazine and Newsweek hailed the series as fair, brilliant, and objective.

Still, other critics of the documentary were less complimentary and viewed it as overly generous to the North Vietnamese. The organization Accuracy in Media (AIM) produced and aired a response to the documentary seeking to “correct” the inaccurate depiction of Vietnam in the series. PBS’s agreement to air the two-hour show, entitled Television’s Vietnam: The Real Story, was seen by many liberal critics as bowing to overt political pressure. PBS’s concession to air AIM’s response to the documentary (its own production) was rare, if unprecedented, in television history.

The controversy surrounding Vietnam: A Television History and the response to it, Television’s Vietnam: The Real Story, raise the important question concerning bias in documentary production. Bias in the interpretation of historical events has fueled, and continues to fuel, rigourous debates among historians, politicians and citizens. The experience Karnow and Ellison had in creating this documentary underscores the sense that the more “producers” involved in a project, the more difficult the task of controlling for bias becomes. The episodes prepared by the British and French teams were noticeably more anti-American in tone. Despite the controversy, Vietnam: A Television History remains one of the most popular history documentaries used in educational forums. It inspired Stanley Karnow’s best-selling book, Vietnam: A History, which was billed as a “companion” to the PBS series. The book also remains one of the top history texts used in college courses concerning the war and its controversy, both in the United States and around the world.

—Hannah Gourgey

FURTHER READING
Vietnam was the first "television war." The medium was in its infancy during the Korean conflict, its audience and technology still too limited to play a major role. The first "living-room war," as Michael Arlen called it, began in mid-1965, when Lyndon Johnson dispatched large numbers of U.S. combat troops, beginning what is still surely the biggest story television news has ever covered. The Saigon bureau was for years the third largest the networks maintained, after New York and Washington, with five camera crews on duty most of the time.

What was the effect of television on the development and outcome of the war? The conventional wisdom has generally been that for better or for worse it was an anti-war influence. It brought the "horror of war" night after night into people's living rooms and eventually inspired revulsion and exhaustion. The argument has often been made that any war reported in an unrestricted way by television would eventually lose public support. Researchers, however, have quite consistently told another story.
There were, to be sure, occasions when television did deliver images of violence and suffering. In August 1965, after a series of high-level discussions which illustrate the unprecedented character of the story, CBS aired a report by Morley Safer which showed Marines lighting the thatched roofs of the village of Cam Ne with Zippo lighters, and included critical commentary on the treatment of the villagers. This story could never have passed the censorship of World War II or Korea, and it generated an angry reaction from Lyndon Johnson.

In 1968, during the Tet offensive, viewers of NBC news saw Col. Nguyen Ngoc Loan blow out the brains of his captive in a Saigon street. And in 1972, during the North Vietnamese spring offensive, the audience witnessed the aftermath of errant napalm strike, in which South Vietnamese planes mistook their own fleeing civilians for North Vietnamese troops.

These incidents were dramatic, but far from typical of Vietnam coverage. Blood and gore were rarely shown. Just under a quarter of film reports from Vietnam showed images of the dead or wounded, most of these fleeting and not particularly graphic. Network concerns about audience sensibilities combined with the inaccessibility of much of the worst suffering to keep a good deal of the “horror of war” off the screen. The violence in news reports often involved little more than puffs of smoke in the distance, as aircraft bombed the unseen enemy. Only during the 1968 Tet and 1972 Spring offensives, when the war came into urban areas, did its suffering and destruction appear with any regularity on TV.

For the first few years of the “living room war” most of the coverage was upbeat. It typically began with a battlefield roundup, written from wire reports based on the daily press briefing in Saigon—the “Five O’Clock Follies,” as journalists called it—read by the anchor and illustrated with a battle map. These reports had a World War II feel to them—journalists no less than generals are prone to “fighting the last war”—with fronts and “big victories” and a strong sense of progress and energy.

The battlefield roundup would normally be followed by a policy story from Washington, and then a film report from the field—typically about five days old, since film had to be flown to the United States for processing. As with most television news, the emphasis was on the visual and above all the personal: “American boys in action” was the story, and reports emphasized their bravery and their skill in handling the technology of war. A number of reports directly
countered Morley Safer’s Cam Ne story, showing the burning of huts, which was a routine part of many search-and-destroy operations, but emphasizing that it was necessary, because these were Communist villages. On Thursdays, the weekly casualty figures released in Saigon would be reported, appearing next to the flags of the combatants, and of course always showing a good “score” for the Americans.

Television crews quickly learned that what New York wanted was “bang-bang” footage, and this, along with the emphasis on the American soldier, meant that coverage of Vietnamese politics and of the Vietnamese generally was quite limited. The search for action footage also meant it was a dangerous assignment: nine network personnel died in Indochina, and many more were wounded.

Later in the war, after Tet and the beginning of American troop withdrawals in 1969, television coverage began to change. The focus was still on “American boys,” to be sure, and the troops were still presented in a sympathetic light. But journalists grew skeptical of claims of progress, and the course of the war was presented more as an eternal recurrence than a string of decisive victories. There was more emphasis on the human costs of the war, though generally without graphic visuals. On Thanksgiving Day 1970, for example, Ed Rabel of CBS reported on the death of one soldier killed by a mine, interviewing his buddies, who told their feelings about his death and about a war they considered senseless. An important part of the dynamic of the change in TV news was that the “up close and personal style” of television began to cut the other way: in the early years, when morale was strong, television reflected the upbeat tone of the troops. But as withdrawals continued and morale declined, the tone of field reporting changed. This shift was paralleled by developments on the “home front.” Here, divisions over the war received increasing air time, and the anti-war movement, which had been vilified as Communist-inspired in the early years, was more often accepted as a legitimate political movement.

Some accounts of television’s role regarding this war assign a key role to a special broadcast by Walter Cronkite wrapping up his reporting on the Tet Offensive. On 27 February 1968, Cronkite closed “Report from Vietnam: Who, What, When, Where, Why?” by expressing his view that the war was unwinnable, and that the United States would have to find a way out. Some of Lyndon Johnson’s aides have recalled that the president watched the broadcast and declared that he knew at that moment he would have to change course. A month later Johnson declined to run for reelection and announced that he was seeking a way out of the war; David Halberstam has written that “it was the first time in American history a war had been declared over by an anchorman.”

Cronkite’s change of views certainly dramatized the collapse of consensus on the war. But it did not create that collapse, and there were enough strong factors pushing toward a change in policy that it is hard to know how much impact Cronkite had. By the fall of 1967, polls were already showing a majority of Americans expressing the opinion that it had been a “mistake” to get involved in Vietnam; and by the time of Cronkite’s broadcast, two successive secretaries of defense had concluded that the war could not be won at reasonable cost. Indeed, with the major changes in television’s portrayal of the war still to come, television was probably more a follower than a leader in the nation’s change of course in Vietnam.

Vietnam has not been a favorite subject for television fiction, unlike World War II, which was the subject of shows ranging from action-adventure series like Combat to sitcoms like Hogan’s Heroes. During the war itself it was virtually never touched in television fiction—except, of course, in disguised form on M*A*S*H. After Hollywood scored commercially with The Deer Hunter (1978), a number of scripts were commissioned, and NBC put one pilot, 6:00 Follies, on the air. All fell victim to bad previews and ratings, and to political bickering and discomfort in the networks and studios. Todd Gitlin quotes one network executive as saying, “I don’t think people want to hear about Vietnam. I think it was destined for failure simply because I don’t think it’s a funny war.” World War II, of course, wasn’t any funnier. The real difference is probably that Vietnam could not plausibly be portrayed either as heroic or as consensual, and commercially successful television fiction needs both heroes and a sense of “family” among the major characters.

An important change did take place in 1980, just as shows set in Vietnam were being rejected. Magnum, P.I. premiered that year, beginning a trend toward portrayals of Vietnam veterans as central characters in television fiction. Before 1980 vets normally appeared in minor roles, often portrayed as unstable and socially marginal. With Magnum, P.I. and later The A-Team, Riptide, Airwolf and others, the veteran emerged as a hero, and in this sense the war experience, stripped of the contentious backdrop of the war itself, became suitable for television. These characters drew their strength from their Vietnam experience, including a preserved war-time camaraderie which enabled them to act as a team. They also tended to stand apart from dominant social institutions, reflecting the loss of confidence in these institutions produced by Vietnam, without requiring extensive discussion of the politics of the war.

Not until Tour of Duty in 1987 and China Beach in 1988 did series set in Vietnam find a place on the schedule. Both were moderate ratings successes; they stand as the only major Vietnam series to date. The most distinguished, China Beach, often showed war from a perspective rarely seen in post-World War II popular culture: that of the women whose job it was to patch up shattered bodies and souls. It also included plenty of the more traditional elements of male war stories, and over the years it drifted away from the war, in the direction of the traditional concern of melodrama with personal relationships. But it does represent a significant Vietnam-inspired change in television’s representation of war.

VIOLENCE AND TELEVISION
Underlying concern for the level of violence in society has lead authorities in several countries to set up investigative bodies to examine the portrayal of violence on television. In 1969 the U.S. Surgeon General was given the task of exploring evidence of a link between television and subsequent aggression. The research that was a product of this inquiry attempted to find a "scientific" answer to the issue of whether television violence causes aggressive behavior, in much the way an earlier investigation had examined the link between cigarettes and lung cancer. The conclusions of the report were equivocal, and while some saw this as reflecting vested interests in the membership of the committee, research over the following 20 years has not silenced the debate. While in 1985 the American Psychological Association stated a belief that the overwhelming weight of evidence supports a causal relation, there is not unanimity even among American psychologists for this position. Not only the specific conclusions but the whole "scientific" framework of what has become known as effects research has been challenged. Reports by the British Broadcasting Standards Council and the Australian Broadcasting Tribunal investigation into TV Violence in Australia, in the late 1980s to early 1990s reflect a very different set of questions and perspectives.

The traditional question of whether viewing violence can make audiences more aggressive has been investigated by a variety of techniques. As social science, and psychology in particular, attempted to emulate the rigorous methods of the physical sciences, the question of television and violence was transferred to careful laboratory experiments. Inevitably the nature of the issue placed practical and ethical constraints on scientific inquiry. A range of studies found evidence that subjects exposed to violent filmed models were subsequently more aggressive (Bandura, 1973). Questions have been raised, however, as to what extent these findings can be generalised to natural viewing situations. What did participants understand about the task they were given? What did they think was expected of them? Can the measures of aggression used in such studies, such as hitting dolls or supposedly inflicting harm by pushing buttons be compared to violent behavior in real world settings? Are these effects too short term to be of practical concern?

One strategy to overcome some of these problems was to conduct studies in natural settings: preschools, reform
homes, etc. Children watched a diet of violent or non-violent television over a period of several weeks and the changes in their behavior were monitored. Such studies resemble more closely the context in which children normally watch television and measure the kinds of aggressive behavior that create concern. Results, however, have been varied and the practical difficulties of controlling natural environments over a period of time mean that critics have been quick to point to flaws in specific studies.

From time to time researchers have been able to capitalize on naturally occurring changes, gathering data over the period when television is first introduced to a community. A Canadian study compared children in two communities already receiving television to those in a community where television was introduced during the course of the study. Increases in children's aggressive behavior over time were found to accompany the introduction of television. A similar conclusion was drawn from a major study into the effects of the introduction of television in South Africa.

An alternative to manipulating or monitoring group changes in exposure to violence, is simply to measure the amount of television violence children view and relate it to their level of aggressive behavior. While many studies have found a clear association between higher levels of violent viewing and more aggressive behavior, proving that television caused the aggression is a more complex issue. It is quite possible that aggressive children choose to watch more violent programs or that features of their home, socioeconomic or school background explain both their viewing habits and their aggression. Attempts to test these alternative models have involved complex statistical techniques, and perhaps most powerfully, studies of children over extended periods of time, in some cases over many years. Studies by Huesmann and his colleagues have followed children in a variety of different countries. They argue that the results of their research demonstrate that the extent of viewing TV in young children is an independent source of later aggression. They also suggest that aggressive children chose to watch more violent programs which in turn stimulates further aggression. The research group gathered data from a range of countries which indicates that the relationship can be found even in countries where screen violence is much lower than the United States. A comparison of Finland with the United States found, however, no relationship between violent viewing and aggressive behavior in Finnish girls. This suggests that the impact of television has to be understood in a cultural context and involves social expectations about appropriate gender roles.

An alternative technique to the longitudinal study was used by Belson in London. He selected, from a large sample of adolescent boys, two small groups that differed in the extent to which they viewed violent television but were very carefully matched on socioeconomic and other variables. Belson concluded from his comparison that greater viewing, particularly of realistic violent drama, was associated with more aggressive behavior.

Critics of these attempts to relate viewing and aggression have questioned both the accuracy with which reports of television habits and preferences were gained, either from parents or by retrospective recall, and the measures used to demonstrate aggression. In reviewing debates on research findings, it becomes clear that any study can be flawed by those taking an opposing position. The majority of researchers who have used the techniques described here believe the evidence does indicate a causal link between violence on television and violent behavior and point to the mutual support provided by the variety of empirical techniques employed.

Even among researchers who are convinced of a causal link between television and violence, explanations of when and why this occurs are varied. One of the simplest ideas is that children imitate the violence they see on television. Items associated with violence through television viewing can serve as cues to trigger aggressive behavior in natural settings. The marketing of toys linked to violent programs taps into these processes. Children are more likely to reenact the violence they have seen on television when they have available products which they have seen being used in violent scenarios. The challenge for social learning theorists has been to identify under what conditions modelling occurs. Does it depend on viewers’ emotional state, for instance a high level of frustration, or on a permissive social environment? Is it important whether the violence is seen to be socially rewarded or punished? It has also been claimed that high levels of exposure to violent programs desensitise children making them more tolerant of and less distressed by violence. Thus children who had been watching a violent program were less willing to intervene and less physiologically aroused when younger children whom they had been asked to monitor via a television screen were seen fighting, than those children who had watched a non-violent program. Alternatively, high arousal itself has been suggested as an instigator of violence.

The significance of such an explanation is that it does not focus on violence as such; other high action, faster cutting programs may stimulate aggression. It is evident that once focus shifts from proving causation to identifying processes, the characteristics of particular violent programs become important because programs vary in many ways besides being classifiable as violent or non-violent.

The traditional violence effects approach has been criticised as employing a hypodermic model, where the link between television violence and viewer aggression was seen as automatic. Such an approach not only ignored the complexity of television programs, but how responses to television are mediated by characteristics of viewers, their thoughts and values. As psychology has become more concerned with human thinking, there has been greater interest in how viewers, particularly children, interpret the television they watch. Research has shown that children's judgements of violent actions relate to their understanding of the plot. This in turn may be influenced by issues like plot complexity, the presence and placement of commercial breaks, the age of the child, etc. Rather than seeing violence as a behav-
Behavior pattern that children internalise and reproduce on cue, children are seen to develop schematic understanding of violence. The values they attach to such behavior may depend on more complex issues, such as the extent to which they identify with a violent character, the apparent justifiability of their actions, and the rewards or punishments perceived for acting aggressively.

It has often been feared that children are particularly vulnerable to violence on television because their immature cognitive development does not enable them to discriminate between real and fictional violence. In a detailed study of children's responses to television and cartoons in particular, Hodge and Tripp (1986) found that children could make what they termed "modality judgements" as young as six years old. They were well aware that the cartoon was not real. What developed at a later stage was an understanding of certain programs as realistic, building the links between television and life experience. Such research demonstrates a coming together of psychological and cultural approaches to television. Researchers interested in the structure of program meanings and in children's psychological processes can collaborate to increase our knowledge of how children actively interpret a violent cartoon.

Another dimension of the television violence debate has been a concern that frequent viewing of violence on television makes people unrealistically fearful of violence in their own environment. Gerbner's "enculturation" thesis appeared supported by evidence that heavier viewers of television believed the world to be more violent than those who watched television less. Alternative explanations have been offered for these findings both in terms of social class (heavy viewers may actually live in more dangerous areas), and personality variables. It has also been suggested that those fearful of violence may choose to watch violent programs such as crime dramas, where offenders are caught and punished. Again viewers are seen as actively responding to violence on television, rather than simply being conditioned by it. Gerbner presents a valuable description of the violent content on television: who are portrayed as attackers and who are the victims in our television world. Yet Greenberg has argued against a cumulative drip-drip-drip view of how television affects viewers' perceptions of the world. Instead he poses a "drench" hypothesis that single critical images can have powerful effects, presumably for good or ill.

Traditional television violence effects research employed simple objective criteria for determining the extent of violence in a program. A feature of this approach has been the development of objective definitions of violence that have enabled researchers to quantify the extent of violence on our screens (80% of prime-time American television contains at least one incident of physical violence). From this perspective cartoons are just as violent as news footage and a comic cartoon like Tom and Jerry is among the most violent on television. Such judgements do not accord with public perceptions and in recent years there has been an interest in discovering what the public consider violent. A carefully controlled study of audience perceptions of violence was conducted in Britain by Barrie Gunter. He found that viewers rated a similar action as more violent, if the program was closer to their life experience than if it was a cartoon, western or science fiction drama. He also found that ratings of violence were linked in complex ways to characteristics of the attacker, victim and setting and to the personality of the rater. This focus on what audiences found violent and disturbing and what they believed would disturb children has provided a rather different framework for considering issues of violence on television.

Research for the Australian investigation of violence on television, in contrast to the U.S. Surgeon General's report, was not concerned with establishing causal links but on finding how audience groups reacted to specific programs. The aim was to improve the quality of guidelines to programmers and the information provided for prospective audiences. The research concluded that the most important dimension for viewers in responding to violence was whether the subject matter was about real life. The interest in public perceptions of violence on television has stimulated new research techniques. British researchers have asked their subjects to take editing decisions as to what cuts are appropriate before material is put to air. Docherty has argued that certain material, both fiction and non-fiction can elicit strong emotional reactions which he has termed "deep play." People's cuts to a horror movie like Nightmare on Elm Street appeared largely a question of taste. In contrast a docudrama about football hooliganism provoked polarised and intense reactions. Some viewers felt the violent material was important and should not be cut, others reacted with great hostility to a portrayal of violence that challenged their sense of social order.

The issue of the appropriate level of televised violence arises not just with fictional violence but with the televising of news footage. Here the problem for reporters is a balance between reporting what is occurring in the world and making the violence they cover palatable for the living room. Reporters have put themselves at risk attempting to film savage violence in a way that can tell their story but not overwhelm the viewers. The violence of the Vietnam War played out nightly in American living rooms has been seen as a major factor in generating the anti-war movement. More recently, coverage of the Gulf War indicates how use of the media, especially television, has become part of wartime strategy. Research on the role of the media in the Gulf War suggests that viewers were often happy to be spared the details of the war as long as their side was winning. It is not perhaps surprising that despite concern expressed about the impact of such a violent crisis on impressionable children, the news image that evoked most anger and sadness in British children was on the plight of sea birds covered in oil.

The portrayal of the war, the sanitised images of high technology, the frequently employed analogy of the video game, the absence of blood and gore are also issues about violence and television. The fact that the political debates
about violence on television have focused so strongly on the potential harm to children may act to divert attention away from the way certain violence is censored in the interests of the state. An excessive focus on screen violence can deflect attention from the complex issues of state and interpersonal violence that exist in our world.

Until recently the potential of television to challenge viewers to think about issues of violence has been largely ignored. A study by Tulloch and Tulloch of children's responses to violence in a series of programs has found young people more disturbed by a narrative about a husband's violent assault on his wife than the objectively more serious violence of a Vietnam War series. Their research has demonstrated clearly that the meanings children attach to violence on television is a function of their age, gender and social class. Not only does this confirm other findings that relate the perception of violence to personal significance, it points to the potential educative effects of violence on television. Once the portrayal of violence is not seen as necessarily increasing violence, the ways programs can work towards the promotion of non-violence can be investigated.

—Marian Tulloch and John Tulloch

THE VOICE OF FIRESTONE
U.S. Music Program

One of network television's preeminent cultural offerings, The Voice of Firestone was broadcast live for approximately twelve seasons between 1949 and 1963. With its forty-six piece orchestra under the direction of Howard Barlow, this prestigious award winning series offered viewers weekly classical and semi-classical concerts featuring celebrated vocalists and musicians. This series is also highly representative of the debate that still rages over the importance of ratings and mass-audience appeals as opposed to cultural-intellectual appeals targeted to comparatively small audiences in the development of network television schedules.

Sponsored throughout its history by the Firestone Tire and Rubber Company, The Voice of Firestone began as a radio offering in December 1928, and transferred to television as an NBC simulcast on 5 September 1949. Long on musical value but often short on television production value, the show was faulted occasionally for its somewhat stilted visual style, its pretentious nature and its garish costume choices.

In time, however, the series drew critical praise and a consistent audience of two to three million people per broadcast. Notwithstanding its "small" viewership, the Firestone series vigorously maintained its classical/semi-classical format adding only an occasional popular music broadcast with stars from Broadway, night clubs and the recording industry and an occasional theme show developed around various topics of interest, e.g., 4-H clubs, highway safety and the United Nations. The program attracted the great performers of the day for nominal fees with Rise Stevens setting the record for program appearances at forty-seven. In his Los Angeles Times feature of 1 November 1992, Walter Price observed that the Metropolitan Opera star "had the face, figure and uncanny sense of the camera to tower above the others in effect."

In 1954, The Voice of Firestone's audience size became a major issue. Citing low ratings and the negative effect of those ratings on other programs scheduled around it, NBC demanded a time change. Historically, the show had been broad-
cast in a Monday, 8:30–9:00 P.M., prime-time period. As an alternative, NBC officials suggested leaving the Monday evening radio program in its established time but moving the television version to Sunday at 5:30 P.M. or to an earlier or later slot on Monday. Firestone officials, considering the millions their company had spent for air time and talent fees over the previous twenty-six years, refused to budge.

Determined to lure viewers away from Arthur Godfrey's Talent Scouts, CBS' highly rated competition for the time period, NBC exercised control of its schedule and canceled both the radio and television versions of The Voice of Firestone effective 7 June 1954. The following week, the simulcast reappeared on ABC in its traditional day and time where it remained until June 1957. In that month, the radio portion was dropped but, after a summer hiatus, the television show returned on Monday evenings at 9:00 P.M. In June 1959, despite more popular music in its format, poor ratings again forced the show's cancellation in favor of the short-lived detective series Bourbon Street Beat.

Amid numerous critical outbursts, threats of Federal Communications Commission (FCC) action and a joint resolution by the National Education Association and National Congress of Parents and Teachers lamenting its cancellation, all three networks offered Voice of Firestone fringe time slots which the Firestone Company rejected. ABC officials indicated that the series was simply the victim of the greater attention paid to television ratings. In radio, critics pointed out, audience delivery to program adjacencies was never considered as important as it was in television and concert music programs in prime time were regarded as too weak to hold ratings through the evening schedule. Condemning the loss of the Firestone program, Norman Cousins wrote in his 9 May 1959, Saturday Review editorial, that stations were now pursuing a policy designed to eliminate high quality programs "even if sponsors are willing to pay for them." Cousins decried the fact that station managers measured program weakness through ratings, and a "weak spot" in the evening programming... must not be allowed to affect the big winners.

The Voice of Firestone was brought back to ABC on Sunday evenings, 10:00–10:30 P.M., in September 1962. However, despite numerous commendations, positive critical reviews and a star-studded rotation of musical conductors and performers, the audience remained at two and a half million people. The Voice of Firestone left the air for its third and final time in June 1963. With its passing, the American public lost an alternative form of entertainment whose long heritage was one of quality, good taste and integrity.

VOICE-OVER

Voice-over (VO or V/O) is the speaking of a person or presenter (announcer, reporter, anchor, commentator, etc.) who is not seen on the screen while her or his voice is heard. Occasionally, a narrator may be seen in a shot but not be speaking the words heard in the voice-over.

Voice-over has diverse uses in a variety of television genres. Like other forms of television talk, it aims at being informal, simple and conversational. However, except for on-the-spot reporting such as sports events, voice-over is often less spontaneous than the language of talk shows; it is heavily scripted especially in genres such as the documentary. Voice-over is not simply descriptive; it also contextualizes, analyses and interprets images and events. Commentaries have the power to reverse the significance of a particular visual content. Voice-over is, therefore, an active intervention or mediation in the process of generating and transmitting meaning. However, viewers are rarely aware or critical of the scope of mediation in part because the visual image itself confers credibility and authenticity on the voice-over. But voice is at times more credible than vision; it is an integral part of a person’s identity. This was experienced in the 1988 British government ban on broadcast interviews with representatives of eleven Irish organizations, including Sinn Fein, the political wing of the Irish Republican Army. Broadcasters were allowed, however, to voice-over or caption a banned representative’s words.

Voice-over is used as a form of language transfer or translation. Viewers of news programs are familiar with the use of voice-over translation of statements or responses of interviewees who do not speak in the language of the viewing audience. Inherited from radio, this form of language transfer allows the first and last few words in the original language to be heard, and then fades them down for revoicing a full translation. The voice-over should be synchronous with the speaker’s talk, except when a still picture is used to replace footage or live broadcast. Usually gender parity between the original and revoiced speakers is maintained.

As a form of language transfer, voice-over is not limited to the translation of brief monologues; sometimes it is used to cover whole programs such as parliamentary debates, conferences or discussions. Its production is usually less expensive than dubbing and subtitling. Some countries, such as Poland and the Balkan states, use voice-over as the main method of revoicing imported television programs. Usually, the revoicing is done without much performance or acting, even when it involves drama genres.

WAGON TRAIN

U.S. Western

Wagon Train, a fusion of the popular Western genre and the weekly star vehicle, premiered on Wednesday nights, 7:30-8:30 P.M. in September 1957 on NBC. The show took its initial inspiration from John Ford’s 1950 film, The Wagonmaster. NBC and Revue productions, an MCA unit for producing telefilms, conceived of the program as a unique entry into the growing stable of Western genre telefilm, combining quality writing and direction with weekly guest stars known for their work in other media, primarily motion pictures. Each week, a star such as Ernest Borgnine (who appeared in the first episode, “The Willie Moran Story”), Shelly Winters, Lou Costello, or Jane Wyman would appear along with series regulars Ward Bond and Robert Horton. The show, filmed on location in California’s San Fernando Valley, had an impressive budget of one hundred thousand dollars per episode, at a time when competing hour-long Westerns, such as ABC’s Sugarfoot, cost approximately seventy thousand dollars per episode.

Star presence enticed viewers; powerful writing and directing made the show a success. Writers with experience in other Westerns, such as Gunsmoke and Tales of Wells Fargo, developed scripts that eventually became episodes, Western novelist Borden Chase and future director Sam Peckinpah among them. Directors familiar with the Western telefilm contributed experience, as did personnel who had been involved with GE Theatre, a program influential in the conception of Wagon Train’s use of stars. Promotional materials suggested that motion picture directors John Ford, Leo McCarey, and Frank Capra had expressed interest in directing future episodes; whether wishful thinking or real possibility, Wagon Train’s producers envisioned their Westerns as television on a par with motion pictures.

Each episode revolved around characters and personalities who were traveling to California by wagon train caravan from St. Joseph, Missouri. Series regulars conducted the train through perils and adventures associated with the landscapes and inhabitants of the American West. The star vehicle format worked in tandem with the episodic nature of series television, giving audiences a glimpse into the concerns of different pioneers and adventurers from week to week. Returning cast members gave the show stability; audiences expected complaints and comedy from Charlie Wooster, the train’s cook; clashes of experience with exuberance in the relationship between the wagonmaster and his dashing frontier scouts. The recurring cast’s interrelationships, problems, and camaraderie contributed greatly to the sense of “family” that bound disparate elements of the series together.

Wagon Train lasted eight seasons, moving from NBC to ABC in September of 1962. In 1963, its format expanded to 90 minutes, but returned to hour length for its final run from 1964-65. It survived several cast changes: Ward Bond (Major Adams), the original wagonmaster, died during filming in 1960, and was replaced by John McIntyre (Chris Hale); Robert Horton (Flint McCullogh) left the series in 1962 and was replaced as frontier scout by Robert Fuller (Cooper Smith). Only two characters survived the eight-year run in their original positions: Frank McGrath, as comical
cook Charlie Wooster, and Terry Wilson's assistant wagonmaster Bill Hawks.

The show's ability to survive a network switch and periodic cast changes during its eight-year run attests to the popularity of the program. In the fall of 1959, two years after its inception, the show was number one in Great Britain; of seven Westerns in the Nielsen top ten in the United States, Wagon Train was in constant competition with Gunsmoke for supremacy. By 1959, the show was firmly ensconced in the top twenty five programs in the country, bouncing as high as number one in the spring of 1960, and maintaining its number one position over Gunsmoke throughout the 1961-62 season. In a field awash with Westerns, Wagon Train established a unique style reminiscent of the anthology drama, but indelibly entrenched in Western traditions.

WALES

As a small but culturally and linguistically distinct nation within the United Kingdom, Wales offers an enlightening case study of the role of television in constructing cultural identity. Broadcasting in Wales has played a crucial role in ensuring the survival of the Welsh language, one of the oldest languages spoken on a daily basis in Europe. Coupled with recent educational policies, which include Welsh-language instruction as either a core or secondary subject in all Welsh schools, and European-wide recognition of the cultural and linguistic rights of indigenous speakers, the nation has seen a slight increase in the percentage of Welsh-speakers. Welsh television is currently comprised of BBC-1 Wales and BBC-2 Wales, the independent television (ITV) commercial franchise holder, Harlech Television (HTV Wales), and Sianel Pedwar Gymru ([S4C] Channel Four Wales), the Welsh equivalent of Britain's commercial Channel Four. BBC-1 Wales, BBC-2 Wales, and HTV Wales broadcast entirely in English, whereas S4C’s schedules contain a mix of locally-produced Welsh-language and English-language Channel 4 United Kingdom programs. Welsh-language television is the progeny of battles over the national and cultural rights of a linguistic minority who, from the outset of television in Britain, lobbied hard for Welsh-language programming. Of the 2.7 million population of Wales, 20% speak Welsh, and since 1 November 1982, the bilingual minority have been able to view Welsh-language programs on S4C during the lunch and prime-time periods, seven days a week.

From the outset of television in Wales, the mountainous topography of the country presented broadcasters with transmission problems; despite the construction of new and more powerful transmitters, there were gaps in service as late as the 1980s. At the time of the opening of the first transmitter in Wales, 36,236 households had a combined radio and television license; a number that more than doubled to 82,324 by September 1953, in anticipation of the televising of the coronation of Queen Elizabeth II. By 1959, 50% of Welsh households had a television set (450,720 licenses); 70% of these viewers received their broadcasts from the Welsh transmitter (Wenvoe), which also reached an identical viewing base in South-west England. However, 10% of the Welsh population could still
not receive television, and 20% received their programs from transmitters located in England.

A key player in early Welsh-language television was Alun Oldfield-Davies (senior regional BBC controller from 1957 to 1967), who persuaded the BBC in 1952 to allow Welsh-language programs to be occasionally transmitted from the Welsh transmitter outside network hours. Oldfield-Davies went on to become an inveterate campaigner for Welsh-language television, and stepped up his lobbying with the introduction of commercial television in Wales in 1956. The first television program broadcast entirely in Welsh was transmitted on St. David’s Day (Wales’ patron saint day) on 1 March 1953, and featured a religious service from Cardiff’s Tabernacle Baptist Chapel. The first Welsh-language feature program was a portrait of the Welsh bibliophile Bob Owen; despite replacing only the test card, the program antagonized English viewers, who complained about the incomprehensible language. This reaction was to intensify in later years, when English programs were substituted by Welsh-language productions.

The Broadcast Council for Wales (BCW) was established as an advisory body in 1955, although its presence had little impact on the tardy appearance of full production facilities in Cardiff, the last regional center in the United Kingdom to be adequately equipped for production in 1959. (The BBC expanded the Broadway Methodist Chapel in Cardiff, a site that had functioned as a drive-in studio since 1954). The first program filmed before a live audience in Wales took place in 1953, while the first televised rugby match and Welsh-language play, Cap Wil Tomos (Wil Tomos’ Cap) were both transmitted in January 1955. (The first televised English-language play produced in Wales, Wind of Heaven, was broadcast in June 1956). However, despite these important breakthroughs in Welsh television, the number of programs locally produced for both bilingual and English-speaking audiences remained small; for example, in 1954, only two hours and 40 minutes of English programming and one hour and 25 minutes of Welsh-language programming were broadcast each week. The first regular Welsh-language program, Cefndir (Background), aired in February 1957; introduced by Wyn Roberts, the show adopted a magazine format featuring topical items.

The BBC’s monopoly in British broadcasting was broken with the launch of ITV, which could first be received by the inhabitants of North-east Wales (and many in North-west Wales) in 1956, following the launch of Granada television in Manchester. South Wales did not receive ITV until Television Wales West (TWW) was awarded a franchise in 1958, and opened a transmitter in the South which also served the South-west of England. More than a little complacent that the commercial imperatives of ITV would preclude Welsh-language ITV broadcasts, the BBC was stunned when the ITV Granada studios in Manchester launched a series of twice-weekly 60-minute Welsh-language programs, greatly overshadowing the BBC’s weekly provision of half an hour. As a result, the political stakes involved in addressing the interests of Welsh-language viewers were raised, although both the BBC and ITV recognized the low ratings generated by such programs, given the minority status of Welsh-language speakers. Gwynfor Evans, who went on to play a pivotal role in the emergence of S4C in the early 1980s, joined the BCW in 1957, and along with Plaid Cymru (the Welsh Nationalist Party), vigorously lobbied for an increase in Welsh-language broadcasting. The issue of Welsh-language programming for children also assumed a greater urgency in the late 1950s. The broadcasting demands of the campaigners were given institutional recognition in 1960 with the publication of the findings of the Pilkington Committee—the first broadcasting inquiry mainly concerned with television—which argued that “the language and culture of Wales would suffer irreparable harm” if Welsh-language production were not increased.

A second ITV franchise, Television Wales West and North (TWWN, known in Wales as Teledu Cymru [Welsh Television]), began broadcasting in Wales in September 1962. Initially transmitting 11 hours of Welsh-language and Welsh-interest programming a week, TWWN obtained half of its programs from TWW. However, TWWN’s future as a broadcaster was short-lived; facing bankruptcy, it was taken over by TWW in September 1963. At this time, the BBC and ITV reached an agreement over the scheduling of Welsh-language programs, requiring that each broadcaster’s schedules be exchanged so as to avoid a clash of Welsh-language programs (leaving non-Welsh-speakers no alternative broadcast during this time slot). By and large, the policy worked, although some overlapping did occur.

In 1963, the BBC in Wales broadcast three hours of programming for Welsh viewers per week, and occasionally produced programs exclusively for the network. Heddiw (Today), a long-running Welsh-language weekday news bulletin, was broadcast outside network hours from 1:00 to 1:25 P.M., while its English-language equivalent, Wales Today, occupied an early evening slot between 6:10 and 6:25 P.M. TWW also had its own Welsh-language magazine program called Y Dydd (The Day).

BBC Wales was launched in February 1964 when it received its own wavelength for television broadcasting (Channel 13). Oldfield-Davies was central in orchestrating the move, and oversaw its implementation (television sets had to be converted in order to receive Channel 13). Up to this point, most Welsh-language programs had been transmitted during non-network hours; the introduction of BBC Wales meant that Wales would opt out of the national service for a prescribed number of hours per week—8.9 hours per week in 1964—in order to transmit locally-produced English- and Welsh-language programs. However, the arrival of BBC Wales meant that non-Welsh-speaking viewers whose aerials received BBC Wales from Welsh transmitters had no way of opting out of this system, unless they could also pick up the national BBC service by pointing their aerials towards English transmitters. The inclusion of a small number of Welsh-language programs on the television
schedules at this time thus incensed some English-speaking Welsh viewers, who claimed that they were more poorly served by the BBC than other English-speaking national minorities such as the Scots, and resented losing programs to Welsh-language productions. By the fall of 1984, 68% of Welsh people received programs from transmitters offering BBC Wales, a number that increased to 75% by June 1970. BBC-2, the first BBC service transmitted on UHF, was launched in South-east England in 1962, reaching South Wales and South-west England in 1965. By the early 1970s, it was available to 90% of Welsh television homes. The first color program produced by BBC Wales was transmitted on 9 July 1970 and consisted of coverage of the Llangollen Eisteddfod.

As pressure for more Welsh-language programs increased, TWW's franchise was successfully challenged in 1968 by John Morgan and Lord Harlech. Commencing in March 1958, HTV pledged to address the "particular needs and wishes of Wales," and a ten-member committee was established to consider a range of topics affecting broadcasting in Wales. These issues were addressed more forcefully in a 1969 booklet published by Cymdeithas yr Iaith Gymraeg (the Welsh Language Society), entitled "Broadcasting in Wales: To Enrich or Destroy Our National Life?" Facing a wall of silence from BBC Wales following publication of the document, three members of the society embarked upon a campaign of civil disobedience, and in May 1970 interrupted a program broadcast from Bangor in North Wales. The following year a small group of men unlawfully gained entry into the Granada television studios in Manchester and caused limited damage to television equipment; television masts were also climbed, parliament was interrupted, and roads were blocked. In addition to these high-profile disturbances, hundreds of people were prosecuted for not paying their television license fees. In the fall of 1970, the society submitted a document to the Welsh Broadcasting Authority (WBA) which contained the first proposal for a fourth Welsh channel; an interim scheme proposed by the society suggested that the unallotted fourth UHF channel in Wales should transmit 25 hours of Welsh-language programming a week and should be jointly administered by a BBC Wales and HTV committee. Soon after, ITV made a formal submission requesting that the fourth channel be used as a second ITV service broadcasting all HTV's current Welsh-language programming and making HTV Wales an all-English channel. The battle for a Welsh fourth channel had begun in earnest.

Against a backdrop of ongoing campaigns by the Welsh Language Society in the early and mid-1970s, the Crawford Committee on Broadcast Coverage examined patterns of rural reception in Wales and explored the possibility of using the fourth channel for Welsh-language programming. Those in favor of retaining the current system of integration argued that a separate Welsh-language channel would ghettoize the language and culture (a view supported by the 1977 Annan Report commissioned by the Labor government); they also drew attention to the fact that English-speaking viewers would still be deprived of English programs broadcast on the U.K. fourth channel, and questioned whether there was a solid enough economic and cultural base in Wales to maintain a fourth channel. An average of 12 hours a week of Welsh- and English-language programs, seven and five hours respectively, were broadcast on BBC Wales between 1964 and 1974, with almost half the time taken up with news and current-affairs programs such as Heddiw (Today), Cywain (Gathering), Wales Today, and Week in Week out.

Welsh-language television up to this point had gained a reputation of being quite high-brow, often consisting of nonfiction programs examining major Welsh institutions and traditions. However, the enormous popularity of sport, especially the national game of rugby, always guaranteed representation and high ratings on the schedules; moreover, the 1974 launch of the hugely successful Welsh-language soap opera entitled Pobol y Cwm (People of the Valley) did even more to shift the balance toward popular programming. Pobol y Cwm's 20-minute episodes are currently broadcast five days a week; the continuing serial is the highest rated program on S4C, attracting an average viewer of 180,000. English subtitles are available on teletext on daily episodes, and the five episodes are repeated on Sunday afternoon with open subtitles.

Welsh-speaking comedic stars also made their mark in light entertainment during the 1970s; these included Ryan Davies, who enjoyed widespread fame with his partner Ronnie Williams in the 1971 show Ryan a Ronnie, and in the first Welsh sitcom Fo a Fe (Him and Him—derived from North and South Walean dialects for "him") written by Rhuddferch Jones. Stand-up comedian Max Boyce also became a household name with his own 1978 one-man series. Religious programming was still popular with audiences (as it had been in radio), and a BBC Sunday half-hour hymnsinging program entitled Dechrau Canu, Dechrau Canmol (Begin Singing, Begin Praising) drew large audiences (it has continued through the 1990s). Two successful English-language programs made for the BBC network in the mid-1970s included a seven-hour miniseries on the life of Welsh politician David Lloyd George (1977) and an animated children's cartoon entitled Ivor the Engine (1976). One of the most successful English-language dramas of the 1970s, a program regularly repeated on Welsh television, was Grand Slam (1975), which hilariously documented the exploits of a group of Welsh rugby fans traveling to Paris for an international match.

Meanwhile, political lobbying for a fourth Welsh language channel intensified as the Welsh Language Society organized walking tours, petitions, leaflet distribution, and the public burning of BBC television licenses. Published in November 1975, the government-sponsored Siberry Report recommended that the Welsh fourth channel should broadcast 25 hours a week of Welsh-language programs, with the BBC and HTV each responsible for three-and-a-half days a week. Welsh MP's also argued that the seven hours of programming on BBC
Wales opened up by the transfer of Welsh-language programs to a fourth channel should be filled with BBC Wales programs in English rather than BBC network material. In their 1979 general election manifestos, both Labor and Conservative parties pledged support for a fourth Welsh channel; however, facing resistance to the plan from the independent broadcasting authority (IBA) and HTV, Conservative Party Home Secretary William Whitelaw repudiated the Welsh fourth channel in a speech given at Cambridge University in September 1979. Welsh reaction was swift; at Plaid Cymru’s annual conference in October, a fund was established into which supporters opposed to Whitelaw’s decision could deposit their television license fee (2,000 protesters pledged support and a number received prison sentences the following spring). Noted political and academic figures in Wales also joined the campaign and were arrested for civil disobedience. It was, however, the intervention of Plaid Cymru MP Gwynfor Evans that had the most profound effect on public and political opinion. In May 1980, Evans announced that he would go on a hunger strike on 5 October and continue with the protest until the government restored their earlier promise of giving Wales a fourth Welsh-language channel. In the wake of public demonstrations during visits to Wales by Prime Minister Margaret Thatcher and Welsh Secretary Nicholas Edwards, Cledwyn Evans (Labor’s ex-Foreign Secretary) led a deputation to Whitelaw’s office in London demanding that the decision be reversed. The government finally backed down on 17 September, stating that a Welsh Fourth Channel Authority would be formed (provisions were incorporated into the 1980 Broadcasting Bill through a House of Lords amendment). The BBC would be responsible for providing ten hours per week and HTV and independent companies eight hours per week. S4C had finally arrived.

Funded by an annual budget from the Treasury which is based on a rate of 3.2% of the net advertising revenue of all terrestrial television in the United Kingdom, S4C is a commissioning broadcaster rather than a program producer with program announcements and promotions the only material produced in-house. By the mid-1990s, S4C was transmitting approximately 1,753 locally-produced hours of programming in Welsh, and 5,041 hours in English per annum; the English-language broadcasts were rescheduled U.K. C4’s output. These figures translate into roughly 30 hours of programming a week in Welsh and 93 hours in English. S4C reaches a target share of approximately 20% of Welsh-speaking viewers, although its remit also includes targeting both Welsh-learning and English-speakers through the use of teletext services that enable participating viewers to call-up English subtitles for most Welsh programs. Some 75% of all local advertisers produce campaigns in both Welsh and English on S4C, while a number of multinational companies, such as McDonald’s and Volvo, have also advertised in Welsh.

Of the 30 hours of Welsh-language programming shown on S4C each week, ten hours come from BBC Wales; the remaining 20 come from HTV Wales and independent producers. BBC Wales also produces ten hours of English-language programming for viewers living in Wales which is broadcast on BBC-1 and BBC-2. The BBC’s Royal Charter changes the BBC to provide services reflecting “the cultures, tastes, interests, and languages of that country,” and via the BCW, the service is regularly reviewed to ensure that programs meet the requirements set down in the Royal Charter. HTV Wales produced 588 hours of English-language programs for Wales during 1995, a figure that amounted to approximately 25 hours per week.

