The Dick Van Dyke Show, which ran from 1961 to 1966 on the CBS network, ushered in the golden age of the situation comedy (even more than I Love Lucy or The Honeymooners) poised as it was on the threshold between the comedy-variety star vehicles of the 1950s (frequently still grounded in vaudeville) and the neorealist socio-comedies of the early 1970s (whose mainstay Mary Tyler Moore carried its pedigree). It was among the first network series to electively bring itself to closure, in the manner of M*A*S*H, The Mary Tyler Moore Show, or Cheers, and has proven one of the most resilient in syndication. And as social document, it managed to operate largely contemporaneously with the New Frontier and the thousand days of the Kennedy presidency.

The show was largely the autobiographical exegesis of Carl Reiner, whose previous tenure in workaday television had been with the legendary stable of writers surrounding Your Show of Shows and the Sid Caesar sketch vehicles of the mid-1950s. This same group went on to literally redefine American humor: on the Broadway stage (Neil Simon); the high and low roads of screen comedy (Woody Allen and Mel Brooks, respectively); and in television, both early and late (Larry Gelbart, M*A*S*H). But first and foremost was Dick Van Dyke, based loosely on Reiner’s 1958 novel Enter Laughing (he directed a tepid screen version in 1967), in which his Alan Brady is a thinly veiled Caesar—a comic monster, sporadically seen but ubiquitously felt.

Brady’s writing staff comprises the college-educated Rob Petrie (the eponymous Dick Van Dyke), assigned to interject new blood into his team of more experienced subordinates, Buddy Sorrell (Morey Amsterdam) and Sally Rogers (Rose Marie), loosely patterned after Show of Shows writers Mel Brooks and Selma Diamond. This sense of autobiography even stretched to the Petries’ New Rochelle address (Reiner’s own, save for a single digit), as well as his immediate family (his son Rob Reiner in turn became the archetypal early-1970s post-adolescent as Michael Stivic on All in the Family, raising certain intriguing Freudian possibilities in the evolution of the sitcom). Rounding out the domestic American Century optimism is Rob’s wife Laura (Mary Tyler Moore).

As author David Marc has noted, for all intents and purposes, the movies destroyed vaudeville once and for all, and as a form of penance, made it into a kind of “biblical era of modern mass culture.” This impulse was inherited wholesale by television of the 1950s (a quick survey of I Love Lucy reruns should suffice), and in turn carried forward rather elegiacally in the many blackouts built into this show within.
a show. Van Dyke, a gifted physical performer, never missed an opportunity to reprise his mewing Stan Laurel, or engage in a bit of Catskills schtick (invariably veiled in nostalgia). Entire episodes were given over to aging radio scribes or vaudeville fixtures who had been brushed aside by the space-age wonder of broadcast TV. Even sidekicks Buddy and Sally, real-life vaudeville veterans often seemed little more than human repositories of the history of formalist comedy ("Baby Rose" Marie was a child singer on radio; Amsterdam, a cello prodigy whose act recalled Henny Youngman or Jack Benny, co-hosted the Tonight Show forerunner Broadway Open House in 1950, and—in a bit of New Frontier pre-science—wrote the paean to U.S. imperialism "Rum and Coca-Cola" for the Andrews Sisters).

Yet perhaps to counterbalance these misted reveries, the show just as often displayed an aggressive Kennedy-era sophistication and leisure-class awareness. Initially competing for the central role were Van Dyke and that other Brubeck hipster grounded squarely in Midwestern guilelessness, Johnny Carson (and if truth be known, another prominent casualty of afterhours blackout drinking). Meanwhile, all the hallmarks of the Kennedy zeitgeist are somewhere in attendance: Laura as the Jackie surrogate, attired in capris pants and designer tops; the Mafia, via the imposing Big Max Calvada (executive producer Sheldon Leonard); Marilyn Monroe, represented by the occasional Alan Brady guest starlet or lupine volupptuary; intelligence operatives who commandeered the Petrie's subterfuge on stakeout. Camelot references abound, with a Robert Frost-like poet, a Hugh Hefner surrogate, Reiner as a Jackson Pollock-modeled abstract painter, or Laura's praise for baby guru Dr. Spock.

Sophisticated film homages appear throughout: Vertigo's "Portrait of Carlotta" becomes "the Empress Carlotta brooch"; Citizen Kane's "Rosebud" turns up as son Richie's middle name. (According to confidante Peter Bogdanovich, Orson Welles reportedly took a break every afternoon to watch the show in reruns.) Civil rights are often squarely and center as well, with Leonard claiming that one racially themed episode, "The Hospital," specifically allowed him to cast I Spy with Bill Cosby, in turn the medium's first superstar of color. Even Van Dyke's own little brother, Jerry Van Dyke, is afforded a brief nepotistic berth from which to triumph— in his case, over painful shyness, social ineptitude, and a somewhat pesky somnambulism, rather than innate ruthlessness and the reputation as White House hatchet man. And for purists, there's even a working conspiracy of sorts—the name "Calvada," scattered portentously throughout (Big Max "Calvada," "Drink Calvada" scrawled on a billboard, the name of their production company)—which is, in fact, a modified acronym for the show's partners: CAr-I Reiner, Sheldon Leonard, Dick VA-n Dyke, and DA-ny Thomas.

But more than vague inspiration, the Kennedys provided direct participation as well. In 1960, Reiner wrote a pilot titled Head of the Family, virtually identical in every way, save for casting himself in the lead role. The package made its way to Rat Pack stalwart Peter Lawford, a burgeoning producer and brother-in-law of the future president. Family patriarch Joseph P. Kennedy, seeking to oversee family business during the campaign, read the pilot personally, and in turn volunteered production money. Although the pilot was unsuccessful, its recasting led directly to the later series.

The Dick Van Dyke Show ended in 1966 with a final episode surveying Rob's "novel"—a collection of favorite moments from the five-year run—which Alan Brady dutifully agrees to adapt as a TV series, thus reupping the autobiographical subtext one more level and providing Reiner the last laugh. This was perhaps in light of CBS' decision to enforce a full-color lineup the following season. As such, the series' cool, streamlined black and white mirrors perfectly the news images of the day, and functions as one of the few de facto time capsules in a finite and much-celebrated age.

A DIFFERENT WORLD

U.S. Situation Comedy

A Different World, a spin-off of the top-rated The Cosby Show, enjoyed a successful run on NBC from 1987 to 1993. The half-hour, ensemble situation comedy was the first to immerse America in student life at an historically black college. Over the course of its run, the show was also credited with tackling social and political issues rarely explored in television fiction, and opening doors to the television industry for unprecedented numbers of young black actors, writers, producers and directors.

Set at Hillman College, a fictitious, historically black college in the South, the series began by focusing on the college experiences of sophomore Denise Huxtable (Lisa Bonet)—one of the four daughters featured on The Cosby Show. Denise’s attempts to adjust to life away from her family’s upper-middle-class nest, and her relationship with her roommates, typically fueled the plot of each episode. One of those roommates, Jaleesa Vinson (Dawn Lewis), was a young divorcée who considered Denise to be somewhat of a spoiled snob. Another roommate, Maggie Lauten (Marisa Tomei), was one of the few white students on the mostly black campus; for her, as it was for much of the show’s audience, Hillman was indeed “a different world.” Other recurring characters were added throughout the course of the first season: Whitley Gilbert (Jasmine Guy) was a rich Southern belle; Dwayne Wayne (Kadeem Hardison) was a fast-talking, but studious, New Yorker; Ron Johnson (Darryl Bell) was Dwayne’s scheming sidekick; and Warren Oates (Sinbad) was the dorm director and gym teacher. Bonet and her character, Denise, left the show after the first season due to her real-life pregnancy.

Despite dismal initial reviews, A Different World capitalized from its Thursday at 8:30 P.M. time slot on NBC—between The Cosby Show and the ever-popular sitcom Cheers—and finished second in the ratings its first season. The show and its creative staff were revamped for the second season, leading to third and fourth-place finishes for the 1988–89 and 1989–90 seasons, respectively. Among black viewers, however, the show consistently ranked first or second throughout most of its run.

As The Hollywood Reporter noted, the series was transformed “from a bland Cosby spin-off into a lively, socially responsible, ensemble situation comedy” only after Debbie Allen took over as producer-director following the first season. Allen, a prominent black dancer, choreographer and actress—and a graduate of historically black Howard University—drew from her college experiences in an effort to
The television production process is gradually moving from a system that interconnects a variety of digital sources with analog equipment to the use of an all-digital environment. Along the way, analog and digital tape formats will be replaced by new digital recording devices similar to computer disk drives, allowing random access to any portion of a recording.

Digital technology has also been applied to the process of transmitting television signals. The bandwidth necessary for high-definition television required development of a means of transmitting up to five times the video information of a traditional television signal in the same bandwidth. The solution was the application of digital compression technology. Digital compression is the work by which digital signals are simplified by removing redundancy. (For example, each of the thirty individual pictures used to create one second of video is quite similar to the previous picture. Instead of transmitting the entire picture again, some compression algorithms transmit only the parts of the picture that change from one picture to the next.) There are two general types of digital compression: "Lossless" compression, in which the decompressed signal is exactly the same as the uncompressed signal; and "lossy" compression, in which the decompressed signal contains less information (or less detail) than the original uncompressed signal.

The flexibility of digital signals has led many engineers to develop uses for digital broadcasting other than high-definition television. The use of digital compression will allow the transmission of at least four, and perhaps eight or more, standard-definition channels of programming in the same bandwidth required for a single analog channel. Furthermore, the fact that digital signals are less susceptible to interference will eventually allow more television stations on the air in a given market. (Interference problems with analog signals requires wide spacing of television stations on the same or adjacent channels, resulting in use of only a few channels in most cities to protect stations in nearby cities.)

One main problem with digital broadcasting is that it will require viewers to either buy new receivers or obtain adapters to convert digital signals to analog form for viewing on a traditional television receiver. Ultimately, the use of television by consumers should be revolutionized as they begin buying digital receivers and video recorders and enjoy the quality and flexibility provided by digital technology.

DILLER, BARRY
U.S. Media Executive

Barry Diller is an innovative television executive best known for organizing a fourth network at FOX Broadcasting to challenge the domination of American prime-time television by ABC, CBS, and NBC. Starting out in the mailroom of the William Morris Agency, Diller joined ABC's programming department in 1966 and was placed charge of negotiating broadcast rights to feature films from the major studios. As vice president in charge of feature films and program development in 1969, Diller inaugurated ABC's Movie of the Week, a regular series of ninety-minute films made exclusively for television. Premiering on 23 September 1969, the program became the most popular movie series in television history and helped ABC achieve parity with NBC and CBS in the ratings.

Made-for-television films (MFTs) had appeared intermittently on prime time since 1965, when NBC contracted with MCA for more than thirty World Premiere movies to be delivered over several years. But it was Diller who devised the formula that enabled MFTs to outstrip the ratings power of theatrical movies. Abandoning conventional narratives such as westerns and crime melodramas, Diller ordered social problem films that explored issues such as homosexuality (That Certain Summer, 1972), the Vietnam War (The Ballad of Andy Crocker, 1969), and drugs (Go Ask Alice, 1973). Capable of being quickly produced at a cost of around $350,000 each, docudramas, as they were called, probed current newspaper headlines and American popular culture for gripping topics targeted at young urban and adult audiences. By 1972, MFTs had become an established network programming practice.

In 1974 Diller was named chair of Paramount Pictures. He was hired by Charles Bluhdorn, head of Gulf and Western Industries, a sprawling conglomerate that had acquired Paramount in 1966. For ten years Diller oversaw a studio that produced hit television series that included Laverne and Shirley (1976–83), Taxi (1978–83), and Cheers (1982–93), and a string of motion picture, including Saturday Night Fever (1977), Grease (1978), Raiders of the Lost Ark (1981), Terms of Endearment (1983), and Beverly Hills Cop (1984).

Diller quit his job in 1984 over a dispute with Gulf and Western's new head, Martin S. Davis, and went to work for 20th Century-Fox. After the studio was acquired by Australian newspaper mogul Rupert Murdoch in 1985,
Diller embarked on a plan to launch a fourth television network to compete with the Big Three. The nucleus of the network consisted of Metromedia Television, a group of seven big-city television stations reaching 23% of the population, which Murdoch purchased from John Kluge in 1986 for $2 billion. Lining up an amalgam of local UHF and VHF stations, FOX Broadcasting started out cautiously in 1987 with only two nights of prime-time programming; by 1990 it had expanded its schedule to five nights. Diller had succeeded against all odds by developing low-cost “reality” programming such as COPS and America’s Most Wanted, and alternative fare such as In Living Color, Married...with Children, and The Simpsons, aimed at the youth audience, from age 18 to 34.

In a move that surprised the industry, Diller quit 20th Century-Fox in 1992 and purchased a $25 million stake in QVC teleshopping network. As head of QVC, Diller launched a takeover bid for Paramount Communications (the new name of Gulf and Western after the conglomerate sold off its non-entertainment businesses) in 1993. The battle for Paramount was joined by Sumner Redstone’s Viacom Inc., which submitted a winning bid of $9.6 billion in 1994. Foiled in his attempt to take over a major film studio, Diller resigned from QVC in 1995 and acquired Silver King Communications, a small group of UHF stations, in an attempt to create a hybrid cable TV network that would offer a full schedule of entertainment, sports, and news. To finance the venture, Diller had secured the backing of John Malone, president and CEO of Telecommunications Inc., the nation’s largest cable operator. Although the outcome of the Silver King venture is unclear, Diller will likely remain a key player in the cable television industry for the indefinite future.

DIMBLEBY, RICHARD

British Broadcast Journalist

Richard Dimbleby was the personification of British television current affairs broadcasting in the 1950s and early 1960s and he set the standard for succeeding generations of presenters on the network, by whom he was recognized as the virtual founder of broadcast journalism. After working on the editorial staff of several newspapers, he joined the BBC as a radio news observer in 1936. When war broke out three years later, he became the BBC's first war correspondent, and, as such, within the constraints of often stifling official censorship, he brought the reality of warfare into homes throughout the length and breadth of Great Britain. Notably graphic broadcasts included despatches from the battlefield of Al-Alamein, from the beaches of Normandy during the D-Day landings, and a report sent back from a Royal Air Force bomber on a raid over Germany (in all he flew as an observer on some 20 missions). He was also the first radio reporter to reach the concentration camp at Belsen, from which he sent a moving account of what he saw, and he was the first to enter Berlin.

After the war, Dimbleby worked as a freelance broadcaster and made the switch to television, in time becoming the BBC's best-known commentator on current affairs and state events. Among the important state occasions he covered were the Coronation of Elizabeth II in 1953 and the funerals of John F. Kennedy and Sir Winston Churchill. The coronation broadcast was a particular personal triumph, establishing Dimbleby as the first choice commentator on all state events and, incidentally, promoting television sales by some 50%. Other milestones in his career included his participation in 1951 in the first Eurovision television relay and, in 1961, his appearance in the first live television broadcast from the Soviet Union.

In 1955 Dimbleby was selected as anchorman for the much-respected current affairs programme Panorama, and it is with this that his name is usually associated. Quizzing politicians of all colours with equal severity on behalf of the nation, he was praised by many as a defender of the public interest, and became almost synonymous with the BBC itself as a bastion of fairness and perspicacity in political debate. Under Dimbleby's direction, Panorama established itself as the current affairs programme par excellence, the weekly showing almost a political event itself, raising issues that Parliament hastened to deal with in order to show it was responsive to the electorate thus represented.

Viewers hung on the presenter's every word and besieged him with letters, begging him to use his evident influence to intervene personally in political issues of all kinds, from proposals for new roads to the Cuban missile crisis. One rare remark that did not go down so well was an infamous aside, "Jesus wept", which was unfortunately picked up by the microphone and prompted a stream of letters criticizing him for blasphemy.

Dimbleby did, though, also tackle lighter fare, and was much loved as chair of the radio programme Twenty Questions and as presenter of the homely Down Your Way series, in which he sought out prominent members of a given locality and passed the time of day with them. His standing with the British listening and viewing public was officially honoured in 1945, when he was made an Officer of the British Empire, and again in 1959, when he was promoted to Companion of the British Empire.

Dimbleby's premature death from cancer at the age of 52, shortly after broadcasting to 350 million people on the state funeral of Winston Churchill, was regretted by millions of viewers, and subsequently the annual Richard Dimbleby lectures were established in his memory. These were not his only legacy, however, for two of his sons, David and Jonathan, pursued similar careers in current affairs broadcasting and in their turn became two of the most familiar faces on British screens, earning reputations as fair but tough-minded interrogators of the political leaders of their generation. David Dimbleby emulated his father by, in 1974, becoming anchorman of Panorama, while Richard Dimbleby has occupied a similar role on such current affairs programmes as This Week and First Tuesday.

—David Pickering

RICHARD DIMBLEBY. Born in Richmond-upon-Thames, London, England, 25 May 1913. Attended Mill Hill School, London. Married: Dily, 1937; children: Jonathan, David, Nicholas and Sally. Began career with the family newspaper, The Richmond and Twickenham Times, 1931; subsequently worked for the Bournemouth Echo and as news editor, for Advertisers Weekly, 1935–36; joined BBC Topical Talks department as one of the first radio news reporters, 1936; accompanied British Expeditionary Force to France as first BBC war correspondent, 1939; reported from front line in

THE DINAH SHORE SHOW(VARIOUS)

U.S. Music-Variety Show

A popular radio and television performer for over 40 years, Dinah Shore was known for the warmth of her personality and for her sincere, unaffected stage presence. Television favored her natural, relaxed style, and like Perry Como, to whom she was often compared, Shore was one of the medium's first popular singing stars. Even though by her own admission, Dinah Shore did not have a great voice, she put it to good advantage by enunciating lyrics clearly and singing the melody without distracting ornamentation. The result was the very definition of "easy listening."

By the time Shore first appeared on television, she was already well-known as a big band singer and radio performer. In 1952, she was chosen most popular female vocalist by a Gallup poll. She was also appearing in the best night clubs, making motion pictures, and selling approximately two million phonograph records per year. Miss Shore's subsequent two decades of television work merely enhanced her already remarkable career.

Dinah Shore first appeared on television in 1951 when she began a twice a week program over NBC. This fifteen-minute show was broadcast on Tuesday and Thursday evenings at 7:30 P.M. Jack Gould, The New York Times radio and television critic, enthused about the program: "Last week on her initial appearance, she was the picture of naturalness and conducted her show with a disarming combination of authority and humility."

The fifteen-minute program was produced by Alan Handley, who made a special effort to make the musical production numbers interesting. The imaginative backdrops he provided for Shore's songs were inspired by travel posters, New Yorker cartoons, history, literary classics, and Hollywood. Handley often checked department store window displays and went to the theater to get ideas for these numbers. On one occasion, he used a Georgia O'Keefe painting of a bleached cattle skull as a backdrop for a song called "Cow Cow Boogie." On another occasion, he made a living Calder mobile out of his vocal quintet "The Notables" by suspending them from the ceiling of the studio.

In 1956, Shore began a one-hour program on NBC, The Dinah Shore Chevy Show. The program was extremely popular, and its theme song "See the USA in your
Chevrolet . . . ,” always ending with Shore’s famous farewell kiss to the television audience, remain television icons. The high production values of her 15-minute program continued on the 60-minute show. The lineup usually contained two or three guests drawn from the worlds of music, sports, and movies. Shore was able to make almost any performer feel comfortable and could bring together such unlikely pairings as Frank Sinatra and baseball star Dizzy Dean.

The Dinah Shore Chevy Show was produced in Burbank, California, by Bob Banner, who also directed each episode. The choreographer was Tony Charmoli who occasionally danced on camera. Often the production numbers took advantage of special visual effects. For “76 Trombones,” Banner used prisms mounted in front of the television cameras to turn 12 musicians into several dozen. The number was so popular that it was repeated on two subsequent occasions. For “Flin Flam Floo,” Banner used the chro-makey so that objects appeared and disappeared, and actors floated through the air without the aid of wires. In his review of the opening show of 1959, Jack Gould called the program “a spirited and tuneful affair.” Shore, he wrote “sang with the warmth and infectious style that are so distinctly her own,” and he judged that she “continues to be the best dressed woman in television.”

Shore’s musical variety program went off the air in May 1963. After that time, she appeared in a number of specials and later did a series of interview shows in the 1970’s including Dinah!, Dinah and Friends, Dinah and Her New Best Friends, and Dinah’s Place. Throughout her career, Shore remained one of the great ladies of the entertainment world.

DINGO, ERNIE

Australian Actor

Ernie Dingo is an Aboriginal Australian actor who has had an extensive career in film and television. Best known to international audiences through his film roles as Charlie in Crocodile Dundee II and as the Australian detective who chases William Hurt around the globe in Wim Wenders’ Until the End of the World, Dingo has also become a familiar and popular figure on Australian television.

Dingo’s television career is particularly significant for the way it has broken new ground in the medium’s presentation of cultural difference. Initially taking roles scripted specifically for an Aboriginal actor by white writers and directors, he has worked consistently to broaden expectations of what Aboriginality can include and to introduce and popularise an understanding of Aboriginal perspectives on Australian life.
Ernie Dingo grew up around the small Western Australian town of Mullewa, where the local Aboriginal people still speak the traditional Wudjadj language. He first moved into acting in Perth when a basketball team to which he belonged formed a dance and cultural performance group Middar. From there, he moved into stage roles in plays by Western Australian Aboriginal playwright Jack Davis, before gaining a role in the television miniseries Cowra Breakout (1985) by Kennedy Miller for the Channel Ten network. Dingo’s background in traditional and contemporary Aboriginal culture have been important to his work in television because, as he points out, working as an Aboriginal actor frequently involves working also (usually informally) as a consultant, cultural mediator, co-writer and translator.

Dingo’s first major screen roles were in film, in Tudawali (1985), Fringe Dwellers (1986) and State of Shock (1989), all of which had white script writers and directors but which dealt sympathetically with problems of racism and disadvantage encountered by Aboriginal people. All three were small release productions designed substantially for television adaptation and/or distribution. In 1988 he was awarded the Special Jury Prize at the Banff Television Festival for his powerful performance as one of Australia’s first Aboriginal screen actors, Robert Tudawali, in Tudawali.

One of Dingo’s main skills as an actor is an ability to engage audiences with an open, easy screen presence and use of humour, while also capturing serious moods dramatically and convincingly. It is perhaps this versatility, above all, which has made him highly effective as a cross-cultural communicator. Dingo’s ability with lighter roles was first demonstrated by his performances in children’s drama series, including Clowning Around (1992) and A Waltz Through the Hills (1990), for which he received an Australian Film Institute award for Best Actor in a Telefeature for his performance as an Aboriginal bushman, Frank Watson.

However, his first emergence as a popular figure of mainstream commercial television occurred with his inclusion in the comedy-variety program Fast Forward. He is particularly remembered for his comic take-off of prominent financial commentator Robert Gottlieben, in which he imitated Gottlieben’s manner and appearance but translated his analysis of movements in share prices and exchange rates into colloquial Aboriginal English.

From Fast Forward, Dingo has moved on to roles in other popular programs such as The Great Outdoors and Heartbreak High. The latter two roles, as well as his role in Fast Forward, are significant because they are not clearly marked as specifically Aboriginal. In The Great Outdoors, Dingo appears alternately with other well-known Australian television personalities as a compere, or master of ceremonies, in light feature stories about leisure, travel and the environment. In Heartbreak High, he appears as Vic, a media studies teacher at multicultural Hartley High. Both roles have done much to normalise the appearance of Aboriginal people on Australian television and have provided an important counter to the often fraught treatment of Aboriginal issues in news and current affairs.

Dingo has also continued with serious dramatic roles with a major role as an Aboriginal police liaison officer, Vincent Burrage, in the Australian Broadcasting Corporation’s highly acclaimed drama series Heartland. The series was in many ways groundbreaking, not only in its inclusion of Aboriginal people in script writing and production and frequent adoption of Aboriginal perspectives, but also for its naturalistic treatment of a cross-cultural romance between Vincent and white urbanite Elizabeth Ashton (Cate Blanchett). The series’ ability to negotiate issues of cultural and political sensitivity was significantly dependent on Dingo’s skills and magnetic screen presence.

Ernie Dingo has been acclaimed by some as one of Australia’s finest contemporary actors. In addition, he has established a place as a major figure in extending mainstream awareness and understanding of Aboriginal Australia.

—Mark Gibson

ERNE DINGO. Born in 1956. Began career as part of the Middar Aboriginal Dance Theatre, 1978; had various stage roles; in television, from 1985; appearances in episodes of The Flying Doctors, Relative Merits, Rafferty’s Rules, The Dirtwater Dynasty, and GP; in film, from 1985; currently host of travel magazine television series, The Great Outdoors. DIRECT BROADCAST SATELLITE

Satellite Delivery Technology

Direct Broadcast Satellite (DBS) is a satellite-delivered program service meant for home reception. DBS programming is, in most respects, the same as that available to cable television subscribers. DBS subscribers, however, do not access their programs from terrestrial cable systems but rather directly from high powered telecommunications satellites stationed in geosynchronous orbit some 22,000 miles above the earth. Like cable systems, DBS program suppliers package a variety of program services or channels and market them to prospective DBS subscribers for a monthly fee.

The DBS business may be distinguished from the older Television Receive Only (TVRO) business in three important respects: technology, programming and cost. TVRO households (of which there are approximately four million in the United States) must purchase and install a satellite dish measuring between seven to ten feet in diameter and costing approximately $1,800. TVRO households receive about 75 channels of unscrambled programming but may also subscribe to a package of scrambled ("encrypted") program services for a monthly fee. TVRO programming is delivered via the three to six gigahertz (GHz) frequency range, known as the C-band, at a power of ten watts or less.

DBS dishes, on the other hand, measure 18 inches or less in diameter and cost approximately $700. DBS and TVRO program packages are similar, although DBS subscribers cannot receive the numerous unscrambled programming channels available to TVRO dish owners. DBS transmissions are delivered at the 11-to-15 GHz frequency range, known as the Ku-band, at a power that may exceed 120 watts. The higher power of the Ku-band allows a more directed satellite-to-receiver signal and, thus, requires a much smaller receiver dish than is required for C-band reception.

The origins of DBS date to 1975 when Home Box Office (HBO) first utilized a satellite to deliver its program service to local cable television systems. Numerous individuals, especially those living in rural areas beyond the reach of cable television, erected TVRO dishes on their property and accessed whatever programming they wanted as it flowed from satellites. Program suppliers soon objected to free receipt of their product by TVRO owners. As a result, HBO and similar services began scrambling their signals in 1985. TVRO owners thereafter were required to pay a subscription fee to receive such programming.

The first effort to create a true DBS service in the United States occurred in 1980 when the Satellite Television Corporation (STV) proposed such a service to the Federal Communications Commission (FCC). The FCC approved STC’s proposal and invited other companies to propose DBS services. Of the 13 companies that responded to the FCC, proposals from eight of them—including such electronics industry giants as Western Union and RCA—even-tually were approved. By the early 1990s, however, the high start-up cost of establishing a DBS service (estimated at more than a billion dollars) had forced many of the original DBS applicants either to delay or to abandon their projects altogether. What’s more, DBS companies were uncertain that program suppliers that heretofore had provided programming exclusively to cable systems would extend their services to DBS. That matter was settled when the Cable Television Consumer Protection and Competition Act of 1992 prohibited cable program suppliers from refusing to sell their services to DBS operators.

FCC permission to launch DBS services included satellite transponder (or transmitter) assignment and DBS orbital slot assignment. Satellites providing a DBS service are allowed to occupy eight orbital slots positioned at 61.5, 101, 110, 119, 148, 157, 166, and 175 degrees west longitude.

A consortium of cable television system owners launched the first generation DBS service, called Primestar, in July 1991. Primestar utilized 45 watt transponders aboard GE American’s Satcom K1 satellite to beam 67 program channels to some 70,000 households by 1995. Subscribers paid a monthly fee of $25-$35 for the Primestar service in addition to a $100-$200 installation fee for receiving hardware that Primestar continued to own.

A second generation DBS service became operational when the DBS-1 satellite went into orbit on 17 December 1993. The DBS-1, owned by Hughes Space and Communications Group, carried 32 transponders. Ten of the transponders were owned by United States Satellite Broadcasting (USSB), and the remaining transponders were owned by DirecTV. Although Primestar, DirecTV and USSB all transmitted via the Ku-band, the higher powered DBS-1 satellite allowed DirecTV and USSB subscribers to use a much smaller receiving dish.

DirecTV and USSB maintained a joint identity for marketing purposes and for selling the receiving system used for both DBS services. The receiving system was a package comprised of dish antenna, decoder unit, and remote control called the Digital Satellite System (DSS). The basic DSS unit retailed in 1995 for about $700 with installation costs ranging from $70 for a do-it-yourself kit to $200 for dealer assistance. By March 1995, over 400,000 of the systems had been sold.

DBS presents some major problems to subscribers. For instance, the receiving dish that requires a clear line-of-sight fix on the transmitting satellite may be blown out of alignment by heavy winds, thunderstorms will disrupt DBS signal reception, and DBS program services do not yet include local over-the-air television channels. However, DBS seems most appealing to persons who either are disenchanted with cable television or who live in areas that are not served by cable.

—Ronald Garay
How DBS works: DBS programming is beamed from broadcast centers to DBS satellites. Digital programming is then beamed down from satellites to 18-inch satellite dish attached to side of a home. A set-top receiver picks up the programming signals from the dish and transmits them to viewers' televisions.

DIRECTOR, TELEVISION

The television director, who sits atop the chain of command of the crew during the actual filming or taping of the show, is responsible for the visualization of the TV program, selecting the different camera angles and compositions that will be used. Beyond this most general definition, however, the nature of the director's job, and the relative importance of the director's creative contribution to the finished product, varies greatly among different forms and genres of television.

One basic distinction in TV production exists between single-camera (film-style) and multi-camera work. In single-camera production each shot is staged individually, allowing precise camera positioning and lighting. Repeated "takes" are shot until the director is satisfied with the results. The
action is filmed or taped out-of-sequence based on a logic of set-ups for camera and lighting. Actors must break their performance into non-continuous bits that still appear coherent when assembled later in the editing room. In this type of production, then, performance is adjusted to fit the visual scheme. Virtually all prime-time television dramas, programs generally one hour or longer, are produced in this manner. Common genres include action-adventure, crime, medical, courtroom, melodrama, and "prime-time soap opera." The television drama is the format in which the TV director has the most control and the most creative input—operating most like a feature film director. Yet, even here the director's role is more limited than a film director's. The series nature of television necessitates an exceptionally demanding production schedule and a rigid organization of labor, giving the director certain responsibilities, removing or restricting others.

In the production of films for theatrical exhibition directors frequently devise and initiate their own projects. Many film directors, such as Oliver Stone and Quentin Tarrantino, write their own screenplays. Even in cases where the director is hired after a producer has initiated a project, and a script has already been commissioned, the director has great leeway to interpret the material in her or his own way. In addition to controlling visual style, the director may also develop the themes, work with actors on characterizations, even participate in the rewriting of the script.

Television directors, however, work on a per-episode basis. Because of the highly compressed production schedule, any series will employ several different directors during a season. When the director arrives on the scene, the characterizations, themes and basic style of the show have already been established by previous episodes. In fact, such creative decisions were often made by the show's producer in the development of the series, and they remain the province of the producer during the run of the show. The director, then, takes an existing, basic aesthetic set-up and works out the details for the episode at hand. When film directors—Steven Spielberg, Michael Mann, David Lynch—work in television, they generally act as producers because from that position the more important creative choices are made.

Nevertheless, the direction of TV drama episodes still offers excellent opportunities for creative expression. A number of TV drama directors, including Spielberg, have gone on to become film directors. This was even more the case in the 1950s and 1960s when television served as a training ground for some of the most prominent directors to work in the American film industry. Arthur Penn, Sidney Lumet, Sam Peckinpah, Delbert Mann, Robert Altman and other directors moved from television to the big screen. More recently, some television directors, such as Thomas Carter, noted for directing outstanding pilots for Miami Vice and other shows, have become producers of their own television series. And in some cases prominent film directors—Lynch, Barry Levinson—have chosen to direct episodes in the series they produce. In the spring of 1995 Quentin Tarrantino elected to direct the concluding episode of the first year of the NBC series E.R. because he found the show compelling.

In contrast to single-camera style, multi-camera television production requires that the visual scheme be adjusted around the performance. The on-camera talent deliver their performances in real-time, and the visualization is created by switching among a series of cameras trained on the unfolding event (and, in many cases, among several channels of electronically stored graphics). All "live" programs, including news and sports broadcasts, are produced this way. So, too, are talk, discussion and game shows which are shot "live-to-tape," then later broadcast with minimal editing. Directing in these genres offers less opportunity for creativity. Multi-camera style in itself introduces great technical limitations, but these are often less restricting than the constraints defined by the forms themselves—how much visual flair is desirable in a shot of Peter Jennings reading a report of the latest Mideast conflict? Usually, then, the visual elements in presentational "event" programs such as news, talk and sports generally follow a rigid pre-set pattern. This is a necessity given that the production needs to be created almost instantaneously, with little or no time to prepare for the specifics of the particular episode. (Indeed, much of the visual excitement in "live" events such as sports derives from technical features such as instant replay.)

Directing this type of production is more a craft than an art. Though it requires great skill, the demands are mostly technical. Directors of multi-camera television productions generally sit in a control room, viewing a bank of monitors on which the images from each camera and graphics source are displayed. They do not operate any studio controls—they must keep their eyes glued to the monitors. They should not even look away to check notes or a script, but must simply know how the program should unfold and be able to keep their mind ahead of the developing action. The director of an American football game must be ready for the cut to the downfield camera before the quarterback throws the pass, for example, or the talk show director should anticipate an outburst of audience response. And this intensity must be maintained for long periods, with commercials serving as brief breaks from the action. In some ways multi-camera direction is a verbal art form. The director literally "talks" the show into existence, calling out cues for edits, camera movements, effects and audio transitions, while different specialized crew persons, listening via headset, execute these commands.

During the 1950s, television drama specials and anthology series were shot in this multi-camera style, and often broadcast live. Directing in this context was especially challenging, requiring the dramatic skill of a stage director, the visual skills of a film director and the technical skills of a live TV director. These programs were often intimate psychological dramas. They called for relatively exacting visuals, which necessitated complicated camera
and actor blocking schemes. For example, a primary camera and the lead actor had to be precisely positioned in order to get the required close-up without obstructing a second camera’s view of the lead actress for the next shot. All these movements, of both cameras and actors, had to be executed perfectly in real time. It is easy to understand why, once the major film studios opened their facilities for TV productions, prime-time narrative shows quickly turned to film-style production. The producers were then able to establish considerably more control over the production process.

Daytime drama, soap opera in the United States, is a different story. Because multi-camera production can be completed much more quickly and is therefore much less expensive than film-style, soaps are still shot live-to-tape using multiple cameras. With little time for pre-production or rehearsal, the director must establish a visual sequence that can be executed essentially in real-time. Yet that visual design must also serve the dramatic needs of the show. This task is made somewhat easier by the formulaic nature of the genre, but the combination of technical and aesthetic challenges makes directing soap opera one of television’s more difficult and under-appreciated tasks. This technique has been adopted for the production of prime time serials throughout Europe, for the telenovelas in Quebec, and for telenovelas throughout Latin America.

The one other contemporary TV genre that employs multi-camera technique is the situation comedy. Until the 1960s and early 1970s most sitcoms were shot in single camera film-style, with the laugh track dubbed in later. Beginning with All in the Family, however, comedy producers adopted multi-camera production techniques. This enabled actors to perform complete scenes before a live audience, generating natural laughter. In some cases it also allowed the producer to schedule two performances of the same script, which enabled the selection of the “biggest” laughs for use in the soundtrack.

Sitcom production is actually a hybrid form, more likely to be shot with film cameras than video cameras. When this is the case, instead of cutting between cameras in real time with a switcher, all the cameras record the entire scene from different angles and edits are made in post-production, as in film-style work. Generally the shows are not performed from beginning to end in real time, but scene by scene, with breaks and retakes as needed. (The live audiences are apparently willing to laugh at the same joke more than once.) Still, this type of production is more a version of filmed theater than pure moving picture work, and a sitcom director operates more like a stage director. sitcom visualization is usually very simple—lots of long shots to catch the physical nature of the comedy are intercut with a few close-up reaction shots. More extensive use of close-ups would be out of place since the actors usually employ broad gestures and strong vocal projection to communicate the performance to the back row of the live audience. The overall effect of this form is the creation of a “proscenium style,” as in the theatre. The camera serves as the surrogate audience and establishes a “fourth wall” which is rarely crossed.

In this production style, the director concentrates on working with the actors on timing and execution, and successful sitcom directors are known primarily for their ability to communicate with the stars of their shows. In many cases these directors work with a single show for its entire run, directing almost all the episodes. Jay Sandrich, for example, is noted for his work on The Mary Tyler Moore Show and The Cosby Show, and James Burrows is equally acclaimed for his direction of Cheers.

In many countries other than the United States the television director is afforded a role of greater prominence, much more akin to that of the film director. In most cases this situation holds because television productions have been limited to one or two episodes or to the miniseries. This role may change, however, as more and more television systems come to rely on regular schedules built around series production, with its attendant demand for tight production schedules and minimal pre-production opportunities. It is this industrial organization, itself the result of particular economic imperatives, that has defined the present role of the American television director, a role in which participation in the creative process is often secondary to that of the producer.

DISASTERS AND TELEVISION

One of television's most basic applications lies in its ability to portray the devastation of a disaster, whether nearby or far away, both as it occurs and in its aftermath. Natural and manmade disasters are ideal subjects and settings for television which continually seeks the dramatic, emotionally-charged, even the catastrophic to capture audience attention. In the process the medium sometimes serves a vital function, informing and instructing viewers in matters pertaining to safety and recovery.

Two main categories of disaster are routinely handled on television. The first, natural disasters, includes earthquakes, floods, hurricanes, blizzards and drought. Technological disasters, the second category, includes plane crashes, nuclear reactor failures, oil or chemical spills, and similar emergencies. Not included in these definitions are human conflicts/disasters such as riots and political coups, though the chaos and drama inherent in them is equally as intriguing to television. Indeed, at times, such events lead to a form of disaster coverage, as in the case of massive problems of disease and famine caused by the Rwandan civil wars. Generally, however, disasters of nature and technology encompass a wide range of catastrophes which have in common a certain unpredictability and ambiguity of blame. In other words, while human conflicts such as wars and riots are predicated on easily-identifiable antagonism, it is more difficult to assign blame or identify human fault for natural and technological disasters. They occur oftentimes with little or no warning, at least by most human calculations, and leave behind considerable damage, both human and structural. When such events occur, the public and the media are challenged to cope, left to try to make sense of a disaster in terms of its cause and its meaning. They are also challenged to learn from one disaster how best to communicate the next.

During the actual moments of a disaster television plays multiple roles. It is purveyor of information, storyteller, and sometimes agent of change. It can impart news of impending disaster, convey the effects of events that have taken place or are unfolding, and assign meaning. All of this is possible by virtue of the medium's technology and its cultural authority.

Actual disasters have been the topic of numerous TV genres, including made for TV movies, public service announcements for relief organizations such as the Red Cross, and entertainment-oriented musical relief efforts such as Live Aid and Band Aid. Yet while the range of television genres employed in framing disasters has broadened, by far most attention to disasters is still found in the news.

It has been argued that people are psychologically drawn to disaster news because it feeds an innate voyeuristic tendency. Whether or not that is the case, natural and technological disasters are newsworthy because they are out of the ordinary events, they wreak havoc and, particularly important in television, they are the stuff of interesting dramatic video footage. The way a disaster is reported on television depends on the characteristics of the disaster itself, but it also depends on characteristics of television news practice and television technology.

Television news is often a useful means of relaying information about stages of disasters as they develop. Natural disasters, such as hurricanes and tornadoes can be reason-
ably predicted because of available sophisticated meteorological technology. Television may serve as a warning mechanism for residents of an area about to be hit by severe weather. However, even without the benefit of warning, television is capable of transmitting news of a disaster as it takes place and in its aftermath. Some natural events such as earthquakes are difficult to predict, and for technological disasters such as plane crashes and oil spills any form of prediction is virtually impossible. Resulting damage from these disasters, however, is completed within a relatively short amount of time. In the aftermaths of the 1989 Loma Prieta earthquake in California, the 1994 Los Angeles earthquake and the 1994 crash of the Delta Airlines shuttle outside Chicago, television news provided immediate, up-to-the-minute reports about the extent of damage and the clean-up and investigative efforts underway. The challenge for television news in such cases is to continuously provide information while trying to make sense of sudden chaos.

While earthquakes and plane crashes are relatively confined both in space and time, other disasters are more widespread and unfold over a much longer period. The Great Flood in the Midwest in 1993 developed throughout the summer and traveled south with the flowing rivers; the drought and famine in Somalia and Ethiopia were also widespread and were covered by television over a period of months or years. The challenge for television news in such ongoing disasters is to continually search for fresh angles from which to report, and new and interesting video to shoot. During the 1993 flood, network television news devoted evening news segments to its effects on farmers one evening, effects on small businesses another, and local and national relief efforts in yet another, all the while updating the audience on the progress of rising flood waters.

The role of television news in disasters is also spatially varied. In local settings or in the immediate area within which disaster has struck or is striking, television news is one of the primary means of disseminating information often vital to the physical and emotional health and safety of community residents. Television provides information about the risks they are under, where they can go for relief and who they should contact for specific needs. At times television becomes a conduit for personal messages. When severe weather conditions or the need for immediate access make television the only viable means of communication, individuals may use the medium to let others know they are safe or where they can be found.

In other situations distant disasters have a profound impact on one area. In such cases television is the fastest way to convey personal information to local residents. Shortly after the December 1988 crash of Pan Am flight 103 in Lockerbie, Scotland, local television newscasters in Syracuse, New York quickly obtained passenger lists to read over the evening news because many of the passengers were students at Syracuse University and most of their friends and relatives were unsuccessful in confirming passenger information with Pan Am. One of the greatest challenges to the local newsroom during periods of disaster is to coordinate efforts with local safety and law officials so that accurate and necessary information is conveyed to the public in an efficient manner. Local television news staffs also find that they must abandon typical daily routines in favor of quick action and greater flexibility in fulfilling tasks.

National television news plays a different role in reporting disaster. A national newscast crosses boundaries and shares disaster stories with a nationwide audience, evoking empathy, community, solidarity and sometimes national action. Hurricane Andrew, which struck the southeastern United States in 1992, the 1993 Midwest Flood and the January 1994 Los Angeles earthquake all developed as national disasters by virtue of the network television coverage they received. Network news reported daily on the damaging effects of these disasters. Network news anchors traveled to and reported from the disaster sites, helping to convey, even create, a sense of national significance. The effect of this type of coverage was a national outpouring of sympathy and grass-roots relief efforts. Daily footage of damage and homelessness brought on by the storm, flood and earthquake prompted residents from distant parts of the country to coordinate food and clothing drives to help their recently-victimized neighbors.

National disaster coverage can also lead to political action. TV coverage, particularly the pictures of damage to wildlife and the ecosystem, from the Exxon Valdez oil spill in Alaska’s Prince William Sound in March 1989 brought the nation’s attention to a technological disaster and invoked the outrage of environmental groups such as Greenpeace. The action of environmentalists in their clean-up efforts and their battles with Exxon became significant angles in the development of that disaster news story.

But television also has the power to divert audiences from these more complex questions of politics and responsibility. On 17 January 1994, for example, immediately after the Los Angeles earthquake, all of the national network news stations sent news teams to Los Angeles. Each shot scene after scene of the most devastating effects of this seismic tragedy, from broken water mains to exploding gas lines to dismantled freeway systems, and finally to the horrified, panicked and awe-struck faces of the earthquake victims. Larger issues, however, went unexplored. Working under the time constraints of broadcast news and emphasizing the pictorial chaos of disaster, television cannot or does not develop other aspects of disaster, including the governmental, policy and sometimes historic problems or implications.

Yet another type of political implication may emerge from news reports of distant international disasters, especially when they involve U.S. coverage of disaster in Third World nations. Critics have charged the U.S. press with geographic bias in covering disasters from the developing nations. Their argument, supported with detailed content analysis of news stories broadcast in the United States, points out that much of the reporting from these nations focuses on disasters and political upheaval. This practice is
seen to create a distorted image of these nations, as chaos-ridden and prone to disaster, representations that support and perpetuate unequal power relations among dominant and developing nations.

Critics also argue that choices determining which disasters receive air time often depends on the connection that can be made with the United States. Those disasters in which Americans or American interests are harmed receive prominent coverage by the U.S. press, including television, while other disasters may be given minor coverage or be overlooked altogether. All these charges speak to television’s ability to construct and assign meaning to the events it covers, including disasters.

In this context, then, television news does not merely convey information about disasters. It has the power to define disaster. Its penchant for striking visual content encourages newsgatherers to use the camera lens to frame numerous images of drama and chaos. As a result, television coverage of natural disasters is often framed in such a way as to convey hopelessness, presenting them as battles between powerless humans and powerful nature.

This power to create and assign meaning demonstrates television’s central role in contemporary societies as is illustrated in the 1986 Chernobyl nuclear reactor disaster in the Soviet Union. One argument suggests that the accident would never have been international news had it not been for television, and goes on to claim that the Soviet government failed to adequately warn its citizens about the effects of the disaster by carefully choosing which images would be included in domestic television news coverage. It has been argued on the other hand, that United States news groups were also duped by outside agents when they accepted videotape of what they believed was actual footage from the site of the Chernobyl disaster, but turned out to be scenes shot somewhere in Italy. Such charges speak both to the power of television and the power of those who can control it to serve their own interests.

Besides framing disasters a certain way, assigning them a certain meaning, television also has the power to decide which disasters will be of significant interest to those outside the immediate area affected. Certain disasters receive national, even international, attention because they are given television air time. Earthquakes that affect a large number of people, both within the United States and abroad, receive far more coverage than earthquakes that have a similar Richter scale measure but don’t wreak the same social havoc.

The importance of disasters as defined by television has even reached beyond news coverage and increasingly into entertainment television. Real-life disasters have become fodder for entertainment and persuasive television as the line between fact and fiction, news and entertainment, is increasingly blurred on TV of the mid to late 1980s and early 1990s. International relief efforts for famine victims in Africa, especially Ethiopia, included most notably the effort of producer Bob Geldof, who coordinated the 1985 Live Aid rock music fund-raiser which was transmitted internationally via satellite television. In this case television defined an international disaster by covering it as one in the news, then offered its own televised solution to the disaster by airing the Live Aid concert for relief. Real-life disasters are also the subject of made-for-TV movies. Sometimes called virtual disasters, these movies based on actual disasters became more common in the early 1990s. A movie such as Triumph over Disaster: The Hurricane Andrew Story is an example of television’s efforts not only to capitalize on disaster for ratings points but also to define the order of reality.

Disasters can also sell. Images of disaster have been used in televised public service announcements for the Red Cross. News footage of recent hurricanes, floods and earthquakes were edited together into a 30-second spot urging Americans to contribute money to the Red Cross which has contributed relief to many disaster victims.

The power of television as a tool for information, for selling, and for defining reality can be witnessed throughout the coverage of natural and technological disasters. As television becomes more competitive in the late Twentieth Century, the drama guaranteed by disaster images practically ensures an audience across increasingly blurred genres.

**DISNEY, WALT**

U.S. Animator/Producer/Media Executive

Walt Disney was a visionary filmmaker who brought his film library, his love of technology, and his business sense to American television in the mid-1950s. His ground-breaking television program, *Disneyland*, helped establish fledgling network ABC, pointed the way toward that network’s increasing reliance on Hollywood-originated filmed programming, and provided much needed financing for Disney’s pioneering theme park.

Since the late 1920s, Disney had been a public figure, Hollywood’s best known independent studio head. He had first achieved success with animated short subjects starring the character with whom he is best associated, Mickey Mouse. In 1937, his studio had produced the first full-length animated motion picture, *Snow White and the Seven Dwarfs*. In the late 1940s, beginning with *Song of the South* (1946), the Disney studio had also branched out into live-action films, but it was primarily associated, then as now, with animation.

Unlike many other studios, Disney’s had not prospered during World War II, when it had devoted much of its energies to producing films for the U.S. government. Indeed, the Disney studio had never made a great deal of money because of the time- and labor-intensive nature of animation work. After the war, Disney hoped to expand his enterprises. The key to this expansion, according to Christopher Anderson in *Hollywood TV* (1994), was diversification. Disney was ready to set his sights beyond the film industry.

Disney flirted with the new medium in the early 1950s, producing a one-hour special for NBC in 1950 and another in 1951. He discussed a possible series with both NBC and CBS, but only third-place network ABC was willing to give him what he wanted in exchange—funding for the amusement park he dreamed of opening in Anaheim, California. ABC executives were desperate to obtain programming that would enable them to compete with their more established
rivals and were particularly interested in courting the growing family market in those baby-boom years.

Walt Disney and his brother Roy convinced the network to put up $500,000 toward the construction costs for the park, to be called (like the television program) Disneyland, and to guarantee its bank loans. In exchange, ABC would obtain 35% of the park and would receive profits from Disneyland concessions for ten years. Even more importantly to the network, Disney would deliver them a weekly, hour-long television program that would take advantage of his family-oriented film library.

The program Disneyland debuted on 27 October 1954, and quickly became ABC’s first series to hit the top ten in ratings. A number of early episodes showed old Disney films or promoted new ones. (A documentary chronicling the filming of the upcoming 20,000 Leagues Under the Sea added to the audience for that film and also earned Disney his first Emmy Award, for best documentary.)

The program’s success was clinched in December 1954 with the introduction of the first of three episodes focusing on Davy Crockett. The day after the 15 December telecast of “Davy Crockett, Indian Fighter,” Crockett mania swept through the country.

The “Davy Crockett” episodes established another new Disney tradition. Not only would Disney move his feature films to television; he would also reverse the process. Although ABC broadcast only in black and white, the Disney studio shot the “Davy Crockett” episodes in Technicolor. After telecasting each of the three hours twice during the winter and spring months of 1954 and 1955, the studio edited them into a film, which it released to theaters nationally and internationally in the summer of 1955. The film’s high attendance increased the visibility of the Disneyland television program—and of all Disney’s enterprises, including his new park.

When the park opened in July 1955, ABC aired a live special honoring America’s new tourist mecca and its founder. Within a year, millions of viewers whose amusement appetites had been whetted by Disney’s television program poured into Disneyland. In its first year, it grossed $10 million. Walt Disney and his company had shaped two new entertainment forms—and had made more money than ever before.

Disney himself served as the affable host of his program. In light of its success, his studio quickly generated other youth-oriented television shows for ABC. The Mickey Mouse Club, a daily daytime program featuring a likable group of youngsters known as the Mouseketeers, premiered a year after Disneyland and lasted for four seasons. Zorro, an adventure series about a masked, swashbuckling Spaniard in 19th-century California, ran from 1957 to 1959.

Disney continued to be best known, however, for the weekly program he hosted. In 1959, this show changed its name to Walt Disney Presents. In 1961, it moved to NBC and changed its name to Walt Disney’s Wonderful World of Color. NBC’s parent company, RCA, offered the Disney studios an appealing sponsorship deal, hoping that Disney’s colorful telefilms would help market color television receivers.

Disney was still the host of this version of the program at the time of his death in December 1966. His avuncular on-screen personality had endeared him to viewers of all ages. And his re-creation of American recreation through the dual marketing of the two Disneylands had forged new patterns in American cultural history, inextricably linking television to the film and amusement industries.

—Tinky “Dakota” Weisblat

WALT (WALTER) ELIAS DISNEY. Born in Chicago, Illinois, U.S.A., 5 December 1901. Attended McKinley High School, Chicago; Kansas City Art Institute, 1915. Married Lillian Bounds, 1925; children: Diane and Sharon. Served in France with Red Cross Ambulance Corps, 1918. Became commercial art apprentice to Ub Iwerks, 1919; joined Kansas City Film Advertising Company, producing, directing, and animating commercials for local businesses, 1920; incorporated Laugh-o-Gram Films, 1922; went bankrupt, 1923; moved to Hollywood and worked on several animated series, including Alice in Cartoonland, 1923; ended Alice series and began Oswald the Lucky Rabbit series, 1927; formed Walt Disney Productions, 1927; created Steamboat Willie (first cartoon to use synchronized sound and third to feature his creation Mickey Mouse), 1928; began distributing through Columbia, 1930; Flowers and Trees released through United Artists, first cartoon to use Technicolor and first to win Academy Award, 1932; began work on Snow White and the Seven Dwarfs, his first feature-length cartoon, 1934; Disney staff on strike, 1941; Disney developed several TV programs, 1951–60; formed Buena Vista Distribution Company for release of Disney and occasionally other films, 1954; hosted Disneyland TV series; opened Disneyland, Anaheim, California, 1955; premiered numerous Walt Disney television shows, including The Mickey Mouse Club and Walt Disney’s Wonderful World of Color; Walt Disney World opened, Orlando, Florida, 1971. Recipient: Special Academy Award, 1932, 1941; Irving G. Thalberg Award, 1941; Best Director (for his work as a whole), Cannes Film Festival, 1953; two Emmy Awards. Died in Los Angeles, California, 15 December 1966.

**DISTANT SIGNAL**

Cable Television Transmission Technology

The term “distant signal” refers to a television station transmission made available to one or more local cable systems by means other than off-air reception. Traditionally, distant signals have been imported via terrestrial microwave relays; today, however, communications satellites are also used for distant signal importation.

The earliest cable systems of the late 1940s and early 1950s, then known as CATV (Community Antenna Television), comprised little more than very tall community antennas connected by wire to homes within a given community. Under these conditions, retransmission of distant signals was limited to communities no more than approximately 100 miles from the nearest television stations. Consequently, many communities, particularly small communities in sparsely populated states of the western United States, were unable to benefit from community antennas.
By the mid 1950s, however, a number of these western towns had CATV systems served by microwave relays. The relays made it possible to retransmit broadcast signals over many hundreds of miles. The first such system, launched in 1953, brought a Denver signal to Casper, Wyoming. Within the next decade, microwave relays—many of which had been connected to form networks—covered a large portion of the West.

Eventually, microwave technology began to be used as more than simply a substitute for community antenna service. By the late 1950s, some cable operators were using microwave-carried signals to supplement signals received off the air. As improved technology brought about increased CATV channel capacity, operators began to seek extra programming options in order to make their service more attractive to potential subscribers. In the early 1960s, independent stations from large cities such as New York and Chicago became popular CATV channel options because of the amount of movies and local sports in their schedules.

Also, in the mid-to-late 1950s some operators began using microwave relays to bypass local or nearby signals entirely in order to provide their subscribers with more popular stations from distant cities. In most cases, the program quality of a local station serving only several thousand people could not be expected to equal that of a station serving millions, and with the technical capability to carry distant stations, CATV operators had little incentive to use the lower quality local programming. An outcry arose from the small-market broadcasters, who felt that CATV would draw viewers away. As local viewership decreased, they argued, so would advertising revenues. Hearings on this issue were held throughout the late 1950s by both Congress and the Federal Communications Commission (FCC), but no decisive regulatory action was taken to limit this type of CATV competition with broadcasters until a landmark 1963 court decision.

In this case, *Carter Mountain Transmission Corp. v. FCC*, a small Wyoming broadcast station challenged the FCC's licensing of a microwave company that intended to deliver distant signals to a CATV system in a community where the station's signal could be received off-air. The FCC ultimately denied the microwave license because the microwave outfit not only refused to guarantee the local station protection against program duplication on imported stations, but also refused to require the CATV to carry the local station's signal. The commission reasoned that, because microwave threatened to destroy a local broadcaster, it also threatened the loss of television service to a substantial rural population without access to CATV as well as to any other CATV non-subscribers. To grant the microwave company a license unconditionally would have been in direct conflict with the commission's policies favoring localism in broadcasting.

The *Carter Mountain* decision set in motion a series of FCC decisions on the status of CATV, culminating in its 1965 First Report and Order and the 1966 Second Report and Order. These two rulings recognized that CATV had become more than simply a retransmission medium for areas not served by broadcast television. It was beginning to enter broadcast markets, sometimes replacing local signals with distant signals. Even when local stations were offered in addition to distant stations in these markets, subscribers often would watch the distant rather than local stations. Thus the two rulings focused on setting guidelines for the carriage of local signals by CATV systems and on restricting the duplication of the local stations' programming by channels that carried imported distant stations. In addition, the 1966 rules temporarily limited growth of CATV in the nation's top 100 broadcast television markets, a provision strengthened by a 1968 FCC ruling which completely froze growth in the top 100 markets, pending further study of cable developments.

The 1972 Cable Television Report and Order, the next major FCC ruling regarding cable, also focused in large part on the importation of distant signals into broadcast markets. This extensive ruling contained one provision that affected the importation of distant independent stations and another that protected local stations' exclusive rights to syndicated programming. The latter, known as "syndicated exclusivity" or "syndex," became increasingly difficult to enforce as the number of cable program services increased, especially after satellites were introduced to the cable industry in the mid-seventies. Still, pressure from broadcasters continued to focus regulators' attention on the issue, and in 1990, an updated version of the syndex rules was enacted. Since then, cable operators have been obligated to black out any syndicated programming on distant signals that duplicates syndicated programs offered by local stations.

Distant signal importation has been important to the growth of the cable industry in that it has allowed cable operators some degree of selection in the types of broadcast signals they retransmit to their subscribers. The most popular distant signals used by modern cable systems are satellite-carried superstations such as WGN-Chicago, WOR-New York, and Ted Turner's WTBS, Atlanta.

DIXON OF DOCK GREEN
British Police Series

Beginning in 1955 and finally ending in 1976, *Dixon of Dock Green* was the longest running police series on British television. Although its homeliness would later become a benchmark to measure the "realism" of later police series, such as *Z Cars* and *The Bill*, it was an enormously popular series. Dixon should be seen as belonging to a time when police were generally held in higher esteem by the public than they have been subsequently. The series was principally set in a suburban police station in the East End of London and concerned uniformed police engaged with routine tasks and low-level crime. The ordinary, everyday nature of the people and the setting was further emphasised in early episodes of the series with the old, British music-hall song—"Maybe it's because I'm a Londoner"—with its sentimental evocations of a cozy community, being used as the series theme song. Unlike later police series, *Dixon* focused less on crime and policing and more on the family-like nature of life in the station with Dixon, a warm, paternal and frequently moralising presence, as the central focus. Crime was little more than petty larceny. However, as the 1960s and the early 1970s brought ever more realistic police series from both sides of the Atlantic to the British public, *Dixon of Dock Green* would seem increasingly unreal, a rosy view of the police that seemed out of touch with the times. Yet the writer of the series maintained to the end of the program's time on air that the stories in the episodes were based on fact and that *Dixon* was an accurate reflection of what goes on in an ordinary police station.

Police Constable (PC) George Dixon was played by veteran actor Jack Warner. The figures of both Dixon and Warner were already well known to the British public when the series was launched. In 1949 in the Ealing film *The Blue Lamp*, Warner had first played the figure of Dixon. A warm, avuncular policeman, his death at the end of the film at the hands of a young thug (played by Dirk Bogarde) was memorably shocking and tragic. British playwright Ted Willis, who with Jan Read, had written the screenplay for *The Blue Lamp*, subsequently revived the figure of Dixon for a stage play and then wrote a series of six television plays about the policeman. Thus, the BBC took little chance in spinning-off the figure and the situation into a television series.

If Dixon was well-known to the public, the actor Jack Warner was even better known. Born in London in 1900, Warner had been a comedian in radio and in his early film career. Starting in the early 1940s he had broadened his range to include dramatic roles becoming a warmly human character actor in the process. But as well as playing in films with dramatic themes, such as *The Blue Lamp*, Warner continued to play in comedies such as the enormously successful Huggett family films made between 1948 and 1953.

In *Dixon of Dock Green*, Jack Warner as Dixon is a "bobby" on the beat—an ordinary, lowest-ranking policeman on foot patrol. With the inevitable heart of gold, Dixon was a widower raising an only daughter Mary (Billie Whitelaw in the early episodes, later replaced by Jeannette Hutchinson). Other regular characters included Sergeant Flint (Arthur Rigby), PC Andy Crawford (Peter Byrne), and Sergeant Grace Millard (Moira Mannon). From 1964 Dixon was a sergeant.

The series was the creation of writer Ted Willis, who not only wrote the series over its 20 years on British television but also had a controlling hand in the production. Longtime producer of the series was Douglas Moody, whose other television credits include *The Inch Man* and *The Airbase*. *Dixon* was produced at the BBC's London television studios at Lime Green. The show began on the BBC in 1955 and ran until 1976. Altogether, some 439 episodes were made, at first running 30 minutes, and later 45 minutes. The early episodes were in black and white, while the later ones were in colour.

The BBC scheduled *Dixon* in the prime family time slot of 6:30 P.M. on Saturday night. At the time it started on air in 1955, the drama schedule of the BBC was mostly restricted to television plays so that *Dixon of Dock Green* had little trouble in building and maintaining a large and very loyal audience. In 1961, for example, the series was voted...
the second most popular program on British television, with an estimated audience of 13.85 million. Even in 1965 after three years of the gritty and grimy procedural police-work of Z Cars, the audience for Dixon still stood at 11.5 million. However as the 1960s wore on, ratings began to fall and this, together with health questions around Jack Warner, led the BBC to finally end the series in 1976.

DOCTOR WHO
British Science-Fiction Programme

Doctor Who, the world's longest continuously-running television science fiction series, was made by the BBC between 1963 and 1989 (with repeats being shown in many countries thereafter, and negotiations with Steven Spielberg and others to make new programs, continuing into the mid-1990s). Doctor Who's first episode screened in Britain on 23 November 1963, the day after the assassination of President Kennedy. Consequently this first episode of a low-budget series was swamped by "real life" television, and became a BBC institution quietly and by stealth, in the interstices of more epic television events. Similarly, in the first episode, the central character is a mysterious ('Doctor Who?') and stealthy figure in the contemporary world of 1963, not even being seen for the first eleven and a half
minutes, and then appearing as an ominous and shadowy person who irresponsibly "kidnaps" his granddaughter's schoolteacher in his time machine (the Tardis). This mystery was the hallmark of the series for its first three years (when William Hartnell played the lead), as was the antithero quality of the Doctor (in the first story he has to be restrained from killing a wounded and unarmed primitive).

The Doctor was deliberately constructed as a character against stereotype: a "cranky old man," yet also as vulnerable as a child; an antithero against the more obvious "physical" hero of the schoolteacher Ian (played by the well-known lead actor in commercial television's Ianshoe series). Its famous, haunting signature tune was composed at the new BBC Radiophonic Workshop, adding a futuristic dimension to a series which would never be high on production values. The program always attracted ambitious young directors, with (the later enormously successful) Verity Lambert as its first. The decision to continue with the series in 1966 when Hartnell had to leave the part, and to "regenerate" the Doctor on screen, allowed a succession of quirkily different personae to inhabit the Doctor. When it was decided in 1966 to reveal where the Doctor came from (the Time Lord world of Gallifrey), the mysteriousness of the Doctor could be carried on in a different way—via the strangely varied characterisation. Following Hartnell, the Doctor was played by the Chaplinesque "space hobo" Patrick Troughton; the dignified "establishment" figure of Jon Pertwee; the parodic visual mix of Bob Dylan and Oscar Wilde, Tom Baker; the vulnerable but "attractive to young women" Peter Davison; the aggressive and sometimes violent Colin Baker; and the gentle, whimsical Sylvester McCoy.

These shifts of personae were matched by shifts of generic style, as each era's producers looked for new formulae to attract new audiences. The mid-1970s, for example, under producer Philip Hinchcliffe, achieved a high point in audience ratings and was marked by a dramatic gothic-horror style. This led to a "TV violence" dispute with Mary Whitehouse's National Viewers and Listeners Association. The subsequent producer, Graham Williams, shifted the series to a more comic signature. This comedy became refined as generic parody in 1979, under script editor Douglas Adams (author of Hitchhiker's Guide to the Galaxy). Doctor Who's 17th season, which was both script edited by Adams and contained episodes written by him ("The Pirate Planet," "The City of Death") became notorious with the fans, who hated what they saw as the self-parody of Doctor Who as "Fawlty Towers in space" (John Cleese appeared briefly in a brilliantly funny parody of art critics in "The City of Death").

Throughout Doctor Who's changes, however, the fans have remained critically loyal to the series. Fiercely aggressive to some producers and to some of the show's signatures, the fans' intelligent campaigns helped keep the program on the air in some of the more than 100 countries where it has screened; and in the United States, huge conventions of fans brought Doctor Who a new visibility in the 1980s. But the official fans have never amounted to more than a fraction of the audience. Doctor Who achieved the status of an institution as well as a cult.

---

Doctor Who's status attracted high level, innovative writers; its formula to educate and entertain encouraged a range of storylines from space opera through parody to environmental and cultural comment. Its mix of current technology with relatively low budgets attracted ambitious young producers led to what one producer called a "cheap but cheerful" British show that fascinated audiences of every age group world-wide. But above all, its early, ambiguous construction opened the show to innovative, often bizarre, but always dedicated acting. With so many different characterisations and acting styles, the program, like the Doctor, was continuously "regenerating," and so stayed young.

The docudrama is a fact-based representation of real events. It may represent contemporary social issues—the “facts-torn-from-today’s-headlines” approach—or it may deal with older historical events. U.S. television examples include *Brian’s Song* (1971), the biography of Brian Piccolo who played football for the Chicago Bears but died young from cancer; *Roots* (1977), the history of a slave and his family; *Roe vs. Wade* (1989), the history of the Supreme Court decision legalizing abortion; *Everybody’s Baby. The Rescue of Jessica McClure* (1989), the rescue of an eighteen-month-old baby from a well; and three versions of the Amy Fisher and Joey Buttafuoco affair (1993). The sources of the
form derive from 19th- and 20th-century journalism, movies, and radio.

In most cases, a docudrama is produced in the manner of realist theater or film. Thus, events are portrayed by actors in front of an invisible “fourth wall”; shooting techniques obey the conventions of mainstream film or television (i.e. establishing shots with shot/reverse shots for dialogue, lighting constructed in a verisimilar manner, non-anachronistic mise-en-scene); no voice-over narrator comments on the actions once the events begin; and little or no documentary footage is interspersed. Unlike mainstream drama, however, the docudrama does make claims to provide a fairly accurate interpretation of real historical events. In other words, it is a nonfictional drama.

Thus, the docudrama is a mode of representation that, as its name reflects, combines categories usually perceived as separate: documentary and drama. This transgression, however, is not an actual one. Texts that claim to represent the real may be created out of various sorts of documents such as photographs, interviews, tape recordings of sounds, printed words, drawings, and narrators who attempt to explain what happened. Nonfictional texts may also use actors to reenact history. In all cases, the real is being represented and is thus never equal to the reality it represents. Some people point out that having any filmic recording of an event is a “text” with the same status as these other types of documents: film footage is necessarily taken from a particular angle and thus is an incomplete representation of an event.

The docudrama should be distinguished from fictional dramas which make use of reality as historical context but do not claim that the primary plot line is representing events that have actually occurred. An example of such a fictional use of history would be an episode in Murphy Brown in which Brown insists on questioning President Bush at a press conference and is then thrown out. The use of the real person Bush as backdrop to a fictional plot creates a “reality effect” for the fictional program but would not qualify the episode to be a docudrama.

Docudramas do not have to conform to the above aesthetic conventions. An early U.S. example of a series devoted to reenacting past events is You Are There. You Are There derived from the radio program CBS Is There, which ran from 1947 through 1950. On television it appeared from February 1953 through October 1957. You Are There violated the traditional taboo of avoiding anachronisms by having contemporary television reporters interview historical figures about the events in which they were supposed to have been participating, for example, during the conquest of Mexico.

The You Are There form for a docudrama, however, is very unusual. Most docudramas employ standard dramatic formulas from mainstream film and television and apply them wholesale to representing history. These conventions include a goal-oriented protagonist with clear motivations; a small number of central characters (two to three) with more stereotyping for secondary characters; causes that are generally ascribed to personal sources rather than structural ones (psychological traumas rather than institutional dynamics); a dramatic structure geared to the length of the program (a two-hour movie might have the normal “seven-act” structure of the made-for-television movie); and an intensification of emotional ploys.

The desire for emotional engagement by the viewers (a feature valuable for maintaining the audience through commercials) produces an inflection of the docudrama into several traditional genres. In particular, docudramas may appeal to effects of suspense, terror, or tears of happiness or sadness. These effects are generated by generic formulas such as those used in the detective, thriller, or horror genre. Although the outcome was known in advance, Everybody’s Baby operates in the thriller mode: how will Baby Jessica be saved? Judicial dramas such as Roe vs. Wade or murder dramas such as Murder in Mississippi (the death of three civil rights workers) use suspense as a central affective device. Examples of terror are docudramas of murders or attempted murders by family members or loved ones, or of larger disasters such as the Chernobyl meltdown or plane crashes.
One of the most favored effects, however, is tears, produced through melodramatic structures. Some critics point out that docudramas tend to treat the "issue-of-the-week," and that such a concern for topical issues also produces an interest in social problems that might have melodramatic resolutions. Docudramas have treated incest, missing children, wife or child abuse, teenage suicide, alcoholism and drug addiction, adultery, AIDS-related deaths, eating disorders, and other "diseases-of-the-week." The highly successful Brian's Song, which won five Emmys and a Peabody, is an excellent example of this subtype of docudrama. Its open sentimentality and use of male-buddy conventions along with the treatment of an interracial friendship uses the event of an early death by cancer to promote images of universal brotherhood. The Burning Bed (1984) or The Karen Carpenter Story (1989) wages war against pressures producing, respectively, domestic violence or anorexia nervosa.

Such implicitly or explicitly socially-conscious programs, however, raise the problem of interpretation. Indeed, docudramas, like other methods of representing reality, are subject to controversy regarding their offer of historical information through story-telling. Although historians now recognize how common it is to explain history through dramatic narratives, historians are still concerned about what effects particular types of dramatic narratives may have on viewers. Debates about docudramas (or related forms such as "reality TV") include several reservations.

One reservation is related to "dramatic license." In order to create a drama that adheres to the conventions of mainstream story-telling (particularly a sensible chain of events, a clear motivation for character behavior, and a moral resolution), writers may claim they need to exercise what they call dramatic license—the creation of materials not established as historical fact or even the violation of known facts. Such distortions include created dialogues among characters, expressions of internal thoughts, meetings of people that never happened, events reduced to two or three days that actually occurred over weeks, and so forth. Critics point out that it is the conventions of mainstream drama that compel such violations of history while writers of docudramas counter that they never truly distort the historical record. Critics reply that the dramatic mode chosen already distorts history which cannot always be conveniently pushed into a linear chain of events or explained by individual human agency.

Another reservation connected to the first is the concern that spectators may be unable to distinguish between known facts and speculation. This argument does not propose that viewers are not sufficiently critical, but that the docudrama may not adequately mark out distinctions between established facts and hypotheses, and, even if the docudrama does mark the differences, studies of human memory suggest that viewers may be unable to perceive the distinctions while viewing the program or remember the distinctions later.

A third reservation focuses on the tendency toward simplification. Critics point out that docudramas tend toward hagiography or demonization in order to compress the historical material into a brief drama. Additionally, complex social problems may be personalized so that complicated problems are "domesticated." Adding phone numbers to call to find help for a social problem may be good but may also suggest sufficient solutions to the social problem are already in place.

Outside the United States many of these problems have been addressed in different but related ways, and while the term docudrama is often used in a generic fashion, it may be applied to a range of forms. In the United Kingdom, for example, Cathy Come Home (1966), stands as one of the earliest and strongest explorations of the problem of homelessness. Created by writer Jeremy Sandford, producer Tony Garnett, and director Ken Loach, this program resists the more conventional structures of dramatic narrative, inserting strong "documentary" style photography into the presentation and using "Cathy's" own voice as narrator-analyst for the harsh social situation in which she finds herself. Another voice, however, presents factual information in the form of statistics and other information related to the central topic of the piece. Cathy Come Home has been described as a "documentary-drama," a term that seeks to emphasize the serious and factual qualities of the show against the more conventional docudrama.

In Australia, versions of docudrama have often been used to explore social and national history. Productions such as Anzacs, Gallipoli, and Cowra Outbreak have focused on Australian participation in both World Wars and, in some views, are crucial texts in the construction of national identity.

In Canada, critics have applied the docudrama designation to a broader range of production styles, including works such as The Valour and the Horror, which combined documentary exploration with dramatized sequences. This program led to an ongoing controversy over the nature of the "real," and the "true." Because the presentation challenged received notions of Canadian involvement in World War II (notions themselves constructed from various experiences, memories, and records), the conflict took on an especially public nature. So, too, did arguments surrounding The Boys of St. Vincent, which dealt with child molestation in a church-run orphanage. The dramatization in this case was more complete, but clearly paralleled a case that was still in court at the time of production and airing.

What all these examples suggest is, on the one hand, that docudrama is a particularly useful form for television, whether for advertising profit, the exploration of social issues, the construction of identity and history, or some combination of these ends. On the other hand, the varied examples point to an ongoing aspect of television's status as a medium that both constructs narratives specifically defined as "fiction" and also purports to somehow record or report "reality." You Are There mixed "news," history, and fiction,
categories often, and uncritically, considered distinct and separate. The mixture, the blurred boundaries among the conventions linked to these forms of expression and communication, and the public discussions caused by those blurrings and mixings, remain central to any full understanding of the practices and the roles of television in contemporary society.

DOCUMENTARY

The television documentary is an adaptable form of nonfiction programming that has served various functions throughout the medium's history: as a symbol of prestige for advertisers and networks, a focal point for national attention on complex issues, a record of the human experience and the natural world, and an instrument of artistic and social expression. Unlike other programming on American television, documentaries have typically been sustained for reasons other than high ratings and ad sales. Consequently, the health of the documentary form serves as an indicator of a network's commitment to news and as a barometer of social, political, and economic dynamics.

A documentary is defined as a nonfiction report that devotes its full time slot to one thesis or subject, usually under the guidance of a single producer. Part of the fascination with documentaries lies in their unique blend of writing, visual images, sound tracks, and the individual styles of their producers. In addition to their particular contribution to the television medium, however, documentaries are notable because they have intertwined with wrenching moments in history. These characteristics have inspired some to describe documentaries as among the finest moments on television and as a voice of reason, while others have criticized them as inflammatory.

TV documentaries, as explained by A. William Bluem in the classic Documentary in American Television, evolved from the late 1920s and 1930s works of photojournalists and film documentarians, like Roy Stryker, John Grierson, and Pare Lorentz. Bluem writes, "they wished that viewers might share the adventure and despair of other men's lives, and commiserate with the downtrodden and underprivileged." The rise of radio in World War II advanced the documentary idea, especially the distinguished works of CBS writer Norman Corwin and the reporting of Edward R. Murrow. In 1946, Murrow created the CBS documentary unit, which linked documentary journalism with the idea that broadcasters owed the public a news service in exchange for lucrative station licenses.

Technology has also been a force in the documentary's evolution. The editing of audiotape on the 1949 CBS re-
Sea (1952–53). Produced by Henry Solomon, this popular NBC series detailed World War II sea battles culled from 60 million feet of combat film footage. It was a paean to freedom and the overthrow of tyranny. Another popular series ran on CBS from 1957 to 1966. The Twentieth Century was a history class for millions of American TV viewers, produced throughout its entire run by Burton (Bud) Benjamin.

The absence of ABC as a major presence in the documentary field in the 1950s is a telling indicator of television history. ABC was the weak third network, lacking the resources, affiliate strength, and audience of its rivals. Since CBS and NBC dominated the airwaves, each could counterprogram the other’s entertainment hits with documentaries. The more the industry tended toward monopoly, the better the climate for documentaries.

Documentaries soared in quality and quantity during the early 1960s, a result of multiple factors. In The Expanding Vista: American Television in the Kennedy Years, Mary Ann Watson articulates how the confluence of technology with social dynamics energized the television documentary movement. Pressure on the industry to restore network reputations following the quiz show scandals spurred the output of high-quality nonfiction programming.

The May 1961 “Vast Wasteland” speech by FCC chairman Newton N. Minow and the “raised eyebrow” of government further motivated the networks to accelerate their documentary efforts as a way of protecting broadcast station licenses and stalling FCC hints that the networks themselves should be licensed. President Kennedy was also an advocate of documentaries, which he felt were important in revealing the inner workings of democracy.

The availability of lightweight 16mm film equipment enabled producers to get closer to stories and record eyewitness observations through a technique known as cinéma vérité, or direct cinema. A significant development was the wireless synchronizing system, which facilitated untethered, synchronized sound-film recordings, pioneered by the Drew Associates.

Primary (1960) was a breakthrough documentary. Produced by Robert Drew and shot by Richard Leacock, the film featured the contest between Senators John Kennedy and Hubert Humphrey in the 1960 Wisconsin primary. For the first time, viewers of Time-Life’s four television stations followed candidates through crowds and into hotel rooms, where they awaited polling results. Through the mobile-camera technique Primary achieved an intimacy technique never before seen, and established the basic electronic news
gathering shooting style. In *Crisis: Behind a Presidential Commitment*, Drew Associates producer Gregory Shuker took cameras into the Oval Office to observe presidential meetings over the crisis precipitated by Alabama Governor George Wallace, who physically blocked the entry of two African-American students to the University of Alabama. The program aired in October 1963 on ABC and triggered a storm of protest over the admission of cameras into the White House.

At ABC the job of developing a documentary unit fell to John Secondari. Since sponsor Bell and Howell produced film cameras and projectors, the artistic quality of the filmed presentation was important and engendered an attention to aesthetics that carried over in later years on ABC News documentaries. The Bell and Howell Close-Up! series, which also aired productions by Drew Associates, like others of the period dealt with race relations, “Cast the First Stone” and “Walk in My Shows,” and Cold War themes, “90 Miles to Communism” and “Behind the Wall.”

Newton Minow also spurred network affiliates to increase documentary broadcasts. Clearances for *CBS Reports* jumped from 115 to 140 stations. The production of local documentaries surged, creating a favorable environment for
independent producers. David Wolper, whose Wolper Productions enjoyed a growth spurt in 1961, said, “Maybe we should thank Newton Minow for a fine publicity job on our behalf.” Wolper’s unique contribution to syndicated TV documentaries includes “The Race for Space” (1958), and the series Biography, the National Geographic Society Special, and The Undersea World of Jacques Cousteau.

The favorable climate for TV documentaries in the Kennedy era also nurtured an international collaboration that began in late 1960. Intertel came into being when five groups of broadcasters in the four major English-speaking nations formed the International Television Federation. The participants were Associated Rediffusion, Ltd. of Great Britain, the Australian Broadcasting Commission, the Canadian Broadcasting Corporation, and in America, the National Educational Television and Radio Center and the Westinghouse Broadcasting Company. In the United States Intertel was piloted by NET’s John F. White and Robert Hudson and by Westinghouse Group W executives Donald McGannon and Richard M. Pack. Intertel sought to foster compassion for the human problems of member nations—to teach countries how to live together as neighbors in a world community, which Bluem characterized as “the greatest service which the television documentary can extend.”

In a speech reported in Television Quarterly, historian Erik Barnouw characterized the documentary as a “necessary kind of subversion” that “focuses on unwelcome facts, which may be the very facts and ideas that the culture needs for its survival.” Throughout the turbulent 1960s, documentaries regularly presented “unwelcome facts.” ABC offered a weekly series beginning in 1964, called ABC Scope. As the Vietnam war escalated, the series became “Vietnam Report,” from 1966-68. NBC aired Vietnam Weekly Review. CBS launched an ambitious seven-part documentary in 1968 called Of Black America.

The year 1968 also marked a change in the influence of network news and a drop in TV documentary production. Affiliate stations bristled over network reports on urban violence, the Vietnam War, and antiwar protests. The Nixon administration launched an assault on the media and encouraged station owners to complain about news coverage in exchange for deregulation. TV coverage of the Democratic National Convention triggered protests against network news.

During this social, political, and economic revolution, network management experimented with less-controversial programs. Each network introduced a newsmagazine to complement evening news and documentaries. Ray Carroll reports the newsmagazine became a substitute for documentaries in the late-1960s and throughout the 1970s, and the number of long-form reports dropped. 60 Minutes on CBS premiered in 1968, and after a slow start for several years, achieved unparalleled success. NBC followed in 1969 with First Tuesday.
ABC's answer was *The Reaonner Report*, launched in 1973, the same year the network resurrected the *CloseUp!* documentary series. In the 1970s, ABC's entertainment programs began to attract large audiences. To establish itself as a full-fledged network, ABC strengthened its news division and added the prestige documentary series, *ABC CloseUp!*, produced by Av Westin, William Peters, Richard Richter, and Pam Hill. Under Hill's guidance, the *CloseUp!* unit excelled in documentary craft, featuring artfully rendered film, poetic language, and thoughtful music tracks.

The three-way competition for prime-time audiences reduced airtime for documentaries. However, ABC's re-entry into the documentary field forced competitors to extend their documentary commitment, a rivalry that carried into the Reagan years. Pressure continued to mount against documentaries, though, in the 1970s. In the most celebrated case, the 1971 CBS documentary *The Selling of the Pentagon* resulted in a Congressional investigation into charges of unethical journalism.

Network documentaries virtually disappeared during the Reagan years; in 1984 there were eleven. The FCC under Mark Fowler eliminated requirements for public-service programming. Competition from cable, independents, and videocassettes eroded network audiences. The Reagan administration advocated a society based on individualism; economics became paramount, while support for social programs declined.

Documentaries also suffered from controversies over the CBS programs *The Uncounted Enemy: A Vietnam Deception* and *People Like Us*, and from an increase in libel suits and deregulation, which offered financial incentives to broadcasters in lieu of public-service programming. In this environment, the network documentary, which was rooted in the Roosevelt era and frequently endorsed collective social programs, became an anachronism. The documentary's decline in the Reagan years is one indicator of the ebbing of the New Deal influence on American culture.

After the three network sales at mid-decade, the new owners required news divisions to earn a profit. The most successful experiment was the 1987 NBC Connie Chung life-style documentaries, *Scared Sexless* and *Life in the Fat Lane*. These programs demonstrated that a combination of celebrity anchor, popular subjects, and updated visual treatments could appeal to larger audiences. In time, as entertainment costs rose and ratings fell, these infotainment programs evolved into a stream of popular newsmagazines, which became cost-effective replacements for entertainment shows.

The documentary thrived on public television in the 1980s. PBS premiered *Frontline* in 1983, an acclaimed investigative series produced by David Fanning. The 13-hour *Vietnam: A Television History* also aired in 1983. In 1987, the network broadcast *Eyes on the Prize*. Produced by Henry Hampton, this moving series chronicles the story of the modern civil rights movement from the beginnings of the Montgomery bus boycott to the passage of the Civil Rights Act of 1964. The success of *Eyes on the Prize* failed to translate into easier fund-raising for the second series, which was more controversial. Other PBS series include *P.O.V.*, *The American Experience*, and *NOVA*. In the 1980s, a shift in the political climate hindered government support for public television. Conservatives objected to what was perceived as a liberal bias in its programming. As on commercial television, the aura of controversy encumbers the documentary form on PBS.

Cable television has made a substantial commitment to noncontroversial documentaries since the mid-80s. The Arts and Entertainment Network, formed in 1984, features documentaries, as does The Discovery Channel, launched in 1985. To date none of the cable documentaries has attracted the viewership of their network counterparts, nor have they tackled sensitive issues on a regular basis.

This conforms to what has been a recurring relationship in the documentary experience and suggests another way in which the tone and frequency of documentaries reflect American culture: The greater the national emphasis on marketplace, the less likely it is for commercial documentaries to excel as craft or grapple with complex problems and suggest social action. The more the nation emphasizes public service, the greater the networks' commitment to documentary art and its ability to be a tool for social justice.

—Tom Mascaro

**DOLAN, CHARLES F.**

U.S. Media Executive

Charles F. Dolan is one of the least known but most powerful moguls in the modern cable television industry in the United States. In early 1995 his corporate creation, Cablevision Systems, Inc., ranked as the fifth largest operator in the United States, serving some 2.6 million subscribers in 19 states, about 1.5 million of them in the New York metropolitan area. "Chuck" Dolan’s Cablevision Systems Corporation also owns and controls a number of noted cable television networks, headed by the popular and influential American Movie Classics. In 1995 *The New York Times* estimated Dolan’s net worth at $175 million.

Headquartered in Long Island, New York, Dolan organized Cablevision Systems in 1973. He had started in the cable TV business a decade earlier with Sterling Television, an equipment supplier. During the 1960s Sterling acquired the franchise for Manhattan Island, and when Time, Inc., purchased Sterling, Dolan used the substantial proceeds to buy some Long Island systems that he turned into Cablevision Systems.

Dolan correctly figured the action for cable would move to the suburbs and turned the locus of Cablevision Systems to the millions of potential customers living in areas surrounding New York City, particularly in Long Island’s close-in Nassau and Suffolk Counties. In time Dolan also acquired franchises controlling 190,000 customers in Fairfield, Connecticut, a quarter of a million more in Northern New Jersey, and 60,000 in West Chester County. He also purchased or built cable TV systems across the United States, in Arkansas and Illinois, in Maine and Michigan, in Missouri and Ohio.

In 1988 Dolan added NBC as a minority partner. General Electric had recently purchased NBC, and prior to that had helped Dolan finance the expansion of Cablevision Systems. Thereafter Dolan, with help from NBC,
moved into cable network programming in a major way. He crafted American Movie Classics into the top classic movie channel on cable. Building through grass-roots marketing, American Movie Classics quietly became one of the fastest growing of cable networks as the 1990s opened. Soon The New York Times was lavishing praise on AMC (American Movie Classics): "It's more than nostalgia. It's a chance to see black-and-white films which may have slipped through the cracks. It's wall-to-wall movies with no commercials, no aggressive graphics, no pushy sound, no sensory MTV overload, no time frame. There's a sedate pace, a pseudo-PBS quality about AMC. It's the Masterpiece Theater of movies."

Sports programming has also done well for Dolan, but on a regional basis. Dolan's regional sports channels cablecast all forms of sports to the millions of subscribers, on his and other cable systems, in the New York City area. The New York Yankees and New York Mets baseball games are particularly successful. By 1994 Dolan had done so well he partnered with billion-dollar conglomerate ITT to purchase Madison Square Garden for $1 billion. Suddenly Cablevision Systems was the major player in sports marketing in the New York City area, owning the Knicks basketball team, the Rangers hockey team, the Madison Square Garden cable TV network, and the most famous venue for indoor sports in the United States. As of the mid-1990s, however, Dolan's other great experiments, 24-hour local news on cable TV and the Bravo arts channel, have not been this profitable.

Local around-the-clock news began in 1986 as News 12 Long Island. This niche service came about because of the long frustrating inability of New York City's over-the-air TV stations to serve Long Island. Viewers not only appreciated News 12's basic half-hour newswheel, but also its multi-part reports that ran for a half hour or more. Such programs would never be possible for telecast by a New York City television station under current economic constraints.

With prize-winning series on breast cancer, drug abuse, and Alzheimer's disease, News 12 Long Island established a brand image. During election campaigns, the channel regularly staged candidate debates, and local politicians loved having their faces presented there. But little money came in to pay for these features, and only after a decade did it seem that News 12 would finally make money.

The same difficult economic calculus affects the arts-oriented Bravo channel. It is popular with well-off consumers, but too few of these tune in on a regular basis. Bravo merely hangs on, cable casting only a half-day schedule.

Dolan's accomplishments have been considerable. Though not well known to the general public, he helped establish cable television as an economic, social, and cultural force in the United States during the final quarter of the 20th century. He represents the TV entrepreneur in the true sense of the word, comparable to more publicized figures who started NBC and CBS, David Sarnoff and William S. Paley.

Dolan continues to look to the future, seeking significant positions for his menu of cable programming networks and franchises on the "electronic superhighway." Like other cable entrepreneurs of the late 20th century, he has pledged 500 channels, movies on demand, and interactive video entertainment and information. As of the late 1990s those plans remain promises.

—Douglas Gomery

CHUCK F. DOLAN. Attended John Carroll University. Married: Helen, children: MariAnne, Theresa, Deborah, James, Patrick, Thomas. Served briefly in the U.S. Air Force at the end of World War II. Worked at a radio station during high school, writing radio scripts and commercials; operated sports newswire business; joined Sterling Television, 1954; built first urban cable television system, in Manhattan, 1961; president, Sterling Manhattan Cable, 1961-72; creator, Home Box Office pay movie service, 1970; sold interests in Manhattan cable service and HBO to Time, Inc., 1973; created and served as chair and chief executive, Cablevision Systems, one of the country's largest cable installations, until 1995; developed first local all-news channel for cable; created Rainbow Program Enterprises, operator of regional and national cable networks, including American Movie Classics, Bravo and SportsChannel; elected chair of the National Academy of Television Arts and Sciences, 1996.

DONAHUE, PHIL
U.S. Talk-Show Host

In recent years, the talk show has become the most profitable, prolific, and contested format on daytime television. The sensationalist nature of many of these shows has spawned much public debate over the potential for invasion of personal privacy and the exploitation of sensitive social issues. In this environment, Phil Donahue, who is widely credited with inventing the talk-show platform, appears quite tame. But in the late 1960s, when *The Phil Donahue Show* first aired on WLW-D in Dayton, Ohio, Donahue was considered a radical and scintillating addition to the daytime scene.

Working at the college station KYW as a production assistant, Donahue had his first opportunity to test his on-air abilities when the regular booth announcer failed to show up. He claimed it was then that he became "hooked" on hearing the transmission of his own voice. The position he took after graduation, news director for a Michigan radio station, allowed him to try his hand at broadcast reporting and eventually led to work as a stringer for the *CBS Evening News* and an anchor position at WHIO-TV in Dayton in the late 1950s. There he first entered the talk-show arena with his radio show *Conversation Piece*, on which he interviewed civil rights activists (including Martin Luther King and Malcolm X) and war dissenters.

After leaving WHIO and a subsequent three-month stint as a salesman, the general manager of WLW-D convinced Donahue to host a call-in TV talk show. The show would combine the talk-radio format with television interview show. However, *The Phil Donahue Show* would start with two major disadvantages: a small budget and geographic isolation from the entertainment industries, preventing it from garnering star guests. In order to attract their audience, Donahue and his producers had to innovate—they focused on issues rather than fame.

The first guest on *The Phil Donahue Show* was Madalyn O'Hair, an atheist who felt that religion "breeds dependence" and who was ready to mount a campaign to ban prayer in public schools. During that same week in November 1967 the show featured footage of a woman giving birth, a phone-in vote on the morality of an anatomically correct male doll, and a funeral director extolling the workings of his craft. A bold nature of these topics was tempered by Donahue's appealing personality. He was one of the first male television personalities to exude characteristics of "the sensitive man" (traits and behaviors further popularized in the 1970s by actors such as Alan Alda), acquired through his interest in both humanism and feminism.

Donahue's affinity with the women's movement, his sincere style, and his focus on controversial topics attracted a large and predominately female audience. He told a *Los Angeles Times Reporter*, in 1992, that his show "got lucky because we discovered early on that the usual idea of women's programming was a narrow, sexist view. We found that women were interested in a lot more than covered dishes and needlepoint. The determining factor [was], "Will the woman in the fifth row be moved to stand up and say something?" And there's a lot that will get her to stand up."

Donahue attempted to "move" his audience in a number of ways, but the most controversial approach involved educating women on matters of reproduction. Shows on abortion, birthing techniques, and a discussion with Masters and Johnson were all banned by certain local affiliates. According to Donahue's autobiography, WGN in Chicago refused to air a show on reverse vasectomy and tubal ligation because it was "too educational for women...and too bloody." Nevertheless, Donahue's proven success with such a lucrative target audience led to the accumulation of other major midwest markets as well as the show's eventual move to Chicago in 1974 and then to New York in 1985. By then the range of topics had broadened considerably, even to include live "space bridge" programs. Co-hosted with Soviet newscaster Vladimir Pozner, these events linked U.S. and Soviet citizens for live exchanges on issues common to both groups.

But by the 1980s, the increasing popularity of Donahue had led to a proliferation of local and nationally syndicated talk shows. As competition increased, the genre became racier, with less emphasis on issues and more on personal scandal. Donahue retained his niche in the market by dividing the show's focus, dabbling in both the political and the personal. He was able to provide interviews with political candidates, explorations of the AIDS epidemic, and revela-
tions of the savings and loan crisis, alongside shows on safe-sex orgies, cross-dressing, and aging strippers.

In 1992, with 19 Emmy Awards under his belt, Donahue was celebrated by his fellow talk-show hosts on his 25th anniversary special as a mentor and kindly patriarch of the genre. Fellow talk-show host Maury Povich was quoted in Broadcasting and Cable as saying at the event “He’s the granddaddy of us all and he birthed us all.” Until 1996 Phil Donahue still broadcast out of New York, where he lives with his wife actress Marlo Thomas. Early in that year he announced it would be his last. Ratings for Donahue were declining and a number of major stations, including his New York affiliate, had chosen to drop the show from their schedules. In the spring of 1996 Donahue taped his final show, an event covered on major network newscasts, complete with warm sentiment, spraying champagne, and expected, yet undoubted, sincerity. The ending of this hugely successful run for a syndicated program no doubt presaged new career developments for Phil Donahue in television.

DOWNS, HUGH

U.S. Television Host

Hugh Downs, a venerable and extremely affable television host, is known for his intelligence, patience, and decency. The Guinness Book of World Records reports that Downs, among the most familiar figures in the history of the medium, has clocked more hours on television (10,347 through May 1994) than any other person in U.S. TV history.

Downs began his broadcasting career as a radio announcer at the age of 18 in Lima, Ohio, moving later to NBC Chicago as a staff announcer. In 1957 he became well known to American audiences as Jack Paar’s sidekick on The Tonight Show and remained in that spot through 1962. In 1958 he began simultaneously hosting the original version of Concentration, helping to establish his niche of doing more serious and thought-provoking television even within the game show format.

He served as NBC’s utility host for many of the network’s 1950s and early 1960s news, information, and entertainment programs. He added The Today Show to his list of network assignments, replacing John Chancellor who had served for just 15 months as Dave Garroway’s replacement on the original Today Show. Downs was the primary host of the Today Show for nine years.

Downs’ reassuring, professional manner in the roles of announcer, sidekick, host, and anchor is unrivaled in U.S.
television. He has said that he tries to be the link between what goes on behind and in front of the camera and the audience at home, hoping that he serves as an “honest pipeline to the audience.” He believes that television works best when a familiar presence is there to help guide viewers in and out of features and stories, however abbreviated that function may be. Since 1978 he has best demonstrated that commitment as the anchor or co-anchor of ABC’s 20/20. Downs came out of a very busy retirement to take the 20/20 position when a near-disastrous premier almost kept the show off the air.

His great affability and smooth manner have made it possible for him to get along well with whomever he has been paired, repeatedly taking the edge off some of the sharper moments with Jack Paar, who was well known for his outbursts, tantrums, and eccentricities. Ironically, Barbara Walters took the position across from Downs on 20/20 just after a major brouhaha developed when she was asked to leave her position as the first female network news co-anchor, paired unsuccessfully with Harry Reasoner. But with Downs the chemistry was right and the two have worked together successfully since 1984.

Intimates refer to Downs as one of the last “renaissance men.” He is a proficient sailor and aviator—even though colorblind. He has composed, published, and had orchestral pieces performed, has hosted Live from Lincoln Center for PBS since 1990, and is exceptionally knowledgeable about science and health. One of his special interests is the U.S. space program. Another focuses on issues surrounding aging, and he has earned a post-graduate certificate in geriatric medicine while hosting Over Easy for the Public Broadcasting Service, the first successful television program in the United States about aging. Always modest, Downs shuns the “renaissance” label, preferring instead to call himself “a champion dilettante.”

He is the author of eight books, including an autobiography, a collection of his science articles (on astronomy and the environment), an account of a sailing voyage across the Pacific, and five on the subjects of aging, health, and psychological maturity. Downs’ public service commitments are also notable. He is currently the chair of the board of the United States Committee for UNICEF, chair of the Board of Governors of the National Space Society, and he serves as an elected member of the National Academy of Science, and a past-member of NASA’s Advisory Council. He recently received an award from the American Psychiatric Association for his work on an ABC News special, Depression, Beyond the Darkness, and also received an Emmy for his work on The Poisoning of America about damage to the environment. He was named Broadcaster of the Year by the International Radio and Television Society in 1990. In 1995 he was honored with a special salute ceremony by the Museum of Broadcast Communications in Chicago.

**DRAGNET**

U.S. Police Drama

From the distinctive four-note opening of its theme
music to the raft of catch phrases it produced, no other
television cop show has left such an indelible mark on
American culture as Dragnet. It was the first successful
television crime drama to be shot on film and one of the few
prime time series to have returned to production after its
initial run. In Dragnet, Jack Webb, who produced, directed,
and starred in the program, created the benchmark by which
subsequent police shows would be judged.

The origins of Dragnet can be traced to a semi-documentary
film noir, He Walked by Night (1948), in which Webb had
a small role. Webb created a radio series for NBC that had many
similarities with the film. Not only did both employ the same
L.A.P.D. technical advisor, they also made use of actual police
cases, narration that provided information about the workings
of the police department, and a generally low-key, documentary
style. In the radio drama Webb starred as Sgt. Joe Friday
and Barton Yarborough played his partner. The success of the
radio show led to a Dragnet television pilot, aired as an episode
of Chesterfield Sound Off Time in 1951, and resulted in a
permanent slot for the series on NBC Television's Thursday
night schedule in early 1952. Yarborough died suddenly after
the pilot aired and was eventually replaced by Ben Alexander,
who played Officer Frank Smith from 1953 to the end of the
series in 1959.
Dragnet was an instant hit on television, maintaining a top 10 position in the ratings through 1956. The series was applauded for its realism—actually a collection of highly stylized conventions which made the show an easy target for parodists and further increased its cultural cachet. Episodes began with a prologue promising that “the story you are about to see is true; the names have been changed to protect the innocent,” then faded in on a pan across the L.A. sprawl. Webb’s mellifluous voice intoned, “This is the city. Los Angeles, California,” and usually offered statistics about the city, its population, and institutions. Among the show’s other “realistic” elements were constant references to dates, the time, and weather conditions. Producing the series on film permitted the use of stock shots of L.A.P.D. operations and location shooting in Los Angeles. This was a sharp contrast to the stage-bound “live” detective shows of the period. Dragnet emphasized authentic police jargon, the technical aspects of law enforcement, and the drudgery of such work. Rather than engaging in fist fights and gun play, Friday and his partner spent much screen time making phone calls, questioning witnesses, or following up on dead end leads. Scenes of the detectives simply waiting and engaging in mundane small talk were common. To save on costly time Webb had actors read their lines off a TelePrompTer. The result was a clipped, terse style, that conveyed a documentary feel and became a trademark of subsequent series produced by Webb, including Adam-12 and Emergency. Dragnet always concluded with an epilogue detailing the criminal’s fate accompanied by a shot of the character shifting about uncomfortably before the camera.

Dragnet’s stories, many written by James Moser, ran the gamut from traffic accidents to homicide. Other stories played on critical middle-class anxieties of the postwar period including juvenile delinquency, teenage drug use, and the distribution of “dirty” pictures in schools. Moral complexity was eschewed for a crime-don’t-pay message sketched in stark black-and-white tones. Friday put up with little from lawbreakers, negligent parents, or young troublemakers. Program segments often concluded with the sergeant directing a tight-lipped homily to miscreants coupled with a musical “stinger” and an appreciative nod from his partner.

By 1954 Dragnet was watched by over half of America’s television households. This success prompted Warner Brothers to finance and distribute a theatrical version of Dragnet (1954), signalling the rise of cross-promotion between film and television (Anderson, 1994). Further evidence of the show’s popularity was found in the number of TV series that imitated its style, notably The Lineup, M Squad, and Moser’s Medic, based on cases from the files of the Los Angeles County Medical Association. Conversely, other series like 77 Sunset Strip and Hawaiian Eye, featuring younger, hipper detectives, were developed to provide an antidote to Dragnet’s dour approach to crime fighting. As Dragnet neared completion of its initial run in 1959 Friday was promoted to lieutenant and Smith passed his sergeant’s exam. Seven years later the show was revived by NBC as Dragnet 1967. Until it was cancelled in 1970, Dragnet was always followed by the year to distinguish the new series from its 1950s counterpart. In the new series Friday was once again a sergeant, now paired with Officer Bill Gannon (Harry Morgan). Though the style and format of the show remained the same, the intervening years and the rise of the counter culture had changed Friday from a crusading civil servant, alternately disgusted by the behavior of the younger generation and peeved at his partner’s prattle about mundane topics. The program’s conservatism was all the more apparent in the late 1960s as Friday’s terse warnings of the fifties gave way to shrill lectures invoking god and country for the benefit of hippies, drug users, and protesters.

Webb’s death in 1982 did not prevent another revival of Dragnet from appearing in syndication during the 1989-1990 season. Two younger characters filled in for Friday and his partner but the formula remained the same. This little-seen effort failed quickly in part because series such as Hill Street Blues and COPS had significantly altered the conventions of realistic police dramas. Those programs, and others like NYPD Blue, must be considered the true generic successors to the original Dragnet. As the archetypal television police drama Dragnet has remained a staple in reruns and continues to be an object of both parody and reverent homage.

FURTHER READING
Dramedy

Dramedy is best understood as a television program genre which fuses elements of comedy and drama. According to Altman (1986), new genres emerge in one of two ways: “either a relatively stable set of semantic givens is developed through syntactic experimentation into a coherent and durable syntax, or an already existing syntax adopts a new set of semantic elements.” Semantic elements are the generic “building blocks” out of which program genres are constructed—those recurring elements such as stock characters, common traits, and technical features such as locations and typical shots. Syntax, or syntactic features, describes the ways these elements are related and combined. The recurring combination of semantic and syntactic elements creates a conventional type or category of program called a genre.

Arguably one of the clearest examples of the dramedy genre emerged in 1985 and 1986 when the Directors Guild of America nominated the hour-long television series Moonlighting for both Best Drama and Best Comedy, an unprecedented event in the organization’s previous 50 years. Moonlighting combined the semantic elements or conventions of television drama (serious subject matter, complex and rounded central characters, multiple interior and exterior settings, use of textured lighting, single camera shooting on film) with the conventional syntactic features of television comedies (four-act narrative structure, repetition, witty repartee, verbal and musical self-reflexivity, hyperbole). Not all dramedies, however, were an hour long. For example, the half-hour series Frank’s Place dealt with serious issues, had rounded and complex central characters, textured lighting, multiple settings, single camera shooting on film, no studio audience or laugh track, and a four-part narrative structure. Given the economic organization of the American television schedule, in which “half-hour” is usually equated with “comedy,” and “hour-long” with “drama,” many dramedies were considered more comic than dramatic and vice versa.

Television, like most popular culture forms, is strongly generic; audiences come to television program viewing experiences with definite expectations about genre conventions; indeed, according to Warshow audiences welcome originality “only in the degree that intensifies the expected experience without fundamentally altering it.” However, as a commercial enterprise, television piques audience members’ interest and attracts viewers, at least in part by offering innovations on familiar genre forms. Thus, while dramedy may have taken the final step from invention to genre evolution in the 1980s, several series during the 1970s occasionally experimented with individual “dramedic” episodes, including M*A*S*H, Barney Miller, and Taxi. After Moonlighting had garnered both popular success and critical acclaim, a number of television producers turned to dramedy’s unique duality as a means of attracting audiences. Other television series which some critics have called dramedies include The Days and Nights of Molly Dodd, Hooperman, The “Slap” Maxwell Story, and Northern Exposure. However as the short runs of several of these series indicate, creating a highly rated dramedy is no easier than creating a popular series in another genre.

---

---

The Days and Nights of Molly Dodd
Critics, on the other hand, have quite uniformly praised television’s dramedy series’ sophistication and innovation. They argue that the appearance of dramedies, whose self reflexivity and intertextual references require a substantial degree of both popular and classic cultural literacy from viewers for full appreciation of their allusions and nuances, signifies a change in the relationships among television, audiences and society and indicates that television has “come of age” as an artistic medium.

DREW, ROBERT

U.S. Documentary Film Producer

Robert Drew is a documentary producer, who, during the late 1950s and 1960s, pioneered a new documentary form for application in the network news departments. This form, which Drew dubbed “Candid Drama,” also known as “Cinema Verite” or “Direct Cinema”, did not, ultimately, reshape news programming, but it did provide the medium with a radically different way of covering historical and cultural events.

“Candid Drama,” according to Drew, is a documentary filmmaking technique which reveals the “logic of drama” inherent in almost all human situations. In sharp contrast to typical television documentaries, which are simply “lectures with picture illustration,” and for that reason usually are “dull,” the candid drama documentary eschews extensive voice-over narration, formal interviews, on-air correspondents, or other kinds of staged and framed television formulas. Instead, through the slowly acquired photography and long, single takes—called real-time photography—of verite technique, the details and flavor of a scene become the important elements: the fatigue experienced by candidates on a campaign trail (Primary), the fervid concentration of a race car driver (On the Pole), capture our attention as much as the factual information about a campaign or the Indianapolis 500. According to Drew, the purpose of candid documentary is to engage the viewer’s “senses as well as his

unlike other practitioners of the form, he has also tried to procure a regular slot for verite on prime-time network programming.

Drew was first introduced to the power of documentary photography just after World War II, while demonstrating a new fighter plane for a *Life* magazine reporter and photography team (Drew had served as a fighter pilot during the war). Struck by the power of the resulting article, Drew, at the age of twenty-two, became a staff reporter for *Life*. In 1955 he accepted a Neiman fellowship at Harvard to formally pursue the problem of an alternative news theory in the medium of film. It was a time of rigorous talk, study and analysis, according to Drew, and upon his return to *Life*, he began making films as well as reporting. Some of these early experiments premiered on *The Ed Sullivan Show* and *The Jack Paar Show*. In 1960, Drew moved to Time's broadcasting division, where, with the backing of Wes Tullen, vice president in charge of television operations, he obtained the funds for his first project and the means necessary to develop lightweight portable equipment. The engineering of the first small sync sound and picture camera unit, which he undertook with filmmaker Richard Leacock, has undoubtedly had an enormous impact on numerous documentarians working both for the major networks and independently. Sensitive and ephemeral moments could now be more easily captured than with the cumbersome camera, large camera crew and lighting system that had been used in news coverage to date.

Also at this time, Drew formed his company, Drew Associates, which enabled him to hire freelance cameramen and filmmakers, some of whom, such as D.A. Pennebaker, Richard Leacock and Albert Maysles, have since gone on to establish celebrated careers of their own. By March 1960, Drew was ready to select their first subject and settled on the Democratic presidential primary in Wisconsin, which pitted the young John Kennedy against Hubert Humphrey. For the last week of the campaign, three two-man crews tracked both Kennedy and Humphrey as they made their rounds of the hustings, photo sessions and the rare, private moments in between.

*Primary*, as this first film was named, still stands today as one of Drew Associate's best-known and celebrated works. It won the Flaherty Award for Best Documentary and the Blue Ribbon at the American Film Festival, while in Europe, according to Drew, "it was received as a kind of documentary second-coming." (The rough immediacy of the hand-held camera is said to have influenced Goddard's *Breathless*) Kennedy, upon viewing *Primary*, liked it so much that he consented to Drew's request to make further candid films in his role as president. "What if I had been able to observe F.D.R. in the 24 hours before he declared war on Japan?" he said. And indeed, Drew Associates gained permission to film the president during a period of crisis. Called *Crisis: Behind a Presidential Commitment* (1963), this documentary chronicles the showdown between Alabama Governor George Wallace and the federal government over the integration of the University of Alabama. As in *Primary*, domestic and personal details of the two main protagonists (Wallace and then-Attorney General Robert F. Kennedy) are intercut with the film's history-making moments—Wallace's initial refusal to back down and the government's decision to employ state troops. To Drew's great chagrin, however, the films were not broadcast over the networks. While regional outlets were found on occasion, the regular scheduling of these films, and the many others he produced, proved an elusive goal.

A joint Time, Inc.-ABC sponsorship allowed Drew Associates, however, to produce a series of films in 1960, for television, including a portrait of Indianapolis race driver, Eddie Sachs, *On the Pole*, and *Yanki No!*, about Latin American reaction to American foreign policy in the region. These two films prompted a Time, Inc.-ABC liaison to offer Drew a contract for a regular supply of candid documentary. In rapid-fire succession the company made about a half dozen more. They form a diverse list, including a profile of Nehru (which grew to a twenty-year documentary relationship with the Nehru "dynasty", with subsequent films on Indira Gandhi and her son, Rajiv). Yet the first series's series was to be the last produced under the arrangement; again, the regular scheduling of the films, which Drew had made the bedrock of his candid drama theory, did not materialize.

The reasons proffered for the ambivalence of the television industry include the political infighting that arose between Time and ABC and the growing difficulty of attracting a single sponsor for the projects; but perhaps the most compelling reason was the networks' unshakable preference for correspondent-hosted or narrated reporting. The predictable, and containable, effects of a regular news anchor has prevailed, with exceptions, over more poetic candid documentary. (Moments of verite reporting have nonetheless been produced in a few instances by the networks, Drew maintains, most notably the network coverage of American troops in Vietnam.) Once the first season of programming was complete, the three-way contractual relationship between Drew Associates, Time and ABC formally ended. The production company since then has managed to survive and produce prolifically on an independent contractual basis with a variety of sponsors, including ABC, PBS, the BBC, corporations, and governmental agencies, as well with its own Drew Associates funds, as an independent producer.

The resulting oeuvre consists of a wide variety of historical and high profile moments, intermingled with scenes of the ordinary in modern life. *Jane* (1962) shows us a young Jane Fonda at her Broadway debut. *A Man Who Dances* (1968), produced as part of series on the arts for Bell Telephone, about ballet dancer Edward Villella, won Drew an Emmy. Many have dealt with subjects the networks have hesitated to tackle in house; responding to a request by Xerox Corporation for a film "that the networks won't touch," Drew made *Storm Signal* (1966), a documentary on drug addiction; a three part series on gangs, produced for PBS *Frontline* (1983–1984) delves into the world of gangs and an inner-city high school. A full ten years later, Drew
Associates completed *L.A. Champions*, also for PBS, about the basketball teams that play the streets of Southcentral Los Angeles, which, like Drew’s first films, unobtrusively follows its main characters, and without a word of narration tells a stirring story.

DUBBING

Dubbing has two meanings in the process of television production. It is used to describe the replacement of one sound track (music, sound effects, dialogue, natural sound, etc.) by another. The technique is used in the production of both audio and audiovisual media. It is a post-production activity which allows considerable flexibility in “editing” the audio component of the visual. Dubbing includes activities such as the addition of music and sound effects to the original dialogue, the omission or replacement of unwanted or poorly recorded audio, or the re-recording of the entire dialogue, narration and music. Much like literary editing, dubbing allows considerable freedom to recreate the product. Synonymous terms include postsynchronizing, looping, re-recording, and electronic line replacement.

Dubbing is also one of the two major forms of “language transfer,” i.e. translation of audiovisual works. Dubbing, in this sense, is the replacement of the dialogue and narration of the foreign or source language (SL) into the language of the viewing audience, the target language (TL).

Inherited from cinema, dubbing is extensively used for translating other-language television programs. Some countries and cultures prefer dubbing to subtitling and voice-over. In Europe, for example, the “dubbing countries” include Austria, France, Germany, Italy, Spain and Switzerland.

Dubbing, unlike subtitling, which involves a translation of speech into writing, is the oral translation of oral language. However, unlike “interpretation” in which the SL speaker and the TL interpreter are separate persons talking in their own distinct voices, dubbing requires the substitution of the voice of each character on the screen by the voice of one actor. It is, thus, a form of voice-over or revoicing. Dubbing is, however, distinguished from voice-over by its strict adherence to lip-synchronization. In order to seem “natural” or authentic, the performed translation must match, as closely as possible, the lip movements of the speaker on the screen. Moreover, there should be a strict, though easy to achieve, equivalence of extra-linguistic features of voice, especially gender and age. The matching of other markers of speech such as personality, class, and ethnicity is most difficult because these features are not universally available or comparable. Another requirement of successful dubbing is the compatibility of the dubber’s voice with the facial and body expressions visible on the screen.

Lip synchronization is usually seen as the strongest constraint on accurate translation. The script editor modifies the “raw translation” of each utterance in order to match it with the lip movements of the person seen on the screen. Given the enormous differences between even closely related languages such as English and German, it is difficult to find TL words that match the SL lip movements; this is especially the case when speakers are shown in close-up. It has been argued, however, that a word by word or sentence by sentence translation is not needed, especially in entertainment genres such as soap operas. Lip synchronization can be better performed with a more pragmatic “plot-oriented translation.” If translation aims at conveying the general tone of each scene rather than locating meaning in each sentence, there will be more freedom to find appropriate words for lip synchronization. Moreover, it is important to seek the equivalence of not only word and sentence meanings but also genres, text quality, character and cultural context. This approach is consistent with the claims of pragmatics, a new field of study which examines language use in social interaction. In either case, it would be more realistic to view dubbing, like other forms of language transfer, as an activity involving a recreation of the original text.

As the transnationalization of television and film increases the demand for language transfer, the controversy about the aesthetics, politics and economics of dubbing and subtitling continues in exporting and importing markets, and in multilingual countries where language transfer is a feature of indigenous audiovisual culture. The polarized views on dubbing/subtitling highlight the centrality and complexity of language in a medium which privileges its visibility. Audience sensitivity to language can even be seen in the considerable volume of intralanguage dubbing. The miniseries Les filles de Caleb, for example, produced in the French language of Quebec, was dubbed into the French standard for audiences in France. And Latin American producers and exporters of telenovelas have generally adopted a Mexican form of Spanish as their standard, following the lead of the earliest successful programs. Thus, dialect also acts as a barrier in the transnationalization of television within the same language community, and highlights the complex issues surrounding this apparently simple industrial process.

—Amir Hassanpour

In 1931, Allen B. DuMont founded Allen B. DuMont Laboratories, Inc., in his garage with $1000—half of it borrowed. The company achieved its initial success as the primary U.S. manufacturer of cathode-ray tubes, which had become critical to the electronics industry. DuMont entered into television broadcasting—first experimentally, then as a commercial venture—in 1938. In fact, the only way to receive NBC-RCA’s historic public broadcast of television outside their 1939 World’s Fair pavilion was on sets made by DuMont Labs.

DuMont first became involved in broadcasting by building a radio transmitter and transmitter and receiver out of an oatmeal box while suffering from polio. In 1924, he received an electrical engineering degree from Rensselaer Polytechnical Institute. After graduation, he joined the Westinghouse Lamp Company as an engineer at a time when 500 tubes a day were being produced. Later DuMont became supervisor and initiated technical improvements that increased production to 5,000 tubes per hour. In 1928, he worked closely with Dr. Lee DeForest on expanding radio, but left later to explore television.

DuMont achieved a number of firsts in commercial television practice, but with little success. He tried to expand his network too rapidly both in the number of affiliates and the number of hours of programming available to affiliates each week. Even as DuMont was developing into the first commercial television network, the other networks, most notably CBS and NBC, were preparing for the time when rapid network expansion was most feasible—experimenting with various program formats and talent borrowed from their radio networks, as well as encouraging their most prestigious and financially successful radio affiliates to apply for television licenses.

Prime-time programming was a major problem for DuMont. The network would not or could not pay for expensive shows that would deliver large audiences, thereby attracting powerful sponsors. When a quality show drew a large audience in spite of its budget, it was snatched by CBS or NBC. DuMont televised the occasional successful show, including Cavalcade of Stars (before Jackie Gleason left), Captain Video, and Bishop Fulton J. Sheen’s Life Is Worth Living. The network never seemed to generate enough popular programming to keep it afloat, however—possibly because it lacked the backing of a radio network.

The NBC, CBS and ABC radio networks provided financial support for their television ventures while the fledgling industry was growing—creating what the FCC deemed “an ironic situation in which one communications medium financed the development of its competitor.” DuMont’s only outside financial assistance came from Paramount Studios between 1938 and 1941. The company created and sold class-B common stock exclusively to Paramount for one dollar per share and a promise to provide film-quality programming that was never delivered. The sale was performed to off-set heavy investments in research, development, and equipment manufacture, but as a result, Allen DuMont relinquished half-interest in his company and Paramount gained a strong measure of “negative” control—with their board members able to veto motions and withhold payment of funds.

Although they ceased financially assisting DuMont in 1941, Paramount maintained a presence on DuMont’s board of directors. The Federal Communications Commission (FCC) ruled in 1948 that DuMont and Paramount must combine the number of stations they owned under ownership rules, hurting DuMont’s ability to secure exclusive network owned-and-operated programming outlets. One question that remains unanswered is the amount of control Paramount actually did have over the DuMont organization. In 1949 the number of Paramount-controlled DuMont board of directors positions was reduced from four to three, but the FCC decision on Paramount control was not reversed.

The FCC “freeze” from 1948 to 1952 hurt the DuMont Network because during a period when the company was financially capable of expansion due to profits from TV set sales, it could add few additional affiliates. DuMont did claim a large number of affiliates compared to the other networks, but many of these appear to have taken only a few shows per week from DuMont and relied primarily on an
affiliation with CBS and NBC. Analysts have suggested that DuMont's lack of primary affiliates was a key factor in the network's demise.

One important factor contributing to the demise of the DuMont Network was Allen B. DuMont himself. Many people thought of him as a "bypassed pioneer" with no head for business. Major stockholders began to publically question the soundness of his decisions, especially his desire to keep the TV network afloat despite major losses. In 1955, concerned holders of large blocks of DuMont stock began to wrest control from the company founder.

When the fiscally weakened DuMont corporation spun off its television broadcasting facilities in 1955, Business Week claimed that DuMont had been forced into television programming in order to provide a market for his TV receivers. No evidence has been found to support this claim, however. In markets where licenses for television stations were being granted during the postwar period, there were sufficient license applicants to provide audiences with programming to stimulate set sales. One reason DuMont television sales lagged behind other manufactures was that its sets were of higher quality, and consequently much more expensive. In fact, in 1951 DuMont cut back television set production by 60%—although profits from this division had been subsidizing the TV network—because other manufacturers were undercutting DuMont's prices.

After the DuMont Television Network and its owned-and-operated stations were spun off into a new corporation, there remained only two major divisions of Allen B. DuMont Laboratories, Inc. In 1958 Emerson Electric Company purchased the DuMont consumer products manufacturing division. DuMont was no longer employed by his own company when the last division—oscillograph and cathode-ray tube manufacturing—was sold to Fairchild in 1960. DuMont was hired by Fairchild as group general manager of the A. B. DuMont Division of Fairchild Camera and Instrument Corporation until his death in 1965.

DuMont may have remained in television broadcasting despite fiscal losses in order to uphold the title once given him, "the father of commercial television."

His company pioneered many important elements necessary to the growth and evolution of the industry. DuMont engineers perfected the use of cathode-ray tubes as TV screens, developed the kinescope process, as well as the "magic eye" cathode-ray radio tuning indicator, and the first electronic viewfinder. DuMont was an intelligent and energetic engineer who took risks and profited financially from them—becoming history's first television millionaire. But when the big radio networks entered the field of television, DuMont was unable to compete with these financially powerful, considerably experienced broadcasters.

—Philip J. Auer

Married: Ethel; children: Allen B., Jr., and Yvonne. Began career with the Westinghouse Lamp Company; conducted TV experiments in his garage, 1920s; developed an inexpensive cathode-ray tube that would last for thousands of hours (unlike the popular German import CRT, which lasted only 25 to 30 hours), DeForest Radio Company, 1930; left to found his laboratory, 1931; incorporated DuMont Labs, 1935; sold a half-interest to Paramount Pictures Corporation to raise capital for broadcasting stations, 1938; DuMont Labs was first company to market home television receiver, 1939; granted experimental TV licenses in Passaic, New Jersey, and New York, 1942; DuMont TV Network separated from DuMont Labs, sold to the Metropolitan Broadcasting Company; Emerson Radio and Phonograph Corp. purchased DuMont's television, phonograph, and stereo producing division; remaining DuMont interests merged with the Fairchild Camera and Instrument Corp., 1960; named group general manager of DuMont divisions of Fairchild, 1960; named senior technical consultant, 1961. Honorary doctorates: Rensselaer and Brooklyn Polytechnic Institutes. Recipient: Marconi Memorial Medal for Achievement, 1945; American Television Society, 1943; several trophies for accuracy in navigation and calculations in power-boat racing. Died in Montclair, New Jersey, 16 November 1965.

DYER, GWYNNE
Canadian Journalist/Producer

Gwynne Dyer is a Canadian journalist, syndicated columnist and military analyst. He is best known for his documentary television series, War, which echoed the peace movement’s growing concern over the threat of nuclear war in the early 1980s. Nominated for an Oscar in 1985, it was based on his own military experience and extensive study.

After serving in the naval reserves of Canada, the United States, and Britain, Dyer completed his doctoral studies in military history at King’s College, University of London, in 1973. He lectured on military studies for the next four years before producing a seven-part radio series, Seven Faces of Communism for the CBC and ABC in 1978. This quickly led to other radio series, including War, in six parts, in 1981. Based on this series, he was invited by the National Film Board of Canada, the country’s public film producer, to enlarge it into a seven-part film series in 1983. Upon release to critical acclaim, the series was broadcast in forty-five countries.

War was a reflection of Dyer’s own growing concern about the proliferation of new technology, its impact on the changing nature of warfare and the growing threat of nuclear annihilation. Filmed in ten countries and with the participation of six national armies, it examined the nature, evolution and consequences of warfare. It featured interviews with top-level NATO and Warsaw Pact military leaders and strategist, many of whom spoke to the Western media for the first time. The series argued that in an era of total war, professional armies were no longer able to fulfill their traditional roles. The growth of nationalism, conscript armies and nuclear technology had brought the world perilously close to Armageddon. War offered the unique perspective of the soldier from the rigorous training of young U.S. marine recruits at the Parris Island Training Depot in South Carolina, to the field exercises conducted by NATO and Warsaw Pact countries in Europe. It presented military officers from both sides talking frankly about how nuclear technology had changed their profession and follows them as they vividly describe how any superpower conflict would inevitably lead to an all-out nuclear war. Dyer argued that the danger posed by the explosive mix of ideology and nuclear technology could only be mitigated by a total elimination of nuclear arsenals.

This award-winning series was soon followed by another production for the National Film Board of Canada in 1986, The Defence of Canada, an examination of Canada’s military role on the international scene. Following similar arguments postulated in War, Dyer called for Canada to set an example by rethinking its position in NATO and NORAD. He maintained his ties in the Soviet Union and from 1988 to 1990 produced a six-part radio series The Gorbachev Revolution, which followed the thunderous changes occurring in Eastern Europe. He served as a military commentator in Canada during the Gulf War, and in 1994 his series The Human Race was broadcast nationally on the CBC. It was a personal enquiry into the roots, nature and future of human politics and the threat posed by tribalism, nationalism and technology to the world’s environment. He continues to publish his syndicated column on international affairs, which is published on over 300 papers in some 30 countries.

DYKE, GREG
British Media Executive

Greg Dyke has been one of the most powerful leaders among the British independent television companies, having headed up TV-AM, Television South, and London Weekend Television. His 1995 departure from network television to become head of the television interests of the Pearson Group, and member of the board of the satellite-delivered television group British Sky Broadcasting (BSkyB), signalled the switch of his considerable influence from mainstream television to the new multi-channel systems. To outsiders, it suggested that the satellite companies were buying a man who understood competitive scheduling and who could help them to take audiences from both ITV and BBC.

Greg Dyke’s success in the industry proved that it was no longer necessary for top British television people to come from Oxbridge and start their careers in the BBC. Unlike most BBC executives, Dyke had a varied career after leaving grammar school at age 16: he worked for various local papers, gained a politics degree at York University as a mature student, and became campaign organizer for Wandsworth Council of Community Relations.

His television career began when he joined The London Program in the 1970s, and rapidly rose to become producer of Weekend World and deputy editor of the London Program. In 1981 he was given command of his own creation, The Six O’Clock Show, an energetic magazine program fronted by Janet Street-Porter and Danny Baker. Dyke proved to his production teams that he was an inspirational manager and able administrator.

Dyke’s greatest success was, almost single-handedly, to save TV-AM. The 1981 franchised breakfast company was heading for bankruptcy when Dyke was called in to bring back its audience. Dyke took the ailing breakfast show down-market, signalling this move with the introduction of bingo numbers, horoscopes, and a gormless puppet called Roland Rat. The ratings rose from 200,000 to 1.8 million in 12 months, and the eventual gain was twentyfold. Observers waited to see if the Independent Broadcasting Authority would complain about these down-market tactics, but no breath of criticism was heard from the upmarket portals of their Knightsbridge headquarters. Better ratings were regarded as more important than cultural qualities.
Any program controller who could build ratings was much in demand. Dyke eventually resigned from TV-AM over budget cuts, and was quickly hired by Television South as director of programs, from where he returned to LWT as director of programs, and then chief executive. Perhaps his most significant promotion was to replace his good friend and former colleague John Birt on the ITV Program Controllers' group. When Dyke rose to become chair of that vital group, he effectively orchestrated the ITV companies' scheduling against the BBC.

Dyke's significance lies partly in the fact that a skilled manipulator of good ratings can also become a shrewd and successful company manager. LWT's chair Sir Christopher Bland, sent Dyke off to Harvard for a three month-management course. When he returned, Dyke showed that he was quite prepared to put business efficiency above his Labour Party principles, and over four years he made 690 staff redundant, with a lavish $45 million redundancy package. He claimed afterwards that to restructure completely a business for less than one year's profits was a good deal. One part of his changes involved transforming the South Bank Television Center into a profit center rather than a service organization. This move proved successful, and in 1995 no less than four different television organizations, the breakfast franchise GMGT, Carlton Television, Hatrick Productions and LWT itself all used the South Bank studios.

By 1993 Dyke was chief executive of London Weekend Television Holdings, chair of the ITV Association, and chair of ITV Sport. Under his command, LWT flourished as never before, with excellent programs like *Blind Date* and *Beadle's About*. But successful companies always risk the danger of being taken over unless they are protected by government regulation, as was the case for ITV companies. When the Conservatives abolished these restrictions in 1993, LWT was at risk. Granada swallowed LWT for $900 million in 1994 and Dyke resigned rather than work under Granada control. With $1.75 million dollars worth of share option, Dyke made a $12 million profit from the Granada bid.

Dyke is perhaps the outstanding ITV babyboomer: generous, perennially optimistic, and very widely experienced. His friends say he is motivated, streetwise and understands popular TV. His critics suggest that he is a lightweight, with a tendency to speak out quickly. Certainly his impact on ITV has been considerable. His move to Pearson and BSkyB illustrates clearly that the old ratings war between ITV and BBC is out of date; now terrestrial broadcasters will struggle together to protect their falling share of the market from the new mediums of cable and satellite programming.

—Andrew Quicke

**DYNASTY**

U.S. Serial Melodrama

Premiering as a three-hour movie on 12 January 1981, the prime-time soap opera *Dynasty* aired on ABC until 1989. *Dynasty* quickly worked its way into the top five rated programs, finishing fifth for the 1982-83 season and third for the 1983–84 season. It was the number one ranked program for the 1984–85 season, but rapidly began losing viewers. By its final season (1988–89), *Dynasty* finished tied for 57th place, and was unceremoniously dumped from ABC's roster leaving numerous dangling plotlines. These plotlines were tied up in a two-part, four-hour movie, *Dynasty: The Reunion*, which aired on ABC on 20 and 22 October 1991, some two years after the series' cancellation.

The soap opera focused primarily on the lives and loves of Blake Carrington (John Forsythe), a wealthy Denver oil tycoon, his wife Krystle (Linda Evans), ex-wife, Alexis (Joan Collins), daughter Fallon (Pamela Sue Martin, Emma Samms), sons Steven (Al Corley, Jack Coleman) and Adam (Gordon Thomson), as well as numerous extended family members and associates including Fallon's husband/ex-husband Jeff Colby (John James) and Krystle's niece and Steven's wife/ex-wife, Sammy Jo (Heather Locklear).

The program relied on both camp and excess for its appeal. Its characters and plotlines were sometimes absurd and rarely drawn, but it was the trappings of wealth, glamour, and fashion which drew viewers in some 70 countries to the program. With a weekly budget of $1.2 million ($10,000 of which went for clothing alone, including at least ten Nolan Miller creations per episode), *Dynasty* placed more emphasis on style than on plot.

The plotlines of this prime-time soap opera often resembled those of its daytime counterparts—kidnapped babies, amnesia, pregnancy, infidelity, and treachery. In fact, *Dynasty* made extensive use of one soap-opera staple—the return to life of characters presumed dead. Both Fallon and Steven Carrington were killed off only to return in later seasons played by different actors.
Just as often, however, Dynasty’s plots leaned toward the campy and absurd. One of the most talked about and ridiculed plots was the 1985 season-ending cliffhanger which saw the Carringtons gathered for a wedding in the country of Moldavia. Terrorists stormed the ceremony in a hail of machine-gun fire, but when the smoke cleared (at the start of the next season, of course), all of the primary characters were alive and basically unscathed.

While often criticized for its weak and at times absurd plots, Dynasty did provide juicy roles for women, notably Joan Collins’ characterization of Alexis. Her character—scheming, conniving, and ruthless—was often referred to as a “superbitch,” and was the quintessential “character you love to hate.” Alexis was set in opposition to Krystle who was more of a “good girl”—sweet, loyal, and loving. One of the best-known scenes in Dynasty history was the 1983 “cat fight” between Alexis and Krystle in which they literally fought it out in a lily pond. Alexis met her match in the character of wealthy singer and nightclub owner, Dominique Devereaux (Diahan Carroll)—the first prominently-featured African-American character on a prime-time soap opera.

During its nearly nine-year run, Dynasty spawned the short-lived spin-off Dynasty II: The Colbys (1985-87) and gave rise to numerous licensed luxury products, including perfume, clothing, and bedding. Never before had television product licensing been so targeted to upscale adults.

When Dynasty left the air in 1989, it also marked the demise of the prime-time soap opera which had been a staple of television programming through the 1980s. Produced in part by Aaron Spelling, whose programs (e.g., Charlie’s Angels, The Love Boat, Beverly Hills, 90210, and Melrose Place) have emphasized beauty, wealth, and glamour, Dynasty had proved the perfect metaphor for 1980s greed and excess. In declaring Dynasty the best prime-time soap of the decade, TV Guide asserted its “campy opulence gave it a superb, ironic quality—in other words, it was great trash.”

AN EARLY FROST

U.S. Television Movie

An Early Frost, broadcast on 11 November 1985 on the NBC network, was the first American made-for-television movie and the second prime-time dramatic program to acknowledge the presence and spread of AIDS in the 1980s. Because the movie was about the potentially controversial topic of homosexuality and the impact of AIDS on the beleaguered community of gay men, much care went into the preproduction process. First, for more than a year, there was much interaction between writers Dan Lipman and Ron Cowen and NBC's Broadcast Standards and Practices department about the script. Such thorough development is highly unusual for most made-for-television movies. This interaction attempted to insure a delicate balance in the presentation of sensitive subject matter. In addition, NBC gathered a cast of actors—Aidan Quinn, Genna Rowlands, Ben Gazzara, and Sylvia Sidney—who were most often associated with theatrically released films. The network also secured the service of Emmy-award winning director Jon Erman for the project. These choices, they hoped, would enhance the production's aura of quality and deflect any criticism about exploitation of the tragic pandemic.

Scriptwriters Lipman and Cowen consciously framed the narrative about AIDS in the generic conventions of the family melodrama. Strategically, this approach provided a familiar, less threatening environment in which to present information and issues surrounding gay men and the disease. At one level, the narrative of An Early Frost exposes the tenuous links which hold the middle-class Pierson family together. On the surface, life appears to be idyllic. Nick Pierson is the successful owner of a lumber yard. He and his wife Kate have reared two seemingly well-adjusted children in a suburban neighborhood. Son Michael is a rising young lawyer in Chicago. Daughter Susan has replicated her parents' lifestyle, married with one child and expecting a second.

Under the surface, however, several familial fissures exist. Nick's upwardly mobile class aspirations are stalled. Kate's creative talent as a concert pianist has been sublimated into the demands of being a wife and mother. Susan acquiesces to her own husband's demands, rather than follow her own desires. Unknown to the family, Michael, a closeted gay man, lives with his lover Peter. The fragile veneer of familial stability bursts apart when Michael learns he has AIDS, exposing all the resentments which various family members have repressed.

The script also includes a parallel narrative thread exploring the conflicts in the gay relationship between Michael and Peter. Their relationship suffers from Michael's workaholic attitude towards his job. Conflict also grows out of Peter's openness about his gayness and Michael's inability to be open about his sexuality. The tension between the two is further exacerbated when Michael discovers that Peter has been unfaithful because of these conflicts.

When broadcast, An Early Frost drew a thirty-three share of the viewing audience, winning its time slot for the evening's ratings, and thus suggesting that the American public was ready to engage in a cultural discussion of the disease. Even so, the ratings success did not translate into economic profits for NBC. According to Perry Lafferty, the NBC vice president who commissioned the project, the
network lost $500,000 in advertising revenues because clients were afraid to have their commercials shown during the broadcast. Apparently, advertisers believed the subject matter was too controversial because of its homosexual theme and too depressing because of the terminal nature of AIDS as a disease.

These concerns inhibited further production of other made-for-television scripts about AIDS until 1988. Ironically, the production quality of *An Early Frost* became a hallmark by which members of the broadcasting industry measured any subsequent development of movie scripts about AIDS. Arthur Allan Seidelman, director of an NBC afternoon school-break special about AIDS titled *An Enemy Among Us*, has stated, "there was some concern after *An Early Frost* was done that 'How many more things can you do about AIDS?" Any new scripts had to live up to and move beyond the standard set by Cowen and Lipman’s original made-for-television movie. Although providing the initial mainstream cultural space to examine AIDS, *An Early Frost*, also in some ways, hindered increased discussion of the disease in prime-time American broadcast programming precisely because it achieved its narrative and informational goals so well.

**EAST SIDE/WEST SIDE**

U.S. Drama

*East Side/West Side*, an hour-long dramatic series, first appeared on CBS in September 1963. Though it lasted only a single season, it is a significant program in television history because of the controversial subject matter it tackled each week and the casting of black actress Cicely Tyson in a recurring lead role as secretary Jane Foster.

During the Kennedy years, with an increased regulatory zeal emanating from the Federal Communications Commission, the networks attempted to de-emphasize the violence of action-adventure series. One result was an increase in character dramas. There was a trend toward programs based on liberal social themes in which the protagonists were professionals in service to society. As one producer of that era explained, "The guns of gangsters, policemen, and western lawmen were replaced by the stethoscope, the law book, and the psychiatrist’s couch." This new breed of episodic TV hero struggled with occupational ethics and felt a disillusionment with values of the past.

Unlike action-adventure series in which heroes often settled their problems with a weapon, the troubles in New Frontier character dramas were not always resolved. Writers grappled with issues such as poverty, prejudice, drug addiction, abortion, and capital punishment, which do not lend themselves to tidy resolutions. Although the loose ends of a plot might be tied together by story’s end, the world was not necessarily depicted as a better place at the conclusion of an episode.

*East Side/West Side*, produced by David Susskind and Daniel Melnick, was among the best of the genre and won instant acclaim. The program about a New York social worker appealed to sophisticates because, according to Lawrence Laurent of *The Washington Post*, it violated "every sacred tenet for television success." Typical TV heroes all had a similar look, said Laurent, "short straight noses, direct from a plastic surgeon, gleaming smiles courtesy of a dental laboratory." But Neil Brock, played by George C. Scott, observed Laurent, was "hooknosed and disheveled."

An exemplary episode of *East Side/West Side* entitled "Who Do You Kill?" aired on 4 November 1963. The story portrays how a black couple in their early twenties living in a Harlem tenement face the death of their infant daughter, who is bitten by a rat while in her crib. Diana Sands played

the mother who works in a neighborhood bar to support the family. Her husband, played by James Earl Jones, is frustrated by unemployment and grows more bitter each day.

The week after the broadcast, Senator Jacob Javits, a liberal, pro-civil rights Republican, moved that two newspaper articles be entered into the Congressional Record: "A CBS Show Stars Two Negroes: Atlanta Blacks It Out," from the New York Herald Tribune, and from The New York Times, "TV: A Drama of Protest." Javits praised CBS for displaying courage in airing "Who Do You Kill?" and told his Senate colleagues he was distressed that not all Southern viewers had the opportunity to see the drama. The program, Javits said, "dealt honestly and sensitively with the vital problems of discrimination, housing conditions and the terrible cancerous cleavage that can exist between the Negro and the white community." "Who Do You Kill?" he said, was "shocking in its revelations of what life can be like without hope."

The stark realism of the series was discomfiting. Most viewers didn't know what to make of a hero who was often dazed by moral complexities. For CBS the series was a bust; one-third of the advertising time remained unsold and the program was not renewed. A few years later David Susskind reflected on the ratings problem of East Side/West Side: "A gloomy atmosphere for commercial messages, an integrated cast, and a smaller Southern station lineup, all of these things coming together spelled doom for the show. I'm sorry television wasn't mature enough to absorb it and like it and live with it."

EASTENDERS
British Soap Opera

EastEnders is one of Britain's most successful television soap operas. First shown on BBC1 in 1985, it enjoys regular half-hour prime-time viewing slots, originally twice and more recently three times a week, repeated in an omnibus edition at the weekend. Within eight months of its launch, it reached the number one spot in the ratings and has almost consistently remained amongst the top five programmes ever since (average viewing figures per episode are around 16 million). A brief dip in audience numbers in the summer of 1983 prompted a rescheduling masterstroke by the then BBC1 controller, Michael Grade, in order to avoid the clash with ITV's more established soap, Emmerdale Farm. The brainchild of producer, Julia Smith, and script editor, Tony Holland, EastEnders is significant in terms of both the survival of the BBC and the history of British popular television drama.

In the increasingly competitive struggle with independent television for quality of programmes and appeal to mass audiences, the BBC claimed to have found in EastEnders the answer to both a shrinking audience and criticisms of declining standards. The programme is set in Walford, a fictitious borough of London's East End, and focuses on a number of...
predominantly working-class, often interrelated, families living in Albert Square. The East End of London was regarded as the ideal location for an alluring and long-running series as its historical significance in Britain renders it instantly recognisable, and as illustrative of modern urban Britain for possessing a mix of individuals who are, according to Smith and Holland, "multi-racial, larger-than-life characters". Much of the action takes place in and around the local pub, the Queen Vic, traditionally run by the Watts—originally villainous Den and his neurotic wife Angie, and later their estranged adoptive daughter, Sharon. The main characters are connected with the closely-knit Fowler/Beale clan, specifically Pauline and Arthur Fowler, their eldest children, Mark—a HIV-positive market trader, and Michelle—a strong-willed, single mother, together with cafe-owner Kathy Beale and the long-suffering Pat Butcher. Additional figures come and go, highlighting the belief that character turnover is essential if a contemporary quality is to be retained. At any one time, around eight families, all living or working in Albert Square, will feature centrally in one or other narrative.

EastEnders exhibits certain formal characteristics common to other successful British soap operas (most notably, its major competitor, Granada's Coronation Street), such as the working-class community setting and the prevalence of strong female characters. In addition, a culturally diverse cast strives to preserve the flavour of the East End, whilst a gender balance is allegedly maintained through the introduction of various "macho" male personalities. The expansion of minority representation signals a move away from the traditional soap opera format, providing more opportunities for audience identification with the characters and hence a wider appeal. Similarly, the programme has recently included more teenagers and successful young adults in a bid to capture the younger television audience. The programme's attraction, however, is also a product of a narrative structure unique to the genre. The soap opera has been described as an "open text", a term relating primarily to the simultaneous development and indeterminate nature of the storylines, and the variety of issue positions presented through the different characters. Such a structure invites viewer involvement in the personal relationships and family lives of the characters without fear of repercussions, through recognition of "realistic" situations or personal dilemmas rather than through identification with a central character. EastEnders is typical of the soap opera in this respect, maintaining at any one time two or more major and several minor intertwining narratives, with cliffhangers at the ends of episodes and (temporary) resolutions within the body of some episodes.

To fulfil its public service remit, the programme aims to both entertain and educate. The mystery surrounding the father of Michelle's baby and the emotionality of the AIDS-related death of Mark's girlfriend, Jill, illustrate how a dramatic representation of social issues in contemporary Britain successfully combines these elements. Throughout its ten-year history, issues such as drug addiction, abortion, AIDS, homosexuality, racial and domestic violence, stabbings and teenage pregnancy have graced the programme's social and moral agenda. EastEnders strives to be realistic and relevant rather than issue-led, with the educational element professed as an incidental outcome of its commitment to realism. Such endeavours have been attacked, with criticisms of minority-group tokenism, depressive issue-mongering, and, paradoxically, lapses into Cockney stereotyping. However, over the last few years the number of "overly diagrammatic characters" such as "Colin the gay" (so described by Medhurst in The Observer) appears to have decreased, with new characters being introduced for their dramatic contribution rather than their sociological significance.

As with other British soaps, EastEnders differs from American soaps by its relentless emphasis on the mundane and nitty-gritty details of working-class life (no middle-class soap has yet succeeded for long in Britain) among ordinary-looking (rather than attractive) and relatively unsuccessful people. This potentially depressing mix is lightened by a dose of British humour and wit, by the dramatic intensity of the emotions and issues portrayed, and by the nostalgic gloss given to the portrayal of solidarity and warmth in a supposedly authentic community. In terms of the image of "ordinary life" conveyed by the programme, EastEnders is again typical of the soap opera for its ambivalences—showing strong women who are nonetheless tied to the home; a community which tries to pull together but a relatively disaffected youth; a romantic faith in love and marriage and yet a series of adulterous affairs and divorces. For its audience, EastEnders is highly pleasurable for its apparent realism, its honesty in addressing contentious issues, and for its cosy familiarity.

A regular feature of the weekly schedules, EastEnders has become a fundamental and prominent part of British television culture. Public and media interest extends beyond plot and character developments to the extra-curricular activities of cast members. While maintaining the essential soap opera characteristics, it distinguishes itself from the other major British soaps, appearing coarser, faster paced, and more
dramatic than *Coronation Street* yet less controversial and more humorous than *Brookside*. In the words of Andy Medhurst of *The Observer*, "*EastEnders* remains the BBC's most important piece of fiction, a vital sign of its commitment to deliver quality and popularity in the same unmissable package". While in many ways typical of the genre, the obvious quality, cultural prominence and audience success of *EastEnders* has established the soap opera as a valued centre piece of early primetime broadcasting in Britain.

**EBERSOL, DICK**

**U.S. Media Executive**

In his various executive positions Duncan Dickie Ebersol has contributed several innovations to the NBC television network. He shepherded *Saturday Night Live* onto the air, then returned as producer to "rescue" the show in the early 1980s. As president of NBC Sports, he pursued several inventive and sometimes risky programming packages such as the Olympics Triple-Cast and the Baseball Network. Throughout his career he has been recognized as one of television's more creative programmers.

Ebersol became hooked on television sports when he saw the debut of ABC's *Wide World of Sports* in 1963. Later, when that show was shooting in his area, he got errand jobs with the crew. By the winter of 1968 he was working as a research assistant for ABC's coverage of the Winter Olympics in Grenoble, France, and while finishing his studies at Yale, he worked full-time as a segment producer. In 1971, following graduation, he became an executive assistant and producer with Roone Arledge, vice president of ABC Sports and creator of *Wide World of Sports*.
NBC tried to hire Ebersol in 1974 by offering to name him president of their sports division, but at the age of 27, he decided he wasn’t ready to compete against Arledge. Instead, he moved to NBC with a new title: director of Weekend Late Night Programming. At that time the programming slots following the Saturday and Sunday late news were a dead zone for all three networks. Affiliates made more money with old movies than with network offerings—in NBC’s case, reruns of The Tonight Show. The network charged Ebersol with finding something, anything, to replace the Carson reruns.

Ebersol conceived of a comedy-variety revue aimed at young adults, an audience generally thought to be away from home—and television—on weekends. He assumed enough of them would stay home to watch a show featuring “underground” comedians like George Carlin and Richard Pryor, especially when supported with a repertory cast picked from new improv-based, television-savvy comedy groups such as Second City, the National Lampoon stage shows or the Groundlings. Ebersol also discovered Lorne Michaels, a former writer for Rowan and Martin’s Laugh-In, who had produced specials for Lily Tomlin and Flip Wilson, and had been lobbying for just the kind of program Ebersol was thinking of.

As Michaels assembled the cast and writers, Ebersol ran interference for Saturday Night Live before nervous network management and affiliates. The pair spurned NBC’s suggestions for safe hosts like Bob Hope and Joe Namath, and secured Pryor, Carlin and Tomlin for that role. As Saturday Night Live took off, NBC promoted Ebersol to vice president of Late-Night Programs, with an office in Burbank and responsibility over every late show that did not belong to Johnny Carson. Ebersol had become, at 28, the youngest vice president in NBC history.

By 1977, he had become head of NBC’s comedy and variety programming. Unfortunately, this was a fallow time for comedy, especially for NBC. Ebersol has said that his only success in this period was hiring Brandon Tartikoff away from ABC to be his associate. After a confrontation with new programming director Fred Silverman, Ebersol quit his position at NBC, and Tartikoff replaced him. He went into independent production, taking over The Midnight Special and various sports programming. Shortly afterward, however, NBC asked him to rescue Saturday Night Live (SNL).

Lorne Michaels had left SNL after the 1979–80 season, and the original cast and writing staff left as well. Replacement producer Jean Doumanian’s tenure proved a disaster: the show’s daring, edgy satire went over the edge with sketches like “The Leather Weather Lady.” NBC executives had seen enough with Doumanian’s twelfth show, when cast member Charles Rocket absent-mindedly said “fuck” on the air. Doumanian was fired, and Ebersol agreed to produce the show if NBC would end Midnight Special.

Ebersol took Saturday Night Live off the air for a month of “retooling.” Following this hiatus only one show was broadcast before a writers’ strike in early 1981 halted production until fall. Meanwhile, he fired all of the cast except rising stars Joe Piscopo and Eddie Murphy, and hired Christine Ebersole (no relation), Mary Gross, and Tim Kazurinsky. He also brought back the head writer from the first season, the brilliant but intimidating Michael O’Donoghue (who was fired by next January).

Critics considered Ebersol’s SNL an improvement over the previous season, but the ratings were still lower than in the Doumanian era. The show’s guest hosts devolved from hip comedians to NBC series players or stars of current movies to plug.

No Sleep Productions, Ebersol’s production house, had brought Friday Night Videos to NBC in 1983, where Michael Jackson’s groundbreaking “Thriller” video debuted. The next year, Ebersol took over Friday Night Videos full-time, and shared the reins on Saturday Night Live with Bob Tischler. For the 1984–85 season, the two shored up SNL’s ratings with experienced comics like Billy Crystal, Harry Shearer, Christopher Guest and Martin Short. Afterward, Ebersol quit to spend more time at home, and Brandon Tartikoff, now his boss, hired Lorne Michaels as producer.

Ebersol continued to produce Friday Night Videos for NBC, while his wife, the actress Susan St. James, starred in CBS’s Kate and Allie with Jane Curtin. In 1985, he produced The Saturday Night Main Event, a series of World Wrestling Federation matches, to rotate in Saturday Night Live’s off weeks. In 1988, he produced the very late-night Later with Bob Costas.

Ebersol returned to NBC in April 1989 as president of NBC Sports. That July he was also named senior vice president of NBC News, a position that paralleled the situation of his mentor, Roone Arledge, at ABC. As the
executive for the *Today Show*, Ebersol presided over Jane Pauley's removal from the anchor desk in favor of Deborah Norville. He took the heat for the resulting bad publicity, and was relieved of his *Today Show* duties.

Ebersol has enjoyed much greater success in sports programming. He helped NBC snare several Super Bowl contracts, then brought the National Basketball Association back to network television at the height of its popularity. NBC's coverage of the 1992 Olympic games in Barcelona received excellent ratings, but the network lost money, largely from its "Triple Cast" coverage offered on three pay-per-view cable channels. Corporate parent General Electric expressed its commitment to the Olympics, though, when they announced Ebersol would be executive producer of the 1996 Atlanta games.

Ebersol aided in the formation of the Baseball Network, an unusual joint venture between NBC, ABC and Major League Baseball. The league produced its own coverage of Friday or Saturday night games; ABC or NBC alternated scheduling *Baseball Night in America*, and affiliates chose games of local interest to carry. The Baseball Network opened after the 1994 All-Star Game, but was cut short by that year's players' strike. In 1995, as the delayed baseball season opened without a labor agreement and no guarantee against another strike, both networks pulled out of the venture.

In the past several years, Dick has often been named among the most influential people in sports by the *Sporting News*. His name had been bandied about to possibly become the next commissioner of baseball, but he preferred instead to sign a contract to continue as president of NBC Sports.

—Mark R. McDermott

**THE ED SULLIVAN SHOW**

**U.S. Variety Show**

*The Ed Sullivan Show* was the definitive and longest running variety series in television history (1948–1971). Hosted by the eponymous awkward and stumbling former newspaperman, the show became a Sunday night institution on CBS. For twenty-three years the Sullivan show fulfilled the democratic mandate of the variety genre: to entertain all of the audience at least some of the time.

In the late 1940s, television executives strove to translate the principles of the vaudeville stage to the new medium, the amalgamation referred to as "vaudeo." As sports reporter, gossip columnist, and master of ceremonies of various war relief efforts, Ed Sullivan had been a fixture on the Broadway scene since the early 1930s. He had even hosted a short-lived radio series that introduced Jack Benny to a national audience in 1932. Although Sullivan had no performing ability (comedian Alan King quipped, "Ed does nothing, but he does it better that anyone else on television"), he understood showmanship and had a keen eye for emerging talent. CBS producer Worthington Miner hired him to host the network's inaugural variety effort *The Toast of the Town*, and, on 20 June 1948, Sullivan presented his premiere "really big show," in the lingo of his many impersonators who quickly parodied his wooden stage presence and multitudinous malapropisms.

The initial telecast served as a basis for Sullivan's inimitable construction of a variety show. He balanced the headliner, generally an unassailable legend, this time Broadway's...
Richard Rodgers and Oscar Hammerstein with the up-and-coming stars, Dean Martin and Jerry Lewis, fresh from the nightclubs in their television debut. He also liked to juxtapose the extreme ends of the entertainment spectrum: the classical, here pianist Eugene List and ballerina Kathryn Lee, with the novelty, a group of singing New York City fireman and six of the original June Taylor Dancers, called the "Toastettes." From the beginning, Sullivan served as executive editor of the show, deciding in rehearsal how many minutes each act would have during the live telecast in consultation with producer Marlo Lewis. In 1955, the title was changed to The Ed Sullivan Show.

Sullivan had a keen understanding of what various demographic segments of his audience desired to see. As an impresario for the highbrow, he debuted ballerina Margot Fonteyn in 1958 and later teamed her with Rudolf Nureyev in 1965; saluted Van Cliburn after his upset victory in the Tchaikovsky competition in Moscow; and welcomed many neighbors from the nearby Metropolitan Opera, including Roberta Peters, who appeared 41 times, and the rarely seen Maria Callas, who performed a fully staged scene from Tosca. As the cultural eyes and ears for middle America, he introduced movie and Broadway legends into the collective living room, including Pearl Bailey, who appeared 23 times; Richard Burton and Julie Andrews in a scene from the 1961 Camelot; Sammy Davis, Jr., with the Golden Boy cast; former CBS stage manager Yul Brynner in The King and I; Henry Fonda reading Lincoln's Gettysburg Address; and the rising star Barbra Streisand singing "Color Him Gone" in her 1962 debut. Occasionally, he devoted an entire telecast to one theme or biography: "The Cole Porter Story," "The Walt Disney Story," "The MGM Story, and "A Night at Sophie Tucker's House."

What distinguished Sullivan from other variety hosts was the ability to capitalize on teenage obsession. His introduction of rock 'n' roll not only brought the adolescent subculture into the variety fold but also legitimized the music for the adult sensibility. Elvis Presley had appeared with Milton Berle and Tommy Dorsey, but Sullivan's deal with Presley's manager, Colonel Tom Parker, created national headlines. The sexual energy of Presley's first appearance on 9 September 1956 jolted the staid, Eisenhower conformism of Sullivan's audience. By his third and final appearance, Elvis was shot only from the waist up, but Sullivan learn how to capture a new audience for his show, the baby boom generation.

In 1964 Sullivan signed the Beatles for three landmark appearances. Their first slot on 9 February 1964 was at the height of Beatlemania, the beginning of a revolution in
music, fashion, and attitude. Sullivan received the biggest ratings of his career, and, with a 60 share, one of the most watched programs in the history of television. Sullivan responded by welcoming icons of the 1960s counterculture into his arena, most notably the Rolling Stones, the Doors, Janis Joplin, and Marvin Gaye. One performer who never appeared was Bob Dylan, who walked off when CBS censors balked at his song "Talkin' John Birch Society Blues."

Although called "the great stone face" on screen, Sullivan was a man of intense passion off camera. He feuded with Walter Winchell, Jack Paar, and Frank Sinatra over his booking practices. He wrangled with conservative sponsors over his fondness for African American culture and openly embraced black performers throughout his career, including Bill "Bojangles" Robinson, Ethel Waters, Louis Armstrong, and Diana Ross. He also capitulated to the blacklisting pressures of Red Channels and denounced performers for pro-Communist sympathies.

Sullivan saw comedy as the glue that held his demographically diverse show together and allowed a nation to release social tension by laughing at itself. He was most comfortable around Borscht Belt comics as seen by the funnymen he most often enlisted: Alan King (37 times), Myron Cohen (47 times), and Jack Carter (49 times). When Sullivan's son-in-law, Bob Precht, took over as producer in 1960, there was a movement to modernize the show and introduce a new generation of comedians to the American audience, led by Mort Sahl, Woody Allen, Richard Pryor, and George Carlin. The comic act that appeared most on the Sullivan show was the Canadian team of Johnny Wayne and Frank Shuster (58 times); the parodic sketches of Wayne and Shuster assured Sullivan a sizable audience north of the border.

Sullivan was always on the lookout for novelty acts, especially for children. His interplay with the Italian mouse Topo Gigio revealed a sentimental side to Sullivan's character. He also was the first to introduce celebrities from the audience and often invited them on stage for a special performance. Forever the sports columnist, he was particularly enthralled by athletic heroes, and always had time on the show to discuss baseball with Mickey Mantle or Willie Mays and learn golf from Sam Snead or Ben Hogan.

The Ed Sullivan Show reflected an era of network television when a mass audience and, even, a national consensus seemed possible. Sullivan became talent scout and cultural commissar for the entire country, introducing more than 10,000 performers throughout his career. His show implicitly recognized that America should have an electronic exposure to all forms of entertainment, from juggling to opera. The Vietnam War, which fractured the country politically, also helped to splinter the democratic assumptions of the variety show. By 1971, The Ed Sullivan Show was no longer a generational or demographic mediator and was canceled as the war raged on. Later in the decade, the audience did not require Sullivan's big tent of variety entertainment any longer; cable and the new technology promised immediate access to any programming desire. The Sullivan library was purchased by producer Andrew Solt in the 1980s and has served as the source of network specials and programming for cable services.

EDUCATIONAL TELEVISION

Broadcasting in the United States evolved as a commercial entity. Within this system efforts to use the medium for educational purposes always struggled to survive, nearly overwhelmed by the flood of entertainment programming designed to attract audiences to the commercials that educated them in another way—to become active consumers. Despite its clear potential and the aspirations of pioneer broadcasters, educational television has never realized its fullest potential as an instructional medium. Educational Television (ETV) in the United States refers primarily to
programs which emphasize formal, classroom instruction and enrichment programming. In 1967, educational television was officially renamed "public television" and was to reflect new mandates of quality and diversity as specified by the Public Broadcasting Act. Public television incorporated "formal" (classroom) and "informal" (cultural, children's, lifelong learning) instructional programming into a collective alternative to commercial television. Despite commercial dominance, however, educational initiatives in American television continue to change with the introduction of new telecommunications technology. Cable and new media challenge and enhance the traditional definition of educational television in the United States.

Interest in educational television was expressed early. Educators envisioned television's potential as an instructional tool and sought recognition by Congress. The short-lived Hatfield-Wagner amendment proposed to reserve one-fourth of the broadcast spectrum for educational stations. But the Communications Act of 1934 became law without this specification, although the Federal Communications Commission (FCC) promised to conduct further inquiry into ETV.

The immediate post-war years created a deluge of requests for broadcast licenses. So overwhelmed, the FCC initiated a "television freeze" in 1948 (forbidding the issuance of new licenses) in order to re-organize the current system and to study the ultra-high frequency band (UHF). The period of the "TV Freeze" was an ideal opportunity to resurrect the debate over allotment of spectrum space for educational channels.

FCC commissioner Freida Hennock led the crusade. She understood that this would be the only opportunity to reserve spectrum space for educational television. When educators would be financially and technically prepared for television experiments, spectrum space might be unavailable. Hennock raised the consciousness of educators and citizens alike, and convinced some of them to form the first ad-hoc Joint Committee for Educational Television (JCET). Financial assistance from the Ford Foundation provided legal expertise, and enabled the JCET to successfully persuade the FCC to reserve channel space for noncommercial educational television stations. In 1953 the FCC allotted 242 channels for education. KUHT in Houston, Texas was the first noncommercial television licensee.

Although this was a major victory, the development of educational television was a slow process. The majority of educators did not have the financial or technical capabilities to operate a television station. Commercial broadcasters recognized their dilemma as a lucrative opportunity.

Commercial broadcasters lobbied against the reservation of channels for education. Although they claimed they were not opposed to ETV as a programming alternative, they were opposed to the "waste" of unused spectrum space by licensees who were financially unable to fill broadcasting time. Persuaded in part by the argument for economic efficiency, the FCC permitted the sale of numerous ETV stations to commercial broadcasters. Many universities, unable to realize their goals as educational broadcasters, profited instead from the from the sale of their unused frequencies to commercial counterparts.

From its inception, then, ETV was continually plagued with financial problems. As a noncommercial enterprise, ETV needed to rely on outside sources for funding. Federal funding created the potential for programming biases and the private foundations, such as the Ford Foundation, would not be able to sustain the growing weight of ETV forever. The 1962 Educational Television Facilities Act provided temporary relief. Thirty-two million federal dollars were granted for the creation of ETV stations only. Programming resources were still essential, however.

The establishment of the Carnegie Commission in 1965 was critical to the survival of ETV. For two years the commission researched and analyzed the future relationship between education and television. Some of their proposals included increasing the number of ETV stations, imposing an excise tax on all television sets sold, interconnection of stations for more efficient program exchange, and the creation of a "Corporation for Public Television." These mandates prompted Congress to enact the 1967 Public Broadcasting Act as an amendment to the Communications Act of 1934.

The evolution of ETV into "public television" forever changed the institution. The ETV curriculum of formal instruction was too narrow to entice sweeping federal recognition. As a result, ETV was endowed with a new name and a new image. The mandate of public television was diversity in programming and audience. Public television promised to educate the nation through formal instruction and enrichment programming emphasizing culture, arts, science, and public affairs. In addition, it would provide programming for "underserved" audiences (those ignored by commercial broadcasters) such as minorities and children. Ultimately, public television promised to be the democratization of the medium. Sadly, however, these public service imperatives could never flourish as originally intended in a historically commercial system.

Educational television provides programming which emphasizes formal instruction for children and adults. Literacy, mathematics, science, geography, foreign language and high school equivalency are a few examples of ETV's offerings. The most successful ETV initiatives in the United States are public television's children's programs. Staples such as Sesame Street, 3-2-1 Contact, Mister Rogers' Neighborhood and The Reading Rainbow teach children academic fundamentals as well as social skills.

Higher education initiatives in television, "distance learning," boasts an impressive but modest history. Distance learning programs, while significantly more intensive abroad, have been integral to realizing the American ETV "vision." Nontraditional instruction via "telecourse" is an alternative learning experience for adults who cannot, or do not choose, to attend a university.

Closed-circuit TV (CCTV) was used as early as the 1950s by universities to transmit classroom lectures to other locations.
on campus. The Pennsylvania State University CCTV project is an early example. In 1952 the Pennsylvania State CCTV system (sponsored by the Ford Foundation) was created to offer introductory college courses via television in order to eliminate overcrowded classrooms and faculty shortages. Although moderately successful in achieving these goals, overall the CCTV system proved unpopular with students because of the absence of student-teacher contact and the lackluster “look” of the programs, especially in comparison with the familiar alternative of commercial television. This experiment made clear a continuing reality: the appeal of an instructional program is often dependent upon its production quality.

The Chicago Television College was a more successful endeavor. Teachers training was another initiative undertaken by the Ford Foundation in the early days of educational television and in 1956, the Chicago Television College was created as a cost-effective way to accomplish this task. Approximately 400 students earned their Associate of Arts (A.A.) from the TV College. The majority of graduates were inmates from particular correctional facilities and home-bound physically challenged individuals.

The Public Broadcasting System (PBS) is a significant participant in distance learning. Its Adult Learning Service (ALS) distributes telecourses to universities nationwide which are broadcast by participating PBS stations. In conjunction with ALS is the Adult Learning Satellite Service (ALSS) which provides a more efficient delivery system of telecourses. Similarly, the Instructional Television Fixed Service (ITFS) transmits college courses to high school students via satellite and microwave relay. Workbooks and examinations often supplement the video “lessons.” ITFS also transmits its signals to social service centers, correctional facilities and community colleges.

Formal instruction efforts by commercial broadcasters are historically scarce. A notable example, however, was the CBS/New York University collaboration entitled Sunrise Semester. For nearly three decades, a New York University university lecture would air at 6:00 A.M. for the edification of early risers.

Adult learners are only not the only beneficiaries of ETV’s instructional programs. Preschool, elementary and secondary school students are all target audiences of ETV services. The National Instructional Television Satellite Schedule (NISS) is a primary distributor of such programming. 321 Contact (science), Futures (math) and American Past (history) are just a few examples of NISS offerings. Enrichment programs such as these are used to enhance, not replace, traditional classroom instruction.

Sesame Street is the ETV staple of pre-school children internationally. Heralded for its ability to successfully combine education and entertainment, Sesame Street is an anomaly. No other broadcast or cable program has seriously rivaled its formula for success. (It is even used in Japan to teach high school students English.)

ETV is not unique to the home and classroom. More specialized uses have proliferated. For example, closed-circuit television is frequently used by medical institutions as a more effective means to demonstrate surgical procedures to doctors and medical students and workplace programming is often used by corporations for training purposes or to teach safety procedures. Distance learning, classroom instruction and workplace programming represent part of the ETV mosaic, which is generally defined by programming which emphasizes formal and informal learning.

But educational television also includes “enrichment” programming emphasizing culture, the arts and public affairs as an alternative to commercial choices. Popular entertainment programs such as Masterpiece Theater, public affairs and news programs such as Frontline and The MacNeil/Lehrer News Hour, and nature programs such as Nova all attempt to meet the requirements of educational television as defined by broadcast law in the United States.

The expansion of the telecommunications environment has also yielded additional outlets for educational television. The surge of cable television has been the most significant challenge to ETV as it is defined and provided by public television. Public television has always justified its very existence in the United States in terms of its role as the sole provider of educational programming. However, the emergence of cable services such as Bravo, A and E, the Learning Channel, Discovery and Nickelodeon have challenged public television’s position. These outlets provide viewers with the same quality programming as public television. Often, cable networks compete with public stations for the rights to the same programs, from the same program suppliers.

Advocates of public television will often justify its existence with two words—Sesame Street. Noncommercial programming, availability in all households and quality children’s programming such as Sesame Street are the examples used by public broadcasters to warrant their claims to federal and viewer support. Cable television’s contribution cannot be completely ignored, however.

Indeed, the vision of educational television is perhaps best exemplified by cable’s public, educational and government (PEG) access channels. While not mandatory, most cable companies are willing to provide these channels as part of their franchise agreements. They point to the existence of PEG channels as examples of their philanthropy. PEG channels demonstrate a grassroots approach to television. Public access encourages individual program efforts, which often contribute to the enlightenment of the immediate community. Paper Tiger Television is one example of such video “activism.”

Education provided on access channels offers much of the same formal instruction as public television. The Cable in the Classroom organization distributes programs created by various cable networks (e.g. A and E, CNN, TLC) for classroom use. The programs are commercial-free. Like public television, educational access offers formal instruction and distance learning. One of its most recognized services is the Mind Extension University which offers credit for college courses taken at home.

Government access channels supply viewers with the discussion of local and national policy debates. City council and
school board meetings are presented here. For a national/international perspective, most cable systems offer C-SPAN and C-SPAN II in their basic service. PEG channels foster localism and serve the public interest. They are valid interpretations of broader concept of educational television.

Globally, educational television plays a more significant role than in the United States. Most international broadcasting systems developed as noncommercial public service organizations. Public service broadcasters, or state broadcasters, are supported almost exclusively by license fees—annual payments made by owners of television receivers. Because the community directly supports the broadcaster, there is a greater commitment by the broadcaster to meet their multidimensional programming needs. As a result, these systems more effectively exemplify the mandates of the American public television system—quality and diversity.

Sweeping deregulation, increased privatization and the introduction of cable television have posed new problems for the public service monoliths, however. The introduction and proliferation of commercially supported television casts doubt on the need for license fees. Public service broadcasters must find new ways to compete, to sustain their reputations as cultural assets. ETV and its relationship to higher education is most developed and more successful as a learning device in what has been called the Open University system. The lack of higher education opportunities in many countries has contributed to the validation of distance learning. Open universities are provided by public (service) broadcasters on every continent. The British Open University is the most notable example, existing as an archetype for similar programs worldwide. Created in 1969, the Open University confers college degrees to students enrolled in telecourses. Programs are supplemented by outside exams and work/textbooks. Degrees from the Open University are as valued as traditional college diplomas.

The University of Mid-America (UMA) was a failed attempt by public broadcasters in the United States to emulate the British system. In existence from 1974 to 1982, UMA attempted to provide traditional higher education through non-traditional methods. Funding problems coupled with a society unreceptive to the open university culture, hastened UMA's demise.

Educational television is similar throughout the industrialized world. The combination of formal classroom instruction and enrichment programming defines the genre. Educational television in the developing world also includes programming which directly effects the quality of life of its viewers. For example, in areas where television penetration is very low, audiences may gather at community centers to view programs on hygiene, literacy, child care and farming methods. In this respect, educational television provides the group with practical information to improve living standards. Such programming best exemplifies the global aims of educational television.

The promise of the electronic superhighway will fundamentally change educational television. Subtle nuances continue to emerge as a result of new technologies and the combination of old ones. Satellite technology has already provided a more effective delivery system for programming. Interactivity has revitalized instructional television in particular. Teleconferencing, for example, links classrooms globally. These services not only provide access to traditional learning but enhance the cultural literacy of students worldwide. The relationship between education and television in the changing telecommunications environment continues to evolve. As television becomes more "individualized," providing, for example, "menus" of lessons, applications, and experiments, educational television may become the programming of choice. The synergisms between the significant players (broadcast/cablecasters, telephone, hard/software companies, educators and government) will ultimately determine new outlets for educational television across the globe, but audiences—students and users—will reap the ultimate benefits.

EGYPT

Egypt began its television system, considered one of the most extensive and effective among all undeveloped countries of Asia and Africa, in 1960. Due to a well-financed radio service and film industry already in existence, Egypt, unlike other Arab countries, was able to start television production without importing engineering staff from abroad. Even with this beginning, however, the development of television has been complicated by many other social and cultural factors.

In the late 1950s, following the 1952 revolution, Egyptian President Gamel Abdul Nasser realized television's potential for helping to build Egypt into a new nation. Though the decision to start television service had been made earlier, the joint British-French-Israeli Suez invasion delayed work until late 1959. Egypt then signed a contract with Radio Corporation of America (RCA) to provide the country with a television network and the capacity to manufacture sets. After the RCA contract was signed, Egypt began construction of a radio and television center, completed in 1960, and the first television pictures appeared on 21 July 1960, using the 625-line European standard.

From the start, Egypt did everything on a grand scale. Thus, while most nations began their systems modestly with one channel, Egypt began with three. The entire system was initially totally subsidized by the government, receiving a direct grant every year. In 1969, however, an annual license fee of $15 per set was introduced and after 1979, revenue from advertising and from the sales of programs to other countries also helped in financing. At the present time, a surcharge, which goes to the broadcasting authority, is added to all electricity bills and provides additional funding for the system.

Egyptian television began its multi-channel operation under the control of the Ministry of Culture and National Guidance, an organization that figured prominently in the Nasser regime from the start. This ministry also used radio and television broadcasting for propaganda to support the ruling regime.

Television's role in the culture was heightened following the June 1967 war with Israel which resulted in an Egyptian defeat that was militarily, economically and psychologically devastating. Immediately after the war, there was a decrease in the amount of foreign programming shown. The third channel, over which much programming had been telecast, was eliminated, and the British and U.S. programs that constituted the bulk of imported programs were deemed unacceptable due to the break in diplomatic relations with those countries. Almost all forms of programming on television placed less emphasis on Egypt's military capability, tending instead, toward the nationalistic, the educational and the religious. Moving closer to the country's new military supplier, the former Soviet Union, television began showing films about Soviet and East European life. These programs were either provided free of charge or were inexpensive to purchase or lease.

The general technical quality of Egyptian television declined between 1967 and 1974 when there was less money for new equipment. Generally, however, the change in government after Nasser's death and Sadat's ascendency to the presidency in 1970 did not appear to have much effect on television programming or the structure of the federation.

On 13 August 1970, radio, television and broadcast engineering were established as separate departments under the Ministry of Information. The new decree formally established the Egyptian Radio and Television Union (ERTU) and created four distinct sectors—radio, television, engineering and finance—each of which had a chairman who reported directly to the minister.

Following the October 1973 war, the Egyptian media took a very different approach to the national situation. Television programming, which took longer to produce and air than radio information, was somewhat more upbeat. As good news came in, it reflected confidence in an Egyptian recovery. After the Egyptian-Israeli engagement, Egyptian television showed much more often with the United Nations, the European countries, the United States and Israel. Agreements regarding military disengagements received a high priority for broadcast on the air. More than any other Egyptian mass medium, television was set to reflect the changing international political orientation of the country. Sadat's government gradually changed Egypt during the 1970s from a socialist orientation to one that was more hospitable to free enterprise and decidedly pro-West. After 1974, the door was formally opened to the West. Consequently, the number of Western programs on Egyptian television schedules increased.

The television organization decided during this time to continue the development of color. Though some believed color television was a luxury that Egypt could not afford, the favorable attitude among broadcasting officials prevailed. The French government had been successful in persuading Egypt to adopt the System Electronic Color Avec Memoire (SECAM) system and had installed its equipment in one of the Egyptian studios before the 1973 war. After the war, the decision was made to convert both production and transmission facilities to color, an action which improved the technical quality of Egyptian television by discarding the monochrome equipment that had been installed by RCA long before 1970. Older switchers and cameras, which were becoming difficult to repair or to purchase, were replaced. The new equipment was necessary for the production of programs to be sold to other countries that were also converting to color and after 1974 television revenues derived from advertising and from program sales to other Arab countries increased significantly. The Egyptian broadcasting authority changed from the SECAM system to PAL, however, in both studio and transmission in 1992.

Because of Egypt's peace treaty with Israel, many Arab countries joined the call by the more militant countries to
isolate Egypt, remove it from the Arab League and boycott its exports. Many countries broke diplomatic relations with Egypt or reduced the size of diplomatic missions in Cairo. Countries that supported the boycott no longer purchased Egyptian television programs, stating that they did not need to buy directly from Egypt because so much quality material was available from Egyptian artists living outside the country. One response held that "the boycott organizers are interested in drawing the distinction between the Egyptian people and the Egyptian government." And indeed, many Egyptian producers moved to Europe to produce programs for sale to the Arab countries. However, Egyptian television program sales to the Arab world did not decrease as a result; they actually have increased.

During this period the Egyptian government was very seriously considering plans for a new satellite system. Technical staff personnel had already been sent to be trained in the United States. This undertaking, called the Space Center Project, was mainly designed for the distribution of television signals that would link the country through ground stations which would receive and rebroadcast programming to the villages. The proposal became active when the Egyptian president signed a document for the beginning of Nile Satellite in 1995, a satellite that not only covers the Egyptian state but also services the Arab world.

In addition to the two centralized television networks, a new strategy to decentralize the television broadcasting system was introduced in 1985. The policy was implemented by starting a third television channel which covers only the capital city. This was followed in 1988 by Channel 4 which covers the Suez Zone. Yet another channel was added in 1990 to cover Alexandria, and in 1994 Channel 6 was created to cover the Delta. Most recently, in late 1994, Channel 7 was introduced in southern Egypt. In 1990 Egypt became the first Arab state to start an international television channel when the Egyptian Space Channel was introduced to the Arab world and later to Europe and the United States. Egypt was also the first to start a foreign national network, Nile TV, to serve expatriates in Egypt as well as to promote tourism in English and French languages.

In part as a result of these available channels, a television set has become a priority for any young couple getting married. Most prefer buying a television set to purchasing other important things for the house. Even a color set is considered a normal part of the household in middle-class families and the number of such sets has increased greatly since 1970. The price of television sets purchased in Egypt, however, reflects high import taxes, sometimes reaching 200%. This has led most Egyptians to buy their sets from abroad. Most Egyptian people working outside the country, especially in Saudi Arabia and the other Gulf states, return to Egypt with television sets because of the lower prices in the Gulf countries. Others acquire second-hand sets from individuals or dealers who sometimes help finance such transactions.

Egyptian shops do carry a variety of television receivers. These include foreign brands as well as sets assembled in Egypt, but the imported sets have a reputation of being more reliable. The government is attempting to reduce prices of locally made sets and in 1995 the number of television sets was estimated at 6,200,000.

Programming
From the beginning, Egyptian television has had a strong tie with Arabic culture. Historical, religious, geographical, political and linguistic bonds tied Egypt to the Arab countries. Egyptian television was influenced Arabic literature, religion, philosophy and music. The producers of the first programs, influenced to some extent by the example of contemporary programs from the East European countries and the Soviet Union, which were heavily cultural in content, quite naturally regarded Egyptian television programs as a proper vehicle for Arab literature and the arts. Egyptian television, then, performs the function of reinforcing and enhancing Arab culture, which is defined as a heritage in creative endeavor and thought. Its programs also raise the cultural level of the ordinary viewer by presenting refined items covering scientific, literary and artistic fields, as well as a great deal of Arab music and drama on traditional themes.

Television is an ideal medium for disseminating Egyptian culture because that culture is family-oriented and tends to center much of its education and entertainment around the home. Nevertheless, the content and style of television broadcasting available to these viewers has changed over time. The government still owns and operates the medium and sometimes uses it to convey political messages, but programming is now characterized by somewhat less politically motivated programming than was characteristic in the 1960s and 1970s. It contains more entertainment and popular culture and the Ministry of Information is trying to stress these aspects and reduce the amount of political content.

Entertainment programs such as the Egyptian soap operas and Egyptian music and songs are very popular. Foreign programs are also popular, especially those from Europe and the United States, which provides Egypt with many series, such as The Bold and the Beautiful, Knots Landing, Love Boat, and Night Rider. The famous American series, Dallas, however, was banned from television because officials thought it conveyed immoral messages to the public, especially to youth and children.

News is an important aspect of programming in Egypt because of the country's regional position and the fluctuating nature of political alignments in the Arabic-speaking area. As previously suggested, the 1960s, especially the events surrounding the 1967 war, was an era of crisis. Egyptian television penetrated the region. It was important for the government to maintain a strong news front to present its particular point of view. Newscasting in Egypt included a segment of official "commentary" when there was some special concern to be articulated. From these
news broadcasts, as well as other programs, the policies of President Nasser were clear to the viewer, as were the identities of those who were considered the enemies of those policies.

Compared to the beginning of the 1960s there was a significant increase in the emphasis upon education at the beginning of the 1970s. It took almost the previous decade for the Ministry of Education to be convinced of the value of educational programs. Moreover, the educational programs were run first under the initiative of the broadcasters, who resisted turning any time over to the ministry. But enlightenment programs remain important in the schedule of Egyptian television and have increased measurably through the years.

Religion, of course, carries great weight in Egypt, an Islamic center. Readings from the Koran have always been broadcast on a regular basis by Egyptian television and religious commentaries or advice on proper moral and ethical behavior are featured. Coverage of the rituals of the Muslim Holy Day is presented as part of the attempt to maintain Islamic traditions and values. During the Muslim Holy Month of Ramadan, Egyptian television is exceptionally active in religious programming, exhorting the faithful and explicating the pertinence of Islamic history. In the period from 1980 to 1985 a close observer could notice an increase in religious programs.

Children's programming, which formerly was completely of foreign origin, has changed to suit the Egyptian culture. Almost all Egyptian programs for youth and women and programs dealing with art and literature have been given increased time on the television schedule.

The Current Broadcasting Industry

Egyptian information media have always been closely tied to politics. Television in Egypt is, typically, a monopoly under direct government supervision, operation, and ownership. There are several reasons for this. First, the minimum cost of establishing a radio or television system is far greater than the minimum cost of establishing a newspaper, for example, and thus far beyond the capability of nearly all private persons in a developing country. Second, high cost encourages the pooling of resources, or a monopoly. And because these media reach beyond borders and literacy barriers, the government has a much greater interest in controlling them or at least keeping them out of hostile hands. Anyone with a printing press has the technical capability of reaching the literate elite, while this is seen by the government as a potential threat, it is not nearly as great a political liability as a monopoly radio station broadcasting to millions. Radio and television, which have the potential of instantaneously reaching every single person in the country and many outside it, are regarded by the Egyptian government as too important to be left to private interests. Third, radio and television are newer media, and the trend is toward greater authoritarian control over all media.

But catching up with new technology and the further development of television systems demands ever larger sums. Additional funds are even more necessary for producing high quality programs. Raising revenues for broadcasting thus will remain a major problem for Egypt, especially when the country is engaged in two huge broadcast projects, Nile Sat and the Television Production City. Each of these projects is projected to cost more than 1 billion Egyptian pounds (US$1 = E.E.3.40).

The staff of the broadcasting industry represents a serious problem, especially in such a centralized television system. Currently, Egyptian television employs almost 14,000 people. Obviously, this large number of television workers is far above that required to produce programs and fill the broadcasting time and there are more workers than necessary for efficient operation of the two television channel services. The figure is especially excessive for a country with limited financial resources.

Along with advertising revenue and license fees (added monthly to the electricity bill), Egypt depends on sales of Egyptian programs to other countries as the main resource to finance television. Since the peace treaty with Israel, many Arab countries have boycotted Egypt's exports. Yet even in these circumstances Egypt received over $20 million from television program sales to other Arab countries from 1973 to 1978. Later, the creation of a program marketing company structured to give the impression of being independent from the government enabled some countries which wanted to buy Egyptian programs to do so without censure.

Even with such modifications and strategies the financing of radio and television broadcasting will continue to be a serious problem for the Egyptian government. Despite the realization of the importance of electronic media in the internal and external political process, funds to continue the dissemination of their services have become increasingly scarce, especially in view of the educational and health needs of the country. It is obvious, then, that Egypt must continue to struggle and to compromise to find funds needed to continue national broadcasting services.

EISNER, MICHAEL

U.S. Media Executive

Michael Eisner joined the Disney Company in 1984 and helped re-craft it throughout the 1980s and 1990s. In the process he helped to make Disney into a television powerhouse, climaxing those efforts with a take-over of Capital Cities-ABC on the last day of July 1995. Through the final sixth of the twentieth century, the Disney Company, with its ever increasing profits, was held up as a quintessential American business success story. It produced popular culture fare embraced around the world—and did not sell out to the Japanese. Yet when Michael Eisner assumed leadership of the company, Disney was in trouble. It was Eisner and his staff who turned the ailing theme park company into a media powerhouse.

Eisner brought a rich base of executive experience to Disney. He had begun his career at the ABC television network and then moved to Paramount under former ABC boss, Barry Diller. The two men made Paramount the top Hollywood studio during the late 1970s and early 1980s. By 1978, just two years after Diller and Eisner arrived, Paramount had moved to the head of the major studio race. Led by *Grease, Saturday Night Fever, and Heaven Can Wait*, Paramount took in one-quarter of the Hollywood box office in that year.

When Eisner moved to Disney he moved immediately to revitalize the company. He hired Hollywood’s new “Irving Thalberg,” Jeffrey Katzenberg, then barely thirty, to make movies under two new “brand names”: Touchstone Pictures and Hollywood Pictures. (Eisner and Katzenberg worked well together until 1994 when Katzenberg moved to Dream Works, Inc., with new partners Steven Spielberg and David Geffen.)

The new Disney turned out hit feature films including *Down and Out in Beverly Hills*, and *Ruthless People*. In 1987 when *Three Men and a Baby* pushed beyond $100 million in box-office take, it became the first Disney film ever to pass that vaunted mark. *Three Men and a Baby* represented a quintessential example of the new Disney, drawing its stars, Ted Danson and Tom Selleck, from the world of television.

From the base of solid theatrical film profits, Eisner then began to re-make Disney into a TV power. The studio quickly placed hits such as *Golden Girls* on prime-time schedules. By the early 1990s Disney’s *Home Improvement* and *Ellen* consistently ranked in TV’s prime-time top-ten. Disney also expanded into the TV syndication business. The company created a very successful syndicated program by hiring “film critics” Gene Siskel and Roger Ebert to “review” movies, including those produced by Disney.

But not all Disney moves into television prospered. Eisner revived Disney's family Sunday night TV show, with himself as host. But Eisner proved no “Uncle Walt” and he was forced to quietly cancel himself despite airing in a prized 7:00 P.M. Sunday time slot on ABC. Like many before and after him, Eisner could not compete successfully with CBS’s *60 Minutes*.

Nor did Disney’s TV syndication efforts always mint gold. *Today’s Business*, an early morning show which, although it aired initially in half the television markets in the United States, lasted but a few painful months in 1985. The Walt Disney Company pulled out, eating a $5 million loss.

Eisner had more success with cable TV as he expanded efforts to make the Disney Channel a pay cable TV power. Using a seemingly infinite set of cross promotional exploitation opportunities, the Disney Channel began to make money by 1990. By that year the channel could claim five million subscribers (of some sixty million possible cable households).

Eisner may have had the most early success in home video. He accomplished this in spades by packaging and proffering the “classics” of Disney animation in the expanding home video market. These video revenues provided an immediate boost to the corporate bottom line. In 1986 alone, home video revenues added more than $100 million of pure profit. In October 1987 when *Lady and the Tramp* was released on video, the Disney company had more than two million orders in hand before it even shipped a copy. By the late 1980s *Bambi* and *Cinderella* were added to the list of the all time best sellers on video. Eisner placed *Bambi* and even *Fantasia* into “video sell through” so every family could buy and own a copy. *Aladdin* and *The Lion King* created even
more profit and made the Disney operation Hollywood's leader in home video sales.

With all this, Eisner made the Disney balance sheets glow. From mid-1985 through late 1990 the company broke profit records for more than twenty straight quarters. Based on the good times of the 1980s operating margins and cash flow tripled. It was no wonder that in order to underscore their thriving new corporate colossus Eisner and company president Frank Wells changed the company name from Walt Disney Productions to the Walt Disney Company.

By 1991 the Walt Disney Company had become a true corporate power. Specifically, as 1991 began, it ranked in the top two hundred of all U.S. corporations in terms of sales and assets, an outstanding 43rd in terms of profits. In terms of its stock value Disney had grown into a $16 billion company, with mind boggling sales of $6 billion per annum, and profits approaching $1 billion per year. This was a media corporate giant, of a rank with Time Warner or Paramount, no marginal enterprise anymore.

It came as no surprise in July 1995 that Disney announced its most important move in television, the takeover of a broadcast television network. What was surprising, however, is that the network chosen by Disney was ABC, then the leading network, and its parent company Capital Cities. Additional surprise came from the quiet, unsuspected nature of the deal-making. As the story is reported, Eisner and Cap Cities President Thomas Murphy began their negotiations only days before the final deal was struck—and managed to keep it from reporters. For an announced $19 billion Disney had suddenly become one of the world's major media conglomerates. A few weeks later the surprise continued when Michael Ovitz, head of the Creative Artists Agency and often referred to as the most powerful man in Hollywood, became president of the new company.

For all his successes Michael Eisner was well rewarded. In 1990 surveys of the best paid corporate executives in the United States, Michael Eisner ranked in the top ten. From 1986 to 1990 he had been paid nearly $100 million for his efforts. The Disney Company hit a publicity apex in May, 1989 when it was revealed that Michael Eisner was the highest paid executive in the United States for 1988—at more than $40 million. Michael Eisner must be credited with creating in the Disney company one of the true media powerhouses of the end of the twentieth century.

ELLERBEE, LINDA
U.S. Broadcast Journalist

Linda Ellerbee, respected and outspoken broadcast journalist, has functioned as a network news correspondent, anchor, writer, and producer. She is currently president of her own production company, Lucky Duck Productions. Gaining fame in the 1970s and 1980s for her stints as an NBC News Washington correspondent, Weekend co-anchor, reporter, and co-anchor of NBC News Overnight, Linda Ellerbee became a symbol for a different type of reporter: literate, funny, irreverent, and never condescending. Her personal style attracted a diverse and dedicated following of viewers for her stories, which covered everything from politics to pop culture. "And so it goes" is her trademark broadcast tag line and the title of her 1986 bestseller "And So it Goes: Adventures in Television, an amusing and candid look at the realities of the profession.

Ellerbee's career at NBC News climaxed with her appointment as co-anchor of an overnight news broadcast, NBC News Overnight. Though the program failed with audiences, Ellerbee and the concept were critical successes. The duPont Columbia awards cited Overnight as "possibly the best written and most intelligent news program ever." She left the network news business in 1986, after serving a stint as anchor for ABC News' short-lived Our World.

Her television production company, Lucky Duck Productions, has a reputation as a supplier of outstanding children's programming. Founded with partner Rolfe Tessem in 1987, the company has won three CableAces, two Peabodys, a duPont, and an Emmy. Each week Ellerbee writes and hosts Nick News and the quarterly Nick News Special Editions, the Nickelodeon news magazine for children and young people, both produced by Lucky Duck Productions. These shows have given Lucky Duck a reputation for introducing quality journalism on a broad range of subjects to its audience. These series have been honored with a Peabody, Columbia-duPont Awards, the National Education Association, and the Parents Choice Awards. The Peabody citation given in 1991 notes the award was given for presenting news in a thoughtful and non-condescending manner for both children and adults. Other Lucky Duck projects for such clients as Nickelodeon, MTV, HBO, FOX, and Time-Life include several projects for young adults and documentary or news shows for all viewers.

In 1996 Ellerbee was again involved in expanding and experimenting with media forms. She began writing and hosting a monthly on-line public affairs interview program, On the Record, produced by Microsoft and Lucky Duck Productions, which combines print, television, and computer technology.

EMERSON, FAYE

U.S. Television Personality

Faye Emerson was one of the most visible individuals in the early days of U.S. television. A "television personality" (meaning talk-show host and more), her omnipresence during the infant days of TV made her one of the most famous faces in the nation and earned her the unofficial titles of "Television's First Lady" and "Mrs. Television."

Before television settled into stricter genre forms, when prime time was dominated by more presentational types of programming, "personalities" prospered. Variety shows abounded, as did low-cost, low-key talk shows which took advantage of TV's intimate nature. While the hosts of some of these shows were men—Ed Sullivan, Garry Moore, and Arthur Godfrey are among the better known "personalities"—the majority were female: Ilka Chase, Wendy Barrie, Arlene Francis, and others.

Faye Emerson had been a marginally successful film and stage actress before she embarked on her second career in television. A talent scout offered her a contract with Warner Brothers, when she was noticed in a local theater production, and she starred or co-starred in various "A" and "B" movies. Her career took an up-swing in 1944 when she married a second time, to Elliot Roosevelt, son of the president. The studio's publicity machine used this union to bring her greater fame and expanded Emerson's non-acting opportunities. As a "first daughter-in-law" she took part in presidential ceremonies and, with her husband, staged a successful trip to the Soviet Union in the late 1940s. She also acted on Broadway and on radio.

Emerson made her first television appearance of note in 1949 as a panelist, with her husband, on a game show. Her quick wit and breadth of knowledge—which upstaged her husband to such a degree she apologized on his behalf on air—made her something of a sensation. Later that year, actress Diana Barrymore was forced by illness to drop out of her soon-to-premiere local New York talk show. The producers phoned Emerson to take over and she accepted.

The Faye Emerson Show premiered in October 1949 and went national over CBS the following March. It quickly gained a following, snagging an average 22 rating. One month later, Emerson began a second talk show, this time on NBC. This made her one of the first people to have two shows simultaneously on two networks.

The late-night talk show of its day, Emerson frequently welcomed celebrity guests (actors, authors, other personalities). Sometimes the show was more free form. Sometimes it was simply Faye talking about her life and goings-on about town.

See also Children and Television
In retrospect, Emerson seemed a natural for early television, a medium which had to bridge the gap between the art of live drama and the appeal of wrestling. Emerson's combination of Hollywood good looks and social connections, along with her old-fashioned common sense and pleasant personality and friendly conversations about people, places and parties, made audiences want to welcome her into their homes. Adding to her appeal were her much talked about designer gowns featuring plunging necklines. It was believed this helped her attain much of her male viewership. (One wit would later say Faye Emerson put the "V" in TV.) The topic was such hot copy for a time that it inspired fashion/photo spreads in Life and other magazines. Finally, to move past it, Emerson brought it to a vote on her show. She asked viewers what she should wear. Ballots ran 95% in favor of Emerson's style staying as it was.

But Emerson was more than just window dressing. During the height of her fame she was a frequent substitute host for Edward R. Murrow on Person to Person and for Garry Moore on his show. She took part in so many game shows that a magazine once labeled her "TV's peripatetic panelist."

Emerson's omnipresence as a television performer should not be underemphasized. Before cable and satellites the average household was lucky to receive a handful of channels. Hosting various shows on various networks for much of the 1950s meant that even the most infrequent of audiences had to be aware of her as one of TV's first citizens. A viewing of Emerson's work today reveals a pleasant, largely unflappable but somewhat stiff talent. Still, she radiates glamour and remarkable camera presence.

In 1950, after divorcing Roosevelt, Emerson announced on her evening program her plans to marry musician Lyle C. "Skitch" Henderson. (It is believed she was the first person ever to make such an announcement on television.) In 1953, the two teamed for the show Faye and Skitch. Earlier in 1951, Emerson began hosting one of the medium's most expensive programs, Faye Emerson's Wonderful Town, in which she traveled the country and profiled different cities.

As the 1950s came to a close "TV personalities" found themselves with fewer opportunities. Some, like Arlene Francis, brilliantly reinvented themselves; others found themselves relegated to guest appearances before moving into retirement. Emerson was in this latter group. She continued to make TV appearances until 1963, when, rich and weary of show business, she sailed off for a year in Europe. Finding it to her liking, she seldom returned to the United States and died abroad in 1993.

Why Faye Emerson, "Mrs. Television," did not endure on the small screen while her masculine counterpart, "Mr. Television" Milton Berle, did can be ascribed to several factors. Perhaps most important was the fact that the TV personality never had a single marketable trait: neither comic nor singer, they were more like the good host or hostess at a private, intimate party. By the late 1950s, as talk shows left prime time, the party was over. TV production moved out of New York and left their kind of glamour behind.

Today, the lack of a clear lineage for the TV personality makes a full understanding of Emerson's appeal hard to grasp. Who today does exactly what Emerson did—Joan Rivers, Kathie Lee Gifford, the women of MTV? But as TV was beginning, it needed a friendly, unifying factor, a symbol to initiate audiences into its technology—and for millions of viewers that envoy was Faye Emerson.

E.N.G.
Canadian Drama

E.N.G., a Canadian television drama series set in the news studio of a local television station, ran successfully on the private CTV network for five seasons from 1989 to 1994. After a slow start, which almost led to its cancellation at the end of the first season, the series steadily gained in popularity as audiences responded to its blend of personal and public issues. It was sold to many countries and well-received when it appeared on the Lifetime cable network in the United States and on Channel 4 in Britain.

The letters in the title stand for "Electronic News Gathering" and were often seen on black-and-white images of news footage supposedly seen through the monitors of hand-held...
video cameras. Through its depiction of news gathering and studio production work, the series was able to respond to topical issues and comment on the role of the media in contemporary culture. The news stories were framed by the personal and professional relationships of the newsmakers, as the objectivity demanded of news reporting collided with the subjective feelings of the reporters or with commercial or political pressures.

The series began with the arrival of Mike Fennell (Art Hindle) to take over as news director, a position to which the executive producer, Ann Hildebrand (Sara Botsford) had expected to be promoted. As these two endeavored to establish a professional relationship, amid the various crises of the newsroom, Ann carried on a supposedly secret affair with Jake Antonelli (Mark Humphrey), an impetuous camera man who often broke the rules and found himself in dangerous situations. In the course of the series, Mike and Ann became personally involved, and the final episodes left them trying to balance their careers and their relationship after the station’s owners decided to adopt a "lifestyles" format.

The major significance of E.N.G. stems from its attempt to negotiate between the traditions of Canadian television and the formulas of the popular American programs that dominate CTV’s schedule. In media coverage of the series, it was often compared with the CBC’s Street Legal, which began two years earlier and which set its personal and professional entanglements in a Toronto law office. Both series were compared to such American hits as L.A. Law and Hill Street Blues, but both presented recognizable Canadian situations and settings. Since most original Canadian television drama has been produced by the CBC, a public corporation, the success of E.N.G. raised hopes that the private networks would offer more support to Canadian producers.

E.N.G. did have one foot in the Canadian tradition associated with the CBC and the National Film Board, a tradition of documentary realism and social responsibility, and it gave work to a number of veteran film and television directors. Yet the major project of the series was clearly to deliver the pleasures of “popular” television, using a formula which owed more to the melodramatic structures of the daytime soaps than to traditional Canadian suspicion of “crisis structures.” When E.N.G. began, it used a fairly strict series format, each episode presenting a complete story with little cross-reference between episodes. The later seasons saw a movement toward a serial format as the personal lives of the characters assumed more importance.

But the basic formula remained the same throughout. A number of loosely-connected stories were interwoven, offering viewers a variety of characters and situations, and inviting them to make connections among the stories and to activate memories of other episodes in the series (and to make comparisons with other similar series). In “The Souls of Our Heroes” (March 1990), for example, the main story dealt with competing accounts of the events in Tiananmen Square, while Ann received an unexpected visit from a childhood friend and her two children and a producer attempted to enliven the Crime Catchers segment of the news with fictional re-enactments. "In the Blood" (January 1991) used the motif of “blood” to link its two main stories: an attempt to capture a day in the life of an AIDS victim and an investigation into an alleged miracle involving a bleeding statue of Jesus. In these episodes, and most others, the focus was on the implications of the way the news is reported: for the newsmakers themselves, for the people on whom they are reporting, and for the community that watches the final product.

Although E.N.G. was clearly indebted to similar American series, its ability to blend melodrama with a serious treatment of topical issues was not shared by WTTOU, a short-lived series with a remarkably similar premise which appeared on CBS in the fall of 1990.

ENGLISH, DIANE

U.S. Writer/Producer

Diane English is in the enviable position of having several successful shows to her credit, a credit often shared with co-producer, and her husband, Joel Shukovsky. In addition to the programs—Murphy Brown, Love and War and the earlier Foley Square and My Sister Sam—their company also manages a lucrative eight-figure multiseries contract with CBS. The couple started their careers in public television (New York City's WNET) with English's adaptation of The Lathe of Heaven, and English went on to write nine TV movies before being offered the opportunity to "create-write-produce" the pilot for Foley Square, which, like her later shows, featured a strong female central character.

In a demanding profession, however, English's career has not been without controversy; Murphy Brown was attacked by Vice President Dan Quayle in the summer of 1992 when the main character on the series, a single professional woman played by Candice Bergen, decided not to terminate her unplanned pregnancy. Quayle's primary criticism was that the series mocked the importance of fathers by having a woman bear a child alone and call it "just another lifestyle choice." Quayle and English engaged in a heated and prolonged dispute through a media which made the series and English herself a household word. Some industry experts called the incident the single most important element contributing to the long-term ratings success of the show. For advertisers, in the following season, Murphy Brown was the most expensive show in television, with 30-second commercials on the show costing an average $310,000. Syndication sales were said to exceed $100 million. Because of her unusual combination of business and creative skills, English is often mentioned as "the only woman in television now capable of taking over the entertainment division at a major network."

The equal time rule is the closest thing in broadcast content regulation to the "golden rule." The equal time, or more accurately, the equal opportunity, provision of the Communications Act requires radio and television stations and cable systems which originate their own programming to treat legally qualified political candidates equally when it comes to selling or giving away air time. Simply put, a station which sells or gives one minute to Candidate A must sell or give the same amount of time with the same audience potential to all other candidates for the particular office. However, a candidate who can not afford time does not receive free time unless his or her opponent is also given free time. Thus, even with the equal time law, a well-funded campaign has a significant advantage in terms of broadcast exposure for the candidate.

The equal opportunity requirement dates back to the first major broadcasting law in the United States, the Radio Act of 1927. Legislators were concerned that without mandated equal opportunity for candidates, some broadcasters might try to manipulate elections. As one congressman put it, "American politics will be largely at the mercy of those who operate these stations." When the Radio Act was superseded by the Communications Act of 1934, the equal time provision became Section 315 of the new statute.

A major amendment to Section 315 came in 1959 following a controversial Federal Communications Commission (FCC) interpretation of the equal time provision. Lar Daly, who had run for a variety of public offices, sometimes campaigning dressed as Uncle Sam, was running for mayor of Chicago. Daly demanded free air time from Chicago television stations in response to the stations’ news coverage of incumbent mayor Richard Daley. Although the air time given to Mayor Daley was not directly related to his re-election campaign, the FCC ruled that his appearance triggered the equal opportunity provision of Section 315. Broadcasters interpreted the FCC’s decision as now requiring equal time for a candidate any time another candidate appeared on the air, even if the appearance was not linked to the election campaign.

Congress reacted quickly by creating four exemptions to the equal opportunity law. Stations who gave time to candidates on regularly scheduled newscasts, news interviews shows, documentaries (assuming the candidate wasn’t the primary focus of the documentary), or on-the-spot news events would not have to offer equal time to other candidates for that office. In creating these exemptions, Congress stressed that the public interest would be served by allowing stations the freedom to cover the activities of candidates without worrying that any story about a candidate, no matter how tangentially related to his or her candidacy, would require equal time. The exemptions to Section 315 have also served the interests of incumbent candidates, since by virtue of their incumbency they often generate more news coverage then their challengers.

Since 1959, the FCC has provided a number of interpretations to Section 315's exemptions. Presidential press conferences have been labeled on-the-spot news, even if the president uses his remarks to bolster his campaign. Since the 1970s, debates have also been considered on-the-spot news events and therefore exempt from the equal time law. This has enabled stations or other parties arranging the debates to choose which candidates to include in a debate. Before this ruling by the FCC, Congress voted to suspend Section 315 during the 1960 presidential campaign to allow Richard Nixon and John Kennedy to engage in a series of debates without the participation of third party candidates. The FCC has also labeled shows such as The Phil Donahue Show and Good Morning America as news interview programs. However, appearances by candidates in shows which do not fit under the four exempt formats will trigger the equal opportunities provision, even if the appearance is irrelevant to the campaign. Therefore, during Ronald Reagan’s political campaigns, if a station aired one of his films, it would have been required to offer equal time to Reagan’s opponents.

Section 315 also prohibits a station from censoring what a candidate says when he or she appears on the air (unless it is in one of the exempt formats). Thus, a few years ago when a self-avowed segregationist was running for the governorship of Georgia, the FCC rejected citizen complaints over the candidate’s use in his ads of derogatory language towards African Americans. More recently, the FCC has also rejected attempts to censor candidate ads depicting aborted fetuses. However, the FCC has permitted stations to channel such ads to times of day when children are less likely to be in the audience.

The equal opportunity law does not demand that a station afford a state or local candidate any air time. However, under the public interest standard of the Communications Act, the FCC has said that stations should make time available for candidates for major state and local offices. With regard to federal candidates, broadcast stations have much less discretion. A 1971 amendment to the Communications Act requires stations to make a reasonable amount of time available to federal candidates. Once time is made available under this provision, the equal time requirements of Section 315 apply.

The 1971 amendments also addressed the rates which stations can charge candidates for air time. Before 1971, Congress only required that the rates charged candidates be comparable to those offered to commercial advertisers. Now, Section 315 commands that as the election approaches, stations must offer candidates the rate it offers its most favored advertiser. Thus, if a station gives a discount to a commercial sponsor because it buys a great deal of air time, the station must offer the same discount to any candidate regardless of how much time he or she purchases.

THE ERNIE KOVACS SHOW (VARIOUS)
U.S. Comedy/Variety Program

In a few brief years in the 1950s there were actually a number of different Ernie Kovacs shows. The first, Ernie in Kovaksland, originated in Philadelphia, Pennsylvania, and appeared on NBC from July until August 1951. The Ernie Kovacs Show (first known as Kovacs Unlimited) was programmed on CBS from December 1952 to August 1953 opposite Milton Berle on NBC. Yet another Ernie Kovacs Show aired on NBC from December 1955 to September 1956. The existence of these separate shows is testament to both the success and failure of Ernie Kovacs. A brilliant and innovative entertainer, he was a failure as a popular program host; praised by critics, he was avoided by viewers.

Kovacs was one of the first entertainers to understand and utilize the television as a true “medium,” capable of being conceived and applied in a variety of ways. He recognized the potential of live electronic visual technology and manipulated its peculiar qualities to become a master of the sight gag. Characters in pictures on the walls moved; sculptures undulated; pilots flew away without their planes. For one gag that lasted only a few seconds he spent $12,000: when a salesman (played by Kovacs) slapped the fender of a used car, the car fell though a platform. According to Kovacs, “Eighty percent of what I do is in the category of sight gags, no pantomime. I work on the incongruity of sight against sound.”

Television was a new toy to Ernie Kovacs, a fascinating array of potential special effects. He created an invisible girlfriend who gradually disappeared as she undressed. He cut a girl in half with a hoola-hoop. As another young lady relaxed in a bath tub, a succession of characters climbed out through the soap bubbles. Ernie taped an orange juice can to a kaleidoscope, placed the can in front of a camera lens, turned a flashlight into the lens and created what might be the first psychedelic effect on TV. Kovacs loved the unusual, the unexpected. He tilted both the television camera and a table so that as a character seated at the table attempted to pour milk, the milk appeared to defy gravity and flow to the side.

Many of Kovacs’ effects were remarkably simple. He used his face to illustrate the effects of the horizontal and vertical controls of a television set. As he adjusted the vertical, his face grew longer; as he adjusted the horizontal, it stretched side to side. To aid viewers who had black-and-white television sets, Kovacs labeled each piece of furniture on the set so viewers would know its color. As he opened a book, sound effects illustrated the plot. As he prepared to saw in half a woman inside a cabinet, two voices were heard from within.

Many of his characters were also simplistic. Percy Dovetics drank martinis and read poetry. The three apes of the Nairobi Trio never spoke: one played the keyboard, one directed the music, and the third hit the director with a set of drumsticks. Eugene, perhaps Kovacs’ most memorable character, never spoke, but managed to sustain a thirty-minute program and win Kovacs an Emmy.

He did not neglect sound, but used it in its proper place, as a compliment to the visuals. He captured the sound of a bullet rolling inside a tube. He used music to accompany the movements of office furniture: filing cabinets opened and closed, typewriter keys typed, telephone dials rotated, water bottles gurgled, all to the rhythm of music.

The influence of the Ernie Kovacs shows has been extensive. Dan Rowan, one of the hosts of Rowan and Martin’s Laugh-In, said many of that show’s ideas came from Ernie Kovacs. On Saturday Night Live, another show directly influenced by the earlier comic, sight gags were so much a staple that when Chevy Chase received an Emmy for his performance on SNL, he thanked Kovacs. And Kovacs’ character “The Question Man,” who supplied questions to answers submitted by the audience, reappeared as “Carnac” on The Tonight Show Starring Johnny Carson.

The Ernie Kovacs shows were products of the time when television was in its infancy and experimentation was acceptable. It is doubtful that Ernie Kovacs would find a place on television today. He was too zany, too unrestrained, too undisciplined. Perhaps Jack Gould of The New York Times said it best—for Ernie Kovacs, “the fun was in trying.”

ETHICS AND TELEVISION

Television ethics are derived from early professional codes of broadcasting that began in the late 1920s and are grounded in problems and issues identified in early radio. For television these ethical systems came into their own and grew rapidly, in conjunction with the development of the new medium, during the 1960s. But they no longer exist as they once did.

Like radio for a previous generation, television had the ability to penetrate the private home and its potential obtrusiveness was the subject of concern. It was, after all, a "guest" in the home and in that capacity it was able to serve the public interest—informing, instructing and enlightening. It also had the ability, recognized early on, for serving private interests driven by the desire for economic gain. The keen awareness of potential confrontation between service on the one hand, and the desire for laissez faire operation on the other, led to another set of possible conflicts—between self regulation and regulation by government. The broadcasting industry placed its faith and its interests in self regulation.

The industry created its own Code of Broadcasting which consisted of eight "rules." Four had to do with advertising and concern over "overcommercialization." The other rules dealt with general operations and responsible programming: no "fraudulent, deceptive or obscene" material. Many of these same ideas and even the language appeared again in the Television Code established in the early 1950s.

Early on, a vexing problem for the code, a potential problem in any ethical system, surfaced. It was the issue of penalty. As in any enforcement of self-regulated ethics, there was little room for harsh sanctions. The only penalty called for violators to be investigated and notified. Later the penalty was strengthened by adding notification among the broadcast community—the threat of ostracism among colleagues. When television came on the scene, radio had recently experienced rapid growth in its commercialization. And with that growth came continuing threats of further, more far reaching regulation from the Federal Communications Commission and the Federal Trade Commission. In an effort to keep the government regulators at bay, the broadcasters' "Code of Good Practice" became more definitive. One of the main elements focused on regulation of the amount of time that should be devoted to commercials.

The evolution of the code can be seen by examining the use of commercial time in the 1930s. While there could be some advertising (of a good-will nature) before 6:00 P.M., according to the code, "commercial announcements, as the term is generally understood, should not be broadcast between 7 and 11 p.m." That restriction then evolved to allow increased broadcasting of commercial messages, to 5 minutes, then 10, then 18 by 1970. When television assumed a dominant place in broadcasting, beginning in the early 1950s, the rules affecting commercial time evolved the same way, increasing the allowed time slowly over the years.

Although the National Association of Broadcasters (NAB) created a separate set of ethical guidelines for television, distinct from radio, the existing concerns were applied to the newer medium: time limits of advertising, types of products advertised, fraud, especially in advertising, and special sensitivity to programming and advertising directed to children. Other program themes, obviously taboo in their times, such as sexual suggestiveness and explicit violence, were also addressed.

At the same time each network installed its own staff for network Standards and Practices (S & P), to enforce their particular policies for advertising and programming. These were the offices and individuals often thought of as "network censors." Large corporations also created statements of policies concerning their professional ethics as related to broadcasting.

These network and company rules of self regulation were supplementary to the NAB's continuation of its two nationally visible codes, one for radio, one for television. But each of these was becoming unwieldy. A dozen or so pages of the Television Code of Good Practice contained a long
list of programming prohibitions: hypnotism, occultism, and astrology, as well as obscene, profane or indecent material, and programs that ridiculed those with disabilities.

Still, the NAB Codes remained an important public relations device for the industry. At the apex of its use, NAB President Vince Wasilewski stated, "Our Codes are not peripheral activities. No activity of NAB is closer to the public."

As social mores changed and social and cultural climates became more permissive, so did television programming. By the late 1970s and early 1980s, the code seemed hopelessly outdated, continually violated, unenforceable and generally ignored by the broadcasters.

In 1982, when advertisers were lined up for a limited amount of available time on the television networks, it appeared that the networks gave favor for its best time slots to the largest advertisers. Displeased, one of the smaller advertisers pointed out this practice to the Justice Department, claiming unfair competitive practices, a violation of anti-trust laws. The Justice Department took action against the National Association of Broadcasters, because, it said, the NAB Code, limiting the amount of available commercial time, was responsible for the network practice. The court agreed, and ordered the NAB to purge that part of the code. After some initial hesitancy, the NAB agreed.

For eight years, from 1982 to 1990, both radio and television had no code of professional ethics. During that period, research showed that although the networks and some large corporate broadcasters had their own codes, or standards and practices, there still seemed to be no universal guidance. One study, based on a national sample of broadcast managers, suggested that broadcasters preferred self regulation rather than government regulation. It also suggested some concern that without such self regulation, government regulation might increase.

In 1990, the NAB issued a new "Statement of Principles of Radio and Television Broadcasting," designed as a brief, general document intended to reflect the generally accepted standards of American broadcasting. The statement encouraged broadcasters to individually write their own specific policies. It also encouraged responsible and careful judgment in the selection of material for broadcast rather than forming a list of prohibition as was the case with the old code. Caution was advised in dealing with violence, drugs and substance abuse, and with sexually oriented materials, but there was also positive encouragement for responsible artistic freedom and responsibility in children's programming. The statement made it clear that these principles are advisory, rather than restrictive. Finally, the 1990 statement mentioned First Amendment rights and encouraged broadcasters to align themselves with the audiences' expectations and the public interest.

The new philosophy concerning ethics in broadcasting reveals that:

- they are advisory rather than prohibitive;
- they should be centered in individual stations or corporations, rather than a national organization like NAB;
- since there is no provision for monitoring and enforcement on the national level, any concerns about ethics should come from individual stations and listeners/viewers;
- the decentralization of ethics may be indicative of a pluralistic society, where values and mores reflect distinct group perspectives, rather than a national standard.

Some observers bemoan the fact that there is no nationally visible standard—no way of measuring whether the language of a daring new television program is actually on the "cutting edge," or merely "bravado bunk." Yet, since the broadcast industry itself has been largely deregulated, the question remains whether this means there is now room for more self regulation, or whether self regulation itself should also be deregulated.

EUROPEAN AUDIOVISUAL OBSERVATORY

The European Audiovisual Observatory is an information service network for the audiovisual profession. It was initiated by professional media practitioners in conjunction with governmental authorities to meet increasing information needs in the audiovisual sector. These groups expressed a common commitment towards improved flow and access to information, and towards more transparent information related to the television, cinema and video sectors of the media industries. The observatory was set up to provide reliable information services, and also to improve the infrastructure of information collection and dissemination in Europe.

The observatory was established in December 1992, and currently thirty-three European states and the European Commission are members. The observatory was created under the auspices of Audiovisual Eureka, and functions within the framework of the Council of Europe.

It is a unique European public service organisation that provides information services to the European television, cinema, video and new media industries. In particular, the observatory serves the information needs of the decision makers of production, broadcasting and distribution. Public administrators, consultants and lawyers, researchers and journalists needing information on the audiovisual sector are all target user groups of its services.

The Observatory provides market and economic, legal, and practical information relevant to audiovisual production and distribution. It is a focal point of audiovisual information, that puts information requesters in contact with the best information available. The observatory brings together the diversity of audiovisual information, guides information requesters to the best sources, and co-ordinates pan-European work towards more transparent information.

The observatory is a service organisation with several core-services. These services provide rapid response to daily information needs, as well as to long-term development needs for better data collection methods. The Information Service Desk handles individual requests for information. It is designed to answer questions quickly and accurately. It covers all three information areas of the observatory: market, legal and practical information.

The observatory prepares the following publications: an annual Statistical Yearbook: Cinema, Television, Video and New Media in Europe; a monthly journal, IRIS – Legal Observations of the European Audiovisual Observatory; and a quarterly journal on the information sources in the audiovisual sector, Sequentia.

The observatory also coordinates work towards transparent European data. It advises on questions relating to data collection and how to access information sources. It organises expert workshops seeking improved and more comparable European data in the audiovisual sector.

The information services of the observatory are based on its network of partners and correspondents. This co-operatively working network currently includes 150 information providers and literally covers greater Europe. It includes a large number of different information providers: public and private research and information organisations, universities, consultants, individual experts, ministries and administrations, and regional network-organisation in the media field. By centrally coordinating this multitude of sources, the observatory gives access to the most reliable and updated information on the European audiovisual industry.

Partners are information or research organisations that have an established track record of providing reliable information in the audiovisual field, either on the European or global level. Each partner has a specific responsibility or thematic area regarding information collection and provision. Partners will also help the observatory to perform its services. Partners also play an essential role in assisting the observatory in its work towards harmonisation of European audiovisual information.

Correspondent organisations are professional information organisations, and they complement and assist the observatory and its partners in collecting information from the member States. Correspondent organisations also advise on data collection, and on the accuracy and relevance of the information from their specific country. In each member state, there are different correspondents for legal, market and economic, and practical information.

European professional organisations are widely represented in the Advisory Committee of the observatory. Some of these organisations collect and maintain databases from their own areas of interest in the audiovisual sector. These organisations have also agreed to collaborate with the observatory in collecting and providing the most reliable data in their field of specialty.

FURTHER READING
The European Broadcasting Union (EBU), which is unrelated to the European Union, was formed 12 February 1950 by 23 broadcasting organizations from Europe and the Mediterranean rim at a conference in the Devonshire coastal resort of Torquay, England. The EBU now has active full members from forty-eight countries, associate members from thirty more countries, and four other approved participants. Members are radio and television companies, most of which are government-owned public service broadcasters or privately owned stations with public missions. Full active Members are based in countries from Algeria to the Vatican State, including almost all European countries. Associate members are not limited to those from European countries and the Mediterranean but include broadcasters from Canada, Japan, Mexico, Brazil, India and Hong Kong, as well as many others. Associate members from the United States include ABC, CBS, NBC, the Corporation for Public Broadcasting, and Turner Broadcasting.

The EBU is a nongovernmental international association, based in Geneva and governed by Swiss law and its own statutes. It is the successor to the first international association of broadcasters, the International Broadcasting Union (1925), which was also based in Geneva. Its principal aims are to promote cooperation between members and with broadcasting organizations throughout the world and to represent its members’ interests in various fields, including legal, technical, and programming. The EBU is administered by a general assembly, which meets annually and elects an administrative council composed of fifteen active members. A president and two vice-presidents are chosen by the assembly from among the representatives of the members making up the council. Council membership is for four years, with re-election permitted. Because the EBU is based in Switzerland, the Swiss member, Société Suisse de Radiodiffusion et Télévision (SSR), has a permanent seat on the council. Four permanent committees, the Radio Programme Committee, the Television Programme Committee, the Legal Committee, and the Technical Committee, report to the council on the work of their working and ad hoc groups. Day-to-day operations are carried out by the Permanent Services staff, headed by the secretary-general.

One of the major activities of the EBU is the Eurovision scheme, consisting of program pooling and joint purchasing operations. Eurovision was the idea of Marcel Bezençon, once director of the SSR and president of the EBU. Eurovision was and is a television program clearing house which facilitates the exchange of programming between national networks throughout Europe. One of the early successes of the EBU was the relay on 2 June 1953, of the transmission of the coronation of Queen Elizabeth II to France, Belgium, the Netherlands, and Germany. The official birth of Eurovision as an international television network occurred 6 June 1954, when the famous Narcissus Festival from Montreux, Switzerland, opened a series of live transmissions, the "Television Summer Season of 1954."

Eurovision brings news and program events to European viewers on a daily basis. It is a network comprised of a mixture of permanent satellite and terrestrial stations. Its programs are identified by a starburst logo and an excerpt of the introduction to Te Deum, a work of the 17th-century composer Marc-Antoine Charpentier.

The most important regular Eurovision activity is the daily news exchange, providing full members and associate members with much of their non-domestic and European news. Material is fed into the exchange by members and nonmember broadcasting unions which also take from the exchange. The news exchange began on a trial basis in 1958 and became regular in 1961. It has now been supplemented by a multilingual channel known as Euronews. Euronews is designed to provide Europeans with world and local news coverage from a European viewpoint. On 1 January 1993, the Euronews channel began broadcasting on 5 terrestrial circuits and 12 satellite circuits in English, French, German, Italian, and Spanish. Euronews is a post-production channel, with none of its own reporters in the field. It has access to Eurovision material and news agencies for its content.

Another major Eurovision activity is its sports programming, including such events as the European Basketball Championships, European Athletics Cup, and European Swimming Championships. Eurovision operates a joint purchasing scheme for international sporting events. When members from two or more EBU countries are interested in a sporting event, they request coordination from the EBU,
The specific activity above became Kourou, French Guiana, aboard an Ariane rocket. December 1991 returns investment and short-term heavy transponder SES increasing in spite global recession als slots transponders The company's asset is to the Luxembourg. From there it uplinks rope, and backed which retains renewable franchise Européen increase since the 1980s. Households (approximately 570,000) have subscribed to the ASTRA system by the end of 1993. The ASTRA system is owned and operated by Société Européen des Satellites (SES), a private company incorporated in Luxembourg and trading under a twenty-five year renewable franchise agreement with the Grand Duchy which retains a 20% interest. SES, founded in March 1985 and backed by private commercial interests all over Europe, has headquarters at the Château de Betzdorf in Luxembourg. From there it uplinks TV and radio signals to the orbiting satellite craft which comprise the system. The company’s revenue is generated by leasing satellite transponders—effectively the equivalent of channel slots—to broadcasting organisations who pay annual rentals reputedly as high as £5 million per transponder. Despite global recession and widespread anxiety about the increasing fragmentation of the audio-visual audience, SES has found no shortage of potential customers, with transponder availability on each new satellite subject to heavy demand from broadcasters willing to gamble high investment and short-term unprofitability for healthier returns later.

ASTRA’s first satellite, ASTRA 1A, was launched in December 1988 from the European Space Centre in Kourou, French Guiana, aboard an Ariane 4 rocket. It became operational in February 1989, 35,975 kilometres above the equator at its geostationary orbital position of 19.2 East. This was the first commercial European satellite specifically dedicated to television and radio transmission. The system was subsequently augmented by the launch of ASTRA 1B in March 1991, while 1C followed in May 1993 and 1D in November 1994—all co-located at the same orbital position and with an active life-span of ten to twelve years. The sixty-four transponders of these four satellites provide over seventy separate analogue television services in either the PAL or D2Mac broadcast standards.
as well as nearly forty radio channels approaching CD stereo quality. The "footprint," or geographical universe, of this satellite constellation extends from Iceland and Norway in the north to coastal Morocco, Sardinia and Belgrade, Yugoslavia in the south; from the Canary Islands in the west to Warsaw, Poland and Budapest, Hungary in the east, with some reception possible even as far east as Helsinki, Finland.

The available services are accessed via one of three methods of delivery, the most visible being individual direct-to-home dish antenna (DTH) which can be fixed or motorised and which, for successful reception in the footprint's central belt, can be as small as 60cm in diameter. Alternatively, in the case of viewers in multi-occupancy dwellings, reception is via communal satellite master antenna systems (SMATV). Many other viewers, including a large proportion in Germany, Holland and Belgium, receive signals relayed over cable networks.

A major factor in the early success of SES was Rupert Murdoch's 1988 decision to become ASTRA's first commercial client, taking four transponders initially on ASTRA 1A for his incipient Sky Television Service (subsequently British Sky Broadcasting), aimed principally at English speaking audiences in the UK and Western Europe. A considerable number of German broadcasting interests also migrated early to ASTRA and SES's evolving system was soon enabling diverse programme services in a wide variety of languages, ushering in a new era of themed private television and radio channels as alternatives to the general entertainment models commonly associated with terrestrial broadcasting. Of course, many of the ASTRA channels are transmitted in encrypted or scrambled form, available only to contracted subscribers possessing the necessary decoding device. Movies, sports, music, news, children, nostalgia and shopping channels are the most consistently popular.

ASTRA 1D inaugurated a significant new phase of technological development, for it is the first satellite in the system that can be operated in the BSS frequency band (Broadcast Satellite Services) reserved for future digital transmissions. Indeed, it already provides capacity for the first European digital test transmissions conducted in collaboration with appropriate hardware manufacturers and programmers. In the late 1990s viewers can expect an increasing number of programme services to be made available simultaneously in both analogue and digital formats via the process of "dual illumination." SES, which plans to be a major influence in Europe's transition from the analogue to the digital age of TV and video, has signed firm contracts for the space launches of ASTRA satellites 1E, 1F and 1G in Summer 1995, the first half of 1996 and the first half of 1997 respectively. Each of these advanced satellites will be specially dedicated to digital transmissions and will significantly increase the potential capacity of the seven-satellite ASTRA system. They are expected to carry a total of 56 additional transponders, each capable, with the use of digital compression, of transmitting up to 10 TV programmes simultaneously; they will also contribute to the introduction of HDTV. In November 1994 the profitable French subscription channel Canal Plus concluded a long-term agreement with SES covering six transponders for digital transmission of the channel's "programmes bouquet" to the different European language markets. Other digital partners, such as British Sky Broadcasting and the European pay-television group Nethold, are also participating in the evolving digital environment.

As many as eight ASTRA devices could theoretically be positioned at the same location before SES would need to find an alternative orbital slot for a second series of twenty-first century satellites. By then, the ASTRA system as a whole will be able to deliver literally hundreds of channels, programmes and services to homes all over Europe. But SES is unlikely to enjoy an indefinite monopoly. In April 1995, the European satellite agency EUTELSAT launched the first in a new series of "Hot Bird" high-technology broadcasting satellites which will compete for the same market. It remains to be seen whether sufficient consumer demand exists for two such major players in the European satellite transponder rental business.

EUROPEAN UNION: TELEVISION POLICY

The European Union (EU) is a unique form of international organization created by treaty but exhibiting characteristics of an embryonic federation. It is based on amendments to the European Coal and Steel Community (ECSC) Treaty of 1951 (Treaty of Paris), the European Economic Community (EEC) Treaty of 1957 (first Treaty of Rome), and the European Atomic Energy Community (EURATOM) Treaty of 1957. The name “European Union” derives from the Treaty on European Union (TEU) of 1992, better known as the Maastricht Treaty. For this purpose, the EU may be considered synonymous with the former terms EEC and EC (European Community). Since 1995, the EU included fifteen members: France, Germany, Italy, Belgium, the Netherlands, Luxembourg, the United Kingdom, Ireland, Greece, Spain, Portugal, Denmark, Austria, Sweden, and Finland.

Among the most important purposes of the original EEC Treaty were the creation of a Common Market and an increase in economic integration among the Member States. Economic integration was intended both to promote economic prosperity and aid in the prevention of further conflicts such as occurred in World War II. Television policy in the EU reflects the underlying purpose of promoting European integration and abolishing national barriers to the free movements of goods and services within the Common Market. By decision of the European Court of Justice in Sacchi (1974), a television signal is considered a provision of services under Articles 59 and 60 of the Treaty of Rome, and national barriers to cross-frontier broadcasting or the establishment of broadcasters from one Member State in another are intended to be abolished in most circumstances.

The EU’s most important initiative in television policy is the establishment of a single EU market in television, the so-called “Television Without Frontiers” (TWF) Directive. A directive requires Member States to conform or harmonize their national legislation to standards or criteria laid down in the text of the directive. The TWF Directive, enacted by the Council of the EC in 1989, had the purposes of securing access for viewers and listeners in all Member States to broadcasting signals emanating from any other Member State and the harmonization of EU broadcast advertising standards. The European Parliament’s Hahn Report on Radio and Television Broadcasting in the EC (1982) laid the groundwork for the formal TWF Directive a few years later. The Hahn Report advocated establishment of a unified European television channel and saw satellite television technology leading to a reorganization of the media in Europe and breaking down of the boundaries of national television networks.

The TWF Directive (1989) lays down minimum standards that, if met by any television program, allow it to freely circulate within the EU without restriction, provided that it complies with the legislation of the country of origin. The directive contains chapters devoted to promotion of television program production and distribution, protection of minors, television advertising and sponsorship, and right of reply. Advertising that promotes discrimination on grounds of race, sex, or nationality; is offensive to religious beliefs; or which encourages behavior prejudicial to health, safety, or the protection of the environment is prohibited or restricted. For example, advertising of alcoholic beverages is restricted, but advertising of tobacco products is totally prohibited. A right of reply is accorded to any person or organization whose legitimate interests have been damaged by an incorrect assertion of fact in a television program.

The TWF Directive also lays down two other policies which have an effect similar to the establishment of quotas on broadcasting in the EU. First, the directive requires member states to ensure “where practicable” and by “appropriate means” that broadcasters reserve for “European works” a majority of their transmission time, exclusive of news, sports events, games, advertising, and teletext services. This is intended to protect 50% or more of transmission time so defined from foreign (non-EU) competition. The second quota, designed to stimulate the production of European drama work, requires broadcasters to reserve 10% or more of their transmission time (as above) or alternatively, 10% of their programming budget, for European works created by producers who are “independent of broadcasters.”

During the late 1980s and early 1990s, concern developed in Europe that a single market in television was an economic threat to national broadcasting markets and national media, as well as a threat to cultural and linguistic diversity in Europe. The threat is seen to derive from English language services and productions—originating from the United States, not England—in that only the United States is considered to have film and television industries organized on a scale large enough to take advantage of the single market. Indeed, one report indicates that the European market is largely dominated by United States productions in a proportion of 12:1. However, less than 50% of total transmission time on most European channels is accounted for by American programming.

Concern at the European level for the protection and aid of European programming has lead to audiovisual industry subsidy programs, such as the European Commission’s MEDIA, MEDIA II, Action Plan for Advanced Television programs, and the Council of Europe’s Eurimages fund. These are collectively intended to support and stimulate independent production and distribution networks for European works which are currently considered noncompetitive with U.S. programming imports.

European Union television policy thus simultaneously pursues the economic objective of creating a single market in broadcasting along with the fostering of cultural pluralism and protection of existing national and subnational broadcasting markets and institutions. The “Television Without Frontiers” approach, rooted in the fundamental purpose of the EU, has so far had more impact than other protectionist
EUROVISION SONG CONTEST

International Music Program

The Eurovision Song Contest is a live, televised music competition that has received widespread ridicule since its debut in 1956. Certainly this has been true of the contest's reception in the United Kingdom, which informs the perspective from which this entry is written. Yet, as its longevity indicates, the program's importance within European television history is undeniable. While critics plead for the plug to be pulled on this annual celebration of pop mediocrity, the Eurovision Song Contest (ESC) continues unabated, extending its media reach (if not its musical scope) from year to year. The competition is truly massive in terms of its logistical and technical requirements, the audience figures and record sales it engenders, and the significance of the popular cultural moments it produces.

The ESC is the flagship of Eurovision light entertainment programming. Eurovision is the television network supervised by the European Broadcasting Union (EBU), and was established in the early 1950s to serve two functions: to share the costs of programming with international interest between the broadcasting services of member nations, and to promote cultural appreciation and identification throughout western Europe. At the time of the first Eurovision broadcast in 1954 there were less than five million television receivers in the whole continent (90% of these were in England). The network now stretches into northern Africa, the Middle East, and eastern Europe, with most transmissions conveyed via satellite to the receiving stations of member nations for terrestrial broadcast.

The overwhelming majority of Eurovision transmissions have fallen into the sports, news, and public affairs categories. In the 1950s, EBU officials, perceiving the need for the dissemination of popular cultural programming to offset the influence of the American media, decided to extend Italy's San Remo Song Festival into a pan-European occasion. This became the ESC, the first of which was held in Lugano, Switzerland, and was relayed to less than ten nations. Since that time the contest has developed into a spring ritual now viewed by 600 million people in 35 countries, including several in Asia and the Middle East (which don't even send representatives to the competition).

The Eurovision Song Contest is a long, live Saturday evening showcase of pop music talent that typically ranges from the indescribably bad, through the insufferably indifferent, to a few catchy little numbers. Contestants are chosen by their respective nations during earlier preliminary stages. The duly nominated acts, as cultural ambassadors for their country, then attend the big event and perform their tune. Conventionally, the host nation is determined by the winner of the previous year's contest. (E.g. Gigliola Cinquetti's triumph of 1964, "Non ho l'età," resulted in Radiotelevisione Italiana playing host in 1965.) The ESC is designed to be a grand affair, with expensive sets, full orchestra accompaniment, and a "special night out" atmosphere. Best behavior is expected from all concerned.

Following the performances, panels of judges from each nation call in their point allocations to the central auditorium where the contest is taking place, and a "high-tech" scoreboard tabulates the cumulative scores. As even the most ardent critics will attest, this is a special moment for home viewers—one where elements particular to the ESC (technological accomplishment, anticipation induced by the live event, intercultural differences) combine for curious effect. Will your country's representatives beat the competition and incure the envy of other Europeans? Will the juries throw objectivity to the wind and vote according to national prejudice? Or will, as occurred to Norway's hapless Jahn

EUROVISION SONG CONTEST

EUROVISION SONG CONTEST

International Music Program

The Eurovision Song Contest is a live, televised music competition that has received widespread ridicule since its debut in 1956. Certainly this has been true of the contest’s reception in the United Kingdom, which informs the perspective from which this entry is written. Yet, as its longevity indicates, the program’s importance within European television history is undeniable. While critics plead for the plug to be pulled on this annual celebration of pop mediocrity, the Eurovision Song Contest (ESC) continues unabated, extending its media reach (if not its musical scope) from year to year. The competition is truly massive in terms of its logistical and technical requirements, the audience figures and record sales it engenders, and the significance of the popular cultural moments it produces.

The ESC is the flagship of Eurovision light entertainment programming. Eurovision is the television network supervised by the European Broadcasting Union (EBU), and was established in the early 1950s to serve two functions: to share the costs of programming with international interest between the broadcasting services of member nations, and to promote cultural appreciation and identification throughout western Europe. At the time of the first Eurovision broadcast in 1954 there were less than five million television receivers in the whole continent (90% of these were in England). The network now stretches into northern Africa, the Middle East, and eastern Europe, with most transmissions conveyed via satellite to the receiving stations of member nations for terrestrial broadcast.

The overwhelming majority of Eurovision transmissions have fallen into the sports, news, and public affairs categories. In the 1950s, EBU officials, perceiving the need for the dissemination of popular cultural programming to offset the influence of the American media, decided to extend Italy's San Remo Song Festival into a pan-European occasion. This became the ESC, the first of which was held in Lugano, Switzerland, and was relayed to less than ten nations. Since that time the contest has developed into a spring ritual now viewed by 600 million people in 35 countries, including several in Asia and the Middle East (which don't even send representatives to the competition).

The Eurovision Song Contest is a long, live Saturday evening showcase of pop music talent that typically ranges from the indescribably bad, through the insufferably indifferent, to a few catchy little numbers. Contestants are chosen by their respective nations during earlier preliminary stages. The duly nominated acts, as cultural ambassadors for their country, then attend the big event and perform their tune. Conventionally, the host nation is determined by the winner of the previous year's contest. (E.g. Gigliola Cinquetti's triumph of 1964, "Non ho l'età," resulted in Radiotelevisione Italiana playing host in 1965.) The ESC is designed to be a grand affair, with expensive sets, full orchestra accompaniment, and a "special night out" atmosphere. Best behavior is expected from all concerned.

Following the performances, panels of judges from each nation call in their point allocations to the central auditorium where the contest is taking place, and a "high-tech" scoreboard tabulates the cumulative scores. As even the most ardent critics will attest, this is a special moment for home viewers—one where elements particular to the ESC (technological accomplishment, anticipation induced by the live event, intercultural differences) combine for curious effect. Will your country's representatives beat the competition and incure the envy of other Europeans? Will the juries throw objectivity to the wind and vote according to national prejudice? Or will, as occurred to Norway's hapless Jahn
Teigen on that unforgettable May night in 1978, a contestant endure the humiliating fate of receiving no points whatsoever?

Like its late-lamented Eurovision companion, Jeux Sans Frontières, the ESC pays homage to clean, amateur fun and the elevation of the unknown to the status of national hero. But unlike the excessively carnivalesque JSF, the Eurovision Song Contest attempts to avoid the very absurdity and mockery it unwittingly generates. For its first decade, the ESC was a wholesome, formal affair: the amorous ballads it featured helped to create a chasm between the competition's cultural mission and that of rock music that has never been bridged. In the late 1960s and early 1970s, youth orientation became a primary factor in determining victory. The 1968 winner, "La la la ..." from Spain's Massiel, inspired a succession of entries incorporating childish lyrics that avoided identifiable linguistic origins in order to garner wide jury appeal. A similar delve into formulism was initiated by the British Sandy Shaw the following year: "Puppet on a String" evoked a generically pan-European musical heritage with its oompah brass and circus ground melodies. In their triumphant international debut on the ESC, Abba opted for English and a continentally-recognizable historical event with "Waterloo" in 1974. The Swedish quartet's glam sensibilities and subsequent commercial success multiplied the contest's kitsch quotient tenfold and launched a string of 2-girl/2-boy combos in its wake. Intimating its own concern over the increasingly imitative nature of the competition, the EBU stipulated various edicts that generated a spate of regional, folk-influenced entries in the late 1970s, all of which scored poorly with the judges. The 1980s witnessed the ascension of over-choreographed performance, and more explicit attempts to excite juries and viewers with soft, sanitized sex appeal. Efforts to resuscitate the ESC as a viable musical forum have resulted in recent efforts to modernize the look and style of the contest and to encourage a more professional approach to promotion through the participation of the corporate music industry.

In estimating the significance of the Eurovision Song Contest, perhaps less attention should be given to its bloated festivity or the derivative nature of the contenders' music. While its cultural merits are dubious, the event has become a television landmark. Its durability and notoriety have led the EBU to support the Eurovision Competition for Young Musicians and the Eurovision Competition for Young Dancers in order to further promote Eurocentric cultural understanding through televised stage performance.

—Matthew Murray
EXPERIMENTAL VIDEO

Experimental video, video art, electronic art, alternative TV, community video, guerrilla television, computer art: these are a few of the labels that have been applied to a body of work that began to emerge in the United States in the 1960s. Arguably, the most important of these labels is "experimental." The dominant goal of this video movement over the past 30 years has been change, achieved through the strategy of experimentation. The consistent target for this change has been television—commercially supported, network broadcast, mainstream television—whose success with mass audiences was the result of the repetition of proven formulas rather than aesthetic, ideological, or industrial innovation or experimentation. It is perhaps commercial television's ability to interpret the uncertain world within the context of familiar conventions that makes it an essential part of everyday life in America. And it is this body of familiar interpretations that became the challenge of experimental video artists.

In his book Expanded Cinema (1970), media visionary Gene Youngblood states "commercial entertainment works against art (experimentation), exploits the alienation and boredom of the public, by perpetuating a system of conditioned response to formulas." Youngblood's manifesto goes on to argue that any community requires experimentation in order to survive. He concludes, "The artist is always an anarchist, a revolutionary, a creator of new worlds imperceptibly gaining on reality."

One of the earliest of the video revolutionaries was Korean-born artist Nam June Paik. When he landed in the United States in 1964, Paik was already anxious to lead the experimental video revolution. One of his earliest works, TV Magnet (1965) challenged the viewing public to reexamine "television." Paik took a piece of furniture, the TV set, and changed its meaning by presenting it as sculpture. He demystified television by altering the magnetic polarity of the cathode-ray tube, demonstrating that the lines of light on the screen were clearly controlled by the large magnet sitting on top of the set rather than by some magical connection to the "real world." Most significantly, he changed the viewers' role as passive consumers to active creators by allowing them to interact with the piece by moving the magnet, thereby participating in the creation of the light patterns on the screen.

Paik is also credited with purchasing the first Sony Portapak, the first truly portable videotape recorder, in 1965. Usually, the Sony Portapak and not the altered TV set has been identified with the beginning of experimental video. For the first time, the low cost of the Portapak and its portability gave the experimental artists access to the means of producing television. Legend has it that Paik met a cargo boat in New York harbor, grabbed a Portapak, rode through the city in a cab shooting video and that night showed his street scenes, including the visit of Pope Paul VI, in Cafe a Go Go.

But Paik was not operating alone. In 1964, the same year Paik moved to the United States, Marshall McLuhan published Understanding Media. His declaration that "the medium is the message" became key words for Paik and a generation of experimental video makers who hoped to design and build a "Global Village" through alternative uses of telecommunications.

Many of these video artists followed the tradition of avant-garde filmmakers, seeking to define the unique properties of their medium. By the early 1970s, experimental video makers were trying to find ways to isolate the unique properties of video's electronic image. A profusion of technical devices began to appear, most notably among them, a variety of color synthesizers. Paik developed one synthesizer in collaboration with Shuya Abe. Concurrently, Stephen Beck, Peter Campus, Bill and Louise Etra, Stan VanderBeek, and Walter Wright built their own versions. These synthesizers allowed artists to work directly with the materials of the TV machine. They brought into the foreground TV's glowing surface composed of tiny points called pixels. By controlling voltages and frequencies, artists could change the color and intensity of the phosphorous pixels. In the process, they pushed the viewer away from the representational properties of TV and toward its powers of abstraction, to forms and patterns akin to those of modern painting.

None of the experimenters was more systematic in their pursuit of the unique properties and language of video than Steina and Woody Vasulka. The Vasulkas founded a studio-exhibition hall-meeting place, The Kitchen, in New York City as a locus of experimentation in video, dance, and music. As a teacher at the State University of New York at Buffalo, Woody Vasulka's established a video class that included the mathematics of television. Working first with the analog signal and then learning to digitize the electronic signal, Vasulka and his colleagues created a dialogue be-
tween the artist's imagination and the inner logic of the TV machine. Slowly an electronic vocabulary and grammar began to emerge and to shape to works such as The Commission (1983), in which electronic imaging codes are used to render the virtuosity of violinist Niccolo Paganini into visual narrative elements.

For many other video experimenters, however, the essence of the video revolution did not lie inside the machine, in its technical or formal qualities. These "video anarchists" responded instead to the Marxist call for the appropriation of the means of production. Their interpretation of McLuhan's famous phrase was that control of the medium determined the meaning of the message and so long as corporate American controlled the commercial TV, the message would be the same—"consume." The Sony Portapak gave these video makers a chance to produce. It did not matter that the Portapak produced low resolution black and white images, that the tape was almost impossible to edit, or that the equipment was sold by a large corporation. It was cheap, portable enough for one person to operate, and reproduced images instantly. It was finally a technology that gave the constitutional guarantee of "freedom of speech" a place on TV. The Federal Communications Commission (FCC) boosted the vision of a media democracy by requiring cable television companies to provide free public access channels in order to obtain franchises, and these access channels often provided the distribution and exhibition sites for experimental video makers.

Charismatic leaders such as George Stoney, who had worked in Canada's Challenge for Change program, rallied young video activists to the cause of media democracy. Throughout the 1970s public access centers, media centers, and video collectives sprung up across the country. Their names suggest utopian intentions: Top Value TV (TFTV), People's Video Theater, the Alternate Media Center, Videofreex, Global Village, Video Free America, Portable Channel, Videopolis, and Paper Tiger. These groups and many others nurtured the movement. Global Village started a festival, The Kitchen hosted the First Women's Video Festival, and Paper Tiger organized a cable network of 400 sites linked via satellite. Deep Dish Television, as the network is called, still continues, airing controversial programs on such issues as censorship of the arts, The Gulf War, and AIDS.

As the United States moved into a more conservative social climate in the 1980s and 1990s, the idea of giving distribution access to the people has lost much of its influence on public policy. The FCC eliminated the public access requirements and the Telecommunications Act of 1996 leaves the notion of public access greatly weakened.

Nevertheless, neither the movement to explore the TV machine nor the movement to create more democratic media went unnoticed by the more mainstream forms of television. In fact, the United States system of public television, the Public Broadcasting Service, takes as part of its mission the provision of a site for alternate voices, innovation, and the airing of controversy. These directives, it would seem, made PBS a natural forum for experimental video. Experience has proven otherwise.

In the early 1970s, WGBH producer, Fred Barzyk, created the New Television Workshop in Boston. Barzyk offered artists the use of non-broadcast quality half-inch video (the Portapak did not meet FCC blanking requirements) and then showed their work on Artists' Showcase. Other PBS venues followed, such as WNET's TV Laboratory in New York, KQED's Center for Experiments in Television in San Francisco, KTCA's Alive from off Center in Minneapolis, and the syndicated series, P.O.V. These programs flourished in the 1970s and early 1980s, yet most shut down because PBS station programmers across the country were always ambivalent about experimental media. They felt that their public trust required them to respond to ratings as did their counterparts in the commercial arena, and ratings for the experimental showcases were never large.

The commercial networks have made their own forays into the experimental movement. CBS, for example, explored the possibility of producing a show called Subject to Change with Videofreex. In the end, executives decided the show was "ahead of its time." NBC's Today show did hire Jon Alpert, co-director of the Downtown Community Television Center in New York City. Alpert's hand-held, personal, verité-style technique made him one of the few experimental artists who could move back and forth between the mainstream and alternate TV forums. He received both praise and criticism for doing so, as did others such as John Sanborn who made music videos for MTV and William Wegman who presented his famous dogs on David Letterman's programs. Michael Shamberg and the Raindance Corporation in their publication, Guerrilla Television (1971), had admonished "anyone who thinks that broadcast-TV is capable of reform just doesn't understand the media. A standard of success that demands 30 to 50 million people can only tend toward homogenization." The question for many experimenters, then, was whether Wegmen's dogs who had seemed so unique in half-inch black and white had been turned into "stupid pet tricks" by David Letterman.

As this example indicates, throughout the last three decades, the dilemma for experimental video artists has been to work with the substance of mass media without being swallowed by it. For many of them, working inside the networks has proven less satisfying than "making television strange" by placing it in new contexts such as museums, alternate spaces, and shopping malls.

Nam June Paik and his conceptual artist group Fluxus had led the way in the 1960s with their "de-collage" method that started with the removal of the TV set from its familial context in the home. Probably the most famous image of the experimental movement, however, is Ant Farm's Media Burn (1975). In this piece, a futuristic-looking Cadillac drives headlong through a burning pyramid of TV sets. Even viewers who
missed the actual performance and have seen only a photograph of Media Burn could not miss Ant Farm’s satirical stab at the power and influence of commercial television.

During the early years of the experimental video movements, the Everson Museum of Art, the Whitney Museum, the Museum of Modern Art, the Long Beach Museum of Art, and the Walker Art Center initiated video exhibition programs. Many of these works, often known as “video installations,” were multi-channel. Gary Hill’s Inasmuch as It Is Always Already Taking Place (1990) was a sixteen-channel installation with sixteen modified monitors recessed in a wall. The multi-channel capability allowed the artist to create new environments and contexts for the viewer. In their Wraparound (1982), Kit Fitzgerald and John Sanborn wanted to give the viewer the “everyday task of assimilating simultaneous information and eliminating the unwanted.”

In a measure of how far the artist intended to go to shake viewers out of their TV habit, Bill Viola placed a small TV set next to a pitcher and glass of water in what was depicted as a Room for St. John of the Cross (1983). Viola’s ambition was to rediscover—in the context of the age of television—the experience of “love, ecstasy, passage through the dark night, and flying over city walls and mountains” that the 16th century mystic described in his poetry.

All of these works have taken the artists away from the low-cost and low-tech Portapak. Instead, they have embraced the advances, especially in 3/4-inch color video, computer editing, and mixing. Moreover, the budgets required for many of the installation works had put the artists back in contact with mainstream corporate America. El Paso Gas Company and the Polaroid Corporation, for instance, had contributed to the creation of Viola’s Room for St. John of the Cross. No project symbolized more the ambition and frustrations of the experimental video artists learning to work with the commercial world than Dara Birnbaum’s video wall constructed for the Rio Shopping Complex in Atlanta. A brilliantly conceived design related to Birnbaum’s background in architecture and video, the wall, made up of 25 monitors, was a giant electronic bulletin board in the middle of the Rio mall’s town square. The content of the monitors was triggered by the motion of the shoppers in the square and contained images that included news coming out of Atlanta-based CNN as well as reflections on the natural landscape that existed before the construction of the mall. The record of the contract negotiations involved in the creation of this project gives an indication of the struggle between a real estate developer and an artist to find a common language for their project. Beginning with the concept that the “art was a work for hire,” the negotiations eventually reversed the point and concluded that the artist should retain the rights to the art and license it to the developer. In the end, developer Charles Ackerman told Business Atlanta magazine “this center will just smack you in the face with the idea that it is different. When you look at, you will think there is no limit to the imagination. Things don’t have to be the way they always are.”

By the 1980s and 1990s, experimental video attracted a whole new generation of artists. Many of the best of these were women, black, Hispanic, Asian, or gay. Most brought to their work a social or political agenda. Specifically, they challenged the white male power structure that dominated myth, history, society, the economy, the arts, and television. They questioned the whole narrative framework with its white male heroes conquering dark antagonists who threatened helpless females. Starting with the camera lens—which they described as an extension of the male gaze directed at the commodified woman—they deconstructed the whole apparatus of image making and image consuming.

Speaking for these artists, the narrator in Helen DeMichiel’s Consider Anything, Only Don’t Cry (1988), lays out their strategy:

I rob the image bank compulsively. I cut up, rearrange, collage, montage, decompose, rearrange, subvert, recontextualize, deconstruct, reconstruct, debunk, rethink, recombine, sort out, untangle, and give back the pictures, the meanings, the sounds, the music, that are taken from us in every moment of our days and nights.

In DeMichiel’s portrait of a woman trying to discover both her personal and culture identities, the intention was to produce a video quilt made up of images ranging from home movies to commercial ads. Indeed, the quilt, a favorite metaphor for the feminists’ communal approach to art, produced in the viewer a perception of many pieces being stitched together rather the perception of monolithic unity derived from conventional narrative. The video quilt invited the viewer into the making of the work by patching in their own associations stimulated by the personal and public images rather than asking them to uncover the message of the author.

Joan Braderman in Joan Does Dynasty (1986), assumed the role of the viewer by skillfully layering a masked image of herself into scenes with Dynasty star, Joan Collins. Once “in” the scene, Braderman carried on her own commentary about Alexi’s plot to wrest power from the Carrington patriarchy. Unlike Fluxus’ appropriation of the TV set, Braderman did not want to leave the familiar grounds of popular television. She wanted in, but on her own terms—with her own lines, and her own images. In effect, she wanted to rearrange “television.”

The challenge to the hegemony of white males spread rapidly in the 1980s and 1990s. Rea Tajiri and Janice Tanaka produced tapes to reclaim their memory and history that lay forgotten in the internment of Asian-Americans during World War II. In Iam Hakin Hopit (1984), Victor Masayesva used cutting-edge technology to celebrate the relevance of the Hopi’s world view. Edin Velez, in his Meta Mayan II (1981), used slow motion to enhance the effect on the American audience of the return gaze of a Mayan Indian woman. In 1991, African-American artist, Philip Mallory Jones, launched his First World Order Project, designed to take advantage of the global “telecommunity” that had been
created by technologies such as the satellite and the Internet. Jones’s project focused on the knowledge and wisdom that rises out of the differences that exist in “others.”

By the summer of 1989, the “differences” in “others” was too much for the establishment. Conservative political and cultural groups targeted the National Endowment for the Arts and its support of “morally reprehensible trash.” The most famous examples were Robert Mapplethorpe’s photos of brutal and extreme homosexual acts. The most infamous experimental film/video was Tongues Untied by African-American and gay artist, Marlon Riggs. Campaigns were mounted against this critically acclaimed work which was to air on the PBS series P.O.V. in the summer of 1991. In the end, 174 PBS stations refused to show the film. Marlon Riggs summed up the reaction of many in the experimental art field when he stated: “a society that shuts its eyes cannot grow or change or discover what’s really decent in the world.”

In Expanded Cinema, Gene Youngblood called for the “artist [to be] an anarchist, a revolutionary, a creator of new worlds imperceptibly gaining on reality.” Experimental artists from Nam June Paik to Marlon Riggs responded. Scholars like Youngblood look upon the experimental movement as a protean force, constantly taking new shapes and revealing additional facets of life and humanity. Critics view it as a many-headed Hydra: each head when cut off is replaced by two others.

In 1984, Paik titled his live satellite broadcast between Paris, New York, and San Francisco, Good Morning, Mr. Orwell. The technology of big brother had arrived. Of course, the playful Paik’s ambition was to demonstrate to Orwell how ridiculous technology was and how easily it could be humanized. In his book Being Digital (1995), Nicholas Negroponte supports Paik’s optimism about human beings actively appropriating technology to achieve change:

The effect of fax machines on Tiananmen Square is an ironic example, because newly popular and decentralized tools were invoked precisely when the government was trying to reassert its elite and centralized control. The Internet provides a worldwide channel of communication that flies in the face of any censorship and thrives especially in places like Singapore, where freedom of the press is marginal and networking ubiquitous.

This is finally the proper context in which to judge the American experimental video movement. It is the desire to be free that has driven the experiments of American video artists and it is the possibility of liberating the full potential of all human beings that will lead them into experimental collaborations in the future.

—Ed Hugetz

EYES ON THE PRIZE
U.S. Documentary Series

Eyes on the Prize, a critically acclaimed 14-part series dealing with the American Civil Rights Movement, was broadcast nationally by the Public Broadcasting Service. The first six programs, Eyes on the Prize: America’s Civil Rights Years (1954–1965) was aired in January and February 1987. The eight-part sequel, Eyes on the Prize II: America at the Racial Crossroads (1965–1985) was broadcast in 1990.

Produced over the course of twelve years by Blackside, Inc., one of the oldest minority-owned film and television production companies in the country, the series received over 23 awards, including two Emmys (for Outstanding Documentary and Outstanding Achievement in Writing), the duPont Columbia Award, the Edward R. Murrow Brotherhood Award for Best National Documentary, the International Documentary Association’s Distinguished Documentary Award, Program of the Year and Outstanding News Information Program by the Television Critics Association, and the CINE Golden Eagle.
In addition to its positive receptions from television critics and professionals, *Eyes on the Prize* was also lauded by historians and educators. Using archival footage and contemporary interviews with participants in the struggle for and against Civil Rights, the series presented the movement as multi-faceted. Watched by over 20 million viewers with each airing, it served as an important educational tool, reaching a generation of millions of Americans who have no direct experience with the historic events chronicled. Though the series included such landmark events as the Montgomery, Alabama bus boycott of 1955–56, the 1963 March on Washington, and the assassination of Dr. Martin Luther King, Jr., in 1968, it also documented the workings of the movement on a grass-roots level, presenting events and individuals often overlooked.

*Eyes on the Prize I*, narrated by Julian Bond, was launched by the episode entitled “Awakenings.” It documents two events that helped focus the nation’s attention on the oppression of African American citizens: the lynching of fourteen-year-old Emmett Till in 1955 and the Montgomery bus boycott, motivated by the arrest of Rosa Parks, who refused to relinquish her seat on a public bus to a white person. Parts two through six covered such topics as the key court case, *Brown v. the Board of Education*, the nationwide expansion of the movement, James Meredith’s enrollment at the University of Mississippi, the Freedom Rides, and the passage of the Voting Rights Act.

Despite the critical and popular success of the first six episodes, executive producer Henry Hampton had a difficult time raising the six million dollars needed to fund the sequel. The reticence of both corporate and public granting organizations is attributed to the subject matter of *Eyes II*, issues which the United States has not yet resolved: the rise of the Black Panther Party, the Nation of Islam, the Black Consciousness Movement, the Vietnam War, busing, and Affirmative Action.

In the second season the series quickly gained a reputation for changing the announced topic, sometimes as late as Friday morning. Midgley began to send "field producers," a term that included unit members with other official titles, to different locations, sometimes holding open the possibility of any one of five stories. The series production relied heavily on news judgments of the field producers, who included Bernie Birnbaum, Russ Bensley, John Sharnick, Av Westin, and Philip Scheffler, individuals who would go on to major roles in the television news industry. Their decisions led to crucial alterations in plans and schedules. Twice, for example, in the second season, last minute developments growing out of tension over school integration in New Orleans were given precedence over already developing stories. Similarly, when the production unit was taping John F. Kennedy's announcement and introduction of Cabinet appointments on the day two jet airliners crashed over New York City, Midgley decided to cover the crash. The resulting journalism illustrated the production unit's expert response to such events—they were faster than units in news divisions in New York. Even late-breaking international stories received the unit's attention. They covered Yuri Gagarin orbiting the earth, causing cancellation of two shows on the Eichmann trial in Israel, and another on the events surrounding the Bay of Pigs and the return of prisoners. When anti-government factions seized the cruise ship Santa Maria off the coast of Brazil, Charles Kuralt was dispatched on another ship to intercept and film the incident, providing coverage for two weeks. If events surrounding a story halted, as they did during negotiations with the hijackers of Santa Maria, or if two events were simultaneously breaking, the series sometimes aired two fifteen-minute segments. After the second year, the CBS television network illustrated to potential advertisers the timeliness of the program by citing listings of the stories the series was preparing to cover.

Although the title changed, Eyewitness remained committed to covering presidential trips and diplomacy, keeping the production unit on tight deadlines according to the president's schedule. Certain shows, such as "Spring Arrives in Paris" and "The Big Ski Boom," were prepared over a two- or three-week period and were aired based on the happenstance of events unfolding and the logistics needed to cover the president. After the title change, coverage of diplomacy changed only slightly by placing the flow of events in something of a larger context, such as "Enroute to Vienna," and "The President in Mexico." But this shift was made possible by the developing expertise of the unit.

During the first year, Eyewitness to History highlighted correspondents Robert Pierpoint, Alexander Kendrik, Robert Trout, David Schoenbrun, Lou Cioffi, Ernest Leiser, and, especially Charles Collingwood, assigned to accompany the president. With Walter Cronkite as anchor in New York,
two or three additional correspondents appeared in programs, from Washington D.C., and different parts of the world according to an event’s implications. This structure remained constant throughout the series for coverage of presidential trips as well as for international incidents such as “The Showdown in Laos” and “India at War.” Midgley utilized CBS reporters around the world, even those assigned to the CBS Evening News, setting the stage for the series’ own cancellation, and the unit’s re-assignment as a support mechanism for Walter Cronkite’s thirty-minute broadcast.

Network politics at this time occasioned a period of instability with regard to the anchor seat. Charles Kuralt was named anchor for the second season of Eyewitness to History. Midgley and others inside CBS perceived Kuralt as following in the footsteps of Edward R. Murrow. But James Aubrey, president of CBS, disliked Kuralt’s on camera appearance, and convinced Midgley to return Cronkite as anchor in January 1961. Cronkite’s role as New York correspondent provided a scope of credibility absent from his other projects. When Cronkite went to the CBS Evening News on 16 April 1962, Charles Collingwood became anchor of Eyewitness.

At the series start, a critical dimension was added to the objective task of presenting news with Howard K. Smith’s commentary on programs focused on diplomacy. In covering certain issues the distinct perspectives and arguments between producer and reporter became evident, as in the case of “Diem’s War—Or Ours,” and other reports on Vietnam.

Critics and the public were engaged by the urgency and depth Eyewitness brought to contemporary issues. Even when considering the new trend in jazz music, Bossa Nova, the producers presented a “critical look” at jazz. Even so the announcement of the program “Who Killed Marilyn Monroe?” brought such an outcry from Hollywood that Midgley changed it to “Marilyn Monroe, Why?”

For three years Eyewitness to History aggressively pursued such events as changes in the labor movement, government fiscal policy, the medical establishment and U.S. foreign relations. It was the training and proving ground for television journalists whose careers span most of the second half of the century they covered. And the series signaled CBS’s turn to prominence in network television journalism.

The policy of the United States Federal Communications Commission (FCC) that became known as the “Fairness Doctrine” is an attempt to ensure that all coverage of controversial issues by a broadcast station be balanced and fair. The FCC took the view, in 1949, that station licensees were “public trustees,” and as such had an obligation to afford reasonable opportunity for discussion of contrasting points of view on controversial issues of public importance. The commission later held that stations were also obligated to actively seek out issues of importance to their community and air programming that addressed those issues. With the deregulation sweep of the Reagan Administration during the 1980s, the commission dissolved the fairness doctrine. This doctrine grew out of concern that because of the large number of applications for radio station being submitted and the limited number of frequencies available, broadcasters should make sure they did not use their stations simply as advocates with a singular perspective. Rather, they must allow all points of view. That requirement was to be enforced by FCC mandate.

From the early 1940s, the FCC had established the “Mayflower Doctrine,” which prohibited editorializing by stations. But that absolute ban softened somewhat by the end of the decade, allowing editorializing only if other points of view were aired, balancing that of the station’s. During these years, the FCC had established dicta and case law guiding the operation of the doctrine.

In ensuing years the FCC ensured that the doctrine was operational by laying out rules defining such matters as personal attack and political editorializing (1967). In 1971 the commission set requirements for the stations to report, with their license renewal, efforts to seek out and address issues of concern to the community. This process became known as “Ascertainment of Community Needs,” and was to be done systematically and by the station management.

The fairness doctrine ran parallel to Section 315 of the Communications Act of 1934 which required stations to offer “equal opportunity” to all legally qualified political candidates for any office if they had allowed any person running in that office to use the station. The attempt was to balance—to force an even handedness. Section 315 exempted news programs, interviews and documentaries. But the doctrine would include such efforts. Another major difference should be noted here: Section 315 was federal law, passed by Congress. The fairness doctrine was simply FCC policy.

The FCC fairness policy was given great credence by the 1969 U.S. Supreme Court case of Red Lion Broadcasting Co., Inc. v. FCC. In that case, a station in Pennsylvania, licensed by Red Lion Co., had aired a “Christian Crusade” program wherein an author, Fred J. Cook, was attacked. When Cook requested time to reply in keeping with the fairness doctrine, the station refused. Upon appeal to the FCC, the Commission declared that there was personal attack and the station had failed to meet its obligation. The station appealed and the case wended its way through the courts and eventually to the Supreme Court. The court ruled for the FCC, giving sanction to the fairness doctrine.

The doctrine, nevertheless, disturbed many journalists, who considered it a violation of First Amendment rights of free speech/free press which should allow reporters to make their own decisions about balancing stories. Fairness, in this view, should not be forced by the FCC. In order to avoid the requirement to go out and find contrasting viewpoints on every issue raised in a story, some journalists simply avoided any coverage of some controversial issues. This “chilling effect” was just the opposite of what the FCC intended.

By the 1980s, many things had changed. The “scarcity” argument which dictated the “public trustee” philosophy of the commission, was disappearing with the abundant number of channels available on cable TV. Without scarcity, or with many other voices in the marketplace of ideas, there were perhaps fewer compelling reasons to keep the fairness doctrine. This was also the era of deregulation when the FCC took on a different attitude about its many rules, seen as an unnecessary burden by most stations. The new chairman of the FCC, Mark Fowler, appointed by President Reagan, publicly avowed to kill the fairness doctrine.

By 1985, the FCC issued its Fairness Report, asserting that the doctrine was no longer having its intended effect, might actually have a “chilling effect” and might be in violation of the First Amendment. In a 1987 case, Meredith Corp. v. FCC, the courts declared that the doctrine was not mandated by Congress and the FCC did not have to continue to enforce it. The FCC dissolved the doctrine in August of that year.

However, before the commission’s action, in the spring of 1987, both houses of Congress voted to put the fairness doctrine into law—a statutory fairness doctrine which the FCC would have to enforce, like it or not. But President Reagan, in
keeping with his deregulatory efforts and his long-standing favor of keeping government out of the affairs of business, vetoed the legislation. There were insufficient votes to override the veto. Congressional efforts to make the doctrine into law surfaced again during the Bush administration. As before, the legislation was vetoed, this time by Bush.

The fairness doctrine remains just beneath the surface of concerns over broadcasting and cablecasting, and some members of congress continue to threaten to pass it into legislation. Currently, however, there is no required balance of controversial issues as mandated by the fairness doctrine. The public relies instead on the judgment of broadcast journalists and its own reasoning ability to sort out one-sided or distorted coverage of an issue. Indeed, experience over the past several years since the demise of the doctrine shows that broadcasters can and do provide substantial coverage of controversial issues of public importance in their communities, including contrasting viewpoints, through news, public affairs, public service, interactive and special programming.

FALK, PETER

U.S. Actor

Most notable for his role as television's preeminent detective Lt. Columbo, Peter Falk has developed a long and distinguished career in television and film. For his efforts, Falk has received numerous Emmy Awards for a detective role which has taken its place alongside other legendary literary sleuths. Since the late 1970s, Falk has continued to appear in feature films as well as reprise his Columbo character on television.

One of Falk's earliest roles was in The Untouchables, a series which launched a number of stars, including Robert Redford. Falk became a popular dramatic actor appearing in several anthology programs, including Bob Hope Presents the Chrysler Theater and The DuPont Show of the Week. He won his first of several Emmy awards in 1962 for his portrayal of Dimitri Fresco in The Dick Powell Show's presentation of the teleplay "The Price of Tomatoes."

In 1965, Falk landed the title role in the CBS series The Trials of O'Brien. A precursor to the Columbo character, O'Brien acted diligently in his professional duties yet slovenly in his personal life. The series lasted one season before cancellation. During the 1960s, Falk also appeared in a number of feature films, including Murder, Inc., which garnered him an Oscar nomination.

The Columbo character, brainchild of veteran television producers Richard Levinson and William Link, came to Falk quite by accident. According to Mark Dawidziak, author of The Columbo File, Levinson and Link had experimented with the Columbo persona when they were writing for NBC's Chevy Mystery Theater. In that and subsequent versions, Columbo was always portrayed by an elderly gentleman. Thus, in 1968, when Levinson and Link approached Universal television with the idea for a TV movie based on their stage play "Prescription: Murder," the writers hoped to enlist Lee J. Cobb or Bing Crosby as Columbo. Peter Falk, a friend of Levinson and Link, had seen the script and was interested; when Cobb and Crosby refused, Falk won the part.

NBC was interested in turning the film into a series, but neither Falk nor Levinson and Link wanted to do weekly

episodic television at the time. Three years later, when NBC promised to package Columbo in rotation with two other series in the NBC Mystery Movie, Falk and Levinson and Link agreed. The series enjoyed a successful run from 1971 to 1977; much of that success is due to Falk’s brilliant portrayal of Columbo. According to Dawidziak, “Everything clicked—the disheveled appearance, the voice, the squint caused by his false right eye. It was all used to magnificient advantage in Falk’s characterization.”

In 1989, Falk reprised the Columbo role, this time for the ABC Mystery Movie; new Columbo episodes have been produced since. Between 1971 and 1990, Falk won four Emmy Awards for his role as Columbo. Since 1978, Falk has also appeared in such feature films as The Cheap Detective (1978), The In-Laws (1979), and Roommates (1994) and, as himself, in Wings of Desire (1987).

FAMILY
U.S. Domestic Drama

Family, a weekly prime-time drama about a Southern California suburban family, ran from 1976 to 1980 on ABC. The show’s pilot, which became the first episode of a six-part miniseries that aired in March 1976, was created by novelist and screenwriter Jay Presson Allen (Forty Carats), directed by film director Mark Rydell (On Golden Pond), and produced by film director Mike Nichols (Who’s Afraid of Virginia Woolf?, The Graduate) as well as television moguls Aaron Spelling and Leonard Goldberg (Charlie’s Angels, Starsky and Hutch) . The success of the miniseries—it recorded an astonishing 40 share in the ratings—led ABC to pick up Family as a regular series for their 1976–77 season. During its five seasons Family received fourteen Emmy Award nominations, three of them for Outstanding Drama Series. The show won four awards all in acting categories: Outstanding Lead Actress in a Drama Series (Sada Thompson in 1977), Outstanding Supporting Actress in a Drama Series (Kristy McNichol in 1976 and 1978) and Outstanding Supporting Actor in a Drama Series (Gary Frank in 1976).

Family’s initial success came from the creative forces behind the project. These artists and producers, nevertheless, had to fight for three years (beginning 1973) before convincing ABC to give the series a chance. As Rowland Barber explains in “Three Strikes and They’re On,” during development ABC found the family portrayed in the series “at various critical times, (1) too well-educated and too well-dressed, (2) too true to life for Family Viewing Time and (3) simply ‘too good for television’” (24) . These attempts to dismiss the project were discarded once the miniseries proved to be a hit both with audiences and critics.

Family also became a success due to the renewed interest in dramatic shows during the mid-1970s (as witnessed by the huge success of the miniseries Rich Man, Poor Man) . In general, police/detective shows like Police Woman, Charlie’s Angels, S.W.A.T., Starsky and Hutch, Switch and Kojak dominated the televisual panorama of the 1976-76 season. The appearance of non-violent, well-crafted and well-acted programs like Family constituted a refreshing alternative to the predominant action-packed TV scene, which was readily embraced by TV audiences.

Family followed the saga of the Lawrences, a middle-class family from Pasadena, California. The clan consisted of the parents, Kate and Doug (played by Sada Thompson and the late James Broderick), and their three offspring: Nancy, divorcée, lawyer and mother of infant Timmy (originally played in the miniseries by Elaine Heilveil, Nancy was portrayed in the regular series by Meredith Baxter-Birney), Willie, a high-school drop-out who was nevertheless a talented and idealistic aspiring writer (played by Gary Frank), and free-spirited teenager Letitia, better known as “Buddy”
(played by Kristy McNichol). During its 1978-79 season, a
new regular character joined the series: Annie Cooper, an
11-year-old orphan girl whom the Lawrences decide to
adopt (played by Quinn Cummings).

Throughout its five seasons, the series engaged a range of
temporary social issues within the parameters of its
melodramatic structure. For example, the miniseries began
with a pregnant Nancy discovering her husband Jeff (played
by John Rubinstein) in bed with one of her girlfriends. This
situation led to a divorce. Subsequently, the series explored,
through the character of Nancy, issues related to the social
position of a divorced, professional woman who was also a
mother. On a couple of occasions, the show dealt with issues
pertaining to homosexuality. In one episode, Willie’s best
crime out of the closet, forcing Willie to reconsider
his positions about both friendship and homosexuality. In
another episode, Buddy had to face issues about bigotry
when the school attempted to fire a teacher she admired who
turned out to be a lesbian. On several occasions, the Law-
rence matriarch found herself in difficult social, moral, and
economic positions that resulted from her situation as a mid-
dle-age woman. Once Kate faced the dilemma of possibly
to have an abortion when she discovered she was
expecting a child at an age when risks and complications
related to pregnancy are higher (she was over forty). In
another episode, Kate had to confront her insecurities and
fears when she decided to take a job outside the house. At
one point in the series, Kate had to deal with the fact that
she had breast cancer.

Not only did Family reclaim a place for hour-long
(melo)dratic series dealing with contemporary everyday
topics during a time when action series ruled, but it also
prepared the ground for the explosion of prime time soap
operas such as Dallas, Dynasty, Knots Landing, and Falcon
Crest that appeared during the late 1970s and 1980s.

FAMILY ON TELEVISION

The introduction of television after World War II coinci-
ded with a steep rise in mortgage rates, birth rates,
and the growth of mass-produced suburbs. In this social
climate, it is no wonder that television was conceived as, first
and foremost, a family medium. Over the course of the
1950s, as debates raged in Congress over issues such as
juvenile delinquency and the mass media’s contribution to
it, the three major television networks developed prime-time
fare that would appeal to a general family audience. Many
of these policy debates and network strategies are echoed in
the more recent public controversies concerning television
and family values, especially the famous Murphy Brown
incident in which Vice President Dan Quayle used the name
of this fictional unwed mother as an example of what is
wrong with America. As the case of Quayle demonstrates,
the public often assumes that television fictional representa-
tions of the family have a strong impact on actual families
in America. For this reason people have often also assumed
that these fictional households ought to mirror not simply
family life in general, but their own personal values regard-
ing it. Throughout television history, then, the representa-
tion of the family has been a concern in Congress, among
special interest groups and lobbyists, the general audience
and, of course, the industry which has attempted to satisfy
all of these parties in different ways and with different
emphasis.

In the early 1950s, domestic life was represented with
some degree of diversity. There were families who lived in
suburbs, cities, and rural areas. There were nuclear families (such as that in The Adventures of Ozzie and Harriet) and childless couples (such as the Stevens of I Married Joan or Sapphire and Kingfish of Amos ’n’ Andy). There was a variety of ethnic families in domestic comedies and family dramas (including the Norwegian family of Mama and the Jewish family of The Goldbergs). In addition, anthology dramas such as Marty sometimes presented ethnic working-class families. At a time when many Americans were moving from cities to mass-produced suburbs these programs featured nostalgic versions of family and neighborhood bonding that played on sentimentality for the more “authentic” social relationships of the urban past. Ethnicity was typically popular so long as it was a portrayal of first generation European immigrants; black, Hispanic and Asian family life were almost never dealt with. When they were they were the butt of the joke such as the Cuban Ricky Ricardo with his Latin temper or the African American Beula with her job as the happy maid/mammy in a white household.

Meanwhile in 1950s documentaries and in fiction programming the family often served as the patriotic reason “why we fight” Communism—much as it served as a source of patriotism in the Norman Rockwell magazine covers of W.W. II. Action/adventure programs such as the syndicated series I Led Three Lives, contained numerous episodes in which Communists infiltrated families and threatened to pervert American youth. Paradoxically, however, the family also provided a reason why we fight the more extremist versions of anti-communism—especially that espoused by Senator Joe McCarthy. In 1952 Edward R. Murrow’s See It Now presented “The Case of Milo Radulovich,” about an Air Force pilot who was suspected for Communist sympathies. Murrow used interviews with Radulovich’s sister and father to convince viewers that he was not a Communist but instead a true American with solid family values. From the outset then the family on television served both sentimental and political/ideological functions and these were often intertwined.

By the mid-1950s, as television production moved to Hollywood film studios and was also controlled by Hollywood independent production companies such as Desilu, the representation of family life became even more standardized in the domestic comedy. By 1960 all the ethnic domestic comedies and dramas disappeared and the suburban domestic comedy rose to prominence. Programs such as The Donna Reed Show, Leave It to Beaver, and Father Knows Best presented idealized versions of white middle-class families in suburban communities that mirrored the practices of ethnic and racial exclusion seen in America’s suburbs more generally. Even while these programs captured the American imagination there was a penchant for social criticism registered in 1950s science fiction/horror anthologies (such as The Twilight Zone’s “Monsters on Maple Street” that explored the paranoid social relationships and exclusionary tactics in America’s suburban towns.) Within the domestic comedy form itself, the nuclear family was increasingly displaced by a counter-programming trend that represented broken families and unconventional families. Coinciding with rising divorce rates of the 1960s numerous shows featured families led by a single father (including comedies such as My Three Sons and Family Affair and the Western Bonanza), while others featured single mothers (including comedies such as Julia and Here’s Lucy and the western The Big Valley). In all these programs, censorship codes demanded that the single parent not be divorced; instead the missing parent was always explained through a death in the family. By 1967 the classic domestic comedies featuring nuclear families were all canceled, while these broken families, as well as a new trend of “fantastic families” in programs like Bewitched and The Addams Family accounted for the mainstay of the genre.

At the level of the news these fictional programs were met by the tragic break up of America’s first family as the coverage of President John F. Kennedy’s funeral haunted America’s television screens. We might even speculate that the proliferation and popularity of broken families on television entertainment genres was in some sense a way our society responded to and aesthetically resolved the loss of our nation’s father and the dream or nuclear family life that he and Jackie represented at the time. As the nation mourned, other program genres showed cause for more general sorrow. Despite the fact that domestic comedy families were well-to-do the 1960s also included depictions or America’s underclass in hard-hitting socially relevant dramas such as the
short-lived *East Side/West Side* that explored issues of child abuse and welfare in New York slums. Television also presented documentaries such as *Hunger in America* and *Harvest of Shame* that depicted underprivileged children, while other documentaries such as *Middletown* or *Salesmen* chronicled the everyday lives or typical Americans, demonstrating the impossibility of living up to the American family ideal. This trend toward social criticism was capped off in 1973 when PBS aired *An American Family* which chronicled the everyday life of Mr. and Mrs. William Loud and their suburban family by placing cameras in their home and surveying their day-to-day affairs. As the cameras watched, the Lounds filed for divorce and their son came out as a homosexual. The discrepancies between these documentary/socially relevant depictions of American families and the more idealized images in the domestic comedy genre were now all too clear.

More generally the 1970s was a time of significant change as the portrayal of family life became more diverse, although never completely representative of all American lifestyles. Network documentaries continued to show the underside of the American Dream, while other genres took on the burden of social criticism as they attempted to reach a new demographic of young urban professionals, working women, and a rising black middle-class. Programs such as Norman Lear's *All in the Family*, *Mauve*, and *The Jeffersons* flourished. *All in the Family* presented a working-class milieu and drew its comedy out of political differences among generations and genders in the household; *Mauve* was the first program to feature a divorced heroine who, in one two-part episode also had the first prime-time abortion. Other programs presented African America families ranging from shows like *The Jeffersons* who had, as the opening credits announced, finally got "a piece of the pie" to programs set in ghettos such as *Good Times*. Interracial families such as *Webster* depicted white parents bringing up black babies (although the reverse was never the case). In the mid-1970s through the present these new family formations have included programs featuring single moms (who were now often divorced or never married) such as *Kate and Allie*, *One Day at a Time*, and the more recent *Murphy Brown*. Drawing on previous working-girl/mother sitcoms like *Our Miss Brooks* or *Here's Lucy* the MTM studio precipitated a shift from literal biological families to a new concept of the family workplace. Here, in programs such as *The Mary Tyler Moore Show* co-workers were also co-dependents so that relationships were often ambiguously collegial and familial. Despite these innovations the 1970s and early 1980s still featured sentimental versions of family life including daytime soap operas, family dramas such as *Family and Eight Is Enough*, historical-family dramas such as *The Waltons*, *Little House on the Prairie*, and the popular comedy *The Brady Bunch*.

Over the course of the 1980s, the genre of prime-time soap opera served as television's answer to the Reagan era dream of consumer prosperity. Programs such as *Dallas* and *Dynasty* presented a world of high fashion, high finance, and for many, high camp sensibilities. Despite their idealized upper-class settings these programs like daytime soaps or the 1960s *Peyton Place*, dealt with marital infidelity, incest, rape, alcoholism and a range of other issues that pictured the family as decidedly dysfunctional. Perhaps because these families were extremely wealthy, audiences could view their problems as a symptom of upper-crust decadence rather than a more general failure in American family life experienced by people of all social backgrounds. Wealth was also apparent in the enormously popular *Cosby Show*, which featured black professionals living an ideal family life. Unlike *Dallas* or *Dynasty*, however, which were widely appreciated for their escapist fantasies and/or "camp" exaggeration, *Cosby* was often taken to task for not being realistic enough.

In addition to prime-time soaps and family comedies, other programs of the 1980s and 1990s showcased dysfunctional families and/or families in crisis. Made-for-TV-movies such as *The Burning Bed* detailed the horrors of spousal abuse. In addition, during this period the television talk show has taken over the role of family therapist as programs such as *Geraldo*, *Oprah*, and *Jerry Springer* feature real-life family feuds with guests who confess to incest, spousal abuse, matricide, co-dependencies and a range of other family perversions. Unlike the daytime soap operas, these programs lack the sentiment of family melodrama and thus appear more akin to their contemporary cousin, the TV tabloid. These syndicated "tabloid" shows such as *COPS* or *America's Most Wanted* offer a range of family horrors as law enforcement agencies and vigilantes apprehend the outlaws of the nation.

They not only demonstrate how to catch a thief and other criminals, they also engage in didactic editorializing which either explicitly or implicitly suggests that crimes such as robbery, prostitution, or drug dealing are caused by dysfunctional family lives rather than by political, sexual, racial, and class inequities. Still, in other instances the family remains "wholesome," especially in the age of cable when the broadcast networks often try to win a family audience by presenting themselves as more clean cut than their cable competitors. (For example, in various seasons on different nights ABC and NBC have both fashioned lineups of family-oriented programs aimed at mothers and children.)

Over the course of the 1980s and through the present, innovation on old formats has also been a key strategy. Programs such as the popular sitcom *Family Ties* reversed the usual generational politics of comedy by making the parents more liberal than their conservative, money-obsessed son. In the latter 1980s the new FOX network largely ingratiated itself with the public by displaying a contempt for the "whitebread" standards of old network television. Programs such as *Married... with Children* parodied the middle-class suburban sitcom, while sitcoms such as *Living Single* and the prime-time soap, *Melrose Place* presented alternate youth-oriented lifestyles. ABC's *Roseanne* followed suit with its highly popular parody of family life that includes such unconventional sitcom topics as teenage sex, spousal abuse, and lesbian romance. By the mid-1990s ABC broad-
cast Roseanne's clone, *American Girl*, the first sitcom to feature the generational conflicts in a Korean family.

Parody and unconventional topicality were not the only solutions to innovation. If portrayals of contemporary happy families seemed somewhat disingenuous or at best cliché by the end of the 1980s television could still turn to nostalgia to create sentimental versions of family togetherness. For example, family dramas such as *The Wonder Years* and *Brooklyn Bridge* presented popular memories of baby boom America. Both nostalgia and parody are also the genius in the system of the cable network, Nickelodeon, which is owned by Viacom, the country's largest syndicator. Its prime-time line-up, which it calls "Nick at Nite," features Viacom-owned reruns of mostly family sitcoms from television's first three decades, and Nick advertises them through parodic slogans that make fun of the happy shiny people of old TV. Other cable networks have also premised themselves on the breakdown of nuclear family ideology and living arrangements by, for example, rethinking the conventional depictions of home life on broadcast genres. For instance, MTV's Generation X serialized programs under the general title, *The Real World*, chronicles the real life adventures of young people from different races and sexual orientations living together in a house provided by the network. Nevertheless, cable has also been extremely aware of ways to tap into the on-going national agenda for family values and has turned this into marketing values. Pat Robertson's Family Channel is an example of how the Christian right has used cable to rekindle the passion for a particular kind of family life, mostly associated with the middle-class family ideals of the 1950s and early 1960s. In this regard it is no surprise that the Family Channel includes reruns of *Father Knows Best*, but without the parodic campy wink of Nick at Nite's evening line-up.

Although television has consistently privileged the family as the "normal" and most fulfilling way to live one's life, its programs have often presented multiple and contradictory messages. At the same time that a sitcom featured June Cleaver wondering what suit to buy the Beaver, a documentary or news program showed the underside of family abuse or the severe poverty in which some families were forced to live. Because television draws on an enormous stable of representational traditions and creative personnel, and because the industry has attempted to appeal to large nationwide audiences the medium never presents one simple message. Instead it is in the relations among different programs and genres that we begin to get a view of the range of possibilities. Those possibilities have, of course, been limited by larger social ideologies such as the racism or homophobia which affects the quality and quantity of shows depicting nonwhite and non-heterosexual households. Despite these on-going exclusions however it is evident that the family on television is as full of mixed messages and ambivalent emotions as it is in real life.

—Lynn Spigel

THE FAMILY PLOUFFE/LA FAMILLE PLOUFFE

Canadian Serial Drama (Teleroman)

La famille Plouffe was created in 1953 in response to a lack of francophone television programming in Canada. Unlike its counterpart in English Canada which could pick up shows from American stations, the francophone division of the CBC, la Société Radio-Canada, was compelled to develop its own programs with very few resources. The early programs grew out of Quebec’s strong tradition of radio drama, a tradition grounded in serial narratives. One such serial, Un homme et son péché, was heard by nearly 80% of the Quebec audience. It was only natural that such a formula would find its way to television. Teleromans, as these serials were called, were launched in the fall of 1953 with the debut of La famille Plouffe, which was broadcast live every Wednesday night. It was an instant hit and its phenomenal success prompted Radio-Canada to develop more shows of this genre which came to dominate the weekday primetime schedule.

The Family Plouffe/La famille Plouffe chronicled the daily life of a Quebec working-class family in the post-war era. It was an extended family which included: Théophile, the father, a former provincial cycling champion who traded in his bicycle—and his youth—for work as a plumber; Joséphine, the naive and kind-hearted mother who doted on her adult children like a worried mother hen; Napoléon, the eldest, and protector of his siblings who mentored his younger brother Guillaume’s dream of one day playing professional hockey; Ovide, the intellectual of the family whose education and love of art and music gave him an arrogant demeanour; and Cécile, the only daughter who, like many women in the post-war era, was faced with the choice between the traditional marriage, children, and security, and new aspirations of career independence.

Plots were generally cast in the form of quests whether for love, career advancement, security, or a sense of personal and national identity. These themes were woven with the daily problems and choices which confronted members of the family. Some commentators have argued that the Plouffs reflected the common experience of the "typical" French Canadian family and that viewers in Quebec could easily identify with the characters, their aspirations, the plots, and the settings. As nostalgic as this view may be, the Plouffs were still fictional. Moral ambiguities were almost always resolved to fit the conventional values of post-war Quebec. Women were expected to be homemakers, wives, and mothers. Those women who strayed from these norms, such as Rita Toulouse, were often depicted as wily and unpredictable. Men were expected to be good providers and strong patriarchs as symbolized by the fact that Théophile let his treasured bicycle fall into disrepair. It was only to be expected that Cécile would opt for marriage to Onésime Ménard and that Ovide would reconcile his elitist aspirations with his working-class environment.

A year following the successful premiere of the original series, CBC programmers decided to launch an English version. The version was essentially the same as its French counterpart, though modifications were made in the script to remove profane and vulgar language and any references to sex. The scripts were written by Roger Lemelin, the original and only French author, and the same cast of actors were used for the live broadcasts which were aired later in the week.

This decision was a unique experiment. Using the magic of television, all Canadians were able to follow the same story and though The Family Plouffe received good ratings in some smaller Canadian centers, the CBC’s own internal surveys showed that the experiment to create a common Canadian cultural icon was a failure. In large cities where viewers had access to American stations, anglophone Canadians preferred to watch American programming. By the end of the 1958-59 season, the CBC had abandoned the practice of broadcasting language-versioned programming.

La famille Plouffe/The Family Plouffe was a unique "made-in-Canada" live drama. Nostalgic memories of its success prompted a return to the family kitchen in a television special Le crime d'Ovide Plouffe in 1982 which was also versioned and broadcast to anglophone Canadians. After more than two decades of separate programming, another attempt was made to broadcast a series to both English and French audiences in the late 1980s. The series Lance et compte/He Shoots, He Scores (1987-1988) was intended to appeal to Canadian common love of hockey, but like earlier experiments, ratings demonstrated that francophone and anglophone viewers wanted very different kinds of programs. The true legacy of La famille Plouffe was its influence in the development of the teleroman which was and has remained a uniquely "made-in-Quebec" television genre.

FAMILY TIES
U.S. Domestic Comedy

Few shows better demonstrate the resonance between collectively-held fictional imagination and what cultural critic Raymond Williams called "the structure of feeling" of a historical moment than Family Ties. Airing on NBC from 1982 to 1989, this highly successful domestic comedy explored one of the intriguing cultural inversions characterizing the Reagan era: a conservative younger generation aspiring to wealth, business success, and traditional values serves as inheritor to the politically liberal, presumably activist, culturally experimental generation of adults who had experienced the 1960s. The result was a decade, paradoxical by America’s usual post-World War II standards, in which youthful ambition and social renovation became equated with pronounced political conservatism. "When else could a boy with a briefcase become a national hero?" queried Family Ties’ creator, Gary David Goldberg, during the show’s final year.

The boy with the briefcase was Alex B. Keaton, a competitive and uncompromising, baby-faced conservative whose absurdly hard-nosed platitudes seemed the antithesis of his comfortable, middle-class, white, Midwestern upbringing. Yet Alex could also be endearingly (and youthfully) bumbling when tenderness or intimacy demanded departure from the social conventions so important to him. He could be riddled equally with self-doubt about his mettle for meeting the high standards he set for himself. During the course of the show, Alex aged from an unredoubtable high schooler running for student council president to a college student reconciled to his rejection by Princeton.

Alex’s highly programmatic views of life led to continuous conflict with parents Steven and Elyse. Former war protestors and Peace Corps volunteers, these adults now found fulfillment raising their children and working, respectively, as a public television station manager and as an independent architect. If young Alex could be comically cynical, his parents could be relentlessly cheerful do-gooders.

whose causes occasionally seemed chimerical. Yet (especially with Elyse) their liberalism could also emerge more authoritatively, particularly when it assumed the voice, not of ideological instruction, but of parental conscience and loving tolerance. And so Family Ties explored not just the cultural ironies of politically conservative youth, but the equally powerful paradox of liberal conscience. Here, that conscience was kept alive within the loving nuclear family, so constantly appropriated by conservatives as a manifestation of their own values.

Significantly, the show’s timely focus on Alex and his contrasts with his parents was discovered rather than designed. Family Ties’ creator was Gary David Goldberg, an ex-hippie whose three earlier network shows had each been canceled within weeks, leading him to promise that Family Ties would be his last attempt. He undertook the show as a basically autobiographical comedy which would explore the parents’ adjustments to 1980s society and middle-aged family life. The original casting focused on Michael Gross and Meredith Baxter-Birney as the crucial Keatons. Once the show aired, however, network surveys quickly revealed that audiences were more attracted by the accomplished physical comedy, skillful characterization, and approachable looks of Michael J. Fox, the actor playing Alex. Audience reaction and Fox’s considerable, unexpected authority in front of the camera prompted Goldberg and his collaborators to shift emphasis to the young man, a change so fundamental that Goldberg told Gross and Baxter-Birney that he would understand if they decided to quit. The crucial inter-generational dynamic of the show, then, emerged in a dialogue between viewers, who identified Alex as a compelling character, and writers, who were willing to reorient the show’s themes of cultural succession around the youth. Goldberg’s largely liberal writers usually depicted Alex’s ideology ironically, through self-indicting punch lines. Many audiences, however, were laughing sympathetically, and Alex Keaton emerged as a model of the clean-cut, determined, yet human entrepreneur. Family Ties finished the 1983 and 1984 seasons as the second-highest rated show on television, and finished in the top 20 six of its seven years. President Ronald Reagan declared Family Ties his favorite program, and offered to make an appearance on the show (an offer pointedly ignored by the producers). FOX was able to launch a considerable career in feature films based on his popularity from the show.

Alex had three siblings. Justine Bireman played Mallory, the inarticulate younger sister who, unwilling to compete with the overachieving Alex, devotes herself to fashion and boyfriends, including the elder Keaton’s nemesis, junkyard sculptor Nick (played by Scott Valentine). Tina Yothers played the younger daughter, Jennifer, an intelligent observer who could pronounce scathingly on either Alex or the parents’ foibles. During the 1984 season, a baby boy joined the Keaton family, and was played by three separate children, as—by the next season—he quickly developed into a toddler.

Both Family Ties’ creator and its production style are products of a specific set of events in Hollywood which, in the mid-1980s, granted promising writer-producers unusual opportunity and resources to pursue their creative interests. Goldberg’s first jobs in television were as a writer and writer-producer for MTM Productions, the independent production company founded by Grant Tinker and Mary Tyler Moore. The company was initially devoted to the production of “quality” comedies, and known for the special respect it accorded writers. In the early 1980s, the booming syndication market and continued vertical integration prompted Hollywood to consider writers who could create new programs as important long-term investments. Paramount Studios raided MTM for its most promising talents, among them Goldberg. Like many of his cohorts, Goldberg was able to negotiate a production company of his own, partial ownership of his shows, and a commitment from Paramount to help fund his next project—all in exchange for Paramount’s exclusive rights to distribute the resulting programs. Goldberg applied the methods of prosenium comedy production he had learned at MTM, developing Family Ties as a character-based situation comedy, sustained by imaginative dialogue, laudable acting, and carefully-considered scripts which sat at the focus of a highly collaborative weekly production routine. (Inside Family Ties, a PBS special produced in 1985, shows actors, the director, and writers each taking considerable license to alter the script; Goldberg mentions that he takes it for granted that 60% of a typical episode will be rewritten during the week.) Each episode was shot live before a studio audience, to retain the crucial excitement and unity of a stage play.

In Family Ties’ third season, the program played an unprecedented role in the production industry’s growing independence from the declining broadcast networks. Paramount guaranteed syndicators that it would provide them with a minimum of 95 episodes of Family Ties, though only 70 or so had been completed at the time. Anxious to capitalize on the booming syndication market, Paramount was, in effect, agreeing to produce the show even if NBC canceled it—a decision anticipating Paramount’s later, successful distribution of Star Trek: The Next Generation exclusively through syndication.

FAMILY VIEWING TIME

Prompted by widespread public criticism in 1974 the United States Congress exhorted the Federal Communications Commission (FCC) to take action regarding the perennial issues of alleged excesses of sex, crime, and violence in broadcast programming. Early in 1975 FCC chairman Richard E. Wiley reported to Senate and House Communications and Commerce Subcommittees recent steps taken by the FCC. They included discussions with corporate heads of television networks which resulted in four strategies for addressing the issues. The network heads adopted a self-declared “family viewing” hour in the first hour of network evening prime-time (8:00-9:00 P.M., Eastern time). Actions by the National Association of Broadcasters’ Television Code review board expanded that “family hour” forward one hour into local station time (7:00-8:00 P.M.). The NAB also proposed “viewer advisories” related to program content that might disturb members of the audience, especially younger people. And the FCC made further efforts to define what it construed as “indecent” under the law, in a case involving Pacifica’s WBAI(FM), New York.

Arthur R. Taylor, president of CBS Inc., had championed more acceptable early-evening programming but could only do so at CBS if competing networks followed suit. FCC chairman Wiley urged reluctant executives to adopt these actions. But to avoid inter-corporate collusion they felt the professional association (NAB) could best orchestrate the effort through its self-regulatory Industry Code of Practices. Enacting the code led to several results. Some early-evening shows with comedy and action deemed less suited for young viewers were displaced to later hours. West Coast producers, directors, and writers claimed the new structure infringed on their creative freedom and First Amendment rights. Later scheduling also led to lower audience ratings, partly from the stigma attached to some programs as inappropriate for viewing by families. Popular sitcom All in the Family suffered from the ruling; its producer Norman Lear protested against the policy and with celebrity colleagues and professional guilds mounted a lawsuit against it. Meanwhile some public-interest groups, including major religious organizations, objected to the policy for not going far enough; they claimed it sanitized only an hour or two of TV programming, leaving the rest of the 24-hour schedule open to “anything goes.”

After extensive hearings U.S. district court judge Warren Ferguson ruled that, while the concept might have merit, the FCC had acted improperly in finessing the result by privately persuading the three network representatives to marshall the NAB’s code provisions. Normal FCC procedure was to openly announce proposals for rule-making, then hold public hearings to develop a record from which federal rulings might be developed. Thus the Family Viewing policy was scuttled, apparently to the satisfaction of not only the creative community that produced programs but to most network personnel who had the complicated task of applying the principle to specific shows and time-slots, with direct impact on ratings and time-sales for commercial spots. Syndicators of off-network reruns also were relieved because the early-evening “fringe time” programmed by local stations had been brought into the ambit of the Code’s provisions, limiting the kinds of shows aired then. But the reversal was frustrating to many members of Congress, to FCC chairman Wiley, and to CBS chief Arthur Taylor. Dubbed by many the “father of Family Viewing” Taylor had proclaimed the policy as the first step in twenty-five years to reduce the level of gratuitous TV violence and sex. John Schneider, president of the CBS/Broadcast Group, issued a statement after the court’s decision: “The Court recognizes the right of an individual broadcaster to maintain programming standards, yet it denies this same right to broadcasters collectively, even though these standards are entirely voluntary. . . . To rule that broadcasters cannot, however openly and publicly, create a set of programming standards consonant with the demonstrated wishes of the American people leaves only two alternatives: no standards for the broadcasting community or standards imposed by government, which we believe would dangerously violate the spirit of the First Amendment. CBS’s belief that family viewing is an exercise of broadcaster responsibility in the public interest is confirmed by its popular acceptance” reported by a major publication’s two national polls.

The episode demonstrated the daunting task of guiding a complex mass entertainment medium in a pluralistic society with varied perspectives and values. Through the decades television came under increasing scrutiny for alleged permissiveness in drama and comedy programs. The theme of excessive “sex and violence” was sounded regularly in Congressional sessions from Senator Estes Kefauver in the 1950s to Senator Thomas
Dodd in the 1960s and Senator John Pastore in the 1970s. By 1975 House Communications Subcommittee chairman Tor- bert MacDonald, fearing the Family Viewing plan was no more than a public relations ploy, raised the perennial threat of licensing the source of national program service, the commercial networks. Meanwhile, the FCC sought to clarify the U.S. Code provision (Title 18, §1464) prohibiting obscene, indecent or profane language, to extend explicitly to visual depiction of such material.

The issue joined, of course, is the broadcaster’s freedom to program a station or network without censorship by governmental prior restraining action (or by ex-post-facto penalty that constitutes implied restraint against subsequent actions). That freedom is closely coupled with the diverse public’s right to have access to a wide range of programming that viewers freely choose to watch. The other side of that coin is the audience’s right to freedom from what some consider offensive program content broadcast over a federally-licensed airwave frequency defined by Congress in 1927 and 1934 as a “natural public resource” owned by the public. The problem arises from the medium’s pervasiveness (the Supreme Court’s wording) which reaches into homes and beyond to portable receivers, readily available to young children often unable to be supervised around the clock by parents. FCC chairman Wiley explained to the Senate Commerce Committee in 1975: “we believe that the industry reforms strike an appropriate balance between two conflicting objectives. On the one hand, it is necessary that the industry aid concerned parents in protecting their children from objectionable material; on the other hand, it is important that the medium have an opportunity to develop artistically and to present themes which are appropriate and of interest to an adult audience.” The issue recurred, as deregulation of broadcast media in the 1980s and growing permissiveness of program content on proliferating cable channels was succeeded in the 1990s by widespread calls for “family values” in media. Senator Paul Simon engineered a waiver of anti-trust provisions enabling major networks and cable companies to collaborate on voluntary self-regulatory practices, to preclude threatened government enactments: “Son of Family Viewing?”

FARNSWORTH, PHILO

U.S. Inventor

Philo Farnsworth, who has been called the forgotten father of television, won a prize offered by the Science and Invention magazine for developing a thief proof automobile ignition switch, at the age of thirteen. Most remarkable from his high-school experience was the diagram he drew for his chemistry teacher, Justin Tolman. This drawing proved to be the pattern for his later experiments in electronics and was instrumental in winning a patent interference case between Farnsworth and Radio Corporation of America (RCA). Farnsworth’s work spanned the continent. His first laboratories were in his Hollywood home; later he and his family moved to San Francisco, Philadelphia, Fort Wayne, Indiana and Salt Lake City. Farnsworth’s experimentation began in 1926 in San Francisco, where he established his first corporation, Farnsworth Television Incorporated, in 1929. And here the first crude television image was created from the Farnsworth system when a photograph of a young woman was transmitted in the San Francisco Green Street laboratory on 7 September 1927. The first patents for the Farnsworth television system were filed January 1927.

In 1931, Farnsworth moved to Philadelphia to establish a television department for Philco. By 1933 when Philco decided that television patent research was no longer a part of its corporate vision, Farnsworth returned to his own labs. In 1938, he established the Farnsworth Television and Radio Corporation. This research and manufacturing company was later purchased by the International Telephone and Telegraph Company (IT and T). Farnsworth’s work for

Philo Fransworth
Photo courtesy of Penn Farnsworth
IT and T included both television and nuclear fusion. In December 1938, Farnsworth moved to Salt Lake City to organize his last venture: Philo T. Farnsworth and Associates. Its purpose was to continue the work on fusion he started at IT and T.

According to the corporate prospectus for Farnsworth and Associates, the development of Farnsworth's ideas over the years resulted in "every television set sold utilizing at least six of his basic patents." Historian Leonard J. Arrington credits Farnsworth with 150 U.S. patents and "more than 100 foreign patents on various foreign inventions."

Farnsworth was an independent experimenter, a charismatic scientist, an idea person who was able to initiate ideas and convince investors. However, his primary focus was always in the laboratory. He was a workaholic and often left the business, investment and management responsibilities of his corporations to others as his experiments continued. He was often so immersed in his inventions that it was reported he would forget to eat. His health proved to be a challenge throughout his life. His wife Elma "Pem" Gardner-Farnsworth worked with him in the earliest labs as a technician and a bookkeeper. Farnsworth himself said, "my wife and I started television." After he died it was his wife who worked to assure his recognition for his inventions and his consequent place in history. In many ways his work brings to an end the era of independent inventors. He was the recipient of numerous awards from scientific and honors societies, and the 1983 U.S. postal stamp commemorates the inventor. In 1981 a historical marker was placed on the San Francisco Green Street Building where the first Farnsworth television image was projected. In 1990 a statue was dedicated in Washington's Statuary Hall—the inscription reads Philo Taylor Farnsworth: Inventor of Television.

FATHER KNOWS BEST
U.S. Domestic Comedy

Father Knows Best, a family comedy of the 1950s, is perhaps more important for what it has come to represent than for what it actually was. In essence, the series was one of a number of middle-class family sitcoms, representing stereotypical family members. Today, many critics view it, at best, as high camp fun, and, at worst, as part of what critic David Marc once labeled the "Aryan melodramas" of the 1950s and 1960s.

The brainchild of the series’ star Robert Young, who played insurance salesman Jim Anderson, and producer Eugene B. Rodney, Father Knows Best first debuted as a radio sitcom in 1949. In the audio version the title of the show ended with a question mark, suggesting that father’s role as family leader and arbiter was dubious. The partner’s production company, Rodney-Young Enterprises, transplanted the series to television in 1954—without the questioning marker—where it ran until 1960, appearing at various times on each of the three networks.

Young and Rodney, friends since 1935, based the series on experiences each had with wives and children; thus, to them, the show represented "reality." Indeed, careful viewing of each of the series’ 203 episodes reveals that the title was actually more figurative than literal. Despite the lack of an actual question mark, father didn’t always know best. Jim Anderson could not only lose his temper, but occasionally be wrong. Although wife Margaret Anderson, played by Jane Wyatt, was stuck in the drudgery of domestic servitude, she was nobody’s fool, often besting her husband and son, Bud.
(played by Billy Gray). Daughter Betty Anderson (Elinor Donahue)—known affectionately to her father as Princess—could also take the male Andersons to task, as could the precocious Kathy (Lauren Chapin), the baby of the family.

Like Leave It to Beaver creators Bob Mosher and Joe Connelly, Young and Rodney were candid about their attempts to provide moral lessons throughout the series. While none of the kids experienced the sort of social problems some of the real-life actors faced (Young was an alcoholic and the adult Chapin became a heroin addict), this was more the fault of television's then-myopic need for calm than Young and Rodney's desire to side-step the truth. The series certainly avoided the existence of the "Other America," as did most other American institutions.

Young won two Emmy Awards for his role, and Wyatt won three. A well-known film actor before his radio and television days, Young went on to later success in the long-running series Marcus Welby, M.D., which may have been more appropriately called "Dr. Knows Best." After Father Knows Best moved into prime-time reruns in 1960, Donahue played Sheriff Andy Taylor's love interest, Miss Ellie, on The Andy Griffith Show. In 1977, NBC brought the Andersons back in two reunion specials, Father Knows Best: The Father Knows Best Reunion (May 1977) and Father Knows Best: Home for the Holidays (December 1977).

FAWLTY TOWERS

British Situation Comedy

Considered to be one of the finest and funniest examples of British situation comedy, Fawlty Towers has become a critical and popular success throughout the world to the extent that all twelve of its episodes can stand as classics in their own right. The series succeeded in combining the fundamentals of British sitcom both with the traditions of British theatrical farce and with the kind of licensed craziness for which John Cleese had already gained an international reputation in Monty Python’s Flying Circus. Comic writing of the highest quality, allied to painstaking attention to structure and detail, enabled Fawlty Towers to depict an extraordinarily zany world without departing from the crucial requirement of sitcom—the maintenance of a plausible and internally consistent setting.

Like so many sitcoms, the premise was simple, stable and rooted in everyday life (reputedly being based on the proprietor of a genuine Torquay hotel in which Cleese and the Monty Python team stayed whilst shooting location footage). Basil Fawlty (Cleese) and his wife Sybil (Prunella Scales) ran the down-at-heel seaside hotel of the title harped by a lovingly-drawn cast of believable characters embellished in varying degrees from comic stereotype. Yet Fawlty Towers stood out from the commonplace through its intensity of pace and exceptional characterisation and performance, with the result that otherwise simple narratives were propelled, through the pandemonium generated by Basil and Sybil’s prickly relationship, to absurd conclusions.

Cleese played Basil as a man whose uneasy charm and resigned awkwardness scarcely contained his inner turmoil. An inveterate snob, he was trapped between his dread of Sybil’s wrath and his contempt for the most of the hotel’s guests—the “riff-raff” whose petty demands seemed to interfere with its smooth running. In Sybil, Prunella Scales created a character which was the equal of Basil in plausible idiosyncrasy—more practical than him but entirely unsympathetic to his feelings, a gossiping, over-dressed put-down expert who could nevertheless be the soul of tact when dealing with guests.

Fawlty Towers turned on their relationship—an uneasy truce of withering looks and acidic banter born of her continual impatience at his incompetence and pomposity. For Basil, Sybil was “a rancorous coiffured old sow”, while she called him “an ageing brilliantined stick insect”. With Basil capable of being pitched into wild panic or manic petulance at the slightest difficulty, the potential was always present for the most explosive disorder.

Powerless against Sybil, Basil vented his frustrations on Manuel (Andrew Sachs), the ever-hopeful Spanish waiter, whom he bullied relentlessly and with exaggerated cruelty. Manuel’s few words of English and obsessive literalism (“I know nothing”) drew on the comic stereotype of the “funny foreigner” but reversed it to make him the focus of audience sympathy, especially in later episodes. When the final show revealed Manuel’s devotion to his pet hamster (actually a rat!), it was gratifying to find it named “Basil.”

Connie Booth, co-writer of the series and Cleese’s wife at the time, completed the principal characters as Polly, a beacon of relative calm in the unbalanced world of Fawlty Towers. As a student helping out in the hotel, her role was often to dispense sympathy, ameliorating the worst of Basil’s excesses or Manuel’s misunderstandings.

Such was Cleese’s reputation, however, that even the smaller roles could be cast from the top-drawer of British comedy actors. Amongst these were Bernard Cribbins, Ken Campbell and, most notably of all, Joan Sanderson, whose performance as the irascible and deaf Mrs. Richards remains her most memorable in a long and successful career.

Beyond the tangled power relations of its principal characters, a large part of the comic appeal of Fawlty Towers lay in its combination of the familiar sitcom structure with escalating riffs of Pythonesque excess. The opening of each episode (with hackneyed theme, stock shots and inexplicably rearranged name-board) and the satisfying circularity of their plotting shared with the audience a “knowingness” about the norms of sitcom. Yet it was this haven of predictable composition which gave licence to otherwise grotesque or outlandish displays which challenged the bounds of acceptability in domestic comedy. Basil thrashing his stalls
car with a tree-branch, concealing the corpse of a dead guest or breaking into Hitlerian goose-stepping before a party of Germans were incidents outside the traditional capacity of the form which could have been disastrous in lesser hands.

The British practice of making sitcoms in short series gave Cleese and Booth the luxury of painstaking attention to script and structure which was reflected in the show’s consistent high quality. An interval of nearly four years separated the two series of *Fawlty Towers* and some episodes took four months and as many as ten drafts to complete. Perhaps as a result, the preoccupations of the series reflected those of the authors themselves. Basil’s character was a study in the suppression of anger, a subject later explored in Cleese’s popular psychology books. This, together with an acute concern with class, contributed to the peculiarly English flavour of the series and may have had its roots in his boyhood. A long-standing fascination with communication problems seems to have been the motivation for the creation of Manuel and is characteristic of much of the interaction in the show (as well as being the title of the episode involving Mrs. Richards).