Since 1 January 1993, S4C has been responsible for selling its own advertising (previously overseen by HTV); this has meant that revenues can now be ploughed directly back into program production. S4C provides a wide range of program genres, including news and current affairs, drama, games, and quizzes, and youth and children’s programming. The main S4C news service, Newyddion (News), is provided by BBC Wales; S4C also has two investigative news shows, Taro Naw (Strike Now) and Yr Byd ar Bedwar (The World on Four), as well as documentaries exploring the diverse lives of Welsh men and women: Hei Straeon (Gather Stories), Cebo Gwlad (Countryside), and Filltir Sgwâr (Square Mile). Recent comedy series have included Nasa Llanw (Folk Evening of Entertainment), Licris Olorts (Loricote Alborots), and the satirical show Peifyd X (X-Ray). Series examining contemporary issues through the lens of popular drama have ranged from Hafren, a hospital drama; Halen yn y Gwaled (Salt in the Blood), which followed the lives of a ferry crew sailing between Wales and Ireland; A55, a hard-hitting series about juvenile crime; and Pris y Farachnad (Market Price), which examined the lives of a family of auctioneers. Children and teenage viewers are catered to via Sali Mali, Round a Round (Round and Round), which looks at the exploits of a paper round, and Rap, a magazine program for Welsh-learners.

Non-Welsh-speaking viewers receive their local news from BBC Wales’ Wales Today and HTV Wales’ Wales This Week. Other recent nonfiction programs have included Grass Roots, The Really Helpful Show, The Once and Future Valleys, and The Infirmary, from HTV Wales, and Between Ourselves, All Our Lives, and Homeland, produced by BBC Wales.

Thanks to S4C, Wales now has a thriving independent production sector centered in Cardiff (where 46% of the Welsh media industry is located) and Caernarfon. Welsh television’s success in the field of children’s animation has continued, with Wil Cwac Cwac and SuperTed making their first appearance in 1982 (both have appeared on the Disney Channel in the United States), followed by Fireman Sam and Toucan Tots. By the early 1990s, Cardiff boasted five animation houses, 45 independent production companies, and a pool of approximately 150 professional animators. Animation co-productions from the mid-1990s have included Shakespeare: The Animated Tales, Opera vox: The Animated Operas, Testament: The Bible in Animation, The Little Engine That Could, and The Legend of Lochmagar. Over 90 of S4C’s programs have been exported to almost 100 countries world-
wide, and co-productions have been negotiated with production companies in France, Italy, Germany, Australia, and the United States.

Finally, it is important to point out that the political advocacy which secured the rights of Welsh-speakers within a broadcasting system for Wales ultimately benefited both Welsh- and English-speakers, since the language campaign fostered the production of more English-language programs for Wales as a whole. The current system of Welsh broadcasting would certainly never have existed had it not been doggedly pursued by Welsh-language activists. Recent audience research into the penetration levels of S4C indicate that in the mid-1990s, between 80 and 85% of Welsh-speakers watch S4C at some point each week, and between 65 and 70% of all viewers (English- and Welsh-speaking) tune in to S4C some time each week. The S4C model in Wales has been emulated by several other European linguistic minorities, including the Basque channel Euskal Telebista 1 in Spain (launched in 1982), and a Catalan channel which started in 1983.

WALLACE, MIKE
U.S. Broadcast Journalist

Although he spent many years in broadcasting before turning to journalism, Mike Wallace became one of America's most enduring and prominent television news personalities. Primarily known for his work on the long-running CBS magazine series 60 Minutes, he developed a reputation as an inquisitorial interviewer, authoritative documentary narrator, and powerful investigative reporter. While his journalistic credentials and tactics have been questioned at times, his longevity, celebrity, and ability to land big interviews have made him one of the most important news figures in the history of television.

Wallace's early career differed from those of his well-known peers at CBS News. Edward R. Murrow, Walter Cronkite, Eric Sevareid, Andy Rooney, and others worked as wartime radio and print correspondents before moving to television. Wallace, however, studied broadcasting at the University of Michigan and began an acting and announcing career in 1939. Throughout the 1940s, he performed in a variety of radio genres—quiz shows, talk shows, serials, commercials, and news readings. After service in the Navy, the baritone-voiced radio raconteur landed a string of early television jobs in Chicago. As early as 1949, "Myron" Wallace acted in the police drama Stand by for Crime and later appeared on the CBS anthology programs, Suspense and Studio One. He emceed local and network TV quiz and panel shows while also working in radio news for CBS throughout 1951–55. Wallace's move into interviewing at the network level came in the form of two husband-and-wife talk shows, All Around the Town and Mike and Buff, which CBS adapted from a successful Chicago radio program. With his wife Buff Cobb, Wallace visited various New York locations and conducted live interviews with celebrities and passers-by. In 1954, after a three-season run on CBS, Wallace had a brief stint as a Broadway actor, but immediately returned to broadcasting.

In 1955, Wallace began anchoring nightly newscasts for the DuMont network's New York affiliate. The following

See also First People's Broadcasting in Canada; Language and Television
year his producer, Ted Yates, created the vehicle that brought Wallace to prominence. *Night-Beat* was a live, late-night hour of interviews in which Wallace grilled a pair of celebrity guests every week night. Armed with solid research and provocative questions, the seasoned announcer with a flair for the dramatic turned into a hard-hitting investigative journalist and probing personality reporter. With the nervy Wallace as its anchor, *Night-Beat* developed a hard edge lacking in most television talk. Using only a black backdrop and smoke from his cigarette for atmosphere, Wallace asked pointed, even mischievous questions that made guests squirm. Most were framed in tight close-up, revealing the sweat elicited by Wallace’s barbs and the show’s harsh klieg lights.

After a successful first season during which Wallace interviewed such celebrities as Norman Mailer, Salvador Dalí, Thurgood Marshall, Hugh Hefner, William Buckley, and prominent politicians, the program moved to ABC as a half-hour prime-time show called *The Mike Wallace Interview*. Promoted as “Mike Malice” and “the Terrible Torquemada of the TV Inquisition,” Wallace continued to talk to prominent personalities about controversial issues. But ABC executives, particularly after brushes with libel suits, proved wary of the brinkmanship practiced by Wallace and his guests. The show lasted only through 1958, turning more cerebral in its final weeks when the Ford Foundation became its sponsor. Intellectuals such as Reinhold Neibuhr, Aldous Huxley, and William O. Douglas replaced the Klansmen, ex-mobsters, movie stars, and more sensational interviewees seen before.

For the next five years, Wallace continued to parlay his celebrity into odd jobs on New York and network TV as quiz master, pitch man for cigarettes, chat show host (*PM East*, 1961–62), and news reader. But he began to sharpen his focus on mainstream journalism as well. He anchored *Newsbeat* (1959–61), one of the first half-hour nightly news programs, for an independent New York station, and also began working as host for David L. Wolper’s TV documentary series *Biography*, narrating 65 episodes of the syndicated program. (His distinctive voice continues to be heard in many such educational productions, including the 1995 A and E cable series *The 20th Century.*) Increasingly he became a field correspondent. After a chain of Westinghouse-owned stations hired Wallace to cover the 1960 political conventions, he started traveling extensively, supplying them with daily radio and TV reports from across the country (*Closeup U.S.A.*, 1960) and abroad (*Around the World in 40 Days*, 1962).

The following year, as he described in this 1984 autobiography, Wallace decided to “go straight,” giving up higher-paying entertainment jobs for a career exclusively devoted to news. In 1963 (a year in which the networks expanded their news divisions), the CBS *Morning News with Mike Wallace* premiered. Wallace remained on the show for three years before resuming full-time reporter’s duties. Although seen frequently on other CBS News assignments (Vietnam, the Middle East), Wallace’s beat was the Richard Nixon comeback campaign. A confessed Nixon apologist, he nevertheless rejected an offer in 1968 to be a press secretary for the candidate.

Instead, that fall Wallace began regular duties for *60 Minutes*, a prime-time news magazine for which he and Harry Reasoner had done a pilot in February 1968. To contrast the mild-mannered Reasoner, producer Don Hewitt cast Wallace in his usual role as the abrasive, tough-guy reporter. While he could be charming when doing softer features and celebrity profiles, Wallace maintained his reputation as a bruising inquisitor who gave his subjects “Mike fright.” With his personal contacts in the Nixon (and later Reagan) circles, he proved an expert reporter on national politics, particularly during Watergate. Throughout his run on *60 Minutes*, he consistently landed timely and exclusive interviews with the most important newsmakers of the day.

As *60 Minutes* was becoming a mainstay of TV news, Wallace developed its most familiar modus operandi: the ambush interview. Often using hidden cameras and one-way mirrors, Wallace would confront scam artists and other wrong-doers caught in the act. Field producers did most of the investigative work, but Wallace added the theatrical panache as he performed his on-camera muckraking. His tactics were both praised and criticized. While he has won
numerous awards as a sort of national ombudsman, a reporter with the resources and ability to expose corruption, some critics have judged his methods too sensational, unfair, and even unethical.

Twice Wallace was entangled in landmark libel cases. His 60 Minutes report, “The Selling of Colonel Herbert” (1973), questioned a whistleblower’s veracity about war crimes. Herbert sued Wallace’s producer. Although the news team was exonerated, the Supreme Court ruled in Herbert v. Lando (1979) that the plaintiff had the right to examine the materials produced during the editorial process. A far bigger case followed when Wallace interviewed General William Westmoreland for the CBS Reports documentary The Uncounted Enemy: A Vietnam Deception (1982). When TV Guide and CBS’ own in-house investigation charged that the producers had violated standards of fairness, Westmoreland sued the network. The charges Wallace aired—conspiracy to cover-up the size of Viet Cong troop strength—were substantiated by trial evidence, but CBS’ editorial tactics proved suspect. Early in 1985, just before Wallace was to testify, CBS issued an apology and Westmoreland dropped the suit.

Despite such occasional setbacks, Wallace continued his signature style of globetrotting reports and “make-em-sweat” interviews throughout the 1980s and 1990s. A CBS News special, Mike Wallace, Then and Now (1990), offered a retrospective of his 50 years in broadcasting, but the senior correspondent of American television journalism continued his 60 Minutes work unabated.

WALSH, MARY

Canadian Performer

Mary Walsh can be credited with single-handedly bringing Newfoundland culture to the rest of Canada through the medium of television. As the creator and co-star of This Hour Has 22 Minutes, Walsh has won three Gemini Awards, Canada’s television honours. The biting satirical show has become a favourite, skewering politics in general, Toronto in particular, and anything else that strikes Walsh’s fancy. No topic is taboo. The show takes its title from the outrageously controversial newsmagazine show This Hour Has Seven Days, which ran on CBC from 1964 to 1966.

A Canadian precursor to Britain’s Tracey Ullman, the 43-year-old Walsh has introduced Canadian audiences over the years to a range of wacky Newfoundland archetypes, including the sharp-tongued, purple-housecoated know-it-all, Marg Delahunty, and the slovenly rooming-house owner, Mrs. Budgell. Her co-stars, fellow Newfoundlanders Cathy Jones, Greg Thomey, and Rick Mercer, all write their own characters as well.

Walsh’s off-the-wall but pointed humour results in part from her unusual upbringing in St. John’s, the capital of Newfoundland. One of eight siblings, at the age of eight months she contracted pneumonia and was dispatched next door to live with a still-beloved maiden aunt. She thus grew up away from her own troubled and hard-drinking family, feeling abandoned. She was also influenced by the strict rules of a convent education in the overwhelmingly Roman Catholic province of Newfoundland.

After taking acting classes at Ryerson Polytechnical Institute in Toronto and working a summer job at CBC radio in St. John’s, Walsh began acting at Théâtre Passe Muraille in Toronto. It was there that she met Cathy Jones, Dyan Olsen, Greg Malone, and Tommy Sexton; together they would become the comedy troupe CODCO, named after the fish which has, until recently, supported the Newfoundland culture and economy for hundreds of years. Their first production, Cod on a Stick (1973), was a play based on the experiences of Newfoundlanders in Toronto. It was a time of “Newfie jokes,” Canada’s equivalent of the racist “Polack jokes.” But CODCO turned the tables on Torontonians, forcing them to laugh at themselves.

After touring the play successfully throughout Newfoundland, CODCO stayed in their home province and continued to develop the wickedly satirical sketches and characters, which they soon parlayed into the CBC television series CODCO. The half-hour show lasted seven seasons, from 1987 to 1993, reaching a nationwide audience.

Politicians are a particular target of the left-wing Walsh’s wrathful humour: referring to Preston Manning, the conservative leader of the Reform Party, she put these words in the mouth of Marg Delahunty: “I’ve always enjoyed Mr. Manning’s speeches. And I’m sure they’re even more edifying in the original German.” About a right-wing media figure, she has this to say: “That’s typical of those people: they want everything—all the power and the money, and the right to call themselves victims too.” Of the ongoing one-way rivalry between Newfoundland and Toronto, she has said: “I forgive Toronto and all the people in it. Toronto was the first large city I ever went to and I thought every large city was like that—cold and icy, like being in Eaton’s [department store] all the time. But then I realized...it’s very much a part of being specifically Toronto. It is just its outward style.” She also jabs at the United States, describing her short stay in Colorado after high school and her exasperation at some Americans’ misguided belief that they defeated Canada in the War of 1812.

Walsh, who is actively involved in social issues through her work in the theatre, won the Best Supporting Actress Award at the Atlantic Film Festival in 1992 for her performance in Secret Nation, and has guest-starred on the children’s show The Adventures of Dudley the Dragon. She

See also Anchor; 60 Minutes; Talk Shows; Uncounted Enemy
also starred as Molly Bloom at Ottawa’s National Arts Centre, as well as in Eugene O’Neill’s A Moon for the Misbegotten, in London, Ontario. In 1992 she directed Ann-Marie MacDonald’s Goodnight Desdemona, Good Morning Juliet at Montreal’s Centaur Theatre.

WALT DISNEY PROGRAMS (VARIOUS TITLES)

U.S. Cartoons/Films/Children’s Programming

Walt Disney was not only one of the most important producers in motion picture history, but one of the most important producers in American television history as well. He pioneered a relationship between the motion picture industry and the fledgling television industry, helped ensure the success of a third television network, promoted the transition from live broadcasts to film, and championed the conversion to color television in the mid-1960s.

Although Disney was quoted in the 1930s as having no interest in television, that opinion had changed drastically by the early 1950s, when television burst onto the American social scene. On Christmas Day in 1950 for NBC and again in 1951 for CBS, Disney produced hour-long specials that employed a number of clips from various Disney films and short subjects. Both specials achieved excellent ratings, and soon all three networks were wooing Disney to create an entire series for them.

Disney’s interest in television was stimulated by his attempts to construct the Disneyland theme park in Anaheim, California. Encountering difficulty in financing the project, Walt offered network executives a television series in return for a substantial investment in the park. ABC, trailing substantially behind NBC and CBS, had just merged with United Paramount Theatres in 1953, and used this new influx of cash to fulfill Disney’s request. The resultant anthology series, appropriately named Disneyland, premiered in late 1954, quickly becoming the first ABC program to crack the Nielsen Top 20.

Disney’s relationship with ABC contradicted the strategy espoused by the rest of the film industry. During this period Hollywood studios viewed television as a competitor to motion pictures, and attempted to crush the medium. Walt, on the other hand, quickly saw TV’s potential as a promotional tool. The first two specials combined old foot-

age with promotions for upcoming theatrical releases such as Alice in Wonderland (1951). Disney’s first Emmy would be awarded for an hour-long Disneyland episode about the filming of 20,000 Leagues Under the Sea (1954) titled “Op-

eration Undersea,” but humorously known within the industry as “The Long, Long Trailer.” The series also worked to advertise the park, with individual episodes devoted specifically to its construction.

Soon, other studios were attempting to duplicate Disney’s success. Series such as The MGM Parade and Warner Brothers Presents quickly appeared promoting their latest releases. They disappeared almost as quickly, mainly because Disney and his studio had constructed a unique image for themselves as producers of family entertainment. With a backlog of animated features and shorts, Disney came to television already known for entertaining children around the world (knowing the value of this backlog, Disney held onto the television rights to all of his films, at a time when all of the other studios were raising revenue by selling off the permanent television rights to their entire pre-1948 film catalog). From years of marketing towards children, Disney understood how children could influence their parents to buy products. After Disneyland’s “Davy Crockett” episodes created a merchandising phenomenon, The Mickey Mouse Club, a daily afternoon series, was introduced. One of the first attempts by television programming to target children, advertisers now conceived of children as a marketable group and initiated a tradition of weekday afternoon programming oriented toward younger audiences.

The studio’s background in film production led to the decision to film the episodes, allowing for higher production values, rather than performing them live. The high-quality look of the series (and the subsequent involvement of other film studios in television production) helped shift television programming from live broadcasts to filmed entertainment. Long before color television technology became regulated and promoted, Disneyland episodes were filmed in color. Disney would promote the conversion to color when the anthology series, renamed Walt Disney’s Wonderful World of Color, moved in 1961 to NBC, which was beginning color broadcasts.

Disney’s importance to television as a producer of programming is incalculable. His success had an enormous effect on decisions by motion picture studios to enter into television production, thus guaranteeing programming for the fledgling medium. Yet, Disney is also important as a television icon as well. Working as host for the anthology series until the end of his life in 1966, Walt Disney quickly became identified by most children as “Uncle Walt.” With an easy-going manner and a warm smile, Walt spoke to viewers in a Midwestern twang, enthusiastically demonstrating how certain special effects were created for his films, explaining the latest advances in space technology, or narrating a beloved fairy tale accompanied by scenes from his animated features. Usually filmed in a set that looked like his studio office, Walt gave the impression that he would drop all business to spend some time with his audience or engage in banter with cartoon characters Mickey Mouse and Donald Duck (who “magically” interacted with Walt as if they actually existed in the same space with him). More than in any other way, Walt’s presence and persona helped represent his company as promoters of American family values, and television itself as a “family medium.” Even after his death, the company’s television productions and subsequent cable channel reinforce that image of wholesome family entertainment.

WALTERS, BARBARA
U.S. Broadcast Journalist

Although Barbara Walters would later downplay her relationship with the feminist movement, her early career is marked by a number of moves that were in part responsible for breaking down the all-male facade of U.S. network news. A Today show regular for 15 years, including two years as the first official female co-host, she was originally visible presence in the program’s “feature” segments, and then went on to cover “hard news”—including President Richard Nixon’s historic visit to the People’s Republic of China in 1972, when she was part of the NBC News team. Her most controversial breakthrough involved her decision in 1976 to leave Today to co-anchor the ABC Evening News with Harry Reasoner, the first time a woman was allowed the privileged position of network evening anchor, for a record-breaking seven-figure salary. Public reaction to both her salary and approach to the news, which critics claimed led to the creeping “infotainment” mentality which threatens traditional (male) reporting, undercut ABC News ratings, and she was quickly bumped from the anchor desk.

After this public-relations disaster, Walters undertook a comeback on ABC with The Barbara Walters Special, an occasional series of interviews with heads of state, newsmakers, sports figures, and Hollywood celebrities that have consistently topped the ratings and made news in themselves. In 1977, she arranged the first joint interview with Egypt’s President Anwar Sadat and Israel’s Prime Minister Menachem Begin; she has since interviewed six U.S. presidents, as well as political figures as diverse as British Prime Minister Margaret Thatcher, U.S. presidential contender Ross Perot, and Russian Federation President Boris Yeltsin. In 1984, ABC returned her to an anchor desk as co-host (with Hugh Downs) of the newsmagazine 20/20.

Despite her status as both national celebrity and the recipient of numerous awards from journalists, television broadcasters, and women’s groups, public reaction to Walters has remained ambivalent, perhaps as a result of changing notions of the nature of “news” in the television era. Walters’ interviews have not been limited to figures embroiled in the matters covered by “hard news” subjects like politics and war; many of her more popular specials (and 20/20 segments) have been celebrity interviews and chats with more tawdry news figures. Certain memorable moments—such as the time she asked actress Katherine Hepburn what kind of tree she would like to be—have worked to undercut her image as a serious journalist. The late Gilda Radner’s classic parody of Walters’ distinctive style as “Baba Wawa” on Saturday Night Live remains popular as a timeless critique of the cult of personality in television journalism.

Walters began her career in broadcast journalism as a writer for CBS News. She also served as the youngest producer with NBC’s New York station, WNBC-TV, before joining Today. After less than a year as a writer for Today, she was promoted to reporter-at-large (or, as then-host Hugh Downs described her, “the new ‘Today girl’”), although gender politics of the time severely constrained her role. According to Walters, she was not allowed to write for the male correspondents or to ask questions in “male-dominated” areas such as economics or politics, and she was forbidden to interview guests on-camera until all of the men on Today had finished asking their questions. Thanks in part to Walters’ contributions, these commandments no longer apply.

THE WALTONS

U.S. Drama

The Waltons was a highly successful family drama series of the 1970s, which portrayed a sense of family in sharp contrast to the problem-ridden urban families of the “socially relevant” sitcoms such as All in the Family, Maude or Sanford and Son, which vied with it for top billing in the Nielsen ratings. Set in the fictitious rural community of Walton’s Mountain, Virginia, during the 1930s, the episodic narrative focused upon a large and dignified, “salt-of-the-earth” rural white family consisting of grandparents, parents and seven children. Based upon the semi-autobiographical writings of Earl Hamner, Jr., much of the early narrative was enunciated from the perspective of the oldest son, John Boy, an aspiring writer. The series was based on Hamner’s novel Spencer’s Mountain, which had been made into a feature film of the same name and subsequently adapted as a CBS-TV holiday special, The Homecoming, in 1971. The initial public reaction to the special was so overwhelming that executives Lee Rich and Bob Jacks of the newly-formed Lorimar Productions convinced CBS to continue it as a series, with Hamner as co-executive producer and story editor.

Lorimar executives constructed the series to emphasize both the locale (the Blue Ridge Mountains) and the historical period (the Great Depression), hoping to evoke a nostalgia for the recent past. They proposed to walk that fine line between “excessive sentimentality and believable human warmth,” and took care not to caricature the mountain culture of the family, desiring to portray them as descendants of pioneer stock rather than stereotypical “hillbillies.” Production notes in the Hamner papers emphasized the respect to be afforded the family and its culture: “That the Waltons are poor should be obvious, but there should be no hint of squalor or debased living conditions usually associated with poverty.” Producers also stressed that The Waltons would not be like earlier wholesome family series Father Knows Best or I Remember Mama transplanted to the Blue Ridge Mountains of Virginia, but instead would be “the continuing story of a seventeen-year old boy who wants to be a writer, growing up during the Depression in a large and loving family.”

Premiering in the fall of 1972, the hour-long dramatic series was scheduled in what was considered a “suicidal” time slot against two popular Thursday-night shows, ABC’s The Mod Squad and NBC’s top-rated The Flip Wilson Show. By its second season, The Waltons achieved the valedictory rank in the overall ratings, and stayed in the top 20 shows for the next several years. During its first season, the series garnered Emmy Awards for Outstanding Drama Series, Best Dra-
matic Actor (Richard Thomas) and Actress (Michael Learned), Best Supporting Actress (Ellen Corby) and Best Dramatic Writing (John McGreevey), and continued to receive Emmys for acting and/or writing for the next half a decade. The series endured until 1981, with the extended family maturing and changing—surviving the loss of some characters, the addition of new supporting characters, and the socio-historical changes as the community weathered the Depression era and entered that of World War II. The cast has reunited for a number of holiday and wedding specials in the nearly 15 years since the series ended, and the Walton family has endured in America’s mythic imagination as well as in ratings popularity.

The Walton family was portrayed as a cohesive and nearly self-sufficient social world. The family members operated as a team, full of collective wisdom and insight, yet always finding narrative (and physical) space for their individuality. In addition to the continuing narrative development of each regular character and of the family dynamics over the course of the series, each episode frequently dealt with a conflict or tension introduced by an outsider who happened into the community (Ziegler described these characters as “foreigners, drifters, fugitives,orphans, and others just passing through”) bringing their own problems which were potentially disruptive influences upon the harmony and equilibrium of the Walton’s Mountain community. The narrative of each episode worked through the resolution of these tensions within the household, as well as the healing or spiritual uplift achieved by the outsider characters as they assimilated the values of the family and learned their lessons of love and morality.

The series was critically praised as being bittersweet, “wholesome”, emotion-laden viewing. Reviewers noted that the series conveyed a vivid authenticity of both historical time and cultural place, as well as an emotional verisimilitude regarding the portrayal of a certain type of family life rooted in that time and place. Devoted viewers besieged the network, producers and cast members with fan letters praising the show and expressing their degree of emotional identification with many aspects of the series. Many considered the series to be the epitome of television’s capacity for romantic, effective and moving storytelling in its evocation of childhood and its ability to tap into a deep desire for a mythicized community and family intimacy.

Yet the series also had its detractors, who complained that The Waltons was too sweet, sappily sentimental, and exploitative of viewers’ emotions. Crowther remarked that its “homey wisdom and Sunday school platitudes have been known to make me gag”; others labeled it an “obviously corny, totally unreal family” with characters too good to be true. Many recognized in the show an “intolerable wistfulness” for a romanticized past constructed through the creation of false memory and hopeless longing. Some critics noted that such a romanticized image of the era could make viewers forget the real nature of rural poverty. “The Depression was not a time for the making of strong souls” or healthy, well-nourished bodies, according to Roiphe, who criticized the series for associating poverty with elevated moral values and neutralizing the social, economic and political upheavals of the 1930s “behind a wall of tradition, goodness and good fortune.” Roiphe noted how skillfully the media producers were able to design and articulate myths of American happiness and innocence during the historical period the series portrayed; however, the viewers who admired the series also eagerly participated in that construction of a mythical past. Other critics have noted that despite its embrace of liberal humanitarian values (against racism, etc.), The Waltons’ inherent conservatism has made it ripe for appropriation by right-wing “family values” religious groups. Indeed, it has become a benchmark series for the Family Channel, the media outlet for Pat Robertson’s Christian Coalition, which has held exclusive syndication rights for the series since 1991.

THE WAR GAME

British Drama

Over thirty years since its production, The War Game remains the most controversial and, perhaps, the most telling television film on nuclear war. Directed by the young Peter Watkins for the BBC, its depiction of the impact of Soviet nuclear attack on Britain caused turmoil at the corporation and in government. Although it went on to win an Oscar for Best Documentary Feature in 1966, it was denied transmission until 1985. Announcing the decision to hold back The War Game in 1965, the BBC explained that the film was too horrifying for the medium of broadcasting, expressing a particular concern for "children, the very old or the unbalanced."

But BBC internal documents, and newly released Cabinet papers of the period, reflect the high degree of political anxiety generated by the film, and suggest that although the BBC was keen to assert its independence and its liberalism, The War Game was indeed the victim of high-level censorship. The popular press of the day, for their part, largely approved the ban, often reading the film as propaganda for the youthful Campaign for Nuclear Disarmament.

The film imagines a period of some four months from the days leading up to nuclear attack. In a show of solidarity with the Chinese invasion of South Vietnam, the Russian and East German authorities have sealed off all access to Berlin, and have threatened to invade the western sector of the city unless the United States withdraws its threat to use tactical nuclear weapons against the invading Chinese. When two NATO divisions attempt to reach Berlin, they are overrun by communist forces, triggering the U.S. president's release of nuclear warheads to NATO. The U.S.S.R. calls NATO's bluff, leading to a preemptive strike by the Allies and, in a self-protective measure, the Soviet launch against Britain.

The War Game, shot in newsreel-style black and white, and running just over three-quarters of an hour, works on a number of levels. The main discourse is that of the documentary exposition itself, chronicling and dramatising the main stages and the key features of the countdown to attack and its immediate consequences. A second discourse, also playing on the relationship between documentary and drama, takes the form of two types of vox pop interviews which punctuate the text: interviews which illustrate the contemporary public's consciousness of the issues, exposing wide-spread ignorance; and clearly fictional interviews with (imaginary) key figures as the attack scenario itself develops and extends.

Further elements go some way to suggesting contexts for the public's failure to perceive the realities of nuclear war.
One strand of the film highlights the pathetically inadequate information purveyed by the official Civil Defence self-help manual (cover-price: nine old pence). A fourth level of comment, provided by inter-titles, exposes the bankruptcy of statements on the nuclear threat emerging from religious sources such as the Ecumenical Council of the Vatican.

The film concentrates on the southeast England, and, in particular, the town of Rochester in Kent. It bleakly illustrates the social chaos of the period before attack, focusing on the personal and ideological conflicts likely to arise from the enforced evacuation of large numbers of the urban population, and the impracticality of building viable domestic shelters—as the price of basics such as planks and sandbags in any case escalates—against the power of the nuclear bomb. It depicts the immediate horrors of a nuclear explosion by invoking memories of the firestorms of Dresden and Hiroshima, the earthquakes and the blinding light, thirty times more powerful than the midday sun, which is capable of melting upturned eyeballs from many miles away.

The remainder of the film concentrates on the rapid disintegration of the social fabric in the aftermath of the attack, as civilisation disappears. In images of chilling and provocative power, policemen are depicted as executioners of the terminally ill and of minor criminals. The effects of radiation sickness are explained and illustrated, along with the psychological devastation which would befall survivors and the dying in a mute and apathetic world. There is a good chance of all this happening, the film suggests, by 1980.

The film's enduring power thus derives from a variety of sources. These include its cool articulation of momentary images—a child's eyes burned by a distant nuclear air-burst as the film itself goes into negative; a bucketful of wedding rings collected as a register of the dead, a derelict building which has become an impromptu furnace for the incineration of bodies too numerous to bury; "Stille Nacht" playing on a gramophone which, in the absence of electricity, must be turned by hand.

At a structural level the film achieves its overall rhetorical power through both its mixture and its separation of documentary and dramatic modes. It does not, for example, offer the purely "dramatic" spectacle of later TV nuclear dramas such as the U.S. *The Day After* (1983) or the British *Threads* (1984), with their more traditional identifications around character and plot. Nor does it simply document the drama in the manner of Watkins' previous *Culloden* (1965), in which the television camera revisits the battlefield of 1746.
and interviews participants, or of *Cathy Come Home* (1966), Ken Loach’s similar merging of the domains of documentary and drama in accounting for the rising problem of homelessness in 1960s Britain.

*The War Game*, on the contrary, confuses and yet demarcates the two modes. The “dramatic” sequences, with their highly “documentary” look, are retained as fragmentary and discontinuous illustrations of an ongoing documentary narrative which itself disorientingly moves back and forth between statements and assumptions that this is “really happening” before our eyes, and other types of proposition and warning that this is how it “could be” and “might look.”

The British television audience was deprived of *The War Game* for two decades, until a moment in history ironically close to the events in Eastern Europe which canceled the particular Cold War scenario which underpins the film. Its banning nonetheless made the film a *cause célèbre* and its notoriety grew in the troubled later 1960s as the film reached significant minority audiences in art-house cinemas and through the anti-nuclear movement. Introducing the 1985 broadcast, Ludovic Kennedy estimated that, by then, the film had already reached as many as six million viewers.

**WAR ON TELEVISION**

War on television has been the subject of both fictional accounts and extensive, often compelling, news coverage. War and other bellicose activities have inspired television documentaries, docudramas, dramatic series and situation comedies. Fictional accounts of war and documentary accounts of historical wars, however, are not discussed in this article, which focuses instead on televised coverage of contemporary warfare and related military actions.

The first noteworthy war to occur in the television age was the Korean War (1950–53). Television was, of course, in its infancy as a mass medium at the time and, as a consequence, the Korean conflict is not widely thought of as a televised war. Not only did relatively few viewers have access to television sets, but, because satellite technology was unavailable, television film had to be transported by air to broadcasters. By the time such film arrived its immediacy was much diminished; often, therefore, newspapers and radio remained the media of choice. Nonetheless, in August 1950, a CBS television news announcer reported an infantry landing as it was in-progress, and the controversy caused by this possible security breach reflects conflicts that would long continue between military authorities waging war and television reporters covering that warfare.

In some national contexts, concern about security has sometimes led to formal legal censorship of television war coverage, although, as frequently, physical or technological obstacles inherent to television broadcasting from theaters of war or erected by military personnel at the scene of a conflict served the same censorship purpose. Debates about censorship raged during many of the post-War European military campaigns to maintain control over the many col-

---

*A soldier in Vietnam*
Informal censorship was frequent, however, as when during the 1956 Suez expedition British media were requested to refrain from reporting certain information, but were not forced to do so under penalty of law.

Television coverage also inspired controversy during the Vietnam War (1962–1975). Despite clear evidence that the war effort was less than successful in objective terms, popular opinion and much expert military opinion regard the Vietnam War as one that could have been won on the battlefield but was lost in the living room (where viewers watched their television sets). Reporters who covered the war in the early 1960s remember, however, that most of that early coverage was laudatory and that, in the words of Bernard Kalb who would later join the Cable News Network (CNN), there was “an awful lot of jingoism . . . on the part of the press in which it celebrated the American involvement in Vietnam.” Methodical scholarly accounts of televised coverage also uniformly discover that television coverage was inclined overall to highlight positive aspects of the Vietnam War and that viewers exposed to the most televised coverage were also most inclined to view the military favorably. Nevertheless, domestic social schisms blamed on the Vietnam War and the war's ultimate failure to sustain a non-Communist regime in Vietnam are often blamed on television and other media.

Whether the public turned against the Vietnam War because television, in particular, and the media, in general, presented it unfavorably, or whether the public turned against the war because media accurately depicted its horrors and television did so most graphically remains an open and hotly contested question in the public debate. There is, however, no historic evidence to prove that a graphic portrayal of war disinclines a viewing public to engage in a war. Some critics suggest that the opposite may be the case when a public considers a war justified and is exposed to images of its side enduring great suffering.
Despite a less than definitive understanding of television coverage and its impact on popular support for war efforts, military strategists began to integrate domestic public relations strategy and overall military strategy during the Vietnam War. As the war progressed, military analysts continued to debate whether it was appropriate for the military to attempt to influence civilian public policy through such efforts. Within military circles and in the wake of the Vietnam War, most such debates were left behind and media relations strategies went far beyond censorship and toward a full-fledged engagement (some say co-optation) of televised media.

During 1976 naval conflicts between Britain and Iceland over fishing rights, strategies to influence televised coverage were used by the Icelandic side to depict Britain as the aggressive party, while the British Navy still even refused to allow television crews on its ships. As late as the 1982 Falklands/Malvinas War, during which Britain successfully regained control of the South Atlantic islands that Argentina’s military government had invaded, British military strategists had yet to develop a comprehensive media strategy. Although, the British Navy did allow television and other media personnel to travel aboard its ships to the geographically isolated Falklands/Malvinas Islands, the British did not control the content of the war coverage by systematically influencing television media.

The following year when the United States invaded Grenada, concerns regarding less than favorable television coverage prompted military planners to exclude civilian in favor of military television camera crews. Sensitivity to unfavorable television coverage was heightened at this time by the deaths of 230 U.S. Marine and 50 French peacekeepers in a bomb attack during operations in Beirut. But in 1989, when the United States invaded Panama, the exclusion of civilian television crews was not possible and thanks to satellite technology and round-the-clock CNN coverage, television viewers were able to watch the progress of military operations with much immediacy. As had been the case during the early Vietnam War, the television media was generally inclined to stress the salutary aspects of the Panama Invasion, and U.S. military planners also did a more effective job of controlling the public perception of the invasion.

The short-lived nature of the Panama, Grenada, and Falklands/Malvinas operations may have also forestalled adverse public reactions among the civilian populations who watched their governments wage war on television. Some argue that television coverage makes short-lived military engagements more likely. Yet, despite many short-lived military endeavors, long-term warfare is still possible in the television age. Still, some observers suggest that lack of widely available independent television coverage is what makes long-term warfare palatable to the international community in contemporary times. The Iran-Iraq War (1980–88), for example, received often negligible international television coverage. Yet, the recent Civil Wars in former Yugoslavia (1991—) have continued at varying levels of intensity despite often extensive international coverage. Other extended or particularly brutal border conflicts, terrorist campaigns, coups d’état, civil wars and genocidal endeavors have also received sometimes varying levels of television coverage. Such latter-day wars have been waged in Algeria, Armenia, Azerbaijan, Cambodia, Chad, Chechnya, El Salvador, Ethiopia, Georgia, Guatemala, Liberia, Nigeria, Peru, Rwanda, the Sudan, Yemen and in other places far too numerous to mention.

Both the 1992 U.S.-led occupation of Somalia and the 1994 U.S.-led occupation of Haiti may have, however, failed to create much domestic opposition because of their short duration. The 1992 Somalia operation did, nonetheless, feature one of the most surreal interactions between military personnel and television film crews. This occurred when the first U.S. occupation forces landing on Somali beaches at night found their landings illuminated by the television lights of international news organizations. Criticism of the security risk this illumination entailed harks back to similar criticism of the 1950 CBS report on the infantry landing in Korea.

By far the most noteworthy recent interaction between military and television was occasioned not by a localized conflict but by the U.S.-led, internationally sponsored 1991 Gulf War against Iraq. In the aftermath of this war, television and other media were criticized for having failed to provide a balanced and complete account of the war. Some critics, most notably Douglass J. Kellner in the *Persian Gulf TV War*, argue that television and other media failed to provide a balanced and complete account of the war because the corporate owners of commercial networks felt it was not in their business interest to do so. Other critics suggest that television coverage simply reflects popular prejudices. To a great extent, however, during the actual war, as in previous wars, the various national media had to rely on the military forces for access to events and for access to their broadcast networks. According to the *Wall Street Journal’s* John Fialka, the importance of military cooperation is seen in this: that U.S. Marines, despite their smaller role in the war, received more U.S. news coverage than the U.S. Army, in part, because U.S. Marines were more dedicated to opening the lines of communication between reporters in their operations area and the reporters’ news organizations back home. Overall, however, British television coverage—benefiting from access policies put in place after the Falklands/Malvinas War—featured the timeliest reports on front-line action. The British military forces were the only ones to allow satellite up-links near the front lines.

Military cooperation with the media also made possible the most notable television innovation during the 1991 Gulf War. This was the access broadcast television had to the closed-circuit video images that emanated from camera-equipped high-tech weaponry directed against Iraqi targets. Thanks to this access, television viewers were literally able to see from the viewpoint of missiles and other weapons as
these bore down on Iraqi civilian and military targets—mostly vehicles, buildings and other inanimate infrastructure. Significantly, also according to the journal’s Fialka, videotape from cameras mounted on U.S. Army Apache helicopter-gunships “showing Iraqi soldiers being mowed down by the gunship’s Gatling gun” were seen by a Los Angeles Times reporter but were suppressed thereafter and made unavailable for television broadcast.

Trejo Delarbe argues that sophisticated efforts to control television coverage were also attempted by Mexico’s Zapatista Army of National Liberation during its uprising (1994—) against the central government—a particularly well-televised war in contrast to many listed above. Such efforts to control televised imagery have, indeed, been attempted as part of other military actions, guerrilla movements and terrorist campaigns, but a military’s having actual control of the point-of-view of televised imagery is a phenomenon thus far almost unique to the Gulf War.

Indeed, lack of control sometimes seems to work in unexpected ways. This has often seemed to be the case in the present conflict in the former Yugoslavia. It has not been uncommon to see military actions from multiple perspectives, interviews with political and military leaders from all factions, human interest stories from within every combat zone, and analyses of the aftermath of battles and shelling from civilians as well as combatant or diplomatic points of view. And when a particularly bloody mortar attack on Sarajevo came at a time of tense diplomatic activity—a apparent diplomatic failure to reach a settlement of the conflict—televised images and stories seemed to provide justification for increased military action by NATO forces in an attempt to force the parties to the settlement table.

In spite of such apparently random and opportunistic events that often define warfare, the control of televised imagery is, nevertheless, a logical consequence of military planners’ increasing willingness to control the media relations aspects of warfare as if exercising this control were just another aspect of military strategy. Moreover, the ability to control televised imagery is also a consequence of the evolution of military technology. Far from the contentious early days, when most military organizations considered television coverage a mere nuisance or a possible security risk, cutting-edge military planners today use many aspects of television to prosecute wars or to prepare for them. As writers for Wired point out, today television technology is used to provide military personnel in training with images of war conditions or maneuvers and the next step in military technological development is said to include “virtual warfare”. During such warfare military personnel will be safely ensconced at distant locations as televised imagery and other telemetry allows them to direct weaponry against remote targets. Such a prospect may well signify that, as media guru Marshall McLuhan wrote in 1968, “television war (will have) meant the end of the dichotomy between civilian and military.”

**WARNER BROTHERS PRESENTS**

**U.S. Dramatic Series**

*Warner Brothers Presents*, the first television program produced by Warner Brothers Pictures, appeared on ABC during the 1955-1956 season. Hosted by Gig Young, the series featured an omnibus format with weekly episodes drawn from three rotating series based loosely on the Warner Brothers movies *King's Row*, *Casablanca*, and *Cheyenne*. Although a one-hour series, each weekly episode reserved the final ten minutes for a segment titled "Behind the Cameras at Warner Brothers" This segment featured behind-the-scenes footage, revealing the inner workings of a major movie studio and promoting the studio's recent theatrical releases.

This short-lived series was a hit with neither critics nor viewers, and yet it still stands as a milestone because it marked the introduction of the major Hollywood studios into television production. The 1955-56 season saw the television debut not only of *Warner Brothers Presents*, but also of the *Twentieth Century-Fox Hour* on CBS and *MGM Parade* on ABC. The common inspiration for these programs was the success of *Disneyland*, which had premiered the previous season on ABC and had given Walt Disney an unprecedented forum for publicizing the movies, merchandise, and amusement park that carried the Disney trademark. Following Disney, Warner Brothers executives saw television as a vehicle for calling attention to their motion pictures. They were much less interested in producing television than in using the medium to increase public awareness of the Warner Brothers trademark.

ABC had its own vested interests in acquiring a Warner Brothers series. By recruiting one of Hollywood's most venerable studios to television, ABC scored a valuable coup in its bid for respectability among the networks. As the perennial third-place network, ABC welcomed the glamour and prestige associated with a major Hollywood studio. The opening credits for *Warner Brothers Presents* pointedly reminded viewers of the studio's moviemaking legacy. As the screen filled with the trademark Warner Brothers logo superimposed over a soaring aerial shot of the studio, an announcer exclaimed, "From the entertainment capital of the world comes *Warner Brothers Presents*. The hour that presents Hollywood to you. Made for television by one of the great motion picture studios."

Marketing the Warner Brothers' reputation, ABC signed contracts with several sponsors who had never before advertised on the network, including General Electric and the tobacco company Liggett and Myers, two of the largest advertisers in broadcasting.

The alternating series of *Warner Brothers Presents* were seen by both studio and network as an ongoing experiment in an effort to gauge the public taste for filmed television
drama. *King's Row* was a pastoral melodrama about a small-town doctor (Jack Kelly) who returns home following medical school to aid the community members and play a role in various soothing tales of moral welfare. *Casablanca* reprised the Academy Award-winning movie, with Charles McGraw in the role made famous by Humphrey Bogart. Rick's Cafe American became the setting for tales of star-crossed romance and, to a much lesser extent, foreign intrigue. The only series to make a significant impression in the ratings was *Cheyenne*, a rough-and-tumble Western starring Clint Walker as a wandering hero who dispenses justice while riding through the Old West.

Since the studio's objective was to reach viewers with its promotional messages, the "Behind the Cameras" segments provided a fascinating glimpse into the production process at a movie studio. They introduced viewers to the various departments at the studio, demonstrating the role played by editing, sound, wardrobe, lighting, and so forth in the production of a motion picture. Each segment featured exclusive footage and interviews with top movie stars and directors. On the set of *Giant* a wry James Dean demonstrated rope tricks and, in a rather macabre twist given his untimely death, talked about traffic safety. A gruff John Ford commanded the Monument Valley location of *The Searchers*. Director Billy Wilder and Jimmy Stewart explained how they recreated Lindbergh's legendary flight in *The Spirit of St. Louis*.