_Fawlty Towers* has been shown repeatedly throughout the world. In the 1977–78 season alone it was sold to 45 stations in 17 countries, becoming the BBC’s best-selling programme overseas for the year, although the treatment of Manuel caused great offence at the 1979 Montreux Light Entertainment Festival where *Fawlty Towers* was a notorious flop. More recently, however, it has successfully been dubbed into Spanish with Manuel refashioned as an Italian. In Britain, *Fawlty Towers* has almost attained the status of a national treasure and Basil’s rages and many of his more outlandish outbursts (“He’s from Barcelona”, “Whatever you do, don’t mention the war”, “My wife will explain”) have passed into common currency.

**THE FBI**

**U.S. Police Procedural**

The FBI, appearing on ABC from 1965 to 1974, was the longest running series from the prolific offices of QM Productions, the production company guided by the powerful television producer, Quinn Martin. Long time Martin associate and former writer Philip Saltzman produced the series for QM with the endorsement and cooperation of the Federal Bureau of Investigation. As Newcomb and Alley report in _The Producer’s Medium_ (1983), Quinn Martin professed that he did not want to do the show, primarily because he saw himself and the Bureau in two different political and philosophical camps. But through a series of meetings with J. Edgar Hoover and other Bureau representatives, and at the urging of ABC and sponsor Ford Motor Company, Martin proceeded with the show.

_The FBI* marked the first time QM Productions chronicled the exploits of an actual federal law enforcement body and each episode was subject not only to general Bureau approval, but to the personal approval of director J. Edgar Hoover. Despite this oversight, Martin reported to Newcomb and Alley that the Bureau never gave him any difficulties regarding the stories produced for the show. The Bureau’s only quibbles had to do with depicting the proper procedure an agent would follow in any given situation.

_The FBI* featured Inspector Lewis Erskine (Efrem Zimbalist, Jr.). For the first two seasons, Agent Jim Rhodes (Stephen Brooks) was Erskine’s associate and boyfriend to his daughter, Barbara (Lynn Loring). Agent Tom Colby (William Reynolds) was Erskine’s sidekick for the remainder of the series. All the principals answered to Agent Arthur Ward (Philip Abbot). Erskine was a man of little humor and a near obsessive devotion to his duties. Haunted by the memory of his wife, who had been killed in a job-related shoot-out, Erskine discouraged his daughter from becoming involved with an FBI agent, hoping to spare her the same pain. But his capacity for compassion ended there. This lack of breadth and depth sets Erskine apart from other protagonists in QM programs, but neither he nor his partners allowed themselves to become emotionally involved in their
work which focused on a range of crimes, from bank robbery to kidnapping to the occasional Communist threat to overthrow the government.

Martin’s attempts, with his team of writer/producers, to develop a multi-dimensional Lewis Erskine were met with resistance from the audience. Through letters to QM and ABC, viewers expressed their desire to see a more stoic presence in Erskine—one incapable of questioning his motives or consequences from his job. Erskine, Ward, Rhodes and Colby were asked to view themselves simply as the infantry in an endless battle against crime. The audience, apparently in need of heroes without flaws, called for and received its assurance in the form of these men from the Bureau. A female agent, Chris Daniels (Shelly Novack), appeared for the final season of the show.

The series drew critical scorn but was very successful for ABC, slipping into and out of the Top Twenty shows for the nine years of its run, and rising to the tenth position for the 1970–71 season. Shortly after the series left the air Martin produced two made-for-television films, The FBI Versus Alvin Karpis (1974), and The FBI Versus the Ku Klux Klan (1975).

In spite of the critics’ attitude The FBI was Quinn Martin’s most successful show. Media scholars point to the program as most emblematic of QM’s approval and advocacy of strong law enforcement. The period from the late 1960s into the early 1970s was one of significant political and social turmoil. The FBI and other shows like it (Hawaii 5-0, Mission: Impossible) proposed an answer to the call for stability and order from a video constituency confused and shaken by domestic and international events seemingly beyond its control.

But despite this social context the series differed from other QM productions in its steady avoidance of contemporary issues of social controversy. The FBI never dealt substantively with civil rights or domestic surveillance or the moral ambiguities of campus unrest related to the Vietnam war. One departure from this pattern was sometimes found in the standard device which concluded many shows. Zimbalist would present to the audience pictures of some of the most wanted criminals in America and request assistance in capturing them. One of the more prominent names from this segment was James Earl Ray, assassin of Dr. Martin Luther King, Jr.

Within the dramatic narrative of The FBI, however, a resolute Erskine would pursue the counterfeiter or bank robber of the week bereft of any feelings or social analysis which might complicate the carrying out of his duties. For Martin, a weekly one-hour show was not the forum in which to address complex social issues. He did do so, however, in the made-for-television movies mentioned above.

The FBI occupies a unique position in the QM oeuvre. It is one of the most identifiable and recognizable of the QM Productions. It is also representative of the genre of law and order television which may have assisted viewers in imposing some sense of order on a world which was often confusing and frightening.

——John Cooper
FECAN, IVAN
Canadian Television Programming Executive

For years, Ivan Fecan was known to the Canadian broadcasting industry as TV's controversial "wunderkind." In 1985, when he was thirty-one years old, the Toronto native was recruited by the U.S. television network NBC as the new vice president of programming under then-programming chief Brandon Tartikoff. NBC and CBC had the Canadian comedy series Second City TV in common at that time and Fecan met with Tartikoff to discuss new program ideas. Impressed with the young man, Tartikoff, himself a young executive, offered Fecan the NBC job.

After two years at NBC, the head of English-language CBC, Denis Harvey, brought Fecan home as director of programming, where he began to institute program development, especially in comedy. He moved the award-winning young people's series, Degrassi Junior High, to Monday nights in prime time, where it flourished. He also hired a Canadian script doctor at CBS, Carla Singer, to work with the producer on Street Legal, the drama series about a group of Toronto lawyers. Although it started out with weak scripts and pedestrian directing, the series found its legs, became much more professional—some would say more "American"—and lasted eight years.

Fecan's rise to the highest levels of the industry can indeed be described as meteoric. Fecan began as a producer of the popular and respected three-hour radio magazine show, Sunday Morning. Moses Znaimer recognized his talent and took him away to be news director of Citytv, the hip new upstart local station. Two years later he became program director at CBC's Toronto station, CBLT. He updated that flagship station by bringing in electronic news gathering (ENG) equipment, two-way radios, and more reporters. Leaving news for the entertainment side of the business, Fecan spent sixteen months as head of CBC-TV's Variety Department. He is said to have renewed variety programming there by using more independent producing talent.

Fecan's goals were to make CBC programming break even, to attain an all-Canadian schedule, and to produce high-quality shows that audiences wanted to see. There are two schools of thought on his tenure as CBC's director of programming. One is that he brought polish and quality to the national network while boosting Canadian-produced shows; the second is that he turned the public broadcaster into a veritable clone of the American networks. What is not in dispute is that he shepherded some of the finest TV movies during his leadership, including The Boys of St. Vincent, Conspiracy of Silence, Love and Hate, Glory Enough for All, Where the Spirit Lives, Life with Billy, Princes in Exile, Dieppe, and Liar, Liar. In fact, Love and Hate (about the true story of a Saskatchewan politician who murdered his ex-wife) was the first Canadian movie of the week to be aired on a major U.S. network (NBC).
The series *Kids in the Hall*, *The Road to Avonlea*, North of 60, *Scales of Justice*, 9B, *Degrassi High*, *The Odyssey*, and *Northwood* came into existence because of Fecan. *Kids in the Hall* went on to become a hit on American television and *The Road to Avonlea* won awards all over the world and ran for seven years. In addition to *Kids in the Hall*, in the comedy arena, he launched *The Royal Canadian Air Force*, CODCO and *This Hour Has 22 Minutes*.

Fecan made professional use of competitive scheduling and programming tools he had learned from Tartikoff and Grant Tinker at NBC. Negotiating that delicate balance between Canadian content and American revenues which has so often been a problem, he programmed American series in prime time to help bring in much needed money—*Kate and Allie*, *Hooperman*, *The Golden Girls*, and *The Wonder Years*. Some argued that *Street Legal* had become too Americanized, like *L.A. Law*, its counterpart, despite the obvious Toronto locations and the Canadian legal traditions and local issues. (The shows were developed and coincidentally went on air about the same time.) *Street Legal* also, however, began to draw more than a million viewers a week, a hit by Canadian standards, after two seasons of mediocrity.

A much more risky and dubious decision was to create *Prime Time News* at 9:00 P.M. to replace the Canadian tradition of *The National* and *The Journal* at 10:00 P.M. It turned out to be an unwise move and *The National* was soon returned.

Such shows as *Adrienne Clarkson Presents*, Harry Rasky’s world-famous documentary specials, the documentary anthology *Witness*, and Patrick Watson’s *The Struggle for Democracy* illustrate Fecan’s commitment to Canadian production which is neither American-style nor draws large audiences. Canadian content grew from 78% to 91% under Fecan’s direction and the amount of U.S. programming dropped. Although criticized for concentrating too much on the national network instead of on regional programming, Fecan strengthened the main network in a time when local stations were about to be cut or closed altogether by severe budget restraints not in his control. It has been claimed that CBC’s audience share declined over his tenure, but in boom years for cable and pay, his work probably prevented much greater declines in ratings which all networks, even the three U.S. majors, suffered.

Fecan left CBC and joined Baton Broadcasting in January 1994 as senior group vice president and became executive vice president and chief operating officer in January 1995. Baton operates the commercial CTV, Canada’s other national TV network.

**FEDERAL COMMUNICATIONS COMMISSION**

**U.S. Regulatory Commission**

The United States Federal Communications Commission, created by an act of Congress on 19 June 1934, merged the administrative responsibilities for regulating broadcasting and wired communications under the rubric of one agency. Created during “The New Deal” with the blessings of President Franklin D. Roosevelt, the commission was given broad latitude to establish “a rapid, efficient, Nation-wide, and world-wide wire and radio communication service.” On 11 July 1934 seven commissioners and 233 federal employees began the task of merging rules and procedures from the Federal Radio Commission, the Interstate Commerce Commission and the Postmaster General into one agency. The agency was organized into three divisions: Broadcast, Telegraph, and Telephone. Today, the agency employs approximately 1900 people and has extensive oversight responsibilities in new communications technologies such as satellite, microwave, and private radio communications.

**The Act of 1934 and Organization of the FCC**

The Federal Communications Commission (FCC) is an independent regulatory government agency. It derives its powers to regulate various segments of the communications industries through the Communications Act of 1934. Congress appropriates money to fund the agency and its activities, though recently the FCC raised revenues through an
The Satellite Act of 1992 required similar revisions to the 1934 Act. But the flexibility incorporated into the general provisions has allowed the agency to survive for sixty years. Though the FCC responsibilities have broadened to include supervision of these new technologies, it now shares regulatory power with other federal, executive and judicial agencies.

The FCC does have broad oversight over all broadcasting regulation. The FCC can license operators of various services and has recently used auctions as a means of determining who would be awarded licenses for personal communications services. The commission enforces various requirements for wire and wireless communication through the promulgation of rules and regulations. Major issues can come before the entire commission at monthly meetings; less important issues are "circulated" among commissioners for action. Individuals or parties of interest can challenge the legitimacy of the regulations without affecting the validity or constitutionality of the act itself. The language of the act is general enough to serve as a framework for the commission to promulgate new rules and regulations related to a wide variety of technologies and services. Though the agency has broad discretion to determine areas of interest and regulatory concern, the court, in Quincy Cable TV, Inc. v. FCC, reminded the FCC of its requirements to issue rules based on supportable facts and knowledge.

To more efficiently carry out all its tasks, the commission is divided into several branches and divisions. The Mass Media Bureau oversees licensing and regulation of broadcasting services. Common Carrier Bureau handles interstate communications service providers. The Cable Bureau oversees rates and competition provisions of the cable act of 1992. The Private Radio Bureau regulates microwave and land mobile services. Several offices within the FCC support the four bureaus. The Field Operations Bureau carries out enforcement, engineering and public outreach programs for the commission. The Office of Engineering and Technology provides engineering expertise and knowledge to the commission and assesses equipment for compliance with FCC standards. The Office of Plans and Policy acts like the commission think tank.

The FCC and Broadcasting

Scholars differ on whether the FCC has used its powers to enforce provisions of the Communications Act wisely. Among the broad responsibilities placed with the FCC under section 303 are the power to classify stations and prescribe services, assign frequencies and power, approve equipment and mandate standards for levels of interference, make regulations for stations with network affiliations, prescribe qualifications for station owners and operators, levy fines and forfeitures, and issue cease and desist orders.

The most important powers granted to the commission are powers to license, short-license, withhold, fine, revoke or renew broadcast licenses and construction permits. These powers are based on the commission's own evaluation of whether the station has served in the public interest. Much
of the debate over the FCC's wisdom, then, has focused on the determination of what constitutes fulfillment of a broadcast licensee's responsibilities under the "public interest, convenience and necessity" standard. Definitions and applications of this standard have varied considerably depending upon the composition of the commission and the mandates given by Congress. Though the FCC can wield the life-or-death sword of license revocation as a means of enforcing the standard, the commission has rarely used this power in its 60 year history.

Indeed, critics of the Federal Communications Commission argue that it has been too friendly and eager to serve the needs of large broadcast interests. Early FCC proceedings, for example, illustrate a pattern of favoring business over educational or community interests in license proceedings. But other scholars point to FCC actions against big broadcast interests by promulgating Duopoly, Prime-Time Access Rules (PTARs), and Syndication and Financial Interest Rules, all aimed at reducing the influence of large multiple license owners.

The commission has restated the public interest requirements numerous times over its sixty-year history. The Blue Book, The 1960 Programming Policy Statement, and Policy Statement Concerning Comparative Hearing were examples of FCC attempts to provide licensees with guidance as to what constituted adequate public service. Today, the FCC's reliance on "marketplace forces" to create competitive programming options for viewers and listeners reflects beliefs that economic competition is preferable to behavioral regulation in the broadcast industry.

Viewed over its sixty-year history, FCC decision making is generally seen as ad hoc. Frequent reversals of policymaking can be seen in commission decisions as the economic and technical conditions warranted changes in regulatory policy. Before the present era of deregulation, the FCC had promulgated extremely complex and detailed technical and operating rules and regulations for broadcasters, but it also gave licensees great latitude to determine what constituted service in the public interest based on local needs under its Ascertainment Policy. Once a station was licensed, the operator was required to monitor the technical, operational and programming aspects of the station. Files on all aspects of station operations had to be kept for several years. Today, under the general guidance of the "market," filing and renewal requirements for broadcasters are greatly reduced. However, when two or more applicants compete for the same license or when a Petition to Deny challenge is mounted, the commission makes a determination as to which of the competing applicants is best qualified to own and operate the broadcasting facility. Hearings follow strict procedures to ensure that the applicants' rights under the law are fully protected, and as a result the adjudicative process can be lengthy and cost applicants thousands of dollars in legal fees.

Reliance on "the marketplace rationale" began under Chairman Charles D. Ferris (1977-81), when the FCC embraced a new perspective on regulation and began licensing thousands of new stations in an effort to replace behavioral regulation with the forces of competition. Chairman Mark Fowler (1981-87) endorsed the marketplace model even more willingly than his predecessor. Yet, despite the flood of new stations, the Scarcity Rationale, based on limitations of the electromagnetic spectrum, remains a primary premise for government regulation over electronic media.

Broadcast licensees do not enjoy the same First Amendment rights as other forms of mass media. Critics charge that entry regulation—either through utilizing the concept of "natural monopoly" or severely limiting the number of potential licenses available—effectively uses the coercive power of government to restrict the number of parties who benefit from involvement in telecommunications. Breyer and Stewart note that, "Commissions operate in hostile environments, and their regulatory policies become conditional upon the acceptance of regulation by the regulated groups. In the long run, a commission is forced to come to terms with the regulated groups as a condition of survival." Critics say both the FRC and the FCC became victims of client politics as these two regulatory agencies were captured by the industries they were created to regulate.

Broadcast Regulation and FCC Policy Decisions

Throughout its history, a primary goal of the Federal Communications Commission has been to regulate the relationship between affiliated stations and broadcast networks, because the Communications Act does not grant specific powers to regulate networks. When the commission issued Chain Broadcasting Regulations the networks challenged the commission's authority to promulgate such rules, and sued in National Broadcasting Co., Inc. et al. v. United States. The Supreme Court upheld the constitutionality of the 1934 Act and the FCC's rules related to business alliances, noting the broad and elastic powers legislated by Congress. The FCC has used The Network Case as a precedent to ratify its broad discretionary powers in numerous other rulings.

On another front, at various times the commission has promulgated rules to promote diversity of ownership and opinion in markets and geographical areas. The Seven Station Rule limited the number of stations that could be owned by a single corporate entity. Multiple-Ownership and Cross-Ownership restrictions dealt with similar problems and monitored multiple ownership of media outlets—newspapers, radio stations, television stations—in regions and locations. Rules restricting multiple ownership of cable and broadcast television were also applied in specific situations. However, as more radio and television stations were licensed, restrictions limiting owners to few stations, a limitation originally meant to protect diversity of viewpoint in the local market, made less sense to the commission. In 1985, recognizing greater market competition, the commission relaxed ownership rules. In the years that followed, restrictions on Ascertainment, Limits on Commercials, Ownership, Anti-Trafficking, Duopoly and Syndication and Financial Interest Rules were also eased.
Still, it is the issue of First Amendment rights of broadcasters that has generated more public controversy in the sixty year history of the Communications Act of 1934 than any other aspect of communication law. Since the earliest days, the FRC and then the FCC insisted that because of "scarcity," a licensee must operate a broadcast station in the public trust rather than promote only his or her point of view. The constitutionality of the Fairness Doctrine and section 315 was upheld by the Court in Red Lion Broadcasting v. FCC. Broadcasters complained that the doctrine produced a "chilling effect" on speech and cited the possibility of fighting protracted legal battles in Fairness Doctrine challenges. Generally, though, the FCC determined station "fairness" based on the overall programming record of the licensee. The court reaffirmed the notion that licensees were not obligated to sell or give time to specific opposing groups to meet Fairness Doctrine requirements as long as the licensee met its public trustee obligations. But, as commissioners embraced deregulation, they began looking for ways to eliminate the Fairness Doctrine. In the 1985 Fairness Report, the FCC concluded that scarcity was no longer a valid argument and the Fairness Doctrine inhibited broadcasters from airing more controversial material. Two cases gave the commission the power to eliminate the doctrine; in TRAC v. FCC, the court ruled that the doctrine was not codified as part of the 1959 Amendment to the Communications Act as previously assumed. Secondly, the FCC applied the Fairness Doctrine to a Syracuse television station after it ran editorials supporting the building of a nuclear power plant (Meredith Corp. v. FCC, 809 F. 2d. 863 [1987]; Syracuse Peace Council 3 FCCR 2035 [1987]). Meredith Corporation challenged the doctrine and cited the 1985 FCC report calling for the doctrine's repeal. The courts remanded the case back to the commission to determine whether the doctrine was constitutional and in the public interest. In 1987, the FCC repealed the doctrine, with the exception of the personal attack and political editorializing rules which still remain in effect.

Other First Amendment problems facing the commission include enforcing rules against indecent or obscene broadcasts (FCC v. Pacifica). After Pacifica, the FCC enforced a ruling preventing broadcasters from using the "seven dirty words" enumerated in comedian George Carlin's "Filthy Words" monologue on the air. However, "shock jocks" (radio disk jockeys who routinely test the boundaries of language use) and increasingly suggestive musical lyrics moved the FCC to take action against several licensees in 1987. In a formal Public Notice, the FCC restated a generic definition of indecency which was upheld by the U.S. Court of Appeals. Spurred by Congress, the commission stepped up efforts to limit the broadcast of indecent programming material, including the graphic depiction of aborted fetuses in political advertising. Various enforcement rules, including a "24 Hour Ban" and a "safe harbor" period from midnight to 6:00 A.M. have met with court challenges.

Other perennial areas of concern for the commission include television violence, the numbers of commercials broadcast in given time periods, the general banality of programming, and many issues related to children's television. Several FCC Chairmen and commissioners have been successful in using the "raised eyebrow" as an informal means of drawing attention to problems in industry practices. Calling television "a vast wasteland," a phrase adopted by many critics of television, Chairman Newton Minnow (1961–63) challenged broadcasters to raise programming standards. In 1974, under Richard Wiley (1972–77), the commission issued the Children's Television Programming and Advertising Practices policy statement starting a review of industry practices. And, Alfred Sikes (1989–92) called for "a commitment to the public trust" when he criticized television news coverage. Interest in children's television was further renewed in 1990 by the passage of the Children's Television Act which reinstated limits on the amount of commercial time broadcast during children's programming and requires the FCC to consider programming for children by individual stations at license renewal. The commission, under Chairman Reed Hundt (1993), has adopted a new Notice of Inquiry on compliance in this area. Congress has become increasingly interested in reducing the amount of violence on television. Industry representatives have issued a Statement of Principles concerning the depiction of violence in an effort to stave off FCC rulemaking.

Currently the FCC has many critics who feel that the agency is unnecessary and the Communications Act of 1934 outdated. Calls to move communication policymaking into the Executive Branch at the National Telecommunications and Information Administration (NTIA) or to reform the FCC have been heard from both industry and government leaders. Congress has grappled with FCC reform through the legislative process in its most recent sessions. Convergence of telephone and broadcasting technologies could make the separate service requirements under Titles II and III difficult to reform. Whether the commission will be substantially changed in the future is uncertain, but rapid changes in communications technology are placing new burdens on the commission's resources.

—Fritz J. Messere

FEDERAL TRADE COMMISSION

U.S. Regulatory Agency

In 1914, Congress passed the Federal Trade Commission Act (FTCA), thereby creating the Federal Trade Commission (FTC). The commission was given the mission of preventing "unfair methods of competition" (Pub. L. No. 203, 1914), and was designed to complement the antitrust laws. As such, the FTC originally was conceived as a protector of business and competition, with no direct responsibility to protect consumers.

In some of its first decisions, however, the commission found that the two interests were not mutually exclusive, since it was possible to steal business from a competitor by deceiving consumers. In fact, the FTC used this justification to protect consumers during its first 15 years of operation. But in 1931 the Supreme Court announced that the FTCA did not permit the commission to protect consumers, except where protection was a mere byproduct of protecting competitors (FTC v. Raladam, 283 U.S. 643). Consequently, in 1938, Congress amended the FTCA to enable the commission to protect both competitors and consumers, by adding power over "unfair or deceptive acts or practices" to the FTC's authority (Pub. L. No. 447).

Today, the FTC is the primary federal agency responsible for preventing citizens from being deceived, or otherwise injured, through advertising and other marketing practices. This responsibility applies to broadcast and print media, as well as any other means of communicating information from seller to buyer. In accord with its original mission, it also protects businesses from the unfair practices of competitors and, along with the Justice Department, enforces the antitrust laws. Each of these areas of commission jurisdiction touch the broadcast industry.

The FTC and the Antitrust Division of the Justice Department have an agreement to inform one another about their investigations and expected litigation, to avoid duplication of effort. The general mission for both is to preserve the competitive process, so that it functions in the most economically efficient manner possible and best serves the interest of the public.

The phrase "unfair methods of competition" is not defined in the FTCA, because it was designed to allow the FTC to adapt to an ever-changing marketplace. And courts have determined this power to be quite extensive. Consequently, the commission's oversight of competition generally involves enforcement of the Sherman and Clayton Acts, as well as the Robinson-Patman Act.

Thus, FTC antitrust actions can arise in cases of vertical restraints, entailing agreements between companies and their suppliers that might harm competition, and in cases of horizontal restraints, where direct competitors enter into a competition-limiting agreement. Those agreements can be subject to regulation whether their primary impact is on prices or on some non-price aspect of competition. This means that the FTC may intervene in situations intentionally designed to reduce competition, such as mergers and buy-outs, or in circumstances where competition may be unintentionally affected, as where a professional association adopts a "code of ethics" agreement.

During the 1970s, the FTC was perceived as being particularly aggressive at enforcing the antitrust laws. Some critics felt it also was somewhat inconsistent in its decisions. But under the Reagan Administration, in the early 1980s, the agency's regulatory philosophy changed. At President Reagan's direction, the agency experienced an infusion of "Chicago School" economists committed to deregulation and the belief that some of the Commission's previous actions were actually injurious to consumer welfare.

Since that time, while their involvement is less pronounced than during the Reagan era, those "Chicago School" economists have continued to influence FTC antitrust regulatory activity. The result has been less regulation of vertical restraints and price restrictions, and a greater focus on the benefits and costs to society in regulating horizontal restraints. Any contract or other agreement between competing businesses, even through a trade association, may be subject to FTC scrutiny. However, no regulation is likely unless the agency believes the harms to competition will outweigh the benefits.

With regard to television, the FTC's role in antitrust activity has focused on the flurry of mergers and acquisitions taking place in the 1980s and 1990s. The commission paid close attention to the purchase of Capital Cities/ABC television network by the Disney company, and to the merger of Time-Warner and Turner Broadcasting Systems.

In the realm of advertising regulation the FTC has authority over both "deceptive" and "unfair" advertising and other marketing practices. For television, the commission's focus is on the content and presentation of commercials.

The "unfairness" power never was used extensively and, as a response to criticism that the power was too broad and subjective, it was somewhat limited by Congress between 1980 and 1994. But in 1994 Congress amended the FTCA to define "unfairness," and thereby circumscribe the commission's authority in that area.

The new definition of "unfairness" permits the commission to regulate marketing practices that (1) cause or are likely to cause substantial injury to consumers, (2) are not reasonably avoidable by consumers, and (3) are not outweighed by countervailing benefits to consumers or to competition. The implications of this definition are not yet known, but it is unlikely that the agency will make extensive use of its "unfairness" power in the near future.

By far, most regulation of advertising and marketing practices is based on the commission's "deceptiveness" power. As in the antitrust arena, advertising regulation experienced a shift in FTC philosophy during the Reagan presidency. The flow of "Chicago School" economists into the agency at that time led to a widespread perception that
the FTC was engaged in less advertising regulation than it had been in earlier years. And in 1983, when the commission re-defined the term “deceptive” (Cliffdale Associates, 103 F.T.C. 110), many observers felt the new definition greatly diminished protection for consumers.

Under that new definition, the FTC will find a practice deceptive if (1) there is a representation, omission or practice that (2) is likely to mislead consumers acting reasonably under the circumstances, and (3) it is likely to affect the consumer’s choice of, or conduct regarding, a product. The first requirement is obvious, and the FTC generally assumes that the last requirement is met. The second requirement, therefore, is the essence of this definition. The issue is not whether an advertising claim is “false.” The issue is whether the claim is likely to lead consumers to develop a false belief.

The previous definition required only a “capacity or tendency” to mislead, rather than a “likelihood” and allowed protection of consumers who were not “acting reasonably.” These changes were what bothered critics. But after a few years criticism virtually disappeared, and this definition continues to be FTC policy.

THE FIFTH ESTATE
Canadian Public Affairs Program

In an attempt to mirror the huge success of the U.S. program 60 Minutes, the Canadian Broadcasting Corporation (CBC) in 1975 inaugurated its weekly public affairs program The Fifth Estate. Following the “four estates” of respectively, the clergy, nobility, the legislature, and print journalism, the “fifth estate” refers to the role of electronic broadcasting in society.

At the outset, the program’s stated format and mandate was to be a weekly hour of innovative and investigative personal journalism. As such, the program adapted the American style of segmenting individual stories, introduced and narrated, and from time to time produced, by one of the program’s hosts. Dubbed a magazine-type show, The Fifth Estate typically runs three such segments per show. Although based on American forms of public affairs programs, The Fifth Estate maintains a distinct link with Canada’s tradition of documentary film-making. In particular, as a CBC-produced program whose mandate is to foster Canadian national identity, The Fifth Estate’s subject matters are drawn from all regions of the country. The program, therefore, also serves to educate Canadians about their own nation, its distinctive geography, cultures, languages and social problems.

The show is under the public affairs section of CBC programming, and its stories are framed within the language of contemporary news journalism. Not unlike the evening news or beat reporter, The Fifth Estate sees its role as a watchdog of government and public policy. And not surprisingly the program’s hosts are usually drawn from the ranks of Canada’s metropolitan daily newspapers. Similarly, hosts such as Hana Gartner have used the program as a stepping stone to prestigious anchor positions with the networks flagship newscast, The National.

The journalistic experience on The Fifth Estate’s staff has resulted in an aggressive and topical approach to public affairs in both Canada and abroad. From time to time this stance has raised the ire of individuals in question. In September 1993, for example, The Fifth Estate made front-page news when an entrepreneur unsuccessfully petitioned a Canadian court to place an injunction banning the broadcast of the prime-time program. At the international level The Fifth Estate’s documentary segment “To Sell a War”,
originally broadcast in December 1992, received widespread attention and acclaim for its detailing, in no uncertain terms, the Citizen's for a Free Kuwait misinformation campaign in the months leading up to the Gulf War. In 1993 "To Sell a War" was awarded the International Emmy for best Documentary.

FILM ON FOUR
British Film Series

The series Film on Four was announced on the opening night of Channel Four in November 1982, and helped to immediately draw attention to the distinctions between this and the three existing British television channels. Osten- sibly, Film on Four occupies a curious position within British television. It was established by Jeremy Isaacs, Channel Four's first chief executive, following a European model, to encourage mainly new, independent filmmakers by offering funding for fictional, mainly feature length films. This was intended to lead to cinema distribution in many cases, where a film might gain a reputation before transmission on Channel Four. Film on Four is often considered to be particularly significant within film culture for providing vital financial support and for commissioning many films which have gained high regard. Indeed, Isaac's film investment policies made little economic sense in strictly television terms. He managed to secure around 8% of Channel Four's total programming funds and allocated it to fictional one-offs which would fill only 1% of air-time. However, it would be constractive to overlook Film on Four's integral position within television culture, particularly during the 1980s.

Traditionally the BBC had been the prime producers and supporters of television drama. However, in the period leading up to the early 1980s, it became increasingly difficult for the BBC to produce the single play for reasons involving changing production values, censorship and declining resources. The first head of Film on Four, David Rose, whose background was in BBC regional drama, commissioned a series of films which collectively represent a renaissance of highly contemporary drama. The films Rose promoted followed a writerly formula of neo-realist with socially displaced characters firmly positioned in a regional landscape. The resultant work, including Neil Jordan's Angel (1982) and Colin Gregg's Remembrance (1982), has been defined as being uncompromised by television's institutional modes of representation or by cinematic demands of impersonal spectacle.

Film on Four's only early success in the cinema was Peter Greenaway's The Draughtsman's Contract (1982), and, although the series had been established to encourage new ideas, in the early years the media argued that most of its products brought little that was innovative to television. Media support, credibility and international acclaim started to be gained three years on, primarily by Rose's investment in Wim Wender's art-house classic Paris, Texas (1984) and his funding of the surprise success, My Beautiful Laundrette (Stephen Frears, 1984). Rose was awarded a special prize at Cannes (1987) for services to cinema and was heralded in Britain as the savior of the film industry. Film on Four's successful output began to multiply with films such as A Room with a View (1985), Hope and Glory (1987), Wish You Were Here (1987) and A World Apart (1987), doing well at both the domestic and international box office. In addition to promoting new directors such as Stephen Frears and Chris Menges, Film on Four encouraged the work of established filmmakers including Peter Greenaway, Derek Jarman and Agnès Varda. After touring the festival circuit and cinema distribution the films were transmitted on television to respectable, although by no means outstanding, viewing figures—audiences averaged three million per film in 1990.

As only a minority of Film on Four products succeeded in returning any money to Channel Four, a general agreement was reached at the end of the 1980s that a large portion of the budget needed to be diverted to higher-rated, long-form drama. Rose was succeeded by David Aukin who continued to implement the recent policy of deliberate under-commissioning. With its much reduced budget, Film on Four could not keep up with massive inflation in production costs. Additionally, a sense of a general decrease in the quality of new projects and emerging talent surrounded the organization. Aukin showed less interest in promoting the film industry than in television itself, and aimed to concentrate on films a television audience would want to watch, rather than cinema award winners. For Aukin, it is almost

incidental that the best drama is produced on film because film remains the medium of choice for the greatest talent.

Whilst Film on Four necessarily cut its budget, the more financially secure BBC entered into a new phase of fiction making in the nineties. With the appointment of Mark Shivas, the BBC reformed its policies on feature length dramas in imitation of Film on Four. Its ambitions were in a higher budget area of filmmaking than Channel Four's, and consequently it accepted the risk of compromising artistic integrity for the demands of overseas financiers, in total contrast to Channel Four's puritanical policies. The BBC expounded its conviction towards the more mainstream, commercial category, and achieved theatrical successes with Truly, Madly, Deeply (1992) and Enchanted April (1991).

Channel Four continues with its film successes, principally Four Weddings and a Funeral (1994), and continues to offer less mainstream viewing with Film on Four and its related series Film on Four International—which buys domestic and foreign films post production—and Short and Curly—a fifteen-minute slot presenting a short film, a type made only by Channel Four. Film on Four was original in that it promoted films with a socio-cultural importance, and allowed them to escape from the former confines of television drama as transient product. Whilst its main impact may have been to inject new life and creativity into British cinema in the 1980s, it is equally valid to claim that Film on Four, having been established so integrally to the channel's schedule, has more than anything else given Channel Four a unique identity, both in England and internationally.

**FINANCIAL INTEREST AND SYNDICATION RULES**

**U.S. Broadcasting Regulations**

The Financial Interest and Syndication Rules (Fin-Sin Rules), or more precisely their elimination, may ultimately alter the television and film entertainment landscape as much as any event in the 1990s. The Federal Communications Commission (FCC) implemented the rules in 1970, attempting to increase programming diversity and limit the market control of the three broadcast television networks. The rules prohibited network participation in two related areas: the financial interest of the television programs they aired beyond first-run exhibition, and the creation of in-house syndication arms, especially in the domestic market. Consent decrees executed by the Justice Department in 1977 solidified the rules, and limited the amount of prime-time programming the networks could produce themselves.

The rationales for Fin-Sin are numerous. The FCC was concerned that vertical integration (control of production, distribution and exhibition) unfairly increased the power of the networks. By taking away the long-term monetary rights to programs created by the networks, and severely restricting their participation in syndication, the FCC eliminated incentives for the networks to produce programs, thus separating production from distribution. Those in favor of Fin-Sin hoped that the rules would benefit independent television producers by giving them more autonomy from the networks (because financial interest would be solely in the hands of the production company), and allowing the producers to benefit from the lucrative syndication market. Proponents believed that by privileging independent producers in this way, the rules would cultivate more diverse and innovative television content. Another potential advantage of the rules was that independent television stations would benefit from the separation of the networks from syndication. If the networks owned the syndication rights to off-network programs, they might “warehouse” their programs, or steer popular reruns to network owned and operated stations and network affiliates to make those stations stronger in a particular market.

From the very beginning, however, the Fin-Sin Rules were controversial and contested. The networks felt that Fin-Sin was unfair and did not solve the intended problems. One anti-Fin-Sin argument noted that the expense of starting a national broadcast network—the financial barriers to entry—much more significantly explained the networks’ control of television than their vertical integration. Others argued that the Fin-Sin Rules undermined the role of independent producers rather than enhanced them. Small independent producers, for example, often cannot afford to engage in the “deficit financing” required by the networks. Deficit financing involves receiving a below-cost payment from the networks during the first-run of a program. Large production organizations—like the Hollywood-tied Warner Television—are much more financially able than smaller companies to cope with the necessary short-term losses in revenue, hoping to strike it rich in syndication. Critics of Fin-Sin therefore noted that Hollywood studios, rather than independents, grew stronger because of Fin-Sin, and that the smaller independents tended to produce conventional, but inexpensive, programs like talk shows and game shows rather than innovative programs.

In 1983, the FCC, swayed by these anti-Fin-Sin arguments and the general political climate favoring deregulation in many arenas, proposed eliminating most of the rules. However, a massive lobbying effort by Hollywood production organizations—efforts helped by a former Hollywood-actor President, Ronald Reagan—kept the rules in place.

In the early 1990s, however, other arguments were levied against Fin-Sin. When the rules were first implemented in the pre-cable, pre-FOX days of the 1970s, the networks’ combined share of the television audience was around 90%. By the early 1990s, this share had dropped to roughly 65% because of the new forms of competition. Fin-Sin opponents also argued that the presence of vertical integration among other media companies—including organizations with television production arms like Time Warner—was unfair.

In 1991, then, the FCC relaxed the Fin-Sin Rules after an intense lobbying war pitting the major television producers (for Fin-Sin) against the major television distributors (against Fin-Sin). Appeals courts later relaxed the rules even further, in essence eliminating all traces of Fin-Sin by November 1995.

The elimination of the Fin-Sin Rules could ultimately have several long-term consequences for television. The first consequence is the merging of production organizations with distribution organizations. One example of this is increased in-house production by the big three networks. By 1992, for example, NBC was the single largest supplier of its own prime-time programming. Besides the distribution firms of television becoming more involved in production, production firms have gotten more involved in distribution. The creation of three new broadcast networks from 1986 to 1995 illustrates this. FOX Broadcasting, supported by its direct relationship with a Hollywood studio, is an early innovator here. In fact, the spark that led to the Fin-Sin elimination was FOX Broadcastings’ 1990 request for Fin-Sin revisions. FOX, both a major producer and a mini network, wanted the transition to full network status to be unimpeded by Fin-Sin. Once the rules against the production-distribution merge were on their deathbed, Paramount and Warner Brothers soon joined FOX in forming studio-based television networks. The mid-1990s were likewise filled with rumors that a major studio, like Disney, might purchase one of the big three networks instead of starting one from scratch. And indeed, the rumors became fact when Disney purchased Cap Cities/ABC in 1995.

The future of independents—both independent producers and independent stations—may also be significantly
affected by the demise of Fin-Sin. Independent producers worry that, at worst, the networks will no longer require their services and, at best, the nets will demand a share of syndication rights to programs and will privilege in-house productions with the best time slots. Independent stations worry that the networks will warehouse their best off-network programs, now that they will own the syndication rights. Some charged that the 1994 syndication of The Simpsons—sold to around 70 FOX affiliates—is a sign of the favoritism to come.

Finally, other critics note the dangers to programming diversity and advertising interference that may result from the deregulation. Now that the networks may benefit from syndication, for example, will they have an incentive to put on programs with high syndication potential, like situation comedies? Also, during the Fin-Sin era, prime-time network producers were at least superficially insulated from advertiser influence because of the separation of production from distribution. Advertisers paid the networks rather than the producers of TV content. Because the categories of production and distribution have collapsed together after Fin-Sin, advertisers may have more direct access to network production because they now write checks directly to organizations that produce as well as distribute.

Changes in the Financial Interest and Syndication Rules illustrate the significance of communication policy in affecting the daily menu of television choices available to the public. As much as alterations in technologies, techniques, and personalities, changes in the Fin-Sin Rules, and their possible disappearance, have an immediate, significant effect on the television industry and television audiences.

FIRESIDE THEATRE
U.S. Anthology Series

Fireside Theatre was the first successful filmed series on American network television. In an era when live television dominated network schedules, the series demonstrated that filmed programming could be successful and from the fall of 1949 to the spring of 1955, it was one of the ten most watched programs in the United States. Following The Milton Berle Show on Tuesday nights on NBC, Fireside was an anthology drama that presented a different half-hour story each week. In 1955, the series was changed to Jane Wyman Presents the Fireside Theatre, and though it soon became a distinctly different series under the title, Jane Wyman Theater (1955–58), the title usually refers to the entire run of the series.

For the first two years of network series television (1947 to 1949), all television shows were broadcast live from New York and many were anthology dramas, presenting weekly hour-long plays. Kraft Television Theatre, Studio One, and Philco Television Playhouse are outstanding examples of the form that dominated network schedules through the early 1950s. Videotape would not be available until 1956, and film was initially thought to be too expensive for weekly television production. For television critics working during the early years of the medium, the hour-long anthology dramas, with their adaptations of literary classics, serious dramas, and social relevance, represented the best of television. The worst was cheap, half-hour, Hollywood telefilms that did not, in their view, aspire to so-called serious drama or social relevance. Fireside Theatre fit this latter category.

See also Deregulation; Federal Communications Commission; FOX Broadcasting Company; Programming; Reruns; Syndication.
The television series most often cited as the innovator in filmed programming is *I Love Lucy* (which was produced in Hollywood). However, when *I Love Lucy* premiered on CBS in 1951, *Fireside Theatre* had already been on the air for two years. To the show's sponsor and owner, Procter and Gamble, film offered several distinct advantages over live production. It made possible the creation of error-proof commercials. It allowed for closer control of content and costs. It created opportunities for added profits from syndication when programs were sold for repeated airing. And it enabled cost-effective distribution to the West Coast, not yet hooked into the coaxial cable network that linked East Coast and Midwest stations.

Producer, director, writer, and host Frank Wisbar is often considered the reason for *Fireside Theatre*’s success. Frank Wisbar Productions was the sole production company from 1951 to 1955 and for the show’s first several seasons, Wisbar produced and directed most episodes, and even served as host in the 1952–53 season. To control costs, he wrote many episodes himself and used public domain and free-lance stories. Writers such as Rod Serling and Budd Schulberg saw their stories produced and then little-known and second-string movie actors such as Hugh O’Brian, Rita Moreno, and Jane Wyatt appeared on the series.

When *Fireside Theatre* premiered in April 1949, it began a three-month experimental period. Some of the 15-minute episodes were live and some were filmed. Genres were mixed, and included comedies, musicals, mysteries, and dramas. A half-hour format that presented two 15-minute filmed stories per episode was chosen for the 1949–50 season. These early episodes were often mysteries, reflecting Wisbar’s background in horror and mystery movie making. (When these episodes were first shown in syndication they were called *Strange Adventure*.) Later seasons presented half-hour dramas, and while the stories continued to vary in genre (Westerns, comedies, melodramas, mysteries), family remained the central theme.

From 1953 to 1955 film actor Gene Raymond served as host and by the end of the 1954–55 season, as ratings declined, *Fireside Theatre* was completely overhauled—it became a different series. The title and theme music changed. But most significantly, film star Jane Wyman became host and producer. Wyman chose the scripts and acted in many of the episodes and her company, Lewman Productions, produced the series. It was now Wyman’s show, which would remain on NBC until 1958.

*Fireside Theatre* established its place in the history of television by being the first successful filmed network series in the era of live broadcasting. It was also the first successful filmed anthology series in an era of prestigious live anthology dramas. Scorned by critics, it was, for most of its seven seasons, a top-ten show on American television.

FIRST PEOPLES’ TELEVISION BROADCASTING IN CANADA

Canadian Programming Service

First Peoples of Canada have become internationally acknowledged as having the most advanced and fair Fourth World (indigenous peoples) broadcasting system, based on a 1991 legislated recognition of their collective communications and cultural rights as Peoples with a special status. In the Canadian context, “First Peoples” is an inclusive term referring to both the Inuit (known elsewhere as “Eskimos”) and the Amerindian populations, the latter also known as First Nations. The language of the Inuit is Inuktitut. Aboriginal-initiated media in Northern Canada (North of the 55th parallel line) has had a relatively long history when compared with Fourth World/indigenous communities elsewhere. The stages through which this broadcasting history has evolved were initiated by First Peoples themselves as they struggled for their inclusion in the policy and practice decisions pertaining to broadcasting services to be received by their national communities. Partly as a result of the pioneering and persistent activities of First Peoples to make their programming an integral part of the Canadian media infrastructure, Canada has also come to be identified as a model of media resistance against the overwhelming forces of continental integration in North America.

It is difficult to talk about the introduction of television into the North without acknowledging its relationship to radio. This is because radio set a very special attitudinal context for the arrival of television. First Peoples expected that television would have local and regional indigenous input, as well as national, Southern-produced programming, as had been the case with radio. A brief overview of Northern radio is, therefore, foundational to understanding why First Peoples reacted the way they did to television.

Radio entered the North in the late 1920s, at the same time that airplanes began to develop easy access to the Arctic. By the early 1930s, trading posts, the Royal Canadian Mounted Police centres, and religious missions were equipped with high frequency radios to maintain contact with their headquarters in the South. Native peoples did not have direct access to these early radio services. In 1958, the Canadian Broadcasting Corporation’s (CBC) Northern Service was established, taking over the infrastructure of shortwave transmitters established by the Canadian Armed Forces and the Department of Transport.

In 1960, the first Inuit-language broadcasts occurred and by 1972, 17% of the CBC shortwave service was in Inuktitut. Since the early 1970s, First Peoples have demanded access to radio in the North. All three levels of government have responded positively to native requests; seed money and core funding from provincial/territorial and federal government communications and cultural programs have assisted First Peoples in their radio development process. As a consequence, culturally-relevant, native-language radio programming has become an integral part of the Northern media infrastructure. Radio is simple to learn, operate, and maintain; it is an important information tool and readily adaptable to local indigenous-language programming.

The Canadian federal government’s public subsidisation of native-produced media began formally in 1974 with the development of its Native Communications Program (NCP). Between then and 1996, 117 First Peoples’ community radio stations have become operational across Canada, including those below the Hamelin line (the line at latitude 55 that separates the North from the South). With the exception of the Inuit service in the Northwest Territories, whose CBC regional radio programming has always been and continues to be satisfactory and representative of their concerns, all other Northern regions have both a network of local radio stations and one publicly-subsidised regional service.

The Native Communications Program was terminated quite suddenly in 1990 by the Secretary of State, who stated that vertical budgetary cutbacks were the reason for its dissolution. Evidence of concrete program successes and public outcry did not result in the program’s reinstatement. Funding for native local radio remains tenuous. In general, most Northern communities do not have a large enough advertising base to convert to private radio. They, therefore, depend on either public subsidy or some guaranteed way of maintaining stable funding. To date, most community radio stations operate radio bingos for their baseline fundraising strategy.

Regionally, both radio and television broadcasting evolved rapidly in response to the launching of the Anik satellite in 1972. In 1973, the North was hooked up to the South through radio and television services and for the first time, Inuit and First Nations were able to have access to the images, voices, and messages that United States and metropolitan-based Canadians produced with Southern audiences in mind. The parachuting in of Southern, culturally-irrelevant television programming into Northern communities by the CBC Northern Service acted as a catalyst for indigenous constituency groups to organize broadcasting services in their own languages (dialects), reflecting their own cultures, as they had achieved in radio. Almost immediately after its initial mystique dissipated, native peoples and their Southern supporters began to lobby for their own television programming and network services. They wanted participatory and language rights, as well as decision making responsibilities about programming and Southern service expansion. By the mid-1970s, First Peoples across the country had secured funding, established Native Communications Societies (NCS) to be the responsible administrative party for their communications activities, and begun operating local community television projects.

Beginning in 1976, in response to their clearly articulated demands, the federal government made large grants...
available for native organizations to be used for technical experiments with the Hermes (1976) and Anik B satellites (1978–81). In 1976, the Alberta Native Communications Society and Taqramiut Nipingat Incorporated (TNI) of Northern Quebec received money to do interactive audio experiments with the Hermes satellite. In 1978, funding was provided to Inuit Tapirisat (Brotherhood) of Canada (ITC) of the Northwest Territories and TNI to complete a more sophisticated interactive series of technical, community development, and educational experiments on the Anik B satellite. By 1981, after the establishment of five Northern television production studios, after two and a half years of staff training, and after six months of experimental access, it was unquestionably demonstrated that the organizations involved were capable of: (1) organizing complex satellite-based audio/video interactive experiments involving five communities; (2) managing five production centres and satellite uplink/downlink ground stations; (3) coordinating a large staff in different locations, as well as a budget of over a million dollars; (4) producing hundreds of hours of high quality program output; (5) documenting technical data related to satellite experimentation and viable uses of the satellite for Northern interactive communications; and, finally, (6) documenting the whole process as evidence of their credibility as a potential broadcasting licensee.

In 1981, based on the positive results of its Anik-B demonstration project called Inukshuk, the Inuit Broadcasting Corporation was licensed as a Northern television service by the Canadian Radio-television and Telecommunications Commission (CRTC), Canada’s regulatory agency, to provide Inuktitut-language services to the Northwest Territories, Northern Quebec, and Labrador. In this same period, other Native Communications Societies across the North were at varying stages of radio and television development, also in preparation for the licensing process and all in support of the establishment of a legislated recognition of their media demands as a distinct constituency group within the Canadian state.

At this time, the federal government undertook a one-year consultation and planning process, the outcome of which was the Northern Broadcasting Policy (1983), and an accompanying program vehicle, the Northern Native Broadcast Access Program (NNBAP). These policy and funding decisions became the foundation for the eventual entrenchment of aboriginal broadcasting in the 1991 Broadcasting Act.

The Northern Broadcasting Policy set out the principle of "fair access" by native Northerners to the production and distribution of programming in their territories. It further established the principle of consultation with First Peoples before Southern-based decisions were to be made about Northern telecommunications services. By 1983, thirteen regional Native Communication Societies had been established to be the recipients of funding from the NNBAP. The NNBAP coordinators set up a program structure within the Department of the Secretary of State (Native Citizens Direc-
edges outside of their Northern borders into the South and beyond. Technical advances in local, regional, and national telecommunications services, conjoined with the social and cultural goals of First Peoples' broadcasters, have demonstrated that it is possible to use media in a sensitive manner to express cultural heterogeneity, rather than homogeneity. To date, from the rudimentary evidence aggregated, it appears that First Peoples have refashioned television broadcasting. They have indigenized it—transformed it into a tool for inter-community and national development. They have utilized television programming as a vehicle of mediation into their own historically ruptured pasts and as a pathway into more globally-integrated futures.

—Lorna Roth

FISHER, TERRY LOUISE
U.S. Writer/Producer

Terry Louise Fisher began her career not in television but as a lawyer in the Los Angeles district attorney's office. She later sidestepped into a specialty in entertainment law and in 1982 wrote for and produced the Emmy-award winning series Cagney and Lacey. Other shows followed: Cutter to Houston and The Mississippi for CBS, the television movie This Girl for Hire and Your Place or Mine? (all 1983). But she is best known for her work as co-creator (with Steven Bochco) and supervising producer of L.A. Law from 1986 to 1988. L.A. Law, which ended its run in 1994, was considered the quintessential example of 1980s "appointment television," perfectly capturing the greed, glitz, and power seeking of the decade, and capturing in the process of its narratives an audience intrigued by those very elements.

The power struggles among the show's law partners were echoed in Fisher's 1987 legal battle with Bochco, when a negotiation for Fisher to take over from Bochco as executive producer failed and he banned her from the set. Since then, Fisher has published two novels, has produced another series and several made-for-television movies, and in 1995 was active in Cagney and Lacey: The Return. She also participated in a pilot for Daughters of Eve, the first international prime-time soap opera, to star Sophia Loren, financed by Proctor and Gamble.

—Cheryl Harris

TELEVISION SERIES
1982-88 Cagney and Lacey
1983 Cutter to Houston
THE FLINTSTONES

U.S. Cartoon Comedy Series

The Flintstones was the first, and the longest running, animated situation comedy shown in prime-time television. Premiering on ABC on 30 September 1960, it gained high ratings in its first season, thus establishing animation as a viable prime time format. Produced by Hanna-Barbera (Bill Hanna and Joe Barbera), The Flintstones was patterned after Jackie Gleason's The Honeymooners. Designed as a program for the entire family, the program did not appear as "children's television" until its rebroadcast by NBC in 1967. Its popularity with teenagers in its 8:30 P.M. Friday time slot, however, presaged the late 1960s move to animation as the preeminent format for children's programming.

Fred and Wilma Flintstone and their best friends, Barney and Betty Rubble, lived in the prehistoric city of Bedrock but faced the problems of contemporary working-class life. After a day at the rock quarry, Fred and Barney arrived home in a vehicle with stone wheels and a fringe on top. Their lives revolved around their home, friends, and leisure activities: a world of drive-ins, bowling, and their "Water Buffalo" lodge. A baby dinosaur and a saber tooth tiger replaced the family dog and cat. In 1962 and 1963, Pebbles and Bamm Bamm appeared as the daughter and adopted son of the Flintstones and Rubbles respectively.

Aside from being the first animated series made for prime time, The Flintstones also broke new ground in that each episode contained only one story that lasted the full half hour. Until the 1960s, cartoons were generally only a few minutes long. Half-hour programs used three or four shorts (three- to four-minute cartoons) and a live "wrap-around," usually presented by a friendly "host," to complete the program. In another innovation, Hanna-Barbera produced The Flintstones using limited animation techniques. This assembly line method of creating drawings, combined with reduced and simplified body movement, made it possible to manufacture animation cells more cheaply. Because of the lowered cost and the appeal of animation to children, limited animation became the format of choice for children's television in the 1960s, a decade in which children's programming became almost entirely animated.

The Flintstones helped establish Hanna-Barbera Productions as a major Hollywood animation studio and by the late 1960s as the world's largest producer of animated entertainment films. The Flintstones also launched a multi-million dollar merchandising business with hundreds of toys and novelties placed on the market. Perhaps the most enduring product developed in this ancillary line was Flintstones vitamins, also used as a sponsor for the program. Citing the difficulties children might have in distinguishing cartoon characters from the products made in their likenesses, critics attacked the practice of advertising vitamins to children, and such ads were withdrawn in 1972. The Flintstones characters still appear in commercials for Pebbles' cereals, and other tie-ins include films (a major, live-action motion picture in 1994), traveling road shows, toys, and other children's products.

The Flintstones played on ABC in prime time through September 1966. The series was rebroadcast on Saturday mornings by NBC from January 1967 through September 1970. Various spin-offs and specials also appeared on the CBS or NBC Saturday morning lineup throughout most of the 1970s, and continue to reappear. The Flintstones is still available in syndication.

THE FLIP WILSON SHOW
U.S. Comedy Variety Program

The *Flip Wilson Show* was the first successful network variety series with an African-American star. In its first two seasons, its Nielsen ratings placed it as America’s second most-watched show. Flip Wilson based his storytelling humor on his background in black clubs, but adapted easily to a television audience. The show’s format dispensed with much of the clutter of previous variety programs and focused on the star and his guests.

Clerow “Flip” Wilson had been working small venues for over a decade when Redd Foxx observed his act in 1965...
and raved about him to Johnny Carson. As a result, Wilson made over 25 appearances on the Tonight Show, and in 1968, NBC signed him to a five-year development deal.

Wilson made guest appearances on shows such as Rowan and Martin's Laugh-In and the first episode of Love, American Style. On 22 September 1969, he appeared with 20 other up and coming comics in a Bob Hope special, which was followed by a Flip Wilson Show special, a pilot for the series to come. The special introduced many distinctive elements that would be part of the series, the most striking element the small round stage in the middle of the audience, from which Wilson told jokes and where guests sang and performed sketches with minimal sets.

For his opening monologue in that special, Wilson told a story about a minister’s wife who tried to justify her new extravagant purchase by explaining how “the Devil made me buy this dress!” The wife’s voice was the one subsequently used for all his female characters, whether a girlfriend or Queen Isabella (“Christopher Columbus going to find Ray Charles!”). Later in the special, he put a look to the voice in a sketch opposite guest Jonathan Winters. Winters played his swinging granny character, Maudie Frickett, as an airline passenger, and when Wilson donned a contemporary stewardess’ outfit—loud print miniskirt and puffy cap—Geraldine Jones was born. The audience howled as Winters apparently met his match.

NBC was encouraged with the special to go forward with a regular series, and The Flip Wilson Show joined the fall lineup on 17 September 1970. Wilson appeared at the opening and explained that there was no big opening production number, because it would have cost $104,000. “So I thought I would show you what $104,000 looks like.” Flashing a courier’s case filled with bills before the camera and audience, he asked, “Now, wasn’t that much better than watching a bunch of girls jumping around the stage?”

That monologue illustrated one of the chances Wilson and his producer, Bob Henry, took. They did away with the variety show’s conventional chorus lines, singers and dancers, and allowed the star and his guests to carry the show. The creative gamble paid off as The Flip Wilson Show defeated all comers in its time slot and won two Emmy Awards in 1971: as Best Variety Show and for Best Writing in a Variety Show.

The show was also a landmark in the networks’ fitful history of integrating its prime-time lineup. Nat “King” Cole had been the first African American to host a variety show, which NBC carried on a sustaining basis in 1956. Despite appearances by guests such as Frank Sinatra, Tony Bennett and Harry Belafonte, that program could neither attract sponsors, nor obtain sufficient clearances from affiliates. Cole left the air at the end of 1957. Later, NBC was more successful with Bill Cosby in I Spy, and Diahann Carroll as Julia. The week after The Flip Wilson Show's premiere, ABC debuted its first all-black situation comedy, an unsuccessful adaptation of Neil Simon's Barefoot in the Park.

During the run of his show Wilson created several other characters who flirted with controversy. There was the Rev. Leroy, of the Church of What’s Happenin’ Now, whose sermons were tinged with a hint of larceny; Freddy the Playboy: always, but unsuccessfully, on the make; and Sonny, the White House janitor, who knew more than the president about what was going on.

But Geraldine Jones was by far the most popular character on the series. Wilson wrote Geraldine’s material himself and tried not to use her to demean black women. Though flirty and flashy, Geraldine was no “finger popping chippie.” She was based partly on Butterfly McQueen’s character in Gone with the Wind: unrefined but outspoken and honest (“What you see is what you get, honey!”). She expected respect and was devoted to her unseen boyfriend, “Killer.” It also helped that Flip had the legs for the role, and did not burlesque Geraldine’s build, though NBC Standards and Practices did ask him to reduce Geraldine’s bust a little.

Another aspect of the show’s appeal was its variety of guests. Like Ed Sullivan, Flip tried to appeal to as wide an audience as possible. The premiere saw James Brown, David Frost and the Sesame Street Muppets. A later show offered Roger Miller, the Temptations, Redd Foxx and Lily Tomlin, whom Freddy the Playboy tried to pick up. Roy Clark, Bobby Darin and Denise Nicholas joined Wilson for a “Butch Cassidy and the Suntan Kid” sketch.

The Flip Wilson Show turned out to be one of the last successful variety shows. CBS’ 1972 offering, The Waltons,
became a surprise hit, winning the same Thursday time slot. By the 1973–74 season, it was John-Boy and company who had the second most popular show of the season. NBC put Wilson’s show to rest, airing its last episode on 24 June 1974.

FOR THE RECORD
Canadian Dramatic Anthology Series

For the Record was one of the most successful series ever produced and broadcast by the CBC. It used an anthology format, offering four to six new episodes each year linked only by the series title and a documentary-style approach to topical stories. Many episodes proved controversial, but the series was critically acclaimed for its thoughtful and intense treatment of difficult issues.

The idea for the series originated with John Hirsch, who was appointed head of television drama at the CBC in 1974. He felt that CBC drama should have the same urgency and relevance as the network’s well-regarded current affairs programming and recruited Ralph Thomas as executive producer of a new series, which would become For the Record.

Although the producers and writers contributed a great deal to the success of the series, one of the key decisions taken by Thomas was to hire directors who had contributed to the growth of Canadian cinema in the 1960s and early 1970s. These filmmakers were part of Canada’s “direct cinema” movement of low-budget feature films based on documentary techniques developed at the National Film Board. In the mid-1970s Canadian film moved toward the production of supposedly more commercial imitations of Hollywood style and, as a result, leading filmmakers, both anglophone and francophone, were pleased to find an outlet for their talents in a television series which stressed its difference from the U.S. network programs that dominated Canadian television screens.

The series officially got under way in 1977, but the basic approach was established in the previous season when five topical dramas were broadcast under the title Camera ’76. These included “Kathy Karus is a Grizzly Bear” (written by Thomas and directed by Peter Pearson), about the exploitation of a young long-distance swimmer, and “A Thousand Moons” (directed by prolific Quebec filmmaker Gilles Carle), about an old metis woman who lives in a city but dreams of returning home to die. Six new programs were broadcast in the following season, when the series got its permanent name: two (“Ada” and “Dreamspeaker”) were contributed by another Quebec director, Claude Jutra, while documentary filmmaker Allan King directed “Maria,” about a young Italian-Canadian who attempts to unionize a garment factory. The most controversial production of the 1977 season was undoubtedly “The Tar Sands,” written and directed by Pearson, which provoked a libel suit because of its depiction of recent dealings between the oil industry and politicians in Alberta.

By the end of the 1977 season the format and possibilities of the series had been firmly established; but these did not fit comfortably into existing categories of television programming. The episodes were presented as television dramas, but the location shooting made them seem more like films. After the legal problems with “The Tar Sands,” the CBC disavowed the term “docudrama” which had been applied to the series and suggested instead “journalistic drama” or “contemporary, topical drama that is issue oriented.”

Whatever the term, the series did allow for a range of approaches. Dramatized treatments of specific topical events (like “The Tar Sands”) were rare, although viewers could often relate the fictional stories to similar stories recently in the news. More common were episodes (like “Maria”) which dealt with an identifiable “social problem” in terms of its impact on characters seen as both individual and representative. While the “social problem” was a necessary ingredient, some episodes, notably those directed by Carle and Jutra, took on a poetic dimension with subjective fantasy sequences emerging from their social realism.

The series was praised for its refusal to allow personal dramas to obscure the social implications of the issues. Whatever the outcome for the characters, the endings did not create the impression that the issues had been resolved, implying that solutions still needed to be sought in reality. Supporters of public broadcasting in Canada pointed to *For the Record* as an alternative to the formulas of commercial television, with its demand for clearly-defined conflicts and happy endings, and there was a widespread agreement that the series fulfilled the CBC's mandate to provide insight into Canadian society and culture. Its cancellation in 1985 could be seen as a response to commercial and political pressures on the CBC, although the public network has continued to broadcast similar realist dramas exploring topical issues.

**FORD, ANNA**

*British Broadcast Journalist*

Anna Ford was independent television's first female newscaster and in time became one of the most popular and experienced of female news presenters in British television. Critics ascribed her early success as a newscaster primarily to her attractive looks, but she subsequently demonstrated even to her detractors that she was more than competent as a presenter and furthermore ready to brave controversy (something she was well used to even as a student, due to her committed Socialist views).

Before her recruitment as ITN's (Independent Television News) answer to the BBC's popular, though less vivacious, newscaster Angela Rippon in the late 1970s, Ford had already amassed some experience as a television presenter through her work as a reporter for *Reports Action, Man Alive* and other programmes. Reflecting her early training in education (she taught social studies to IRA internees in Belfast's Long Kesh prison, among others), she had also worked on broadcasts for the Open University and had then presented *Tomorrow's World* for a time before resigning because, she explained, she had no wish to become "a public figure."\[73\] Ironically, this is exactly what she was shortly afterwards fated to become as a high-profile newscaster for *News at Ten*.

The most controversial stage in Ford's career opened in the early 1980s when she was one of the "Famous Five" celebrities behind the launching of the ill-starred TV-AM company, for which she presented the breakfast programme *Good Morning Britain*. When the new enterprise failed to

attract the required audiences, Ford (and Rippon) were unceremoniously sacked and it was speculated that her career in television was over. Ford's response to this was to pour a glass of wine on her former employer, M.P. Jonathan Aitken— an incident that hit the headlines and only confirmed Ford's reputation for belligerence.

Similarly controversial was Ford's widely reported refusal to wear flattering make-up on television to disguise the effects of aging. In protest, she said, of the "body fascism" of television bosses who insisted that female newscasters were only there to provide glamour. Critics of her stand attacked her for being aggressive and overtly feminist (they also expressed shock that she sometimes read the news while not wearing a bra), but many more admired her for her forthrightness. Those who had automatically written her off as "just a pretty face" were obliged to think again. It was a mark of her success in the argument that, some six years after the TV-AM debacle, Ford—now age 45—was readmitted to the fold as a newscaster for the BBC's prime-time Six O'Clock News. She has also continued to present occasional programmes on a wide range of educational and other issues.

PUBLICATION

FORMAT SALES, INTERNATIONAL

In the process of international format sales the basic format of a programme is sold (or licensed) to a foreign production company to enable them to create a domestic version of the product. This practice, while more and more common, is hardly new.

In U.S. television's infancy it was common for successful radio shows to transfer to television (a practice incidentally that still takes place in the United Kingdom). The most popular of these early radio to TV transfers were game shows and human interest shows such as This Is Your Life which made its U.S. TV debut in 1952 and Candid Camera which was adapted from radio's Candid Microphone in 1948. This initiative demonstrated the durability and flexibility of certain formats and alerted programme creators to the feasibility of secondary usage of their creations. The rapid rise in popularity of television in the United States and the proliferation of networks to serve the public produced an ever increasing demand for programming so that, even by the
early 1950s, a great number of formats had been tried and tested. The BBC Television service in Britain may have started three years before its U.S. counterpart but the U.S. service grew far more quickly and didn’t have a five year hiatus because of World War II, as did the BBC. The U.S. systems, consequently, were far more advanced in the areas of programme formats by the early 1950s when the BBC began to purchase successful formats from the United States. A year after What’s My Line? debuted on CBS in 1950, the format rights were bought by Maurice Winnick for the BBC. The show proved as successful in the United Kingdom as in the United States. The original format for What’s My Line? had been developed by former radio announcer Mark Goodson and former radio writer Bill Todman who had formed the Goodson-Todman Production Company in 1946. The Goodson-Todman company became the acknowledged masters of format development and created a slew of formats that were to sell successfully in many territories and be revived domestically on occasion, especially during the game show revival of the 1970s. Other successful game show format holders include Chuck Barris and Merv Griffin.) Formats that sold in English speaking territories would often spawn shows with the same name as the original, hence The Price Is Right and Beat the Clock are titles as famous in the United Kingdom as in the United States. On other occasions the names of the new shows differ from the originals: in the United Kingdom, The Match Game is known as Blankety Blank and Family Feud is retitled Family Fortune.

With the United States’ head start on format development expertise it was quite a while before the trend was reversed and the United States started buying formats in. The first game show the United Kingdom sold to the United States was Whodunnit in 1979 but in the 1960s another genre proved to be exportable: Comedy.

Given the huge potential financial rewards associated with a successful long-running situation comedy, U.S. producers were quick to exploit series formats that had been hits in the United Kingdom, rationalising that some of them would translate to an American audience. As early as the mid-1960s such experiments were undertaken. At that time film producer Joseph E. Levine decided to expand his empire (Embassy Pictures) to include network television and had the idea of acquiring the rights to produce an American version of the runaway U.K. hit sitcom Steptoe and Son. This was an ambitious move as Steptoe and Son was quite extreme, more hard hitting “kitchen-sink” drama than traditional sitcom. But Levine thought the hard edges could be softened enough to make the series palatable for the U.S. audience who, after all, had already demonstrated a willingness to identify with the working class by making The Honeymooners such a success in its time. Beefy film actor Aldo Ray was cast alongside Lee Tracey, but the pilot remained unsold. This remained the case until years later when Norman Lear would produce a successful U.S. version of the series, Sanford and Son. This adaptation came, however, after Lear had already changed the face of the U.S. sitcom genre with another U.K. format buy, Till Death Us Do Part which became the groundbreaking All in the Family.

Lear’s success with these format changes gave rise to many similar deals. While many of the attempts at format copying have been failures, there have been notable successes. Man About the House (U.K.) spawned in the United States Three’s Company. Keep it in the Family translated as Too Close for Comfort, etc. Certain companies (such as D. L. Taft) specialise in format transfers, knowing enough about both markets to make astute decisions on whether a show would travel. Most successful British sitcoms are scrutinised carefully by U.S. producers and a huge percentage are optioned for a format change. Occasionally the trend occurs in reverse (the U.S. Who’s the Boss? emerging in the United Kingdom as The Upper Hand, The Golden Girls becoming The Brighton Belle) but this is far rarer, almost certainly because most successful U.S. sitcoms appear in the United Kingdom in their original format. The United States’ domination of the entertainment media results in local audiences being au fait with American society and culture and thus more willing and able to consume the original.

THE FORSYTE SAGA

British Serial Drama

The Forsyte Saga, one of the most celebrated of British period drama series ever made, was first shown in 1967 and subsequently in many countries around the world, to universal acclaim. Based on the novels of John Galsworthy, the series was made in black and white and comprised twenty-six episodes covering the history of the aristocratic Forsyte family between the years 1879 and 1926 (actually rather longer than the period covered in the novels themselves).

The project was the brainchild of producer Donald Wilson, who first conceived the idea in 1955 and spent years planning the series and getting the necessary backing for it. The series finally got the go-ahead on the strength of the distinguished cast who were signed up for it. They included Kenneth More (Jolyon Forsyte), Eric Porter (Soames Forsyte), Nyree Dawn Porter (Irene Forsyte), Fay Compton (Ann Forsyte), Michael York ("Jolly" Forsyte) and newcomer Susan Hampshire (Fleur Forsyte). The plot revolved around the feuds and machinations of the Forsyte family and their London merchants' business (paving the way for such glossy soap operas of the 1980s as Dallas and Dynasty). Each episode culminated in a "cliffhanger" ending designed to persuade viewers to tune in once again the following week. Among the most famous scenes was one in which the hapless Irene, unloved by her cold and possessive husband Soames, was brutally raped by him as their marriage fell apart. The scene was rendered even more convincing by bloodstains on Irene's dress (Eric Porter had inadvertently cut his hand on her brooch when tearing off her bodice).

The series enjoyed vast audiences, the first showing, on BBC2, attracting some six million viewers and the second showing, now on BBC1, attracting some 18 million. Publicans and vicars alike complained that they might just as well shut up shop on Sunday evenings as everyone stayed at home to see the next episode of the gripping saga. Similar success greeted the series in other parts of the world, including the United States, and The Forsyte Saga also earned the distinction of being the first BBC series to be sold to the Soviet Union. The worldwide audience was estimated as something in the region of 160 million.

The success of the series, which won a Royal Television Society Silver Medal and a BAFTA award for Best Drama, prompted the BBC to plough further resources into similar blockbusting "costume" dramas, a policy that in ensuing...
years was to produce such results as *The Pallisers* (which was also produced by Donald Wilson) and *Upstairs, Downstairs*. In the United States it promoted the development of the miniseries in competition with the open-ended perpetual drama serial. The bosses of one U.S. television station, indeed, decided its viewers could not be expected to wait for the next episode and showed the entire series in one chunk, which lasted twenty-three hours and fifty minutes.

**FORSYTHE, JOHN**

U.S. Actor

With his tanned, handsome mein, silver hair and urbane style, John Forsythe has been a recognizable television personality associated with suavity and upper-class elegance since the 1950s. He has made his mark chiefly in debonair paternal parts in several long-running television series. The actor’s distinctive voice and precise diction have also served him well, particularly in parts where the actor was never seen on screen, as in the 1970s Aaron Spelling hit *Charlie’s Angels*, in which Forsythe voiced the role of Charlie Townsend, the eponymous employer of a trio of female detectives.

Forsythe’s first roles in fact permitted him to hone and showcase his vocal talents. After studying at the University of North Carolina, he began his career as a sports announcer for the Brooklyn Dodgers at Ebbets Field and then segued into acting in radio soap operas. Subsequent appearances on Broadway led to a motion picture contract with Warner Brothers and a Hollywood debut with Cary Grant in the film *Destination Tokyo*.

After World War II Forsythe went on to starring roles in a number of Broadway productions. While still in New York, he appeared in many of the live television shows based there, such as *Studio One, Kraft Television Theatre, Robert Montgomery Presents*, and *Schlitz Playhouse of Stars*. He subsequently moved to Los Angeles and took a starring role as a playboy Hollywood attorney responsible for raising his orphaned niece in the television series *Bachelor Father*, which was broadcast from 1957 to 1962. Forsythe was nominated for an Emmy for his first television role as a father figure, and he would be nominated again for his portrayal of the head of the Carrington clan in the hit show *Dynasty* in the 1980s.

ABC’s answer to hit CBS show *Dallas, Dynasty* featured Forsythe in the role of patriarch Blake Carrington, head of a wealthy Denver family, plagued by a scheming ex-wife, a bisexual son, and other tribulations. The show, which ran roughly in tandem with the Reagan era, was known for its opulent atmosphere, lavish sets and costumes and typical preoccupation with the problems of the wealthy ranging from murder and greed to lust and incest. The show, which hit its ratings peak in 1984–85, solidified Forsythe’s “nice guy” image even in the role of a ruthless oil magnate.

exploring plot lines focusing on his emotional reactions in opposition to Joan Collins' villainy, his son's sexuality, and his attempts to maintain the family. Blake Carrington even pitched his own line of cologne in advertisements featuring his love for his wife, who, in a commercial narrative extending from *Dynasty*, had the fragrance designed for him.

Forsythe won two Golden Globe Awards for Best Actor in a Dramatic Television Series for his work in *Dynasty*. Since the series ended in 1989, he has recreated his role as Blake Carrington in a reunion movie and appeared as the on-camera host for *I Witness Video*. He also starred in a 1992–93 series, a political satire sitcom called *The Powers that Be*.

FOUR CORNERS
Australian Current Affairs Program

*Four Corners* is Australia's longest running current affairs program, and is often referred to as the “flagship” of the government-funded Australian Broadcasting Corporation (ABC). *Four Corners* has gone to air continuously on the ABC since 1961 and has established itself not only as an institution of Australian television but more widely of Australian political life. The program has frequently initiated public debate on important issues as well as precipitated governmental or judicial inquiries and processes of political reform.

*Four Corners* was originally conceived as a program with a magazine format offering an informed commentary on the week's events. It filled a space on Australian television roughly comparable to the British Broadcasting Commission's *Panorama* (from which it often borrowed material in the 1960s) or the early current-affairs programming developed by Edward R. Murrow for the Columbia Broadcasting System in the United States. It was also notable for providing the first truly national orientation.
uncertainty and decline of network television. According to Sydney Head and Christopher Sterling, 1985 was the first year that network revenues fell slightly. By 1987, total revenues of ABC, CBS and NBC had dropped to $6.8 billion. For the first time ever, CBS recorded a net loss for the first quarter. As a result, all three networks adopted austerity measures, cutting budgets, laying off personnel and dumping affiliates.

To the big three, the competition of the FOX network could hardly have occurred at a worse time. FOX itself was not spared financial hardship. In 1988 the company lost $90 million and in 1989, $20 million. To hedge against increased profit erosion the three networks began to diversify their interests in cable television and shore up their owned and operated stations.

Economic uncertainty also affected network affiliate relationships. ABC, NBC and CBS tended to dominate the powerful and lucrative VHF stations throughout the United States, with the less profitable UHF stations being in the hands of independents. With the advent of the FOX network, a number of the VHF stations, previously affiliated with the major networks, jumped ship, providing a lucrative advantage to Murdoch. Some claim that Murdoch’s exclusive National Football League contract was an added incentive to switch their allegiance. In one agreement with station group owner, New World, the FOX network gained twelve new stations which ended their affiliation with “Big Three” networks. Such “fickle behavior” on the part of affiliates sent shock waves through the established networks which had complacently relied upon their loyalty.

Opposition to Murdoch’s aggressiveness did not go unchallenged by the networks. Americans have long been suspicious of the power and influence of foreign investors. For this reason, the navy strongly opposed British Marconi’s monopoly of radio telephony in 1919, forcing the formation of RCA. Moreover, FCC licensing regulations specified that only U.S. citizens could own broadcasting stations. The FCC also regulated cross-ownership of media companies to avoid antitrust abuses.

In an attempt to thwart Rupert Murdoch’s growing influence, the FCC, spurred on by NBC and the NAACP, investigated his citizenship and the ownership structure of the FOX network. Murdoch became a U.S. citizen in 1985, just prior to the founding of the FOX network. He also disclosed that FOX would assume virtually all economic risk for and reward of acquired stations. His disclosures were backed by sworn declarations of key FCC staffers and the independent legal counsel of Marvin Chirelstein of Columbia Law School.

Some reports claimed the disclosures were, in fact, deceptive. Murdoch’s Australia-based News Corporation owned 24% of the FOX voting stock (just below the legal limit of 25%); the remaining 76% belonged to Barry Diller (20th Century-Fox) who was a U.S. citizen. In fact, News Corp. indirectly owned 99%, a reality which the FCC either ignored or failed to see. Still, in keeping with deregulation trends, and despite temporary congressional freezes, the FCC found in favor of Murdoch. This decision was a great victory for Murdoch and a major disappointment to the networks.

The new network strengthened its position with several strategies. By reducing the number of prime time hours offered each week and providing no morning shows or soap operas, FOX has given its affiliates much more freedom to schedule their own shows and commercial announcements. Rather than compete with the major networks using counter program strategies, FOX has tried to offer entertaining, low cost shows to its affiliates. Some programs in late night fringe (the Joan Rivers and Chevy Chase hosted talk shows) have not done well but others (such as Married...with Children, 21 Jump Street, The Tracy Ullman Show, Beverly Hills 90210 and The Simpsons) have been successful. The probable reason for these successes is that they target younger, trend-following viewers devoted to light entertainment. In addition, somewhat controversial program strategy, Murdoch has spent lavishly to obtain the rights to National Football League football, a major coup.

FOX’s vertically integrated structure (a combination of 20th Century-Fox, FOX Network and Fox Stations) is also well suited to produce and distribute a large number of quality shows. The substantial collection of films in the vaults of 20th Century-Fox remain a rich resource, still to be developed.

—Richard Worthingham

FURTHER READING

FRANCE

In no other country in Europe have the audio-visual media been a greater stake in political struggle than in France, despite the fact that television, in particular, was very late in getting started and slow to develop. This lag may be attributed to both French anxiety about image-based culture, and to uncertainty about new technology. Within the public service tradition administered by a Jacobin state, television was tightly controlled and part of electoral spoils. Its informational and educational programmes achieved a high standard before deregulation in the 1980s, while popular programming languished in the shadow of American imports and the low cultural esteem in which they were held on the “audiovisual landscape”. Television, unlike the cinema, was never considered part of the national culture, and so French program makers contributed little to the international circulation of programs, nor did intellectuals make much contribution to media theory.

French television’s origins were not propitious. A few experiments in the 1930s culminated in the first regular programming in 1939, transmitted from the Eiffel Tower to a limited number of sets in Paris only. During the Occupation, the Germans used the medium to entertain their soldiers, thereby tainting the medium from the start. The post-war government revoked the Vichy law conceding broadcasting to the private sector, and the resulting state monopoly would remain unchallenged for four decades. In 1948, the then Secretary for Information, François Mitterrand, set a 819-line technical standard in deference to the electronic industry’s ambitions, but the results were expensive sets and a service long confined to the Paris region. Heavy regulation and a centralized bureaucracy explain the slow development of a network compared with the United Kingdom or Germany. Studios were built in a suburb of Paris, and for many years the “Buttes-Chaumont” label connoted a heavily dramatic style, then scorned by the young cinéphiles in the sway of the Nouvelle Vague. Television was perceived as the refuge of classical academicism and the untalented; it was not until the 1980s that the pioneer “réalisateurs de télévision” began to receive their critical due. There were still only 3.5 million sets by 1963, but the figure was increasing dramatically each year of the “30 Glorieuses” in the Gaullist period, often stimulated by international broadcast events (Eurovision in 1954, World Cup football). The evening news at 20:00 became a national ritual, “la grande messe”.

Under the Fifth Republic, television legislation mutated every four to five years on average, as governments pondered how best to govern what its intellectuals considered a monster in the living room, undermining literate culture and opening the way to commercial influences from abroad. But the government and the opposition distrusted TV—each believing it favored the other. Under the control of Ministers for Information, then for Culture, and occasionally for Communication itself, there was no accountability, little audience research, and, scarcely any cultural legitimacy. Employees of state broadcasting had the status of civil servants, which made their right to free expression precarious. During the Algerian War, President Charles DeGaulle became the first head of state to use TV to justify his policy, but the government openly interfered with the news coverage of the conflict and many journalists quit or were dismissed. Legislation in 1959 transformed Radio-Télévision de France into a body (ORTF) with industrial and commercial objectives, but rejected both private TV and any protection against the threat of censorship.

A new breed of professionals came to the medium in the mid-1960s, when French television experienced something of a golden age under the ethos that the medium could make culture accessible to the people. The television diet leaned toward turgid studio productions of classic plays and novels (the spicy history serial Les Rois Maudits is remembered as refreshing in this context), and pedagogic series of “initiation” (Lectures pour Tous, Le Camera Explore le Temps). In the way of entertainment, there were variety shows, often associated with the popular crooner Guy Lux, and slapstick games shows like the French-originated Jeux sans Frontières, but little middlebrow fare, except for Inspector Maigret mysteries. A brief period of liberalization occurred after 1964 when a second channel (A2) was created, despite the fear of where competition might lead. (The new 615-line technical system was non-compatible with the rest of Europe, but was propagated to the Soviet bloc.) A third channel (FR3) was created in 1973 with a regional structure. An ORTF strike coincided with the events of May 1968, and 200 staff were fired. Less noticed that year was the first authorization of advertising, which would lead to a slowly creeping increase in the number of advertising minutes per hour, to the collection of ratings, and in turn to the break-up of ORTF and eventually what came to be called the “dictatorship of the Audimat”.

In 1973, President Georges Pompidou was able to proclaim that television was the “voice of France” at home and abroad. It was the only country with three public service channels, none of which was autonomous from the government or in competition with each other for viewers. It was considered axiomatic that getting rid of the monopoly would lead to mediocrity. Neither the political left nor right was committed to freedom of communication, each for its own reasons. By 1974 there were 14 million sets receiving 7,400 program hours a year produced by 12,000 staff at ORTF. 1974 was the year the decision was finally taken to break up the “monster ORTF”, whose functions were divided among seven autonomous bodies, but the government still drew the line on private broadcasting and maintained its right to appoint broadcast executives. In fact, the production wing would still get 90% of program commissions; there was very little independent production; and executives
were still chosen for their political docility. Experimentation was hived off to INA, the Institut National de l’Audiovisuel, which also managed the archives and professional training. (Jean-Christophe Averty is usually singled out as the first producer to forge a specifically televsional style, one relying heavily on chromakey effects.) Programs remained much as before, and studio programs seemed even more boring and didactic. Imports from Britain (The Forsyte Saga) and the United States (Roots, Holocaust) merely raised the alarm among cultural elites about the public taste for serial fiction and about a marked decline in domestic quality programming. Television investment had become a major factor in film production.

President Giscard d’Estaing’s government also launched France into telecommunications research and development in 1979, with a DBS satellite agreement with Germany, one of the first efforts to counter United States’ and Japanese hegemony in this field. The D2MAC format, an intermediate step toward high definition, would prove an expensive mistake ten years later, another unfortunate consequence of the technocratic hold over the media.

Paradoxically, in the light of the Socialists’ historical opposition to private ownership of the airwaves, it was under Socialist President François Mitterrand that deregulation finally occurred. In 1981 the Moinot Commission, charged with examining the state of affairs since the break-up of ORTF in 1974, found that decentralization and competition between the three channels were illusory and not promoting creative programming; serious programs were being pushed to the edges of the schedules, in favor of a high quotient of popular imports, a trend for which Dallas became the inflammatory label. A 1982 law abolished the state monopoly and “freed” communications: the prime channel, TF1, was sold outright and licenses for two more were granted, including the pay channel Canal Plus, which quickly became a major player in the audio-visual industries, spinning off its own feature film production company. Meanwhile, a belated attempt to cable the major cities got under way. Political controversy dogged the attribution of these private channels (Italian media mogul Silvio Berlusconi won one franchise) as well as the appointment of directors of the increasingly beleaguered state channels. The composition and powers of a relatively feeble regulatory agency changed with almost every government. The private TF1 quickly became the channel of reference, with almost half the general audience, while the revenues and audience share of France 2 and France 3 (as the state channels were re-named in 1994) gradually shrank.

At the international level, France had become the leading exponent of protectionist quotas for film and television, as well as of the view that the audiovisual market could be a way of creating—or defending—a common European cultural identity. France eschewed both cost-sharing initiatives with foreign partners and involvement in experiments in pan-European television, although she was increasingly worried about satellite penetration. Instead she chose the path of Francophony with the TV5 satellite channel in partnership with French-speaking countries, and conducted a lobbying effort within the European parliament to endorse a European channel.

Surrounded by bitterness among socialist supporters that the government had surrendered the media to private interests, Culture Minister Jack Lang exploited both a lingering anti-Americanism and a revived Europeanism in order to launch a new public service channel with the habitual mission of exploiting new technologies and a cultural remit. La Sept, initially a wholly French channel lodged on the frequency of a bankrupt private channel, became ARTE when Germany became an equal partner in 1991.

The French view that cultural and political identity are necessarily linked predominated in European audiovisual policy; the debates on “world image battles” led to the European Community White Paper Television without Frontiers, which tackled the problem of English-language domination of the world image market by enjoining its member states to ensure, by all necessary means, that at least half the content of their television channels was of European origin. France’s own quota was higher—60%—but the irony is that whatever its status as proponent of the European public cultural space, its domestic broadcasting policy has run in the direction of deregulation, to such an extent that the national regulatory body (Conseil Supérieur Audiovisuel) has been unable to enforce these quotas or to inhibit French investors from putting up money for English language films, ranging from The Piano to Under Seige. In fact, certain aspects of American production—like the use of multiple screenwriters—are gradually being adopted in France. Nevertheless, the various governments under President François Mitterrand, even the conservative ones, have generally proclaimed the importance of national and high cultural goals. France continued to argue for protectionism, as in the GATT discussions in 1993, when a lobby of intellectuals helped to secure the exclusion of film and TV from the treaty.

The state of French television in the mid-1990s is a mixed but unbalanced system, with the private TF1 and Canal Plus becoming major players in the international media market. The audiences for FR2 and FR3 shrink slightly each year, as the redown (license fee) does not keep pace with rising program costs, and is widely flouted by viewers turning to the growing cable sector. The Franco-German cultural channel ARTE shares a wavelength with a daytime educational channel, which seems to perpetuate the same intellectual values that have always characterized French TV: didactic and avant-garde offerings, especially “authored” documentaries and “personal” films, made by the elites for the masses.

**FRANCIS, ARLENE**

U.S. Talk-Show Host/Performer

Arlene Francis played a key role in television’s first decades as performer, talk-show host, and guest star, appearing on many shows and proving herself to be one of the medium’s most durable personalities. At the height of her popularity in the mid-1950s, she was rated the third most recognized woman in the United States.

Francis had a diverse and successful career on television, preceded by a versatile career as “femcee,” actress, and radio performer. Her film career began in 1932 with *Murders on the Rue Morgue* and one can listen to her work as an actress on radio as early as 1936 on the Columbia Radio Workshop. During World War II she was the “femcee” of a radio show called *Blind Date*, a forerunner of *The Dating Game*, and she worked regularly as a featured actress on the Broadway stage before coming to television in the early 1950s. She appeared in a simulcast version of *Blind Date* from 1949 to 1952, and also on such shows as *By Popular Demand* and *Prize Performance*, but it was as a regular panelist on the popular quiz show, *What’s My Line?*, that Francis became a household name on television. Known for her elegance and good humor, Francis would trade repartee each week with such figures as columnist Dorothy Kilgallen, publisher Bennet Cerf, and poet Louis Untermeyer.

Although *What’s My Line?* was her bread-and-butter show over the next twenty-five years, versatility continued to mark Francis’ career. In September 1950, shortly after she joined the panel of that word-and-wit show, she became the first “mistress” of ceremonies for NBC’s *Saturday Night Revue: Your Show of Shows*, and she appeared frequently on other television shows in the 1950s, 1960s and 1970s.

Francis also made a major contribution to the history of television talk as host and managing editor of NBC’s *Home* show. *Home* was the afternoon show teamed with *Today* and *Tonight*, in NBC President Sylvester “Pat” Weaver’s trilogy of daily talk on NBC in the 1950s, each show anchored by a “communicator.” Network executives knew that women represented a major part of the daytime audience and were key decision makers on consumer purchases. *Home* was NBC’s attempt to capture that audience. To quote from the 1950s film, *On the Waterfront*, Francis ”coulda been a contender.” She was certainly one of the foremost talk-show hosts on television in the 1950s; if her show had continued into the 1960s, her national status as a talk-show host might have been assured. But *Home*, despite great popularity among its audience, was can-

Phil Donahue rose to national syndication prominence two decades later that another national talk-show host would make a similar appeal to women audiences. With more support from NBC management, or if Weaver had been able to continue as president, the Home show might have continued to build an audience and sustained itself into the 1960s. As it is, the story of Arlene Francis' role on Home reveals the limitations placed on women talk-show hosts in the male-dominated world of 1950s television.

The tensions placed on Francis' life as the managing editor and "boss" of her show are reflected in a 1957 Mike Wallace Interview on ABC. Wallace begins his interview with Francis by saying that a lot was being said and written about "career women" in America. "What," he asks her, "is it that happens to so many career women that makes them so brittle? That makes them almost a kind of third sex?" Francis replies: "Well, what happens to some of [the women] who have these qualities you've just spoken of, is that I suppose they feel a very competitive thing with men and they take on a masculine viewpoint and forget primarily that they are women.... Instead they become aggressive and opinionated. While men do it, it is part of the makeup of a man, and a man has always done it all his life. I do not think it is a woman's position to dominate." Yet when NBC came to Francis to succeed the end of Dave Garroway's long reign to ask her to co-host Today with Hugh Downs, she refused. Unresolved issues of power, issues that Barbara Walters would struggle with and resolve in the 1960s and 1970s, limited Francis' options in the mid-1950s. By the end of her life Francis was considerably more reflective of her dilemma. In her autobiography, she writes that she had come to realize "how deeply my inability to express myself without becoming apprehensive about what 'they' might think had affected me. In short, my 'don't make waves' philosophy had inhibited my life to an incalculable extent.... I had forgotten that a few waves are necessary to keep the water from becoming stagnant."

In the later 1960s and 1970s, it was Francis' friend Walters, the person who did take the co-host position with Hugh Downs on the Today show, who became the preeminent national woman host of public affairs and news talk on television.

FRANK, REUVEN
U.S. Broadcast Journalist/Producer/Executive

In a career that parallels the rise and ebb of network television journalism, Reuven Frank helped shape the character of NBC News through his work as a writer and producer, a documentary and news magazine pioneer, news division president, and especially through his innovative coverage of national party conventions. In 1956, Reuven Frank teamed Chet Huntley with David Brinkley to anchor the political conventions, a move that catapulted the two correspondents and NBC News to national fame.

Beginning with his first job at NBC in 1950, Reuven Frank realized he had an affinity for the process of film editing and an appreciation for the visual power of television, which...
became the signature of his career in TV news. The process of shaping film clips into coherent stories left an indelible impression on Frank. Competitor CBS News had built its strong reputation in radio, which emphasized words. Camel News Caravan, NBC's original 15-minute evening news program, on which Frank served as a writer, evolved from the newscast tradition. An early partisan of television, Reuven Frank sought to exploit the medium's advantage over newspapers and radio to enable the audience to see things happen. "Pictures are the point of television reporting," he wrote.

This visual sense is clearly evident in the coverage of political conventions. Frank developed a method for orienting a team of four floor reporters—all but lost in a sea of convention delegates—toward live cameras. He established a communication center that simultaneously controlled news gathering, reporting, and distribution. The filter center, linked to the entire crew, advised the decision level when a report was ready for air. On cue from the decision level, the technical team would air the report. This tiered system of communication control became the industry standard.

The Huntley-Brinkley Report premiered in October 1956, with Reuven Frank as producer and lasted until Huntley's retirement in 1970, when the report was renamed The NBC Nightly News. Frank was the program's executive producer in 1963 when the report was expanded from fifteen to thirty minutes. In a memo to his staff Frank outlined NBC News policies for gathering, packaging, and presenting news reports. The guiding principle for developing NBC newscasts was based on Frank's belief that "the highest power of television journalism is not in the transmission of information but in the transmission of experience."

The early years of television provided Frank with opportunities to develop his ideas and to experiment with half-hour weekly series. In 1954 he introduced Background, which featured "history in the making" through specially shot films, expert commentary, and the newly designed process of electronic film editing. The documentary-style series went through several iterations, including Outlook, Chet Huntley Reporting, Time Present...Chet Huntley Reporting, and Frank McGee Reports.

A fierce advocate of free speech, Reuven Frank staunchly defended television's right and obligation to deliver unsettling news. He supported rival CBS in controversies over the documentaries Harvest of Shame (1960) and The Selling of the Pentagon (1971). He championed network coverage of the Civil Rights Movement, the Vietnam War, and the riot at the 1968 Democratic National Convention in Chicago. Frank also produced the acclaimed NBC documentary, The Tunnel, which depicts the escape of 59 East Germans beneath the newly constructed Berlin Wall in 1962. NBC aired the program over objections by the U.S. State Department, which delayed the broadcast because it came on the heels of the Cuban Missile Crisis. The Tunnel is the only documentary ever to win an Emmy Award as Program of the Year.

The Tunnel, as did other programs, exemplified one of Reuven Frank's lasting contributions to the content of NBC News reports, his attention to narrative structure and visual images. In the 1963 operations memo to his staff, Frank wrote, "Every news story should, without sacrifice of probity or responsibility, display the attributes of fiction, of drama. It should have structure and conflict, problem and denouement, rising and falling action, a beginning, a middle, and an end. These are not only the essentials of drama; they are the essentials of narrative. We are in the business of narrative because we are in the business of communication."

Other of Frank's innovative series include Weekend and NBC News Overnight. Weekend was a 90-minute late night, youth-oriented newsmagazine introduced in 1974 that alternated with rock concerts and Saturday Night Live. Weekend evolved from First Tuesday (later called Chronolog), NBC's answer to 60 Minutes. Later, in response to competition from the innovative all-news-network CNN's late-night news feeds, Frank developed Overnight, a program hosted by Lloyd Dobyns and Linda Ellerbee, and produced on a shoestring budget in a newsroom carved out of studio space. Overnight was a literate magazine show that affected a wry, thoughtful, and highly visual presentation of the news.

The title of Reuven Frank's memoir, Out of Thin Air: The Brief Wonderful Life of Network News, reflects his sense and appreciation of fortuitous timing. Frank credits former NBC president Robert Kintner for elevating the status of NBC News: "Those early years with Kintner emphasized
news programs as never before, or since, on any network. There was money for reporters; there was money for documentaries; there was money for special programs. In his seven years as president, Kintner placed his stamp upon NBC as no one else in my four decades."

Reuven Frank left his mark on one of American television's premier news reporting services. After advancing through several roles and contributing to the development of a worldwide TV news network, Frank became president of NBC News in the turbulent year of 1968. He held that position through the coverage of watershed events in the history of TV news, until 1973 when he returned to producing special projects for NBC News. In 1982, Frank was asked again to head the News Division, which he did until 1984. Robert E. Mulholland, then president of NBC, said of Frank's contributions, "Reuven wrote the book on how television covers the political process in America, has trained more top broadcast journalists than anyone alive, and simply embodies the very best professional traditions of NBC News."

FRANKENHEIMER, JOHN

U.S. Director

John Frankenheimer is sometimes likened to a "wunderkind in the tradition of Orson Welles" because he directed numerous quality television dramas while still in his twenties. He is also one of a handful of directors who established their reputation in high-quality, high-budget television dramas and later moved on to motion pictures.

As with other television directors of the 1950s, Frankenheimer began his training in the theater, first with the Williams Theater Group at Williams College and then as a member of the stock company and director at Highfield Playhouse in Falmouth, Massachusetts. He later moved to Washington, D.C., where he acted in an American Theater Wing production. While in Washington, he both acted in and directed radio productions and began working at WTOP-TV.

After a stint with the U.S. Air Force, during which he directed two documentaries, Frankenheimer began his television career as an assistant director at CBS. He worked on weather and news shows, and moved on to Lamp unto My Feet, The Garry Moore Show, and Edward R. Murrow's Person to Person. As his career advanced, Frankenheimer directed dramatizations on See It Now and You Are There (working under director Sydney Lumet). He also directed episodes of the comedy series Mama (based on John Van Druten's play I Remember Mama), but it was his directorial efforts on television anthologies where Frankenheimer made his mark.

Frankenheimer began directing episodes of the suspense anthology series Danger in the early 1950s. Producer Martin Manulis hired Frankenheimer as a co-director on the critically acclaimed Climax!, an hour-long drama series which was originally aired live. When Manulis moved on to CBS' Playhouse 90 in 1954, he brought Frankenheimer with him. Over the next few years, Frankenheimer directed 140 live television dramas on such anthologies as Studio One (CBS), Playhouse 90, The DuPont Show of the Month (CBS), Ford Staretime (NBC), Sunday Showcase (NBC), and Kraft Television Theatre (NBC). He directed such productions as The Days of Wine and Roses, The Browning Version (which featured the television debut of Sir John Gielgud), and The Turn of the Screw (which featured Ingrid Bergman's television debut).

Frankenheimer's production of Ernest Hemingway's For Whom the Bell Tolls (Playhouse 90) was one of the first dramas to be presented in two parts (12 and 19 March 1959) and, at $400,000, was the most expensive production at that time. Unlike most of his other productions, For Whom the Bell Tolls was taped for presentation because the actors were involved in other theatrical productions in New York. The production's intensive five-week rehearsal and ten-day shooting schedule had to be organized around the actors' other theatrical appearances.

Most directors of live television came from a similar theatrical background and, as such, used a static camera and blocked productions in a manner similar to a live stage play. A firm believer that a production is the sole creative statement of its director, Frankenheimer was one of the first directors of the "golden age" to utilize a variety of camera angles and movement, fast-paced editing, and close-ups to focus the audience's attention (some critics have labeled his technique as gimmicky or contrived). Frankenheimer's most famous use of the camera appears in his 1962 film The Manchurian Candidate, in which one shot is slightly out of focus. Ironically, the shot, which has been widely acclaimed as artistically brilliant was, according to the director, an accident and merely the best take for actor Frank Sinatra.

Frankenheimer went on to make other memorable films, such as The Birdman of Alcatraz (which he had, at one time, wanted to do as a live Playhouse 90 production in 1955), Seven Days in May, Grand Prix, The Fixer, and The Iceman Cometh. Personal problems and a decline in the number of quality scripts offered him forced Frankenheimer into an absence from the industry. Returning to television in the 1990s, Frankenheimer directed the original HBO production Against the Wall about the 1971 Attica Prison riot. Always drawn to intimate stories and psychological portraits, in this production Frankenheimer explores the relationship between the officer taken as hostage and the inmate leader of the uprising.
Frankenheimer has received six Emmy nominations for his directorial work on television, including: Portrait in Celluloid (1955, Climax; CBS), Forbidden Area (1956, Playhouse 90, CBS). The Comedian (1957, Playhouse 90), A Town Has Turned to Dust (1958, Playhouse 90), and The Turn of the Screw (1959, Ford Startime, NBC).

FRANK'S PLACE

U.S. Dramedy

Frank's Place, an exceptionally innovative half-hour television program sometimes referred to as a "dramedy," aired on CBS during the 1987–88 television season. The program won extensive critical praise for the ways in which it used conventions of situation comedy to explore serious subject matter. As Rolling Stone writer Mark Christensen commented, "rarely has a prime-time show attempted to capture so accurately a particular American subculture—in this case that of blue-collar blacks in Louisiana."

In 1987 Frank's Place won the Television Critics Association's award for outstanding comedy series. One 1988 episode, "The Bridge," won Emmy Awards for best writing in a comedy series (writer and co-executive producer, Hugh Wilson) and outstanding guest performance in a comedy series (Beah Richards). Tim Reid, star and co-executive producer, received an NAACP Image Award. In spite of its critical success, however, the show did not do well in the ratings and was not renewed by CBS.

Frank's Place was developed by Wilson and Reid from a suggestion by CBS executive Kim LeMasters. Wilson, an alumnus of the heyday of MTM Productions, had previously produced WKRP in Cincinnati, a sitcom favorite in which Reid played super-cool disc jockey, Venus Flytrap. The premise for their new show centered on Frank Parrish (played by Reid), an African-American college professor from Boston who inherits a New Orleans restaurant from his estranged father. Wilson, who had directed for film as well as television, decided against using the standard situation comedy production style—videotaping with three-cameras in front of a live audience. He opted instead for film-style production, single camera with no laugh track. Thus, from the beginning, Frank's Place looked and sounded different. Changed, too, were the broad physical humor and snappy one-liners that characterize most situation comedies. These were replaced with a more subtle, often poignant humor as Frank encountered situations his formal education had not prepared him for. He's the innocent lost in a bewildering world, a rich and complex culture that appears both alien and increasingly attractive to him. And he is surrounded by a surrogate family who wish him well but know he must ultimately learn from his mistakes.

The ensemble cast included Hanna Griffin (played by Daphne Maxwell Reid), a mortician who became a romantic interest for Frank, and Bubba Weiberger (Robert Harper), a white Jewish lawyer from an old southern family. The restaurant staff included Miss Marie (Frances E. Williams), the matriarch of the group; Anna-May (Francesca P. Roberts), the head waitress; Big Arthur (Tony Burton), the accomplished chef who rules the kitchen; Shorty La Roux (Don Yesso), the white assistant chef; Tiger Shepin (Charles Lampkin), the fatherly bartender; Cool Charles (William Thomas Jr.), his helper. Reverend Deal (Lincoln Kilpatrick), a smooth-talking preacher in constant search of a church or a con-man's opportunity, was another regular.

Frank's journey into the world of the southern working-class African-American begins when he visits Chez Louisiane, the creole restaurant he inherited and plans to sell. The elderly waitress Miss Marie puts a voodoo spell on him to ensure that he will continue to run the restaurant in his father's place. After Frank returns to Boston, his plumbing erupts, telephones fail him, the laundry loses all his clothes, his girlfriend leaves him, and his office burns. Convinced he has no choice, he returns to New Orleans, to the matter-of-fact welcome of the staff, the reappearance of his father's cat, and the continuing struggle to turn the restaurant into a profitable venture.

Story lines in many episodes provide comic and pointed comments on the values and attitudes of the dominant culture. In one story, college recruiters bombard young basketball star Calvin with virtually identical speeches about family and tradition and campus life. Calvin's naive expectations of becoming a professional athlete contrast with Frank's concern about academic opportunities. In another
episode, the chairman of a major corporation stops in for a late night dinner. Commenting on efforts to oust him, he eloquently condemns speculators who use junk bonds to buy companies they know nothing about and with which they create no real value or service. The plot takes an ironic turn when he realizes his partners may have made mistakes in plotting the takeover and he enthusiastically schemes to thwart them.

Class and racial issues emerge in many story lines. On Frank’s first night back in New Orleans, he wonders why there are so few people in the restaurant. Tiger explains with a simple observation: their clientele are working people who eat at home during the week—and white folks are afraid to come into the neighborhood at night. In a later episode Frank is flattered when he is invited to join a club of African-American professionals. Not until Anna-May pulls out a brown paper bag and contrasts it with Frank’s darker skin does he understand that those who extended the invitation meant to use him to challenge to the light-skin bias of the club members.

Throughout the series tidy resolutions are missing. A group of musicians from East Africa, in the United States on a cultural tour, stop at Frank’s Place. One of them, who longs to play the jazz that’s forbidden at home, decides to defect. Frank refuses to help him and he is rebuffed by jazz musicians. But in the closing scene, as he sits listening in a club, he gets an inviting nod to join the musicians when they break. The final frame freezes on a close-up of his face as he rises, suspended forever between worlds. In another episode, a bum moves into a large box in the alley and annoys customers by singing and begging in front of the restaurant. Nothing persuades him to leave until one evening Frank tries unsuccessfully to get him to talk about who he is, where he’s from, the reasons for his choices. When Frank steps outside the next morning, he’s gone. A final image, as Frank dusts off the hat left on the sidewalk, resonates with a recognition of kinship and loss. Visual sequences in many episodes suggest the loneliness of Frank’s search for father, for self, for his place in this community.

Various explanations have been offered for the decision to cancel *Frank’s Place* after one season. In spite of a strong beginning, the show’s ratings continued to drop. Viewers who expected the usual situation comedy formula were puzzled by the show’s style. Frequent changes in scheduling made it difficult for viewers to find the show. CBS, struggling to improve its standing in the ratings, was not willing to give the show more time in a regular time slot to build an audience. The large ensemble and the film-style techniques made the show expensive to produce. In the end, it was undoubtedly a combination of reasons that brought the series to an end.

*Frank’s Place*, however, deserves a continuing place in programming history. As Tim Reid told *New York Times* reporter Perry Garfinkel, it did present blacks not as stereotypes but as “a diverse group of hard-working people.”

Hugh Wilson attributed this accuracy to the racially mixed group of writers, directors, cast and crew. Authenticity was heightened by the careful researching of details. Individual stories were allowed to determine the style of each episode. Some were comic, some serious, some poignant. All of them, however, were grounded in a compelling sense of place and a respect for those who inhabit Chez Louisiane and its corner of New Orleans.

**FURTHER READING**

Pauline Frederick's pioneering broadcast career covered nearly 40 years and began at a time when broadcasting was virtually closed to women. During these decades, she was the primary correspondent covering the United Nations for the National Broadcasting Company (NBC) and was the first broadcast newswoman to receive the coveted Peabody Award for excellence in broadcasting.

Frederick began her career as a teenager, covering society news for the Harrisburg Telegraph. She turned down a full-time position there in favor of studying political science at American University in Washington, D.C. Later she received her master's degree in international law, and at the suggestion of a history professor, combined her interests in journalism and international affairs by interviewing diplomats' wives. She broke into broadcasting in 1939 when NBC's director of women's programs, Margaret Cuthbert, asked her to interview the wife of the Czechoslovakian minister shortly after Germany overran that country.

Her interviews continued until America joined World War II. She then worked a variety of jobs for NBC, including script writing and research. After touring Africa and Asia with other journalists—over the protests of her male boss at NBC who thought the trip too difficult for a woman—she quit her job with NBC and began covering the Nuremberg trials for ABC radio, the North American Newspaper Alliance, and the Western Newspaper Alliance.

Denied a permanent job because she was female, she worked as a stringer for ABC, covering "women's stories." Her break came when she was assigned to cover a foreign ministers' conference in an emergency: her male boss had two stories to cover and only one male reporter. In a few months, the United Nations became her regular beat, and in 1948, ABC hired her permanently to cover international affairs and politics. In 1953, NBC hired her to cover the United Nations.

Over the next two decades she covered political conventions, the Korean War, Mideast conflicts, the Cuban missile crisis, the Cold War and the Vietnam War. After retiring from NBC, she worked for National Public Radio as a commentator on international affairs. Frederick received many honors, including election to the presidency of the United Nations Correspondents Association, named to Sigma Delta Chi's Hall of Fame in 1975, 23 honorary doctorate degrees in journalism, law, and the humanities.

Of her life, Frederick once said, "I think the kind of career I've had, something would have had to be sacrificed. Because when I have been busy at the United Nations during crises, it has meant working day and night. You can't very well take care of a home when you do something like that, or children." Through her work she advanced the position of women in broadcast news and became an important role model for newswomen everywhere.

RADIO

FREED, FRED
U.S. Documentary Producer

Fred Freed was a leading practitioner of prime-time documentary during the genre's heyday of the 1960s. Working on the network flagship series, NBC White Paper, he produced close to forty major documentaries, which earned him seven Emmy and three Peabody awards. Describing himself as an "old-fashioned liberal," Freed believed that documentary could stimulate change by providing audiences with detailed information about pressing social issues. Yet Freed was also a prominent member of a generation of documentary producers who courted mass audiences with narrative techniques that would later spread to network news reporting and television magazine programs.

Freed began his media career after a stint in the Navy during World War II. Starting out as a magazine editor, he moved to radio and ultimately to network television in 1956. One year later, he joined CBS as a documentary producer working under Irving Gitlin, the head of creative projects in the news and public affairs division. During the late 1950s, CBS News was well endowed with talented personnel and the competition for network airtime was extremely fierce. The CBS evening schedule almost exclusively featured entertainment fare with the exception of irregularly scheduled broadcasts of See It Now, produced by Edward R. Murrow and Fred Friendly. The cancellation of this series in 1958 generated intense dissatisfaction among the news and public affairs staff, many of them frustrated with the marginal time periods devoted to information fare. Partly in response to internal dissension, CBS management in 1959 announced the inauguration of a new prime-time documentary series, CBS Reports. Gitlin and his colleagues were disappointed to learn, however, that Friendly had been tapped for the slot of executive producer. Shortly thereafter Gitlin, Freed, and producer Albert Wasserman were wooed away by NBC president Robert Kintner, who promised them a prestigious prime-time series of their own.

PUBLICATON

FURTHER READING
Beginning in 1960, *NBC White Paper* was a central component of the peacock network's efforts to dislodge CBS from its top billing in broadcast news. A former journalist, Kintner was a vigorous supporter of the news division, believing it both good citizenship and good business. Over the next several years, NBC News grew rapidly and its documentary efforts earned widespread acclaim from critics and opinion leaders. Under Gitlin's leadership, Freed and Wasserman produced numerous programs focusing on significant foreign policy issues, then a key concern of the Kennedy administration and Federal Communications Commission (FCC) chair Newton Minow. Programs on the U-2 debacle, the Berlin crisis, and political unrest in Latin America received prominent attention. Yet all three documentarians were determined to use narrative techniques in an effort to make such issues accessible to a broad audience. At the time, Freed commented, "In a world so interesting we always manage to find ways of making things dull. This business of blaming audiences for not watching our documentaries is ridiculous."

With this credo in mind, Freed produced documentaries about "The Death of Stalin" and "The Rise of Khrushchev" that featured tightly structured storylines with well-developed characters. Similarly, his analyses of the Bay of Pigs invasion and the Cuban Missile Crisis were built around dramatic moments in which historical figures struggled against Promethean odds. Freed's increasingly creative use of audio and visual elements is conveyed in a tightly edited opening sequence of the latter documentary as a nuclear missile ominously emerges from its silo accompanied by the piercing sound of a military alarm claxon. Much like a feature film, the editing of the visual imagery dramatically sets the terms for the story that followed.

Freed and his documentary colleagues also experimented during the early 1960s with camera framing techniques that would later become standard conventions of television news. For example, Freed would have his camera operator zoom in for tight close-ups during particularly emotional moments of an interview. This was a significant break from the standard head-and-shoulders portrait shots then used on nightly news and Sunday talk shows. It was intended to engage viewers on both an affective and intellectual level.

Despite these dramatic techniques, network documentaries only occasionally generated ratings that were comparable with entertainment fare. By the middle of the decade, all three networks trimmed back their commitment to the genre for a variety of reasons and producers Wasserman and Gitlin moved on to other opportunities. Yet Freed remained with *White Paper* and continued to play a leading role with the series into the 1970s. He made major documentaries about the urban crisis, gun control, and environmental issues. He also produced numerous instant specials on breaking news events as well as three super-documentaries, which featured an entire evening of prime-time devoted to a single issue. This concept, which was distinctive to NBC, originated in 1963 with a program on civil rights. It was followed in 1965 by Freed's twenty-year survey of American foreign policy and in 1966 by his program on organized crime. In 1973 he produced NBC's last super-documentary, an evening devoted to "The Energy Crisis." One year later, in the midst of a busy schedule of documentary production, Freed succumbed to a heart attack at the age of 53. His passing also marked the demise of *NBC White Paper*, for the network mounted only three more installments before the end of the decade. Although *White Paper* very occasionally returns to prime time, it lacks the autonomy, prestige, and resources that were characteristic of the series during the Freed era.

“FREEZE” OF 1948

On 30 September 1948 the Federal Communications Commissions (FCC) of the United States announced a “freeze” on the granting of new television licenses (those already authorized were allowed to begin or continue operations). The Commission had already granted over 100 licenses and was inundated with hundreds of additional applications. Unable to resolve several important interference, allocation and other technical questions because of this rush, the FCC believed that the freeze would allow it to hold hearings and study the issues, leading to something of a “master blueprint” for television in the United States. This “time out” was originally intended to last only six months, but the outbreak of the Korean War as well as the difficult nature of some of the issues under study, extended the freeze to four years. During this time, there were 108 VHF television stations on the air and over 700 new applications on hold. Only 24 cities had two or more stations; many had only one. Most smaller and even some major cities, Denver, Colorado and Austin, Texas, for example, had none at all.

Ultimately, five major, not unrelated, issues became the focus of deliberations: 1) the designation of a standard for color television; 2) the reservation of channel space for educational, noncommercial television; 3) the reduction of channel interference; 4) the establishment of a national channel allocation map or scheme; and, 5) the opening up of additional spectrum space.

With the 14 April 1952 issuance of the commission’s *6th Report and Order*, the freeze was finally lifted. This document presented to an anxious broadcast industry and impatient viewers the resolutions to the five questions.

The decision on color came down to a choice between an existing but technologically unsophisticated CBS mechanical system which was incompatible with existing television receivers (i.e., “color” signals could not be received on black and white television sets) and an all-electronic system proposed by RCA which was compatible but still in development. The commission approved the CBS system but it was never implemented because the television set manufacturing industry refused to build what it considered to be inferior receivers. The FCC rescinded its approval of the CBS system in 1950 and, in 1953, accepted the RCA system as the standard.

The reservation of channel space for noncommercial, educational television was spearheaded by FCC Commissioner Frieda B. Hennock. When the channel reservation issue was raised for radio during the deliberation leading up to the Communications Act of 1934, the industry view prevailed. Broadcasting was considered too valuable a resource to entice to educators or others who had no profit motive to spur the development of the medium. Exactly zero spectrum space was set aside for noncommercial (AM) radio. Hennock and others were unwilling to let history repeat in the age of television. Against heavy and strident industry objection (*Broadcasting* magazine said such a set-aside was “illogical, if not illegal”), they prevailed. Two hundred and forty-two channels were authorized for educational, noncommercial television, although no means of financial support was identified. The commission acquiesced because it reasoned that if the educators succeeded, it would be viewed as prescient; if the educators failed, at least the commission had given them an opportunity. Additionally, Hennock and her forces were a nuisance: the noncommercial channel issue was helping keep the freeze alive and there were powerful industry and viewer forces awaiting its end.

Channel interference was easily solved through the implementation of strict rules of separation for stations broadcasting on the same channel. Stations on the same channel had to be separated by at least 190 miles (some geographic areas, the Gulf and Northeast regions, for example, had somewhat different standards). A few stations had to change channels to meet the requirements.

Channel allocation took the form of city-by-city assignment of one or more channels based on the general criterion of fair geographic apportionment of channels to the various states and to the country as a whole. The “assignment table” that was produced gave some cities, New York and Los Angeles, for example, many stations. Smaller locales were allocated smaller numbers of outlets.

The question of opening up additional spectrum space for more television stations was actually the question of how
much of the UHF band should be utilized. Eventually, the entire 70 channel UHF band was authorized. Therefore, the television channels then available to American broadcasters and their viewers were the existing VHF channels of 2 through 13 and the new UHF channels of 14 through 83.

FURTHER READING

FRENCH, DAWN

British Actor

Dawn French is one half of Britain’s top female comedy duo, French and Saunders, as well as a highly successful writer, comedian and actress in her own right. She and partner Jennifer Saunders have become an outstanding double act whilst also following successful solo careers.

French’s television debut was an auspicious one, as a member of a group of “alternative” comedians known as the Comic Strip, on the opening night of Britain’s fourth TV channel, Channel Four, in 1982. “Five Go Mad in Dorset,” a spoof of author Enid Blyton’s popular children’s adventure books, clearly showed that French was a comic actress to watch. The following two years saw two series of The Comic Strip Presents in which French played everything from housewives to hippies.

In 1985 French approached the kind of comedy which she and Saunders would eventually make very much their own. Girls on Top, a sitcom about four bizarre young women sharing a flat in London, gave French as co-star and co-writer a chance to develop further the type of character she so loves to play. Amanda was an overgrown teenager, sexually inexperienced and aware of the sexual powers of woman, yet so “right-on” that she is somehow unable to do other than caricature them. A second series followed in 1986, as did appearances with Saunders on Channel Four’s cult late-night comedy show Saturday Live, but in 1987 French and Saunders moved as a double act to the BBC for their own co-written series, French and Saunders. This was broadcast on BBC2, the nurturing ground for so much of Britain’s new generation of comic talent. This first series took the form of a cheap and badly rehearsed variety show, hosted by the two women. Saunders was the rather grumpy, irritable half of the partnership, with French portraying a bouncy, enthusiastic, schoolgirlish character. This format was dropped for the second series, and instead the programmes were a mixture of sketches and spoofs.

With an uncanny ability to pick up on the foibles and fears of childhood, and particularly teenage girlhood, French always played the fervent, excitable girl, generally leading the more sullen and awkward Saunders into mis-

Dawn French (upper) with Jennifer Saunders

chief, whether it be discussing the schoolboys they fancy, or playing games in the school playground. This ability to draw on universal but commonplace memories of what now seem petty and trivial matters of girlhood and turn them into fresh and original comedy is one of the things which has set French and her partner above virtually all other female performers except, perhaps, Victoria Wood. Further series of French and Saunders have seen their transfer from BBC2 to the more popular BBC1. While their inventiveness has increased, there has been no diminution in their ability to latch on to the way women behave with each other. In particular they have become skilled at extraordinarily clever film spoofs, with French playing Julie Andrews in The Sound of Music one week and Hannibal Lecter in Silence of the Lambs the next.

French's first solo starring role came in 1991 with Murder Most Horrid, a series of six comic dramas with a common theme of violent death, in which she played a different role every week. The series was commissioned for French and enabled her to play everything from a Brazilian aupair in "The Girl from Ipanema" to a naive policewoman in "The Case of the Missing". A second series of Murder Most Horrid in 1994 was even more ambitious, with roles ranging from an old woman whose family are trying to murder her to a woman who disguises herself as a man in order to become a doctor.

If there had been any doubt about French's acting ability, this had been dispelled the previous year, 1993, in the BBC Screen One drama Tender Loving Care. In this work, French played a night nurse in the geriatric ward of a hospital. There she helps many of her charges "on their way" with her own brand of tender loving care, believing that by killing them she is doing them a service. It was a beautifully understated and restrained performance.

After the General Synod of the Church of England voted to permit women to become priests, one French and Saunders sketch concerned French's receipt of a vicar's outfit after having received permission to become the first female comedy vicar, complete with buck teeth and dandruff. This soon proved prophetic when French was cast as the Reverend Geraldine Granger, "a babe with a bob and a magnificent bosom," in Richard Curtis's The Vicar of Dibley. French's portrayal of a female vicar sent to a small, old-fashioned, country parish is possibly her most popular to date. The public quickly took this series to their hearts, and French shone even amidst an ensemble cast of very experienced character actors.

French's influence can probably be felt in other areas of British comedy too. She is married to Britain's top black comedian, Lenny Henry, and is often quoted as having influenced him during the early stage of their relationship to abandon his then somewhat self-deprecating humour, in order to explore what it is like to be a black Briton today.

French and Saunders currently have an exclusive contract with the BBC which gives them scope for exploring beyond the confines of their double act. Their first project, Dusty, a documentary about Dusty Springfield, was not entirely successful, but there can be no doubt that whether it is as part of a double act or as a solo actress, Dawn French can be assured of a place at the heart of British television for a considerable number of years.

—Pamela Logan

DAWN FRENCH. Born in Holyhead, Wales, 1957. Attended St. Dunstan's Abbey, Plymouth; Central School of Speech and Drama, London. Married: Lenny Henry, 1984; child: Billie. Met Jennifer Saunders at Central School of Speech and Drama and formed alternative comedy partnership with her, appearing at the Comic Strip club, London, from 1980; participated with Saunders in the Channel Four Comic Strip Presents films and then in own long-running French and Saunders series; has also acted in West End theatre. Address: Peters, Fraser and Dunlop, The Chambers, Chelsea Harbour, Lots Road, London SW10 0XF, England.

FRIENDLY, FRED W.
U.S. Broadcast Journalist and Media Commentator

Fred W. Friendly, a pioneering CBS News producer and distinguished media scholar, has enjoyed a sixty-year career as remarkable for its longevity as for its accomplishments. As the technically creative and dramatically inspired producer for CBS correspondent Edward R. Murrow, Friendly helped enliven and popularize television news documentary in the decade after World War II, when television news was still in its infancy. After resigning from CBS as its News Division president in 1966, Friendly found a second career as an author and as creator of a series of moderated seminars on media and society.

Friendly got his start in broadcasting during the Great Depression with a staff position at a small radio station in Providence, Rhode Island. It was as a successful radio producer that Friendly was teamed with Murrow in the late 1940s to create a series of documentary albums entitled I Can Hear It Now. When Murrow made the jump to television reporting, he brought Friendly with him as his principal documentary producer. Armed with a flair for the dramatic and his experience as a technical innovator in radio, Friendly set out to do for television what he had already done for radio documentaries. The result, in 1952, was the debut of the highly-acclaimed See It Now, a weekly series hosted by Murrow that broke new ground with its intrepid probing into subjects of serious socio-political significance and its stunning visual style. The successful combination of Friendly’s energy and Murrow’s stature hit its professional peak in 1954, with their decision to broadcast a documentary attack on Senator Joseph McCarthy that helped change the tide of popular opinion against the anti-communist demagogue.

In his later years at CBS, Friendly was given broader responsibility to create a variety of news programs, including the landmark hourly documentary series, CBS Reports, and a political forum that would later be known as Face the Nation. As president of CBS News in the mid-1960s, Friendly struggled to keep his news division independent of profit-conscious and entertainment-oriented corporate decision-making at CBS Inc., which he considered a threat to the autonomy and integrity of his news operations. In March of 1966, Friendly argued vociferously to management that CBS had a journalistic obligation to carry extensive live coverage of the first Senate hearings to question American involvement in Vietnam. When the network opted instead to air reruns of I Love Lucy, Friendly resigned from CBS in protest.

Friendly, in his post-CBS years, turned his interests to writing and teaching about media and law. In a span of twenty years, Friendly authored several books that traced the history of people involved in landmark Supreme Court cases, including Minnesota Rag, The Good Guys, The Bad Guys and the First Amendment, and The Constitution: That Delicate Balance. At the Ford Foundation in the mid-1970s and, later, as the Edward R. Murrow Professor of Broadcast Journalism at Columbia University, Friendly collaborated with some of the country’s leading lawyers, journalists and politicians to create a series of roundtable debates on media and society. Now known as The Fred Friendly Seminars, broadcasts of these programs have become a fixture of the Public Broadcasting Service.

—Michael Epstein

FRED W. FRIENDLY. Born Ferdinand Friendly Wachenheimer in New York City, New York, U.S.A., 1915. Educated at Cheshire Academy and Nichols Junior College. Married: Ruth W. Mark; two sons, one daughter (from previous marriage), and three stepsons. Served in U.S. Army, Information and Education Section, 1941–45. Broadcast producer, journalist for WEAN radio, Providence, Rhode Island, 1937–41; wrote, produced, and narrated radio series Footprints in the Sands of Time, 1938, later, at NBC, Who Said That, quiz based on quotations of famous people;
collaborated with Edward R. Murrow in presenting oral history of 1932-45 (recorded by Columbia Records under title I Can Hear It Now; I Can Hear It Now: The Sixties) with Walter Cronkite; editor and correspondent in India, Burma, and China for CBI Roundup, 1941-45; co-producer, CBS radio series Hear It Now, 1951, and CBS TV series See It Now, 1952-55; past executive producer, with Edward R. Murrow, CBS TV show CBS Reports, 1959-60; president, CBS News, New York, 1964-66; Edward R. Murrow professor emeritus; broadcast journalist Columbia University Graduate School of Journalism, and director, Seminars on Media and Society, since 1966; adviser on communications, Ford Foundation, 1966-80; director, Michele Clark Program for minority journalists, Columbia University, 1968-75; member, Mayor's Task Force on CATV and Telecommunications, New York City, 1968; distinguished visiting professor, Bryn Mawr College, 1981; visiting professor, Yale University, 1984; commissioner, Charter Revision Committee for City of New York, 1986-90; Montgomery fellow, Dartmouth College, 1986. FRONT PAGE CHALLENGE
Canadian Panel Quiz/Public Affairs Program

Front Page Challenge, television's longest continuously running panel show, was one of the most familiar landmarks on the Canadian broadcasting landscape. During much of its 38-season run on the Canadian Broadcasting Corporation (CBC), from 1957 to 1995, it was among Canadian television's most popular programs, regularly drawing average audiences of one to two million in the small Canadian market; towards the end, viewership dropped, numbering about 500,000 in the show's final season. A book was published in 1982 to mark the show's 25th anniversary.

Front Page Challenge was first born as a summer fill-in show; at the time, it was one of many quiz shows on the air, a genre popular because of the low production costs involved, and Front Page Challenge was in fact named after an American quiz favourite of the time, called The $64,000 Challenge. A half-hour program, Front Page Challenge featured four panelists, usually well-known journalists, who...
would ask yes-or-no questions in an attempt to correctly identify a mystery challenger connected to a front-page news item, as well as the news item itself. After the panelists had guessed correctly—or been stumped—they would proceed to interview the challenger.

Equal parts quiz show and current affairs panel, Front Page Challenge’s hybridization of televisual genres drew in not only audience members attracted by the entertainment value of the quiz show format, but also viewers who were curious about who the week’s mystery challengers would be and eager to hear them interviewed by Front Page Challenge’s panel of crack journalists. Long before current affairs programs or all-news channels like CNN or CBC Newsworld began to offer similar fare, Front Page Challenge provided Canadians with a humane look at the newsmakers they read about in their morning papers. Over the years, some of the show’s guests included figures as diverse as Indira Gandhi—saying she would never go into politics—Eleanor Roosevelt, hockey player Gordie Howe, Tony Bennett, and Errol Flynn, along with Mary Pickford, a Canadian and one of cinema’s first stars. Walter Cronkite even announced his new job as CBS anchor on the program.

As a television program noted for its attention to the newspaper, Front Page Challenge panelists were almost exclusively eminent Canadian newspaper workers. For most of the show’s run, well-known reporter Gordon Sinclair and journalist-writer Pierre Berton joined actress Toby Robins to form the panel, with a guest panelist making a fourth, and Fred Davis hosting the show. Broadcaster Betty Kennedy replaced Robins in 1961, and upon Gordon Sinclair’s death in 1984, he was replaced by author and columnist Alan Fotheringham. Another prominent reporter, Jack Webster, was added as a permanent fourth panelist in 1990.

That Front Page Challenge pointed not to the everyday world, but to other points within the media universe—the television program’s very name evokes the newspaper—is significant as more than a sign of the times, however. By building a show in which competence in recalling newspaper headlines is the most important attribute, Front Page Challenge helped reinforce the social importance attached to what is reported in the media. The show’s use of the newspaper as a frame of reference for significant events had the effect of perpetuating the idea that news happens in the real world, and that the media...
simply reflect these goings-on. As much research has shown, though, what we read in the newspaper is as much the result of the institutionalized conditions of newspaper reporting as it is of what goes on “out there”—the news is constructed by the media. Front Page Challenge, then, was an early example of the proliferation of television programs which recycle media content as news—Entertainment Tonight is perhaps the best-known example—and demonstrates how this type of programming tends, among other things, to contribute to the “aura” of media, in which the media world comes to stand in for the lived world.

As the product of the quiz show genre popular in the 1950s and 1960s, Front Page Challenge stood both within and outside of that television format, and thus provides a unique vantage point from which to look at the quiz or game show. Whereas the game show is characterized by its captivating unknown, everyday individuals from the private sphere into the public sphere of television—providing home viewers with an easy locus of identification—Front Page Challenge featured only well-known public figures or newsmakers. Indeed, the only way an ordinary viewer might hope to participate in the program, other than becoming involved in a news event, was by successfully writing to Front Page Challenge and suggesting a front-page story to be used. Unlike other game or quiz shows, there was little competition—the panel worked together as a team—and almost no prizes to be won. Even the home viewers themselves were positioned in an unorthodox way on Front Page Challenge: whereas in other game shows the viewer plays along with the contestants, often shouting out the answer in her or his living room before it emerges from the television speaker, the Front Page Challenge viewer was able to actually see the mystery challenger, who stood behind the panelists, hidden from their eyes, but in full view of the camera.

Eliminating the elements of the quiz show genre seen as crass or vulgar helped to provide Front Page Challenge with an air of legitimacy and respectability that the straight quiz show did not enjoy; the show’s evocation of the newspaper’s seriousness, its panelists, and its location on the state broadcasting network marked it as a “quality” television program. This controlled distance from what was seen as “American mass culture” helped distance it considerably from the quiz-show scandals which plagued American broadcasting in the 1960s—including The $64,000 Challenge.

When Front Page Challenge was taken off the air in 1995, a move emblematic of major restructuring at the CBC, it signalled the end of an era in Canadian television broadcasting. The program’s mixing of quiz show and public affairs, its lending of journalistic credence to the game show genre, and the interest with which audiences tuned in to hear and watch newsmakers of the day exemplified television’s ability to convey the humane qualities and attributes of those who were in the news.

FROST, DAVID

British Broadcast Journalist/Producer

David Frost is an outstanding television presenter, political interviewer and producer, who is successful on both sides of the Atlantic. The awards recognizing his achievements in television include two Golden Roses from the Montreux international festival (for Frost Over England), as well as two Emmy awards (for The David Frost Show) in the United States. His long career was honored by knighthood in 1993.

Frost was one of the first generation of university graduates who bypassed Fleet Street and went straight into television. While at Cambridge, he showed his satirical talent in the Footlights Revue and edited the university newspaper, Granta. In 1961 he moved to London to work for ITV during the day and perform in cabaret at night. His nightclub performance drew the attention of BBC producer Ned Sherrin, who invited him to host That Was the Week That Was, often called TW3. In the “satire boom” of the early 1960s the irreverent, topical and politically oriented TW3 introduced satire to television in Britain. Among others topics, the program poked fun at the Royal family, the church, high politics, and the respectable tenets of British life. TW3 brought the divisions of British society to the surface, and the ensuing controversy made the BBC discontinue it. From 1964 to 1965 Frost co-hosted the next, milder satirical program Not So Much a Programme, More a Way of Life. At its most successful, this program bore significant resemblance to TW3 and reached the same end.

The success of TW3 made Frost a transatlantic commuter after NBC had bought the rights and put on the American version (1964–65) with executive producer Leland Hayward. The shorter, less political and outspoken program never had the same impact as its British counterpart, but made Frost’s name in the United States, nevertheless.

Back in Britain, BBC’s new show The Frost Report (1966–67) focused on one topic per program and tackled social and contemporary issues as opposed to the political and topical focus of TW3 and Not So Much.... Drawing on the talents of John Cleese, Ronnie Barker and Ronnie Corbett, the program brought humor to the topics of education, voting and the like. The working environment provided for the development of a new humorous trend in Britain, and five of the comedians went on to form Monty Python’s Flying Circus.

From 1966 to 1968 The Frost Programme at ITV showed the beginning of the transition from the comedian to the serious interviewer. Frost pioneered such TV techniques as directly involving the audience in the discussions and blending comedy sketches with current affairs. From this time on Frost’s mixture of politics with entertainment would draw mixed responses from critics. At this time his “ad-lib interviewing” style, as he calls it, was characterized by rather remorseless fire on well-chosen subjects, and led to his label as the “tough inquisitor”.

From anchorman to executive producer Frost filled many different roles in the television business. In 1966 he founded David Paradine Ltd., and as an entrepreneur he put a consortium together to acquire the ITV franchise for London Weekend Television in 1967. LWT’s programming did not live up to its franchise undertaking in the long run and was criticized in Britain for emphasizing entertainment to the detriment of substantial programming.

On the strength of his British chat shows Group W (the U.S. Westinghouse Corporation television stations) selected Frost to anchor an interview daily from 1969 to 1972. Frost kept his London shows and fronted The David Frost Show in the United States. He used more one-to-one interviews than before and managed to mix friendly conversation with confrontation. Throughout these endeavors Frost’s instinct for television, his handling of the audience, and his ability to put guests at ease and make them accessible justify the label “The Television Man,” given him years earlier by the BBC’s Donald Baverstock.

Frost’s television personality status, niceness, and ability to market himself well enabled him to attract prominent
interviewees. He has interviewed every British prime minister since Harold Wilson as well as leading politicians and celebrities from a number of different countries. His specials *The Next President* (1968, 1988, 1992) has become a regular on American television featuring interviews with presidential candidates in the run-up for the presidency. The most famous of the big interviews characterizing Frost's recent focus is *The Nixon Interviews* (1977). This interview is the only televised assessment Richard Nixon gave about his conduct as president, including the Watergate affair. The interviews were syndicated on a barter basis and were subsequently seen in over 70 countries.

When interviewing leading public figures Frost retains his persistence, but he has refined his style into an apparently soft interrogative method where the strength of a question is judged more by the range of possible responses. Unlike his entertainment-oriented shows, which were often followed by rows over questions of bias, the big interviews are usually judged as fair and balanced.

On the way to fame as a serious political interviewer Frost had a new chance to combine politics and satire. As executive producer he helped to launch *Spitting Image* in 1984. This show, a scathing satire, picked up on already existing perceptions of politicians and highlighted them in puppet caricatures. When Margaret Thatcher was portrayed as a bald man who ate babies and lived next door to Hitler, the life-size puppets were thought to be as dangerous for politicians as *TW3* was. As a result, before the 1987 elections the program was not even broadcast. In another Atlantic parallel, this popular program also made it into the United States. In 1986 NBC carried *Spitting Image: Down and Out in the White House*, hosted by David Frost, and in 1987 *The Ronnie and Nancy Show* special appeared on the screens.

In 1982 Frost successfully bid for a commercial breakfast television franchise, TV-am, and became director of the new venture. Despite the five famous flagship presenters, TV-am as a whole faced the same criticism as London Weekend Television. Its leisurely approach to hard news, especially during the Gulf War, was thought to cost it the franchise in 1991.

After losing TV-am, Frost signed a contract with the U.S. Public Broadcasting Service in 1990 to produce *Talking with David Frost*, a monthly interview program. In the program Frost interviewed Yitzhak Rabin, General Norman Schwarzkopf, and Ted Turner, as well as numerous other famous and infamous personalities. At times he has been criticized for an interviewing style thought to be too sympathetic towards his influential guests.

Frost's business ventures also include filmmaking, where he acts as executive producer. The satirical *The Rise and Rise of Michael Rimmer* (1970), featuring Peter Cook taking over the prime ministership, and *The Search for Josef Mengele* (1985) documentary indicate the variety of films he has produced. As a writer, Frost draws on his commuter observations. Apart from other writings, he published his autobiography in 1993.

In Britain Frost has often been criticized for his showbiz leanings, his mannerisms and his apparent ability to use the fame bestowed by television to further his career in a number of different fields. Nevertheless, his flair for television and his ability to produce high-quality current affairs and interview programs are widely recognized. His excellent political interviews show how television is able to provide insights into political decisions and contribute to the historical record. Throughout his long career, Frost has always been ready to experiment with something new. His personal contributions to satire and political programs as well as his business ventures make him a prominent figure of broadcasting.

An Evening with David Frost, 1966.

PUBLICATIONS
FRUM, BARBARA
Canadian Broadcast Journalist

Barbara Frum was one of Canada’s most respected and influential woman journalists. She began her career in journalism as a freelance writer and commentator for various CBC radio programs. She quickly branched out into the print media, writing various columns for national newspapers such as the Globe and Mail, The Toronto Star and a television column for the Saturday Night magazine. In 1967, she made a brief foray into television as a co-host for an information program The Way It Is, but it was in radio that she first gained notoriety.

In the fall of 1971, she took on the co-hosting duties of As It Happens, a new innovative newsmagazine show on CBC radio which followed the 6:00 P.M. news. At a time when the national broadcaster was struggling to develop programs that would keep its listeners beyond the supper-hour newscast, the show’s young producer, Mark Starowicz, proposed a format based largely on newsmaker interviews that would provide an in-depth examination of the stories behind the headlines. Through the use of long-distance telephone and radio, listeners were connected to world events. In this format, Frum shone. She quickly gained the reputation as a tough, incisive and well-informed interviewer. For ten years, she interviewed numerous world leaders, national politicians and other newsmakers as well as those affected by the news. She was respected as one of Canada’s foremost woman journalists. She was honoured with numerous awards during her tenure, most notably the National Press Club of Canada Award for Outstanding Contribution to Canadian Journalism in 1975; Woman of the Year in literature, arts and education category of the Canadian Press in 1976; and the Order of Canada in 1979.

In the 1980s CBC television decided to move its national newscast, The National, from its traditional 11:00 P.M. timeslot to 10:00 P.M. The news division of CBC television had long been considering such a move, hoping to capture a larger audience since studies had shown that a large number of viewers retired to bed prior to 11:00 P.M. Realizing that it was a huge gamble, CBC executives appointed Starowicz, the producer of As It Happens, to translate his radio success to the newsmagazine program, The Journal. He, in turn, looked to Frum, who had been instrumental in the success of As It Happens. After months of preparation, the new current affairs program, The Journal, was launched on 11 January 1982. In the weeks that followed it became the most-watched and highly respected newsmagazine show in Canada.

It featured many innovations and made use of the latest electronic news gathering technology. Features, such as field reports and short documentaries, public forums and debates, as well as a series of reports on business, sports, arts and entertainment, and science news were interwoven with the interview portion of the program. The show featured two female hosts. Barbara Frum was joined by Mary Lou Finley in the hosting duties and a higher profile was assigned to women reporters and journalists than on most other stations.

The show relied heavily on Frum’s skill as an interviewer. The interview portion of The Journal accounted for

60% of the program. She remained the dominant and permanent presence on a show which saw many new co-hosts. All of Canada was deeply saddened by the news of her sudden death on 26 March 1992 from complications of chronic leukemia. Tributes poured in from colleagues, coworkers and the public at large. Months following her passing, the CBC announced that it would move its newscast and newsmagazine program, The National and The Journal, from 10:00 P.M. to 9:00 P.M. Once again, executives argued that studies showed that aging babyboomers were retiring to bed at an earlier time. This move proved to be less successful than the first endeavour and two years later the CBC was forced to reverse itself after ratings had fallen off by half. Amid these changes and reversals The Journal was transformed into the present Primetime News. As IT Happens continues its run, having celebrated its 25th year on the air.

THE FUGITIVE

U.S. Adventure/Melodrama

Popularly known as the longest chase sequence in television history, The Fugitive ran through 118 episodes before a climactic two-part episode brought this highly regarded series to a close—with all the fundamental story strands concluded. The wrap-up ending was a rather rare and unusual decision on behalf of the producers as well as something of a television “first”. Premiering on ABC on Tuesday 17 September 1963, The Fugitive went on to present some of the most fascinating human condition dramas of that decade, all told in a tight, self-contained semi-documentary style. By its second season the program was number 5 in the ratings (27.9) and later received an Emmy Award for Outstanding Dramatic Series of 1965. For its fourth and final season the program was produced in color, having enjoyed three years of successfully film noir-like black and white photography, ending on a high note that drew the highest TV audience rating (72 percent) up to that time.

Based on a six-page format, inspired by Victor Hugo’s Les Miserables, by writer-producer (and Maverick and 77 Sunset Strip creator) Roy Huggins, ABC brought in executive producer Quinn Martin to supervise the project. He in turn brought on board line producer Alan Armer (who went on to oversee 90 episodes) and hired David Jansen to play the title character. While Huggins’ original outline saw the wrongly-convicted character behave like an oddball, since society was treating him like one anyway, Martin’s concept of the character was something less bizarre: a put-upon but basically decent person. At first, however, ABC executives worried that perhaps viewers would feel the only honourable thing for Kimble to do would be to turn himself in. Martin’s production expertise, evidenced in the footage they viewed, changed their minds. In the pilot episode, “Fear in a Desert City”, the audience was introduced to the story of Dr. Richard Kimble, arriving home in the fictional town of Stafford, Indiana, to witness a One-Armed Man running from his house, leaving behind his murdered wife. In the same episode “blind justice” saw fit to charge Kimble himself with the murder and sentence him to the death house. This narrative was assured immediately of viewer sympathy and interest. That the train enroute to the prison where Kimble was to be executed was accidentally derailed, rendering his captor Lt. Philip Gerard unconscious and thus allowing Kimble to escape, propelled the hero into a "willed irresponsibility without a concomitant sense of guilt", as Roy Huggins put it. In other words, the (mid-1960s) TV viewer felt perfectly at ease with this particular “outlaw” because what was happening was not his fault.
Not unlike the western hero, which U.S. television had embraced since the 1950s and with which it still had something of an infatuation, Kimble had the appeal of the rootless wanderer whose commitments to jobs, women or society were temporary, yet who at the same time deserved our sympathy as something of a tragic figure. The series' and the introspective character's success lay largely with the appeal of actor David Janssen's intensity in the part (Janssen's first television hit had been as the lead in the slick Richard Diamond, Private Detective series of the late 1950s). The drama of the stories came not so much from the transient occupations of the fleeing hero, such as sail mender in Hank Seals' "Never Wave Good-bye" or dog handler in Harry Kronman's "Bloodline", but from the dilemma of the Kimble character himself, something Janssen was able to convey with an almost nervous charm.

The other principal members of the cast were Canadian actor Barry Morse as the relentless Javert-like Lt. Gerard, who only appeared in about one out of four stories but who seemed always ominously present, Jacqueline Scott as Kimble's sister Donna Taft, Diane Brewster as Kimble's wife Helen, in occasional flashbacks, and the burly Bill Raisch as the elusive One-Armed Man Fred Johnson. Raisch, who had lost his right arm during World War II but nevertheless went on to become a stand-in for Burt Lancaster, may have been the show's "MacGuffin", the prime motivation for Kimble to stay one step ahead of the law, but his character was rarely seen on screen; during the first two years of production Raisch worked on the program only four days.

Using the general format of an anthology show, but with continuing characters (in the manner of the contemporary Herbert Leonard series Naked City and Route 66), the producers, writers and directors were given license to deal with characters, settings and stories not usually associated with what was in essence a simple man-on-the-run theme. Under various nondescript aliases (but most frequently as "Jim"), Kimble traversed the United States in pursuit of the One-Armed Man and along the way became involved with ordinary people who were usually at an emotional cross-roads in their lives. The opportunities for someMagnificent guest performances as well as interesting locations were immense (in the early years of production the crew spent six days on each episode with about three of them on location): Sandy Dennis in Alain Caillou and Harry Kronman's "The Other Side of the Mountain" (West Virginia), Jack Klugman in Peter Germano and Kronman's "Terror at High Point" (Salt Lake City, Utah), Eileen Heckart in Al C. Ward's "Angels Travel on Lonely Roads", parts one and two (Revenna, Nevada and Sacramento, California), Jack Weston in Robert Pirosh's "Fatso" (Louisville, Kentucky). The series also featured a number of different directors, including Ida Lupino, Laslo Benedek, Walter Grauman, Robert Butler, Richard Donner, Mark Rydell, Gerd Oswald, and Joseph Sargent; Barry Morse even got an opportunity to direct an episode.

Then in 1967—Tuesday, 29 August—the running stopped. It was actor William Conrad's final Fugitive narration after four years of keeping viewers tuned in to Kimble's circumstances and thoughts. By the fourth year of production Janssen was physically and nervously exhausted. When ABC, which had grossed an estimated $30,000,000 on the series, suggested a fifth year Janssen declined the offer and Quinn Martin, in a move quite unorthodox to series television, decided to bring Kimble's story to a conclusion. The definitive two-part episode, "The Judgment", written by George Eckstein and Michael Zager, and directed by Don Medford, saw Kimble track the One-Armed Man to an amusement park in Santa Monica where in a climactic fight, with Kimble about to be killed, the real murderer is shot down by Gerard. The final episode pulled a Nielsen score of 45.9. Now, with Kimble exonerated, both he and Gerard were now free to pursue their own paths. Janssen, too, continued his own career; after The Fugitive he starred in O'Hara, U.S. Treasury(1971–72) and Harry O (1974–76).

While other series with similar themes followed (Run for Your Life, the comedy Run, Buddy, Run), it is to The Fugitive's credit that it remains one of the more fondly remembered of the 1960s drama series. Harrison Ford starred as an energetic Kimble in Warner Brothers' successful 1993 feature remake, The Fugitive, with Tommy Lee Jones as Gerard.

—Tise Vahimagi
FURNESS, BETTY

U.S. Actor/Media Personality/Consumer Reporter

Betty Furness—whose first regular television appearances were in 1945 and whose last were in 1992—enjoyed one of the most diverse, remarkable careers in U.S. television, both as commercial spokeswoman and, later, as a pioneering consumer reporter.

Born Elizabeth Mary Furness in New York City in 1916, Furness was raised in upper class fashion by a Park Avenue family. Her first job was in 1930 when, at the age of fourteen, she began modeling for the Powers agency. Her pert and pretty looks, and her educated speaking voice, soon gained the attention of Hollywood. She was signed by RKO movie studios in 1932 and moved, with her mother, to California. While taking her senior year of school on the studio lot, Furness starred in her first film. She would go on to act in over thirty films, the majority of them forgettable. After seeking greater fulfillment in stage roles on the west coast and after the birth of her daughter and the failure of her first marriage, Furness, with her daughter, journeyed to New York hoping to land theater parts. A self-described "out of work actress," Furness found herself able and willing to break into the very infant medium of television.

For a few months in the spring of 1945, Furness endured blistering heat, from the lights needed to illuminate the set, and other primitive technologies to host DuMont's "Fashions Coming and Becoming." By 1948, she was in front of the television cameras again as an actress for an episode of Studio One, an anthology program sponsored by Westinghouse appliances. In that era of live television, many commercials were also done live, frequently performed to the side of the main set. Furness was unimpressed with the actor hired to perform the commercial and offered to take a stab at it. Company executives were impressed and offered her the $150 a week job pitching their products. Following her philosophy of never turning down a job, Furness signed on.

With TV still apparently innocent, audiences had not yet grown jaded by TV commercials and the people who appeared in them. Furness's blend of soft sell and common sense was soon moving the merchandise. Her delivery was always smooth and memorized (she refused cue cards), her

tone pleasant and direct, and her look pretty, approachable. In little time the company had signed her to be their sole pitchwoman. And soon the pitchwoman was selling out stores and receiving, on average, one thousand pieces of fan mail a week.

Furness’s place in the popular culture cannon was assured after her work for Westinghouse at the 1952 national political conventions. Westinghouse was the convention’s sole sponsor and, as their spokeswoman, Furness was in every ad. By conventions’ end she had logged more air time than any speaker of either party and made her tag line “You can be SURE if it’s Westinghouse” into a national catch phrase. From January to July 1953, Furness hosted Meet Betty Furness, a lively, informative daily talk show—sponsored by Westinghouse—on NBC. Later she acted as hostess on the Westinghouse sponsored Best of Broadway and made regular appearances on What’s My Line? and I’ve Got a Secret.

Furness’s affiliation with Westinghouse ended (by mutual agreement) in 1960. Though financially well-off, Furness wanted to keep working. She attempted to obtain jobs at the networks as an interviewer but found the going rough. As Mike Wallace and Hugh Downs had experienced, Furness was facing the challenge of putting her commercialized past behind her. While waiting to break in again in TV, Furness worked in radio and for Democratic political causes. She also entered the last of her three marriages when she married news producer Leslie Midgely in 1967.

It was while preparing for her wedding that Furness got a call from President Johnson. Familiar with her work on behalf of Democrats, and impressed with her work ethic, Johnson offered her the job of Special Assistant for Consumer Affairs. Furness, again following her job philosophy, took the position and with it transformed herself from actor-spokeswoman into political figure. She later recalled it as the best decision of her life.

Still in the public mind as the “Westinghouse lady,” consumer groups voiced criticism at her appointment. But Furness threw herself into learning consumer issues, testifying before congress, and traveling the country. Within the year she had silenced her critics and won over such forces as Ralph Nader and the influential consumer affairs magazine, Consumer Reports. Furness held her White House position until the end of the Johnson administration in 1969. Later she headed the consumer affairs departments of both New York City and New York state. Then she reentered broadcasting for the second act of her television career. She was signed by WNBC in New York specifically to cover consumer issues, the first full time assignment of its kind. Furness found herself now—at age 58—pioneering a new type of TV journalism.

Over the next eighteen years, Furness took a hard line against consumer fraud and business abuse. Her reports criticized Macy’s department store, Sears, and Lane Bryant among other businesses. She was also the first to report on the Cabbage Patch Doll craze and on the defective Audi automobile. In 1977, her local show Bayline: Betty Furness won the Peabody.

Earlier in 1976, Furness filled in as co-host on Today between the tenures of Barbara Walters and Jane Pauley. From that time on she contributed regular consumerism pieces to the program. Furness made her last TV appearances in 1992. Since battling cancer in 1990, Furness had abbreviated her work week to four days. NBC used that reason to oust her, and she was given notice in March in one of the most blatant examples of ageism in media history. Though both Today and WNBC aired tributes to her during her last week, Furness did not keep her frustration out of the press. Nor did she hide her desire to keep working. But a reemergence of cancer prevented it and she passed away in April of 1994.

It is hard to place Betty Furness’s career in a historical context because it was so eccentrically one of a kind. Of the legions who pitched products from the 1950s and 1960s, hers remains the only name still very much a part of popular history. In her movement from political insider to TV commenator she laid the groundwork for Diane Sawyer and Mary Matalin. And in her work as a consumer advocate she predates John Stossel and others who have since adopted that as their beat.

In assessing the career of Betty Furness one stumbles upon a feminist retelling of the Cinderella story: a smart, savvy woman who turned her back on TV make believe and soft sell to embrace hard news and tough issues. That one individual’s life encompasses such width and depth speaks well not only for the far-reaching talents of one woman but also for the progression of women’s roles in the latter half of the twentieth century and for the dynamic development of television and its ability to record them both.

GARNER, JAMES

U.S. Actor

James Garner has been called our finest television actor; he has been compared more than once to Cary Grant, but also deemed dependably folksy. Possessed of a natural gift for humor, a charm that works equally well for romantic comedy and tongue-in-cheek adventure, Garner patented the persona of the reluctant hero as his own early in his career, but also exhibited an understated flair for drama that has deepened with age. Garner began his television career in the 1950s, becoming a movie star in short order, and maintains an active presence in both media nearly forty years later.

Transplanted to Hollywood after a knockabout adolescence and stints in the Merchant Marine and Korea, the strapping Oklahoman came to acting almost by chance, at the urging of an old friend-turned-talent agent. Although his first job, in a touring company of The Caine Mutiny Court Martial, was a non-speaking role, it enabled the 25-year-old actor to work with—and learn from—Henry Fonda, and led to a bigger part in a second national tour of the play. Spotted by Warner Brothers producers, he was hired for small parts on two episodes of the western series Cheyenne, after which the studio signed him to a contract. After a turn as a con man in an installment of the anthology Conflict and small parts in two Warners features, Garner landed a major role as Marlon Brando’s pal in Sayonara. On the heels of this breakthrough, Garner was signed as the lead in Maverick, a new western series created by Roy Huggins. As wandering gambler Bret Maverick, Garner perfected a persona that would remain with him throughout his career: the lovable con-man with a soul of honor and a streak of larceny. Maverick put more emphasis on humor than gunplay, but while Bret and brother Bart (Jack Kelly) were a bit more pragmatic—not to say cowardly—than most TV heroes, the series was not a wholesale satire on westerns, although it did parody the genre—and TV favorites like Bonanza—on occasion.

Immediately upon signing as Maverick, Garner found himself cast in leading roles in Warner Brothers features. He made three routine films for the studio during breaks from the series—but he was still being paid as a television contract player. When Warner’s suspended the young star in 1960 during a writers’ strike, Garner walked off the series and out of his contract. The studio sued, and lost, and Garner would not return to television—apart from guest shots in comedy-variety shows, or golf tournaments—for a decade.

Garner made a comfortable transition to features, becoming a bankable box-office name in the early 1960s. He made eighteen features during the decade, a mix of adventures (The Great Escape), westerns (Duel at Diablo), and romantic comedies (The Thrill of It All). Garner tested his dramatic muscles in downbeat psychological thrillers like Mister Buddwing, and made a calculated turn against type as...
a grim, vengeful Wyatt Earp in *Hour of the Gun*, but his most successful films emphasized his innate charm and flair for irony. Save for a boost from the tongue-in-cheek western *Support Your Local Sheriff*, by the late 1960s Garner's drawing power as a movie star was in decline.

Garner returned to form, and to television, in 1971 with the turn-of-the-century western *Nichols*. The series also marked Garner's return to Warner Brothers, this time as a partner and co-producer (through his Cherokee Productions) rather than an employee. Set in Arizona circa 1914, *Nichols* was an affectionate depiction of the death of the old west, with Garner cast as the motorcycle-bound sheriff of an Arizona town. Nichols was amiably shady a la Maverick, but with a harder edge, more greed, and less honor. An innovative concept: people with offbeat characters, *Nichols* premiered with mediocre ratings that were not aided by schedule-juggling. The network, theorizing that Garner's character was too avaricious and unlikable, decreed a change: Sheriff Nichols was murdered in the last episode aired, and replaced by his more stalwart twin brother Jim Nichols. Before the strategy could be tested in additional episodes, or an additional season, the program was canceled. It remains the actor's favorite among his own series.

After returning to the big screen for a few fairly undistinguished features (e.g., *They Only Kill Their Masters*), in 1974 Garner was cast in what might be called the second defining role of his television career, as laid-back private detective Jim Rockford in *The Rockford Files*. A product of writer-producers Roy Huggins and Stephen J. Cannell, *Rockford* was in some ways an updated version of *Maverick*, infusing its mysteries with a solid dose of humor, and flirting with genre parody. At the same time, however, thanks to fine writing and strong characters, the series worked superbly as a realistic private eye yarn in the Chandler tradition. Garner left *Rockford* in 1980, in the middle of the series' sixth season, suffering from the rigors of its action-packed production. Soon after, Universal sued the actor for breaching his contract, but in 1983 Garner, ever the maverick off-screen, brought a $22.5 million suit against the studio for creatively accounting him out of his *Rockford* profits; six years later Universal settled for an undisclosed, reportedly multi-million dollar, sum.

Garner had dusted off his gambler's duds in 1978 for two appearances as Bret Maverick in the pilot and first episode of a short-lived series *Young Maverick* (same concept, now featuring a young cousin as the wandering hero). A year after exiting *Rockford*, Garner revived his original roguish alter-ego once more in a new series, *Bret Maverick*, with the dapper cardsharp now older and more settled as a rancher and saloon owner in an increasingly modern west. Despite good ratings, the show was canceled after one season, ostensibly because its demographics skewed too old.

Garner took on the occasional movie role throughout the 1980s, in hits like *Victor, Victoria* (1982), and *Murphy's Romance* (1985)—which earned him an Oscar nomination—and misses like *Tank* (1984) and *Sunset* (1988). But feature work became almost a sidelight for the actor as he entered a new phase of his career, cultivating his dramatic side in a succession of made-for-television movies and miniseries. Apart from a fairly pedestrian role in the soapy mini-series *Space*, Garner's performances in *The Long Summer of George Adams*, *The Glitter Dome*, *My Name Is Bill W.*, and *Decoration Day* allowed him to explore and expand his palette as a character actor. He earned some of the best notices of his career (and two Emmy nominations) for his performances in *Heartsounds*, as a physician facing his own mortality, and *Promise*, as a self-involved bachelor faced with the responsibility of caring for his schizophrenic brother. More recently Garner won praise as Joanne Woodward's curmudgeonly husband in *Breathing Lessons*, and for his portrayal of the taciturn Woodrow Call in *Streets of Laredo*, a miniseries sequel to Larry McMurtry's *Lonesome Dove*.

The affable charmer Garner did not completely abandon the light touch, however. In 1991 he returned to series television in a half-hour comedy *Man of the People*, as a gambler and con-man appointed by corrupt politicians to fill the city council seat of his late ex-wife. Independent and honorable (in his way), Councilman Jim Doyle managed to confound his patrons and do some good for the community while lining his own pockets. (Shades of *Nichols*, low ratings prompted producers to try to make the character "warmer" after a few months, but the tinkering didn't help and the show was canceled at mid-season.) Two years later Garner was cast as RJR-Nabisco executive Ross Johnson in HBO's *Barbarians at the Gate*, in large part to ensure that at least one character in the cast of corporate cutthroats would have some likability. When *Maverick* was reincarnated as a theatrical film in 1993 (with Mel Gibson as Bret), Garner was there as an aging lawman who turns out to have more than a passing connection to the Maverick legend. And P.I. Jim Rockford was revived in a series of *Rockford Files* made-for-television reunion movies beginning in 1994, his relaxed attitude and wry anti-heroes intact. With three *Rockford* movies aired, three more projected, and other television and feature projects in the pipeline, James Garner has never been busier—or better. As he approaches the end of his fourth decade as an actor, Garner demonstrates true maturity at his craft (he would undoubtedly call it a "job").

Described as "amiable" and "lovable" in countless career profiles, Garner's warmth and likability were best suited, perhaps, to the intimacy of television's small screen and serial storytelling forms. And yet from the very beginning his career constituted a unique exception in the hierarchy of Hollywood stardom, as he passed back and forth with relative ease between television and feature work, and—although that boundary remains distinct, and crossover rare—still does. Like many of Hollywood's greatest actors, he tends to play an extension of himself—like Jimmy Stewart, Spencer Tracy, Cary Grant, and his mentor Henry Fonda. Like them, Garner is affecting not
because of his ability to obliterate himself and become a character, but because of his ability to exploit his own personality in creating a part. Admittedly, it is a different sort of talent than that of a DeNiro or Duvall. Yet, as Jean Vallely wrote in Esquire, DeNiro is probably unsuited to television stardom—he may not be the kind of star we want to see our living room. "On the other hand," Vallely wrote, "you love having Garner around. He becomes part of the fabric of the family. You really care about him." Where DeNiro impresses us with his skill, Garner welcomes us with his humanity. Which is why he may indeed be the quintessential TV actor, and why he surely will be remembered by television audiences as he has said he wishes to be: "with a smile."

GARNETT, TONY
British Producer

Tony Garnett, producer, was a central figure in the group (including writer Dennis Potter and director Ken Loach) which revolutionized British television drama in 1960s, creating something of a golden age.

Originally an actor, Garnett was recruited by Sidney Newman in 1963 as a script editor for a new BBC drama series, The Wednesday Play. British television drama in the 1950s had been dominated by classic theatrical texts done in the studio, normally live, with occasional 35mm film inserts. The coming of videotape meant only that these productions were done live-to-tape. The Wednesday Play, with a commitment to new talent and new techniques, changed all this. Influenced by the theatre of Joan Littlewood (Oh What a Lovely War) and the cinema of Jean-Luc Goddard (A bout de souffle), Garnett sought contemporary, overtly radical scripts for the series which he was producing by 1964.

In 1966, he produced, with Loach directing, Cathy Come Home. Many British viewers were complacent that its welfare system was among the best in the world, and this documentary-style film of the devastating effects of homelessness on one young family had enormous impact. It was the first of many controversies. Between 1967 and 1969, Garnett mounted 11 productions ranging in subject from the plight of contemporary casualized building workers (The Lump by Jim Allen, directed by Ken Loach) to aristocratic corruption in Nazi-era Germany (The Parachute by David Mercer, directed by Anthony Page). Garnett’s productions became TV “events”.

In the 1970s the pace slowed but not the combative quality of the work. In 1975, Days of Hope, a Jim Allen miniseries, rewrote the history of the decade before the 1926 General Strike as a betrayal of the working class by its own leaders. In 1978, another Allen miniseries, Law and Order, caused an uproar by treating professional criminals as just another group of capitalist entrepreneurs trying to turn a profit.

The cockney criminal slang in Law and Order was so authentic that the BBC program guide had to provide a glossary. The language and Northern accents in Kes, Garnett’s first feature script, produced in 1969, were also so authentic that this story of a disadvantaged boy and a kestrel had to be subtitled.

Uncompromising politics—“self-righteous idealism” as Garnett recalls it—and rigorous authenticity created a passionate, if completely uncommercial, oeuvre. But Garnett then discovered the critical importance, the “disciplines,” of popular genres during the 1980s, a decade he spent in Hollywood. Here he learned “a movie should never be about what it’s about”. Thus, for example, he produced in Follow That Bird and Earth Girls Are Easy, two films about racial prejudice disguised as, respectively, a Sesame Street adventure and a comedy about space aliens.

In the 1990s, back in England, Garnett revisited the subjects of earlier work but now in popular genre form. Between the Lines was a hit crime series that focused on police corruption and set in the internal investigation department of the force. Cardiac Arrest was a bitter examination of the state of Britain’s socialized medical system but in the form of a black situation comedy series. Garnett, characteristically, continued to rely heavily on new talent.

Tony Garnett has been, and remains, one of the major shaping intelligences of British television drama.

GARROWAY AT LARGE

U.S. Music Variety Show

Garroway at Large was the definitive program series emanating from the Chicago School of Television during the late 1940s and early 1950s. An intimate, low-budget musical variety program, this critically acclaimed series allowed its host, Dave Garroway, to wander the NBC studio “at large” during the actual telecast. In the process, the show combined a number of elements later defined as being in the Chicago style—improvisation, scriptlessness, interpretive cameras.

Dave Garroway began his career in broadcasting in 1938 when he landed a sixteen-dollar-a-page week position at NBC-New York. Enrolling in the network’s announcer school, he placed an unimpressive twenty-third out of a class of twenty-four but did manage to find work as a special events announcer at Pittsburgh’s KDKA. In September 1939, he joined the announcing staff at NBC-Chicago’s WMAQ radio outlet.

From the opening strains of “Sentimental Journey” to his trademark expression of “Peace,” Garroway’s “hip” esoteric broadcasting persona developed and crystallized on Chicago radio. His local 11:60 Club, jazz music and conversation at midnight, led him into network radio with his Sunday evening Dave Garroway Show and his daytime Reserved for Garroway. From there he moved quickly into network television. Garroway at Large premiered on 16 April 1949, within four months of NBC television beginning operations in Chicago.

Taking advantage of Garroway’s intellect, unique personality and relaxed, intimate broadcasting style, Garroway at Large scripts were more conceptual than specific and placed minimal emphasis on elaborate production. Under the watchful eye of producer Ted Mills, writer Charles Andrews, and directors Bob Banner and Bill Hobin, the show worked to create illusions and gently shatter them with the reality of the television studio. In the best tradition of Chinese Opera, commedia dell’arte, or the Pirandellian manipulation of reality, Garroway would wander in and out of scenes or from behind sets, stopping to hold quiet conversations with occasional guest celebrities, the home view-

GARTNER, HANA
Canadian Broadcast Journalist

Hana Gartner is co-host of the Canadian Broadcasting Corporation's (CBC) major evening newscast, Prime Time News. Her long broadcasting career has made her one of the most visible journalistic positions in Canada.

In 1970, Gartner worked for Montreal radio station CJAD as both an interviewer and a features reporter. She subsequently joined Standard Broadcast News, a syndicated radio news service, as parliamentary correspondent in Ottawa, the federal capital. In 1974, Gartner made her first switch to television. She returned to Montreal as co-host of The City at Six, CBC Montreal's local daily news hour. The following year, she relocated to Toronto for a position as host of In Good Company on CBC Toronto television. In 1976, however, Gartner returned briefly to radio to host the CBC's signature network radio program, This Country in the Morning.

The movement between radio and television, and amongst various cities, is typical of CBC journalists. Not only does it contribute to their training and but it also allows the CBC to use its various radio and television stations as "farm teams" for network programming. This system has also helped launch many Canadian journalists on successful international careers.

In 1977, Gartner made her second and decisive switch to television when she joined CBC Toronto's local news hour, 24 Hours, as co-host and interviewer. She also became host of a CBC television network daytime interview program, Take 30.

In 1982, Gartner was selected to co-host CBC television's flagship public affairs news and investigation program, The Fifth Estate, which is best known for breaking new stories and for presenting complex issues in compelling narrative style. In this capacity, she has reported from around the world on a huge range of topics. In 1978, she was given her own summer series, This Half Hour.

Gartner's interview style combines toughness, honesty, and sympathy. She is capable of uncomfortable directness, and even irony, in her questioning of subjects; however, she does not stray into gruity or nastiness. She is capable of revealing a personal attitude or orientation towards an issue without betraying journalistic objectivity. On the contrary, these qualities win the sympathy of viewers who identify with her. As is characteristic of Canadian news and information programming generally, the overall tone of Gartner's work is sober with a focus on issues and their intricacies rather than personality or glamour.

In 1985, Gartner won the Gordon Sinclair Award for excellence in broadcast journalism. In 1994, she was given a CBC series of special interviews, Contact with Hana Gartner. In 1995, she became co-host of Prime Time News, the most visible journalistic position in Canada.

—Paul Attallah

HANA GARTNER. Born 1948 in Prague, Czechoslovakia. Educated at Loyola College (now Concordia University), Montreal, Quebec, Canada, B.A. in communications 1970. Married: Bruce Griffin, 1987; two children. Began career as radio-show host, CJAD, Montreal, 1970; began television career at CBC, Montreal, 1974; host, interviewer, reporter, various television and radio programs. Recipient: Gordon Sinclair Award, 1985; three Gemini.

**GELBART, LARRY**

U.S. Writer/Producer

As producer of *M*A*S*H*, Larry Gelbart provided numerous contributions to one of television's most innovative and socially aware sitcoms. But he has been a dynamic force in broadcasting for more than thirty years. Gelbart has written for radio, television, film and the stage. After leaving television in the early 1980s, Gelbart went on to produce feature films, including *Oh, God!* (1977) and *Tootsie* (1982).

During the 1940s, Gelbart began working as a writer for Fanny Brice's radio show, and as a gag writer for Danny Thomas. After a brief stint in the army, where he wrote for Armed Forces Radio, Gelbart joined the writing staff of *Duffy's Tavern*, a popular radio program. He also wrote for Bob Hope, whom he followed to television.

In the early 1950s, Gelbart became part of the extraordinarily talented crew of writers on Sid Caesar's *Your Show of Shows*. This group, which included Carl Reiner, Howard Morris, Mel Brooks and Woody Allen, helped define the medium in its earlier days. Shortly after becoming head writer for *The Pat Boone Show*, Gelbart became disgusted by broadcasting's communist witch-hunts and moved to England. While in London, he continued to work in British film and television.

In the early 1970s, Gene Reynolds, who was developing a television version of the film *M*A*S*H*, enticed Gelbart to write the pilot script. Gelbart was leery about returning to American television, but became interested when he learned that CBS was willing to allow the series to realistically depict the horrors of war. When CBS picked up the series in 1972, Gelbart became its creative consultant. One year later, Gelbart joined Reynolds as co-producer.

Gelbart provided numerous innovations to an idea which had already made for a best-selling novel and box office hit. Recalling a Lenny Bruce bit on draft dodges, Gelbart created Corporal Klinger, a character who dressed in women's clothing in hopes of getting a "Section Eight" discharge. Written as a one-time character, Gelbart's Klinger, played by Jamie Farr, became central to the long-running series. When actor McLean Stevenson decided to leave the series, Gelbart was involved in the decision to "kill off" Stevenson's character, Colonel Henry Blake. This was the first time a series regular had met such a fate. Furthermore, Gelbart is credited with "The Interview" episode, an innovative script in which journalist Clete Roberts, playing himself, interviews the doctors of the *M*A*S*H* unit. Produced with a cold opening (no teaser, lead-in, or commercial), filmed in black and white, and shot in documentary style, it paved the way for the numerous innovations carried out by later *M*A*S*H* producers. After four seasons with *M*A*S*H*, Gelbart became worried he would grow repetitive and left the series.

In 1973, Gelbart and Reynolds created *Roll Out*, a disappointing series about an army trucking company set in World War II. Gelbart's last outing with series television, the highly touted *United States*, also failed to score with the public. One of television's first stabs at dramatic sitcoms (dramedy), it fizzled out two months after its March 1980 debut.

GELLER, HENRY

U.S. Telecommunications Legal Expert

Henry Geller is a Washington, D.C., telecommunications attorney and law professor with a distinguished career in U.S. communications policy making and regulation. He worked at the Federal Communications Commission (FCC) at several intervals from 1949 until 1973, serving as general counsel for six years (1964-70) and then becoming assistant to FCC chair Dean Burch. He later served as administrator of the National Telecommunications and Information Administration (NTIA) for three years (1978-81) during the Carter presidency. His contributions to national telecommunications policy making led to the National Civil Service Award in 1970.

Geller has since served as a telecommunications advisor for a number of non-governmental organizations, including Duke University's Washington Center for Public Policy Research, the Rand Corporation, and the Markle Foundation. His advice on policy matters was solicited because of his experience as a Washington telecommunications insider,
and because of his iconoclastic views on communications spectrum issues.

Geller long espoused that the electromagnetic spectrum allocated for telecommunications purposes is a finite national resource and that fees should be collected from all users of that spectrum. In 1979, while at the NTIA, Geller first broached the idea of auctioning spectrum for then-new technologies such as cellular telephony and wireless cable (MMDS). Free users of this resource such as radio and television broadcasters were adamantly opposed to such proposals, claiming that they were serving the public interest by providing news and other informative programming.

Geller felt that broadcasters, especially at the local level, had neglected their public-interest programming obligations, and that the FCC should eliminate all "public fiduciary" regulation in favor of a fee-for-spectrum arrangement. The benefits of such a system, as Geller described it, would involve an end to the lack-luster provision of public affairs and children's programming, and would allow the public, rather than the buyers and sellers of existing broadcast licenses, to benefit from spectrum auctions. He proposed that funds raised from spectrum auctions be dedicated to the development of public broadcasting services—much like the traditional British model of public support for national programming.

The irony of Geller's position on spectrum auctions is that the FCC now conducts such auctions for emerging communications technologies such as Personal Communications Services (PCS). However, the revenues collected will be allocated for federal deficit reduction instead of supporting public broadcasting. Henry Geller is a well-informed critic of the status quo in telecommunications policy making, and the recent adoption of the spectrum auctions in the United States reaffirms a position that he has long advocated for the benefit of the public, rather than private, interest.

—Peter B. Seel

PUBLICATIONS (selection)

In a two-part article written for *TV Guide* in 1964, bestselling author of *The Feminine Mystique*, Betty Friedan, claimed that television has represented the American woman as a "stupid, unattractive, insecure little household drudge who spends her martyred, mindless, boring days dreaming of love—and plotting nasty revenge against her husband." Almost thirty years later, Pulitzer Prize winning journalist Susan Faludi suggested that the practices and programming of network television in the 1980s were an attempt to get back to those earlier stereotypes of women, thereby countering the effects of the women's movement that Friedan's messages had inspired in the late 1960s and 1970s.

Although the analyses of Friedan and Faludi are undeniable on many levels, it is important to remember that television provides less than realistic stereotypes of men as well (although these stereotypes embody qualities—courage, stoicism, rationality—that society values) and the images of femininity justifiably disturbing to Friedan and Faludi are not necessarily read by female viewers in the ways intended by program producers and advertisers. Recent scholarship has studied not only female fan groups that rework television texts in their own writings, but has also suggested that narratives and images are polyvalent and dependent on contextual situations for meaning. For example, television scholar Andrea Press studied women's responses to *I Love Lucy*, finding that middle-class women drew strength from Lucy Ricardo's subversion of her husband's dominance and Lucille Ball's performing talents, while working-class women tended to find Ball as Lucy Ricardo funny, but thought the character was silly, unrealistic, and manipulative.

While scholarship such as Press's, motivated by an agenda of understanding cultural products and practices, attempts to understand how audiences negotiate the meanings of gender and class in their encounters with television, commercial broadcasting also has a history of research into audience composition and desires. Of course its agenda is mainly focused on understanding the audience as consumers, since the economic basis of commercial broadcasting is selling products to consumers. As early as the late 1920s, market research suggested to advertisers the importance of the middle-class female consumer in terms of her primary role in making decisions regarding family purchases. Early radio programs included some targeted to the female listener. Advertisers found success with how-to and self-help programs that could highlight the use of a food, cosmetic, or cleaning product in their generous doses of advice patter. By the early 1930s, household product advertisers successfully underwrote serialized dramas ("soap operas") in the daytime hours, and their assumptions that women were the primary listeners during those hours meant that narratives often revolved around central female characters and that segmentation of story and commercial must conform to the working woman's activities as she listened.

Several of the popular radio soap operas made the transition to television, with many new ones created for the medium which would eventually eclipse radio in audience numbers. As with their radio predecessors, these shows were programmed for the daytime hours and featured commercials aimed at the housewife, that "drudge" Friedan described as the stereotype of the post-war American culture. Daytime hours on television also included game and talk/advice shows, whose rhetorical strategies assumed women's capacity as caretaker of the family's economic and emotional resources. The make-up of daytime programming on the broadcast networks has stayed remarkably the same over the years, although soap opera plots seem to take into account the presence of male viewers (not only making male characters more important, but mixing action genre ingredients into the narratives). Perhaps even more significantly as programming strategy, game shows have given way on the schedule to talk shows.

This latter trend began with the tremendous success of *Donahue*, which started in 1967 as a local, Dayton call-in talk show aimed at women. Host Phil Donahue was interested in serving the needs of the woman at home who was intelligent and politically sophisticated, but unrecognized by other media. Appearing at a time of considerable political and gender unrest and change, by 1980 it was carried on 218 stations around the country, delivering the "right numbers" to advertisers—women aged 18 to 49. Oprah Winfrey also started locally (in Chicago) and two years later, in 1986, *The Oprah Winfrey Show* went national, not only beating *Donahue* in the ratings, but also becoming the third-highest rated show in syndication. Winfrey is now one of the wealthiest working women in the country, and has her own production company to produce theatrical and television films, often about African American women. Like Donahue, Winfrey aims her show at intelligent...
women at home, but she attempts more intimacy with her viewers by relating her guests’ problems to her own difficulties with weight, drugs, and sexual abuse. The success of Donahue and Winfrey led to a glut of talk shows on daytime television, and the fierce competition among them has resulted in an exploration (some would say exploitation) of once-unspoken or repressed experiences of gender and sexuality (transvestitism, homosexuality, prostitution, incest, adultery, abortion, etc.).

Ironically, primetime television, once considered more “serious” than daytime programming, has continued to cause controversy in the 1980s and 1990s when dealing with issues (abortion, homosexuality) now regularly discussed on daytime talk shows. Primetime television has been considered by the networks and media critics and historians as more serious because of the presumably “adult” dramas, mostly with male characters as central figures, scheduled during the late, 9:00-11:00 P.M. time slots. Of course, the unspoken assumption here is that these shows are serious because they appeal to male viewers, who are stereotyped as more interested in violence, the law, and the sometimes socially relevant aspects of nighttime drama.

Many primetime dramas of the 1950s, 1960s, and early 1970s drew on the "masculine" emphasis of genres successful in other, prior media forms—novels, films, and radio. The western, the detective/police thriller, science fiction, and the medical drama featured controlling male characters, having adventures, braving danger, solving problems through reason and/or violence. Many critics have pointed to the goal-oriented nature of these generic forms, as opposed to the more open-ended, process-orientation of the serialized melodrama assumed to appeal to the female viewer. Yet the primetime dramas addressing the male audience have never precluded the development of characters and community. Some of the primary pleasures of westerns, such as Gunsmoke and Wagon Train, derived from their emphasis on community and the "feminine" values of civilization over the male hero alone in the wilderness. Yet, Wagon Train and two other long-running westerns, Rawhide and Bonanza, had no regular female characters. Likewise, medical dramas of the period, such as Dr. Kildare, Ben Casey, and Marcus Welby, had rational male doctors diagnosing hysterical female patients and, as in the western Bonanza or the sci-fi show Star Trek, whenever a serious relationship developed between a female character and one of the shows’ heroes, she would usually die before the episode concluded.

The detective and cop thriller tended to fit most securely within the action-oriented, goal-driven narrative form assumed to be compatible with stereotypes of masculine characteristics. From the police procedural Dragnet to the buddy cop thrillers Starsky and Hutch and Streets of San Francisco, women were usually criminals or distractions. In many ways, these were men’s worlds.

This trend was born out in the statistics gathered by media researchers: in 1952, 68% of characters in primetime dramas were male; in 1973, 74% of characters in these shows were male. These kinds of numbers, as well as the qualities of the portrayals of women, spurred the National Organization for Women (NOW) to action in 1970. NOW formed a task force to study and change the derogatory stereotypes of women on television, and in 1972 they challenged the licenses of two network-owned stations on the basis of their sexist programming and advertising practices. Although they were unsuccessful in this latter strategy, NOW and other women’s groups provided much needed pressure when CBS tried to cancel Cagney and Lacey, a “buddy” cop show and the first primetime drama to star two women. Conceived in 1974 by Barbara Corday and Barbara Avedon, two women inspired by critic Molly Haskell’s study of women’s portrayal in film, Cagney and Lacey was originally turned down by all three networks, only getting on the air after eight years. Producer Barney Rosenzweig worked closely with organized women’s groups and female fans to support the show during threats of cancellation, after CBS fired the first actress to portray Christine Cagney because she was not considered “feminine enough,” and during periods when the show aired controversial episodes on such topics as abortion clinic bombings.

Despite the controversy over Cagney and Lacey, by the time it got on the air, there were already other changes in primetime dramas that reflected the impact of the women’s movement and networks increasing desire to capture the female market in primetime. Film noir, Hill Street Blues, St. Elsewhere, even the detective thriller, Magnum, P.I. with its Vietnam vet hero, had begun to emphasize characters’ emotional developments over action, with the former two programs adopting the serialized form once more common in the daytime soap operas (NYPD Blues and Homicide) inherit these changes in the 1990s). Made-for-television movies, scheduled almost every night of the week during the 1970s and 1980s often featured female characters in central roles, causing many critics to suggest that they filled the void of women’s pictures now vanished from the theatrical feature film world. In the mid to late 1980s, shows such as China Beach (about nurses in Vietnam), Heartbeat (women doctors at a women’s health clinic), L.A. Law (with both male and female law partners) suggested new trends in primetime drama. Yet, in 1987, 66% of characters in primetime were still male.

The situation comedy, which filled the early primetime hours from the early fifties to the present, has tended to be more hospitable to female characters, at least in terms of numbers. In terms of their portrayals of women and femininity, situation comedies are more of a mixed bag. Because most comedy shows focused on the family, women were mainly seen as wives, mothers, and daughters. Within that context, the programs might center on the value of the mother’s nurturance and work, as in Mama or The Goldbergs (which star Gertrude Berg produced), or marginalize her in decision making about the family’s resources and children, as in Leave It to Beaver (the mother in The Brady Bunch of
the late 1960s-1970s is heir to June Cleaver in that regard). Zany wives, who continually acted against their husband's wishes, were featured in *I Love Lucy*, *I Married Joan*, and *My Favorite Husband*, while *Private Secretary* and *Our Miss Brooks* represented single working women as only slightly less irrational. It would be wrong to suggest that these shows ignored gender tensions—some of the programs were fraught with them. In *Father Knows Best*, for example, although father Jim Anderson is the moral center of the show, his intelligent wife Margaret and ambitious daughter Betty are confronted in more than one episode with some of the agonies of the polarized choices (wife and mother or career) women faced in the 1950s. Likewise, Donna Stone of the *The Donna Reed Show* questions the connotations of the media’s use of “housewife” in one episode, and Lucy Ricardo of *I Love Lucy* is probably the most ambitious and dissatisfied woman in all of television history.

In the 1960s, restlessness with domesticity appears in shows where the female characters have to literally use magic to leave their roles, as in * Bewitched* and *I Dream of Jeannie*, or in the girlish pretensions of would-be actress Ann Marie in *That Girl*. Although critics now point to her idealized feminine looks and her sometimes subserviant response to boss Mr. Grant, Mary Richards of *The Mary Tyler Moore Show* was a refreshing relief from the frustrated women in sitcoms of the 1950s and 1960s. Coming on the air the same year NOW organized its task force, this show still stands out in not compromising Mary’s single status, in its development of her career as a news producer, in its portrayal of a character basically happy as a non-married, working woman. Her smart and sarcastic (and slightly more man crazy) friend Rhoda was so popular with viewers that she starred in a spin-off show. While producer Norman Lear’s *All in the Family* more successfully satirized male stereotypes than female, other Lear productions like *Maude* and *One Day at a Time* worked against earlier portrayals of wives and mothers. These women were married more than once, raised children, stood up for their rights and beliefs. Maude even had an abortion in one of the most controversial programs in television history.

Although sitcoms of the 1980s and 1990s, such as *Kate and Allie*, *Designing Women*, *Golden Girls*, *Roseanne*, *Murphy Brown*, *Grace Under Fire*, continue the trend of the 1970s in representing working women, female friendships, free from competition, non-traditional family formations, etc., television producers during this period persisted in creating family sitcoms that banished mothers. Although in reality a statistically small number of households involve single fathers, * Full House*, *My Two Dads*, *Empty Nest*, *Blossom*, *The Nanny*, and *I Married Dora* featured men as both mothers and fathers (who sometimes have a great housekeeper/nanny). Mom was around in *The Cosby Show*, but some critics suggested she was too present, claiming the program hardly captured the reality of a working attorney who was also a mother of five. The show's depiction of Claire Huxtable as free from the tensions of demanding career vs. motherhood caused some critics to label her character “post-feminist.” At the opposite end of the spectrum, *Murphy Brown* and *Roseanne* have come under fire for depicting motherhood in too “non-traditional” ways.

While current broadcast network programming arguably presents a greater variety of representations of women than in previous decades due to changes in gender roles in society since the women’s movement, this is as much because the “new woman” is recognized as a consuming audience member as it is because networks feel a responsibility to break down cultural stereotypes. Such marketplace driven political correctness even motivated the creation of Lifetime, a cable network for women, in 1984. At first relying mostly on acquired programming, which included many prime-time reruns from the broadcast networks, in the late 1980s the channel began producing original TV movies and programs appealing to women on the basis of central female characters and behind-the-camera female personnel, such as director-actress Diane Keaton directing a TV movie. When NBC cancelled *The Days and Nights of Molly Dodd*, a “dramedy” about a wishful, divorced, working woman, Lifetime acquired the reruns and produced 30 original episodes of its own. While this decision did not generate the ratings hoped for, it was great public relations, and put the channel on the map. Morning shows concentrate on advice shows for young mothers, and the rest of daytime hours are filled with reruns of shows with proven appeal to women, such as *Cagney and Lacey*, *The Tracy Ullman Show*, and *L.A. Law*. While the channel refuses to identify itself as feminist—it only admits to avoiding programming that “victimizes” women—its existence does suggest that women are far from ignored by television.

Currently, the greatest gaps in television programming's representation of women probably reside in sports and news. Broadcast networks rarely cover women’s sports (newer sports cable channels do a little better if only because they have 24 hours of coverage to fill), and when they do, media scholars have noted that the sportscasters call female athletes by first name and use condescending or paternal adjectives in describing them. Female TV news journalists have had their own problems in getting airtime, and are usually submitted to sexist biases about feminine appearance. Women in television news divisions, both behind and in front of the camera, organized groups in the 1970s and 1980s to pressure executives to give women in these areas more power and representation. There were well-publicized sex discrimination and sexual harassment suits at this time, but change has come slowly. But CNN, a cable channel needing to fill 24 hours, has put more women on the air (including all women news show, CNN and Co.), and the profitability of increasing the number of "newsmagazines" on the air prompted the broadcast networks to include more female anchors in the early 1990s. Yet women are used as experts on news shows only about 15% of the time, an issue of representation as important as their presence as news
anchors. Many media critics look to an increase in the use of women as experts as a possible catalyst for change in all areas of television programming. When women are seen as authority figures in our culture, their representation in fiction as well as non-fiction media forms will perhaps change for the better.

GENERAL ELECTRIC THEATER

U.S. Anthology

General Electric Theater featured a mix of romance, comedy, adventure, tragedy, fantasy and variety music. Occupying the Sunday evening spot on CBS following the Toast of the Town/Ed Sullivan Show from 1 February 1953 to 27 May 1962, the General Electric Theater presented top Hollywood and Broadway stars in dramatic roles calculated to deliver company voice advertising to the largest possible audience.

Despite a long technical and practical experience with television production, General Electric's previous attempts to establish a Sunday evening company program had fared poorly. In the fall of 1948 General Electric entered commercial television for the first time with the Dennis James Carnival, a variety show dropped after one performance. A quiz program entitled Riddle Me This substituted for twelve weeks and was also dropped. In April 1949 GE returned to Sunday evenings with the musical-variety Fred Waring Show. Produced by the Young and Rubicam advertising agency under the sponsorship of GE's Appliance, Electronics and Lamp Divisions, the program occasionally included company voice messages. In November 1951 GE transferred television production to the Batten, Barton, Durstine and Osborn (BBDO) advertising agency, under whose direction the General Electric Theater debuted 1 February 1953 as an "all-company project" sponsored by GE's Department of Public Relations Services.

The first two seasons of General Electric Theater established the half-hour anthology format of adaptations of popular plays, short stories, novels, magazine fiction and motion pictures. "The Eye of the Beholder," for example, a Hitchcock-like telefilm thriller starring Richard Conte and Martha Vickers, dramatized an artist's relationship with his
model from differing, sometimes disturbing psychological perspectives.

The addition of Ronald Reagan as program host commencing the third season, beginning 26 September 1954, reflected GE's decision to pursue a campaign of continuous, consistent company voice advertising. The Reagan role of program host and occasional guest star brought needed continuity to disparate anthology offerings. The casting of Don Herbert of TV's Watch Mr. Wizard fame in the role of "General Electric Progress Reporter" established a clear-cut company identity for commercials. "Outstanding entertainment" became the watchword of GE's public and employee relations specialists. Reagan, in the employ of BBDO, helped merchandise the concept within the company itself. The first of many promotional tours orchestrated by BBDO and the GE Department of Public Relations Services sent Reagan to twelve GE plant cities in November 1954 to promote the program idea, further his identity as spokesman, and become familiar with company people and products. By the time General Electric Theater concluded its eight-year run in 1962, Reagan claimed to have visited GE's 135 research and manufacturing facilities, and met some 250,000 individuals. In later years, Reagan's biographers would look back upon the tour and the platform it provided for the future president of the United States to sharpen his already considerable skill as a communicator.

By December 1954, after only four months on the air with Reagan as program host, the new General Electric Theater achieved Nielsen top-ten status among all programs as television's most popular weekly dramatic program. The format accommodated live telecasts originating from both coasts, and increasingly, the telefilms of Revue Productions, the motion picture production company of the Music Corporation of America (MCA). An unprecedented talent waiver, granted to MCA-Revue by the Screen Actors Guild (SAG) during Reagan's tenure as SAG president in 1952, and again in 1954, allowed MCA-Revue to dominate the fledgling telefilm industry. The SAG talent waiver enabled MCA-Revue to simultaneously represent artists and employ them in telefilms that it produced. MCA's stars appeared on Revue's General Electric Theater, and ratings soared. Many made television debuts in dramatic roles. Joseph Cotten starred in "The High Green Wall," an adaptation of Evelyn Waugh's A Handful of Dust; Jack Benny starred in "The Face is Familiar," a comedy about a man whose face no one could remember; Alan Ladd starred in "Committed," a mystery about "an author who advertises for trouble and finds it." Joan Crawford made her only 1954 television appearance in "The Road to Edinburgh," a story of "terror on a lonely road." "The Long Way Around" featured Ronald Reagan and Nancy Davis Reagan, who solved "a unique marital problem to reunite a family." In a direct dramatic tie-in with a company voice theme, Burgess Meredith portrayed "Edison the Man," a telecast coinciding with GE's commemoration of "Light's Diamond Jubilee."

General Electric Theater saturated its audience with Reagan's genial progress-talk in introductions, segues and closing comments, and Herbert's commercials. From the viewpoint of its sponsors, the program's entertainment component seemed beside the point of audience "recall scores," "impact studies" and the "penetration" of company messages culminating with the motto, "Progress is our most important product." Commercials from the 1954 fall season, for example, included "Kitchen of the Future," "Lamp Progress," "Jet Engine Advancement," "Turbosupercharger Progress," "Sonar Development," "Atomic Safety Devices" and so on. "Kitchen of the Future" achieved the highest impact score (90% audience recall) recorded to date by the polling firm of Gallup-Robinson, whose specialists reported the General Electric Theater as "the leading institutional campaign on television for selling ideas to the public." Following a 1956 Herbert "progress report" on the subject of steam turbine generators and their contributions to "progress toward a fuller and more satisfying life," Reagan reiterated, "In the meantime, remember: From electricity comes progress; progress in our daily living; progress in our daily work; progress in the defense of our nation; and at General Electric, progress is . . ."

By 1957 General Electric Theater had hit stride with a top-rated program package the equal of the company's early technical proficiency in television. While GE's product divisions developed individual sponsorships to reach
appliance, lamp and electronics consumers via *The Jane Froman Show*, *The Ray Milland Show*, *I Married Joan*, *Ozzie and Harriet* and *Today*, the *General Electric Theater* aspired to the overarching sale of Total Electric living. One telecast featuring Jimmy Stewart, for example, celebrated the first anniversary of the electric utilities' "Live Better Electrically" campaign and "National Electric Week." The closing commercial featured Nancy and Ronald Reagan in the kitchen of a Total Electric home. "When you live better electrically," Reagan told viewers, "you lead a richer, fuller, more satisfying life. And it's something all of us in this modern age can have." In his 1965 autobiography *Where's the Rest of Me?* Reagan recalled that GE installed so many appliances in his Pacific Palisades home that the electrical panel needed to serve them soon outgrew the usual pantry cupboard for a three-thousand-pound steel cabinet outside the house. The *General Electric Theater* was no less loaded with the corporate stewardship of personal and social improvement, expressed over and over by Reagan: "Progress in products goes hand in hand with providing progress in the human values that enrich the lives of us all."

*General Electric Theater* left the air in 1962 in a welter of controversy surrounding the U.S. Justice Department's anti-trust investigation of MCA and the Screen Actors Guild talent waivers granted to MCA Revue. The hint of scandal discounted Reagan's value as company spokesman and program host. As SAG president in the 1950s Reagan had, after all, signed the waivers, and later benefited from the arrangement as a *General Electric Theater* program producer himself. The suggestion of impropriety fueled Reagan's increasingly anti-government demeanor on tour, and his insistence upon producing and starring in episodes combating Communist subversion in the final season of *General Electric Theater*.

**GENRE**

The French term "genre," meaning "genders" or "kind," is applied in various contexts throughout the study of an audiovisual medium. Television users and audiences are familiar with uses of the term that appear in popular television criticism, in programming strategies and schedules, and in the common designations found in newspaper and magazine listings. For those who make television shows the term is absolutely central to the organization and structure of the production industries. And in the study of television, genre criticism is a major approach, clearly dependent on systems of classification that sometimes agree with, and sometimes differ from, those used for industrial and advertising purposes.

Genre criticism can be said to have begun with the Greek philosopher Aristotle, who mentions different genres in the first sentence of his book *De Poetica* (Poetics), "Our subject being Poetry, I propose to speak not only of the art in general but also of its species and their respective capacities...Epic poetry and Tragedy, as also Comedy...are all, viewed as a whole, modes of imitation." This same concept of "species" or "groups" of imitative forms can be used in study and analysis of television genres.

When people speak of "watching television," strictly speaking they mean they watch some kind of program that is broadcast by the *medium* of television. A large percentage of these programs have a narrative structure—they tell stories. As a glance at any newspaper television log shows, there are many different kinds of narratives. Yet all television programs can be classified according to type; every program is a distinct work, but it is also a kind of program. The most common genres are commercials, news programs, situation comedies, soap operas, documentaries, sports shows, talk shows, action adventure programs, detective shows, science-fiction shows, hospital dramas, and westerns. In principle, there may be a finite number of genres and each television show should fit into only one of them, if the classification system works perfectly. In practice, however, there are mixed genres, combinations of kinds of programs, that complicate
Little House on the Prairie

Adam 12

Mr. Ed

Dr. Kildare
matters enormously. For example, a science-fiction story that involves having the hero find a murderer is really a mixture of science-fiction and detective genres.

Texts carried by a mass medium such as television, which have huge audiences, are often constructed in a manner that makes them easily understood by large numbers of people. As a result, they tend to be formulaic—that is, they observe certain familiar conventions which make it relatively easy for audiences to follow them. John Cawelti, who has written extensively on formulas in the mass media, suggests that texts can be placed along a continuum from invention (which involves new ways of organizing texts) to convention (which involves formulaic, often-repeated ways of organizing texts).

The basic conventions found in narrative texts involve the following matters: time when story takes place; location where story takes place; characteristics of heroes and heroines; nature of villains and villainesses; characteristics of secondary characters; kinds of plots; themes found in the plots; costuming of main characters; means of locomotion; weaponry of heroes and villains.

These conventions vary from genre to genre. Thus, science-fiction stories tend to take place in the future, in outer space, and have courageous heroes and heroines with specific powers (mental or physical). These characters soar through space in ships, battle against aliens, robots, and villains, with ray guns, lasers, and similar devices. Detective stories usually take place in the present and have rather less-than-courageous heroes and heroines with specific skills and specialties and styles of behavior. They move through urban scapes in automobiles and do battle with criminals, using conventional weapons and their fists.

The formulas of science-fiction or detective stories may be well established, enabling audiences to be familiar with the narrative events, but each individual adventure is, to some degree, different. With series such as Star Trek or The Rockford Files, audience members who watch a number of the programs feel they know the characters, identify with them, and thus can understand their motivations and behavior. They may take pleasure, however, from observing small variations, learning more about a character's background, or predicting character behavior in unexpected circumstances.

It can be argued that formulas are subclasses of genres. Thus, the detective story genre has three basic formulas. The tough, hard-boiled detective formula is exemplified in a program like Mike Hammer. The classical detective formula, with cerebral detectives who are not members of police forces, are represented by figures such as Sherlock Holmes and Hercule Poirot. The police procedural presents detectives who are members of a police force, who use crime laboratories and other technologies in their work, but must still rely on their intelligence and courage to find and apprehend murderers. Many of the most popular "cop" shows are police procedurals. The British series Prime Suspect is an excellent example of this formula. As these examples make clear, however, one problem for those who study television is identifying the continuing combinations and permutations of both formula and genre. Hill Street Blues, for example, solidly grounded in the tradition of the police procedural, also takes on many of the characteristics of prime time melodrama such as Dallas and Dynasty, complete with domestic struggles, psychological conflict, and a range of emotional complications not necessary in a classic procedural.

Indeed, among the more important questions related to the study of genres is the matter of the way genres evolve. There is, for example considerable difference between the production values of the original Star Trek and its latest incarnation, Star Trek: Voyager. Nevertheless, we still have the same kinds of characters and plots. This relationship between the two instances of an ongoing, unfolding, and developing "story" is complex and continually interesting.

There is also the matter of how genres are related to one another. Intertextual borrowings from one genre to another have led to new, mixed genres. In this regard it is crucial to consider varying roles of the medium and the impact that new technologies have had, and will have, on televised texts. For example, if screen sizes continue to enlarge, will greater action, larger special effects, and more panoramic scenes alter television's tendency to explore intimate psychological involvement, character developments, and domestic arenas that are often the site of television comedy?

Such concerns are also central within the television industry, which in many ways is organized according to genre. In the United States, where television production is centered in Hollywood, this reliance on genre is as old as the film studio system, in which certain studios or units within studios were closely identified with particular types of films—westerns, musicals, gangster narratives. The practice remains in place in the production of television. Certain independent producers are closely identified with particular genres, even with particular formulas within genres. Norman Lear's socially conscious situation comedies of the 1970s are a familiar example.

The more complicated example, perhaps, is MTM Entertainment, the production company originally founded to produce The Mary Tyler Moore Show. After a string of successful comedies, MTM produced Lou Grant, a melodrama shaped around the social entanglements of a major metropolitan newspaper. This shift in production styles served as a transition as the company moved on to produce Hill Street Blues, which combined, as suggested, the police procedural and the prime time melodrama.

These transitions and connections among genres are complicated still further when we recognize that the details extend to characters and actors. The transformation of Ed Asner's "Lou Grant" from a supporting, comic role in The Mary Tyler Moore Show to the serious, central character in a melodrama, required adjustment on the part of writers, producers, and audiences, as well as the actor himself.

Moreover, genre is used to organize the actual production process in the television industry. Half-hour situation
comedies are generally produced inside studios, before live audiences, with multiple cameras using either film or videotape to capture a script performed in sequence, line by line, scene by scene. The production schedule, from completed script to performance, usually requires five days, with additional days for post-production. The comedies are written by staffs of writers who often collaborate in a very intense manner up until the actual moments of performing the show. By contrast, one-hour action programs, melodramas, courtroom or hospital stories, are shot out of sequence, on location, with a single camera. These productions—actually small, one-hour movies—move from script to completed production in seven to nine days, again with additional time required for post-production. Even the scripts for half-hour comedies and one-hour programs are formatted differently on the page. It is easy to understand, then, why genre affords a handy organizational structure for the television industry.

But the use of this organized, routinized scheme of classification extends beyond the production stage. It is also used to organize the television schedule. The schedule is based on programmer assumptions about social and cultural organization, and genres are presumed to “match” certain aspects and classifications of daily experience. Early prime time, for example, is usually reserved for comedy. In the United States, even without official regulation of programming schedules, this means that certain types of programs are deemed suitable for “family” viewing. As the schedule progresses into later hours, more serious programming—which often means more violent or sexually explicit—is preferred. And at various moments in the history of U.S. television, certain genres have been selected for production and scheduling because they are presumed to appeal to specific demographic groups—the youth audience, the adult audience, the older audience.

These uses of genre are crucial because the categories function as far more than descriptive classifications. They are ways of organizing ideas about social issues, human experience, cultural behavior. Comedies, for example, may seem to be silly diversions in many cases, but often they are also very important arenas for exposing the “rules” and “standards” that go unnoticed in everyday life. Crime shows almost always explore notions of guilt, innocence, and justice. Melodramas touch on sensitive, delicate issues of personal interaction. Moreover, any of these genres can be altered to examine matters from new perspectives. Very serious social issues such as AIDS, abortion, health care, and crime have been explored in “comedies” and the mixtures of expectations and outcomes require audiences to adopt a different relationship with both the topics and the genre. In this sense genres are not merely descriptions or production facilitators—they are ways of thinking about the world.

There is, for example, the matter of the relationship between certain popular television genres, which lend themselves to violence and are permeated by violence, and society. A considerable amount of social science research indicates that repeated exposure to televised violence excites certain individuals, who are violence prone—but also has a negative impact on people in general by desensitizing them. And the exposure of young children to the kinds of adult problems found in soap operas and other dramas may also have harmful psychological effects. These issues, with questions of the impact these programs and genres may be having on viewers, on culture, and on society must be carefully considered when programs from these genres are aired or when they are selected by audiences for viewing.

All these genre related questions permeate television systems around the world. Genres drawn from specific cultural contexts are developed to express explicit social and cultural concerns. Often, however, because of the high costs involved in local production, audiences are already familiar with television produced in the United States, the United Kingdom, or elsewhere, then imported to fill schedules. As a consequence, genres are often blended or shared. These “ways of thinking” have been moved across cultural and social lines all because they are cheap to purchase and program.

It is precisely these economic questions that underlie any complete understanding of the role of genre in television. In commercially-supported systems producers and programmers offer genres to audiences and shift their financial support toward those that draw large numbers or particularly desirable viewers. In systems rooted in public support, additional genres may be supplied for smaller audiences and more specialized groups, and non-formulaic presentations may provide a greater portion of the scheduled offerings without regard to costs.

But as these systems become more and more intertwined, the economic base becomes more evident. In the United States, for example, financing of television production is founded on the syndication of successful programs—resale for non-network, non-prime time distribution, and further resale to non-U.S. markets. In the U.S. syndication markets, half-hour comedies are the primary commodity, the most popular items, and the search for the “hit” comedy drives many decisions by writers, producers, actors, network executives, and programmers. But U.S. comedies are not as popular in non-U.S. markets, where one-hour action programs are still the primary choices.

Producers and distributors must weigh costs of producing within a particular generic context against possible rewards. But they must also acknowledge that genres are systems of meaning and significance. Either the financial constraints or the cultural significance can be deemed the primary factor in understanding any given program, but both must be recognized to fully understand the significance of genre in television as a system. As a form of classification within the medium, then, genre is an active and indispensable concept at almost every level of practice. Whether future forms of television alter this significance remains to be seen.

GEOGRAPHY AND TELEVISION

The importance of a geographical understanding of television lies in recognizing that television always has been produced for, has circulated across, and has been engaged at particular sites. Consequently, what is understood as the "televisual" has never been a discrete object but a set of practices or attributes—always attached to, situated within, and dispersed across different environments. While one may choose to talk about the distinctive properties of television (e.g., as an industry, a technology, a narrative or cultural form, an audience), it is just as necessary to recognize that any definition draws strategically on examples of practices from particular locations. Similarly, any such definition risks ignoring how these distinctive properties have always been site-specific, complexly conjoined, along with other practices, to environments. As a consequence, any aspect of the televisual has been deployed, developed, and engaged unevenly around the world.

Beside being organized around locations and landscapes, the televisual has also mediated and shifted any understanding of "the geographic." As a visual and narrative form, it has conditioned perceptions and understandings of places, showing particular pictures as "locations" for drama, for example, or narrating documentaries from a particular point of view. As a dispersed formation it has conditioned concrete, material relations among places, with some countries selling their technology and their television programs to others, just as other countries set quotas and limits on what and how much television can be imported. There are, of course, very specific physical geographic features of television's material infrastructure and circulation: the location of studios and transmitter towers, the use of microwave relay stations to cross mountains, cable strung from poles, receivers placed in homes, or particular national or regional systems of broadcasting. There are even geographically specific stories and narrative strategies. As is the case with other aspects of telecommunications and telematics, the televisual infrastructures, networks, and network flows, dependent upon electronic and satellite signals, are increasingly invisible and pose special challenges to geographers accustomed to marking and charting the visible. The increasing dispersal of television sets outside the home has contributed to spatial redefinitions of the relation between the private and public spheres. Within different cultural contexts, television narrative has conventionalized and mythologized place and landscape—where, after all, is Dallas? In other words, television has aspired to the role of cultural atlas. Television viewers have formed cognitive maps of an environment they inhabit in part through their engagements with television. The ways in which viewers engage television, then, are contingent upon both television and viewers' relations to particular locations. And they are also contingent upon both television and the viewers' mediation of other locations through and around the site of television watching.

The spread and containment of the televisual have been fraught with political conflicts and legislation over a variety of sites, borders, and kinds of territory. Efforts to regulate the consumption of pornography, for example, have found television's place in the domestic sphere to be particularly alarming. In this case, legislating television is nothing short of legislating the domestic sphere. In the case of the nation-state, the implementation of national coding of broadcast signals (e.g., NTSC, PAL, and SECAM) has served as an invisible border against the international flow of television broadcasting. In Europe, for instance, these televisual borders began to erode with the increased reliance upon satellite broadcasting and with efforts to organize a European Union. Still, language and other cultural differences have deterred a European televisual formation, and the difficulties faced in legislating and regulating the cultures of a "European television" have been a recurring impediment to actualizing a
European Union or of treating television as merely another commodity in a European common market. Questions of cultural geography rise with the uses of television among Australian aboriginal communities, which have not only raised issues of autonomy and governance within and among these communities but have been the subject of the Australian government’s efforts to implement policy regarding “national” broadcast space. And beside the impact of transnational televisual flows on the collapse of the Soviet Union, the televisualization of the dismantling of the Berlin Wall in 1989 attested to the capability of television to conjon a global audience in an event that signaled a profound transformation in geo-political borders. Moreover, that event also served as an occasion for national commentators and audiences to reformulate national cultural maps of the world. As these instances affirm, the location of television is organized through emerging and residual social and cultural formations, of which the televisual is one. But the location of television is also organized through policies and commercial interests bent on preserving, or dismantling residual formations or on nurturing or containing emerging ones—or on co-opting both.

The history of the televisual, then, is a history of how various sites and environments—such as domestic, urban, rural, regional, national, or global space—have conditioned and been conditioned by the place of television in everyday life. Emphasizing the sites and (overlapping or conflicting) territories of the televisual thus makes it impossible to conceive of a uniform and universal history of television. But to say that the televisual lacks a discrete, continuous history is not to ignore that there have in fact been certain historically parallel developments that eventually contributed to global flows of television broadcasting. In one respect, the televisual belongs to certain spatial models that have underpinned geopolitics since the 1920s. Numerous experiments with television technology before World War II occurred alongside the development of telephony and radio technology, and all three continued to be crucial in the social organization of national territory after the war. In particular the “national” could be defined as a networked space with a single center of cultural production (as London was to Britain, Hollywood to the United States, or Rome to Italy). The national broadcasting and telecommunication companies, formed during the 1920s and 1930s, were also an important factor in the conceptualization and national territory. But throughout the 1980s it was in fact their competition—often with expanding local, regional, or foreign companies—that began to undo that model of the nation. During the 1980s, some cities became equally or more aligned to flows outside their national boundaries than had previously been the case.

Despite having followed this trajectory of development in many nation-states, the televisual only became central to the formation of social relations and to everyday life after World War II, a period characterized by a broad restructur-
Goldbergs’ move to suburbia during the early 1950s on The Goldbergs, the Clampetts’ move from a “simple,” rural America to the suburban dream-world of Beverly Hills in the early 1960s on the sitcom The Beverly Hillbillies, or the Jeffersons’ move “up” and out from Queens to Manhattan in the mid-1970s on the sitcom The Jeffersons).

That television has played a mediating role amidst the flows of people reshaping cities has also been evident in the post-cable/satellite era when television became an invaluable instrument in the “revitalization” projects of certain cities. Particularly in the United States, where cable/satellite broadcasting first became widely established, Chicago and Atlanta transformed local network affiliates (Chicago’s WGN and Atlanta’s WTBS) into “superstations,” capable of broadcasting across the United States via satellite and the rapidly expanding cable companies. Through sports broadcasting in particular, these superstations maintained a circuit of fans and thus of potential tourists to cities that were concurrently attempting to “rehabilitate” their old commercial centers as new tourist sites/sights through “restoration” projects. Wrigley Field became a nationally circulating image of a pre-suburban Chicago, and Turner Broadcasting’s ownership of and regular recycling of Gone with the Wind functioned similarly for the contemporaneous “restoration” of the area surrounding Atlanta’s Peachtree Street as a retail/tourist center. In both instances, the televised worked to spatially redefine and to re-image the relation of current development to an urban past. Since the 1970s, the modifications to these cities have developed alongside the construction of Disney World in Orlando and the initiation of the Disney Channel that promoted the theme park, and alongside the Nashville Network’s promotion of that city as country-music mecca and museum. Through television, these cities emerged as “new” centers of national popular culture (after New York and Los Angeles) through their reproduction of an urban past already partially constituted as televisual and cinematic past. These urban “revitalization” projects precipitated and were fueled by a reterritorization of national and global economic flows, by the movement of people (as “settlers” or “tourists”) to these cities, and by broadcasts from them.

The flow of television broadcasting via cable, fiber-optic, and satellites has affected the geographic features of the televisual and its environment in a variety of ways. It has brought traditional broadcast television into close relations with the paths and flows of telecommunications and telematics, though these convergences have been fraught with commercial and political conflicts over territory. It has occurred amidst a redistribution of people and economic/cultural capital. Not every home and not every nation and few rural areas are equally connected to these potentially global flows. To the extent that new modes of transmission and new industry alliances have made the televisual a global formation, this formation is at best tenuously sustained through various conjunctions and divisions between the domestic, the urban, the rural, the regional, and the national. And recognizing only the global flow of television risks ignoring how the movement of people from one part of the world to another often involves their “assimilation” into a new environment—shaped politically, economically, culturally—in part through televisual mediation of their new sense of place and/or their relation to their former homeland. This has occurred through Spanish-language television broadcasting across the western hemisphere, through television produced by and for Iranian exiles in Los Angeles, through television broadcast via satellite by the Italian RAI foreign service to Italian-American audiences in New York, through video rentals and pirating for video playback where there are no broadcasts for immigrant audiences, or through audiences whose sense of place is bound up with their consumption of television that arrives from abroad (e.g., Europeans watching Dallas or Australian aborigines watching Diff’rent Strokes).

The televisual has always been appended to particular sites and located within particular environments—mediating various spheres of sociality. But the current codetermination of television with telecommunication and telematics suggests that what has been known so far as “the televisual” was comprised of spatial formations and forms of spatial modeling whose effectivity belonged to a vanishing set of environmental conditions. In certain respects, the first wave of televisual technologies emerged within established infrastructures, networks, and environmental conditions. Through these conditions the televisual flourished as a means of spatially organizing social relations. But the flow of images and the formation of discourses through the current technological convergence has already been predicated upon changing concentrations and dispersals of economic and cultural capital, and cultural capital, after all, is the basis for accessing these flows, as opposed merely to inhabiting an environment conditioned by them. Despite the enthusiastic proclamations about the democratizing potential of new technological convergences, then, access to global media flows is still unequally distributed at the level of home and region. The televisual thus remains as a residual formation, still an organizing feature of homes, cities, nations even as their relations are once again being redefined spatially through technologies appended to television.

THE GEORGE BURNS AND GRACIE ALLEN SHOW

U.S. Domestic Comedy

The George Burns and Gracie Allen Show, which premiered on 12 October 1950, was one of the first comedy series to make the successful transition from radio to television. Similar to the format of the radio program in which George Burns and Gracie Allen played themselves, the CBS domestic comedy was set in their home, the first television series to depict the home life of a working show business couple.

The half-hour series was broadcast live for the first two seasons. The first six episodes were broadcast from New York, but the show soon moved to Hollywood, making it the only third CBS series to emanate from the West Coast (after The Ed Wynn Show and The Alan Young Show). On Burns' insistence, the show was broadcast on alternate weeks in order to provide sufficient time for rehearsals and alleviate some of the pressures of live broadcasts. During its bi-weekly period, the series alternated with the anthology series Starlight Theater and, later, with Star of the Family. After two seasons of live performances, the series switched to a weekly filmed broadcast. Although not filmed before a studio audience, the final filmed product was previewed to an audience and their reactions recorded. At a time when many series relied on mechanically reproduced ("canned") laughter, Burns claimed that his series only "sweetened" the laughter when a joke went flat and there was no way of eliminating it from the film. Even then we never added more than a gentle chuckle."

Like other television pioneers such as Desi Arnaz and Jack Webb, George Burns must also be credited for his contributions behind the scenes. Burns and Allen incorporated a number of television "firsts," although Burns noted that "television was so new that if an actor burped, everyone agreed it was an innovative concept and nothing like it had ever been done on television before." Still, he was the first television performer to use the theatrical convention of "breaking the fourth wall" between the audience and the performer. He frequently stepped out of a scene and out of character to address the audience, then rejoined the story. This convention was later imitated by others, but not used effectively until It's Garry Shandling's Show in the 1980s.

The staff writers for the series were those who had written for the Burns and Allen radio program or worked with the team in vaudeville, including Paul Henning (who later created The Beverly Hillbillies), Sid Dorfman (who later wrote for M*A*S*H and produced Good Times for Norman Lear), Harvey Helm, and William Burns, George's younger brother. To keep dialogue and situations consistent with the characters' personalities and ages, the writers adhered to policies and practices established during their radio show. The stories stayed away from topical humor, fantastic characters, and absurd situations and focused instead on more universal aspects of daily life. Plots were simple (e.g., Gracie attempting to learn Spanish) and, like their vaudeville routines, the comedy emanated from Allen's uniquely skewed interpretation of the world and the resulting confusion. Burns played the quintessential straight man to the giddy, scatterbrained Allen.

Each episode began with Burns' monologue, standing, trademark cigar in hand, before the proscenium surrounding their living room set. There he presented a brief monologue, then offered the audience a few comments regarding the situation they were about to see.
Allen’s success, and her enormous popularity, emanated from her ability to underplay her character. Her convincing sincerity makes illogical premises, such as sewing buttons on her husband’s shirttails so no one would notice if he lost one, seem logical.

Episodes ended with a Burns and Allen dialog reminiscent of their vaudeville routines. At the conclusion of every episode Burns would turn to Allen and say, “Say goodnight, Gracie,” to which Allen would obligingly turn to their audience and fondly bid them “goodnight.”

The supporting cast continued in roles established in the original Burns and Allen radio program. Bea Benaderet and Hal March played the Burns’ neighbors, Blanche and Harry Morton. Bill Goodwin, as himself, played the show’s announcer and friend of the family, and Rolfe Sedan played mailman Mr. Beasley, with whom Gracie gossiped. During the run of the series, the role of Harry Morton was subsequently played by John Brown, Fred Clark, and Larry Keating. In the second season, announcer Goodwin left to host his own variety series (The Bill Goodwin Show, NBC) and was replaced by Harry Von Zell. A musical ent'acte entertainment was provided by The Singing Skywalkers. The Burns’ son Ronnie later joined the cast as himself.

Although Burns and Allen was never among the top-rated series, it maintained consistently high ratings throughout its eight seasons. The show garnered a total of twelve Emmy nominations: four for best comedy series, six for Allen as best actress and comedienne, and two for Bea Benaderet as best supporting actress.

The series ended on 22 September 1958 with Allen’s decision to retire from show business. Burns continued working in a revamped version of the show, The George Burns Show (NBC, 21 October 1958 to 14 April 1959), in which he again played himself, now in the role of a theatrical producer. Bea Benaderet and Larry Keating reprised their roles as Blanche and Harry Morton, but now portrayed Burns’ secretary and accountant and Harry Von Zell repeated his role as Burns’ announcer. The series lasted only one season.

Burns returned to series television again in 1964 as producer and star of Wendy and Me (ABC, 14 September 1964 to 6 September 1965), in which he played an apartment building owner who narrated and commented on the action. Burns’ McCadden Productions continued to produce other situation comedies, such as Mr. Ed, The Bob Cummings Show, The People’s Choice, and The Marie Wilson Show. In 1985, at age 89, Burns hosted the short-lived half-hour comedy anthology series George Burns Comedy Week (CBS, 18 September 1985 to 25 December 1985).

GERMANY

Television in Germany began as an integrated part of an existing public broadcasting system. Although it took seven years in the 1950s to fully establish TV as a mass medium, its history started before World War II. The first tests with wireless transmission of television pictures without sound were regularly offered by the German Reichpost in 1929. As a result of these tests, the first TV-movie Morgenstund hat Gold im Mund (The Early Bird Catches the
Worm) was produced in 1930. It was not until 1934, however, that programs combining pictures and sounds were produced.

The National Socialist Party enforced further technical developments in order to create a new instrument for propaganda. The first regular television network, "Paul Nipkow," began operation on 22 March 1935 under control of Reichssendeleiter Eugen Hadamovsky. In order to fulfill the propaganda function, reception was made available only in public television rooms. These venues, which operated quite similarly to movie theatres and presented programs at three nights a week, were set up in Berlin. The first highlight, shown in 28 television rooms, was live coverage of the 1936 Olympic Games in Berlin. Private reception of television was made technically possible by the Deutsche Fernseh-Einheitsempfänger, but the system could not be introduced to the market because of the beginning of the war. Television programming adapted to the situation and by 1941 a series of variety shows, Wir senden Frohsinn—Wir spenden Freude (We Broadcast Joy—We Spend Happiness), were broadcast for injured soldiers in Berlin. Following the presentation of programs in Hamburg, television was also broadcast in occupied Paris from 1942 until 1944. The same programs produced for the injured soldiers were aimed in French at the inhabitants of Paris.

The development of television in Germany following World War II began when the Western Allies founded new networks in their occupied areas, patterned on the network systems of their home countries. A common aim of the Western Allies was to prevent the future abuse of broadcasting by the German government. Thus the different regional networks were placed under control of the federal countries of the republic: NWDR (Northern and West Germany, which were split, during the 1950s, into NDR and WDR); Radio Bremen (Bremen); BR (Bavaria); HR (Hessia); SR, SDR, and SWF for Southwest Germany.

In 1948, the British Allies allowed the NWDR to broadcast television programs for the northern part of Germany. A general television programming test phase, organized by Werner Pleister, started on 25 September 1950. Pleister and members of a television committee traveled to the United States and several European countries to become more familiar with television standards. In 1950 the NWDR presented a two-hour program between 8:00 and 10:00 P.M. which included news, variety shows, movies, and television plays. In 1951 additional programs for children (Television’s Children’s Hour with Ilse Obrig) and women (Television’s Tea Hour with Eva Bierer Post) were already broadcast in the afternoon. Further gaps in the daily schedule were filled during the 1950s and, beside the NWDR, other federal networks also started to develop television programs.

In the time of the test phase, between 1950 and 1952, it seemed necessary to promote the new medium by pointing out the technical differences that distinguished television from its “big brothers,” radio and film. By presenting live reports with both visual and sound components, television was described as the fifth wall in the living room or as the “Miracle Mirror.” Television was celebrated as the “window to the world” which transferred directly into German homes. Two major events assisted in efforts to change television into a mass medium—the live coverage of the Coronation Ceremony of Queen Elizabeth II on the 2 June 1953 and the final game of the Soccer World Cup in Switzerland on the 4 July 1954. Many people who did not yet own a television set watched these events in pubs.

In 1954 a regular television schedule began as a cooperation of all federal networks, which had formed an association named ARD (Arbeitsgemeinschaft der öffentlich-rechtlichen Rundfunkanstalten der Bundesrepublik Deutschland). ARD was financed by licence fees paid by the audience and, after 1956, with a few minutes of commercials presented in the early evening. During the 1950s the basic television genres in the central areas of entertainment, information, and education were established, and television plays developed as television’s own specific art form. Because of the lack of a recording technique, these plays, as well as other types of shows, were presented live. In 1954 the first family series Unsere Nachbarn heute Abend: Familie Schoelermann (Our Neighbours Tonight: The Schoelermann Family) appeared. Their lifestyle served as an ideal for the audience, which resulted in many letters expressing gratitude for helpful advice. Documentaries, under the heading Zeichen der Zeit (Signs of the Time), also gave direct insights into several parts of German society.

Improvements in the technical quality of television sets, reduced prices, and better programs resulted in a steady increase in licence holders, and their number reached one million on 1 October 1957. This success and new, still unused frequencies motivated Konrad Adenauer, chancellor of the German government, to increase his influence by founding a second channel, "Free Television," financed by the industry with the central goal of presenting government opinions. The federal governments protested against these activities and they were finally stopped by court judgment in 1961. The ARD also presented a second schedule of programs from 1 January 1961 until 4 January 1963. In addition, the federal governments allowed the several ARD networks to found regional third channels which, from 1964, presented educational and cultural programs in addition to local information.

The ZDF (Second German Television) was founded by the federal states in 1963 as the long-promised second national network. In contrast to the ARD, whose networks distributed several radio programs as well, the ZDF was centrally organized solely for the production of television programs. According to a decision by the federal governments, programming had to be planned in cooperation with the ARD with the aim of presenting contrasting elements on the two channels. Still, the well-established ARD perceived the ZDF as a competitor which they confronted with enhanced news coverage and several international reports. New political magazine programs such as Panorama created
controversial public discussions as a result of their investigative journalism. The ZDF did not yet have enough journalists to cover these areas with the same standard. Instead, it increased its efforts in presenting entertainment in order to gain a larger audience. The arrival of colour TV in 1967 increased the presentation of popular programs for both ARD and ZDF, whose schedules by then included many U.S. serials, such as *Bonanza*. With the increasing influence of popular television shows, the star system also became far more significant. Still, as in the 1960s, the highlight of the era came in the form of live coverage—with the first man on the moon on the 21 July 1969.

Serials dominated prime time television broadcasts in the 1970s. In the early years of the decade the liberalization movements initiated by students started to influence television. In 1971 Wibke Bruhns was the first female news anchor. *Wunsch Dir was (Desire Something, 1969-72)* was the first game show which intended to improve social behaviour of the candidates. The first German sitcom series *Ein Herz und eine Seele (One Heart and One Soul, 1973)* criticized the conservative attitude and the chauvinistic behaviour of its protagonist, Ekel Alfred. Television plays tried to present realistic daily life routines in the tradition of Egon Monk's *Wilhelmsburger Freitag (Friday in Wilhelmsburg, 1964)*. Even television series such as Rainer Werner Fassbinder's *Acht Stunden sind kein Tag (Eight Hours Don't Form a Day, 1972)* followed realistic dramaturgy in order to present the necessity of political engagement. This aim also influenced informational programs which were mainly presented in magazine format, but in addition to politics there were also magazines for seniors, car owners, and others. Politics was approached from another direction when the election campaign in 1976 was used to develop new formats for the presentation of political items, and television discussions between the main candidates were established.

In the late 1960s the government founded a commission to analyze possible influences of new media technologies, but the commission did not present its report until 1976. It made clear that cable technology made new, commercially-financed television channels possible. Although a 1981 legal decision guaranteed the audience further educational and information programs supplied from public television, this period saw major changes resulting from the rise of commercial broadcasting that was made possible by these new technologies.

With the foundation of privately organized pilot projects in 1984 in Ludwigshafen, Berlin, and Dortmund, the media landscape in Germany, long dominated by public television, changed rapidly. Ratings, instead of quality, now formed the basic criteria for the success of programming. ARD and ZDF, the state supported competitors to the commercial systems, altered their schedules in attempts to secure their financial situation. The general public service goal of integrating social minorities through the development and broadcasting of special programming was now driven by the dominance of economic measurements. Public television systems did produce their own series, which were quite successful with their specific regional orientation.

Ratings instead of quality now formed the basic criteria for the success of programming which was designed with different forms of entertainment. The steadily increasing number of channels created a growing demand for programs. It was quite expensive to produce them but the prices for licenses exploded as well. Many Hollywood movies and U.S. series like *Dallas, Dynasty*, and *The A-Team* were broadcast. The commercial networks RTL and SAT.1 established the form of the daytime series with productions like *The Springfield Story*. Game show and talk show formats were both successful and inexpensive. RTL tried to gain public attention by breaking existing taboos—*Tutti Frutti* (1990) was the first striptease show presented on German TV. Soft news dominated the information sector. Instead of seriously discussing a topic, RTL talk shows were based on the principle of "confrontainment."

At the beginning of the 1990s RTL and SAT.1 improved their financial situation. Simultaneously ARD and ZDF, as public networks, experienced a financial crisis because of the decreasing number of commercials they carried. With their new prominence, RTL and SAT.1 started several campaigns to improve their image. They promised a higher percentage of self-produced TV-movies and series, more information, and less sex in future programming. They bought in stars in order to deepen the identification between the viewers and their networks. ARD and ZDF increasingly adapted the successful formats of their competitors, who had themselves already taken up popular public television formats such as folklore programs.

From 1992 to 1994 "Reality TV" shows were a successful format on every channel. The blurred lines between reality and fiction in these programs created controversial public discussions and led to their slow disappearance. Several forms of emotionalized shows like *Ich hekkenne (I Confess)* or *Verzeih mir (Pardon me)* presented weeping guests comforted by weeping hosts. Flirt and love shows offered exciting possibilities for finding a partner or even for marriage in front of studio cameras (*Traumhochzeit*). During the 1990s several specialty channels were created. In addition to news (n-tv), sport (DSF), and music channels (Viva I and Viva II), local channels (HH1, Puls TV) were also founded. Even more new channels are expected in the future as digital television technologies make more networks possible.

Throughout most of these developments in West Germany, television broadcasting in the GDR (East Germany) remained under government control and served as a propaganda instrument for socialist ideals. Regular programming officially started on 3 March 1956 as an alternative to West German television but it reached only few regions across the border. By contrast, ARD broadcasts could be seen in most parts of the GDR.

As in West Germany, there had been a test phase in the GDR, begun on 3 June 1952 under the control of Hermann
Zille. TV officials traveled to Moscow to gain insight into socialist models of television practices. For political reasons, Zille was fired in 1953 and replaced by Heinz Adamek in June 1954, who remained as head of the system until 1989. The first East German television play was an adaptation of E.T.A. Hoffmann's Der Vettern Eckfenster (The Cousin's Corner Window, 22 January 1953).

The purpose of television was to form the morality of socialist people. Television shows and old DEFA movies were presented as entertainment to keep the audience from watching West German channels. In the 1960s TV novels were popular, presenting historical plots in miniseries format. The news Aktuelle Kamera (Current Camera) was directly controlled by members of the government. Der Schwarze Kanal (The Black Channel) with anchorman Karl Eduard von Schnitzler reacted directly to West German news coverage with propaganda material.

As a reaction to the West German television landscape, a second program schedule, presented in colour, was founded in 1969 to complement the original schedule. In its early period this channel presented colour versions of programs which the audience already knew from the first schedule. Additionally, the leaders of Soviet troops in the GDR demanded a series of Russian movies, Für die Freunde der Russischen Sprache (For Friends of the Russian Language), which were presented in the original language. In the late 1970s the second schedule began several educational and cultural programs.

During the 1980s East German television tried to react against commercial tendencies in West Germany. More movies and popular series were placed in the schedules to keep citizens from watching West German channels. By the 1989-90 season, following political changes in East German and the unification of East and West Germany, the central issue for television was the matter of news coverage. Journalists of the ARD claimed to have encouraged the political changes with their information policy. In essence, East German television was adapted to the West German broadcasting system, with various services integrated in the ARD.

It remains to be seen whether the newer, combined German system of television will continue a familiar path of creating new channels to serve viewer interests, or become something quite different. Throughout the world television as medium of "mass" communication has begun to fragment into several forms of individual communication. New possibilities for interactive television try to change viewers into active users. Still, it is likely that many of those now sitting before the television set will cling to this medium as a favorite source for information, stories, and human insights.

—Joan Bleicher

**GERUSSI, BRUNO**

Canadian Actor

After an extensive career in stage, radio, and television and film, Bruno Gerussi became one of Canada's most highly recognizable actors and television personalities. Despite the diversity of his career, the Canadian-born Gerussi is best known for his role as Nick Adonis in Canada's longest running television series, *The Beachcombers* (1972-90).

Gerussi began his acting career on the stage where he ultimately performed both supporting and leading roles in Canadian Players and Stratford Festival productions such as *Twelfth Night*, *Romeo and Juliet*, *Julius Caesar* and *The Crucible*. The exposure and experience provided allowed Gerussi to make a smooth transition into the expanding arena of Canadian television production of the late 1950s and early 1960s. During this time the Canadian Broadcasting Corporation (CBC) developed a number of televised dramas, including *The Crucible* (1959), *Riel* (1961), and *Galileo* (1963), in which Gerussi assumed important dramatic roles.

After a two-year stint (1967-68) with his own nationally broadcast midmorning CBC radio show *Gerussi, Words and Music*, Gerussi won the lead role on the popular CBC family adventure series *The Beachcombers* (1972-90) created by Marc and Susan Strange (produced by Philip Keatley and Derek Gardner). Gerussi portrayed Nick Adonis, the Greek-born owner of Nick's Salvage Company, and father figure for a set of characters who inhabited the fishing village around Molly's Reach. Although largely consistent with the family-adventure genre, *Beachcombers* ("The" was dropped from the title in 1988) stretched the limitations of the form sufficiently to allow the various characters to evolve and the series to stay fresh during its long history. Over the course of the series, for example, the romantic, free spirit nature of Gerussi's character became increasingly responsible and fatherly towards his substitute family.

A total of 324 half-hour *Beachcomber* episodes were produced over a 19-year period. At its peak in 1982, the
series attracted an audience of 1.94 million (25% of the available audience) during the "CBC Sunday night family hour" (7:30 P.M. time slot). Beachcombers was one of the few Canadian productions of its time to be widely exported, selling to as many as 34 countries at once, including Greece, Australia, Italy and Britain. The location of the production, Gibson's Landing, a small fishing village on the coast of British Columbia, pulled upwards of 100,000 tourists a year as a result of the show's popularity. Despite the international appeal of Beachcombers, the program was often interpreted by Canadians as the quintessential Canadian program. This was true both in terms of its economic development—a relatively low budget product of the publicly subsidized CBC, as well as culturally, in the sense that it presented a relatively innocent, unglamorous group of characters and story lines, which distinguished the series from much of the U.S. prime-time programming distributed on Canadian airwaves. Ironically, CBC management attempted to revamp the series in its last years by increasing the level of action and violence in the story lines, decreasing the contrast to its competition. This move was publicly criticized by longtime cast members, particularly Gerussi, who saw this as an "Americanization" of Canadian programming. By the 1988–89 season, Beachcombers' audience fell to 990,000, and the program was canceled the following year.

Since the 1970s Gerussi accumulated dozens of television credits as a guest character on various Canadian and U.S.-Canadian co-productions, including E.N.G., McQueen, Seeing Things, Hangin' In, Wojecj, Wieguy and most recently on CBC's Side Effects. Gerussi was often cast in roles that take advantage of his "larger than life" persona. For example, Gerussi acted as the host of the Canada Day telecast, and the opening of the Canada's National Arts Centre. Gerussi also hosted his own CBC afternoon cooking program for four years entitled Celebrity Cooks. This weekday production, often shot in one take, drew on the host's personality and ability to interact with the celebrities who acted as guest chefs.

Through his association with the Beachcombers series, and his decision to locate his career permanently in Canada rather than in the larger U.S. market, Gerussi developed a particularly strong link to Canada and its television industry.

GET SMART

U.S. Spy Parody

The premise of this cult-classic television comedy series is that an evil organization, KAOS, is attempting to take over the world. The forces of good, symbolized by the organization CONTROL, constantly battle KAOS to preserve order in the world. Maxwell Smart (Don Adams) is CONTROL Secret Agent 86. Yet Smart was anything but smart. A stupid, self-centered man, Smart is the antithesis—and parody—of everything conventionally represented by secret service agents in popular culture.

Smart’s immediate superior is the Chief (Ed Platt), the head of the Washington Bureau of CONTROL. In his fight against KAOS Smart is assisted by his side-kick, Agent 99, played by former model Barbara Feldon. Unfailingly faithful to Maxwell Smart and always willing to let him take credit for her proficiency, 99’s admiration of Smart goes well beyond professional respect. It is obvious to anyone, except of course Maxwell Smart, that Agent 99 is in love with him, and indeed, in a later show they marry.

The success of *Get Smart* has been linked to three primary factors. The first was the spy craze that was all the rage in early 1960s popular culture. Second was the talent of persons involved in the production of the series both in front and behind the camera. And third was the more tenuous sense of a new mood in the American public, a willingness to accept television humor that went beyond sight gags and family situation comedies. In the aftermath of 1950s McCarthyism, the Civil Rights Movement, and increasing criticism of the policy in Vietnam, these newer forms of television humor included satiric jabs at an increasingly questioned status quo.

In this context Mel Brooks (*The Producers, Blazing Saddles, Spaceballs*), Buck Henry (*The Graduate, Saturday Night Live*), Jay Sandrich (director of *Soap, The Mary Tyler Moore Show* and *The Carol Show*), and Carl Reiner (*Mary Tyler Moore*) were brought together by Dan Melnick and David Susskind. Melnick and Susskind owned Talent Associates, the company that had produced the highly acclaimed television series *East Side/West Side* (1963-64). Brooks and Henry developed the idea for *Get Smart*.

Don Adams had played a house detective on *The Danny Thomas Show* before signing on as Agent 86. His ability to deliver memorable lines was uncanny. On several occasions, for example, after being asked if he understands that his current assignment means he will be in constant danger, unable to trust anyone, and face torture or even death, Smart, assuming a cavalier stance, responds with, “And loving it.” Another catchy phrase, “Sorry about that, chief,” was usually uttered when Smart accidentally caused his boss some problem.

Finally, the mood of the American public seems to have contributed to the success of a program like *Get Smart*. In 1965 protests against the war in Vietnam, riots by African Americans in many urban centers, organized efforts by Mexican and Mexican American migrant workers to strike for higher wages, and an increase in new political activism on the part of women eventually led to a questioning of fundamental assumptions about the role of the U.S. government in domestic and world affairs. A television series like *Get Smart* was able to make pointed—some might say subversive—statements about many political issues in a non-threatening, humorous way. McCrohan provides an example she refers to as “probably the strongest anti-bomb statement made by situation comedy up to that time”. The dialogue she cites takes place between Maxwell Smart and Agent 99 in the episode titled “Appointment in Sahara”. Behind the two characters is an image of a mushroom cloud:
99: Oh, Max what a terrible weapon of destruction.

Smart: Yes. You know, China, Russia, and France should outlaw all nuclear weapons. We should insist upon it.

99: What if they don’t, Max?

Smart: Then we may have to blast them. That’s the only way to keep peace in the world.

Get Smart is credited with paving the way for other comedy programs and broadening the parameters for the presentation of comedy on television. While it was on the air, from 1965 to 1970, a total of 138 half-hour programs were produced.

In the 1994–95 television season an attempt was made to revive the series with some of the original actors. This time Don Adams was cast as the Chief, Barbara Feldon is a congresswoman and Secret Agent Smart is their son. The series lasted only a few episodes, its jokes, and perhaps its cast, unable to attract a large audience.

**GLEASON, JACKIE**

U.S. Comedian/Actor

Jackie Gleason must be counted among Milton Berle, Sid Caesar, and Red Skelton in the small group of creative comedy-variety stars who dominated, and to some degree invented, early television. Perhaps more than any of the others he explored the limits of broad physical gesture and loud verbal bombast in the contextual frame of the small screen. His highly stylized and adroitly choreographed blustering, prancing, smirking and double-taking led Gilbert Seldes to describe Gleason as "a heavy man with the traditional belief of heavy men in their own lightness and grace." Gleason’s work in the 1950s constitutes a vital contribution to the invention of television comedy.

Born in a poor section of Brooklyn and abandoned by an alcoholic father, he dropped out of school at an early age and supported himself as a pool hustler, professional boxer and carnival Barker before establishing himself as “Jumpin’ Jack” Gleason, a nightclub comic and vaudeville emcee known for his spirited exchanges with hecklers. Following a brief, unsuccessful stint in Hollywood as a Warner Brothers contract player, Gleason’s career reached an apparent plateau. He worked as a stand-up comic and a master of ceremonies in venues ranging from middle-level nightspots to seamy dives in the New York area.

In 1949, at age 33, he got the title role in a TV adaptation of *The Life of Riley*, a popular radio series about a culturally displaced Brooklyn factory worker who follows his job to a new life in a Southern California suburb. The plodding, moralistic narrative structure of the sitcom, however, obscured Gleason’s verbal rancor and physical comedy. The series was not renewed; however, it was successfully revived several years later when its radio star, William Bendix, was freed from a movie contract that had enjoined him from appearing on television.

Gleason was once again called on as a substitute when Jerry Lester, the host of DuMont’s *Cavalcade of Stars*, suddenly quit the show in 1950. This time it turned out be the break of his career. The live-from-New York, comedy-variety format played directly to Gleason’s strengths, allowing him to wisecrack as emcee, to engage in off-the-cuff chats with guests and to move in and out of short sketch material that emphasized physical humor rather than narrative resolution. The show became DuMont’s biggest success.

It was on *Cavalcade* that Gleason originated most of the sketch characters he would play for the rest of his career: the absurdly ostentatious millionaire Reginald Van Gleason, III;
the Poor Soul, a pathetic street character played in pantomime; the hapless, bumbling Bachelor; and, his greatest creation, Ralph Kramden, a bus driver tortured by a life that will not support his ego. All were to some degree autobiographical fantasies, personal visions of despair and grandeur culled from his poverty-stricken Brooklyn childhood, meditations on who the comedian could, would, or might have been. It was on the DuMont show that Gleason created his persona of the Great One; he also began his life-long association with Art Carney, a Cavalcade regular.

Impressed by Gleason’s performance on the screen and in the ratings, William Paley personally wooed the star away, offering him five times his DuMont salary and the far greater market coverage of CBS. The Jackie Gleason Show debuted in 1952, quickly propelling the comedian into national stardom. By 1954, Gleason was second only to Lucille Ball in the ratings. Taking advantage of this success, he secured rights that allowed him to thoroughly dominate every aspect of production, from casting to set design to script approval.

Glitz was Gleason’s watchword. The June Taylor Dancers opened each show with a high-stepping chorus line dance number that always included at least one overhead kaleidoscope shot of the Busby Berkely variety. A troupe of personally-auditioned beauties, known as the Glea Girls, escorted the star around the stage and brought him “coffee” (he always sipped it as if it were something stronger) and lit his cigarettes on camera. Unable to read music, Gleason composed his own musical theme, “Melancholy Serenade,” which he hummed out for a professional songwriter. (Gleason also produced several gold albums of romantic music this way in an LP series titled “For Lovers Only.”) The show ended each week with an unprecedented but justifiable personal credit: “Entire Production Supervised by Jackie Gleason.”

Riding high, the comedian paid little attention to the relationship between his sudden rise in fortune and the medium that had facilitated it. The Gleason style was utterly suited to 1950s comedy-variety: the vaudeville trappings, including a live audience; the emphasis on slapstick, constant close-ups, blackout segues, splintered segments and so on. But ever the arriviste, the star remained extremely defensive about his talents and status, yearning to prove himself in “higher” forms, especially the movies.

Attempting to make time for new ventures, he came up with a radical format for retaining his CBS Saturday night hour in the 1955-56 season. Gleason repackaged the most popular feature of his show, The Honeymooners, into a 30-minute sitcom, while the second half of the hour was contracted to the DuMont network for a big-band musical program. The best of the old Ralph Kramden sketch material was reworked into the thirty-nine Honeymooners episodes that have run in continuous syndication ever since.

For pure economy of style and setting, The Honeymooners has never quite been equaled. Often using only a single set, rarely employing more than four regular characters, each episode is completely dependent upon the bra- vura performances of the show’s stars: Gleason, as Ralph Kramden, the incorrigible egoist who, when not being teased about his weight, is repeatedly humiliated by his failed get-rich-quick schemes; Art Carney, as Ed Norton, a best friend and sidekick whose physical and mental slowness plays foil to Gleason’s mania in a kind of TV variation on Laurel and Hardy; and Audrey Meadows as Alice, the stoic, sensible wife who is forced to function as parent as much as spouse. Signature lines and gestures, such as Ralph’s threats to send Alice “to the moon,” or Ralph’s throwing Norton out of his apartment, are ritually repeated to extraordinary comic effect.

Unfortunately that season marked the end of Gleason’s most creative period. He would continue to hold down a prime-time slot (with some gaps) until 1970, but he never created any new noteworthy characters or elaborated further on the style he had developed. Casting about for a fresh format in which he could demonstrate versatility, he hosted a game show (You’re in the Picture, 1961), conducted a one-on-one talk show (The Jackie Gleason Show, 1961) and returned to comedy-variety, promising (but not delivering) an innovative social satire approach (Jackie Gleason and his American Scene Magazine, 1962-66). The results were all critically disappointing, though the last of the three did prove that he could still deliver a top twenty audience with a comedy-variety format.

In 1964 all pretense was dropped and the Saturday night hour with relaunched as The Jackie Gleason Show, a reprise of the familiar comedy-variety form of dozen years
early. Gleason spent much of the rest of his TV career doing increasingly tiresome replays of The Honeymooners and his other 1950s creations. Perhaps the only notable feature of the final series is that it was the only show in prime time not made in Los Angeles or New York. Gleason had moved his home and his show to Miami Beach.

Jackie Gleason's career illustrates much about the lot of television comedians. A small-timer with an erratic career, Gleason found a medium perfectly suited to his talents. He refused, however, to respect either the medium or the genre that had made him. Rather than pursue further depth as a TV sketch artist, he tried to prove that his talents transcended medium and genre. Others who would make this mistake include Dan Aykroyd, Katherine O'Hara, Chevy Chase and Joe Piscopo. Gleason finally did achieve some popular success in the movies playing a Southern sheriff in the three Smokey and the Bandit films made between 1977 and 1983.

GLESS, SHARON

U.S. Actor

Sharon Gless, who worked primarily in supporting roles for a number of series and TV movies in the late 1970s and early 1980s, rose to stardom as Christine Cagney in the female cop show, Cagney and Lacey (1982–88).

Two of her more prominent roles before Cagney and Lacey anticipated aspects of the Cagney character. In a short-lived NBC sitcom, Turnabout (1979), Gless played Penny Alston, whose mind and spirit are exchanged with those of her husband. Gless's character thus explored gender differences through the split between a feminine exterior and masculine motivations. Three years later, Gless was tapped to take over the co-starring role in House Calls when Lynn Redgrave was forced out of the series.

It was the experience of trying to take over in the wake of a popular actor's departure that made Gless hesitate when
she was offered the role of Christine Cagney. In the TV movie, Cagney had been played by Loretta Swit, and in the first season of the series, the character had been portrayed by Meg Foster. A CBS executive touched off a protest from fans, however, when he made a statement suggesting Foster was not feminine enough for the role, making the team of Chris Cagney and Mary Beth Lacey (played by Tyne Daly) look like "a pair of dykes." Renewal of the series was contingent on replacing Foster with someone "softer." Though initially seen by fans as a sellout to the network, Gless soon gained acceptance from the devoted audience of Cagney and Lacey. Ironically, she developed a substantial following among lesbian viewers, according to critic Julie D’Acci.

Not only did Cagney contrast with her married, working-class partner, but, as played by Gless, Christine Cagney embodied a number of contradictions in class and gender. Her soft blonde beauty played against the tough shell she maintained both on the job and in many of her personal encounters. Her working-class Irish cop identity, inherited from her father, clashed with the sleek, upper crust veneer she had acquired from her mother. Her career success contrasted with a string of unhappy romances in her personal life.

Although Gless has said she considers herself primarily a comedienne, Cagney and Lacey provided the opportunity for her to grow as a dramatic actor. In the first three years of the series, Gless was nominated for an Emmy, but Daly received the award for Best Actress in a Dramatic Series. The following two years, however, the Emmy went to Gless, and in the final year of the series, the Emmy went back to Daly. Gless took pride in her contribution to the substance and quality of the series: "We're pioneering," she said in a story for McCall's. "We're showing women who can do a so-called man's job without ever forgetting that they are women."

Since the end of Cagney and Lacey in 1988, Gless has married Barney Rosenzweig, who created the series, The Trials of Rosie O’Neill (1990–1991). In the role of the title character, Gless again portrayed a single, upscale character connected with the law—this time a newly divorced, well-healed lawyer, working in the cramped, underfunded offices of Los Angeles public defenders. Gless won a Golden Globe Award for her work in the series before it was canceled. She has also joined Daly in several Cagney and Lacey reunion movies, and has appeared in a number of other made for television movies.

GODFREY, ARTHUR
U.S. Variety Show Host

Arthur Godfrey ranks as one of the important on-air stars of the first decade of American television. Indeed, prior to 1959 there was no bigger TV luminary than this freckled faced, ukelele playing host and pitchman. Through most of the decade of the 1950s Godfrey hosted a daily radio program and appeared in two top-ten prime-time television shows, all for CBS. As the new medium was invading American households, there was something about Godfrey’s wide grin, his infectious chuckle, his unruly shock of red hair that made millions tune in, not once, but twice a week.

To industry insiders, Godfrey was television’s first great master of advertising. His deep, microphone-loving voice delivery earned him a million dollars a year, making him one of the highest paid persons in the United States at the time. He blended a Southern folksiness with enough sophistication to charm a national audience measured in the millions through the 1950s. For CBS-TV in particular, Godfrey was one of network television’s most valuable stars, generating millions of dollars in advertising billings each year, with no ostensible talent save being the most congenial of hosts.

After more than a decade on radio, Godfrey ventured onto prime-time TV in December 1948 by simply permitting the televising of his radio hit Arthur Godfrey’s Talent Scouts. The formula for Talent Scouts was simple enough. “Scouts” presented their “discoveries” to perform live before a national radio and television audience. Most of these discoveries were in fact struggling professionals looking for a break, and the quality of the talent was quite high. The winner, chosen by a fabled audience applause meter, often joined Godfrey on his radio show and on Arthur Godfrey and His Friends for some period thereafter.

Through the late 1940s and 1950s Godfrey significantly assisted the careers of Pat Boone, Tony Bennett, Eddie Fisher, Connie Francis, and Patsy Cline. An institution on Monday nights at 8:30 P.M., Arthur Godfrey’s Talent Scouts always functioned as Godfrey’s best showcase and through the early 1950s was a consistent top-ten hit.

A month after the December 1948 television debut of Arthur Godfrey’s Talent Scouts came the premiere of Arthur Godfrey and His Friends. Here, Godfrey employed a resident cast which at times included Julius La Rosa, Frank Parker, 

Arthur Godfrey
Lu Ann Simms, and the Cordettes. Tony Marvin was both the announcer and Godfrey's "second banana," as he was on Arthur Godfrey's Talent Scouts. The appeal of Arthur Godfrey and His Friends varied depending on the popularity of the assembled company of singers, all clean cut young people lifted by Godfrey from obscurity. Godfrey played host and impresario, sometimes singing off key and strumming his ukulele, but most often leaving the vocals to others.

As he had done on radio, Godfrey frequently kidded his sponsors, but always "sold from the heart." only hawking products he had actually tried or regularly used. No television viewer during the 1950s doubted that Godfrey really did love Lipton Tea and drank it every day. He delighted in tossing aside prepared scripts and telling his audience: "Aw, who wrote this stuff? Everybody knows Lipton's is the best tea you can buy. So why get fancy about it? Getcha some Lipton's, hot the pot with plain hot water for a few minutes, then put fresh hot water on the tea and let it just sit there."

Godfrey perfected the art of seeming to speak intimately to each and every one of his viewers, to sound as if he was confiding in you and you alone." Despite all his irreverent kidding, advertisers loved him. Here was no snake-oil salesman hawking an unnecessary item, merchandise not worth its price. Here was a friend recommending the product. This personal style drove CBS efficiency experts crazy. Godfrey refused to simply read his advertising copy in the allocated 60 seconds. Instead he talked—for as long as he felt it necessary to convince his viewers of his message, frequently running over his allotted commercial time.

CBS owner William S. Paley detested Godfrey but bowed to his incredible popularity. CBS president Frank Stanton loved Godfrey because his shows were so cheap to produce but drew consistently high ratings. In 1955 when Disneyland cost $90,000 per hour, and costs for a half hour of The Jack Benny Show totalled more than $40,000, Arthur Godfrey's Talent Scouts cost but $30,000. This figure was more in line with the production of a cheap quiz program than fashioning a pricey Hollywood-based show on film.

In his day Godfrey accumulated a personal fortune that made it possible for him to own a vast estate in the Virginia horse country, maintain a huge duplex apartment in Manhattan, and fly back and forth in his own airplanes. In 1950 he qualified for a pilot's license; the following year he trained to fly jets. Constantly plugging the glories of air travel, Godfrey, according to Eddie Rickenbacker, did more to boost aviation than any single person since Charles Lindbergh.

Godfrey's end symbolized the close of the era of experimental, live television. But he should be remembered for more than his skill in performing for live television. Perhaps even more significant is that he taught the medium how to sell. In terms of the forces of that have shaped and continue to shape the medium of television, Godfrey's career perfectly illustrates the workings of the star system. Here was a person who seemed to have had "no talent," but was so effective that through most of the 1950s he was "everywhere" in the mass media. In the end, times and tastes changed. In 1951 Arthur Godfrey stood as the very center of American television. Eight years later he was back on radio, a forgotten man to all but the few who listened to the "old" medium.

THE GOLDBERGS

U.S. Domestic Comedy

In many ways the program that Gertrude Berg devised in 1928 and sold to NBC radio the following year was unique. No other daily serial drama reflected so explicitly its creator's own ethnic background, and few other producers retained such close control over their work. Until the late 1930s, Berg herself wrote all the scripts, five to six fifteen-minute stories per week, and even after hiring outside writers continued to act as producer; she performed the role of the main character herself throughout the show's thirty-year history on radio and television.

The Rise of the Goldbergs began as skits produced at her family's Catskills hotel for the rainy-day entertainment of guests. Originally centered around the comic character Malka Talzinskiy, Malka became Molly and Talzinskiy modulated to Goldberg, while Berg herself ventured into writing theatrical and commercial continuities. On 20 November 1929, the first episode of The Rise of the Goldbergs aired as a sustaining program on WJZ, flagship of the NBC Blue network, no doubt building on the success of radio's first network dramatic serial, Amas 'n' Andy, introduced in August 1929. Early scripts concerned themselves explicitly and intimately with an immigrant Jewish family's assimilation into American life. The cast consisted of "Molly" herself, playing the wise and warmhearted wife of Jake (James R. Waters) and mother of Rosalie (Rosllyn Silber), and Sammy (Alfred Ryder/Alfred Corn). Uncle David (Menasha Skulnik) filled the role of resident family patriarch. Molly, Jake, and Uncle David spoke with a heavy Yiddish accent, while the children favored standard American with a goodly dash of the Bronx. Much humor derived from Molly's malapropisms and "Old World" turns of phrase, drawing on the vaudeville ethnic dialogue tradition. The first season's scripts deal with such issues as the difficulties of raising children in an American environment that sometimes clashed with old world traditions, and the immigrant family's striving for economic success and security. Molly's conversations up the airshaft with her neighbor—"Yoo hoo, Mrs. Bloo-oom"—and frequent visitors in their small apartment vividly invoke New York tenement life. The success of this slice of specifically ethnic, but far from atypical, American experience resulted in eighteen thousand letters pouring into NBC's office when Berg's illness forced the show off the air for a week.

The Rise of the Goldbergs aired sporadically for its first few seasons, then more regularly from 1931 to 1934 sponsored by Pepsodent, appearing daily except Sunday from 7:45 to 8:00. After a hiatus it returned in 1936 as a late afternoon serial, running five days a week from 5:45 to 6:00 on CBS under the sponsorship of the Colgate-Palmolive-Peet company via the Benton and Bowles agency. At this point it was renamed simply The Goldbergs. Procter and Gamble took over the program in 1938.

In 1939 the show's setting shifted from the Bronx to the Connecticut town of Lastonbury, in keeping with its narrative of American assimilation. Yet Berg never lost sight of the specifically Jewish ethnic background that made the Goldbergs unique in network radio and television. One memorable episode, aired 3 April 1939, invoked Kristallnacht and the worsening situation in Nazi Germany as the Goldberg's Passover Seder was interrupted by a rock thrown through their living room window. Other stories referred to family members or friends trying to escape from Eastern Europe ahead of the Holocaust. Most plot lines avoided head-on discussion of anti-Semitism or world politics, however, concentrating instead on family and neighborhood doings with the occasional crime or adventure story to liven up the action. Molly continued to supervise her family's activities, Jake experienced business setbacks and successes, Rosalie and Sammy grew up, got married, and went off to war, as American families in the show's loyal listening audience followed a similar trajectory.

In 1946 the show suspended production, during which time Berg adapted it to the Broadway stage as a play called Me and Molly which ran for 156 performances. In 1949 The Goldbergs moved to television with a new cast (except Molly), sponsored on CBS by General Mills' Sanka Coffee, which dropped the program in 1951 when Philip...
Loeb, then playing Jake, was blacklisted in the infamous Red Channels purge. Reappearing without Loeb and with a different sponsor and network in 1952, the television Goldbergs ran on NBC from February 1952 through September 1953, then on DuMont from April to October 1954. These early seasons were all performed live and featured the Goldberg family back in the Bronx (with the children once again teenagers). In 1955 they moved to the New York suburb of Hauppauge in a version filmed for syndication; this lasted one season.

Combining aspects of the family comedy and the daytime serial, *The Goldbergs* pioneered the character-based domestic sitcom format that would become television's most popular genre. Its concern with ethnicity, assimilation, and becoming middle class carried it through the first three decades of broadcasting and into the post-war period, but ultimately proved out of place in the homogenized suburban domesticity of late 1950s TV.

"GOLDEN AGE" OF TELEVISION DRAMA

The "golden age" of American television generally refers to the proliferation of original and classic dramas produced for live television during America's postwar years. From 1949 to approximately 1960, these live dramas became the fitting programmatic complements to the game shows, westerns, soap operas and vaudeville shows (vaudeville and variety acts on TV) that dominated network television's prime time schedule. As the nation's economy grew and the population expanded, television and advertising executives turned to dramatic shows as a programming strategy to elevate the status of television and to attract the growing and increasingly important suburban family audience. "Golden age" dramas quickly became the ideal marketing vehicle for major U.S. corporations seeking to display their products favorably before a national audience.

In the early years, "golden age" drama programs such as *The Actors' Studio* (ABC/CBS, 1948–50) originated from primitive but innovative two-camera television studios located primarily in New York City, although some broadcasts, such as *Mr. Black* (ABC, 1949), a half-hour mystery anthology series, were produced in Chicago as well. Ranging in duration from thirty minutes to an hour, these live dramas were generic hybrids uniquely suited to the evolving video technology. Borrowing specific elements from the stage, network radio, and the Hollywood film, the newly constructed dramas on television (teleplays) fashioned a dynamic entertainment form that effectively fused these high and low cultural expressions.

From radio these teleplays inherited the CBS and NBC network distribution system, sound effects, music,
theme songs and the omniscient narrator, who provided continuity after commercial message breaks. From film, teledramas borrowed aging stars and emerging personalities, camera stylistics, mobility and flexibility. Imported from the theater were Broadway-inspired set designs, contemporary stage (i.e. realist and "method") acting techniques that imparted a sense of immediacy and reality to small-screen performances, and finally, teleplay adaptations of classic and middle-brow literature. In a statement that clearly expresses television drama's debt to the stage, Fred Coe, producer of the weekly NBC Television Playhouse (1948–55), remarked that "all of us were convinced it was our mission to bring Broadway to America via the television set."

Ironically, however, it was live teledramas that helped television to displace radio, the stage and film as the favorite leisure-time activity for the nation's burgeoning suburban families in the late forties to the mid-fifties. This postwar demographic shift from urban to suburban centers is often credited with creating the new mass audience and the subsequent demand for the home-theater mode of entertainment that network television, boosted by the high quality drama programs, was uniquely capable of satisfying.

The first so-called "golden age" drama program to appear was the Kraft Television Theatre, which premiered on 7 May 1947, on the NBC network. The Ford Theater (CBS/NBC/ABC, 1948–57), Philco and Goodyear Television Playhouses (NBC, 1948–55), Studio One (CBS, 1948–58), Tele-Theatre (NBC, 1948–50) and Actors Studio (ABC/CBS, 1948–49) followed the very next year. In 1951 network television was linked coast to coast, and in 1950 Hollywood Theater Time (ABC) became one of the first dramatic anthology shows to originate from the West Coast (although transmitted to the East via kinescopes—inferior copies of shows filmed directly from the television screen).

Several important factors contributed to the rise of "golden age" dramas by the mid-1950s. First, the U.S. Congress issued more station licenses and allocated more air time and frequencies to the nation’s four networks, NBC, CBS, ABC and DuMont. Consequently, this major expansion of the television industry necessitated a rapid increase for new shows. Because this early video era preceded the advent of telefilm and videotape, the live television schedule was a programming vortex with an inexhaustible demand for new shows. 90% of which were broadcast live. The remaining dramas were transmitted (usually from the East Coast to the West) via kinescopes. Location on the television schedule was also a key element in the success of anthology dramas during this early phase. Because the sponsors rather than the networks generally controlled the programs, teledramas were not restricted to a particular network or time schedule. As a result of this programming flexibility, it was not unusual for shows either to rotate around the dial or to remain firmly entrenched, all in search of the best possible ratings. In 1953, the Kraft Television Theatre aired at 9:00 P.M. on Wednesdays over the NBC network and aired a second hour under the same series title on Thursdays at 9:30 P.M. on ABC. The venerable Ford Television Theater appeared on all three networks during its nine-year run. The anthology format itself, which demanded a constant supply of actors, writers, directors and producers, and was quite different from the episodic series structure featuring a stable cast, always offered something new to viewers. And since anthology dramas provided plenty of work to go around, many actors got their first starring roles in live dramas, while others gained national exposure that was not possible on the stage or that eluded them on the big screen.

This rotating system of anthology drama production resulted in a creative environment for television that many television historians consider as yet unsurpassed. The fact that these shows dramatized many high quality original works as well as adaptations of high and middle-brow literature gave advertisers cost-effective reasons for underwriting the relatively high production values that characterized many of the topnotch anthology programs. Many, in fact, were consistent Emmy Award winners. The Texaco Star Theater won the 1949 Emmy for "Best Kinescope Show," U.S. Steel Hour won two Emmys in 1953, its debut year, and Studio One received three Emmys for the 1955 season for its production of "Twelve Angry Men."

As the genre matured and traded its amateur sets for professionally designed studios, it looked good, and by extension, so did its sponsors. Accordingly, the growing prestige of live dramas enabled established and fading stars from the Broadway stage and Hollywood films to be less reticent about performing on television, and many flocked to the new medium. In fact, some even lent their famous names to these anthology drama programs. Robert Montgomery Presents (ABC, 1950–57) is one of the first anthology series to rely on Hollywood talent. His star-driven program was later joined by the Charles Boyer Theater (1953), and in 1955 silent film star Conrad Nagel hosted his own syndicated anthology drama entitled The Conrad Nagel Theater. Bing Crosby Enterprises produced The Gloria Swanson Show in 1954, with Swanson as host and occasional star in teleplays produced for this dramatic anthology series. More commonly, however, it was the sponsor's name that appeared in the show titles, with stars serving as narrators or hosts. For example, from 1954 to 1962 Ronald Reagan hosted CBS' General Electric Theater.

As crucial as these elements were, perhaps the most important reason leading to the success of this nascent television art form was the high caliber of talent on both sides of the video camera. Whereas many well-known actors from the stage and screen participated in live television dramas as the 1950s progressed, it was the obscure but professionally trained theater personnel from summer stock and university theater programs like Yale's Drama School who launched the innovative teletheater broadcasts that we now refer to as television's "golden age."

In 1949, 24-year-old Marlon Brando starred in "I'm No Hero," produced by the Actors' Studio. Other young actors, such as Susan Strasberg (1953), Paul Newman
(1954), and Steve McQueen, made noteworthy appearances on the Goodyear Playhouse. Among some of the most prominent writers of "golden age" dramas were Rod Serling, Paddy Chayefsky, Gore Vidal, Reginald Rose and Tad Mosel. Rod Serling stands out for special consideration here because in addition to winning the 1955 Emmy for "Best Original Teleplay Writing" ("Patterns" on Kraft Television Theatre), Serling also won two teleplay Emmys for Playhouse 90 (1956 and 1957), and two "Outstanding Writing Achievement in Drama" Emmys for Twilight Zone (1959 and 1960) and for Chrysler Theater in 1963. Serling's six Emmys for four separate anthology programs over two networks unquestionably secures his position at the top of the golden age pantheon. For television, it was writers like Serling and Chayefsky who became the auteurs of its "golden-age." Gore Vidal sums up the opportunity that writing for television dramas represented in this way: "one can find better work oftener on the small grey screen than on Broadway." Chayefsky was more sanguine when he stated that television presented "the drama of introspection," and that "television, the scorned stepchild of drama, may well be the basic theater of our century."

In addition to actors and writers, some of the most renowned Hollywood directors got their big breaks on television's anthology dramas. John Frankenheimer directed for the Kraft Television Theatre, Robert Altman for Alfred Hitchcock Presents, Yul Brynner and Sidney Lumet for Studio One, Sidney Pollack for The Chrysler Theater (1965 Emmy for "Directorial Achievement in Drama") and Delbert Mann for NBC Television Playhouse. These are but a few major directors who honed their skills during television's "golden age."

By 1955 "golden age" dramas had proven so popular with national audiences that they became important staples of the network television schedule. Some of the anthologies were now produced on film, but they maintained the aesthetic and psychological premises of the live productions that tutored their creators and their audiences. These drama series aired on the networks each day except Saturdays, and on some days there were up to four separate anthology shows airing on one evening's prime-time schedule. One instance of such a programming pattern occurred on Thursday nights during the 1954–55 TV season. Here, in one single evening, viewers could choose between Kraft Television Theatre (ABC, 1953–55), Four Star Playhouse (CBS, 1952–56), Ford Theater (NBC, 1952–56) and Lux Video Theater (NBC, 1954–57). Dramatic anthologies came in various generic formats as well. The other genres were, for example, suspense: Kraft Suspense Theatre (NBC, 1963–65) and The Clock (NBC/ABC, 1949–51); mystery: Mr. Arsenic (ABC, 1952) and Alfred Hitchcock Presents (CBS/NBC, 1955–65); psychological: Theater of the Mind (NBC, 1949); legal: They Stood Accused (DuMont 1949–54); science fiction: Twilight Zone (CBS, 1959–64); military: Citizen Soldier (Syndicated, 1956); and reenactments: Armstrong Circle Theater (NBC/CBS, 1950–63).

As these various titles suggest, the dramas staged on these anthology programs were remarkably diverse, at least in form if not in substance. In this regard, critics of the so-called "golden age" dramas have noted what they consider to be major problems inherent in the staging of plays for the commercial television medium.

Much of the criticism of these live television dramas concerned the power sponsors often exerted over program content. Specifically, the complaints concerned the mandate by sponsors that programs adhere to a "dead-centerism." In other words, sponsored shows were to avoid completely socially and politically controversial themes. Only those dramas that supported and reflected positive middle-class values, which likewise reflected favorably the image of the advertisers, were broadcast. Critics charge the networks with pandering to Southern viewer expectations in order not to offend regional sensibilities. Scripts exploring problems at the societal level (i.e. racial discrimination, poverty, and other social ills) were systematically ignored. Instead, critics complain, too many "golden age" dramas were little more than simplistic morality tales focusing on the every day problems and conflicts of weak individuals confronted by personal shortcomings such as alcoholism, greed, impotence, and divorce, for example. While there is no doubt that teleplays dealing with serious social issues were not what most network or advertising executives considered appropriate subject matter for predisposing viewers to consume their products, it is important to note that the "golden age" did coincide with the cold-war era and McCarthyism and that cold-war references, including many denigrating communism and celebrating America, were frequently incorporated in teleplays of the mid to late 1950s.

Most of the scripts in the live television dramas, however, were original teleplays or works adapted from the stage, ranging from Arthur Miller's Death of a Salesman and Eugene O'Neill's The Iceman Cometh to Shakespeare's Romeo and Juliet and Othello, among many others. This menu of live television dramas, especially when compared with popular Hollywood films, the elite theater, or commercial radio, presented American audiences with an extraordinary breadth of viewing experiences in a solitary entertainment medium. Moreover, this cultural explosion was occurring in the comfort of the new mass audiences' brand new suburban living rooms. While the classics and some contemporary popular writers provided material for the teleplays, they were not enough for the networks' demanding weekly program schedules. Moreover, the television programmers were often thwarted by Hollywood's practice of buying the rights to popular works and refusing to grant a rival medium access to them, thereby foreclosing the television networks' ability to dramatize some of the most popular and classic plays. In response, the networks began cultivating original scripts from young writers. Thus, the majority of the dramas appearing on these anthology shows were original works.

Perhaps the quintessential "golden age" drama is Paddy Chayefsky's "Marty." On 24 May 1953, Delbert Mann
directed Chayefsky's most renowned teleplay for NBC's *Philco Television Playhouse*. Starring Rod Steiger and Nancy Marchand as the principals, "Marty" is a love story about two ordinary characters and the mundane world they inhabit. "Marty" is important because its uncomplicated and sympathetic treatment of Marty, the butcher, and his ability to achieve independence from his demanding mother and embrace his uncertain future, resonated with many new suburban viewers, who were, themselves, facing similar social and political changes in postwar American society. "Marty" was an ideal drama for the times, leading one reviewer to write that it represented "the unadorned glimpse of the American middle-class milieu." The suburban viewers, like the fictional "Marty" they welcomed into their living rooms, had become willing participants in an emerging national culture no longer distinguishable by inter-generational and inter-ethnic differences. What further distinguishes "Marty" is the fact that it signaled a trend in the entertainment industry whereby teleplays were increasingly adapted for film. Shortly after its phenomenal television success, "Marty" became a successful feature film.

Some of the most successful and critically acclaimed dramatic anthology programs of the "golden age" were *Armstrong Circle Theater* (thirteen seasons), *Kraft Television Theatre* (eleven seasons), *Alfred Hitchcock Presents* (ten seasons), *Studio One* (ten seasons), *The U.S. Steel Hour* (ten seasons), *General Electric Theater* (nine seasons), *Philco Television Playhouse* (seven seasons), *Goodyear Playhouse* (six seasons), *Playhouse 90* (four seasons), and *Twilight Zone* (four seasons, revived in 1985–88). In present times, only the *Hallmark Hall of Fame* (1951–present), survives from the heyday of television's "golden age." With the advent of videotape and telefilm, the shift to Hollywood studios as sites of program production, and the social upheavals of the 1960s, live anthology dramas fell victim to poor ratings and changing social tastes.

**THE GOLDEN GIRLS**

U.S. Situation Comedy

The opening line of the popular song "Thank You for Being a Friend" not only became the weekly thematic prelude to the situation comedy, *The Golden Girls*, it also came to represent the sensibility which sprang from the heart of this delightful program. With *The Golden Girls* NBC brought to television one of the first representations of senior women coming together to create a circle of friends that functioned as a family. The program centered around four main characters: Dorothy Zbornak (Bea Arthur), a divorced school teacher; Sophia Petrillo (Estelle Getty), Dorothy's elderly, widowed mother; Blanche Devereaux (Rue McClanahan), a widow and owner of the Miami home in which all of the women lived, and Rose Nylund (Betty White), a widow and an active volunteer in the community. Aside from the mother-daughter relationship between Dorothy and Sophia, no other family relations existed between...
the women, yet they shared their daily lives, dreams, fears, and dilemmas as a unit. The group life of the characters enabled expression of diverse opinions and approaches to problems the women faced as individuals.

The south Florida setting added a warmth and lightness to the show, reflected in the tropical furniture and clothing favored by the women. The vivid colors and the light that flooded the production visually represented the vibrance of the lives of the characters.

Though all of the women were late-middle aged or beyond, they were presented as full of life, working, capable, and energetic. Even Sophia, the elderly mother was often in plays, taking trips, having dates, and doing charity work. Blanche, the youngest of the golden girls, known for her fondness for men, enjoyed her reputation for wild sex. (Though Blanche's sexual adventures were always a topic of conversation, they were never actually portrayed on the program). Rose, the storyteller of the group, boasted about her roots in St. Olaf, Minnesota and was painted as much more conservative than the passionate Blanche. Much of the comedy in the program stemmed from the absurdity of Rose's stories of her "simple" hometown. These rambling narratives were often utterly inane, but eventually, after the no-nonsense Dorothy shouted in frustration, "the point, Rose, get to the point!", the story would offer warm-hearted advice or a perceptive viewpoint on the problem at hand. Sophia often aided her sharp and sarcastic wit at Rose's stories, making fun of her in a critical, but kind, way. Dorothy, the working school teacher and the voice of reason, generally played against the more extreme, often comical perspectives of the other women. Despite individual eccentricities, each woman was wise in her own way and each valued the others' experiences and sage advice. Each played her part in the maintenance of friendships and family bonds that resulted from their cohabitation.

The Golden Girls valued women and put special emphasis on the importance of women's networks, friendships, and experiences. The series was big enough to showcase the concerns and escapades of four distinctive, aging women, yet balanced enough to combine the individual experiences into a positive picture of four senior citizens functioning together to make the most of life.

Despite the success of the program, NBC dropped The Golden Girls from the prime-time line up at the end of the 1992 season. CBS picked up the program, but Arthur and McClanahan refused to make the move. The new network changed the show into The Golden Palace, and set it in a hotel run by Rose and Sophia. It was a failure, and after its swift cancellation, the character Sophia returned to NBC to do occasional walk-ons on Empty Nest, a Golden Girls spin-off.

GOLDENSON, LEONARD
U.S. Media Executive

As the founder of a major U.S. network, Leonard Goldenson is perhaps not as famous as David Sarnoff of NBC or William S. Paley of CBS. Starting in 1951, over a thirty-year period, Goldenson created the modern ABC (American Broadcasting Company) television network. He did not have the advantage of technological superiority, as NBC had from its owner, Radio Corporation of America (RCA). He did not have the advantage of an extraordinary talent pool, as CBS did from its radio contract. Yet Goldenson should be given credit as one of the modern corporate chieftains who shaped and led television in the United States into the network era—and beyond. The last of the old TV network tycoons, Leonard Goldenson snatched ABC from the brink of irrelevance as a minor radio network and by the 1980s had transformed the company into one of the top broadcasting networks and a leading site for advertising in the world. Three of Goldenson’s considerable accomplishments: he lured the big Hollywood movie studios into the TV production business; he re-packaged sports and made it prime-time fare with Monday Night Football and Olympic coverage; he led the networks into the era of movies made for TV and miniseries.

After graduating from the Harvard Business School in 1933, Goldenson was hired to help reorganize the then near bankrupt theater chain of Hollywood’s Paramount Pictures. So skillful was his work at this assignment that Paramount’s chief executive officer Barney Balaban hired Goldenson to manage the entire Paramount chain. In 1948 when the U.S. Supreme Court forced Paramount to choose either the theater business or Hollywood production and distribution, Balaban selected the Hollywood side and handed over the newly independent United Paramount theater chain to Goldenson. Goldenson then sold a number of movie palaces. Looking for a growth business in which to invest these funds, he selected ABC.

Goldenson finalized the ABC takeover in 1953, which came with a minor network and five stations. Given the ownership restrictions defined by the Federal Communication Commission’s Sixth Report and Order, Goldenson worked from the assumption that only three networks would survive. Only in 1955, with the failure of the DuMont television network, was ABC really off on what would become its successful quest to catch up with industry leaders, CBS and NBC.

As late as 1954 only 40 of the more than 300 television stations then on the air were primarily ABC-TV affiliates. More affiliates for ABC-TV were so-called secondary accounts, an arrangement through which an NBC or CBS affiliate agreed to broadcast a portion (usually small) of the ABC-TV schedule. When DuMont went under, ABC-TV could claim only a tenth of network advertising billing; NBC and CBS split the rest.

Goldenson developed a specific tactic: find a programming niche not well served by the bigger rivals and take it over. Thus, for a youth market abandoned by NBC and CBS, ABC set in motion American Bandstand, Maverick, and The Mickey Mouse Club. Goldenson found early ABC stars in Edd “Kookie” Byrnes, James Garner, and Ricky Nelson. Controversy came with the premiere of The Untouchables, as critics jumped on an apparent celebration of violence, but Goldenson rode out the criticism and lauded the high ratings to potential advertisers.

When necessary, Goldenson would also copy his competition. In the 1950s there was no greater hit than CBS’ sit-com I Love Lucy. Goldenson signed up Ozzie Nelson and Danny Thomas, and in time The Adventures of Ozzie and Harriet would run 435 episodes on ABC, and Danny Thomas’ Make Room for Daddy would air 336.

Goldenson was able to convince Hollywood, in the form of Walt Disney and Warner Brothers, to produce shows for ABC. A turning point—for the network and for all of television—came when Walt Disney agreed to supply ABC with TV shows. In exchange ABC sold its movie palaces and loaned the money to Disney to build a new type of amusement park. Disney had approached any number of banks, but could not convince their conservative officers that he really did not want to build another “Coney Island.” Repeatedly, the financial institutions passed on “Disneyland.” So, too, did NBC and CBS, thus
missing out on the opportunity to program *The Mickey Mouse Club* and *The Wonderful World of Disney*.

ABC's first Disney show went on the air on Wednesday nights beginning in October 1954; it moved to Sunday nights in 1960, and would remain a Sunday night fixture for more than two decades. ABC-TV had its first top-twenty ratings hit, and made millions from its investment in Disneyland. In particular a December 1954 episode entitled “Davy Crockett” created a national obsession, fostering a pop music hit, enticing baby boomers to beg their parents for coonskin caps, and making Fess Parker a TV star.

With the Warner Brothers shows—*Cheyenne, 77 Sunset Strip, Surfside 6* and *Maverick*—the ABC television network began making a profit for the first time. By the early 1960s ABC was airing the top-rated *My Three Sons, The Real McCoys*, and *The Flintstones*, which was television’s first animated prime-time series. In the more turbulent late 1960s ABC-TV mixed the traditional (The FBI and Marcus Welby, M.D.) with the adventurous (Mod Squad and Bewitched). But it was not until the 1976–77 season that ABC-TV finally rose to the top of the network ratings; its prime-time hits that season were *Happy Days, Laverne and Shirley, and Monday Night Football.*

In sports telecasting ABC-TV soon topped NBC and CBS as a pioneer. ABC led the way with not only its Monday night NFL football, but also with *ABC Wide World of Sports* and coverage of the both summer and winter Olympics. In the late 1970s ABC’s mini-series *Roots* set ratings records, and acquired numerous awards for its 12 hours of dramatic history. The TV-movie was also innovated at ABC-TV and in time the “alphabet” network received top ratings for airing *Brian’s Song, The Thorn Birds,* and *The Winds of War.*

By the mid-1980s Leonard Goldenson had passed his 80th birthday and wanted out of the day-to-day grind of running a billion dollar corporation. In 1986 Capital Cities, Inc., backed by Warren Buffett’s Berkshire Hathaway investment group, bought ABC for $3.5 billion. Capital Cities, Inc., had long been an award-winning owner of a group of the most profitable television stations in the United States. "Cap Cities’ chief executive officer Thomas Murphy inherited what Leonard Goldenson had wrought. Leonard Goldenson then gracefully retired.

GOOD TIMES
U.S. Domestic Comedy

Evictions, gang warfare, financial problems, muggings, rent parties and discrimination were frequent themes of the television program *Good Times*, which aired on CBS Television from February 1974 to August 1979. The program was created by Norman Lear and Bud Yorkin. This highly successful team of independent producers team enjoyed unmitigated success during the 1970s and 1980s with a number of hit television shows including *Maude, Sanford and Son, The Jeffersons* and one of television’s most controversial sitcoms, *All in the Family*.

*Good Times* was a spin-off show of the hit series *Maude*. In *Maude*, the black maid/housekeeper Florida, was portrayed by actor Esther Rolle. Rolle was chosen to star with John Amos as Mr. and Mrs. Evans in *Good Times*. The cast of *Good Times* included Florida; her unemployed but always looking-for-work husband, James; their teen-aged son, J.J.; a daughter, Thelma; and a younger son, Michael. The Evan’s neighbor, a fortyish woman named Willona made frequent appearances. A very young Janet Jackson of the Jackson family fame, joined the cast later as Willona’s adopted daughter.

*Good Times* earned its place in television history for a number of reasons. The program is significant for its decidedly different view, not only of black family life, but American family life in general. Unlike the innocuous images served up in early television shows such as *Father Knows Best* and *Julia*, *Good Times* interjected relevancy and realism into prime-time television by dealing with the pressing issues of the day.

*Good Times* was also noteworthy in its portrayal of an African-American family attempting to negotiate the vicissitudes of life in a high-rise tenement apartment in an urban slum—the first show to tackle such a scenario with any measure of realism. The program exploited, with comic relief, such volatile subject matter as inflation, unemployment and racial bigotry. Along with *The Jeffersons*, *Good Times* was one of first television sitcoms featuring a mostly black cast to appear since the controversial *Amos ’n’ Andy* show had been canceled some twenty years previously.

*Good Times* was initially successful in that it offered solace for both blacks and whites, who could identify with the difficulties the Evans family faced. During the program’s appearance on prime-time television, the concurrent period of history had included the Watergate scandal, the atrocities of the Vietnam War, staggeringly high interest rates, and growing unemployment. The James Evans character made clear his dissatisfaction with current government policies, and, the show became a champion for the plight of the underclass.

The show also highlighted the good parenting skills of James and Florida. In spite of their difficult situation, they never shirked on their responsibility to teach values and morality to their children. The younger son Michael was thoughtful, intelligent, and fascinated with African-American history. He frequently participated in protest marches for good causes. J.J. was an aspiring artist who dreamed of lifting his family from the clutches of poverty. In one episode the family’s last valuable possession, the television set, is stolen from J.J. on his way to the pawn shop to obtain a loan that would pay the month’s rent. But somehow the Evans family prevailed, and they did so with a smile. Their ability to remain stalwart in the face of difficult odds was an underlying theme of the show.

*Good Times* is also significant for many layers of controversy and criticism that haunted its production. Both stars, Rolle and Amos, walked away and returned as they became embroiled in various disputes surrounding the program’s direction. A major point of disagreement was the J.J. character, who metamorphosed into a coon-stereotype reminiscent of early American film. His undignified antics raised the ire of the black community. With his toothy grin, ridiculous strut and bug-eyed buffoonery, J.J. became a featured character with his trademark exclamation, "DY-N-O-MITE!" J.J. lied, stole, and was barely literate. More and more episodes were centered around his exploits. Forgotten were Michael’s scholastic success, James’ search for a job and anything resembling family values.

Both Ester Rolle and John Amos objected to the highlighting of the J.J. character. When both stars eventually left the program in protest, abortive attempts were made to soften the J.J. character and continue the program without
GOODSON, MARK, AND BILL TODMAN

James and Florida. "We felt we had to do something drastic,"
Rolle said later in the Los Angeles Times, "we had lost the
essence of the show."
Even with a newly fashioned (employed and mature acting) J.J. character, ratings for Good Times plummeted.
With some concessions, Rolle re- joined the cast in 1978 but
the program failed and the series was canceled. The program
went on to enjoy a decade of success in syndication.
Good Times, with its success and its criticism, remains
an important program in television history. As the product
of the highly successful Lear/Yorkin team, it stretched the
boundaries of television comedy, while breaking the unspoken ban on a mostly black cast television show.

GOODSON, MARK, AND BILL TODMAN
U.S. Producers

Goodson and Bill Todman were among
television's most successful producers of game
shows. They refined celebrity panel quizzes with What's My
Line? and I've Got a Secret, and created games that lasted for
Mark

years. Some, like The Price Is Right, became even more
popular in revived versions. Many of their shows have been
adapted for production in television systems outside the
United States.
In 1939, Mark Goodson created his first game, Pop the
Question, for San Francisco's radio station, KFRC. In Pop
the Question players threw darts at balloons to collect prizes
inside. Goodson left for New York City in 1941, with an
introduction from Berkeley alumnus Ralph Edwards. While
working several announcing and writing jobs, he met Bill
Todman, a radio writer, director, and advertising copy-

writer. The two found a shared love of games, and set to
work on their first quiz show. They developed the methods
that would serve them throughout their careers: Goodson
refined the format, while Todman tested possible flaws in
the rules and worked out the financial angles. CBS Radio
finally picked up the game Winner Take All, after World
War II, and the two also partnered to create four local radio
quizzes: Hit the Jackpot, Spin to Win, Rate Your Mate, and
Time's a Wastin . Winner Take All used a lockout buzzer
system and was the first quiz to pit two contestants against
each other, rather than against the quizmaster one at a time.
It was also first to have winners return each week until they
were defeated. Winner Take All became the first Goodson
and Todman show on CBS' new television network, debuting 8 July 1948.


Quiz shows had been popular on radio through the 1940s, and they were equally popular with TV executives: they cost little to produce, and merchandise prizes, so scarce during the war, were furnished free by manufacturers in return for plugs. An oft-repeated story had the partners carrying prizes for *Winner Take All* from their office to the studio. Todman slipped, sending small appliances clattering to the sidewalk. Writer Goodman Ace witnessed the accident and shouted, "Hey, Todman, you dropped your script!"

Most popular radio quizzes did not survive on television. Straight quizzes proved visually dull, and failed to involve the audience. Before the rise and fall of the big-money shows, Goodson and Todman found their success by going in two different directions: celebrity panel shows and celebrations of ordinary people.

Their first panel show began in 1949 with Bob Bach, a staffer who had bet the partners that he could deduce the occupations of total strangers. This inspired a proposal called "Occupation Unknown," which CBS bought in 1950 and renamed *What's My Line?* Bach became its associate producer as a reward for creating the basic concept for the program, a custom that continued at Goodson-Todman. *What's My Line?* put tuxedoed bon vivants into viewers’ homes for parlor games. These wits seemed amazed and amused by the occupations of ordinary working people. There was also a chance to be suggestive: for a guest whose "line" was "sells mattresses," Arlene Francis innocently provoked gales of laughter by asking, "If Bennett Cerf and I had your product, could we use it together?"

*Beat the Clock*, meanwhile, let ordinary folk attempt difficult, wacky stunts, which often involved whipped cream, mashed potatoes or water balloons. This was the only Goodson-Todman show to join the trend in "big money" games, as the prize for completing the stunts rose from $100 to $5,000 by 1958.

In 1950, CBS gave Goodson and Todman a shot at live drama when the producers of the popular anthology *Suspense* abruptly announced they were taking a summer hiatus. With just four weeks to the first air date, their studio put together *The Web*, an anthology of stories focused on people caught in a "web" of situations beyond their control. The show stayed on the air until 1954, and, like many New York-produced dramas, featured several future Hollywood stars. James Dean made his television debut on *The Web*, and later worked as a "stunt tester" for *Beat the Clock*. He proved so well-coordinated, however, that his times at completing stunts could not be used to gauge average contestants. Dean was obliged to seek his fortune elsewhere. Goodson and Todman made a few other forays into drama, with the Westerns *Jefferson Drum, The Rebel* and *Branded*. They also produced *Philip Marlowe* and a repertory anthology, *The Richard Boone Show*.

In its second season, *What's My Line?*’s format and panelists jelled, and CBS had a hit that would last for 18 seasons, the longest running game show in prime time.

Goodson and Todman continued to prepare more panel shows such as *The Name’s the Same* (ABC, 1951-55), in which celebrity panelists met ordinary people with famous or unusual names (e.g. George Washington, Mona Lisa, A. Garter).

Two unemployed comedy writers, Allan Sherman and Howard Merrill, created *I’ve Got a Secret* for Goodson-Todman, and when it debuted in 1952, Sherman became its producer. He managed prodigious booking feats such as locating the nearest phone to Mt. Everest in order to be the first to contact Edmund Hillary following his historic ascent. He requested the U.S. Air Force to attempt to break the flight speed record from Los Angeles to New York on a Wednesday so the pilot could be a guest that evening: that stunt gave audiences their first look at John Glenn.

*I’ve Got a Secret* caught a whiff of the quiz scandals with its celebrity segment: since few celebrities in those days wanted to admit their real secrets, the writing staff created some of them. Thus Boris Karloff’s "secret" was that he was afraid of mice, or Monty Wooley’s that "I sleep with my beard under the covers." Asked by Henry Morgan whether that was really true, Wooley shot back, "Of course not, you bloody idiot! Some damn fool named Allan Sherman told me to say so." (Sherman later became famous for his song parodies, especially "Hello Muddah, Hello Fadduh!")
The third of Goodson and Todman’s long-running panel shows, To Tell the Truth, was created in December 1956 by Bob Stewart, a former ad agency man, who later packaged game shows on his own, including The $10,000 Pyramid. Stewart also contributed Password in 1961, the first quiz in which “civilians” teamed up with celebrities. But in total air time, Stewart’s most enduring creation has been The Price Is Right. When Price debuted in 1956, it was a sponsor’s dream. Contestants won fabulous prizes as rewards for knowing their retail prices, a skill prized in the 1950s consumption-oriented society. During the quiz show probes, it was revealed that contestants were sometimes furnished with ceiling prices over which they should not bid, but all the contestants had shared the information. The Price Is Right continued in daytime until 1965, and ran in prime time from 1957 to 1964. When the show was revived in 1972, it put contestants through several flashy games, but with the same object of guessing prices. The New Price Is Right continues to this day, an hour each weekday, and has spun off two syndicated versions.

Goodson-Todman Productions was America’s biggest producer of game shows by 1956, but after the quiz scandals, the thirst for new games cooled considerably, and they were coasting on earlier successes. Their last winner in that period was another celebrity panel show, The Match Game. The prime-time audiences for What’s My Line?, I’ve Got a Secret, and To Tell the Truth had grown older, and CBS retired the shows in 1967. By 1970, the networks swept nearly all their game shows from their daytime lineups as well.

A new window opened in 1971 with the implementation of the Prime-Time Access rule, and Goodson-Todman produced new syndicated versions of nearly all their old shows. They even purchased Concentration from Barry and Enright after NBC canceled it in 1973, and issued a syndicated edition.

The New Price Is Right was part of the networks’ attempt to return to daytime game shows in the early 1970s. Most shows of the period used more lights, flashy scoreboards and high-tech, moving sets, but substance was lacking and the shows had short runs. Goodson-Todman had its share of gadget-filled failures, but they also struck gold with Family Feud and Card Sharks.

Goodson and Todman sold What’s My Line? to CBS in 1958, and I’ve Got a Secret to CBS and program host Garry Moore in 1959. The sales helped reduce their capital gains tax burden, and netted $3 million. They established the Ingersoll Newspaper Group, a chain of 8 dailies and 25 weeklies, and served as vice-presidents.

The partnership continued until Todman’s death in 1979, after which it was renamed Mark Goodson Productions. Goodson’s son Jonathan succeeded him as president and chief executive officer of Mark Goodson Productions, while Howard Todman serves as treasurer. In December 1994, the company joined with Merv Griffin Enterprises to launch the Game Show Channel. The cable outlet offers old game shows from a library of 41,000 episodes, and new shows allowing home viewers to play along for prizes via interactive controllers. Its growth, though, is currently stymied by the lack of available channels on most cable systems, and has been awaiting the expansion of direct satellite and expanded cable capacity.

—Mark R. McDermott

WILLIAM S. TODMAN. Born in New York City, New York, U.S.A., 31 July 1918. Graduated from Johns Hopkins University, Baltimore, Maryland, 1938. Married: Frances Holmes Burson; one daughter and one son. Freelance radio writer following college; writer and producer, radio station WABC, New York; co-founder, with Mark Goodson, Goodson-Todman Productions, 1946, which produced game shows for television; expanded Goodson-Todman enterprises to form Capital City Publishing, which included Ingersoll newspaper group and other publishing holdings. Died in New York, 29 July 1979.

GOODYEAR PLAYHOUSE
U.S. Dramatic Anthology

Goodyear Playhouse, a highly prestigious American program of live, one-hour plays, appeared on NBC from 1951 to 1957. Its original title, Goodyear TV Playhouse, was changed in 1955. The program shared its time slot in alternating weeks with Philco Television Playhouse and later with The Alcoa Hour. The varying titles referred to specific corporate sponsorship from week to week, but all three series were produced by the same people, and at times all three series were referred to simply as NBC’s “Television Playhouse.”

Goodyear Playhouse was among several anthology dramas which many television critics associate with television’s “golden age.” Like other anthology programs, each show featured different actors and stories, many of which were developed from Broadway plays and short stories. New stories were also written especially for Goodyear Playhouse by writers who had little or no previous television experience. Because programs were produced live, on small sets, and for nine-inch television screens, they tended to rely upon close-ups and dialogue for dramatic impact. Stories necessarily took place indoors so that sets would seem more realistic. Partly because of such constraints, the plays usually had a strong psychological emphasis, concentrating upon characters rather than action.

During its brightest years (1951–55), Goodyear Playhouse was produced by Fred Coe who had made a name for himself in experimental television productions in the late 1940s. Coe encouraged several young authors to write for the series, allowing them an unusual amount of freedom in their scripts. The writers included Paddy Chayefsky, Tad Mosel, Robert Alan Arthur, Horton Foote, David Shaw, and Gore Vidal, each of whom continued to write for other media as well as television. Similarly, because the series was performed in New York, Coe made ample use of stage actors who later became well-known television and screen stars, Grace Kelly, Rod Steiger, and Leslie Nielsen among them. Though neither actors nor writers were paid much for performing on Goodyear Playhouse, many enjoyed the excitement of live television and the national exposure the series offered. Coe also trained many directors, including Delbert Mann, Arthur Penn, and Sidney Lumet, who would later make names for themselves in television and film.

Although Goodyear Playhouse and other anthology dramas received more critical praise than most television fare of the day, they—like all commercial television productions—were constrained in their content and production styles by desires of advertisers who were careful not to sponsor anything that might offend consumers. Hence, rather than suggest that the source of postwar problems was found in social inequities, television plays rooted problems within individual characters who usually managed to overcome their problems by the denouement. Further-

FURTHER READING

more, television plays were bound by temporal limitations inherent in commercial television. While Coe argued that two commercial breaks were beneficial in that they allowed actors to rest and also simulated stage theater's three-act structure, the sixty-minute format meant that the timing of productions was to a large extent predetermined.

Despite their limitations, Goodyear Playhouse often presented impressive stories, acting, and direction. The most famous of its plays was Paddy Chayefsky's Marty (24 May 1953), starring Rod Steiger as a middle-aged, lonely butcher and Nancy Marchand as an unattractive school teacher whom he meets at a dance. Marty was perfectly attuned to the limitations placed upon live television drama, subtly and sensitively exploring the emotions of a man torn between family commitments and his need for personal maturation. Marty was later made into an Oscar-winning film starring Ernest Borgnine. Besides Marty, other notable Goodyear Playhouse premieres include Chayefsky's The Bachelor Party (1955) and Gore Vidal's Visit to Small Planes (1955).

In 1954 and 1955, anthology sponsors began to demand more control of their programs. Gloomy personal problems faced by anthology characters did not seem to mesh with bright, optimistic commercials. Sponsors were increasingly turning to series television productions filmed in Hollywood. These factors signaled the demise of anthology programs including Goodyear Playhouse. Fred Coe left NBC when his ideas no longer generated sponsor interest.

When Coe left the series in 1955, ratings dropped, and Goodyear Playhouse was canceled two years later. The series was reprised somewhat from 1957 to 1960 by a half-hour, taped program called the Goodyear Theater. Goodyear Theater was similar in content to its predecessor and again alternated with Alcoa Theater on NBC.

Goodyear Playhouse, along with other live anthology series such as Omnibus and Playhouse 90, set a standard for excellence in television production despite industrial limitations placed upon them. Just a few years after the end of

---

**GRANDSTAND**

**British Sports Programme**

The BBC's flagship sports programme, Grandstand has been broadcast in Britain since the autumn of 1958. This enduring and resourceful programme runs for approximately five hours every Saturday afternoon, pulling together discrete sporting events under one programme heading.

Grandstand was conceived by Bryan Cargill, then a sports producer within the BBC, with the idea of unifying the corporation's live Outside Broadcasts within a single sports omnibus. The sports magazine format had its precedents in both BBC radio and television, and Grandstand joined its sister programs Sportsview (a midweek sports magazine which was presented by Peter Dimmock from 1954 and latterly became known as Sportnight) and Sports Special (a Saturday evening programme of filmed highlights, presented by Kenneth Wolstenholme which aired from 1955 to 1964 when it was replaced by Match of the Day program exclusively dedicated to soccer). These provided a comprehensive sports portfolio without comparison among the ITV companies.

It was Dimmock, then the head of BBC Television Outside Broadcasts, who presented the initial two programmes. He was soon replaced by the sports journalist David Coleman, who from 1958 to 1968 brought a vibrant style and meticulous sporting knowledge to the programme in a decade which saw televised sport in Britain come of age. The role of the anchor has been central to the success of Grandstand, whose structure changes from week to week...
and, on occasion, hour to hour, or even minute by minute. As the public end of a finely tuned production team, the anchor knits together and makes coherent the live and recorded material which alternates between various sports and locations. Since Coleman left the programme in 1968, it is a role only a few broadcasters have been privileged to undertake: Frank Bough (1968–83); Desmond Lynam (1983–93) and Steve Ryder (1993–96).

One of the guiding principles of Grandstand has been to appeal to a family audience, despite being male dominated in terms of its selection of presenters, commentators and sports covered. Indeed, it is between the dichotomy of the sports fan (viewed as predominantly male) and the casual viewer (the family audience) that the presenters and commentators seek to appeal and has given the aforementioned anchors of the programme recognition as talented broadcasters beyond the genre of televised sport. Similarly, the sports commentators, many of whom joined the BBC in the 1950s and 1960s, have become household names in Britain: Peter O’Sullivan (Horse Racing), Murray Walker (Motor Racing), Bill McLaren (Rugby Union), Peter Allis (Golf), Richie Benaud (Cricket), John Motson (Soccer), David Coleman (Athletics), Ted Lowe (Snooker), Dan Maskell (Tennis) and Harry Carpenter (Boxing). These commentators are among the most enduring names in British broadcasting, and although the latter three practitioners of the lip microphone retired from broadcasting in the early 1990s, all remain familiar to the armchair sports fan.

The individuals who have taken on the challenge of presenting the programme have been aware of the need to produce the illusion of a seamless flow of sports entertainment; continuity and slickness being key production values. Without any definitive script, without knowing what is going to happen next, the fronting of Grandstand is recognised as one of the toughest jobs in British television. Yet the complexity of directing several Outside Broadcasts in one afternoon, mixing events and making sure everything significant is captured, has been made to look easy.

Although soccer does not feature as one of the alternating live Outside Broadcasts, due to a historical fear on the part of the soccer authorities that live coverage would affect actual attendance on Saturday afternoons, the sport does figure strongly within the overall news values of the programme. Starting with “Football Focus”, a review and analysis of the previous week’s games and an outlook towards the afternoon’s matches, Grandstand provides a continual update of the latest scores for its viewers. “Final Score”, which concludes the programme, provides a soccer results service which emphasises the up-to-the-minute production values, formatively utilizing the technology of what affectionately became known as the “teleprinter” (later replaced by the “videprinter”). “Final Score” was introduced to the programme not only as a means of informing soccer fans of their teams’ success or failure on a particular Saturday afternoon, but also to provide news of success or failure to the hundreds of thousands of British people who gamble on the football pools. In this respect, Grandstand was the first television programme to take the sports gambler seriously, specifically with regard to horse racing, which is a staple diet of the programme. It combines the coverage of racing events with analysis of race form, betting odds and results.

Between 1965 and 1985 Grandstand had to compete with ITV’s sports magazine programme World of Sport. Initially launched in a joint operation between ATV and ABC, and subsequently produced by LWT, World of Sport took up the same scheduling time as Grandstand. Instead of alternating between Outside Broadcasts it televised sports within a far more structured approach. Its demise was due to the problem of overcoming the regional system of the ITV Network and its failure to encroach on the BBC’s stranglehold on the television rights to the main sporting events. Of central importance, here, has been the BBC’s predominance in the coverage of the “Listed Events”: a set of sporting occasions which have been sidelined since 1954 by the Postmaster General to maintain non-exclusivity in the broadcasting of Wimbledon tennis, the F.A. Cup Final, the Scottish Cup Final, the Grand National, the Derby, Test Cricket in England, the Boat Race, soccer’s World Cup Final, the Olympic Games and the Commonwealth Games. Grandstand has been the vehicle for the coverage of all these events. Therefore, not only has the programme established Saturday as a day of televised sport, but also has created a seasonally shifting, broadcasting calendar of sport, ubiquitously known and familiar throughout the nation.

With the introduction of satellite and cable delivery systems in Britain, and the emergence of sports narrowcasting (most notably Sky Sports), the BBC has found it increasingly difficult to compete for television rights to sport as prices inflate. However, the BBC has maintained its commitment to sport, and introduced Sunday Grandstand (formerly Summer Grandstand when it began in 1981) as a means of extending its scheduled hours of sport, under a title which has become synonymous with quality sports programming.

GRANGE HILL
British Children's Serial Drama

Grange Hill is a successful children's soap opera set in a fictional East London comprehensive school. More controversial than traditional BBC children's dramas, Grange Hill examines how social and political pressures directly affect Britain's school children, rupturing cherished and long held images of sheltered youth and innocence.

The first two seasons concentrated on the lives of a group of dominantly working-class eleven-year-old students who started at Grange Hill Comprehensive in 1978. Bad boy Tucker Jenkins (Todd Carry) was the show's working-class anti-hero. His best friend Benny Green (Terry Sue Patt), a sweet-tempered black boy, battled with the dual problems of racial prejudice and poverty (his father was unemployed as a result of an industrial injury). Although he was a skilled footballer, he was stigmatized by poverty as teachers constantly reprimanded him for wearing the wrong school uniform or the old gym shoes.

When Tucker and friends reached their third year in school, a new generation of children entered Grange Hill. Every two years after this, a new class of younger students would share the limelight with their veteran classmates. The second group of Grange Hill pupils included another anti-hero, Zammo, the Tucker of his generation. A few years later, in the midst of national panic about drug abuse in schools, Zammo became addicted to drugs and glue sniffing. This narrative was conceived in conjunction with a national anti-drugs awareness scheme and was featured on other BBC children's programs like Blue Peter to educate children on the dangers of illegal drugs.

Generally, Grange Hill was not well received by parents and critics who condemned its images of worldly, disrespectful and disillusioned students. Children, on the other hand, found the series a little too idealistic. After the first season, producer Phil Redmond changed the tone of the show in

---

response to children who complained that "things weren't tough enough." In all probability, the show would have been controversial as it engaged with an issue at the forefront of public debate—comprehensive schools. Labour Government policy mandated that these mixed ability schools would replace the two tier system of grammar and secondary modern schools by 1980. Comprehensive schools came to represent both utopian and dystopian visions of the nation's future. At the center of it all were the children, a disenfranchised group unable to participate in the molding of their future. Throughout the years, Grange Hill has explored this theme, the idea that children engage with and are affected by politics even though the public tries to protect them or deny their interest in social matters.

Phil Redmond's Grange Hill spinoffs continued to explore how government policy affected Britain's youth. Tucker's Luck (BBC 2, 1983–85) was aimed at slightly older children and teenagers and dealt with the problems facing working-class youth with few academic qualifications (like Tucker and his friends) in a world of growing unemployment. This series was neither as popular as nor as controversial as Grange Hill largely because it was shown against the early evening news on both BBC 1 and ITV.

GREECE

In Greece, television appeared in 1966, surprisingly late compared to Ireland (1960) and Portugal (1955), two of the European countries with whom Greece has a more or less equal living standard and a few other social affinities. The first national network was EPT, a state monopoly which owned the three national radio stations. A second network (YENEA) was created in 1968 and operated under military control. Since Greece was under a junta regime from 1967 to 1974, this second network served as the official organ of the military government. During this first period, the two channels offered a program of about seven hours a day, beginning about 5:00 or 6:00 P.M. with rather inexpensive American children's shows, usually cartoons. The program schedule continued with "family shows" (Dennis The Menace, Hazel) which normally had been hits in the United States during the late 1950s and early 1960s and belonged
to the kiddie hour. For the first three or four years the networks were supplied with popular, if somewhat old, American sitcoms (such as *I Love Lucy*), series (such as *Peyton Place, Combat, Bonanza, Mannix, Hawaii 5-0, The Fugitive*), and crooner shows (Tom Jones, Shirley Bassey, Andy Williams, Diahann Carroll). This description of television hardly changed radically in the following years. In the late 1960s and early 1970s Greece was isolated from Europe (it did not become a member of the Common Market until May 1979), and lived under American influence. Nevertheless, around 1970 Greek series started to be made and were shown with enormous success. Perhaps the most successful ever were the bluntly propagandistic *Unknown War*—a purely military product, financed by the army—and *The Strange Voyager*, a pompous, pseudo-noir series with an incongruous plot.

The booming Greek movie industry, which had reached its peak in the 1967–68 season (118 films and four million moviegoers), started to decline soon after. Some 50% of the moviehouses closed in only five years and the local movie moguls (notably Philopoinimin Finos, Spentzos and Zervos) provided the networks with countless innocuous old movies which became a considerable part of the program. From 1966 to 1974 Greek comedies (mostly farces but also comedies of manners), "urban" tear-jerkers, bucolic tear-jerkers and heroic war adventures were sold to the networks and shown in prime time. (The most popular of these movies were shown on Saturday evenings, the traditional movie time for Greeks.) In 1969 and 1970 a "new" movie genre emerged, a kind of grotesquely tasteless musical (in color), which made its way to the small screen. Thus, in the early 1970s, Greek cinema production and audiences tended to shrink pathetically while both networks thrived despite heavy censorship, poor taste and a low technical level.

Although the technical know-how was, not amazingly, deficient, early Greek television was not short of stars. People who had worked successfully for the radio and the stage revue excelled as television hosts although they grossly imitated their American counterparts and were too willing to collaborate with the military authorities. Nikos Mastorakis was the TV personality *sine qua non* of the dictatorship years.

The main income of EPT came from the so-called contribution of the citizens which was (and still is) incorporated into the bi-monthly bill of the ΔΕΗ (the National Electricity Company). This method of financing the state monopoly seems unique worldwide: the "contribution" is added automatically to the bill even if one does not possess a TV set. A supplementary income came from commercials but TV advertisement was by no means the colossal business it is today. Spots in the actual meaning of the term were unthinkable. Programs were never interrupted for the sake of a commercial, rather they just preceded programs in very modest quantities. Besides, 70 to 90% of the TV commercials were imported, as were the products they promoted.

There were a few differences between the two networks: for example, YENEA was better managed, had a very "populist" program, and its general expenses were covered by the Department of Defence; it also had higher ratings (two-thirds of the viewers) attracting the biggest portion of commercials. EPT was disorderly—the epitome of bureaucracy in the public sector—and its program was high-brow and pretentious: 80% of its income (10% of which came from commercials) hardly covered its general expenses (which included a sluggish crowd of civil servants mostly appointed in a debauch of favoritism). Only 10% of the income was conveyed to the program which was more or less a random matter.

Another emblematic feature of early Greek television was its fondness of sports which soon enough turned to an obsession. The junta years were clearly marked by a soccer-mania of Latin American style, a fact that television nurtured and exploited to the extreme. It took only six years for television to displace cinema (in the 1972–73 season, only 60 Greek movies were shot and there was a 30% decrease in the box-office sales) and to raise soccer to a matter of national pride.

In July 1974 after the Turkish invasion of Cyprus, the Greek Junta collapsed. It was a time of jubilation. Greek life teemed with new plans and promises, and with new faces too, as many exiled intellectuals came back home carrying a European aura. For several years political discourses seemed to prevail; there was time and space for little else. Modern Greece was a country that had never enjoyed basic civil rights and it plunged into politics fervently. The TV networks were more or less delivered to the center-right wing government, elected by an unprecedented landslide in November 1974. Nevertheless, an equally phenomenal procedure of modernization was undertaken. Roviro Manthoulis, a Greek filmmaker who lived in France, was the main figure of this effort concerning EPT. As an executive manager of EPT he tried to alter structures and improve programs, in spite of state interventions, continual internal crisis and bad publicity from the ultra-conservative press.

From 1974 to 1981 (the year when the Social Democrats came into power), Greek television came of age. Although Roviros Manthoulis resigned in January 1977, he left a very useful legacy of honesty and competence. During this period the correlation between EPT and YENEA changed dramatically: in the last semester of 1974 YENEA lost millions of viewers while the ratings of EPT increased by 40%, which seems like a world record in the history of the media. In the mid-1970s there were six million viewers (in a total population of nine million). Approximately 2.4 million watched EPT in December 1975, while in April 1976 they reached 3.3 million. On the other hand, the ratings of YENEA fell by 25% partly because it obviously lagged behind in terms of modernization, partly because it was connected to the hateful colonels (a fact that had not prevented it from blossoming as it did throughout the junta years).
A tacit war—which at times became very explicit—broke out between the two networks. The military management of YENEA accused EPT of illicit rivalry but the charge evaporated in a special meeting of both managements with the Prime Minister. This rivalry resulted in a palpable improvement of both channels although too many projects (the co-production of movies according to the French and British pattern, the shooting of 50 educational documentaries), were abandoned for reasons of idleness and indifference.

In October 1981 Andreas Papaandreu and the Social Democrats (PASOK) came to power and for a short spell Greeks enjoyed good will politics which were also applied to the television. Color television drew new young audiences who had been brought up with color movies, and video sales skyrocketed. The old black-and-white programs became an anachronism rerun in early afternoons. YENEA was renamed EPT2 and together with the ex-EPT (now EPT1) formed the so-called Hellenic Television (ET); although they still were autonomous channels, they became barely distinguishable. It was a period of frantic television production: Greek series prevailed, ranging from downright trashy to first rate (as were the Melody of the Dawn and the Lemon-tree Wood) they were usually adapted from popular Greek novels. The sitcoms and soap operas persisted but they became chiefly Greek whereas the first early afternoon program Good Afternoon succeeded in securing unexpected ratings, making way for numerous early afternoon “live” programs. By 1987 several filmmakers and screenwriters (practically jobless, since only 10 to 15 films were made annually) worked on television. Also, the channels started to participate in the production of movies financed mainly by the Hellenic Film Center, a state organization founded in 1981.