When the series failed to find an audience, however, the advertisers balked at the studio's emphatic self-promotion in these segments, particularly when the studio seemed unable to create dramatically compelling episodes. Critics, sponsors, and network executives agreed that the dramatic episodes were formulaic in their writing and perfunctory in their production. In part, this reflected the economics of early telefilm production. The entire $3 million budget that ABC paid for thirty-nine hour-long episodes of *Warner Brothers Presents* represented only a fraction of the budget for a single studio feature like *Giant* or *The Searchers*. Consequently, episodes of *Warner Brothers Presents* were written, produced, and edited on minuscule budgets at a frenetic pace unseen at the studio since the B-grade movies of the 1930s.

After considerable tinkering—including the recycling of scripts from several of the studio's western movies—*Cheyenne* emerged as the sole hit among the *Warner Brothers Presents* series. Had its ratings been calculated separately, it would have finished the season among the twenty highest-rated series. Observing the success of the bluntly conflict-driven *Cheyenne*, ABC asked the studio to heighten the dramatic tension in both *King's Row* and *Casablanca*, fearing, in the words of ABC President Robert Kintner, that neither series was "lusty and combative" enough to appeal to viewers. New scripts were written for both series, introducing murderous kidnappers and mad bombers, but neither series found an audience, and they were both canceled before the end of the season. In their place, *Warner Brothers Presents* substituted an anthology series, *Conflict*, which alternated with *Cheyenne* for the remainder of the season and for the next.

Due to the difficulties in gearing up for the rapid pace of television production, *Warner Brothers Presents* lost more than a half-million dollars on *Warner Brothers Presents*. But the studio also achieved two lasting benefits. First, with the production of this initial series Warner Brothers crossed the threshold into television production where, in just four years, it would become the largest producer of network series. Second, it launched the studio's first hit series, *Cheyenne*, which went on to have an eight-year run on ABC.

WATCH MR. WIZARD

U.S. Children's Science Wizard Program

Watch Mr. Wizard, one of commercial television's early educational efforts, was highly successful in making science exciting and understandable for children. Presenting scientific laboratory demonstrations and information in an interesting, uncomplicated and entertaining format, this long-running series was a prime example of the Chicago School of Television and of quality education in a visual format. Created and hosted by Don Herbert, the show's low key approach, casual ad lib style, and resourceful, often magic-like demonstrations led to rapid success and brought Herbert instant recognition and critical acclaim as an innovative educational broadcaster and as a teacher of science.

Donald Jeffry Herbert, a general science and English major at LaCrosse State Teachers College in Wisconsin, had originally planned to teach dramatics. Following his graduation in 1940, he acted in summer and winter stock and then traveled to New York with an eye toward Broadway. World War II interrupted his career and the young actor entered the Army Air Forces as a private. As a B-24 bomber pilot, he flew 56 missions with the Fifteenth Air Force and subsequently participated in the invasion of Italy. Discharged as a Captain in 1945, Herbert had earned the Distinguished Flying Cross and the Air Medal with three oak leaf clusters.

After the war, Herbert accepted offers of radio work in Chicago. He acted in such children's programs as Captain Midnight, Jack Armstrong and Tom Mix and sold scripts to Dr. Christian, Curtain Time and First Nighter. In October 1949, as co-producer of the documentary health series It's Your Life, he was able to combine his interests in science and drama. Most importantly, his idea for Mr. Wizard began to take form. He became fascinated with general science experiments and studied television as a medium of presentation.

Herbert sold his idea for Mr. Wizard to WNBQ-TV, the Chicago outlet for NBC, and the series premiered on 3 March 1951, with Herbert as the Wizard and Bruce Lindgren as the first of his young assistants. Produced in cooperation with the Cereal Institute, Incorporated, the 30-minute show was targeted at pre-teens and initially broadcast on Saturdays from 4:00 to 4:30 P.M.

Within four months the series had climbed to third place among children's programs in ARB ratings and its audience was growing. Chicago's Federated Advertising Club created an award especially for the show and the Voice of America entered a standing order for recorded transcripts of each program. Within two years, approximately 290 schools were using the series as required homework. In its quiet way, wrote Variety on 10 September 1952, "this cleverly contrived TV tour into the world of science probably adds as much to NBC's prestige as some of the network's more highly touted educational ventures."

By 1954, Watch Mr. Wizard was seen live on 14 stations and via kinescope on an additional 77. The National Science Foundation (NSF) cited Herbert and his show for promoting interest in the sciences, and the American Chemical Society presented him their first citation ever awarded for "important contributions to science education." Three years into his network run, there were more than 5,000 Mr. Wizard Science Clubs across North America with a membership totaling in excess of 100,000.

Sensing the decline of Chicago as a production center, Herbert moved his show to New York in 1955. During this time, he would win a number of national awards including the prestigious Peabody Award and three Thomas Alva Edison National Mass Media Awards. The total number of Mr. Wizard fan clubs would increase nearly tenfold to 50,000. Notwithstanding these accomplishments, NBC canceled the series on 5 September 1965.

Herbert's abilities as a teacher-producer of quality televised science education led him to the National Educational Television network where he produced a series of shows under the title Experiment (1966). He also produced films for junior and senior high schools, wrote a number of books on science and developed the Mr. Wizard Science Center outside of Boston. On 11 September 1971 NBC revived Watch Mr. Wizard but Herbert's old leisurely pace of the 1950s seemed outdated and the show left the air on 2 September 1972.

Undaunted by his second cancellation, and challenged by the NSF to create an awareness of science in children, in the early 1970s Herbert and his wife Norma developed Mr. Wizard Close-Ups for broadcast on NBC's daily morning schedule. At the end of the decade, the husband and wife team also developed traveling elementary school assembly programs featuring young performers and live science demonstrations. By 1991, these tours were annually presenting...
programs to approximately 3,000 schools and 1.2 million students.

With NSF and General Motors financial backing, in 1980 Herbert began production of How About—a long-running series of 80-second reports on developments in science and technology to be used as inserts in local news programs across the country. In time, the series would earn special praise from the American Association for the Advancement of Science-Westinghouse Science Journalist awards committee. Not content to rest on his laurels, in 1984 Herbert developed an updated and faster-paced Mr. Wizard’s World that was seen three times a week on Nickelodeon, the children’s cable network.

In 1991, Herbert received the Robert A. Millikan award from the American Association or Physics Teachers for his “notable and creative contributions to the teaching of physics.” Three years later, in his late 70s, he developed another new series, Teacher to Teacher with Mr. Wizard—a series of NSF sponsored 15-minute programs airing on Nickelodeon and highlighting exemplary elementary science teachers and projects. In addition, the seemingly indefatigable Herbert created, among others, Mr. Wizard Science Secrets kits with clips from Watch Mr. Wizard and a Mr. Wizard Science Video Library with 20 videos from the Mr. Wizard’s World series.

In March, 1984, Herbert told Discovery magazine his purpose in life was not to teach but to have fun. “I just restrict myself to fun that has scientific content.” Fortunately, for generations of children and adults attracted to his Mr. Wizard persona, this soft-spoken, Minnesota-born personality had the ability to communicate and inspire in others his passion for the “fun” to be had with science.

WATCH WITH MOTHER
British Children’s Programme

W
atch with Mother, the general title of a series of five individual programmes, formed a central element in making television a domestic and family medium in Britain. Although the title Watch with Mother did not come into existence until 1952, Andy Pandy, the mainstay of the series, was first broadcast in July 1950. Two years later it was joined by The Flowerpot Men and later in the 1950s these shows were scheduled alongside Rag, Tag and Bobtail in 1953, and Picture Book and The Woodentops in 1955. Initially, Andy Pandy was shown in the afternoon between 3:45 P.M. and 4:00 P.M. at the end of the women’s programme For Women. But in the 1960s Watch with Mother was scheduled at lunch time. The different programmes within the series were shown on specific days of the week: Picture Book on Monday, Andy Pandy on Tuesday, The Flowerpot Men on Wednesday, Rag, Tag and Bobtail on Thursday and The Woodentops on Friday. The series was eventually taken off-air and replaced by See-Saw in 1980.

Watch with Mother was the first television programme series which specifically addressed a preschool child audience and, along with BBC radio’s Listen with Mother, which began in 1950, it represented a shift in BBC policy to make programmes, both on radio and television, for this very young audience. Until this time, the BBC had made occasional radio programmes for the very young; however, in the words of Derek McCulloch (“Uncle Mac”), director of Children’s Hour radio, they did not think that the young should be “catered for deliberately”. This audience, according to McCulloch, came
into no real category at all”. An earlier programme, Muffin the Mule, which was originally shown from 1946 on BBC children’s television, had all the appearances of a preschool children’s programme but was in fact addressed to all children and was popular with adults as well.

In the planning stages of Andy Pandy there was clearly some reticence about the introduction of a television programme for very young children and the BBC had a special panel to advise them, consisting of representatives of the Ministry of Education, the Institute of Child Development, the Nursery Schools’ Association, and some educational child psychologists. There was particular concern about children watching television on their own, letting the “mother” free to do other things. As a result of these concerns about the development of the child and the responsibilities of the mother, Andy Pandy, and the later programmes, needed to be imagined in such a way as to allay these fears. The textual form of the programme and its scheduling are important in this respect.

Andy Pandy was created by Freda Lingstrom, who was head of Children’s Television Programmes at the BBC between 1951 and 1956, and her long-standing friend, programme-maker Maria Bird, as a programme specifically directed at the preschool audience. Lingstrom, while assistant head of BBC School’s Broadcasting, had been responsible for Listen with Mother and was asked to make a television equivalent on music and movement lines. Andy Pandy had no linear narrative structure. Instead, it presented a series of tableaux with no apparent overarching theme. For example, in one programme Andy starts by playing on a swing, accompanied by Maria Bird singing, “Swinging high, swinging low.” He is joined by Teddy. The camera then focuses on Teddy, who enacts the movements to the nursery rhyme “Round and round the garden.” Finally, after a scene with Andy and Teddy playing in their cart and a scene with Looby Loo singing her song, “Here we go Looby Loo,” the two male characters return to their basket and wave goodbye and Maria Bird sings “Time to go home.” Lingstrom argued that the tempo was slow and there was no story, so that the action could move from one situation to another in a way totally acceptable to the very young child.

The programme was designed to bring three year olds into a close relationship with what was seen on the screen. Andy Pandy was intended to provide a friend for the very young viewer, and, as a three-year-old actor was out of the question, a puppet was the obvious answer. The characters took part in simple movement, games, stories, nursery rhymes and songs. The use of nursery rhymes was seen as particularly important as it worked both to establish a relationship between the mother and the development of the child and also to connect the child to a tradition and community of preschool childhood. The children were invited, not only to listen and to watch the movements of the puppets, but also to respond to invitations to join in by clapping, stamping, sitting down, standing up and so forth.

Andy Pandy drew upon the language of play in order to make itself, and also television, homely. Mary Adams, head of Television Talks at the BBC, argued that the puppet came to the child in the security of its own home and brought nothing alarming or contradictory to the safe routines of the family. In Andy Pandy, and also in The Flowerpot Men, the fictional world of preschool childhood was presented within the confines of the domestic. Andy, Teddy and Looby Loo were always presented within the garden or the living room. Likewise, in The Flowerpot Men, the characters were presented within the garden and in close proximity to the little house which was pictured at the beginning of each programme opening its doors to the diegetic space. In Andy Pandy we hear nothing of the outside world. And in The Flowerpot Men the only off-screen character we hear about is the gardener, whose character, never seen or heard, signified the limits of this imaginary world.

Watch with Mother was never scheduled within the main bulk of children’s programmes between 5:00 P.M. and 6:00 P.M. When, in September 1950, there was discussion that Andy Pandy should be shown with the rest of children’s programmes, Richmond Postgate, acting head of Children’s Television Programmes at the BBC, firmly responded by stating that at 5:00 P.M. three year olds should be thinking of bed. The programme was designed to fit into the routines of both mothers and small children and it was scheduled at different times during its early history. However, changes to its scheduling caused minor revolts widely reported in the press. For example, when in 1963 the BBC planned to show Watch with Mother at 10:45 A.M. the Daily Sketch declared that “for most small children 10:45 is a time to ‘Watch Without Mother’. And there’s not much joy in that.” However, although the timing of the programme was intended to provide a space especially for mother and small child, it is clear that some viewers saw it as a means to do other things.

In the 1960s and 1970s a new stream of programmes were invented for the series (e.g. Pogles’ Wood, Trumpton, and Mary, Mungo and Midge). There was still significant
emotional investment in the older programmes. For example, there was much concern in 1965 when viewers thought that Camberwick Green was to replace Andy Pandy and The Flowerpot Men. Doreen Stephens, head of Family Programmes, reassured the audience, stating that the familiar shows would be shown, which they were, although less frequently until 1970. It was no surprise that when a number of the older programmes were released on a Watch with Mother video in 1986, it became a best-seller and topped the BBC’s video charts.

WATERGATE

“Watergate” is synonymous with a series of events that began with a botched burglary and ended with the resignation of a U.S. president. The term itself formally derives from the Watergate building in Washington, D.C., where, on the night of 17 June 1972, five burglars were arrested in the Democratic National Committee offices. Newspaper reports from that point began revealing bits and pieces of details that linked the Watergate burglars with President Richard Nixon’s 1972 reelection campaign. The president and his chief assistants denied involvement, but as evidence of White House complicity continued to grow, the U.S. Congress was compelled to investigate what role the Watergate matter might have played in subverting or attempting to subvert the electoral process.

The U.S. Senate, by a 77-to-0 vote, approved a resolution on 7 February 1973, to impanel the Senate Select Committee on Presidential Campaign Activities to investigate Watergate. Known as the Ervin Committee for its chairperson, Senator Sam Ervin, the committee began public hearings on 17 May 1973, that shortly came to be known as the “Watergate Hearings.”

Television cameras covered the Watergate hearings gavel-to-gavel, from day one until 7 August. 319 hours of television were amassed, a record covering a single event. All three commercial television networks then in existence—NBC, CBS, and ABC—devoted an average of five hours per day covering the Watergate hearings for their first five days.
The networks devised a rotation plan that, beginning on the hearing's sixth day, shifted coverage responsibility from one network to another every third day. Any of the three networks remained free to cover more of the hearings than required by their rotation agreement, but only once did the networks choose to exercise their option. All three networks elected to carry the nearly 30 hours of testimony by key witness and former White House counsel John Dean.

The non-commercial Public Broadcasting Service (PBS) aired the videotaped version of each day's Watergate hearing testimony during the evening. Many PBS station managers who were initially reluctant to carry such programming found that as a result of the carriage, station ratings as well as financial contributions increased.

As the Ervin Committee concluded its initial phase of Watergate hearings on 7 August 1973, the hearing's television audience had waned somewhat, but a majority of viewers continued to indicate a preference that the next hearing phase, scheduled to begin on 24 September, also be televised. The networks, however, felt otherwise. The Ervin Committee continued the Watergate hearings until February 1974 but with only scant television coverage.

Television viewers were attracted to the Watergate hearings in impressive numbers. One survey found that 85% of all U.S. households had tuned in to at least some portion of the hearings. Such interest was not universal, however. In fact, Special Prosecutor Archibald Cox had argued that television's widespread coverage of Watergate testimony could endanger the rights of witnesses to a fair trial and in doing so, could deprive Americans of ever hearing the full story of Watergate. The Ervin Committee refused Cox's request to curtail coverage, saying that it was important that television be allowed to carry Watergate testimony to the American public firsthand.

On 6 February 1974, a new phase of Watergate began when the U.S. House of Representatives voted 410-to-4 to authorize the House Judiciary Committee to investigate whether sufficient grounds existed to impeach President Nixon. If so, the committee was authorized to report necessary articles of impeachment to the full House.

The Judiciary Committee spent late February to mid-July 1974 examining documents and testimony accumulated during the Senate's Watergate hearings. When this investigatory phase ended, the Judiciary Committee scheduled public deliberations for 24-27, 29 and 30 July to debate what, if any, impeachment recommendations it would make to the House. Three articles of impeachment eventually were approved by the Committee, recommending that the House begin formal impeachment proceedings against President Richard Nixon.

The decision to televise Judiciary Committee meetings was not immediate nor did it meet with overwhelming approval. Only after several impassioned pleas from the floor of the U.S. House that such an extraordinary event should be televised to the fullest extent did the House approve a resolution to allow telecast of the Judiciary Committee's impeachment deliberations. The committee itself had final say on the matter and voted 31-to-7 to concur with the decision of their House colleagues. One major requirement of the Judiciary Committee was that television networks covering the committee not be allowed to break for a commercial message during deliberations.

The Judiciary Committee began its televised public debate on the evening of 24 July. The commercial networks chose to rotate their coverage in the same manner as utilized during the Senate Watergate hearings. What's more, the commercial networks telecast only the evening portions of Judiciary Committee deliberations, while PBS chose to telecast the morning and afternoon sessions as well. As a result, television viewers were provided nearly 13 hours of coverage for each of the six days of Judiciary Committee public deliberations.

Eventually, the full House and Senate voted to allow television coverage of impeachment proceedings in their respective chambers, once assurances were made that the presence of television cameras and lights would not interfere with the president's due process rights. Final ground rules were being laid and technical preparations for the coverage were underway when President Nixon's resignation on 9 August 1974, brought the impeachment episode to an end.

WATERMAN, DENNIS
British Actor

Dennis Waterman has the distinction of being well known to the British television public, somewhat known in Australia, and almost completely unknown to the North American audience. As a screen character, Waterman is heavily dependent on a strong partner; in comedy, especially, he usually acts as a straight figure to the comic excesses of his counterparts. When he does play solo, as in the recent thriller Circle Of Deceit, he shows himself to lack colour and charisma.

Born in London in 1947, Waterman became a child actor, appearing in the feature film Night Train to Inverness (1958) and in a West End production of the musical The Music Man. In 1961, he landed the title role of William in the children's television series William, produced by the BBC. This 13 half-hour episode series was based on the very popular childrens' books by Richmal Crompton, adapted by writer C.E. Webber.

Waterman spent the following year in Hollywood working on the CBS situation comedy Fair Exchange. He was one of four British actors imported for the series, which concerned two families, one from New York and the other from London, who arranged to swap teenage daughters. Waterman played a younger boy in the London family who suddenly had to contend with a teenage American "sister." The series was unusual only because it had extended the situation comedy format to hour-long episodes. However, it provoked only lukewarm interest and was dropped after three months. It was briefly revived in half-hour episodes but fared no better.

Waterman's voice broke, his appearance changed, and the child actor faded. In 1976, he landed the role of Detective Sergeant George Carter in the British police crime series The Sweeney, produced by Thames Television's Euston Films. The Sweeney was based on a fictional version of Scotland Yard's Flying Squad, a police car unit concerned with major crimes such as armed robberies. (The series title came from Cockney rhyming slang: Sweeney Todd-The Flying Squad). The Sweeney was the best British police series of the 1970s. It was well made, carrying excellent action scenes, good stories, and fine acting from leads John Thaw as Detective Inspector Jack Regan, Waterman as his assistant, and Garfield Morgan as their boss, Detective Chief Inspector Hoskins.

The Sweeney offered Waterman not only considerable fame but also a second career. As a child actor, his accent had been middle-class and he had projected sensitivity and vulnerability. In The Sweeney he conveyed energy, toughness, and a gritty Cockney sense of how the world really worked. Although his character played second-fiddle to Jack Regan, Waterman still managed to infuse Carter with considerable colour and guts.

Waterman's career was boosted even further by his next series, the enormously popular Minder. This program,
which introduced the character of Arthur Daley, a shady London car dealer, and Terry McCann, his ex-convict bodyguard and partner, has been described as a perfect blend of dark humour and colourful characterization. *Minder* was built around the inspired casting of George Cole as Arthur and Waterman as Terry. Cole was a veteran of British cinema, who had created a memorable forerunner to Arthur Daley in the figure of the Cockney spiv, Flash Harry, in three very funny St. Trinian films in the 1950s and 1960s. Drawing partly from the figure of Carter in *The Sweeney*, Waterman’s Terry was tough and Cockney streetwise. What was new was that Waterman was playing comic straight-man as the often hapless Terry, who was usually no match for Arthur. Although *Minder* was named after the figure of Terry, it was Arthur who was the mainstay of the series, a fact underlined by its revival in 1991, some six years after Waterman’s departure, with Gary Webster filling the minder role.

In 1986, Waterman’s on-screen woman troubles began with BBC 2’s four-hour miniseries, *The Life and Loves of a She Devil*. A gruesome black comedy which combined outrageous fantasy with close-to-the-bone social comment, *She Devil* was an enormous popular success. The series concerned an unfaithful husband (Waterman) whose ex-wife, the figure of the title, wreaks a truly memorable set of punishments on her hapless mate. In portraying Waterman as a womaniser who is finally unable to control the feminine forces that he has unleashed, *She Devil* added an interesting new dimension to the actor’s screen persona.

In 1989, Waterman returned to comedy-drama with the series *Stay Lucky* for Yorkshire Television. The title, which referred to nothing in particular, was somewhat indicative of the series’ problems as a whole. Like *The Sweeney* and *Minder*, *Stay Lucky* concerned a partnership, although in this instance one that was romantic as well as professional. Set aboard a houseboat, the series concerned a set of predictable oppositions between male and female leads—Waterman as Thomas and Kay Francis as Sally. As a Cockney, he was nuggety, streetwise, and realistic; as a Northerner, she was glamorous, sophisticated, and headstrong.

*Stay Lucky* attempted to mix the comedy of the sexes with the darker world of London crime and poverty but the mixture did not quite jell. However, the series was at its strongest when it gravitated to the former theme, with Waterman usually generating solid comic exasperation, not at the outrageous schemes of an Arthur Daley, but at the outlandish stratagems of a willful, attractive woman.

Waterman’s most recent series has been the BBC 1 situation comedy serial, *On the Up*. Altogether 18 half-hour episodes were made between 1990 and 1992, and the comedy/drama blend was much more successful. The series concerned the Cockney selfmade millionaire Tony (Waterman), who was less successful running both his marriage—to a beautiful, headstrong, upper-class woman—and a household of servants and friends.

WATERS, ETHEL

U.S. Actor

Ethel Waters, one of the most influential jazz and blues singers of her time, popularized many song classics, including “Stormy Weather.” Waters was also the first African-American woman to be given equal billing with white stars in Broadway shows, and to play leading roles in Hollywood films. Once she had established herself as one of America’s highest-paid entertainers, she demanded, and won, dramatic roles. Single-handedly, Waters shattered the myth that African-American women could perform only as singers. In the early 1950s, for example, she played a leading role in the stage and screen versions of Carson McCullers’ The Member of the Wedding. Waters played a Southern mammy, but demonstrated with a complex and moving performance that it was possible to destroy the one-dimensional Aunt Jemima image of African-American women in American theater and cinema.

In a career that spanned almost 60 years, there were few openings for an African-American woman of Waters’ class, talent, and ability. She appeared on television as early as 1939, when she made two experimental programmes for NBC: The Ethel Waters Show and Mamba’s Daughters. But it was her regular role as the devoted, cheerful maid in ABC’s popular situation comedy Beulah (1950-53) that established her as one of the first African-American stars of the small screen.

Waters’ dramatic roles on television were also stereotyped. Throughout the 1950s, she made appearances in such series as Favorite Playhouse, Climax, General Electric Theater, Playwrights ’56, and Matinee Theater. Without exception, Waters was typecast as a faithful mammy or suffering mother. In 1961, she gave a memorable performance in a Route 66 episode, “Good Night, Sweet Blues,” as a dying blues singer whose last wish is to be reunited with her old jazz band. Consequently, Waters became the first black actress nominated for an Emmy Award. She later appeared in The Great Adventure (“Go Down Moses”), with Ossie Davis and Ruby Dee in 1963; Daniel Boone (“Mamma Cooper”) in 1970; and Owen Marshall, Counselor at Law (“Run, Carol, Run”) in 1972. But, says African-American film and television historian Donald Bogle in Blacks in American Films and Television (1988): “Waters’ later TV appearances lack the vitality of her great performances (she has little to work with in these programs and must rely on her inner resources and sense of self to get by), but they are part of her evolving image: now she’s the weathered, ailing, grand old woman of film, whose talents are greater than the projects with which she’s involved.”

In the late 1950s, ill health forced Waters into semi-retirement. A deeply religious woman, most of her public appearances were restricted to Billy Graham’s rallies. She died in 1977 at the age of 80.

WATKINS, PETER
British Director

George Bernard Shaw wrote of fin-de-siècle novelist Samuel Butler, “England does not deserve great men.” Much the same might be said at the end of another century of one of the most singular, committed, and powerful directors of the last 40 years. Peter Watkins’ prize-winning experimental documentaries, Diary of an Unknown Soldier (1959), and The Forgotten Faces (1961), reconstructing respectively World War I and the Hungarian uprising of 1956, earned screenings and a job at the BBC, which he used to make the remarkable Culloden, a Brechtian deconstruction of documentary technique in an account of the bloody defeat of the 1742 Jacobin rebellion in Scotland. Culloden exhibited hallmark techniques: hand-held camera, direct-to-camera address from historical and fictional characters, and interviews with them, though the near surrealism of placing a modern on-camera reporter on the battlefield was a humourous touch rarely paralleled in his later work. Using, as he has throughout his oeuvre, the heightened naturalism of amateur actors, the programme contrasted the effete figure of Bonnie Prince Charlie, actually a European adventurer, with the impoverished and still feudally-bound Gaelic-speaking peasantry of the Highlands, a cruel indictment of both Scottish patriotism and the brutal British reprisals on the Highlanders. Another work, The War Game, “reconstructed” the effects of a nuclear attack on southern England. Perhaps it was not just Watkins’ deadpan voice-over, nor the matter-of-fact delivery of official prognostications of casualties and security measures, but his comparison of nuclear firestorms with the ever-sensitive British bombing of Dresden in 1945 (subject of two later banned programmes in the United Kingdom) that saw the film banned. Reduced to fund-raising shows for nuclear disarmament groups, the programme has rarely been discussed in terms other than those of its subject and its political fate. But its pathbreaking and still-powerful juxtaposition of interview, reconstruction, graphics, titles, and the collision of dry data with images of horror still shock, the grainy black-and-white imagery and use of telephoto, sudden zooms, and wavering focus creating an atmosphere of immediacy unique in British television. Fifty minutes that shook the world, it was banned for 25 years by the BBC amid storms of controversy which were reopened when it finally made British TV screens in a Channel 4 season of banned titles.

The War Game took the 1966 Best Documentary Oscar, opening the door to Hollywood. Universal bankrolled the feature film Privilege, about a pop messiah in a near-future police state, but pulled the plug on an ambitious reconstruction of the Battle of The Little Big Horn and the subjugation of the Native American Indians. From the late 1960s, Watkins’ career was marked by projects cut, abandoned, or suppressed: Watkins himself listed 14 of them in a document seeking support for his 1980s film The Journey. The Gladiators, made for Swedish TV, about popular acquiescence in militarism, used the device of a fictional television programme, “The Peace Game,” in which generals played games of strategy, and the savage 16mm allegory of Nixon’s America, Punishment Park, in which “deviants” were given their chance to survive in a nightmarish outlaw zone, both saw broadcast and theatrical release, though limited. These two titles extended Watkins’ repertoire of effects by their focus on individual characters caught up in evil times, though the use of montage cutting and extreme naturalism

Photo courtesy of the British Film Institute
in performances combined to minimise identification, and increased the intellectual engagement of the viewer with the narrative. Closer in technique to Brecht's practice than his theory, Watkins failed to benefit either from the vanguardism of contemporary film theory or the political clout of less challenging auteurs like Ken Loach and Dennis Potter.

Other completed projects like 70s People (on suicide and the failures of social democracy) and Evening Land (a terrorist kidnap contrasted with the quelling of a strike in a military shipyard), both for Danish TV, were suppressed. Only the biopic of a Norwegian painter, Edvard Munch, has had major distribution, though mainly as theatrical film, rather than the three-part series it was originated as. Munch's passion derived not only from the subject and Watkins' handling of it, but from the identification between director and derided artist. The series was distinguished again by direct-cinema techniques, but also by complex editing around motifs, especially faces and floras, and by multi-tracked sound design layering the characters' past, present, and future into a rich montage. Like his earlier documentaries, Munch added voice-over to the sound mix, sometimes even over blank screens, to connect the narrative with worldwide events and political analysis. Carrying the use of natural light pioneered in his BBC projects into colour, the film achieved a profoundly affecting image of a consumptive society unable to credit those who warn of its demise until it is too late. It was its political analysis and, stylistically, its use of sophisticated montage editing, that distinguished Munch and its predecessors from the hand-held stylistics of some recent U.S. cop shows.

In 1982, an attempt to remake The War Game with Central TV fell through, and Watkins devoted the following three years to accruing donations and help to make The Journey, perhaps his greatest achievement. Running at over 14 hours, the film was a rarely screened account, shot in over a dozen nations, of nuclear war and its effects. It has yet to be broadcast. Watkins' peripatetic life, spent developing and trying to complete projects in cinema and TV, and his occasional embittered polemics in print, are all that is certain. Rumours circulate of an international shoestring production on ecological disaster, and about further failed projects with production houses. Watkins' intelligence, passion, and skill have been consistently masked by controversy: he is the most neglected and perhaps the most significant major British director of his generation.

WATSON, PATRICK
Canadian Producer/Host

Patrick Watson has played a key role in the development of Canadian television, starting as producer, and then host, of many of the Canadian Broadcasting Corporation's (CBC) groundbreaking public-affairs series. In 1989, he was named chair of the CBC board of directors, a position from which he resigned in June 1994. His career in Canadian broadcasting, with several short detours into U.S. television, has been recognized by many for its innovative and substantive contribution to television journalism. He currently holds two honorary degrees, and is an Officer of the Order of Canada for his journalistic efforts. At the same time, his career has been distinguished by well-publicized struggles with CBC management and a number of Canadian politicians, both as producer and board chair. Lending substance to his television journalism has been his wide-ranging interest in the arts and social affairs.

Watson's first broadcast experience was as a radio actor in 1943, in a continuing CBC children's dramatic series called The Kootenay Kid. He has maintained his interest in dramatic television production by performing in several CBC dramas, and by producing and performing in his two dramatized series of fictional encounters with great historical figures: Titans and Witness to Yesterday. In 1983, he wrote and acted in a one-man stage version of the Old Testament's The Book of Job.

Canadian television received its bilingual launch on Saturday, 6 September 1952, on CBFT, a CBC station in Montreal. Watson's involvement with television started in those early years, first as a freelancer in 1955, then as producer of Close-Up, 1957–60, and the national-affairs series, Inquery, 1960–64. Both shows were noted for their hard-hitting, sometimes confrontational interviews with the Canadian elite. Inquery established an exciting and stimulating public-affairs television show that would attract a larger audience than the typical narrow, well-educated one.

Watson's next project, which has attracted the largest audience for a public-affairs program in Canadian history, also proved to be the most controversial series of its kind. This Hour Has Seven Days was the creation of Watson and his co-producer from Close-Up and Inquery, Douglas Leiterman. Broadcast before a live audience on Sunday nights from the fall of 1964 to the spring of 1966, this public-affairs show became the darling of over three million Canadians until its demise at the hands of CBC management, who could no longer withstand the criticism from parliament or the insubordination of the Seven Days team. Shows featured satire of politicians in song and skit mixed with "bear pit" interviews, probing film documentaries, on-location stakeouts and street interviews—all dealing with important, but often ignored, social and political issues. Critics hailed it for its freshness and probing investigations and condemned it for its sometimes sensational and "yellow" journalism. Watson was the co-producer for the first season of Seven Days, and became the on-air co-host and interviewer in the second year in a move that the CBC management thought would curb some of the more controversial ideas and methods of the series. Watson and the extraordinary team of producers and writers assembled for the program (many of whom became influential documentarians and producers through the 1960s and 1970s) became even more innovative and "in-your-face" with their journalism, daring the CBC management to take action. In a later interview Watson admitted to the arrogance of those days, inciting his crew to "make people a little bit angry, frustrate them...come socking out of the screen." The management took the dare and cancelled the show to the outrage of many, some of it orchestrated by the Seven Days team to try and save the show. There was an avalanche of calls and letters, public demonstrations, a parliamentary committee hearing, and a special investigation by an appointee of the prime minister—quite a response to the cancellation of a TV show. The series has taken on mythic proportions in the history of television journalism. It certainly pushed the boundaries of what was considered appropriate journalism, predating the current concern over the fine line between news and entertainment, and created a very chilly environment for CBC producers of public affairs for many years.

Because of his highly visible contribution to Seven Days and the aftermath to its cancellation, Watson was popularly touted for president of the CBC. He let it be known that he was interested, but was not to reach high administrative office in the CBC until 25 years later. In the intervening years he turned his attention to a number of creative projects in and out of television. In addition to those already mentioned, he wrote, produced, hosted, and directed for The Undersea World of Jacques Cousteau, The Watson Report, The Canadian Establishment, Lawyers, and The Fifty-first State (for PBS Channel 13.
New York), among others. In 1989, before being named chair of the CBC, he created, produced, and hosted the ten-part international co-production television series, *The Struggle for Democracy*. It was the first documentary ever to appear simultaneously in French and English on the CBC's two main networks with the same host. Researched in depth and reflecting the dominant values of western democracy, this substantive and ambitious series took the viewer across the world and into history, to the sites of many experiments, successes, and failures of the democratic effort. In the years after *Seven Days*, Watson was frequently and deservedly praised for his skills as a host and interviewer.

Watson's years as chair of the CBC board of directors were difficult ones for him and the corporation. The CBC had to face many severe budget cuts, subsequent layoffs, and the closing of regional outlets. Watson was dealing with a board已成为 a concern to the president, several of whom advocated the privatization of the CBC. He was expected to both manage the board and lobby parliament. Though he toured the country speaking up for public television, he was seen by many CBC staffers and some of the public as less than effective in his efforts. In his last year, the CBC was hit with a new controversy over a public-affairs series on the Canadian effort in World War II, called *The Valour and the Horror*. This program challenged many standard versions of World War II history by critically examining the actions and the fallibility of military and political leaders. While the series won awards and was praised by many, it was vilified by veterans' groups and conservative politicians. After intense pressure, including a senate hearing controlled by the critics of the program, the CBC issued an ombudsman report, supported by statements from the president of the CBC and the board, that essentially chastised the show's producers for their research, methods of presentation, and conclusions. As chair of the board, Watson was criticized for not speaking out publicly in support of the journalists and for not resigning. Insiders, including the producers of the show, credit Watson for moderating the board's and the president's response and mediating the dispute with CBC management.

Ironically, it seemed that Patrick Watson's career had circled back in on him. He began by pushing the boundaries of TV public affairs, stretching the limits of management tolerance, and establishing a precedent for interpretative journalism that would eventually challenge his own authority, role, and accountability. Throughout, he has remained dedicated to the important role television can play in creating an informed public. His influential career has both reflected and addressed a number of the issues and tensions facing Canadian broadcasting and society.

**PATRICK WATSON**

Wayne and Shuster, who won international acclaim for their distinctive gentle satiric sketches, were the founding fathers of English Canadian TV comedy. Appearing fairly regularly on CBC radio and television from the 1940s until Wayne’s death in 1990, they helped to pave the way for such successful Canadian acts as the Royal Canadian Airforce and Kids in the Hall. At the same time, however, their near-monopoly on the CBC’s commitment to TV comedy for many years may have hindered the growth of other comedic talent in Canada. During their early years, they wrote all their own material, but later made use of other writers as well.

On television, initially, they were a bigger sensation in the United States than in Canada. They made a record-setting 67 appearances on The Ed Sullivan Show, and edited versions of their many specials for CBC TV were highly popular in U.S. syndication. Over the years, they also made frequent appearances on the BBC and won numerous awards, including the illustrious Silver Rose of Montreux.

The eldest of seven children of a successful clothing manufacturer who spoke several languages, Johnny Wayne was born John Louis Weingarten on 28 May 1918, in the heart of downtown Toronto. Though also born in Toronto, on 5 September 1916, Frank Shuster grew up in Niagara Falls, Ontario, where his father ran a small theatre called the Colonial. Most evenings of his childhood were spent watching silent movies (and learning to read the intertitles), until his father was put out of business by a larger operation down the street. Failing to join other relatives in the United States (Frank’s first cousin, Joe, who drew the Superman comic strip, lived in Cleveland), the family returned to Toronto.

The future comics first met in Grade 10 at Harbord Collegiate—seated in the same class alphabetically—seated in the same class alphabetically, S happened to be close to W. Under the influence of Charles Girdler, who taught ancient history at Harbord and set up the Oola Boola Club to teach students how to do sketches and variety, they wrote a series of comedy dramas for the school’s dramatic guild. One of Wayne’s long-standing characters, Professor Waynegartner, originated in a geometry lesson written by Girdler poking fun at one of the other teachers. To take the sting out it, Girdler suggested that it be done with a German accent.

Both men completed degrees in English at the University of Toronto where they wrote, produced, and starred in a number of variety shows. They also edited and wrote for the university newspaper, the Varsity. In 1941, they began a show on Toronto radio station CFRB called Wife Preserves, which paid them $12.50 each per week to dispense household hints for women over a network of Ontario stations. They were then contracted to write and perform on the Shuster and Wayne (sic) comedy show on the CBC’s Trans-Canada Network for one year.

In 1942, they left the CBC to join the infantry, and were soon writing and performing for the big Army Show. They toured military bases across Canada and later, when the show was split into smaller units, took the Invasion Review into Normandy after D-Day. Later they wrote a 52-week series for veterans and spent six weeks entertaining the Commonwealth Division in Korea.

In 1946, they returned to CBC Radio on the Wayne and Shuster Show, broadcast live at 9:30 P.M. Thursdays. It was one of the few Canadian programs to compete successfully against American imports. Among their radio creations were the undefeated Mimico Mice, who competed against the Toronto
Maple Leafs. Legendary radio sports announcer Foster Hewitt did the play-by-play using the names of real Leaf players, but only Wayne and Shuster played for the Mice.

Although they began appearing as guests on various American TV programs as early as 1950, their biggest television success came in 1958 when Ed Sullivan, whose ratings had slipped, invited them to appear on his Sunday night variety show. He insisted that they stick to the kind of comedy they were doing in Canada, and gave them a one-year contract with complete freedom to decide on the length, frequency, content, sets, and supporting cast of all their sketches. Jack Gould of The New York Times described them as “the harbingers of literate slapstick.” Sullivan, who became very fond of them both personally and professionally, said they were his biggest hit in ten years. In fact, his ratings shot up whenever they performed and their contract was renewed again and again. So too was their CBC contract, which had been on the verge of being canceled before their American success.

In 1961, Wayne and Shuster unwisely agreed to do a dreadful 13-week sitcom called Holiday Lodge, written by others as a summer replacement for Jack Benny on CBS. But they soon returned to the sophisticated sketches they did best, and in 1962 and 1963 were ranked as the best comedy team in America in polls by Motion Picture Daily and Television Today.

Fearing overexposure, they avoided doing a weekly show for CBC TV, and instead contracted for a certain number of hour-long specials each year. Their style, which consisted of a mixture of slapstick, pantomime, and groan-inducing jokes, depended heavily, at times excessively, on sets and props. Many of their early sketches were take-offs on classic situations, such as putting Shakespearean blank verse into the mouths of baseball players. In their first appearance on Ed Sullivan, Wayne played a Roman detective investigating the murder of Julius Caesar in “Rinse the Blood Off My Toga.” His use of “martinus” as the singular of “martini” quickly became a catchphrase (some New York bars began advertising “Martinus Specials”), as did the line “I told him, ‘Julie, don’t go,’” uttered several times by actress Sylvia Lennick playing Caesar’s wife. Even Marshall McLuhan complimented them on their word games, as when the hero of their western version of Hamlet refused a drink from the bar and ordered “the unkindest cut of all.”

Some of the most memorable moments on their TV shows for CBC arose from tricks of the camera—they would walk down an apparently infinite number of stairs or defy gravity as painters on the Tower of Pisa. Although Shuster tended to play the straight man, both portrayed a variety of characters. In general, their comedy was literate, middle-brow, and up-beat. They always disdained cruel humor, preferring the “send-up” to the put-down. Wayne thought that the best description of their style was the phrase “innocent merriment” from Gilbert and Sullivan’s Mikado.

By the late 1970s, some Canadian critics were complaining that the comic duo were merely going through the motions, that their comedy was hopelessly out of date, more sophomoric than sophisticated, and often embarrassingly bad. It was suggested that they had become too comfortable with the world, that they had lost the anger or frustration necessary for good comedy. There was also some criticism of their decision to do commercials for U.S.-owned Gulf Oil. Nonetheless, they remained quite popular, especially among the under-30 and over-55 age groups. The syndication of 80 half-hour specials in the United States, South Africa, and half a dozen other countries in 1980 was the CBC’s largest dollar sale of programming to that date.

Despite several enticing offers from the United States, Wayne and Shuster always chose to stay in Toronto. In addition to giving Canadians the confidence to do their own comedy, they spoke passionately on behalf of Canadian cultural sovereignty. In 1978, for example, Wayne told a joint luncheon of the Ottawa Men’s and Women’s Clubs that “an imbalanced television system has made us a nation of American watchers, totally ignorant of our own way of life. We are being robbed of our national identity. We’ve put Dracula in charge of the blood bank.”

—Ross A. Eman

WEARING, MICHAEL
British Producer

Michael Wearing is one of Britain’s most well-respected and successful producers of quality drama, responsible for developing a string of award-winning short series in the 1980s, including Boys from the Blackstuff; one of the landmarks in British television drama. His career in television began in 1976 when he was appointed script editor to the BBC’s English Regions Drama Department in Birmingham, set up to encourage new writing from the regions.

From 1980 Wearing was producing both single plays and series for the unit; in 1981, he achieved a major success with the serialisation of The History Man.

In the development of single plays BBC producers have enjoyed considerable autonomy and, following the trend in contemporary theatre. Wearing was keen to commission socially challenging material. However, by the early 1980s single plays were being squeezed out of the schedules and their...
potential to create a social stir had diminished accordingly. Wearing’s contribution to TV drama hinges on his success in carrying over the progressive tendencies of the single play into the short series—an altogether more difficult format to negotiate with management because of the higher costs.

In Britain, the most celebrated of these programmes was Alan Bleasdale’s Boys from the Blackstuff (1982), a five-part play series which explored the impact of unemployment on a gang of Liverpudlian asphalt workers. The hard-hitting programme coincided with rocketing unemployment and gave a voice to the despair of the three million people in Britain who were forced to claim the dole at the time. The series touched a vital nerve and stimulated a national debate on a major social issue like few other dramas before it. Wearing then moved to London and was soon producing The Edge of Darkness, a nuclear thriller series by Troy Kennedy-Martin. Once again the moment was highly opportune, as the programme’s transmission in 1985 coincided with widespread anxiety about the nuclear issue in the wake of Chernobyl and the deployment of cruise missiles. Subsequently the programme was sold to 26 countries and proved to be one of the BBC’s most successful exports to North America. Other award-winning programmes followed, including Peter Flannery’s Blind Justice series in 1988, which exposed the inadequacies in the British criminal justice system.

Though these series were all writer-originated projects, Wearing was the driving force behind their success. Indeed, it is entirely due to his strategic skills and tenacity in negotiating the budgets and mustering the resources that they found their way through the convoluted production process onto the screen.

Wearing has been a head of department in the BBC since 1988 and is currently head of Drama Serials. The BBC Serials product, much more than a conventional miniseries, is required to contribute to the prestige of the corporation. In the bureaucratic turmoil of the early 1990s when the corporation was attempting to secure its charter renewal, there was considerable reappraisal as to how drama might best contribute. Under Wearing’s stewardship the classic serial was reintroduced, and the adaptations of Middlemarch and Pride and Prejudice were to enjoy international success. However, in the finest tradition of Sydney Newman before him, Wearing has also managed to preserve the space for more socially controversial contemporary programmes, such as The Buddha of Suburbia, Family, and most recently, the ambitious Our Friends in the North.