It can be argued that from 1974 to 1987 Greek television tried to follow the European television model. In 1987, although the state monopoly was reaffirmed, it seemed threatened by the foundation of the first free radio station (the station of the City of Athens) which broke new ground and heralded the numerous private stations that eventually reduced the audience of the state stations. In 1988 the first local Thessaloniki-based television network was founded (ET3), a development that did little to save the national television industry from near bankruptcy and public dissatisfaction. At the same time, satellite television was made available through the industrial galaxy Matra, Ariane, Thomson. Yet its impact was short-lived as the foreign language programs appealed to the meager minority familiar with European languages. Traditionally this minority watches little television, satellite or not. Thus, in the beginning, before the Greek networks came to look more like the satellite ones, large audiences went zapping through REL (which showed soft porn and love-strip-tease live shows), RAI (with its typical glamorous and flashy shows), MTV (which remains wildly popular among the young), and Junior (which has a sizable audience of preschoolers). The French TV5, although relatively more interesting than the rest, attracted only the French-speaking part of the Greek intelligentsia as well as journalists who use it as an additional source of political comment. As for CNN, it used to be reasonably favoured among satellite channels, but after the rush of the private national networks it was almost forgotten.

In 1988, the Social Democrat government was accused of corruption. ET1, ET2, and ET3 were savagely criticized and the private channels flourished abruptly, almost overnight. They simply appeared, without soliciting any licence whatsoever. The first was Mega Channel, which belonged to the group “Telelypos,” an association of Athenian newspapers. The New Channel followed, hardly threatening Mega’s supremacy. Despite the existing legislation, they both obtained a “temporary permit”. In 1990 there were already seven private networks: Antenna TV (associated with a group of private investors), Kanali 29 (of the Press group Kouris, an unreserved advocate of the Social Democrats), Tele City, TV Plus (Pireus based), and TV100 (Thessaloniki based). Before long the confusion evoked the “Italian anarchy” of the 1970s; the legislation of 1989 did not define clearly the organization of the Greek televisual landscape. The National Council for Radio-Television, created in 1989 in order to supervise this new industry and formulate opinions on the issuing of licenses, is not independent (as one would assume) from the Department of Communications.

In 1991 the national networks reached their nadir. They employed more than 6,300 civil servants while there was an undefinable number of people who worked at the EPT1 and EPT2 “under contract.” The deficit reached 4 billion drachmas ($172 million U.S.) and the national networks lost the bulk of their viewers; ratings fell under 5% before the sudden prosperity of Mega and Antenna TV. In the same year, a promising new channel began to operate. Seven X was a youth-oriented network that showed choice films, hilarious no-nonsense series (avant-garde American and British) and video-clips (French initially, American later on). For several months it was the alternative to quiz shows, disruptive commercials and action movies; but it soon became heavily indebted and for the last two years it has been showing the same programs endlessly hoping that some entrepreneur will take over. On the other side of the spectrum, several petty political channels sprang up, half ludicrous, half exasperating (like Teletora held by a group of royalists). Nonetheless, in the framework of restraining the galloping television chaos, 26 channels which operated illegally were prosecuted.

Mega Channel and Athenna TV, which control 33% and 30% of the market respectively, have imitated the dubious aesthetics of the Italian RAI Uno and RAI Due regarding the “live” everyday programs (that is gaudy song, chorus line dance, and chat shows with some audience “participation.”) They have also undertaken a huge production of soap operas of the Dynasty and The Bold and the Beautiful style, but have added more sex and violence. Despite their slight differences, these two dominant channels, as well as the two younger ones, Sky and Superstar, materialized quite a few changes that had been brewing in the Greek society for a while. They fomented an outrageously sensationalist sort of journalism which had already dominated the tabloids since 1981. They
 managed to impose sexy and bloody shows (films, reportages, etc.), as well as racy language on a traditionally prudish spectatorship. It should be noted that private channels show hard-core porn late at night (though not very late), and that Greek soap-operas involve, inevitably, nudity, sex deviances, violence, and a deluge of four-letter words. They also imposed an enormous number of commercials that take up more than 30% of television time (time which has also become extravagantly overpriced). They fashioned a new generation of TV stars—talk-show hosts, news reporters of the alleged muck-raker type, voluptuous quiz-show hostesses—who rose to sex-symbol or jet-set status. As a result, an increasing number of young people aspire to media careers. They provided the viewers with a large amount of movies, which caused a slump in video rentals and led to limited success of the cable TV network (Filminet) which offers a variety of mainstream American movies which can be seen on video with a delay of two or three months. They contributed greatly to relatively new behavior patterns which are also introduced by the glossy magazines of the Face, Max, Penthouse, Marie Claire, Top Models generation, attracting large young audiences with lots of pocket money to spend. Peyton Place ethics have been replaced by Melrose Place gloss and a Beverly Hills image of affluence. They turned to markets other than U.S. and Western Europe, buying soap operas from South America and Australia (usually weepies). They established 24-hour television, responding to an apparently keen, long-standing demand. They multiplied and expanded lavish quiz-shows which have become an obsession among lower-middle class audiences. They fueled a profusion of TV and gossip magazines. They established morning programs, such as The Morning Coffee, which replaced morning radio zones. They applied high technology, particularly sophisticated computer technology extensively, if not abusively.

On the other hand, the state networks were compelled to polish their public image (which they have yet to do), and to improve their programs (which they have done to some extent) in order to increase their portion of the market, which now stands at about 12.5%, and preserve whatever remains of their prestige. Although they dwell on out-of-date structures they have begun to show signs of recovery. This is partly due to a kind of satiation and weariness caused by the private networks. As a result, total television audiences diminished by 250,000 in 1994 and show a fairly downward tendency.

GREEN ACRES

U.S. Situation Comedy

Green Acres (1965-71, CBS), in the words of author David Marc, is "as utterly self-reflexive as any program ever aired on network TV." The gifted product of television mastermind Paul Henning, who made his name and fortune on The Beverly Hillbillies, Green Acres was a spin-off created in conjunction with Jay Sommers, based on his original radio series Granby's Green Acres. Despite its folksy origins, and in an age which routinely produced garrulous nags, crusty aliens, flying nuns, suburban witches, maternal jolopies, and coconut-powered shortwaves, Green Acres stands proudly as the furthest point on the edge of television's psychedelic era.

Reversing the narrative hook of The Beverly Hillbillies (city folks come to the country), Green Acres simultaneously managed to nosedive off the edge of the known world. Prestigious lawyer Oliver Wendell Douglas (Eddie Albert) and his socialite wife Lisa (Eva Gabor) trade in their exhausting Park Avenue existence for the simple country pleasures, which they imagine await them wrapped in a cloak of Jeffersonian idealism, glorious sunrises, and the smell of new-mown hay. What they find instead is a consensus reality which flies in the face of Cartesian logic, Newtonian physics, and Harvard-sanctioned positivism. Albert, who made his film debut in Brother Rat opposite Ronald Reagan, takes refuge in the same reductionist platitudes his former co-star eventually learned to trade on quite deftly, but they ultimately prove no match. Meanwhile, Gabor (who with her sisters Zsa Zsa and Magda had by this time been dubbed "mythological" by Dorothy Parker) embraces this new order with a circular instinct worthy of Gracie Allen herself (Henning's long-time employer). Against all odds, Lisa flourishes—coaxing the chickens to lay square eggs, bringing a world-class symphony conductor to Hooterville, establishing a state-of-the-art beauty salon in Sam Drucker's General Store, and of course, perfecting her signature biological weapons-grade hotcakes.

Also populating this wrinkle in critical reason are a healthy cross-section of supporting eccentrics. These include: Mr. Haney (Pat Buttram), the hornswagling con man whose bargains invariably cost the Douglases several times their face value. Buttram once served as Gene Autrey's sidekick, and claims he based his character loosely on Col. Tom Parker, Elvis Presley's legendary shadowy manager, whom he had known as a carnival entrepreneur in the 1940s,
where he ran a booth featuring dancing chickens. County Agent Hank Kimball (Alvy Moore) "discourses on plant and animal husbandry rival those of a semiotics professor" (according to Marc), and personifies a kind of infinite regress, where every empirical statement branches into multiple statements that in turn preclude it, spiraling each new observation back and away from itself like an inductive Escherism. Fred and Doris Ziffle (Hank Patterson and Barbara Pepper; later Fran Ryan) are the beaming parents of Arnold, a 250-pound adolescent pig who watches television, is writing a book, visits Washington on scholarship, and ultimately falls in love with Mr. Haney's pet hound.

Green Acres was canceled in 1971 when CBS consciously targeted a younger demographic audience and purged its so-called “rural comedies.” Its user-friendly absurdism became one of the cornerstones of the mock-patriotic revivalism of the Nickelodeon Channel’s “Nick at Nite” lineup in the early 1990s.

GREENBERG, HAROLD

Canadian Media Executive

Harold Greenberg is one of Canada’s leading television and film entrepreneurs. As chief executive officer and majority owner of Montreal-based Astral Communications, a leading provider of specialty television services, he has been responsible for some of Canada’s most significant successes in television and film production, processing and delivery.

Starting in the photo-finishing business, Greenberg moved into film processing and sound production through an acquisition of Canada’s largest motion picture laboratory in 1968. The processing laboratories, Astral Bellevue-Pathe, established strong ties to major U.S. studios. This purchase represents the beginnings of the current diversified structure of Greenberg’s operations as well as its links to Hollywood. First forays into film production range from the faux-American The Neptune Factor (Daniel Petrie, 1973) to the critically-acclaimed The Apprenticeship of Daddy Kravitz (Ted Kotcheff, 1974). Greenberg also produced Porky’s (Bob Clark, 1981), still Canada’s highest-grossing film of all time. After producing over 30 motion pictures, Greenberg became interested in developing a Canadian pay-tv movie channel. In this way, Greenberg came to television via photo and film processing and production, all of which still play a central role in Astral’s diversified interests.

Astral Communications is a vertically integrated corporation, involved in production, processing, duplication, and distribution of film, television and video. It plays a leading role in Canadian specialty channels. Its first were two premium film channels, the Movie Network (formerly First Choice) and the French-language Super Ecran in 1983. Since then, Astral’s English-language broadcasting ventures in Canada include Viewer’s Choice Canada Pay Per View, the Family Channel, and MoviePix, which is a pay-tv venue featuring films of the 1960s, 1970s, and 1980s. French-language broadcasting includes Le Canal Famille and Canal D, which offers arts and entertainment programming. Astral continues to provide an array of post-production and technical services including dubbing, processing, and printing of film, video and compact disks. In 1994, Astral opened a compact disk and video replication plant in Florida. They have duplication and distribution agreements with Buena Vista, HBO and Barney Home Video for Canada and French-language markets. Distribution deals with U.S. majors have made Astral the Canadian distributor for some
popular American programs. For instance, a joint venture between 20th Century-Fox and Astral controls distribution for NBA Blue and The Simpsons, as well as some Canadian programming. Astral has historically used its Montreal location as a way to bridge both English and French-language markets, eventually giving the company a credible foothold in European ventures (e.g., co-production agreements with TF-1, France 3 and Canal Plus in France, RAI-2 in Italy, Europool in Germany, in addition to a minority holding in France's Canal Enfants).

Despite his internationalist outlook, and Astral's frequent role as a provider of U.S. programming to Canadian audiences, Greenberg has been chair of the Canadian Communications and Cultural Industries Committee, a lobby group of industry leaders who see their operations as fundamental to Canadian cultural sovereignty. In this capacity, Greenberg has repeatedly supported the cultural exemption clause for Canada in the North American Free Trade Agreement. This has brought him into conflict with some U.S. industry figures, including Jack Valenti, president of the Motion Picture Association of America. Astral's current interest in ExpressVu, a Canadian direct-to-home satellite service, echoes Greenberg's corporate nationalism. Greenberg claims that support for the Canadian service over offerings from Power DirectTV, a subsidiary of the U.S. DirectTV service, is fundamental to the protection of Canadian cultural interests. After a brief period of monopoly for ExpressVu, granted by the federal regulator, the Canadian Radio-television and Telecommunications Commission (CRTC), parliament overturned the decision in April 1995, and opened the way for competition in the direct-to-home market, in particular from U.S.-controlled services.

Greenberg has received numerous awards and honours, including the Order of Canada and la Legion d'honneur of France. His Astral Communications is a distinct example of contemporary convergence in the film and television sectors, as well as the synergy developing between broadcasting, theatrical and home distribution and production in Canada.

—Charles Acland

HAROLD GREENBERG. Born in Montreal, Quebec, Canada, 1930. Quit school at 13 to work in uncle's camera store; purchased half of Pathé Humphries Laboratory, 1966; took over Astral Films with help from the Bronfmans and merged them into Astral Bellevue Humphries, a communications empire of production, distribution and Pay TV, 1973; producer and executive producer, Pay TV and films; chair of the board, First Choice Canadian Communications Corp. and Premier Choix TVEC. Recipient: Presidential Proclamation Award, SMPTE, 1985; International Achievement Award, World Film Festival, 1989; Air Canada Award, Academy of Canadian Cinema and Television, 1990; Golden Reel Award.

**GREENE, LORNE**

Canadian Actor

Long before millions of Americans knew Lorne Greene on the popular western series *Bonanza,* he was known to Canadians as the "Voice of Doom," an epithet he acquired as the chief radio announcer for CBC radio from 1939 to 1942, the height of Canada's darkest days of World War II.

Greene's interest in acting and media had begun in his hometown of Ottawa, and gained further impetus when he joined a drama club while studying engineering at Queen's University in Kingston, Ontario. Always seeking a challenge, he joined the CBC radio where his distinctive voice soon propelled him into newscasting. After finishing his military service in 1945, he decided not to return to his job as chief announcer at CBC radio and pursued other interests which eventually led him to co-found the Academy of Radio Arts in Canada and the Jupiter Theatre.

In 1953, like many of his contemporaries, Greene migrated south to pursue his acting career in the burgeoning television industry. He made numerous appearances on various U.S. telecasts such as *Studio One,* *Climax* and *Playhouse 90.* He also made two movies, *The Silver Chalice* and
Tight Spot. After a role in the Broadway production of The Prescott Proposals, he was offered the part in The Hard Man in 1957. In spite of his friends' concerns that a western would limit his appeal, he accepted the role as a way of exploring the genre. It quickly led to another western, The Last of the Fast Guns, and eventually to the small screen and Wagon Train. It was after seeing him in Wagon Train that the producers selected him to play Ben Cartwright in the pilot episode of Bonanza.

The show became a hit despite formidable competition. A Sunday night standout on NBC for fourteen years, from 1959 to 1973, Bonanza rode the television western's biggest wave of popularity. Its stories focused on the lives of widower Ben Cartwright (Greene) and his three sons—all from different mothers—Adam (Pernell Roberts), Hoss (Dan Blocker), and Little Joe (Michael Landon). Each week the family would defend the Ponderosa, the most prosperous ranch outside Virginia City, or some helpless person against unscrupulous outsiders. The formula was common in U.S. television westerns, though Bonanza did differ somewhat from its competitors. Indeed, many critics consider the series to be more a "western soap opera" since it downplayed the violent action and moral ambiguity which characterized "adult westerns" such as Gunsmoke or Cheyenne.

But Bonanza was still engaging and had a large following, particularly among women, who could perhaps find among the Cartwrights a man to appeal to all types. Ben Cartwright was a tough yet wise father who exuded a balance between ruggedness and compassion. Adam was a suave lady's man. The huge Hoss was dim-witted but lovable. All three kept an ever watchful eye on the fresh-faced and hot tempered Little Joe. It was a successful pattern that outdrew audiences for dozens of competing shows. Its "family-oriented" themes also made it popular when the medium was under criticism during congressional hearings on TV violence.

After the end of Bonanza and the collapse of the Western's television popularity, Greene starred briefly in 1978 in the ill-fated Battlestar Galactica, a science-fiction television series about a flotilla of human refugees voyaging to Earth while hunted by the evil Cylons. Despite the interest generated by Star Wars, the series failed to catch on. In the 1980s Greene devoted his energies to wildlife and environmental issues. He collaborated with his son, Charles, and a television series, Lorne Greene's New Wilderness, to promote environmental awareness.

GRiffin, MERv
U.S. Talk Show Host/Producer

Merv Griffin had a series of overlapping careers in show business as a singer and band leader, then as a talk-show host and developer of game shows for television. Griffin’s career as a television talk-show host was associated from the beginning with that of Johnny Carson, the reigning “king of late-night talk” from the 1960s through the 1980s. Griffin’s first daytime talk show on NBC began the same day as Carson’s reign on The Tonight Show, and if Carson was consistently rated number one as national talk-show host, Griffin was for significant periods of time clearly number two.

Carson’s approach to the television talk show had been forged in the entertainment community of Los Angeles in the mid-1950s. Griffin, who came to New York to sign a record contract with RCA in the early 1950s, was subject to a series of other influences. He watched shows like Mike Wallace’s Night Beat and David Susskind’s Open End and socialized with New York’s theater crowd. On his own first ventures into network talk in the mid- and late 1960s, he was interested in capitalizing on the ferment of the era. As surprising as it might be to those who knew him only from
his later tepid shows on Metromedia, the Merv Griffin of the 1960s and early 1970s thrived on controversy. Broadcast historian Hal Erickson credits Griffin with using his "aw-shucks style to accommodate more controversy and makers of controversy than most of the would-be Susskind's combined." Griffin booked guests like journalist Adele Rogers St. John, futurist Buckminster Fuller, writer Norman Mailer, critic Malcolm Muggeridge, and controversial new comedians like Dick Gregory, Lily Tomlin, Richard Pryor and George Carlin. In 1965, in a Merv Griffin special aired from London, English philosopher Bertrand Russell issued the strongest indictment up to that time of the growing U.S. involvement in Vietnam.

As the late-night television talk show wars heated up between Carson, Joey Bishop, Dick Cavett, and David Frost, Griffin entered the fray in 1969 as CBS's candidate to take on Carson in his own time slot. He immediately ran afoul of network censors with controversial guests and topics. Con- cerned with the number of statements being made against the war in Vietnam in 1969, CBS lawyers sent Griffin a memo: "In the past six weeks 34 antiwar statements have been made and only one pro-war statement, by John Wayne." Griffin shot back: "Find me someone as famous as Mr. Wayne to speak in favor of the war and we'll book him." As Griffin recalls in his autobiography, "The irony of the situation wasn't wasted on me; in 1965 I'm called a traitor by the press for presenting Bertrand Russell, and four years later we are hard-pressed to find anybody to speak in favor of the Vietnam war." In March 1970 antiwar activist Abbie Hoffman visited the show wearing a red, white and blue shirt that resembled an American flag. Network censors aired the tape but blurred Hoffman's image electronically so that his voice emanated from a "jumble of lines." The censors interfered in other ways as well, insisting Griffin fire sidekick Arthur Treacher because he was too old, or that he not use eighteen-year-old Desi Arnaz Jr., as a guest host because he was too young.

By the beginning of 1972, Griffin had had enough. He secretly negotiated a new syndication deal with Metromedia which gave him a daytime talk show on the syndicated network the first Monday after any day he was fired. A penalty clause in his contract with CBS would give him a million dollars as well. With his ratings sagging, CBS predictably lowered the boom and Griffin went immediately to Metromedia where his daytime talk show ran for another 13 years. In 1986 he retired from the show to devote his time to highly profitable game shows.

It was in this second arena of the daytime game show that Merv Griffin again influenced commercial television. A self-proclaimed "puzzle freak" since childhood, he began to establish his reputation as a game-show developer at about the same time he launched his talk-show career. Jeopardy!, produced by Griffin's company for NBC in March 1964, became the second most successful game show on television. The most successful game show on television, with international editions licensed by Merv Griffin in France, Taiwan, Norway, Peru and other countries by the early 1990s, was Wheel of Fortune.

Wheel premiered in January 1975. It was a game show in which three contestants took turns spinning a large wheel for the chance to guess the letters of a mystery word or phrase. The show's first host was Chuck Woolery. Pat Sajak took over in 1982, assisted by Vanna White. Sajak and White went on to become household names in the world of television game shows.

In a largely unflattering portrait, biographer Marshall Blonsky describes Griffin as a financially successful but artistically limited individual. The key to Griffin's character, according to Blonsky, was a desperate drive to be accepted by the rich and powerful, and much of his financial success he owed to his financial manager, Murray Schwartz, who he never credited and with whom he parted ways in the late 1980s. However that may be, Merv Griffin did provide controversy and significant competition for Johnny Carson and other talk-show hosts during his long career on television, and possessed what even Blonsky acknowledges to be a genius for creating game shows for television.

1969–72 Merv Griffin Show
1972–86 Merv Griffin Show
Andy Griffith is one of television’s most personable and enduring of star performers. He is perhaps best known as Andy Taylor, the central character in The Andy Griffith Show, which aired on CBS from 1960 to 1968 and consistently ranked among the top ten shows in each of its eight seasons. As a “down home” attorney in the even longer running Matlock (since 1986), Griffith continues to make a unique contribution to television Americana.

The Andy Griffith Show began as a “star vehicle” for Griffith, who had achieved his initial success with recordings of humorous monologues based on a “hillbilly” persona (“What It Was Was Football,” “Romeo and Juliet”), which led to an appearance on The Ed Sullivan Show. He next played the leading role in the Broadway production of No Time for Sergeants, as well as in the film and TV versions. His film debut was in the critically-acclaimed A Face in the Crowd (1957), directed by Elia Kazan, followed by Onionhead and the film version of Sergeants (both in 1958).

Having informed the William Morris Agency that he was ready to try television, Griffith was put in contact with Sheldon Leonard, producer of The Danny Thomas Show. A Danny Thomas episode was built around Thomas getting stopped for speeding by Griffith, and this show served as the pilot episode for the Griffith show. Astutely, Griffith negotiated for 50% ownership of the new program, which enabled him to be a major player in the program’s creative development. Griffith’s creative vision took a very different approach to TV comedy, in which place, pace and character were equal and essential contributors to the overall effect. Scenes were allowed to play out with almost leisurely timing, with character development occurring alongside the humor. Another key element to the program’s success was the casting of Don Knotts as Deputy Barney Fife. As the inept but lovable sidekick, Knotts took on the key comic role, enabling Griffith to play a more interesting and useful “straight-man” role. In this capacity Griffith’s “Lincolnesque” character was allowed to develop—a character more appropriate to the role of single-parent father, and by extension, father to the small town of Mayberry. The Griffith-Knotts team became the driving comic relationship of the show, and the writers built most of the humorous situations around it.
Griffith left the show in 1968, feeling that he had contributed all he could to the character of Andy Taylor. Ironically, the program reached the number one position that year. The show's sponsor, General Foods, was not ready to relinquish the successful vehicle, however, and a transitional program aired introducing a new lead character and a new name: Mayberry, R.F.D. Griffith remained as a producer, and the ratings strength continued as several of the supporting characters stayed on. The program was canceled in 1971, when CBS decided to abandon its rural programming for more "relevant" shows targeted at younger viewers.

Griffith's career subsequently stalled. Two series attempts, The Headmaster and The New Andy Griffith Show, did not make it past their initial runs. A number of made-for-TV movies followed, many of which involved crime scenarios (and some in which he even played the villain). In 1981 Griffith received an Emmy nomination for Murder in Texas, in which he played a father who presses a court case against the son-in-law accused of murdering his daughter. Griffith played a prosecuting attorney in the miniseries Fatal Vision (1984), a performance which so impressed NBC's Brandon Tartikoff that a series was proposed utilizing an attorney as the main character. A pilot film for the show, Diary of a Perfect Murder, aired on NBC on 3 March 1986, and Matlock began airing in September 1986. Griffith plays Ben Matlock in the hour crime drama, a criminal defense lawyer whose folksy demeanor belies his considerable investigative and courtroom abilities. Many of the regulars from The Andy Griffith Show make appearances on Matlock, continuing a Mayberry legacy spanning over thirty years.

**GRIFFITHS, TREVOR**

British Writer

Trevor Griffiths is one of Britain’s most politically incisive television dramatists. He has combined television and film writing with a highly regarded theatre career because he has wanted to reach the maximum possible audience with his Socialist values.

Never a political propagandist or polemicist, Griffiths has been the leading international television proponent of “critical realism”. This distinguishes between what Griffiths calls the “materialism of detail” (the surface appearance of the world) and the “materialism of forces” (the dynamic structure of a world determined by differences of power between genders, classes and ethnicities). Thus, for example, in his miniseries *The Last Place On Earth* (or *Scott of the Antarctic*, screened on commercial television in Britain) Griffiths incorporated the familiar surface details of the Scott/Amundsen competitive quest within the deep structure of what his script calls the “historical conjuncture” of 1910. On the one hand, Griffiths imagines Scott’s journey as among the dying throes of a failing British Empire (with parallels between the “heroic defeats” of Scott and the World War I fields of Flanders and Gallipoli). On the other hand, Amundsen’s journey is related to the nationalism of a newly independent nation constructing its identity out of its successful explorers.

Griffiths’ commitment has always been to reinventing form (the country house, hospital, and “high art” genres, for example), at the same time revealing the real agencies and structures of history. This genuinely creative radicalism has led to many conflicts with Hollywood (he came close to taking his name off *Reds* after disagreements with Warren Beatty), as well as to differences of view with other Socialist television workers (Ken Loach). But in a group of extraordinarily and critically creative British television dramatists who began work in the 1960s, Trevor Griffiths is unquestionably paramount in the systematic intelligence with which he has blended critical theory and popular television.

The intellectual clarity of his work has also offered the television scholar the unusual opportunity of tracing the quite specific transformations his work undergoes as it encounters the generally more conservative and conventional work practices of set and costume designers, directors, producers, and so on. The analysis of the production of Griffiths’ *Sons and Lovers* by Poole and Wyver, for example, indicates the way in which his counterreading of Lawrence’s classism was itself subverted by the unthinkingly naturalistic assumptions of costume design, as well as the “high art” visual flourishes of directors making “BBC classics.” Similarly, Tulloch, Burvill, and Hood have explored the problematic path of Griffiths’ *The Cherry Orchard* through conventions of acting, lighting, and set design.

During the late 1980s and 1990s, an increasingly conservative British institutional establishment made it harder for Griffiths to bring his projects to air. Also, the fragmentation of television through pay-TV and the proliferation of channels led to some change in his view that television was the vehicle of mass public education. In response, Griffiths worked less for television and made important returns to the theatre (with formally innovative plays about the Gulf War and Thatcher’s Britain). However, he continued to work in television, with a play on Danton, *Hope in the Year Two*, using the moment of the play’s production (the breakdown of Communism) as a stimulus to rethink issues of Socialism.

by going back beyond "one revolutionary wave" (the Russian, where he focused some of his earlier works) to another, the French Revolution. This resistance to the stale "common sense" conventions of the media via new historical and formal exploration is typical of Griffiths. Like his unflinchingly tough lead character of Comedians, Gethin Price, Trevor Griffiths retains an undiminished energy for investing any interstices within popular culture with new and unsettling forms. As such he continues to be a master of "strategic penetration" as politics, media institutions, and television genres continuously change their historical forms.

FURTHER READING
Australasia has produced few media moguls and even fewer who are known outside the country. The most remarkable has undoubtedly been Rupert Murdoch but not far behind is the figure of Reg Grundy. And like Murdoch, Grundy's path has been ever upward.

Grundy was born in Sydney, where for ten years he worked in radio as a sporting commentator and personality. He developed a radio game show, Wheel of Fortune, which he transferred to television in 1959. He had earlier realised the importance of having several programs in production at any one point in order to stay in business. Appearing as compere as well as producing Wheel, and realising that U.S. network television was a ready source of program ideas in the area of game shows, he began to adapt programs such as Concentration and Say When for Australian television. He suffered two lean periods over the next decade when all his shows were canceled, but by 1970 his business empire was starting to take shape.

The foundation of this enterprise was game shows and by 1970 his company was starting to turn a handsome profit. For Grundy, the economics of television game shows were such that it was possible to sell variants of a game show on a regional or state basis as well as selling on a national basis. By this stage he was displaying the two qualities that made him unique among Australian television packagers. The first was a capacity to spot and hire talented workers who would serve him well as managers and producers. As his company grew, he turned much of the running of things to these employees. The second element of his genius lay in his ability to quickly recognise the value of particular program formats so far as programming and audience appeal were concerned. Increasingly Grundy was to concentrate on searching for new formats, paying particular attention to game shows on American television. By the late 1970s trade in program formats was becoming more formalised with the adaptation of licensing arrangements. By then Grundy had established a firm relationship with the Goodson-Todman group in the United States and had first call on their many television game show formats for adaptation in Australia and the Pacific.

In the late 1970s Grundy's company, now known as the Grundy Organisation, began to purchase game show formats in its own right. Among the first was Sale of the Century. In the meantime the company had also become established in the area of drama production, beginning in 1974 with Class of '74 and continuing into such serials as The Young Doctors, The Restless Years, Prisoner, Sons and Daughters and Neighbours. Having a second economic anchor in drama has made the company enormously secure so far as its finances was concerned.

Several elements now combined into a logic of offshore development. Having long outgrown its Sydney base and produced game shows for broadcasters both nationally and in other regions, there seemed to be no reason why the company should not expand its productions into other territories. The fact that many of its game shows had come from elsewhere in the first place meant that the company always had an implicit "internationalism". The large cash flow from the game shows and the dramas meant that the company had the resources to establish offices elsewhere. In addition, after 1980, the company also benefited from the expanding overseas market for Australian television drama. To facilitate this trade, the company appointed an independent agent to handle the distribution of its programs and later set up its own distribution arm. Finally, the company was also building up its catalogue of formats, both through purchase from elsewhere as well as those it had developed itself.

The 1980s and the 1990s outline the story of the Grundy company as an increasingly transnational organisation. The company set up a production office in Los Angeles in 1979 and by 1982 had programs in production
in the United States, Hong Kong, and Brunei. The establishment of permanent offices in multiple territories, however, is not part of its long-term goal. After all, in Australia, the company had opened and closed offices in particular state capitals as the demands of production had dictated. The same logic has tended to operate internationally. The key to the transnational operation of Grundy transnationally has lain in the ownership and control of formats both in game shows and drama serials. Grundy has typically sought a local production partner in a particular national territory and this co-production strategy has had three important consequences so far as the company is concerned. It allows Grundy to act in a quality-control role in relation to production; it guarantees that the local production company will establish and maintain the "indigenisation" of the program format; and it enables Grundy to retain control of the format for other territories. Distributing its large packages of drama serials, especially those produced in Australia, ensures that the company has a "calling card" when it seeks to enter new territories.

Nevertheless the company has found it important to establish offices in particular regions. In 1983 the company was re-structured with Grundy World Wide, headquartered in Bermuda, as the parent company. To serve its European operation, the most important sector of its activities, the company has an office in London. It also has permanent offices in Chile to anchor its Latin American operation and an office in Singapore that services Asia. Its Los Angeles office has had a major function in developing new game show formats both for the United States and also for other territories, most especially those in Western Europe.

Where is Reg Grundy in all of this? The answer is that until very recently he was the driving figure behind the very highest executives in his organisation, always aware that good executives and new, attractive formats were the lifeline of his organisation. Unlike a Rupert Murdoch, however, he had no offspring to groom as successors. In 1995 he sold Grundy World Wide to the Pearson International for $386 million (U.S.). The sale saw his executives remain in place, continuing to expand the company. This was likely to accelerate, given that Pearson Television already held the format catalogue of Thames Television. Grundy meanwhile, from his home in Bermuda, through his private investment company, RG Capital, was reported to be seeking shares in several Australian television and radio stations.

—Albert Moran

REG GRUNDY. Born in Sydney, Australia, 1923. Educated at St. Peter's College. Married: Joy Chalmers. Sports commentator and time salesman, Sydney radio station 2CH; host, radio quiz show, 1957, which he subsequently took to television TCN 9, 1959; founder, Reg Grundy Enterprises, 1960; leading producer of game shows in Australian television; expanded into production of drama serials, from 1973, including The Young Doctors, The Restless Years, Prisoner and Neighbours; company reorganized as Grundy Organisation, 1978; opened its first overseas office in Los Angeles, 1979; Grundy re-located company to Bermuda, 1982; sold the television company to Pearson Television, United Kingdom, 1995.

GUNSMOKE

U.S. Western

Gunsmoke, America's longest running television Western, aired on CBS from 1955 to 1975. In 1956, its second season on the air, the series entered the list of top ten programs on U.S. television and moved quickly to number one. It remained in that position until 1961 and in the top twenty until 1964. Following a shift in its programming time in 1967, Gunsmoke returned to prominence within the top twenty for the next seven years, dropping out only in its final year. From 1987 to the present there have been four Gunsmoke "reunion" programs, presented as two-hour, made-for-television movies.

This exceptionally successful program is often referred to as the medium's first "adult Western." The term is used to indicate differences between the Hollywood "B" Westerns and versions of the genre designed for the small screen in the 1950s and 1960s. Without recourse to panoramic vistas, thundering herds of cattle, and massed charges by "Indians" or the United States Cavalry, the television West-
ern often concentrated on character relationships and tense psychological drama. *Gunsmoke* set the style and tone for many of these shows.

Set in Dodge City, Kansas, in the 1890s, the series focused on the character of United States Marshall, Matt Dillon, played by James Arness. The part was designed for John Wayne, who chose not to complicate his still-successful film career with commitment to a long-term television contract. Wayne, who appeared on air to introduce the first episode of *Gunsmoke*, suggested the younger actor for the lead role. The tall, rugged-looking Arness, who until this time had played minor film roles, became synonymous with his character during the next twenty years.

Surrounding Dillon were characters who became one of television’s best known “work-place families.” Kitty Russell (Amanda Blake) owned and managed a local saloon, The Longbranch, and over the years developed a deep friendship with Dillon that always seemed to border on something more intimate. Doc Adams (Milburn Stone) represented science, rationality and crusty wisdom. His medical skills were never questioned and he patched up everyone on the show, often more than once. Dennis Weaver portrayed tender-hearted and gullible Chester Goode, Deputy Marshall. Chester’s openness and honesty were often played against frontier villainy, and his loyalty to Dillon was unquestionable. When Weaver left the show in 1964 he was replaced by Ken Curtis as Festus Hagen, a character equally adept at providing humor in the often grim world of Dodge and a foil to the taciturn and sometimes obsessive professionalism of Dillon. Burt Reynolds appeared on *Gunsmoke* from 1962 to 1965 in the role of Quint Asper.

While *Gunsmoke* had its share of shoot-outs, bank robberies, cattle rustlings, and the like, the great strength of the program was the ongoing exploration of life in this community, with these people, in this place, at this time. In *Gunsmoke*, Dodge City stands as an outpost of civilization, the edge of America at the end of a century. It is one of the central images of the Western in any of its media creations—a small town, a group of professionals, perhaps a school and a church, surrounded by the dangers of the frontier, its values of peace, harmony, and justice always under threat from untamed forces. Such a setting becomes a magnified experiment for the exploration of fundamental ideas about American culture and society. Issues faced by the characters and community in *Gunsmoke* ranged from questions of legitimate violence to the treatment of minority groups, from the meaning of family to the power of religious commitment. Even topics drawn from American life in the 1950s and 1960s were examined in this setting. The historical frame of the Western, and television’s reliance on well-known, continuing characters allowed a sense of distance and gave producers the freedom to treat almost any topic.

The dramatic formula for the series, particularly in later years, was simple. Some type of “outsider”—a family separated from a wagon train, an ex-Confederate officer, a wandering theatre troupe—entered the world of the regular characters. With the outsiders came conflict. With the conflict came the need for decision and action. If violence was called for, it was applied reluctantly. If compassion was the answer, it was available. Often, no solution so simple solved the problems. Many sides of the same issue could be presented, especially when moral problems, not action and adventure, were the central concerns. In such cases *Gunsmoke* often ended in ambiguity, requiring the ideas and issues to be pondered by viewers. As the series progressed into its last seasons, it became highly self-conscious of its own history. Characters explored their own motivations with some frequency, and memories became plot devices.

In the history of American popular culture, *Gunsmoke* has claimed a position of prominence. Innovative within traditional trappings, it testified to the breadth and resilience of the Western genre and to television’s ability to interweave character, idea and action into narratives that could attract and compel audiences for decades.

—Horace Newcomb

Barbas, SuzAnne, and Gabor Barbas. Gunsmoke: A Complete History and Analysis of the Legendary Broadcast

GYNGELL, BRUCE
Australian Media Executive

Bruce Gyngell is best known by the general public in Australia for being the first face on television. When the commercial station Channel 9 in Sydney made the first broadcast in September 1956, Gyngell was the announcer who appeared to report the fact that television had arrived. His career has been a remarkable and unique one in that he trained in the United States, has operated in all spheres of the industry in Australia and has also played a significant role in television in the United Kingdom.

Gyngell’s remarkable career cannot be understood without understanding the structure of television in Australia. From 1956 until 1980 when the national multi-cultural network SBS (Special Broadcasting Service) was established, the Australian television system was divided into two sectors. The ABC (Australian Broadcasting Commission, later Corporation) was modeled loosely on the BBC. A commercial sector, first consisted of two networks (Nine and Seven) and later, in a controversial move, was joined by a third, the Ten Network. Because Australia had a small population (then around 15 million) spread over a very large land mass, three commercial networks were thought to be too many to be viable. Two of the commercial systems were owned by print media barons from their beginnings, and in 1980 the third, Network Ten, also fell into the hands of a print media owner, Rupert Murdoch. While there was fierce competition among the three commercial networks, there was also collusion. Programs were acquired from U.S. suppliers, for example, in a manner that would not drive up prices for any individual broadcaster. Ultimately, Australia has been able to maintain all three commercial networks because traditionally there has been a high level—until recently, more than 50%—of imported programming. But

See also Gender and Television; Westerns
foreign programming does not by itself make for popularity. It has been the mix of local and overseas material which has led to strong ratings, and Gyngell’s skill as a programmer contributed to the successes of the stations with which he was involved.

Having trained in the United States in the mid-1950s, Gyngell became programming director at Channel 9 Sydney in November 1956. Always the showman, he helped to make the Nine Network the dominant force in Australian commercial television. Gyngell’s contribution was built upon a keen sense of audience tastes and an enthusiasm for catering to them. He scheduled a judicious mix of hit American shows such as *I Love Lucy*, *The Mickey Mouse Club* and *Father Knows Best* alongside popular and long-running Australian-made programs like *Bandstand* and *In Melbourne Tonight*. Gyngell developed very strong links with American program suppliers in those years and his U.S. contacts and his strong commercial instincts remained strong assets throughout his television career.

Gyngell became managing director of Channel 9 in 1966 and remained until 1969, when a programming dispute with the owner, Sir Frank Packer, drove him to Network Seven. There he became managing director and led the so-called “Seven Revolution”, a programming strategy successfully designed to put his new network ahead of Nine in the ratings. In 1971, after three years at Seven and at the age of 42, he moved to the United Kingdom and became involved with Sir Lew Grade’s ATV, then a leading U.K. company holding the lucrative Midlands franchise. Gyngell was also deputy managing director of ITC Entertainment, Grade’s production company. From this position Gyngell supported the production of the first episodes of *The Muppet Show*, which the U.S. network CBS was unwilling to wholly finance. Between 1975 and 1977 Gyngell was a free-lance producer, working between the United States and Australia.

In 1977 in a move that was extremely controversial, Gyngell was appointed to be the first chair of a new broadcasting regulatory authority, the Australian Broadcasting Tribunal, established as a result of an inquiry organized by the conservative Fraser government. The former regulator, the Australian Broadcasting Control Board, had itself been replaced because it was seen to have been captured by the industry. Thus, Gyngell’s complete identification with commercial television resulted in a good deal of criticism from observers worried about media concentration, the amount of Australian content and the need for quality on television.

Gyngell was a controversial and high profile chairman. Under his tenure the promotion of children’s television improved—a committee to advise the Tribunal on programs suitable for children was established and quotas for such programming reinforced. But Gyngell also presided over the award of the Ten Network to Rupert Murdoch, a bitterly contested decision. Because of Murdoch’s already substantial media holdings there was fear of his domination of both print and broadcasting media. Gyngell argues the legislation did not permit him to refuse approval of Murdoch’s acquisition, but other commentators saw the incident as affirming Gyngell’s closeness to commercial broadcasters and disregard for the public interest. At the present time there has been no sober reassessment of this period of Australian broadcasting history; the jury is still out on Gyngell’s tenure as chair of the Tribunal.

In 1980 Gyngell moved yet again to a new sector of the Australian broadcasting scene. Responding to determined “ethnic” lobbying the Fraser government had established multicultural broadcasting in Australia in the late 1970s. When the first television station dedicated to this service was established in 1980, Bruce Gyngell was called upon to be its managing director. Given his lack of experience with either multicultural policy or public service broadcasting, this was another controversial appointment.

The beginnings of the SBS, as the new service was called, were naturally fraught with difficulty. The ethnic communities and the government probably expected that the television station would be like the multi-ethnic radio station—an access channel for which ethnic groups could make their own programs. Gyngell had quite a different idea. Instead of a low-grade, well-meaning but amateurish channel, he envisioned a top-class station which would show the best of television from around the world. With programming skills well-honed from watching hundreds of programs
at the annual Los Angeles buying sprees, Gyngell set out to acquire programs mainly from European sources. He programmed SBS with quality programs from Italy, France, Germany, and Spain as well as from the Middle East and Asia. And he attempted as far as possible to match the nationality of the programs with the composition of the ethnic audience in Australia.

SBS television is generally deemed a success story although its audience has never topped 2-3%. In its early days its appeal was limited by its poor transmission conditions (a weak signal on UHF whereas all other television was on VHF) making it accessible only to part of the population. Although it has remained controversial over the years, and though the very late advent of pay television in Australia in 1995 is likely to change its role considerably, the direction generally set by Gyngell has been adhered to and has led to SBS occupying a permanent place in Australia's broadcasting mix.

Bruce Gyngell's next big career move was to become managing director of Britain's first breakfast television service, TV-AM. The franchise was awarded to TV-AM in 1984 and at the end of its first year of operation, when Gyngell arrived, it had accumulated losses of £20 million. He applied the experience he had gained in the more competitive environment of Australian television and began trimming costs, which had the desired effect of turning around the financial fortunes of the service. However, Gyngell's tenure at TV-AM was as controversial as his ventures in Australia. Many observers saw the service's profitability being won at the expense of quality. There was no doubt that TV-AM was the most tabloid-like of any of the British franchises but the material found a willing audience.

The controversy surrounding Gyngell deepened when in 1987 he took on the broadcasting unions in much the same manner as his compatriot, Rupert Murdoch, had challenged the print unions. Needing to trim the coast of his regional studios, Gyngell wanted to replace workers with automated studios. The unions went on strike and for many months Gyngell and other managers ran the service, replacing local programming with a high dose of repeat imported programs. Gyngell eventually broke the strike by installing automated equipment and recruiting new, untrained staff whom he trained quickly, winning in the process a Department of Industry Award for innovations in staff development. No doubt these maneuvers were the basis of his reputed high standing with then British Prime Minister Margaret Thatcher. When TV-AM failed to bid successfully for the breakfast franchise in the 1992 round of allocations, Thatcher sent Gyngell a personal letter of commiseration.

After TV-AM's removal from the British broadcasting scene, Gyngell returned to Australia to become executive chair of his old company, Network Nine. This position was largely ceremonial, however, and he returned to the United Kingdom in 1995 to become chair of the newly merged Yorkshire Tyne Tees service in Britain.

Bruce Gyngell is a consummate television executive who has played a significant role in television in both Australia and Britain. He has worked in both the commercial and public service sectors and as a regulator. He has been an influential figure in Australian television since its foundation and has brought to it a showman's flair, a deep love of the medium and a keen sense of how to please audiences. It is no accident that when pay television finally arrived in Australia in 1995, his was once again the first face to be seen. He was recalled from Britain to announce the arrival of a new era of television.

HAGMAN, LARRY
U.S. Actor

Larry Hagman is best known—throughout the world—for his role as J.R. Ewing, the unscrupulous heir to a Texas oil fortune, on the long-running Dallas, the blockbuster night-time soap opera which still defines the genre. Less well-known is the actor’s earlier work in a variety of media.

The son of musical star Mary Martin, Hagman moved to England as a member of the cast of his mother’s stage hit South Pacific after a variety of early theatrical experiences. He remained in England for five years, producing and directing shows for U.S. servicemen, before returning to the United States and appearing in a series of Broadway and off-Broadway plays.

Hagman’s first television experience began with various guest appearances on such shows as Playhouse 90. He was then cast in the daytime soap opera The Edge of Night, in which he appeared for several years. In 1965, he became a television star playing Major Tony Nelson, astronaut and “master” to a beautiful blonde genie, in the comedy series I Dream of Jeannie, which ran from 1965 to 1970. He subsequently appeared in The Good Life and Here We Go Again and was a frequent guest star on a variety of television programs, until undertaking the career-making role of the crafty, silkily charming villain J.R. Ewing in 1978.

Hagman’s role as the ruthless good old boy of Southfork would be indelibly associated with American cultural and economic life in the early 1980s. Over the course of 330 episodes, Dallas featured an American family beset by internal problems, many originating in the duplicitous schemes of its central figure, J.R. Ewing, who was a far cry from television’s previous patriarchs. Viewers who tuned in could expect a weekly dose of greed, family feuds, deceptions, bribery, blackmail, alcoholism, adultery, and nervous breakdowns in the program that became, for a time, the second longest-running dramatic hour in prime-time history (after Gunsmoke). The show’s blended themes of sex, power and money also sold well worldwide. When J.R. was shot in March 1980, the audience totaled 300 million in 57 countries.

Particularly noteworthy was the way in which Dallas made use of the cliffhanger ending. In its “Who shot J.R.?” season-end cliffhanger (the first ever in prime time), fans were left to speculate all summer over the fate of the man they loved to hate and ponder the question of which one of his many enemies might have pulled the trigger. The speculation grew to become an international cause celebre, with the first show of the 1981 season generating Nielsen ratings comparable to M*A*S*H’s season finale, and pointing to the overlooked profitability of high-stakes serial narratives in prime time. Hagman’s J.R. was influential in making greed and self-interest seem seductive, and the characterization inspired countless other portrayals (both male and female) on spin-off shows such as Knots Landing and recent nighttime soap operas such as Melrose Place.

More recently, Hagman has been active in anti-smoking campaigns, producing a videotape entitled Larry Hagman’s Stop Smoking for Life, whose proceeds went to the American Cancer Society. In 1995, the actor was diagnosed with a liver tumor and later underwent a successful liver transplant.

HALEY, ALEX
U.S. Writer

Alex Haley, an African-American writer, is best known as the author of the novel Roots: The Saga of an American Family, from which two television miniseries, Roots and Roots: The Next Generation, were adapted. The novels, loosely based on Haley's own family, presented an interpretation of the journey of African Americans from their homeland to the United States and their subsequent search for freedom and dignity. The novel was published in 1976, when the United States was celebrating its bicentennial.

During the last week of January 1977 the first Roots miniseries was aired by the American Broadcasting Company (ABC). Its phenomenal success surprised everyone, including Haley and the network executives who had "dumped" the program into one week, fearing the subject matter would not attract an audience. Instead Roots garnered one of the largest audiences for dramatic television in the U.S. history of the medium, averaging a 44.9 rating and a 66 share.

The success of Roots went far beyond attracting a large audience, however. The miniseries, and Alex Haley, became a cause célebre. In a cover story, Time magazine reported that restaurant and shop owners saw profits decline when the series was on the air. The report noted that bartenders were able to keep customers only by turning the channel selector away from basketball and hockey and tuning instead to those stations carrying Roots. Parents named their children after characters in the series, especially the lead character, Kunta Kinte.

The airing of Roots raised issues about the effects of television. There were debates about whether the television miniseries would ease race relations or exacerbate them. A
Time magazine article explained that "many observers feel that the TV series left whites with a more sympathetic view of blacks by giving them a greater appreciation of black history." The same article reported that white junior-high school students were harassing African Americans and that black youths assualted four white youths in Detroit while chanting, "Roots, roots, roots."

Haley began his writing career through assignments from Reader's Digest and Playboy magazine, where he conducted interviews. During this time he met Malcolm X, then one of the followers of Elija Mohamad, leader of the Nation of Islam. Later Haley was asked by Malcom X to write his life's story. The result of that collaboration, The Autobiography of Malcolm X, was published in 1965 and sold six million copies.

Roots, Haley's next bestseller, was a fictionalized version of his own search for his ancestral past, which led him to the African village of Juffure, in Gambia. Haley described Roots as "faction," a combination of fact and fiction. Although criticized by some for taking too many liberties in the telling of his journey into his ancestral past, Haley maintained that "Roots is intended to convey a symbolic history of a people."

In the 1980s Leslie Fishbein reviewed previous studies concerned with the inaccuracies found in both the book and television series and noted that Haley glossed over the complicity of Africans in the slave trade. Fishbein also analyzed an inherent contradiction in Haley's work—it centers on the family as an independent unit that isolates itself from the rest of the community and is thus unable effectively to fight the forces of slavery and racism.

Debates about Roots continued into the 1990s. Researchers Tucker and Shah have argued that the production of Roots by a predominantly white group led to decisions that resulted in an interpretation of race in the United States reflecting an Anglo-American rather than an African-American perspective. They also criticized the television version of Roots for transforming the African-American experience in the United States into an "immigrant" story, a narrative model in which slavery becomes a hardship, much like the hardships of other immigrant groups, which a people must experience before taking their place along side full-fledged citizens. When slavery is simplified in this fashion and stripped of its context as a creation of social, economic and political forces, those who experience salvery are also stripped of their humanity.

The tremendous success of Roots can only be appreciated within its social context. The United States was moving away from what have come to be known as the "turbulent 60s" into a era when threats from outside forces, both real and imagined, such as the Middle Eastern Oil Cartel, and instability in Central America, especially Nicaragua, contributed to the need for a closing of ranks.

On one level, then, the program served as a symbolic ritual that helped bring African Americans into the national community. At another, more practical level, it represents the recognition on the part of television executives that the African American community had become a significant and integral part of the larger mass audience. As Wilson and Gutierrez have written, "In the 1970s, mass-audience advertising in the United States became more racially integrated than in any time in the nation's history." These writers point out that during this time blacks could be seen much more frequently in television commercials.

The importance of Alex Haley and the impact of his work on television history should not be underestimated. To fully appreciate the contribution he made to medium, the African-American community and the country, his work must be examined within a context of changing demographics, historical events at home and abroad and, most important, the centuries-long struggle of a people to be recognized as full-fledged members of the national community.

HALLMARK HALL OF FAME
U.S. Anthology Drama

Created by Hallmark Cards to be a showcase around which to market its greeting cards, Hallmark Hall of Fame has become one of the most valued treasures in the history of quality television programming. Hallmark Hall of Fame made its debut on NBC on 24 December 1951, with Amahl and the Night Visitors, the first opera commissioned for television, and continued as a weekly series until 1955. The half-hour series was called Hallmark Television Playhouse during its first two years. Sarah Churchill served as the host of the program during this early period.

Beginning in 1955, Hallmark Hall of Fame has been a series of specials (appearing four to eight times a year throughout the 1960s, two to three times a year thereafter). Hallmark Hall of Fame usually aired around holiday times, in order to coincide with the sale of greeting cards. These specials were usually in 90-minute or 120-minute form, and were adaptations of works by major playwrights and authors (e.g., William Shakespeare, Charles Dickens, George Bernard Shaw, and Rod Serling). Hallmark Hall of Fame specials often featured the leading stage actors and actresses from Great Britain and the United States (e.g., Maurice Evans, Dame Judith Anderson, Alfred Lunt, and Jessica Tandy).

Hallmark Hall of Fame ran exclusively on NBC from 1951 until 1979. The parting was a mutual one for NBC and Hallmark—NBC was disappointed with the low ratings the specials routinely received, and Hallmark was disappointed with poor time slots allotted to it. With the promise of better time periods, Hallmark Hall of Fame moved to CBS for the 1979–80 season. Despite a brief switch to PBS in
1981, Hallmark Hall of Fame continues to air twice a year on CBS. In the 1988–89 season, Hallmark Hall of Fame made its appearance on ABC for the first time, thereby having appeared on all three of the major television networks, as well as PBS.

Hallmark Hall of Fame is one of the most honored programs in the history of television, having won over 50 Emmy Awards, including 10 Emmys for best dramatic program of the year: Little Moon of Alban (1958–59), Macbeth (1960–61), Victoria Regina (1961–62), The Magnificent Yankee (1964–65), Elizabeth the Queen (1967–68), Teacher, Teacher (1968–69), A Storm in Summer (1969–70), Love Is Never Silent (1985–86), Promise (1986–87), and Caroline! (1989–90). In addition, Hallmark Cards has won the Trustees Award in 1960–61 and the ATAS Governors Award in 1981–82. Judith Anderson won her first Emmy for her portrayal of Lady Macbeth in the Hallmark Hall of Fame presentation of Macbeth in 1954, and would win again for the same role when Hall remade Macbeth in 1960–61. Also of note, in 1971, one month after he refused to accept his Academy Award for his portrayal of Patton, George C. Scott accepted his Emmy for his performance in Arthur Miller’s The Price.

HANCOCK'S HALF HOUR
British Comedy

Tony Hancock became the premier radio and TV comic of his generation, due mainly to the long running radio and TV series that both bore the name, Hancock's Half Hour. Hancock's career as a comedian began with performances when he was 16 and continued on radio the following year, before he joined the Royal Air Force in 1942. Following the war he returned to the stage and eventually worked as a resident comedian at the Windmill, a famous London comedy and striptease club in which many of Britain's favorite comedians of the period worked. He reappeared on radio in 1950 in a famous variety series Variety Bandbox, but it was the following year when he joined the cast of radio's Educating Archie that he really came to public notice. His success on the show eventually led to him being offered his own starring series on radio, from 1954, on Hancock's Half Hour.

For Hancock's Half Hour, Hancock was paired with the script-writing team Ray Galton and Alan Simpson; with the comedian they created one of Britain's best-loved and enduring comic characters. The Tony Hancock of the series was a slightly snobbish type with delusions of grandeur and a talent for self deception. The sharp scripts were complemented by the contribution of the supporting cast (Hattie Jacques, Kenneth Williams, Bill Kerr and Sid James) and immeasurably from Hancock himself. Hancock proved a master of comic timing, instinctively knowing how long to hold a pause for maximum effect (similar to Jack Benny in the United States). In 1956, the show transferred to BBC Television and Hancock went on to even greater success.

The television Hancock's Half Hour was a landmark in British television and became the yardstick by which all subsequent sitcoms were measured. On TV, many of the episodes were virtual double handers between Tony Hancock and co-star Sid James, who appeared as a down-to-earth type but still a shady character always with an eye on the main chance. Their partnership proved enormously popular with viewers and critics alike. On TV, Hancock displayed a marvelous talent for facial comedy; by rolling his eyes, crossing his brow in deep concentration, sucking on his lips or puffing out his cheeks, he could suggest any number of internal wranglings. When these expressions were combined with his superb timing, he managed to wring big laughs from the thinnest of lines. But the lines were rarely thin; Galton and Simpson's writing was constantly improving and the series, unlike many in the genre, continued to grow from strength to strength. After making 57 TV episodes of the series from 6 July 1956 to 6 May 1960, Hancock decided he wanted a change in the format. Always convinced he could do better, Hancock was rarely happy with the work he was doing. Against the advice of his writers and producer (Duncan Wood), he insisted that James be written out of the series because he thought they had fully explored the double-act potential. Finally it was agreed and the series returned, now simply called Hancock, for six more episodes.

To emphasise the change in format, the first episode featured Hancock alone in his room delivering a desperate rambling monologue as he struggles to pass the time.

Against all the odds Hancock was a roaring success and those six episodes stand out as the highlight of Hancock's career. One episode in particular, "The Blood Donor", is unquestionably the best-remembered episode of any British sitcom. Hancock, however, remained unimpressed and finally split with his writers Galton and Simpson, complaining they were writing him too poor, too hopeless. (Intriguingly for their next major project the writers went even further "down market" with the rag-and-bone man sitcom Stepney and Son.)

Hancock never found the perfection he was seeking, and often sought solace in alcohol. After struggling to make his mark in films and other TV series, his bouts of depression deepened and eventually he committed suicide in Australia on 25 June 1968.

The joint efforts of William Hanna and Joseph Barbera have had a powerful and lasting impact on television animation. Since the late 1950s, Hanna-Barbera programs have been a staple of television entertainment. Furthermore, a great many of the characters originally created by Hanna and Barbera for the small screen have crossed the boundaries into film, books, toys, and all manner of other media, becoming virtually ubiquitous as cultural icons.

The careers of comedy writer Bill Hanna and cartoonist Joe Barbera merged in 1940, when both were working in the Cartoon Department at MGM Studios. Their first joint effort was a Tom and Jerry cartoon entitled, *Puss Gets the Boot* (1940). Dozens of *Tom and Jerry* episodes were to follow. When the studio closed its cartoon unit, nearly two decades after Hanna and Barbera began working at MGM, the two decided to try their collaborative hand at creating material for television. In 1957, already having gained a solid reputation as animators working in film, the pair successfully approached Columbia’s Screen Gems television studio with a storyboard for *Ruff and Reddy*, a cartoon tale about two pals—a dog and a cat.

The ensuing success of *Ruff and Reddy* as wrap-around segments for recycled movie cartoons (including *Tom and Jerry*) proved to be the beginning of a lengthy career in television animation. In late 1958, Hanna and Barbera launched *Huckleberry Hound*, the first cartoon series to...
receive an Emmy Award. This half-hour syndicated program featured, in addition to the title character, such cartoon favorites as Yogi Bear, Pixie and Dixie, Augie Doggie, and Quick Draw McGraw. This latter character, like numerous others who began their "careers" in one Hanna-Barbera creation, went on to an enormously successful series of his own.

In 1960, when a survey revealed that more than half of Huckleberry Hound's audience was comprised of adults, Hanna and Barbera turned their efforts toward creating a cartoon for prime time. The result was The Flintstones, a series that drew on and parodied conventions of popular live-action domestic sitcoms—most specifically in this case Jackie Gleason's The Honeymooners. The comical premise of a "typical" suburban family living in a cartoon "Stone Age," with home appliances represented as talking animals and frequent celebrity guest stars (authentic voices with caricatured bodies) enabled The Flintstones to attract both child and adult audiences during its initial run on ABC (1960-66). The Jetsons, a "space-age" counterpart to The Flintstones, joined its predecessor in prime time in 1962.

Unlike The Flintstones, The Jetsons would last only one season in ABC's evening schedule. However, in the late 1960s both programs became extremely popular in Saturday morning cartoon line-ups and subsequently in syndication. The programs were so successful as reruns that in the 1980s, 51 new episodes of The Jetsons were produced, as were TV specials and movies based on both The Flintstones and The Jetsons. Flintstones spin-off series for children—including Pebbles and Bamm-Bamm (1971-72 and 1975-76), The Flintstones Comedy Hour (1972-74), and The Flintstones Kids (1986-90)—also have appeared since the original series ceased production.

Other popular Hanna-Barbera series have included children's cartoons such as Scooby-Doo, Where Are You? (1969, plus a number of subsequent Scooby-Doo series), The Smurfs—a concept based on a Belgian cartoon series and first brought to Hanna-Barbera by network executive Fred Silverman (1981), Pac-Man (1982), Pound Puppies (1986), and Captain Planet (1994). As of the 1990s, Hanna-Barbera Productions, now a subsidiary of Turner Broadcasting System, boasts a library of several thousand cartoon episodes. Hanna-Barbera fare accounts for the bulk of the programming on Turner's Cartoon Network cable service. Since the 1970s Hanna-Barbera has produced, in addition to the cartoons, a number of films and specials for television, including The Gathering (1977), The Stone Fox (1987), and Going Bananas (1984), as well as live-action feature films, including The Jetsons: The Movie (1990), The Pagemaster (1994) and The Flintstones (1994).

The long and productive partnership between William Hanna and Joseph Barbera has yielded some of television's most successful and enduring programs. Cartoon series such as The Flintstones, The Jetsons, and Huckleberry Hound are as popular with audiences today as they were when first shown. While this is evidence of the timeless entertainment value of animated programming, it also reflects the astute business sense of Hanna and Barbera and their ability to recognize trends in the entertainment industry.

After decades of exposure to audiences worldwide, many individual Hanna-Barbera animated characters have become so familiar to audiences that they have transcended their original program contexts to some extent. An obvious example is the Flintstones characters—which have achieved international recognition through television series, specials, theatrical film, and their display on every imaginable consumer product (most licensed by Hanna-Barbera).

—Megan Mullen

WILLIAM DENBY HANNA. Born in Melrose, New Mexico, U.S.A., 14 July 1910. Studied journalism and engineering. Married: Violet Wogatzke, 1936; children: David William and Bonnie Jean. Engineer, California, 1931; story editor and assistant to Harman-Ising unit, Warner Brothers, 1933-37; director and story editor (Joseph Barbera was hired a few weeks later), MGM Studios, 1937; director, first animated film Blue Monday, 1938; began collaborating with Barbera as directors of animated shorts for Warners, making primarily Tom and Jerry shorts, 1940; co-head, with Barbera, Animation Department, 1955-57; co-founded Hanna-Barbera Productions, 1957, which, in 1960, produced the first-ever animated prime-time show, with half-hour storyline, The Flintstones, which aired from 1960-66; executive producer, Once Upon a Forest, a 20th Century-Fox release, 1993; directed the ABC specials Yakka Dabba Do and Hollyrock-A-Bye Baby; executive producer, The Flintstones movie, 1994; director (his first solo directorial effort since 1941), Cartoon Network's World Premiere Toons project of the original cartoon short Hard Luck Duck, 1995. Charter member, Boy Scouts of America. Recipient: seven Oscars; eight Emmy Awards; Governor's Award, Television Arts and Sciences; Hollywood Walk of Fame Star, 1976; Golden IKE Award, Pacific Pioneers in Broadcasting, 1983; Pioneer Award, BMJ (Broadcast Music Inc.), 1987; Iris Award—NATPE Men of the Year, 1988; Licensing Industry Merchandisers' Association Award for Lifetime Achievement, 1988; Academy of Television Arts and Sciences Governors Award, 1988; Jackie Coogan Award for Outstanding Contribution to Youth through Entertainment Youth in Film, 1988; Frederic W. Ziv Award for Outstanding Achievement in Telecommunications, Broadcasting Division, College—Conservatory of Music, University of Cincinnati, 1989; named to Television Academy Hall of Fame, 1991. HAPPY DAYS

U.S. Comedy

Happy Days originated in 1974 as a nostalgic teen-populated situation comedy centered on the life of Richie Cunningham (Ron Howard) and his best friend Potsie (Anson Williams), both students at Jefferson High School in 1950s Milwaukee, Wisconsin. The character, of Arthur Fonziarelli, Fonzie, with whom the show is now most associated was originally only fifth-billed. But his leather jacketed, “great with the girls,” biker profile unexpectedly captured the imagination of viewers. Fonzie increased the popularity of the show and actor, who portrayed him, Henry Winkler, and by 1980, “the Fonz” had achieved top billing.

The show presented a saccharine perspective on American youth culture of the 1950s. With rock and roll confined to the jukebox of Al’s Diner, the kids worried over first loves, homecoming parades, and the occasional innocuous rumble. The Cunninghams represented the middle class family values of the era. Minor skirmishes erupted between parents and children, but dinner together was never missed—prepared and served by mother, Marion (Marion Ross), or daughter, Joanie (Erin Moran). There was no inkling of the “generation gap” discourse which was beginning to differentiate youth from their parents in the 1950s, and which was still active in the mid-1970s when the show was created.

One episode pits Ritchie and his friends against Ritchie’s father, Howard (Tom Bosley), by virtue of his support of a business plan that would send a freeway through the teen make-out spot, Inspiration Point. Civil disobedience is suggested by the teenagers’ organization of petitions and picket signs to protest the plan. Fonzie even chains himself to a tree at the site. Yet generational harmony is restored when Ritchie makes Howard realize that he, too, participated in the culture of Inspiration Point when he was young.

Fonzie’s lower-class status, his black leather clothes, and motorcycle, propensity to get into fights, and apparent sexual exploits with multiple women takes advantage of the code of delinquency which social scientists of the period fashioned under the rubric of deviancy studies. But again, Fonzie’s representation had none of the hard edge or angst of a James Dean or Marlon Brandon character and was played more for laughs than social critique. Yet his popular-
the men's restroom in Al's Diner was referred to as his “office.” The Fonz's courting of many women at once meant he was never subject to the kind of romantic involvement and inevitable heartbreak which characterized Ritchie's relationships with women.

The Fonz's style, "my way" bravado, working-class ethos, and loner sensibility differed from the mainstream Cunninghams and was in direct opposition to the upwardly mobile, college-bound, leadership-quality Ritchie. Ritchie, audiences knew, would someday outgrow Milwaukee and leave it behind, but Fonzie had fewer choices, and would stay behind. And perhaps the tension between these two worlds, these two life directions kept audiences watching through the show's ten year run during which time Ritchie and his pals go to college, the army, and even get married.

Despite these contrasts, however, Fonzie and the Cunningham family were never involved in overt conflict. Indeed, by the end of the show, Fonzie had moved into the Cunningham's garage apartment, and though the bemused Howard Cunningham often wondered what was happening "up there," Fonzie was, by this time, a thoroughly domesticated character. His role not only paralleled that of Mr. Cunningham, but those of countless sitcom fathers before him, and he was as likely to dispense careful, family-oriented wisdom, as to suggest rebellion of the slightest sort. But it was always proffered with Winkler's parody-delinquent sense of style, a style that continues to appeal to youngsters in syndicated rerun throughout the world.

Happy Days stands as the first of a string of extremely successful spinoff comedies from producer Garry Marshall. Laverne and Shirley, Mork and Mindy, and others shows helped propel the ABC television network into first place in the ratings battles, and enabled Marshall to move from television to feature film direction.

**HARDING, GILBERT**

British Television Personality

G ilbert Harding was an outspoken English panellist, quiz master and broadcaster, known as "the rudest man in Britain." A former teacher, police constable, and journalist, he began working with the BBC's Monitoring Service in 1939 as a sub-editor. In 1944, he went to Canada for three years to work with the BBC's Toronto office. On returning to Britain in 1947, he began making appearances as a question master in the popular BBC radio-panel game show Round Britain Quiz. He also introduced BBC radio's The Brains Trust and Twenty Questions. From 1951 he became part of the post-war British way of life with his appearances as a grumpy panellist in the highly-successful, long-running television-panel game show What's My Line? Every week he entertained and shocked viewers with his intellect, sharp wit, and rudeness. He often bullied innocent guests if they gave evasive answers, or didn't speak perfect English. After one clash between Harding and chair Eamonn Andrews, the BBC received over 175 phone calls and 6 telegrams from viewers complaining about Harding's appalling behaviour. For over a decade, What's My Line? was...
an institution on British television, and Harding became a national celebrity.

In 1960 Harding agreed to be interrogated by journalist John Freeman on a live television-interview programme called Face to Face. Harding was reduced to tears in front of millions of viewers when Freeman asked about the recent death of his mother. This was, in fact, a deliberate and tactless attempt to "out" him as gay at a time when homosexuality was still illegal in Britain. Harding admitted nothing, but clearly the interview was a distressing experience for him. He confessed on-screen that "my bad manners and bad temper are quite indefensible...I'm almost unfit to live with...I'm profoundly lonely...I should be very glad to be dead." John Freeman later admitted his lack of sensitivity but Harding died shortly after the programme's September transmission on 16 November 1960. He was 53.

Owen Spencer Thomas described him on BBC Radio London's Gilbert Harding in 1979 as "that enigmatic man...was bad tempered and rude, yet his friends counted him as one of the kindest, and most generous."

—Stephen Bourne

GILBERT (CHARLES) HARDING. Born in Hereford, Herefordshire, England, 5 June 1907. Attended Cambridge University. Taught English in Canada and France and worked as a police officer in Bradford, West Yorkshire, before settling in Cyprus as a teacher and Times correspondent; returned to England, in 1936, and joined the BBC monitoring service in 1939, through his skills as a linguist; subsequently worked for BBC, Toronto; overseas director, after World War II; host of and regular guest on radio and television panel shows, 1950s. Died 16 November 1960.

HARRIS, SUSAN
U.S. Writer/Producer

Watching television as she grew up in the 1950s in New York, Susan Harris concluded, as do many viewers, that "anybody could write this." Unlike most who make the claim, however, she persisted in preparing work for television, and by 1969 found a way to present it to the creator of Then Came Bronson, a short lived NBC series. The show needed a script and she sold one. In 1970 Garry Marshall brought her to the anthology series, Love, American Style for which she wrote ten scripts. There she met Norman Lear and ended up writing scripts for his breakthrough series, All in the Family, taking her son with her to the story meetings. Following the Supreme Court's 1973 decision in Roe v. Wade, Lear decided to address the highly charged abortion issue in one of his television programs. Susan Harris wrote the script for "Maude's Abortion," a sensitive and sensible examination of a married couple's choices in light
of the court’s decision. She received the Humanitas Award for her efforts. The Catholic Church, expectedly, disapproved of the story, not the last time Harris would hear from that institution.

During those years she met produces Paul Junger Witt and Tony Thomas and with them formed an independent television production company, Witt/Thomas/Harris, in 1976. For the new company Harris created and wrote Fay, starring Lee Grant, a series essentially canceled by NBC before it aired. (Grant described the NBC executives as the mad programmers.) Harris’ next effort was no less controversial, but far more successful. In 1977 she was the sole writer of the series Soap, which was attacked by Newsweek magazine, Southern Baptists, and Roman Catholics, none of whom had seen it. The butler in Soap was spun off in a new series, Benson and Harris then went on to create and write I’m A Big Girl Now, Hail to the Chief, Golden Girls, Empty Nest, and Good and Evil. After retiring from television she commented in 1995 that her favorite series was Soap.

Harris recalled that on most of the shows with which she was associated before creating her own company, men were writing about women. Maude, she noted, had an all-male staff. By the time she received the Emmy Award for Golden Girls in 1987 Harris had literally changed the face of television comedy. Her female characters were well defined and represented an array of personality types. Working alone, she sparked a revolution as a woman writing about women while providing insight into male personalities as well. On the cutting edge, she drew the wrath of self-styled moralists even as she used wit, satire and farce to provide a new kind of television.

In the past 20 years Witt/Thomas/Harris has grown to become the largest independent producer of television comedy in the United States. Married to her partner, Paul Witt, Susan Harris is now active in community projects and an avid art collector. Her future writing, she believes, will be in feature films.

HAVE GUN, WILL TRAVEL

U.S. Western

Have Gun, Will Travel transplanted the chivalric myth to television’s post-Civil War West. The hit CBS series aired from 1957 to 1963 and was centered on Paladin, an educated knight-errant gunslinger who, upon payment of $1,000, would leave his well-appointed suite in San Francisco’s Hotel Carlton to pursue whatever mission of mercy or justice a well-heeled client commissioned. Paladin was played by Richard Boone, an actor who had risen to TV fame in 1954 with his intense portrayal of Dr. Konrad Styner, the host/narrator of the reality-based hospital drama, Medic.
Have Gun was created by Sam Rolfe and Herb Meadow, two innovative ex-radio writers who had been tipped that CBS was in the market for a cowboy show with a "different" twist. They thereupon fashioned the first truly adult TV Western—a story centered on a cultured gunfighter who had named himself Paladin after the legendary officers of Charlemagne's medieval court. A gourmet and connoisseur of fine wine, fine women, and Ming Dynasty artifacts, Paladin would quote Keats, Shelley, and Shakespeare with the same self-assurance that he brought to the subjugation of frontier evildoers.

Because the concept revolved entirely around Paladin, its success hinged on the ability of the actor portraying him, in creator Rolfe's words, "play a high-I.Q. gunslinger and get away with it" (Edson, 1960). When Western movie icon Randolph Scott (the first choice for the role) was unavailable, the producers turned to Richard Boone who, they were overjoyed to find, actually could ride a horse. Boone's intimidating growl, prominent nose, and pock-marked visage physically distanced him from the standard fresh-faced cowboy hero in the same way that his character's cultured background distinguished him from those prairie-tutored rustics. After watching Paladin muse about Pliny and Aristotle, one television critic marveled, "Where else can you see a gun fight and absorb a classical education at the same time?" (Edson, 1960).

The show's identifying graphic was Paladin's calling card—bearing an image of the white knight chess piece and the inscription, "Have Gun, Will Travel ... Wire Paladin, San Francisco." The responses that these cards generated were brought to Paladin by the show's only other continuing character—an Oriental hotel minion named Hey Boy (Hey Girl in 1960-61 when actress Lisa Lu temporarily replaced actor Kam Tong who had moved to another series). Without an ensemble cast, the entire weight of the series rested on Richard Boone's shoulders. Paladin's mannerisms and motivations had to be what propelled and interlocked the show's episodes from week to week and season to season.

A genuine descendent of Kentucky frontiersman Daniel Boone, method actor Richard successfully met this challenge both on-camera and off, directing several dozen of the later episodes himself. The sophisticated elegance of his character also brought him more loyal feminine fan mail than was received by any of his more photogenic cowboy contemporaries. The show's off-beat quality was further enhanced by its practice of using mainly new writers who had not been drilled in conventional saddlesoap story lines. Have Gun became an immediate hit, ranking among the top five shows in its first season and was the consistent number three program from 1958-61. But by early 1962, Boone was growing weary of the project and felt it had run its course. "Every time you go to the well, it's a little further down," he lamented. "It's sad, like seeing a (Sugar) Ray Robinson after his best days are past. You wish he wouldn't fight any more, and you could just keep your memories" (Newsweek, 1962).

Have Gun's distinctive inverting of the television horse opera provided many memories to keep. In virtually every episode, Paladin would be seen in ruffled shirt, sipping a brandy or smoking a fifty-eight-cent cigar before or after embarking on his latest paid-in-advance assignment to the hinterland. Like Captain Marlowe from Conrad's Heart of Darkness, he was always the brooding observer as well as the valiant, if somewhat vexed, participant. Unlike the archetypal Western hero, Paladin wore black rather than white, complete with an ebony hat embellished by a band of silver conches and a holster embossed with a silver chess knight. He sported a villain's mustache and wasn't enamored of his horse, declining even to justify its existence with an appealing name. And he seemed to relish the adventures of the mind—his chess matches and library—far more than the frontier confrontations from which he drew his livelihood.

As articulator of Have Gun's central premise, its theme song, The Ballad of Paladin, became a success in its own right. Sung by the aptly-named Johnny Western and written jointly by Western, Boone, and series creator Rolfe, the tune was a hit single in the early 1960s. The first words of the lyric encapsulated both the show's motivating graphic and the chivalric roots of its central character:

Have gun, will travel reads the card of a man,
A knight without armor in a savage land.
Occasionally, this unshielded self-sufficiency would cause Paladin (again like Conrad's Marlowe) to turn on his employers when he determined them to be the unjust party. For a nation that, in 1957, was just becoming politically aware of cowering conformity's injustices, this may have been Have Gun's most potent, if most understated, element.

—Peter B. Orlick

HAZEL
U.S. Situation Comedy

Hazel, starring Shirley Booth as Hazel Burke, the live-in housekeeper of the Baxter family, premiered on NBC in 1961. For the program's first four seasons, Hazel worked for lawyer George Baxter, his wife, Dorothy, and their son, Harold. In the fifth and final season, Hazel began to work for George's brother and his family (George and Dorothy were "transferred" to the Middle East for George's work), taking Harold with her from one household to another and from NBC to CBS.

Critics generally found Hazel mildly amusing, though they complained that it was often contrived and repetitive. Despite the mixed reviews, the program made it to the top 25 for the first three years of its five-year run. It ranked number 4 in 1961–62; number 15 in 1962–63; and number 22 in 1963–64. It also held some value with at least a few network producers in that after NBC dropped the show, CBS quickly picked it up. Perhaps CBS was relying too much on the capabilities of stage actress, Shirley Booth. Nevertheless, Hazel held the attention of the American public.

Based upon the popular Saturday Evening Post cartoon strip, Hazel presents stories of Hazel's humorous involvement in both the professional and household business of George Baxter. In the television version, Hazel becomes the figure that, though seemingly innocuous, ultimately holds the household together: the servant, though in a marginalized position, is at the same time, central to marking the well-being of the nuclear family. George, the father figure, competes with Hazel, who often ending up being "right." And Dorothy, described by one critic as "dressing like and striking the poses of a high fashion model," follows in the tradition of glamorous TV moms whose work often gets done by the maid. Also keeping with television tradition is Harold, who plays the part of the "All-American" kid. Completing this family portrait is Hazel. She is characterized as "meddling" and as causing "misadventures" in her attempts to run the household but ultimately it is her job to keep order—both literal and ideological—in the house.

Following in the footsteps of Leave It to Beaver and Father Knows Best, Hazel also proffers an American tale of the suburban family. Furthermore, in the decade in which the most American families brought televisions into their homes, perhaps Hazel brought a sense of stability and appeasement, for this was also a decade of great civil and women's rights advancements.

Throughout television history (as well as the history of film), the representation of the American family is often made "complete" by the presence of the family housekeeper figure. Generally, the "American" family is specifically white American, although a few exceptions have existed such as The Jeffersons and Fresh Prince of Bel Air, in which African American families employ an African American maid and an African American butler, respectively. For the most part, however, "family" has been portrayed as white and therefore the ideology of the family has also been in terms of dominant, white social values. The presence of a household servant therefore, serves to reinforce the status (i.e., both economic and racial) of the family within society.

The significance of Hazel, then, is that it stands in a long history of television programs focused on American families and including their household servants. Beulah in
Beulah, Mrs. Livingston in *The Courtship of Eddie’s Father*, Hop Sing in *Bonanza*, Florida in *Maude*, Alice in *The Brady Bunch*, Nell in *Gimme a Break*, Mr. Belvedere in *Mr. Belvedere*, Dora in *I Married Dora*, and Tony in *Who’s the Boss?* are all characters who occupy the servant’s role. Differences in connotation among the various television servants serves to mark the status of the family for whom they work. More specifically, there are differences between a British butler and an Oriental houseboy, between a Euro-American nanny and a woman of color working as a domestic, marking subtle lines of hierarchy within the family and ultimately, within the larger community. *Hazel* is yet another program in which the household servant demarcates the different roles played within the family according to such factors as gender, age, race, and class.

A current popular program, *The Nanny*, continues this tradition. Here a Jewish American woman works for a wealthy British man and his three children. Unlike maids of color or white maids who are older than their employers, this household servant is portrayed as fashionable, attractive (though still a bit loud), and more significantly, as a potential mate for her employer. It will be interesting to observe and analyze the continuing representation of servants in American television, because, although shifting in form and style, the servant continues to mark the status of a house and the roles of the people working and living under its roof.

—Lahn S. Kim

**HEARTBREAK HIGH**

*Australian Drama Series*

Heartbreak High is a new Australian drama series, aired on the Ten Network in Australia from 1994. It has also appeared on television systems in eleven other countries around the world, including Britain, France, Germany, the Scandinavian countries, South Africa, Indonesia, and Israel. Over a short time, the series has become highly successful, particularly in Europe.

Heartbreak High is notable for breaking with the established formula for successful Australian audiovisual exports. Unlike feature films such as The Man from Snowy River and Crocodile Dundee, or television dramas such as A Country Practice and Neighbours, the series does not work the themes of a perceived Australian innocence and harmonious community. It has emerged from an early 1990s development in Australian film and television which presents a grittier, urban, multicultural picture of contemporary Australian life.

The series is a television spin-off of the feature film The Heartbreak Kid (1993) by the same production company (Ben Gannon Productions). Like The Heartbreak Kid, Heartbreak High is set in an ethnically diverse inner-city high school and thematizes the pleasures and problems of young people growing up in such an environment. It is the first Australian television drama to make a central feature of multiculturalism and so extend to television a trend developed in films such as Death in Brunswick, The Big Steal, Strictly Ballroom, as well as The Heartbreak Kid.

Set in Hartley High, a fictional school in suburban Sydney, Heartbreak High interweaves narratives based on teen romance, conflicts of young people with teachers and parents, and social problems such as racism, teenage pregnancy, alcohol abuse, gay bashing, and abortion. A key character in early episodes is Nick (Alex Dimitriades), an impulsive teenage “heart-throb” from a Greek family background. Nick is a central romantic interest but he must also come to terms with problems such as grief over the loss of his mother in a car accident.

Other major characters are Jodie (Abi Tucker), who comes from a broken home, and is a talented singer and is ambitious to develop a career in the music industry; Rivers (Scott Major), a “disruptive,” anti-authority figure among the students; Con (Salvatore Coco), a “joker” who provides a comic focus; Steve (Corey Page), who finds that he has been adopted and sets out to find his birth mother; and Danielle (Emma Roche) who has an affair with Nick after he breaks up from a longer relationship with Jodie. Among the teachers, the key characters are Yola Futosh (Doris Younane), the school counselor, who has close involvement in helping the students overcome problems; and Bill Southgate (Tony Martin), a conservative authoritarian figure against whom the students rebel. In the second block of episodes, they are joined by Vic (Ernie Dingo), an Aboriginal teacher in media studies. Popular with the students, he teaches them about more than the content of the official curriculum.

Stylistically, Heartbreak High is a fast-paced, realist drama which employs naturalistic dialogue. While teenage romance is an important narrative element, it is structured into rapid sequences and frequently intercut with “harder” content which maintains a strong sense of immediacy and action. Similarly, the series’ emphasis on contemporaneity and relevance to a youth audience is rarely openly stated or didactic. Its topicality rests more on capturing the texture of life of young people than a fictionalization of issues taken directly from news or current affairs.

In its rhythm and editing techniques, Heartbreak High takes its reference from American-produced action or situation comedy, while at the same time taking on more “serious” content generally associated with the slower-paced genres of British or more traditional Australian television drama. It might therefore be seen as a “hybrid” televisual product which has achieved commercial success while presenting a picture of an urban, multicultural Australia which has not previously had widespread international distribution.

HEMSLEY, SHERMAN

U.S. Actor

African-American actor Sherman Hemsley is recognized mainly for his portrayal of the feisty George Jefferson character in the hit television show The Jeffersons, a program he starred in for ten years. Earlier in his life, he aspired to be an actor, but was too level-headed to quit his job as a postal worker to pursue his craft exclusively. Holding onto his job, he managed to maintain affiliations with local dramatic organizations, appearing in various children’s theatre productions. Eventually, Hemsley obtained a transfer to a position with the post office in New York. Here, he became a member of the famed Negro Ensemble Company. He began taking acting lessons, but was becoming discouraged at his lack of progress. In 1969, however, he earned the plum role of “Gitlow” in the highly successful, musical version of Purlie Victorious.

In 1973 Hemsley was “Cat” in the successful stage play Don’t Bother Me I Can’t Cope. It was during the run of this show that he was “discovered” by independent producer Norman Lear. Lear, along with his collaborator Bud Yorkin, produced a string of hit television shows during the 1970s,
including Maude, Good Times, and 1970s television's most notable sitcom, All in the Family.

In 1973, Lear cast Hemsley to play the part of Archie Bunker's upwardly mobile, and militantly black neighbor, George Jefferson. The response to this character was so favorable that two years later, Hemsley was cast in the spin-off series The Jeffergsons. The Jeffergsons became a top-rated television program which aired on prime-time television for ten years. The program focused on the lives of a successful African-American couple, George and Louise Jefferson. George Jefferson was a thriving businessman, a millionaire and owner of seven dry cleaning stores. He lived with his wife in a ritzy penthouse apartment on Manhattan's fashionable and moneyed East Side.

The George Jefferson character was conceptualized as a black equivalent of Archie Bunker. George was intolerant, rude, and stubborn; he referred to white people as "honkies." He was a short, mean, bigoted popinjay who balked at manners. Louise, his long-suffering wife, spent most of her time apologizing for her husband's behavior. Florence, the housekeeper and maid, contributed a great deal of comic relief with her continuous put-downs of George. She was not afraid of his of angry outbursts; in fact she had little regard for him or his tirades. She referred to him as "Shorty", and never missed a chance to put George in his place.

The Jeffergsons was one of three highly successful television sitcoms featuring African Americans in starring roles, in a mostly-black cast program—the first since Amos 'n' Andy. It was the first television program to feature an interracial married couple; it offered an uncommon, although comic, portrayal of a successful African-American family.

Hemsley as a person is quite unlike the high-strung character he has popularized on television. He is a private individual who has managed, even with success, to keep his life away from the glare of public scrutiny. During the height of The Jeffergsons popularity, he spoke of his sudden fame, simply stating that he was, "just getting paid for what I did for free in Philadelphia."

When The Jeffergsons was canceled in 1985, Hemsley went on to star in the 1986 sitcom Amen. In typical Hemsley style he portrayed a feisty Philadelphia church deacon, Ernest Frye. Like George Jefferson, the Frye character was loud, brash and conceited. Amen lasted five years on prime-time television and Hemsley's career continues to flourish. He has appeared as an occasional character or guest in several television programs, including the long-running Family Matters.

Although known mostly for his television work, Hemsley's acting credits include the motion picture Love at First Bite (1979) and the made-for-TV version of Purlie (1981). Years after its cancellation The Jeffergsons still enjoys success in syndication.

FILMS
HENNING, PAUL
U.S. Producer

Throughout the 1960s, Paul Henning was the creative mastermind behind three of the most successful sitcoms then on television: *The Beverly Hillbillies* (1962), *Petticoat Junction* (1963), and *Green Acres* (1965)—all of which were narratively interthreaded, and the first of which was perhaps the most successful network series ever. A perpetual Midwesterner who spent 30 years in Hollywood in both radio and television, his basic country mouse/city mouse formula never veered far from his rural roots. Once those roots were deemed passe by the demographics avatars, his exile from television was both sudden and emphatic.

When a radio spec script Henning had written on a whim was accepted by *Fibber McGee and Molly*, he began a 15-year career as a series staff writer, culminating with *Barns and Allen* on radio and then television, where he became a protege of future *Tonight Show* director Fred de Cordova. On TV, he launched both *The Bob Cummings Show* (1955–59, all three networks), wherein a pre-*Dobie Gillis* Dwayne Hickman assimilates the Southern California decadence of his starlet-addled bachelor uncle through a filter of Midwestern verities.

But it was *The Beverly Hillbillies* (1962–71, CBS) with which he made both his name and fortune. Equal parts Steinbeck and absurdism, the *nouveau riche*-out-of-water Clampetts populated the top-rated program of their premier season, remained in the top ten throughout the rest of the decade, and had regular weekly episode ratings which rivaled those of Super Bowls.

The Clampett clan initially hailed from an indeterminate backwoods locale somewhere along (in author David Marc's words) "the fertile crescent that stretches from Hooterville to Pixley and represents Henning's sitcomic Yoknapatawpha." As explained in the opening montage and theme song, Lincoln-esque patriarch Jed (Buddy Ebsen) inadvertently stumbles onto an oil fortune languishing just beneath his worthless tract of scrub oak and brambles, and pursues his destiny westward to swank Beverly Hills, in the interest of suitable escorts for daughter Elly May (Donna Douglas) and employment prospects for wayward nephew Jethro (Max Baer, Jr.). In tow (in a sight gag from *The Grapes of Wrath*, no less) is Granny (Irene Ryan), carried out to the truck at the last second in her favorite rocker. In this way, the Clampetts inadvertently echoed the fascination of a rural population newly wired for television with the purveyors of TV's content—at least partially accounting for their corresponding popularity.

Meanwhile, Henning quickly moved to fashion several spinoffs with characters in common. *Petticoat Junction* (1963–70, CBS) featured long-time Henning player Bea Benaderet as Kate Bradley, proprietress of the Shady Grove Hotel, a homey inn situated along a railroad spur between Hooterville and Pixley, with her three growing daughters providing ample latitude for farmer's daughter jokes. The show was canceled in 1970 following Benaderet's death.

Then into this homespun idyll, Henning dropped *Green Acres* (1965–71, CBS), a flat-out assault on Cartesian logic, Newtonian physics, and Harvard-centrist positivism. Lawyer Oliver Wendell Douglas (Eddie Albert) and his socialite wife Lisa (Eva Gabor) come to Hooterville in search of the greening of America and a lofty Jeffersonian idealism. What they discover instead is a virtual parallel universe of unfettered surrealism, rife with gifted pigs, square chicken eggs, and abiogenetic hotcakes—a universe which Lisa intuits immediately, and by which Oliver is constantly bewildered.
In their later stages, these three worlds were increasingly interwoven, so that by the time of the holiday episodes where the arriviste Clampetts return to Hooterville to visit kith and kin, including the laconic Bradleys, and intersect with the proto-revisionist Douglases—using Sam Drucker’s General Store as their narrative spindle—television had perhaps reached its self-reflexive pinnacle.

Despite high ratings, both *The Beverly Hillbillies* and *Green Acres* were canceled in 1971 by CBS President James Aubrey (once nicknamed “the smiling cobra”) in the same purge which claimed *Mayberry RFD*, and shows starring Jackie Gleason, and Red Skelton (despite a final season on NBC). The push to cultivate a consumer base of advertising-friendly 18- to 34-year-olds was the same one which ushered in *M*A*S*H*, *All in the Family*, *The Mary Tyler Moore Show*, and, ostensibly, political conscience.

Yet, viewed in retrospect, such shows perhaps perfectly mirrored the times. A pervasive argument against television has always been that its hermetic nature removes it from a social context: Idealized heroes or families and their better mousetrap worlds seem all but impervious to the greater ills of the day. Nowhere is this more evident or egregious (so the argument goes) than in 1960s sitcoms, where a watershed decade elicited programming which seemed downright extraordinary in its mindlessness. But who better than garrulous nags, crusty aliens, maternal jholies, suburban witches, subservient genies, gay Marines or bungling Nazis to dramatize the rend in the social fabric, or typify the contradictions of the age? If so, no one was more adept at manipulating this conceit—nor pushed the envelope of casual surrealism further—than Henning. Not for nothing did button-down visionary Oliver Douglas, whose plans for Cornell School of Agriculture were dashed by his father’s insistence on a Harvard Law degree, lose his first law office job for growing mushrooms in his desk drawer.

Special “Return of” TV movies were created for both *The Beverly Hillbillies* (1981) and *Green Acres* (1990), and a *Beverly Hillbillies* feature film followed in 1992, but none of these, charitably speaking, managed to rise to the challenge.

**HENNOCK, FRIEDA BARKIN**

U.S. Attorney/Media Regulator

Frieda Barkin Hennock served as a Federal Communications Commissioner from 1948 to 1955. Appointed by President Harry S Truman, she was the first woman to serve as a commissioner on the Federal Communications Commission (FCC). In this position she was instrumental in securing the reservation of channels for non-commercial television stations, an FCC decision that enabled the development of the system of public broadcasting that exists in the United States today.

Before her nomination to serve on the FCC, Hennock had been practicing law in New York City. She had, as she told the Senate Committee during her confirmation hearings, no experience in broadcasting other than using radio to raise money for the political campaigns of Franklin
Roosevelt and other Democratic candidates. After her confirmation in 1948, she quickly began to study the technical questions and policy issues facing the FCC, issues that would shape the future of the broadcast industry. Several systems for broadcasting color television were vying for FCC approval. Plans to use UHF frequencies were under discussion. Interference was being reported between signals from the sixteen television stations already on the air. It was clear that more formal allocation plans were needed to assure that all parts of the country would have access to television broadcasts. To allow time to study these issues and others, the FCC announced a freeze on awarding television licenses.

In addition to the technical issues she faced as a commissioner, Hennock became convinced that television had the power to serve as an important educational tool. As the proposed table of television channel assignments was developed during the freeze, however, there were no reservations for educational stations. Hennock was determined that the opportunity to use television for educating the audience not be lost. She wrote a strong dissenting opinion and became an outspoken advocate for channel set-asides.

Anticipating that commercial interests would quickly file for all the available television licenses, Hennock understood the need to alert the public. She consulted with members of the Institute for Education by Radio and the National Association of Educational Broadcasters. She accepted invitations to speak to many civic groups and wrote articles for *The Saturday Review of Literature* and other publications. After she appeared on radio and television programs to discuss the importance of using television for educational purposes, listeners and readers responded with a flood of letters supporting her position. Educators formed the Joint Committee on Education Television and prepared to testify at the FCC hearings.

Hearings on the television allocation plan were held in the fall of 1950. Commercial broadcasters testified that reservations for non-commercial stations were not needed because their programs served the educational needs of the audience. Educators produced the results of studies monitoring those programs. The studies found few programs that could be considered educational except in superficial ways.

Hennock was able to use these monitoring studies and other evidence presented during the hearings to build a strong case for channel reservations. When the FCC published its notice of rule making in March 1951, it included channel reservations for education. Still, it was not clear that these were to be permanent. Hennock wrote a separate opinion urging that reservations for non-commercial stations should be permanent.

In June 1951, President Truman nominated Hennock for a federal judgeship in New York. The nomination proved to be controversial. In spite of strong support from her fellow FCC commissioners and several bar associations, confirmation by the Senate seemed unlikely and Hennock asked that her name be withdrawn.

Back at the FCC, Hennock renewed her commitment to educational television. When the FCC issued the Sixth Report and Order in April 1952, the allocation plan included 242 specific channel reservations for non-commercial stations. Hennock encouraged universities and communities to apply for these non-commercial licenses. She provided guidance on procedural matters, suggested ways to gain the support of community leaders and organizations, and enlisted the cooperation of corporations in providing grants to help these new stations buy equipment. Her belief in educational broadcasting was being realized. In June 1953, the first educational television station began to broadcast. KUHT-TV in Houston, Texas, invited Hennock to speak during its inaugural program. By mid-1955, twelve educational stations were on the air and over fifty applications for non-commercial licenses had been filed.

Hennock was not surprised when her term as FCC commissioner was not renewed. Many of the positions she had taken were unpopular with powerful broadcasters. An outspoken critic of the practices of commercial networks, she criticized violence in television programming and warned about the growth of monopolies in the broadcast.
industry. She wrote many dissenting opinions questioning FCC actions. But as her assistant Stanley Neustadt told oral historian Jim Robertson, when she took a position on an issue "she was ultimately—sometimes long after she left the Commission—ultimately shown to be right." At the end of her term as FCC commissioner, Hennock returned to private life and private law practice.

HENRY, LENNY
British Comedian/Actor

In 1976, at the age of sixteen, Lenny Henry won the British television talent show New Faces, as a comic and impressionist, and he became one of Britain’s best-known personalities. The transitions in his career are indicative both of his personal development and of the changing cultural climate in Britain over the past two decades. Henry began with stand-up comedy which often included racist jokes and impressions. Managed by Robert Luff, he entered the British variety circuit, touring with The Black and White Minstrel Show and the comedy duo Cannon and Ball. Although this was good show business experience, the press tended to focus more on the “novelty-value” of Henry’s blackness rather than on his actual stage performances.

In 1976, Henry was offered a part in The Fosters (LWT 1976–77), British television’s first black television situation comedy. Working alongside established black actors such as Norman Beaton, Carmen Munroe and Isabelle Lucas, Henry learned more about acting and the dynamics of television. When Henry began to make regular appearances on the Saturday morning children’s programme Tiswas and its adult equivalent OTT (Over the Top), his anarchic, irreverent style of comedy gained popularity. Henry was recruited by BBC producer Paul Jackson, for a prime-time sketch show Three of a Kind (1981–83) in which he appeared with Tracey Ullman and David Copperfield.

By the 1980s, Henry’s gift for creating comic characters and witty vignettes of West Indian life in Britain, was firmly established. The nuances of his comedy were gradually changing from straight jokes and blatant impressions to more farcical and chaotic comedy. This was partly influenced by other young rising comics of the time such
as Alexei Sayle, Adrian Edmondson, Rik Mayall, and Dawn French. At this time, however, Henry was best known for his caricatures such as the African television host Joshi Arlog, the cartoonish Rastafarian Algernon, and black politician Fred Dread, all with widely-imitated catch phrases. Many of Henry’s character creations caused controversy and raised the question of whether Henry, as a black comedian, was actually reinforcing already-existing stereotypes of black people. Henry admits that some of the material he was doing at the time “was very self-deprecating, very self-detrimental.”

Henry created a myriad of familiar caricatures but the most popular one earned him his own series, *The Lenny Henry Show* (BBCTV 1984–88). Set in a pirate radio station, the series featured Delbert Wilkins, a Brixton wide-boy, a character created at the same time as the real-life Brixton riots. Henry was influenced by comedians from the United States such as Richard Pryor, Steve Martin and Bill Cosby, and became the first British comedian to make a live stand-up comic film, *Lenny Henry Live and Unleashed* (1989), in the tradition of U.S. comics such as Robin Williams and Eddie Murphy. His live tours are renowned for being chaotic, noisy, and daring, but also for relying on the same collective of characters such as the extravagant soul singer Theophilus P. Wildebeeste and the old West Indian man Grandpa Deakus.

By the late 1980s, Lenny Henry began to broaden his repertoire even further. He became increasingly interested in “serious” acting roles and starred in the BBC’s Screen Two production *Coast to Coast*. In 1990, he was signed by Disney on a three-film deal, the first of which was *True Identity* (1991), a comic-drama about mistaken identity. Later that year, Henry starred in *Alive and Kicking*, a BBC drama in which he played a drug dealer alongside Robbie Coltrane as a drug councillor. The film was awarded the Monaco Red Cross and the Golden Nymph Award at the Monte Carlo Television Festival in February 1992.

Henry has extended his ambition to other areas, including his own production company, Crucial Films. The company was established to launch film and comedy projects, but to particularly encourage black performers and film practitioners. He initiated “Step Forward” comedy-writing workshops in conjunction with the BBC, which led to the comedy series *The Real McCoy*, consisting of selections of sketches and songs and stand-up comedy from a black perspective. Crucial Films also led to a series of ten-minute dramas entitled *Funky Black Shorts*.

Henry’s 1990s television appearance has been in *Chef* in which he plays the erratic Head Chef Gareth Blackstone. The series has been highly critically acclaimed for its production values, its comic-drama scripts and its lead performances. Most of all, perhaps, the series is a landmark programme in the sense that Henry plays a character who just happens to be black; the fact of his blackness does not limit the narrative or the audience the series reaches.

Since the mid-1970s, Lenny Henry has risen from being a talent show hopeful to being the most popular black British light entertainer. He has won numerous awards including the Radio and Television Industry Club Award for BBC Personality of the Year in 1993. Although Henry does not see himself as a specifically black comedian, he does believe that being black enriches his work. The development in his work and the breadth of his appeal signifies the different contexts within which he has managed to sustain his popularity and credibility as one of the key players in British comedy.

HENSON, JIM
U.S. Muppeteer-Producer

Jim Henson's most significant contribution to television culture was his imaginative ability. His creative talents are responsible for perhaps the most recognizable and beloved television characters of all time—the puppet/marionette hybrids better known as the Muppets. For over three decades, the Muppets have entertained children and adults in myriad pop culture arenas; however, they are most associated with the television legacy known as *Sesame Street*.

As an adolescent, Henson was fascinated with television. His desire to work for the blossoming industry was inadvertently realized through the craft he considered merely a hobby—puppetry. His first puppet creations premiered on a local television station, an NBC affiliate in Maryland, which picked up Henson's five-minute puppet show and ran it prior to *The Huntley-Brinkley Report* and *The Tonight Show*. This exposure proved to be a tremendous opportunity.

Jim Henson developed an innovative art-form which was perfectly suited for television. His Muppets (some say this name is a combination of m(arionette) + (p)uppet) were ideal for the new medium because they perpetuated its "seamlessness." Muppets are stringless (unlike marionettes) and appear to move on their own (unlike traditional hand-puppets). This characteristic of "realness" made the Muppets readily accepted by the television audience.

*Sam and Friends*, Henson's first network program, aired for several years. The Muppets amassed a loyal following by appearing in commercials and performing in popular venues such as *The Ed Sullivan Show*. However, it was the character of Rowlf the Dog (a regular on *The Jimmy Dean Show*) which propelled the popular fascination with Henson's creations.

It was not until 1969 (and the commencement of a public television experiment called *Sesame Street*) that Jim Henson and his Muppets became a household word. *Sesame Street* was the brainchild of Joan Ganz Cooney. Frustrated by the lack of quality children's programming, Cooney proposed a television program especially for pre-schoolers which would incorporate the stylistic devices of advertisements (jingles, etc.) to sell learning. Although *Sesame Street* was designed for all pre-school children, it was particularly targeted at inner-city youths. In many ways the program symbolized the idea of a televisial panacea, an entertainment offering with an educational and pro-social agenda.

It was Jon Stone, the first head writer for *Sesame Street*, who suggested Henson's Muppets for the project and it has been suggested that if there were no Muppets, there would be no *Sesame Street*. The Muppets are largely responsible for the colossal success of this program. In skits, songs, and other performances they epitomized the social skills fundamental to *Sesame Street*’s mission—cooperation, understanding, tolerance and respect.

Henson's Muppets were abstractions—most were animals, some were humans, and others a combination of both, all of different sizes, shapes and colors. Their appearances were foreign, but their personalities were very familiar. Each member of the *Sesame Street* ensemble personified characteristics inherent in pre-schoolers. Through Ernie's whimsy, Big Bird's curiosity, Oscar's grouchiness, Grover's timidity, or the Cookie Monster's voracity, children experienced an emotional camaraderie. However, Kermit-the-Frog (often referred to as Jim Henson’s alter ego) is the Muppet most representative of the human spirit. Kermit's simple reflections often echo the philosophical complexities of everyday life.

Jim Henson's Muppets are a global phenomenon. The internationalization of *Sesame Street* is indicative of their cross-cultural appeal. *Sesame Street* is an anomaly within the realm of children’s television and the unique qualities of the Muppets are somewhat responsible for this distinction.

Still, the immediate success of *Sesame Street* was a bittersweet experience for Henson. He felt that the Muppets were branded "children's entertainment." He knew the wit and charm of the Muppets transcended all questions of age. In 1976, owing much to the implementation of the Financial Interest and Syndication (Fin-Sin) Rules, *The Muppet Show* began, and offered a venue more in keeping with Henson's larger vision for his creations. The Fin-Sin Rules opened time slots in local television markets for non-network programming. Henson quickly took advantage of this need for syndicated...
programming with his new production. The half-hour variety program featured celebrity guests who participated in the Muppet antics. The Muppet Show was hosted by Kermit-the-Frog, the only Sesame Street character permitted to cross genre boundaries (except for guest appearances and/or film cameos). The series spawned a new generation of characters for its predominantly adult demographic. "Animal," "Doctor Teeth," "The Swedish Chef" and "Fozzie Bear" still appealed to children and adults, but now the Muppets were more sophisticated and less pedagogical. The romantic relationship between Kermit and a porcine diva known as "Miss Piggy" established the dramatic potential of the Muppets. Miss Piggy was inspired by Frank Oz, Henson's lifelong colleague.

The success of The Muppet Show provoked Henson to explore the medium of film. His cinematic endeavors include The Muppet Movie, The Great Muppet Caper, The Muppets Take Manhattan and Treasure Island.

The Muppets have permeated all media—television, film, animation, music, literature. Their generative ability is also manifest in various spin-off endeavors such as Fraggle Rock, The Muppet Babies, and Dinosaur. The empire known as Jim Henson Productions has spawned numerous production companies—all infused with the imaginative potential of their creator. It is interesting to note that Henson's "Muppet-less" projects, feature films such as The Dark Crystal and Labyrinth were not widely successful. Perhaps this is because they lacked the cheerfulness which has defined most of Henson's work.

Jim Henson died on 16 May 1990 from an untreated bacterial infection. His vision and creative spirit are immortalized by the Muppets and the future projects his legacy inspires.

HEWITT, DON

U.S. Producer

Don Hewitt is a genius at what he does—and he does 60 Minutes. But Hewitt has done more in his TV career than be the founder and executive producer of that enormously successful program. It was Hewitt who directed Edward R. Murrow’s early TV experiment of bridging the U.S. continent with TV. It was Hewitt who, while producing and directing the first Kennedy-Nixon debate in 1960, attempted to advise Nixon to use appropriate make-up to cover his wan appearance. Nixon didn’t listen, lost the debate, and lost the election. Hewitt ventured (unsuccessfully) into cable home shopping 33 years later.

Hewitt began his work in the world of print journalism, but he quickly moved to CBS TV, where he has spent the entirety of his career. He not only produced and directed Douglas Edwards with the News from 1948 to 1962, but also the first year (1962–64) of the trend setting CBS Evening News with Walter Cronkite. These two programs had a tremendous influence on the general development of television news programming, as well as on CBS’s own nightly news. Hewitt was also responsible for CBS’s coverage of the national political conventions between 1948 and 1980, and directed Conversations with the President (i.e., Presidents Kennedy and Johnson), programs that were “pooled” for all three networks. Among this significant body of work, however, his most notable, profitable, and successful venture was the creation of 60 Minutes in 1968.

60 Minutes has been one of the premiere programs produced by CBS. CBS counts the profits from this show significantly in excess of a billion dollars. And such profits bring independence and power to Hewitt. He doesn’t hesitate to attack network executives as being deficient in foresight and fortitude and he reportedly has the best employment contract in the history of network broadcasting. The unparalleled success of Hewitt’s 60 Minutes has led to considerable speculation regarding programming strategies. Some surmise that the program benefited from following National Football League (NFL) games on CBS for so many years. But the NFL moved to the FOX Television Network in 1994 and 60 Minutes continued to flourish (as it had before it followed the games). Reuven Frank, formerly of NBC, who clearly suffered under the success of Hewitt’s 60 Minutes, called the show “star journalism,” a form in which reporters such as Mike Wallace are the heroes whose questions are more important than the subsequent answers. And the Federal Communication Commission’s (FCC) Prime Time Access Rule (PTAR) has also been credited with contributing to 60 Minutes’ success. The PTAR limited network offerings at 7:00-8:00 P.M. (EST) on Sunday to public affairs or children’s programming. When Hewitt’s program moved to this time slot in 1975, the argument goes, there was no real competition from entertainment programming and CBS began raking in huge audiences, hungry advertisers, and giant profits. Most observers, however, give Hewitt the credit for the success of 60 Minutes. As Peter Jennings of ABC put it, the success of 60 Minutes is a “testimony to Don Hewitt’s imagination and his editing.”

Hewitt has an extraordinary news judgement and editing ability. He creates stories in a manner that appeals to the average person. He admits he is not college educated, is not really intellectual, and that he identifies with the middle-of-the-road American. He knows what the average person likes to watch on TV. His formula for 60 Minutes stories is not complex. He simply understands that the audience wants the hero—Wallace, or Morley Safer, or Ed Bradley, or Diane Sawyer, or Leslie Stahl—to drive the bad guys out of town. These people have been known in the TV industry as Hewitt’s “anchor monsters.”

Despite these formidable skills, Hewitt is not always known as a nice or likeable person. His handling of 60 Minutes producers and staff is at best volatile and heavy handed. When Harry Reasoner, one of the first and best-liked anchors of the program, was dying of cancer, Hewitt reportedly removed him from the program with very little apparent sensitivity to Reasoner or other staff. On the other hand, as Andy Rooney of 60 Minutes has observed of Hewitt, “I don’t think the show would last without him.”

Don Hewitt
Photo courtesy of Don Hewitt
Hewitt’s accomplishments have earned him countless honors and awards, including a place in the Television Hall of Fame. But perhaps the greatest recognition came from one of his colleagues, who said, Don Hewitt “invented the wheel” in the business of television news.

HEY HEY IT’S SATURDAY
Australian Variety Program

Hey Hey It’s Saturday, a variety program, began as a Saturday morning children’s show, but like other children’s shows in Australia, developed a curious adult following and has become a durable feature of Australian television history. Now programmed on Saturday nights from 6:30 to 8:30, it has been a consistent ratings winner for Network Nine, outlasting every challenge the other networks have thrown at it. Television variety like Hey Hey emerges from Australia’s robust history of music hall, vaudeville, and revue on the stage, and in radio. Vaudeville featured singers, dancers, comedians, acrobats, magicians, ventriloquists, male and female impersonators, and animal acts. In revue a thin storyline was used to connect a series of comedy sequences, backed by song and dance numbers. It included an orchestra, ballet and show girls, and a comédienne. But the comedian was always the star of the show.

From such traditions great comedians, such as George Wallace and the legendary “Mo” (Roy Rene), emerged before the days of television. Australia’s greatest TV comedian, Graham Kennedy, in his long-running variety program In Melbourne Tonight, adapted such vaudeville traditions for television, where they continued to thrive in specifically televisual terms. The compere of Hey Hey It’s Saturday is Darryl Somers, a comedian who is perhaps the successor to Graham Kennedy on Australian television. While he may not be so much a king of comedy, he remains a noteworthy lord of misrule. One of Kennedy’s writers at In Melbourne Tonight, Ernie Carroll, provides another connection to the earlier tradition. He became the producer of Hey Hey and also the arm and voice for its resident puppet figure, Ossie Ostrich, retained from the children’s show version.

Hey Hey differs from 19th- and 20th-century vaudeville in not having show girls or animal acts. It did for a period have a character called Animal, who silently wandered about the set, a walking icon of a crazy world, purely visual signifier of the ludic, of a world upside-down. The show does continue vaudeville and revue tradition in having an orchestra (a rock band) and, for a long period, a resident comédienne, Jacky MacDonald. Jacky portrayed an apparent naïf, telling sly risqué jokes with wide innocent eyes.

Although Darryl Somers, with Ossie Ostrich sitting beside him, guides the show, Hey Hey is decentered comedy, dispersed through the various figures and performers, who often include the production crew. The show also contains various (changing) segments. “Media Watch” presents mistakes in TV commercials, or funny items, usually taken from the provincial press. “Red Faces” offers amateur acts.
“Ad Nauseum” invents a quiz show with questions about TV ads. “What Cheeses Me Off” is a complaints column, and “Beat It” a music quiz.

*Hey Hey* uses all the technical and audiovisual resources of TV itself to make everyone and everything in the show part of the comedy. We rarely see John Blackman, for example. But he is a regular voice off-screen, doing impersonations, being ironic and sarcastic about guest acts and cast members, or making dry jokes and performing “insult comedy.” This visual “absence” is countered by the highly visual cartoon jokes flashed on the screen at any moment. When “Media Watch” speculates on possible mistakes in TV commercials, a camera may suddenly focus on a producer. Surrounded by cameras and cords, he holds a mic, and says what he thinks, though he will earn derision if the others think he gets it wrong. Puppet Ossie Ostrich will comment on everything dryly and ironically. Little Dickie the other puppet (a blue head held on a stick, and a rasping voice provided by John Blackman), might suddenly rush forward and be rude about someone or something. In turn, in one show Ossie commented of Little Dickie that his stick has “terminal white ant.”

The show revels in the festive abuse that Bakhtin saw as a feature of carnival in early modern Europe. In a society where, he suggested, people were “usually divided by the barriers of caste, property, professions, and age,” festive abuse overturned hierarchy in social relations, creating an atmosphere of equality, freedom, and familiarity—*Hey Hey* exactly.

In *Hey Hey* all is chaos and anarchy, the reverse of structured sequences guided by the straight person and chief comedian. Darryl Somers as compere is, instead, a relatively still space across which all the mad traffic of jokes, the different comic contributions and voices, traverse and clash and comment on each other. If he maintains an ongoing program he is never a central voice of authority, a ringmaster. His strength is in his alertness to what is going on about him as much as in his own comic contributions.

Traditional stage variety entertainment thrived on familiarity and audience involvement. Similarly, *Hey Hey* actively draws on the vast and intimate knowledge that its audience (in the studio and at home) has of the media, of the rest of popular commercial TV. Like *Monty Python's Flying Circus* in the early 1970s, *Hey Hey* is variety for the electronic age. The media are often the material for the comedy: parodying Lotto in “Chook Lotto,” the media in “Media Watch,” talent shows in “Red Faces,” or testing knowledge of pop music in “Beat It.”
Involvement by the studio audience is always encouraged. If, for example, a show is declared a 1960s or a Science Fiction night, Darryl and Jacky and Ossie wear extravagant uniforms and masks. But the audience also dress up—a touch of the masks and disguises of carnival of old, taking people out of their ordinary life and circumstances. In "Red Faces," perennially one of Hey Hey's most popular segments, the audience may override Red's gong if it likes an act.

Clearly in Hey Hey there is an extreme self-reflexivity; we see camera people with their cameras and crew with mikes and cords going everywhere. For television culture, this builds on a very long tradition of self-reflexivity in popular culture and theatre. The festive abuse of Hey Hey reminds us that a great deal of popular culture, from carnival in early modern Europe to music hall and vaudeville in the 19th century and into the 20th, featured parody and self-parody. This was more than a way of mocking received attitudes and official wisdom. It was a philosophical mode, a cosmology, a way of questioning all claims to absolute truth—including its own. To the degree that our own "wisdom" is drawn from and dependent upon the media Hey Hey It's Saturday suggests we should look on that knowledge with a wary eye.

—John Docker

HIGH-DEFINITION TELEVISION

High-definition television (HDTV) is an arbitrary term that applies to any television production, transmission, or reception technology with a scanning rate that exceeds the 525 lines of the present U.S. NTSC standard or the 625 lines of the PAL or SECAM standards. Most global HDTV systems have at least 1,000 scanning lines, and multi-channel audio capability. When viewed on a large television tube or projected on a screen, HDTV images are demonstrably brighter and sharper than those of present video systems.

The first viable HDTV system known as Hi-Vision/MUSE (the former is a production standard, the latter is a compatible transmission companion) was perfected in the 1970s in the laboratories of NHK, the Japan Broadcasting Company. Distinctive characteristics of analog Hi-Vision technology include a wide-screen 16:9 aspect ratio (compared with a conventional 4:3 ratio), and 1,125 scanning lines. After abortive Japanese attempts to have Hi-Vision/MUSE adopted as a de facto world television standard in 1986, a European consortium developed an alternative incompatible standard with 1,250 scanning lines.

The following year the Federal Communications Commission created an Advisory Committee on Advanced Television Service (ACATS) to conduct a testing program to select an American advanced television standard. After eight years of development and testing, the FCC is expected to adopt a digital transmission scheme that will permit American broadcasters to simultaneously transmit a number of channels with variable resolution levels. One true HDTV channel can be broadcast, or up to five lower-quality standard-definition (SDTV) digital channels. The U.S. HDTV digital standard will also include a wide-screen 16:9 aspect ratio and six-channel "surround" audio. Digital data such as stock market quotes or weather information can also be transmitted within the HDTV spectrum allocation.

The FCC plans for U.S. broadcasters to simulcast digital HDTV signals in conjunction with conventional NTSC transmissions until the year 2010, at which time the old system will be turned off and the spectrum will revert to the Commission for reallocation. Japanese and European television manufacturers are expected to develop advanced digital...
television production and transmission systems which are transcodable with the American format.

HDTV and SDTV are variable-resolution examples of advanced television technology. By shifting from an analog to a digital transmission scheme, electronic engineers have merged the previously incompatible worlds of television and computers. Advanced television sets will have the capability to be linked into the same digital networks as personal computers for access of global services such as the Internet.

HILL, BENNY
British Comedian

Benny Hill was born in Southampton in the south of England in 1925. His family was lower middle class; Hill's father was the manager of a medical appliance company. Hill was attracted early to the stage and saw many live stage shows at the two variety theatres in Southampton. Hill served in the army in the later years of World War II; it was there that he began to perform as a comedian. After demobilisation, Hill began working in variety theatre where he slowly learned his craft. In 1956, Hill starred in the feature film comedy Who Done It? (Ealing Studio). Hill starred as a hapless, bungling private detective. The film was only mildly funny, although Hill did display touches of the comic slapstick and characterisation that were to become part of his genius. The film was moderately successful but did nothing to further Hill's career. Instead, it was in the new medium of television that Hill was to shine.

Hill's career as a British comedian fits between that of earlier figures such as Tony Hancock and later performers such as Frankie Howerd. Whereas Hancock established his definitive comic persona in radio and then extended this to television, Hill was created by television. Yet Hill was also the most traditional of comedians and his programs had strong roots in variety theatre, revolving around comic songs, routines, and sketches rather than an on-going comic characterisation and situation. And although Hill had his own show on the BBC as early as 1955, his career was actually launched by the 1960s vogue for comedy on British television. Other British comedians such as Ken Dodd, Charlie Drake, and Frankie Howerd also gained their own shows around the same time, but none had the comic genius and stamina of Hill.

Part of this genius lay in his writing. Hill wrote all his own material, a grueling task which helps explain the relatively small number of programs produced. Under his later contract with Thames Television, Hill was given full control of his program such that he could undertake a program when, in his opinion, he had accumulated enough comic

material. Hill also had a hand in producing some of the offshoots of The Benny Hill Show such as the 1970 half-hour silent film Eddie in August.

Although all his material was original, Hill nevertheless owed a comic debt to U.S. entertainer Red Skelton. Like Skelton, Hill worked in broad strokes and sometimes in pantomime with a series of recurring comic personae. Hill even adopted Skelton's departing line from the latter's show that ran on network television from 1951 to 1971: “Good night, God bless.” However, Hill was without Skelton's often-mauvlin sentimentality, substituting instead a ribald energy and gusto. Hill's humour was very much in a broad English vaudeville and stage tradition. The Socialist writer George Orwell once drew attention to the kind of humour embodied in the English seaside postcard—henpecked and shrunken older men and randy young men, both attracted to beautiful young women with large breasts, and an older, fatter, unattractive mother—and some of this also fed into Hill's television comedy just as it was to feed into the Carry On feature films.

While Hill's publicity often portrayed him as a kind of playboy who liked to surround himself with beautiful, leggy showgirls, this was an extension of his television persona and had nothing to do with his private life. In fact, Hill never married and lived alone in what would have been a lonely life had it not been for the heavy work demands imposed by the television show.

Hill's humour with its smut and double-entendres was never entirely acceptable to the moral standards of some and his sexism made him seem increasingly old-fashioned. The forces of political correctness finally had their way in 1989 when Thames Television canceled the program due not only to complaints about its smuttness but also because its old-fashioned sexism had become increasingly intolerable. Thames finally sacked Hill. In his last television appearance, in 1991, he appeared as himself, the subject of the BBC arts documentary series, Omnibus. Although over the last three years of his life, Hill talked in interviews about a comeback, it was the end of his career. He died in hospital, suffering from a chest complaint, in 1992. Benny Hill once told an interviewer that, like Van Gogh, he would be appreciated in 100 years time. The statement implied that he was not recognised as a great comedian and was belied by the enormous international popularity of his program and by the fact that in the 1970s and 1980s he was several times voted the Funniest Man in the World by the British television audience.

HILL STREET BLUES
U.S. Police Procedural/Melodrama

Hill Street Blues, one of the most innovative and critically acclaimed series in recent television history, aired on NBC from 1981 to 1987. Although never highly rated, NBC continued to renew Hill Street for its "prestige value" as well as the demographic profile of its fiercely loyal audience. Indeed, Hill Street is perhaps the consummate exam-
ple of the complex equation in U.S. network television between “quality programming” and “quality demographics.” *Hill Street Blues* revolutionized the TV “cop show,” combining with it elements from the sitcom, soap opera, and *cinema verite*-style documentary. In the process, it established the paradigm for the hour-long ensemble drama: intense, fast-paced, and hyper-realistic, set in a densely populated urban workplace, and distinctly “Dickensian” in terms of character and plot development.

*Hill Street*’s key antecedents actually were sitcoms, and particularly the half-hour ensemble workplace comedies of the 1970s such as *M*A*S*H*, *The Mary Tyler Moore Show*, and *Barney Miller*. *M*A*S*H* was influential not only as a medical series set in a literal “war zone” (versus the urban war zone of *Hill Street*), but also for the aggressive cinematic style adapted from Robert Altman’s original movie version. *The Mary Tyler Moore Show*’s influence had to do primarily with its “domesticated workplace,” a function of Mary’s role as nurturer as well as the focus on the personal as well as the professional lives of the principals. The influence of *Barney Miller*, an ensemble sitcom set in a police precinct, was more direct. In fact the genesis of *Hill Street* resulted from NBC’s Fred Silverman suggesting that the network develop an hour-long drama blending *Barney Miller* and the documentary-style anthology drama, *Police Story*.

To develop the series, NBC turned to Grant Tinker’s MTM Enterprises, which in the early 1970s had specialized in ensemble sitcoms (*The Mary Tyler Moore Show, Bob Newhart, and others*) before turning to the hour-long ensemble drama in 1977 with *Lou Grant*. *Hill Street* was created by Steven Bochco and Michael Kozoll, two veteran TV series writers with extensive experience on various crime series. The two had collaborated on the short-lived police drama *Delvecchio* in 1976–77 before joining MTM, and they had little interest in doing another cop show unless they were given considerable leeway to vary the form. NBC agreed, and *Hill Street* debuted as a mid-season replacement in January 1981.

The basic *Hill Street Blues* formula was simple enough. The series was set in the Hill Street station, a haven of controlled chaos in a crime-infested, racially-torn ghetto within an unnamed industrial metropolis. Each episode invariably charted a “day in the life” on the Hill, from the early-morning “roll call” to a late-night rehash of the day’s events.

In the hands of Bochco and Kozoll, who teamed for much of the writing in the first two seasons, this formula provided the framework for a remarkably complex and innovative series—qualities which were evident from the opening roll call. This daybreak ritual was conducted “below decks” in the precinct house by the desk sergeant—most memorably Sgt. Phil Esterhaus (Michael Conrad from 1981 until his death in 1984), who always closed with the trade-mark line: “Let’s be careful out there.”

A deft expository stroke, the roll call served a range of narrative functions. It initiated the day-long trajectory; it provided an inventory not only of the current precinct “case load” but also the potential plot lines for the episode; it reintroduced most of the principal characters, whose commentary on the cases reestablished their individual personalities and professional attitudes. And technically, it set *Hill Street*’s distinctive *verite* tone with its hand-held camera, continual reframing instead of cutting, multi-track sound recording, and edgy, improvisational feel.

After the roll call, the cops filed upstairs to begin their assignments, which set the episode’s multiple crime-related plot lines in motion. Most of the series regulars who worked “out there” on the streets were partners: Hill and Renko (Michael Warren and Charles Haid), Coffee and Bates (Ed Marinaro and Betty Thomas), LaRue and Washington (Kiel Martin and Taurean Blacque). Other notable street cops were Lt. Howard Hunter (James Sikking), the precinct’s SWAT team leader; Mick Belker (Bruce Weitz), a gnarling, perpetually unkempt undercover detective; and Norm Buntz (Dennis Franz), an experienced, cynical, street-wise detective prone to head-strong, rule-bending tactics.

With the episode thus set in motion, the focus shifted to Captain Frank Furillo (Daniel Travanti), the professional touchstone and indisputable patriarch of the precinct workfamily, and the moral center of *Hill Street*’s narrative universe. Furillo adroitly orchestrated his precinct’s ceaseless battle with the criminal element. He also did battle with bureaucrats and self-serving superiors, principally in the character of Chief Fletcher Daniels (Jon Cypher). And on a
more personal level, he battled his own demons (alcoholism, a failed marriage) and the human limitations of his officers, ever vigilant of the day-to-day toll of police work in a cesspool of urban blight whose citizenry, for the most part, was actively hostile toward the “police presence.”

Furillo also battled Joyce Davenport (Veronica Hamel), a capable, contentious lawyer from the Public Defender’s office. Their professional antagonism was countered, however, by an intimate personal relationship—the two were lovers. Their affair remained clandestine until the third season, when they went public and were wed. And through all this, Furillo also maintained a troubled but affectionate rapport with his ex-wife, Fay (Barbara Bosson).

The Furillo-Davenport relationship was Hill Street’s most obvious and effective serial plot, while also giving a dramatic focus to individual episodes. As professional adversaries, they endlessly wrestled over the process of law and order; as lovers they examined these same conflicts—and their own lives—in a very different light. Most episodes ended, in fact, with the two of them together late at night, away from the precinct, mulling over the day’s events. This interplay of professional and personal conflicts—and of episodic and serial plot lines—was crucial to Hill Street’s basic narrative strategy. Ever aware of its “franchise” as a cop show, the series relied on a crime-solution formula to structure and dramatize individual episodes, while the long-term personal conflicts stakes and fueled the serial dimension of the series.

Hill Street’s narrative complexity was reinforced by its distinctive cinematic technique. As Todd Gitlin suggests, “Hill Street’s achievement was, first of all, a matter of style.” Essential to that style was the “density of look and sound” as well as its interwoven (“knitted”) plot lines, which created Hill Street’s distinctive ambience, “Quick cuts, a furious pace, a nervous camera made for complexity and congestion, a sense of entanglement and continuous crisis that matched the actual density and convolution of city life.” Hill Street’s realism also extended to controversial social issues and a range of television taboos, particularly in terms of language and sexuality.

This realism was offset, however, by the idealized portrayal of the principal characters and the professional work-family. Whatever their failings and vulnerabilities, Furillo and his charges were heroic—even tragic, given their fierce commitment to a personal and professional “code” in the face of an insensitive bureaucracy, an uncaring public, and an unrelenting criminal assault on their community. But the Hill Street cops found solace in their work and in one another—which, in a sense, was all they had, since the nature of their work precluded anything resembling a “real life.”

Not surprisingly, considering its narrative complexity, uncompromising realism, and relatively downbeat worldview, Hill Street fared better with critics than with mainstream viewers. In fact, it was among TV’s lowest-rated series during its first season but was renewed due to its tremendous critical impact and its six Emmy Awards, including Outstanding Drama Series. Hill Street went on to win four straight Emmys in that category, while establishing a strong constituency among upscale urban viewers. It also climbed to a respectable rating, peaking in its third season at number 21; but its strength was always the demographic profile rather than the sheer size of its audience.

Thus Hill Street paid off handsomely for NBC, and its long-term impact on TV programming has been equally impressive. In a 1985 TV Guide piece, novelist Joyce Carol Oates stated that the series was as “intellectually and emotionally provocative as a good book,” and was positively “Dickensian in its superb character studies, its energy, its variety; above all, its audacity.” Critics a decade later would be praising series like NYPD Blue, Homicide, ER, Chicago Hope, and Law and Order in precisely the same terms, heralding a “new golden age” of television drama—a golden age whose roots are planted firmly in Hill Street Blues.

ANITA HILL-CLARENCE THOMAS HEARINGS

The Hill-Thomas Hearings, conducted by the United States Senate Judiciary Committee to investigate Professor Anita Hill’s allegations of prior sexual harassment by Supreme Court nominee Clarence Thomas, were televised nationally on American television from 11 October to 13 October 1991. Although the hearings themselves had no legal significance, to many observers they symbolized a public referendum on sexual harassment and other gender inequities in late twentieth-century America. As such, they have been widely credited with increasing public awareness about gender discrimination and motivating female voters during the 1992 congressional elections.

As President George Bush’s nominee to replace Thurgood Marshall on the Supreme Court, Thomas had already been through confirmation hearings during September, 1991, although the Senate Judiciary Committee was unable to make a recommendation to the full Senate after these hearings. Thomas’ appointment seemed further jeopardized by reports on 6 October that appeared in Newsday and on National Public Radio of alleged acts of sexual harassment toward a co-worker from 1981 to 1983. These charges, made by Anita Hill during interviews with the FBI, were apparently leaked to the press just days before the Senate’s final vote on Thomas’ appointment. Responding to demands from feminist organizations and seven female Democratic members of the House of Representatives, the Senate delayed the vote in order to hear more about Hill’s allegations.

During the three days of televised hearings, the senators and the viewing public heard testimony from both Hill and Thomas, as well as their supporters. Hill referred to specific incidents of Thomas’ behavior, including repeated requests for dates and references to pornographic material. Thomas vehemently denied Hill’s allegations and responded with outrage, at one point calling the hearings “a national disgrace . . . a high-tech lynching for uppity blacks who in any way deign to think for themselves, to do for themselves.” So adamant was each side’s accounts that many observers in the press labeled the hearings an example of “He Said, She Said,” with both parties offering such vastly differing recollections of events that many wondered if the hearings could ever reveal the truth.

See also Bochco, Steven; Police Programs

Anita Hill
Two days after the hearings ended, with no clear resolution of the discrepancy between Hill’s and Thomas’ accounts, the Senate voted on Thomas’ confirmation. Due to the media coverage of the hearings, public interest in the vote was unusually high, as evidenced by a barrage of phone calls and faxes sent to the capital on this issue. Although opinion polls reported evidence of debate and division among minority groups, including African Americans and women, they also indicated that a majority of voters supported Thomas. Ultimately, the Senate voted 52-48 in favor of Thomas’ confirmation.

The visual imagery and political symbolism of the hearings may have been their most important legacy. In this regard the hearings take their place alongside other memorable television events, including the Army-McCarthy Hearings and the Watergate Proceedings. These events exemplify television’s ability to galvanize a national audience around matters of crucial social significance and often they stand as historical markers of significant social and cultural shifts.

Indeed, many feminist groups refer to Anita Hill as the mother of a new wave of awareness of gender discrimination, particularly given the attacks on her credibility that she withstood from the white male senators. To witness a composed, articulate law professor being questioned about her mental state (some senators and Thomas supporters had theorized that Hill was “delusional”) offended many female viewers who themselves had experienced sexual harassment. Harriett Woods, then president of the National Women’s Political Caucus, commented that “Anita Hill focused attention on the fact that there were no women in that Senate panel making decisions about people’s lives.”

As is true for so many cultural memories in the United States, the televised Hill–Thomas hearings etched some clear and unforgettable images into the minds of the American public. To those observers who did not believe Hill’s claims, the hearings represented the gravity of such allegations in a society where gender politics can be divisive. To Hill’s sympathizers, the memory of a lone woman reluctantly speaking out about past painful experiences to a room full of bewildered and unsympathetic men may have been one reason why an unprecedented 29 women were elected in the subsequent congressional elections.

HIRD, THORA
British Actor

Dame Thora Hird is one of Britain’s finest character actresses. Her career spans some eighty years, from her earliest stage appearance at the age of eight weeks to the present day; it encompasses work in a range of media forms, including radio broadcasting and appearances in over one hundred films. In television, she has appeared both in her capacity as actress, and as presenter of the popular Songs of Praise. She has also written her autobiography, Scene and Hird (1976) as well as a number of books on prayer.
Her durability is due to both her versatility, revealed by her work in a number of television genres, and paradoxically, her ability to remain distinctly unique and individual. Her work for television includes an early drama for BBC TV, The Queen Came By, about life in a general drapers, set in Queen Victoria’s jubilee year. In the play, her characterisation of Emmie Slee proved very popular. She has also appeared as the long-suffering wife in the comedy series Meet the Wife, with Freddie Frinton; the nurse in Romeo and Juliet for the BBC in 1967; Billy’s overbearing mother in the situation comedy In Loving Memory (1986), set in a funeral parlour; and the tragicomic character in A Cream Cracker Under the Settee, one of the acclaimed series of Talking Heads monologues written by Alan Bennett, and broadcast in 1988.

All of these roles offered Hird the opportunity to exercise her particular brand of Lancastrian wit, which may be firmly located within the music-hall-based tradition of northern, working-class comedy, characteristically “down to earth,” anecdotal and always constructed in opposition to the “pretentious and privileged” south of England. In much the same vein as the seaside postcards of her Morecambe birthplace, Hird’s typical roles are as an all-seeing boardinghouse landlady, a gossiping neighbour, or as a sharp-tongued mother-in-law, in each case the “eyes and ears” of the (female) community. And just as the veneer of the garishly painted seaside piers cracks to reveal the old and slightly rotten wood beneath, so Hird’s skillful characterisations offer a hint of the underlying sadness and pathos that is often found beneath the proud facade. She has been taken up by the comedienne Victoria Wood, who extends the tendency of this brand of comedy to take the everyday, the ordinary, and exaggerate elements to make it extraordinary. Parodying one of its chief icons creates hilarious results and establishes a double articulation of the humour of social observation with which Hird is commonly associated.

Whilst Hird has earned considerable recognition and respect within her profession, critical and audience acclaim for many of her roles, and was the subject of a South Bank Show monograph in 1995, there is yet to be an academic study of her contributions to television. This may be due to the fact that she tends to play roles that are located within genres such as situation comedy, which is afforded a lowly status in many aesthetic and critical hierarchies. Potentially, however, there is much critical currency in exploring how these roles or types represent working class women, and indeed, how older actress may often be subject to typecasting.

HISTORY AND TELEVISION

As a productive cultural force, television is involved in projecting new modes and forms of historical understanding. These forms do not always follow from traditional scholarly or professional ideas about history. On the contrary, for a number of reasons, television has been widely seen as contributing to the disappearance or loss of history in the contemporary postmodern condition. The emphasis on television’s “liveness,” based in its technology and its common discursive and rhetorical strategies, has led some theorists to the conclusion that television plays a central role in erasing a sense of the past, and eliminating a common, coherent linear sense of cultural and social development.

It is certainly the case that conventional history is increasingly hard to identify in mass culture, especially in the form of coherent linear narratives, a clear set of major historical players, or readily identifiable class struggles. At the same time, however, television seems obsessed with defining itself in relation to history. Television’s ubiquity suggests that its conceptions of history—both its representations of specific events and its appropriation of history as a way of understanding the world—must be taken seriously. Television does not supplant, but coexists with familiar ideas about how we know the past, what we know of the past, and the value of such knowledge. In the process, television produces everyday forms of historical understanding.

As a result, it is probably more accurate to propose that television is contributing to a significant transformation and dispersion of how we think about history, rather than to the loss of historical consciousness. Television offers forms of history that are simultaneously more public than traditional, professional history and more personal and idiosyncratic. This is because the medium’s historical narratives are available to mass viewing publics, but also engage viewers in diverse, and even highly idiosyncratic ways. While history may be conceived in both broadly social and intensely personal terms, television has transformed the ways in which individuals understand and position themselves in relation to either of these definitions.

In the case of the United States, it is nearly impossible to think about American culture and its global influence today without including everyday media culture as an integral part of this history. Significant historical events and conjunctures of postwar 20th century American history—the Vietnam war, the assassination of John F. Kennedy, civil rights and student protests, the Challenger explosion, the Persian Gulf War—can hardly be imagined without the television images which carried them into American (and other) homes. Similar conditions, events, and moments, such as the collective memory of the 1952 coronation of Queen Elizabeth for British viewers, exist in other nations of the world which have also had a long experience with television. As these examples suggest, for some established nation-states television can actually connote national identity through a televisual history. Other nations and regions, particularly in the postcolonial world, have yet to see representations of their national identity consistently emerge on their television screens. And yet another group of nations and regions, such as post-apartheid South Africa, are experiencing a transformation of the historical representation of their televisual national identity.

Nearing the end of the 20th century, the idea of “video diplomacy” also has increasing importance in a world linked by telecommunications technology and covered by international television news organizations. Indeed television news—with its emphasis on being live and up to date—is one of the key places where television most insistently promotes its historical role. The rapid growth of television in the postcolonial world, coincident with the end of the Cold War (since 1989, sets in use worldwide have doubled, with most of that growth in the postcolonial world) suggests that the impact of televisual history first experienced in the United States will now be seen on a world scale. The live televising of coups and crises in post-Soviet Russia is one recent example of the globalizing trend of television and historical consciousness. Other indicators include the unprecedented global circulation of war reporting, of political journalism, and of the lives and misfortunes of celebrities.

In other contexts television links history to world-historical events, often before they have even begun. The term “history” is regularly used to designate events before, during, and after they occur. In this vein, television casts all sorts of events as history including the Middle East peace summit in Madrid; the fall of the Berlin Wall; the annual World Series in baseball; Michael Jordan’s return to basketball; and odd spectacles such as “Hands Across America”; and the first prime-time airing of the final episode of M*A*S*H. From the apparently sublime to the apparently inexplicable, “history” is a term and a conceptual field that television often bandies about with surprising frequency and persistence. In the process conventional ideas of history as a distinctive temporal and narrational discourse are dispersed. “History” becomes a process wherein events and people in the present (and future) are simultaneously implicated in a social, polit-
ical, and cultural heritage. Past and present, then and now, are set in a temporal tourniquet, akin to a moebius strip.

Television routinely correlates liveness and historicity in the form of equivalence, alibi, reversals, and identity, especially in the area of news and public affairs/documentary programming. In the context of news coverage, especially events that warrant live coverage, it is not unusual to hear that the events thus presented are "historic." At the same time, the very presence of television at an event constitutes a record for posterity. In this sense television acts as an agent of history and memory, recording and preserving representations to be referenced in the future. The institution of television itself becomes the guarantor of history, even as it invokes history to validate and justify its own presence at an event.

Another factor at work in this array is the long-term search by broadcasters for a recognition of their own legitimacy as social institutions; many critics of television have linked the rise of a televsional historical consciousness and the aggressive self-promotion of the broadcasting industry when criticizing television for its supposed failure to fully advance public ideals. Even while driven by the lure of significant profit American television broadcasters are often desperate to dissociate themselves from discourses presenting television as a vast wasteland. As part of a spirited defense against their many detractors they point to their unique ability to record and represent history. The "high culture—low culture" debate, so prevalent in analyses of American media, has sunk its roots into this issue as well.

In much of the rest of the world, by contrast, government investment in broadcasting has meant that questions of legitimacy, and subsequent defense through claims of unique historical agency, have been less urgent. However, following the worldwide wave of privatization of media outlets which began in the 1980s television broadcasters throughout the world may begin to mimic their American predecessors. They, too, may protect their self interests by turning the production of "history on television" and "television history" into a useable past.

As a result of all these activities, it is possible to see how forms of historical consciousness purveyed by television get transformed in the process of representing current events that are all equally "historic." Television promotes ideas about history that involve heterogeneous temporal references—past, present, and future. But actual historical events are unstable combinations of public and private experiences, intersecting both global and local perspectives. By proposing combinations and permutations of individual memory and official public document, television produces a new sense of cultural and social viewers.

For example, in relation to past events, television frequently addresses viewers as subjects of a distinctive historical consciousness: Americans of various ages are all supposed to remember where we were when we first heard and saw that John F. Kennedy was shot, that the space shuttle Challenger had exploded, or when the bombs began to drop on Baghdad, signaling the start of the Persian Gulf War. The drama of the everyday can be similarly historicized when, for example, television promotes collective memories of Kathy Fiscus for one American generation or Baby Jessica for another. By addressing viewers in this way, television confirms its own central role as the focal point of the myriad individual experiences and memories of its individual viewers. In the process the medium brings sentimental domestic drama into direct relation with public, domestic, and global histories.

In all these instances, television's ideas of history are intimately bound up with the history of the medium itself (and indirectly with other audiovisual recording media), and with its abilities to record, circulate, and preserve images. In other words, the medium's representations of the past are highly dependent on events that have been recorded on film or video, such that history assumes the form of television's self-reflection. The uses of available still photography and audio recordings can also, on occasion, play a significant role in this regard. The medium's own mechanisms—its prevailing technologies and discourses—become the defining characteristics of modern historiography. Similarly, the television journalist—particularly the news anchor—can become an embodied icon of television's ability to credibly produce and represent history. Many nations have (or have had) a number of individuals achieve this status typically associated with an American reporter like Walter Cronkite. Now television journalists seem on the cusp of achieving this at transnational and transcultural levels. An emergent example here is Peter Arnett, correspondent for the Cable News Network (CNN). Television may in the process also begin to produce a new sense of global histories, along with national and personal histories.

This self-reflective nature of television's historiography develops in relation to both public events and in relation to the medium's own programming. American television routinely celebrates its own past in an array of anniversary, reunion, and retrospective shows about its own programs, and even in "blooper" specials which compile outtakes and mistakes from previously-aired programs. Programs of this ilk serve multiple functions, and have various implications with regards to ideas of history. Self-promotion, in the form of inexpensive, recycled programming, is one obvious motivation for these shows, especially as the multi-channel environment means that more "old" shows are rerun on broadcast and cable services. This also becomes a kind of self-legitimation, by means of retrospective logic. For if American programs such as The Tonight Show, The Brady Bunch, or Laverne and Shirley warrant celebratory reunion or retrospective celebration, even years after they are no longer in production, this could mean they are important cultural artifacts/events.

Television thus continually rewrites its own past in the form of “history” as a way of promoting itself and its ongoing programming as a significant, legitimate part of culture. In the process, postwar American popular culture is held up as the measure of social-cultural history more generally. All viewers are enjoined to “remember” this heritage, whether they experienced it first-hand, in first-run, or not. This can
even lead to the production of instant nostalgia, when special programs herald popular series' final episodes (such as occurred with *Cheers* and *Knots Landing*), just as those final new episodes air in primetime. This sort of self-promotional and self-reflective ballyhoo (in network specials, as well as on talk shows, entertainment news programs, and local news programs around the country) proposes that these programs have been absorbed into a common popular cultural historical heritage from the very moment they are no longer presenting new episodes in primetime.

Programming schedules and strategies in themselves adopt and offer these new ideas about history, especially in terms of popular culture. This is increasingly apparent in the multi-channel universe, as television becomes something of a cultural archive, where movies and television programs from the past are as readily accessible as new programs. This can even be made self-conscious, as in the case of Nick at Night (a programming subdivision of Nickelodeon, an American cable network), which features American sitcoms from the 1960s and 1970s, and promotes itself as "celebrating our television heritage." In 1995 Nickelodeon proposed a second network, programmed exclusively with old television shows. The name for this collection of reruns would be "TV-Land." Once again, the history in question is the medium's own history, self-referentially reproducing itself as having cultural value and utility.

Beyond these strategic constructions of the historical significance of television as medium, a specific sense of history also pervades television's fiction programs. Because of the nature of American commercial television programming, individual programs develop and project a sense of history in direct proportion to their success—the longer they stay on the air, the more development there is over time. Characters and the actors who portray them not only age, but accrue a sense of density of experience and viewers may establish character relationships with these characters and their histories. This sense of continuity and history, linking and intersecting fictive worlds with the lives of viewers, seems strongest and most explicit in serial melodrama, but equally affects any successful, long-running series. It is also complicated by the question of syndication and reruns where the interplay of repetition and development, seriality and redundancy leads to the sense that history is malleable and mutable, at least at the level of individual, everyday experience. While many European television programs intentionally have a limited run of episodes, other long-running programs such as *EastEnders* indicate that this tendency is not unique to American television. Furthermore, complicated historical issues can certainly be involved in limited-run series, as suggested by mini-series such as *Roots* in the United States or *Yearnings* in China.

As suggested above, many of these ideas about history are powerfully played out in the context of serial melodrama, a genre which may seem as far removed from "history" in the conventional sense as anything on television. These "soap operas" offer stories that may continue for decades, maintaining viewer allegiances in the process, even though the stories are punctuated by redundancies on the one hand, and unanticipated reversals on the other. These narrative conventions are some of the very things for which the genre is often derided—slow dramatic progress, the ongoing breakups of good relationships, the routine revival of characters presumed dead, and sudden revelations that characters were switched at birth, or the product of previously unrevealed affairs, leading to major reconstructions of family relations. But these characteristic narrative strategies also produce a subtle and sophisticated sense of historicity and temporality, in the context of the accumulation of a long-term historical fiction and long-term viewing commitments. Among other things, they encourage a persistent reexamination of conventional assumptions and attitudes about lineage, and about family and community relations, in patriarchal culture. In the process they also offer a sense that the force and weight of the past is important, but not always readily transparent, requiring the active interpretive involvement and participation of the most ordinary people, including soap opera viewers. Complex and contradictory ideas about temporality and narrative contribute to a popular historical consciousness because they have everything to do with individuals' actual relations to and ideas about historicity. One example is found in the various *telenovelas* produced and aired in Brazil during the recent downfall of the Collor presidency: these *telenovelas* were read by audiences as socio-political texts embed with the twists and turns which eventually led to Collor's resignation.

Television also produces ideas about history through historical fictions, in particular in primetime dramas and historical miniseries. These offer particular revisions and interpretations of the past, often influenced by a sense of anachronism. It is not surprising that many controversial social issues continue to be readily explored in the context of historical narrative. For viewers, the historical fictions provide the alibi of a safe distance and difference in relation to situations they might encounter in the present. A range of programs have thus explored ideas about race, gender, and multiculturalism in anachronistic historical contexts, allowing the past to become the terrain for displacing and exploring contemporary social concerns. In this way particular historical moments, however fictionalized, may be revivified in conjunction with contemporary social issues. This occurs, for example, in programs as *Dr. Quinn, Medicine Woman*, *I'll Fly Away*, *Homefront*, and *The Young Indiana Jones Chronicles*, to name some notable American examples from the 1990s. While these historical frames permit an opportunity for exploring issues that might otherwise be considered overly controversial (especially in the present), they also propose that the issues are not necessarily of current or topical concern, since they are retrospectively projected into the past. In this context, it is also interesting to examine which periods of the past become fertile territory for reexamination. Television often focuses on periods which are
based in the recent past and thus overdetermined in their familiarity; or, the chosen moments are widely recognized as eras of national transition or upheaval, providing opportunity for the exploration of many socially charged topics. Even within particular programs dealing with these particular periods, however, the idea of a stable linear historicity is not necessarily the rule.

In various ways, then, television situates itself at the center of a process wherein it produces and reconstructs history for popular consumption. For if the things it reports are historical, sometimes before they have even occurred, and if early television programs are our common cultural heritage, then the medium itself is the agent of historical construction. This reaches extremes when the medium's presence at an event becomes the "proof" of the event's historical importance, a tautological process which tends to encourage self-absorption, self-referentiality, and self-legitimation. Watching television and being on television become twin poles of a contemporary cultural experience of historicization. Viewers are likely to get caught up in this process.

There is, for example, the case of a young woman standing in a crowd on an L.A. freeway overpass in the summer of 1994, waiting for O.J. Simpson to pass by in a white Ford Bronco, trailed by police who were trying to arrest him. A reporter from CNN asked her why she was there. She explained that she had been watching it all on television, and realized that if J. would pass near her house and, she said, "I just wanted to be a part of history." In the logic of contemporary television culture she achieved her goal, because she was on television and was able to write history in her own voice, live, with her presence and participation in a major televised event.

THE HITCHHIKER'S GUIDE TO THE GALAXY

British Science-Fiction Programme

The Hitchhiker's Guide to the Galaxy is a wholly remarkable book, television program, radio series, record, cassette, video, and proposed feature film. The six-part BBC Television adaptation of its own radio comedy is only one small part of a whole universe of merchandising which has sprung from this saga of angst and despair—from illustrated book versions to T-shirts and towels.

The story centres on an Earthman, Arthur Dent, one of a handful of survivors who remain when the planet is demolished to make way for a hyperspace bypass. Arthur travels through the galaxy with a group of companions, his friend called Ford Prefect, Zaphod Beeblebrox, two-headed ex-president of the galaxy, a pretty young astro-physicist called Trillian, and a copy of The
Hitchhiker's Guide to the Galaxy, a woefully inaccurate electronic tourist guide.

The tale is a despair-ridden one. Our world, traditionally the center of our Earthnocentric view of the universe, becomes "an utterly insignificant blue/green planet", orbiting a "small, unregarded sun at the unfashionable end of the Western spiral arm of the galaxy." Indeed, the entire Hitchhiker's Guide entry for "Earth" reads nothing more than "Mostly Harmless". In the course of the plot, it is repeatedly made clear just how meaningless the universe is. For example, when Deep Thought, the greatest computer of all time, discovers the answer to "Life, the Universe and Everything", it turns out to be "Forty Two". Indeed, the Earth is in fact a huge computer, built to discover the Question of Life, the Universe and Everything. On discovering this, Arthur Dent exclaims that this explains the feeling he has always had, that there's something going on in the universe that nobody would tell him about. "Oh no" says Zaphod Beeblebrox, "That's just perfectly normal paranoia. Everyone in the universe has that." This whole tone of angst is emphasized by the title sequence of the television programme: a single spaceman falls, isolated, against a backdrop of distant stars; while a melancholy mandolin plays in the background.

The form of all the incarnations of this story, not least the television version, is comedy-science fiction. A sparsely populated category even in literature, it is even rarer to find films or television programmes which twist the logic of the genres involved to provide innovative science fiction which is also very funny. Films like Spaceballs, for example, take rules from established comedy genres (satire) and use a science-fiction iconography as little more than a backdrop. Red Dwarf, the BBC's other successful science-fiction comedy, relies on well-known science-fiction standards done over as comedy (the metamorph, the good/bad sides of personalities splitting, and so on). None of these, were the jokes removed, would stand as notable science fiction in their own right.

The comedy could just as little be removed from Hitchhiker's but this is because it is a part of the science-fiction context, and vice versa. The humour in the programme comes from puncturing portentous science-fiction themes. For example, there are extra-terrestrial beings—but far from being all-knowing or enlightened, all they are concerned with is getting drunk and getting laid. Similarly, the Earth is under threat from aliens—not for reasons of power, or resources, but simply because it is in the way of a planned bypass.

This comic deflation is an important part of the programme's feeling of despair. The jokes build up expectations of transcendent truths, then knock them down with the realisation that everything is meaningless after all. Hitchhiker's is a consistently comic dystopia.

It is also worth noting that the only constant name through all the manifestations of Hitchhiker's is one of its original authors, Douglas Adams. It is possible to make an auteur reading of the programme in terms of Adams' other work. He was also a script editor of the BBC's long-standing science-fiction series Doctor Who. Over the 26 seasons of that programme, its style changed considerably, according to its producer and script editor—from space opera to gothic horror, adventure programme to serious science fiction. While Adams was working on the programme, he edited and wrote some of the most explicitly humorous episodes in that program's history. "City of Death", for example, features an alien creature forcing Leonardo Da Vinci to paint multiple copies of the Mona Lisa to be sold on the black market; while "Shada" is written almost as sit-com, with lines such as, "I am Skagra and I want the globe!—Well, I'm the Doctor, and you can't have it".

Focusing on Adam's authorship underscores other aspects of Hitchhiker's. The story has been re-used across several different formats. The great efficiency of Adams' recycling is also evident in his earlier work—material from his Doctor Who stories "Shada" and "City of Death", for example, is brought wholesale into his other major enterprise: mystery stories about a "holistic" detective called Dirk Gently.

The most noticeable things about the television production of Hitchhiker's are the sections of the programme which come from "the book". As Arthur encounters the various suns of the Universe, the live action scenes and there are short sections of what is essentially comic monologue—the disembodied voice of the Hitchhiker's Guide talks, while its comments are illustrated by "computer graphics" (illustrated line drawings). The structure of these programmes is somewhat like that of the musical—the narrative stops for a short performance. This gives a unique comic feel to the programme.

Ultimately, though, the most impressive fact about The Hitchhiker's Guide to the Galaxy is that so much has so repeatedly been made of so little. This is not to belittle the programme in any way, but simply to point out that basically the same narrative has been reworked and reissued over more than a decade, consistently finding, with new media, new
HOCKEY NIGHT IN CANADA

Canadian Sports Program

Hockey Night in Canada is one of sports broadcasting's longest-running and most groundbreaking programs. The contractual foundation for the series was established on an Ontario golf course in 1929 with a handshake between Toronto Maple Leafs boss Conn Smythe and advertising agency owner Jack MacLaren. The agreement granted MacLaren and his General Motors client the radio rights to Leafs games once Maple Leaf Gardens had been built. The inaugural General Motors Hockey Broadcast subsequently aired on 12 November 1931, soon after the Gardens was completed, with Foster Hewitt calling a Leafs/Chicago Black Hawks match-up. That same night, a Montreal contest between the Canadiens and the New York Rangers was also transmitted. By the start of 1933, a 20-station hook-up relayed broadcasts in English from both Toronto and Montreal. A telephone survey estimated the combined per-game audience at just under a million—in a country of less than ten million people, many of whom did not even own radio sets. A coast-to-coast ad hoc network for the program was in place by the end of the 1933-34 season.

From 1936 to 1937, Imperial Oil (another MacLaren client) replaced General Motors when GM of Canada's new president, freshly transferred from the United States, declared that he "did not believe hockey would sell cars." Meanwhile, on 1 January 1937, the Canadian Broadcasting Corporation (CBC) was launched as a public network and assumed national carriage of the program. Sometime thereafter, the series began to be identified as Hockey Night in Canada.

HNIC's first publicly televised game originated from Montreal on 11 October 1952. The initial Toronto telecast followed on 1 November. The Toronto broadcasts were supervised by George Retzlaff, a 30-year-old technical director from Winnipeg who had just finished his CBC cameraman's training when he was named head of CBC Sports and producer of HNIC. Retzlaff's flair for cogent camera angles and sensitivity to the sound factors of a telecast proved to be vital assets in his new job. Meanwhile, Gerald Renaud, a 24-year-old newspaper sports editor from Ottawa, taught himself television and secured the job of Montreal sports producer. Renaud remarked, "The basic principle for the camera positions I wanted to have was an ideal seat from which to watch the game." HNIC broadcasts originally utilized three overhead cameras. In 1956, Renaud introduced a fourth "goal camera" at ice level to catch the action around one of the nets. This was a natural extension of his daring method for shooting a game and pioneered a tighter, more adventurous school of hockey directing. Toronto's Retzlaff was an innovator as well. Anticipating the video tape replay, he used a new "hot

processor” in 1955–56 to develop a kinescope (film) recording of a goal within thirty seconds for “almost instant” replay. Separately, and in their own ways, Retzlaff and Renaud taught telecasters how to convey the hockey drama. In these early years, Retzlaff was also a master at keeping both the CBC and MacLaren Advertising happy—an essential factor in HNIC’s fiscal stability.

Throughout the 1950s, the national feed game alternated weekly between Toronto and Montreal with the opposite game downgraded to regional status for airing in Ontario or Quebec respectively. Because there was no real liaison between the two units, tensions and differences in coverage styles developed. In 1966, therefore, Ted Hough (whose MacLaren vice presidency made him administrative head of HNIC) hired TV football director Ralph Mellanby to be executive producer of all HNIC telecasts. To make the coverage more interesting, Mellanby began by requiring staff to ledger every stoppage in play and justify what the production featured during each stoppage. He introduced dramatic scripted openings to sell the personality of each particular game in the same way that teasers were used in entertainment series. Mellanby also brought in directional microphones to catch the sounds of crunching bodies and richocheting pucks and (once colorcasting began after a March 1965 test) put the home team in white uniforms so that succeeding weeks’ matches would benefit from the changing hues of different visitors’ bright road jerseys.

For many years, the television production of HNIC dovetailed with the radio coverage. Thus, the series aired on Saturday evenings (with some regional Wednesday games continuing into the 1970s) until Stanley Cup Play-off time when coverage could be almost nightly. However, because of CBC scheduling constraints, the early telecasts did not begin until 9:00 P.M.—the middle of the games’ second period. In 1963–64, sign-on was moved up to 8:30 (near the first period’s end) and in 1967–68, an 8:00 start inaugurated full-game coverage. In 1995, a Saturday doubleheader pattern began that featured two regional matches at 7:30 followed by a 10:30 nationwide feed from a western venue.

Financial aspects of the series also evolved. In 1958, the Molson family bought controlling interest in the Montreal Canadiens and used this as leverage to acquire part of the HNIC sponsorship for their Molson Breweries. By 1963, their sponsorship share equaled that of Imperial Oil. Ford of Canada also came aboard, initially to air “cover” commercials in provinces where beer advertising was prohibited. Imperial Oil pulled out of partner sponsorship in 1976 as oil shortages made advertising redundant. (But it left behind the post-game ritual of picking the “three stars”—a practice begun to promote Imperial’s “Three Star” brand of gas.) The CBC then assumed Imperial’s equity, creating a struggle for control with MacLaren’s Canadian Sports Network, the entity that actually produced HNIC. Ultimately, Molson chose to eliminate the MacLaren middleman, setting the stage for a 1988 Molson/CBC pact that kept the series out of the hands of eager independent network CTV, and officially retitled it Molson Hockey Night in Canada on CBC. The CBC thereby solidified its technical and transmission control of the series with Molson subsidiary Molstar Communications strengthening its role as the proprietary producer and holder of exclusive contracts with the key on-air personalities.

Over the years, HNIC’s air talent have been among the most famous people in Canada. Pioneering broadcaster Foster Hewitt was joined by son Bill when television coverage was added. Once HNIC outgrew radio/TV simulcasts, the elder Hewitt let his son handle the bulk of the TV side while he concentrated on his first love, radio. Foster Hewitt’s ability to call a play and anticipate where it was going set the standard for the HNIC personalities who followed. Among these are Bob Cole, who replaced the ailing Bill Hewitt in 1973. Cole’s style is to build his voice in a compelling series of plateaus as a play develops to its climax. Another broadcaster, former Vancouver and Detroit coach Harry Neale, inserts pithy lines into his games. (“Turnovers in your own end are like ex-wives. The more you have, the more they cost you.”) Dick Irvin Jr., whose father coached both the Maple Leafs and the Canadiens to Stanley Cups, imbues the broadcasts with a genteel sense of heritage. And commentator and ex-coach Don Cherry is a volatile legend himself. Together with adroit foil and master punster Ron MacLean, Cherry’s between-periods Coach’s Corner often attracts more audience than the game itself as he rails against the “pukes” and “LA-LA land sissies” who would outlaw on-ice fighting and draws blustery, unfavorable comparisons between European players and “good Canadian boys who play hockey the way it’s supposed to be played.”

HODGE, PATRICIA

British Actor

Patricia Hodge is a versatile and familiar face in British television comedy and drama. Her credits extend from the situation comedy Holding the Fort to supporting roles in long-running drama serials, such as Rumpole of the Bailey, and leading parts in specials and miniseries like The Life and Loves of a She-Devil.

Hodge’s abilities as an actress were evident even before she completed her training at the London Academy of Music and Dramatic Art, where she won the Eveline Evans Award for Best Actress. Prior to establishing herself in television and film she gathered valuable stage experience, appearing in major productions of plays as varied as Rookery Nook, Two Gentlemen of Verona, Hair, and Look Back in Anger. With her vivacious good looks, half-closed eyes, and distinctive sharp-lined mouth, she proved herself equally adept at playing sultry temptresses and outraged harpies with a cruel streak, among other contrasting roles. The one single factor common to the majority of her characters has been their patently aristocratic birth.

As a television performer, Hodge was warmly received as well-spoken barrister Phyllida Trant in support to a rascally Leo McKern in Rumpole of the Bailey, a role in which she reappeared many times. Her first starring part came in the situation comedies The Other ‘Arf, in which she was MP John Standing’s snobbish, spurned partner Sybilla Howarth, and Holding the Fort, a somewhat lacklustre series in which she was paired with Peter Davison as a newly married young mother experimenting with role reversal, going back to work while her restless husband stayed at home to do the chores.

By now established as a player of ladies of distinctly elevated backgrounds, Hodge was an obvious choice for Lady Antonia Fraser’s aristocratic amateur sleuth Jemima Shore in Jemima Shore Investigates, sniffing out crimes among the nobility. Hodge’s playing was widely recognized as the best feature of an otherwise very ordinary effort, which despite her contribution was fated to be only short-lived. Also wealthy and well-connected was her character in Fay Weldon’s far more successful The Life and Loves of a She-Devil — the arrogant and man-stealing best-selling novelist Mary Fisher finally brought low by the vengeful Ruth Patchett (played by Julie T. Wallace). Also worthy of note have been her performances as Julia Merrygrove in Rich Tea and Sympathy and guest appearances in shows ranging from Softly, Softly, The Adventures of Sherlock Holmes, and Inspector Morse, to Victoria Wood: Staying In and The Full Wax, in which she showed a refreshing readiness to allow herself to be made fun of.

HOLBROOK, HAL

U.S. Actor

Hal Holbrook is a highly respected television actor. Perhaps known to TV viewers for his regular supporting role in Evening Shade, Holbrook plays a cantankerous older man, a newspaper editor, whose son-in-law is played by Burt Reynolds. Holbrook is also known as the cunning lawyer Wild Bill McKenzie in the NBC made-for-TV Perry Mason Mystery movies. In these movies Perry Mason is out of town and Holbrook's McKenzie is handling court cases for Mason. Another regular recurring role introduced him to audiences as Reese Watson, boyfriend of the rambunctious Julia Sugarbaker on Designing Women. (Dixie Carter, who portrayed Julia, is Holbrook's wife.) But Holbrook's acting experience is much more expansive than these recent television excursions indicate.

Holbrook began his acting career on Broadway in the 1950s when his characterization of Mark Twain won him international recognition. The one-man drama Mark Twain Tonight premiered on Broadway in 1959, and won him a Tony Award in 1966. He performed the act on network TV, and has continued its performance. He also has acted in many other plays and locations. In 1993, for example, he played Shakespeare's King Lear at the Old Globe Theatre in San Diego, California, where the critics and audiences loved him. While touring with Mark Twain Tonight Holbrook began acting in cinema. He first appeared in The Group (1966) and Wild in the Streets (1968).

Holbrook began acting on TV as he simultaneously toured Mark Twain Tonight and acted in film. In 1969 he appeared in the made-for-TV movie The Whole World Is Watching. This was followed by a quick succession of other TV movies, such as A Clear and Present Danger, Travis Logan, D.A., Suddenly Single, Goodbye, Raggedy Ann, and That Certain Summer. Most of his best acting on TV is in single appearances rather than in a series. Many of these performances are based on historical figures (Twain, Lincoln, Commander Lloyd Bucher of the ship Pueblo). He

has won the Emmy for The Senator, Pueblo, and Sandburg's Lincoln. His TV credits include working as the sometimes host on Omnibus, and acting in miniseries such as North and South.

Holbrook's work in the theater has been of enormous benefit to his TV performances. For Holbrook, money—

not art—is in Hollywood films and TV. He has learned the craft of acting primarily on the stage. In theater, says Holbrook, the actor is responsible for his/her success or failure. Thus, his acting has improved over several decades due to his professional theater work. But he has consistently come back to the mass medium of TV to entertain audiences in movies and historical dramas, bringing well-crafted acting, intelligent characterizations, and award-winning performances. He has gone one step further with Designing Women and Evening Shade. Classic and classy acting now resides in a TV sitcom.

HOLLYWOOD AND TELEVISION

The history of the vital relationship between Hollywood and television begins in the 1920s, as radio broadcasting created new opportunities for showmanship and entertainment. Film entrepreneurs eagerly pursued the possibilities radio awoke for various aspects of the film business, including production, promotion, and exhibition. One of the earliest was Samuel L. Rothafel, manager of the Capitol Theater in New York City, owned by the Loews Corporation. "Roxy", as he was known, took to the air on 19 November 1922, over WEAF as host of The Capitol Theater Gang, a regular Sunday night broadcast of the Capitol Theater's pre-feature stage show. Roxy soon became one of radio's first celebrity personalities, and Loew's flagship theater and films received the benefit of national promotion as WEAF became the central hub of the fledgling NBC network. This mutual publicity and benefit showed what a strategic alliance of the two media could accomplish.

Samuel L. Warner parlayed his interest in sound film technology into a Warner Brothers radio station, KFWB, in 1925, proposing that other studios recognize the potential in this new medium as well. Loew's New York station, WHN, provided one of the few consistent venues for black jazz musicians in the 1920s and early 1930s. Despite some exhibitors' objections, both Paramount and MGM announced their intentions to form radio networks in the late 1920s. Paramount eventually became half-owner of CBS until forced to sell back its stock in 1932; MGM went on to participate in radio program origination with The Maxwell House Showboat in the 1930s; and in a reversal of this pattern RCA, parent of NBC, acquired its own film studio, RKO, in 1929.

With the entry of advertising agencies into radio production in the early 1930s, the somewhat stuffy potted-palm aesthetic of NBC gave way to Hollywood-based showmanship, and film stars and properties made up an increasing proportion of radio's daily schedules. Hollywood became a major broadcast production center in the mid-1930s, with such programs as Hollywood Hotel, the Lux Radio Theater (hosted by Cecil B. DeMille), and most major variety shows featuring Hollywood talent originating from the West Coast studios of NBC, CBS, and major agencies. In turn, as radio developed its own roster of stars, the studios capitalized on a long series of radio pictures, from Amos and Andy's Check and Double Check in 1932 and the Big Broadcast films to the Bob Hope and Bing Crosby "Road" movies of the 1940s. The studios also capitalized on the promotional capacity of radio in the form of spot advertising, using audio-only trailers as an important part of film promotion.

This lucrative and mutually beneficial relationship, combined with FCC regulation, kept Hollywood from developing its potential for competition with network broadcasting by restricting the use of recorded material for syndication. Not until the advent of television did film itself present a strong alternative to provision of live programming via networks. Though Paramount, Warner Brothers, Loew's-MGM and 20th Century-Fox had all opened stations or applied for television station licenses in the late 1940s, indications from the FCC that movie studios would not be looked upon favorably in post-freeze allocations led to experimentation with other methods.

Hollywood studios plunged into television on three fronts: first, in the development of pay television systems in the late 1940s, designed to provide feature films on a box-office basis; second, in experiments with theater television, a method for projecting television onto movie theater screens; and third, in direct production for television, both network and syndicated. Paramount experimented with its Telemeter pay-per-view system, along with Zenith's Phonevision and the Skiatron Corporation's over the air technology; FCC discouragement of this potentially powerful competition to network broadcasting prevented pay television from becoming a reality and allowed the cable industry to find a foothold. Both Fox and Paramount attempted to develop theatre television but the expansion of individual TV set sales, combined with the FCC's refusal to allocate part of the mostly unused UHF band for transmission, brought this short-lived technology to a halt. By the early 1950s the studios had turned to television production. Led by Hollywood independents but culminating in the Disney/ABC alliance that produced Disneyland in 1954. Warner Brothers and MCA/Universal followed, as network expansion and consolidation allowed a shift from live programming to filmed series. By 1960, 40% of network programming was produced by the major Hollywood studios and the proportion continued to grow.

Institution of the financial interest and syndication rules in the mid-1970s finally allowed the production companies to break free of network dominance of the lucrative syndication market. Combined with the growth of cable, where the must-carry rule helped provided new audiences for independent stations, the market for Hollywood-produced series, specials, miniseries and movie packages skyrocketed in the 1980s. Pay cable companies such as HBO and Showtime provided new funds for production capital.

By the late 1980s history had come full circle, as Rupert Murdoch's vertically integrated Twentieth Century-Fox corporation formed the first successful fourth network in broadcasting history. The new FOX network capitalized on a ready supply of in-house programming, newly powerful independent stations, niche marketing to youth and favorable FCC regulation to prove that the Hollywood film industry and network television broadcasting had only remained separate for forty years as a result of heavy legislative intervention. Paramount and Warner Brothers were not slow to take heed, starting up two new networks, the United
Paramount Network (drawing on the success of the syndicated Star Trek series) and the WB (an almost exact imitation of FOX), in January 1995. Disney's purchase of ABC in 1996 confirmed the studio-network alliance. By the late 1990s, as cable, telephone, computer and broadcasting companies struggled for favorable alliances with Hollywood-based creative organizations, the relationship of Hollywood and television continued its cruise at warp speed into the integrated and interactive sphere of cyberspace.

HOLOCAUST

U.S. Miniseries

Holocaust first aired on NBC from 16 April through 19 April of 1978. Most obviously, this nine-and-a-half-hour, four-part series may be compared to Roots, which aired on ABC a year earlier and on which Holocaust's director, Marvin Chomsky, had worked. Like Roots's saga of American slavery, Holocaust's story of Jewish suffering before and during World War II apparently flew in the face of network programming wisdom, which advised against presenting tales of virtually unrelieved and inexplicable misery. While Holocaust was a smaller ratings success than was Roots (it drew a 49 audience share to Roots' 66), NBC estimated after the 1979 rebroadcast that as many as 220 million viewers in the United States and Europe had seen the series.

Holocaust, produced by Herbert Brodkin, contrasts the interlocking fates of two German families, the Jewish Weisses of the subtitle and the Nazi Dorfs. At the time of the series's first airing, critics sniped about the improbability of the proposition that so small a cast of characters would be witnesses to so great a number of the major milestones in the destruction of European Jewry, among them the confabulations of the architects of Hitler's Final Solution, the slaughter at Babi Yar, the Warsaw Ghetto uprising, and the liberation of Auschwitz. In another sense, however, this emphasis on blood ties conforms to this drama's major artistic strategy, the employment (over-employment, James Lardner complained in the New Republic) of symbol and archetype. Thus the Holocaust is, in this conception, the decimation of a family within Europe, just as the infamous smokestacks of the death camps may be emblazoned by a moment when the small daughter of Nazi bureaucrat Erik Dorf stuffs a sheaf of Weiss family photographs into the parlor stove and shuts the door firmly upon them.

On its American debut, Holocaust met with a generally positive response but not with unanimous approbation. Holocaust survivor Elie Wiesel protested in The New York Times that it was "untrue, offensive, cheap". Reviewers generally applauded the cast (which included Meryl Streep, Ian Holm, Fritz Weaver, Rosemary Harris, and Michael Moriarty, who won an Emmy for his portrayal of Dorf) and praised Gerald Green's script, an overnight best seller when published in novel form as a tie-in. Still, several critics described a curious "emptiness" at the drama's heart, emanating from what they identified as excessive melodrama and flat characters who seemed designed to represent particular classes and types more than individuals. Moreover, many viewers were particularly dismayed by the content of the commercial interruptions, which at best seemed to strike a cheerfully vulgar note inappropriate to the subject matter of the series and at other times appeared, horrifyingly, to parody it, as in the juxtaposition of a Lysol ad alerting viewers to the need to combat kitchen odors, with a scene in which Adolf Eichmann complains that the crematoria smells make dining at Auschwitz unpleasant.

When the series aired in West Germany on the Third (Regional) Network in January 1979 (a forum apparently designed to lessen its impact), however, viewer response was little short of stunning. According to German polls intended to measure audience reaction before, immediately after, and several months after Holocaust appeared, this single television event had a significant effect on West Germans' understanding of this episode in the history of their country. Despite strong opposition to the broadcast before it aired, some 15 million West Germans (roughly half the adult population) tuned in to one or more episodes, breaking what Judith Doneson calls "a thirty-five-year taboo on discussing Nazi atrocities". Among those who saw the series, the number favoring the failed German-resistance plot of 20 July 1944 to assassinate Hitler rose dramatically, Variety reported that "70% of those in the 14 to 19 age group declared that they had learned more from the shows about the horrors of the Nazi regime than they had learned in all their years of studying West German history". Such was the public response that West Germany promptly canceled the statute of limitations for Nazi war crimes, formerly scheduled to expire at the end of 1979.

The mixture of prime-time commercialism and emotional commitment that informed Holocaust goes far to
explaining both its wide appeal (and, often, powerful effect) and the disappointment it represented for its detractors. Filmed, unlike *Roots*, on location—in Mauthausen concentration camp, among other places—and reportedly a shattering experience especially for the actors portraying Nazis, the series allowed its producers to take pride in the quality of the research involved; they were creating, they noted, a major television event designed to shape the historical perceptions of millions. But ultimately, it would seem, the critiques of the series arise from the fact that it is no more than the "major television event" that NBC assuredly achieved.

—Anne Morey

HOME BOX OFFICE
U.S. Cable Network

Home Box Office (HBO), a division of Time Warner Entertainment Company, produces, markets, and distributes media products for both film and television. It operates a 24-hour premium cable channel with transmission across the United States, Puerto Rico, Guam, and the U.S. Virgin Islands. The mainstay of its programming is non-X-rated motion pictures, with originally produced documentaries, movies, series, comedy, music, movies, and sports specials. In addition to the self-named premium channel HBO, the corporation operates Cinemax, another premium channel, and owns 50% of Comedy Central. It also maintains equity interests in E! Entertainment. Internationally, its services include HBO Asia, HBO Brazil, HBO Czech, HBO Hungary, HBO Spektrum, a Hungarian language documentary channel, and throughout Spanish-speaking Latin America and the Caribbean Basin as HBO Ole.

Founded in 1972, HBO was developed as a paymovie/special service cable operation in New York. In November of the same year, service was expanded when a National Hockey League game from Madison Square Garden was transmitted to 365 Service Electric Cable TV subscribers in Wilkes-Barre, Pennsylvania. After three years of expansion using microwave technology, HBO presented the heavyweight boxing championship fight between Muhammad Ali and Joe Frazier in Manila via satellite. Its success lead to HBO becoming the first in the television industry to use satellites for regular transmission of programming.

With the national growth of cable television, came competition from other companies offering premium channel service. In an effort to ensure product, Showtime, The Movie Channel negotiated a deal with Paramount Pictures, giving them exclusive rights to all motion pictures distributed. HBO countered the move by forming a new motion picture company with Columbia Pictures and CBS in 1983—Tri-Star. Later, the company obtained exclusive rights to films from Silver Screen Partners, Columbia Pictures, Savoy Pictures, and 20th Century Fox.

The company expanded its reach into broadcast television in 1990 with the formation of HBO Independent Productions, developed to produce series television. Its first show was Roc, which aired on the FOX network. Acquisition of Citadel Entertainment in 1991 furthered HBO’s reach, developing programming for CBS and ABC, as well as for cable channels TNT, USA Lifetime, and HBO.

The cable and broadcast television industry were severely affected by increasing use of videocassettes by the public. In the 1980s, sales and rentals of pre-recorded video tapes detrimentally affected viewership. HBO further diversified, entering into this area as well. In 1984, with Thorn
EMI Entertainment, the company formed EMI/HBO Home Video (now known as HBO Home Video). This division of HBO both acquires and distributes home video programs in the United States and Canada. A cable industry giant, the Home Box Office corporation initiated several new technologies, marketing strategies, and programming ideas to television, resulting in its receipt of the Golden Ace, the cable industry’s highest overall honor. Some of its innovations include: in 1980, pay-tv’s first comprehensive national advertising campaign; in 1981 the first made-for-pay-tv movie, *The Terry Fox Story*; in 1986, full-time time scrambling in an effort to fight piracy; and in 1991 multi-plexing of HBO and Cinemax.

**HOME VIDEO**

In the early 1960s major players in the U.S. electronics and entertainment industries began making plans to develop some form of home video system. All of these projects conceived of home video as a playback-only system, employing some kind of disc. The basic assumption was that consumers would purchase copies of video programs just as they purchased phonograph records. In this way, the program producers could retain strict control over the duplication and sale of their copyrighted material. A machine that recorded could only mean one thing: piracy of valuable rights. To U.S. interests, videotape was strictly a professional medium.

Japanese corporations, however, sought to develop video recorders for consumer use. Sony was the leader in this effort, making brief attempts to open the home market with open-reel VTRs (videotape recorders) in the mid-1960s, and 3/4-inch U-Matic VCRs (video cassette recorders) in the early 1970s. These formats had been developed with home video in mind, and although they were either too crude, complex, cumbersome or costly to catch on with consumers, both were successes in educational and industrial markets, allowing Sony to continue development work.

The U.S. video ventures tended to be over-promoted and under-engineered, more hype than substance. RCA began making grand pronouncements about its soon-to-be released video disc in 1969, yet the device did not reach the market until 1981. One of the factors that plagued the development of video disc systems was the chicken-and-egg nature of the relationship between software and hardware. Hardware producers were unwilling to invest major efforts if software wasn’t available, and software producers were unwilling to commit production to an untried system. Sony did not have this problem. Sony CEO Akio Morita had long felt that video’s consumer potential lay in its ability to free viewers from the rigid time constraints of the broadcast schedule. “People do not have to read a book when it’s delivered,” he argued, “Why should they have to see a TV program when it’s delivered?” In 1975 Sony introduced the Betamax VCR with an ad campaign positioning it as a product with unique single purpose: time-shift viewing.

Sony did not suggest that viewers might then save the tapes, and begin building a library of programs. But this prospect occurred almost immediately to MCA president Sidney Sheinberg when he saw the first Betamax ads. MCA, the parent company of Universal studios, was a major entertainment copyright holder—and was also seeking to develop its own video disc system. MCA sued Sony, arguing that the Betamax encouraged copyright infringement, and seeking to have the VCRs withdrawn from the market.

The Betamax VCR system soon faced opposition in the market as well. Sony’s more powerful Japanese competitors Matsushita (the parent company of Panasonic) and Hitachi developed their video cassette recording devices on the VHS system, a format developed by JVC, and incompatible with the Sony system.

Although early VCRs in any format were expensive—luxury items restricted mainly to the relatively well-to-do—they sold well enough for the manufacturers to expand production, and to worry the domestic video-disc forces. In 1978, inside buzz in the consumer electronics industry held
that RCA was about to ship disc players with prices so cheap, and with so much software and marketing power behind them, that the Japanese upstarts would be sent packing and VCRs would go the way of 8-track tape players. It didn’t happen. Instead, RCA, GE, Magnavox and other domestic companies entered the video business by marketing VCRs manufactured by Matsushita and Hitachi. These companies were willing to slap the U.S. brand names on their machines because they could garner significant sales without spending large sums on promotion or establishing new dealer networks.

The original verdict in the Betamax case was delivered in 1979. Sony won. MCA appealed, backed by the larger forces of the Motion Picture Association of America and a coalition of copyright holders in other mediums. In 1981, the U.S. Court of Appeals reversed the earlier decision, but it did not order the Betamax withdrawn, leaving the matter of penalty to be decided later. Though still not common household items, VCRs had by this time won enough favor with the public that it would have been politically unwise to prohibit them. No action was taken, pending Sony’s appeal to the U.S. Supreme Court.

When RCA finally released its long-awaited videodisc player that same year, the cost was near that of a VCR, the picture was mediocre and the discs began to wear out after a number of plays. The public reacted with a collective yawn. The RCA videodisc was the only home video product created directly by a major U.S. corporation ever to reach the market.

Though a number of bills dealing with VCR development and use had been introduced in Congress, none passed. In 1984 the Supreme Court reversed the Appeals Court, ruling in Sony’s favor on the grounds that home video recording fell under the "fair use" provisions of copyright law. However, Sony’s legal triumph was tempered by setbacks in the market. Almost all the U.S. companies marketing VCRs had opted for the VHS format, and Betamax machines had steadily lost market share.

VCR use continued to move away from mere time-shifting, and in the format wars between the Beta and VHS systems, software was the deciding factor. And software meant movies. When the Betamax appeared, the movie industry had little interest in releasing old films on videocassette. After all, the movies studios and trade organizations were supporting the suit to get rid of the Betamax, and still had visions of video discs dancing in their heads.

Nevertheless, a Michigan entrepreneur named Andre Blay decided to start a pre-recorded videocassette business. He began soliciting the studios, seeking to purchase the rights to distribute films on tape. All but one rejected him. 20th Century-Fox, strapped for cash at the time, signed on, and in late 1976 Blay began selling tapes through a video club arrangement advertised in TV Guide. The promotion was an instant success. Blay and Fox made more money than they had imagined, and the other film companies slowly but surely followed them to this new source of profit.

Because the first films on video were prepared for an untested market, they were produced on a small scale and were quite expensive. Like the first VCRs, they seemed to be luxury items with a limited market. However, another entrepreneur struck on the idea of acquiring a library of tapes and renting them out for a reasonable fee. This seemed like a good idea to many would-be small businessmen, and video rental businesses quickly spread across the country. “Mom and Pop” video shops seemed to appear on every local corner.

For all the power of the large corporations that created the hardware, this grass-roots phenomenon of tape rental was the key to the diffusion of the VCR. With inexpensive software readily available for rent, VCR ownership became more desirable. Rising VCR sales drew more video titles into release and lowered rental prices, which helped VCR sales grow again, and so on. Unfortunately for Sony, the fact that a majority of VCR sales were VHS units led video shop owners to stock more VHS titles, which led to even more VHS sales. The Beta format was left on the wrong end of the economic spiral. By 1986, with basic models priced under $200 in discount stores, the VCR was no longer a luxury, but a household staple, a piece of the common culture. As the decade turned, Sony quietly folded Beta production and began manufacturing VHS machines.

Ironically perhaps, most VCR owners rarely use the machines for time-shifting—most VCR clocks will do nothing but blink “12:00” on into eternity. Instead consumers use VCRs in purposes intended for the failed disc-players—to play back pre-recorded material. Another irony: despite all the entertainment industry’s fears of piracy, videocassette sales proved to a major source of revenue—the VCR helped save the studios instead of helping destroy them. The Japanese triumph in the video wars was the last straw in the collapse of the U.S. consumer electronics industry, and signaled the development of new global relations in the entertainment business. A final irony: in the 1990s Matsushita purchased MCA (only to sell it in 1995, perhaps an indication that the manufacturer is a stronger force in the creation of hardware than software.)

The cultural impact of home video is not as easy to gauge as the economic. When the VCR first arrived some social thinkers enveloped it in utopian promise. By putting technology in the hands of the people, their argument went, we finally had the mechanism to enable true media diversity that would replace an imposed, top-down mass culture. Indeed, videotape distribution does not require the economies of scale necessary for large-scale network or even local broadcasting. Thus, theoretically, home video opens the television medium to a host of small, non-corporate voices. The utopian promise grew with the advent of portable VCRs and video cameras, later refined into the low-cost compact camcorder. With this technology almost anyone could become a producer!

Yet home video did not lead to a great democratic decentralization of television. In the early days of the video
business a number of tapes from non-mainstream producers became widely available, but these were largely pornography and low-grade slasher films. Even these disappeared as the Mom and Pop video stores were displaced by the clean corporate hegemony of Blockbuster Video and other chain distributors. The pre-recorded tapes most VCR users pop into their machines are mainstream products of an increasingly monopolized culture industry. What home video has enabled is the phenomenon of "cocooning," the ability to participate in cultural consumption without going out in public. Even the camcorder remains a largely private phenomenon, restricted by most users to home movies of family events (with all cute-kid out-takes shipped off to America's Funniest Home Videos, of course). Still, while home video has had no revolutionary effect on the cultural mainstream, it has enabled new activity at the margins. Independent, experimental or alternative tapes of all sorts do get made and distributed. For example, Cathode Fuck and other scabrous works of culture-criticism-on-video circulate more freely and widely than the avant-garde films from which they descended.

In all, the history of home video indicates that technology does not so much change society as better enable people to pursue their existing interests, be it the few who experiment with media alternatives, or the many who seek Hollywood thrills and romance from the comfort of their living room sofas.

HOMICIDE
Australian Crime Series

Homicide was one of the first drama series produced in Australia, and one of its most historically significant and successful. First broadcast in 1964, Homicide ran for 509 episodes until production ceased in 1975, establishing the police drama as a staple of Australian-made TV in the 1960s and 1970s, and revealing an enthusiasm among Australian TV viewers for local programming, of which there had been very little prior to the success of Homicide.

Homicide was produced for the Seven Network by the Melbourne-based Crawfords Productions, whose founder Hector Crawford has been a pivotal figure in Australian radio and television. With Homicide, Crawfords pioneered long production runs for serialised drama on modest budgets, and had established the importance of the external production house as a source of local drama material for the commercial networks. Crawfords also pioneered outdoor location filming in Australia, which was an important part of Homicide's popularity with Australian audiences, who for the first time saw drama taking place in familiar urban locations.

Homicide was an episodic crime drama, invariably involving a murder, with most episodes following closely a narrative structure in which the detective team would investigate and, in the final segments, resolve the murder and arrest the perpetrators. The program was thus "realist" in both narrative and visual representation. Still, the team of male detectives was detached from their social environment. They were always presented as part of a stable hierarchy, and bound by thorough professionalism and no consideration was given to their private lives. These factors place Homicide in an older tradition of TV police drama. Here dichotomies between law and crime, the police and the society in which they operate, their professional work and private lives, and the relationship of hierarchical authority to individual initiative remain stable and largely uncontested. Homicide can be seen as a program which defined the generic conventions of police drama in Australia, drawing upon the codes and conventions established in police dramas such as Dragnet in the United States and Z Cars in Britain, with more emphasis upon the narrative of crime-solving than on the development of character and the generation of conflict.

The peak years of Homicide were also the peak years of police drama on Australian TV, with it and other similar programs consistently rating highly with local, particularly male audiences. When production of Homicide ceased in 1975, the police drama had already declined in significance in programming schedules and popularity, giving way to the rise of the serial drama and, later, the miniseries.

The significance of Homicide to Australian television perhaps lies less in its textual innovations than in certain institutional factors. It demonstrated a capacity to present familiar environments and character types to Australian audiences on TV for the first time. It created an environment more conducive to policy measures that promoted local drama production and restricted imported material. And it exemplified the innovations in program production necessitated by the need to produce an on-going drama series. In many ways the program demonstrates the ways in which Australia's international reputation as a country with a competitive advantage in low-budget

HONEY WEST

U.S. Detective Program

Honey West is significant as the first woman detective to appear as the central character in American network television series. While women had portrayed investigators, police reporters, FBI agents and undercover operatives in crime drama formats from the earliest days of television, they typically shared billing as sidekick characters, worked at occupations more commonplace than detective or were cast in secondary roles. Examples would include, among others, journalist Lorelei Kilbourne in the series Big Town (1950–56), international art gallery owner turned sleuth, Mme. Lui-Tsong, in The Gallery of Mme. Lui-Tsong (1951) and girl Friday Maggie Peters in The Investigators (1961). Honey West took this activity to another level. Her principal work was operating a detective agency and, unquestionably, she was the star of her show. Featuring actress Anne Francis in the title role, the ABC series was broadcast for one season (1965–66) and broke ground for other female detective/spy programs to follow, such as The Girl from U.N.C.L.E. (1966–67), Get Christie Love (1974–75) and Police Woman (1974–78).

The character of Honey West was created by husband and wife writing team Skip and Gloria Fickling (a.k.a. G. G. Fickling) in a series of novels published in the late 1950s to early 1960s. On 21 April 1965 the character was introduced to television audiences in a Burke's Law episode, "Who Killed the Jackpot?", and true to form, Honey outwitted the dapper detective played by Gene Barry. Producer Aaron Spelling spun the character off into a separate thirty-minute series which premiered 17 September 1965.

Operating her late father's detective agency, Honey West used many talents in her fight against crime. She was expert at judo and held a black belt in karate. Beautiful and shapely, her feminine wiles were accentuated by form-fitting black leather jump suits, a sexy mole on her right cheek, tiger coats and "Jackie O" sunglasses. Like James Bond, she also owned an arsenal of weapons filled with "scientific" gadgets including a specially modified lipstick tube and martini olives that camouflaged her radio transmitters.

For undercover work, Honey and her admiring partner, Sam Bolt (John Ericson), drove a specially equipped van labeled "H. W. Bolt and Co., TV Service." Her principal base of operation was her Los Angeles apartment complete with secret office behind a fake living room wall, Bruce, her pet ocelot, and Meg West (Irene Hervey), her sophisticated aunt, also lent assistance and comfort as necessary.

Honey West premiered to reasonably good reviews. Citing the show's sensual aspects, smooth production values and Honey's ability to bounce Muscle Beach types off the wall with predictable regularity, Variety's 1965 evaluation predicted some success "as a short subject warm up to The Man from U.N.C.L.E." Season opening Nielsen ratings ranked the show in a tie for nineteenth place but this proved short-lived as the show's CBS competition, Gomer Pyle, knocked it quickly out of the top forty.

Contrasted with Variety's review, Jon Lewis and Penny Stempel note that while the "Honey West" concept was good and the character deserves credit for working in a man's world, the series suffered from unimaginative plots and poor production quality. "In fact, say Lewis and Stempel, Honey West is "mostly memorable for the fight scenes in which a man with a blonde wig was quite obviously wheeled in to do the stunts."

Often compared to Emma Peel in the British series The Avengers (U.S., 1966–69), Honey West simply did not have Miss Peel's style or longevity and lasted a total of thirty episodes. Providing a notable change to the male dominated detective genre so prevalent from the earliest days of network television, Honey West broadcast her last original show on 8 April 1966.

—Joel Sternberg
THE HONEymoonERS

U.S. Situation/Sketch Comedy

The Honeymooners is one of network television's most beloved and syndicated series. Although The Honeymooners ran for only one season as a half-hour situation comedy (during the 1955-56 season on CBS), Jackie Gleason presented the sketch numerous times during his various variety series. In fact, no premise has been seen in so many different guises in the history of television—aired live, on film and on tape; in black and white and color; as sketch comedy, situation comedy, and musical. It succeeded on network, syndicated, and cable television. Whatever the form, audiences have continued to embrace the loudmouthed bus driver Ralph Kramden, Gleason's most resonant creation, as an American Everyman, a dreamer whose visions of upward mobility are constantly thwarted.

The Honeymooners stands in stark contrast to the prosperous suburban sitcoms of the 1950s. The battling Brooklynites, Kramden and his sarcastic wife Alice (Audrey Meadows, the most well known of the several impersonations), are trapped on the treadmill of lower-middle-class existence. Their spartan apartment is one of the most minimal and recognizable in television design. A functional table, a curtainless window, and an antiquated ice box signal their impoverishment. Most of the comedy revolves around Ralph's schemes to get-rich quick (e.g. his infomercial for the Handy Housewife Helper in "Better Living Through TV"). The tempestuous Ralph is assisted by his friend and upstairs neighbor Ed Norton (agilely and always played by Art Carney), a dimwitted sewer worker. The Honeymooners quartet is rounded out by Trixie Norton (most notably Joyce Randolph), Ed's loyal wife and Alice's best friend. Unlike most couples in situation comedy, both the Kramdens and the Nortons were childless and rarely talked about their situation in a baby-booming America.

Gleason introduced The Honeymooners on 5 October 1951 during his first variety series, Cavalcade of Stars, broadcast live on the DuMont network. Kramden directly reflects the frustrations and yearning of Gleason's upbringing; his address at 358 Chauncey Street, was the star's boyhood address. The Honeymooners began as a six-minute sketch of marital combat. The battered wife was realistically played by veteran character actress Pert Kelton. A cameo was provided by Art Carney as a policeman. Viewers immediately identified with Ralph and Alice's arguments and further sketches were written by Harry Crane and Joe Bigelow. Early on, they added the Nortons; Trixie was first played by Broadway actress Elaine Stritch. These early drafts were a starkly realistic insight into the compromises of marriage, a kind of kitchen sink-comedy of insult and recrimination.

In September, Gleason and his staff were lured to CBS by William Paley to star in a big-time variety series, again on Saturday night. Audrey Meadows, who performed with Bob and Ray, replaced Kelton, who suffered from heart problems and political blacklisting. The Honeymooners sketches were mostly less than ten minutes during the first...
During the next two years, the routines grew increasingly longer, many over thirty minutes. Most were marked with the familiar catchphrases—Ralph’s blustery threats (“One of these days Pow! Right to the Kisser!”) and the assuring reconciliations with Alice at the end (“Baby, you’re the greatest”).

For the 1955–56 season, Gleason was given one of the largest contracts in show business history to produce The Honeymooners as a standard situation comedy. Gleason formed his production company and experimented with the Electronicam technology, which enabled him to film a live show with several cameras, a precursor of three-camera videotape recording. Gleason filmed two shows a week at the Adelphi Theatre in New York, performing to over 1,000 spectators. Gleason’s stable of writers felt hemmed in by the regular format, and Gleason noticed a lack of fresh ideas. When the ratings of The Honeymooners sitcom plummeted out of the top ten shows (the previous season The Jackie Gleason Show ranked number two), Gleason decided to return to the variety format. Gleason later sold these “classic” thirty-nine films of The Honeymooners to CBS for a million and a half dollars, and they provided a bonanza for the network in syndication.

The Honeymooners remained a pivotal sketch during Gleason’s variety show the following season. The writers created a few new wrinkles, including a musical trip to Europe that covered ten one-hour installments. When Carney left the show in 1957, Gleason dropped the sketch entirely.

He resurrected his big-time variety show in 1962 and moved the production permanently to Miami Beach in 1964. He sporadically revived The Honeymooners when Carney was available. Since Meadows and Randolph did not want to relocate, Sue Ann Langdon (Alice) and Patricia Wilson (Trixie) took over as the wives. Meadows returned for a one-time special reenactment of “The Adoption,” a 1955 sketch in which Ralph and Alice discuss their rarely heard feelings about parenthood. During the 1966-67 season, Gleason decided to remake the
"Trip to Europe" musicals into color spectaculars with forty new numbers. Sheila MacRae and Jean Kean were recruited for the roles of Alice and Trixie.

Gleason's variety show ended in 1970, but he was reunited with Carney and Meadows for four one-hour *Honeymooners* specials during the late 1970s. The specials, broadcast on ABC, revolved around such family celebrations as wedding anniversaries, Valentine's Day, and Christmas. With Jean Kean as Trixie, *The Honeymooners* remained two childless couples, the most basic of family units on television.

The film episodes of *The Honeymooners* were one of the great financial successes in syndication. A local station in New York played them every night for over two decades. The thirty-nine programs with their almost ritualistic themes and incantatory dialogue inspired cultic worship, most notably the formation of the club RALPH (Royal Association for the Longevity and Preservation of the Honeymooners). For years, the live sketches were considered lost. When the Museum of Broadcasting discovered four complete variety programs featuring the Kramdens and the Norton's, Gleason revealed that he had more than eighty live versions in his Miami vault. He sold the rights of the "lost episodes" to Viacom and the live *Honeymooners* found an afterlife on cable television and the home video market.

*The Honeymooners* remain one of the touchstones of American television, enjoyable on many levels. Critics have compared the richness of Gleason's Ralph Kramden to such literary counterparts as Don Quixote, a character worthy of Dickens, and Willy Loman. Although *The Honeymooners* did not tackle any social issues throughout its many incarnations, the comedy evokes something very essential to the national experience. The Kramdens and Norton's embody the yearnings and frustrations of post-war, urban America—the perpetual underdogs in search of a jackpot. When such producers as Norman Lear in *All in the Family* or Roseanne in her own series want to critique the flipside of the American Dream, *The Honeymooners* has been there as a source of inspiration.

—Ron Simon

**HONG KONG**

Ordered the People’s Republic of China (PRC), Hong Kong has been a British colony for more than 150 years. As a result of the Anglo-Chinese wars in the mid-nineteenth century, Hong Kong Island and the southern tip of the Kowloon peninsula were ceded by China to Britain through the Treaty of Nanking in 1842 and the Convention of Peking in 1860; northern Kowloon was then leased to the British government for 99 years in 1889. The British and Chinese governments have agreed to transfer jurisdiction of all Hong Kong territories to the PRC at midnight, 1 July 1997. According to the Basic Law resolved in 1990 by British and Chinese leaders, Hong Kong will maintain its existing social and economic systems for fifty years subsequent to this transition.

Amidst these dramatic changes, people in Hong Kong rely on television as a central source of information and entertainment. On average, Hong Kong residents watch more than three hours of television each day, making this a more popular leisure activity than playing computer games, seeing films, or even singing karaoke. Out of approximately 6 million inhabitants, more than 90% have televisions in their homes. Among those who do have televisions, about one-third have more than one set at home, while two-thirds also have at least one video-cassette recorder.
The television industries in Hong Kong fit within the economic structure of the territory, favoring private enterprise and free trade. All of the television stations are commercial, with the government receiving a proportion of advertising or subscription revenues from each broadcasting system. Hong Kong carries two terrestrial television stations, Asia Television Limited (ATV) and Television Broadcasts Limited (TVB); a satellite television station (Star TV); and a cable system (Wharf Cable Limited).

Although a significant proportion of the television programing is produced within the territory, many programs are imported from other countries. Imported programs may be dubbed into Cantonese, the dialect of Chinese spoken in the region, or subtitled in Chinese characters, in order to be understood by the Hong Kong community. Aside from importing news, entertainment series and films from the West, most animated programs are imported from Japan, and several popular fictional series are imported from Taiwan. For example, one of the most popular dramas shown in Hong Kong is the Taiwanese series *Pao the Judge*, which depicts the exploits of a Song Dynasty magistrate in an elaborate costume drama. It is estimated that approximately one-third of Hong Kong residents on a given evening watch this program, which is broadcast on both terrestrial stations.

Each of the terrestrial stations transmits two channels, in order to cater to audiences with different language skills: TVB broadcasts the Jade channel in Cantonese and the Pearl channel predominantly in English, while ATV broadcasts the Home channel in Cantonese, and the World channel mostly in English. These stations are required by the Hong Kong government to provide this English-language service to the community as part of their licensing agreement. This condition is being phased out though, given the changing political structure in the territory.

Controlled by a private corporation, the Lai Sun Group, ATV offers a service similar to that of its competitor, although its programming is not as popular nor the station as wealthy as TVB. Independent research groups have estimated that the average viewer watches TVB Jade (69%) and ATV Home (22%) most often, followed by TVB Pearl (6%) or ATV World (3%). Given that most of the population speak Cantonese but not English, the two English-language channels are not as popular as are their Cantonese-language counterparts.

TVB is by far the dominant station within the Hong Kong community. Controlled by the private interests of Sir Run Run Shaw and the Kerry Group (under the direction of financier Robert Kuok), profits generally exceed US$40 million each year. During prime time hours, it is estimated that TVB's two stations, Jade and Pearl, command more than three-quarters of the market share of Hong Kong's viewing public. Jade, producing most of its own programing in the local language, enjoys by far the greater part of this popularity.

Initiating broadcasting in 1967, TVB was the first television station in the territory. In 1971, TVB produced its first local television program in color, a musical variety show known as *Enjoy Yourself Tonight*, which remains on the air as Hong Kong's longest running program. In recent years, the station has developed its technological capacity to improve the appeal of foreign programming to the Hong Kong audience. TVB operates its own Chinese character generator for subtitling, and has employed a localized NICAM (Near Instantaneously Compounded Audio Multiple) system since 1991, offering viewers with equipped television sets the choice of viewing designated programs in different languages (typically Cantonese, Mandarin or English). Forty percent of households with televisions have a set equipped with NICAM capabilities.

TVB not only produces most (about 80%) of the programing for its Jade channel, but it also distributes Chinese-language programs globally. TVB exports about two-thirds of its programing to other countries including Taiwan, China and Malaysia. In addition, TVB is developing satellite and cable television stations to broadcast its programing in Taiwan, Indonesia, Europe, Canada (in Toronto and Vancouver), and the United States (in San Francisco and Los Angeles). Satellite television channels established for Chinese viewers in Western regions broadcast programs in Cantonese, Mandarin and Vietnamese. As part of a consortium with other global television industries, such as the Turner Broadcasting System, Australian Broadcasting, ESPN and Home Box Office, TVB also intends to develop a new satellite system to broadcast throughout Asia.

The Government of Hong Kong does not have its own television station, but instead requires the two terrestrial stations to carry programing and advertisements in the public interest (APIs) that its agency, Radio-Television Hong Kong (RTHK), produces. RTHK stipulates the blocks of time within which these public programs and APIs must be aired. Although privatization for RTHK had been considered, this television agency, along with its seven radio services, will remain under government control even after the transition to PRC rule in 1997.

RTHK Programs are designed to be informative and to address local issues. For example, one popular RTHK program, known as *All in a Family*, addresses cross-cultural relationships through the presentation of a family drama, in which a Cantonese-speaking American man marries into a local Hong Kong family. Some RTHK programing on current affairs has been exported to Vancouver, Canada, for the benefit of Hong Kong immigrants there.

Television options available to local Hong Kong residents have been increasing in the past few years. Satellite television was first offered in 1991, while a cable system was initiated by Wharf in 1993. By 1993, approximately one-fifth of the households in Hong Kong had the capability to receive satellite television services through connection with Star TV. From its base in Hong Kong, Star TV reaches approximately 38 countries from Egypt to Japan, and from Indonesia to Siberia. Rupert Murdoch's Australian-based News Corporation purchased 63.3% of this station from...
HutchVision Limited (BVI) and the Li Kashing family for approximately US$525 million in 1994.

Star TV offers Chinese programming (from Hong Kong, Taiwan, the PRC and Japan), Sports, Entertainment (mostly Western programs) and a music video channel. Originally, an Asian version of Music Television (MTV) was part of the Star TV package, but this was later replaced by a local Asian broadcast known as Channel V, which divided into a Mandarin-dominated music video service for northern Asia and a Hindi-dominated music video service for western Asia. In addition to broadcasting regional productions, Channel V broadcasts videos supplied by global corporations, such as Warner Music, EMI, PolyGram, Sony and BMG. Star TV had also offered the British Broadcasting Corporation (BBC) World News Service, but this channel was dropped subsequent to Murdoch’s purchase and the objections raised by the PRC over a documentary the BBC had produced about the reign of Mao Zedong (described below).

In 1993, Wharf Cable, a wholly owned subsidiary of Wharf Communications Investments Limited, was awarded a twelve-year license to offer cable services in Hong Kong. During its first three years, Wharf held an exclusive right to expand cable services without competition, while being restricted from carrying advertisements. At the end of its first year, approximately 15% of Hong Kong households had subscribed to cable television services at the cost of about US$3 per month. As a new and popular service, the number of households wired for cable television has been increasing rapidly.

Most Wharf Cable programming is transmitted in Cantonese, or subtitled in Chinese if produced in another language. Currently, channels are devoted to family entertainment, movies, sports, English-language news and finance, education, informational programs for foreign nationals, and a preview channel. What’s license stipulates that at least three channels should be allocated for government use. One of these has been discussed as a potential public access channel for local communities, but concerns that an unregulated service might invite politically sensitive messages seem to being still this initiative.

The impending political transition has sparked many controversies concerning the regulation of television ownership and content. Some believe that the new regime will reshape the television industry to suit its own interests. For example, PRC government officials have warned that television programs ought to promote patriotism, collectivism and socialism, but not consumerism, while PRC television stations have been cautious about importing foreign programs, particularly music shows produced in Hong Kong and Taiwan. Although many homes (some estimate almost two-thirds of households in the southern area of China’s Guangzhou province) have access to cable television services, satellite dishes are officially banned for personal use as a “matter of national sovereignty, to protect Chinese culture.”

The impending political transition has led many observers of Hong Kong media industries to be concerned over potential state- and self-censorship. These issues are already paramount in decisions over television broadcasting. In 1994 the ATV news staff resigned over a battle with their management concerning the screening of a Spanish documentary that included coverage of the 1989 Tiananmen Square massacre; this program was aired as scheduled following this well-publicized disagreement.

Another recent controversy reflects these political concerns in the Hong Kong television industry. A documentary, Chairman Mao: The Last Emperor, was produced by the BBC and aired in Britain in 1993, to commemorate the 100th anniversary of Mao’s birth. This documentary addresses sufferings caused by Mao’s failed economic policies as well as his alleged relations with young girls. The PRC government voiced its anger over the distribution of the film, noting that the documentary may “hurt the feelings of Chinese people” in its portrayal of Mao. In response to the BBC’s production of this documentary, the PRC government extended new restrictions on BBC operations within China. Moreover, this film was not broadcast on television in Hong Kong, despite being purchased by TVB and being approved by public censors representing the Hong Kong Film Censorship Ordinance (even though this very ordinance prohibits screening films that might damage relations with other countries). Instead, private organizations broadcast this documentary to community groups within the territory.

Regulation over the television industry in Hong Kong attempts to maintain existing diversity and indigenous control of the industry. To avoid monopolization, television stations may only invest in each other up to 15%. Murdoch failed to buy into TVB (before investing in Star TV), because he encountered a local regulation, supported by the PRC, that no foreigner should own more than 15% of a local terrestrial television station. In addition, political and religious groups are disqualified from acquiring local television licenses.

Television broadcasting licenses are subject to periodic renewal from the government of Hong Kong through its Broadcasting Authority (BA), established in 1987. Approximately twelve BA members meet on a monthly basis to review issues concerning broadcasting industries. This body may issue warnings and impose fines against violations of license conditions. The BA processes more than 800 complaints from the public each year, one fifth of which concern television reception, while the others concern program and advertising content, typically about violence or obscene language.

Programming standards set by the BA dictate appropriate content concerning subject matters, such as crime, family life and violence, as well as suitable presentations of cigarettes and alcohol. Regulations also define permissible commercial advertising and sponsorship of programs; for example, tobacco companies are not authorized to advertise, but instead may sponsor programs, such as sporting events and music videos.

In accordance with their licensing conditions, terrestrial television stations are required to produce certain types of
programs (public affairs and children’s programs among them) in defined quantities. Designated blocks of time also incur different sets of regulations: for example, the 4:00 P.M. to 8:30 P.M. family viewing period holds strict regulations regarding the content of programming.

With the impending transition to Chinese rule in 1997, television in Hong Kong must balance a tension between the need to adapt to the ideology of new political leadership and the attempt to maintain the economic success of the industry.

HOOD, STUART

British Media Executive/Producer/Educator

Stuart Hood has made a considerable impact upon the development of television production, news broadcasts, programme scheduling, and programming policy in the United Kingdom. He has also acted as an advisor and consultant to various countries, Israel being the most notable, as they established their national television broadcasting potential. He has also contributed significantly to the practice of higher education for the television profession and as an academic writer on broadcasting.

Hood’s life has been a mixture of involvement with broadcasting, the media, politics, education, and literature. It could be argued that the significance of his contribution to television has been as much a product of his scholarship, the range of his interests and his creative drive as to any narrow dedication to the medium. He was born in the village of Edzell, Angus, Scotland, the son of a village schoolmaster. After graduating in English literature from Edinburgh University he taught in secondary schools until World War II.

During the war Hood served in Italian East Africa and the Middle East as an infantry officer, then as a staff officer on operational intelligence with the German Order of Battle. He was captured in North Africa and then spent time as a prisoner of war in Italy. He escaped at the time of the Italian Armistice in September 1943 and lived at first with the peasants. He then joined the partisans in Tuscany. His account of this period, Pebbles from My Skull, is a major piece of 20th century war writing. He saw further military service in Holland, then at the Rhine crossing with the U.S. 9th army. In the final years of the war, Hood did political intelligence work in Germany.

These biographical details are important for two reasons. The first is that the war took Hood and a whole generation of young, talented graduates and offered them, amongst other things, an apprenticeship in the farces, tragedies, and innovations of military administrative matters.

The second is that the war has had a lasting impact on Hood’s literary output as well as providing him with a lasting contempt for cant and superficiality.

Fluent in German and Italian, Hood joined the BBC German Service at the end of the war. He went on to become head of the BBC Italian Service and then of the 24-hour English-language service for overseas. After a period as editor-in-chief of BBC Television News, he became controller of programmes for BBC television. Ten years working as a freelancer was followed, in 1974, by an invitation to become professor of film and television at the Royal College of Art in London. During the next four years Hood was not always happy with his role as a senior educator. His approach to higher education was not always greeted with enthusiasm by his peers. He gave students the chance to be involved in the decision making process in relation to their own work and to general staffing and administrative matters during his period at the Royal College of Art.

Hood has always been politically of the left. For several years he was vice president of ACCT, the film and television union in the United Kingdom. His politics might have placed him, as a senior manager, in something of a difficult position. He has never shirked responsibility, however, and has worked rather to make positive and productive use of his management positions. He was responsible, in large part, for the break between radio and television news and was the first to employ a woman newsreader at the BBC. He worked under Carleton Greene at the BBC and was encouraged to seek to test the limits of viewer tolerance and interest. This resulted in series such as the now legendary satirical programme, That Was the Week That Was. In relation to television drama, Hood also did all he could to encourage the work of innovative writers such as David Mercer. Hood has publicly expressed his disgust at the fact that the BBC had denied for many years that MI5 routinely vetted BBC staff. On some things he had to remain silent and as a

See also Murdoch, Rupert; Satellite; Star-TV
result of this he developed something of a reputation as an enigmatic character.

As a director and producer in his own right, Hood was responsible for such innovative programmes as *The Trial of Daniel and Sinyavsky* (Soviet dissidents) and a programme on the trial of Marshal Petain entitled *A Question of Honor*. Hood has made a unique contribution to broadcasting through the diversity of his interests and talents. He has demonstrated, through his literary output, that senior administrators in broadcasting are not necessarily outside the world of direct productive activity. He has also made a significant contribution to writing about broadcasting and his *On Television* is a classic in the field. Hood's major contribution to television has been to demonstrate that both production and management can be enhanced and enriched by scholarship and astute political awareness.

—Robert Ferguson

STUART HOOD. Born in the Edzell, Angus, Scotland, 1915. Educated at Edinburgh University. Served as an intelligence officer in the British army during World War II; worked with Italian partisans, 1942–43. Briefly joined the Workers' Revolutionary Party; writer, first achieving widespread recognition in the United Kingdom, 1960s; media career began at the BBC World Service; controller of programs, BBC-TV, 1962–64; independent filmmaker; involved with the Free Communications Group, from 1968; vice president, ACTT; continued writing, from mid-1980s; professor of film, Royal College of Art.

**HOOKS, BENJAMIN LAWSON**

U.S. Media Regulator

Benjamin Lawson Hooks was nominated as a member to the Federal Communications Commission (FCC) by President Richard M. Nixon in 1972. Shortly thereafter the U.S. Senate confirmed the nomination and Hooks became the first African American to be appointed to the commission. He served as a member of the FCC until 27 July 1977.

During his tenure on the commission, Hooks actively promoted the employment of African Americans and other minorities in the broadcast industry as well as at the FCC offices. He also encouraged minority ownership of broadcast properties. Hooks supported the Equal Time provision and the Fairness Doctrine, both of which he believed were among the few avenues available to minorities for gaining access to the broadcast media.

Hooks received his undergraduate degree from LeMoyne college in his home state, Tennessee. However, because Tennessee prohibited blacks from entering law school he attended DePaul University in Chicago. He returned to Tennessee, to serve as a public defender in Shelby County. From 1964 to 1968 he was a county criminal judge.

The nomination and confirmation of Hooks to the FCC represented the culmination of efforts by African-American organizations such as Black Efforts for Soul on Television (BEST), to have an African American appointed to one of the seven seats on the commission. Before Hooks' appointment there had been no minority representation on the commission and only two women, Frieda Hennock and Charlotte Reid, had been appointed up to that time.

Riding a wave created by the Report of the National Advisory Commission on Civil Disorders (1968), otherwise
known as the Kerner Commission, which itself was a reaction to the civil unrest of the 1960s, African-American organizations, like BEST, lobbied aggressively for an African-American appointment to the Federal Communications Commission. Under a section titled “The Negro in the Media,” the Kerner Commission urged that African-Americans be integrated “into all aspects of televised presentations.” African American organizations knew that in order to achieve such a goal representation on the policy making body that governed broadcasting was critical. However, when it was announced that Benjamin Hooks was one of three African Americans considered for a seat on the FCC, BEST expressed some strong reservations about his candidacy. Leaders of the organization did not believe that Hooks was qualified to serve on the commission and instead favored the appointment of Ted Ledbetter, a Washington, D.C., communications consultant. The third candidate considered for the position was Revius Ortique, an attorney from New Orleans. Although there are no set criteria for qualifying as a candidate for the FCC, it was believed by BEST that Hooks did not have the experience or expertise in broadcasting necessary to be an effective commissioner. In fact, Hooks, while far from being an industry insider, was not entirely new to broadcasting.

In addition to being a lawyer and minister, Hooks had been a popular local television personality before being considered for the FCC post. He hosted a weekly half-hour program, Conversations in Black and White, on station WMC-TV in Memphis. He had also appeared as a panelist on a broadcast of the program What Is Your Faith?, which aired on WREC-TV in Memphis. The presence of Hooks on the commission meant that organizations previously outside of the policy-making process in broadcasting finally had access. The National Media Coalition, Citizens Communications Center and the United Church of Christ all felt that their cases would at least get a fair hearing, because of Hooks.

Although he was a spokesman for the perspectives of blacks, women and Latinos with respect to broadcasting policies, relations between Hooks and these groups were not always friendly. Two of his decisions while on the commission stand out as especially difficult for Hooks. The first was his vote to uphold the First Amendment and not censor a political candidate for the U.S. Senate in the Georgia primary. As part of his political campaign, senatorial candidate J. B. Stoner produced and aired television and radio spots that referred to African Americans as “niggers.” Understandably, African Americans and other groups wanted the spots banned by the FCC. Hooks, however, felt that supporting freedom of speech was more important than banning the spots. In a New York Times interview he suggested that “even if it hurts sometimes, I’m a great believer in free speech and would never do anything to tamper with it.” He argued that in the long run, banning the spots would prove more detrimental to blacks and other groups than allowing them to air.

The second major decision during his stint on the FCC involved broadcasters and the rules related to Equal Employment Opportunities (EEO). Prior to 1976 stations with five or more employees were required to file a statistical report, including the number of employees by race and gender, with the commission. In 1976 the commission proposed a change in this policy. Only those stations with a specific number of employees, higher than in the past, would be required to file a statistical report outlining the station’s employees by race. The new policy also required an EEO program that would provide a strategy for increasing minority representation at the stations. Citizens’ groups felt the FCC was easing its restrictions regarding minority hiring practices on smaller stations. They asked Commissioner Hooks not to support the new policy. Hooks decided that the new rules would have an overall positive impact on the hiring of minorities and women, so he supported the new policies, except for the section no longer requiring stations with less than fifty employees to file EEO programs.

While Hooks served on the commission, broadcast ownership groups that included minorities were given preferential treatment by the FCC, an office of Equal Employment Opportunity was set up, and the employment of blacks by the Federal Communications Commission offices increased. After serving five years of his seven-year term, Hooks resigned from the FCC to become the head of the National Association for the Advancement of Colored People (NAACP). His plans were to establish a communications department in the NAACP in order “to see how we can make television more responsive to the people, black and white.”

The appointment of Hooks must be seen as one part of a long history of demands for access to the broadcast media by African Americans. While African Americans had at times been included in the “television family,” their roles had too often been limited to stereotypical portrayals that were thought to contribute to distorted images of the black experience. Organizing and lobbying for an African-American appointment to the FCC was a continuation of a political and social process. The appointment of Benjamin Hooks symbolized a crystallization of those efforts, and while it would be incorrect to state that with his appointment all barriers to minority access were knocked down, it would be equally incorrect not to recognized that the appointment of Benjamin Hooks did lead to increased access for African Americans and other minorities in the field of broadcasting.

—Raul D. Tovares

HOPE, BOB

U.S. Comedian

Bob Hope is one of television's most renown comedians and actors. He has also worked in vaudeville, radio, and film, and, for the last eight decades, has made audiences laugh at themselves, their contemporary culture and its foibles, their politics and politicians. For his efforts he has received numerous awards and accolades. He is perhaps equally well-known, and certainly equally applauded, for his efforts in entertaining American soldiers overseas.

Hope began his career in 1914 when he won a Charlie Chaplin imitator contest. He then made his way into vaudeville in the 1920s and his Broadway acting and musical debut in 1933 when he appeared in Roberta. Hope moved to Hollywood in 1938 after appearing in several short films and on radio. He made his film acting debut in the full-length film, The Big Broadcast of 1938 where he first sang his signature song, Thanks for the Memory with Shirley Ross. In 1940, Hope made the first of seven "Road" films, The Road to Singapore, with Bing Crosby and Dorothy Lamour. He became a showbiz wizard by playing on his rapid-fire wisecracking technique in the "Road" films that followed. The best-known and probably most televised of these films, The Road to Utopia, was made in 1945. Hope regularly starred as a comic coward in caught in comic-adventurous situations, but he generally wound up winning the hand of the leading lady. In addition to the "Road" films, he also appeared in many others. He made his last "Road" film, The Road to Hong Kong, in 1962, and his film career virtually ended in the early 1960s.

Hope was one of the biggest names in show business when television began to develop. Unlike some of his fellow

1927–1994; television began to develop. Unlike some of his fellow

Hope was one of the biggest names in show business when television began to develop. Unlike some of his fellow
stars, he jumped into the new medium, making his debut on Easter Sunday, 1950. On a regular basis he was seen on two budget variety shows, *Chesterfield Sound Off Time* and *The Colgate Comedy Hour*. In 1953, NBC broadcast the first annual *Bob Hope Christmas Special*. These specials were usually filmed during his regular tour to entertain the troops overseas. He also began a series of comedy specials for NBC-TV where he became known for his marvelous comic timing, his stunning array of guest stars, and his ease with both studio audiences and the camera. His guests regularly included top stars from film, stage, television, and the music industry. He was usually surrounded by Hollywood starlets and athletic figures. His humor poked gentle fun at the world of politics, usually leaning toward the conservative. He also made numerous guest appearances on various comedy shows such as *I Love Lucy*, *The Danny Thomas Show*, and *The Jack Benny Show*, where he was applauded for his wise-cracking ability to throw new comic wrenches into already hilarious situations. In most Hope simply played himself, and his appearance as a guest star was a guarantee of a larger audience. His ability to make both the audience and his co-stars feel at ease, eager for the wry comment that would put a new spin on any situation, was performance enough.

In commemoration of the 50-year anniversary of World War II, NBC broadcast an hour-long Bob Hope special that chronicles the comedian's camp tours during the war. Hope, at the age of 92, narrates *Memories of World War II*. The special was crafted from a video and CD collection originally produced for retail sales. An additional 20 minutes show Bob Hope and his wife, Dolores, talking with friends and co-workers, such as Charleton Heston, Dorothy Lamour and Ed McMahon, about special photos and remembrances about the war, the entertainment, and their efforts to build and maintain morale. Many scenes extol Hope's comic abilities, patriotism, and human compassion. The recollections range from outrageously funny to heartfelt to harrowing. Still, some critics saw the special as self-congratulatory, inept, and awkward. Mike Hughes, a critic for the Gannett News Service, says, "This doesn't mean Hope isn't a fine person. It doesn't mean the war effort wasn't worthy. It simply means that bad is bad, no matter the motivation." By this point in his long career Hope, at times, seemed anachronistic, a reminder of a different world, a different sort of television.

In spite of such commentary, Bob Hope remains an American institution in the entertainment world, a quick-witted master of comic response. He will be remembered as one of the foundational figures of U.S. television in the network era, one of the kings of television comedy.

HOPKINS, JOHN

British Writer

John Hopkins is one of the great pioneers of British television drama, whose considerable output as a writer includes the award-winning play quartet Talking to a Stranger, described by one contemporary critic as “the first authentic masterpiece written directly for television.” Hopkins’ career in television began first as a studio manager in the 1950s, but he was soon turning his attention to writing and putting his earlier experience to good use in his plays. There are few other writers who have exploited so effectively the potential of the multi-camera studio in their work. After serving an apprenticeship with single plays, he rapidly established himself as a key writer for the popular BBC crime series, Z Cars, and, between 1962 and 1964, wrote 53 episodes for the programme. He went on to write noted single plays such as Horror of Darkness (1965) and A Story to Frighten the Children (1976), and also to adapt Dostoevsky’s The Gambler (1968) and John Le Carre’s Smiley’s People (1982) with the novelist. The pinnacle of his achievement, though, is undoubtedly his 1966 series, Talking to a Stranger, directed by Christopher Morahan and shown on BBC-2.

The 1960s in Britain provided a golden age for writers of TV drama with well over 300 hours a year available in the schedules for original work. The launch of BBC-2 in 1964, in particular, opened up opportunities for serious TV drama and exploration of television as an art. Experimentation with form was being discussed openly by writers and Troy Kennedy-Martin, the originator of the Z Cars series, produced a manifesto for a new TV drama free from the conventional spatial and temporal constraints of naturalist theatre. Talking to a Stranger, especially in its free-floating use of time, sets up a similar experimental agenda, but in other respects remains rooted in a familiar naturalism and the close-up observation of ordinary people.

Nothing could be more mundane than the basic situation at the centre of this family drama. A grown-up daughter and her brother go back home to visit their aging father and mother, but the emotional collisions that arise provoke unexpected tragedy—the suicide of the mother. Some of the same events, are repeated from one play to the next, but the viewpoint changes as each play focuses on a different character. In this way the series provides a sustained opportunity to explore subjective experience. The self-aborption of the characters is enhanced by the use of experimental devices that include extended monologues, overlapping dialogue, lingering reaction shots, and film flashbacks in time.
Hopkins' vision of human loneliness and alienation may be an uncompromisingly bleak and pessimistic one, but it is made compelling through his artistic manipulation of the television medium. *Talking to a Stranger* as a family drama bears comparison with Eugene O'Neill's great stage play *A Long Day's Journey into Night*. In relation to the development of art television, Hopkins' successful pioneering of the short series for serious drama established an important precedent in Britain, and writers of the stature of Dennis Potter and Alan Bleasdale have subsequently followed in his example to produce some of their most distinctive work.

HOUR GLASS

U.S. Variety Program

Hour Glass was a seminal, if largely forgotten, variety program airing on NBC-TV from May 1946 to February 1947. It is historically important, however, in that it exemplified the issues faced by networks, sponsors, and advertising agencies in television’s formative years. The program was produced by the J. Walter Thompson agency on behalf of Standard Brands for their Chase and Sanborn and Tenderleaf Tea lines. It took sponsor and agency several months to decide on the show’s format, eventually choosing variety for two reasons: it allowed for experimentation with other forms (comedy sketches, musical numbers, short playlets, and the like), plus Thompson and Standard Brands had previously collaborated on the successful radio show The Chase and Sanborn Hour.

The lines of responsibility were not completely defined in those early years, and the nine-month run of Hour Glass was punctuated by frequent squabbling among the principals. Each show was assembled by seven Thompson employees working in two teams, each putting together a show over two weeks in a frenzy of production. The format was familiar to Chase and Sanborn Hour listeners in that the program accentuated star power as the means of drawing the largest audience. Hour Glass featured different performers every week, including Peggy Lee and—in one of the first examples of a top radio star appearing on network television—Edgar Bergen and Charlie McCarthy in November 1946. The show also showcased filmed segments produced by Thompson’s Motion Picture Department; these ranged from short travelogues to advertisements. Every episode also included a ten-minute drama, which proved one of the more popular portions of the show.

It must have been the curiosity factor that prompted some stars to appear on the show because they certainly were not paid much money. Hour Glass had a talent budget of only $350 a week, hardly more than scale for a handful of performers. Still, Standard Brands put an estimated $200,000 into the program’s nine-month run, by far the largest amount ever devoted to a sponsored show at that time.

Although Thompson and Standard Brands representatives occasionally disagreed over the quality of individual episodes, their association was placid compared to the constant sniping that was the hallmark of the agency’s relationship with NBC. It started with unhappiness over studio space, which Thompson regarded as woefully inadequate, and escalated when the network insisted that a NBC director manage the show from live rehearsals through actual broadcast. The network was similarly displeased that Thompson refused to clear their commercials with NBC before air time.

In February 1947 Standard Brands canceled Hour Glass. They were pleased with the show’s performance in terms of beverage sales and its overall quality, yet were leery about continuing to pour money into a program that did not reach a large number of households (it is unclear if the show was broadcast anywhere other than NBC’s interconnected stations in New York and Philadelphia). The strain between NBC and Thompson played a role as well. Still, Hour Glass did provide Thompson with a valuable blueprint for the agency’s celebrated and long-running production, Kraft Television Theatre.

THE HOWDY DOODY SHOW
U.S. Children’s Program

The Howdy Doody Show was one of the first and easily the most popular children’s television show in the 1950s and a reflection of the wonder, technical fascination, and business realities associated with early television. While Howdy and his friends entertained American children, they also sold television sets to American parents and demonstrated the potential of the new medium to advertisers.

The idea for Howdy Doody began on the NBC New York radio affiliate WEAF in 1947 with a program called The Triple B Ranch. The three Bs stood for Big Brother Bob Smith, who developed the country bumpkin voice of a ranch hand and greeted the radio audience with, “Oh, ho, ho, howdy doody.” Martin Stone, Smith’s agent, suggested putting Howdy on television and presented the idea to NBC television programming head Warren Wade. With Stone and Roger Muir as producers, Smith launched Puppet Playhouse on 17 December 1947. Within a week the name of the program was changed to The Howdy Doody Show.

Children loved the Doodyville inhabitants, because they were a skillfully created, diverse collection of American icons. The original Howdy marionette was designed by Frank Paris and in keeping with Smith’s voice was a country bumpkin; however, in a dispute over licensing rights Paris left the show with the puppet. The new Howdy, who premiered in March 1948, was an all-American boy with red hair, forty-eight freckles (one for each state in the union), and a permanent smile. Howdy’s face symbolized the youthful energy of the new medium and appeared on the NBC color test pattern beginning in 1954.

Smith treated the marionettes as if they were real, and as a result, so did the children of America. Among the many unusual marionettes on the show was Phineas T. Bluster, Doodyville’s entrepreneurial mayor. Howdy’s grumpy nemesis. Bluster had eyebrows that shot straight up when he was surprised. Bluster’s naïve, high-school-aged accomplice, was Dilly Dally, who wiggled his ears when he was frustrated. Flub-a-dub was a whimsical character who was a combination of eight animals. In Howdy and Me, Smith notes, “Howdy, Mr. Bluster, Dilly, and the Flub-a-Dub gave the impression that they could cut their strings, saunter off the stage, and do as they pleased.”

Although the live characters, particularly the native American Chief Thunderthud and Princess Summerfall Winterspring, were by modern standards stereotypical and often clownish, each had a rich heritage interwoven into the stories. These were prepared by Eddie Kean, who wrote the scripts and the songs until 1954, and Willie Gilbert and Jack Weinstock, who wrote scripts and song lyrics thereafter. For example, Smith (born in Buffalo, New York) was transformed into Buffalo Bob when he took his place in the story as the great white leader of the Sigafoose tribe. Chief Thunderthud (played by Bill LeCorme) of the mythical Ooragnak tribe (“Kangaroo” spelled backward) introduced the word “Kawabonga,” an expression of surprise and frustration, into the English language. One of the few female characters in the cast was the beloved Princess Summerfall Winterspring of the Tinka Tonka tribe, who was first introduced as a puppet, then transformed into a real, live princess, played by Judy Tyler.

The Howdy Doody Show also reflected America’s fascination with technology. Part of the fun and fantasy of Doodyville were crazy machines such as the Electromindomizer that read minds and the Honkadoodle that translated Mother Goose’s rhymes into English. Television’s technical innovations were also incorporated into the show. On 23 June 1949 split-screen capabilities were used to join Howdy in Chicago with Buffalo Bob in New York, one of the first instances of a cross-country connection. Howdy also ushered in NBC’s daily color programming in 1955.

The Howdy Doody Show was immediately successful and was NBC’s first daily show to be extended to five days a week. In 1952 NBC launched a network radio program featuring Howdy, and in 1954 Howdy Doody became an international television hit with a Cuban and a Canadian show, using duplicate puppets and local talent, including Robert Goulet as Canadian host, Timber Tom.

As amazing as it may now seem, there were published concerns over violent content in Howdy Doody, but though
the action in Doodyville generally involved slapstick, parents generally supported the show. Much of the mayhem was perpetrated by a lovable, mischievous clown named Clarabell Hornblow. Clarabell was played by Bob Keeshan who later become Captain Kangaroo. His pratfalls were generally accidents, and the most lethal weapon on the show was his seltzer bottle. Moreover, educational material was consciously incorporated both into the songs and the stories; for example, young viewers received a lesson in government when Howdy ran for President of the kids of America in 1948. The educational features of the program made the Doodyville characters attractive personal promoters both for the show and for the sale of television sets.

And even before the advent of the Nielsen ratings, Howdy Doody demonstrated its ability to draw an audience both for NBC and for possible advertisers. In 1948, children’s shows were often provided as a public service either by the networks or the stations. When Howdy ran for President of all the kids, Muir suggested that they offer free campaign buttons. They received 60,000 requests, representing one-third of the American homes with television sets. Within a week their advertising time was sold out to major advertisers, such as Colgate Palmolive Peat Company. Although the producers were careful about what they advertised, they were very aggressive about marketing products they selected, incorporating product messages into songs and skits.

The producers also recognized the potential for merchandising. In 1949 the first Howdy Doody comic book was published by Dell and the first Howdy Doody record was released, selling 30,000 copies in its first week. There were also Howdy Doody wind-up toys, a humming lariat, a beanie, and T-shirts, among other licensed products.

Although extremely popular, the demise of the Howdy Doody Show demonstrated the financial realities of the new medium. In 1956 the early evening time slot became more attractive to older consumers, and the show was moved to Saturday morning. Although it continued to receive high ratings, the expense was eventually its downfall, and it was taken off the air on 24 September 1960, after 2,343 programs.

The most famous moment in the history of The Howdy Doody Show came during the closing seconds of the final show when Clarabell, who did not speak but communicated through pantomime and honking his horns, surprised the audience by saying, “Good-bye, kids.” The reality continues to be that the rich, live-action performances that filled early children’s programming are too costly for modern, commercial television. The show was briefly brought back to television as The New Howdy Doody Show in August 1976, but was canceled in January 1977, after only 130 episodes.

See also Children and Television
Frankie Howerd was a popular post-war stand-up comedian, who survived many changes in the humour tastes of the British nation to remain a television favourite until his death in 1992. From an early age he decided he wanted to be an actor, despite bouts of nervousness and a recurring stammer, but after suffering rejection from the Royal Academy of Dramatic Arts, he decided instead to become a stand-up comic. However, this route seemed equally closed to him as he failed numerous auditions. During World War II he joined the army, but failed to impress as an entertainer and was turned down by the military entertainment organisation, ENSA (Entertainments National Service Association—but better known by the troops as Every Night Something Awful). This rejection, however, did not deter Howerd who still performed for his comrades in arms, learning to control his stammer and develop a line of patter. Following the war Howerd’s rise was dramatic. He toured the provinces in a stage show, For the Fun of It, in 1946, and although placed at the bottom of the bill he hit upon the clever ruse of changing his name from Howard to Howerd. This meant that his name was more noticeable simply because people assumed it was a misprint. And if the name was spelt incorrectly as the more normal Howard (an easy mistake) the comedian could complain and get some appeasement—perhaps larger lettering on the next poster or a longer spot or even extra money.

In 1947 he presented his comedy act in the radio series Variety Bandbox and soon became a hit with the listening public. His comic persona was becoming defined. Influenced by the comedians of his time, especially his great idol Sid Field (one of Britain’s greatest comic talents from the 1930s to his death in 1950), Howerd had, by the end of the 1940s, developed a strong style of his own. His tactic was to deliver jokes and appear in sketches almost reluctantly as if forced there by circumstance. It was as if he had something better to do, and if the audience didn’t respond to the lines in the right way, then he didn’t care. Indeed, his offhand statement to such indifference “Oh please yourself” became one of his great catchphrases, getting a huge laugh as the audience identified with the character.

Success on radio increased his standing in stageland but many of the venues were closing down as the era of music hall was drawing to an end. Sadly, as his stock rose, the circuit itself was closing down. Many of his comic contemporaries were crowding the radio waves and some (like Charlie Chester and Terry-Thomas) had even gotten their own shows on the increasingly popular medium of television. In 1952 Howerd got his first television series, The Howerd Crowd, an hour-long entertainment with scripts by Eric Sykes. Howerd had a good face for television, long and lugubrious, and the small screen enabled him to use his exaggerated facial expressions to good effect. He appeared a few more times in that period but he was about to enter one of the quiet phases of his career.

Howerd made his feature film debut in 1954, a major role in The Runaway Bus, and he had a small but memorable part in The Ladykillers the following year; it was such film roles and occasional radio appearances that kept him occupied throughout the rest of the 1950s. His television career throughout this period was in the doldrums and, with each year bringing in less work than the year before, he seemed to be on a familiar path that led to obscurity. Then in 1962 Howerd’s career was suddenly and dramatically resurrected when he did a stand-up routine in Peter Cook’s Establishment Club, an American style comedy cabaret club specialising in satire. With a script by Johnny Speight, Howerd was a big hit. It seemed his style of innuendo and ad-libbed asides had a place in the new world of anti-establishment comedy. The following year Howerd consolidated his revitalised reputation with an appearance on the BBC’s controversial and groundbreaking satire series That Was the Week That Was. In the space of a year he was re-established as a major comedy star, and became a familiar face on television as a guest star or leading artist in variety shows. He headlined his own show again, Frankie Howerd (1964–66), this time with scripts from Galton and Simpson, mixing an introductory stand-up routine with a long-form sketch that continued the same
about how smutty most year. British Howerd Funny Thing Happened on the Way to the Forum, in which Howerd had appeared (as Prologus and Pseudolus) in its British stage version. A pilot episode of Up Pompeii! in 1969 raised enough interest and the series began the following year. Howerd played the slave Lucio who commented on and got involved in the various comings and goings in his master's household. His master was Ludicrous Sextus and most of the main characters in the plots had punnish names, e.g. Ammonia, Erotica, Nausius, Prodigus. The shows (scripted by Talbot Rothwell, one of the writers of the bawdy Carry On ... film series) were peppered with innuendo and smutty references and also allowed Howerd free rein to talk directly to camera and deliver his typically weary asides about how awful the show was. This method of combining a pseudostand-up routine with plot—coupled with Howerd's conspiratorial relationship with the viewing audience which allowed him to step in and out of character—gave the series a unique, almost theatrical feel which lingered long in the public psyche despite the fact that only thirteen episodes were made (14 with the pilot). Such was its popularity that an Easter special Further Up Pompeii aired on the BBC in 1975 and a revival also called Further Up Pompeii! was made by the commercial London Weekend Television in 1991. It also spawned a feature film version in 1971 (followed by two others on similar themes, a medieval romp, Up the Chastity Belt in 1971 and a World War I version Up the Front in 1973). On TV in 1973 the format was reworked as Frankie Howerd in Whoops Baghdad (BBC 1973), which ran for six episodes and featured Howerd as Ali Oopla, bondservant to the Wazir of Baghdad.

Howerd actually improved with age. His face, lined and wrinkled with doleful bags under his eyes, became even more expressive, allowing him to suggest any number of things with a raise of the eyebrows, his impossibly deep frown, or his wide-eyed aghast look. The face was perfectly fitted to his camp delivery, and his confidential asides and world-weary looks were given added authenticity. In 1975 Howerd appeared in an abortive pilot A Touch of the Casanovas for Thames TV and made the series The Howerd Confessions for the same company the following year. But British tastes were changing. The anarchic comedy wave that emerged in the wake of the punk rock phenomenon began to be taken seriously by television companies by the early 1980s and there was a backlash against Howerd's sexual innuendo style of humour in favour of full frontal comedy attacks on taboo subjects. After his Yorkshire TV series Frankie Howerd Strikes Again (1981), Howerd once again found it harder to come by work. His 1982 sitcom Then Churchill Said to Me was made but shelved by the BBC; in 1985 he was chosen as front-man in an ill-fated and ill-timed attempt to make The Gong Show (Gambit productions for C4)—a British version of the successful U.S. show.

However, some of the younger audiences began to rediscover and reassess the old comedians and Howerd once again found himself back in favour—appearing to rapturous college students similar to his success at the Establishment Club. Indeed, evidence of Howerd's regained popularity can be found from his appearance in 1987 on LWT's live new wave comedy showcase Saturday Live; it meant that the producers considered Howerd “hip” enough for their audience. Although this appearance didn’t have the sort of impact his previous comeback (on TW3) had had, it nonetheless heralded another revival and he again was a regular face on TV as he appeared in the young people's sitcom All Change (Yorkshire TV 1989). A series of his concerts were filmed for television, the most revealing of which was Live Frankie Howerd on Campus (LWT 1990). Howerd, back in demand, was as busy as ever.

Two revealing TV documentaries contain much of the essence of Howerd's style and craft: 1990s Ooh Er, Missus—The Frankie Howerd Story from Arena (the BBC's art documentary series) and Thames Television's Heroes of Comedy—Frankie Howerd (1995).

HUGGINS, ROY
U.S. Producer

Roy Huggins is a prolific and influential producer who created several of the most enduring dramatic series in the history of television, including Maverick (1957–62), 77 Sunset Strip (1958–64), The Fugitive (1963–67), and The Rockford Files (1974–80). Huggins has spent much of his career in television as a producer for two large studios, Warner Brothers and Universal. Working within these studios, Huggins served as producer or executive producer on made-for-television movies, miniseries, and more than twenty dramatic series. While Huggins supervised a wide range of projects, many of which were simply studio assignments, he was one of the first writer-producers to emerge once television production shifted to Hollywood in the 1950s. Many of his series bear the distinctive stamp of his irreverent, self-deprecating wit and his fondness for characters who operate on the margins of society.

As a civilian employee of the U.S. government during the war, Huggins spent his spare time writing hard-boiled crime fiction, inspired by the work of Raymond Chandler. In 1946 his first novel, The Double Take, was published. Huggins sold several serialized mysteries to The Saturday Evening Post, and soon published two more novels, Too Late for Tears and Lovely Lady, Pity Me. When Columbia Pictures purchased the rights to The Double Take in 1949, Huggins recognized an opportunity for more steady employment and signed to adapt the script. From here he entered the movie industry, working as a contract writer at Columbia and RKO. In 1952 he wrote and directed the feature film Hangman's Knot, a Randolph Scott western produced by independent producer Harry Joe Brown for Columbia. Afterwards, he signed a contract with Columbia, where he worked as a staff writer until 1955.

Huggins made the transition to television in April 1955, when Warner Brothers hired him as a producer for its inaugural television series, Warner Brothers Presents, an omnibus series which featured three alternating dramas, King's Row, Casablanca, and Cheyenne. Huggins agreed to produce King's Row, but after creating the series he was reassigned to Cheyenne in order to salvage the faltering series, which faced withering reviews from both critics and sponsors. Huggins rescued Cheyenne by recycling scripts from Warner Brothers movies such as Treasure of the Sierra Madre (1948), often simply inserting the character of Cheyenne Bodie (Clint Walker) into familiar stories from the studio vaults. These changes brought the series a measure of respect as an "adult" western and made it the studio's first full-fledged hit.

Huggins immediately moved from Cheyenne to Conflict (1956–57), a short-lived anthology series that alternated...
with the western. During the production of *Conflict* Huggins met James Garner, an actor who perfectly embodied his wry sense of humor. When Warner Brothers asked Huggins to create a new series, he thought immediately of Garner and tailored *Maverick* as a star vehicle. In a crowded field of TV westerns, *Maverick* quickly moved into the top ten and won an Emmy for Best Western in 1958.

*Maverick* was a refreshing antidote to the strained seriousness of so many westerns, including *Cheyenne*, but it was also ground-breaking because it redefined the heroic protagonist and brought a sly self-mockery to television drama. For the first time, Huggins built a series around a flawed central character, a reluctant hero who lives on the fringes of society. Huggins wanted Bret Maverick to have none of the "irritating perfection" of TV's typical western heroes. Instead, Maverick is a much more complicated character than those found at the center of most dramatic series up to that time. Although obviously charming, he is an unrepentant rascal whose moral code is molded by expediency, greed, and the need for self-preservation. As Garner and co-star Jack Kelly, who played brother Bart Maverick, proved adept at balancing a subtle blend of adventure and comedy, Huggins guided the series in the direction of comedy. While generally sending up the entire western genre, Maverick soon began to needle its more serious competitors, offering razor-sharp parodies of *Gunsmoke* and *Bonanza.* The touch of irony that Huggins brought to the western genre in *Maverick*—an irreverent blend of drama and comedy—has become one of the defining characteristics of dramatic series in the subsequent years.

During the second season of *Maverick*, Huggins created the detective series *77 Sunset Strip* which was based loosely on his novel, *Lovely Lady, Pity Me.* *77 Sunset Strip* revived the crime drama on television, much as *Maverick* had revived the western, by injecting a healthy dose of humor into a genre trapped in grim rites of law and order. In place of the stolid cops who governed most crime series, *77 Sunset Strip* brought the hard-boiled private detective into the endless summer of Los Angeles circa 1958. Starring Efrem Zimbalist, Jr., and Roger Smith as private detectives Stuart Bailey and Jeff Spenser, the series defined Sunset Boulevard as the epicenter of hipness on television, a sun-drenched world of cocktails, cool jazz, and convertibles.

*77 Sunset Strip* lacked the satirical edge of *Maverick*, because after producing the pilot episode Huggins had no responsibility for the series. Nor did he have anything to do with the clones generated by the Warner Brothers brass—*Hawaiian Eye* (1959–63), *Bourbon Street Beat* (1959–60), and *Surfside 6* (1960–62). Huggins also stopped producing *Maverick* after the second season, wearyied by the pace of production at Warner Brothers and by the studio's tightfisted finances. As a matter of policy, Warner Brothers refused to share profits with its television personnel—including Huggins, its most gifted and indispensable producer. Huggins was directly responsible for the studio's three most successful series, but was not even given credit for having created *Maverick* and *77 Sunset Strip*, which studio executives claimed had been based on properties already owned by the studio.

Huggins left Warner Brothers and in October 1960 became the vice-president in charge of television production at 20th Century-Fox. This proved to be a strange interlude in his career, because while he was only able to place one series in prime time, that series stirred up an inordinate amount of controversy. *Bus Stop* (1961–1962), adapted from the play by William Inge, was set in a small town in Colorado, a way-station on an otherwise endless highway. The central location served as the premise for an anthology series featuring the stories of wandering, disenfranchised characters who passed through the bus stop. The program gained national notoriety when an episode titled "A Lion Walks Among Us" starred pop icon Fabian as a charismatic psychopath who commits several cold-blooded murders. In the climate of criticism that was soon crystallized in a speech by the chair of the Federal Communications Commission, (Newton Minow's "vast wasteland" speech), the episode became a target of television critics and politicians, who seized upon it in order to decry television's degrading influence on American culture.

Stung by the criticism of the series, 20th Century-Fox placed Huggins in a kind of administrative limbo by refusing to allow him to develop other series and essentially waiting for his contract to expire. Huggins used the unexpected free time to write a stinging rebuttal of Minow that appeared in *Television Quarterly.* In writing the article Huggins became one of the few members of Hollywood's creative community to defend the artistic merit of commercial, popular culture and to question Minow's essentially elitist criticism of television. He criticized Minow and other cultural elitists for allowing their contempt for kitsch—"their dread of being caught in a profane mood"—to cloud their judgment. Huggins's essay amounted to a sophisticated and subtle defense of popular culture in an era when television producers did not make artistic claims for their work. "The public arts," he wrote, "are created for a mass audience and for a profit; that is their essential nature. But they can at times achieve truth and beauty, and given freedom they will achieve it more and more often."

After the debacle at Fox, Huggins returned to graduate school at University of California, Los Angeles, determined to get his Ph.D. and to leave television behind. He needed a bankroll and came up with the idea of creating a series that he could sell to another producer, then sit back and watch the residuals roll in. This series was *The Fugitive*, which he sold to independent producer Quinn Martin after overcoming ABC's initial resistance to a series with an escaped convict as its central character. The story of Dr. Richard Kimble (David Janssen), suspected of murdering his wife and forced to flee the police while in pursuit of the actual killer, carried the mythic resonance of quest narratives from *The Odyssey* to *Les Misérables.* Huggins wanted to update the western by placing its wandering hero in a contemporary setting. In transposing the stock figure of the wanderer from the mythic landscape of the West to the
landscape of 1960s America, he created a new and unsettling dramatic hero for television, a rootless, paranoid loner, the most unsettled character on the New Frontier of Kennedy-era America. The quest—the ongoing tension between pursuit and capture—was new to prime-time series and gave The Fugitive a powerful narrative momentum which paid off in the record-setting ratings for the final episodes. The Fugitive did not exhibit Huggins’s characteristic sense of humor, but it developed his fascination with heroic outcasts and revealed his skepticism toward what he considered the American "cult of optimism."

In 1963 Huggins gave up his plans of graduate school and accepted a job as a vice president in the television division at Universal, where he spent the next 18 years. During this period, Universal became the predominant creator of dramatic series, often accounting for much of the NBC schedule throughout the 1960s. Huggins adapted to the programming formats that evolved over the years at Universal, producing series, made-for-TV movies, and miniseries. He began by producing The Virginian (1962–71) and Kraft Suspense Theatre (1963–65). He created and produced Run for Your Life (1965–68), a variation on The Fugitive in which attorney Paul Bryan (Ben Gazzara) sets off on an adventurous journey after discovering that he has a mysterious fatal illness and only two years to live.

In 1969 Huggins set up an independent production company, Public Arts, at Universal and began a series of co-productions with the studio. He created The Lawyers segment of the omnibus series The Bold Ones (1969–73) and produced several other series, including Alias Smith and Jones (1971–73), Toma (1973–74), and Baretta (1975–78). The crown jewel of Huggins’s period at Universal is certainly The Rockford Files, which he co-created with Stephen J. Cannell. Huggins produced The Rockford Files for only two seasons, but his influence is unmistakable in the self-deprecating, slightly disreputable private eye played by James Garner.

In the late 1970s Huggins turned to producing miniseries, including Captains and Kings (1976) and Arthur Hailey’s Wheels (1978). His association with Universal ended in 1980, when he left to concentrate on writing. In 1985 he returned to television at the request of his former protégé Stephen J. Cannell to produce Hunter (1984–91). Recent feature-film versions of The Fugitive (1993) and Maverick (1994) have been fantastic successes at the box office. Their success is a tribute to Huggins’s lasting importance as one of television’s great storytellers.

HUNTLEY, CHET
U.S. Broadcast Journalist

Chet Huntley is most famous for his role as co-anchor of the critically acclaimed and highly rated *The Huntley-Brinkley Report*. This evening newscast, which first appeared in October 1956 on NBC, ushered in the modern era for television evening news. *The Huntley-Brinkley Report* introduced an innovative broadcast style, cutting between Huntley in New York and David Brinkley in Washington, D.C. The energy, pace, and style of the program was clearly a step beyond the more conventional work of "news readers" who had preceded the new format.

Huntley’s rise to broadcast news stardom began during his senior year at the University of Washington when he landed his first broadcasting job at Seattle’s KPCB radio. His roles for the station ranged from writer and announcer to salesman, and his salary was a mere $10 a month. These modest beginnings led to several short stints at radio stations in the northwest, but by 1937 Huntley settled in Los Angeles. He worked first at KFI Los Angeles, and then at CBS News in the west. He stayed with CBS for 12 years until he was lured to ABC in 1951. His tour of the networks was complete when NBC enticed him to New York in 1955 with talk of a major TV news program.

Huntley first worked with Brinkley in 1956 while co-anchoring the Republican and Democratic national conventions of that year. The NBC duo successfully garnered the largest share of the convention television audience, and as a result, the Huntley-Brinkley team was born. *The Huntley-Brinkley Report*’s audience was estimated at 20 million, and in 1965, a consumer research company found that, as a result of their hugely successful news program, both Huntley and Brinkley were more recognizable to American adults than such famous stars as Cary Grant, James Stewart or the Beatles.

Throughout his impressive career, however, Huntley developed a reputation for airing his personal opinions on-air, and he was once accused of editorializing with his eyebrows. In the 1950s, he candidly criticized Senator Joseph McCarthy’s outrageous allegations of Communist sympathy among government officials and members of Hollywood’s film industry.

As a cattle owner in his native Montana, Huntley’s endorsements for the beef industry during the 1960s again brought criticism from other professionals. His only apparent disagreement with his partner came during 1967, when Huntley crossed an American Federation of Television and Radio Artists’ picket line, claiming that news anchors did not belong in the same union as “actors, singers, and dancers.”

Despite his critics, Huntley received an estimated $200,000 salary from NBC during the height of *The Huntley-Brinkley Report*’s time on the air. He also earned several prestigious news industry awards. He was named the International Radio and Television Society’s "Broadcaster of the Year" in 1970.

*The Huntley-Brinkley Report*’s ceremonial closing ("Good night, David," “Good night, Chet”) would have been heard for the last time on 1 August 1970, when Huntley retired from broadcasting, but Brinkley altered his words to “Good-bye, Chet.” As he signed off, Huntley left his audience with one final plea: "Be patient and have courage—there will be better and happier news some day, if we work at it."

Huntley retired to his native Montana, where he worked to develop the Big Sky resort. His love for the state and its people is evident in his memoir, *The Generous Years: Remembrances of a Frontier Boyhood.*

I, CLAUDIUS

British Historical Serial

I, Claudius, a 13-episode serial produced by BBC/London Film Productions and first aired on BBC-2 in 1976, made its American debut on the Public Broadcasting Service in November 1977 as an installment of Masterpiece Theatre, sponsored by Mobil Corporation. The production was based on two novels by poet and essayist Robert Graves, I, Claudius: From the Autobiography of Tiberius Claudius, Born B.C. X, Murdered and Died 41 A.D. LIV (1934), and Claudius the God and His Wife Messalina (1935). Adapted for television by Jack Pulman, I, Claudius chronicles the slide of Roman civilization in the first century A.D. into unrelenting depravity during the reigns of the four emperors who succeeded Julius Caesar—Augustus, Tiberius, Caligula, and Claudius. Its themes of decadence, which included brutal assassinations, sadistic gladiatorial contests, incest, forced prostitution, adultery, nymphomania, and homosexuality, and its scenes of nudity and orgiastic violence, including a gruesome abortion, while toned down somewhat from the BBC original, nevertheless pushed the limits of moral acceptability on American television at the time.

Anchored firmly in the genre of fictional history, I, Claudius portrayed real historical figures and events, but, according to Woodward, "with the license of the novelist to imagine and invent." While Graves drew extensively from Claudius's biographer Suetonius, among others, for the historical material in the novels, he framed the story by using Claudius himself as the autobiographical narrator of his 13-year reign as emperor and the reigns of his three predecessors. At the outset of the drama, Claudius is seen as a lonely old man perusing various incriminating documents from which he is constructing his "history." His project was prophesied by the Cumaen sibyl many years earlier when Claudius visited her and was told to write the work, seal and bury it where no one will find it. Then, according to the sibyl, "1900 years from now and not before, Claudius shall speak." The remainder of the serial is backstory, recounting the unbridled ambition, domestic intrigue, bloodlust and sexual dysfunction of Rome's ruling elite.

Claudius is among the most fascinating dramatis personae of Roman history. A weak and sickly youth, repressed by a stern tutor as a child, physically deformed and suffering from a severe stammer, he was an outsider in the royal family, considered an idiot and, as Kiefer puts it, "utterly unsuited for all the duties expected of him as a young prince." As an adult, he was never taken seriously as a future ruler of Rome. Ironically, however, Claudius was ostensibly the most intelligent of the lot. A shy man of considerable culture inclined toward a life of quiet scholarship, he knew Greek well, and wrote several works on history (now lost), including two on the Etruscans and the Carthaginians. In the Imperial Rome of his day, however, obsessed with the exercise of power through treachery and brute force, such preoccupations of the mind were considered little more than idle pastimes.

While Claudius was wise in matters of history, he was apparently far less so in matters requiring discernment of human character. His repression as a child led to his weak reliance on other people as an adult, especially the ruthless women in the Imperial family. Nevertheless, Claudius was not the "complete idiot." He was consul under Caligula; and when chosen by the soldiers to be emperor, following Caligula's murder, he demonstrated many excellent administrative qualities. He annexed Mauretania, and in A.D. 43 he landed in Britain, which he made a Roman province. During his reign the kingdoms of Judea and Thrace were reabsorbed into the empire.

The character of Claudius (played with great intelligence and wit by Derek Jacobi) is clearly the linchpin that provides dramaturgical continuity throughout the serial, as both historical actor and observer/commentator. If one were to assume for a moment that I, Claudius is history (which it is not), a professional historian would question Claudius's motivation for presenting his "history" as he has done here. Self-interest might be a driving force for portraying himself in the best possible light given the less-than-sanguine historical epoch in which he assumed a major role.

In fact, I, Claudius does precisely that. Claudius is the much misunderstood and frequently mocked "good guy"—the "holy fool"—amidst a rogue's gallery of psychopaths, most notably Livia (played to fiendish perfection by Sian Phillips), the scheming wife of Augustus, and Claudius's grandmother, who methodically poisons all possible candidates who might assume the emperor's throne over her weak son Tiberius upon Augustus's death; and the ghoulish and crazed Caligula (played by John Hurt, whose memorably hyperbolic performance might be classified as a caricature if the subject were anyone but Caligula). Set against
the likes of such characters, Claudius comes off looking like a Saint. But was he in reality?

While reviewers generally accepted the presentation as accurate, the actual biography seems quite different. Suetonius's treatment of Claudius which, while questioned by some modern scholars as likely exaggerated in some details, is nevertheless accepted in large measure as an accurate reflection of the man. According to Suetonius, Claudius "overstepped the legal penalty for serious frauds by sentencing such criminals to fight with wild beasts." He "directed that examination by torture and executions for high treason should take place in full before his eyes . . . At every gladiatorial game given by himself or another, he ordered even those fighters who had fallen by accident . . . to have their throats cut so that he could watch their faces as they died." This sadistic streak in Claudius, which Suetonius also notes in other passages, is absent from the BBC serial, and for good reason, for it would make the character far less sympathetic and thereby subvert the melodramatic "good vs. evil" contrast established throughout.

In another area, that of sexuality, the historical record again comes into conflict with the fictional treatment. According to Suetonius, Claudius's "passion for women was immoderate." In the television version, Claudius is clearly portrayed more as a hapless victim of duplicitous women (and a staunch protector of virtuous women) than as a lecher.

The historical record does, however, include the positive side of Claudius's character so much in evidence in the BBC presentation. He often appears as "a gentle and amiable man," as when he published a decree that sick and abandoned slaves should have their freedom and that the killing of such a slave should count as murder.

Claudius was a man grounded in his cultural milieu. His sadism, while tempered by erudition and amiability, should nonetheless be acknowledged. At the same time, his behavior can properly be contextualized by noting that that not only in Imperial Rome, but also in the Republic preceding it (which Claudius held in high regard), criminals, when condemned to death, were routinely taken to the amphitheater to be torn to pieces by wild beasts as a public show.

The historical character Claudius is a complex man full of contradictions, and, one could reasonably argue, dramatically more resonant than the sanitized emperor offered viewers of I, Claudius. The BBC production is, nevertheless, excellent entertainment featuring superb ensemble acting.
and expert direction by Herbert Wise. Its treatment of deviant behavior is sensitive, seeking to avoid the titillation evidenced in so much of today's violent Hollywood fare. Its scenes of debauchery and carnage seem safely distanced (by two thousand years) from our present milieu, and may even allow us to feel good that the contemporary world seems less debased by comparison, if we bracket out such collective barbarity as Nazi and Khmer Rouge genocide. But the nagging issue of historical veracity remains.

The problem is that \textit{I, Claudius} is symptomatic of a general tendency to fictionalize history in popular media, from which the broad public, as Woodward rightly points out, "mainly receives whatever conceptions, impressions, fantasies, and delusions it may entertain about the past." As a consequence, not only may the general populace internalize a distorted picture of historical persons and events, but also be deprived of the invaluable opportunity to better understand its collective past and apply that knowledge critically and constructively to the present. People today, in the thrall of the media popularizers of history, are less likely than their forebears to read the work of professional historians, whose scholarly ethics require them to "disappoint" those among the laity or designing politicians who would "improve, sanitize, gentrify, idealize, or sanctify the past; or, on the other hand ... discredit, denigrate, or even blot out portions of it." Thus is left open the door to the demagoguery of self-interested revisionist history.

Predictably, discussion of \textit{I, Claudius} in the popular press prior to its American television debut focused not on such questions of historical veracity, but rather on how American audiences might react to its presentation of sex and violence. As Brown noted, the serial "is a fusty venture for American public television and one that got on the national service...on sheer merit." Mobil Corporation, the Masterpiece Theatre sponsor, was informed by WGBH-TV, the Boston public station who puts together the Masterpiece Theatre package, that some scenes might cause audience discomfort. Mobil responded that it had no reservations about the program and felt \textit{I, Claudius} to be television of "extraordinary quality." Nonetheless, WGBH did make selective edits for the American version without prompting by Mobil. These included shortening a scene featuring bare-breasted dancers, and eliminating what might be considered a blasphemous comment by a Roman soldier on the Virgin Birth, some gory footage of an infant being stabbed to death, and bedroom shots featuring naked bodies making love. WGBH defended these and other excisions by arguing that viewers in some parts of the United States would be disturbed by their inclusion.

\textit{I, Claudius} became one of the more critically acclaimed Masterpiece Theatre offerings and attracted a loyal following, which today can revisit the fictionalized life and times of Emperor Tiberius Claudius Drusus Nero Germanicus, a.k.a. Claudius I, on the cable arts network Bravo.

I LOVE LUCY

U.S. Situation Comedy

*Love Lucy* debuted on CBS in October 1951 and was an immediate sensation. It spent four of its six prime-time seasons as the highest-rated series on television and never finished lower than third place. Eisenhower's presidential inauguration in January 1953 drew twenty-nine million viewers; when Lucy gave birth to Little Ricky in an episode broadcast the next day, forty-four million viewers (72% of all U.S. homes with TV) tuned in to *I Love Lucy*. When it ceased production as a weekly series in 1957, *I Love Lucy* was still the number one series in the country. And its remarkable popularity has barely waned in the subsequent decades. Since passing into the electronic museum of reruns, *I Love Lucy* has become the Mona Lisa of television, a work of art whose fame transcends its origins and its medium.

Television in the 1950s was an insistently domestic medium, abundant with images of marriage and family. The story of *I Love Lucy’s* humble origins suited the medium perfectly, because it told of how a television program rescued a rocky marriage, bringing forth an emotionally renewed and financially triumphant family. After a relatively successful career in Hollywood, Lucille Ball had spent three years with actor Richard Denning in a CBS radio sitcom, *My Favorite Husband*. When CBS asked her to move into television, she agreed—but only if her real husband, Desi Arnaz, were allowed to play her TV husband. Arnaz, a one-time contract performer at RKO Pictures, was a moderately successful musician and orchestra leader who specialized in Latin pop music. His touring schedule placed a tremendous strain on the marriage, and they wanted to be together in order to raise a family. The network and prospective sponsors balked at the casting of Arnaz, fearing that his Cuban accent—his ethnic identity—would alienate television viewers. To dispel doubts, Ball and Arnaz created a nightclub act and toured during the summer of 1950. When the show proved to be a huge success, CBS agreed to finance a pilot starring husband and wife.

In 1951 agent Don Sharpe negotiated a contract with CBS and sponsor Philip Morris cigarettes for Desilu, the couple’s new production company, to produce *I Love Lucy*. CBS and the sponsor insisted that the program be broadcast live from New York, to take advantage of network production facilities in what was still predominately a live medium. For personal reasons Ball and Arnaz wanted to stay in Hollywood, but they also wanted to take advantage of movie industry production facilities and to ensure the long-term value of their series by capturing it on film. Syndication of reruns had not yet become standard procedure, but television’s inevitable growth meant that the return on serious investment in a television series was incalculable. The network finally agreed to the couple’s demands, but as a concession asked Ball and Arnaz to pay the additional cost of production and to accept a reduced fee for themselves. In exchange Desilu was given 100% ownership of the series—a provision that quickly turned Ball and Arnaz into the first millionaire television stars.

*I Love Lucy* reflected the couple’s own family life in the funhouse mirror of a sitcom premise. To this extent, *I Love Lucy* resembled several other vaguely autobiographical showbiz family sitcoms of the 1950s, such as *The George Burns and Gracie Allen Show* (1950–58), *The Adventures of Ozzie and Harriet* (1952–66), and *The Danny Thomas Show* (1953–64). Lucille Ball and Desi Arnaz played Lucy and Ricky Ricardo, a young married couple living in a converted brownstone on the upper east side of Manhattan. Ricky is the orchestra leader for the Tropicana nightclub; Lucy is a
frustrated housewife who longs to escape the confinement of her domestic role and participate in a larger public world, preferably to join Ricky in show business. They were joined by Vivian Vance and William Frawley, who played Ethel and Fred Mertz, former vaudeville performers who are the Ricardos' landlords.

Conflicts inevitably arise when Lucy's fervent desire to be more than a housewife run up against Ricky's equally passionate belief that such ambitions in a woman are unseemly. This dynamic is established in the pilot episode—when Lucy disguises herself as a clown in order to sneak into Ricky's nightclub act—and continues throughout the entire series. In episode after episode Lucy rebels against the confinements of domestic life for women, the dull routines of cooking and housework, the petty humiliation of a wife's financial dependence, the straightjacket of demure feminin-
ity. Her acts of rebellion—taking a job, performing at the club, concocting a money-making scheme, or simply plotting to fool Ricky—are meant to expose the absurd restrictions placed on women in a male-dominated society. Yet her rebellion is forever thwarted. By entering the public sphere she inevitably makes a spectacular mess of things and is almost inevitably forced to retreat, to return to the status quo of domestic life that will begin the next episode.

It is possible to see I Love Lucy as a conservative comedy in which each episode teaches Lucy not to question the social order. In a series that corresponded roughly to their real lives, it is notable that Desi played a character very much like himself, while Lucy had to sublimate her professional identity as a performer and pretend to be a mere housewife. The casting decision seems to mirror the dynamic of the series; both Lucy Ricardo and Lucille Ball are domesticated, shoehorned into an inappropriate and confining role. But this apparent act of suppression actually gives the series its manic and liberating energy. In being asked to play a proper housewife, Ball was a tornado in a bottle, an irrepressible force of nature, a rattling, whirling blast of energy just waiting to explode. The true force of each episode lies not in the indifferent resolution, the half-hearted return to the status quo, but in Lucy's burst of rebellious energy that sends each episode spinning into chaos. Lucy Ricardo's attempts at rebellion are usually sabotaged by her own incompetence, but Ball's virtuosity as a performer perversely undermines the narrative's explicit message, creating a tension which cannot be resolved. Viewed from this perspective, the tranquil status quo that begins and ends each episode is less an act of submission than a sly joke; the chaos in between reveals the folly of ever trying to contain Lucy.

Although I Love Lucy displayed an almost ritualistic devotion to its central premise, it also changed with each passing season. The first season presented the Ricardos as a young couple adjusting to married life and to Lucy's thwarted ambitions. The second and third seasons brought the birth of Little Ricky and focused more often on the couple's adjustment to being parents—particularly the question of how motherhood would affect Lucy's ambition. The fourth season saw Ricky courted by a Hollywood studio. The Ricardos and Mertzes took a cross-country automobile tour and eventually landed in Hollywood, where Lucy wreaked havoc in several hilarious encounters with celebrity guest stars. During the fifth season the Ricardos returned to New York, but then soon left for Europe—seen as a variation of Innocents Abroad. The sixth and final season found the Ricardos climbing the social ladder as the series shifted toward family issues. Ricky bought the Tropicana nightclub, renaming it Club Babalu. Plots began to revolve around five-year-old Little Ricky (Richard Keith). Finally, the Ricardos joined the exodus to the suburbs, abandoning New York for a country home in Connecticut, where they were joined by the Mertzes and by new neighbors Betty and Ralph Ramsey (Mary Jane Croft and Frank Nelson).

The creative team behind I Love Lucy was remarkably consistent over the years. Writers Jess Oppenheimer, Madelyn Pugh, and Bob Carroll, Jr., had written My Favorite Husband on radio, and they accompanied Ball to television. Oppenheimer served as the series producer, while Pugh and Carroll were the writers. Together the three would sketch out episode ideas—many of which were based on scripts from the radio series. Pugh and Carroll would write the script, and Oppenheimer would edit it before production. This pattern continued, regular as clockwork, for four entire seasons in which the trio wrote each and every episode—an incredible achievement considering the pace of television production. In the fifth and sixth seasons Bob Schiller and Bob Weiskopf joined as a second writing team. Jess Oppenheimer left to take a job at NBC after the fifth season, and Desi Arnaz, who had served as executive producer since the beginning, stepped in to replace him as producer. While in production as a weekly series, I Love Lucy had only three directors: Marc Daniels (1951–52), William Asher (1952–55, 1956–57), and James V. Kern (1955–56). Much of the quality of the series is a result of this unusually stable production team.

The production process was unique for filmed television. Recognizing the economic importance of the work they produced, Arnaz and Ball still faced the difficulty that shooting the series on film generally meant shooting with one camera on a closed soundstage. But they also wanted to capture the spontaneity of Ball's comic performances, her interaction with other performers and her rapport with a live audience. Arnaz recruited famed cinematographer Karl Freund to help solve the problem. Freund was a respected Hollywood craftsman who had begun his career in Germany working with directors Robert Weine and Fritz Lang. In the United States he had a long career at MGM, where he shot several films with Greta Garbo and won an Academy Award in 1937 for The Good Earth. Freund adapted the live-TV aesthetic of shooting with multiple cameras to the context of film production—a technique already used with limited success by others in the telefilm industry. Freund developed a system for lighting the set from above, since it would not be possible to change the lighting during a live performance. With three cameras running simultaneously in front of a studio audience, I Love Lucy was able to combine the vitality of live performances with the visual quality of film. Although the technique was not generally used outside of Desilu until the 1970s, it is now widely used throughout the television industry.

During the network run of I Love Lucy, Desilu became the fastest rising production company in television by capitalizing on the success of I Love Lucy, which earned over $1 million a year in reruns by the mid-1950s. From this foundation Desilu branched out into several types of production, a process of expansion that began with an investment of $5,000 in 1951 and saw the staff grow from 12 to 800 in just 6 years. Desilu produced series for the networks and for syndication (December Bride, The Texan) and contracted to shoot series for other producers (The Danny Thomas Show).
In October 1956 Desilu sold the rights to *I Love Lucy* to CBS for $4.3 million. With the help of this windfall profit, Desilu purchased RKO studios—the studio at which Ball and Arnaz had once been under contract—for $6.15 million in January 1958. The success of *I Love Lucy* created one of the most prolific and influential television production companies of the 1950s.

By 1957, Arnaz, Ball, and the entire production team had grown weary of the grinding pace of series production. Desilu ceased production of the weekly series after completing 180 episodes. The familiar characters stayed alive for more three seasons through thirteen one-hour episodes, many of which appeared as installments of the Westinghouse-Desilu Playhouse (1958–1960).

**I SPY**

**U.S. Adventure/Espionage**

*I Spy*, which ran on NBC from 1965 to 1968, was a Sheldon Leonard Production which chronicled the exploits of fictional characters Kelly Robinson (Robert Culp) and Alexander Scott (Bill Cosby). Robinson and Scott, who posed as a professional tennis player and his personal trainer, were in reality spies for the United States. *I Spy* was a whimsical adventure show with a hip wit characteristic of the espionage genre in the 1960s. But rather than being drawn in the cartoonish James Bondian style, Robinson and Scott were fully realized characters who displayed a range of feelings and concerns uncharacteristic of spy television heroes. They bled, got headaches, and often doubted themselves and their role in global affairs.

The Cold War has often been considered a generative force for the television espionage programs. The genre of spy fiction, which arguably began its 1960s cinematic version with *Dr. No*, made its way to television in 1964 with *The Man from U.N.C.L.E.* Many imitators followed, but *I Spy* was a departure from the style established in earlier shows. In this series, Robinson and Scott did not battle against shadowy organizations of global evil, such as THRUSH from *The Man from U.N.C.L.E.* or SPECTRE from James Bond films. Rather, the show recognized political tensions of the day. *I Spy* unashamedly acknowledged the role of the United States in the arena of world espionage.

Virtually the entire first season was filmed on location in Hong Kong and other Asian locales. Leonard, as well as producers David Friedkin and Morton Fine, had no qualms about spending money to avoid a "backlot" look to the show. Associate producer Ron Jacobs and location manager Fuad Said worked with both their own "Cinemobile" and film crews from NBC News Asian bureaus to get much of the location footage used in that first season. The second season was filmed almost exclusively in Greece, Spain, and other Mediterranean locations, using similar techniques.
But the series did not depend exclusively on exotic location and “realism” for its narratives. It also looked at the personal side of espionage and the toll it could take on those who practiced it. The characters would often admit and lament the fact that they had to fight the forces of evil on their level. Unlike many shows of the genre, *I Spy* dealt with agents dying cruel deaths, burning out on the spy game, and often even doubting the nature of orders from superiors. This questioning of authority was more at home in programming based on the “counterculture” pitched toward the youth of the times. Yet Cosby and Culp more often than not straddled the fence between rebellion and allegiance despite the fact that after the premiere of *I Spy*, *New York Times* television critic Jack Gould called it a show “looking for a style and attitude.”

*I Spy* was one of the first dramatic shows to feature an African-American male as a leading character. Producer Leonard was certain of Cosby's talents but the network had grave doubts about casting an untested stand-up comedian in a dramatic lead. The network's concerns were quickly dispelled by Cosby's deft and multifaceted talent—a talent which garnered him three consecutive Emmys as Best Male Actor in a Dramatic Television series between 1965 and 1968. Originally, the role of Alexander Scott was to have been that of a bodyguard for Kelly Robinson. Both Cosby and Culp conferred with the three producers (Leonard, Friedkin, and Fine) and the decision was made to have Robinson and Scott as equals. Cosby also stated that racial issues would not be dealt with on *I Spy*. This “color blind” approach freed the show from having to impart a message each week and instead allowed it to succeed by emulating the conventions of the genre of espionage adventure. *I Spy* also showcased the talents of other African-American actors of the time, including Godfrey Cambridge, Ivan Dixon, and Eartha Kitt. As a result of its ostensible neutrality on race relations, African-Americans could be heroes or villains with a minimum of political overtones.

Though never a Top Twenty show, *I Spy* enjoyed three successful years on NBC. Bill Cosby in particular enjoyed very high Q ratings (audience appreciation ratings) for the run of the show. In 1994, an *I Spy* reunion movie was broadcast. But more than a quarter century had passed since Robinson and Scott last toiled to preserve world security and the viewing audience was not as welcoming as it had been.

### INDEPENDENT PRODUCTION COMPANIES

In the American system of advertiser supported television independent production companies and independent producers create and produce programming independently of a sponsor or network’s direct influence. While networks still license, schedule and help fund independently produced programming—as well as maintain liaisons who may mon-
itor and/or censor weekly episodes—the casting, writing and directing remain the responsibility of the independent producer. Since the mid-to-late 1950s, when television switched from live to filmed shows, independent production companies have accounted for the majority of television programming.

According to William Boddy’s *Fifties Television* (1993), the rise of independent production companies is rooted in the mid-1950s, when networks successfully wrestled program control away from sponsors. In the golden age of live television, when programming originated from New York, sponsors not only controlled a majority of the shows, but were also responsible for their production. Many sponsors also owned the network time slots during which their shows aired. As the number of companies desiring TV advertising increased, the networks found that controlling the time slots would allow them to realize higher profits through multiple sponsorships and the sale of spot advertising. Networks also found they could reduce production costs by airing filmed shows (telefilms) that were produced either by the network or—even better—by independent production companies which absorbed the high cost of production. Through the 1970s, many independent production costs were underwritten by commercial sponsors.

Independence did not mean autonomy for these producers. Underwriting sponsors could interfere with and influence production. Furthermore, networks obtained many of the rights and a significant financial share of the programs, primarily through deals made by funding the pilot episode and allowing it a place on the network’s schedule. While the 1971 Financial Interest and Syndication Rules (Fin-Sin) would eventually limit the network’s ability to syndicate independently produced material, the network’s control over scheduling still affords them incredible power. Indeed, in the late 1990s changes in the Fin-Syn Rules are restoring network powers of program ownership and syndication and therefore encouraging networks to once again become directly involved in program production.

There were literally hundreds of independent producers and syndicators in the early 1950s who provided first-run syndicated programs, as well as previously released theatrical films, to local stations. As the networks solidified their control over local affiliates—thus controlling the bulk of local prime time programming—fewer markets remained open for independents. And as networks became obsessed with insuring hit programs, they began working with only those independents who had proven track records; by the late 1950s, only a handful of independents survived.

One of the first independent production companies, Telecom Incorporated, was launched in 1944 by William Pine and William Thomas. But in 1951 it was Jerry Fairbanks, Jr., who became the first independent producer to sell a series, *The Public Prosecutor*, to a television network; Fairbanks is also credited with devising the three-camera filming system that was used for this series. This technique became key to later off-network (rerun) sales and syndication. In 1953, Hal Roach, Jr., who inherited a fortune from his father, the king of the two-reel comedies, made the first telefilm deal that included pilot financing. The largest of the early independents was Frederick W. Ziv, a radio syndicator who entered television in 1948. According to Boddy, Ziv was convinced that American viewers wanted escapism in their entertainment. Responding in kind, Ziv provided such first-run syndicated series as *The Cisco Kid* (1950), *I Led Three Lives* (1953), *Highway Patrol* (1955), and *Seahunt* (1957) to local stations across the nation, many of which were not yet connected to the network’s coaxial cable. By 1959, Ziv and CBS accounted for one-third of the revenues made from television’s syndicated programming. Ziv later sold out to United Artists.

The most significant of the early independent production companies was Desilu, founded in 1951 by Lucille Ball and Desi Arnaz. Desilu was as much the result of the couple’s personal desire to bolster their faltering relationship (which they failed to do) as it was a part of their quest to amass a fortune (which they did). The marital problems that eventually resulted in the couple’s divorce began long before *I Love Lucy*, when Arnaz’s work as a band leader had him constantly on the road. In 1950, Ball, a Hollywood B-actress who found success in the radio comedy *My Favorite Husband*, was preparing to make the transition to television. Hoping the series would take Arnaz off the road, Ball insisted that CBS agree to let Arnaz co-star. Ball later requested the couple produce the show as a filmed series through their own production company.

While the story of Desilu is quite romantic—a company built by the stars’ futile desire for happiness and love—ownership of a production company had numerous financial benefits (as Bing Crosby, one of the earlier independent TV producers, had already learned). First, it allowed the actors to share in the profits brought by off-network telecasts, as well as share in other subsidiary and foreign rights. Furthermore, it allowed the stars to channel their money through various corporate holdings, taking their profits in capital gains. *I Love Lucy* and Desilu set many precedents, none the least of which being the profit potential that lay in the ownership of television programming. Today, as in earlier periods of television history, the major lure of independent production is the possibility of huge profits rising from syndicated sales of properties owned by the production company. With this goal in mind independent production companies and the studios with which they often work are willing to sink considerable sums of their own money into production costs, hoping to recoup the deficit when the series is sold into syndication.

Using a financial base constructed on this system, Desilu, and its hit sitcom *I Love Lucy*, built a production empire that, by the late 1950s, rivaled the size and output of the biggest motion picture studios. At the same time, it solidified the position of the telefilm and the independent producer’s role in the medium. Under the leadership of Arnaz, who popularized the use of the three-camera system
which had recently been improved by Al Simon, a producer for Ralph Edward’s *Truth or Consequences* (1950), Desilu not only produced a number of its own series, but served as a studio for numerous other independents, including Danny Thomas and Quinn Martin.

Thomas is perhaps the most successful independent producer. A nightclub comedian and singer, Thomas was tired of life on the road and sought the more stable life of a sitcom performer. Indeed, the title of his semi-autobiographical series, *Make Room for Daddy* (1953), was based on the life Thomas’ kids used when their occasional father returned home. Riding the series’ success, Thomas became the star tenant of Desilu, producing such successful hits as *The Real McCoys* (1957), *The Andy Griffith Show* (1960), *The Dick Van Dyke Show* (1961), and *Gomer Pyle, USMC* (1964). Each of these shows had a complex financial structure. For example, *Gomer Pyle* was produced by Andy Griffith’s Ashland productions, which itself was owned in conjunction with Thomas’ star disciple Sheldon Leonard, who worked under Thomas. To make matters more complicated, Desilu made money as the studio and CBS got its cut from syndication.

At least Thomas had a good sense of humor regarding the convoluted nature of the business side of independent production. A 1964 episode of *The Dick Van Dyke Show*, “It Wouldn’t Hurt Them To Give Us a Raise,” finds Van Dyke’s character Rob Petrie uncovering the multiple corporations responsible for producing the mythical *Alan Brady Show*, for which Petrie served as head writer. *The Dick Van Dyke Show* itself was produced by Calvada productions, which was a partnership of Carl Reiner, Sheldon Leonard, Dick Van Dyke and Danny Thomas. Production costs for Van Dyke’s series were underwritten by sponsors Proctor and Gamble and Lorillard.

Quinn Martin, one of TV’s golden age writers, is another independent whose career started with Desilu. In 1959, Martin, who had written for *Desilu Playhouse*, was approached to write a two-hour TV movie based on the book *The Untouchables*. When the show became a series, Martin remained as its producer. By the end of the series run in 1963, Martin formed his own QM Productions and launched a number of hits that dominated the 1960s and 1970s, including *The Fugitive* (1963), *The FBI* (1965), *Cannon* (1971), *The Streets of San Francisco* (1972) and *Barnaby Jones* (1973). Martin forged a highly stylized tone with each of his productions, the most obvious example being his use of act numbers and epilogues in each of his series. His climactic finale to *The Fugitive* also set the precedent for today’s season and series’ finales.

Long before Martin developed his singular narrative style, Jack Webb, with his series *Dragnet*, had become the master of formula drama. Webb’s independent company, Mark VII Productions, began in 1949 when he sold *Dragnet* to NBC radio. When the series moved to TV in 1952, it became an instant hit; indeed, during the 1953-54 season, *Dragnet* was bested only by *I Love Lucy*. Webb’s narrative style, coupled with the series’ bare bones production, made it possible to convey a dramatic story with very little action, movement, or cost. Webb based his *Dragnet* stories on real-life incidents that came from actual police files. He had experimented with this on radio with his 1946 series *One Out of Seven*, whose plots were based on actual headlines. *Dragnet* ran until 1959, and was later revived in 1967; the new color series ran until 1970. Webb brought his true-life style to numerous other series, the most popular being *Adam-12* (1968) and *Emergency* (1972). Like Quinn Martin, Webb remained a prominent, if not dominant, force in television for well over twenty years.

Another prolific 1960s independent telefilm producer was Filmways, which began as a producer of advertising commercial productions, then branched into television. Filmways’ fortune grew when the company linked with independent producer Paul Henning, creator and producer of *The Beverly Hillbillies*. Henning was a radio writer who made the transition to television by writing for *Barns and Allen* (1950) before creating his first series, *The Bob Cummings Show*, in 1955. In 1962, Henning drew from his southern roots to create *The Beverly Hillbillies*. The series, which capitalized on the growing success of rural based sitcoms launched by Thomas, was one of the few breakaway hits in TV history; in other words, it debuted and remained in the top 20 throughout its nine-year run. *The Beverly Hillbillies* spun-off two other successful Henning hits, * Petticoat Junction* (1963) and *Green Acres* (1965). Between Henning and Thomas, the Nielsen ratings were dominated by a crop of rural sitcoms.

Throughout the 1950s and 1960s, one of the continuing complaints against independent telefilm production was that it was formulaic and two-dimensional. Indeed, most, but certainly not all, telefilmed dramas and comedies paled in comparison to the thought-provoking, well-written live anthology programs the telefilm had replaced. While each body of telefilm had a style unique to its producer—the Henning rural sitcoms, for example, were much more irrelevant than those produced by Thomas—they each catered to the prevailing norm of providing the “least-objectionable” programming, where real-world relevance was divorced from entertainment (a strategy explaining why *Gomer Pyle* never went to Vietnam). In 1971, however, two independent production companies—Grant Tinker and Mary Tyler Moore’s MTM Enterprises, and Norman Lear and Bud Yorkin’s Tandem Productions—brought back the vitality and relevance of TV’s lost age of live drama.

Television’s move toward relevance was predicated by CBS’ desire to capture a more sophisticated demographic; indeed, while a show like *The Beverly Hillbillies* would play well overall, it failed to capture upscale viewers with greater disposable income. Nevertheless, relevant programming could not be accomplished simply through a new philosophy—there had to be a product. Independent producers MTM and Tandem provided it.

Lear, who had worked as a writer in early television, became disillusioned by the medium after the rise of telefilms. In the 1960s, he and partner Bud Yorkin launched
Tandem, an independent feature-film company. After producing a series of marginally successful films, Lear returned to television to challenge its existing rule of "least objectionable" programming. Lear's *All in the Family*, based on Johnny Speight's British series *Till Death Us Do Part*, was like nothing which had preceded it. Grounded in the conflict between a working-class bigot and his liberal son-in-law, *All in the Family* took on civil rights, Vietnam, sex and other relevant issues that had only been touched, with limited success, by a few other series, including *Julia* (1968) and *Room 222* (1969).

After a brief period of adjustment, American viewers made *All in the Family* a continuing top-ten favorite. Through spin-offs such as *Maud* (1972), *Good Times* (1974) and *The Jeffersons* (1975), in addition to such hits as *Sanford and Son* (1972), and *One Day at a Time* (1975), Lear quickly became the king of relevant sitcoms. However, while Lear brought important issues to the forefront of American entertainment, he also proved that racy issues and a degree of vulgarity would be tolerated by American viewers. Thus, sitcoms of lesser quality, such as *Three's Company* (1977) or *Married...With Children* (1987), also found roots in *All in the Family*.

One year earlier, MTM Enterprises had emerged to attempt relevance in a more sophisticated manner. Mary Tyler Moore had become famous as Laura Petrie in the *The Dick Van Dyke Show*. In early 1970, Moore was reunited with Van Dyke in a variety special; CBS was impressed by the viewer's response. Eager to woo Moore back to series television, CBS gave her and husband Grant Tinker the go-ahead to form an independent production company that would produce a vehicle for Moore. The result was *The Mary Tyler Moore Show*, one of the most critically acclaimed sitcoms in television history.

Unlike *All in the Family*, *The Mary Tyler Moore Show* provided its relevance through highly defined, understated characters who developed as the series progressed. Rather than attack issues head on, *The Mary Tyler Moore Show* met them with subtlety and grace. As the series progressed, MTM Enterprises grew, producing a series of successful and critically acclaimed sitcoms including *The Bob Newhart Show* (1972), *Rhoda* (1974), *Phyllis* (1975), and *WKRP in Cincinnati* (1978). Unlike Tandem shows, which were highly dependent upon the singular style of Lear, the MTM series developed their style from the ensemble of writers and producers enlisted by Tinker. MTM, more than any other independent, became a true "writer's company." Not since the days of live TV had a television writer carried so much status. To this day, MTM represents a standard for quality television which has been equaled only by those companies spawned by former MTM alumni, including *Taxi*’s (1978) John Charles Walter's Company and *Cheers*’s (1982) Charles-Burrows-Charles Productions.

Unlike Lear, MTM Enterprises also began developing dramatic series, including *Lou Grant* (1977), *Hill Street Blues* (1981), and *St. Elsewhere* (1982). MTM dramas placed social conscience over raw drama and the impact of these series can be seen in modern programs such as *NYPD Blue* (1992), *ER* (1994), and *Chicago Hope* (1994), also produced by independents.

Among the most successful independent producers concentrating on one-hour drama is Aaron Spelling. Unlike Cannell, however, Spelling has continued to cross generic lines, and is defined more by his sense of light entertainment sought by large portions of the viewing audience, than by any particular style. From *The Mod Squad* in the 1960s, through *The Love Boat*, *Fantasy Island*, *Charlie's Angels* and *The Rookies* in the 1970s, *Dynasty* in the 1980s, to *Beverly Hills 90210* and *Melrose Place* in the 1990s, Spelling has been a major participant in American television programming. Seen by some as a master of schlock entertainment, he was also co-producer of *Family*, one of the most prestige laden series of the late 1970s. Working with various partners in various corporate arrangements, Spelling has fashioned an true independent production empire.

According to David Marc and Robert J. Thompson's *Prime Time Prime Movers* (1992), the most significant force in 1970s and 1980s drama was Lee Rich, a former advertising executive and television producer. Rich's Lorimar Productions found instant success with *The Waltons* (1972), and lasting fortune with such hits as *Eight Is Enough* (1977), *Dallas* (1978), and *Falcon Crest* (1981). Although *The Waltons* launched a mini-revival of family entertainment, it was *Dallas* and *Falcon Crest* that garnered the most viewers. By bringing the soap opera format to prime time, Lorimar also paved the way for continuing storylines in modern episodic television. Rich left Lorimar in 1986; the company was later sold to Warner Communications.

The rise of these and other dramas produced by independents tended to dominate Nielsen ratings, giving rise to concerns that the sitcom had outlived its usefulness. Then came Carsey-Werner productions. Marcia Carsey and Tom Werner were ABC executives who started their own production company in the early 1980s. As time-developed fans of Bill Cosby, Carsey and Werner yearned to find him a suitable vehicle—the result was *Cosby*, which debuted in 1984. Aside from proving itself a wildly successful hit for Carsey-Werner, Bill Cosby, and NBC, *Cosby* revitalized the foundering sitcom format. By 1988, Carsey-Werner had also developed *A Different World* and *Roseanne*, in the tradition of Desilu and Danny Thomas, Carsey-Werner claimed credit for the most successful series of their time.

Marcia Carsey is not the first successful female independent producer. Indeed, while Desi Arnaz gets much of the credit for Desilu, one cannot ignore Lucille Ball's active role in the company. Ann Sothern also took an active interest in Anso productions, which produced *The Ann Sothern Show* (1958).

Like the programming itself, independent production has changed significantly since the early days of telefilm. Rather than depending on sponsors to underwrite production costs, the modern independent works in conjunction with a group of production companies, with major investment dollars coming from the television divisions of such studios as Warner Brothers, Twentieth Century-Fox and MCA-Universal. Indeed, it is not uncommon to see three or four production logos at the end of a contemporary series, with each company representing the stars, producers, and distributor’s stake in production.

—Michael B. Kassel

**INDEPENDENT TELEVISION SERVICE**

The U.S. Congress amended the Public Broadcasting Act in 1988 by creating a separate fund for independent productions called ITVS (Independent Television Service). ITVS was merely the latest attempt to implement some of public broadcasting’s earliest goals: that public television would be independent of commercial interests and would become—in the words of the Carnegie Commission in 1967—"the clearest expression of American diversity, and of excellence through diversity." By 1988, however, many saw the Public Broadcasting Service as neither independent nor diverse.

The very organizing logic of network television in the United States—that it act for us in the public interest, operate under government regulation, and define itself economically by the "mainstream"—has meant that television encouraged a consensual cultural "inside" and a marginalized "outside." By delegating to television the authority to provide a balanced view of the world and to serve the mass audience, many individual and cultural voices have been underrepresented. While intellectual and artistic cultures have demeaned television’s mass mentality from the start in postures of voluntary cultural exclusion, it was the civil rights crisis in the 1960s, by contrast, that highlighted television’s involuntary forms of ethnic, racial, and gender bias. Even as underground filmmakers, newsreel activists, and video artists at the time forged the notion of "independent" media as an alternative to the networks, a more public crisis over television’s exclusionary practices challenged the government to recast its relationship to broadcasting. The formation of National Educational Television (NET), its successor the Public Broadcasting Service (PBS), and the funding arm, the Corporation for Public Broadcasting (CPB) were all attempts to correct the narrow interests that democratically minded critics saw at the root of network television. Public television’s mandate was to open up and diversify television in both an aesthetic and social sense. Different types of stories and perspectives on American culture were to emerge, even as the very notion of an independent perspective would be part of the PBS niche that followed.
Yet, by the late 1980s, many liberal critics complained that PBS had failed in its mission to diversify television and to give voice to those without one. The presence of advertising spots in major PBS affiliate stations, Fortune 500 corporate sponsorship of programs, and the generic monotony that came from a limited diet of nature documentaries, high-culture performing, and British imports proved to such critics that, far from fulfilling its function, PBS represented rigid class interests of the most limited type. This was in fact corporate, rather than independent, television. A direct result of this organized critique was the formation of ITVS.

With advocacy from the Association of Independent Video and Filmmakers and its publication *The Independent*, a coalition of independent producers from major cities across the country publicly criticized contradictions at the root of public broadcasting’s “failure”: administrative overheads at PBS and CPB consumed the lion’s share of public subsidies from the government, panels that awarded program development and production funds were ingrown networks, and PBS affiliate stations along with a select group of insider companies now fulfilled the role of “independents.” Apart from token programming ghettos (the TV “labs” and new artists “workshops” at WNET and WGBH, segment producing spots on *Frontline*, and half-hour anthologies of experimental work on affiliates WTTW, WNED, and KQED), independent work that engaged radical political, racial, or sexual politics was essentially absent. PBS seemed unresponsive to such issues and ITVS organizers took their critique directly to the source of PBS subsidies—Congress.

The resulting federal mandate required that CPB negotiate directly with the National Coalition of Independent Public Broadcasting Producers (NCIPBP) to develop programs through ITVS. ITVS’s $6 million yearly budget was to be allocated without oversight or interference by any existing funding entity, including CPB and PBS. But the independence guaranteed by direct-to-producer subsidies also brought with it a lasting complication for ITVS: freed of PBS/CPB intrusions into program development, ITVS also lost any guarantee of final broadcast on PBS stations. While public broadcasters protested that federal funds would now go to programs that had little chance of carriage on the stations that they controlled, ITVS countered that up-front development money—not carriage—had always been the historic problem for independents.

By May 1990 complications arose on both sides. Spun as an “overhead-versus-production funding” struggle, CPB complained of NCIPBP’s unrealistic assumptions about support; ITVS criticized CPB’s refusal to cover basic postproduction, packaging and promotion costs. Many others noted that very little television had actually been developed by ITVS—and none broadcast.

From St. Paul, Minnesota, ITVS aimed to develop “innovative” series and single programs. Topics were identified, professional panels constituted, and “requests for proposals” announced. Open calls received as many as 2000 submissions; focused topics were as few as 75. By 1993–1994, numerous series were finally in production or distribution. *Declarations* collaged video essays around ITVS’s charter notion of free speech; *TV Families* serialized family diversity as an antidote to network television’s one-dimensional paradigm; *Stolen Moments* tackled AIDS in the context of urban street culture, hip-hop and jazz; and *The United States of Poetry and Animated Women* brought their artistic subcultures to after-prime PBS affiliate audiences.

While some ITVS programs were picked up by many PBS stations, others were less successful. ITVS’s quarterly *Buzzwords*, however, defended the organization’s uneven successes by pointing to the critical acclaim given some individual works—like Marlon Riggs’ *Black Is...Black Ain’t*—at the Berlin, San Francisco, and Sundance film festivals.

Two complications built into ITVS from the start continue to dog the organization’s future: carriage and overhead. Despite a new rhetoric of “audience-driven programming” in 1995, ITVS remains weakest in its ability to deliver programming to a national audience. Second, although ITVS was designed to prevent the overhead and administrative skimming that characterized CPB/PBS, many independents by 1995 began to question the ability of ITVS to deal with such problems as the “identity politics” that skewed awards, or the “insiders” that comprised funding panels. The criticism that ITVS is simply a reemerging bureaucracy that constrains independence is exacerbated by the fact that its $6 million yearly budget for program development is minuscule by commercial industry standards.

Annually and economically, then, ITVS cannot possibly act as a programming advocate for the thousands of independents that were publicly linked to it by NCIPBP and Congress. Systemic dissension and broadcaster resistance alike may pale, however, before a greater threat to ITVS. The victory of the “Contract with America” in November 1994 placed PBS squarely on the federal budgetary chopping block. If congressional initiatives succeed in making the market public broadcasting’s new patron, then the tentative foothold that ITVS maintains will probably slip along with the Carnegie Commission’s defining notions of independence and diversity.

*The Independent* (various issues). Foundation for Independent Video and Film, New York: 1978–.
INDIA

The Indian television system is one of the most extensive systems in the world. Terrestrial broadcasting, which has been the sole preserve of the government, provides television coverage to over 90% of India's 900 million people. By the end of 1996 nearly 50 million households had television sets. International satellite broadcasting, introduced in 1991, has swept across the country because of the rapid proliferation of small scale cable systems. By the end of 1996, Indians could view dozens of foreign and local channels and the competition for audiences and advertising revenues was one of the hottest in the world. In 1995, the Indian Supreme Court held that the government's monopoly over broadcasting was unconstitutional, setting the stage for India to develop into one of the world's largest and most competitive television environments.

Broadcasting began in India with the formation of a private radio service in Madras in 1924. In the same year, the British colonial government granted a license to a private company, the Indian Broadcasting Company, to open Radio stations in Bombay and Calcutta. The company went bankrupt in 1930 but the colonial government took over the two transmitters and the Department of Labor and Industries started operating them as the Indian State Broadcasting Corporation. In 1936, the corporation was renamed All India Radio (AIR) and placed under the Department of Communications. When India became independent in 1947, AIR was made a separate department under the Ministry of Information and Broadcasting.

The early history of radio broadcasting in independent India is important because it set the parameters for the subsequent role of television in the country. At independence, the Congress government under Jawaharlal Nehru had three major goals: to achieve political integration, economic development and social modernization. Broadcasting was expected to play an important role in all three areas.

The most important challenge the government faced at independence was that of forging a nation out of the diverse political, religious, geographic and linguistic entities that composed independent India. In addition to the territories ruled directly by the British, over 500 hundred "independent" princely states had joined the new nation, some quite reluctantly. The country immediately found itself at war with Pakistan over one of those states—Kashmir. The trauma of the partition of the country into India and Pakistan and the violence between Hindus and Muslims had further weekend the political stability of the country. Broadcasting was harnessed for the task of political nation building. National integration and the development of a "national consciousness" were among the early objectives of All India Radio. Broadcasting was organized as the sole preserve of the chief architect of this process of political integration—the State. The task of broadcasting was to help in overcoming the immediate crisis of political instability that followed Independence and to foster the long-term process of political modernization and nation building that was the dominant ideology of the newly formed state.

Broadcasting was also charged with the task of aiding in the process of economic development. The Indian Constitution, adopted in 1950, mandated a strong role for the Indian State in the economic development of the country. The use of broadcasting to further the development process was a natural corollary to this state-led developmental philosophy. Broadcasting, was especially expected to contribute to the process of social modernization, which was considered an important pre-requisite of economic development. The dominant development philosophy of the time identified the problems of development as primarily internal to developing countries. These endogenous causes, to which communication solutions were thought to exist, included traditional value systems, lack of innovation, lack of entrepreneurial ability and lack of a national consciousness. In short, the problem was one of old ideas hindering the process of social change and modernization and the role of broadcasting was to provide an inlet for the flow of modern ideas.

It was in the context of this dominant thinking about the role of broadcasting in India that television was introduced in 1959. The government had been reluctant to invest in television until then because it was felt that a poor country like India could not afford the medium. Television had to prove its role in the development process before it could gain a foot-hold in the country. Television broadcasts started from Delhi in September 1959 as part of All India Radio's services. Programs were broadcast twice a week for an hour a day on such topics as community health, citizens duties and rights, and traffic and road sense. In 1961 the broadcasts were expanded to include a school educational television project. In time, Indian films and programs consisting of compilation of musicals from Indian films joined the program line-up as the first entertainment programs. A limited number of old U.S. and British shows were also telecast sporadically.

The first major expansion of television in India began in 1972, when a second television station was opened in Bombay. This was followed by stations in Srinagar and Amritsar (1973), and Calcutta, Madras and Lucknow in 1975. Relay stations were also set up in a number of cities to extend the coverage of the regional stations. In 1975, the government carried out the first test of the possibilities of satellite based television through the SITE program. SITE (Satellite Instructional Television Experiment) was designed to test whether satellite based television services could play a role in socio-economic development. Using a U.S. ATS-6 satellite and up-link centers at Ahmedabad and Delhi, television programs were beamed down for about 4 hours a day to about 2,400 villages in 6 states. The programs dealt mainly with in- and out-of-school education, agricultural issues, planning and national integration. The program was fairly successful in demonstrating the effectiveness of satel-
lite based television in India and the lessons learnt from SITE were used by the government in designing and utilizing its own domestic satellite service INSAT, launched in 1982.

In these early years television, like radio, was considered a facilitator of the development process and its introduction was justified by the role it was asked to play in social and economic development. Television was institutionalized as an arm of the government, since the government was the chief architect of political, economic and social development in the country.

By 1976, the government found itself running a television network of eight television stations covering a population of 45 million spread over 75,000 square kilometers. Faced with the difficulty of administering such an extensive television system television as part of All India Radio, the government constituted Doordarshan, the national television network, as a separate department under the Ministry of Information and Broadcasting. Doordarshan was set up as an attached office under the Ministry of Information and Broadcasting—a half-way house between a public corporation and a government department. In practice, however, Doordarshan operated much like a government department, at least as far as critical issues of policy planning and financial decision-making were concerned. Doordarshan was headed by a director general appointed by the Finance Ministry. The ministry itself and sometimes the office of the director general as well, was and continues to be, staffed by members of India's civil services.

In 1982 television began to attain national coverage and develop as the government's pre-eminent media organization. Two events triggered the rapid growth of television that year. INSAT-1A, the first of the country's domestic communications satellites became operational and made possible the networking of all of Doordarshan's regional stations. For the first time Doordarshan originated a nation-wide feed dubbed the "National Programme" which was fed from Delhi to the other stations. In November 1982, the country hosted the Asian Games and the government introduced color broadcasts for the coverage of the games. To increase television's reach, the government launched a crash program to set up low and high power transmitters that would pick-up the satellite distributed signals and re-transmit them to surrounding areas. In 1983 television signals were available to just 28% of the population; this had doubled by the end of 1985 and by 1990 over 90% of the population had access to television signals.

In 1976 a significant event in the history of Indian television occurred, the advent of advertising on Doordarshan. Until that time television had been funded through a combination of television licenses and allocations from the annual budget (licenses were later abolished as advertising revenues began to increase substantially). Advertising began in a very small way with under 1% of Doordarshan's budget coming from advertising revenues in the 1976–77 season. But the possibility of reaching a nation wide audience made television look increasingly attractive to advertisers after the introduction of the "National Programme" in 1982. In turn, Doordarshan began to shift the balance of its programming from educational and informational programs to entertainment programs. The commercialization of Doordarshan saw the development of soap operas, situation comedies, drama, musical programs, quiz shows and the like. By 1990 Doordarshan's revenues from advertising were about $300 million, accounting for about 70% of its annual expenditure.

By 1991, Doordarshan's earlier mandate to aid in the process of social and economic development had clearly been diluted. Entertainment and commercial programs had begun to take center stage in the organization's programming strategies and advertising had come to be Doordarshan's main source of funding. However, television in India was still a modest enterprise with most parts of the country getting just one channel, except for the major cities which received two channels. But 1991 saw the beginnings of international satellite broadcasting in India and the government launched a major economic liberalization program. Both these events combined to change the country's television environment dramatically.

International satellite television was introduced in India by CNN through its coverage of the Gulf War in 1991. Three months later Hong Kong based StarTV (now owned by Rupert Murdoch's News Corp.) started broadcasting five channels into India using the ASIASAT-1 satellite. By early 1992, nearly half a million Indian households were receiving StarTV telecasts. A year later the figure was close to 2 million and by the end of 1994, an estimated 12 million households (a little less than one-fourth of all television households) were receiving satellite channels. This increase in viewership was made possible by the 60,000 or so small scale cable system operators who have mushroomed across the country. These systems have redistributed the satellite channels to their customers at rates as low as $5 a month. Taking advantage of the growth of the satellite television audience, a number of Indian satellite-based television services were launched between 1991 and 1994, prominent among them Zee TV, the first Hindi satellite channel. By the end of 1994 there were 12 satellite based channels available in India, all of them using a handful of different satellites. This number was expected to double by the end of 1996, with a number of Indian programmers and international media companies like Turner Broadcasting, Time-Warner, ESPN, CANAL 5 and Pearson PLC, seriously considering the introduction of new satellite television services for India.

The proliferation of channels has put great pressure on the Indian television programming industry. Already the largest producer of motion pictures, India is poised to become a sizable producer of television programs as well. With Indian audiences clearly preferring locally produced program over foreign programs, the new television services are spending heavily on the development of indigenous programs. The number of hours of television program-
ming produced in India has increased 500% from 1991 to 1996 and is expected to grow at an ever faster rate until the year 2000.

Despite the rapid growth of television channels from 1991 to 1996, television programming continues to be dominated by the Indian film industry. Hindi films are the staple of most national channels and regional channels rely heavily on a mix of Hindi and regional language films to attract audiences. Almost all Indian films are musicals and this allows for the development of inexpensive derivative programs. One of Doordarshan’s most popular programs, Chitrahaar, is a compilation of old film songs, and all the private channels, including ZeeTV and music video channels like MTV Asia and Channel V, show some variation of Chitrahaar. A number of game shows are also based on movie themes. Other genres like soap operas, talk shows and situation comedies are also gaining in popularity, but the production of these programs has been unable to keep up with demand, hence the continuing reliance on film based programming.

International satellite programming has opened up competition in news and public affairs programming with BBC and CNN International challenging Doordarshan’s long standing monopoly. Most of the other foreign broadcasters, for example, ESPN and the Discovery Channel, are focusing on special interest programming. Only StarTV’s STAR Plus channel offers broad-based English-language entertainment programs. Most of its programs are syndicated U.S. shows, for example soap operas like The Bold and the Beautiful and Santa Barbara and talk shows like Oprah. However, STAR Plus has a very small share of the audience in India and even this is threatened by the launch of new channels.

A peculiar development in television programming in India has been the use of hybrid English-Hindi program formats, popularly called “Hinglish” formats, which offer programs in Hindi and English on the same channel and even have programs, including news shows, that use both languages within a single telecast. This takes advantage of the audience for television (especially the audience for satellite television) which is largely composed of middle-class Indians who have some knowledge of English along with Hindi, and who colloquially speak a language that is primarily Hindi intermixed with words, phrases and whole sentences in English.

Commercial competition has transformed Doordarshan as well and it is scrambling to cope with the changed competitive environment. Satellite broadcasting has threatened Doordarshan’s audiences and self-preservation has spawned a new ideology in the network which is in the process of reinventing itself, co-opting private programmers to recapture viewers and advertising rupees lost to ZeeTV and StarTV. In 1994, the government ordered Doordarshan to raise its own revenues for future expansion. This new commercial mandate has gradually begun to change Doordarshan’s perception of who are its primary constituents—from politicians to advertisers.

The government’s monopoly over television over the years has resulted in Doordarshan being tightly controlled by successive governments. In principle, Doordarshan is answerable only to Parliament. Parliament lays down the guidelines that Doordarshan is expected to adhere to in its programming and Doordarshan’s budget is debated and approved by Parliament. But the guidelines established by Parliament to ensure Doordarshan’s political neutrality are largely ignored in the face of the majority that ruling parties have held in Parliament. Doordarshan has been subject more to the will of the government than the oversight of Parliament. Successive governments and ruling political parties have used Doordarshan to further their political agendas, weakening its credibility as an neutral participant in the political process. There have been periodic attempts to reconstitute Doordarshan into a BBC-like public corporation, but governments have been reluctant to relinquish their hold on such a powerful medium.

The government drew its right to operate the country’s broadcasting services as a monopoly from the Indian Telegraph Act of 1885 which empowers the government with the exclusive right to “establish, maintain and work” wireless services. In addition, the Constitution lists broadcasting as the sole domain of Parliament, effectively shutting out the states from making any laws with regard to television. Within the ambit of these provision it was assumed that media autonomy or liberalization in any form was the prerogative of the government to grant. But the government’s monopoly was challenged in the Indian Supreme Court in 1995. The court held that the government monopoly over broadcasting was unconstitutional and while the government has the right to regulate broadcasting in the public interest, the Constitution forbids monopoly control over any medium by either individuals or the government. The court directed the government to establish an independent public authority for “controlling and regulating” the use of airwaves. The court’s decision holds out the promise of significant structural changes in Indian broadcasting and the possibility that terrestrial television may finally free itself from governmental control.

It is evident that over time the state’s control over television will continue to diminish. As its revenue structure begins to change and Doordarshan begins to respond to increasing commercial pressures, the character of its programming will begin to increasingly reflect the demands and pressures of the market place. In the meantime, caught between the government and the market, Doordarshan continues to struggle to maintain its mandate of public service programming. But the Supreme Court’s recent decision ordering the government to establish an independent broadcasting authority to regulate television in the public interest holds the promise of allowing Indian television to escape both the stifling political control of the state and the commercial pressures of the market. There are a number of other constituencies like state governments, educational institutions, non-govern-
mental organizations and social service agencies who can participate in a liberalized broadcast system. The Supreme Court has provided an opportunity to develop a broad based television system. How the country responds to this opportunity in the next few years will determine the future of broadcasting in India in the next century.

INSPECTOR MORSE
British Police Program

This lushly produced and melancholy series was made by Zenith for Central Independent Television, to critical and popular acclaim, between 1987 and 1993. In Britain, the series gained audiences of up to fifteen million, and it has been widely exported, contributing internationally to the image of an England of dreaming spires, verdant countryside and serious acting. It was also one of the first programmes on British television to be commercially sponsored, in this case by the narratively appropriate “Beamish Stout”, whose logo appeared on the later series. Originally based on detective novels by Colin Dexter featuring Chief Inspector Morse and Detective Sergeant Lewis, the series was developed to increasingly include Dexter’s characters in new scripts by, among others, Julian Mitchell, Alma Cullen, Daniel Boyle and Peter Buckman. Of the twenty-eight films broadcast, nine are based on Dexter stories, as is the “return by popular demand” Morse “special”, The Way Through the Woods, made in 1995 after the series was declared finished and transmitted in November.