WEAVER, SYLVESTER (PAT)  
U.S. Media Executive/Programmer

Sylvester (Pat) Weaver enjoys a well-deserved reputation as one of network television's most innovative executives. His greatest impact on the industry came during his tenure as programming head at NBC in the late 1940s and early 1950s. There he developed programming and business strategies the other networks would imitate for years to come. He is also remembered for supporting the idea that commercial television could educate as well as entertain, and he championed cultural programming at NBC under a policy he labeled "Operation Frontal Lobes."

Weaver studied philosophy and classics at Dartmouth, graduating magna cum laude. After military service in World War II, he worked in advertising at the Young and Rubicam agency. At that time, advertisers owned the programs that were broadcast on network radio and television, and Weaver worked on program development for the agency's clients. This experience prepared him to make the move to network television.

Weaver joined NBCTV in 1949 to help the company develop its new television network, and held several top-management positions culminating in his appointment as chair of the board in 1956. During that time he maintained close control over television programming at the network and shaped NBC's entire programming philosophy.

To promote growth in the fledgling network, Weaver commissioned a series of specials he called "spectaculars." These heavily-promoted, live specials were designed to generate interest in the NBC schedule in particular and the television medium in general. He hoped that families would purchase their first television sets specifically to watch such events and would then develop viewing habits. The strategy especially promised to benefit NBC's parent company RCA, which controlled most patents on new receiver sets. Programming events such as Mary Martin's Peter Pan and the 1952 Christmas Eve broadcast of Amahl and the Night Visitors, the first opera commissioned for television, resulted from this plan.

While overseeing NBC's growth, Weaver also worked to enhance its power in relation to advertisers. His experience at Young and Rubicam convinced him that sponsors rather than network programmers actually ran the television industry. Because sponsors owned shows outright, the networks had minimal control over what was broadcast through their services. Some sponsors could even dictate when a show would appear in the weekly schedule. Weaver moved to shift this power to the networks by encouraging NBC to produce programs and then to offer blocks of time to multiple sponsors. He developed certain programs such as Today and The Tonight Show to provide vehicles for this practice. Advertisers could buy the right to advertise in particular segments of such shows but could not control program content. Weaver called this the "magazine concept" of advertising, comparing it to the practice in which print advertisers bought space in magazines without exercising editorial control over the articles. His ambition was for NBC to develop a full schedule of programs and then persuade advertisers to purchase commercial time here and there throughout that schedule. Any given program would carry commercials of several different sponsors. Other networks eventually followed the NBC model, and by the 1960s it had become the television industry standard, commonly known as "participation advertising."

Weaver took pride in his classical education, and he championed the idea that commercial television had an educational mission. He proposed a series of cultural and public-affairs programs for NBC which he promoted under the banner "Operation Frontal Lobes." The goal, Weaver announced in 1951, was "the enlargement of the horizon of the viewer." The campaign included a number of prime-time documentary specials. For example, Project XX was a full-time documentary production unit which made feature-length documentaries on historical events. The Wisdom series consisted of interviews with major artists and intellectuals (Edward Steichen, Margaret Mead). Weaver even required that educational material be mixed into the entertainment schedule. For example, the popular comedy/variety program Your Show of Shows might include a
WEBB, JACK

U.S. Actor/Producer

Although he will be remembered most for his physically rigid portrayal of the morally rigid cop Joe Friday on Dragnet, Jack Webb had one of the most varied and far-reaching careers in television history. In his four decades in broadcasting, Webb performed nearly every role imaginable in the industry: actor, director, producer, writer (under the pseudonym John Randolph), editor, owner of an independent production company, and major studio executive. Webb’s importance stems not only from his endurance and versatility, but also from his innovation and success.

Webb entered broadcasting as a radio announcer in 1945. After leading roles in radio dramas such as Pat Novak for Hire, he conceived of his own police program based on discussions with Los Angeles police officers about the unrealistic nature of most “cop” shows. Dragnet began on NBC radio in 1949, based on “actual cases” from the files of the L.A.P.D., and featuring Webb as director, producer, co-writer, and star in the role of the stoic Sergeant Joe Friday. Webb broke the traditional molds of both “true story” crime dramas and “radio noir” by de-emphasizing violence, suspense, and the personal life of the protagonists; he instead strove for maximum verisimilitude by using police jargon, showing “business-only” cops following dead-end leads and methodical procedures, and sacrificing spectacle for authenticity. Webb’s personal ties to the L.A.P.D. (which approved scripts and production for every Dragnet episode) and his own admitted “ultra-conservative” political beliefs tinted his version of “reality” in all of his productions, where good always triumphed over evil and the law always represented the best interests of all members of society at large.

Dragnet was a huge success, moving to television in 1951, where it became the highest-rated crime drama in broadcast history. The television version featured more Webb innovations, including passionless dialogue and acting (obtained by performance of a Verdi aria among its normal array of comic monologues and Sid Caesar skits.

Weaver left NBC in 1956 when it became clear that the network could no longer follow his philosophy of program variety and innovation. His successor, Robert Kintner, pushed the network schedule toward more standardized series formats. Weaver’s last major effort at television innovation came in the early 1960s when he headed Subscription Television, Inc., an early venture into the pay cable industry. His effort to set up a cable service in California was blocked by a referendum initiated by traditional broadcasters. Weaver challenged them in court, and the U.S. Supreme Court subsequently ruled the referendum unconstitutional. STV, however, was bankrupted by the process. Although Weaver’s cable venture failed, the case helped remove certain barriers to the eventual development of cable television.

forcing actors to read dialogue “cold” from cue-cards) and using camera and editing techniques taken from a film model. The show’s success fueled Webb’s career as an independent producer and director of both television and feature films. His Mark VII Limited production company produced Dragnet throughout its run on television, including its four-year return in the late 1960s. He also produced numerous other shows with varied degrees of success, including Adam-12, Emergency, and General Electric True, but all Mark VII productions featured Webb’s special blend of heightened realism, rapid-fire emotionless dialogue, and conservative politics. In 1954, Dragnet spawned one of the first in a long line of successful television-inspired films. Webb directed and produced more feature films throughout the 1950s, most notably an acclaimed version of Pete Kelly’s Blues in 1955.

Webb’s least successful venture was his brief tenure as a studio executive. Webb, whose association with Warner Brothers ran back to his mid-1950s film projects, was named head of production at Warner Brothers Television in early 1963. Although his previous successes created high expectations, he was only able to sell one show to a network (NBC’s short-lived western, Temple Houston), and his singular style was incompatible with Warner’s only other series on the air, 77 Sunset Strip. This “ultra-hip” crime show was created in direct opposition to the grim procedural quality of Dragnet, but Webb pushed the already waning show in a new direction—toward the stark realism of his previous work. 77 Sunset Strip was canceled at the end of the season, but Webb didn’t last as long—he was fired in December 1963, ending a failed ten-month tenure.

Upon Webb’s death in 1982, most reports and coverage focused on Joe Friday. His performance style has been parodied since his emergence in the 1950s, but Webb’s impact on television has never been properly assessed. Always anomalous and bucking the tide of televisial convention, Webb’s style lives on in syndicated episodes of Dragnet, but his innovations and creations are consistently being copied or forsaken on every crime show today.

THE WEDNESDAY PLAY

British Anthology Series

The Wednesday Play is now nostalgically looked back upon as part of the legendary past of British television drama—a halcyon time in the 1960s when practitioners had the luxurious freedom of exploring the creative possibilities of the medium through the one-off television play, egged on by broadcasters and audiences alike. To many writers and directors today, it stands as a wistful beacon, a symbol of the possible, as they gaze enviously at the apparent freedoms of their forebears from the seemingly ratings-led, series-dominated wasteland of their TV dramatic present.

As with any legend, there is more than a grain of truth to this view of the past, but also a considerable amount of misty idealisation. The Wednesday Play arose, in fact, not as a benign gift of liberal broadcasters but as a desperate attempt by the head of BBC TV drama, Sydney Newman, to save the single play from being axed from the BBC's premier channel (BBC-1), due to poor ratings. Newman, who had been impressed by Scots director James MacTaggart's work on the earlier experimental play strands, Storyboard (1961) and Teletale (1963), hired him as producer of the new BBC-1 play slot, handing him a brief to commission a popular series of plays.

Newman's stipulations were significant. He wanted a play slot that would be relevant to the lives of a mainstream popular audience, and that would reflect the "turning points" of society: the relationship between a son and a father; a parishioner and his priest; a trade union official and his boss. He also wanted plays that would be fast, not only telling an exciting narrative sparsely rather than building up mood, but alsohooking the audience's attention by way of an intriguing pre-titles "teaser" sequence. Borrowing from the techniques of the popular series that was threatening to displace the single play in the schedules, Newman wanted the slot to have a recognisable "house style," so that audiences knew that if they tuned in each week, they could expect to see a certain type of show. Finally, mimicking his own success in commercial television several years earlier (on ITV's Armchair Theatre slot), Newman prioritised a search for material that would more accurately reflect the experience of the audience, by instituting a system of story editors whose task it was to bring fresh new writers to television.

MacTaggart absorbed Newman's guidelines but translated them in his own way, not least by appointing as his story editor a young writer and actor with whom he had worked on Teletale, Roger Smith. It was with Smith's help that the play slot soon came to acquire the reputation for "controversy" and "outrage" that would mark its subsequent history. The script commissioned for MacTaggart and Smith's very first Wednesday Play outing in January 1965 set the seal for what would follow. Written by a convicted murderer (James O'Connor) and depicting the cynical progress of a villain from gangster to baronet, A Tap on the Shoulder marked a conscious break with the conventions of the polite, "well-made" TV play.

Its determination to break new ground came to characterise The Wednesday Play ethos as a whole—from the first crucial season in 1965 to the last in 1970. The slot also acted as a showcase for new talent, in keeping with Newman's original vision. Many well-known practitioners gained their first big break on The Wednesday Play, including Tony Garnett and Kenith Trodd (recruited by Smith as assistant story editors), Dennis Potter, and Ken Loach, A Tap's director, whose contributions to the slot eventually numbered some of the most seminal TV plays of the 1960s: the "docudramas" Up the Junction (1965) and Cathy Come Home (1966).

As The Wednesday Play developed, shifts in emphasis, however, took place. Under the first season of MacTaggart and Smith, the plays were much more "expressionist" in style, and concerned with exploiting the resources of the television studio, as the earlier Teletale had done. It is significant that the slot's first non-naturalistic dramas, from writers like Dennis Potter and David Mercer, were commissioned at this time. In later seasons, though, after MacTaggart and Smith had departed and Tony Garnett was named chief story editor, many of the plays became noticeably more "documentary," reflecting a determination to transcend the confines of the TV studio in order to record more faithfully the rapidly changing character of life in 1960s Britain. Having gained access to lightweight 16mm filming equipment, Garnett and his collaborator Loach abandoned the studio for location shooting, and their form of filmed documentary realism became one of the most familiar hallmarks of The Wednesday Play.

The Loach-Garnett documentary style also became one of the most controversial, and was accused both outside and within the BBC of unacceptably blurring the distinctions between fictional drama and factual current affairs. Meanwhile, the play slot itself came under attack from some
quarters for its general "filth" and "squalor." "Clean-Up TV" campaigner Mary Whitehouse harried it for what she saw as its gross sexual immorality, though the effect of her attacks was simply to boost publicity and the all-important ratings. Audiences climbed from one to eight million, as people tuned in each week to see for themselves the latest play trailed as "controversial" in the press. For one of the very few times in TV history, Newman's dream of a popular series of plays became reality. By the end of the 1960s, however, it was clear the slot had become a victim of its own past reputation: a reaction had set in against its perceived "permissiveness" and anti-establishment bias amongst significant proportions of the audience who were now deliberately not tuning in. Accordingly, Newman's successor as head of drama, Shaun Sutton, tried to win new audiences by giving the BBC's contemporary play slot a new time and title. In 1970, he mutated it into Play for Today, thereby inadvertently creating the legend of the lost golden age which The Wednesday Play has become.

WEINBERGER, ED

U.S. Writer/Producers

Ed Weinberger is one of television's most respected writer-producers who, along with James L. Brooks, David Davis, Allan Burns, and Stan Daniels, comprised the heart of the MTM creative team. Weinberger has received many awards for his contributions to a number of successful or critically acclaimed series for both MTM and the John Charles Walters Company, of which he was a partner.

Weinberger's early TV experience included writing for The Dean Martin Show, where he was teamed with Stan Daniels, who eventually became Weinberger's writing partner at MTM. Weinberger had also been a writer for Bob Hope, traveling with him to Vietnam. In the late-1960s, Weinberger wrote a screenplay about a divorced woman who was struggling to make it on her own. Although it was never produced, Mary Tyler Moore Show creators James L. Brooks and Allan Burns saw a copy of the script and hired Weinberger during the series' second season.

In addition to his Emmy Award-winning work on The Mary Tyler Moore Show, Weinberger, along with Daniels, created and produced the MTM sitcoms Phyllis, Doc, and The Betty White Show. In 1977, Weinberger, with Brooks, Davis, and Daniels, were wooed away by Paramount, which was looking to finance other independent production companies for ABC programming. The MTM alumni welcomed the change, if only because the cozy MTM atmosphere was being gradually replaced by a growing bureaucracy that hampered creativity. Brooks, Davis, Daniels, and Weinberger formed the John Charles Walters Company, which produced its most famous sitcom, Taxi, in 1978.

In Taxi, Weinberger and the other members of the new creative team were able to successfully echo the quality television that had become synonymous with MTM. Much like an MTM show, Taxi was a sophisticated example of humor derived from carefully-crafted character exploration. Taxi also pursued the "work-place as family" theme so prominent in the best of MTM sitcoms. Canceled in 1982 by ABC, Taxi was picked up by NBC for a continuing season. Thus, Weinberger helped deliver a second-generation of quality television that extended into the 1980s.

In 1983, after NBC also canceled Taxi, Weinberger seemed to take a giant step backward when he co-produced Mr. Smith, a sitcom featuring a talking chimp for which Weinberger provided the voice. This was not the first time Weinberger had used his voice-over talents; the sigh in the John Charles Walters Company end credit logo is Weinberger's as well. In 1984, Weinberger was back on the quality track when he co-wrote the Emmy Award-winning pilot episode for The Cosby Show. Weinberger's later production credits also include the disappointing-yet-wildly successful series Amen, as well as the critically-acclaimed-yet-unpopular sitcom Dear John.

WELDON, FAY
British Writer

Most widely known in Britain and abroad as an irreverent novelist usually concerned with women’s issues, Fay Weldon has also pursued a wide variety of projects for television, radio, and the stage. The daughter of a novelist, granddaughter of a Vanity Fair editor, and a niece to novelist-screenwriter-radio and television dramatist Selwyn Jepson, Weldon’s first published novel in 1967 simply expanded upon her 1966 teleplay for The Fat Woman’s Tale. The teleplay had been written while Weldon was working as a highly successful copywriter for English print and television advertising; her previous work included the still-remembered “Get to work on an egg” campaign. Weldon remained in advertising until the 1970s, yet she still produced teleplays for productions such as A Catching Complaint (1966) and Poor Cherry (1967).

While Weldon’s real progress as a writer has often been traced back to the mid-1960s, it was in the early 1970s that she began fully to establish both her name and public voice. Where Weldon fit in British culture was another matter. The Fat Woman’s Tale had told a decidedly proto-feminist story of a housewife’s anger toward her philandering husband, yet Weldon’s public espousal of domestic joys and the use of “Mrs.” seemed to mark her as an opponent to the growing British women’s rights movement. But as David Frost learned in 1971, Weldon’s relation to feminism is not always what it might seem: invited onto Frost’s television program to rebut feminist activists, she instead surprised everyone by publicly embracing their complaints. That same year Weldon won the best series script award from the Writers Guild of Great Britain for “On Trial,” the first episode of Upstairs, Downstairs. She wrote only one other episode, and in many ways the series’ sober, understated visual style was quite different from the satiric, reflexive, often fantastic surfaces of much of Weldon’s other work, including her sedate, but still barbed television adaptation of Pride and Prejudice (1980).

Perhaps it is no coincidence that the imagined recipient of Weldon’s Letters to Alice: On First Reading Jane Austen, 1984, is a punk-haired but literary niece; that juxtaposition of texts and attitudes, together with Weldon’s own later televised comments on the (mis)teaching of Austen, led some critics to accuse Weldon of unjustly attacking Austen’s work.

Yet the melodramatic pleasures of both Upstairs, Downstairs and Pride and Prejudice run through nearly all of Weldon’s work and inform her understanding of gender. She not only won a prestigious Booker Prize nomination for Praxis (1978), but also chaired the prize’s 1983 panel. Yet Weldon has never divorced her “serious” literary work from her own enjoyment of what she calls “that whole women’s magazine area, the communality of women’s interests, and the sharing of the latest eye-shadow.” With such an attitude, Weldon penned the polemical prison docudrama Life for Christine (1980), polished the script for Joan Collins’ Sins miniseries (1985), and turned a critical eye toward pastoral life in The Heart of the Country (1987).

Despite her willingness to adapt the work of others, Weldon has been protective of the rights to her own work. Nevertheless, she has been most notably represented on television in Britain and abroad not through her own scripts, but through two popular multi-part adaptations from her novels: The Life and Loves of a She-Devil (1983, televised 1986), which sharply satirized conventions of both heterosexual romance and the romance novel, and The Cloning of Joanna May (1989, televised 1991), a slightly more genteel version of She-Devil’s antics, this time as practiced by a devilish husband. The same creative team (including writer Ted Whitehead, director Philip Saville, and star Patricia Hodge) helmed both adaptations, but it is the highly praised The Life and Loves of a She-Devil which remains the strongest
evocation of Weldon's own ethos, despite the intervening memory of Susan Seidelman's limp Americanized film adaptation (She Devil, 1990).

Oddly enough, Seidelman's film omitted Weldon's most visually rich and outrageous portion, the fantastic surgical reconstruction of the She-Devil into her nemesis, the physical form of female romantic perfection. This excision removed what is most remarkable throughout much of Weldon's work, her Mary Shelley-like coupling of deliberately excessive Gothic fantasy with sharp feminist perception.

Weldon has not been alone in the use of such fantastic elements. Indeed, as Thomas Elsaesser (1988) has suggested, Weldon and "New Gothic" companion Angela Carter (The Magic Toyshop, 1986) may present a female-centered television parallel to the man-centered and often fantastic films of Peter Greenaway, Derek Jarman, and other directors prominent in the 1980s "New British Cinema." If these filmmakers were "learning to dream" again (to quote the familiar title of James Park's study), then Weldon has been one of British television's more prominent instructors in the same task.

WELLAND, COLIN
British Actor/Writer

Colin Welland is widely respected both as an actor and writer for television, the cinema, and the stage. Rotund and unfailingly good-humoured, he has given invaluable support in a range of plays and serials.

Welland first became a familiar face on British television when he landed the role of Constable David Graham, one of the original characters based at Newtown police station in the long-running police serial Z Cars in the 1960s. The series broke new ground, introducing a fresh realism to police dramas, and the regular stars all became household names. Welland stayed with the show for some time, as PC Bert Lynch's second partner on the beat, before eventually leaving for new pastures. He reappeared, together with other stars from the early years of the show, when the last episode was filmed in 1978.

Thus established in television as a performer, Welland went on to star in various plays and television movies, often also contributing the scripts (he was voted Best TV Playwright in Britain in 1970, 1973, and 1974). True to his Lancashire roots, his plays often had an earthy northern humour and dealt with themes accessible to the working-class "man in the street." He also enjoyed huge success as a writer for the cinema, notably with his screenplays for Yanks and Chariots of Fire, an Oscar-winning smash that was heralded (somewhat prematurely) as signalling a new golden era in British moviemaking. Welland himself picked up an Academy Award for Best Screenplay. Among subsequent films that have garnered their share of praise have been A Dry White Season, a drama dwelling on the cruelties imposed by the policy of apartheid in South Africa (co-written with Euzhan Palcy), and The War of the Buttons, delving into the often dark and violent world of children. Also much admired were his appearances in such films as Kei, in which he played the sympathetic Mr. Farting, and Willy Russell's Dancing Through the Dark, which was set in familiar north-western territory, in the bars and clubs of Liverpool.

Perhaps the most memorable image from Welland's lengthy career as a television actor came in 1979, when he was one of a first-class cast that was chosen to appear in Dennis Potter's award-winning play Blue Remembered Hills, which recalled the long-lost days of his own childhood. In company with Helen Mirren, Michael Elphick, Colin Jeavons, and John Bird, among others, all of whom were adults playing the roles of young children, Welland cavorted gleefully around woods and fields, his bulk grotesquely crammed into a pair of boy's shorts. Potter's brilliantly realised play, exposing the native cruelty beneath the outwardly innocent world of children, was hailed as a masterpiece and Welland himself, not for the first time in his distinguished career, was singled out for special praise.

Australian Broadcast Journalist

Jana Wendt is Australian television’s best-known female current affairs reporter and presenter. She is also widely regarded as one of Australian commercial television’s most skilled interviewers.

The daughter of Czech immigrants, Melbourne-born Wendt began her career in journalism researching documentaries for the government-funded Australian Broadcasting Commission in 1975. After completing an arts degree at Melbourne University, she accepted a job in commercial television, joining Ten Network as an on-camera news reporter in their Melbourne newsroom. Shortly after moving into the role of news presenter at Ten Network, Wendt was offered a position as a reporter on Nine Network’s new prime-time current affairs show, Sixty Minutes.

Under the guidance of executive producer Gerald Stone, an American with broad experience in both Australian and U.S. news and current affairs programming, Sixty Minutes proceeded to set the standard for quality commercial current affairs in Australia both in terms of content and production values. The youngest correspondent to join the Sixty Minutes team, Wendt quickly established a reputation for her aggressive interviewing style and glamorous, ice-cool on-camera demeanour. It was this combination of acuity and implacability which earned Wendt her nickname “the perfumed steamroller”.

In 1988, Wendt left Sixty Minutes to anchor another Nine Network program, the nightly prime-time half-hour current affairs show, A Current Affair, where she cemented her journalistic reputation with a series of incisive and revealing interviews with national and international political figures. Her subjects included Libya’s Colonel Gaddafi, U.S. Vice President Dan Quayle, former U.S. Secretary of State Henry Kissinger, former Philippines President Ferdinand Marcos, and media barons Rupert Murdoch and Conrad Black. In 1994, Wendt returned to Sixty Minutes to fill the newly-created role of anchor.

Wendt’s departure from A Current Affair the previous year followed accelerating criticism of the program for its increasingly tabloid accent. The trend, evidenced for critics by A Current Affair’s frequent use of hidden cameras, walk-up interviews, and stories with a voyeuristic, sexual theme, was at odds with Wendt’s image as a guarantor of dispassionate investigative reporting. While she declined to criticise the program on her departure, she did register her general professional objections to the tabloidisation of Australian current affairs on her return to Nine Network in 1994. The first Sixty Minutes she hosted was an hour-long studio debate on journalistic ethics and the tabloidisation of news and current affairs.

A traditionalist who endorses the notions of journalistic objectivity and the watchdog role of the media in the public sphere, Wendt is an icon of an era many media analysts believe to be passing in Australian commercial current affairs television. The approach of pay television, as
well as the debt burdens many network owners inherited in the 1980s, caused Australian broadcast networks to look carefully at their production budgets and demand that news and current affairs divisions show increasing profitability. The result has been an attempt to move the focus of such programs away from public sphere issues like politics, economics, and science and concentrate on domestic matters such as relationships, consumer issues, sexuality, and family life. In many instances, this shift in focus has been accompanied by a more melodramatic, emotional approach on the part of journalists and hosts. It is a trend which Wendt has consistently resisted, and which has led her to become a respected, but somewhat isolated figure in the commercial current affairs landscape of the 1990s.

WESTERNS

The western has always been a dusty rear-view mirror for reflecting back on the U.S. experience. Whether celebrating the pioneering spirit of the Scotch-Irish invading class or lamenting the genocidal whitewashing of the continent under the banner of "Manifest Destiny," the western has operated as an instrument for navigating through the fog of contemporary political, social, and cultural anxieties by reinterpreting and rewriting the nation's mythic past. In the 1930s, during the most desperate days of the Great Depression, singing cowboys sporting white hats offered hopeful visions of good guys finishing first to a nation starved for optimism; during the dawning of the Cold War era, Hollywood's "A" westerns provided relatively safe vehicles for commenting on McCarthyism (High Noon) and American apartheid (The Searchers); prime-time westerns in the 1960s often addressed, though allegorically and indirectly, the generational discord of the decade, as well as the conflicting frustrations over U.S. involvement in an undeclared war; and in the 1980s and 1990s, revisionist westerns have taken multicultural angles on the Western Expansion (Dances with Wolves) or libertarian spins on the genre's long-standing infatuation with law and order (The Unforgiven). The western is, in other words, best understood as a "hindsight" form—a form that deploys the rich imagery of the Old West in an ongoing rewriting of the pride and shame of what it means to be American.

This rewriting and reinterpreting of the American experience is even evident in the first "modern" western novel, The Virginian by Owen Wister. Published in 1902, Wister's classic cowboy novel sparked something of a range war in the heartland of popular literature. According to contemporary literary critics, Wister's novel and the rise of the cowboy hero represented a masculinist and secular reaction to the so-called "sentimental novel" that had been so popular in
The Big Valley

Dr. Quinn, Medicine Woman

Rawhide

The Virginian
the late 19th century. In the tradition of *Uncle Tom’s Cabin* and *Little Women*, the sentimental novel celebrated feminine moral authority, domesticity, and religion. The 20th-century western, in stark contrast, denounced the civilized world of women and flouted, instead, rugged images of courageous men free from the constraints of family. Ultimately, these taciturn men were more given to flirtation with death than with women, and more attached to their horses and six-shooters than they were to their mothers, sisters, sweethearts, wives, or daughters.

Although rooted in the novel, the first westerns appearing on television were more directly connected to Hollywood’s mass-produced version of the genre. In television’s infancy, recycled “B” westerns from marginal production companies like Mascot, Monogram, PRC, Lonestar, and Republic played a prominent role in transforming television into a mass medium, by stimulating much of the initial enthusiasm for the medium especially among younger and rural audiences. Formulaic features and serials displaying the exploits of familiar names like Ken Maynard, Bob Steele, Hoot Gibson, and Tex Ritter were telecast locally, usually during juvenile viewing hours, in showcases with names such as *Six-Gun Playhouse*, *Sage-Bush Theater*, and *Saddle and Sage Theater*. Thanks to such scheduling, a survey of the programming preferences of children in New York City conducted in April 1949 ranked westerns at the top of the list, a full two percentage points ahead of *Howdy Doody*.

The astute marketing of William Boyd’s Hopalong Cassidy was by far the most profitable repackaging of a “B” western hero in television’s infancy. Performing as a romantic leading man in silent films, Boyd had trouble even mounting a horse when he first landed the role of Hopalong Cassidy in 1935. However, by 1948, after completing 66 western features, Boyd was not only at home in the saddle, but also savvy enough to secure the TV rights to his Hoppy films. In 1949, as a weekly series on NBC, *Hopalong Cassidy* ranked number seven in the Nielsen ratings—and Boyd quickly cashed in on his popularity through product endorsements that included Hoppy roller skates, soap, wristwatches, and, most notably, jackknives (of which one million units were sold in ten days). Clearly influenced by the *Hopalong Cassidy* phenomenon, the first wave of made-for-TV westerns was targeted specifically at the juvenile market, which was a particularly appealing and expansive demographic segment because of the post-war baby boom. Some of the first western series produced expressly for television, most notably *The Gene Autry Show* and *The Roy Rogers Show*, recycled prominent stars of the “B” western. Others, like *The Cisco Kid* and *The Lone Ranger*, were more familiar as radio series. All featured squeaky-clean heroes who modeled what was considered positive roles for their prepubescent fans.

Perhaps the most self-conscious moralist of television’s first western stars was Gene Autry, who in the early 1950s authored the Cowboy Code:

1. A cowboy never takes unfair advantage, even of an enemy.

2. A cowboy never betrays a trust.

3. A cowboy always tells the truth.

4. A cowboy is kind to small children, to old folks, and to animals.

5. A cowboy is free from racial and religious prejudice.

6. A cowboy is always helpful, and when anyone’s in trouble, he lends a hand.

7. A cowboy is a good worker.

8. A cowboy is clean about his person, and in thoughts, word, and deed.

10. A cowboy is a patriot.

With its emphasis on the work ethic and patriotism, the Cowboy Code adequately captures the seemingly-benign, though unapologetically sexist values animating the juvenile westerns of America’s Cold-War culture. But “Thou Shall Not Kill” is noticeably missing from Autry’s Ten Commandments—and this omission would later come to be the source of much public concern.

In the mid-1950s, as major powers in Hollywood stampeded into the television industry, a second wave of made-for-TV westerns would elevate the production values of juvenile programs and, more importantly, introduce the first of the so-called adult western series. On the kiddie frontier, Screen Gems, the TV subsidiary of Columbia Pictures, blazed the trail for tinsel town with *The Adventures of Rin Tin Tin* which premiered on ABC in October 1954. Walt Disney Productions ventured into the territory of TV westerns with three hour-long installments of the *Disneyland* anthology show that presented Fess Parker’s clean-cut portrayal of an American legend: *Davy Crockett, Indian Fighter* (first telecast on 15 December 1954); *Davy Crockett Goes to Congress* (26 January 1955); and *Davy Crockett at the Alamo* (23 February 1955). The merchandising hysteria that accompanied the initial broadcasting of the Crockett trilogy even surpassed the earlier Hopalong frenzy as Americans consumed around $100 million in Crockett products, including 4 million copies of the record, “The Ballad of Davy Crockett” and 14 million Davy Crockett books. In the fall of 1957, Disney would branch out into series production with *Zorro* which celebrated the heroics of a masked Robin-Hood figure who was fond of slashing the letter “Z” onto the vests of his many foes.

On the adult frontier, four series premiering in September 1955 would start a programming revolution: *Gunsmoke* on CBS, *Frontier* on NBC, and on ABC, *Cheyenne* and *The Life and Legend of Wyatt Earp*. While *Cheyenne* is notable for being part of Warner Brothers Studio’s first foray into television production, the most important and enduring of the original adult westerns is, without a doubt, *Gunsmoke*. Adapted from a CBS radio series in which the rotund William Conrad provided the mellifluous voice of Marshall Matt Dillon, the television version recast the taller, leaner, and more telegenic James Arness in the starring role. Des-
tined to become one of the longest running prime-time series in network television history, the premiere episode of *Gunsmoke* was introduced by none other than John Wayne. Positioned behind a hitching post, Wayne directly addressed the camera, telling viewers that *Gunsmoke* was the first TV western in which he would feel comfortable appearing. Linking the program to Hollywood's prestigious, big-budget westerns, Wayne's endorsement was obviously a self-conscious attempt by CBS to legitimize *Gunsmoke* by setting it apart from typical juvenile fare.

The impact of the adult western was stunning and immediate. In the 1958–59 television season, there were 28 prime-time westerns crowding the network schedule. That year seven westerns (*Gunsmoke, Wagon Train, Have Gun, Will Travel, The Rifleman, Maverick, Tales of Wells Fargo,* and *The Life and Legend of Wyatt Earp*) ranked among the top ten most-watched network programs. But the extraordinary commercial success of the television western was not without its detractors. Although adult westerns displayed characters with more psychological complexity and plots with more moral ambiguity than their juvenile counterparts, the resolution of conflict still involved violent confrontations that left saloons, main streets, and landscapes littered with the dead and dying. The body count attracted the scorn of a number of concerned citizens—but by far the most powerful and threatening figure to speak out against such violence was Newton Minow. On 9 May 1961, soon after being appointed the chair of the Federal Communications Commission (FCC) by President John F. Kennedy, Minow delivered his “vast wasteland” speech to a meeting of the National Association of Broadcasters. In this famous harangue, the FCC chairman singled out the TV western for special denunciation. After roundly condemning the “violence, sadism, murder, western badmen, western good men” on television, Minow rebuked westerns as a hindrance in the not-so-cold propaganda war with the Soviet bloc. “What will the people of other countries think of us when they see our western badmen and good men punching each other in the jaw in between the shooting?” Minow asked. “What will the Latin American or African child learn from our great communications industry? We cannot permit television in its present form to be our voice overseas.”

In part because of such criticism from high places, and in part because of burn-out in the mass audience, the western would, once again, be rewritten in the 1960s. As the networks attempted to deemphasize violence, the domestic western emerged as a kinder, gentler programming trend. In contrast to action-oriented westerns dealing with the adventures of law officers (*The Deputy,* bounty hunters (*Have Gun, Will Travel,*), professional gunmen (*Gunsminger,*), cowpunchers (*Ratchid,*), gamblers (*Maverick,*), and trail-weary loners (*The Westerner,*), the domestic western focused on the familial. The patriarchal Murdoch Lancer and his two feuding sons in *Lancer,* the matriarchal Victoria Barkley and her brood in *The Big Valley,* and the Cannon clan in *The High Chaparral—all were ranching families in talky melodramas that attempted to replicate the success of the Cartwrights of *Bonanza* fame (Lorne Greene’s Ben, Pernell Roberts’ Adam, Dan Blocker’s Hoss, and Michael Landon’s Little Joe). Television’s most distinguished domestic western—and the first western series to be televised in color—*Bonanza* ranked among the top ten TV shows for 10 of its 14 seasons and for three consecutive years from 1964 to 1967 was the nation’s most watched program.

Unfortunately, this gloss of the western cannot do justice to all of the interesting wrinkles in the genre. The innovations of series like *Branded* and *Kung Fu* are lost in such a brief accounting—and comedic westerns like *The Wild, Wild West* and *F Troop* can only be mentioned in passing. It is also impossible to catalog the accomplishments and contributions of the many talented artists who brought the western to life on television—whether working behind the camera (Lewis Milestone, Sam Fuller, Robert Altman, and Sam Peckinpah, for instance), or in front of it (Amanda Blake, Ward Bond, Richard Boone, Robert Culp, Clint Eastwood, Linda Evans, James Garner, Steve McQueen, Hugh O’Brian, Barbara Stanwyck, and Milburn Stone, to name a few). Suffice it to say that this dinosaur of a programming form once attracted many of television’s most creative storytellers and most compelling performers.

In fact, no one was really surprised in 1987 when J. Fred MacDonald wrote the TV western’s obituary in his book, *Who Shot the Sheriff?* Declaring that the western was “no longer relevant or tasteful,” MacDonald noted the irony that “the generation [baby boomers] that once made the western the most prolific form of TV programming has lived to see a rare occurrence in American popular culture: the death of a genre.” Indeed, between 1970 and 1988, fewer than 28 new westerns in total were introduced as regular network series. The last time a western made the top ten list of weekly prime-time programs was in 1973 when *Gunsmoke* was ranked eighth. With the exception of the strange popularity in the early 1980s of made-for-TV movies starring singer Kenny Rogers in the role of “The Gambler,” the thunder of the western has been silenced in prime time.

Even so, after the publication of MacDonald’s book, the TV western would have at least one more moment of glory when the adaptation of Larry McMurtry’s epic western novel, *Lonesome Dove,* became the television event of the 1988–89 season. The highest rated miniseries in five years, *Lonesome Dove* documented the final days of a lifelong partnership between two characters who represent distinctly different models of manhood: Woodrow Call and Augustus “Gus” McCrae. Call enacted the strong, silent tradition of the western hero. Like John Wayne’s characters in *Red River* (Tom Dunson) and *The Searchers* (Ethan Edwards), Call was a powerful, tireless, generally humorless leader who outwardly feared no enemy, though his rugged individualism drove him toward the misery of self-imposed isolation. Call was masterfully portrayed by Tommy Lee Jones—but it was Robert Duval’s performance of McCrae that stole the show. Where Call’s outlook was utilitarian, Gus’s was romantic. In some ways, Gus resembled the
funny, spirited sidekicks of westerns past: Andy Devine in Stagecoach, Walter Brennan in Red River, Pat Brady in The Roy Rogers Show, or Dennis Weaver and Ken Curtis in Gunsmoke. But in Lonesome Dove, the eccentric sidekick achieved equal status with the strong silent hero—and as a counterpoint to Call, Gus rewrote the meaning of the western hero. Valuing conversation, irony, the personal, and the passionate, Gus openly shed tears over the memory of a sweetheart. In a genre marred by misogyny since the publication of The Virginian in 1902, Gus was no woman-hater. Instead, Gus actively sought the company of women, not merely for sexual gratification, but for their conversation and civilization: he was as comfortable around women as he was around men. The rewriting of the western hero in the Gus character, then, goes a long way toward explaining why Lonesome Dove attracted a mammoth audience in which the women viewers actually outnumbered the men. For a story in a genre that has traditionally been written almost exclusively by men for men, this was no small accomplishment.

At the end of Lonesome Dove, Call returns to Texas after leading the first cattle drive to Montana. The quest for untamed land beyond the reach of bankers, lawyers, and women has been costly for Call. Narrow graves scattered along the trail north contain the remains of men who served with Call in the Texas Rangers, who worked with him in the Hat Creek Cattle Company, and who looked to him for friendship, leadership and discipline. As Call surveys the ruins of the forlorn settlement that he once called his headquarters, he is approached by a young newspaper reporter from San Antonio. An agent of the expanding civilization that Call has spent a lifetime loathing and serving, the reporter presses the uncooperative Call for an interview.

"They say you are a man of vision," says the reporter. Reflecting with anguish on the deaths of his friends (including Gus whose dying words were "What a party!"), Call replies, "A man of vision, you say? Yes, a hell of a vision."

As the final words of the miniseries, "hell of a vision" spoke to Call's disillusionment with the dream of Montana as "Cattleman's Paradise"—a vision that inspired the tragic trail drive. Defeated and alone, his invading heart had, finally, been chastened. But in punctuating what appears to be the great last stand of the cowboy on the small screen, “hell of a vision” takes on even more profound connotations as an epitaph—an epitaph for the television western.

WESTINGHOUSE-DESILU PLAYHOUSE

U.S. Anthology Series

Westinghouse-Desilu Playhouse, an anthology series broadcast on CBS between 1958 and 1960, never received the critical acclaim of Playhouse 90 or Studio One, nor did it last as long as those two dramatic programs. However, among the episodes in its brief run were two productions that, in effect, served as pilots for The Twilight Zone and The Untouchables, two of the most memorable (and most widely syndicated in reruns) television shows of the 1960s.

Westinghouse-Desilu Playhouse was produced by Desilu, a telefilm production company owned by Desi Arnaz and Lucille Ball that owed its genesis and initial success to a single series— I Love Lucy (CBS, 1951–57). By the late 1950s, the company was producing, through a variety of financial arrangements (wholly owning, co-producing, leasing of facilities and personnel), several situation comedies and western dramas. Desilu Playhouse was to be the realization of Arnaz's dream to make Desilu the most significant televfilm production company and to give himself the opportunity for creative play and control beyond his role as producer and actor on I Love Lucy and The Lucy-Desi Comedy Hour (an hour-long comedy series with the cast and characters of I Love Lucy that aired once a month during the 1957–58 television season). Departing from the
standard practice of networks committing to series only after a sponsor had agreed to bankroll production costs, CBS bought Desilu Playhouse on the strength of the Desilu track record and with a promise that The Lucy-Desi Comedy Hour would be among the planned package of dramas, comedies, and musical spectacles.

Westinghouse committed to sponsorship a month after the sale to CBS in early 1958, agreeing to a record of $12 million production cost outlay. The company was already sponsor of the prestigious anthology series Studio One, but this show was canceled shortly after the deal with Desilu. Historians as well as former personnel of Desilu and Westinghouse suggest that it was Westinghouse president Mark Cresap’s love of I Love Lucy and the persuasiveness of the charming Arnaz—who promised Cresap that the series would double Westinghouse’s business in the first year—that encouraged the company to lay out so much money for the telefilmed anthology series.

The first episode of the Westinghouse-Desilu Playhouse, aired in October 1958, was “Lucy Goes to Mexico,” a Lucy-Desi Hour with guest star Maurice Chevalier. The following week the first dramatic hour premiered, “Bernadette” (a biography of Saint Bernadette, the young girl claiming visitation from the Virgin Mary in 19th century Lourdes, France), starring Pier Angeli. Despite Arnaz’s claim that the series would never show anything offensive to children, its highest rated telecasts were the two hours of The Untouchables, featuring Robert Stack as Eliot Ness, leader of the crack FBI team who pursued Al Capone and other gangsters during the Prohibition. When The Untouchables became a regular series on ABC in 1959, it was the subject of great controversy because of its violence and allegedly negative stereotypes of Italian-Americans.

Westinghouse-Desilu Playhouse did not survive long for a variety of reasons—the inability to attract big-star guests every week, the waning power of the anthology series form due to cost and subject matter, the growing popularity of other dramatic programming (such as westerns and cop shows), and the divorce of Ball and Arnaz, which ended their partnership as Lucy and Ricky Ricardo as well. Although Westinghouse-Desilu Playhouse did prove Desilu to be multifaceted at telefilm production, Desi Arnaz did not get a chance to expand his acting range, and the musical spectacles he had envisioned producing for the series fell short of the quantity and quality promised to Westinghouse. The legacy of the series lies in its launching of The Twilight Zone and The Untouchables, and its continuation of The Lucy-Desi Hour, which still appears regularly in syndicated reruns.

WEYMAN, RON
Canadian Producer

The story of Ron Weyman is the story of the beginning of film drama on Canadian national television in the 1960s and early 1970s, a time when there were no full-length dramatic features being made on a regular basis in Canada. In Weyman’s own words, “I was in the business of getting home-town (i.e., Canadian) writers to write films, which would in fact be feature pictures. They could then break through the artificial relationship (as I saw it) between television and the screen.”

Weyman, an executive producer of film drama, took on this mission in the midst of a varied career. In the 1950s, he spent a number of years with the National Film Board of Canada as producer, director, writer, and editor of over 20 films. He traveled extensively and learned the craft of shooting film on location, a skill which he eventually brought back to the Canadian Broadcasting Corporation (CBC), where he was responsible for moving the CBC into the production of filmed series, and encouraging a corporate commitment to dramatic film production.

Several years earlier, when technologies had improved and business had changed to the point that the U.S. model of the filmed series obliterated the live-television anthology genre, Weyman had begun to explore the possibilities offered by film in a form new to Canada—the serial. Serials were still studio-bound in Canada, but Weyman put film crews out on locations across the land to film sequences for
insertion into the stories. The response was remarkable. Viewers loved to see where they lived—and other places in their sprawling country—on television. At the same time, with Weyman’s support, Philip Keately was producing four or five stories in his limited series Cariboo Country—on film, on location in the Chilcotin.

The relationship between the National Film Board (NFB) and the CBC was characterised at this time by uneasy and intermittent cooperation. Opinions on the relationship are divided. It is clear that as far as the medium of film—as opposed to kinescope copies of “live” or “live to tape”—productions were concerned, the two agencies were rivals in some areas. As in many other countries, film was considered to be the paramount medium in a hierarchy of entertainment that excluded theatre but included radio and television. When the question of television drama on film was raised, the perceived wisdom was that this was the NFB’s job. When both agencies were urged to co-produce fictional films for the centennial year (1967), the premise was that CBC director/producers understood actors and NFB producers and directors (their roles were separate in film but not in television) understood film. Inevitably this led to internal conflicts and overspent budgets. The result was three rather ordinary dramas on film, broadcast on the CBC flagship Sunday night anthology Festival. The one remarkable colour film from that period, The Paper People, did not involve the NFB. Physically removed from the working headquarters of the CBC (English) language division, Weyman and his crews and editors were free from middle management’s interference—and were seen as a drama production unit of their own.

The result of this freedom was the hit series Wojack (a concept which was run through the Hollywood blender to emerge as the bland Quincy) and Corwin, a medical series. Meanwhile, with David Gardner, Weyman also produced another hit series, Quentin Durge, M.P., about an idealistic member of parliament. This program was shot on tape, but still went on location for part of each episode, and made a star of actor Gordon Pinsent. Weyman also produced a half-hour comedy program set in an 1837 pioneer settlement, Hatch’s Mill, and McQueen: The Actioneer, a series about a newspaper columnist.

The common thread in all of these works, even Hatch’s Mill, was engagement with topical social issues, an examination of the uses and abuses of power, and questions of individual and communal responsibility. Most episodes raised uncomfortable questions for the audience and often chose not to present the easy answers supplied by most television drama at that time. Within the series form, Weyman fused the documentary style and spirit of inquiry with the personalised focus of continuing characters, who were supplied with literate dialogue, and the subtext, nuance, and structural freedoms of fiction.

Weyman’s influence continues to be felt in the work of producer Maryke McEwan, who began with the docudramas of For the Record, shaped the series Street Legal, and then returned to documentary and docudrama specials. Many successful series in Canada still reflect the blend of documentary and drama which Weyman and Keately created 30 years ago.

WHELDON, HUW

British Producer/Media Executive

Sir Huw Wheldon was one of the leading figures among BBC television program makers in the 1960s and a top BBC administrator in the 1970s. A man of profound intellect and understanding, he inspired great loyalty among those who had the privilege of working with him.

After a distinguished war career, Wheldon became the arts council director for Wales, and was awarded an OBE for his contributions to the Festival of Britain. Joining the BBC publicity department in 1952, he quickly established himself as a gifted television presenter with the children’s program All Your Own. Wheldon’s greatest contribution to modern television in Britain was his editorship of the arts program Monitor from 1958 to 1964. He both produced the program and appeared as its principal interviewer and anchor, surrounding himself with a brilliant team of young directors which included David Jones, Ken Russell, and Melvyn Bragg. Wheldon was a wonderful encourager. He made a major contribution to the work of young directors like Ken Russell, whose career was boosted by his Monitor film on the life of Edward Elgar.

Wheldon made Monitor the seminal magazine program of the arts. As interviewer, he guided his audience by his readiness to learn and to inquire rather than to pontificate. His sensitivity to language and his skilled use of film sequences made Monitor the outstanding arts program of its day. Though some criticised his editorship as promoting a “middle culture” which was neither high art nor pop art, Monitor captured and held a large and varied audience. Wheldon described this group as “a small majority, the broad section of the public well-disposed to the arts.”

The second part of Wheldon’s career was as a manager and administrator. He became head of documentary programs in 1962, a post that was enlarged the following year to head of music and documentary programs. He proved himself a good administrator who could detect and promote real talent. At that time Wheldon believed it was difficult to find superior documentary makers outside the department, and he seldom used freelances. Three years later, however, when he became controller of programs, he accepted the value of the BBC’s employing brilliant freelance film makers such as Jack Gold, Ken Russell, and Patrick Garland. In 1968 Wheldon succeeded Kenneth Adam as director of BBC television.

The post was later redesignated as managing director and, in that position, Wheldon was committed to three conflicting objectives: to maintain and enhance standards; to secure at least half of the viewing audience in competition with ITV; and to contain costs in an era of inflation. Wheldon easily maintained and enhanced standards, but the challenge of competitive scheduling was formidable. His published paper, The British Experience in Television, revealed how the BBC television audience as a whole suffered because the ITV companies ran very popular programs such as Coronation Street and Emergency Ward 10 at 7:30 P.M., thus winning the audience in the early evening and keeping it. Wheldon’s solution was to fight like with like, pitting film against film, current affairs against current affairs. He wrote, “Both BBC-1 and ITV had to adopt broadly competitive policies if they were to remain, each of them in a 50-50 position. Neither could afford to be in a 20-80 position...A 50-50 position was achieved in the sixties, and broadly speaking, has prevailed ever since.”

Containing costs was an ever harder task; the BBC employed the management consultants McKinsey to make recommendations, and as a result of their report, the corporation, through the efforts of Wheldon and others, introduced a system of total costing. Under this system, individual programs were charged a true proportion of the overheads. The prospect of employment casualization worried the broadcasting unions; every time Wheldon imposed cutbacks the unions became restive. Wheldon believed that 70% of the program staff should be on permanent budget, and the other 30% on temporary or short-term contracts.

Sir Ian Trethowan, who succeeded Wheldon as managing director of television, described Wheldon’s style of leadership as tending toward the flamboyant and inspirational. Wheldon was also a shrewd professional broadcaster, with a passion for the public service role of the BBC. He believed it was the BBC’s organisational foundation that made it possible to work well and achieve excellence. For Wheldon, the singularity of the BBC lay in its privileged position. Supported by the license fee, and armed with all the radio channels and two television channels, it could afford excellence.

Huw Wheldon was perhaps the last great leader in BBC television; none of his successors measured up to his achievements. He was described as the “last of the great actor-managers,” but such a judgment underestimates a man who was much more than a performer. It is fascinating to speculate what would have happened if age had not debarred him from succeeding Charles Curran as director general. Instead the job went to his immediate successor as managing director of television, Ian Trethowan. It was Wheldon’s misfortune that his luck ran out just when he could have made his greatest contribution to the fortunes of the BBC as director general.

BBC and  
British Television;  

"British Traditions in a World Wide Medium." London:  

WHICKER, ALAN
British Broadcast Journalist

Alan Whicker is a globe-trotting television commentator without equal. For some 40 years, on behalf of both the BBC and independent British television networks, he has roamed far and wide in search of the eccentric, the ludicrous, and the socially-revealing aspects of everyday life as lived by some of the more colourful of the world’s inhabitants.

Since the late 1950s, when the long-running Whicker’s World documentary series was first screened, Whicker—a former journalist and reporter for television’s Tonight programme (he was once reported dead while working as a war correspondent in Korea)—has probed and dissected the often secretive and unobserved private worlds of the rich and famous, rooting out the most implausible and sometimes ridiculous characters after gaining admittance to the places where they conduct their leisure hours. These have ranged from fabulously appointed cruise ships and the Orient Express to cocktail parties, world tours, health spas, and gentlemen’s clubs. His focus has been truly international, with series from Australia, the Indian continent and Hong Kong, as well Britain and the United States.

Whicker’s satire is so subtle it is often almost undetectable. The objects of his interest are allowed to condemn or recommend themselves and their way of life almost entirely through their own words and appearances, with often little more than the odd encouraging question or aside from Whicker himself. With long-practiced ease and studied diffidence he infiltrates the most select clubs and institutions and moves almost invisibly from person to person, seeking out the most promising individuals and, generally, being more than amply rewarded with the results. Never aggressive in his questioning and carefully cultivating the image of the relaxed but politely interested ex-patriot ready to accept the world as it comes, he has lured countless individuals into allowing him a privileged glimpse of sometimes extraordinary lives.

On occasion over the years Whicker has concentrated his attention upon a single individual, usually someone of immense influence or prestige who is rarely seen in the public eye. Attracted by the air of mystery surrounding such personages, he has drawn general conclusions about the problems and privileges of living with wealth and power through his detailed portraits of such enigmatic and sometimes deeply disturbed (and disturbing) figures as billionaire John Paul Getty, Paraguay’s General Stroessner, and Haiti’s greatly feared dictator “Papa Doc” Duvalier. Sometimes the tone is openly critical, but more often the viewer is allowed to draw his own conclusions.

Whicker’s World, over the years, has consistently claimed a place in the top ten ratings and Whicker himself has been widely recognized for his talents as a social commentator, winning numerous major awards.

WHITE, BETTY
U.S. Actor

One of television’s most beloved, talented actresses, Betty White began as a local TV “personality” and then, defying convention, became star and producer of her own nationally broadcast sitcom. But it was later that she obtained her greatest fame. In a pair of very different roles on sitcom hits, in the 1970s and 1980s, her skillful acting as part of an ensemble and her way with a comic line earned her acclaim and a loving following; a following that has made her a legend.

Early on, White played leads at Beverly Hills High. After graduation, she took on stage roles at the Bliss-Hayden Little
Theater Group. She began to work as a radio actress as well; local TV quickly followed since it was a natural “option for someone just starting.” In 1949, Los Angeles TV personality Al Jarvis called White and gave her her first regular TV assignment. Jarvis took to the airwaves six days a week on KLAC to act as a “disc jockey,” to play records just like on radio. Between selections, he delivered commercials, performed in sketches and conducted interviews. White was hired as his on air “girl Friday” to do much of the same. Jarvis left in 1952 and soon after White took over full hosting duties.

While still appearing on daily Los Angeles television, White, with two male partners, co-founded Bandy Productions in 1952 to produce her own self-starring situation comedy. A direct out-growth of some of White’s daytime sketches, Life with Elizabeth told the story of married couple Elizabeth and Alvin (played by Del Moore). It was an unusual program in several respects, not the least of which was its twenty-eight year old co-creator, producer, and star. White was one of only two women in the early days of television (Gertrude Berg being the other) to wield creative control both in front of and behind the camera. A second distinctive feature of the program were its non-linear stories—each episode consisted of three vignettes, three different plots. Leisurely paced, Elizabeth’s stories had a ring of I Love Lucy about them. While Elizabeth never launched any outrageous schemes, the comic conflicts often grew out of husband Alvin’s disapproval of her logic.

Originally, Elizabeth aired only in the Los Angeles area, but by 1953 Guild Films began to syndicate the series nationally and the program was in production until 1955. Afterward, the show’s three act format made it possible for each episode to be divided up and marketed to stations as fillers. As ten minute segments Elizabeth ran successfully and profitably for many years. Betty White earned her first Emmy in 1952 for Life with Elizabeth.

While Elizabeth was still in production, White moved to NBC and to her own daily daytime variety show. Bandy Production’s The Betty White Show premiered February 1954. White would appear in the two programs simultaneously for a year. The NBC daytime show ended in early 1955 and White filled the next two years working, primarily, for game show packagers Goodman and Toddson.

In 1957, White co-created the prime time sitcom A Date with the Angels. She played Vicki Angel and Bill Williams starred as her husband Gus. More typical in its format and stories than Life with Elizabeth, the Angels were newlyweds and were seen fumbling through their first year of wedded bliss. The program aired on ABC for six months before the network retooled it into the comedy-variety vehicle The Betty White Show. Lackluster ratings, which inspired the revamping, lingered and that program ended in April 1958.

Over the next several years, White concentrated on guest work. She was a regular visitor to The Jack Paar Show where her funny, slightly risqué remarks made her an audience favorite. She also was a frequent visitor to daytime, as a game show panelist.

It was on Password in 1961 that White met her husband, host Allen Ludden. They were married in Las Vegas in 1963.

The Luddens were good friends of actress Mary Tyler Moore and her producer husband Grant Tinker, the two powerhouses behind the hit The Mary Tyler Moore Show. When script #73 for the series came along it called for an “icky sweet Betty White type” and the show’s casting director eventually decided to call the genuine article. Though usually thought of as a series regular, White did not make her first appearance on The Mary Tyler Moore Show until the program’s fourth year and in her most active season she appeared in only twelve of twenty-six show regularly scheduled episodes. Nevertheless, she made herself an integral part of that show’s family and dynamic. As Sue Ann Nivens, the host of “The Happy Homemaker,” White created a sparkling presence. Satirizing her own image, White threw herself into the role of a catty, man-chaser who hid her true self behind a gooey shell of sugar. White won Emmys in the 1974–75 and 1975–76 seasons for Best Supporting Actress. She was part of The Mary Tyler Moore Show’s final episode in 1977.

After its end White began her own series. The sitcom The Betty White Show premiered in 1977 on CBS. Critically acclaimed and co-starring such pros as John Hillerman and Georgia Engel, the program faced tough competition on Monday nights and CBS did not wait for the show to build an audience. It was canceled in early 1978.

In 1983, White joined the small, exclusive group of women to have hosted a daytime game show. Just Men! had White as host and seven male guest stars who tried to help two female contestants win cars. Though the program lasted only six
months, White proved funny and unflappable as "femcee" and won the Emmy for best game show host that year. She remains, to date, the only female winner of that top honor. Back on prime time she took guest roles on St. Elsewhere and other shows.

In 1985, White, at age 63, began the biggest hit of her career. The Golden Girls, from Disney, reunited three of TV's greatest comedienne: White, Beatrice Arthur, and Rue McClanahan. (From the New York stage it imported Estelle Getty.) A highly anticipated show, it was the biggest hit of NBC's new fall season. At the end of the first year, all three lead actresses were nominated for Emmys. White won, for her innocent, adorably ignorant and unflappable "femcee" role Rose Nylund whose nature bespoke of a more optimistic and trusting time. In some ways Rose brought Betty White full circle: Elizabeth of Life with Elizabeth was sweet and a little naive and so was Rose.

Golden Girls ran for seven years. The program was repackaged, without Arthur, for CBS the following season. Golden Palace, with White, McClanahan and Getty running a Florida hotel, aired for one year. Then, for White, it was on to Bob, Bob Newhart's third series, for a few months in early 1994. There she played Sylvia, the no nonsense head of a greeting card company. After Bob, White did several guest spots and some television commercials.

White's eagerly awaited autobiography, Here We Go Again: My Life in Television, was published that summer not long after it was announced that she would return to series TV. Maybe This Time, a Disney-produced sitcom co-starring actress/singer Marie Osmond premiered in the fall of 1995. That same year saw White's induction into the Academy of Television Arts and Sciences' Hall of Fame. Inducted along with Dick Van Dyke, Bill Moyers and Jim McKay, among others, White was the tenth woman so honored.

It has been a long, highly diverse career. From early TV "DJ" to producer/actress to game-show regular to Emmy-winning ensemble player—from "girl Friday" to "Golden Girl." White has said her longevity is based on her "familiarity" to audiences: the generation who knew her as Elizabeth stayed with her up through Rose. Subsequent generations have discovered her, like a shiny new penny, along the way. Each incarnation of Betty White has brought with it a new set of fans.

But whether as herself or as a character (and in her career she has shown a range greater than that of most actors) Betty White always connects with her audience through her honesty and genuineness. And that quality, intimate and comfortable, makes some TV performers truly unique and long-lasting—legendary.

—Cary O'Dell

---

**WHITFIELD, JUNE**

British Comedy Actor

June Whitfield is a durable comedy actor whose entire career has been spent providing excellent support to virtually every major British comedian on radio and television. In the 1950s she became a radio favourite, playing the perennially...
engaged “Eth” in the famous Jimmy Edwards comedy series, *Take It from Here*, but her lasting stardom was due to a remarkable succession of television appearances supporting Britain’s best-loved comedians, and her long-running sitcom series, *Terry and June*. The list of male comedians with whom Whitfield has worked reads like a *Who’s Who* of British comedy talent, and includes Benny Hill, Tony Hancock, Frankie Howerd, Morecambe and Wise, and Dick Emery. However, she was most closely associated with Jimmy Edwards, with whom she co-starred in a number of comedy playlets under the generic title *Faces of Jim* (*Seven Faces of Jim*, 1961; *Six More Faces of Jim*, 1962; and *More Faces of Jim*, 1963; all BBC). She also appeared in many series with Terry Scott, including *Scott On...* (1964–74, BBC), and *Terry and June* (1979–87, BBC), which was a continuation of an earlier series, *Happy Ever After* (1974–78, BBC).

Whitfield made her debut on television in 1951 in *The Passing Show* (BBC), and later appeared as support to Bob Monkhouse and Derek Goodwin in *Fast and Loose* (1954, BBC). After guesting in various sitcoms for 12 years, she landed a starring role in *Beggar My Neighbour* (1966–68), a show about ill-matched neighbours.

*Terry and June* was Whitfield’s most famous vehicle, and her portrayal of a typical long-suffering wife (June Fletcher) with a perennially adolescent husband (Terry Fletcher, played by Terry Scott), while not stretching her talent as an actor, nevertheless demonstrated her amazing consistency and willingness to bring the best out of any material. Throughout the 1980s and into the 1990s, she also reestablished herself as a radio star, working with comedian Roy Hudd in *The News Huddlins*, where she demonstrated a hitherto unknown talent for impersonation, particularly for her “Margaret Thatcher.”

The “new wave” of comedy which began to make serious inroads into British television in the 1980s provided Whitfield with further opportunities. Comediennes Dawn French and Jennifer Saunders used the actor in their sketch show, *French and Saunders* (1987–88, BBC), and Jennifer Saunders later chose her for the role of “Mother” in *Absolutely Fabulous* (1992–95, BBC).

*Absolutely Fabulous* was a groundbreaking British sitcom of the 1990s, with a dazzling mix of politically incorrect, outrageousness, and savage wit. The clever casting of Whitfield as “Mother” allowed Saunders to utilise the actor’s housewife persona in a subversive way, employing dialogue and plot to investigate areas of the character never glimpsed in *Terry and June*.

*Absolutely Fabulous* and similar shows written by and starring women are no longer rarities on British television, but the majority of Whitfield’s career has been spent supporting male comedians who dominated the medium, with most of the programmes on which she worked bearing the name of the male star (*The Benny Hill Show* and *The Dick Emery Show*, among others). She is not the only funny woman of British television to have had such a comedy-support career, but she is arguably one of the busiest. One can only lament that it was never considered viable in British television to produce *The June Whitfield Show*.

—Dick Fiddy

WIDOWS

British Crime Drama

Widows, a drama series with six 52-minute episodes written by Lynda La Plante, was first broadcast on British television in the spring of 1983. The series had a simple, effective conceit, which was initially condensed into the opening credits, in which we saw a carefully planned robbery of a security van go badly wrong, with the apparent death of all participants. The widows of the title are the three women left alone by this catastrophe which has befallen Harry's gang. They decide, under the leadership of Harry's widow, Dolly (Ann Mitchell), to follow through the already laid plans for the next robbery—which they will conduct themselves after recruiting another recently widowed woman, Bella (Eva Mottley). This simple variation on a traditional crime story formula—the gang of robbers planning and carrying out a raid under the surveillance of the police—offered a series of pleasures for both male and female viewers in what is traditionally a men's genre. The production company, Euston Films, a wholly owned subsidiary of Thames Television, set up in 1971 to make high quality films and film series for television, had a strong track record with the crime genre, being responsible for Special Branch, The Sweeney, Out, and Minder. Characteristics of the Euston series included London location shooting in a "fast" realist style, working-class and often semi-criminal milieux and sharp scripts. Widows offered these familiar pleasures, but also engaged with changing ideas of appropriate feminine behaviour by audaciously presenting the widows of the title tutoring themselves in criminality so they could be agents not victims. In this sense the series, which had Verity Lambert as executive producer and Linda Agran as producer, was clearly a Euston product; it also must be understood in relation to earlier shows which had tried to insert women into the crime genre—such as Cagney and Lacey, The Gentle Touch and Juliet Bravo. The difference with Widows was that the women were on the wrong side of the law.

Following the success of the first series—which had six episodes and a continuous narrative—a second series was commissioned and the two were broadcast together in 1985. Again, the narrative was continuous over the two series, and at the end of Widows II the central character, Dolly Rawlins, was imprisoned. Some years later, in 1995, Lynda La Plante, the writer of the first series, produced the final part to what had become a trilogy, She's Out, in which Dolly returns. She's Out reprises Widows I to some extent in that its climax was a carefully planned train robbery—conducted, spectacularly, by women on horseback—but the general critical consensus was that neither of the sequels quite matched Widows I.

Retrospectively, Widows is now perhaps most interesting as Lynda La Plante's first successful foray into a territory she has made peculiarly her own, the hard world of women in the television crime genre. Her subsequent projects, which include the internationally successful Prime Suspect, in which Helen Mirren plays a chief inspector on a murder case, and The Governer, in which Janet McTeer plays an inexperienced governor given a prison to run, have tended to place their central female characters within a male hierarchy and visual repertoire. Here they must both confront the prejudice of their colleagues and successfully inhabit and wield power in the context of law enforcement and criminal justice. In contrast, Widows, the first of La Plante's "women in a man's world" dramas, was set explicitly within a criminal milieu with the women attempting to support themselves through robbery, rather than learning...
how to occupy masculine positions of power. This had a series of interesting consequences.

First, the representation of female criminality in the crime series is strongly focused around the figures of the prostitute and the shop-lifter, not the ambitious and successful bank robbers we find here. So the series shook up expectations about what women in crime series can do. Second, because the women are having to learn to perform as men, femininity is “made strange” and becomes a way of behaviour that the women consciously turn on when they need to escape detection. Finally, it should be noted that the heroes of this series, three white, one black, were all working class in origin—although Dolly, well-off from the proceeds of Harry’s crimes, listens to opera—and the series thus has a place in the history of honourable endeavour by both Euston Films and Lynda La Plante to depict working class life as diverse and contradictory—and more than comic.

WILD KINGDOM
U.S. Wildlife/Nature Program

Mutual of Omaha’s Wild Kingdom (also titled Wild Kingdom) was one of television’s first wildlife/nature programs, and stands among the genre’s most popular and longest-running examples. Wild Kingdom premiered in a Sunday afternoon time slot on NBC in January 1963, and remained a Sunday afternoon staple until the start of the 1968–69 television season, when it was moved to Sunday evenings. NBC dropped Wild Kingdom from its regular series lineup altogether in April 1971 as part of the programming changes and cutbacks each of the three networks were making at that time in response to the newly-created Prime-Time Access Rule. Interestingly, Wild Kingdom found its largest audience as a prime-access syndicated program, playing to an estimated 34 million people on 224 stations by 1974, and beating out the likes of The Lawrence Welk Show and Hee Haw to top the American Research Bureau ratings for syndicated series in October of that year. Though a good number of the episodes aired after 1971 were repackaged reruns from earlier network days, new episodes continued to be produced and included in the syndicated program packages as well. Wild Kingdom was produced and distributed in first-run syndication until the fall of 1988.

The perennial host and figurehead of Wild Kingdom was zoologist Marlin Perkins. Perkins began his zoological career as reptile curator at the St. Louis Zoo in 1926, and then became director of the Buffalo Zoo in the late 1930s and early 1940s, the Lincoln Park Zoo (Chicago) through the 1950s, and finally the St. Louis Zoo in 1962, a position he held until his death on 14 June 1986. Throughout his career, Perkins was drawn to the medium of television as a means of promoting a conservationist ethic and popular-
Perkins initiated his involvement in the production of nature programming in 1945, when television itself was only beginning to work its way into the fabric of American life. Having recently been named director of Chicago's Lincoln Park Zoo, Perkins began hosting a wildlife television program on a small local Chicago station, WBKB. He then became the host of Zoo Parade in 1949, which began its eight-year run on Chicago station WNBQ before becoming an NBC network show early in 1950. A precursor of sorts to the regularly-featured animal segments on The Tonight Show and other late-night talk shows, Zoo Parade was a location-bound production (filmed in the reptile house basement) during which Perkins would present and describe the life and peculiarities of Lincoln Park Zoo animals. Soon after his move to the St. Louis Zoo in 1962, Perkins and Zoo Parade’s producer-director Don Meier were convinced by representatives of the Mutual of Omaha Insurance Company to create Wild Kingdom. Perkins remained involved with the production of Wild Kingdom until a year before his death on 14 June 1986.

Unlike Zoo Parade, Wild Kingdom was shot on film almost entirely in the field, and featured encounters with wildlife in their natural habitat. Indeed, one of the program’s signature features was the footage of Marlin Perkins, or his assistants Jim Fowler and later Stan Brock, pursuing and at times physically engaging with the wildlife-of-the-week, whether that meant mud-wrestling with alligators, struggling to get free from the vice-like grip of a massive water snake, running from unexpectedly awakened elephants or seemingly angered sea lions, or jumping from a helicopter onto the back of an elk in the snows of Montana. Edited to emphasize the dangerous, dramatic, or comedic interplay between man and beast, accompanied by the appropriate soundtrack mix of music and natural sound, and always punctuated by the familiar voice-overs of Marlin or Jim, the popular narrative conceit of Wild Kingdom at times was criticized by some zoologists and environmentalists for putting entertainment values before those of ecological education. Yet Wild Kingdom reflected in precisely these ways many of the dominant ecophilosophical and ecological tenets of its day. Set “out in nature,” as one reviewer put it, and structured around the actions of protagonists who have left the ordered world of the zoo to explore the unpredictable and often alien landscape of nature, Wild Kingdom echoed the conservationist idea of the natural world and the human world as, at best, separate but equal kingdoms.

Many wildlife/nature series since Wild Kingdom have developed different and less human-centered narrative strategies with which to represent the natural world, strategies which may themselves reflect a contemporary shift away from the anthropocentric essence of conservationism toward a more ecocentrically-defined environmentalism. In their day, however, Marlin Perkins and Jim Fowler were, in the words of Charles Siebert, “television’s cowboy naturalists,” and their weekly rides proved to be among the most popular in television history.

WILDLIFE AND NATURE PROGRAMS

Television has capitalized on a cultural fascination with the non-human, the mysterious, the unknown, the exotic, and the remote aspects of the natural world in the form of programs devoted to the study and presentation of wildlife, geography, and other features of the biological universe. Watching such offerings, viewers can “go” to locations normally inaccessible because of physical and fiscal limitations. While there is certainly an entertainment value to such programs, they also play an important educational role. And, like all such offerings, while enter-
taining and educating, they also construct their own interpretation of “nature” or “the wild” or “the animal kingdom.” Indeed, wildlife and nature presentations are among the most prominent in emphasizing television’s capacity for “framing” and “constructing” particular points of view, while omitting others.

Most wildlife and nature programs are documentary in format. They can be classified roughly under three related categories; tourism, scientific discovery, and environmental preservation. Of these categories, the first may be distinguished from purely educational or scientific inquiry because of its commercial connection. The last is also distinct because of its political motivation.

Since most documentaries are shot on location production costs are relatively high and grants or sponsorship of some kind are necessary to sustain them. On location, film crews are kept small and efficient to minimize costs. The director often doubles as stand up and voice over narrator. Equipment usually consists of a single camera, microphone, sound recorder and lighting kit, where necessary.

Wildlife and nature programming first appeared on U.S. television in 1948 with the success of a fifteen-minute science program called The Nature of Things. The series’ success lasted until 1954 and paved the way for a host of nature programs to follow. From the start, the introduction of nature and wildlife programming attracted audiences as a “great escape.” These programs were fun and exhilarating to watch, and had viewers on the edge of their seats waiting for the commercial-breaks to end and the show to resume. Programs such as Zoo Parade (1950-57) a half-hour Sunday afternoon series which looked at animals and animal behavior, included travel footage from such locations as the Amazon jungles. Another such program was Expedition (1960-63) which documented journeys to the various remote regions of the world. Known for presenting exciting and sometimes controversial places around the globe, one episode presented a tribe in New Guinea, ruled by Tambaran—the cult of the ghost which venerated the sweet potato. In another episode, Expedition presented an aboriginal Indian tribe who had never before seen a white man.

Following the success of adult-oriented programs, such as Zoo Parade and Expedition, nature and wildlife shows changed strategies and focused attention on attracting younger audiences. Programs were often set up in a format designed to “introduce” the phenomena of wildlife and nature. Exploring (1962–66) targeted children ages five to eleven by using methods such as storytelling, mathematics, music, science, and history. Discovery (1962–71) searched the world over for natural wonders, as did Zoo Parade and Expedition, but with the aim of attracting a younger audience. The Discovery series was designed to stimulate the cultural, historical, and intellectual curiosity of seven to twelve-year olds regarding nature. Young people were piloted through a spectrum of wonders including how animals use their tails, dramatized essays on the history of dance, the voyage of Christopher Columbus, a visit to a Texas ranch, and were introduced to the desert Native Americans. In keeping with the same format, First Look: Wonders of the World (1965–66) was designed to provide young children with an introduction to natural history, science, and the various inventions of the world. First Look’s topics varied from exploring sea life to experiencing a simulated prehistoric expedition of the dinosaur period.

From the 1960s through the 1970s, wildlife and nature programming introduced a new format designed to give audiences an “untamed” and “dangerous” view into the world of nature. Programs became more “adventurous” in their presentational style. Perhaps the best known and successful of such a series was Wild Kingdom (1963–88), sponsored by Mutual of Omaha and hosted for most of its duration by Marlin Perkins. Wild Kingdom traveled to out-of-the way places in Africa, South America, the Arctic, Alaska, across the United States, Canada, and the Soviet Union in search of unusual creatures and wild adventures. The series covered such diverse topics as animal survival in the wilds, treatment of animals in captivity, and the lives and habitats of animals and primitive people and their struggle for survival. Similar documentary series followed which focused on animals and their struggle for survival, including The Untamed World (1969–71); Wild, Wild World of Animals (1973–76); The World of Survival (1971); Safari To Adventure (1971–73); and Animal World (Animal Kingdom) (1968–80). Another such program was Jane Goodall and the World of Animal Behavior (1973–74). ABC aired several nature documentaries featuring Miss Goodall, who came to national attention as a scientist who lived among the apes. Here the scientist as “adventurer-hero” became a central narrative focus. Two successful efforts in her ABC series were “The Wild Dogs of Africa” (1973) and the "Baboons of Gombe" (1974) which
wildlife programs added a “sophisticated approach” with the airing of such programs as the National Geographic Specials (1965–). Produced in cooperation with the National Geographic Society, this long running series of specials on anthropology, explorations, biological, historical and cultural subjects was first aired on CBS (1965–73), then on ABC (1973–74) and currently can be seen on PBS (1975–). The National Geographic Specials, in keeping with the traditions of the journal and the society that stand behind them, are noted for exceptional visual qualities. Another such program was Animal Secrets (1966–68), which disclosed the mysteries of wildlife behavior in an appealing nature series and explored such phenomena as how bees buzz, how fish talk, and why birds migrate. A program on “The Primates,” filmed in Kenya, presented a study of baboons; their social order and living patterns were observed to find clues to the development of man. The high-quality film series Nova (1974–) also relied on detailed productions with exceptional production values. Nova is noted for examining complex scientific questions in a manner comprehensible to laymen and in a relatively entertaining fashion. For the most part, the series concerns itself with the effects on nature and society of new developments in science. The close connection of this program with the Public Broadcasting Service (PBS) has almost reached “brand” identification, and the program is often cited as an example of what PBS is and can do.

For a short period of time, wildlife documentaries added a new frontier to the nature of inquiry by examining “oceans and marine worlds.” With the appearance of such programs as Water World (1972–75) and the very popular Undersea World of Jacques Cousteau (1967–76), a new market was opened and added to the previous audience. The Undersea World centered around the scientific expeditions of Captain Jacques Cousteau and the crew of his specially equipped vessel, the Calypso. The first show began on ABC in 1968 and continued for nearly eight years. ABC dropped the series in 1976, but it continued on PBS with underwriting by the Atlantic Richfield Corporation. Since 1981 Cousteau’s environmental series and specials have been produced for Turner Broadcasting System (TBS) in a number of short series.

As the decade of the 1970s closed there was a movement towards bringing back traditional methods of presenting wildlife and nature programming—as if “reintroducing” the areas would stir up an interest in the subject. One such program, Animals, Animals, Animals (1976–81), explored the relationship of humans and other animals in order to help youngsters and inquiring adults understand various wildlife phenomena and the interrelated scheme of nature. An entertainment focus was combined with an introduction to the world of science, zoology and biology, and each episode focused on a particular animal in an exciting, yet simplistic manner. By the 1980s a few wildlife and nature programs such as Nature (1982–) and Wild America (1982–) sustained the “adventurous” format that marked the era of the 1960s and 1970s. For the most part, however, 1980s programming appeared to make greater strides when the focus was on ecology and “saving the planet.” During this period programs such as Universe (Walter Cronkite’s Universe) (1980–82) and Life on Earth (1982) often focused on space—the solar system and beyond—in order to understand the phenomena of nature and society.

Another major advancement for wildlife and nature programming occurred in 1985 when the Discovery Channel, an all-documentary cable network, was launched into homes across the nation. This network was devoted chiefly to presenting documentaries on nature, science-technology, travel, history, and human adventure—finally, there was something for everyone. By 1990, the Discovery Channel’s penetration passed the 50 million mark, making it one of the fastest growing cable networks of all time. Today, the Discovery Channel has become an alternative outlet for the kinds of nature and wildlife programs that in the 1980s had to depend on public television for exposure. With the success of Discovery Channel, another cable network has joined the nature campaign. Nickelodeon (1979–), a children’s programming network, recently teamed with Sea World of Florida to educate young people about the importance of conserving the earth’s natural resources, the protection of endangered species, pollution prevention, and the importance of recycling. In the 1990s, “Nickelodeon’s Cable in the Classroom” service and “Sea World’s Shamu TV: Sea World Video Classroom” service provides a hands-on program for audiences from preschoolers to college postgraduates about sea-life and the ecology.

A number of programs focused on nature and wildlife have stepped beyond the most common U.S. television goals of entertaining and informing. They have not only attempted to support the preservation of species and environments but to hold corporations and governmental agencies accountable for acts of pollution and destruction. Films of this type often record dramatic confrontations between those who seek to conserve and those who seek to exploit the environment. The environmental activist group Greenpeace, for example, adopts as part of its policy the need to identify and protest callous indifference toward animals and the environment, and has used such films with great advantage. It remains to be seen whether or not television will eventually be used in a similar manner, or whether “nature” will continue to be presented either as an entertaining commodity or as an exotic topic for popular education.

—Nannetta Durnell and Richard Worthingham

FURTHER READING
WILDMON, DONALD
U.S. Minister/Media Reformer

As social mores have evolved in the United States in recent years, increasing concern over the role of the media, particularly that of television, has come from outspoken "media reformers" such as Donald Wildmon. Wildmon is regarded by some as a self-appointed censor. To others, he is a minister whose congregation crosses the nation and is comprised of followers upset with the kinds of material seen on television. His ministry comes not so much from preaching, but from the publication of the American Family Association Journal, which boasts a readership of nearly two million and income of over $10 million. The central theme of the publication and of Wildmon's work is the advocacy of effecting change in television content through boycotting the advertisers of programs which present language and themes that he believes to be anti-Christian.

Wildmon, a soft-spoken fundamentalist Methodist minister from Tupelo, Mississippi, graduated from Emory University's Divinity School. He has spoken often of the roots for his current cause: in the mid-1970s, when his family of young children were gathered around the TV set, he found nothing but sex and violence, adultery and swearing. He vowed to his family that he would do something about it.

At the time, he was the pastor of a Methodist church in Mississippi. He asked his congregation to go without television for one week and found such a striking reaction to the content of programming and to this action taken against the medium that he soon formed the National Federation for Decency, in Tupelo. From that time he never re-entered the regular ministry.

Early on, Wildmon discovered that preaching to the network chiefs, advertisers and programmers was not an easy task. By 1980 he joined with the Reverend Jerry Falwell, leader of the Moral Majority, to form the Coalition for Better Television (CBTV). Members began to observe and record, with a form of "content analysis," the numbers of sexual references, or episodes ridiculing Christian characters, and other aspects of programming deemed offensive. Armed with statistics that, to him, demonstrated the erosion of Christian principles by television programs, Wildmon visited corporate heads. On one occasion, he convinced the chairman of Proctor and Gamble to withdraw advertising from approximately 50 TV shows.

Disputes between Wildmon and Falwell broke up CBTV and Wildmon started another group, Christian Leaders for Responsible Television (CLEAR-TV). His concern spread from television to movies to the distribution of adult magazines. He targeted movie studios such as MCA–Universal, distributor of The Last Temptation of Christ, and its "blasphemous depiction" of biblical accounts. He organized campaigns against retail chains—7-Eleven, and K Mart, parent company of Waldenbooks—where adult magazines were sold. And he protested against hotel chains such as Holiday Inns for carrying adult movies on in-house cable systems.

Wildmon's boycotting strategies have been both direct, going to the heads of companies requesting avoidance of anti-Christian materials, and indirect, asking media users to avoid buying those products advertised on questionable programs. In some cases, he seems to have been successful. PepsiCo was persuaded to cancel commercials in which Madonna's use of religious imagery appear. Mazda Motor of America withdrew advertising from NBC's Saturday Night Live because of its "indecent vulgar and offensive" nature. And when Burger King was found advertising on TV shows containing "sex, violence, profanity and anti-Christian bigotry," it was induced to run a newspaper ad, an "Open Letter to the American People," declaring its support of "traditional American family values on TV." Some of Wildmon's critics question whether such persuasion by Wildmon is a form of censorship. Others, including Wildmon, insist that such boycotting and public pressure is "as American as the Boston tea party."

Donald Wildmon

Photo courtesy of Broadcasting and Cable
Past issues of Wildmon's American Family Association Journal have carried names of members of Congress, together with phone and fax numbers, suggesting active consumer participation in the law-making process. A typical issue of the journal includes "TV Reviews" focused on demonstrating the presence of themes not in keeping with Wildmon's perspectives of traditional values, but there is also text that highlights "The Good Stuff." The journal also regularly presents a list of "troublesome" TV programs and identifies the advertisers supporting the shows. And this is followed by a column listing the "Action Index" or the more emphatic "Boycott Box," listing names of corporations, the chief executive officers, addresses, and phone numbers. Articles cover a number of topics, such as NEA's funding of "anti-Christian" art. Advertisements offer related items such as the video, MTV Examined, described as a "comprehensive—and sometimes shocking—look at the destructive effects of MTV and how the programming often crosses the line from entertainment to promotion of illicit sex, violence, drug abuse, immorality, profanity and liberal politics."

More liberal forms of media have been outspoken in reacting to these efforts. Playboy has regularly lashed out against Wildmon, presumably because of his attacks on retail outlets that sell the magazine. Other media simply ignore him.

In 1994 Wildmon's attacks hit a crescendo and gained national attention when he brought to public attention, before its airing on ABC, the controversial cop show, NYPD Blue. The show's producer, Steven Bochco, had indicated that he would push the frontier of what would be seen on prime-time TV with a series that included controversial language, adult situations, perhaps even brief nudity. This would be television akin to what might be seen in R-rated movies. Wildmon called for a boycott, loudly. With Bochco's promotions and Wildmon's protests, the show attracted viewers and received good ratings, as well as many positive critical notices. A number of ABC affiliates chose not to carry the show, however, and there was some controversy surrounding its advertisers. But the viewing public soon became acclimated; the show did not seem strikingly indecent to many and it continued unchanged through the season. Wildmon later conceded that his loud protests against the show probably attracted attention to it.

While the idea of consumer activism and consumer boycotting came from liberals in the 1960s and 1970s, in ensuing decades such causes and tactics came from the political right. Donald Wildmon, as leader of the forces attacking the media and television in particular, brought to many people the idea that they were not helpless in countering media influences. In doing so, he has taken a prominent place in a long line of advocates addressing the social and cultural role of television.

WILLIAMS, RAYMOND

British Media Critic

Raymond Williams was to become one of Britain’s greatest post-war cultural historians, theorists and polemists. He was a distinguished literary and social thinker in the Left-Leafsite tradition. He was concerned to understand literature and related cultural forms not as the outcome of an isolated aesthetic adventure, but as the manifestation of a deeply social process that involved a series of complex relationships between authorial ideology, institutional process, and generic/aesthetic form. Pioneering in the context of the British literary academy, these concerns are heralded in the brief-lived post-war journal Politics and Letters, which he co-founded. They are perhaps best summarised in Culture and Society 1780–1950, his critical panorama of literary tradition from the Romantics to Orwell, predicated on the key terms “industry”, “democracy”, “class”, “art” and “culture”. This ideological sense of cultural etymology became the basis of his influential pocket dictionary: A Vocabulary of Culture and Society.

Marked by a commitment to his class origins and his post-war experiences of adult education, his expansion of the traditional curriculum for English also entailed an early engagement with the allied representational pressures of film and cinema, in books such as Preface to Film, Drama from Ibsen to Eliot, Drama in Performance, Modern Tragedy, and Drama from Ibsen to Brecht. His perception of the links between film and drama remains evident in his 1977 Screen essay on the politics of realism in Loach’s TV film The Big Flame and in his historical introduction to Curran’s and Porter’s British Cinema History (1983).

His preoccupation with the relationships between ideology and culture, and the development of socialist perspectives in the communicative arts, were to continue in such works as The Long Revolution, May Day Manifesto 1968, The English Novel from Dickens to Lawrence, The Country and the City, Marxism and Literature, Problems in Materialism and Culture, Culture, Writing in Society, Towards 2000, Resources of Hope, The Politics of Modernism, and Politics, Education, Letters, Politics and Letters: Interviews with ‘New Left Review’ provides a useful retrospective.

In the 1960s Williams’ work was to take on new dimensions. He published his first, autobiographical novel, Border Country, which was to be followed by Second Generation, The Volunteers and The Fight for Manod. At the beginning of the decade, he was to write his first book directly addressing the new world of contemporary mass media, Communications, an informative and influential volume in the early history of media studies in Great Britain and internationally. He was to move to the centre of left cultural politics, in the crucible of 1968, with his chairmanship of the Left National Committee and his edition of the May Day Manifesto 1968.

Throughout the 1960s he was participating in what he remembered as innumerable TV discussion programmes as the young medium found its style. Two of his novels became TV plays, now sadly lost—a “live” version of A Letter from the Country (1966) and Public Inquiry (1967), filmed in his native Wales.

From 1968 to 1972 he contributed a weekly column on TV to the BBC magazine The Listener. Now collected as Raymond Williams on Television: Selected Writings, these illustrate Williams’ response to a wide range of TV themes and pleasures—from an enthusiasm for television sport to a distrust in the medium’s stress on “visibility”, to arguments about the economic and political relationships between production and transmission.

He went on to develop these ideas more formally in the book Television: Technology and Cultural Form, one of the first major theoretical studies of the medium, largely written on a visiting professorship at Stanford in 1972. There he soaked up American TV, almost inevitably developed his influential concept of TV “flow”, and encountered the newly emerging technologies of satellite and cable.

In 1970 he had contributed a personal documentary, Border Country, to the BBC series One Pair of Eyes, which was to be followed, at the end of the decade, by The Country and The City: A Film with Raymond Williams, the last of five programmes in the series Where We Live Now: Five Writers Look at Our Surroundings (1979). In the 1980s he contributed to a trio of Open University/BBC programmes—Language in Use: “The Widowing of Mrs Holroyd” (1981), Society, Education and the State: Worker, Scholar and Citizen (1982) and The State and Society in 1984 (1984). He also appeared in Identity Ascendant: The Home Counties (1988), an episode in the HTV/Channel 4 series The Divided Kingdom, and in Big Words, Small Worlds (1987), Channel 4’s record of the Strathclyde Linguistics of Writing Conference.

Williams’ contribution to cultural thinking was that of the Cambridge professor who never forgot the Welsh village of his childhood. He was a theorist of literature who himself wrote novels; an historian of drama who was also a playwright; and a commentator on TV and the mass media who himself regularly contributed to the medium in a variety of ways. For him, unlike so many academics, the medium of television was a crucial cultural form, as relevant to education as the printed word. When Channel 4 began transmission in Great Britain in 1982, it was entirely appropriate that this innovative channel’s opening feature film should be So That You Can Live, Cinema Action’s elegy for the industrial decay of the Welsh valleys, explicitly influenced by the work of Williams, from whose work the film offers us readings.

The Second International Television Studies Conference, held in London in 1986, was honoured to appoint him as its co-president alongside Professor Hilde Himmelweit. But it was a gathering, eventually, that he could not join, and by the time the next event came round in 1988 the conference sadly honoured not his presence, but his passing. The breadth of his impact in the U.K. cultural arena can be
gauged from the British Film Institute monograph, Raymond Williams: Film/TV/Cinema (1989), produced to accompany a Williams memorial season at the National Film Theatre and containing a contribution by his widow.