Shot on film, in Oxford, the individual stories were broadcast in two-hour prime-time slots on British networked commercial television, contributing significantly to the reputation for quality garnered for independent television by series such as Brideshead Revisited (Granada) and The Jewel in the Crown. This reputation was enhanced by the increasing willingness of theatrical actors such as Janet Suzman, Sheila Gish and Sir John Gielgud to guest in the series. However, the series also staked its claim to be “quality television” through continual high cultural reference, particularly the use of literary clues, musical settings and Barrington Pheloung’s theme music. Thus, the very first Morse, The Dead of Jericho (6 January 1987) investigates the murder of a woman with whom Morse (no forename ever) has become romantically involved through their shared membership of an amateur choir. The opening titles intercut shots of Oxford colleges to a sound track of the choir singing, while Morse plays a competing baroque work loudly on his car stereo. Morse spends some large part of the film trying to convince the skeptical Lewis that “Sophocles did it” after finding that the murdered woman has a copy of Oedipus Rex at her bedside and her putative son has damaged his eyes. He is, characteristically, wrong—but right in the end.

Almost symmetrically, but with the rather more splendid setting of an Oxford ceremony for the conferring of honorary degrees testifying to the success of the series, the final film, Twilight of the Gods, not only uses a Wagnerian title but weaves the opera through the investigation of an
apparent assassination attempt on a Welsh diva. The significance of music in the series for both mise-en-scene and character—it is repeatedly shown to be Morse’s most reliable pleasure apart from good beer—can be seen at its most potent in the regular use of orchestral and choral work as the soundtrack to a very characteristic Morse shot, the narratively redundant crane or pan over Oxford college buildings. This juxtaposition, like Morse’s old and loved Jaguar, insists that although the programme may be about murder, it is murder of the highest quality. The plots, which frequently involve the very wealthy—and their lovely houses—tend to be driven by personal, rather than social factors. Morse’s Oxford is full of familial and professional jealousies and passions rather than urban deprivation, unemployment and criminal sub-cultures.

Within these relatively reliable and familiar parameters of a certain kind of Englishness—perhaps most manifest in the way in which Inspector Morse, despite skillful and repeated contemporary reference, somehow seems to be set in the past, and is therefore cognate with The Adventures of Sherlock Holmes, Agatha Christie’s Poirot and Miss Marple in a genre we might call “retro-exo” crime, rather than Between the Lines or The Bill—it is the casting of John Thaw as Morse which most significantly shapes the series. This has two main aspects apart from the continuing pleasures of Thaw’s grumpy, economical—and in contrast to some of his guest co-stars—profoundly televisial performance. Firstly, Thaw, despite a long television history, is best known in Britain as the foul-mouthed, insubordinate, unorthodox Inspector Regan of The Sweeney, a show first broadcast in the 1970s and regarded as excessively violent and particularly significant in eroding the representational divide between law enforcers and law-breakers (an erosion in which, for example, Don Siegel’s film with Clint Eastwood, Dirty Harry, was seen as particularly significant). That it should be Thaw who once again appears as “a good detective, but a bad policeman” in a series which eschews instinct and action for intuition and deduction offers a rich contrast for viewers familiar with The Sweeney. However, it is the partnership between Thaw and Kevin Whately (originally a member of the radical 7.84 theatre group, and subsequently a lead in his own right as Dr. Jack Kerruish of Peak Practice) which drives the continuity of the series and offers pleasures to viewers who may not be at ease with Morse’s high cultural world.

For if Morse, the former Oxford student and doer of crosswords, is the brilliant loner who is vulnerable to the charms of women of a certain age, it is Lewis, happily married with children, who, like Dr. Watson, does much of the leg-work and deduction, while also nurturing his brilliant chief. But it is also Lewis, a happy man, who often fails to understand the cultural references (“So do we have an address for this Sophocles?”), who, in the most literal sense, brings Morse down to earth—to popular television.

INTERACTIVE TELEVISION

Interactive television (ITV) represents the convergence of interactive technology and television which allows the exchange of information between the sender and the receiver. Potentially, it offers increased control over programming content by enabling the viewer to immediately respond to the programming—and even alter it. By offering such control, interactive television has the potential to redefine what producers of television and viewers mean by “television” and to redefine communication processes in society.

One of the first television programs to encourage audience interaction was Jack Barry’s Winky Dink and You, a children’s show broadcast from 1953 through 1957 on CBS. The interaction was created through the use of cellophane overlay that children could buy at local stores and then
attach to the television set. In the program, the cartoon character Winky Dink encountered many problems, such as being chased to the edge of a cliff by a tiger. Viewers were then asked to help Winky Dink escape from the tiger by drawing a bridge on the cellophane overlay.

Interactive television in its more modern form ostensibly began in 1964, with A&T and T's picture telephone introduced at the New York World's Fair. With this technology users could see as well as hear each other. It was not widely adopted for a number of reasons, but picture telephones were eventually found to be useful in some criminal justice settings and in business settings for video conferencing.

During the 1970s, the most publicized interactive television experiment was QUBE. QUBE was an interactive cable service offered by Warner Communications to subscribers in Columbus, Ohio. QUBE customers were given set-top decoder boxes with five buttons. Subscribers could participate in game shows, call plays in a college football game, take part in electronic town meetings, simulate a vote on the Academy Awards, participate in a newspaper survey, and more. Viewers pushed the appropriate button(s), and their choices were recorded by a computer. When the results were tallied, they were announced on-screen. Unfortunately, the QUBE system was too expensive to maintain and eventually went out of business.

In the late 1980s and 1990s, cable companies and telephone companies began a complex strategy of competition and cooperation in an effort to define the future of interactive television. AT and T and Bell Atlantic conducted interactive television services trials with groups of employees in the Chicago and Washington, D.C. areas. From these trials, AT and T and Bell Atlantic reported strong interest in educational programs for children and games where households competed against each other. In another joint venture, TCI, AT and T, and US West conducted a test of movies-on-demand in the Denver area. And, under a TCI and Viacom alliance, fiber optic lines were laid in the San Francisco Bay Area in order to link several Bay area cable systems to serve as a basis for interactive services provided by the two companies.

As of the mid-1990s only two interactive television services were in operation. Interactive Network, a service in California and Illinois, required a special terminal costing a few hundred dollars and had high monthly charges. Interaction took place not on the TV screen but on a small display attached to the terminal. Services consisted of playing along with TV game shows and trying to anticipate the next play sporting events, but provided no original content. Videoway, a service in Montreal installed at about the same time, developed a large subscriber base with its service that required no hardware costs, a low monthly fee and enabled interaction directly on the TV screen. Videoway's service differed from Interactive Network in that it provided original content, including daily interactive news programming, games and original programming for children.

Interactive television has been conceived in several different forms and configurations. At a most basic level, it is a system that connects the viewer with the broadcaster. The home shopping channels, for example, provide a simple form of interaction by asking viewers to call in and order merchandise and occasionally putting callers on the air. Similar techniques are used in opinion polls in which viewers call one telephone number to register a favorable vote and another to register an unfavorable one.

In a more complex form, ITV is a system that broadcasts an audio/video signal to and from a certain point. The most common form of this is the live news broadcast from the location of an event. Because of the satellite connection, the reporter and news anchor are able to see and hear each other and converse. President Bill Clinton often made use of this technology to hold "town meetings" across the country and to appear at conventions he could not attend personally.

Satellite transmission of two signals is also used in educational settings, particularly in distance learning situations. By broadcasting a signal from one classroom where the instructor is teaching to another remote classroom with more students and in turn, broadcasting the signal from the remote classroom, a "true" class can be held which includes questions and answers from the remote classroom.

The more recent configurations of interactive television integrates computers, television and in some cases cable lines or fiber optic telephone lines. As technology advances, computer power, data compression and decompression, and the systems needed to carry ITV have advanced to the point where video and audio signals can be digitized, sent over high-speed networks to home personal computers or TV set-top conversion boxes enabling viewers to send responses back to the point of origin. Available services using this configuration include video-on-demand (movies available 24 hours a day with full rewind and fast forward capabilities), near video-on-demand (movies available at 15-20 minute intervals with no rewind or fast forward capabilities), shopping services, video games (some that allow competition with other ITV subscribers), limited interactive news programming, and educational programming. Experts predict that entertainment and education applications have the greatest potential for growth.

One final developing technology sure to have an impact on interactive television is on-line computer services such as the Internet. These services allow interaction with individuals and large groups of users and are rapidly moving toward more video and audio based transmissions.

The future of interactive television is unclear. No one is sure how ITV will be delivered to homes or even what ITV will look like. What is certain is that when it does arrive, ITV will change the medium of television in ways that audiences and producers have not yet begun to imagine.

INTERNATIONAL TELECOMMUNICATIONS UNION

The instantaneous transmission of news and information across the globe was made possible in the 1830s by the invention of the telegraph, the invention that gave rise to the word "telecommunications." The electric telegraph machine was created through the efforts of Morse, Wheatstone and Cooke, and telegraphy began in England in 1837.

In the early days of cross-national communication, messages were encoded on a telegraph machine and sent to the bordering country for transcription, usually by a national post office, and then sent to their destination. Messages could not be sent directly from a source in one country to a receiver in another country because a common code was not used.

The need for technical standardization was recognized by Prussia and Austria and in October 1849, these two countries made the first attempt to link telegraph systems with a common code. One year later, an agreement between these two countries, Bavaria and Saxony created the Austro-German Telegraph and Union. The success of this first union gave rise to additional unions such as the International Telegraph Union, then later to the International Radio Conferences, and finally, in 1865, to the International Telecommunications Union (ITU). Today, the ITU is the sole regulating institution with power to regulate the transfer of data throughout the world.

In 1947 the ITU became an agency in the United Nations. According to a 1982 ITU convention report the purposes of the ITU are as follows: (1) to maintain and foster rational use of telecommunications and to offer technical assistance; (2) to promote and improve efficient use of technical equipment and operations; and (3) to coordinate and promote a positive world environment for the achievement of the above goals.

As the speed of telecommunications inventions increases, so does the importance of the ITU. The evolution of telecommunications technology during the twentieth century is so great that telecommunications affects almost every aspect of life and the role of the ITU continues to extend into new areas of concern. The three major areas of jurisdiction for the ITU are:

1. distribution of radio and satellite services and assignments;
2. establishment of international telecommunications standards; and
3. regulation of international information exchange such as telephony, telegraphy, and computer data. The ITU also plays a vital role in telecommunications assistance for developing countries.

One hundred and sixty countries within the United Nations (UN) have representatives in the ITU. Each of these countries gets one vote on ITU decisions. The general meeting of the ITU is held once every few years and is called the Plenipotentiary Conference. The chief objective of this conference is to review and revise the ITU Convention, which is the governing document of the union. The one-country, one-vote format often leads to voting blocks based on country alliances, and creates the political nature of the ITU.

The voting blocks and the tenets of the New World Information Order threaten the existence of the ITU. Many
developing countries in the UN want to break the dominant flow of information from northern industrialized countries to southern developing countries. The northern industrialized countries want to continue the “free flow” of information while the developing countries in the south want a balanced flow to ensure control of socio-cultural development.

A second aspect that threatens the existence of the ITU is the fact that the speed at which technological changes occur is greater than the ITU’s international standards process can accommodate. Thus, several other standards organizations have developed such as the T1 Committee of the Exchange Carriers Standards Association in the United States, the Telecommunications Technology Committee (TTC) in Japan, and the European Telecommunications Standards Institute (ETSI). These regional standards organizations (RSOs) offer a more homogeneous membership than the ITU which makes the standardization process quicker.

In response to the RSOs, the ITU has streamlined its standards process and restructured its voting rules so that decisions can be made by ballot between Plenipotentiary Conferences. It remains to be seen whether the ITU will maintain its status as the world’s telecommunications regulatory body.

INTERNATIONAL TELEVISION PROGRAM MARKETS

MIDEM/MIPCOM/MIP-TV/MIP-ASIA

Television has always been traded, exchanged, bought and sold. It would be fair to say, however, that for a good part of the history of this medium commerce in television travelled along what Nordenstam and Varis called, in 1974, “a one-way street”—from the United States and to a lesser extent Great Britain, to the rest of the world. Now, however, this situation is changing. The pressures of globalisation, the spread of postfordist models of production, and the emerging dynamism of many alternative centres of production make the idea of “world television” less fanciful. A more appropriate metaphor for depicting international television might now be Michael Tracey’s (1988) notion of a “patchwork quilt”. This image implies interconnectedness in a world system. One cause for this newer pattern of world television is the very practical need for co-financing arrangements caused by the impossibility of funding high-end product domestically. A second factor in the newer arrangements is the continuing dependency of most programming services on some degree of imported television.

Today, then, there is a world market for television. The main players in this market are producers, distributors and broadcasters. The subsidiary players are government agencies, financiers, packagers and sales agents. The stages on which the players appear are the markets held several times a year in the United States, Europe and more recently in Asia. The most important of these markets are MIP-TV (held in April in Cannes), MIPCOM (held in October in Cannes), the American Film Market, or AFM (held in Los Angeles in January), the Monte Carlo market, and the National Association of Television Programming Executives, NATPE (held in the United States in March). Another major site affecting television trade is the annual unveiling of the new programs from the major U.S. suppliers, usually in the month prior to the start of the fall U.S. television season. Here eager broadcasters from the importing countries anxiously view Hollywood’s wares to try to guess what will play with their domestic audiences.

Some of these sales conventions are well established. The MIDEM organisation, which runs the MIP events, started in the 1950s and is now owned by Reed International, the publishing company. Others are just beginning; MIP Asia began in December 1994 in Hong Kong. MIP-
TV, the longest running of the markets, attracted 400 exhibitors and 9500 participants from 99 countries in 1994. MIPCOM (International Market for Television, Video, Cable and Satellite Films and Programs) which began life in the early 1980s as an “obscure sibling” to the long running MIP-TV in spring, is held in the northern fall, also in Cannes. It grew fast to become, by the late 1980s, the second biggest event after MIP-TV, and now is a huge meeting of the world’s television buyers and sellers, with the established players dominant. The October 1993 MIPCOM attracted 1705 participating companies and over 8000 individual participants representing 36 countries. Xavier Roy, chief executive of the Midem organisation believes the event can accommodate expansion to 12-15,000 participants.

In these big markets, programming is often bought or rejected sight-unseen, in job lots, based on company reputation or distributor clout. Very broad, rough and ready, genre expectations are in play. Decisions to purchase programs not central to the schedule are frequently made on such grounds, even though they seem arbitrary. Conversely, there is a tradition amongst some European public broadcasters of scrutinising possible foreign acquisitions extremely closely. In this atmosphere it is difficult for the new company, the offbeat product or the unusual concept to be discovered. (For its first foray as a seller into MIPCOM in 1993, the U.S. documentary cable channel Discovery tamed up their profile by dressing their stall as a movie set. Actors were employed to create live action scenarios around a World War II theme to coincide with Discovery’s use of Normandy landing documentaries as their flagship programs.)

These markets are the places where buyers can view the programs on sale from various producers, distributors and sales agents. But just as crucially it is the place where the players can circle each other at screenings and parties in the attempt to set up or consolidate partnerships which can help to finance the next project. If there is one thing true about “world” television it is that it works on a basis of personal contact. Experienced distributor Bruce Gordon, Head of Paramount International, has described the international television market as a club. And not all players in this club are equal. The most powerful are the U.S. networks, the representatives or the Hollywood studios, the major broadcasters, both commercial and public service, from the richest regions—Japan and Europe, the emerging new pay services like Star TV and Canal Plus and perhaps some of the biggest television distributors, eg., Germany’s Kirch Group, whose large holdings of library material give them considerable economic clout. Given the multiplication of television distribution channels throughout the world, it is likely that the international markets will continue to grow in importance. New participants will need to find ways to place themselves within the structures of power and exchange already controlled by these more established institutions and individuals.

IRELAND

The country Ireland is constituted by two nation-states. Northern Ireland consists of six counties of the province of Ulster and is part of the United Kingdom. The television service provided in its broadcast area is that of the BBC, Channel 4 and ITV. The local member of the ITV network is Ulster Television, which both acts as a broadcaster of the ITV service and produces programs for inclusion in the local transmission of the service. Ireland, sometimes known as Eire, is an independent republic and consists of the remaining 26 counties of the country. Irish television is here considered as that television service that obtains in the republic, although, as will become clear, the British service has a strong determining role on the Irish service.

Through the nineteenth and twentieth century, the Irish state—whether operating from London or Dublin—has been characterised by a high degree of authoritarian control, both coercive and ideological. The Irish Free-State, founded in 1922, resumed control of all broadcasting in the 26 counties to head off a possible attempt by British Marconi to establish itself in the country, but also to help in the ideological task of establishing a nationalistic identity. Until 1960, the state, through an agency of the Department of Posts and Telegraph—Radio Eireann—provided a broadcast service through a single radio network. The service was financed through a combination of licence fee and advertising. The service was extremely conservative in its programming and was only tolerated by most of its listeners. In fact, Radio Eireann did not have an audience monopoly. Households on the east coast and near the Northern Ireland border could also receive the BBC and Radio Luxembourg.
It was this proximity to British television broadcasting in the late 1950s that partly forced the Irish government's hand so far as the inauguration of an Irish television service was concerned. The 1960 Broadcasting Act legislated the establishment of a television service which began in 1962. Like the radio service, Irish television was to be financed through a combination of licence fees and advertising revenue. The service, consisting of a single national channel, was put under the control of Radio Telefís Éireann (RTE). The latter was a revamped version of the radio provider, now becoming an independent public authority. This was a significant move of liberalisation, in line with the government's own moves to "modernise" Ireland to make it attractive to transnational capital investment. And indeed television has acted as a Trojan Horse so far as the liberalisation of social and cultural values in Ireland is concerned. However, this has not lessened attempts by the state to keep a tight control on the forms of political debate on Irish television. In general this has lead to poor relations between RTE and most Irish politicians. Thus, for example, in 1969, following political unrest in Northern Ireland, the government imposed direct censorship over RTE news and current affairs. When in 1972, RTE interviewed a spokesperson for the Provisional Irish Republican Army (IRA), a paramilitary group defending Catholics in Northern Island, the Irish government dismissed the RTE board and appointed its own members. In 1978 the government favourably considered allowing the BBC to be relayed to those parts of the country not already picking up its signal. Instead, it had to bow to public opinion by allowing RTE to begin a second television network. The broadcaster, however, was not allowed to increase licence fees or its advertising rate so that its financial position, and therefore its capacity to produce local programs, was significantly weakened.

Technological and ideological pressures also were at work that would erode RTE's monopoly in Irish television. Since 1970, the authority had operated its own cable network. RTE Relay, renamed Cabellink in 1988. Cabellink is the largest cable operator in Europe and provides about two-thirds of television households in the Irish Republic with the British broadcast television service, later complemented by the European services Superchannel and Sky. By the early 1990s, Cabellink was beginning to carry advertising, thereby diminishing RTE's potential revenue. In addition there was also the possibility that Cabellink might be sold to a private operator, thereby providing direct competition to RTE's broadcast service. However, the government was also interested in weakening RTE's position and saw a further opportunity to do so with moves throughout Europe to open up broadcast television to private, commercial interests. The 1988 Broadcast and Wireless Telegraphy Act formally broke the television broadcast monopoly of RTE. A new broadcast body, the Independent Radio and Television Commission, was established to oversee the introduction of privately owned radio and television stations in Ireland. Several commercial radio stations have since gone on the air. A private commercial television station, TV3, was announced in 1990 but never began broadcasting. Nevertheless the threat of commercial competition remains. Most worrying from the point of view of an Irish television service was the fact that the government was prepared to allow a private television station to collect more advertising revenue than RTE while having no specific obligations so far as local content was concerned.

The increased commercial competition as well as the low revenue generated through the licence fee has affected RTE's capacity to produce local content. In 1965, Irish programs constituted some 60% of material transmitted. This figure has fallen to around 36% by 1990. In a schedule dominated by imported programs, RTE's own programs—particularly those with mass appeal—are especially important as "flagship" programs in the schedule. These include Gay Byrne's The Late Show (Friday night), Glenroe (Sunday) and Fair City (Tuesday and Thursday). The latter two are popular soap operas in a "public-service" tradition while the former is a talk show with a strong sense of community which is not afraid to discuss social issues. RTE exists in a commercial television environment where it is no match for its principal rival, ITV. To attempt to maintain its general ratings both for its imported programs and its local programs, RTE is forced to engage in a scheduling strategy of parallel programming with British television, especially ITV. It buys some of the latter's most popular programs, such as Coronation Street, which it then programs against the same program on ITV.

Like many other public broadcasters in Europe, RTE finds itself in an increasingly grim situation. The Irish State has charged RTE with the task of fostering an Irish cultural identity yet has, over the past 25 years, increasingly withheld the resources that would enable to do so more effectively. Cross-natural transmission has always posed a fundamental threat to the service and recent developments in technology, ideology and financial arrangements have made that task even more difficult.

ISRAEL

Television was late in coming to Israel. By introducing television only in 1968, the nation lagged long behind most Western countries and even the neighboring Arab countries. Establishment opposition to television during the two preceding decades (since the founding of the state) was strong enough to prevent earlier initiatives and suspicion of television was manifold. There was the fear that book reading would decline; that newly developed Israeli culture and language, still in need of nurturing, would be swamped by imported, mostly U.S. junk; that national integration would be weakened by entertainment; and that politics would become less ideological, that is, less oriented to issues, more to charismatic personalities (Katz, 1971). All these considerations were overcome when, following the Six Day War, Israel found itself in charge of two million Palestinians in Gaza and the West Bank. The establishment of television was originally conceived by the government as a bridge to the Arab population in the occupied territories, which therefore had been exposed only to broadcasts from the Arab countries. That this was indeed the overriding reason may be shown in the (unrealistic and un-realizable) decision whereby nascent Israel television was supposed to broadcast more hours in Arabic than in Hebrew.

Until the introduction of television, radio was the central medium of national integration, serving as a Hebrew teacher to the masses of new immigrants, providing a focus for the development of a shared Israeli culture, and for the celebration of holidays. Radio also played a crucial role in the surveillance of the Arab-Israeli conflict.

The history of Israeli broadcasting began underground. Kol Yisrael (Voice of Israel), the Hebrew Radio, started transmitting illegally during the last years of British Mandatory Rule, as a means for mobilizing for the national struggle. With the founding of the state, radio was installed in the prime minister's office, to act in the service of government information. The listening public was spoon-fed, as the new state was considered still vulnerable, still fighting for the full realization of Zionism, and the political establishment was used to secrecy from its pre-state struggle of fighting with the British.

In 1965, however, Israel Radio became a public authority, modeled on the BBC, administered by a largely independent board, and financed by a user's license fee. According to the new rules, it gained a much more independent status, but it remained, nevertheless, under constant pressure to "behave." Its directors preserved the notion of responsibility toward the public, focusing mainly on information and enrichment, not on entertainment.

In addition to its national networks, Israel Radio broadcast to two kinds of communities outside Israel. A channel of news programs and commentary in Arabic—prepared in Egyptian, Syrian, and Iraqi dialects—was directed to the neighboring countries, engaging in propaganda wars with the Arab counterparts. The Voice of Zion to the Diaspora (which started in Hebrew, English and Arabic, expanding to many other languages) addressed the Jewish public abroad.

In the early 1970s, the placid monopolism of Israel Radio was shaken. Unexpected competition took the form of a pirate radio station—"the Voice of Peace"—which adopted a light informal style, very different from the buttoned-up British tradition of Public Radio. The Israel Army Radio—a channel in which professionals and young soldiers cooperate during their army-service in producing spirited and inventive programs—had expanded during this period, starting its own news and current events department. Above all television was going to steal radio's centrality in the society. In response, Israel Radio branched out into a number of channels, adding a light channel for young listeners, a classical music channel (in FM), and keeping its main channel, for news and current events, always open to live reporting. While radio remained the focus of society in times of crisis, it had to hand over centre-space to television.

The first television in Israel was educational, founded in 1966, with programs for schools only. This project had no problem winning government approval because making use of the medium for an instrumental function was ideologically acceptable. Television for the general public (as mentioned above) was sneaked in only following the Six Day War, when it could be justified as a means to fill the indisputable role of telling the Israeli version of the Arab-Israel conflict to the Palestinians under occupation. Not quite in line with this definition, its opening assignment was the broadcasting of the military parade on Independence Day.

A decision to incorporate television into the existing authority for Public Broadcasting carried severe consequences for its development. Because staff was recruited from the radio, professionals earned the same low wages, and moved into television with their already tenured positions. This caused a lack of mobility, and made it almost impossible to recruit new talent. Moreover, cultural conflicts added to these industrial problems. Israel Television's first challenge in this arena, brought by the National Religious Party over the violations of the Sabbath, was in the very fact of broadcasting on Friday nights. The controversy was overcome in a citizen's appeal (for relief) to the Supreme Court.

For the next 25 years Israel had only one television channel, which divided its time between daytime Educational Television and Public Broadcasting, which started transmissions in the late afternoon (children's and Arabic programs), ending with the national anthem at 12:00.

Publicly owned and managed, and financed by the license fee, the new television was modeled on the BBC. A number of significant deviations, however, make it more politicized, and more dependent on Parliamentary control than its British model. In Britain, the queen, on the advice of the government, appoints the Board of Governors, who appoint the director general. In Israel, the government itself
appoints the director general, on the recommendation of the Board of Governors. Moreover, the Board of Governors in Israel consists of representatives of the various parties, and does not follow the British precedent according to which its members should represent "the great and the good". In Israel, the Ministry of Finance retains indirect control of the license fee (as it is in charge of approving the annual budget), decides on the amount of license-fee increase to keep up with inflation, and finances the budgetary deficits.

Television's income suffers from the fact that 20% of Israelis escape paying the license fee. External financing from "public service advertisements" and corporate "sponsorship" slowly crept into the system, eventually amounting to 50% of the revenues. But these corporate-based revenues shrank to almost nothing with the establishment of a second commercial channel.

The second television channel started its official existence only in 1991 (although unofficially it went on air in 1986, with the excuse of "occupying" a wavelength). Again, following the British example, it was also public, but financed by advertising rather than by license fee. Broadcasting on the second channel is divided among three companies, each of which broadcasts two days a week in rotation, and a news company, financed by the three.

The monopoly of Public Broadcasting was undermined also by the various technological changes, offering easy alternatives to national television for segmented audiences. Video cassette recorders sold rapidly (2/3 of the population by 1996), giving rise to ubiquitous video rental libraries. Satellite broadcasts from Europe and the United States are received by roof "dishes," and pirate cable channels speeded the legislation of cable television.

By 1995, the penetration of cable reached 60% of Israeli households, with about 30% share of viewing (Nossek and Adoni, 1996). Cable television offers 40 channels, six of which—children, family, sports, films, science, and shopping—are assembled by the cable companies, who also provide Hebrew subtitles, announcements, promos, and a small number of originally-produced programs. Local production consist of sports and children's programs, and time is allocated for public access programs.

The second channel, originally defined as public, has brushed aside this definition and behaves like a commercial channel in every way. Aiming for the lowest common denominator, in order to increase advertising profits, it has started a ratings war with the first channel, in which the latter, restricted by its adherence to its aims as public service as well as by inferior financing is bound to be the loser.

A major consequence of the multiplication of channels is the marginalization of television news. Until the establishment of the second channel an evening news program was broadcast at 9:00 P.M., serving as the sole focus for prime time viewing, and providing a common agenda for public debate. Over 60% of Israelis watch regularly, and, in consequence, the medium of television was regarded as supplying more information than entertainment (Katz and Gurevitch, 1976). Indeed, one side effect of the focus on news production was that locally produced entertainment shows remained poor, and local drama was virtually non-existent. This made the news even more central, the best drama in town.

During the first twenty-five years of Israel Television, actual drama series consisted mainly of American, but also British, imports. Usually, only one such series was aired on prime time. Kojak, Starsky and Hutch, Dallas, and Dynasty, and the British dramatic serial Upstairs, Downstairs, may be listed among the "best-sellers." The attraction of Dallas—which exceeded all others in popularity (Liebes and Katz, 1993)—may be understood in terms of its concerns with family relations and primordial themes. British comedies (Yes, Minister, Are You Being Served?) and detective series (Inspector Morse) were popular, but imports of more highbrow series were stopped, following the major failure of the prestigious Brideshead Revisited, based on the Evelyn Waugh novel. More recently, programs such as Hill Street Blues, The Cosby Show, and Northern Exposure, representing a plurality of American TV genres, were successfully shown. Cheers is the only program in the Public Channel's history which was rejected by the Israeli audience and taken off the screen.

In recent years American programs have gained more popularity than their British counterparts, as the abundance of American shows have increasingly socialized viewers to American conventions and styles of production. Unlike most European countries, which use dubbing for the translation of imported programs, Israel Television continues to use Hebrew subtitles. In defence of subtitles, television's policy makers argue that a considerable number of Israelis understand foreign languages, that there is virtually no illiteracy in Israel, and that dubbing "looks bad." The harsh competition imposed on the public channel limited its capacity to buy new series (and new films), and these are now shown on the second channel and on cable.

Israel Television did produce high quality current-affairs programs (Mahat Sheni) often based on investigative reporting, and made various attempts at producing Israeli sitcoms (such as Krovim krovim), which were not very successful but nevertheless popular. Highlights in the history of Israel Television include the documentary series on the history of Zionist settlement in Israel (Amud Haeish) modeled on the British The World at War; an inventive series of political satire (Nikuy Rosh), which drew heavy attack from the political establishment, and gave rise to a number of Israeli comedy stars; and one-time television films, which touched on central controversies in Israeli society, notably by prize-winning television director Ram Levi (whose film Hirbat Hiza, showing Israeli soldiers evacuating an Arab village during the 1948 war, was broadcast only years after its production).

Beyond creating an integrative focus for the society in daily life, Israel Television also took an active part in the formation of holidays—creating secular alternatives to traditional rituals (for example, by showing a classical movie);
complementing the traditional content (dramatizing the Passover Seder); taking the viewers to the event (the public reading of the book of Esther, on Purim, or the holocaust observance ceremony); or by creating the event itself (such as the annual Bible Quiz, invented for the Day of Independence) (Katz, 1988).

In times of crisis broadcasting takes over the function of surveillance and social integration. As the more accessible of the two media, radio is still being listened to in public buses—in total silence at moments of crisis; it is used by the Army for fast mobilization of its reserve forces, and stands in for the outdated alarm system on the rooftops when it is time to go to the air-shelters (the "sealed rooms" of the Gulf War). While television took over as the ceremonial medium of integration, radio adapted itself by switching to open-ended programming, always interruptable by the latest news of any conflict, relaying reports from solders away from home to their families, instructing the people in Northern Kiriath Shmona to spend the night in shelters, summoning soldiers to their reserve units by reading out the appropriate slogans for rehearsing an emergency mobilization, or for enacting a real one.

In critical moments, however, television also becomes the focus for sharing the national trauma, and for reflecting on its meaning. This may be best illustrated by the role it played during the week following the assassination of Prime Minister Yitzhak Rabin, in November 1995. Similar to Americans in the wake of the Kennedy assassination, Israelis could not disconnect themselves from the television set. Television acted as a locus for sharing the grief; pointed out the various "sacred" arenas for people who wanted to go out and mourn in public, and provided a forum for debating the ideological rift in which the assassination was rooted.

Television has also been a central factor in historic events which became landmarks in the collective memory of Israelis. The live broadcasting of Egyptian President Sadat’s visit to Jerusalem in 1977 is the best example for illustrating the crucial part played by television in influencing public opinion (Liebes-Plesner, 1984; Dayan and Katz, 1993). Israelis fell in love with Sadat, thus making peace (and the sacrifice of territories and strategic distance) possible. The various stages towards peace with Jordan and the Palestinians, in 1993–95, were celebrated by media events, which endowed them with (various degrees of) public legitimacy, reuniting the by-now segmented audiences from a multiplicity of channels to sharing one vision and reinstating themselves as members of one society (Liebes and Katz, 1995).

ITALY

In the bars of the 1950s, Italian television became popular when crowds of Italians, women as well as men, left their homes to meet after supper and look at the first huge success of Italian public television. The attraction was Lascia o raddoppia (Double Your Money), a quiz show imported from the United States by a young showman, Mike Bongiorno (who continued to host shows through the 1990s). The crowds watched television and discussed the contest, fiercely favouring or opposing this or that game player.

In August 1996, the board of administrations of RAI, the public radio and television company, made decisions concerning the directors and vice directors of all the news and programs departments in RAI—the third such change of executives in four years. For three days, all Italian newspapers dedicated the lead article to the subject, and continued with two or three inside pages filled with comments, backgrounds, and feature stories. As on previous occasions, the nominations of RAI department directors have been an important conversation topic. This level of attention in the press, and the concern about public opinion by RAI would be seen as quite unusual in most other countries; even in Italy, there is no similar interest with regard to other kinds of companies. Television is not only a conversation topic in terms of the content and programs it presents to audiences, but for itself.

Beginnings and Developments
The official history of Italian television began on 3 January 1954. RAI was the only television network transmitting news and prime time programs.
A state-owned entity was created in 1924 as a radio company, URI, and was heavily controlled by the national government, at that point a fascist regime. For years, and despite transformations in government, the same company (which simply changed its name—in 1924 URI, in 1927 EIAR, in 1944 RAI), remained a monopoly. RAI was the only producer of radio news and programs, the only broadcaster through different channels, and the only owner of technical installations and repeaters. From 1954 to 1976, the history of Italian television is the history of RAI, for the monopoly was extended to television, with the same concentration established during the radio era.

In 1954, the reconstruction period ended and a new phase of industrialization began, with huge transformation of the country. Until the end of the 1960s millions of Italians relocated inside the country, from south to north, from small villages to large cities, from agriculture to industry. This was a period of great transformation. Television, contrary to the expectations of intellectuals and politicians, was an immediate success. At first, for most people, television viewing was public viewing: in the bars, the cinemas, the houses of the richest families. In the 1960s, when a second channel began programming (4 November 1961), television reached a nationwide audience and family viewing began. In a country still characterised by a high level of illiteracy, television became the most widespread media, in contrast to the traditional low circulation of the daily press (among the lowest in the world) and the irregularity of school attendance (especially in the south). Radio and cinema had benefited during the 1940s and 1950s from high audience rates, but television overcame them in a few years.

The unexpected success of television, coincident with the unexpected great transformation of the country and the rapid growth of national income, explains why the medium became an important political issue. While private entrepreneurial groups tried to create alternatives to the state monopoly of radio and television, the Corte Costituzionale (a high court which oversees the Constitution), ruled on 13 July 1960 that the television monopoly was legal. Just a few years after the beginning of regular programming, then, "television" and RAI (as the only broadcaster and producer), became the makers of two different kinds of histories. One was the history of a new medium, which concerned technological evolution, the quantity and quality of programs produced and broadcast, and the audience reactions. The other was the history of the power struggles between political parties, and businesses of various kinds. The struggles were for the control both of legislation and the resources related to RAI—from the control of news and electoral campaigns, to the control of advertising, to the production of fiction, variety shows, and other forms of popular culture.

The Struggles for Television Power
In post-war Italy, after the end of fascism and World War II in 1945, the form of the state changed from monarchy to a republic, established by a referendum in 1946. The parliament, made up of two chambers with slight differences, was now elected by the people, including for the first time the vote of women. Governments are formed as expressions of the majority of parliament. With the exception of the first five years of the republic (1948-1953) during which the Catholic party, the Christian Democrats (DC), received an absolute majority, all governments have been coalitions of political parties with the DC having a relative majority. The governing coalitions are opposed on the left by a very strong Communist party (PCI) and on the right by a small neo-fascist party (MSI). The Communist party is the strongest among western countries. It is very influential among trade unions and intellectuals and receives the absolute majority of votes in the central regions of Italy: Emilia-Romagna, Toscana, and Umbria. This kind of political geography lasted, with minor changes, until the collapse of the Soviet Union and the Communist regimes of Eastern Europe (1990). During this period the coalition governments of Italy were usually constructed from a conflictual alliance between the Christian Democrats and the Socialist party (PSI). In the years immediately following World War II, the Socialist party had been allied with the Communist party, but from the 1960s it was autonomous, and attempted, unsuccessfully, to compete for the vote of the working class. With the success of television viewing, RAI, as a state monopoly under the control of the government, became the main and the most visible stake in the Italian spoils system.

Television became important as a matter of public debate and political struggle on the Italian scene. All political parties have been united by the idea of maintaining RAI as a state monopoly, because every one hoped to win a share of television power by getting more votes in the elections. Indeed, this happened when the Socialist party entered into the governing coalition during the 1960s, and when the Communist party became more influential during the second half of the 1970s.

Italian television has not only been a public service institution, in the European tradition. It is also—mainly—a central means of power controlled by the Christian democrats, the Catholic culture and the Roman Church. It does not work as a self-supporting industry. Rather, it receives financial resources from both advertising and from fees paid by subscribers. Advertising is sold to firms at low prices and in a very discriminating way, depending on the political power of the organizations and institutions involved. Automobile advertising, for example, was forbidden because FIAT, the Italian automobile company, did not want other cars to be seen on the screen.

During the 1970s these situations began to change. On 14 April 1975, a new reform law gave RAI a new regulatory structure. The main powers—nomination of the board of administration, and control over policies—were transferred from the government to parliament. Even more significantly, a year later, on 28 July 1976, the Corte Costituzionale issued a new ruling which allowing the transmission of radio and television programs at local level.
With that decision the era of competition had begun and the media system entered a period of change which continued through the 1990s.

In 1977 colour television was finally allowed by government decisions. And, at the end of 1979, RAI began a third channel, partly devoted to regional news programs. Hundreds of local radio and television stations mushroomed throughout the country, but no cable television could be created because of legal restrictions.

Still, the television scene is changing rapidly. RAI no longer holds monopolies for radio or television: half of its radio audience has gone. Even within the company, RAI is no longer monolithic. Radio and television channels have their own news departments, budgets, and political and cultural outlook. They compete among themselves and with private broadcasters for audience. Influence, power, resources, and audiences are broadly divided across three segments: the major portion goes to the Catholic sector, the second to the Socialists, the third part to the Communists. Meanwhile, in the private sector the greatest competition has come from the media empire created by Silvio Berlusconi.

Under the new legal structure permitting local broadcasting, Berlusconi was able to build a network made by three channels: Canale 5, Italia 1, and Rete 4. These local and regional broadcasting systems were unified by a common management and strategy within Fininvest, the company created to oversee the media operations. They were financially supported by Pubitalia, a firm specialising in the collection of advertising revenues. The extraordinary and very rapid success of private television in Italy was due mainly to one factor: a large number of new companies which had flourished in the roaring 1960s and 1970s had no way to reach Italian markets with their advertising. Yet after years of hard work, of social and political unrest, consumers were ready to accept new styles of living and to enter the era of mass consumption. Berlusconi and his management understood this need and provided an answer—a private television system which for the first time in the European scene offered a scheduling and programming policy oriented by marketing philosophy.

The three channels were shaped to be strong competitors with the public channels. They began to gain audience in all time periods where the RAI offerings were weak: afternoon television for children, late afternoon television for women, evening television for youngsters, late evening television for intellectuals, and so on. Canale 5 was shaped as a general channel for mass audience, while Italia 1 was shaped for an audience of youngsters, and Rete 4 for women. At the beginning, private television was especially successful among northern-Italian and large-city audiences, where there was a higher level of income and consequently a more widespread acceptance of consumption. Successful programs included American films and American series and serials (such as Dallas and Dynasty), game shows, Latin American telenovelas, new formats of Italian variety shows, and Japanese cartoons for children. By the end of the 1980s, the competition between the private and public networks was at its height and the audience more or less divided in two equal parts. The financial resources coming from advertising grew seven times in about twelve years, and, although the greatest part went to the private network, the overall media system, RAI and daily press included, increased their revenues as well. While at the end of the 1970s the percentage of advertising expenditure on the gross national product was the lowest among industrial countries, at the end of 1980s it reached 6%.

On 6 August 1990, after years of discussion and struggle among the main political parties, a new law was passed by parliament which recognised that a new television system had emerged from the rough competition between RAI and Fininvest. With the new law, private television systems, at both national and local levels, are obliged to transmit a news program in order to maintain their license. In the 1990s, then, competition began in the news arena. Twelve national channels were recognised by the 1990 law. But the six channels owned by the two main networks, RAI and Fininvest, shared 90% of the audience.

In a way what happened in the second half of the 1980s could be read as a form of Americanisation of Italian television. The media system, previously more directly oriented toward matters of state and politics as was common among European systems, suddenly became more open to market orientations. This shift could be explained by the huge expansion of the Italian economy, led by a large number of small and medium size firms located in the eastern part of Italy, specially in the north and centre regions. The Socialist party (PSI) whose leader Bettino Craxi had long been a successful premier, tried hard to be the leading party of the so-called new Italy that developed from the great transformation of the 1960s and 1970s. For this reason, Craxi and the Socialist party strongly supported Berlusconi and his television strategy, expressing favour for pluralism, a market economy, and consumption, trying to make Italian society similar to American society.

Television as a New Enemy

In the 1990s television became, more than ever before, if possible, the centre of the Italian scene. Silvio Berlusconi, the owner of Fininvest, made the decision to enter into the political arena, creating a new political movement called Forward Italy. “Forza Italia” is the slogan that supporters of the national teams in all sports scream during international games. Forza Italia was rapidly organized with the help of volunteers—and mainly with the very efficient staff of Fininvest and Pubitalia. The Italian flag was taken as symbol of the movement; a hymn was created; blue, the national colour for sport teams in international competitions, was adopted as the official colour; a coalition with other parties was set up in a few weeks and a nationwide electoral campaign was organised, using marketing techniques, polls, and television spots. The left coalition, led by the PDS, was furious. The two television networks were heavily engaged in the campaign: RAI on the side of the left coalition and
Fininvest on the side of right coalition. To the surprise of most observers, the right coalition of Silvio Berlusconi won the elections of 27 March 1994 and Berlusconi became the head of the national government.

But from the day of the Berlusconi victory a terrible war began. It was not only a war against Berlusconi but against television itself—the new enemy. Politicians, intellectuals, teachers, newspapers, began to organise public meetings and conventions against television. Italians were called to a national referendum against private television. Berlusconi became, for half of the country, evil itself and was unable to resist the attacks—he decided to resign after only seven months. A new government passed a law, which was not approved by parliament, dictating severe restrictions on the use of television in electoral campaigns (practically forbidding the use of television as a propaganda device). In the meantime, advertising revenues decreased rapidly and the entire media system entered a period of recession. Both RAI and Fininvest faced large debts and drastically reduced their investments in fiction production, the most expensive segment of the television industry. The general atmosphere of the country shifted towards pessimism: fear for the future, a strong reduction of private consumption, demands for the restriction of goods and services were all indicators of the national mood, the opposite of the 1980s.

In spite of these views, a June 1995 national referendum against television—mainly against advertising, American series, soap operas, and telenovelas, and targeting private television—demonstrated that Italians accept and like private television. The campaign against television continued but began to resemble campaigns of the same kind occurring in other countries. The themes focused on the amount of violence and sex in programming, or on ways of protecting children from television.

**Scheduling: Programs and Audiences**

The long-lasting success of television in Italy can be explained by the fact that networks and channels were able to meet the demands of Italian people, in different periods of time and circumstances. In spite of restrictive rules and the heavy influence of political parties and leaders, men and women who were in charge of television, at different times and in both private and public television, were able to play a relatively autonomous role and to make television work quite well on a daily basis.

Italian television is created from an original and changing mixture of five different kinds of content: American fiction, Italian fiction, Italian soccer and other sports, Italian songs and shows, Italian news and politics. Each one is bound to strong patterns of Italian culture.

The style of presentation has two main approaches. One is melodramatic, in the 19th century tradition of melodrama and opera. The other is light and ironic, in the tradition of the commedia dell’arte (the comedy of art) and of the avampettacolo, a form of popular theater variety show featuring comedians and girls.

In all these forms, Italy is the main subject of Italian television: Italian places and faces, Italian stories, Italian products, Italian sportsmen and women, and teams to be proud of. A second subject is America, focused on notions of the American dream, which many Italians consider as an American version of the Italian dream. European countries and the rest of the world form a minor part of Italian television. Europe and the world are places where Italians go as emigrants, as tourists, and as exporters of goods and services. Fiction is for cultivating dreams and fears; dreams are located elsewhere and mainly in America, fears are located in Italy. Sport is for cultivating national pride. News and politics are for locating oneself in a turbulent world and trying to understand what is going on and how to take part.

The relationship of Italian television to American fiction has specific characteristics. Even prior to television, American mass culture has been the model for Italian entertainment, mainly through films. Throughout the 1950s most American movies were imported, dubbed in Italian, and shown throughout the country in more than eleven thousand cinemas. The first audiences for television, then, looked at television as a different form of movie, and indeed, American films have, for years, been the prime time family viewing on Mondays. American films, and subsequently, American series and serials have provided a considerable part of the offering of television schedules and Italian television channels. Among European channels, Italian television has dedicated more air time to American fiction programs and to foreign films dubbed in Italian.

Another important element of Italian television has been the production of original fiction series which had no model abroad. These were called teleromanzi (telenovelas or television novels) or sceneggiati (adaptations of novels). The stories were presented in six or eight episodes of two hours each, taken from the masterpieces of international literature. They were shot and played in a realistic setting in a mixed style between theatre and film. One of their models is to be found in an Italian post-war invention, the fotoromanzi, novels with photographs. These long-running series sold weekly as magazines. They met with huge success and are still produced. Action was slow and all the stories were located in the past, mainly in the 19th century. Prime time Sunday was for years dedicated to family viewing of teleromanzi. Since the 1980s this kind of fiction production has no longer been produced in the same way. Italian fiction in the last 15 years has tried to adopt more standard formats with stories now located in contemporary Italy. The most successful of these stories was La Piovra (The Octopus), a story about criminal syndicates commonly referred to as the Mafia. Begun in 1984 and still continuing, it is a kind of Italian-style serial comprised of seven miniseries to date.

**Looking at the Future**

The future of Italian television is uncertain. A law concerning telecommunications, radio, and television was proposed in parliament by the government on 25 July 1996. If ap-
proved, it will open the system to more competition, while preserving an important role for public service and more severe anti-concentration rules. For television, the new law will open the possibility for cable and satellite channels and, consequently, reduce the predominance of terrestrial networks and channels. It will also be possible for the same company to have limited partnerships in different communication businesses: telephone, cellular, television, radio, press, content provider.

The state-owned monopoly of telephone services will become private. In the arena of cellular services there will possibly be a competition among at least three different companies. The 1000 local radio and 500 local television stations will be reduced in number. Pay-TV, which is actually run by one company (Tele+) on three analogic channels will be expanded, as will a rich bouquet of digital European channels.

In the area of broadcast television three groups now compete for participation and dominance. RAI, located in Rome, with three channels and an average audience share of about 45%; Mediaset (previously Fininvest), located in Milan, with three channels and an average share of 43%. Mediaset became a publicly-traded stock company in July 1996 and is no longer the personal property of Silvio Berlusconi. The Cecchi-Gori Group, located in Florence, with two channels and an average share of 6%. Minor national channels, Pay-TV, and local stations get the remaining audience.

Each one of these three main organizations has its own competitive advantage: RAI has the advantages of tradition, the income from fees, no debt, and, more than before, the total support of the centre-left government; Mediaset has the advantages of innovation, the internationalisation of part of its capital, its know-how, and support in parliament from the strongest political party at the opposition. The Cecchi-Gori Group, which is the most powerful Italian film producer and distributor, has the advantages of its control of the copyright to a huge number of Italian and American films. It also has a special relation for copyright of soccer matches. The company is the proprietor of Florence’s winning soccer team, “la Fiorentina,” and has special agreements with international networks interested in buying copyrights of soccer matches of Italian teams, which can be widely sold to many television channels of Arabic and Latin American countries. In parliament, support comes from Catholic politicians who are part of the centre-left government. Vittorio Cecchi Gori, the main proprietor and the leader of his group, is also a senator of Florence.

These groups face considerable difficulties in the immediate future. The main problems for cable and Pay-TV emerge from the fact that in the last ten years Italian audiences have had the benefit of a huge free offering of programs of many kinds. In each hour of the day, it has been possible to choose among a great variety of fiction, talk shows, variety shows, and game shows.

At the same time, however, large financial resources are no longer readily available to television producers and distributors. Advertising revenues for mass consumption products and services are decreasing and there is a need for more restricted and better defined targets. The fees that Italians pay for public television will not be accepted much longer by the public, yet two thirds of the income for RAI comes from these fees. These problems must solved in the near future as Italian television reshapes itself once again.

IT’S GARRY SHANDLING’S SHOW/ THE LARRY SANDERS SHOW

U.S. Situation Comedies

Garry Shandling put aside a successful career as a stand-up comedian to venture into irreverent forms of fictional television with film producers and talent managers Bernie Brillstein (Ghostbusters) and Brad Grey. The trio created comedies in 1986 and 1992: the whimsical and warm It’s Garry Shandling’s Show and the darker Larry Sanders Show.

The first program began on the cable network Showtime in 1986. After a year, it reached critical success and Shandling relinquished his role as one of Johnny Carson’s regular guest hosts on NBC’s Tonight Show, leaving Jay Leno as the primary alternate behind the desk. Shandling and Leno had replaced Joan Rivers as Carson’s principle replacements in 1986 when Rivers began her own talk show—the initial program on the fledgling FOX Broadcasting Company network.

While still in first run on Showtime, It’s Garry Shandling’s Show was licensed by the new FOX Broadcasting Company as part of its second season Sunday evening line-up. Although plagued by low ratings and hence unable to satisfy FOX’s expectations, critics praised Shandling’s tongue in cheek style. FOX reran the Showtime episodes and then contracted with “Our Production Company” for new installments until 1990.

The program, set in Shandling’s condominium in Sherman Oaks, California, featured comic schtick. Shandling played a single man looking for the right woman. He spent his free time with his platonic friend Nancy (Molly Cheek), his best friend’s family (Stanley Tucci and Bernadette Birkett) and his single mother. Much of the show mimicked Shandling’s own life, including his actual home in Sherman Oaks and his romances (a girlfriend moved in with Shandling’s “character” when his personal domestic life changed).

The program began with a monologue, introducing the show. Next came a silly theme song, performed by Randy Newman, including the lyrics “Garry called me up and asked if I could write it” and a whistling segment. The “dramatic action” in each episode was simple, built on such premises as Garry’s bad dates, or his discovery of a nude photo of his mother from the 1960s. Each situation was resolved with warmth and whimsey, sometimes with the help of audience members.

His antics included “breaking the fourth wall”—acknowledgement and direct address of the audience, both in the studio and at home, as part of the show. In one episode, Garry told the audience to feel free to use his “apartment” (the set) while he was at a baseball game. Several people from the audience (perhaps extras) left their seats to read prop books and play billiards in front of the cameras as the program segued into its next scene.

It’s Garry Shandling’s Show often included guest stars. In the pilot, just after Garry’s character moved into the condo, he was robbed. That night he dreamed of Vanna White (appearing on the show) giving away his good underwear and other personal belongings as prizes on Wheel of Fortune—for less value than he hoped. His most frequent visitor was his “next-door neighbor,” rock musician Tom Petty. In one episode Petty, who usually had appeared with disheveled long hair, loose shirts and tight pants, became part of a neighborhood quartet. He made his entrance walking in line with three middle-aged singers and all four wore (bad) matching plaid wool vests.

Shandling sometimes used other sight jokes, but most often he exploited running verbal gags. These included the unseen ceiling mirror inscribed with the typed motto, “things may be larger than they appear.” Another continuing joke involved Larry’s ongoing consideration of what to do during the 41 seconds when theme music interrupted the action.

Some episodes, however, were more serious. One of these featured Gilda Radner near the end of her unsuccessful battle with cancer. This show also presented an anti-war Vietnam theme, detailing how one friend’s conduct caused...
a man to become a prisoner of war. Though the program ended jovially, the action included a darkly lit battle sequence in which uniformed soldiers shot at each other and put holes into Radner's living room set.

Though each episode of the show was scripted, Shandling was known to improvise his lines. If a scene needed three takes, he often performed differently in each iteration as though challenging himself to make each retake funnier than the prior one.

The Larry Sanders Show, appearing on HBO since 1992, has been the Mr. Hyde of Garry Shandling's pair of comedies. The program, which mocks behind the scenes activities of post-primetime talk shows, paints a more disturbing view of television as a status-bestowing medium. The technique includes intertwining fictional characters with actual guest stars. By 1995, the show received both Emmy nominations and CableAce awards, but the mass audience has had difficulty accessing both the content and the premium cable channel distributing this half hour.

Shandling stars as Larry Sanders, a talk-show host competing with the larger network late night programs. Though Larry is not the biggest fish in the chat pond, it is difficult to realize this from his interactions. He uses his power and position as a celebrity to control his office staff, show crew and at times the general public as portrayed in this fictional world. Larry exposes his deep insecurities only to his executive producer, Artie (veteran character actor Rip Torn) and to his assistant, Beverly (Penny Johnson).

On-screen, Larry is smooth and controlled, but behind the scenes, he is manipulative and disturbed, descending frequently into paranoia and temper tantrums. His interactions with his office employees feature a peculiar style of communication. Each staff member or guest has a clear position in an invisible hierarchy. This situation is accepted because the strong office culture is dominated by constant job insecurity. People with greater clout are allowed to act abusively to those with less status. In one show, it seems clear that a staff member will be fired, but Larry cannot decide which person. Facing the tension mounting within the office, one writer breaks down with anxiety, creates several ugly scenes and—predictably—is chosen to lose his job.

Office relations are not the only story line. Plots derived from typical talk show circumstances include contract renegotiations, strange sponsors needing odd on-air celebrity endorsements, marriages and relationships, problems with guests and difficulty managing public images. During the several years of the program, Larry has been married (to Megan Gallagher), divorced, and involved in a live-in arrangement with another ex-wife (Kathryn Harrold). These relationships have exhibited little tenderness; instead, the unions are portrayed as they fit Larry's profession and lifestyle. If love blocks his career in any way, love ends.

Many of the show's elements are focused on Larry's relationship with his "side-kick" character, Hank Kingsly, played to perfection by Jeffrey Tambor. Hank is presented as an essentially talentless individual who has made an incredibly successful career by translating his position as hanger-on into hugely recognizable celebrity status. He makes additional money by endorsing cheap products, he gets dates because of his proximity to Larry, and he uses his status to bully other members of the show's staff. Larry tolerates Hank because he is, at once, confidant and pitchman, as responsible for Larry's success as are his own skills.

Shandling used It's Garry Shandling's Show to push television to its whimsical extreme. With The Larry Sanders Show he presents the funny side of television at its worst. In each case, he explores the medium intelligently and inventively, creating an arena to consider what television can be, rather than continuing the hackneyed stereotypes and norms.

I'VE GOT A SECRET

U.S. Game Show

Many radio and television game shows have their origin in parlor games and it is no surprise to realize that *I've Got a Secret* was based on the game of "Secret, secret, who's got the secret". The format was simple but very durable. Sitting together on one side of a plain, unadorned set, each of four panelists took a 30-second turn questioning and then guessing a contestant's secret. The contestants were a mixture of ordinary people and celebrities and the panelists were invariably celebrities. Each episode used four contestants and, in the American original, one contestant in each episode was a celebrity. Ordinary contestants received a small money prize if they stumped the panel. In the case of the celebrity contestant, the secret was very often related to some element of their fame. Thus the first episode of *Secret* in 1952 featured the actor Boris Karloff's revelation was that he was afraid of mice.

The U.S. version of the program was the longest running and most popular game show in the history of the genre. It began in June 1952 and ran on the CBS network until 1967. However, it was not quite an overnight success. The premiere episode used a courtroom as the set. Host Garry Moore was presented as a judge, the contestants as witnesses under cross-examination, and the panelists as the questioning lawyers. CBS cancelled the program after its first season but almost immediately changed its mind and the program resumed after its summer break. *Secret* became enormously popular and ran for 15 years on network television, a record never equaled by another game show. By the late 1950s it was consistently in the top ten of U.S. television programs; it survived the quiz scandals of 1958-59; its popularity remained intact through the first part of the 1960s. The program was revived for syndication from 1972 to 1973 and also played a short summer stint on CBS in 1976.

*I've Got a Secret* had three hosts in its time on U.S. television—Garry Moore, Steve Allen, and Bill Cullen. Cullen, a long-time panelist was made famous by the program, but many other panelists were already well-known. Among them were Laraine Day, Orson Bean, Henry Morgan, Jayne Meadows, Faye Emerson and Betsy Palmer. *Secret* featured several producers including Allan Sherman who was to have his own career in the early 1960s as a comic singer cum satirist.

The program was originated and produced by the imitable Mark Goodson and Bill Todman. Their partnership in developing successful game show formats had begun in radio in 1946 and *I've Got a Secret* was one of their earliest programs in television.

J

JACKSON, GORDON
Scottish Actor

Gordon Jackson was one of the stalwarts of British television in the 1970s, though he also had extensive stage and screen experience going back to the 1940s. A Scot, he began his career playing small parts in a series of war films made by the Ealing Studios and others. Initially typecast as a weakling, Jackson gradually won recognition as a useful character actor, specializing in stern, well-mannered gents of the "stiff upper lip" variety, often lacking in a sense of humour. His rich Scottish accent, however, balanced this with a certain charm; it was this combination of sternness and warmth that characterized most of his roles on stage and screen.

During the 1950s, Jackson continued to develop his film career and was also busy in repertory theatre, making his debut on the London stage in the farce Seagulls Over Sorrento in 1951. Other acclaimed roles on the stage included an award-winning Horatio in Tony Richardson's production of Hamlet in 1969, Tesman in Ibsen's Hedda Gabler, and Malvolio in Twelfth Night. In the cinema he gradually moved from young soldiers and juvenile leads in the likes of Millions Like Us (1943), Tunes of Glory (1960), and Whisky Galore (1949) to major supporting parts in such films as The Ipcress File (1965), starring Michael Caine, and The Prime of Miss Jean Brodie (1969), which was adapted from the novel by Muriel Spark. By the 1960s, it was apparently automatic for Jackson's name to crop up whenever a genial, but crusty Scotsman was required, whether the production under discussion was a wartime epic or something more homely.

As a television star, Jackson really came into his own in 1971, when he made his first appearances in the role of Hudson, the endearingly pompous butler in the classic period-drama series Upstairs, Downstairs. Over the next five years, Jackson, as one of the central characters in this hugely popular series about Edwardian life, became a household name—a status formally acknowledged in 1975 when he won the Royal Television Society's Best Actor Award (followed later by his being made an Officer of the British Empire). As Hudson, a character the actor himself professed to dislike, Jackson was in turn supportive and dependable and dour and infuriating, not least through his old-fashioned attitudes to the other servants and any inclination they showed to forget their station.

Not altogether dissimilar in this regard was Jackson's other most famous television role, the outwardly contrasting part of George "The Cow" Cowley in the action adventure series The Professionals, which was first seen in 1977. As Cowley, a former MI5 agent and now head of the specialist anti-terrorist unit CI5, Jackson combined a hard-bitten determination and impatience with his wayward operatives Bodie and Doyle (Lewis Collins and Martin Shaw) with genuine (if grudging) concern for their well-being when their lives were in danger. This too became favourite viewing for peaktime audiences in the 1970s, as much through the chemistry of the three main performers as through the somewhat formulaic car-chases and action sequences that were included. The series did have its critics—many people protested at the violence of many episodes (leading the producers to limit explosions to two per story) and others

Gordon Jackson
Photo courtesy of the British Film Institute
refused to accept that Jackson, still firmly associated in their minds with the stuffy Mr. Hudson, could ever be convincing as a tough anti-terrorist chief, notwithstanding his early experience in the Ealing war films.

Also worthy of note were Jackson’s always reliable appearances in other classic television programmes, which ranged from Doctor Finlay’s Casebook to the Australian-made A Town Like Alice and Stars on Sunday (as host).

JAFFREY, MADHUR

British Actor/Television Personality/Cookery Host

Madhur Jaffrey, born in India, has had a remarkably varied career encompassing acting, directing, and writing. In Britain, it is for her role as a presenter of television cookery programmes that she is most highly renowned and respected.

Professionally, Jaffrey has worked largely in cinema with prominent roles in films such as the Merchant Ivory Production, Shakespeare Wallah (1965), for which she was awarded a prize at Venice, and The Assam Garden (1985). Her most prolific role as an actor in recent British television has been the drama series, Firm Friends (ITV, 1992 and 1994). Jaffrey plays Jayshree Kapor, cleaning lady turned business partner to white, middle-class Rose (Billie Whitelaw), in a show that is unusual in representing a racially-mixed society without treating this as an issue. While many of the productions Jaffrey has performed in draw on
her cultural background, *Firm Friends* is also involved in unashamedly drawing on her culinary image—the business Jayshree initiates is selling cooked foods.

Madhur Jaffrey as an actor has not surpassed her popularity as a food presenter. Jaffrey's route into presenting BBC food shows was less than orthodox. While a drama student at the Royal Academy of Dramatic Arts in London, she wrote to her mother begging her to send simple recipes. In India, her mother obliged, and thus Jaffrey learnt to cook by correspondence, although this was never intended as a career move. She was drawn into cooking as a business, after friends implored her to write a cookery book. Her immense success and appeal may be attributed to her flamboyant yet sensitive style of presentation and the way she has revolutionised and demystified Indian cooking—a cuisine particularly favoured by the British. By introducing authentic Indian cuisine to the British kitchen, Jaffrey radically altered the way British people cook, eat, and think about Indian food. Indeed it is fair to suggest that the ready availability of oriental spices and other Indian ingredients in British supermarkets is a direct result of Jaffrey's television programmes.

The inspirational presentation of food in the three BBC series—*Madhur Jaffrey's Indian Cookery* (1982); *Madhur Jaffrey's Far Eastern Cookery* (1989); and *Madhur Jaffrey's Flavour's of India* (1995)—is equaled by the warmth and charm of its presenter. While her shows have been educational from a culinary perspective, they have also proved influential within television culture, as Jaffrey sought to contextualise the cookery by presenting it in the appropriate geographical location. In liberating cookery from the studio-bound format, these shows not only offer the viewing pleasures of a travel show, but also work to redefine popular perceptions of Eastern cultures. Jaffrey focuses on the recipes and their ingredients by presenting a variety of people—mainly cooks, professional and otherwise—and by exploring a wealth of market-places, local lifestyles and regional religions.

The gastronomic travelogue format may no longer be considered revolutionary, as it has developed into a television standard, but Jaffrey remains a guru of British culinary television. Her series are particularly noteworthy for their stylish and sophisticated production values and their attention to detail—for example, Madhur dresses to reflect the cultural background of specific recipes. The greatest appeal of her cookery shows lies in her vibrant approach and personality, with which she has spiced up British television. Madhur Jaffrey has argued that she sees no conflict in her professional double life, as she treats the presentation of food as a performance equal to any acting role.

—Nicola Foster

FILMS (selection)  

PUBLICATIONS (selection)  
JAFFREY, SAEED

Indian Actor

Saeed Jaffrey is one of Britain's best known and most experienced actors, playing a wide variety of roles in comedy and drama with equal enthusiasm. He started his performing career in India, setting up his own English theatre company in Delhi after completing his post-graduate degree in history. His early theatrical work included roles in productions of Tennessee Williams, Fry, Priestly, Wilde, and Shakespeare. Having completed his studies at the Royal Academy of Dramatic Art in London, he went to the United States on a Fulbright scholarship and took a second post-graduate degree in drama from the Catholic University in America. From these firm foundations Jaffrey set out as the first Indian actor to tour Shakespeare, taking his company across the United States and subsequently joining the Actor's Studio in New York, where he played the lead in off-Broadway productions of Lorca's Blood Wedding, Rashomon, and Twelfth Night. Jaffrey is an accomplished stage actor and has appeared on Broadway and at London's West End in a diverse range of characterisations.

His work in television has been just as varied. He appeared as Jimmy Sharma in Channel 4's first "Asian" comedy, Tandoori Nights and as the elegiac Nawah in Granada Television's adaptation of The Jewel in the Crown. It was arguably his performance as the smooth Rafiq in the BBC cult-classic Gangsters that brought him to national recognition, even though he had been acting in both theatre and television for several years previously.

In some ways, Jaffrey's character types have been broadly similar and, like Clint Eastwood, he always plays himself playing a character. His impeccable English accent, his dapper style and his catch-phrases—"My dear boy"—are part of his acting persona. His smooth charm is used to good effect whether he plays the archetypal oily, corrupt Asian businessman or the kindly, knowing father figure. In 1994 he co-starred with Norman Beaton in Michael Abbenset's new TV series, Little Napoleons, for Channel 4, playing once again a successful lawyer—cashmere coats, flashy car, doting daughter—who wants political as well as economic power.

Jaffrey's career has spanned several decades and it is still unfortunately the case that he is one of a handful of Indian actors who is regularly in employment, be it for radio, television, or the stage. Although this is good news for him, his prodigious success and his ability to talk the right language means that he is a hard act to follow for younger talent trying to penetrate a hard-faced industry.

JAMES, SID

British Comedian

Sid James established himself as a nationally recognised figure in British broadcasting in a groundbreaking radio comedy, Hancock's Half Hour in the mid-1950s. But James was a ubiquitous supporting role actor. Appearing in over 150 features during his career, he was best known as a regular character in some of the “Carry On” comedy films (1958-80). He acted in numerous stage comedies and starred in several television series. With the situation comedy, Bless This House (ITV, 1971-76), James secured his status as one of the most enduring figures of post-war British popular culture. Clever exploitation of a naturally heavily lined face to produce a variety of put upon expressions endeared him to “Carry On” and television audiences alike. His “dirty” cackle of a laugh embodied a vein of “kiss-me-quick” bawdiness that runs deep in English humour.

Christened Sidney Joel Cohen, Sid James was a South-African-born Jew whose parents worked in the music hall business. James had joined a South African regiment of the British Army in 1939 and soon became a producer in its entertainment unit. As such he was typical of a generation of British performers and writers who learned their trade while in the armed forces. After the service, James arrived in London on Christmas Day 1946 looking to make a start in acting. He landed his first film role nine days later. His grizzled face led to typecasting as minor gangsters in his early film appearances. His career success came when he transformed himself into a quintessential Londoner, an ordinary bloke, who drew sympathy from his audience despite playing a rascal in many of his roles.

His television credits include some dozen plays (including some drama) and several series. He made his television debut in 1948 in a two-part BBC drama Kid Flanagan as Sharkey Morrison and played the lead role of Billy Johnson in The Front Page (BBC) later the same year. In 1949, he played an American film director in a 30-minute play called Family Affairs (BBC). After significant supporting roles in films such as The Lavender Hill Mob (1951) and The Titchfield Thunderbolts (1952), his repertoire began to develop, from gangsters, into characters who lived just this side of the law in the austere conditions of 1950s Britain. Although he was best known for his comic roles, James rarely turned down dramatic work. His next television appearance was in Another Part of the Forest (BBC, 1954), one of an acclaimed 20th Century Theatre series.
stations around the country, but is not considered a major station. The most popular network of the mid-1990s is Fuji TV, which in 1992 had three of the top ten dramas, seven of the top ten quiz and variety programs, and six of the top ten animated programs, all in prime time.

Chief among successful types of programming on stations supported by advertising is the “wide show,” a melange of reporting on true-life scandal, crime, celebrity gossip, and tragedy broadcast daily in the mornings and afternoons on each of the four major networks. Other types of programming include variety spectaculars (often centered around holidays and special seasonal occasions), game/quiz shows, news and information, comedy shows, dramas of various types (chiefly samurai period pieces, domestic dramas, and modern love stories), children’s shows (including cartoons), sports programming, and documentaries. Although panel talk shows of various sorts have been popular for many years, open discussion of controversial news topics has only very recently begun to appear on television, following the electoral overthrow of the ruling party (LDP) in 1992.

Commercials are one of Japanese television’s most interesting features: well-produced, creative, daring, and increasingly shorter in length. In a nation with very little corporate or government sponsorship of the fine arts, Japan’s young art students tend overwhelmingly to enter giant advertising firms such as Dentsu and Hakuhodo, which together control approximately 80% of all advertising in Japan. It has been claimed that television commercials are the only Japanese art form flourishing in the late 20th century.

Another interesting aspect of Japanese television is its emphasis on seasonality and culturally appropriate festivals and activities. Traditional Japanese culture places great importance on the transitions between seasons, and adherence to the appropriate sets of colors, foods, greetings, and customs remains a subtly important ritual feature of daily life in schools, restaurants, department stores and businesses. Television also adjusts to the changing of the seasons in its own fashion; commercials tend to depict primarily seasonally appropriate activities, clothing and food, while annual holidays and festivals are the occasion for local and national televised events and coverage. The New Year, in particular (celebrated on 1 January according to the Western rather than the Chinese system), is the occasion for a three-day televisual marathon of special events, including the famous Red vs. White singing contest, which pits popular male and female singing stars from a variety of genres against each other. This popular event is watched by approximately 70% of the nation each year, according to annual newspaper reports.

An additional feature of Japanese television that may enhance the overall effect of seasonal time flow within the televisual world is its general avoidance of syndicated reruns of popular programs. While some rerunning of programs (particularly older period dramas) does exist during daytime hours, in general, production costs are kept relatively low in order to produce a high volume of television programming meant for one-time viewing. The most popular twelve-part dramas, such as Hyaku-I-Kaime-no-Paropuzu (The One-Hundred-and-First Marriage Proposal), Tokyo Love Story, and New York Monogatari (New York Stories), are occasionally made available for video rentals, but will only be aired again as vignettes in retrospectives on the works of a particular actor or time period. This may be in part because of the centrality of the element of suspense to the narratives of these dramas, as in soap operas.

Another factor may be the relatively short half-life of young Japanese stars who tend to feature in these dramas. The enormous and efficient Japanese star system maintains close ties with the music industry. These stars (known as talento) also appear frequently on talk shows, quiz shows, comedy, variety and game shows. It is often uncharitably suggested that talento are in fact generally talentless, and owe their success to attractive appearance and clever marketing; nevertheless, some few stars do manage to keep their appeal over a considerable length of time. But the generally rapid turnover in the star population in Japan may preclude the possibility of rerunning many shows that feature talento, as last year’s star adds little appeal to any type of programming.

While talento may be famous, however, part of their appeal for some lies in their “ordinariness,” and their normal behavior. As Andrew Painter and others have noted, the appeal of many programs seems to stem from the creation of a world of “quasi-intimacy,” an in-group composed of hosts, guests, technical crew and studio audience that may be accessed simply by switching on the television. The use of informal language directed to one another and to the camera, openly enthusiastic participation in conversation and activities, and even some self-ridicule by the hosts of programs and by the talento themselves may work to provide a respite from the highly formal and structured day-to-day social interactions of most Japanese. Other elements that add to this sense of intimacy are frequent on-camera in-jokes referring to writers and producers and crew members of the show, and very occasional breaking of the camera’s illusion of a “fourth wall,” (i.e. comments made to crew technicians, audience members and home viewers by those who are onstage).

Violence, sex, and scatology play significant roles in much of Japanese television. The day-time “wide shows” focus much of their attention on scandalous sex relations and violent or anti-social acts performed by both celebrities and ordinary Japanese, hinting suggestively at their existence when proof cannot be produced. Cartoons for children often feature references to, or jokes about, sex and scatology. A 1980s cartoon was entitled Machiko Mainchingu-Sensei (Machiko, the Giving-in Teacher), about a voluptuously-drawn elementary-school teacher who every week would be groped and fondled by her male students. A current example is the animated cartoon Crayon-Shin-chan that features a kindergarten boy whose main interest is adult women, although the version produced for television is considerably toned down from the comic version. Samurai dramas feature sword fights and occasionally some authentic traditional
tortures, while the recently popular genre of police dramas such as Abunai Dekka, and Motta Abunai Dekka (Dangerous Cops, and More Dangerous Cops) includes abundant gun and fist fights.

Predictions on the future of Japan's televisual technology are cautiously optimistic, but Bruce Stronach points out in his introduction to Japanese television in the Handbook of Japanese Popular Culture that several cultural factors have combined to slow down the introduction of new technologies and types of programming in Japan. These factors include the conservative nature of Japanese society and bureaucracy, and interwoven struggles between the Ministry of Posts and Telecommunications and the Ministry of International Trade and Industry over regulation and control of new media. Cable television had made few in-roads by 1994. But despite setbacks in the late 1980s, efforts continue toward developing HDTV technology, as well as making satellite dishes affordable to a majority of consumers.

One satellite cable system, WOWOW, began broadcasting regularly in 1990, offering one channel of chiefly movies and sports for a monthly fee.

JASON, DAVID

British Actor

David Jason's career can be viewed in many respects as that of the archetypal modern television actor in Britain. Although he made forays into the theatre in the 1970s and 1980s, and made occasional appearances on film, these fade into relative insignificance when compared to the steady stream of eye-catching and increasingly high-profile roles he created for television. As a result, his acting persona is circumscribed by the televisual medium. Nevertheless, such exposure, while making him a British "household name," did not make him into a celebrity, for Jason largely eschewed the paraphernalia of television fame.

Jason's histrionic instincts are basically comic, and the majority of his roles have been in the situation comedy format. His earliest major television role was an elderly professor doing battle against the evil Mrs. Black and her gadgets in the surreal Do Not Adjust Your Set (1967), a comedy show whose ideas and personnel later fed into Monty Python's Flying Circus. But Jason first achieved note through his association with comic actor-writer Ronnie Barker, by supporting performances in the prison comedy Porridge and corner-shop comedy Open All Hours, both starring Barker. In the former, Jason played the dour wife-murderer Blanco; in the latter, and to great effect, he acted the boystyle, downtrodden delivery-man and assistant to Barker's parsimonious storekeeper. Open All Hours cast Jason as a kind of embryonic hero-in-waiting, constantly dreaming of ways of escaping the provincial narrowness and boredom of his north-country life. The role provided the actor with an opportunity to develop his acting trademark—a scrupulous and detailed portrayal of protean ordinariness, sometimes straining against a desire to be something else.

A later series, The Top Secret Life of Edgar Briggs, toyed with this sense of ordinariness by having Jason as a Secret Service agent ineptly trying to combine his covert profession
with suburban home life. But Jason's greatest success has been with several series of the comedy Only Fools and Horses, in which he played Del Trotter, the small-time, tax-evading "entrepreneur" salesman, living and working in the working-class council estates and street markets of inner-city London. Deftly written by John Thaw—the series is regarded by some as a model for this kind of sitcom writing—the series cast Jason in a domestic situation in which he is quasi-head of an all-male family, responsible for both his younger brother and an elderly uncle. In the role, Jason cleverly trod a path between pathos and the quick-wittedness necessary to someone operating on the borderlines of legality. The character was, in many respects, a parody of the Thatcherite working-class self-motivator, complete with many of the tacky and vulgar accoutrements and aspirations of the (not-quite-yet) nouveau-riche. At the local pub, while others order pints of beer, Del seeks to distinguish himself from his milieu by drinking elaborate and luridly coloured cocktails. The undertone, though, is salt-of-the-earth humanity and selflessness, called out in his paternal role to his younger brother, who eventually leaves the communal flat to pursue a life of marriage and a proper career. Jason's character is hemmed in by both the essential poverty of his situation but also by a deep-rooted sense of responsibility: though the plots of the individual episodes invariably revolve around one or either of Del's minor get-rich-quick or get-something-for-nothing schemes, the failure of these ventures often owes much to the character's inability to be sufficiently ruthless. Jason's skill was to interweave the opposing forces of selflessness and selfishness, working-class background and pseudo-middle-class tastes, brotherly condescension and "paternal" devotion into a successful balance. The character Del, exuding a deeper humanity as expressed in his ability to imbue the everyday with a well-judged emotional resonance and believability, ultimately embodied a rejection of aggressive materialism.

Since Only Fools and Horses Jason made moves away from overtly comic vehicles, pursuing variations on this rootedness in the everyday. In the adaptation of the Frederick Raphael satire on Cambridge University life, Porterhouse Blue, he played the sternly traditional porter Scullion, the acutely status-conscious servant of the college, dismayed by the liberalising tendencies of the new master, and making determined efforts to put the clock back. In The Darling Buds of May, his other great ratings success, he took the role of Pa ("Pop") Larkin, in these adaptations of the rural short stories of H.E. Bates. Such roles allowed him to develop the range and craftsmanship of his character performances.

Jason's most recent television venture has taken him out of comedy altogether into the crime genre, as the eponymous Inspector Frost in A Touch of Frost. In this series, Jason's Frost is a disgruntled, middle-aged, loner detective, whose fractious, down-to-earth nature has not entirely endeared him to his superiors and therefore—we infer—has hindered his career prospects. In such respects the series is in the mould of the immensely successful adaptations of Colin Dexter's Inspector Morse novels. But whereas Morse's cantankerousness, as played by John Thaw, was epitomised by a certain snobbishness—his love of classical music, his vintage car, his instinctive aloofness—in the Oxford environment of Dreaming Spires, Frost's gradually unfolding history reveals a lower middle-class resentfulness of those with money, fortune, and easily gained happiness. His own life has—as we find out gradually—rendered him increasingly a victim of misfortune (his wife has died, his house has burned down). While Morse, in effect, creates a world of evil-doing amid soft-toned college greens, country pubs, and semi-rural Englishness, the Frost series is nearer to the subgenre of the detective soaps, its principal character a distinctly unglamorous malcontent, whose ideas and experience are entirely provincial and suburban. This was perhaps Jason's greatest acting challenge, for it largely denies him the "punctuation" of comic acting, the rhythm of regular comic pay-offs in any length of dialogue or action, instead demanding a slow building, a gradual revelation of character, as each long episode augments the previous. The first several episodes suggested an increasing sureness of touch in this respect by Jason.

THE JEFFERSONS
U.S. Domestic Comedy

The Jeffersons, which appeared on CBS television from 1975 to 1985, focused on the lives of a nouveau riche African-American couple, George and Louise Jefferson. George Jefferson was a successful businessman, millionaire and owner of seven dry cleaning stores. He lived with his wife in a ritzy penthouse apartment on Manhattan's fashionable and money-eyed East Side. "We're movin' on up!" intoned the musical theme of the show opener that featured George, Louise and a moving van in front of "their de-luxe apartment in the sky."

The program was conceived by independent producers, Norman Lear and Bud Yorkin. This team's creation of highly successful and often controversial sitcoms during the 1970s and early 1980s helped to change television history. Programs such as Maude, Sanford and Son, and Good Times enjoyed frequent rankings amongst the top ten most watched programs.

The Jeffersons was a spin-off of one of 1970s television's most notable television sitcoms, All in the Family. In 1973, Lear cast Sherman Hemsley in the role of George Jefferson, Archie Bunker's irascible and upwardly mobile black neighbor. This character was such a hit with viewers that Hemsley was soon cast in the spin-off series, The Jeffersons.

George and Louise Jefferson lead lives that reflected the trappings of money and success. Their home was filled with expensive furnishings; art lined the walls. They even had their own black housekeeper, a wise-cracking maid named Florence. The supporting cast consisted of a number of unique characters including neighbor Harry Bentley, an eccentric Englishman who often made a mess of things; the Willises, a mixed-race couple with two adult children—one black, one white; and, the ever-obsequious Ralph the Doorman, who knew no shame when it came to earning a tip. Occasional characters included George's mother, the elderly and quietly cantankerous "Mother Jefferson" (the actress, Zara Cully died in 1978), and George's college-aged son (who was portrayed during various periods by two different actors).

The George Jefferson character was conceptualized as an Archie Bunker in blackface. George was intolerant, rude, and stubborn; he referred to white people as "honkies." He was a short, mean, bigoted popinjay who balked at manners. Louise, his long-suffering wife, spent most of her time apologizing for her husband's behavior. Florence, the maid, contributed a great deal of comic relief, with her continuous put-downs of George. She was not afraid of his outbursts, and in fact had little regard for him or his tirades. She referred to him as "Shorty," and never missed a chance to put him in his place.
The program was enormously popular and remained on prime-time television for ten years. There are a number of factors that position this program as an important facet of recent television history. First, The Jeffersons was one of three programs of the period to feature African Americans in leading roles—the first such programming since the cancel- lation of the infamous Amos 'n' Andy show in 1953. The Jeffersons was the first television program to feature an inter- racial married couple, and it offered an uncommon, albeit comic, portrayal of a successful African American family. Lastly, The Jeffersons is one of several programs of the period to rely heavily on confrontational humor. Along with All in the Family, and Sanford and Son, the show was also one of many to repopularize old-style ethnic humor.

It also serves to examine some of the controversy that surrounded The Jeffersons. Throughout its ten-year run on prime-time television, the show did not go without its share of criticism. The range of complaints, which emanated from media scholars, television critics and everyday black viewers ranged from the show's occasional lapses into the negative stereotyping to its sometimes lack of ethnic realism. To some, the early Louise Jefferson character was nothing more than an old-south Mammy stereotype. And George, though a million- aire businessman, was generally positioned as nothing more than a buffoon or the butt of someone's joke. Even his own maid had no respect for him. Some blacks questioned, "Are we laughing with George as he balks at convention, or at George as he continuously makes a fool of himself?"

Ironically, as the show continued into the conservatism of the Reagan years the tone of the program shifted. Louise Jefferson's afro hairstyle disappeared and so did her poor English. There was no mention of her former life as a housekeeper. George's racism was toned down and the sketches were ren- dered more palatable as to appeal to a wider audience. As with Amos 'n' Andy some twenty years prior, America's black com- munity remained divided in its assessment of the program.

This period of television history was a shifting one for television programmers seeking to create a show featuring African Americans. Obvious stereotypes could no longer be sold, yet the pabulum of shows like Julia was equally as
unacceptable. The Jeffersons joined other Leaf/York programs in setting a new tone for prime-time television, exploring issues that TV had scarcely touched before, while it proved that programs with blacks in leading roles could indeed be successful commodities.

JENKINS, CHARLES FRANCIS

U.S. Inventor

Charles Francis Jenkins was a leading inventor and promoter of mechanical scanning television and largely responsible for strong and passionate interest in television in the 1920s and early 1930s in the United States. His work in mechanical television paralleled the work of John Logie Baird in England. Jenkins also provided the first public television demonstration in the United States on 13 June 1925, less than three months after a somewhat similar demonstration by Baird in England. Jenkins’ demonstration, using mechanical scanning at both the transmitting and receiving ends, consisted of crude silhouette moving images called “shadowgraphs.” This early work in mechanical scanning television helped lay the foundation for later all-electronic television.

Jenkins was the archetype of the independent inventor. Without major corporate financial backing, he never received the recognition, success or wealth that otherwise might have come to him. His numerous contributions and inventions covered a broad range of areas and uses. He co-invented and publicly demonstrated the first practical motion picture projector in the United States (1894), developed an automobile with the engine in the front instead of under the seat (1898), designed an early sight-seeing bus (1901), created an early automobile self-starter (1911) and developed significant improvements to the internal combustion engine (1912). He was granted more than 400 U.S. patents for inventions as diverse as an altimeter, airplane brake, conical paper drinking cup, and, even a bean-shelling machine. In the area of communication and media technology he developed the “prismatic ring” (circa 1915) designed to eliminate the need for film shutters in motion picture projectors by using a glass disk
scanning apparatus. He later experimented with a variation of this concept for one of his mechanical television scanning systems. His work in facsimile in the early 1920s led to successful wirephoto transmissions by January of 1922 and radiophotos in May of that year. He was also involved in early wireless teletype transmission.

In 1916 Jenkins helped found the Society of Motion Picture Engineers, later renamed the Society of Motion Picture and Television Engineers (SMPTE), and was elected as the organization's first president. The idea of visual transmission interested Jenkins many years before his first demonstrations of facsimile and television. In the July 1894 issue of Electrical Engineer he proposed a method for electrically transmitting pictures. In the September 1913 issue of Motion Picture News he proposed a mechanism for television.

Jenkins' initial target market for television was radio amateurs and experimenters. He expected this market to quickly grow as a larger public became interested in television. The Federal Radio Commission (FRC) issued the first experimental television station license in America to Jenkins in 1927 and this station, W3XK, began transmitting on 2 July 1928, with regular broadcasts of "radiomovies," television images of motion pictures, from Jenkins' facility near Washington, D.C. In addition, his company provided information and instructions on how to build television receivers. In December 1928 the Jenkins Television Corporation was founded in New Jersey to sell Jenkins television equipment and operate television stations to promote the sale of receivers to the public and equipment for experimenters and other experimental stations. By mid-1929 the Jenkins Television Corporation was marketing receivers, named Radiovisors, to pick up signals from its transmitters in Washington, D.C., and New Jersey. The receivers were designed for easy use by people in their homes. The devices initially utilized a compact spinning-drum scanning mechanism that conserved space, energy and weight. Unfortunately, picture quality was extremely limited making the reception of television little more than a "quickly tiresome novelty." By 1931 the Jenkins Television Corporation was offering both factory-built Radiovisors and do-it-yourself kits. Because of the high cost of Radiovisors during the Depression, the lessening interest in the limited program offerings, mediocre image quality, and the pending introduction of all-electronic television, sales dropped precipitously by the end of the year. To make matters worse, the Federal Radio Commission had disallowed the broadcast of advertisements on the air promoting Jenkins receivers and receiver kits.

In October 1929 DeForest Radio had acquired a majority interest in Jenkins Television. In March 1932, Jenkins Television was liquidated and its assets sold to DeForest Radio. Within months, DeForest Radio went into receivership and sold its assets, including its Jenkins holdings, to RCA which then discontinued the Jenkins television operation due to a notable lack of interest in, and support for, mechanical television. The limitations inherent in mechanical television's picture quality kept it from being able to compete with electronic scanning television systems and it was, therefore, deemed a failure and doomed to quick obsolescence in America. The Jenkins Laboratories in Washington, D.C., continued television research but closed in 1934 with the death of Jenkins.

Perhaps Jenkins was short sighted by concentrating on mechanical television and not moving ahead into electronic television. Perhaps he simply didn't have the financial backing to move in this direction. Today he has been almost forgotten by all but a few television historians. Yet in the United States he was responsible for the advent of television and was the first pioneer to make television a reality. He was responsible for creating a great interest in television and its future among experimenters, amateur radio enthusiasts, the public and business. He paved the way for television's future success helping provide the incentive for support of television experimentation by "big business" such as RCA's support of Vladimir K. Zworykin, Crocker and later Philco's support of Philo T. Farnsworth, and G.E.'s support of Ernst F. W. Alexander.

—Steve Runyon

CHARLES FRANCIS JENKINS. Born in Dayton, Ohio, U.S.A., 22 August 1867. Attended Earlham College, Richmond, Indiana. Married: Grace Love, 1902. Independent inventor, demonstrated the first practical motion picture projector,
1894; invented automobile with the engine in front instead of under the seat, 1898; designed an early sight-seeing bus, 1901; created an early automobile self-starter, 1911; developed significant improvements to the internal combustion engine, 1912; developed inventions in radiophotography, television, radiomovies, 1915-20; founded the Society of Motion Picture Engineers, 1916; research vice president of Jenkins Television Corporation, 1928. Member: National Aeronautical Association, American Automobile Association. Recipient: Franklin Institute and the City of Philadelphia medal. Died in Washington, D.C., U.S.A., 6 June 1934.

**JENNINGS, PETER**

U.S. Broadcast Journalist

Very few names in broadcast journalism are as recognizable as Peter Jennings. His father, Charles, was the most prominent radio announcer for the Canadian Broadcasting Corporation (CBC). Thus, it seems perhaps predictable that Peter Jennings would have his own successful career in the news industry.

Jennings was ten years old when he received his first anchor job for *Peter's Program*, a Saturday morning radio show which showcased young talent. As a student, he exhibited little interest in formal education. However, his interests and talent in the area of news would demonstrate his capacity and willingness to learn. He began his professional career as a disc jockey and news reporter for a small radio station in Brockton, Ontario, and like many reporters who achieve major success his opportunity to make a name for himself came with breaking news. In this case it was the story of a train wreck he covered for the CBC that brought attention. But the story got him a job with CTV, Canada's first private TV network, rather than with the public broadcaster. On CTV he was noticed by ABC News' Elmer Lower, who recognized Jennings' good looks and charm as elements that would sell to the American public. Shortly after, in 1964, Jennings joined ABC as an anchor for a 15-minute evening news segment.

A year later, in an unprecedented rise to the top, Jennings, at 27, became the youngest *ABC Evening News* anchor. His competition at the time—Walter Cronkite on CBS, and the team of Chet Huntley and David Brinkley on NBC—stood as the most credible anchors of their time. In this competitive environment, Jennings' was unable to break through and establish a strong share for ABC News. In 1968, he left the anchor desk and was sent to Rome to become a foreign correspondent and sharpen his reporting skills. Jennings was credited with establishing the first American television news bureau in the Middle East and served for seven years as ABC News bureau chief in Beirut, Lebanon. After

building a strong reputation for world-class reporting. Jennings was put back in an anchor position for A.M. America, the predecessor for Good Morning, America, where he delivered five-minute newscasts from Washington.

The experience and contacts in the Middle East paid off for Jennings. He established a reputation as Anwar Sadat’s favorite correspondent after completing a documentary on the Egyptian president and in 1977, when Egypt and Israel were about to make peace, Jennings was called to the scene. In 1978 he was the first U.S. reporter to interview the Ayatollah Khomeini, then in exile in Paris. When the Ayatollah came to power in Iran, Jennings was the first reporter to be granted an interview and accompanied the Ayatollah on the plane back to Iran.

Shortly after, on 10 July 1978, the first ABC World News Tonight aired. There Jennings was to become a star. His breadth of experience in national and international reporting served him well while he was a reporter for World News Tonight, and in 1983 he was named lead anchor.

During the late 1980s, Jennings anchored several highly acclaimed programs, including a live series called Capital to Capital, which broadcast communications between Soviet officials and members of the American Congress. News specials on political volatility in China, Iran, and the former Soviet Union also won praise. His contributions include a live, via-satellite, town hall meeting between American citizens and Soviet leaders Mikhail Gorbachev and Boris Yeltsin. This show, with its question and answer format, gave Americans unprecedented exposure to the Soviet leaders.

Although Jennings’ political reports have won him the most praise at World News Tonight, they do not stand alone. Jennings also anchors Peter Jennings Reporting. These one-hour, prime-time specials address important issues facing the nation and the world. He has explored issues ranging from abortion, gun-control, and rape to funding for the arts and Ross Perot’s presidential campaign. Jennings’ most recent accomplishments include a series of news reports for children. In 1994 he served as moderator of a special question-and-answer broadcast from the White House in which American children questioned President Clinton about issues important to their lives.

For his work, Jennings has won several Emmy and Overseas Press Club awards, and the prestigious Alfred I. duPont Columbia University Award for journalism. In 1989, a Time-Mirror poll found Jennings to be the most believable source of news. Jennings was also named “Best Anchor” by the Washington Journalism Review in 1988, 1989, 1990 and 1992.

THE JEWEL IN THE CROWN
British Serial Drama

The *Jewel in the Crown* is a fourteen-part serial produced by Granada Studios and first broadcast on British independent television in January 1984. A lavish prestige production, *Jewel in the Crown* received immediate critical acclaim going on to win several national and international awards and in the process confirming Britain's excellence in the field of television drama. As well as receiving critical attention the serial also proved popular with British audiences. The first run averaged 8 million viewers a week, a significant figure for a "quality" drama on British television.

Based on Paul Scott's *Raj Quartet*, four novels published between 1966 and 1975, the serial focuses on the final years of the British in India. Set against the backdrop of the second world war and using the rape of an English woman as its dramatic centre, *The Jewel in the Crown* charts a moment of crisis and change in British national history.

The serial should be seen in the context of a cycle of film and television productions which emerged during the first half of the 1980s and which seemed to indicate Britain's growing preoccupation with India, the Empire and a particular aspect of British cultural history. Notable examples from this cycle would include *A Passage to India* (1984), *Heat and Dust* (1982), and the television drama *The Far Pavilions* (1984). These fictions were produced during, and indeed reflected, a moment of crisis and change in British life: mass unemployment, the arrival of new social and class configurations tied to emerging political and economic trends all conspired to destabilise and recast notions of national and cultural identity in the early 1980s. While often critical of Britain's past, these fictions nevertheless permitted a nostalgic gaze back to a golden age, presenting a vision of Empire as something great and glorious. These fictions seemed to offer reassurance to the British public, as cultural fetish objects they helped negotiate and manage a moment of social and political upheaval.

If these fictions were ultimately reassuring for certain sections of the British public, then *Jewel in the Crown* has been seen by at least one commentator, Tana Wollen, to be the least nostalgic and most troubled text in the cycle. However, this "trouble" may have less to do with the serial's overt politics and more to do with its form and style. Paul Scott's *Raj Quartet* are fairly unconventional novels and were not wholly suited to the demands of serial form. Their use of multiple point of view and their elliptical, collage-like narratives were not easily adapted to a form based round linear progression, continuity of action and character and the promise of eventual narrative resolution.

The television adaptation was necessarily a more conventional rendering of the story, the narrative now flattened out and the events subjected to a more chronological ordering. Nevertheless, *Jewel in the Crown* managed to hold on to some of the formal complexity of the novels by employing voice-overs, flashbacks and newsreel inserts, techniques which tend to arrest narrative development giving the serial a heavy, ponderous quality. The adaptation, and Scott's novels, lacked the kind of character development and continuity that we have come to expect from the television serial. By the third episode the serial's central character Daphne Manners is killed off and only one character spans the whole fourteen episodes. This is the evil Ronald Merrick who dies in episode thirteen and only appears in the final

part through flashback. However, Jewel in the Crown managed to maintain continuity through a series of echoes and motifs: images of fire, the repetition of certain actions and events and the passing down of the lace Christening gown all helped to provide the serial with a formal cohesion that seemed to be lacking at the level of character and plot development. All in all, Jewel in the Crown proved to be a challenging text and demanded from its audience an unusually high degree of commitment and perseverance.

Although Jewel in the Crown was broadcast in 1984, with a repeat screening the following year, by the late 1980s the serial still had a high public profile as it became embroiled in debates about television, quality and the future of British broadcasting. This debate followed legislation calling for the deregulation of the British airwaves which in turn kindled anxieties concerning the fate of public service and quality television. In this debate, as Charlotte Brunsdon has pointed out, Jewel in the Crown, along with Brideshead Revisited, came to represent the "acme of British quality". Elsewhere, Jewel in the Crown was being held up as the epitome of excellence. In 1990 the serial was screened at the National Film Theatre as part of a season called "Good-by to all this". Here Jewel in the Crown was described as the "title everyone reaches for when asked for a definition of quality television". Jewel in the Crown came to represent what was at stake in the deregulation of the British airwaves. It articulated fears over what could be lost in the transition from a regulated, public service tradition in broadcasting to a more commercial, market-led system. Increasingly, Jewel in the Crown was coming to represent the golden days of pre-deregulation quality television.

This serial, then, had originally emerged as part of a cycle of texts dealing with anxieties over national identity. At a moment of radical change in British life these texts may have offered us a nostalgic vision of a glorious past. By the late 1980s the serial was referring to a more immediate past and a cultural identity bound to a broadcasting tradition of public service and quality drama. In both cases Jewel in the Crown has been able to articulate and represent the anxieties and the sense of loss felt by sections of the British public who were faced with the decline of a particular idea of national and cultural identity.

JOHNSON, LAMONT
U.S. Director

Lamont Johnson is an actors’ director who’s also a director’s director. Acclaimed, respected, and superbly consistent, he is television’s answer to William Wyler. Between his 1964 Emmy nomination and Directors Guild of America (DGA) Award for a Profiles in Courage episode ("The Oscar Underwood Story") and his 1992 Emmy nomination for the real-life disaster film Crash Landing, he amassed 11 Emmy nominations (winning in 1985 for Wallenberg: A Hero’s Story and in 1988 for Gore Vidal’s Lincoln) and eight DGA nominations (winning four, plus a special award as the "Most Outstanding TV Director of 1972"). Although he’s racked up admirable big-screen credits, too, such as The Last American Hero (a 1973 movie based on Tom Wolfe’s profile of a stock-car racing champion, “The Last American Hero is Junior Johnson. Yes!”), television is the medium that has allowed him the most room to flex his creative muscles. His video credits list contains character portraits, period epics, theater pieces, and docudramas.

Employing what he learned in theater, radio, live TV, and feature films, he imbues his TV movies with dramatic briskness and invention, vital sound, and visual dimension. But his distinctive humane touch derives from his feeling for performers, who in some way become his true subject. Each year brings new additions to his gallery of unforgettable figures, from John

Gifted with a “roaring bass voice,” Johnson turned pro as a radio actor at age 16, and financed his college education as a broadcast performer, news announcer and disc jockey. After student theater experience (such as directing a production of *Liliom* in a women’s gym), he moved from Los Angeles to New York with the aim of acting on the stage. He became a mainstay of radio soap operas and a Broadway understudy; on a USO tour through Europe he befriended Gertrude Stein, who gave him rights to her play, *Yes Is for a Very Young Man*. His first professional directing job was to mount it, in 1948, at Off Broadway’s Cherry Lane Theater, with a cast that boasted Anthony Franciosa, Gene Saks, Michael V. Gazzo, Bea Arthur, and Kim Stanley.

Although he swore off directing after that—he couldn’t bear the role of referee—he came under its spell for good while acting for such broadcast luminaries as John Frankenheimer, Sidney Lumet, and Jack Smight. In 1955, Johnson made his TV directorial debut guiding Richard Boone through an adaptation of *Wuthering Heights* for the hour-long live drama series, *Matinee Theater*. (Johnson ended up doing twenty-eight of those shows in two years.) In 1958, Boone gave Johnson the opportunity to break into filmed TV when the star insisted that Johnson be hired for six episodes of the second season of his hit western, *Have Gun, Will Travel*. In the late 1950s and early 1960s Johnson went on to direct popular and innovative dramatic series such as *Peter Gunn*, *Naked City*, and *The Defenders*. He did a fistful of episodes for *The Twilight Zone*, including "Kick the Can" (which Steven Spielberg remade in his *The Twilight Zone: The Movie*).

But it was a trio of collaborations with the producing-writing team of Richard Levinson and William Link that cemented his place in broadcast history. Levinson and Link smartly emphasized the plight of individuals while blazing trails in TV movies’ depictions of race relations (My *Sweet Charlie*, 1970), homosexuality (*That Certain Summer*, 1972), and American military conduct (*The Execution of Private Slovik*, 1974). Coming fully into his own as a director, Johnson shaped performances with an emotional combustion to match the script’s social conflagrations. Working on location whenever possible, he brewed alive and unpredictable atmospheres. It’s rare to remember character bits and mood points from what are usually called "message movies." But what springs to mind from *My Sweet Charlie* is the edgy sheepishness of the fugitive Northern black lawyer, Al Freeman, Jr., as he tries to persuade the pregnant Southern runaway (played by Patty Duke) that he can impersonate a down-home black man. From *That Certain Summer*, one recalls the uncomfortable-looking figures of the gay hero, Hal Holbrook, and his teenage son, Scott Jacoby, as the father struggles to explain his lifestyle on a three-minute downhill walk. Picture *The Execution of Private Slovik*—the first docudrama TV movie—and a different trek pops into memory: the penetratively sad, snowballed death march for the only U.S. soldier to be executed for desertion after the Civil War. Though the writers received the lion’s share of attention, and the scripts were solid and sensitive, Johnson’s direction was the most artistic aspect of these ambitious projects, lending them delicacy as well as poignance. In the capper to this spate of TV productivity, his 1975 *Fear on Trial* (based on a David W. Rintels script), Johnson’s evocation of a frigid 1950s New York City winter overpowered the screenplay’s conventional, simplistic anti-blacklisting theatrics; it looked as if the Cold War itself had set the city’s temperature.

Johnson did astonishing work while constantly shuttling among media from the mid-1970s to the mid-1980s. In 1980 two of his favorite TV productions premiered. The first, *Paul’s Case*, a 52-minute-long drama for the PBS *American Short Story* series (shot in ten days on a $180,000 budget), is a powerful, peculiar American tragedy about the downfall of a fragile escapist. Following Willa Cather’s
original story to the letter, Johnson led Eric Roberts to his best performance—he's splendidly off-kilter as a high-school boy in 1905 Pittsburgh who's too far into his dream world of glamour and theatricality to come out of it alive. Johnson's TV-movie Off the Minnesota Strip, which aired just three months later, is a revelation of a contemporary adolescent limbo, with Mare Winningham, as a teenage hooker, brilliantly conveying the interlocking social and sexual pressures that trap teenagers into self-destructive fantasies of "making it." Around the same time as these TV milestones, Johnson completed one of his finest feature films, Cattle Annie and Little Britches (not released until 1981), an offbeat western that explored Americans' need for pop mythology and turned the adventures of its young pulp heroines (stunningly played by Diane Lane and Amanda Plummer) into coming-of-age action poetry.

Pulling off three wildly different projects in a year would be admirable for the resident director of a repertory company or an anthology series; to do it by leap-frogging the worlds of network TV, PBS, and independent filmmaking would seem a feat. But not for Johnson. He's nurtured a robust, sane creativity by approaching the theatrical arts as a continuum—and creating an emotional spectrum that retains its intensity whether projected on a movie screen or transmitted via satellite and cable.

—Mike Sragow

LAMONT JOHNSON. Born in Stockton, California, U.S.A., 30 September 1922. Educated at the University of California, Los Angeles, 1942-43; studied at Neighborhood Playhouse School of the Theatre. Married: Toni Merrill, 1945, children: Jeremy, Carolyn, Christopher Anthony. Stage producer and director, since 1948; founded UCLA Theater Group (now Centre Theater Group), 1959; television director, since 1950s; film director, since 1961. Recipient: numerous Screen Director's Guild Television awards; numerous Emmy Awards.

**JONES, QUINCY**

U.S. Musician/Producer

Quincy Jones’ long career as a music composer lends insight into popular music’s influence on the television and film media. In 1951, a teenager Jones began working as a trumpet player and arranger for Lionel Hampton. During his early career, he played with some of the best-known names in black bebop and jazz, performers such as Count Basie, Clark Terry, Ray Charles, Billy Eckstine, Dizzy Gillespie, and Sarah Vaughan. He toured Europe, the Middle East and South Africa during the 1950s. In 1957, he studied in Paris with Nadia Boulanger. During this period he also became a major publisher of music.

However, failed business ventures in 1959 forced him to sell his music publishing catalogue. Jones overcame this major financial setback by working as an executive at A and M Records and by working as an arranger for Dinah Washington in New York City. He became vice president of Mercury Records in 1964, the first African-American executive at a major record label.

In 1961, *Jet* magazine, a weekly entertainment periodical directed to an African-American readership, awarded him the title of best arranger and composer. But despite honors from his African-American community and excellent critical reviews, Jones recognized that jazz music was not earning high record sales. He decided then to produce more commercial songs. In 1963, he branched out to develop the talent of a white teenage singer, Lesley Gore, with whom he recorded the pop hit “It’s My Party.” Jones continued to work with talented white artists such as Frank Sinatra for whom he conducted and arranged *Sinatra: Live in Las Vegas at the Sands with Count Basie* (1966). By adapting to technological changes that gave more control to engineers and producers, Jones achieved commercial success in the music recording industry during the 1960s. Yet, he still desired to compose scores for motion pictures and his success allowed him to pursue the small openings in media industries previously closed to African-American artists.

After Jones scored his first film *The Boy in the Tree* (1960), he scored *The Paumbroker* (1965) for director Sidney Lumet. His first major Hollywood contract was with Universal Pictures. Jones became an African-American pioneer in film and television industries during the late 1960s, and he had few black colleagues. But television news reports were increasingly presenting images of America facing racial conflict. Amidst the struggle for civil rights, Jones worked in Hollywood to help destroy the negative stereotypes of African Americans. In 1965, he was hired to score the film *Mirage*, starring Gregory Peck and he scored *In the Heat of
the Night (1967), starring a top box-office star of the era, Sidney Poitier.

In 1967, Jones scored the pilot and eight episodes of the dramatic television series Ironside. In creating the Ironside theme, he was the first composer to utilize a synthesizer in the arrangement of a television score. During the same year he composed the theme to the television movie Split Second to an Epitaph. Jones also wrote the theme song for Bill Cosby's first situation comedy, The Bill Cosby Show (NBC 1970) and went on to score 56 episodes.

In a brief two-week period between film and television scores, Jones returned to record making with the jazz album, Walking. The album won a Grammy as Best Jazz Performance by a large group in 1969.

In 1972, Jones wrote the theme to the NBC Mystery Movie series and his momentum in the television industry continued to grow. During the same year, he scored 26 episodes of The Bill Cosby Variety Series, and in 1973, he composed the theme to the comedy program Sanford and Son, starring comedian Redd Foxx.

In 1974, soon after his Body Heat album reached the top of the music charts, Jones suffered from health problems. A brain aneurysm required two surgical procedures and he had to stop playing the trumpet.

After a four-year hiatus, during which he concentrated on his own music productions, Jones returned to television in 1977 to score the ABC miniseries, Roots, one of the highest rated programs in television history. His score accented the exploration of African chants and rhythms as indigenous to American culture and garnered Jones an Emmy Award. Coinciding with this success in television, he scored The Wiz (1978), a Universal Pictures all-black version of The Wizard of Oz, starring Diana Ross and Michael Jackson.

From the time between 1963, when Jones entered the Hollywood film industry as a film composer, and 1990, he had earned thirty-eight film credits. Most notably, he co-produced the critically acclaimed film The Color Purple (1985) with director Steven Spielberg. In 1994, Jones was honored with an Academy Award for his achievements in the film industry.

Despite his success in television and film, Jones never lost interest in spotting talent in black music. During the 1970s, he continued to cultivate new performers in this arena. He created technically advanced, funk-influenced albums for the Brothers Johnson, Chaka Kahn and Rufus. In 1977, he produced Michael Jackson's Off the Wall album, which succeeded in selling seven million albums—before the invention of MTV. His record-breaking pop album Thriller, for Michael Jackson in 1984, became a musical landmark.

In 1981, Jones left A and M and formed his own Qwest label at Warner Brothers. The Qwest label produced hits for Patty Austin and James Ingram and captured Lena Horne's performance on Broadway; these recording projects earned him Grammy awards. In 1985, Jones produced the all-star recording of "We Are the World," to help performer Harry Belafonte realize a charity drive to raise world awareness of famine. From the song's popular music video, Jones became a recognizable face to the general public. He raised money for Jesse Jackson's historic run for the Democratic Presidential nomination in 1988 and produced The Jesse Jackson Show in 1990, granting a forum to a high-profile black figure in U.S. politics.

Jones also discovered a larger television audience by producing situation comedies. In 1990, Fresh Prince of Bel-Air premiered, starring a popular rap artist, Will Smith, to become a highly rated program on NBC. In 1990, Jones formed the multi-media entertainment organization, Quincy Jones Entertainment Company and Quincy Jones Broadcasting, to acquire television and radio properties. In 1995, Jones hoped to repeat his television success with the situation comedy, In the House, starring Debbie Allen and rap artist L.L. Cool J.

While overcoming racial barriers and redefining several genres in music composition, Quincy Jones' creative persistence in the music business helped to maneuver black music across the color line of the musical mainstream and into every form of media expression. Jones' body of work spans five decades and opened the door for the growth of successful black entrepreneurs in television, film and music. Since Miles Davis' death, many critics cite Quincy Jones as the only remaining figure from the bebop era who has stayed contemporary and whose work continues to have an impact on these three closely integrated media industries.

JULIA

U.S. Domestic Comedy

Julia, a half-hour comedy premiering on NBC in September 1968, was an example of American network television's attempt to address race issues during a period of heightened activism and turmoil over the position of African-Americans in U.S. society. The series was the first to star a black performer in the leading role since Beulah, Amos 'n' Andy, and The Nat "King" Cole Show all left the air in the early and mid-1950s. By the mid-1960s, a number of prime-time series began featuring blacks in supporting roles, but industry fears of mostly southern racial sensibilities discouraged any bold action by the networks to more fully represent African-Americans in entertainment television. Series creator, Hal Kanter, a Hollywood liberal and broadcasting veteran whose credits included writing for the Beulah radio show in the 1940s, initiated Julia's challenge to what remained of television's colour bar. Kanter had attended a luncheon organized by the National Association for the Advancement of Colored People (NAACP) and been inspired enough to propose the project to NBC. The network agreed to run the show, but programmers did not expect it to do well since it was scheduled opposite the hugely popular Red Skelton Show. The show proved to be a surprise hit, however, jumping into the top ten list of most watched programs during its first year, and continuing to be moderately successful during its remaining two seasons on the air.

The series revolved around the lives of Julia Baker, (Diahann Carroll) a widowed black nurse, and her young son, Corey (Marc Copage). Julia's husband had been killed in a helicopter crash in Vietnam, and the series began with the now fatherless Baker family moving into an integrated apartment building in Los Angeles while Julia secured employment at the medical offices of Astrospce Industries. She worked with a gruff but lovable elderly white physician, Dr. Chegley (Lloyd Nolan), and a homely but spirited white nurse, Hannah Yarby. Julia's closest friends were her white neighbors, the Waggedorns—Marie, a scatter-brained housewife; Len, a police officer; and Earl J. Waggedorn, their son and Corey's pal. While Julia lived in an almost exclusively white environment, she managed to find a series of impeccably refined African-American boyfriends. Paul Winfield played one of her more long-standing romantic partners. Performed with elegance and dignity by Carroll, Julia represented a completely assimilated—and thoroughly non-stereotyped—African-American image to prime-time viewers.

FILMS

FURTHER READING

Julia's unthreatening respectability served as the basis for a great deal of heated debate during the series' initial run. In the midst of growing political militancy among many African-Americans, some critics accused the show of presenting Julia as a "white Negro." Nothing in the Bakers' lives indicated that they were in any way connected to the rich tradition of black culture and history. Neither Julia nor Corey was ever the victim of racism. However, Hal Kanter emphasized that the show did attempt to emphasize the more "humorous aspects" of prejudice and discrimination, while focusing on how the black characters attempted "to enjoy the American dream." Humorous situations dealing with race tended to work to defuse anxieties about racial difference. For instance, in her initial telephone interview with Dr. Chegley in the series' pilot, Julia mentions that she is black. Chegley deadpans: "Have you always been black—or are you just being fashionable?" When little Earl J. Waggedorn sees Corey's mother for the first time, he points out, "Hey, your mother's colored." Corey replies, matter-of-factly, "Yeah, so am I." To which Earl responds: "You are!"

The show was also criticized for presenting no male head of the family. While the Bakers were emphatically middle-class, living in a beautifully appointed apartment rather lavish for a nurse's salary, the fact that an unattached black mother ran the family appeared to perpetuate stereotypes about a "black matriarchy" in which black men had no place. A recurring problem in the Baker household was who would care for Corey while Julia was at work. Several episodes dealt with Julia's dilemma in securing a mother's helper. Unwittingly and quite unself-reflexively, the show was echoing a painful aspect of the history of black women, many of whom had to leave their children unattended while they went off to care for white children and work as domestics in white establishments.

While these depictions of race relations generated objections, they also elicited praise from critics and viewers. *Ebony*, a mass circulation magazine targeted at a middle-class black readership, lauded the series for giving viewers an alternative to the steady diet of ghetto riot images of blacks so pervasive on news programming. The show was also commended for representing black characters who were not thoroughly and exclusively defined by race.

*Julia* was an important moment in American broadcasting history as television programmers struggled to find a way to introduce African-Americans into entertainment formats without relying on objectionable old stereotypes, but also without creating images that might challenge or discomfort white audiences.

JULIEN, ISAAC
British Filmmaker

Isaac Julien is one of Britain's most innovative and provocative filmmakers. Born in 1960, he came from a black, working-class, East London background. Julien studied painting and film at St. Martin’s School of Art in London. He was both writer and director for Who Killed Colin Roach?, a 1983 documentary about the controversial death of a young black man while in police custody. This was followed by Territories in 1984, an experimental video that examined policing at London’s Notting Hill Carnival.

A co-founder of Sankofa Film and Video, a pioneering group of young black British filmmakers, Julien has collaborated with them on several ground-breaking, radical dramas for film and television since the mid-1980s. With Sankofa, Julien co-wrote and co-directed The Passion of Remembrance in 1986, an ambitious feature film drama which offered a fresh and revealing look at black feminism and black gay politics. There followed the award-winning short film, Looking for Langston, in 1988. Set in Harlem in the 1920s, this homoerotic, hauntingly beautiful study of the black gay American poet, Langston Hughes, cleverly blended his words with those of the contemporary black gay poet Essex Hemphill. Looking for Langston received the Golden Teddy Bear for Best Gay Film at the Berlin Film Festival, and was shown in Channel Four’s ground-breaking lesbian and gay television series Out on Tuesday in 1989.

In 1991, Julien directed Young Soul Rebels, a seductive, engaging and challenging feature film drama set in 1977, the year of Queen Elizabeth II’s Silver Jubilee. Once again Julien explored sexual and racial identities in a provocative way, and walked off with the Cannes Film Festival’s Critics’ Week prize.

In 1991, Julien was interviewed with other young black gay filmmakers in Some of My Best Friends, one of the programmes featured in BBC television’s Saturday Night Out, an evening of programmes devoted to lesbian and gay viewers. The following year he directed Black and White in Colour, a two-part documentary for BBC television which traced the history of black people in British television from the 1930s to the 1990s. Using archival footage and interviews with such black participants as Elisabeth Welch, Norman Beaton, Carmen Munroe and Lenny Henry, Black and White in Colour was well received by the critics. It was also nominated for the British Film Institute’s Archival Achievement Award, and the Commission for Racial Equality’s Race in the Media Award.

Since making Black and White in Colour, Julien has directed a short film, The Attendant, and The Dark Side of Black (1994), an edition of BBC television’s Arena series. This compelling documentary examined the social, cultural and political influences of rap and reggae music, with particular emphasis on its growing homophobic content.

JUNEAU, PIERRE
Canadian Media Executive

Pierre Juneau has held virtually every important position in the Canadian broadcasting hierarchy. His long career is characterized by a sustained commitment to the principles of public broadcasting and ownership.

In 1949, Juneau joined the National Film Board of Canada (NFBC) as the Montreal district representative. Throughout the 1950s he became in turn the Quebec assistant regional supervisor, the chief of international distribution, the assistant head of the European office, the NFBC secretary, and in 1964, the director of French-language production. He also pursued film interests only secondarily related to his official position. In 1959, Juneau co-founded the Montreal International Film Festival and served as its president until 1968.

In 1966, Juneau left the NFBC to become vice-chair of the Board of Broadcast Governors (BBG), the federal broadcast regulatory agency. In 1968, Parliament enacted a new Broadcasting Act which replaced the BBG with the Canadian Radio-Television Commission (CRTC) and Juneau was named its first chair, a position he held until 1975. As CRTC chair, Juneau is best remembered for promoting Canadian content regulations in both radio and television, as well as in the growing medium of cable. The regulations, soon called “Cancon”, helped create a permanent domestic market for Canadian music and television. They stipulate percentages of overall air time and specific time slots which must be devoted to material produced or performed by Canadians. They met with widespread public support and their principle remains essentially unchanged to the present day. Indeed, in 1971, the Canadian Academy of Recording Arts and Sciences (CARAS) named its annual ceremony the “Juno Awards” as a gesture towards both the CRTC chair and the Roman goddess.

In 1975, Liberal Prime Minister Pierre Trudeau appointed Juneau minister of communication, but he was defeated in the by-election of that year and resigned from the post. In 1978, still under Trudeau, he became Under-secretary of State and in 1980 deputy minister of communication. Trudeau appointed Juneau to a seven-year term as president of the Canadian Broadcasting Corporation (CBC) in 1982. These proved to be turbulent times, however, as the Trudeau government was defeated by the Conservative Party of Prime Minister Brian Mulroney. Although the CBC president enjoys an “arm’s length” relationship with the government, relations between Juneau, who was closely identified with the Trudeau Liberals, and the new government became strained as increasingly severe budget cuts were imposed upon the CBC. In 1988, the Mulroney government also revised the Broadcasting Act. It foresaw that Juneau’s position would be split between a part-time president and a full-time chair, a move Juneau opposed. Simultaneously, throughout the 1980s, new television services were launched and the CBC’s audience share declined. Juneau defended both the ideal and the practical reality of public broadcasting and stated his intention to raise to 95% the amount of Canadian content on the CBC. Furthermore, in 1988 and 1989, he oversaw the launch of the CBC’s all-news cable channel, Newsworld, on which he appeared as the first speaker on the last day of his mandate.

Like CBC presidents before him, Juneau campaigned for operating budgets, controlled by Parliament, covering five-year rather than one-year periods, and refused to relinquish advertising revenue so long as Parliament declined to cover all expenses. Under Juneau, the CBC on both its French- and English-language networks consolidated its reputation for news and public affairs, increased its Canadian content, brought in a new head of English-language programming, Ivan Fecan, and shifted towards independently-produced dramatic content. In the 1980s, the CBC also scored some of its highest ratings successes ever. However, its dependence upon advertising revenue became more acute and its audience share fell. In 1994, Juneau was appointed to head a government enquiry into the future of the CBC.

KATE AND ALLIE
U.S. Domestic Comedy

Kate and Allie, which ran on CBS from 19 March 1984 to 22 May 1989, was the brainchild of Sherry Coben who came up with the idea for the series while attending a high school reunion. There she noticed that a couple of divorcees, who seemed unhappy and dissatisfied, found comfort in sharing with each other. Coben worked with this germinal notion and successfully pitched the resulting script, originally entitled, “Two Mommies,” to Michael Ogiens, then head of New York program development at CBS. Ogiens liked the script because it contained fresh material that dealt with a real issue of the day—single parenthood.

The next step in the series’ genesis was the location of actresses for the central roles. Susan St. James was, at the time, under contract to CBS. Though she was best known for romantic comedy, she liked the script and the part of Kate McArdle but stipulated her demands—production before a live audience and a New York shooting location. St. James’ close friend Jane Curtin was soon convinced to accept the part of Allie Lowell. Producer-director-writer Bill Persky agreed to produce and direct six episodes, without committing to an entire series. He also insisted that Bob Randall be brought on board as producer-writer and supervisor. Reeves Communications, with executive producers, Mort Lachman and Merrill Grant, undertook production of Kate and Allie, and the series debuted with a script by Coben which sets the series’ premise: two divorced women who have known one another since childhood decide to move in together and raise their three children as a family unit—at least temporarily.

Kate and Allie was an instant success, ranking fourth the week it debuted, garnering consistently high ratings thereafter, and earning Jane Curtin two consecutive Emmys and Bill Persky, one. The characters and the issues they dealt with obviously appealed to the program’s audience.

St. James’ character, Kate, is a woman recently divorced from her unstable and somewhat flighty part-time actor husband, Max. She has one daughter, 14-year-old Emma (Ari Meyers). Curtin’s Allie is also recently divorced from her successful, but unfaithful doctor husband, Charles. She has a 14-year-old daughter Jennie (Allison Smith) and a 7-year-old son, Chip (Frederick Koehler). Neither Kate nor Allie have ruled out remarriage but view their new situation as a provisional reprieve, a time for both women to come to know and appreciate themselves. On one level the series dealt with practical problems faced by divorced women with children: adjusting to a new lifestyle and to living closely with new people, dealing with children’s issues, beginning to date again, securing financial stability.

On another level, however, the series deals with the larger issue of gender identity at a time when gender roles were in transition. Allie Lowell has submerged her own identity in that of her husband and most of the series’ trajectory tracks her journey toward autonomy. Kate McArdle, on the other hand, has a stronger sense of her own identity, but must constantly struggle for equality at work and for the assurance that her goals will be respected in any love relationship.

Key to the series’ notion of women’s development is same-sex friendship, and each episode is narratively structured to highlight the long-term, supportive friendship bet-
between the two main characters. Episodes begin with a conversation between Kate and Allie designed to enhance the audience's understanding of both women or to provide backstory. Similarly, each episode ends with Kate and Allie discussing and bringing closure to the events just depicted. Their verbal intimacy both reflects and heightens their sustaining friendship. As the series evolved, the same kind of supportive friendship developed between the two daughters who initially disliked being forced together.

After directing one hundred episodes and having Allie accept the wedding proposal of likable character Bob Barsky, Bill Persky left the series, feeling that *Kate and Allie* had now fulfilled its premise. The needed respite had worked for Allie, who was now able to enter a meaningful heterosexual relationship as a fully autonomous individual, sure of herself and of her own goals. While Kate still had not met a man whose life goals matched her own, she and Allie owned a successful business, and the audience was sure that she would not succumb to a marriage which downplayed her personal desires.

Despite these developments, the series continued. Linda Day became the director with Anne Flett and Chuck Ranberg as producers, but the new team did not meet with the same success as had the first. The decline of *Kate and Allie* illustrates an interesting aspect of television's capabilities in combining socio-cultural issues with particular narrative strategies. With the series' premise fulfilled, plots lacked the same objective and lost the relevance and vitality of earlier episodes. In part to address this situation, early in the new season the writers created a device to bring the two women together again: Kate moved out of the old apartment and in with Allie and Bob—who accepted a sportscasting job that would take him away on weekends. By this time, however, Emma was out of the series, ostensibly away studying, and though Jennie remained an active and visible character, she too had moved out of the household to live in a university dorm. The friendship between Kate and Allie lost its earlier dynamism now that Allie was married. Kate appeared as an intruder into the household rather than a necessary part of it. Even though the series had not "solved" the social problems it addressed, its creators and performers had moved the main characters into a narrative situation that no longer seemed a workable fiction. After its sixth season, the series was not renewed.

—Christine R. Catron

**KEESHAN, BOB**

U.S. Children's Television Performer

Bob Keeshan is the actor and producer responsible for the success of the long-running children's program, *Captain Kangaroo*. As the easy-going captain with his big pockets and his bushy mustache, Keeshan lured children into close engagement with literature, science, and especially music, adopting an approach which mixed pleasure and pedagogy. Children learned most easily, he argued, when information and knowledge became a source of delight.
Keeshan's approach represented a rejection of pressures towards the increased commercialization of children's programming as well as a toning-down of the high volume, slapstick style associated with earlier kids' show hosts, such as Pinky Lee, Soupy Sales and Howdy Doody's Buffalo Bob.

Keeshan was working as a receptionist at NBC-Radio's Manhattan office when Bob Smith started offering him small acting parts on his NBC-TV show, Triple B Ranch, and then, subsequently, hired him as a special assistant for The Howdy Doody Show. Though Keeshan's initial responsibilities involved supervising props and talking to the children who were to be program guests, he was soon pulled on camera, bringing out prizes. After appearing in clown garb on one episode to immense response, he took on the regular role of Clarabell, the mute clown who communicated by honking a horn. Leaving the series in 1952, he played a succession of other clown characters, such as Corny, the host of WABC-TV's Time For Fun, a noontime cartoon program, where he exerted pressure to remove from airplay cartoons he felt were too violent or perpetuated racial stereotyping. While at WABC-TV, he played an Alpine toymaker on Tinker's Workshop, an early morning program, which served as the prototype for Captain Kangaroo.

The CBS network was searching for innovative new approaches to children's programming and approved the Kangaroo series submitted by Keeshan and long-time friend Jack Miller. The series first aired in October 1955 and continued until 1985, making it the longest running children's series in network history. Keeshan not only vividly embodied the captain, the friendly host of the Treasure House, but also played a central creative role on the daily series, supervising and actively contributing to the scripts and insuring the program's conformity to his conceptions of appropriate children's entertainment. Through encounters with Mr. Green Jeans and his menagerie of domestic animals, with the poetry-creating Grandfather Clock, the greedy Bunny Rabbit, the punning trickster Mr. Moose, and the musically-inclined Dancing Bear, the captain opened several generations of children to the pleasures of learning. Unlike many other children's programs, Captain Kangaroo was not filmed before a studio audience and did not include children in its cast. Keeshan wanted nothing that would come between him and the children in his television audience and so spoke directly to the camera. He also personally supervised which commercials could air on the program, and promoted products, such as Play-Dough and Eich-a-Sketch, which he saw as facilitating creative play, while avoiding those he felt purely exploitative.

As his program's popularity grew, Keeshan took on an increasingly public role as an advocate for children, writing a regular column about children and television for McCall's and occasional articles for Good Housekeeping, Parade, and other publications. Keeshan wrote original children's books (as well as those tied to the Kangaroo program) and recorded a series of records designed to introduce children to classical and jazz music. He appeared at "tiny tot" concerts given by symphony

orchestras in more than 50 cities, offering playful introductions to the musical instruments and the pleasure of good listening.

After his retirement, Keeshan became an active lobbyist on behalf of children's issues and in favor of tighter controls over the tobacco industry. A sharp critic of contemporary children's television, Keeshan is currently making efforts to get a new version of Captain Kangaroo onto the air, but since he does not own the rights to the character, there is some possibility that the captain may be recast.

KENDAL, FELICITY

British Actor

Felicity Kendal first emerged as a favourite actor in British situation comedy in the 1970s and went on to vary her repertoire with television dramas, films, and stage plays with considerable success. She spent her childhood in India and had an early introduction to the theatre on tour with the Shakespearean company run by her parents, both established theatrical performers. She made her debut on the London stage in 1967 and subsequently confirmed her reputation as a popular stage star with appearances in such plays as Alan Ayckbourn’s The Norman Conquests (1974), Michael Frayn’s Clouds (1978), Peter Shaffer’s Amadeus (1979), Tom Stoppard’s Haygadd (1988), and Chekhov’s Ivanov (1989), for which she won the London Evening Standard Best Actress Award.

Kendal’s theatrical links secured for her a first television role in The Mayfly and the Frog, which starred John Gielgud, and she made a good impression in supporting roles in such subsequent productions as Man in a Suitcase, The Woodlanders, The Persuaders, Edward VII, and Home and Beauty, among others. Producers liked her girlish good looks and bubbly confidence and audiences also quickly warmed to her.

Kendal’s whimsical, puckish charm and endearing good-humoured outlook made her ideal for the role that was destined to establish her as a television star—that of Barbara Good in the BBC’s The Good Life, in which she partnered Richard Briers as a suburban couple determined to lead a life of independent self-sufficiency. Loyal to the point of lunacy, and ever-fetching even in mud-stained jeans and knotted headscarf, she won universal praise as the pert and long-suffering young wife of Briers, striving to understand the frustrations of her wayward cereal designer-turned-smallholder husband as he painfully sought to put some meaning back into his life by turning their Surbiton house and garden into a small-scale farm. The accessibility of the central characters, perfectly played by Briers and Kendal, with Paul Eddington and Penelope Keith as their neighbours the Leadbeaters, ensured stardom for all four of them and a lasting place in
public affections. As a direct result of the programme’s success, the number of smallholdings in Britain shot up to a record 51,000 by 1980.

After four seasons of The Good Life, the way was open for the four performers to develop their own solo careers. Kendal herself was showcased in two further sitcoms that centred around her alone. In Carla Lane’s Solo she returned to the theme of self-sufficiency, playing Gemma Palmer, a vulnerable but resolutely independent 30-year-old woman who throws out her faithless boyfriend and gives up her job in an attempt to reassert control of her life. In The Mistress, a rather more controversial sitcom also written by Lane, she was florist Maxine, trying to cope with the guilt and confusions involved in carrying on an affair with the married Luke Mansel (played by Jack Galloway). Some viewers disliked this last series, objecting to the girlish and rather innocent Felicity Kendal they remembered from The Good Life wrestling with such a dubious issue as adultery as she awaited her lover in her cosy pink flat, in the company of her pet rabbits, and pondered how to keep the affair secret from Luke’s suspicious wife (played by Jane Asher).

Always an intelligent and sensitive actor, Kendal has been by no means confined to sitcoms, however. By way of contrast, in 1978 she played Dorothy Wordsworth in Ken Russell’s biopic Clouds of Glory and later on she appeared with success in the miniseries The Camomile Lawn. In Honey for Tea, she was back in more familiar sitcom territory, playing American widow Nancy Belasco.

STAGE
KENNEDY, GRAHAM

Australian Comedian/Host

In 1956, just in time for the Melbourne Olympics, Australian television began on Network Nine, destined to be the nation’s most successful popular network. A year later, also on Network Nine, the long-running variety show, *In Melbourne Tonight*, also began and soon became immensely popular. So too did the host of the show, Graham Kennedy, who became that classic icon, a household word. He was the king of comedy, the recognised successor to Australia’s previous comic king and lord of misrule, Roy Rene (Mo), whose stage had been vaudeville and radio from the 1920s to the late 1940s. With *In Melbourne Tonight*, Kennedy adapted for television Australia’s rich history of very risqué music hall, vaudeville, and variety. *In Melbourne Tonight* included musical acts, game segments, burlesques of ads, and sketches, including “The Wilsons.” In this segment, perhaps reminiscent of *The Honeymooners* skits on early 1950s American television, Graham played a dirty old man, married to his Joyce, carnivailing marriage as comic disaster.

After some 15 years of *In Melbourne Tonight*, Kennedy’s TV shows and appearances became more occasional. In the middle 1970s he was host of *Blankety Blanks*, a variety quiz show that parodied other quiz shows. On *Blankety Blanks*, contestants would be asked to provide a reply which matched the responses offered by a panel of celebrities; there was no “true” answer, only answers that matched, as Kennedy would occasionally remind viewers amidst the mayhem and clowning. The program tended to go sideways into nonsense and fooling, rather than go straight ahead as in a quiz “race.” In the late 1980s, Kennedy was host of *Graham Kennedy Coast to Coast*, an innovative late night program (10:30 to 11:30 P.M.) that mixed news, accompanied by its conventions of seriousness and frequent urgency, with comic traditions drawn from centuries of carnival and vaudeville, a hybridising of genres usually considered incompatible.

Kennedy’s humour was saturated with self-reflexivity. On *Blankety Blanks* he insulted the producer, chided the crew, complained about the format of the show, and chaffed with the audience. He made jokes about the props he had to use, or the young lad called Peter behind the set whose task was to pull something. He was addressed by Kennedy as Peter the Phantom Puller, and frequently instructed to, “Pull it, Peter.” On *Graham Kennedy Coast to Coast* he continued to make comedy out of self-reflexivity. At various times he showed how he could keep out words with a device on the desk in front of him. He demonstrated the cue system, and revealed the cue words themselves. He discussed his smoking problem, announcing that he was a chain smoker, and though he wasn’t supposed to puff on it in front of viewers, he held a lighted cigarette just below his desk. He presented ads, making fun of the product, revealing how much the station received for them. He showed a tiny new camera, and what it could do, and invited the audience to ring in with suggestions for how he should use it. Every night he read out telephone calls resulting from the previous night’s show, some registering their disgust with his extremely “crude”—grotesque bodily—jokes.

Everything—the studio, the situation of sitting in front of cameras and dealing with a producer, the off-screen personalities of his straight men (Ken Sutcliffe, a sports compere, and John Mangos, back from the United States where he’d been an overseas reporter for Network Nine)—served as grist for Kennedy’s comedy mill.

As with professional clowns from early modern Europe through pantomime, music hall, vaudeville, to Hollywood, Kennedy presented his face and body as grotesque, highlighting his protruding eyes, open gaping mouth, and long wandering tongue. His comedy was indeed risqué, calling on every aspect of the body to bring down solemnity or pomposity or pretension; his references to any and every orifice and protuberance were often such that one laughed and cried out at home, “that’s disgusting.” His relationship with his audience was, again as with clowns of old, competitive and interactive, particularly in the segments when he read out and responded to phone calls. To one viewer, who must have been demanding them, Kennedy commented, “There are no limits, love, there are no limits.” It is the credo
of the clown through the ages, the uttering of what others only think, the saying of the unsayable.

When Queen Elizabeth was shown in a news item visiting Hong Kong in 1989, Kennedy remarked that for a woman her age she didn't have bad breasts, a purposely outrageously sexist comment, directed at a figure traditionally revered by Anglo-Australians. The night following the San Francisco earthquake, Kennedy and John Mangos staged a mock earthquake in the studio, with the ceiling apparently falling in on them. This piece of comic by-play was discussed in the press for some days. "Quality" papers such as the Sydney Morning Herald debated how distasteful it was. Kennedy was calling on an aspect of carnivalesque, uncrowning death with laughter. Such comedy usually remains verbal and underground, but Kennedy brought it to television.

Coast to Coast always highlighted and played with gender identity and confusion. Kennedy created his TV persona as bisexual. He might make jokes of heterosexual provenance, as in expressing his desire to make love to Jana Wendt, Australian TV's highest-rating current-affairs and news-magazine host. Or he would play up being gay. One night Sutcliffe suddenly said to Graham, "Would you like to take your hand off my knee?" Jokes flowed, and Kennedy later included the performance in his final retrospective 1989 Coast to Coast program. Graham and Mangos were also very affectionate to each other. In his last appearance on the show, Graham kissed Mangos' hand, and said of Ken and John that "he loved them both."

Kennedy also highlighted ethnicity on Coast to Coast, particularly with Greek-Australian Mangos. With George Donikian, an Armenian-Australian reading our headlines every half hour, and with an American-Australian listing stock exchange reports, Graham set about exploring contemporary cultural and ethnic identities in Australia. His ethnic jokes probed, provoked, teased, challenged. The jokes were uncertain, revealing his own uncertainty.

The popularity of Graham Kennedy since 1957, a popularity almost coterminous with Australian television itself, was extremely important and influential for contemporary entertainment. This comedy king gave license to many princes and lesser courts. He enabled them to explore comic self-reflexivity and direct address, the grotesque body, parody, and self-parody. For if Kennedy mocked others, he just as continuously mocked himself, creating for Australian television a feature of long carnivalesque signature, comedy that destabilises every settled category and claim to truth, including its own. Such self-parody also drew on what has been remarked as a feature of (white) Australian cultural history in the last two centuries, perhaps directly influenced by Aboriginal traditions of mocking mimicry: a laconic self-ironic humour, unsettling pomposity, pretension, and authority. Kennedy belongs not only to cultural history in Australia; his quickness of wit in verbal play, double-entendre, sexual suggestion, inverted meanings, and festive abuse joins him to a long line of great comedians across the world. What he adds to stage traditions of comedy is a mastery of the television medium itself.

ASSASSINATION AND FUNERAL OF PRESIDENT JOHN F. KENNEDY

The network coverage of the assassination and funeral of John F. Kennedy warrants its reputation as the most moving and historic passage in broadcasting history. On Friday 22 November 1963, news bulletins reporting rifle shots during the president’s motorcade in Dallas, Texas, broke into normal programming. Soon the three networks preempted their regular schedules and all commercial advertising for a wrenching marathon that would conclude only after the president’s burial at Arlington National Cemetery on Monday 25 November. As a purely technical challenge, the continuous live coverage over four days of a single, unbidden event remains the signature achievement of broadcast journalism in the era of three network hegemony. But perhaps the true measure of the television coverage of the events surrounding the death of President Kennedy is that it marked how intimately the medium and the nation are interwoven in times of crisis.

The first word came over the television airwaves at 1:40 P.M. EST when CBS News anchorman Walter Cronkite broke into As the World Turns with an audio announcement over a bulletin slide: “In Dallas, Texas, three shots were fired at President Kennedy’s motorcade in downtown Dallas. The first reports say that President Kennedy has been seriously wounded by this shooting.” Minutes later, Cronkite appears on screen from CBS’ New York newsroom to field live reports from Dallas and read news bulletins from Associated Press and CBS Radio. Eddie Barker, news director for CBS’ Dallas affiliate KRLD-TV, reports live from the Trade Mart, where the president was to have attended a luncheon. As a stationary camera pans the ballroom, closing in on a black waiter who wipes tears from his face, Barker relates rumors “that the president is dead.” Back in New York, a voice off camera tells Cronkite the same news, which the anchorman stresses is “totally unconfirmed.” Switching back to Dallas, Barker again reports “the word we have is that the President is dead.” Though he cautions “this we do not know for a fact,” the visual image at the Trade Mart is ominous: workman can be seen removing the presidential seal from a podium on the dias.

Behind the scenes, at KRLD’s newsroom, CBS’ Dallas bureau chief Dan Rather scrambles for information. He learns from two sources at Parkland Hospital that the president has died, a report that goes out prematurely over CBS Radio. Citing Rather, Cronkite reports the president’s death but notes the lack of any official conformation. At 2:37 P.M. CBS news editor Ed Bliss, Jr. hands Cronkite an AP wire report. Cronkite takes a long second to read it to himself before intoning: “From Dallas, Texas, the flash, apparently official. President Kennedy died at 1:00 P.M. Central Standard Time, two o’clock Eastern Standard Time.” He pauses and looks at the studio clock. “Some thirty-eight minutes ago.” Momentarily losing his composure, Cronkite winces, removes his eyeglasses, and clears his throat before resuming with the observation that Vice President Lyndon Johnson will presumably take the oath of office to become the thirty-sixth president of the United States.

To appreciate the enormity of the task faced by the networks over the next four days, it is necessary to recall that in 1963, before the days of high-tech, globally linked, and sleekly mobile newsgathering units, the technical limitations of broadcast journalism militated against the coverage of live and fast-breaking events in multiple locations. TV cameras required two hours of equipment warm-up to become “hot” enough for operation. Video signals were transmitted across-country via “hard wire” coaxial cable or microwave relay. “Spot coverage” of unfolding news in the field demanded speed and mobility and since television cameras had to be tethered to enormous wires and electrical systems, 16mm film crews still dominated location coverage, with the consequent delay in transportation, processing, and editing of footage. The challenges of juggling live broadcasts from across the nation with overseas audio transmissions, of compiling instant documentaries and special reports, and of acquiring and putting out raw film footage over the air was an off-the-cuff experiment in what NBC correspondent Bill Ryan called “controlled panic.”

The resultant technical glitches served to heighten a national atmosphere of crisis and imbalance. NBC’s coverage during that first hour showed correspondents Frank McGee, Chet Huntley, and Bill Ryan fumbling for a simple telephone link to Dallas, where reporter Robert McNeil was on the scene at Parkland Hospital. Manning the telephone and bobbiling a malfunctioning speaker attachment, McGee had to repeat McNeil’s words for the home audience because NBC technicians could not establish a direct audio feed. As McNeil reported White House aide Mac Kilduff’s official announcement of the President’s death, the phone line suddenly kicked in. Creating an eerie echo of the death notice, McGee, unaware, continued to repeat McNeil’s now audible words. “After being shot at,” said McNeil. “After being shot,” repeated McGee needlessly. “By an unknown assailant...” “By an unknown assailant...”

Throughout Friday afternoon, information rushes in about the condition of Texas governor John Connally, also wounded in the assassination; about the whereabouts and security of Vice President Lyndon Johnson, whom broadcasters make a determined effort to call “President Johnson;” and, in the later afternoon, about the capture of a suspected assassin, identified as Lee Harvey Oswald, a former Marine associated with left-wing causes.

So urgent is the craving for news and imagery that unedited film footage, still blotched and wet from fresh development, is put out over the air: of shocked pedestrians along the motorcade route and tearful Dallas residents out-
The funeral of John F. Kennedy

side Parkland Hospital, of the President and First Lady, vital and smiling, from earlier in the day. The simultaneity of live video reports of a dead president intercut with recently developed film footage of a lively president delivering a good-humored breakfast speech that morning in Fort Worth make for a jarring by-play of mixed visual messages. Correspondents on all three networks are apt reflections of spectator reaction: disbelief, shock, confusion, and grief. Grasping for points of comparison, many recall the death of Franklin Delano Roosevelt on 12 April 1945. NBC's Frank McGee rightly predicts, "that this afternoon, wherever you were and whatever you might have been doing when you received the word of the death of President Kennedy, that is a moment that will be emblazoned in your memory and you will never forget it... as long as you live."

At 5:59 P.M. Friday, the president's body is returned to Andrews Air Force Base, where television catches an obscure, dark, and ghostly vessel taxiing in on the runaway. When the casket is lowered from the plane, glimpses of Jacqueline Kennedy appear on screen, her dress and stockings still visibly bloodstained. With the new First Lady, Lady Bird Johnson, by his side, LBJ makes a brief statement before the cameras. "We have suffered a loss that cannot be weighed," he intones flatly. "I will do my best. That is all I can do. I ask for your help—and God's." Speculations about the funeral arrangements and updates on the accused assassin in Dallas round out the evening's coverage. NBC concludes its broadcasting day with a symphonic tribute from the NBC Studio Orchestra.

On Saturday, the trauma eased somewhat by religious ritual and Constitutional tradition. Close friends, members of the president's family, government officials, and the diplomatic community arrive to pay their respects at the White House, where the president's body is lying in state. Former Presidents Truman and Eisenhower speak for the cameras, offering condolences to the Kennedy family and expressions of faith in democratic institutions. Instant documentary tributes to the late president appear on all three networks—quick, makeshift compilations of home movies of Hyannisport frolics, press conference witticisms, and formal addresses to the nation. Meanwhile, more information dribbles in about Oswald, the accused assassin, whom the Dallas police parade through the halls of the City Jail. That evening CBS presents a memorial concert by the Philadelphia Orchestra with Eugene Ormandy conducting.

On Sunday an unprecedented televised event blasts the story of the assassination of John F. Kennedy out of the realm of tragedy and into surrealism: the on-camera murder of Lee Harvey Oswald, telecast live. At 12:21 P.M. EST, as preparations are being made for the solemn procession of the casket bearing the president's casket from the White House to the Capitol rotunda, the accused assassin is about to be transferred from the Dallas City Jail to the Dallas County Jail. Alone of the three networks, NBC elects to switch over from coverage of the preparations in Washington, D.C. to the transfer of the prisoner in Dallas. CBS was also receiving a live feed from Dallas in its New York control room, but opted to stay with the D.C. feed. Thus only NBC carried the murder of Lee Harvey Oswald live. "He's been shot! He's been shot! Lee Oswald has been shot!" shouted NBC correspondent Tom Petit. "There is absolute panic. Pandemonium has broken out." Within minutes, CBS broadcasts its own live feed from Dallas. For the rest of the day all three networks deploy their Ampex videotape technology to rewind and replay the scene again and again. Almost every American in proximity to a television watches transfixed.

Amid the scuffle after the shooting, a journalist's voice can be heard gasping, "This is unbelievable." The next day New York Times television critic Jack Gould called the on-air shooting of Oswald "easily the most extraordinary moments of television that a set-owner ever watched." In truth, as much as the Kennedy assassination itself, the on-air murder of the president's alleged assassin creates an almost vertiginous imbalance in televiewers, a sense of American life out of control and let loose from traditional moorings.

Later that same afternoon, in stark counterpoint to the ongoing chaos in Dallas, thousands of mourners line up to file past the president's flag-draped coffin in the Capitol rotunda. Senator Mike Mansfield intones a mournful, poetic eulogy. With daughter Caroline by the hand, the president's widow kneels by the casket and kisses the flag, the little girl looking up to her mother for guidance. "For many," recalled broadcasting historian Erik Barnouw, "it was the most unbearable moment in four days, the most unforgettable."

Throughout Sunday, tributes to the late president and scenes of mourners at the Capitol intertwine with news of the assassin and the assassin of the assassin, a Dallas strip club owner named Jack Ruby. Remote coverage of church services around the nation and solemn musical interludes is intercut and dissolved into the endless stream of mourners in Washington. That evening, 8:00 P.M. EST, ABC telecasts A Tribute to John F. Kennedy from the Arts, a somber variety show featuring classical music and dramatic readings from the bible and Shakespeare. Host Fredric March recites the Gettysburg Address, Charlton Heston reads from the Psalms and Robert Frost, and Marian Anderson sings Negro spirituals.

The next day—Monday, 25 November, a National Day of Mourning—sees witness to an extraordinary political-religious spectacle: the ceremonial transfer of the president's coffin by caisson from the Capitol rotunda to St. Matthews Cathedral, where the funeral mass is to be celebrated by Richard Cardinal Cushing, and on across the Potomac River for burial at Arlington National Cemetery. Television coverage begins at 7:00 A.M. EST with scenes from D.C., where all evening mourners have been filing past the coffin in the Capitol rotunda. At 10:38 A.M. the coffin is placed on the caisson for the procession to St. Matthews Cathedral. Television imprints a series of memorable snapshot images. During the mass, as the phrase from the president's first inaugural address comes through loudspeakers ("Ask not what your country can do for you. Ask what you can do for your country") cameras dissolve to a shot of the flag-draped
coffin. No sooner do commentators remind viewers that this day marks the president’s son’s third birthday, than outside the church, as the caisson passes by, little John F. Kennedy, Jr. salutes. The spirited stallion Black Jack, a riderless steed with boots pointed backwards in the stirrup, kicks up defiantly. Awed by the regal solemnity, network commentators are quiet and restrained, allowing the medium of the moving image to record a series of eloquent sounds: drums and bagpipes, hoofbeats, the cadenced steps image to antently. Awed by the with boots pointed Jr. salutes.

The quiet power of the spectacle is a masterpiece of televisual choreography. Besides maintaining their own cameras and crews, each of the networks contributes cameras for pool coverage. CBS Arthur Kane is assigned the task of directing the coverage of the procession and funeral, coordinating over 60 cameras stationed strategically along the route. NBC takes charge of feeding the signal via relay communications satellite to twenty-three countries around the globe. Even the Soviet Union, in a broadcasting first, uses a five-minute news report sent via Telestar. CBS estimated 50 engineers worked on the project and NBC 60, while ABC put its total staff at 138. Unlike the fast-breaking news from Dallas on Friday and Sunday, the coverage of a stationary, scheduled event built on the acquired expertise of network journalism.

The colossal achievement came with a hefty price tag. Trade figures estimated the total cost to the networks at $40 million, with some $22,000,000 lost in programming and commercial revenue over the four days. Ironically, the one time none of the networks cared about ratings, the television audience was massive. Though multi-city Nielsen for prime time hours during the Black Weekend were calculated modestly (NBC at 24, CBS at 16, and ABC at 10), during intervals of peak viewership—as when the news of Oswald’s murder struck—Nielsen estimated that fully 93% of televisions in the nation were tuned to the coverage. As if hypnotized, many Americans watch for hour upon hour at a stretch in an unprecedented immersion in deep involvement spectatorship. Not incidentally, the Zapruder film, the famous super 8mm record of the assassination, was not a part of the original televisual experience. Despite the best efforts of CBS’ Dan Rather, exclusive rights to the most historically significant piece of amateur filmmaking in the twentieth century were obtained by Life magazine. The Zapruder film was not shown on television until March 1975 on ABC’s Goodnight America. Almost certainly, however, in 1963 it would have been deemed too gruesome and disrespectful of the feelings of the Kennedy family to have been broadcast on network television.

The saturation coverage of the assassination and burial of John F. Kennedy, and the startling murder of his alleged assassin Lee Harvey Oswald on live television, yielded a shared media experience of astonishing unanimity and unmatched impact, an imbedded cultural memory that as years passed seemed to comprise a collective consciousness for a generation. In time, it would seem appropriate that the telegenic president was memorialized by the medium that helped make him. For its part, television—so long sneered at as a boob tube presided over by avaricious Lords of Kitsch—emerged from its four days in November as the only American institution accorded unconditional praise. Variety’s George Rosen spoke the consensus: “In a totally unforeseen and awesome crisis, TV immediately, almost automatically, was transformed into a participating organ of American life whose value, whose indispensability, no Nielsen audimeters could measure or statistics reveal.” The medium Kennedy’s FCC commissioner Newton Minow condemned as a “vast wasteland” had served, in extremis, as a national lifeline.

ROBERT F. KENNEDY ASSASSINATION

Shortly after midnight on 5 June 1968, Senator Robert F. Kennedy (D-New York) was assassinated by Sirhan B. Sirhan in the ballroom of the Ambassador Hotel in Los Angeles, California. All three television networks (ABC, CBS, and NBC) began coverage at the scene just minutes after the shooting. The first broadcast included footage of a large crowd of supporters gathered in the ballroom, awaiting Kennedy’s address following his California presidential primary victory. Muffled sounds emerged from the direction of the podium, the crowd became disorderly, and although the reason for the disruption was still unclear, Steven Smith, Kennedy’s brother-in-law, asked everyone to clear the room.
The funeral of Robert F. Kennedy

Photo courtesy of the New York City Police Department
A still photograph of Kennedy sprawled on the floor was televised as reporters noted in voice-over that he had been shot by an unknown assailant. About two hours after the shooting, supplemental footage was shown of Kennedy from behind as he stepped up to the podium, with a crowd around him. Shots were heard, camera angles were jolted in the confusion, but one camera managed to focus on the senator lying injured on the floor.

Intermittent reports provided updates of Kennedy's medical condition. Reporters at the scene first noted his condition by sight only, stating that he had been shot repeatedly but was conscious and had "good color." A physician at the scene remarked that the extent of his injuries was unknown. Later reports were provided by Kennedy's press secretary, Frank Mankiewicz, who stood on a car outside Good Samaritan Hospital to relay more technical information supplied by surgeons. At last he announced Kennedy's death some 26 hours after the shooting.

The whereabouts, identity, and motives of the assassin were vague in early accounts. Two hours after the shooting, reporters noted that a "young man had been caught" but were uncertain whether he was still in the hotel or had been taken into police custody. Described as "dark-skinned" and "curly-haired," and variously as Filipino, Mexican, Jamaican, and Cuban, Palestinian Sirhan B. Sirhan was identified nearly 10 hours later by his brother Adel after a still photograph of him was shown on television. Although he made no statements to police, eyewitnesses claimed that at the time of the shooting Sirhan said, "I did it for my country." In response to the crowd's angry chant of "kill him, lynch him," anchorman Walter Cronkite reiterated that Sirhan was "presumed innocent until proven guilty." Questions concerning Sirhan's motives and whether he was part of a conspiracy are mired in controversy to this day.

A description of the weapon was similarly indeterminate. In the earliest reports, a policeman stated that celebrity Roosevelt "Rosie" Grier had first grabbed the weapon but that he currently had no idea where or what type the weapon was. Within one hour of the shooting, controversy had begun to emerge in terms of conspiracy: some eyewitnesses reported that the assassin had used a six-shot revolver; others said that more than six shots had been fired. One reporter suggested that there might have been more than one gun—and more than one gunman. Two hours later, however, the weapon was identified as an Iver Johnson .22-caliber pistol, a weapon capable of eight shots. Los Angeles Police Chief Thomas Reddin stated several hours after this that the pistol had been traced to a missing gun report, though the gunman himself had not yet been identified. He was uncertain at this point if the man in custody was actually the assailant. Special reports on the pistol's history of ownership began to air nine hours after the shooting; 18 hours after the shooting, detailed special reports related the histories of the pistol and the assassin, who by this time had been identified as Sirhan.

The issue of violence played a crucial role in many of the shooting reports. One reporter noted that the United States would, with its rash of assassinations in the 1960s, appear to outsiders to be "some sort of violent society." The Reverend Ralph Abernathy, speaker for the Southern Christian Leadership Conference, aimed his criticism more pointedly in the direction of President Lyndon Johnson and the Vietnam War by saying that Kennedy had worked against "the violence, the hatred, and the war mentality" that had been "poisoning" America. Kennedy's opponent in the Democratic primary, Senator Eugene McCarthy, echoed this sentiment in his condemnation of violence at home and abroad. Some 12 hours after the shooting, Johnson responded to criticism in a special address in which he denounced violence "in the hearts of men everywhere" and suggested the establishment of a commission to investigate the causes of violence in society. The commission would be jointly directed by the president and Congress and would be composed of academic, political, and religious leaders.

More immediate measures were also proposed to deal with the security of political candidates. Following an early report that police had planned no special security for Kennedy, President Johnson declared that full secret service protection would be provided for all leading announced candidates for national positions rather than for the position-holders alone. In the meantime, reporters announced that Senator McCarthy, New York Governor Nelson Rockefeller, and Republican candidate Richard Nixon had called off all appearances.

Others at the Ambassador Hotel rally were also injured. Shortly after the shooting, it was reported that Jesse Unruh, Kennedy's campaign manager, had been hit, along with Paul Shrade, head of the United Automobile Workers union. Four hours later, added to the list were William Weisel, an ABC unit manager; Ira Goldstein, a California news service reporter; Elizabeth Evans, a political supporter; and Irwin Stroll, a teenage bystander.