WILSON, FLIP

U.S. Comedian

Flip Wilson was among a group of rising black comics of the early 1970s, of such notoriety as Bill Cosby, Nipsey Russell, and Dick Gregory. He is best remembered as the host of The Flip Wilson Show, the first variety show bearing the name of its African-American host, and for his role in renewing stereotype comedy.

With a keen wit developed during his impoverished youth, Wilson rose quickly to fame as a stand-up comic and television show host. Under the stage name Flip, inherited from Air Force pals who joked he was "flipped out," Wilson began performing in cheap clubs across the United States. His early routines featured black stereotypes of the controversial Amos ’n’ Andy-type. After performing in hallmark black clubs such as the Apollo in Harlem and the Regal in Chicago, Wilson made a successful appearance on The Ed Sullivan Show. Recommended by Redd Foxx, Wilson also performed on The Tonight Show to great accolades, becoming a substitute host.

After making television guest appearances on such shows as Love, American Style and That’s Life, and starring in his own 1969 NBC special, Wilson was offered an hour-long prime-time NBC show, The Flip Wilson Show, which saw a remarkable four-year run. Only Sammy Davis, Jr. had enjoyed similar success with his song-and-dance variety show; comparatively, shows hosted by Nat "King" Cole and Bill Cosby were quickly canceled, due to lack of sponsorship and narrow appeal. At the show’s high point, advertising rates swelled to $86,000 per minute, and by 1972, The Flip Wilson Show was rated the most popular variety show, and the second-most popular show overall in the United States.

Wilson’s television success came from his unique combination of "new" stereotype comedy and his signature stand-up form. His style combined deadpan delivery and dialect borrowed from his role models, Redd Foxx and Bill Cosby, but replaced their humorous puns with storytelling. His fluid body language, likened to that of silent-screen actor Charlie Chaplin, gave Wilson’s act a dynamic and graceful air. The show benefited from his intensive production efforts, unprecedented for a black television performer; he wrote one-third of the show’s material, heavily edited the work of writers, and demanded a five-day work week from his staff and guests to produce each one-hour segment. Audiences appreciated the show’s innovative style risks, such as the intimate theater-in-the-round studio, and medium-long shots which replaced close-ups, to fully capture Wilson’s expressive movements.

Wilson altered his club act for television to accommodate family viewing, relying on descriptive portraits of black characters and situations rather than ridicule. Still, his show offended many African-Americans and civil rights activists who believed Wilson’s humor depended on race. A large multi-ethnic television audience, however, found universal humor in the routines, and others credited Wilson with subtly ridiculing the art of stereotyping itself. Wilson denied this claim, strongly denouncing suggestions that his race required that his art purport anti-bias messages.

These divergent interpretations in fact reflect the variety among Wilson’s characters. Some were easily offensive, such as the money-laundering Reverend Leroy and the smooth swinger, Freddy the Playboy. Others, such as Sonny, White House janitor and the "wisest man in Washington," were positive black portraits. The show’s most popular character, Geraldine, exemplifies Wilson’s intention to produce race-free comedy. Perfectly coiffed and decked out in designer clothes and chartreuse stockings, Geraldine demanded respect and, in Wilson’s words, “Everybody knows she don’t take no stuff.” Liberated yet married, outspoken yet feminine, ghetto-born yet poised, Geraldine was neither floozy nor threat. This colorful black female image struck a positive chord with viewers; her one-liners—“The devil made me do it,” and “When you’re hot, you’re hot”—became national fads. Social messages were imparted indirectly through Wilson’s characters; the well-dressed and self-respecting Geraldine, for example, countered the female-degrading acts of other popular stand-up comics. Through Geraldine, Wilson also negotiated race and class bias by positively characterizing a working-class black female, in contrast to the absence of female black images on 1970s television, with the
exception of the middle-class black nurse of the 1969 sitcom *Julia,* Wilson addressed race more directly through story and theme; one skit, for example, featured Native American women discourteously greeting Christopher Columbus and crew on their arrival in North America. Such innovative techniques enabled Wilson's humorous characters and themes to suggest racial and gender tolerance.

Wilson saw himself first as an artist, and humor was more prominent than politics in his comic routines. This style, however, allowed him to successfully impart occasional social messages into his act. Moreover, he achieved unprecedented artistic control of his show, pressing the parameters for black television performers and producers. Through Geraldine, Wilson created one of a few respectful television images for black women, who were generally marginalized by both the civil rights and women's movements of that era. Finally, though no regular black variety show took up where Wilson left off, its success paved the way for the popularity of later sitcoms featuring middle- and working-class black families, situations, and dialect, shows such as *Sanford and Son, The Jeffersons,* and *Good Times.*

**WINDSOR, FRANK**
British Actor

Frank Windsor is one of the most well-known stalwarts of British police drama serials, having co-starred in several such productions since the 1960s. His career as a television performer started in radically different shows from those with which he was destined to become most closely associated, with appearances in the Shakespearean anthology *An Age of Kings* and subsequently in the science-fiction series *A for Andromeda,* in which he played scientist Dennis Bridger. In 1962, however, he made his debut in the role with which he became virtually synonymous—that of Newtown's Detective Sergeant John Watt. As one of the crime-busting team crewing *Z Cars,* Watt was right-hand man to Detective Inspector Barlow (Stratford Johns), and was often placed in the role of the "nice guy" to Stratford John's more aggressive, often bullying, senior officer. The two actors formed a dynamic, absorbing partnership that survived well beyond their departure from the series in 1965.

The two stars resumed the same screen personas in their own follow-up series, *Softly, Softly,* a year after leaving the Newtown force. With Barlow raised to the rank of detective chief superintendent and Watt detective chief inspector, the pair continued to hunt down criminals in their "nice and nasty" partnership, though now based in the fictional region of Wyvern, which appeared to be somewhere near Bristol.
Three years into the series the pair were relocated to Thamesford Constabulary’s CID Task Force, and the programme itself was retitled Softly, Softly—Task Force. Barlow disappeared from the series in 1969, when he left for his own series, Barlow at Large, leaving Watt to continue the battle with new partners for another seven years.

Barlow and Watt were brought together again in 1973, when they disinterred the case files connected with the real-life “Jack the Ripper” murders of the 1880s. They pored over the various theories concerning the identity of the murderer, including the possibility that he might have been a member of the royal family, but in the end even television’s two most celebrated police detectives could draw no firm conclusion. Along similar lines was Second Verdict, another short series in which the two characters investigated unsolved murder cases from real life.

The extent to which Windsor became linked to just one role has subsequently militated against his taking parts that would challenge public perceptions of his original persona. He has, however, appeared as a guest in supporting roles in a number of established series (including All Creatures Great and Small, Boon, and Casualty), has participated in quiz shows, and has also accumulated a number of film and stage credits.

WINFREY, OPRAH
U.S. Talk Show-Host

Oprah Winfrey, known primarily as the nationally and internationally syndicated American talk-show host of The Oprah Winfrey Show, has successfully charted and navigated a career that has built on the television industry as a form of public therapy. The proliferation of talk-show programs in 1980s and 1990s that have been constructed around the public airing of private trials can be directly attributed to the success of Oprah Winfrey and, a decade
earlier, Phil Donahue. It is a genre of television that blends the private and the public into a public confessional. On Oprah Winfrey both ordinary people and guest celebrities are there to reveal their inner truths. And it is these revelations which create in the audience the dual sentiments that have been critical to the success of Oprah: there is a voyeuristic pleasure in hearing about what is normally hidden by others, and there is the cathartic sensation that the public revelation will lead to social betterment.

One of the key features of Oprah Winfrey's television persona is that her own private life has been an essential element of her talk-show format of public therapy. Her poor black background and her past and current problems with child abuse, men, and weight have made Oprah an exposed public personality on television and have allowed her loyal audience to feel that they "know" her quite well. This televisual familiarity is part of the power of Oprah Winfrey.

Winfrey was born in Kosciusko, Mississippi, in 1954 and was raised solely by her paternal grandmother for her first six years on a rural pig farm. Her now famous name Oprah was in fact a misspelling of the Biblical name Orpah. Throughout her childhood and adolescence she moved between her father's residence in Nashville and her mother's in Milwaukee. By her early teens she had settled more permanently in Nashville and it was there that she developed her first contacts with broadcasting.

Her path into the profession was partially connected to her success in two beauty pageants. At 16, Winfrey was the first black Miss Fire Prevention for Nashville. From that position and her obvious and demonstrated abilities in public speaking, she was invited to be the newsreader on a local black radio station, WVOL. Later, she maintained her public profile by winning the Miss Black Tennessee and gained a scholarship to Tennessee State University. In her final year of studying speech, drama and English, Winfrey was offered a position as co-anchor on the television news program of the CBS affiliate, WVTW. She has described her early role model for news broadcasting as Barbara Walters.

Although not entirely comfortable with her role as news journalist/anchor, Winfrey gained a more lucrative co-anchor position at WJZ, the ABC affiliate in Baltimore in 1977. She struggled for several months in the position—her greatest weaknesses derived from not reading the news copy before airtime and from her penchant for extensive ad libbing. She was pulled from the anchor position and given the role of co-hosting a morning chat show, People are Talking. Able to be relaxed and natural on air, Winfrey excelled in this position. By the end of her run, her local morning talk show had transformed into a program dealing with more controversial issues and Winfrey's presence helped the show outdraw Donahue, the nationally syndicated talk show in the local Baltimore market.

In 1983, she followed her associate producer Debra Di Maio to host A.M. Chicago, a morning talk show on Chicago station WLZ-TV. By 1985 the name was changed to The Oprah Winfrey Show and again the program was drawing a larger audience than Donahue in the local Chicago market. Winfrey also gained a national presence through her Oscar-nominated role in Steven Spielberg's The Color Purple (1985). The large television program syndicator King World, realizing the earning potential of Winfrey, took over production of her show in 1986 and reproduced the daily program for the national market. Within weeks of the launch in September 1986, The Oprah Winfrey Show became the most watched daytime talk show in the United States.

The deal struck with King World in 1986 instantly made Winfrey the highest paid performer in the entertainment industry with estimated earnings from the program of $31 million in 1987. She has continued to be one of the wealthiest women in the entertainment industry and has used that power to establish her own production company, Harpo Productions. Harpo's presence on television has been evident in a number of arenas. First, in dramatic programming, Harpo produced the miniseries The Women of Brewster Place (1989) and the follow-up situation-drama comedy Brewster Place (1990). Winfrey both starred in and produced these programs. She has produced and hosted several prime-time documentaries, one specifically on children and abuse. In recent years, she has supplanted Barbara Walters in securing one-off interviews with key celebrities. Her prime time interview of Michael Jackson in February 1993 (ABC) succeeded at garnering a massive television audience both
nationally and internationally. Similarly her interview with basketball star Michael Jordan in October 1993 reaffirmed Winfrey’s omnipresence and power in television.

The centrepiece of both her wealth and public presence continues to be her daily talk show, which is also broadcast successfully internationally. Borrowing the “run and microphone thrust” device from Phil Donahue, she makes the television audience part of the performance. With this and other techniques, Winfrey has managed to create an interesting public forum that transforms the feminist position that “the personal is political” into a vaguely political television program. Themes range from the bizarre, (“Children Who Abuse Parents”) to the titillating (“How Important is Size in Sex?”), from the overtly political (“Women of the Ku Klux Klan”) to the personal trials and tribulations of her own weight loss/gain and the “problems” of fellow celebrities. The sensational quality to the topics has often been cited to discount the seriousness of her show and others. But Winfrey has been a central part of this televisial transformation of public debate in the United States. Partly through her own public revelations of her private battles and her capacity to move from the serious to the humorous, Oprah Winfrey has aided in the expansion of television as public therapy.

WINTERS, JONATHAN

U.S. Comedian

Jonathan Winters began his career in radio as a disk jockey on station WING (Dayton, Ohio), and then moved to television at WBNS (Columbus, Ohio), where he hosted a local program for three years. He moved to New York in the 1950s and performed in night clubs on Broadway. But it is TV that has made Winters both famous and familiar to a huge and grateful U.S. audience for more than four decades. Known for his numerous characters and voices, his stream-of-consciousness humor has influenced countless other performers, a prime example being the contemporary comic actor Robin Williams.

Winters' first network television appearances came during the 1950s with enormously successful guest spots on talk/variety shows such as The Jack Paar Show, The Steve Allen Show, and The Tonight Show. He went on to appear in many television programs, including Omnibus (where he was the show’s first stand-up comedian) Playhouse 90, Twilight Zone, and Here's the Show (a summer replacement for The George Gobel Show). The NBC Comedy Hour, originally designed as a Sunday showcase for new talent, was revamped to feature Gail Storm as the hostess and Jonathan Winters as the show’s comedian. He also hosted his own program, The Jonathan Winters Show, in 1956–57. Aired on NBC from 7:30–7:45 P.M. to fill a 15-minute spot following the NBC evening news, the show was structured around Winters’ sketches, blackouts, and monologues. The program was revived by CBS in a one-hour format for two seasons beginning in December 1967, and featured the famous Maude Frickert, as well as the character Willard “From the Couple up the Street” sketch. In some ways, these shows indicated that Winters’ comedy was almost too unpredictable for conventional network television, and he was allowed more freedom in The Wacky World of Jonathan Winters, a syndicated program that focused on Winters’ bravura improvisations.

Younger viewers may remember Winters from Mork and Mindy, where he played the role of Mork and Mindy’s son. Paired with Robin Williams in his Mork role, Winters was wildly inventive. The comedy in this show was at times truly explosive, with one improvisational genius playing off the other. In the more conventional sitcom, Davis Rules, Winters was confined to a character, yet somehow managed to work many of his other personae into the stories. His performance earned an Emmy for best supporting actor in a comedy. In addition to on-camera roles, Winters frequently provides the voice for commercials and cartoons. These performances are usually wedded to his distinctive style, allowing audiences the pleasure of recognition for yet another Jonathan Winters moment.

WISEMAN, FREDERICK

U.S. Documentary Filmmaker

Frederick Wiseman is arguably the most important American documentary filmmaker of the past three decades. A law professor turned filmmaker in 1967, Wiseman, in his most dramatically powerful documentaries, has poignantly chronicled the exercise of power in American society by focusing on the everyday travails of the least fortunate Americans caught in the tangled webs of social institutions operating at the community level. An underlying theme of many of these documentaries is the individual's attempt to preserve his or her humanity and dignity while struggling against laws and dehumanizing bureaucratic systems. Wiseman functions as producer, director, and editor of the films, which numbered 29 by 1996. The documentaries have all been broadcast on public television in the United States, presented by New York station WNET, and have regularly marked the opening of the new PBS season. Wiseman's documentaries have won numerous awards, including two Emmys, and a Dupont Award. Wiseman was awarded the prestigious MacArthur Prize Fellows Award in 1982, and received a Peabody Award for his contribution to documentary film.

Wiseman's aesthetic falls squarely in the "direct cinema" tradition of documentary filmmaking, which emphasizes continued filming, as unobtrusively as possible, of human conversation and the routines of everyday life, with no music, no interviews, no voice-over narration, and no overt attempt to interpret or explain the events unfolding before the camera.

Wiseman calls his films "reality-fictions," reflecting his tight thematic structuring of the raw footage in the editing process. Eschewing "leading characters," Wiseman skillfully interweaves many small stories to provide contrast and thematic complexity.

Wiseman's debut as a documentarian was both auspicious and highly controversial. His first film, Titicut Follies (1967), was shot in the Massachusetts State Hospital for the Criminally Insane at Bridgewater. Here we see the impact of a social institution—a publicly-funded mental hospital—on society's rejects. Often described as an "expose" (a description Wiseman rejects), Titicut Follies chronicled the indignities suffered by the inmates, many of whom were kept naked and force-fed through nasal tubes. Titicut Follies

PUBLICATIONS

 caused a public outcry and demands for institutional reform. The film was officially barred from general public showings until 1993 by order of a U.S. court on grounds that it violated an inmate's privacy.

A succession of critically-acclaimed documentaries quickly followed. In **High School** (1968), Wiseman examined a largely white and middle-class Philadelphia high school and the authoritarian, conformist value system inculcated in students by teachers and administrators. The official ideology reflected in the educational power structure was largely seen as an expression of the value framework of the surrounding community.

**Law and Order** (1969) was filmed in Kansas City, Missouri. Here, Wiseman cast his gaze on the daily routine of police work in the Kansas City police department. Most of the sequences were filmed in the black district of the city. Examples of police brutality and insensitivity were juxtaposed with other examples of sympathetic patrol officers attempting to assist citizens with a variety of minor, and sometimes humorous, problems. On the whole, however, police behavior was depicted as symptomatic of deeper social crisis, including racism, poverty, and the resultant pervasive violence in the inner city.

His next film, **Hospital** (1969), for which Wiseman won two Emmys for Best News Documentary, was set in the operating room, emergency ward and out-patient clinics of New York City's Metropolitan Hospital. As in **Law and Order**, Wiseman used an institutional setting to examine urban ills. Stabbing and drug overdose victims, abused children, the mentally disturbed, and the abandoned elderly pass through the public hospital. But unlike the authority figures in **Titicut Follies**, the doctors, nurses, and orderlies at Metropolitan come off as much more humane, responding to patients with sympathy and understanding.

In **Juvenile Court** (1973), as in **Hospital**, Wiseman reveals the compassionate side of authority. The court officials in the Memphi, Tennessee, juvenile court discuss, with evident concern, the futures of young offenders accused of crimes such as child abuse and armed robbery.

**Welfare** (1975) is one of the most provocative and understated of Wiseman's institutional examinations. Shot in a New York City welfare office, the documentary, in seemingly interminable shots, chronicles the frustration and pain of abject welfare recipients who spend their time sitting and waiting, or being shunted from office to office, as the degrading milieu of the welfare system grinds on. Welfare bureaucrats are largely seen as agents of dehumanization.

**The Store** (1983), Wiseman's first color film, at first glance appears to depart from the typical "weighty" subject matter of most of his previous films. That, however, is deceptive. For while the institution under scrutiny, the world-famous Neiman-Marcus department store in Dallas, Texas, may seem to be light-weight material, Wiseman's treatment of the activities of store employees and the mostly wealthy customers ultimately reveals the shallow lives of America's economic elite and those who service them. Conspicuous consumption is everywhere in evidence. The clientele while away days in the store's dressing rooms, trying on expensive gowns and furs. A compliant group of saleswomen are led in smile exercises as they prepare to meet their condescending customers. The bourgeoisie and proletariat are complicit in this sordid dance of money and unproductive leisure. **The Store** stands in stark and powerful contrast to the despair depicted in **Welfare**.

The ethics of Wiseman's filmmaking has been criticized by some as invading the privacy of its subjects (**Titicut Follies** is the clearest case-in-point). Wiseman's response is unequivocal. He argues that if an institution receives public tax support, citizens are entitled to observe its operation. Reportorial access, Wiseman adds, is a constitutional right with regard to public institutions. In his early documentaries, if any subject objected at the time of shooting to being filmed, Wiseman eliminated the footage in question from the final cut. Later, however, he denied subjects veto rights. Some subjects, while initially pleased with their portrayals, later became upset with others' negative reactions to those portrayals. This may be one of Wiseman's major contributions to the documentary form, to permit subjects to examine their own behavior—to confront the consequences of their own social actions—as seen through the eyes of others.

—Hal Himmelstein

WITT, PAUL JUNGER
U.S. Producer

Native New Yorker Paul Junger Witt took his first television position with Screen Gems in Los Angeles immediately following his graduation from the University of Virginia. At Screen Gems, one of Hollywood’s most active television production companies, he worked as an associate producer and director of The Farmer’s Daughter and Occasional Wife. In 1971, Witt produced the enormously successful and influential—and Emmy-winning—made-for-television movie, Brian’s Song. On that project he worked for the first time with his future partner, Tony Thomas. He then assumed producer-director duties on The Partridge Family.

In 1971, he moved on to become a producer with Spelling-Goldberg Productions, where he was involved in several films. A year later, he joined Danny Thomas Productions as president, serving as executive producer of five movies for television and two series, including Fay, which was created and written by Susan Harris.

In 1975, Witt joined with Tony Thomas, son of the legendary comedian, Danny Thomas, to form Witt/Thomas Productions. A year later, the two men teamed up with Susan Harris to form Witt/Thomas/Harris Productions. Their first venture, Soap, was both a critical and popular success, although it was roundly attacked by religious and cultural conservatives. Witt found the criticisms particularly disturbing since no one in the groups making the attacks had ever seen the series. Yet several ABC affiliates responded to the critiques and either refused to air Soap or relegated it to late hours. It is Witt’s belief that the unfair depictions of the show by those bent upon removing it from the air continued to have a chilling effect on advertisers for all the remaining years that the program was on ABC.

A unique television event, Soap set in motion a long string of major television hits for the three partners, includ-
ing Benson, The Golden Girls, and Empty Nest. Of these series, Soap and Golden Girls reflected a continuing emphasis on strong female characters. The company also produced at least five other shows with modest success that focused upon women. In addition, Witt/Thomas produced Beauty and the Beast, Blossom, and The John Larroquette Show.

The huge success of the company solidified Witt/Thomas/Harris as a powerful force in the television industry. Witt observed that their reputation gave them significant access to network time slots. In 1984, Witt/Thomas also began production of feature films with Firstborn, Dead Poets’ Society, and Final Analysis.

WOJECK

Canadian Drama Series

First aired on the anglophone network of the Canadian Broadcasting Corporation for two seasons (1966 and 1968), Waoke was a magnificent aberration: a popular, homegrown dramatic series made for the pleasure of English-Canadian viewers. Early on, francophone producers in Montreal had developed a particular genre of social melodrama, known as téléromans, that did captivate the imagination of French-Canadian viewers. Not so their anglophone counterparts. The record of domestic dramatic series in English Canada had been short and dismal, a collection of failures, or at best partial successes, usually modeled on American hits but lacking either the inspiration or the funding necessary to succeed. Audiences much preferred watching the originals, the stories Hollywood had made—until Waoke arrived. Early in its first season, Waoke was purportedly attracting more viewers than many American imports, and it received even higher ratings when rebroadcast in the summer of 1967.

Part of the success of Waoke rested upon its visual style. It was the first time the CBC had produced a filmed dramatic series for its national audience. Executive producer Ronald Weyman drew upon his experience at the National
Film Board to deliver stories which had the look of authenticity. This was especially true in the first season, when each episode was in black and white, and scenes were sometimes shot with a hand-held camera, giving the productions a gritty, realistic quality that at times suggested the news documentary. The look of authenticity was less apparent in the second season, when the series was shot in color.

Success, however, had as much to do with the subject, the script, and above all the acting. Wojeck created stories around a big city coroner and his quest for justice. The character and setting were novel twists on the very popular 1960s American genre of work-place dramas that focused on the exploits of such professionals as lawyers, doctors, and even teachers and social workers. The notion of a crusading coroner would become much more familiar to North American audiences because of the hit U.S. Quincy, of course, which began its long run on NBC in 1976. But at the time, Wojeck was an original, possibly inspired by the much-publicized exploits of an actual coroner of the city of Toronto.

The show did conform nonetheless to the formula of such American hits as Ben Casey (1961–66) and Mr. Novak (1963–65). All of the episodes (written in the first season by Philip Hersh) centered on the seamy side of life: racism, ageism, discrimination (one program dealt with male prostitution and homosexuality), and other species of injustice. Often the “heavy” was society itself, whose indifference or intolerance had bred evil. Wojeck was a kind of “edutainment,” since viewers were supposed to absorb some sort of moral lesson about the country’s social ills while enjoying their hour of diversion. The first show, an outstanding episode entitled “The Last Man in the World,” looked at why an Indian committed suicide in the big city, exposing “Canada’s shame”—its mistreatment of its native peoples.

Wojeck featured a strong male lead, Dr. Steve Wojeck, superbly played by John Vernon, who was backed up by a “team” that included his wife (the understanding helpmate), an assistant (efficient but unobtrusive), and a sometimes reluctant crown attorney (the well-meaning bureaucrat). Wojeck was emphatically masculine: big and rough, aggressive, short-tempered, and domineering. These qualities were most apparent when he dealt with the police and other authorities. He was easily moved to anger and moral outbursts, but was much more understanding when he dealt with society’s outcasts. Wojeck was the engaged liberal: an advocate for the powerless committed to reforming the practices of the system so that it ensured justice for all. Like his Hollywood counterparts, Wojeck embodied the 1960s myth of the professional as hero who would turn his talents and skills to making our sadly flawed world a better place.

Wojeck had no real successors. Weyman and others did produce a number of forgettable dramas in the next few years, but none could match the appeal of the imports. Ironically, the very success of Wojeck had spelled trouble for CBC’s drama department. John Vernon was lured away to Hollywood, where he came to specialize in playing villains. Indeed, Weyman later claimed that much of the talent which had contributed to the appeal of Wojeck was drawn away to the greener pastures down south. The memory of that brief, glorious moment was sufficient to justify replaying some of the episodes of Wojeck on the CBC network over 20 years later.

WOLPER, DAVID L.
U.S. Producer

David L. Wolper is arguably the most successful independent documentary producer to have ever worked in television. Through a career span of nearly fifty years, this prolific filmmaker has left his imprint with documentary specials, documentary series, dramatic miniseries, movies made for theatrical release, movies made for television, television sitcoms, entertainment specials and entertainment special events.

Wolper began his career in the late 1940s by selling B-movies, English-dubbed Soviet cartoons, and film serials, including Superman, to television stations. Interested in producing television documentaries, in 1958 he established Wolper Productions. Working with exclusive Russian space program footage and NASA cinematography of American missile launches, within two years, his first film, The Race for Space, was completed and had attracted a sponsor. Wolper offered the film to all three networks but an unofficial rule of the time dictated that only news programs and documentaries produced by network personnel were allowed on the air. Not to be discouraged, the young producer fell back on his sales experience and syndicated the film to 104 local stations across the United States—the overwhelming majority of these stations network affiliates willing to preempt other programming for the Wolper show. For the first time in television history a non-network documentary special achieved near-national audience coverage. Having been released to theaters prior to television, The Race for Space also received an Academy Award nomination in the best documentary category—another first for a television film.

Wolper’s notoriety helped to launch a significant number of documentary projects that found their way to network time slots. Utilizing a basic compilation technique, these early films consisted of editing photo stills and film clips to narration and music, with occasional recreations of footage, minimal editorial viewpoint and high-information, high-entertainment value. Increasingly successful, within four years of establishing Wolper Productions, Wolper’s method would place him on a level with NBC and CBS as one of the three largest producers of television documentaries and documentary specials.

A major turning point in Wolper’s career occurred in 1960 when he bought the rights to Theodore H. White’s book, The Making of the President. Aired on ABC, Wolper’s potentially controversial film presented an incisive look at the American political process, won four Emmy Awards including 1963 Program of the Year and guaranteed Wolper’s celebrity.

In 1964, Wolper sold his documentary production unit to Metromedia but stayed on as the company’s chief of operations. With this media giant’s backing, Wolper’s projects grew in scope and substance. He became a regular supplier of documentary programs to all three commercial networks creating such memorable series as The March of Time, in association with Time, Inc., and a series of nature specials in collaboration with the National Geographic Society. For the latter, he introduced American audiences to French oceanographer Jacques Cousteau. This in turn led to the first ever documentary spin-off, The Undersea World of Jacques Cousteau.

Breaking away from Metromedia in 1967, Wolper continued his documentary work but also tried his hand at theatrical release motion pictures. He created a number of unexceptional films including The Bridge at Remagen (1968), If It’s Tuesday, This Must be Belgium (1969), and Willy Wonka and the Chocolate Factory (1971). In fiction television, he found more success with regularly scheduled television series that included Get Christie Love! (1974–75), featuring the first black policewoman character in television history, Chico and the Man (1974–78) and Welcome Back, Kotter (1975–79).

Perhaps Wolper’s most significant accomplishment was his developmental work with the television non-fiction drama miniseries. In the mid-1970s, after bypass heart surgery and sale of his company to Warner Brothers, he helped to invent the docudrama genre with his award-winning
production of Alex Haley’s acclaimed family saga, *Roots*. Reconstructing history in an unprecedented twelve-hour film, the series was broadcast in one- and two-hour segments over an eight-day period in January 1977. Contrary to initial concerns over the high risk nature of the venture, the series brought ABC a 44.9 rating and 66% share of audience to set viewership records that place it among the most watched programs in the history of television.

In 1984, Wolper stepped out of his usual role as film producer to orchestrate the opening and closing ceremonies for the Summer Olympics in Los Angeles. The first ever to be staged by a private group, the ceremonies received a 55% share of audience outranking all other Olympic coverage. For his efforts, Wolper was rewarded with a special Emmy and the Jean Hersholt Humanitarian Award at the Oscar ceremony in 1985. The following year he was recruited to produce the Liberty Weekend hundredth anniversary celebration for the Statue of Liberty. The four-day event was viewed by 1.5 billion people worldwide.

As a producer, filmmaker, entrepreneur, historian and visionary, David Wolper’s career has been one of taking risks and continually breaking new ground. Most importantly, through his more than 600 films his innovative and creative spirit has educated and entertained millions.

THE WOMEN OF BREWSTER PLACE

U.S. Miniseries

The Women of Brewster Place, a miniseries based on the novel by Gloria Naylor, was produced in 1989 by Oprah Winfrey's firm Harpo, Inc. Winfrey served as executive producer and starred along with noted actors, Mary Alice, Jackee, Lynn Whitfield, Barbara Montgomery, Phyllis Yvonne Stickney, Robin Givens, Olivia Cole, Lonette McKee, Paula Kelly, Cicely Tyson, Paul Winfield, Moses Gunn and Douglas Turner Ward. The story, spanning several decades, includes a cast of characters that depict the constant battles fought by African-American women against racism, poverty, and sexism. Interpersonal struggles and conflicts also pepper the storyline, often revolving around black men who may be fathers, husbands, sons, or lovers.

The Winfrey character, Mattie, opens the drama. Her road to Brewster Place began when she refused to reveal the name of her unborn child’s father to her parents (Mary Alice and Paul Winfield). Milestones for Mattie included living in the home of Eva Turner (Barbara Montgomery) until she died and willed the house to Mattie; then forfeiting the house when her son, Basil, jumped bail after Mattie used their home as collateral for his bond. The other characters’ journeys to the tenement on Brewster Place were just as unpredictable and crooked. Kiswana, portrayed by Robin Givens, moved to the neighborhood to live with her boyfriend. They worked to organize the neighbors, to plan special activities for the neighborhood, and to protest their excessive rent. One of the most powerful scenes in the drama occurs between Kiswana and her mother, Mrs. Browne (Cicely Tyson). When Tyson comes for a visit, she and Givens begin a conversation that progresses into a heated argument regarding Kiswana’s name change. Mrs. Browne reveals why she named her daughter Melanie (after her grandmother), and in a powerful soliloquy tells the story of that grandmother’s strength and fearlessness when facing a band of angry white men.

Other women from the building reveal bruises inflicted either by the men in their lives, or by the world in general. Cora Lee (Phyllis Stickney) continues to have children because she wants the dependency of infants; once they become toddlers, her interest in them falters. By the end of the series, however, she begins to see the importance of all her children, and after being prodded by Kiswana, she attends the neighborhood production of an African-American adaptation of a Shakespearean play. Through this experience and her children’s reaction to it, the audience sees a change in Cora Lee.

Miss Sophie (Olivia Cole), an unhappy woman and the neighborhood busybody, spreads vicious gossip about her neighbors in the tenement. Etta Mae (Jackee), Mattie's earthy, flamboyant and loyal childhood friend, moved to Brewster Place for refuge from her many failed romances. Lucielia Louise Turner, housewife and mother (Lynn Whitfield), lived a somewhat happy life with her husband Ben (Moses Gunn) and daughter Serena in one of the tenement apartments until Ben lost his job and left home. Lucielia then aborted their second child and her daughter Serena was electrocuted when she used a fork to chase a roach into a light socket. Theresa and Lorraine (Paula Kelly and Lonette McKe) decided to reside on Brewster Place because, as lesbians, they were seeking some place where they could live without ridicule and torment. Their relationship, soon discovered by their neighbors, became the backdrop for the drama’s finale.

Criticism of the miniseries began before the drama aired. The National Association for the Advancement of Colored People requested review of the scripts before production to determine whether the negative images of the African-American male, present in the Naylor book, appeared in the television drama. This request was denied, but Winfrey, also concerned with the image of black men in the novel, altered several of their roles. Ben Turner, the tenement janitor and a drunk in Naylor's novel, was revamped for the teleplay, and in a scene created for especially for the series, explains why he felt pressed into desertion. The producers also attempted to cast actors who could bring a level of sensitivity to the male roles and create characters who were more than one-dimensional villains.

Still, newspaper columnist Dorothy Gilliam criticized the drama in a two-part series for the Washington Post, as one of the most stereotype-ridden polemics against black men ever seen on television, a series which, she claimed, trotted out nearly every stereotype of black men that had festered in the mind of the most feverish racist. In spite of such criticism the series won its time period Sunday and Monday nights against heavy competition, The Wizard of Oz on CBS and a Star Wars installment, Return of the Jedi, on NBC.

Though criticized for its portrayal of African-American men and women, The Women of Brewster Place offered its audience a rare glimpse of America’s black working class and conscientiously attempted to probe the personal relationships, dreams, and desires of a group of women who cared about their children and friends, who worked long hours at jobs they may have hated in order to survive, and who moved forward despite their disappointments. A spin-off of the miniseries titled Brewster Place, also produced by Harpo, Inc., aired for a few weeks in 1990 on ABC, but was canceled because of low ratings.

The Wonder Years

U.S. Domestic Comedy

The Wonder Years, a gentle, nostalgic look at Baby Boom youth and adolescence, told stories in weekly half-hour installments presented entirely from the point of view of the show’s main character. Young Kevin Arnold, portrayed on screen in youth by fresh-faced Fred Savage, provided the center of the action. Adult Kevin, whose voice was furnished by unseen narrator Daniel Stern, commented on the events of his youth with grownup wryness twenty years after the fact. The series traced Kevin’s development in suburban America from 1968,
when he was 11 years old, until the summer of 1973, his junior year in high school.

A typical week's plot involved Kevin facing some rite of passage on the way to adulthood. His first kiss, fleeting summer love, first day at high school, the struggle to get Dad to buy a new, color TV—these were the innocuous narrative problems of The Wonder Years. The resolutions seemed simple but often were surprising. Kevin the narrator always conveyed the unsettling knowledge that, in our struggle toward maturity, we make decisions that prevent us from going back to the comfortable places of youth. For example, when pubescent Kevin stood up to his mother's babying, he took pride in his new independence. But his victory was bittersweet—he realized that he had hurt Norma by reacting harshly to her well-meaning mothering, and he had lost a piece of the relationship forever.

Mundane situations that would resonate with most Americans' youth experiences were shaded by the backdrop of everyday life in the late 1960s or early 1970s. Hip hugger pants, Army surplus gear, and toilet-paper-strewn yards helped to place the show in the collective memory of the baby boomers who were watching it (and whose dollars advertisers were vigorously seeking). Attention to period detail was often thorough, but occasional anachronisms managed to slip through, such as the use of a television remote control device in the Arnold home in about 1970. The program often opened with TV news clips from the era—showing a war protest, President Nixon waving goodbye at the White House, or some other instantly recognizable event—accompanied by a classic bit of rock music. Joe Cocker's rendition of "I Get By With a Little Help from My Friends" was the show's theme song, played over a montage of home movie clips depicting a harmonious Arnold family and Kevin's friends, Paul and Winnie.

Much of the series' historical identification had to do with oblique connections with hippie counterculture and the Vietnam War. Kevin's older sister, Karen, was a hippie, but Kevin was not, and his observation of the counterculture was from the sideline. While Karen struggled to define her identity against the grain of her parents' traditions, Kevin, for the most part, accepted the world around him. He was portrayed as an average kid, personally uninvolved with most of the larger cultural events swirling about him. One serious treatment of the Vietnam War did intrude in Kevin's personal experience, however, when Brian Cooper, older brother of his neighbor and girlfriend, Winnie, was killed. Kevin struggled to support Winnie, first in the loss of her brother and, later, after her parents' separation resulted from the brother's death.

Episodes of The Wonder Years were often based on challenges in Kevin's relationship with a family member, friend, authority figure, or competitor. Kevin's father, Jack; mother, Norma; sister, Karen; brother, Wayne; neighborhood best friend, Paul Pfeiffer; and childhood sweetheart, Winnie Cooper, were heavily involved in the storyline. Much of the action took place in and around the middle-class Arnold home or at Kevin's school (Robert F. Kennedy Junior High and, later, William McKinley High School).

While each episode was self-contained, Kevin's struggles and changes were evident as the series developed. In one episode, Kevin's older sister became estranged from their father because of her involvement in the hippie culture. Other episodes reflected that estrangement, and, in a later season, the program depicted Karen's reconciliation with her father. Kevin's observations and feelings, of course, remained central to exploring such issues. Although episodes sometimes showed how characters' perspectives shifted, the emphasis was on Kevin's own observation of his world. This acknowledgment of the character's egocentrism melded with a major program theme—adolescent self-involvement.

Sometimes, the primary point of the program was the effect of another character's struggle on the egocentric Kevin. He watched as father Jack quit a stultifying middle-manager's job at the Norcom corporation and as frustrated salesman Norma enrolled in college classes and launched her own career. Often, Kevin spent much of his time reacting to the personal impact of such events, then feeling guilty about expressing his selfish thoughts. At the end of each episode, relations, although marked by change, became harmonious once again.

As an example of a "hybrid genre," the half-hour dramedy, The Wonder Years never amassed the runaway ratings of a show such as Cheers (though it did wind up in the Nielsen Top Ten for two of its five seasons). After a time, it was apparent to producers and the television audience that
Kevin Arnold's wonder years were waning. Creative differences between producers and ABC began to spring up from such instances as Kevin's touching a girl's breast during the 8:00 hour usually reserved for "family viewing." Economic pressures, including rising actor salaries and the need for more location shooting after Kevin acquired a driver's license, also helped to end the show. During its 115-episode run, however, *The Wonder Years* generated intensely loyal fans and collected important notice.

The final episode on 12 May 1993 exercised a luxury few ending series have: tying up loose ends. Bob Brush, executive producer of the show after creators Neal Marlens and Carol Black left in the second season, took a cue from sagging ratings when the last episode was shot. In it, Kevin quit his job working in Jack Arnold's furniture store and struck out on his own. Sadly, for some viewers, he and Winnie Cooper did not wind up together. Unfortunately, the show's resolution occurred in the summer following Kevin's junior year in high school, so the formal finality of graduation, a rite of passage so familiar to much of the audience, was missing.

Among the awards bestowed on *The Wonder Years* were an Emmy for best comedy series in 1988—after only six episodes had aired—and the George Foster Peabody Award in 1990. *TV Guide* named the show one of the 1980s' 20 best.

**WOOD, ROBERT**

U.S. Media Executive

Robert Wood moved network prime-time programming out of TV's adolescent phase into adulthood. In 1971 he broke with patterned success by jettisoning long-lived popular shows in order to attract younger audiences coveted by advertisers. At the same time he set aside traditional standards of gentle and slightly vacuous comedy for "in your face" dialog and contemporary situations that delighted masses, offended some, and pulled network entertainment into the post-assassination/civil rights/Vietnam era.

His strategy in 1970 was to cancel rural- and older-skewed classic series (*Green Acres*, *Beverly Hillbillies*, *Petticoat Junction*, and *Hee Haw*), and veteran stars (Red Skelton, Jackie Gleason, Ed Sullivan, and Andy Griffith), in favor of more contemporary, urban-oriented programming. He scheduled the challenging comedy *All in the Family*, developed by producer Norman Lear, which ABC had twice rejected. After a weak initial half season, in the spring of 1971, the series built a strong viewership during summer reruns and became a sensation by the fall season. Massive audience popularity, including sought-after younger adults, and critical praise helped Lear's production company add to CBS' schedule *The Jeffersons*, *Maude*, *Good Times*, *Sanford and Son*, *One Day at a Time* and other series. Rather than farcical situation comedies (sitcoms), these shows built on issues affecting characters as interacting persons, thus becoming "character comedies" instead.
Wood presided over the entertainment revolution that changed the tenor of America's living rooms during evening television viewing. Other networks emulated the move, sometimes outpacing CBS' entries in teasing audience acceptability with double entendre. But the nation's TV screens had moved to a new plateau (some cynics would claim a lower one) with Wood's determined risk-taking. TV and cable in the following decades pushed forward dramatic and comedic themes from that position.

Wood was energetic, optimistic, thoughtful, and shrewd. But his strategies never undercut people as he formed policies for the stations he managed (KNXT, Los Angeles; the CBS television stations division of owned-and-operated outlets) and the network he led (CBS-TV) from 1969 to 1976. He was the longest-lived and last executive totally in command of the national television fortunes of CBS Inc.

As the industry grew more complex, he advocated shifting the programming department from network headquarters in New York City to the West Coast where most entertainment programming was developed. After he retired from the network, his position was eventually divided into several presidencies, including: TV network, entertainment (programming—on the west coast), sports, affiliate relations, sales, and marketing. Competing networks had already begun splitting network executives' responsibilities, after Wood had proposed such a structure within CBS.

Wood was the rare network executive who was respected and liked, often with genuine affection, by broadcast colleagues, executives, staff members, local station managers, program producers, and talented actors. He dealt with each graciously and with good cheer, caring for those he worked with, not taking himself too seriously, and was totally committed to his top management responsibilities which he handled skillfully and with enormous success. After a brief stint as an independent producer he became president of Metromedia Producers Corporation in 1979. He died in 1986.

WOOD, VICTORIA
British Comedy Actor/Writer/Singer

Victoria Wood is a talented comedy actor/writer/singer who has built up a national reputation following a string of self-written TV plays, films, and sketch shows. Born in 1953 in Lancashire in Northern England, she first had small-screen exposure on the TV talent search show New Faces when she sang comedy songs of her own composition. Accompanying herself on the piano, she scored heavily with viewing audiences with her jaunty tunes, which often belied her sharp, poignant lyrics. Her regular themes of unrequited love, tedium, mismatched couples, and suburban living, as well as her ability to find humour in the minutiae of modern life, stood her in good stead when she moved into writing plays for the stage and later for television.

Talent, her first play adapted for television (Granada, 5 August 1979), reunited her with Julie Walters, whom she had met at Manchester Polytechnic. Their partnership would launch both their careers. Talent dealt with a mismatched couple: the ambitious would-be cabaret singer Julie Stephens (Walters) and the eternally sniffing Maureen, her plump, dull, but loyal friend (played by Wood), who had accompanied Julie to a talent contest. The bitter-sweet comedy explored themes of desperation, dashed hopes, lost ambition, and hopeless romances. The fact that Talent managed to be both funny and truthful demonstrated Wood’s skill as a writer and the pair’s acting ability. A sequel, Nearly a Happy Ending (Granada, 1 June 1980), appeared the following year. This time the couple were going out for a night on the town, pausing en route at a slimming club. Wood was then quite portly, and occasionally her material dealt with what being overweight meant to oneself and others. Later in her career, she slimmed down considerably.

Following Nearly a Happy Ending, Wood and Walters appeared in a one-off special, Wood and Walters: Two Creatures Great and Small (Granada, 1 January 1981), which led to the series Wood and Walters (Granada, 1982). It was the series Victoria Wood: As Seen on TV (BBC), however, that truly established Wood as a major TV star. A sketch show introduced by a stand-up routine from Wood, the program also featured a musical interlude. Julie Walters, Patricia Routledge, Susie Blake, Duncan Preston, and Celia Imrie provided strong support, and a favourite section of the show was “Acorn Antiques,” a spoof of cheaply-made soap operas.

As Walters’ film career blossomed, Wood’s comedic talent continued to mature, and by the end of the 1980s she was a big draw on the live circuit. Her stand-up routine relied on observational humour as she drew laughs from finding the idiosyncrasies of normal modern life. She followed a long line of (male) northern comedians with her style of taking her story lines into surreal areas, as well as her character inventions, especially the gormless “Maureen.” On television she remained determined to try something new and not merely revamp winning ideas. To this end, she wrote and starred in a number of half-hour comedy playslets under the generic title Victoria Wood (BBC, 1989), her first series not to attract universal acclaim. She also appeared in a number of solo stand-up shows, and in a one-off spoof of early morning television news magazine programs, Victoria Wood’s All Day Breakfast (BBC, 31 December 1992).

The feature-length TV film Pat and Margaret (BBC, 11 September 1994), Wood’s most ambitious project to date, was her most accomplished reworking of her mismatched couple theme. In this context, Pat (Julie Walters) was a successful English actor in a hit U.S. soap (a la Joan Collins) who was reunited with her sister Margaret (Wood) on a TV chat show. The pair hadn’t been in touch for 27 years, and neither was happy about the meeting. Once again, bitter-sweet themes of escape and despair were explored; once again, despite this tone, Wood’s comedic ability triumphed.

WOODWARD, EDWARD

British Actor

Edward Woodward has enjoyed a long and varied career since he first became a professional performer in 1946. A graduate of the Royal Academy of Dramatic Art, he has acted in England, Scotland, Australia and the United States, on both London and Broadway stages, and has appeared in a wide range of productions from Shakespeare to musicals. Despite being known for dramatic roles, he can also sing and has made over a dozen musical recordings. In recent years, his distinctive, authoritative voice has narrated a number of audio books.

Although he has played supporting roles in prestigious films like Becket (1964) and Young Winston (1972), Woodward is best known for two hit television series, Callan in Britain and The Equalizer in the United States. Despite the fact that the series were made over a decade apart, Woodward played essentially the same character in each—a world-weary spy with a conscience.

Woodward's definitive screen persona of an honorable gentleman struggling to maintain his own personal morality in an amoral, even corrupt, world was prefigured in two motion pictures in which the actor starred, The Wicker Man (1974) and Breaker Morant (1980). In The Wicker Man, Woodward was a priggish Scottish policeman investigating a child's disappearance; he stumbles upon an island of modern-day pagans led by Christopher Lee. In Breaker Morant, Woodward starred as the title character, a British Army officer well-respected by his men, who is arrested with two other soldiers for war crimes and tried in a kangaroo court during the Boer War. In both cases, Woodward's character's life is sacrificed, a victim of larger hostile social and political forces he is too decent to understand or control.
Woodward as David Callan, an agent who carried a license to kill, working for a special secret section of British Intelligence. The section’s purpose was “getting rid of” dangerous or undesirable people through bribery, blackmail, frame-ups, or, in the last resort, death. Described in one episode as “a dead shot with the cold nerve to kill,” Callan was the section’s best operative and indeed, killing seemed to be his main occupation. The character paid a high moral and emotional price for his expertise: he was brooding, solitary, and friendless except for a grubby petty thief named Lonely (Russell Hunter), and his only hobby was collecting toy soldiers. Callan also had two personal weaknesses: he was rebellious and he cared. Although he always did what his bosses told him, he inevitably argued or defied them first, and more importantly, he often became concerned or involved with those whose paths he crossed during the course of his assignments. Despite its bleak subject matter, Callan was a hit in Britain. It spawned both a theatrical film (Callan, 1974), and later a television special (Wet Job, 1981), in which loyal viewers learned of Callan’s ultimate fate.

On one Callan episode, “Where Else Could I Go?”, a psychiatrist working for British Intelligence says that Callan is “brave, aggressive, and can be quite ruthless when he believes in the justice of his cause.” This description could also be applied to Robert McCall, the lead character of The Equalizer, which ran in the United States on CBS from 1985 to 1989. McCall was a retired espionage agent who’d been working for an American agency (probably the CIA). After forcing the agency to let him go, he decided to use his professional skills to aid helpless people beset by human predators in the urban jungle, usually free of charge. His ad running in the New York classifieds read: “Got a problem? Odds against you? Call the Equalizer.” Although McCall’s clients came from all walks of life, they shared one thing in common: they all had a problem that conventional legal authorities, such as the courts and the police, could not handle. McCall had an ambivalent relationship with his ex-superior, Control (Robert Lansing), but often borrowed agency personnel (Mickey Kostmayer, played by Keith Szarabajka, was a frequent supporting player) to assist in the “problem-solving.”

In a time of rising crime rates, The Equalizer was a potent paranoiaic fantasy, made more so because Woodward as McCull cut a formidable figure. He seemed the soul of decency, always polite and impeccably dressed, but one could also detect determination in his steely-eyed gaze and danger in his rueful laugh. To many critics familiar with Callan, McCall seemed to be just an older, greyer, version of the same character. However, there were significant differences. Like Callan, McCall was suffering from a crisis of conscience, but unlike the earlier character, he had found a way to expiate his sins. While Callan was the instrument and even the victim of his superiors, McCall was the master of his fate.

A year after The Equalizer’s run, Woodward starred in another detective drama, Over My Dead Body. An attempt by producer William Link to create a male version of his successful Murder, She Wrote, the show paired Woodward as a cranky crime novelist with a young reporter turned amateur sleuth played by Jessica Lundy. Unfortunately, there was a lack of chemistry between the stars and the series lasted barely a season.

Afterward, Woodward returned to England to lend his authoritative voice and presence to a real-life crime series called In Suspicous Circumstances, a sort of British version of the American show, Unsolved Mysteries. In 1995, Woodward was back on U.S. television screens in a TV movie, The Shamrock Conspiracy, playing a retired Scotland Yard inspector who tangles with IRA terrorists. The film, reportedly the first of a series starring Woodward as the inspector, was shot in Toronto, Canada.

In addition to his series work, Woodward has appeared in several other television movies both in Britain and the United States. His roles have been offbeat, to say the least, including most notably Merlin in Arthur the King, a strange version of the Camelot legend told by way of Lewis Carroll, and the Ghost of Christmas Present in the very fine 1984 production of A Christmas Carol, starring George C. Scott as Scrooge.

WILLIAM LINK
WOODWARD, JOANNE

U.S. Actor

Joanne Woodward has been recognized as an exceptional television performer from the beginning of her career in 1952 when she appeared on Robert Montgomery Presents in a drama entitled "Penny." She performed in over a dozen live New York productions from 1952 to 1958, and was also active on the stage during that period, a vocation she has pursued throughout her career. In those early years Woodward made appearances on Goodyear Playhouse, Omnibus, Philco Television Playhouse, Studio One, Kraft Television Theatre, U.S. Steel Hour, Playhouse 90 and The Web, in which she played opposite Paul Newman in 1954. Woodward remembers those experiences as "marvelous days."

In 1957 Woodward was cast in her first starring role in a feature film, The Three Faces of Eve, for which she received an Academy Award as Best Actress. Since then, Woodward has been recognized primarily as a feature film actress; however, her television roles have been numerous and highly memorable.

Woodward received an Emmy Award for her starring performance in See How She Runs on CBS in 1978. In 1985 she won a second Emmy for her role in Do You Remember Love?, a provocative and moving drama about the impact of Alzheimer’s disease. In 1990 she received her third Emmy.

**WORKPLACE PROGRAMS**

U.S. television, from its earliest years, has developed prime-time programs which focus on the workplace. This trend is understandable enough, given TV's essential investment in the "American work ethic" and in consumer culture, although it also evinces TV's basic domestic impulse. By the 1970s and 1980s, in fact, TV's most successful workplace programs effectively merged the medium's work-related and domestic imperatives in sitcoms like *The Mary Tyler Moore Show, M*A*S*H, Taxi,* and *Cheers,* and in hour-long dramas like *Hill Street Blues, St. Elsewhere,* and *LA Law.* While conveying the working conditions and the professional ethos of the workplace, these programs also depicted co-workers as a loosely knit but crucially interdependent quasi-family within a "domesticated" workplace. This strategy was further refined in 1990s sitcoms like *Murphy Brown* and *Frasier,* and even more notably in hour-long dramas like *ER, NYPD Blue, Picket Fences, Chicago Hope,* and *Homicide: Life in the Streets.* These latter series not only marked the unexpected resurgence of hour-long drama in prime time, but in the view of many critics evinced a new "golden age" of American television.

This integration of home and work was scarcely evident in 1950s TV, when the domestic arena and the work-
place remained fairly distinct. The majority of workplace programs were male-dominant law-and-order series which generally focused less on the workplace itself than on the professional heroics of the cops, detectives, town marshals, bounty hunters, who dictated and dominated the action. Dragnet, TV's prototype cop show, did portray the workaday world of the L.A. police, albeit in uncomplicated and superficial terms. The rise of the hour-long series in the late 1950s brought a more sophisticated treatment of the workplace in courtroom dramas like Perry Mason, detective shows like 77 Sunset Strip, and cop shows like Naked City (which ran as a half-hour show in the 1958–59 season and then returned as an hour-long drama in 1960). More than simply a "home base" for the protagonists, the workplace in these programs was a familiar site of personal and professional interaction.

The year 1961 saw three new important hour-long workplace dramas: Ben Casey, Dr. Kildare, and The Defenders. The latter was a legal drama whose principals spent far less time in the courtroom and more time in the office than did Perry Mason. And while Mason's cases invariably were murder mysteries, with Mason functioning as both lawyer and detective, The Defenders treated the workaday legal profession in more direct and realistic terms. Both Ben Casey and Dr. Kildare, meanwhile, were medical dramas set in hospitals, and they too brought a new degree of realism to the depiction of the workplace setting—and to the lives and labors of its occupants. As Time magazine noted in reviewing Ben Casey, the series "accurately captures the feeling of sleepless intensity of a metropolitan hospital."

Another important and highly influential series to debut in 1961 was a half-hour comedy, The Dick Van Dyke Show, which effectively merged the two dominant sitcom strains—the workplace comedy with its ensemble of disparate characters, and the domestic comedy centering on the typical (white, middle-class) American home and family. At the time, most workplace comedies fell into three basic categories: school-based sitcoms like Mr. Peepers and Our Miss Brooks; working-girl sitcoms like Private Secretary and Oh Suzanna; and military sitcoms like The Phil Silvers Show and McHale's Navy. The vast majority of half-hour comedies were domestic sitcoms extolling (or affectionately lampooning) the virtues of home and family. These occasionally raised work-related issues—via working-stiffs like Chester Riley (The Life of Riley) lamenting an American Dream just out of reach, for instance, or on an "unruly" housewife like Lucy Ricardo (I Love Lucy) comically resisting her domestic plight. And some series like Hazel centered on "domestic help" (maids, nannies, etc.), thus depicting the home itself as a workplace.

The Dick Van Dyke Show created a hybrid of sorts by casting Van Dyke as Rob Petrie, an affable suburban patriarch and head writer on the fictional Alan Brady Show. Setting the trend for workplace comedies of the next three decades, The Dick Van Dyke Show featured a protagonist who moved continually between home and work, thus creating a format amenable to both the domestic sitcom and the workplace comedy. The series' domestic dimension was quite conventional, but its treatment of the workplace was innovative and influential. The work itself involved television production (as would later workplace sitcoms like The Mary Tyler Moore Show, Buffalo Bill, and Murphy Brown), and thus the program carried a strong self-reflexive dimension. More importantly, The Dick Van Dyke Show developed the prototype for the domesticated workplace and the work-family ensemble—Rob and his staff writers Buddy (Morey Amsterdam) and Sally (Rose Marie); oddball autocrat Alan Brady (Carl Reiner, the creator and executive producer of The Dick Van Dyke Show); and Alan's producer and brother-in-law, the ever-flustered and vaguely maternal Mel (Richard Deacon). Significantly, Rob was the only member of the workplace ensemble with a stable and secure "home life," and thus he served as the stabilizing, nurturing, mediating force in the comic-chaotic and potentially dehumanizing workplace.

The influence of The Dick Van Dyke Show on TV's workplace programs was most obvious and direct in the sitcoms produced by MTM Enterprises in the early 1970s, particularly The Mary Tyler Moore Show and The Bob Newhart Show. While these and other MTM sitcoms featured a central character moving between home and work, The Mary Tyler Moore Show was the most successful in developing the workplace (the newsroom of a Minneapolis TV station, WJM) as a site not only of conflict and comedic chaos but of community and kinship as well. And although Moore, who had played Rob's wife on The Dick Van Dyke Show, was cast here as an independent single woman, her nurturing instincts remained as acute as ever in the WJM newsroom.

While the MTM series maintained the dual focus on home and work, another crucial workplace comedy from the early 1970s, M*A*S*H, focused exclusively on the workplace—in this case a military surgical unit in war-torn Korea of the early 1950s (with obvious pertinence to the then-current Vietnam War). Alan Alda's Hawkeye Pierce was in many ways the series' central character and governing sensibility, especially in his caustic disregard for military protocol and his fierce commitment to medicine. Yet M*A*S*H was remarkably "democratic" in its treatment of the eight principal characters, developing each member of the ensemble as well as the collective itself into a functioning work-family. While ostensibly a sitcom, the series often veered into heavy drama in its treatment of both the medical profession and the war; in fact, the laugh track was never used during the scenes set in the operating room. And more than any previous workplace program, whether comedy or drama, M*A*S*H was focused closely on the professional "code" of its ensemble, on the shared sense of duty and commitment which both defined their medical work and created a nagging sense of moral ambiguity about the military function of the unit—that is, patching up the wounded so that they might return to battle.
A domestic sitcom hit from the early 1970s, *All in the Family*, also is pertinent here for several reasons. First, in Archie Bunker (Carroll O'Connor), the series created the most endearing and comic-patchic working stiff since Chester Riley. Second, parenting on the series involved two grown "children," with the generation-gap squabbling between Archie and son-in-law Mike (Rob Reiner) frequently raising issues of social class and work. Moreover, their comic antagonism was recast in other generation-gap sitcoms set in the workplace, notably *Sanford and Son* and *Chico and the Man*. And third, *All in the Family* itself evolved by the late 1970s into a workplace sitcom, *Archie Bunker's Place*, with the traditional family replaced by a work-family ensemble.

The trend toward workplace comedies in the early 1970s was related to several factors both inside and outside the industry. One factor, of course, was the sheer popularity of the early-1970s workplace comedies, and their obvious flexibility in terms of plot and character development. These series also signaled TV’s increasing concern with demographics and its pursuit of "quality numbers"—the upscale urban viewers coveted by sponsors. Because these series often dealt with topical and significant social issues, they were widely praised by critics, thus creating an equation of sorts between quality demographics and "quality programming." And in a larger social context, this programming trend signaled the massive changes in American lifestyles which accompanied a declining economy and runaway inflation, the sexual revolution and women’s movement, the growing ranks of working wives and mothers, rising divorce rates, the aging of the baby-boom generation, and so on.

Thus, the domestic sitcom with its emphasis on traditional home and family all but disappeared from network schedules in the late 1970s and early 1980s, replaced by workplace comedies like *Alice, Welcome Back, Kotter, WKRP in Cincinnati, Taxi, Cheers, Newhart*, and *Night Court*. The domestic sitcom did rebound in the mid-1980s with *The Cosby Show* and *Family Ties*, and by the 1990s the domestic and workplace sitcoms had formed a comfortable alliance—with series like *Murphy Brown, Coach*, and *Frasier* sustaining the MTM tradition of a central, pivotal character moving between home and the workplace.

TV’s hour-long workplace dramas underwent a transformation as well in the 1970s, which was a direct outgrowth, in fact, of MTM’s workplace sitcoms. In 1977, MTM Enterprises retired *The Mary Tyler Moore Show* and created a third and final spin-off of that series, *Lou Grant*, which followed Mary’s irascible boss (Ed Asner) from WJM-TV in Minneapolis to the *Los Angeles Tribune*, where he took a job as editor. *Lou Grant* was created by two of MTM’s top comedy writer-producers, James Brooks and Allan Burns, along with Gene Reynolds, the executive producer of *M*A*S*H*. It marked a crucial new direction for MTM not only as an hour-long drama, but also because of its primary focus on the workplace (a la *M*A*S*H*) and its aggressive treatment of "serious" social and work-related issues. In that era of Vietnam, Watergate, and *All the President’s Men*, *Lou Grant* courted controversy week after week, with Lou and his work-family of investigative journalists not only pursuing the "Truth" but agonizing over their personal lives and professional responsibilities as well.

MTM’s hour-long workplace dramas hit their stride in the 1980s with *Hill Street Blues* and *St. Elsewhere*, which effectively revitalized two of television’s oldest genres, cop show and doc show. Each shifted the dramatic focus from the all-too-familiar heroics of a series star to an ensemble of co-workers and to the workplace itself—and not simply as a backdrop but as a social-service institution located in an urban-industrial war zone with its own distinctive ethos and sense of place. Each also utilized serial story structure and documentary-style realism, drawing viewers into the heavily populated and densely plotted programs through a heady, seemingly paradoxical blend of soap opera and cinema verite. Documentary techniques—location shooting, hand-held camera, long takes and reframing instead of cutting, composition in depth, and multiple-track sound recording—gave these series (and the workplace itself) a "look" and "feel" that was utterly unique among police and medical dramas.

*Hill Street Blues* and *St. Elsewhere* also emerged alongside prime-time soap operas like *Dallas* and *Falcon Crest*, and shared with those series a penchant for "continuing drama." While this serial dimension enhanced both the Hill Street precinct and St. Eligius hospital as a "domesticated workplace," the genre requirements of each series (solving crimes, healing the sick) demanded action, pathos, jeopardy, and a dramatic payoff within individual episodes. Thus, a crucial component of MTM’s workplace dramas was their merging of episodic and serial forms. The episodic dimension usually focused on short-term, work-related conflicts (crime, illness), while the serial dimension involved the more "domestic" aspects of the characters’ lives—and not only their personal lives, since most of the principals were "married to their work," but also the ongoing interpersonal relationships among the co-workers.

*Hill Street* co-creator Steven Bochco left MTM in the mid-1980s and developed *LA Law*, which took the ensemble workplace drama "upscale" into a successful big-city legal firm. While a solid success, this focus on upscale professionals marked a significant departure from *Hill Street* and *St. Elsewhere*—and from most workplace dramas in the 1990s as well. Indeed, prime-time network TV saw a remarkable run of MTM-style ensemble dramas in the 1990s, notably *ER, Homicide, Law and Order, Chicago Hope*, and another Bochco series, *NYPD Blue*. Most of these were set, like *Hill Street* and *St. Elsewhere*, in decaying inner cities, and they centered on co-workers whose commitment to their profession and to one another was far more important than social status or income. Indeed, a central paradox in these programs is that their principal characters, all intelligent, well-educated professionals, eschew material rewards to work in under-funded social institutions where commitment outweighs income, where the work is never finished nor the conflicts satisfactorily resolved, and where the work itself, finally, is its own reward.
Despite these similarities to *Hill Street* and *St. Elsewhere*, the 1990s workplace dramas differed in their emphasis on workaday cops and docs. Those earlier MTM series carried a strong male-management focus, privileging the veritable "patriarch" of the work-family—Captain Frank Furillo and Dr. Donald Westphall, respectively—whose role (like Lou Grant before them) was to uphold the professional code and the familial bond of their charges. The 1990s dramas, conversely, concentrated mainly on the workers in the trenches, whose shared commitment to one another and to their work defines the ethos of the workplace and the sense of kinship it engendered.

More conventional hour-long workplace programs have been developed alongside these MTM-style dramas, of course, from 1970s series like *Medical Center*, *Ironside*, and *Baretta* to more recent cop, doc, and lawyer shows like *Matlock*, *T. J. Hooker*, and *Quincy*. In the tradition of *Dragnet* and *Marcus Welby*, the leads in these series are little more than heroic plot functions, with the plots themselves satisfying the generic requirements in formulaic doses and the workplace setting as mere backdrop. Two recent hour-long dramas more closely akin to the MTM-style workplace programs are *Northern Exposure* and *Picket Fences*. Both are successful ensemble dramas created by MTM alumni who took the workplace form into more upbeat and off-beat directions—the former a duck-out-of-water doc show set in small-town Alaska which veered into magical realism, the latter a hybrid cop-doc-legal-domestic drama set in small-town Wisconsin. But while both are effective ensemble dramas with an acute "sense of place," they are crucially at odds with urban-based medical dramas like *ER* and *Chicago Hope*, and police dramas like *Homicide* and *NYPD Blue*, whose dramatic focus is crucially wed to the single-minded professional commitment of the ensemble and is deeply rooted in the workplace itself.

Indeed, *ER* and *Homicide* and the other MTM-style ensemble dramas posit the workplace as home and work itself as the basis for any real sense of kinship we are likely to find in the contemporary urban-industrial world. As Charles McGrath writes in *The New York Times Magazine*, "The Triumph of the Prime-Time Novel," such shows appeal to viewers because "they've remembered that for a lot of us work is where we live more of the time; that, like it or not, our job relationships are often as intimate as our family relationships, and that work is often where we invest most of our emotional energy." McGrath is one of several critics who view these workplace dramas as ushering in a renaissance of network TV programming, due to their Dickensian density of plot and complexity of character, their social realism and moral ambiguity, their portrayal of workers whose heroics are simply a function of their everyday lives and labors.

The workplace in these series ultimately emerges as a character unto itself, and one which is both harrowing and oddly inspiring to those who work there. For the characters in *ER* and *NYPD Blue* and the other ensemble workplace dramas, soul-searching comes with the territory, and they know the territory all too well. They are acutely aware not only of their own limitations and failings but of the inadequacies of their own professions to cure the ills of the modern world. Still, they maintain their commitment to one another and to a professional code which is the very life-blood of the workplace they share.

**WORLD IN ACTION**

*British News Documentary*

*World in Action*, Britain’s long-running and most illustrious current affairs programme, goes out in prime-time on ITV (the main commercial channel) and is produced by Granada Television, a company with a reputation for innovation and “quality” programming. First launched in 1963, with Tim Hewat, an ex-*Daily Express* reporter, as its editor, *World in Action* was the first weekly current affairs programme in Britain to pioneer pictorial journalism on film and to risk taking an independent editorial stance. In comparison with *Panorama*, the BBC’s rival current-affairs programme, which was studio-based and featured several items, *World in Action* was, in the words of Gus McDonald, "born brash." It devoted each half-hour episode to a single issue and, abandoning the studio and presenter,
put the story itself up-front. The lightweight film equipment
gave the production team the mobility to follow up the
stories first hand and to bring raw images of the world into
the living room. A conspicuous and influential style evolved
with interviewees framed in close-up talking directly to
camera, cross-cut with fast-edited observation of relevant
action and environmental detail. The hard-hitting approach
compelled attention and made complex social issues access-
able to a mass audience for the first time.

Having firmly established the idea of picture journalism
on TV, World in Action consolidated its position in 1967 under
David Plowright when an investigative bureau was set up, and
it is on the quality of its investigative journalism that the
programme’s reputation chiefly rests. Award-winning episodes
have included “The Demonstration” (1968) observing the
mass protest outside the U.S. embassy against the bombing of
North Vietnam; “Nuts and Bolts of the Economy” (1976), a
series exploring different aspects of the world economy; and an
investigation into “The Life and Death of Steve Biko” (1978).
The programme has been equally wide-ranging with domestic
topics, covering stories such as the exposure of police corruption
in “Scotland Yard’s Cocaine Connection” (1985), revealing the
British Royal Family’s tax loop-hole (1991), and investigating
the dangers of different types of contraceptive pill (1995). Over
the years the programme has fearlessly and impartially pursued
the truth, exposing injustice and falsehood, and frequently
running at odds with the powers that be. In this respect
the programme’s long-standing, but eventually successful, fight to
secure the release of the six men wrongfully convicted for the
IRA pub bombing in Birmingham provides the outstanding
equivalent example.

World in Action stands as one of the finest achievements of
public service television in Britain—of programming driven by
the desire to inform and educate viewers as much as to entertain
them. In the course of its long run it has provided the training
round for some of the most distinguished names in British
broadcasting, as well as pioneering innovative programme
approaches such as under-cover and surveillance work, and drama
documentary. How it will continue to fare in the more competi-
tive broadcast market following deregulation remains to be
seen. However, it is possible that to maintain its prime time slot
the emphasis will shift away from costly long-term investigations
and international stories to focus on populist health and con-
sumer issues which can be guaranteed to deliver large audiences.

WORRELL, TRIX

British Writer

Trix Worrell has lived in Britain for most of his life,
having moved there from St. Lucia when he was five.
When he began his acting career, he also started writing
because there were so few good parts for black actors to play.
As a teenager, Worrell worked with the Albany Theatre in
South London, where he wrote and directed his first play,
School’s Out, in 1980. Eventually, he enrolled at the National
Film and Television School, initially as a producer, but soon
decided to concentrate on writing and directing. Even before
his NFTS course, he had achieved recognition as a writer.

In 1984, Worrell won Channel 4 Television’s “Debut
New Writers” competition with his play Mohicans, which
was broadcast on Channel 4 as Like a Mohican in 1985. At
that time, the young Worrell was a more modest individu-
al, and it was a colleague rather than Worrell himself who
sent in the script to the competition. When he won, his
pleasure was somewhat dulled when he realized that de-
spite his success, the small print of the competition meant
that Channel 4 did not actually have to broadcast his work.
Showing the determination which would stand him in
good stead for subsequent battles with commissioning editors, Worrell fought to have his play broadcast, and successfully challenged Channel 4's insistence that single dramas were too expensive to produce. Having leapt that first hurdle, he then argued forcefully for the play to keep its original language, including the ubiquitous swearing which is an intrinsic part of polyglot London's authentic voice. Fortunately, his persistence paid off, and after this success he went on to co-author (with Martin Stellman) the feature film For Queen and Country (1989) before returning again to the small screen.

In the late 1980s, Channel 4 was interested in commissioning a new sitcom, and Worrell contacted the producer Humphrey Barclay with a view to working up an idea. Though he had never written television comedy before, he had penned various satirical works for the theatre and felt confident, if slightly anxious, about entering this extremely difficult terrain. Worrell tells the story that he was on his way to meet Barclay to talk through possibilities when his bus pulled up at a traffic light and he saw a barber shop with three barbers peering through the shop window to ogle the women going past: suddenly he had found his comedy situation. The subsequent show, Desmond's, was one of Channel 4's most successful programmes, producing seven series in five years, from 1989 to 1994. As with all good sitcoms, Desmond's was organised around a particular location, in this case, the inside of the barber shop, with occasional shoots in the world outside or scenes set in the flat over the shop, which served as home for the eponymous Desmond and his family.

Although this was not the first British comedy series about a black family, Worrell was keen to work through a number of complex issues and important features of black migrant experiences in Britain in ways which would make sense to both black and white viewers. Desmond's was always intended for a mixed audience, and Worrell wanted to expose white audiences to an intact black family whose members experienced precisely the same problems and joys as those of white families. At the same time, he wanted to reflect a positive and realistic black family for black viewers as an antidote to the routinely stereotypical portraits which more usually characterise programmes about black people in Britain.

In talking about the production of Desmond's, Worrell has revealed the considerable antagonisms he faced from black colleagues who regarded writing sitcoms as an act of betrayal, or at the very least as a soft-option sell-out. But this type of criticism misses the point: powerful sentiment and subversive commentary can be made by comedy characters precisely because their comedic tone and domesticated milieu are unthreatening—the viewer is invited to laugh and empathise with the characters, not to scorn them. In later episodes of Desmond's, programme narratives were pushed into more controversial areas such as racism because identification and loyalty had already been secured from the audience and more risks could be taken.

Worrell is very aware of the limited opportunities which exist for black writers wanting to break into television. By the third series of Desmond's, he had brought together a new team to work on the show, enabling him to concentrate more on directing as well as providing valuable production experience to a cohort of black writers, many of whom were women. Despite the considerable success of Desmond's, Worrell believes he still has to fight much harder than white colleagues to get new programme ideas accepted. There are significant problems in trying to negotiate new and challenging territory which questions the cosy prejudices of the status quo, and British broadcasters now tend towards the conservative rather than the innovative in their relentless battle to retain market share. While there is a continued interest in series which reflect the assumptions and preconceptions that white editors have about black communities, Worrell is keen to explore the diversities of life as it is actually lived by Britain's blacks. His work breaks out of the suffocating straightjacket of dismal (racist) stereotypes, instead examining the complex realities of black experiences, which are as much about living, loving, and working within strongly multicultural environments as about the hopeless crackheads, pimps, and villains who inhabit London's ghetto slums. There is no one story—which there are many.

In late 1994, Worrell teamed up with Paul Trijbits to create the film and TV production company, Trijbits-Worrell. With corporate backing from the Dutch-based Hungry Eye Entertainment Group, Worrell is currently working up a number of new ideas for both film and television. Two TV projects which are already considerably advanced are Quays to the City, a post-yuppie soap opera for the BBC set in London's Docklands, and Saturday Dad, a sitcom about a group of single fathers who only see their children at weekends. Although Worrell is quite pessimistic about the future for black writers, producers, and directors trying to penetrate the industry, the continued success of his own work ensures that there is at least one act to follow.

WRATHER, JACK
U.S. Media Executive/Producer

Born in Amarillo, Texas, Jack Wrather became an oil wildcatter who eventually rose to be president of an oil company founded by his father. He later expanded his resources into real estate, hotels, motion pictures, and broadcast properties. Following service in the U.S. Marine Corps during World War II, Wrather relocated to California, where he diversified his holdings in the movie business, creating Jack Wrather Pictures, Inc. and Freedom Productions. Between 1946 and 1955, Wrather produced feature films for Eagle Lion, Warner Brothers, Allied Artists, and United Artists, including *The Guilty*, *High Tide*, *Perilous Waters*, *Strike It Rich*, *Guilty of Treason*, *The Lone Ranger and the Lost City of Gold*, *The Magic of Lassie*, and *The Legend of the Lone Ranger*.

A true entrepreneur, Wrather established television syndication services during the 1950s such as Television Programs of America and Independent Television Corporation. He was also co-owner of television stations licensed to Wrather-Alvarez Broadcasting Company in Tulsa, San Diego, and Bakersfield.

Perhaps Wrather is most noted for several of the television series he produced: *The Lone Ranger*, *Lassie*, and *Sergeant Preston of the Yukon*. These programs, which were standards among early syndicated television offerings, served stations affiliated with networks as well as independent stations, and demonstrated that formulaic, filmed entertainment could provide both audiences and a resalable product. In many ways, Wrather's operations foreshadowed some of the most significant developments in the economic support structure for the next generation of television, a fact he obviously recognized.

After paying three million dollars to George W. Trendle for rights to *The Lone Ranger*, Wrather considered his purchase an important part of American history. The 221-episode half-hour western series, licensed through the years to ABC, CBS, and NBC, remains in syndication today. In the 1950s Wrather also produced the popular weekly *Lassie* adventure series and 78 episodes of *Sergeant Preston*.

Among other Wrather holdings were the *Queen Mary* and Howard Hughes' transport aircraft, the *Spruce Goose*. He also owned Disneyland Hotel, and served as board director or board chair for Continental Airlines, TelePromTer, Muzak, Inc., and the Corporation for Public Broadcasting.

Wrather was among several prominent business executives who became members of Ronald Reagan's original transition committee when Reagan became president in 1981. Jack Wrather died of cancer in 1984 at age 66.

**WRIGHT, ROBERT C.**

**U.S. Media Executive**

Robert C. Wright succeeded the legendary Grant Tinker as president of NBC in 1986 when “the peacock network” was acquired by General Electric (GE) for $6.3 billion. Under General Electric chief executive officer Jack Welch, Wright immediately began to reshape a new NBC, moving it out of radio altogether and headlong into cable television. In 1988 Wright allied with Cablevision Systems, Inc., in a $300 million deal which led in the following year to the start-up of a 24-hour cable network, CNBC (Consumer News and Business Channel). He also acquired shares of Visnews, an international video news service, and immediately initiated selling NBC News products to hundreds of clients overseas, and of the cable channel, Court TV.

The first half of the 1990s were equally busy for Wright. The Australian Television Network became NBC’s first overseas affiliate. In 1991, NBC bought out CNBC’s chief rival, the Financial News Network, for well in excess of $100 million, closed it down, and merged its core components into CNBC. He invested in the Super Channel, an advertising-supported satellite service based in London, England; began NBC Asia; and poured millions into NBC’s News Channel, a TV wire service based in Charlotte, North Carolina. But the biggest deal during the first half of the 1990s came when Wright and Bill Gates announced a multimillion dollar alliance of NBC and Microsoft to create an all-news channel, MSNBC, to rival CNN around the world.

Wright, under the tutelage of Jack Welch, remade NBC within 10 years, and served as the longest reigning NBC head since David Sarnoff. And like mentor Welch, Wright came from a Catholic household (from suburban Long Island), was the son of an engineer, had not gone to an Ivy league college, was devoted to GE, and was no fan of television. Wright had entered the GE corporate ladder as a staff attorney, but quickly moved to the decision-making

Wright's first ten years at NBC were not without failure. Most notably he led NBC to well in excess of $50 million in losses by way of its pay-per-view venture "Triplecast" during the 1992 Olympics. Still, he is credited with transforming NBC, and maneuvering NBC through a key intersection of the technological, economic, political, social, and cultural forces that helped shape television in the United States, at the end of the 20th century.

WRITER IN TELEVISION

A commonplace in the television industry is that "it all begins with the script." In part, this notion recognizes the centrality of writers in the early days of live television, when authors such as Reginald Rose, Paddy Chayevsky and Rod Serling established the medium as an arena for the exploration of character, psychology, and moral complexity in close intimate settings. With the television industry's move to Hollywood in the 1950s, and its increasing reliance on filmed, formulaic, studio factory productions, writers were often reduced to "hack" status, churning out familiar material that was almost interchangeable across genres. This week's western could be reformatted for next week's crime drama. This view oversimplifies, of course, and ignores extraordinary work in television series such as Naked City, The Defenders, Route 66, and others. But it does capture conventional assumptions and expectations.

In the 1970s, with the rise of socially conscious situation comedy often identified with producer Norman Lear and the "quality" comedies associated with MTM Productions, writers once again moved to positions of prominence. Lear himself was a writer-producer, one of the many "hyphenates" who would follow into positions of authority and control. And Grant Tinker, head of MTM, sought out strong writers and encouraged them to create new shows—and new types of shows—for television. Indeed, the legacy of MTM stands strong in today's television industry. Names such as James Brooks, Allan Burns, Steven Bochco, David Milch, and others can trace their careers to that company.

At the present time almost every major producer in American television is also a writer. Writers oversee series development and production, create new programs, and see to the coordination and conceptual coherence of series in progress. Their skills are highly valued and, for the very successful few, extremely highly rewarded. Never the less, the role of the writer is affected by many other issues, and despite new respect and prominence, remains a complex, often conflicted position within the television industry.

The film and television industries, for example, have been, until quite recently, very separate entities. Even in the early years of television writers were recruited not from film but from radio and the theater. In many ways, the environment for writers in television still remains distinct from that of the film industry. TV writers are quick to remark that it is nearly impossible to start out in television and move on to film, but that there are no barriers to moving in the other direction—it is, rather, a fact that writers in the film industry will not write television "unless they are starving." This belief summarizes a power relationship in which writers are clearly identified as either "television" or "film," or even by genre, early in their careers. One important difference lies in the common perception that writers in television have more clout, simply because there is a well-defined career path by which writers can move up through the ranks of a production company to become a senior producer and therefore control their work in ways typically denied to film scriptwriters.
An interesting aspect of writing for television is the hierarchical organization of the profession. Many production companies now employ "staff writers," although most TV writers work as freelancers competing for a diminishing number of assignments. At the bottom of the pyramid are the outside freelancers who may write no more than two or three episodes a season for various shows. At the top are the producers and executive producers. In between are readers, writer's assistants, a handful of junior staff writers (with contracts of varying lengths), and assistant and associate producers. Producer titles are often given to writers and are usually associated with seniority and supervisory responsibilities for a writing team. The desirable career path, then, involves moving from reader, to staff writer, to associate producer, to supervising producer to executive producer. Executive producers are given sole responsibility for controlling a television series, are usually owners or part owners of the series, and may work on several series at once.

Writers usually become executive producers by creating their own series. But this generally occurs only after writing successfully in other positions, and after being recognized by studio and network executives as someone with the potential to create and control a series. Only in the rarest of circumstances are new program ideas purchased or developed from freelancers or beginning writers.

Readers are a critical element in a freelance television writer's working life, because they control whether or not one's work reaches senior staff with hiring authority. Readers analyze samples of a writer's work and evaluate the appropriateness of a writer's skills, experience, and background for the series, and they are used routinely as a "first cut" mechanism throughout the industry. The criteria used by readers is often very specific, sometimes seemingly arbitrary, but because of their importance TV writers learn to "write to the reader" in order to advance to the next assessment level. An entire subordinate industry exists in Los Angeles to educate writers about the process and criteria reviewers employ, even though readers describe themselves as without significant influence.

Agents are also a fact of a television writer's life because production companies and their readers generally will not consider any work from a writer unless it is submitted by an agent, preferably an agent known to that production company. A common frustration for writers is that agents refuse to represent writers without credits but credits cannot be earned without agent representation.

The Writers Guild Of America (WGA) founded in 1912 is the official trade union and collective bargaining unit for writers in the film and television industries and actively monitors working conditions for writers. The WGA has warned that contemporary writers face a hostile environment with ageism and sexism a common complaint. Hollywood is enamored with youth culture and consequently producers and network executives often seek creative talent they feel will be capable of addressing that audience. According to WGA statistics, a definite bias toward younger writers has emerged in the industry. In addition, the WGA and another organization, Women in Film, recently released reports showing that although women comprise 25% of the Hollywood writing pool they receive a smaller share of assignments proportional to their number. Although there are several prominent female writers and producers in television, many industry observers believe that there are structural and cultural barriers to the advancement of women throughout the industry that cannot be easily removed.

Because the production of most television shows (prior to syndication sales) must be "deficit-financed" (network payment for the rights to the series is less than the cost to produce the episodes), writers often bear the brunt of the resulting financial insecurity, taking less cash upfront in salary or per-episode fees and hoping for healthy residuals if the series becomes successful. Although the WGA sets minimum payments for each type of writing assignment, writers are often seen at the popular "Residuals Bar" in Van Nuys where a residuals check for $1 or less earns the bearer a free drink. 70% of television writers earn less than $50,000 a year through their efforts in this field. In spite of this harsh reality, hundreds of aspiring writers write thousands of new scripts each year, hoping for the chance to write the next huge hit.

In other television systems writers continue to enjoy a similar sort of prestige. Television authors such as Dennis Potter and Lynda La Plante have offered audiences outstanding, formally challenging work for this medium. Because of their work as well as because of the American system's financial and aesthetic rewards, television writing is now perhaps recognized as a truly legitimate form of creativity, and has taken its place alongside the novel, the stage play, and the film screenplay as one of the most significant expressive forms of the age.

—Cheryl Harris

WYMAN, JANE
U.S. Actor/Producer

Jane Wyman is one of the few Hollywood movie stars to have had an equally successful television career. She was at the height of her film career in the mid-1950s when she launched her first television series, Jane Wyman Theater. Modeled after the successful The Loretta Young Show, the prime-time filmed anthology series presented a different drama each week, with Wyman as host, producer, and sometimes actress. Between 1958 and 1980, Wyman appeared occasionally as a guest star on television series and in made-for-TV movies. Then, in 1981, she scored another series success with her portrayal of ruthless matriarch Angela Channing on CBS’ prime-time soap opera, Falcon Crest.

Wyman broke into movies in the early 1930s as a Goldwyn Girl and continued to play chorus girls until the mid-1940s. By 1948, when she won the Best Actress Academy Award for Johnny Belinda, her image was that of a capable, dramatic actress. In the early 1950s, her success continued with romantic comedies like Here Comes the Groom (1951) and melodramas like Magnificent Obsession (1954). She was considered a “woman’s star,” mature yet glamorous, a woman with whom middle-class, middle-aged women could identify. Amid speculation as to why a currently successful film star would want to do series television, Wyman started work on her own anthology drama series. According to her, television seemed like the right thing to do at that time. The movie industry was changing, and she wanted to try the new medium. Moreover, film roles for fortyish female stars were in short supply.

Procter and Gamble’s Fireside Theater, a filmed anthology series, had been a fixture on NBC since 1949 but, by the end of the 1954–55 season, ratings had slipped. The show was overhauled in 1955 and became Wyman’s series. Her production company, Lewman Productions (co-owned with MCA’s Revue Productions), produced the series. As host, she was glamorous Jane Wyman. As producer, she chose the stories. As actress, she chose her occasional roles. Presentations were dramas or light comedies, with Wyman acting in about half of the episodes. The series carried on the tradition established by Fireside Theater and The Loretta Young Show—filmed, half-hour anthology dramas that attracted substantial audiences while critics praised live, 60- and 90-minute anthology dramas like Studio One and Playhouse 90.

Wyrman’s series was initially titled Jane Wyman Presents the Fireside Theater, but was later shortened to Jane Wyman Theater. (It was called Jane Wyman Presents when ABC aired reruns in 1963.) Like The Loretta Young Show, Wyman’s series was rerun on network daytime schedules (to target women audiences) and in syndication. (An aspiring writer,
Aaron Spelling, found work with Jane Wyman Theater and later became one of television's most successful producers. Wyman also hosted a summer series that featured teleplays originally shown on other anthology dramas. This 1957 program was called Jane Wyman's Summer Playhouse.

In the years following the cancellation of Jane Wyman Theater, Wyman guest-starred on television programs, made a few feature films (with starring roles in two Disney films), and appeared in a made-for-TV movie. In 1971, Wyman guest starred on an episode of The Bold Ones as Dr. Amanda Fallon. This production provided the basis for a series pilot, but never became a series. In 1979, she received attention for her supporting role in the made-for-TV movie The Incredible Journey of Dr. Meg Laurel. She then made appearances on two of Aaron Spelling's series, The Love Boat and Charlie's Angels. The spotlight really returned in 1981—for two different reasons.

As the ex-wife of the newly-elected President Ronald Reagan, Wyman was being sought out by the media. Her publicity value did not escape Lorimar Productions' Earl Hamner and CBS. Seeking to capitalize on their success with Dallas and Knots Landing, Lorimar and CBS launched Falcon Crest in 1981 with Wyman starring as a female version of Dallas's ruthless and manipulative J.R. Ewing. For nine seasons, she portrayed Angela Channing, the powerful matriarch of a wealthy, wine-making family. Wyman had made a successful return to series television, but in a role quite different from her earlier work. As Angela Channing, she was not the likable, clean-cut woman she had so often portrayed in the past, but she played the part to perfection. In 1984, she won a Golden Globe Award for her Falcon Crest performances, and was reported to be the highest paid actress on television at that time. Jane Wyman's television career began in the mid-1950s, after she had already achieved stardom in the movies. Like Loretta Young and Lucille Ball, she was one of the few film stars, one of fewer women, to have her own successful television series. She also was one of the few women to star in her own anthology drama series. Thirty years later, in the 1980s, Wyman accomplished something even more unusual: as an actor of old Hollywood and early television, she starred in another, even more successful series, Falcon Crest.

YES, MINISTER
British Situation Comedy

Yes, Minister, a classic situation comedy exposing the machinations of senior politicians and civil servants in Great Britain, was first broadcast by the BBC in 1980. Such was the standard of scripts and performance and the accuracy of the satire that the programme became required viewing for politicians, journalists, and the general public alike, and both the initial three-season series and the two-season sequels that were made in the 1980s under the title Yes, Prime Minister, were consistently among the top-rated shows.

The idea for the series was developed by writer Antony Jay and former Doctor in the House star Jonathan Lynn while both were on the payroll of the video production company set up by John Cleese in the mid-1970s. The BBC bought
1884

ENCYCLOPEDIA OF TELEVISION

the rights to the pilot episode and work on a full series finally
got under way in 1979.
The humour of each episode revolved around the maneuverings of the Right Honourable James Hacker, MP, the
idealistic and newly installed minister for Administrative
Affairs (and ultimately prime minister), and his cynical and
wily permanent under-secretary, Sir Humphrey Appleby,
who was committed to seeing that his ministerial charge
never meddled too much in the business of the department
and that the real power remained securely in the hands of
the civil service. Every time Hacker conceived some notion
aimed at reform of the ministry, Sir Humphrey Appleby and
Private Secretary Bernard Woolley were there to thwart him
by various ingenious means. If Hacker inquired too closely
into the reasons why he was not going to get his way about
something, Sir Humphrey Appleby was more than able to
throw up a smokescreen of obfuscation and technical jargon,
which as often as not discouraged further questioning and
persuaded the civil servant that his charge was now nearly
"house- trained ". This was not to say that Sir Humphrey
always got his way, however: sometimes a last- minute development would deliver him into the minister's hands, leaving
the civil servant speechless with rage and indignation.
The script of Yes, Minister, was both perceptive and
hugely funny, and the casting of the main roles was perfect.
Paul Eddington was completely convincing as the gullible
and idealistic Hacker, while Nigel Hawthorne was masterly
as the machiavellian Sir Humphrey, assisted by Derek
Fowlds as the genial Bernard Woolley. The show was an
immediate success and was showered with numerous awards.

Among its many devotees were such distinguished figures as
Margaret Thatcher, who named it as her favourite programme and saw to it that writer Antony Jay received a
knighthood (Eddington and Hawthorne both got CBEs in
the 1986 New Year's Honours list). Also connected with the
programme, providing invaluable insights into the operations of Whitehall behind the scenes, was Harold Wilson's
one-time secretary, Lady Marcia Falkender.

YOUNG, LORETTA
U.S. Actor
Loretta Young was one of the first Hollywood actors to
move successfully from movies to a television series. She
made that transition in 1953 with Letter to Loretta (soon
retitled The Loretta Young Show), an anthology drama series.
Anthology dramas were a staple of 1950s programming,
presenting different stories with different characters and
casts each week. Young hosted and produced the series, and
acted in over half the episodes as well. Capitalizing on her
glamorous movie star image, her designer fashions became
her television trademark. The show's success spurred other
similar series, but Young's was the most successful. She was
one of the few women who had control of her own successful
series, the first woman to have her own dramatic anthology
series on network television, and the first person to win both
an Academy Award and an Emmy Award.

Loretta Young began her acting career with bit parts as
a child extra in silent films. By the mid- 1930s, fashion and
glamour were important components of her star image. By
1948, after more than twenty years in films, she was recognized for her acting when she won the Best Actress Academy

Award for her performance in The Farmer's Daughter, a
romantic comedy. In 1952, she made her last feature film
and jumped eagerly into television. For older movie actors,
television offered new opportunities and at forty Young was
considered "older" when she began her series. Following her
lead with prime -time anthology dramas were actors Jane
Wyman, June Allyson, and Barbara Stanwyck.
As a movie star and as a woman, Young realistically had
two options for a television series in 1953. CBS, the situation
comedy network, home of Lucille Ball and I Love Lucy,
suggested a sitcom. NBC offered an anthology drama. Not
a zany comedienne like Ball or Martha Raye (who appeared
in comedy -variety shows), Young went for the anthology
drama. In doing so, she would follow film actor Robert
Montgomery (Robert Montgomery Presents) to prime -time
success as host and actor in her own dramatic anthology
series. She wanted -and the anthology format afforded
acting variety, a format for conveying moral messages, and
a showcase for her glamorous, fashionable movie star image.
Though many anthology dramas were broadcast live,

-


Young—like most movie stars trying series TV—chose tele-film production, a mode that could bring future profit through syndication.

Young and husband Thomas Lewis (who was instrumental in setting up Armed Forces Radio during World War II and developed numerous radio programs) created Lewislor Enterprises to produce the series. Lewis initially served as executive producer, but left the show by the end of the third season. Young became sole executive producer. When her five-year contract with NBC was up, Young formed a new company, Toreto Enterprises, which produced the series’ last three seasons.

Religious and moral questions had long concerned Young. Known for her religious faith and work on behalf of Catholic charities, the stories she selected for production in her series carried upbeat messages about family, community, and personal conviction, and every story was summed up with a quotation from the Bible or some other recognized source. Concerned about postwar changes in American society, Young advocated TV entertainment with a message. Scripts hinged on the resolution of moral dilemmas. Numerous civic and religious groups honored her for this. She also won three Emmys, the first in 1955 as best dramatic actress in a continuing series.

Fashion had also been an important component of Young’s star image, and was central to her television program. Indeed, fashion may be the most memorable feature of The Loretta Young Show. Every episode opened with a swirling entrance that showcased her designer dresses, a move that became her television trademark. Many of the dresses she wore on the show were designed by Dan Werle, and some were marketed under the label Werle Originals. Young’s strong feelings about fashion were publicized again in the early 1970s when she won a suit against NBC for allowing her then-dated fashion introductions to be shown in syndication. While this emphasis on fashion actually served Young’s conviction that women had to maintain their femininity, as a star she epitomized a supposed paradox: she was beautiful and feminine, but she was also a strong-willed woman with a career.

While the star and her fashions often attracted reviewers, some complained that Young and her show were sentimental, low-brow women’s entertainment, a typical criticism of women’s fiction, where stories focus on the relationships and emotions comprising women’s traditional sphere of home and family. The criticism was also typical of a 1950s conceit that filmed television series were inferior to prestigious live anthology dramas such as Studio One and Philco Television Playhouse.

Young’s anecdotal and philosophical book, The Things I Had To Learn, was published in 1961, the same year her prime-time series went off the air. Her philosophies about life, success, and faith were the basis of the book, just as they had been for The Loretta Young Show.

She returned to series television in the 1962–63 season with The New Loretta Young Show, a situation comedy, and formed LYL Productions to produce the series. The story originally centered on her as a widowed writer-mother, but her character was married by the end of the season. This new series lasted only one season and Young did not return to television again until 1986, when she appeared in a made-for-TV movie, Christmas Eve. She won a Golden Globe Award for that performance. Her most recent television appearance was in another made-for-TV movie, Lady in the Corner (1989), in which she played the publisher of a fashion magazine.

Loretta Young is probably most important to television’s history as a woman who blazed a path for other women as both an actor and a producer, who succeeded with her own prime-time show in a format that was not a situation comedy, and who was able to transfer success in film to success in television. Few film stars have made this transition.

YOUNG, ROBERT
U.S. Actor

Robert Young came to television out of film and radio, and for nearly 30 years he was revered as television’s quintessential father-figure. With his roles as Jim Anderson in the domestic melodrama Father Knows Best, and as the title character in the long-running medical drama, Marcus Welby, M.D., he was admired as a strict, benevolent patriarch. Gentle, moralistic, and highly interventionist, Young’s television character corrected and guided errant behavior initially in a family setting, then as an omnipotent doctor, and perhaps most self-consciously, when he portrayed “himself” in a decade-long series of decaffeinated coffee commercials. With a simple raised eyebrow and a tilt of the head, Young’s character convinced even the most hedonistic of co-stars to relinquish their selfish ways for a greater noble purpose.

Young began his career as a second lead in Hollywood films. Displaying a generally unrecognized versatility, Young portrayed villains, best buddies and victims with equal aplomb, and performed for many of Hollywood’s finest directors, including Alfred Hitchcock, Frank Borzage, and Edward Dmytryk. Frustrated with his secondary status (he described his parts as those refused by Robert Montgomery), Young ventured into radio, in 1949, where with his good friend and business partner, Eugene Rodney, he co-produced and starred in a family comedy, Father Knows Best. Running for five years, the program was a soft-hearted look at a family in which the benevolent head of the family was regarded with love but skepticism and in which mother generally supplied the wisdom. At the time, most family comedies were characterized by wise-cracking moms and
inept fathers. Young took the role on the condition that the father, in his words, not be "an idiot. Just make it so he's unaware. He's not running the ship, but he thinks he is."

In 1954, Young and Rodney were approached by Screen Gems to bring the program to television. While Young was hesitant at first, a promise of joint ownership in the program convinced him to make the move. Upon network insistence, the question mark was dropped (they thought it demeaning) and Father Knows Best premiered on CBS, under the sponsorship of Kent cigarettes. Because of advertising and network time-franchises, the program was placed too late in the evening to attract a family audience, and quickly died in the ratings. A fan-letter campaign and the personal intervention of Thomas McCabe, president of the Scott Paper Company, resurrected the program, which was to become an NBC staple for the next five years.

The television series was quite different from the radio version. Most significantly, radio’s ambivalence about the father’s wisdom was removed and replaced by an emphatic belief that Jim Anderson was the sole possessor of knowledge and child-rearing acumen. Although the original head writer, Roswell Rogers, remained with the program, most of the radio scripts had to be re-written or completely scrapped for the visual television medium. With the exception of Robert Young, the Anderson family was completely re-cast, with Jane Wyatt signing on after a year-long search. Many of the episodes were based on the real-life exploits of Young’s daughter Kathy, while Wyatt was described as an amalgamation of the wives of Young, Rodney, and Rogers.

The program was heralded by the popular press and audiences alike as a refreshing change from "dumb Dad" shows. With near-irritating consistency, Jim Anderson resolved his family’s dilemmas through a pattern of psycnh intimidation, guilt and manipulation, causing the errant family member to recant his or her selfish desires, and put the good of the community, family and society ahead of personal pleasure. The wife and the three children, played by Elinor Donahue, Billy Gray, and Laurin Chapin, were lectured with equal severity by the highly exalted father, whose virtues were often the focus for episodic tribute.

The program won numerous awards, and spawned a host of domestic melodramas that were to dominate television (including The Donna Reed Show, and Leave It to Beaver). So popular was the program and so powerful its verisimilitude that viewers came to believe the Anderson family really existed. Women wrote to star Jane Wyatt with questions about cooking and advice about home decorating or child-rearing. Young was named Mt. Sinai "father of the year," and gathered similar honors throughout the series' run. In one of the stranger blends of fact and fiction, the producers were approached to do a U.S. Savings Bond benefit for the American Federation of Labor and the Treasury Department. "24 Hours in Tyrant Land" depicted the Anderson’s fictional Springfield community caught in the clutches of a tyrannical despot. Never aired on television, the episode toured the country’s town halls and churches.

By 1960, the personal difficulties of both Young and the teenage cast members, and the creative fatigue of Rogers, prompted the producers to cease first-run production, although reruns continued to air in prime time on ABC for two more years.

Despite a couple of television films, Young's career was basically dormant during the 1960s until the highly acclaimed television movie, Marcus Welby, M.D. The pilot film, revolving around the heroic efforts of a kindly general practitioner and his "anti-establishment" young assistant (played by James Brolin), became a hit television series that was to air on ABC for the next seven years. Each phenomenally slow-moving episode, featured Welby, his partner Dr. Steven Kiley, and the friendly (but usually confused) nurse, Consuela, treating a single patient whose disease functioned as some sort of personal or familial catastrophe. Even for the 1970s, the program was anachronistic—Welby practiced out of his well-appointed Brentwood home, and both he and Kiley made housecalls. Significantly, the show did try to bring public attention to current health crises or recent medical discoveries. Thus, episodes dealt with Tay-Sachs disease, amniocenteses, abortion rights (when abortion was still illegal). With kindly didacticism, Welby would lecture the guest star (and the television viewer) on the importance of consistent medical care, early detection, immunization and the like.

By the mid-1970s, Young grew weary of the program, and this, coupled with Brolin’s career ambitions, and a post-Watergate viewership hostile toward elderly male authority figures, contributed to the program’s demise. With the end of the program, Young continued to work in television, starring in a couple of Welby movies, and a Father Knows Best reunion. He gained critical acclaim in a television film dealing with Alzheimer’s disease and euthanasia.
His bitterness towards Hollywood casting practices never diminished however, and in the early 1990s Young attempted suicide, revealing a vulnerability and despair totally at odds with his carefully constructed patriarchal persona.

YOUR HIT PARADE
U.S. Music Variety

Your Hit Parade was a weekly network television program that aired from 1950 to 1959. The program enjoyed some popularity but was never as successful as its radio predecessor which began in 1935 and ran for fifteen years before moving to television. Both the radio and television versions featured the most popular songs of the previous week as determined by a national “survey” of record and sheet music sales. The methodology behind this survey was never revealed but most audience members were willing to accept the tabulations without question. Both the TV and
radio versions were sponsored by the American Tobacco Company’s Lucky Strike cigarettes.

Original cast members for the TV program included Eileen Wilson, Snooky Lanson, Dorothy Collins and a wholesome array of young fresh-scrubbed “Hit Parade Singers and Dancers.” Gisele MacKenzie joined the cast in 1953.

The TV version featured the top seven tunes of the week and several Lucky Strike extras. These extras were older, more established popular songs that were very familiar to audiences. The top seven tunes were presented in reverse order not unlike the various popular music countdowns currently heard on radio. The top three songs were presented with an extra flourish and audience members would speculate among themselves as to which tunes would climb to the top three positions and how long they would stay there.

The continuing popularity of certain songs over a multiple-week period had never been a problem for the radio version of the program with its Top Ten list. Regular listeners were willing to hear a repeat performance of last week’s songs perhaps with a different vocalist than the previous week to provide variation. The television Hit Parade attempted to dramatize each song with innovative skits, elaborate sets, and a large entourage of performers. Creating new skits for longer running popular songs proved much more difficult on television, particularly when we recall such hits from the period as “How Much Is that Doggie in the Window,” and “Shrimp Boats Are Coming.”

A much more serious problem facing the program was the changing taste in American popular music. Rock ’n’ roll was displacing the syrupy ballads that had been the mainstay of popular music during the 1930s and 1940s. The earlier music had a multi-generational appeal and the radio version of Your Hit Parade catered to a family audience. The rock music of the 1950s was clearly targeted to younger listeners and actually thrived on the disdain of its older critics.

Further, much of the popularity of the faster paced rock hits was dependent on complex instrumental arrangements and the unique styling of a particular artist or group. Rock music’s first major star, the brooding, sensuous Elvis Presley, was a sharp contrast to the sedate styles of Snooky Lanson and Dorothy Collins. As rock (and Presley) gained in popularity, the ratings for Your Hit Parade plummeted. The cast was changed in 1957, the show temporarily canceled in 1958, but revived under new management with Dorothy Collins and Johnny Desmond in 1953. Despite these changes, the program was simply out of touch with the current musical scene and the last program was broadcast on 24 April 1959.

YOUTH TELEVISION

**Canadian Youth Cable Network**

Youth TV (YTV) is a Canadian cable television network aimed at young people up to the age of 18. Since its launch in September 1988, YTV has proven remarkably successful, far surpassing even its most optimistic economic and audience projections. An important part of YTV’s success is predicated upon its ownership structure. Although investors include numerous producers with a long-standing commitment to children’s television, over 50% of YTV is owned by just two cable firms, CUC Ltd. and Rogers Communications, the latter being Canada’s largest cable operator. Their financial interest has helped make YTV available in the over 85% cabled homes in Canada. This high rate of cable penetration has in turn made YTV an attractive advertising vehicle for products and services aimed at a youth demographic.

Additionally, YTV has been able to insert itself into a traditional area of Canadian programming strength. Canadian production companies have long excelled at children’s and young people’s programming for three main reasons: (a) children’s programming was relatively inexpensive, (b) it could easily be exported, and (c) it tended to be neglected by more powerful American production companies. As a result, YTV has been able to draw upon a considerable catalogue of Canadian children’s programming and to provide opportunities for the expansion of this traditional expertise.

Finally, YTV has proven very successful in attracting its target audience. It engages in extensive polling of young people to determine their aspirations and concerns, buying patterns, political views, and to spot trends. As a result, YTV has crafted a schedule which mixes old, familiar shows with new, highly-targeted programs. YTV has therefore very rapidly emerged not only as a leading showcase but also an important producer of children’s programming. It has produced or co-produced such shows as *Maniac Mansion*, *The Adventures of the Black Stallion*, *Deke Wilson’s Mini-Mysteries*, and *Street NOISE*, some of which have received wide international distribution. Indeed, YTV regularly exceeds its Canadian content production requirements by very wide margins.

YTV has also emerged as a socially conscious broadcaster which contributes to numerous charities and fund raisers (Children’s Wish Foundation, Muscular Dystrophy, Kids Help Phone, etc.) and which provides educational grants. In its few years, YTV has already received several national and international awards for excellence in programming, for promoting international human rights, for aiding the cause of literacy, and for work in other areas of social concern.

Ironically, YTV’s greatest problems have come not from the marketplace or from viewers but from the Canadian Radio-Television and Telecommunication Commission (CRTC). In its concern that YTV not appeal to audience members or age groups beyond its mandated audience, and thereby threaten the market of established broadcasters, the CRTC instituted the “protagonist clause” also known as the “Little Joe” rule. This clause requires that 100% of YTV’s drama programming broadcast in the evening feature “a major protagonist that is a child, youth under the age of 18 years, puppet, animated character or creature of the animal kingdom.”

The clause acquired its nickname when YTV discovered that Little Joe, a main character of *Bonanza* which it had purchased to strip in prime time, actually celebrated his 19th birthday in one of the early episodes. The CRTC ordered *Bonanza* off the air and YTV has since lobbied to have the clause removed or altered.

YTV complains that the protagonist clause prevents it from showing material which legitimately appeals to its

target audience—characters such as Superman, Batman, and Robin Hood, who are all well over 18—hockey superstar Wayne Gretzky, works of classic literature such as *Great Expectations* in which the hero starts as a child but grows past 18, the life stories of most musical groups, and so on. YTV claims that it is difficult to co-produce or sell internationally if a major protagonist must be "a puppet, animated character or creature of the animal kingdom."

YTV’s efforts met with some success when the CRTC amended the protagonist clause in 1992 to include comic book characters, folk and superheroes, and classical or historical heroes. Nonetheless, YTV has generally managed to reach a loyal audience, to produce hundreds of hours of original content, and to ensure its financial success while also meeting public service and social responsibility objectives.

—Paul Attallah
**Z Cars**

*British Police Series*

**Z Cars** was the innovative, long-running BBC police series of the 1960s, which has programmed more episodes (667) than any other weekly crime programme on British television. Created by Troy Kennedy-Martin and Elwyn Jones, and produced by David Rose, the series brought a new realism to the genre as it featured day-to-day policing in Newtown, a fictitious town to the north of Liverpool. At the spearhead of operations were four police constables: “Jock” Weir, “Fancy” Smith, Bob Steele and Bert Lynch. They occupied the two radio crime cars called Z-Victor 1 and Z-Victor 2, from which the series gained its title. Supervising operations via a VHF radio operator in the station, and securing prosecutions in the interrogation room, were Detective Sergeant Watt and the formidable Detective Inspector Barlow. Watched by nearly 14 million viewers in its first season, **Z Cars** rapidly captured the public imagination, and the leading characters became household names. Though in later seasons new characters might be brought in as replacements and the crime cars up-dated, the same basic formula applied. Bert Lynch, played by James Ellis, remained throughout the programme’s run. Promoted to station sergeant in 1966 he was still in place at the desk when the doors were finally closed down on the cars in 1978.

In terms of programme aesthetics, **Z Cars** attempted to counter the film appeal of early U.S. cop programmes, such as *Highway Patrol*, with “gritty” realism. This was achieved by close attention to authentic police procedure, observation of working-class behaviour and, most especially, the adoption of regional speech. “Northern” working-class subject matter was prominent in 1960s culture, exemplified in feature films like *Saturday Night and Sunday Morning* and *A Taste of Honey*. However, **Z Cars** had more in common with the dialogue-led drama and actor-centred performances of ATV’s *Armchair Theatre* and the early years of Granada’s *Coronation Street*. Though later series were able to make more use of film and locations, the look of **Z Cars** was constructed almost entirely in the television studio. The 50 minutes of continuous recorded performance provided the space for displays of male comradeship and teamwork, sharp verbal exchanges with members of the community, and, most characteristic of all, intense drama in the interrogation room as Barlow bullied and coaxed confessions from his suspects.

Overall, **Z Cars** succeeded in presenting a more human and “down to earth” image of the police than had been previously created on British television. Major crime remained at the periphery of the series and the emphasis was placed instead on domestic and juvenile crime. The programme adopted the social-democratic view of society so prevalent in 1960s Britain, and at times the PCs behaved more like social workers than policemen, as criminal behaviour was explained in terms of social deprivation. The liberal approach, however, was showing signs of exhaustion. Barlow upheld the law with a fierce authoritarianism in the station, and the PCs needed all their ingenuity and skill to enforce it effectively in the community. An on-going theme is the personal cost of securing law and order, and most of the police characters have unsatisfactory family relationships. In one episode, for instance, Watt was shown agreeing to a divorce and in another Steele beats up his wife. The image of policemen as fallible human beings created some controversy and for a time the chief inspector of Lancashire withdrew his support from the programme, apprehensive that it might undermine public confidence in the police.

In the course of its long run the programme established the reputations of many production participants, including actors such as Stratford Johns, Frank Windsor, Colin Welland, Brian Blessed and James Ellis, producers and directors such as Shaun Sutton, David Rose and John McGrath, and writers such as Troy Kennedy-Martin, John Hopkins, Alan Plater and Allan Prior. **Z Cars** has been a major influence on the course of TV police fiction in Britain. The long-running C.I.D. series *Softly Softly* (1966–75) was a direct spin-off from it, achieved by promoting Barlow to the rank of chief inspector, transferring him to a regional crime squad and replacing the squad car with a dog-handling unit. Recent British programmes about community policing as different as *The Bill* and *Heartbeat* continue to draw from the **Z Cars** idea. One of the most interesting reworkings of the programme’s basic format was BBC’s *Juliet Bravo* (1980–88) which, in keeping with 1980s gender politics, transferred the power from male C.I.D. officers to a uniformed female inspector.

ZAPPING

Zapping is the use of a remote control device (RCD) to avoid commercials by switching to another channel. The process is often paired with “zipping,” fast-forwarding through the commercials in recorded programs. Although zapping and zipping have received much attention recently, viewers have always avoided commercials by changing channels, leaving the viewing area or simply shifting their attention away from the set. But as the penetration of RCDs increased to about 90% and videocassette recorders (VCRs) to over 77% of U.S. households by 1993, advertiser concern over zapping and zipping has accelerated. RCDs and VCRs, combined with a multitude of viewing options on cable and home satellite systems, have led to the zapping or zipping of 10 to 20% of all commercials, according to some industry studies. Cable networks specializing in short form programming (music videos, news stories, comedy shorts) are well suited to filling commercial breaks. Thus, the once “captive” audience of television is exercising its option to zap or zip boring or annoying commercials. Indeed, several studies of RCD gratifications have consistently identified commercial avoidance as a major motivation to use remote control devices.

In the 1980s, RCDs and VCRs proliferated, while the advertising and television industries debated the relative impact of zapping and zipping. Advertisers argued that program ratings did not reflect decreasing audience attention to commercials, while broadcasters cited studies that minimized the increase in channel changing during commercials. Several studies showed that the content of a commercial greatly affected the degree of zapping, encouraging many advertisers to restructure their television commercials by focusing on more entertaining content, fast-paced editing, or high quality special effects. When research showed that commercials placed during sports programming were particularly susceptible to zapping, some advertisers responded with commercials that combined both program and advertising elements. For example, IBM’s “you make the call” commercials inserted an advertising message between question and answer segments of a sports quiz. Advertisers also tried to thwart the RCD’s impact through more careful audience targeting and by reducing the length of some commercials. As the decade wore on, advertisers increased their use of place-based advertising and integrated

marketing to replace the ad exposures lost to zapping and zipping.

Although some observers see RCD enhanced zapping as a modest intensification of the television audience's long standing urge to avoid bad commercials, others have argued that zapping will lead to gradual structural changes in the commercial television industry. Refinements in RCDs and VCRs may make zapping and zipping even easier. Thus, as these two sources of commercial avoidance decrease the value of commercially sponsored programming, advertisers may continue to shift resources to other advertising media and marketing approaches, or begin to offer compensation to viewers for simply watching commercials. Program providers may need to seek other revenue streams such as pay-per-view and subscriber fees to replace the lost revenue from advertisers. The result of these structural changes may be fewer viewing options for those unable or unwilling to pay these new charges and a wider gap between the information and entertainment haves and have not's.

ZIV TELEVISION PROGRAMS, INC.

U.S. Production and Syndication Company

As the most prolific producer of programming for the first-run syndication market during the 1950s, Ziv Television Programs occupies a unique niche in the history of U.S. television. Bypassing the networks and major national sponsors, Ziv rose to prominence by marketing its series to local and regional sponsors, who placed them on local stations, generally in time slots outside of prime time. Using this strategy, Ziv produced several popular and long-lived series, including The Cisco Kid (1949–56), Highway Patrol (1955–59), and Sea Hunt (1957–61).

Frederick W. Ziv, the company's founder, was born in Cincinnati, Ohio, in 1905. The son of immigrant parents, he attended the University of Michigan, where he graduated with a degree in law. Returning to his native Cincinnati, Ziv chose not to practice the legal profession, but instead opened his own advertising agency. His corporate strategies and his vision of the broadcasting business developed from this early experience in the Midwest.

During the radio era, Cincinnati was a surprisingly active regional center for radio production. Clear-channel station WLW, owned by the local Crosley electronics firm, broadcast a powerful signal that could be heard over much of the Midwest. Due to its regional influence, WLW became a major source of radio programming that offered local stations an alternative to network-originated programming. Cincinnati was also home to Procter and Gamble, the most influential advertiser in the radio industry at a time when most radio programming was produced by sponsors. Consequently, Procter and Gamble was directly responsible for developing many of radio's most lasting genres, including the soap opera.

Ziv's small advertising agency gained valuable experience in this fertile regional market. Ziv produced several programs for WLW, where he met John L. Sinn, a writer who would become his right-hand man. In 1937, the two men launched the Frederick W. Ziv Company into the business of program syndication. From his experience in a regional market, Ziv recognized that local and regional advertisers could not compete with national-brand sponsors because they could not afford the budget to produce network-quality programs. In an era dominated by live broadcasts, Ziv produced pre-recorded programs, "transcriptions" recorded onto acetate discs, bypassing the networks and selling his programs directly to local advertisers on a market-by-market basis. Programs were priced according to the size of each market; this gave local sponsors a chance to break into radio with affordable quality programming that could be scheduled in any available slot on a station's schedule.

Ziv produced a wide range of programming for radio, including sports, music, talk shows, soap operas, anthology dramas, and action-adventure series such as Boston Blackie, Philo Vance, and The Cisco Kid. By 1948, he was the largest packager and syndicator of radio programs—the primary source of programming outside the networks.

In 1948, Ziv branched into the television market by creating the subsidiary, Ziv Television Programs. His fortunes in television were entirely tied to the market for first-run syndication, which grew enormously during the first half of the 1950s before going into a steep decline by the end of the decade. In the early years of U.S. television, local stations needed programming to fill the time slots outside of prime time that were not supplied by the networks. More importantly, local and regional sponsors needed opportunities to advertise their products on television. As in radio, Ziv supplied this market with inexpensive, pre-recorded programs that could be scheduled on a flexible basis. In 1948, the first Ziv series, Yesterday's Newsreel and
Sports Album, featured 15-minute episodes of repackaged film footage.

In 1949, Ziv branched into original programming with his first dramatic series, *The Cisco Kid*, starring Duncan Renaldo as the Cisco Kid and Leo Carillo as his sidekick, Pancho. Ziv's awareness of the long-term value of filmed programming was signaled by his decision to shoot *The Cisco Kid* in color several years before color television sets were even available. *The Cisco Kid* remained in production until 1956, but its 156 episodes had an extraordinarily long life span in syndication thanks to the decision to shoot in color. In its first decade of syndication, the series grossed $11 million.

Ziv produced more than 25 different series during the 1950s, all of which were half-hour dramas based on familiar male-oriented, action-adventure genres. His output included science-fiction series such as *Science Fiction Theater* (1955–57), *Men into Space* (1959–60), and *The Man and the Challenge* (1959–60), westerns such as *Tombstone Territory* (1957–60), *Rough Riders* (1958–59), and *Bat Masterson* (1958–61), and courtroom dramas such as *Mr. District Attorney* (1954–55) and *Lockup* (1959–61).

In order to carve out a unique market niche, Ziv tried to spin variations on these familiar genres. In the crime genre, for instance, he produced few series that could be considered typical cop shows. His most notorious crime series, *I Led Three Lives* (1953–56), featured Richard Carlson as Herbert Philbrick, an undercover FBI agent sent to infiltrate Communist organizations throughout the United States. While the major networks generally avoided the subject of the Red Scare, preferring to blacklist writers and performers while barely alluding to the perceived Communist threat in their programming, Ziv attacked the issue with an ultra-conservative zeal. By organizing the series around Philbrick's fight against the menace of Communism, the series implied that Communism was every bit as threatening and ubiquitous as urban crime.
Another crime series, *Highway Patrol*, starring Broderick Crawford, moved the police out of the familiar urban landscape, placing them instead on an endless highway—an important symbolic shift in a postwar America obsessed with automobile travel as a symbol of social mobility. *Sea Hunt*, which was produced for Ziv by Ivan Tors (who would go on to produce *Flipper* and *Daktari*), took the crime series onto the sea, where star Lloyd Bridges as Mike Nelson solved crimes and found adventure under the ocean’s surface. The underwater footage added a touch of low-budget spectacle to the crime genre.

The market for first-run syndication swelled through the mid-1950s, and Ziv rode the wave with great success. The watchword for Ziv productions was economy, and the company even formed a subsidiary called Economee TV in 1954. Production budgets were held to $20,000 to $40,000 per episode, which were generally shot in two to three days. As the demand for syndicated programming grew, Ziv expanded rapidly. In 1953, Ziv opened an international division to sell its series overseas. The operation proved to be such a success in England that Ziv found itself with revenues frozen by protectionist British legislation designed to force American companies to spend their profits in Great Britain. In order to make use of these frozen funds, in 1956-57, Ziv produced two series in England: *The New Adventures of Martin Kane* and *Dial 999*.

With production at the studio booming, Ziv stopped leasing space from other studios, and purchased its own Hollywood studio in 1954. By 1955, the company’s annual revenues were nearly doubling every year. Ziv was then producing more than 250 half-hour TV episodes annually, with a production budget that exceeded $6 million—a figure that surpassed virtually every other television producer in Hollywood.

But the tide was turning in the market for first-run syndication. By 1956, the networks had begun to syndicate reruns of their older prime-time programs. Since these off-network reruns—with their established audience appeal—had already earned money during the initial run in prime time, networks were able to sell them to local markets at deep discounts. As a consequence, the market for first-run syndication began to shrink dramatically. In 1956, there were still 29 first-run syndicated series on television, with the number dropping to ten by 1960. By 1964, there was only one such series left on the air.

As the networks extended their influence beyond prime time and the market for first-run syndication dwindled, Ziv began to produce series specifically for network use—a decision that the company had actively avoided for over two decades. Ziv’s first network series was *West Point* (1956-57) for CBS, followed by four other network programs: *Tombstone Territory*, *Bat Masterson*, *Men into Space*, and *The Man and the Challenge*.

In 1959, Ziv elected to sell 80% of his company to an alliance of Wall Street investment firms for $14 million. "I sold my business," he explained, "because I recognized the networks were taking command of everything and were permitting independent producers no room at all. The networks demanded a percentage of your profits, they demanded script approval and cast approval. You were just doing whatever the networks asked you to do. And that was not my type of operation. I didn’t care to become an employee of the networks."

In 1960, United Artists purchased Ziv Television Programs, including the 20% share still held by chair of the board, Frederick Ziv, and president, John L. Sinn, for $20 million. The newly merged production company was renamed Ziv-United Artists. United Artists had never been very successful in television, having placed only two series in prime time, *The Troubleshooters* (1959–60) and *The Dennis O’Keefe Show* (1959–60). This pattern continued after the merger. Ziv-UA produced 12 pilots during the first year and failed to sell any of them. In 1962, the company phased out Ziv Television operations and changed its name to United Artists Television. Frederick Ziv left the board of directors at this time to return to Cincinnati, where he spent his retirement years.

**ZNAIMER, MOSES**

**Canadian Media Producer/Executive**

Moses Znaimer, an internationally known Canadian broadcaster and producer, is the executive producer and president of Citytv, one of Canada’s leading commercial media production organizations. There he guides program services such as MuchMusic, Bravo!, and MusiquePlus.

Znaimer’s work in forging a distinctive style of television within Canada, and internationally, identifies him as a clear *auteur* within television production and he can rightfully claim that he is the visionary of Canadian television. His early work in broadcasting was as a co-creator and producer...
of the CBC national radio program, Cross-Country Check-up in the 1960s (a first in the world), and in television as a co-host and producer of the CBC afternoon talk show Take-Thirty with Adrienne Clarkson. After being denied the opportunity to remake the radio phone-in program into a national television program, Znaimer quit the CBC and launched into private broadcasting. With no VHF licenses available, Znaimer began Toronto’s first UHF station, Channel 57, known as Citytv, on a limited budget in offices on Queen Street in Toronto in 1972. The unique programming of Citytv has been Znaimer’s central contribution to the world of broadcasting. The station originally created a sensation in the 1970s for its late-night, soft-core porn movie stripping. Baby Blue Movies which shocked Toronto. But, its inner-city focus, its celebration of a cosmopolitan ethnic diversity in its choice of personalities and reporters, its transformation of news into something that was decidedly less formal, more identifiably urban and generally more positive, and its programming mix of just news, movies and music all clearly made the station distinctive. Indeed, Znaimer and his small UHF station served as the real-life starting point for David Cronenberg’s dystopic film Videodrome (1983).

Through the platform of Citytv, Znaimer has successfully produced a number of programs, many of which have gained national and international distribution. The New Music (1978–), designed as a Rolling Stone-style magazine of the air, was widely sold within Canada and internationally. More recently, Znaimer has broadcast and distributed two fashion related programs, Fashion Television and Ooh-La-La, both nationally and internationally. Movie Television, an interview and news program about Hollywood in particular, has also been well syndicated throughout Canada’s independent stations. The success of Citytv under Znaimer’s direction allowed the company that bought the station in 1981, CHUM Limited, to launch Canada’s first satellite to cable music specialty channel MuchMusic. What was clear about the look of MuchMusic was that it emulated Citytv. Its style was irreverent, its use of hand-held cameras at often canted angles was unending, its dependence on the liveliness of television and its possibility for spontaneity and its transformation of the studio “backstage” into the foreground were signatures of Znaimer’s work as executive producer.

Znaimer has contributed specific forms of television which celebrate the potential spontaneity of the medium. His Toronto ChumCity building (1987), the home of Citytv, MuchMusic and Bravo! is described as the first studio-less television station. With complete cabling and wiring through 35 exposed “hydrants”, any part of the building can be converted into an exhibition site for broadcast. Several conceptual approaches to television have been registered trademarks developed by Znaimer. The building itself is trademarked as the “Streetfront Studio-less Television Operating System” and is marketed internationally. The Vox populi box at the front of the building is trademarked “The Speaker’s Corner,” where anyone by dropping a dollar into the slot can speak on any issue and the message will be broadcast.

Recent ventures of Znaimer, both nationally and internationally, have met with more circumscribed success. His involvement with a 1992 bid to set up a similar inner-city style of television for Britain (along with Thames Television and Time-Warner) for the proposed Channel Five was in the end not accepted. His recent launch of another specialty channel, Bravo!, which rebroadcasts past Canadian television programs and films, has had limited appeal and financial viability. Znaimer was involved in setting up a third television network in New Zealand, which once again built on his tried programming flow strategies developed at Citytv. His launch of a Spanish version of MuchMusic, MuchMusica, in Buenos Aires, Argentina, in 1994 has gained access to over 1.5 million via cable and thousands of others via satellite in South America. The launch of MuchMusic into the U.S. cable market in 1994 has also produced access to a further 4 million viewers.

Znaimer’s versatility within the arts has occasionally led to on-camera performances. He has been an on- and off-actor over the last two decades with film credits including Atlantic City (1980) and, more regularly, an on-air narrator/interviewer in a number of programs, most notably The Originals. His most recent-large scale production for the CBC is a clear acknowledgment of his role in pioneering a unique style of television.
A four-part series entitled *TVTV: The Television Revolution* (1995) was hosted and produced by Znaimer.

Znaimer's style of television represents a unique contribution to broadcasting. He has developed a localized style with up to 40 hours a week of local content that because of its connection to the particular urban landscape has gained a certain resonance and exportability to other urbanized cultures. In addition, Znaimer has emphasised the concept of the flow of television in various formats. Rather than a focus on narrative conclusion, Znaimer's programming style identifies how television can attempt to capture—however partially—the becoming aspect of contemporary life. He has been able to achieve this vision of interactive, urban, hip television through repeated financial success in Toronto, generally recognized as one of the most competitive television markets in North America. The apparent cost of his studio-less studio is roughly one-quarter that of regular television stations. Portions of this style have been copied throughout North American television and to a lesser degree internationally.

—P. David Marshall

**ZORRO**

**U.S. Western**

The television version of Zorro, like its previous movie incarnations, was based on stories written by Johnston McCulley. These stories recounted exploits of the swashbuckling alter-ego of Don Diego de la Vega in colonial California.

The most popular and recognizable TV version of Zorro was the Disney Studios production for ABC. The two organizations had entered into a joint production agreement in 1954, an agreement which bore immediate fruit with *Disneyland* and *The Mickey Mouse Club*. Walt Disney had purchased the rights to the Zorro stories in the early 1950s but pilot production stalled while Walt focused on construction of his Disneyland theme park. Zorro went into production in 1957 and enjoyed immense popularity on ABC for two years, from October 1957 to September 1959.

Guy Williams played Zorro, the mysterious hero who righted wrongs perpetrated on the common people by the evil Captain Monastario (Britt Lomond), commandant of the Fortress de Los Angeles. Don Diego’s father, Don Alejandro (George J. Lewis), persuaded his son to return to California from Spain and do his utmost to foil Monastario and his dimwitted underling, Sergeant Garcia (Henry Calvin). Zorro’s true identity was known only to his deaf-mute servant Bernardo (Gene Sheldon). Depending on the situation Zorro rode one of two trusty mounts, one black (Tornado) and one white (Phantom). Each episode began with Zorro sticking a message on the Commandant’s door, “My sword is a flame to right every wrong, so heed well my name—Zorro.”

Though it used almost all Caucasian actors, the story of Zorro stands out in the television landscape of 1957 for featuring an Hispanic hero figure. Roles and role models for Hispanic-Americans were absent from the television productions of the era and this acknowledgement of the Hispanic culture and the heroism of many of its constituents was considered a forward step.

Yet the characters were broadly drawn and often stereotypical. The conflict in Zorro was a simple distillation: a decadent, militaristic monarchy which exercised a corrupt, greedy rule over simple, God-loving folk versus the mysterious, altruistic defender of honesty and virtue. The archetypal characters of Monastario, Garcia, and Zorro provided
easy markers of good and evil for the children of Zorro’s target audience. Evil was effeminate, devious, slovenly, and doltish. Good was decisive and (in the words of another Disney Studios product), “brave, truthful, and unselfish.” Even as the prime-time western genre was approaching the end of its cycle by reinventing itself as “adult,” the western genre for children remained a comfortable and predictable haven of values championed by Walt Disney and, in turn, the middle class.

By the late 1950s and early 1960s, the relationship between ABC and the Disney Studios had soured. The Mickey Mouse Club was dropped after its fourth season. Though the network claimed this was due to flagging sponsorship, Walt Disney believed it was because of excessive commercial minutes. Zorro, still quite popular, was also cancelled. ABC now owned enough shows to make the purchase of programs from independent producers less necessary. To make matter worse, ABC forbade the Disney Studios from selling its product to a competing network, and while legal wrestling changed that restriction, it was clear that the Disney Studios had become a casualty of the fledgling network’s success.

But Zorro also serves as an early example of what can happen to the popularity of a show when it is extensively merchandised. Because it was a Disney Studios product, Zorro had the benefit of the studio’s massive merchandising machinery. During the run of the show, and for many years thereafter, Zorro spawned a huge number of items—hats, knives, masks, capes, pencil and lunch boxes—sold with the Zorro logo. The original theme was recorded for the opening of the show by Henry Calvin, who played Sergeant Garcia, and made into a popular hit record by the musical group called the Chordettes. During the two years that Zorro ran on ABC, the Disney merchandising juggernaut generated millions in additional income and kept the profile of the program high, especially with children. Even years after the popularity of the Disney Studios and ABC’s Zorro had waned, the merchandising continued. When Zorro became a children’s cartoon in the 1970s, a PEZ dispenser capped with Zorro’s masked visage enjoyed healthy sales.

In some ways, Zorro serves as a model for much that is right and much that is wrong with children’s television. It often propounded positive values and altruistic behavior, but it was ultimately one of the first of a long line of productions used solely to deliver a huge number of children to advertisers.

The image of Zorro remains prevalent today. From McCulley’s original stories, through the movie with Tyrone Power and the serial with Clayton Moore, the Disney version for ABC, the Saturday morning cartoon, and the cable remake on the Family Channel in 1988, Zorro still has appeal. Even today, colorized versions of the original black-and-white episodes shot by Disney are cablecast on the Disney Channel, introducing the next wave of children to “a horseman known as Zorro.”

ZWORYKIN, VLADIMIR
U.S. Inventor

For his fundamental and crucial work in creating the iconoscope and the kinescope, inventor Vladimir Zworykin is often described as “the father of television.” These basic technologies revolutionized television and led to the worldwide adoption of electronic television rather than mechanical television, a device which used synchronized moving parts to generate rudimentary pictures.

At the Petersburg Institute of Technology, Zworykin studied electrical engineering with Boris Rosing, who believed cathode ray tubes would be useful in television’s development because they could shoot a steady stream of charged particles. After graduating from St. Petersburg in 1912, he studied X-ray technology with well-known French physicist Paul Langevin at the College de France in Paris. Both experiences influenced Zworykin’s later work after he emigrated to the United States in 1919.

In 1920 Zworykin joined Westinghouse to work on the development of radio tubes and photocells. While there, he earned his Ph.D. in physics at the University of Pittsburgh and wrote his dissertation on improving photoelectric cells. But electronic television’s development captured his attention, and in December 1923 he applied for a patent for the iconoscope, which produced pictures by scanning images. Within the year he applied for a patent for the kinescope, which reproduced those scanned images on a picture tube. Electronic television was now possible. After demonstrating his new system to Westinghouse executives, they decided not to pursue his research.

He found a more receptive audience in 1929 at the Radio Corporation of America (RCA), where he was hired as associate research director for RCA’s electronic research laboratory in Camden, New Jersey. This same year, he filed his first patent for color television. Reportedly, Zworykin told RCA president David Sarnoff that it would take $100,000 to perfect television. Sarnoff later told the New York Times, “RCA spent $50 million before we ever got a penny back from TV.”

In 1930, Zworykin’s experiments with G.A. Morton on infrared rays led to the development of night-seeing devices. He also began to apply television technology to microscopy, which led to RCA’s development of the electron microscope. His work also led to text readers, electric eyes used in security systems and garage door openers, and electronically-controlled missiles and vehicles. During World War II he advised several defense organizations, and immediately after the war, he worked with Princeton professor John von Neumann to develop computer applications for accurate weather forecasting.

After retiring from RCA in 1954, he was named an honorary vice president and its technical consultant. He was also appointed director of the Medical Electronics Center at Rockefeller Institute, and worked on electronically based medical applications.

Zworykin received numerous awards related to these inventions, especially television. They included the Institute of Radio Engineers’ Morris Liebmann Memorial prize in 1934; the American Institute of Electrical Engineers’ highest honor in 1952, the Edison Medal; and the National Academy of Sciences’ National Medial of Science in 1967.