Coverage of the shooting and its aftermath continued to be broadcast until the early evening of 5 June, when networks began switching back to programs "already in progress." ABC opted not to broadcast a professional baseball game and instead had a special report on "The Shooting of RFK." Other networks informed viewers that regular programming would be interrupted occasionally to provide updated reports of Kennedy's condition. Early on the morning of 6 June, a news conference was held to announce Kennedy's death. His funeral was televised on 7 June, and highlights were televised on 8 June.

KENNEDY-MARTIN, TROY

British Writer

Troy Kennedy-Martin began his career as a television screenwriter in 1958 and quickly emerged as a leading member of a group of writers, directors, and producers at the BBC who were pushing the limits of British television drama. As well as writing episodes of crime series, literary adaptations, and original miniseries, Kennedy-Martin became an outspoken proponent of a new approach to television drama that would exploit what he saw as the properties of the medium.

His first major chance to test these ideas came with the BBC police series *Z Cars*, which proved enormously popular and ran from 1962 to 1965. The series was acclaimed for the fast pace and gritty realism with which it depicted a Lancashire police force coping with the problems of a modern housing estate. Its view of the police offered a sharp contrast to the homespun philosophy of PC Dixon in the BBC's *Dixon of Dock Green*, which had been extremely popular with family audiences since its debut in 1955. Kennedy-Martin wrote the first episode of *Z Cars*, and six more during the initial season, but did not return for the later seasons because he felt the series had lost its critical edge.

In 1964 he published an article in the theater magazine *Encore* in which he argued forcefully for a "new television drama." Through its attack on "naturalism," this article set the terms for a lively, if sometimes confusing, debate on realism in television drama which persists into the present. Kennedy-Martin advocated using the camera to do more than just show talking heads, by freeing the dramatic structure from the limits of real time, and creating more complex relations between sound and image. In particular, he wanted to exploit what he called "the total objectivity of the television camera" which gave the medium a built-in Brechtian critical dimension that worked against subjective identification with characters.

From Kennedy-Martin's point-of-view, the value of *Z Cars* lay in its respect for reality: its refusal to idealize the police and its attempt to reveal the underlying social causes that led to crime. Yet, because the style remained "naturalistic," Kennedy-Martin felt that it was soon compromised by the generic and institutional constraints that encourage identification with the police and the demonization of the criminal.

Despite his disappointment with *Z Cars*, Kennedy-Martin continued to write within popular crime and action genres, notably for Thames Television's police series *The Sweeney* (1975-78). He also wrote screenplays for several action films, with the same sense of frustration that his critical intentions were subverted in the production process.

Some of the formal innovations which Kennedy-Martin called for in his manifesto were incorporated into *Diary of a Young Man*, a six-part serial broadcast by the BBC in 1964, written by Kennedy-Martin and John McGrath and directed by Ken Loach. Other writers, notably David Mercer and Dennis Potter, also explored the possibilities of a non-naturalistic television drama. Yet it was not until the 1980s that Kennedy-Martin was able to produce work that fulfilled both his critical and formalist goals. First came a fairly free adaptation of Angus Wilson's *The Old Men at the Zoo* as a five-part serial, broadcast by the BBC in 1983, a powerful and disturbing science-fiction parable about a political order whose logic leads to the destruction of Britain in a nuclear war.

Fears of nuclear power and government bureaucracy also drove Kennedy-Martin's major achievement, *Edge of Darkness*, a political thriller broadcast in six parts on BBC2 in late 1985 and promptly repeated in three parts on consecutive nights on BBC1. This serial combined the "naturalistic" tradition of British television drama on social issues with a popular thriller format and elements of fantasy and myth. A police inspector, investigating the murder of his daughter, discovers that she belonged to an anti-nuclear organization that had uncovered an illegal nuclear experiment backed by the government. The break with naturalism occurs when the murdered woman simply appears beside her father and starts a conversation with him, linking his investigation to the fusion of myth and science in the ecological movement to which she had belonged.

The popularity of political thrillers on British television after 1985 confirmed the significance of *Edge of Darkness* as a key work of the decade. Although Kennedy-Martin advocated the development of short dramatic forms, not unlike the music videos which emerged in the 1980s, he has made a major contribution to British television drama in the developments of the long forms of series and serials.

PUBLICATIONS

On 26 September 1960, 70 million U.S. viewers tuned in to watch Senator John Kennedy of New York and Vice President Richard Nixon in the first-ever televised presidential debate. It was the first of four televised "Great Debates" between Kennedy and Nixon. The first debate centered on domestic issues. The high point of the second debate, on 7 October, was disagreement over U.S. involvement in two small islands off the coast of China, and on 13 October, Nixon and Kennedy continued this dispute. On 21 October, the final debate, the candidates focused on American relations with Cuba.

The Great Debates marked television's grand entrance into presidential politics. They afforded the first real opportunity for voters to see their candidates in competition, and the visual contrast was dramatic. In August, Nixon had seriously injured his knee and spent two weeks in the hospital. By the time of the first debate he was still twenty pounds underweight, his pallor still poor. He arrived at the debate in an ill-fitting shirt, and refused make-up to improve his color and lighten his perpetual "5:00 o'clock shadow." Kennedy, by contrast, had spent early September campaigning in California. He was tan and confident and well-rested. "I had never seen him looking so fit," Nixon later wrote.

In substance, the candidates were much more evenly matched. Indeed, those who heard the first debate on the radio pronounced Nixon the winner. But the 70 million who watched television saw a candidate still sickly and obviously discomforted by Kennedy's smooth delivery and charisma. Those television viewers focused on what they saw, not what they heard. Studies of the audience indicated that, among television viewers, Kennedy was perceived the winner of the first debate by a very large margin.

The televised Great Debates had a significant impact on voters in 1960, on national elections since, and, indeed, on our concerns for democracy itself. The impact on the election of 1960 was significant, albeit subtle. Commentators broadly agree that the first debate accelerated Democratic support for Kennedy. In hindsight, however, it seems the debates were not, as once thought, the turning-point in the election. Rather than encouraging viewers to change their vote, the debates appear to have simply solidified prior allegiances. In short, many would argue that Kennedy would have won the election with or without the Great Debates.

Yet voters in 1960 did vote with the Great Debates in mind. At election time, more than half of all voters reported that the Great Debates had influenced their opinion; 6% reported that their vote was the result of the debates alone. Thus, regardless of whether the debates changed the election result, voters pointed to the debates as a significant reason for electing Kennedy.

The Great Debates had a significant impact beyond the election of 1960, as well. They served as precedent around the world: Soon after the debates, Germany, Sweden, Finland, Italy, and Japan established debates between contenders to national office. Moreover, the Great Debates created a precedent in American presidential politics. Federal laws requiring that all candidates receive equal air-time did not apply to debates for the next three elections, as did Nixon's refusal to debate in 1968 and 1972. Yet by 1976, the law and the candidates had both changed, and ever since, presidential debates, in one form or another, have been a fixture of U.S. presidential politics.

Perhaps most important, the Great Debates forced citizens to rethink how democracy would work in a television era. To what extent does television change debate, indeed, change campaigning altogether? What is the difference between a debate that "just happens" to be broadcast and one specifically crafted for television? What is lost in the latter? Do televised debates really help us to evaluate the relative competencies of the candidates, to evaluate policy options, to increase voter participation and intellectual engagement, to strengthen national unity? Fundamentally, such events lead to worries that television emphasizes the visual, when visual attributes seem not the best, nor most reliable, indicators of a great leader. Yet other views express confidence that televised presidential debates remain one of the most effective means to operate a direct democracy. The issue then becomes one of improved form rather than changed forum.
The Kennedy-Nixon debates of 1960 brought these questions to the floor. Perhaps as no other single event, the Great Debates forced us to ponder the role of television in democratic life.

KENYA

Kenyan television is a classic example of an industry whose chances for development have been consistently frustrated by government sensitivity and political interference. The medium's 30-year history in Kenya is marked by stunted growth, from excessive government regulation and extensive abuse by the dominant political forces.

In 1959, when the Kenya Broadcasting Corporation was established by the British colonial administration with the objective of providing radio and television broadcasting. The proposal for the formation of a public corporation had been submitted by a commission appointed earlier in the year to report on the advantages and disadvantages of
a television service for Kenya, and the impact of such a service on radio broadcasting. The 1959 Proud Commission rejected earlier findings by another commission in 1954 that television was "economically impracticable in Kenya" and concluded that the new medium was likely to be financially self-reliant if it was set up as a fully-fledged commercial outfit.

Between 1959 and 1961, and in keeping with the Proud Commission's recommendations, the colonial administration contracted a consortium of eight companies to build and operate a television service. The eight firms, seven of which were from Europe and North America, formed Television Network Ltd. which was charged with the responsibility of setting up the national television broadcasting system. The consortium, cognizant of the developments pushing toward Kenya's political independence, created the Kenya Broadcasting Corporation as an autonomous public organization. The idea was to have the corporation wield as much independence as the British Broadcasting Corporation (BBC). By the end of 1962, a transmission station and recording studio had been set up, and television was officially launched the following year.

The corporation created by the consortium bore a striking semblance to the BBC. It drew its revenue from advertising, annual license fees on receiver sets, and government subventions. The vision of financially self-sustaining television service was however misplaced, especially since the new medium failed to attract as much advertising as the older and more popular radio broadcasting service. Within the first full financial year of television broadcasting—July 1963 to June 1964—the corporation posted a loss of nearly $1 million, and had to resort to government loans and supplementary appropriations to remain afloat. Coincidentally, Kenya had gained independence and the new government, worried about the threat to national sovereignty posed by the foreign ownership of the broadcasting apparatus, decided to nationalize the corporation in June 1964. After the takeover, the corporation was renamed Voice of Kenya (VoK) and was converted to a department under the Ministry of Information, Broadcasting and Tourism (later renamed Ministry of Information and Broadcasting). Its new role as the government mouthpiece was to provide information, education and entertainment. And while the government adopted a capitalist approach to economic development, which embraced private sector participation in all areas of the economy and even welcomed participation in a number of electronic broadcasting activities, private ownership of broadcasting concerns was disallowed.

Between 1964 and 1990, television and radio were owned and controlled by the state, and the two media exercised great caution in reporting politically-sensitive news. During this period, several attempts were made to move away from the broadcasting system set up. The Ministry of Information and Broadcasting replaced annual license fees with a one-time permit fee, and the drive for commercial self-sustenance was replaced by a politically-inspired initiative for increased local content and a sharper nationalistic outlook. The objective was elusive, however, as the VoK television was only able to achieve a 40% local programming content by the mid-1980s against the target of 70% local content. Television also failed to become an authoritative national medium: studies in 1985 showed that only 17% of electronic media audience regarded television as the best source of information, compared to 86% who rated radio as their prime news source.

Several reasons were advanced for poor performance of television. Besides being a preserve of the educated minority in the country, the spread of ownership of television sets was severely curtailed by the poor penetration of the national electrical power grid. A more tenacious barrier was the poor transmission the country received from the 55 small transmission and booster stations, whose weak signals generally covered small areas or were constrained by the country's rugged topography. As such, household audiences have been growing mainly within the major urban areas, or near large rural centers served by electricity and near a booster station.

In 1989, the VoK was renamed Kenya Broadcasting Corporation and accorded semi-autonomous status, founded on the premise that it would adopt a more commercially-oriented stance. Although the corporation unveiled grandiose plans to expand news coverage and improve local programming content, it was unable to chart out an independent editorial position, and is still widely seen as a part of the government propaganda machinery. Some progress has however been made in increased weekly on-air periods, and enhancement of color transmission. Until the early 1990s, the corporation relied on cheap but time-consuming air-mail services for the supply of foreign news footage even though the country was serviced by Intelsat. Since 1994, the corporation has been retransmitting large chunks of the BBC World Service Television several nights per week.

Since March 1990, a second television station, the Kenya Television Network (KTN) has been in operation, offering a mixture of relayed retransmission of the American Cable News Network (CNN) programming and light entertainment. Transmitting on UHF channel, KTN started out as a pilot project for a 24-hour subscriber TV service in Nairobi and its environs, but has apparently abandoned plans to scramble its signal and currently derives most of its revenue from advertising and TV production services. It was initiated as a joint venture between Kenya's ruling party, Kanu, and the London-based Maxwell Communications, but the British media group withdrew after the death of its founder, Robert Maxwell.

In spite of its private ownership position, KTN has been unable to provide independent news coverage because of excessive political interference with its editorial direction, a problem that forced its management to scrap the transmission of local news for over one year between 1993 and 1994. About 95% of the station's programs are foreign, mainly because most of its 24-hour service is a retransmission of the CNN signal. A second private station, Cable Television Network (CTN), launched in March 1994, has also failed...
to inspire major changes in Kenya's television industry. CTN has been trying to build a subscriber base in Nairobi via overhead cables passed along existing electrical power pylons. Its intermittent transmissions have so far comprised Indian drama and films. A third private station, Stellavision, was licensed in the early 1990s but had yet to start broadcasting by 1996.

The licensing of three private stations, however, says little about Kenya's commitment to liberalizing the airwaves. In spite of heavy pressure from a number of interested investors, the Ministry of Information and Broadcasting has declined to license more stations on the grounds that broadcasting frequencies are inadequate, and on a declared fear of losing its authoritarian control over the information dissemination process. Although about two dozen applications for new radio and television licenses were submitted between 1985 and 1995, the government refused to allow full private sector participation in the industry, and instead reinforced tactics to regulate electronic news flows. For example, even though KTN received the CNN signal clearly, it opted for delayed transmission, hoping to sieve out anything which could be unpalatable to the government.

Due to the centralized nature of Kenyan television, only a handful of small production houses have been set up in the country. Most local productions are from the KBC teams and the government camera crew located in provincial headquarters. Virtually all programs have been either in English or Swahili; English is the language on two thirds of total air time. Most of the small production houses concentrate on commercials and documentary filming.

KIDS IN THE HALL
Canadian Sketch Comedy Program

Kids in the Hall (KITH) is a sketch comedy program produced by Lorne Michaels' Broadway Video and co-financed by the Canadian Broadcasting Corporation (CBC) and the U.S. cable network, Home Box Office (HBO). KITH aired in Canada on the CBC and in the United States on HBO, CBS, and another cable network, Comedy Central. The members of KITH performance group are Dave Foley, Bruce McCulloch, Kevin McDonald, Mark McKinney, and Scott Thompson. The name derives from U.S. comedian Jack Benny's habit of attributing some of his material to aspiring comedians whom he called "the kids in the hall".

KITH was formed in 1984 when McCulloch and McKinney, who had worked together in Calgary as part of a group named the Audience, teamed up with Foley and McDonald's Toronto-based group, KITH. Thompson officially joined in January 1985. That same year, McCulloch and McKinney were hired as writers for NBC's Saturday Night Live (SNL) after a talent scout saw KITH in performance. Significantly, SNL had also been created by Michaels, himself an ex-patriate Canadian living and producing in New York. Also in 1985, Foley appeared in the film High Stakes, and Thompson and McDonald toured with Second City. In 1986, KITH were reunited in Toronto and Michaels finally saw them perform. He immediately envisaged a television project around them. In 1987, he moved KITH to New York and, paying each member $150 per week, had them perform in comedy clubs, write new material, and rehearse sketches. In 1988, Michaels produced their HBO special. The regular series followed.

KITH immediately attracted a cult following and broke new ground by combining shock humour with a finely developed sense of performance and a generosity of spirit, which invited audiences to question their presuppositions rather than simply to mock the targets of the humour. Characteristic of KITH's style are well-rounded personifications of both men and women, homosexuals, business executives, prostitutes and drug users, and such creations as the half human/half fowl Chicken Lady, gay barly Buddy Cole, the angry "head crusher", the annoying child Gavin, and the teenager drawn to older women. These personifications consistently draw upon the inner resources of the characters themselves, showing their encounters with society rather than society's judgment upon them.

KITH also occupies an interesting place within Canadian television. First, although a Canadian show filmed in Toronto, it was produced by a New York-based company best known for turning comedians such as Steve Martin and John Belushi into major stars. KITH could therefore serve as Canadian content while gaining access to the much larger and more lucrative U.S. market. Second, although a CBC program, KITH attracted a youthful cult audience unfamiliar to the CBC and inconsistent with its core demographic. Third, KITH cracked the U.S. market by targeting an audience understood not in terms of its membership in a Canadian national cultural community but a North American
Wayne and Shuster and movie exist, mainly in the comedy to American humor and U.S. television. However, KITH also extended certain existing aspects of Canadian television. KITH adopted the sketch rather than the situation comedy format. Canadian broadcasting has attempted situation comedy only sparingly and unevenly, whereas its sketch comedy record reaches back at least to the 1940s with radio's The Happy Gang. On television, sketch comedy appears in the early 1950s with Wayne and Shuster and comes to include Nightcap, SCTV, The Frantics, S and M Comic Book, Codco, The Vacant Lot, Three Dead Trolls in a Baggie, This Hour Has 22 Minutes, and others.

Within the North American context, KITH also exemplified the relative openness of Canadian broadcasting. For example, many of KITH's themes and situations were initially deemed inappropriate for U.S. network TV and it therefore debuted on HBO. When CBS did pick it up, KITH underwent certain deletions. Canadian television, however, because of the traditional preponderance of public broadcasting, is more experimental and less censorious, and has long been open to a much broader range of social, political, and cultural attitudes than would be possible on U.S. television. This created a space for KITH's shock humor and extended the CBC's commitment to more challenging material.

KITH repeated the tradition of exporting Canadian comedy to American television through such notables as Lorne Michaels himself, Dan Aykroyd, Dave Thomas, Martin Short, James Carrey, John Candy, Catherine O'Hara, Rick Moranis, Mike Meyers, and others.

KITH was terminated by the principals themselves who are now pursuing acting, writing, and music careers mainly in the United States. A KITH fanzine and video exist, as well as KITH merchandise. A KITH book and movie are anticipated and a KITH newsgroup is maintained on usenet. There may be KITH reunions and concert tours in the future.

KINESCOPE

The first and most primitive method of recording television programs, production, or news story, a kinescope is a film made of a live television broadcast. Kinescopes are usually created by placing a motion picture camera in front of a television monitor and recording the image off the monitor’s screen while the program is being aired. This recording method came into wide use around 1947. Before videotape, this process was the standard industry method of creating a permanent document, for rebroadcast and for archival purposes. The term “kinescope” comes from the combination of two words: the Greek “kinetic,” meaning of or related to motion, and “scope,” as in an observational instrument such as a microscope.

Actually, kinescope is the name for the cathode-ray tube in a television receiver which translates electrical signals into a picture on a lighted screen. The use of the word “kinescope” to describe a filmed recording of a television broadcast was derived from this piece of equipment. Originally they were called “kinescope recordings,” but, due to repeated usage in spoken language, the term was usually shortened to just “kinescope,” and then often shortened again to just “kine” or “kinnie.” The picture quality created by kinescopes was admittedly and understandably poor— they appeared grainy, fuzzy, even distorted—yet they were the only method for documentation available to stations and producers at that time. Though their poor picture quality generally prohibited any extensive reuse, many programs were rebroadcast from kinescope in order to save money, to allow broadcast at a different time or, more frequently, to expose the programs to a wider audience. Cities and locales outside of an antenna’s reach and without wire or cable connection had no way of seeing programming produced in and broadcast from New York City, programming which constituted the majority of television at the time. In order for a program to be seen in outlying areas (either beyond the city limits or elsewhere across the country), kinescope films were shipped from station to station in a practice known as “bicycling.”

For many stations the airing of kinescopes (despite the very poor picture quality) was a necessary way to fill the programming day. This was especially true in the early days of educational television, which had high goals but little money with which to achieve them. Though kinescoped programs could never be very timely, they could be educational and, in this case, they were the best way to fill a void. The National Educational Television and Radio Center (later NET) in Ann Arbor, Michigan, was the country’s largest clearinghouse for kinescope distribution until the late 1950s.

Because kinescopes were considered so unsatisfactory many companies attempted to find more efficient, less cost-ly, and more aesthetically pleasing methods of recording programs. Singer Bing Crosby, who was seeking a more convenient way of producing his television specials without having to perform them live, had his company Bing Crosby Enterprises create and demonstrate the first magnetic videotape recordings in 1951. The RCA and Ampex companies would also display electronic videotape recording methods before the end of the decade with the Ampex standard eventually adopted by the television industry.

But the true demise of the kinescope (at least as far as entertainment programming is concerned), like most things in television, was ultimately driven by economic concerns, and can be attributed to I Love Lucy and its stars and producers Desi Arnaz and Lucille Ball. When beginning their landmark show, the couple insisted on producing in California, their home of many years. Philip Morris, the cigar and cigarette manufacturer, already signed on as the show’s sponsor, wanted the program produced in New York because more potential smokers lived east of the Mississippi: Philip Morris would not settle for inferior kinescopes playing on the East Coast. In response Arnaz and cinematographer Karl Freund devised a method of recording performances on film. Their system used three cameras to record the live action while a director switched among them to obtain the best shot or angle. The show was later edited into the best performance in a manner much like a feature film. The result not only was a superior recording good for repeated airing throughout the country, it also presaged the move of the TV industry from New York to the West Coast, where fully equipped film studios eagerly entered television production and recouped some of the losses they had encountered with the rise of the newer medium. Moreover, the new filmed product created, almost accidentally, TV’s most profitable byproduct, the rerun.

The kinescope, the one and perhaps only method of television recording technology to be completely obsolete in the industry today, is now of use only in archives and museums where the fuzzy, grainy texture often adds to their charm as artifacts and antiquities. Fortunately, for those who would understand and present the history of television programming, that charm is matched by the historical value of even this partial record of an era all but lost.

KING, LARRY
U.S. Talk-Show Host

Larry King, television and radio talk-show host, claims to have interviewed over 30,000 people during his career. In 1989, The Guinness Book of World Records credited him as having logged more hours on national radio than any other talk show personality in history.

His nationwide popularity began with his first national radio talk show, premiering over the Mutual Network in 1978. In 1985, the Cable News Network (CNN) scheduled a nightly one-hour cable-television version of King’s radio program. Larry King Live has become one of CNN’s highest-rated shows and positioned King as the first American talk-show host to have a worldwide audience. Currently, the program reaches over 200 countries, with a potential audience of 150 million.

Called cable television’s pre-eminent pop-journalist, King is characterized as “interviewer,” not “journalist.” Described as having an “aw-shucks” quality, he is an ad-lib interviewer who claims not to over-prepare for his guest. “My lack of preparation really forces me to learn, and to listen,” he says. His guests are given a wide range of latitude while responding to questions that any person on the street might ask. Rather than acting as an investigative reporter, King prides himself in asking “human questions,” not “press-conference questions.” He sees himself as non-threatening, non-judgmental, and concerned with feelings.

King’s radio broadcast career began with a 1957 move to Miami, Florida, where he worked for station WAHR as a disc jockey and sports talk-show host. He changed his name from the less euphonious Larry Zeiger when the general manager noted that his name was “too German, too Jewish. It’s not show-business enough . . . .”

After a year, he joined WKAT, a station that gave DJs a great deal of freedom to develop their personalities. King took advantage of the opportunity by inventing a character called “Captain Wainright of the Miami State Police.” Sounding like Broderick Crawford, Wainright interrupted traffic reports with crazy suggestions—like telling listeners to save a trip to the racetrack by flagging down police officers and placing their bets with them. The Wainright character became so popular that bumper stickers appeared with “Don’t Stop Me. I Know Capt. Wainright.”

In 1958, King’s celebrity status led to his first major break as host of an on-location interview program from Miami’s Pumpernik Restaurant. He interviewed whoever happened to be there at the time. Never knowing who his guest would be and unable to plan in advance, he began to perfect his interviewing style, listening carefully to what his guest said and then formulating questions as the conversation progressed.

Impressed with King’s Pumpernik show, WIOD employed him in 1962 to do a similar radio program originating from a houseboat formerly used for the ABC television series, Surfside 6. Because of the show’s on-the-beach location and because of the publicity it offered the television series, Surfside 6 became an enormous success. WIOD gave King further exposure as the color commentator for the Miami Dolphins’ broadcasts. While riding a tide of popularity during 1963, he did double duty as a Sunday late-night talk-show host over WLBN-TV. In 1964, he left WLBN-TV for a weekend talk show on WTVJ-TV. He added newspaper writing to his agenda with columns for The Miami Herald, The Miami News, and The Miami Beach Sun-Reporter.

Of this period, King said he was “flying high.” Unfortunately, his life flew out of control. He ran up outrageous bills and fell $352,000 into debt. Still worse, he was charged with grand larceny and accused of stealing $5,000 from a business partner. On 10 March 1972, the charges were dropped, but the scandal nearly destroyed his career. It would take four years before he worked regularly in broadcasting again. King candidly presented this period of his life to the public in his book, Larry King.

From 1972 to 1975, King struggled to get back on his feet. In the spring of 1974, he took a public relations job with a horse racing track in Shreveport, Louisiana. In the
fall, he became the color commentator for the short-lived Shreveport Steamers of the World Football League.

In 1975, after returning to Miami, he was re-hired by a new general manager at WIOD for an evening interview show similar to his previous program. Over the next several years, he gradually recovered as a TV interviewer, a columnist for The Miami News, and as a radio commentator for the Dolphins. Still deep in debt, he claimed bankruptcy in 1978.

In the same year, the Mutual Broadcasting Network persuaded him to do a late-night talk show that debuted on 30 January 1978 in 28 cities as the Larry King Show. It was first aired from WIOD, but beginning in April 1978, it originated from Mutual’s Arlington, Virginia, studios, which overlook the capital. Originally, the show’s time slot was from midnight to 5:30 A.M. and divided into three distinct segments, a guest interview, guest responses to callers, and “Open Phone America.” King greeted callers by identifying their location: “Memphis, hello.”

In February 1993, King’s radio talk show on Mutual (now the Westwood Mutual Broadcasting System) moved from late night to an afternoon drive time reaching 410 affiliates. By June 1994, Westwood also began simulcasting King’s CNN live show, the first ever daily TV/radio talk show.” As part of the agreement, King dropped his syndicated radio show, a move that ended his regular radio broadcasting activities.

Larry King’s CNN program received a huge boost in 1992 by attracting the presidential candidates. On 20 February his interview with H. Ross Perot facilitated Perot’s nomination. Viewers of Larry King Live learned of Mr. Perot’s candidacy even before his wife did. Because of King’s call-in format, Perot was approachable as he responded to questions from viewers. The interview initiated a new trend in campaigning as other candidates followed suit by side-stepping traditional news conferences with trained reporters in favor of live call-in talk shows. The new boom in “talk-show democracy” invited voters back into the political arena formerly reserved for politicians and journalists, and marked a new stage in television’s influence on the U.S. political process.

Dr. Martin Luther King, Jr., leader of the American Civil Rights Movement, was assassinated on 4 April 1968 in Memphis, Tennessee, while lending support to a sanitation workers' strike. He was shot by James Earl Ray at approximately 7:05 P.M. Ray's bullet struck King as he was standing on his balcony at the Lorraine Motel; King died approximately one hour later. Although no television cameras were in the vicinity at the time of the assassination, television coverage of the event quickly followed.

News reports of King's wounding appeared first, but reporters remained consistent with the traditional news format, making early reports of the shooting seem both impersonal and inaccurate. The assassination occurred at the same time as the evening news, and several anchormen received the information during their live broadcasts; because details of the shooting were not yet clear, inaccurate information was offered in several cases. Julian Barber of WTTG in Washington, D.C., for example, mistakenly reported that King had been shot while in his car. Following this presentation of incorrect details, Barber then proceeded to introduce the station's weatherman. The rest of the newscast followed a standard format with only minor interruptions providing information about King's condition.

Similarly, Kondrashov recalls that Walter Cronkite had almost finished delivering his report on The CBS Evening News when he was interrupted by the news of King's death. The newscast then continued with a standard format, providing updates on the situation as they became available.
News when he received word of King's wounding. Visibly shaken, he announced the shooting. Moments after the announcement, however, the news program faded into commercial advertising. With little information available, the networks continued with their regularly scheduled programming and only later interrupted the programs with their station logos. At that point an anonymous voice announced that King was dead.

Having received word of King's death, all three networks interrupted programming with news programs. Avoiding President Lyndon Johnson's statement, all three featured anchormen discussing King's life and his contributions to the Civil Rights Movement. The networks then broadcast Johnson's statement, in which he called for Americans to "reject the blind violence" which had killed the "apostle of nonviolence." In addition, the networks also covered Hubert Humphrey's response, and presented footage of King's prophetic speech from 3 April, in which he acknowledged the precarious stage of his life. Although the networks had reporters positioned in Memphis, there were no television reporters on the scene because an official curfew had been imposed on the city in an attempt to prevent violence.

According to McKnight, the immediacy of the television coverage prompted riots in over 60 American cities, including Chicago, Denver, and Baltimore. Television coverage of King's death and the riots it sparked continued for the next five days. King's Life was featured on morning shows (e.g., NBC's Today Show), evening news programs, and special programs. The riots themselves commanded extensive television coverage (e.g., CBS' News Nite special on the Riots). Carter suggests that the riots following King's assassination represent a significant shift from previous riotous activities, from responses dealing primarily with local issues to the national focus emerging in the wake of the King riots. National television coverage of the circumstances surrounding the King assassination may have contributed to this shift.

The King assassination is a significant moment in the history of the Civil Rights Movement as well as in the history of the United States. In death, as in life, Dr. King influenced millions of Americans. From the first reports of his shooting to the coverage of his funeral services on 9 April at the Ebenezer Church on the Morehouse College Campus, television closely followed his struggle. Even after his death, news coverage of King's legacy continued when, on 11 April, President Johnson signed the Civil Rights Bill.

KINNEAR, ROY

British Actor

Articulate and popular comic character actor, Roy Kinnear proved to be a reliable guest star on many television programmes and a dependable lead in his own right. He was born in Wigan, Lancashire, and educated in Edinburgh. When he was 17 he enrolled in the Royal Academy of Dramatic Arts (RADA) but his studies there were interrupted when National Service conscription took him to the war. He later returned to the theatrical world and appeared on stage in repertory theatre in the 1950s. In 1959 he joined Joan Littlewood's famous Theatre Workshop in the East End of London and appeared in some of their biggest successes.

Television made Roy Kinnear a household name; his big break was the satirical series That Was the Week That Was (TW3). TW3 was controversial and highly popular. The team consisted of a group of irreverent, bright young things hell-bent on attacking the hypocrisies of the establishment. One criticism often made of the show was that the protagonists came across as smug, but Kinnear was spared from that accusation as his role in the group was that of the common man. In sketches he would usually be cast as a normal, working-class chap baffled by the complexities and machinations of the government and the media. Viewers could identify with the character and were endeared to him. Indeed Kinnear's very ordinariness and likeability assured him a long career in the medium.

He was a regular guest star on long-running series such as The Avengers, often co-starring in TV plays and was a semi-regular on Minder (as Whaley), and George and Mildred (as Jerry). He was not adverse to appearing as a straight man (albeit a very funny one) to comedian Dick Emery in various Dick Emery shows, and his familiar face was put to use in various TV commercials. Kinnear starred in his own sitcoms, shaped round his persona: as daydreamer Stanley Blake in A World of His Own (1965, BBC); as compulsive worrier George Webley in Inside George Webley (1968 and 1970, Yorkshire Television); as greengrocer and ladies' hairdresser Alf Butler in No Appointment Necessary (1977, BBC); as building-firm manager Joe Jones in Cowboys (1980–81, Thames Television); as Sidney Pratt, manager of struggling
escapologist Ernest Tanner (Brian Murphy) in The Incredible Mr. Tanner (1981 London Weekend Television); as Arnold Bristow, used-car dealer and psychic in The Clairvoyant (1986, BBC) and in his last sitcom, as the tipsy headmaster, R. G. Wickham, in the short-lived school sitcom Hardwicke House (1987, Central), which was pulled from the schedules half-way through its run following accusations of bad taste.

Kinnear worked regularly for more than 25 years on television. Much of his success was due to the warmth that the public felt toward him and the esteem in which he was held by his fellow professionals. Throughout this period Kinnear still made appearances in the theatre and acted in support roles in more than 50 movies. While on location for The Return of the Musketeers (1989), he suffered a fatal fall from his horse.

KINOY, ERNEST

U.S. Writer

Ernest Kinoy is one of U.S. television’s most prolific and acclaimed writers. His career spans five decades, from the live anthology dramas of the 1950s to the made-for-television movies of the 1990s. His best-known works—like scripts for The Defenders and Roots—have dramatized social and historical issues. Outside of television, Kinoy is less well known than some of his contemporaries from the golden age of television, like Mel Brooks and Paddy Chayefsky. Within the industry, however, Kinoy has always been recognized for his well-crafted television dramas. He has also written successfully for radio, film, and the stage.

Kinoy wrote for many shows in the 1950s, including The Imogene Coca Show and The Marriage, a series for Hume Cronyn and Jessica Tandy. He was best known for contributing to live anthology dramas like The duPont Show of the Week, Studio One, and Playhouse 90. When the Federal Communications Commission (FCC) held an inquiry into the decline of the live dramas, Kinoy and other writers offered damaging testimony about network unwillingness to broadcast “serious” drama. CBS, under scrutiny, resurrected a weighty dramatic series that would soon showcase Kinoy’s talents—The Defenders. Kinoy won two Emmy Awards writing for the series, which was created by his colleague Reginald Rose. The show followed two idealistic lawyers, a father and son, who confronted controversial issues and moral paradoxes on a weekly basis. In “Blacklist,” one of Kinoy’s most celebrated episodes, Jack Klugman played a blacklist actor who finally received a serious part after ten years, only to be harassed by vehement anti-Communists. In another well-known Kinoy episode, “The Non-Violent,” James Earl Jones played a black minister thrown in jail with a wealthy, white civil rights activist. Like Dr. Kildare, another series that Kinoy wrote for, The Defenders was sometimes described as a New Frontier character drama for its exploration of social ethics. During this same period, Kinoy also wrote for the series The Nurses and Route 66.

In the 1970s, Kinoy shifted to made-for-television movies and feature films. He often had two or more scripts produced in a year. Notable accomplishments included Crawlspace (1972), a CBS movie about a family adopting a homeless man, and Buck and the Preacher (1972), an action-packed black western directed by Sidney Poitier for the big screen. Kinoy’s television career took a new turn in 1976 when he wrote two docudramas for producer David L. Wolper: Victory at Entebbe, about the Israeli rescue operation in Uganda, and Collision Course, based on Harry Truman’s struggles with Douglas MacArthur. Kinoy subsequently worked on Wolper’s blockbuster docudrama Roots (1977), winning an Emmy for an episode he co-wrote with William Blinn. Kinoy served as Wolper’s head writer on Roots: The Next Generations (1979). In 1981, he received an Emmy nomination and Writers Guild of America award for another of his television docudramas, Shokie, about street demonstrations attempted by Neo-Nazis in the Jewish neighborhoods of Skokie, Illinois.

In the 1980s and 1990s, Kinoy’s made-for-television movies continued to receive praise. His scripts included Murrow (1985), about the famous broadcaster, and TNT’s Chernobyl: The Final Warning (1990). Kinoy is a rare presence in contemporary television. A writer known for quality drama, he has enjoyed success during each of television’s five decades.

KINTNER, ROBERT E.
U.S. Media Executive

Robert E. Kintner was a television executive who, as network president, influenced the development of two major networks (ABC and NBC) during the tumultuous decade of the 1950s. This former journalist fused his passion for journalistic excellence and his zeal for high entertainment ratings into a successful formula which shaped network programming trends for several decades. Kintner was lauded within the industry and the press for applying the "doctrine of common sense to many a ticklish problem" and for his refreshing "cold realism." He defended the embattled television industry during the quiz show scandals of the late 1950s, and spearheaded the move to make television a respectable journalistic medium by dedicating unprecedented network resources and air time to news and documentary programming.

Beginning his career as a reporter, Kintner established a national reputation in the late 1930s with a syndicated political column co-written with Joseph Wright Alsop, with whom he also collaborated on a number of best-selling books on American politics. Kintner's entry into broadcasting came when he was hired by ABC owner and chair Edward J. Noble in 1944 as a vice president of public relations and radio news. Six years later, Kintner was named president of the ABC network, which was just beginning to provide television service and was the clear underdog in competition with NBC and CBS.

With a keen understanding of television's potential as a journalistic medium, Kintner's major coup at ABC was the

Robert E. Kintner
Photo courtesy of Broadcasting and Cable
network's full coverage of the Army-McCarthy hearings, which brought Senator Joseph McCarthy's tactics to public light and established ABC as a major source for public affairs coverage. On the entertainment front, under Kintner's leadership the production-weak ABC struck groundbreaking deals with Walt Disney and Warner Brothers studios for the production of weekly television series. The success of such filmed television programming as *Disneyland* (and its offshoots) and the hit western *Cheyenne* influenced the programming trends at all three networks; by the late 1950s, Hollywood studio-produced westerns dominated the Nielsen ratings.

Kintner left the ABC presidency in 1956, in a period of great network growth, joined NBC in early 1957, and was named president in July 1958. As the first journalist to head a network, Kintner took pride in the informational potential of broadcasting, and believed that TV could fulfill its mission to society through news programming. Known affectionately as the "managing editor" of the NBC news division because of his hands-on approach, Kintner was directly responsible for the development of a strong news component at NBC. By increasing budget allocations and air time for the news division, and hiring top news executives and journalists (often from CBS, with whom NBC was in ferocious competition), Kintner had by the end of the decade built a high-prestige, unequalled news division at NBC which reigned throughout the early 1960s.

The major components of Kintner's three-pronged public affairs initiative were the nightly network newscasts, the development of strong prime-time documentary series, and the pre-emption of regular programs to provide live coverage of breaking news events. The anchor team of Chet Huntley and David Brinkley dominated news programming during this period, and in late 1963 both NBC and CBS lengthened their evening newscasts from fifteen to thirty minutes, a move which many critics credited as making television a serious information medium comparable to newspapers.

Kintner's vision of the medium as a way to educate and inform citizens about social issues was enabled by public and government pressures—especially in the wake of the quiz show scandals—to increase the prestige of the industry by increasing prime-time public affairs programming by the networks. Kintner revitalized NBC's network documentary units, which had focused mainly on cultural programming, to begin to take on serious social and political issues in series such as *NBC White Paper*. By 1962 Kintner claimed that the networks were "proving what's right with television"—brining space flights, civil rights riots, election coverage and swiftly breaking events into America's living rooms. Although often gently criticized for micro-managing the NBC news division, Kintner hosted the transformation of news and informational programming from a peripheral aspect of television programming to the position of prestige in broadcasting.

This "golden age" of television journalism was directly related to the historical moment—especially the years of President John F. Kennedy's "New Frontier" initiative, marked by the charismatic charm of a made-for-media president, the dramatic struggles of the Civil Rights Movement, the patriotic Cold War-era fervor of America's race into space, and the coming of age of American news broadcasting with the live coverage of the aftermath of the Kennedy assassination. Kennedy's image-oriented New Frontier forged an alliance with television, an alliance described by Mary Ann Watson in *The Expanding Vista* as a "symbiotic bond" between Kennedy and the television medium which would forever alter the relationship between the public and the president. Similarly, the centrality of television in the political process increased dramatically under Kintner's reign at NBC, with the coverage of the 1960 campaigns, the "Great Debates" between Kennedy and Nixon, paid political advertisements, and especially the election coverage (Watson reports that over 90% of American homes were tuned in).

Kintner was an active player in the public controversies surrounding the quiz show scandals of 1959, and he used this opportunity to redefine the mission and the structure of commercial television. Testifying before the House Subcommittee on Legislative Oversight in 1959, Kintner claimed that the networks, as well as the public, were victims of deception by those who rigged quiz shows. Although the networks were criticized by the subcommittee for "lack of diligence" in taking action, Kintner strongly defended his network, claiming that NBC was taking active steps to "investigate and safeguard the integrity of the shows" and had taken direct production control over the quiz shows away from the sponsors.

Under intense public criticism about the entertainment programming standards, as well as mounting pressure from the FCC and from civic and religious groups in the wake of the quiz scandals, Kintner recognized this period as a crossroads for the TV industry, and advocated that the industry take actions to recover public confidence. In the face of concerns about sex and violence in television shows, Kintner also defended the network in 1961 before the Senate Subcommittee on Juvenile Delinquency (the Dodd Committee), which charged the TV industry with violating moral codes, lacking imagination and shirking its responsibilities in the drive for higher ratings.

Believed to watch more television than any of his contemporaries in the industry, Kintner's addiction to "the box" was frequently noted. He was perceived as a paragon by some critics, such as Jack Gould of *The New York Times*, who wrote about him in 1965: "He can rationalize the pop of the medium with a relaxed opportunism that stands in strange contrast to his initiative in news and public affairs. . . . He embodies [both] the promise and problem of mass communication—how to keep up the quarterly dividend while offering both folk rock and the oratorio."

In early 1966 Kintner left NBC and was appointed as a special assistant and Cabinet secretary to President Lyndon B. Johnson. In a parting interview upon leaving NBC, Kintner advocated greater experimentation in TV programming, calling for programs dealing with more controversial social, economic and political subjects in both news and entertainment programming.

KIRCK, HARVEY
Canadian News Anchor

Harvey Kirck, news anchor for the privately-owned Canadian Television Network (CTV) from 1963 to 1984, has been called Canada's version of Walter Cronkite. In his autobiography he even noted how his retirement after twenty years was planned to ensure that he broke Cronkite's record. In fact, Kirck never exercised a similar power over the news or over the public mind, but he did become a celebrity, a recognized "Face and Voice of the News" in English Canada.

Beginning in 1948, Kirck served a long apprenticeship in private radio as an announcer who hosted programs, narrated commercials, wrote, delivered, and occasionally reported the news. In 1960 he became a news anchor for a television station where, he claimed later, he learned the importance of being a performer: "You have to develop a bullet-proof persona, and send him out to face the damnable, merciless camera." Three years later, he joined the CTV News service, then stationed in Ottawa, as one of four men (another was Peter Jennings) who served in two pairs of co-anchors on the model of NBC's The Huntley-Brinkley Report. The fledgling network, only two years old, was determined to challenge the dominance of the established The National (then CBC Television News) offered by the Canadian Broadcast Corporation (CBC). The peculiar arrangement of alternating pairs of co-anchors soon devolved into a more normal structure and Kirck took over the responsibility as chief anchor as well as news editor.

After a change in the ownership structure of the network, CTV News was moved in 1966 to Toronto, the media hub of English Canada. It was a mixed blessing for Kirck: he lost his position as news editor to concentrate on the task of presenting the news (though he also continued to participate in the writing of the newscast). Even though CTV's resources were slight—much of the material came from American sources or the private affiliates—it hoped to produce a bright and lively newscast at 11:00 P.M. with a distinctly American flavor that would contrast with the supposedly stodgy, and British, approach of the CBC. From 1971 to 1972 CTV News had drawn roughly even with CBC's National at 950,000 viewers a night in the common area covered by both networks (CTV did not then cover the country). A 1972 CBC survey discovered that CTV News scored higher as "more complete, lively, aggressive, fresh, friendly, interesting and in-touch".

That success owed something to Kirck's persona. He was a tall, eventually heavy-set man with a craggy and weathered face that signaled experience. His voice was deep and resonant, authoritative rather than casual. He might seem a bit gruff but he was eminently believable: a survey carried out in 1977 found that people had confidence that he fully understood what he presented.

But that persona was not enough to overcome the deficiencies in the quality of CTV News. During the next few years, The National secured an apparently unshakable lead over its rival, except in the metropolitan centers where CTV News moved ahead. In 1976 management scored a coup by hiring away from the CBC its news anchor, Lloyd Robertson, as well as a top news producer, Tim Katcheff. Robertson and Kirck became co-anchors, which allowed each more freedom to go on special assignment. The relationship be-
In the mid-1980s Rupert Kluge, one of the most powerful moguls, invested millions of dollars in the United States. He bought independent TV stations and their affiliates that had been purchased by Robert Murdoch. Kluge saw great potential in the growing sales of the Metromedia stations, which he felt were the key to Murdoch’s success. This deal made Kluge one of the richest persons in the United States.

It was the food business that led Kluge to television. In 1951 he invested in a Baltimore, Maryland, food brokerage house, and increased his sales dramatically, sold his majority stake in the mid-1950s, and began to look for another industry that was growing. He found television. In 1956

---

KLUGE, JOHN

U.S. Media Mogul

John Kluge ranks as one of the least known but most powerful moguls in the modern television industry in the United States. The major television networks and their affiliates deservedly draw the most attention, but Kluge proved a group of independent TV stations could make millions of dollars. His Metromedia, Inc., pioneered independent stations operations through the 1960s and 1970s. In the mid-1980s Rupert Murdoch offered Kluge nearly $2 billion for the Metromedia stations, which then served as the basis for Murdoch’s FOX television network. This deal made Kluge one of the richest persons in the United States.
Kluge was too late to enter network television, but he saw possibilities with independent TV stations. He assembled an investment group and purchased the former DuMont stations. He ran Metromedia on a tight budget, saving rent, for example, by headquartersing the company across the Hudson River from New York City, in Secaucus, New Jersey. He seized upon the programming strategy of simply re-running old network situation comedies and low budget movies. And Metromedia made millions with relatively small audiences, because costs of operation were so low.

Under his stewardship, Metromedia grew into the largest independent television business in the United States. Thereafter Kluge purchased assorted businesses to add to his Metromedia empire. Over the years he acquired the Ice Capades, the Harlem Globetrotters, music publishing companies holding such titles as Fiddler on the Roof, Zorba the Greek, and Cabaret, television production and syndication units, Playbill magazine, and a highly profitable direct mail advertising division. But he did make mistakes. One disastrous misstep was Kluge's 1960s purchase of the niche magazine Diplomat; another came with his proposal for a fourth TV network. Neither project succeeded, and the failures cost Metromedia millions of dollars.

Kluge reached his greatest successes in television by buying the syndication rights to M*A*S*H. With this asset, he finally gave rival network affiliates a contest for ratings in the early fringe time period. Not one to sit still, during the early 1980s Kluge cooked up a deal to take Metromedia private. In 1984, by structuring a $1.3 billion leveraged buyout on unusually favorable terms, Kluge ended owning three-quarters of the new company and pocketing $115 million in cash in the process. Now private and in full control, Kluge did not hesitate when Rupert Murdoch approached him with $2 billion to buy Metromedia’s television stations.

Out of TV, Kluge attended to his other businesses. Under the Metromedia name, he began to manufacture paging devices and mobile telephones. In managing these telecommunication ventures, Kluge retraced the steps he took in his television career: buy a license in a major market at an affordable price, then wait as the market evolves, and finally cash in.

In 1995 the Actva Group Inc., Orion Pictures Corp., MCEG Sterling Inc., and Metromedia International Telecommunications, Inc., signed an agreement to form a global communications entity to be named Metromedia International Group, Inc. Kluge already owned a major stake in Hollywood's Orion Pictures. The new four-part alliance merged wireless cable and Hollywood production skills to sell all forms of mass communication to citizens in Eastern Europe and the former Soviet Republics.

Investing and selling has benefited Kluge enormously. His wealth, which Forbes estimated at $5 billion as of the mid-1990s, vaulted him onto the list of the richest persons in the United States. Kluge spent his wealth so he could live like a king in a 250-room Georgian mansion, Albemarle,

situated on 10,000 acres in rural Virginia, near Charlottesville. He hosted frequent shoots for his guests, handing out antique guns to aim at birds released by a large staff of British-born retainers. In 1988 neighbors began pressing charges when their household pets turned up dead; local wildlife officials successfully prosecuted Kluge's staff for slaughtering hawks, a protected species.

Kluge represents the TV entrepreneur in the true sense of the word. David Sarnoff and William Paley, more publicized figures who started networks, have long been the subject of major biographies and much research. Kluge, perhaps because his efforts have been directed toward a less glamorous side of the television industry, has not been studied. But as a pioneer in independent television station ownership and operation, he deserves the same degree of attention.

### KNOWLEDGE NETWORK

**Canadian Distance Education Network**

The Knowledge Network is the educational television network of the province of British Columbia, a part of the province's larger effort to make post-secondary education available to all parts of the province using various delivery systems. In 1978, the province established the Open Learning Institute (OLI), to develop and deliver educational programming using distance education methods. These included correspondence courses, audio, film, teleconferencing, videodiscs, and strategies for reaching outside the conventional classroom. In 1980, in order to further the...
goals of distance education, the province created the Knowledge Network as part of OLI. The Knowledge Network today reaches over 90% of all households in British Columbia. Its mandate, however, has led it to pursue two different types of audience. On the one hand, the Knowledge Network was mandated to provide general public education programs which might interest casual viewers. On the other hand, the Knowledge Network was also directed to collaborate with the province’s educational institutions to deliver formal instruction which would only interest registered students. This double focus has led to a progressive diversification in the types of programs offered.

In 1988, however, OLI was substantially re-organized. Renamed the Open Learning Agency (OLA), it was re-shaped into three constituents: (1) the Open University, offering courses in the arts, sciences, and administrative studies, (2) the Open College, responsible for adult basic education and vocational courses, and (3) the Knowledge Network responsible for the delivery of courses and the provision of general educational programming.

The Knowledge Network’s pursuit of two different types of audience is typical, however, of virtually all educational networks in Canada. As organizations concerned with education, educational networks naturally attempt to extend and give shape to the larger projects of their respective ministries of education. Consequently, they are involved in the delivery of course material, collaborate with educational institutions, and reflect various curricula in their scheduling. As television networks, however, they also find themselves confronted with a much broader constituency—in terms of age, background, ability, education, etc.—than would be likely in any classroom. Furthermore, they reach this constituency under conditions conducive to learning. Hence, like all other educational networks, the Knowledge Network has construed education in a broad sense. It means not only formal education or the content of lectures and courses, but also the attempt to create a generally literate, lively, and well-educated citizenry.

The result is clear in the Knowledge Network’s schedule. The Knowledge Network devotes roughly half of its 6,000 annual broadcast hours to traditional educational material (credit and non-credit courses, college and university lectures, K-12 content, etc.). Furthermore, less than 30% of its content consists of tele-courses. It devotes the other half of its broadcasting hours to content of a more general and entertaining nature. This includes programs devoted to film (international, Hollywood, Canadian), general documentaries, teleplays, how-to programs, music programs, children’s shows, and so on.

In recent years, the very effort to construe education as both formal and informal has led to the criticism that educational networks are no longer fulfilling their mandates. For some they are increasingly perceived as publicly-funded entertainment undertakings competing unfairly with the private sector. This has, in turn, led to calls for them to be defunded, re-organized, abolished, or sold to private interests.

KOPPEL, TED

U.S. Broadcast Journalist

When Ted Koppel addressed Catholic University’s graduating class in 1994, he proclaimed, "We have reconstructed the Tower of Babel, and it is a television antenna." In Koppel’s words, "We now communicate with everyone and say absolutely nothing." This may be Koppel’s opinion of television in general, but few observers would accept it as a description of Koppel or his late-night news and public affairs program, Nightline, which began on ABC in 1980. Koppel and Nightline have repeatedly won awards and consistently attracted large audiences, even battling against such successful network stars as Johnny Carson and David Letterman. In the eyes of many worldwide TV viewers, Koppel is a celebrity, a respected, gutsy commentator, one of the best interviewers on TV, and a superb reporter. Newsweek once called him the "smartest man in television." Clearly, Ted Koppel does not "say absolutely nothing."

After first working in radio news at WMCA in New York, Koppel joined ABC News in 1963 as one of the youngest news reporters to ever work for a network, and quickly rose through the ranks of the organization. He covered Vietnam, and became the bureau chief for Miami, then Hong Kong, and then chief diplomatic correspondent in 1971. In this capacity he established himself as one of television’s best reporters. But then on 4 November 1979 Iranians seized the American embassy in Iran, taking Americans hostage, and television news took another step toward becoming the most reliable source of news. Four days later at 11:30 P.M. ABC News aired a program called The Iran Crisis: America Held Hostage anchored by Frank
Reynolds. Roone Arledge, ABC News president, decided this program would continue till the hostage crisis was over, and that it would eventually become a regular late-night newscast. After about five months The Iran Crisis became Nightline, and Koppel, who had anchored The Iran Crisis several times, became the permanent anchor for the new program. Since 1980 it has been difficult to separate Koppel from Nightline.

Koppel has won Peabody, duPont-Columbia, and Emmy awards, as well as countless of other awards. Koppel went to South Africa for a week-long series in 1985 to analyze apartheid, and subsequently won a Gold Baton duPont-Columbia prize for the series. Koppel also brought Jim and Tammy Bakker to Nightline, attracting 42% of network viewers. He brought George Bush and Michael Dukakis to TV in the last days of the 1988 presidential election when neither was giving interviews. Also in 1988 Koppel went to the Middle East to report on Arab-Israeli problems and held a town meeting attended by hundreds of Israeli and Arab citizens. And Koppel has probably brought Henry Kissinger (who once tried to hire Koppel as his press spokesman at the State Department) to TV more than any other interviewer. Among many other accomplishments, Koppel achieved a journalistic coup by being the first Western journalist to reach Baghdad after Iraqi’s Sadam Hussein invaded Kuwait in 1990. (Koppel eventually began his own production company so he could produce his own programs, such as The Koppel Reports.)

Koppel’s success has been earned under the scrutiny of millions of viewers, and he has had his share of critics. But as media critic Bernard Timberg comments, Koppel is resourceful. While dealing with enormous programming, technological, and economic changes in the business of electronic journalism (not to mention enormous egos), Koppel has persisted and has come out on top. But the style of Nightline was established early as “us-versus-them” during the Iran hostage crisis. Critics like Michael Massing have said Koppel and Nightline are not impartial; some feel that, especially with Kissinger’s influence, the show (and therefore Koppel) serves as a “transmission belt for official U.S. views.” Fairness and Accuracy in Reporting (a watchdog organization also called FAIR) has charged Koppel’s Nightline as being overly influenced by white, male, corporate guests. In other words, the audience frequently only gets one side of an issue. However, Koppel wants to be seen as impartial, and he wants Nightline to be a program where “people of varying stripes and political persuasions can feel comfortable.” Koppel recognizes the possibility, raised by critics, that his work can actually influence news events, but says that all the journalist can hope for is to “bring events to the attention of people in government,” and of course to the public. In his book on ABC News, Gunther describes Koppel’s Nightline as the most significant addition to television news since 60 Minutes was created in the 1960s. If this is so, then Ted Koppel may be one of the most significant journalists working in the medium.

KOVACS, ERNIE

U.S. Comedian

Ernie Kovacs, a creative and iconoclastic comedian, pioneered the use of special effects photography in television comedy. On the 50th anniversary of the beginning of television in 1989, People Weekly recognized him as one of the television’s top 25 stars of all time. During the 1950s, Kovacs’ brilliant use of video comedy demonstrated the unique possibilities of television decades before similar techniques became popular on Rowan and Martin’s Laugh-In and the various David Letterman shows. His live shows were characterized by ad-libbed routines, enormous flexibility with the TV camera, experimentation with video effects, complete informality while on camera, and a permissiveness that expanded studio boundaries by allowing viewers to see activity beyond the set.

His routines frequently parodied other programs and introduced imaginative Kovacsian characters such as the magician Narzoh Hepplewhite, Professor Bernie Cosnowski, and Mr. Question Man, who resembled Johnny Carson’s Carnac the Magnificent. The best known of his creations was the Nairobi Trio, three ape instrumentalists playing “Solfeggio” in a deadpan manner like mechanical monkeys. The high point came when the percussionist turned jerkily to the conductor and bopped him on the head with a xylophone hammer.

Following a career in radio, Kovacs’ transition to television came in 1950 when he simultaneously hosted several programs on NBC’s WPTZ in Philadelphia. His first show, Deadline for Dinner, consisted of cooking tips from guest chefs. When a guest did not show, he did his own recipe for “Eggs Scavok,” his name spelled backwards. In August 1950, he hosted a quiz and fashion program titled Pick Your Ideal, basically a 15-minute promotional for the Ideal Manufacturing Company. In November of that year he pioneered one of TV’s first morning wake-up programs. The unstructured format required improvisational abilities Kovacs had mastered on radio. The daily 90-minute slot was titled 3 To Get Ready. (The number three referred to channel 3, or WPTZ).

Kovacs’ off-the-wall style was extremely unorthodox in early television. He approached the medium as something totally new. While his contemporaries were treating TV as an extension of vaudeville stages, Kovacs was expanding the visible confines of the studio. His skits incorporated areas previously considered taboo, including dialogue with the camera crew, the audience, and forays into the studio corridor.

Impressed with his abilities, NBC network executives scheduled his first network show, It’s Time for Ernie, in May 1951. The daily 15-minute broadcast aired from WPTZ, featuring Kovacs and music from a local combo known as the Tony deSimone Trio. In July he received his first prime-time slot as a summer replacement for Kukla, Fran, and Ollie. Ernie in Kovacsland opened with the music “Oriental Blues” and title cards with cartoon drawings of Ernie. A voice-over announced: “Ernie in Kovacsland! A short program—it just seems long.”

Early in 1952, Kovacs reappeared on daytime TV as host for Kovacs on the Corner, the final show to originate from...
Philadelphia. Similar to radio's *Allen's Alley*, Kovacs strolled along a cartoon-like set and talked to such neighborhood characters as Luigi the Barber, Pete the Cop, Al the Dog, and Little Johnny Merkin, a midget. One program segment allowed a selected audience member to say hello to folks back home. A closed window filled the screen. On the window shade was printed the phrase "Yoo-Hoo Time." When the shade was raised, the excited audience member waved, saying "Yoo-hoo!"

In April 1952, Kovacs moved to WCBS in New York as host of a local daytime comedy variety show named *Kovacs Unlimited*. Known for its parodies of other programs, *Kovacs Unlimited* resembled the contemporary *Saturday Night Live*. It was Kovacs' longest-running series out of New York, lasting 21 months.

In December, CBS aired a new, national *Ernie Kovacs Show* opposite NBC's *Texaco Star Theater* with Milton Berle. Kovacs produced and wrote the show himself and, as with his earlier broadcasts, much of the program was improvised. Unlike other TV comedies, there was no studio audience, nor was canned laughter used. In Kovacs' view, the usefulness of an audience was diminished because they could not see the special effects. Described as his "hallucinatory world," the program featured many ingenious video effects as though illusion and reality were confused. In his skits, paintings came to life, flames from candles remained suspended in midair, and library books spoke.

Kovacs reappeared periodically in shows over various networks. In April 1954, the DuMont network's flagship station, WABD in New York, scheduled him as a late-night rival to Steve Allen. NBC aired his show as a daytime comedy premiering in December 1955 and in prime time a year later. Kovacs' final appearances were in a monthly series over ABC during 1961 and 1962. He received an Emmy for the 1961 series sponsored by Dutch-Masters Cigars. Regulars on many of Kovacs' early shows were Edie Adams, who became his second wife, straight-man Trigger Lund and Andy McKay, and the Eddie Hatrak Orchestra.

The most extraordinary episode in Kovacs' career was the half-hour NBC broadcast, without dialogue, known as the "Silent Show." Seen on 19 January 1957, it was the first prime-time program done entirely in pantomime. Accompanied only with sound effects and music, Kovacs starred as the mute, Chaplinesque "Eugene," a character he earlier developed during the fall of 1956 when hosting *The Tonight Show*. In 1961, Kovacs and co-director Joe Behar received the Directors Guild of America Award for a second version of the program over ABC.

Kovacs was an avant-garde experimenter in a television era governed by norms from earlier entertainment media. In his routines, he pioneered the use of blackouts, teaser openings, improvisations with everyday objects, matting techniques, synchronization of music and sound with images, and various camera effects including superimpositions, reverse polarity (a switch making positive seem negative), and reverse scanning (flipping images upside down). Recent TV documentaries have celebrated his work. These include WNJT's *Cards and Cigars: The Trenton in Ernie Kovacs* (1980), Showtime Cable's *Ernie Kovacs: Television's Original Genius* (1982), and ABC's *Ernie Kovacs: Between the Laughter* (1984). In 1987, he was inducted into the Academy of Television Arts and Sciences Hall of Fame.

KRAFT TELEVISION THEATRE

U.S. Anthology Series

Kraft Television Theatre proved to be one of the most durable and honored programs of the Golden Age, airing on NBC from 1947 to 1958. Produced by the J. Walter Thompson advertising agency, this live anthology drama was designed to mesh with Kraft’s overall marketing strategy, which stressed the concept of “gracious living,” an appeal to middle-class, suburban, family values. Kraft Television Theatre featured quietly paced, intimate dramas; as one Kraft representative put it, the show was be a “respectful guest in America’s living rooms.”

Although Kraft Television Theatre quickly established itself as a critical favorite after its premiere in May 1947, in Kraft’s estimation the show was only as useful as its ability to move product. In this it succeeded beyond fondest expectations. The first indication of the magnitude of the program’s sales prowess came from Thompson’s Sales Department which reported in June that McLaren’s Imperial Cheese, a new Kraft product advertised nowhere else but on television, was flying off grocers’ shelves.

The decision to feature food preparation over hard-sell personality or price appeals was not made lightly. Kraft’s advertising personnel were concerned that using a model or a recognized spokesman would detract from the product, so Thompson designed live commercials that used a single-focus technique. Each program had, on average, a pair of two-minute breaks, at which time cameras focused on a pair of feminine hands as they demonstrated the preparation of various dishes as announcer Ed Herlihy relayed the recipe to the viewer. This careful approach paid off for Kraft; sales of advertised products rose dramatically in television cities, and, even more importantly, a poll conducted by Television magazine in November 1947 showed that Kraft Television Theatre had the highest sponsor identification of any show on television.

Kraft and Thompson prided themselves on keeping costs at a minimum in the early years. The dramatic emphasis was on warm and engaging family fare (“realism with a modest moral,” as one executive said) solicited from young playwrights in New York; all performers were selected by Thompson’s Casting Department. Although the show was almost entirely an agency product, NBC took a great interest in the program’s operation—to too much, at times, for the agency’s liking.

Still, Kraft Television Theatre remained Thompson’s defining program, and through its long run (the show never went on hiatus during its eleven years on the air), featured such outstanding plays as Rod Serling’s “Patterns,” “A Night to Remember,” in which the Titanic disaster was memorably reproduced, and a version of Senator John F. Kennedy’s book Profiles in Courage. Several noted directors, including George Roy Hill, Fielder Cook, and Sidney Lumet, also served their apprenticeships on the program.

In October 1954, a second Kraft Television Theatre debuted, this time on ABC. The addition of another series surprised many industry observers who expected Kraft, if anything, to pare their television activities. The original Kraft Television Theatre was never a ratings success, but Kraft apparently never expected it to be, consistently claiming that they measured the show’s popularity by the number of recipe requests, not by its Nielsens. The ABC version was conceived with the intent of creating another advertising vehicle for Kraft’s burgeoning product line, such as the new Cheez Whiz. However, sales figures from products advertised on the ABC program did not justify the additional $2 million in costs, so Kraft pulled the show in January 1955.

By 1958, the anthology drama had yielded to serial narratives with their recurring characters and situations, and in April 1958, after a sustained period of ratings lassitude, Kraft decided to sell the rights to the program to Talent Associates, a production company headed by David Susskind. The movement from agency to package production relieved much of Kraft’s financial obligation to the show, as they could now split production costs with Susskind. Kraft Television Theatre remained on the air only a few more months before it was completely reconfigured by...
Talent Associates as *Kraft Mystery Theatre*, which lasted until September 1958.

**KUKLA, FRAN AND OLLIE**

Children's Puppet/Variety

*Kukla, Fran and Ollie* was the first children’s show to be equally popular with children and adults. The show’s immense popularity stemmed from its simplicity, gentle fun and frolic and adult wit. Burr Tillstrom’s Kuklapolitan Players differed from typical puppets in that the humor derived from satire and sophisticated wit rather than slapstick comedy. At the height of the show’s popularity, the cast received 15,000 letters a day, and its ratings were comparable to shows featuring Milton Berle and Ed Sullivan.

The basic format of the show was simple: Fran Allison stood in front of a small stage and interacted with the characters. The format was derived from the puppet act Tillstrom performed for the RCA Victor exhibit at the 1939 New York World’s Fair. Acting as an entr’acte for another marionette show at the World’s Fair, Kukla and Ollie would comment on the activities, sometimes heckle the announcer, and coax the actresses and models acting as spokespersons for the exhibit to come up onto the stage and talk with them. Never working from a written script, Tillstrom improvised over 2,000 performances at the Fair, each one different because of his personal dislike of routine. During World War II, Tillstrom and his Kuklapolitan Players performed in USO shows, at army hospitals, and for bond drives, where he met radio personality Fran Allison.

In 1947, the majority of television sets were located in taverns and saloons. Network executives were looking for a television show that could be watched at home and decided the Kuklapolitans would be the perfect “family fare”. The group was contracted for 13 weeks on daytime TV and stayed for the next ten years.

The first episodes were aired daily from 4:00 to 5:00 in the afternoon on local Chicago television station WBKB, which was later acquired by NBC. When the network completed its New York-Chicago transmission lines in 1948, Kukla, Fran and Ollie began to air nationwide. By its second season, the growing adult audience prompted the network to move the show to a 7:00 P.M. half-hour time slot. By its third season, the show had six million viewers. In 1951, NBC cut the half-hour format to fifteen minutes, which, ironically, caused the ratings to soar even higher because audiences craved more of their favorite characters. After several seasons, the daily program was shifted to a weekly program on Sunday afternoons. When the series switched from NBC to ABC in 1954, it returned to a daily broadcast. When the series was canceled in 1957, it was one of the longest running programs on television, second only to Kraft Television Theatre.

With few exceptions (e.g., elaborately staged versions of The Mikado and an original operetta of St. George and the Dragon), all of the shows were improvised. Pre-show preparation consisted of a meeting between Tillstrom, Allison, director Lewis Gomavitz, musical director Jack Fascinato, costume designer Joe Lockwood, and producer Beulah Zachary to discuss the basic premise for that day's program.

The popularity of the show stemmed from how it created its own unique world of make-believe. The characters were not caricatures, but rather well-developed, three-dimensional individuals with distinct histories, personalities, eccentricities and foibles. In the show’s initial episodes, the Kuklapolitans were strong characters, but not individuals. In the simple banter between Allison and one of the “kids” (as Tillstrom, Allison and others referred to them), audiences learned more of their individual histories where they went to school, their relatives, how an ancestor of Ollie’s once swam the Hellespont and took in too much water and thereby drowned the family’s fire-breathing ability, and about the time Buelah Witch was arrested by Interpol for flying too low over the United Nations building.

The leader of the troupe was Kukla, a sweet-natured and gentle clown who was something of a worry-wart. Oliver J. Dragon (Ollie), atypical of traditional puppet show dragons, was a mischievous, one-toothed dragon with a penchant for getting into trouble. Other members of the Kuklapolitans included grand dame Madame Ophelia Oglepuss, Stage Manager Cecil Bill (who spoke a language comprehensible only to the other Kuklapolitans), Colonel R.H. Crackie, a debonair Southern gentleman, floppy-eared Fletcher Rabbit, Buelah Witch (named for producer Beulah Zachary—with the intentional misspelling), Ollie’s mother Olivia Dragon and niece Dolores, whom audiences saw grow from an noisy infant into a typical teenage dragonette, and many others. Their human qualities endeared them to their audience.

It could be said that Allison acted as “straight man” to this cast of characters, but her role was much more. A quick wit in her own right who could maintain the pace set by Tillstrom, Allison served simultaneously, according to Tillstrom, as “big sister, favorite teacher, baby-sitter, girlfriend and mother.” Allison was equally responsible for adding to the characters’ histories. She was the first to mention Ollie’s mother and prompted Tillstrom to create the character for a future show.

The Kuklapolitans returned briefly for one season in 1961 for a daily five-minute show without Fran Allison. Kukla, Fran and Ollie was revived for two season (1969–71) for PBS, and from 1971 to 1979, the Kuklapolitans and Allison served as hosts for the Saturday afternoon CBS Children's Film Festival. The characters continued to appear in syndicated specials in the early 1980s. In all of these series and formats, the essential elements of the original series remained the same.

In its initial ten-year run, Kukla, Fran and Ollie received a total of six Emmy nominations for Best Children’s Program but won only once, in 1952. It was awarded a Peabody as the outstanding children’s program of 1949. In a tribute to creator Burr Tillstrom, co-worker Donald Corren (Chicago, July 1986) said, “The acceptance of television puppetry as a form of entertainment and communication exists because Kukla, Fran and Ollie was as much a part of the original television vocabulary as were ‘station identification,’ ‘the six-o’clock news,’ or the chimes that identified NBC.” Because the Kuklapolitans were such vibrant characters, Tillstrom specified in his will that they are never to be put on display inartely unless they are moving and speaking as he intended them to be seen.

KURALT, CHARLES
U.S. News Correspondent

Charles Kuralt is best known for his critically acclaimed series of “On the Road,” television “essays” on America and for his fifteen year tenure as host of the equally acclaimed CBS Sunday Morning series. Through a CBS network career spanning thirty-seven years, this award-winning journalist and author has brought the life and vitality of back-roads America to an eager audience while providing a television home for the arts, the environment and the offbeat.

Kuralt began his career as a reporter-columnist in 1955 for the Charlotte News. His penchant for unusual human interest stories found a home in the News' daily “People” column which in turn earned him the 1956 Ernie Pyle Memorial Award. A year later he was recruited for CBS. His first network job was to re-write wires and cables from overseas correspondents for radio newscasts, but he quickly advanced to the position of writer for CBS Evening News. In 1958, he moved to the CBS television news assignment desk, where he also covered fast-breaking stories. A year later, he became a full-fledged correspondent—the youngest person ever to win that position. His star continuing to rise, in 1960, he was chosen over Walter Cronkite to host a new CBS public affairs series, Eyewitness to History. However, within four months he was replaced by Cronkite and was moved back to general assignment reporting. He was named chief of CBS' newly established Latin American bureau during the Kennedy administration, then chief west coast correspondent in 1963. He also reported from various global hot spots in Africa, Europe and Southeast Asia, including four tours of duty in Vietnam.

Contributing special reports to the documentary series, CBS Reports, and anchoring several public affairs specials in addition to his regular reporting duties, Kuralt began to tire of the grind and rivalry inherent in daily reporting. To remedy this, he devised his plan for “On the Road.” After an initial negative reaction, he managed to win minimal support from network executives who granted him a three-month trial.

Kuralt's three-month trial began in October 1967, and turned into a twenty-five-year odyssey. With cameraman port from network executives who granted him a three-month trial.

Gehman, Richard B. “Mr. Oliver J. Dragon...and Friends.” Theatre Arts (New York), October 1950.

“Shed a Tear for Them.” Newsweek (New York), 9 September 1957.

Izzy Bleckman and soundman Larry Gianneschi, he logged more than one million miles in six motor homes while producing approximately 500 "On the Road" segments. Staying off the interstates and with no set itinerary, he drew upon viewer letters, a state-by-state clipping file, and occasional references from public relations firms and local chambers of commerce to find unusual stories and unsung heroes. He had total freedom to discover America.

In the early 1970s, CBS considered reassigning Kuralt but he was ever reluctant to leave the road. He did serve as co-host with Sylvia Chase on the short-lived CBS News Adventure in 1970, and in May 1974, on Magazine, an afternoon news and features program. He also contributed pieces to another short-lived prime-time magazine show, Who's Who (1977). With Dan Rather and Barbara Howar concentrating on more famous high-profile newsmakers, in typical Kuralt fashion, he brought the Who's Who viewing audience such unlikely characters as the inventor of the shopping cart, champion boomerang throwers and an eighty-nine-year-old kite flyer.

With network assurance that he could continue On the Road, on 28 January 1979, Kuralt assumed the anchor position on the new CBS News Sunday Morning. leisurely paced and low key, in keeping with its early Sunday morning time slot, the ninety-minute show examined major headlines, provided a weekly in-depth cover story and a series of special reports on law, science, the environment, music, the arts, education and world affairs. In essence, with its eclectic view of America, Sunday Morning became a natural extension of "On the Road," providing an outlet for topics not regularly covered on other newscasts. Commented Milton Rhodes, president of the American Council for the Arts, in the June 1987 issue of Horizon: "Nowhere else on television does a journalist of Kuralt's reputation discuss the arts as regularly, as fully, and as intelligently as he."

For eighteen months, Kuralt combined his Sunday Morning activities with his ongoing "On the Road" reports, but in October 1980, he left the road to become anchor for the daily morning network news offering. Morning with Charles Kuralt would be criticized for being too slow-paced for the time period and, in mid-March 1982, Kuralt was replaced as anchor and sent back out on the road. Within two years, his new "On the Road" reports became the centerpiece of yet another short-lived prime-time series, The American Parade.

Openly opposed to the fast-paced, minimal information format of many news broadcasts, through the years Kuralt has chastised television executives for "hiring hair instead of brains." Quoted in TV Guide on 2 April 1994, Kuralt said, "I am ashamed that so many [anchorpersons] haven't any basis on which to make a news judgment, can't edit, can't write, and can't cover a story." As TV Guide's Neil Hickey reported, these are all things Kuralt can do and for which he has been honored with eleven Emmy Awards and three Peabody Awards.

Into the 1990s, Kuralt continued his Sunday Morning efforts and for an approximate five-month period beginning in October 1990, co-hosted the nightly news summary, America Tonight, four nights a week, with Lesley Stahl. Then on 3 April 1994, at the age of fifty-nine, he retired from CBS with a poetic good-bye to his audience at the conclusion of his Sunday Morning broadcast.

Described by Newsweek on 4 July 1983, as "our beloved visiting uncle" and a "deToqueville in a motor home," Kuralt worked to awaken America to the beauty of its landscape, the depth and character of its people and to the qualities of excellence possible in television journalism. As a fitting tribute to a celebrated career, in April 1996, Kuralt was honored for his lasting contributions with the National Association of Broadcasters 1996 Distinguished Service Award.

KUREISHI, HANIF

British Writer/Director

Hanif Kureishi, an Anglo-Pakistani writer, is best known to international audiences as the screenwriter of My Beautiful Laundrette, one of the greatest international successes of British television’s Channel Four.

Born in London of an English mother and a Pakistani father, Kureishi documents the population of London’s margins—an underclass of disenfranchised youth, immigrants from former British colonies, leftist intellectuals, sexual outlaws (gays, lesbians, and heterosexuals refusing serial monogamy), and those individuals who cross class, ethnic, and sexual boundaries. His stories are often set in the Notting Hill district, a neighborhood at the center of the country’s most violent racial unrest.

Notting Hill is also the home of film and television director, Stephen Frears, with whom Kureishi collaborated on two projects for Channel Four’s Film on Four, Laundrette and Sammy and Rosie Get Laid. Frears is one of many British directors who has worked on films produced exclusively for television as well as those which are theatrically released, but have been funded all or in part by television (the two Frears-Kureishi films are examples of the latter). He has repeatedly claimed that television—not the cinema—is the best site for communicating the quality of daily life in Britain. When he encountered Kureishi’s script for My Beautiful Laundrette, he was excited by the prospect of bringing the story of the everyday lives of a group of entrepreneurial Pakistanis and disenfranchised white youth to a British television audience of up to 12 million people, 74% of whom never attend the cinema.

The film centers on Omar, a Pakistani caught, like so many of Kureishi’s characters, between two worlds—those of his leftist intellectual father, now a bitter alcoholic, and of his Uncle Nasser, a wealthy slumlord who lets his nephew revamp one of his laundromats. Omar first employs and then becomes lovers and partners with a former school chum, Johnny, one of the hundreds of unemployed white youths in London in the 1980s. The racist attacks on Omar by the other white youth are graphically depicted, but Kureishi does not demonize the perpetrators. In the universe of his stories, the once-colonized are sometimes the new exploiters, and left vs. right, us vs. them dichotomies don’t apply. Omar respects his father, but imitates his economically successful uncle, keeping his homosexual love affair with Johnny from both.

In Sammy and Rosie Get Laid, Rafi, a Pakistani official and wealthy factor owner returns to London to rekindle relationships with his son Sammy, his leftist English
daughter-in-law, Rosie, and his former mistress Alice. The film condemns Rafi's association with a government that used torture on its citizens, but Kureishi endows the character with lively hedonistic impulses that underscore his affinity with his non-monogamous son and daughter-in-law, whose leftist beliefs are more in sync with the writer's.

Critics usually point to Kureishi's masterful use of irony in these two films whose characters embody Thatcher's meritocrats and entrepreneurs, but who still find their identity in some of the sensual excesses of the 1960s—most notably sexual experimentation and/or drugs—that were decried by the Thatcher regime. Kureishi has written in his "Film Diary," that "openness and choice in sexual behavior is liberating," while "ambition and competitiveness are stifling narrowers of personality." By that prescription, his major characters—ambitious, competitive, but risk takers in sensuality—are complex studies in the contradictions of 1980s Britain.

LA FRENAINS, IAN
British Writer

Ian La Frenais ranks among British television’s most accomplished comedy writers. Most of his greatest successes were collaborations with BBC writer-producer Dick Clement; with Clement he has contributed several of the most enduringly popular comedy series of the last three decades.

La Frenais’s early experience as an insurance salesman in his native Newcastle-upon-Tyne was to prove invaluable when he came to write the first of the classic comedy series that he created in partnership with Clement. He happened to meet Clement while on holiday and they devised a sketch about two cocky northern lads for Clement’s director’s exams. The BBC was much impressed by the scenario and their sketch was developed into the massive hit *The Likely Lads*, which was one of the fledgling BBC2’s first big successes. The series revolved around the squabbles and contrasting aspirations of two friends, Bob Ferris (Rodney Bewes) and Terry Collier (James Bolam). La Frenais’s writing showed facility with characterization and an easy grasp of northern traits and humour, as well as a certain acuteness in exposing the absurdities of the British class system in a rapidly changing world. Sequels all too often turn out to lack the flair and uniqueness of originals. In this case, when the series was revived some years later as *Whatever Happened to the Likely Lad*, with Bob now engaged to be married and an even more vituperative Terry newly released from the Army, the critics were unanimous in finding the humour even sharper and more effective. There was no critical dissent when the programme was voted Best Situation Comedy of the Year in 1973.

Clement and La Frenais returned to the humour of North East England at regular intervals over the years, notably in the extraordinarily successful series *Auf Wiedersehen, Pet*, about a gang of Geordie building labourers obliged to pursue their trade in Germany, and in *Spender*, which starred former *Auf Wiedersehen* bricklayer Jimmy Nail. However, the pair proved that they were by no means restricted to purely regional comedy drama and in the mid-1970s they scored another huge hit with the classic prison comedy *Porridge*, starring the multi-faceted comedian Ronnie Barker.

Barker’s Cockney Norman Stanley Fletcher, a habitual criminal obliged by his innate good nature to guide his young cellmate Godber (Richard Beckinsale) through the vicissitudes and dangers of life behind bars, was hailed as a masterpiece of comic invention and the programme became a favourite of prison audiences throughout the country. A sequel, *Going Straight*, which followed Fletcher’s life after his release was less successful, lacking the dramatic tension that came with the confines of the original. In some respects Clement and La Frenais had already had a dry run for *Porridge* in their series *Thick as Thieves*, in which two crooks (Bob Hoskins and John Thaw) competed for the love of the same woman. This series ended after just eight episodes, when Thaw began work on *The Sweeney* police series. The original plan had been to return the two central characters to prison, where their relationship would have to adjust to new circumstances.

Collaborative efforts on situation comedies in the 1990s—including the disappointing *Full Stretch*, about a luxury car-hire business—have proved less notable. Though, with Clement, La Frenais enjoyed significant success as a screenwriter with his script for the cult film *The Commitments* (a triumph that prompted the pair to attempt a television version under the title *Over the Rainbow*). In the 1990s, La Frenais’s solo contributions as writer have been more successful, with the popular *Lovejoy* series, adaptations for television of the Jonathan Gash novels about an antiques dealer with an eye for the main chance (and for the ladies). As before, La Frenais’s easy humour and skillful characterization was deemed essential to the show’s success.

LA PLANTE, LYnda
British Writer

Considered one of the most important contemporary British television dramatists, Lynda La Plante is energetic, prolific and has achieved success in several diverse media fields. Originally an actress, La Plante is also a best-selling novelist and currently runs her own production company, La Plante Productions, as well as having gained both popular and critical recognition for her serious and intelligent television dramas. Apart from her series Lifeboat (1994), which was centred on the intrigues of a coastal community (almost in the fashion of a soap opera), La Plante’s dramas have been generally constructed round the imperatives of crime, punishment and underworld intrigue.

As an actor, La Plante appeared on British television in several well-known crime series of the late 1970s and early 1980s, including The Sweeney and The Gentle Touch. Usually typecast as either a prostitute or a gangsters’ moll, La Plante’s experience of television acting not only ensured that she was grounded in the narrative dynamics of the British crime series, but was also made only too aware of the subordinate role generally assigned to female characters in the genre. Having written for her own pleasure since her childhood, La Plante began to write and submit her own scripts for various current police series, scripts which attempted to create roles for women which were much more intelligible, independent and less subordinate to men. As fate would have it, one of her scripts, entitled The Women, ended up on the desk of producer Verity Lambert at Euston Films at a time when she and her colleague Linda Agran were consciously looking for television dramas which would feature women both at the centre of events and the action. The Women became the series Widows which was broadcast to great public acclaim in 1983.
and which was to transform La Plante’s career from actor to television dramatist.

Despite the centrality of women in her writing career, whether as characters such as Dolly Rawlins (Widows and She’s Out) and Jane Tennison (Prime Suspect), or as producers such as Lambert, La Plante has eschewed any identification with feminism or feminist agendas. Although undeniably aware of the questions raised and changes brought about by “second wave” feminism, she has included women’s issues (such as Tennison’s abortion in the Prime Suspect series) in incidental rather than pivotal positions in her dramas.

It would also be true to say that La Plante’s female heroines are neither saintly nor unproblematic. Dolly Rawlins murdered her husband, and Jane Tennison finds it necessary to repress her own emotional needs to the extent that she not only obscures much of her own femininity (qualities traditionally accepted as feminine such as care and compassion) but, at times, she seemingly manages to lose all humanity.

Despite the problematic nature of her heroines, La Plante’s work has still, however, been accused by some critics of producing an underlying subtext which actively espouses ideas of the politically correct and which succeeds in portraying all men as bastards and oppressors of women. On reflection, it would seem, rather, that La Plante has, in fact, provided some of the most disturbingly frank yet sympathetic male characters to appear on British television in recent times. In programmes such as Civies (but also in Comics and Prime Suspect), La Plante has uniquely explored the bonds of love between heterosexual men. Although poorly received by public and critics (because of its brutality and lack of sentiment), Civies undoubtedly portrays extraordinary love between men.

Male violence is often at the heart of La Plante’s work. She does not excuse it, nor does she shy away from its reality and implications. In many ways she is eager to get to the heart of this violence and depict it in a matter of fact way. This can be seen in a more formalised way in Seconds Out, Prime Suspect and to a lesser extent in Framed, where La Plante explores some of the dynamics of boxing. She displays obvious fascination with how dimensions of male physicality and brutality are enacted and performed in boxing competitions, training sessions and sparring bouts.

La Plante’s dramas, on the whole, do not champion either sex, but try to discuss both inequalities and power relations as they exist within society. For the most part, her protagonists (both male and female) stand for reason, the ability to think intelligently, and for expertise. In her dramas, La Plante is not interested in small-scale petty crime; she is preoccupied by both exceptional crimes and feats of exceptional detection. La Plante’s crime dramas often focus on the minutiae of planning (Widows, Prime Suspect, Framed, She’s Out) and the exhibition of particular skills and expertise such as Gloria’s demonstration of weapons in She’s Out.

A concern for realism and accuracy of procedure (whether in a police station, a pathology lab or a prison) has become one of the hallmarks of La Plante’s work. Her dramas are based on her own detailed and painstaking research and her elaborate and detailed scripts demand absolute accuracy of mise-en-scene, performance and procedure. With the formation of her own production company, it will be interesting to follow the possible future effects of her enhanced influence and control over her own dramatic products.

LAMBERT, VERITY
British Producer

By the early 1980s Verity Lambert's influence as a television producer and executive had made her not only one of Britain's leading businesswomen, but possibly the most powerful member of the nation's entertainment industry. With a résumé which lists many of the most noteworthy successes from the past 30 years, Lambert has served as a symbol of the women's advancement in the media. By the early 1990s, however, Lambert's name had also become associated with one of the more spectacular disasters in the history of the British Broadcasting Corporation (BBC).

Lambert's career did not quite suggest such dramatic highs or lows when the BBC first hired her in the early 1960s. She had already worked on the British ABC's Armchair Theatre, a prestigious commercial television series, and she had worked in American television with David Susskind. After 18 months, however, she returned to ABC, only to quit over their refusal to hire women directors. But when the BBC hired Sydney Newman away from ABC in 1963, the BBC's new head of drama in turn brought along Lambert, who, at age 27, became the corporation's youngest producer.

Lambert's BBC assignment, producing a new children's program, may be her most internationally-known achievement; for its first three seasons (1963–65), Lambert guided the development and production of Doctor Who. Although those three seasons might easily be overlooked in the twenty-five-plus history of the series, Doctor Who fans have repeatedly stressed Lambert's importance. During her tenure she both oversaw the creation of the original Doctor as a willful, often irresponsible pacifist, and presided over the phenomenal explosion of popular interest in writer Terry Nation's cyborg villains, the ever-hardy Daleks.

As Tulloch and Alvarado argue in Doctor Who: The Unfolding Text (1983), Lambert herself represents the convergence of discourses which helped to make Doctor Who so original and enduring. Over the course of the previous decade, the BBC had sought to meet the challenge of ITV by broadening its own definition of high culture beyond the realm of classical literature and its adaptation. Coming from the upstart world of commercial television, Lambert's association with the production of original dramas, heavy in social realism, became part of the BBC's continuing efforts to maintain its audiences. Moreover, Lambert and Doctor Who were not based in the children's department, and Lambert's inexperience with and even indifference to the established conventions of children's programming helped to lay the ground for the cross-generational audiences that made the series a groundbreaking success. Perhaps it was simply assumed that, "as a woman," Lambert was somehow automatically qualified for the job. Indeed, interviewers have often emphasized Lambert's decision not to have children of her own. Lambert has just as often refused to supply the sometimes expected displays of remorse: in the early 1980s, she cheerfully claimed "But I can't stand babies—no, I love babies as long as their parents take them away."

Lambert's career subsequent to Doctor Who continued to display similar mixtures of social awareness and slick commercial savvy. After producing an award-winning...
series of Somerset Maugham's short stories and other projects, Lambert left the BBC in 1970 for London Weekend Television. She returned to co-create Shoulder to Shoulder (1974), a multi-part history of the suffragette movement. The next year Lambert joined Thames Television as controller of the drama department, becoming the company's director from 1982 to 1985. During that time Lambert was responsible for a number of highly successful productions with high exposure abroad, including Rumpole of the Bailey, the American Emmy-winning Edward and Mrs. Simpson, and Quentin Crisp's landmark biography, The Naked Civil Servant.

In 1976 Lambert had also joined the Thames subsidiary Euston Films, Ltd., and from 1979 to 1982 she served as its chief executive. At Euston Films she developed Danger UXB, as well as the gangster drama, Out. She was also responsible for the 1979 Quatermass sequel, The Flame Trees of Thika, and Reilly: Ace of Spies, as well as Minder (1979–82), the popular working class crime series, with which she is most often associated in Britain. Series such as Out, Reilly and Minder helped to solidify her reputation as a woman who could produce tough, male-oriented programming, a reputation she has both acknowledged and decried as sexist.

Lambert's move into feature films came when she was named head of production for Thorn-EMI, replacing the man responsible for the disastrous, big-budget flops Can't Stop the Music and Honky Tonk Freeway. During what she calls this "terrible, horrible time" (1982–85), Lambert did persuade the company to join with Rank Film Distribution and Channel Four in backing a new British Screen Finance Consortium, a step which helped further to blur the distinctions in Britain between film and television production.

After leaving Thorn-EMI, her production company, Cinema Verity, produced the Meryl Streep film A Cry in the Dark (1988). Lambert's most public project, however, has been an elaborate, high-budget soap opera, Eldorado (1992–93). Like Doctor Who, Eldorado was an attempt by the BBC to prove itself competitive in an rapidly evolving market. This time, however, Lambert was not so lucky. A disaster of fully publicized dimensions, Eldorado was only Lambert's second experience with the genre (the first was in the 1960s, The Newcomers). Critics quickly turned on Lambert's "tough" Minder reputation and blamed her for Eldorado's departures from the familiar British conventions for soap opera. The "greatest of all British television drama producers" had dared to set a soap opera in Spain, and filled it with a multilingual array of British expatriates and foreigners far removed from the milieu of either Coronation Street or the BBC's own "quality" soap, EastEnders.

Lambert defended Eldorado to the end, and continued to produce a range of programming, from sitcoms to the gritty thriller Comics (1993), written by Prime Suspect's Lynda La Plante.

LANE, CARLA

British Writer

Carla Lane is one of the most successful British sitcom writers—she has conceived of and written numerous shows which have proved tremendously popular, and contributed to many others. Lane carries particular significance within British television, as she is one of few British counterparts to the women writers, directors, and producers of American prime-time sitcoms.

Lane broke into television when she and Myra Taylor created The Liver Birds, a BBC sitcom based on two young women sharing a Liverpool bedsit and their mainly amorous adventures. Having moved to London from her native Liverpool at a time when, Lane reports, being from Liverpool wasn't something people were interested in, she succeeded in demonstrating writing skills precisely by flaunting Liverpool culture. Over the following ten years and one hundred episodes, a highly recognisable style developed in Lane's writing of The Liver Birds. The characteristics of her work include themes on sexual and personal relationships, contemporary characters, and narratives more realistic than British television comedy had hitherto allowed. Ironically, Lane's comedy has always been distinctive for its lack of jokes, and can best be defined as comedy-drama. She describes herself as writing dialogue not jokes, with humour emerging through characters and speech rather than action.

Butterflies, Lane's next popular success, marked an increasing seriousness and melancholic tone in her sitcoms. The long-running BBC show Butterflies (1978–82), presented an intimate and studied portrait of middle-aged, suburban housewife, Ria (Wendy Craig), as she became attuned to the shortcomings of her life. Initially the BBC argued with Lane that comedy was not ready for a married woman stricken by another man, but Lane persevered and Ria was embarked on an adulterous affair. Although not championing women's issues, Lane writes from a woman's experience and point of view, which is clearly evident in the relationships defined in Butterflies. Her shows are, consequently, favourites with women viewers.

Lane furthered many of her earlier themes in ensuing sitcoms, including Solo, The Mistress (both starring Felicity Kendal); Leaving; and I Woke Up One Morning (all BBC). In addition to creating portraits of life up and down the social scale, these and other shows took social issues as a backdrop for character development, focusing on adultery, divorce, alcoholism. Unemployment, another issue, was the typically unconventional background of Lane's next major show, Bread (BBC, 1986–91), which was once again informed and inspired by Liverpool, and revolved around the Boswells, a working-class family consisting of a matriarch and her unemployed children. Bread was in no sense an instant success—it took a while for viewers to warm to the indulgent, staunchly Catholic mother and her family of unashamed scroungers—but within two years the sitcom had gained almost soap status, and came close to overtaking top soap EastEnders in the ratings.

Whilst Lane's contribution to British television has been officially recognised by an OBE, her work has not always received critical approval. There has often been an aversion to her subtle, anecdotal, and often poignant approach to programmes that have been labeled as comedy. BBC's recognition of the popular appeal of her writing has been confirmed in the ratings. Lane's phenomenally popular success stemmed from her insight into character construction, and her skill at allowing humour to flourish in situations not conventionally considered for such potential, yet which exist as everyday realities.

—Nicola Foster

LANGUAGE AND TELEVISION

In spite of the centrality of the visual image in television, this medium combines visibility with both oral and written varieties of language. Television is thus distinguished from print media by its predominantly aural-oral mode of language use, while visibility separates it from the exclusively aural medium of radio.

Orality is generally viewed as the "normal" or "natural" mode of communication through language. Being face-to-face, interactive, immediate and non-mediated (e.g. through writing, print or electronic media), oral communication and the oral tradition are considered by some theorists, such as Innis, to be indispensable to a free and democratic life. Unlike oral communication, which is usually dialogic and participatory, written language separates the writer and the reader in space and time, and relies on other senses. According to this perspective, audiovisual media, especially television, restore the pre-print condition of harmony of senses by using the ear and the eye and calling into play the remaining senses of touch, smell and taste. This view is rejected by those who argue that the "mechanized" orality of radio and television provides a one-way communication flow from the broadcaster to the hearer or viewer, thus eliminating a fundamental feature of the spoken language: its dialogue and interactivity. Television, like writing, then, overcomes the barriers of space, reaches millions of viewers, and may contribute to the centralization of power and knowledge.

Many viewers see television as an oral medium, a perception constantly reinforced by announcers, anchors and reporters who try to engage in an informal, conversational style of speaking. Among their techniques are the use of direct forms of address, (e.g., "Good evening," "Thank you for watching," or "Please stay with us..."), the maintenance of eye contact with viewers while reading the script from teleprompters or printed copy, and the attempt to be, or at least appear, spontaneous.

This on-the-air conversationality is, however, different from everyday talk in significant ways. For instance, television talk aims at avoiding what is natural in face-to-face conversation—errors such as false starts or pauses, and repetitions, hesitations and silence. A manual of script writing advises the beginner: "Structure your scripts like a conversation, but avoid the elements of conversations that make them verbose, redundant, imprecise, rambling, and incomplete" (Mayeux 1994). Furthermore, the broadcaster is required to have a good or "polished" voice, and is advised to articulate, enunciate, breathe from the diaphragm, sound authoritative, stay calm under fire, and, all the while, be conversational!" (Freedman 1990).

Viewers, by contrast, engage in an aural or auditory communication with the medium. Even in call-in shows, the majority of viewers are not able to speak. The few who go on the air via telephone are selected through a gatekeeping process, and are often instructed to be brief and to the point. Language, then, much like studio setup and camera position, is used to create a sense of intimate involvement, a sharing of time and space. Phil Donahue, for example, uses words such as "we," "us," "you," and "here" in order to create a sense of communion between the host, and the studio and home audiences, e.g., in "You'll forgive us, Mr. X, if we are just a little sceptical of your claim that all we need to do..." Similarly, another linguistic code, the frequent use of the present tense, is used to create a sense of audience involvement, and apparently allows the host, the guest and the home audience to share the same moment of broadcast time, even though most shows in the United States were, by the early 1990s, either pre-recorded or packaged as syndication reruns.

In spite of the presence of seeming spontaneity in talk genres, they are usually semi-scripted, and involve a preparation process including research, writing, editing and presentation. As Timberg points out, over a hundred professionals were involved in producing and airing a "spontaneous" talk show like The Tonight Show each evening, for example, and as much as 80% of the interview with guests on the Letterman show was worked out in advance. Non-scripted, ad lib and unprepared talk shows do, however, appear both on mainstream networks (e.g. Larry King Live), and on low-budget or semi-professional programs of local, community or alternative television.

While some theorists, such as Ong, admit the written bases of television's spoken language and conceptualize it as "secondary orality", there is a tendency to explain the popularity of television by, among other things, equating its orality with that of the face-to-face speech. Some researchers see in popular talk shows (such as Donahue or Kilroy) a forum or a public sphere where audiences, in the studio and in front of the screen, engage in oppositional dialogue. Others find the talk shows essentially conformist, contributing to the maintenance of the status quo.

Romanticizing the orality of television is as problematic as denouncing it as an impoverished form of speech. Language changes continually, and television, as a social institution and powerful technology, creates new discourses, new modes of language use, new forms of translation, and new forms of communication between communities with different linguistic abilities. "Natural" and TV languages coexist in constant interaction, influencing each other and contributing to the dynamism of verbal communication. Language consists of numerous varieties rooted in socio-economic differentiation (e.g., working class language, legal language), gender (male and female languages), age (e.g., children's language), race (e.g., black English), geography (e.g., Texan English), ethnicity, and other formations. Each variety may include diverse styles with distinct phonological, lexical, semantic and even syntactic features. Television genres provide a panorama of these language varieties and styles, a presentation of amazing language diversity which the viewer will rarely if ever encounter in daily face-to-face communication.
Television fosters an appreciation of the way writing and speaking merge, not only in the production of speech (the oral text), but also on the screen (in print), in genres ranging from weather and stock market reports to commercials and game shows. Even live interviews carry captions identifying the interviewees, their status, location or affiliation. Moreover, "writing for television" has emerged as a new art, which aims not at a literate readership but rather an aural-visual audience. It has developed, for instance, "aural writing styles" or "writing for the ear" allowing the incorporation of music and sound, "visual writing styles" for envisioning images, and "broadcast punctuation" codes for indicating the nuances of on-the-air speech. Training in this new realm of writing is provided in courses offered by academic and professional institutions and in dozens of textbooks and manuals with titles such as Wylie's *Writing for Television* and Blum's *Television Writing*. On a different level, some popular American programs in the United States have generated extensive fan writing, published and exchanged through the Internet. The fandom of science-fiction series *Star Trek*, for example, have produced no less than 120 fanzines (fan magazines), and some novels written by fans are commercially published.

Unlike radio and print media, then, which create meaning primarily through language, television engages in signification through the unity and conflict of verbal, visual and sound codes. The dynamics of this type of signification has not been studied adequately. Viewers and media professionals often claim that the visuality of television is a sufficient form of communication, as evidenced in the popular belief that "seeing is believing" and "the camera never lies." Much like verbal language, however, the visual and sound components of the television program are polysemic, i.e. they convey multiple meanings, and lend themselves to different, sometimes conflicting, interpretations. Moreover, the verbal text, far from being a mere appendage to the visual, has the power, as Masterman suggests, to "turn images on their heads." McLuhan's well-known aphorism "the medium is the message" implies that all these meanings are, to a large extent, determined by the technology of television, its audiovisuals. But this view has been rejected by, among others, producers and script writers who are rather self-conscious about their independence and claim freedom from the dictates of the medium.

Despite this multiplicity of meanings, language in television, as in all its other manifestations, written or spoken, does not serve everyone equitably or effectively. Far from being neutral, language is always intertwined with the distribution and exercise of power in society. Dichotomies such as standard/dialect or language/vernacular point to some aspects of the unequal distribution of linguistic power. In its phonetic, morphological and semantic systems language is marked by differences of class, gender, ethnicity, age, race, etc.; similarly, the speakers/hearers are also divided by their idiosyncratic knowledge of language, and often communicate in "idiolects," i.e., personal dialects.

Television attempts to control these differences and overcome the cleavages in order to reach sizable audiences. Thus, for example, the Program Standards of CBS requires broadcast language to "be appropriate to a public medium and generally considered to be acceptable by a mass audience." This implies, among other things, that "potentially offensive language" must be generally avoided and "blasphemy and obscenity" are not acceptable. In conforming to standards such as these, many television genres, especially news and other information programs, have developed a language style characterized by simple, clear and short sentences, read or spoken in an appropriate voice.

Born into this unequal linguistic environment, television followed radio in adopting the standard, national or official language, which is the main communication medium of the nation-state. While the schools and the print media established the written standard long before the advent of broadcasting, radio and television assumed, more authoritatively than the "pronouncing" dictionaries, the role of codifying and promoting the spoken standard. In Britain, for example, broadcasters were required until the 1960s to be fluent in the British standard known as Received Pronunciation. In spite of increasing tolerance for dialectalisms in many Western countries, news and other information programming on the public and private national networks continue to act as custodians of the standard language.

Thus, much like the language academy and the dictionary, television actively intervenes in the language environment, and creates its own discourses, styles and varieties. In the deregulated television market of the United States, genres known as "tabloid" or "trash" TV usually feel free to engage in potentially offensive language. And, citing an economic imperative to compete with less restrictive programming on cable television, dramas such as Steven Bochco's *NYPD Blue*, use language once prohibited on network television.

Television and radio have also actively participated in the exercise of gender power through language. In the U.S., female voice, especially its higher pitch, was marginalized for "lacking in the authority needed for a convincing newscast," whereas male lower-pitched voices were treated as "overly polished, ultrasophisticated." Thus, in the 1950s, Barnhart points out, that about 90% of commercial copy in the United States was "specifically written for the male voice and personality." According to a British announcer's handbook, women were not usually "considered suitable for the sterner duties of newscasting, commentary work or, say, political interviewing" because of their "voice, appearance and temperament." By the 1970s, however, television responded to the social movements of the previous decade and gradually adopted a more egalitarian policy. Women appeared as newscasters although male anchors still dominated the North American screens in the mid-1990s. The 1979 edition of an American announcer's manual added a chapter on "the new language," which recommended the use of an
inclusive language that respects racial, ethnic and gender differences.

Despite this kind of professional awareness, television’s role in the far larger configuration of world-wide language use remains far more constricting. The languages of the world, estimated to be between five to six thousand in number, have evolved as a “global language order,” a system characterized by increasing contact and a hierarchy of power relations. About one-fifth of the 5,000 existing languages are used by at least ten thousand speakers each; they are too small to survive. Only about 200 are spoken by more than one million. About sixty are spoken by ten million or more, comprising 90% of the world’s population. Twelve languages are spoken by one hundred million or more, accounting for 60% of the world’s population. Although Chinese is spoken by one billion people, it is dwarfed by English (which has half a billion speakers) in terms of cultural power. Most of the world’s languages remain unwritten while half of them are, according to linguists, in danger of extinction; if state policy was once responsible for language death, the electronic media, including satellite television, are now seen as the main destructive force.

Before the age of broadcasting, contact between languages was primarily through either face-to-face or written communication. Overcoming spatial barriers and the limitations of literacy, radio and television have brought on-the-air languages within the reach of those who can afford the receiving equipment. However, contrary to a common belief that access to broadcasting is easier than to print media, small and minority languages have often been excluded by both radio and television. Being multilingual and multietnic, the great majority of contemporary states seek national unity in part through a national or official language. As a result, the states and their public television systems either ignore linguistic diversity or actively eliminate it. Private television is equally exclusionist when minority audiences are not large enough to be profitably delivered to advertisers, or if state policy proscribes multilingual minority broadcasting (as is the case in Turkey). Even in Western Europe, indigenous minority languages such as Welsh in Britain had to go through a difficult struggle in order to access television. Both the centralizing states and minorities realize that television confers credibility and legitimacy on language. The use of a threatened language at home, even at school, no longer ensures its survival; language vitality depends increasingly on broadcasting.

Although broadcasting in the native tongue is increasingly viewed as a communication right of every citizen, the majority of languages, especially in developing countries, have not yet been televised. In Turkey, where Turkish is the only official language, some twelve million Kurds are constitutionally deprived of the right to broadcast in their native tongue, Kurdish. Even listening to or watching transborder programs in this language is considered an action against the territorial integrity of the state. In countries where linguistic and communication rights are respected, economic obstacles often prevent multilingual broadcasting. In Ghana, for example, there are over sixty languages or dialects, but in 1992 only six out of 55 hours of weekly television air-time were devoted to “local” languages; the rest was in English, the official language. Television production could not satisfy local tastes and demands. While the rural population could not afford the cost of a TV set, the urban elite tuned to CNN.

New technologies such as satellites, computers, cable and VCR have radically changed the process of televised production, transmission, delivery and reception. One major change is the globalization of the medium, which has for the first time in history created audiences of the size of one billion viewers for certain programs. Satellite television easily violates international borders, but is less successful in crossing linguistic boundaries. This has led to the flourishing of translation or “language transfer” in the form of dubbing, subtitling, and voice-over. Although the linguistic fragmentation of the global audience is phenominal, English language programs, mostly produced in the United States and England, are popular throughout the world. Television has accelerated the spread of English as a global lingua franca. For instance, in Sweden where subtitling allows viewers to listen to the original language, television has helped the further spread of English. Also, since the United States is the most powerful producer of entertainment and information, American English is spreading at the expense of other standards of the language such as Australian, British, Canadian, and Indian.

While some observers see in the new technologies the demise of minority languages and cultures, others believe these technologies empower them to resist and survive. Cable television, for instance, has offered opportunities for access to small and scattered minorities. Satellites empowered the refugee and immigrant Kurdish community in Europe to launch a daily program in their native tongue in 1995. Thus, unable to enjoy self-rule in their homeland, they gained linguistic and cultural sovereignty in the sky, beaming their programs to Kurdistan where the language suffers from Turkey’s harsh policy of linguisticide. While this is a dramatic achievement, other experiences, e.g. aboriginal languages in Western countries, are mixed.

Truly empowering is television’s potential to open a new door on the prelingually deaf community. The World Federation of the Deaf in Helsinki demands the official recognition of the sign language(s) used by the deaf as one of each country’s indigenous language. Television is the main medium for promoting these languages, and providing translated information from print and broadcast media. While it is possible to launch channels in sign language, it is important to note that the same technology is used by the more powerful states to promote their linguistic and political presence among the less powerful. Thus, the Islamic Republic of Iran’s state-run radio was made available via satellite to the sizable refugee population in North America in 1995, and television was to follow soon.

It is a remarkable achievement of the small screen to allow a home audience of diverse linguistic abilities to communally
watch the same program. This is made possible in some instances by simultaneous broadcasting in spoken language, closed captioning, and sign language through an interpreter in an insert on the screen. In another strategy, The McNeil-Lehrer News Hour allows viewers to choose between English and Spanish versions. Television has even popularized an artificial tongue, Klingonese, the "spoken and written language" of the fictional Klingons, a powerful "humanoid warrior race" who built an empire in Star Trek's fictional universe. Fans are speaking and studying the language, which is taught in a Klingon Language Institute, with learning materials such as The Klingon Dictionary, an audiotape, Conversational Klingon, and a quarterly linguistics journal.

Television itself, then, is not a monolithic medium. Moreover, there is no great divide separating the language of television and other media. Throughout the world, television airs old and new films and theatrical performances, while in North America some popular programs such as Roseanne and Star Trek are simulcast, i.e. broadcast on radio. Linguistic variation is found even within a single genre in mainstream, alternative, local or ethnic televisions. And while a cross-media study of each genre, e.g. news, would reveal medium-specific features of language use, the diversity of genres does not allow us to identify a single, homogeneous language of television. In spite of this rich variety of voices, however, it remains to be seen whether or not a combination of official policies and market forces reduces the overall range and heterogeneity of languages and their uses throughout the world.

LANSBURY, ANGELA

U.S. Actor

Angela Lansbury’s importance to television is primarily related to her production and performance contributions in *Murder, She Wrote*. From its inception in 1984, the CBS broadcast series enjoyed top ten ratings and performed equally well for USA network when it was placed in strip syndication.

As mystery novelist Jessica Beatrice Fletcher, Lansbury initially offered an image of a mature woman living a comfortable, fulfilling life in a stable community of friends in Cabot Cove, Maine. She had often portrayed women older than herself in film and on stage; she was Laurence Harvey’s diabolical mother in *The Manchurian Candidate* although she was only three years his senior. When the television series premiered, the almost-60-year-old Lansbury portrayed Jessica as a settled woman who had added professional success to an already complete life. The early years of the series showed Jessica as a secure figure living out the remainder of her life with the status quo—solving mysteries as a diversion.

The balance of traditional values and contemporary change was carefully maintained. Lansbury’s Jessica was by no means a militant feminist. She’d been widowed after a long, happy marriage, and her close friends were male. Yet, the fact that she used the androgynous appellation J.B. Fletcher in her writing was often exploited to make subtle comments on differential treatment of male and female authors.

Following the strong lead in from *60 Minutes* on CBS Sunday night, *Murder, She Wrote* was an immediate success and built a strong base of viewer loyalty. The combination of a comfortable lead character, interesting guest and supporting casts, and solid police-procedural scripts provided something for everyone, and the absence of exploitive violence or sexual activity assured that no one was alienated from the program. It was on the basis of this success that Lansbury and her husband Peter Fisher—who received a producer’s credit for the series—began to negotiate changes in the series.

Lansbury eventually tired of the series workload and even of the rather dowdy Jessica. Fearing the loss of its strong Sunday night block, CBS agreed to a season which included several *Murder, She Wrote* mysteries with Lansbury introducing stories but not taking part in the action. When Lansbury returned to a full production schedule, Jessica had changed. Not only was she trimmer and better dressed, she had a New York apartment and a university teaching job. She was more involved in the marketing of her books and the mentoring of young authors. She even traveled abroad and occasionally dated. And she still exchanged visits with her Cabot Cove friends. Jessica had grown up instead of growing old.

Lansbury exemplifies the power of individual influence within the television production/distribution system. She is closely identified with a role in a well-constructed popular series; she has retained a significant degree of production authority in that series; and she has used her authority to create a satisfying role for herself while providing a valuable image of a mature woman continuing to explore new and interesting personal activities.

—Kay Walsh

LASSIE
U.S. Family Drama

Lassie was a popular long-running U.S. television series about a collie dog and her various owners. Over her more than fifty-year history, Lassie stories have moved across books, film, television, comic books, and other forms of popular culture. The American Dog Museum credits her with increasing the popularity of Collies.

British writer Eric Knight created Lassie for a Saturday Evening Post short story in 1938, a story released in book form as Lassie Come Home in 1940. Knight set the story in his native Yorkshire and focuses it around the concerns of a family struggling to survive as a unit during the depression. Lassie's original owner Joe Carraclough is forced to sell his dog so that his family can cope with its desperate economic situation, and the story became a lesson about the importance of interdependence during hard times. The story met with immediate popularity in the United States and in Great Britain, and was made into a MGM feature film in 1943, spanning six sequels between 1945 and 1953. Most of the feature films were still set in the British Isles and several of them dealt directly with the English experience of World War II. Lassie increasingly became a mythic embodiment of ideals such as courage, faithfulness, and determination in front of hardship, themes which found resonance in wartime with both the British and their American counterparts. Along the way, Lassie's mythic function moved from being the force uniting a family towards a force unifying a nation. The ever-maternal dog became a social facilitator, bringing together romantic couples or helping the lot of widows and orphans. In 1954, Lassie made her television debut in a series which removed her from Britain and placed her on the American family farm, where once again she was asked to help hold a struggling family together. For the next decade, the Lassie series became primarily the story of a boy and his dog, helping to shape our understanding of American boy-
hood during that period. The series’ rural setting offered a nostalgic conception of national culture at a time when most Americans had left the farm for the city or suburbia. Lassie’s ownership shifted from the original Jeff Miller to the orphaned Timmy Martin, but the central themes of the intense relationship between boys and their pets continued. Lassie became a staple of Sunday night television, associated with “wholesome family values,” though, periodically, she was also the subject of controversy with parents’ groups monitoring television content. Lassie’s characteristic dependence on cliff-hanger plots in which children were placed in jeopardy was seen as too intense for many smaller children; at the same time, Timmy’s actions were said to encourage children to disobey their parents and to wander off on their own. Despite such worries, Lassie helped to demonstrate the potential development of ancillary products associated with television programs, appearing in everything from comic books and Big Little Books to Viewmaster Slides, watches, and Halloween costumes.

By the mid-1960s, actor Jon Provost proved too old to continue to play Timmy and so Lassie shifted into the hands of a series of park rangers, the focus of the programming coming to fall almost exclusively upon Lassie and her broader civic service as a rescue dog in wilderness areas. Here, the show played an important role in increasing awareness of environmental issues, but the popularity of the series started to decline. Amid increasing questions about the relevance of such a traditional program in the midst of dramatic social change, the series left network television in the early 1970s, though it would continue three more years in syndication and would be transformed into a Saturday Morning cartoon series. Following the limited success of the 1979 feature film, The Magic of Lassie, yet another attempt was made in the 1980s, without much impact on the market place, to revive the Lassie story as a syndicated television series. The 1994 feature film, Lassie, suggests, however, the continued association of the series with “family entertainment.”

Many animal series, such as Flipper, saw their non-human protagonists as playful, mischievous, and child-like, leading their owners into scrapes, then helping them get out again. Lassie, however, was consistently portrayed as highly responsible, caring, and nurturing. In so far as she created problems for her owners, they were problems caused by her eagerness to help others, a commitment to a community larger than the family, and more often, her role was to rescue those in peril and to set right wrongs that had been committed. She was the perfect “mother” as defined within 1950s and 1960s American ideology. Ironically, of course, the dogs who have played Lassie through the years have all been male.

LATE NIGHT WITH DAVID LETTERMAN/
THE LATE SHOW WITH DAVID LETTERMAN

U.S. Talk/Comedy/Variety Show

Fans of late night television have delighted in the antics of host David Letterman in one form or another since the beginnings of his “talk” show on NBC in 1981. For eleven years Late Night with David Letterman enjoyed the week night time slot following The Tonight Show with Johnny Carson (later Tonight Show with Jay Leno). But after being passed over as the replacement for the retiring Johnny Carson on Tonight, Letterman accepted CBS’ multi-million dollar offer to hop networks. The move brought Letterman and his band leader/sidekick Paul Shaffer to CBS, moved them up an hour in the schedule to run opposite Tonight Show with Jay Leno, and prompted renovation of the historic Ed Sullivan Theatre in downtown New York to be the exclusive location for Letterman’s new show. The Late Show with David Letterman featuring Paul Shaffer and the CBS Orchestra premiered on 30 August 1993, and within weeks had overtaken and passed the Leno show in the ratings race.

It would be too simplistic to classify David Letterman as a talk show host, or his programs as fitting neatly into the talk show genre. Still, the format for both Late Night and Late Show resembles the familiar late night scenario: An opening monologue by the host usually plays off the day’s news or current events. The monologue is followed by two or three guests who appear individually and chat with the host for five to ten minutes. Before and between the guest appearances, the host might indulge in some comedic skit or specialty bit. Despite their similarity to this basic format, however, Letterman’s shows differ from others in the areas of program content, delivery, and rapport with guests.

The content of both Late Night and Late Show has remained remarkably steady over the past fourteen years. Standard installments included “Viewer Mail” which became “The CBS Mailbag” after the move. During this segment, Letterman reads actual viewer letters and often responds to requests or inquiries with humorous, scripted video segments featuring Shaffer and himself. Another long-time Letterman bit is “Stupid Pet Tricks,” in which ordinary people travel to the program and showcase pets with unusual talent. In one sequence Letterman hosted a dog that would lap milk out of its owner’s mouth and from that bit sprang “Stupid Human Tricks.” In this bit people present unusual talents such as tongue distortion and spinning basketballs; one man vertically balanced a canoe on his chin. One of the most popular elements in Letterman’s repertoire is the “Top Ten List.” Announced nightly by Letterman, this list “express from the home office in Sioux City Iowa”, features an

David Letterman
visits local businesses.

Other specialty bits have included sketches such as “Small Town News” during which Letterman reads dotky or ironic headlines from actual small town newspapers, and “Would You Like to Use the Phone?”, in which Letterman invites a member of the studio audience to his desk and offers to place a phone call to someone they know. Letterman sent his mother, known to fans as “Letterman’s Mom” to the 1994 Winter Olympics in Lillehammer, Norway, where she interviewed First Lady Hillary Clinton and skater Nancy Kerrigan for the Late Show. Letterman frequently visits local businesses near his Broadway theatre: the copy shop, a local café, and a gift shop owned by “Mujibar and Sirjul”, two brothers who have become quite famous because of their visits to the show and their performances in skits on the program.

Letterman’s style melds with the content of his program, both often unpredictable and out of control. His delivery is highly informal, and like the content, the personal performance is extremely changeable, given to sudden outbursts and frequent buffoonery. This style builds on the carefully constructed persona of “a regular guy” and Letterman often “wonders” with the audience just how a guy like him managed to become the host of one of the most popular late night shows in America. He has referred to himself as “the gap-toothed monkey boy”, and frequently calls himself a “dweeb” (which his band leader Shaffer usually acknowledges as true). This “regular guy” excels at impromptu delivery and the ability to work with his audience. He often hands out “gifts and prizes” such as light bulbs, motor oil, and most notably, his trademark brand “Big Ass Ham”. He has been known to send his stand-by audience to Broadway shows when they were not admitted to his taping. Letterman’s relationship with his studio and viewing audiences does not always translate to his treatment of his guests, however.

Over the years of Late Night and Late Show, Letterman has hosted first ladies, vice presidents, film and television stars, national heroes, sports figures, zoo keepers, wood choppers, six-year-old champion spellers, and the girl next door. His relaxed attitude can make guests feel at home, and he can be a very gracious host if he so chooses. But there have been times when he has offended guests (Shirley MacLaine nearly decked him) and been offended by guests (Madonna offended the nation with her obscene language and demeanour on one of her visits with Letterman).

In his later years, Letterman has become prone to interrupting guests and is often guilty of drawing more attention to himself than to his visitors. He does all this with the full recognition that his position and popularity allow him to be as goofy as he likes. The once bitter, skeptical, “NBC” Letterman gave way to the sillier, snottier, “CBS” Letterman who now shouts “Get your own show” at hecklers in his studio audience. Still, as a dedicated and long-term late-night talk show host, he has provided viewing audiences with zany comedy, great music, and timely, interesting guests. Letterman presents himself as pal and equal to his audiences; letting down a layer of formality allows him to be the spontaneous host that audiences have come to love. Once again, the Ed Sullivan Theater is home to a “Really Big Show”.

LAVERNE AND SHIRLEY
U.S. Situation Comedy

Originally introduced as characters on Happy Days, Laverne De Fazio (Penny Marshall) and Shirley Feeney (Cindy Williams) "schlemiel-schlamazeled" their way into the Tuesday night ABC prime-time line up and into the hearts of television viewers in 1976. The show, set in the late 1950s, centered on the two title characters, and was rated the number one program in its second year of airing. In the earliest years of the long-running sitcom, the two twenty-something women shared an apartment in Milwaukee and worked at Shotz Brewery, the local beer bottling plant. Many of the episodes focused on the humorous complications involving the women or their friends. From ditching blind dates to goofing up on the conveyor belt at the bottling plant, Laverne and Shirley "did it their way" in Milwaukee until 1980 when ABC decided to change the setting of Laverne and Shirley to Burbank, California for a new twist. Aside from a change of climate and employment, now in Bradburn's Department store, the central characters and structure of the program remained the same until Williams left the program in 1982. Following her departure, the program continued for one year under the original title, but with Laverne alone as the central character.

"There is nothing we won't try, never heard the word impossible, this time, there's no stopping us, we're gonna do it!" This line from the theme song of the sitcom describes the state of mind of the program's two main characters. With the advantage of two decades of hindsight, Laverne and Shirley painted a picture of the 1950s from the single, independent woman's point of view. The plots of the episodes reflected concerns about holding a factory job, making it as a independent woman, and dealing with friends and relatives in the process of developing a life of one's own. Many plots revolved around the girls dating this man or that, or pondering the ideal men they would liked to have met: sensitive, handsome doctors. If on the surface the characters appeared to be longing to fulfill the stereotypical 1950s role of woman, their true actions and attitudes cast them as two of television's first liberated women. They thought for themselves and made things happen in their social circles. Together they fought for causes, from workers' rights at the bottling plant to animal rights at the pound. They helped each other and they helped their friends, who added much texture and comic effect to the program.

Their two male neighbors, Lenny and Squiggy, provided much of the humor in the program with their greasy-1950s appearance and their ironic knack of entering at just the wrong time. If someone said, "Can you imagine anything more slimy and filthy than that?", in would charge Lenny and Squiggy with the famous, distorted "hello!" Despite the fun poked at the two men, they were still portrayed as friends and thus were often caught up in the "Lucy-esque" escapades of Laverne and Shirley. Another prominent character, Carmine Ragusa or "The Big Ragu" was an energetic Italian singer. Friend to both women, Carmine was after Shirley's heart. Laverne and Shirley gave its lead characters room to explore boundaries and break some stereotypes common in television portrayals of women prior to the 1970s. Shirley was portrayed as interested in marriage, yet she was not sure that Carmine was "the one"; instead of settling, she kept her independence and her friendship with Carmine.

Among the loudest characters on the program was Mr. Frank De Fazio, Laverne's widowed father who owned the local Pizza-Bowl where everyone congregated. In his eyes Laverne was still a little girl, and he frequently checked up on her, evaluated her dates, and attempted to invalidate her decisions. Edna, Frank's girlfriend, acted as a buffer between father and daughter, and even more as a motherly figure to Laverne after she married Frank midway through the program's network run. Though Frank would express his overly protective and chauvinistic views, Edna's buffering reason and Laverne's stubbornness always won out. Laverne and Shirley was an early prime-time proponent of women's rights and placed much value in the viewpoints and experiences of 1950's women, suggesting that even in that decade women could be independent.

Since Laverne and Shirley was a spin-off of Happy Days, and because the programs aired back to back, it was easy to
cross over characters from one to another. Often Laverne and Shirley were visited by Arthur Fonzie (better known as The Fonz), or ran into Richie Cunningham or Ralph Malph (all from Happy Days) camping in the woods. Viewers were able to carry knowledge from one show (Happy Days) to the next (Laverne and Shirley) as characters shared experiences with each other outside the context of their own programs. The programs were thus able to layer meanings or overlap realities between previously mutually exclusive television families.

While visits to or from Happy Days characters were always extra fun, Laverne and Shirley provided seasons of hilarious antics and television families.

People often write to us about how much they enjoy watching Laverne and Shirley, and it brings a smile to our faces. We hope you share our love for this iconic show.

THE LAWRENCE WELK SHOW

U.S. Musical Show

One of television’s most enduring musical series, The Lawrence Welk Show, was first seen on network TV as a summer replacement program in 1955. Although the critics were not impressed, Welk’s show went on to last an astonishing 27 years. His format was simple: easy-listening music, what he referred to as “champagne music,” and a “family” of wholesome musicians, singers, and dancers.

The show ran on ABC for the first 16 years and was known in the early years as The Dodge Dancing Party. ABC canceled the show in 1971, not because of lack of popularity, but because it was “too old” to please advertisers. ABC’s cancellation did little to stop Welk, who lined up more than 200 independent stations for a successful syndicated network of his own.

Part of Welk’s success can be attributed to his relationship with viewers. He meticulously compiled a “fever chart” which tallied pro and con comments received from viewers’ letters. Performers with favorable comments became more visible on the show. In this way, the viewer also played an important role in his “family” of regulars.

There were many show favorites throughout the years including the Lennon Sisters, who were brought to his attention by his son Lawrence Jr., who was dating Dianne Lennon in 1955. Other favorites included the Champagne
The Lawrence Welk Show

Ladies (Alice Lon and Norma Zimmer); accordionist Myron Floren, who was also the assistant conductor; singer-pianist Larry Hooper; singers Joe Feeney and Guy Hovis; violinist Aladdin; dancers Bobby Burgess and Barbara Boylan; and Welk’s daughter-in-law, Tanya Falan Welk.

Most of the regulars stayed with the show for years, but a few moved on—or who were told to move on by Welk. In 1959, for example, Welk fired Champagne Lady Alice Lon for “showing too much knee” on camera. After receiving thousands of protest letters for his actions, he attempted to get Lon to return, but she refused.

Welk himself was the target of endless jokes. Born on a North Dakota farm in 1903 of Alsatian immigrant parents, he dropped out of school in the fourth grade. He was 21 years old before he spoke English. His thick accent and stiff stage presence were often parodied. But viewers were delighted when he played the accordion or danced with one of the women in the audience. Fans also bought millions of his albums, which contributed to the personal fortune he amassed, a fortune including a music recording and publishing empire and the Lawrence Welk Country Club Village.

The final episode of *The Lawrence Welk Show* was produced in February 1982. Followers of his show, however, were still able to enjoy the programs, which were repackaged with new introductions by Welk under the title *Memories with Lawrence Welk*. Loyal fans thirsty for more champagne music were pleased. The programs continue to be programmed in syndication on many channels throughout the United States, including many Public Broadcasting channels.

LAYBOURNE, GERALDINE

U.S. Media Executive

Geraldine Laybourne is currently vice president of Disney/ABC Television, charged with oversight of the organization’s cable operations. She came to that position in 1996 following her hugely successful presidency of Nickelodeon, a cable programming network targeted at children’s audiences. In this position, Laybourne was largely responsible for the overwhelming success Nickelodeon achieved in the 1980s and 1990s, a time when Nickelodeon, garnering a larger audience of child viewers of children’s television than ABC, CBS, NBC, and FOX, combined.

Laybourne began her tenure at Nickelodeon in 1980 as the network’s program manager. Her prior background featured stints in both education and children’s television programming, experiences that would serve her well at Nickelodeon. She then joined her husband Kit (a professional animator) as an independent producer of children’s television programming. From this position she began, in 1979, to work with the new cable network Nickelodeon in the production of pilot programs. A year later she was named the company’s program manager.

During Nickelodeon’s early years Laybourne was instrumental in several key decisions that ultimately led to the network’s long-term success. Nickelodeon came into being as a noncommercial program source created largely to serve as a goodwill tool through which cable system operators could win both franchise rights and subscribers. The company began to accept corporate underwriting in 1983, and became advertiser-supported a year later. Though it continues to devote fewer minutes per hour to advertising than most cable or broadcast commercial program sources, the initial decision to accept advertising was extremely controversial. The end result of the decision, however, was that Nickelodeon became an extremely profitable operation.

In 1985, Laybourne initiated the launch of the evening service Nick at Nite, which breathed new life into old
television series such as The Dick Van Dyke Show, The Mary Tyler Moore Show, Get Smart, and Dragnet. Nick at Nite took series that had been syndicated for years, and presented them in an original, tongue-in-cheek environment designed to create a unique program flow and to appeal to an affluent baby boomer audience. Nick thus expanded Nickelodeon’s programming hours and widened the network’s appeal to new audience segments.

With these successes under her belt, Laybourne was named president of Nickelodeon in 1989, and in 1992 she became vice-chair of corporate parent MTV Networks (owned by Viacom). In these positions, Laybourne continued her efforts to build the “brand equity” of the Nickelodeon name. To this end, Nickelodeon opened its own production studio at Universal’s Orlando, Florida, theme park; it licenses consumer products to companies such as toy manufacturers Mattel and Hasbro; and it produces a magazine aimed at children, which regularly includes a Q and A section with “The Boss Lady,” as Laybourne has come to be known by Nickelodeon’s young viewers.

Nickelodeon has also produced programs aired on outlets other than the cable network itself. For instance, its youth-oriented game show Double Dare was syndicated to broadcast stations, and its 1991 sitcom Hi Honey, I’m Home represented a cable landmark in that its episodes aired within the same week on both cable network Nickelodeon and broadcast network ABC. Such synergistic strategies are even more likely in the future because of Paramount Communication’s takeover of Viacom in 1994. An early example of the role Nickelodeon may play within Paramount’s media empire was demonstrated by the cross-media promotional strategies Paramount employed leading up to its successful 1995 theatrical release of The Brady Bunch Movie, in which Nickelodeon played a central role.

Under Laybourne’s leadership, Nickelodeon grew from a fledgling, noncommercial programmer that existed largely to serve the cable industry’s public image purposes, to a profitable and acclaimed program source that has become a core service in the channel lineups of virtually every U.S. cable system. In so doing, Laybourne became one of the foremost figures among cable television programmers, as well as one of the most influential women in the television industry. Her appointment to a position at Disney/ABC shortly after those two organizations merged into one of the world’s largest media conglomerates reflects this status and Laybourne’s new position promises to offer further opportunities for her to exercise her particular vision of television’s role in contemporary society.

LEAR, NORMAN

U.S. Writer/Producer

N
orman Lear had one of the most powerful and influential careers in the history of U.S. television. Lear first teamed with Ed Simmons to write comedy (he tells numerous stories relating how he persisted in seeking the attention of comedians like Danny Thomas, trying to convince them he could write their kind of material). After a time it worked and Thomas bought a routine from Lear and Simmons. David Susskind, too, noticed their work, and signed them to write for *Ford Star Revue*, a musical comedy-variety series that lasted only one season, 1950–51, on NBC. Lear and Simmons then moved to *The Colgate Comedy Hour*, a high-budget NBC challenge to Ed Sullivan on Sunday evenings. It was a success, lasting five years. The partners wrote all the Jerry Lewis and Dean Martin material for the famous comedy team’s rotating regular appearances on the show.

After the *Colgate* years Lear began writing on his own, and in 1959 he teamed with Bud Yorkin to create Tandem Productions. Tandem produced several feature films and Lear selectively took on the tasks of executive producer, writer and, on the film *Cold Turkey*, director.

In 1970 Lear and Yorkin moved into television. While in England Lear had seen a comedy, *Till Death Us Do Part*, which became an inspiration for *All in the Family*. ABC was interested in the idea and commissioned a pilot, but after it was produced the network rejected it, leaving Lear with a paid for, free standing pilot. He took it to CBS which had recently brought in a new president of the network, Robert Wood. The timing was fortuitous. Anxious to change the bucolic image cast by shows like *The Beverly Hillbillies*, Wood reacted positively to Lear’s approach and gave Tandem a green light.

*All in the Family* first aired on 12 January 1971. Wood commented in a 1979 interview that CBS had added several extra phone operators to handle an expected flood of reactions. They never came.

The series did, however, attract its share of protests and strong reactions. Over its early life, there were a continuous flow of letters that objected to language and themes and that challenged Lear for his “liberal” views. Later in 1979 Lear remarked that he responded to such criticism by stating, “I’m not trying to say anything. I am entertaining the viewers. Is it funny? That was the question.” Later, when attacks on the show asked how he dared to express his views, he altered his response: “Why wouldn’t I have ideas and thoughts and why wouldn’t my work reflect those ideas?” And of course they did.

Lear’s pioneering television work brought an even more controversial series, *Maude*, to CBS in 1972. Lear once described the acerbic and openly liberal Maude as the flip side of Archie Bunker. Perhaps that was true in the beginning, but unlike Archie, Maude’s positions on issues were not presumed to be ridiculous and her approaches to social issues were almost always presented sympathetically. The most famous episodes of *Maude* dealt with her decision to have an abortion. Reflecting the Supreme Court’s abortion decision of 1973, Maude and husband Walter worked out their response to her mid-life pregnancy with dignity and compassion. That show sparked a storm of protest from Roman Catholics. If some viewers accepted Archie as the bigot he was, some of the religious community took Maude equally seriously.

Lear and Yorkin also moved black families to network prime time with *Good Times* and *The Jeffersons*. And Lear’s satiric bent was evident in *Mary Hartman, Mary Hartman*, a pioneering show he wanted to air in the daytime as part of the soap-opera scene. When that attempt failed he syndicated the series, and it is frequently relegated to late-night fringe time schedules. Still, Lear saw the show as depicting “the worst of what was going on in society.” At the other end of the spectrum Lear collaborated with Alex Haley and brought a classy drama, *Palmerstown, U.S.A.* to the air in 1980.

Always present at story conferences of every series, even when he had as many as six on the air at one time, Lear’s
influence could be seen in every show. During most of the 1970s, he even performed as the "warm up" entertainer for the audiences assembled to watch weekly tapings of his shows, a production schedule that ran from late summer to early spring. He was fond of describing various episodes as sensitive, requiring his constant attention for just the right touch. He and executive assistant Virginia Carter spent several hours one Sunday evening discussing a single dramatic development—how to treat Walter Findley's alcoholism and Maude's response. When Lear left active involvement in television production in 1978, he left a company without a creative rudder. Few projects reached the small screen and those that did were poorly received. Much of Lear's own attention turned to the development of various media related industries, cable television, motion picture theaters, and film production companies.

But by 1980 he was alarmed by the radical religious fanaticism of Christian fundamentalists. At first he thought he would use a television series to respond. He developed a series concept, Good Evening, He Lied, in which the co-star of the show would be a woman newswriter in her thirties, very professional, trying to do her job—as a writer for an egotistical, airhead, male news anchor. A moralist at heart, Lear also proposed to have the woman be a devout, mainstream Protestant Christian, openly practicing her faith. It was a fine idea and demonstrated anew Lear's genuine respect for sincere religious convictions. NBC approved the idea but Lear did not pursue the production. He became convinced that another approach would be more effective for him, and he founded People for the American Way to speak out for Bill of Rights guarantees and monitor violations of constitutional freedoms. By 1996 the organization had become one of the most influential and effective voices for freedom.

In the 1990s Lear returned to television with several efforts. Neither Sunday Dinner, addressing what Lear calls "spirituality" nor 704 Hauser, involving a black family moving into Archie Bunker's old house, found an audience. Lear's voice is still heard through public appearances. He has not abandoned television, but is less frequently involved. Probably, however, no single individual has had more influence through the medium of television in its 50-year history than Norman Lear.

—Robert S. Alley

LEAVE IT TO BEAVER

U.S. Situation Comedy

Leave It to Beaver, a series both praised for its family-bolstering innocence and panned for its homogenized sappiness, served as a bridge between the waning radio comedy and the blossoming of the television "sitcom." The show was created by Joe Connelly and Bob Mosher, two writers who first worked together at the J. Walter Thompson advertising agency in New York. Leaving the agency in 1942 to devote their talents to radio comedy writing, the duo worked on shows starring Edgar Bergen, Frank Morgan, and Phil Harris before securing jobs on the wildly popular *Amos 'n' Andy* program. Over a period of twelve years, they earned writers' credits on over 1,500 radio and television scripts for that series; continuing to create material for the show's radio version right up to *Beaver's* third year. Although *Amos 'n' Andy* now is viewed as a distorted repository of racial stereotyping and segregated casting, Connelly's and Mosher's experience on that program helped them refine a flair for extracting humor from uncomplicated, yet likeable characters immersed in unremarkable situations with which the audience could easily identify.

Connelly's and Mosher's first solo television effort was a short-lived anthology series for actor Ray Milland. This uncharacteristic failure, they revealed in a *New York Times* interview with Oscar Golbout, taught them to restrict themselves to writing "things we know about." They followed up on this resolution by taking a situation Connelly had observed while driving his son to parochial school and crafting it into *The Private War of Major Benson*, a theatrical feature starring Charlton Heston that won the pair an Academy Award nomination in 1956. It was from such real-life simplicity that Leave It to Beaver was born. In 1957, Connelly and Mosher developed a concept for an adult-appealing show about children. Unlike such predecessors (and competitors) as *The Life of Riley*, *The Adventures of Ozzie and Harriet*, and *Father Knows Best*, it would not be the parents who served as Beaver's focal point but rather, their offspring. The stories would be told from the kids' point-of-view as Connelly and Mosher recalled it and observed it in their own children. Mosher was the father of two children and Connelly the parent of six. While all of these offspring served as sources for the show's dialogue and plot lines, Connelly's eight-year-old son Ricky was the inspiration for Beaver, his fourteen-year-old son Jay the model for Beaver's older brother Wally.

Remington Rand picked up the project that became a co-owned vehicle in which Connelly and Mosher had 50 percent and comedian George Goebel's Gomalco Production controlled the other half. The creative and casting aspects of the show were put together by dominant talent agency MCA (then known as the Music Corporation of America). From its inception, Beaver was fashioned as a traditional family unit with two sons. Beaver Cleaver was near eight when the show began and his brother Wally was twelve. Although Beaver's real name was Theodore, the nickname was emphasized to suggest a toothy, perky youngster who was "all boy." Early in the series, Beaver explains that he acquired the moniker as a baby when toddler Wally could only pronounce Theodore as "Tweeter". Parents Ward and June modified the sound to the slightly more dignified "Beaver" which would be the show's namesake. The pilot script was, in fact, titled *Wally and Beaver* to emphasize the project's child's-eye viewpoint. Sponsor Remington Rand felt this might suggest a nature program, however, so the series became Leave It to Beaver.

*Beaver* ran on network television from October 1957 to September 1963, the first two seasons on CBS and the last four on ABC. Paralleling the network shift, the show's production relocated from Republic Studio to Universal Studios after the second year—and the on-screen Cleavers moved from a modest, picket-fenced house at 485 Maple Drive to a larger abode at 211 Pine Street—both in the small and vaguely midwestern town of Mayfield. A library of 234 episodes was produced in which the characters were allowed to naturally age with their actors. Beaver went from a dirt-loving little boy to a gawky teen about to enter high school. Wally matured from a pre-teen just beginning to take an interest in girls to a poised young man ready to leave for college. In the show's first seasons, when actor Jerry Mathers was at his cutest, his Beaver character was the program's centerpiece. As he became a more gangling pre-adolescent, more plot attention was directed toward Wally, whose portrayer Tony Dow was developing into a handsome teenager. Through it all, father Ward (played by Hugh

Leave It to Beaver

Beaumont, a Methodist lay preacher and religious film actor) and mother June (grade-B film and TV drama veteran Barbara Billingsley) observed and nurtured their children with quiet selflessness and obvious love.

Despite its six-year run as a prime-time network offering, Beaver never made the coveted top-twenty-five list. Nevertheless, its down-to-earth writing, low-key acting and unconstrived storylines served as a memorable and well-crafted icon for the
positive if unremarkable joys of middle class family life in general and suburban kid-dom in particular. If Beaver’s ignoring of significant social issues was a common flaw of the programs of its time, its unpretentious advocacy of personal responsibility and self-respect was an uncommon virtue. Admittedly, as critic Robert Lewis Shayon observed, Ward and June Cleaver were “Mr. and Mrs. Average-American living in their typical Good Housekeeping home.” But what happened in and around that home was a consistent and continuous celebration of all those minor but precious family victories that could be won even when the children themselves were required to be the decision-makers.

Less than three months after Beaver left the air, the assassination of President John F. Kennedy changed the nation’s view of itself and its times. Connelly and Mosher went off to write The Munsters and a country preoccupied with civil rights strife, Vietnam, Woodward and Watergate would find little relevance in Beaver’s radio-derived simplicity. But by the late 1970s, the show’s uncomplicated and unabashed observations reacquired appeal. On superstation WTBS and scores of other outlets, Beaver reruns enjoyed significant ratings success. Beaver and Wally appeared on packages of Kellogg’s Corn Flakes in 1983 and the show’s cast members have since been featured in a variety of retrospective projects. A striking example of the wistful admiration for all the series still represents was uncovered in a 1994 Parenting magazine poll. Predictably, 40% of respondents said the contemporary superhit Roseanne reflected their family life—but a full 28% picked Beaver instead. What Wally once observed about his bother may be true of the program as a whole: “He’s got that little kid expression on his face all the time, but he’s not really as goofy as he looks.”

LEE, SOPHIE

Australian Actor

A ustralian actor Sophie Lee shot to national fame as the teenage presenter of the Bugs Bunny Show in 1990 (Channel Nine). With a combination of daring fashion sense, verve and beauty she secured high ratings among adults as well as children. Lee went on to host the first series of Sex (a.k.a., Sex with Sophie Lee) for Channel Nine in 1991. The show scored a high rating (32) and propelled her further into popular notoriety, especially in tabloid and consumer journalism, where she was the undisputed cover girl of the year, appearing, often repeatedly, in Australia's biggest-circulation magazines: Woman's Day, New Idea, TV Soap, TV Week, Cosmopolitan, Cleo, Dolly, Who Weekly, Truth, Playboy (in a cover/interview as sax-player with Melbourne rock band The Freaked Out Flower Children), and The Australian Woman's Weekly.

Her celebrity was organized around her youthful good looks, but Lee exceeded the image from the start, being associated with forthright views on sexism, feminism, and on the need for young people to get accurate sex information in the HIV era.
The combination of her popular reach, sexy image, and widely reported comments on sexism, made her a contributor to and an icon of the modernization, democratization and feminization of sexual attitudes in Australian popular/public culture. Her television career coincided with the rise of supermarket journalism and the supermodel phenomenon (she was also used as a fashion model), both of which blurred traditional distinctions between public and private, politics and entertainment, male and female "domains," urban and suburban culture. Lee herself was constantly critical of the tendency of TV executives and tabloid journalists to confuse sexuality with sleaze; and, as a result, she was seen as an unofficial spokesperson for a postmodern, post-political generation and its concerns.

Lee was reluctant to continue as the role model of sexuality for Channel Nine, since her commitment to democratized sexual lifestyles was exploited to run segments on voyeuristic topics (such as topless barmaids) over which she had no control, instead of stories she did herself on topics such as abortion and the campaign to put condom vending machines in schools. As a result of these concerns she dropped out of the Sex show after its first season. She continued to appear as an actor in the internationally syndicated prime-time soap opera The Flying Doctors and its short-lived successor RFDS, playing the character of Penny Wellings. She also appeared in the pilot episode of the successful "forensic psychologist" series Halifax fp (starring Rebecca Gibney) in 1994. But effectively Lee withdrew from television celebrity roles altogether to concentrate on acting, spending 1995 on tour with the classic Australian stage play Summer of the Seventeenth Doll.

Lee is known to an international audience through her role as Tania in the 1994 suburban tragi-comedy film Muriel's Wedding. Tania is notable for her sobbing, mascara-spattered, uncomprehending line "But I'm beautiful!" uttered when she loses the plot to the despised, ugly, fat, uncool Muriel. This line sums up an ironic, Australian displacement of the standard Hollywood teen film where the good-looking girl wins out in the end precisely for that reason.

Within the constraints of possibility offered by her public persona, Lee works against the grain of "suburban terrorism," not uncritically endorsing or exploiting it, but offering glimpses of powers other than being "beautiful" but "dangerously short of brains." She has consistently used her own beauty and brains in opposition to the "power thing," to talk through the expected stereotypes to the suburban audiences who were hooked on her Bugs Bunny persona. Sophie Lee was among the first of a new generation of politically astute popular performers in Australia who allowed a virtualized, postmodern public to think even as they admired.

—John Hartley

SOPHIE LEE. Born in Melbourne, Australia, 1969. Worked in local theatre groups and as an international model; first film role in the Australian telemovie Raw Silk, 1988; host, GTV Channel 9 Bugs Bunny Show, major roles in The Flying Doctors, 1985, and its spin-off RFDS; talk show host, 1991; pursued a singing career with a small Melbourne band.

LENO, JAY

U.S. Comedian

With his sanitized comedy appealing to middle class sensibility and ordinary, nice-guy demeanor, Jay Leno rose from comedy hall fame to win the coveted host seat of NBC’s *Tonight Show* in 1992. In so doing, Leno followed in the footsteps of the great past hosts, Johnny Carson, Jack Paar and Steve Allen.

Leno began his stand-up career in Boston and New York comedy clubs and strip bars. During the 1970s, he became a popular warm-up act for such divergent performers as crooner Johnny Mathis and country singer John Denver, and wrote scripts for the sitcom *Good Times*, starring Jimmy Walker. He obtained similar work for David Letterman, who, after he began hosting *Late Night with David Letterman*, granted Leno over forty appearances on the program. Leno became a popular guest on the Merv Griffin, and Mike Douglas shows and *Tonight Shows*, and by 1986 was named one of several guest hosts for *The Tonight Show*. An untiring success-seeker, Leno still spent 300 days a year on the road.

As a popular stage and television stand-up comic, Leno strives not to offend, offering non-racist, non-sexist, anti-drug humor. Like forerunners George Carlin and Robert Klein and contemporary Jerry Seinfeld, Leno is uncapricious. His focus is on ridiculing the mundane, the idiocies of social life. His feel-good approach avoids cynicism, and promotes patriotism; in 1991, for example, he performed for American Service Personnel stationed in the Middle East. Despite his penchant for politically liberal jokes, Leno insists that his humor is non-ideological and thus apolitical. Hence, he appeals to a conventional and politically diverse, that is, broad American public.

Although he was the exclusive guest host for *The Tonight Show* since 1987, Leno’s selection as Johnny Carson’s successor caused surprise and controversy in the industry. David Letterman—whose popular late, late show had followed *Tonight* for years, and created expensive advertising slots—had been slated for the job. However, NBC was attracted to the more cooperative Leno, matching his wit to the older *Tonight Show* audience. Moreover, an aggressive Leno promoted himself, working the affiliate station personnel, who in turn boosted his popularity ratings. Ultimately, Leno was simply more affordable than Letterman, allowing *The Tonight Show* to maintain its $75-$100 million profit base.

Seeking Letterman’s fans, Leno’s *Tonight Show* featured a renovated stage, young, popular guests, and the music of popular jazz musician Branford Marsalis. Controversy came to the set early on when NBC fired Leno’s long-time, tumultuous manager Helen Kushnick, and later when Marsalis, in a wrangle over artistic control, quit and was replaced by Kevin Eubanks. Thereafter, Leno fairly decently in the ratings, but failed to impress reviewers as had Carson and Paar. Accustomed to practicing his routines many times before a show, Leno suffered agitation with his new, full-week schedule. Moreover, a year into the show, Leno was faced with a rating war against CBS’ new *Late Show*, hosted by highly paid competitor Letterman.

During the *Late Show*’s first three years, it regularly bested the *Tonight Show* in the ratings, particularly with the younger audiences. This was particularly damaging as *Tonight* had the advantage of airing a full hour earlier than *Late Show* across 30% of the nation. Leno, in comparison to Letterman, was an unseasoned monologist, and a sometimes distracted interviewer, lacking ad-libbing skills. To boost ratings, Leno agreed to hire new *Tonight* writers and to hawk advertiser’s goods—Hondas and Doritos—on air. In early 1995, *Tonight* revamped the show from a talk to a variety format, creating a comfortable, comedy club-type studio for Leno. A more responsive and fluid Leno raised *Tonight*’s ratings to competitive levels, and by 1996 had intermittently regained its status, held since 1954, as the most popular late night show in the United States.

Leno was frustrated, though not broken by his make-or-break *Tonight Show* role; rather, he responded predictably
to this mid-career trauma with more strenuous effort on the set and increased appearances at Las Vegas clubs and college campuses. A popular comic, Leno has been named Best Political Humorist by Washingtonian Magazine, and one of the Best Loved Stars in Hollywood, by TV Guide.

LEONARD, SHELDON

U.S. Actor/Director/Producer

For nearly two decades, from the early 1950s through the late 1960s, Sheldon Leonard was one of Hollywood's most successful hyphenates, producing—and often directing and writing—a distinctive array of situation comedies, of which three justly can be considered classics (The Danny Thomas Show, The Andy Griffith Show, and The Dick Van Dyke Show). Although he assayed the hour-long espionage form with conspicuous success as well, the sitcoms remain the Leonard hallmark. Long before Taxi, Cheers, and MTM Productions, Leonard was overseeing the creation of literate, character-driven ensemble comedies that blended the domestic arena with the extended families of the modern workplace.

Like many independent producers in television's formative years (Bing Crosby, Desi Arnaz, Jack Webb, Dick Powell), Leonard began his show business career in front of the cameras. After six years acting on Broadway—during which time he also took his first stab at directing, for road companies and summer theater—in 1939 Leonard made the move to Hollywood, where he would go on to appear in fifty-seven features over the next fourteen years. It was not long before the actor was equally busy in radio, with regular roles on several programs (The Jack Benny Show, The Lineup and Duffy's Tavern, to name only a few), and guest parts on dozens of others. Although Leonard played a variety of characters in both media, the Brooklyn-toned actor—described as "Runyonesque" in most biographical sketches—is best remembered for his incarnations of quietly-menacing gangsters.

As the 1940s wore on, Leonard decided to take up writing for radio, selling scripts to such anthology shows as Broadway Is My Beat. Already demonstrating the business savvy befitting a future producer, Leonard retained the ownership of his radio scripts after production, thus building a library of salable properties. It was not long before Leonard turned his writing talents to the new medium of television, writing teleplays (some adapted from his radio scripts) for the filmed anthologies. Next Leonard tried his hand at directing some installments, an experience that signaled a new chapter in his show business career.

His apprenticeship behind him, Leonard signed on as director of the Danny Thomas series Make Room for Daddy in 1953. He was promoted to producer in the show's third year, remaining its resident producer-director for six more seasons. Between 1954 and 1957 the energetic director also found time to produce and direct the pilot and early episodes of Lassie and The Real McCows (which was produced by Thomas' company), write and direct installments of (fittingly enough) Damon Runyon Theatre—as well as act in a 1954 summer replacement series, The Duke. In
1961 Leonard became executive producer of the Thomas series (titled *The Danny Thomas Show*), at which time he and the comedian teamed up to form their own production firm.

T and L Productions would go on to make a lasting mark on television comedy. At its peak in 1963, T and L had four situation comedies in prime time, with Leonard serving as executive producer on all four: *The Danny Thomas Show, The Dick Van Dyke Show, The Andy Griffith Show,* and *The Bill Dana Show*. Through their own separate companies, Leonard and Thomas also owned an interest in a fifth sitcom, *The Joey Bishop Show*, although Leonard had no creative role in the series after directing the pilot. To complete the T and L comedy empire, the partners each owned an interest in *My Favorite Martian* by virtue of Thomas’ financing and Leonard’s direction of the pilot, and also owned *The Real McCoys* syndication package. Although the *Bishop* and *Dana* programs were short-lived, *Danny Thomas, Dick Van Dyke,* and *Andy Griffith* were all certifiable Top Ten Nielsen hits.

As the titles suggest, the foundation of the T and L formula was the comic performer, around whom a premise was formed and an extended “family” of kin and co-workers built. There were certain clear resemblances among the series, notably the reflexive *Van Dyke* and *Joey Bishop* shows, which followed the *Danny Thomas* model by focusing on the professional and private lives of people in show business (a TV writer in the first case, nightclub performers in the others). *The Andy Griffith Show* is in some ways antithetical to the noisy, urban sensibility of show-biz shows, though the slow-paced rural realism of *The Real McCoys* could not have been far from Leonard’s mind when he created the premise. Yet all the programs had something more in common, something *Television* magazine called the “T and L trademark”: “It’s good clean comedy with a small moral,” in the words of one 1963 observer—or, as a *Television* reporter put it, “a combination of comedy and sentiment.” While this mix was certainly not unique to the T and L sitcoms during the 1960s, it underlines their emphasis on characters, relationships, and emotion over situation and slapstick. One need look no further for proof of this than Mayberry Deputy Barney Fife, who, in even his most outrageously broad moments, is underlined with a humanity that keeps him believable.

Leonard’s influence on television comedy is bound up in the T and L hits, but it also transcends them. He can be credited with spotting the potential of bucolic raconteur Andy Griffith and (with writer Artie Stander) transforming him into wise and gentle Andy Taylor, sheriff of a fictional town called Mayberry. It was Leonard who recognized the story and character quality in a failed pilot written by and starring Carl Reiner, and resurrected it by casting Dick Van Dyke in the lead role—retaining Reiner’s writing talents. The excellence of the T and L programs is surely due in no small part to Leonard’s commitment to the quality of the scripts, exemplified by his cultivation of writing talent, his promotion of writers to producers, and the extremely collaborative nature of the writing process on all the shows. Indeed, Leonard had an equally profound impact on the medium through the writers he mentored, notably Danny Arnold (*Barney Miller*), and the teams of Garry Marshall and Jerry Belson (*The Odd Couple, Happy Days,* etc.), and Bill Persky and Sam Denoff (*That Girl, Kate and Allie*).

Leonard’s impact on television is attested by the long-standing popularity of the *Griffith* and *Van Dyke* programs in syndication. Just as significant in terms of industry practice, Leonard pioneered the strategy of launching new series via spin-offs, thereby avoiding the expense of pilots. Both the *Andy Griffith* and *Joey Bishop* shows began with “back-door pilots” (directed by Leonard) aired as episodes of *Danny Thomas;* similarly, Bill Dana’s “José Jimenez” character began as a recurring character on the *Thomas* show before setting out on his own series. While the Dana and Bishop vehicles were flops, Leonard scored a long-running success with another spin-off in 1964 when he and *Griffith* producer Aaron Ruben sent a popular resident of Mayberry off into six years of military misadventures on *Gomer Pyle, U.S.M.C.*

Leonard and Thomas parted company in 1965, and Leonard shifted genetic gears, mounting the globe-trotting espionage series *I Spy.* Among a sparse of spy shows popular in the mid-sixties, *I Spy* distinguished itself for its mix of
humor and suspense, and its exotic locales (Leonard and company spent several months each season shooting exteriors around the world in such faraway places as Hong Kong, England, France, Morocco, and Greece). But the most significant aspect of the series was Leonard’s decision to cast African-American comedian Bill Cosby opposite Robert Culp as the series’ two leads. If the move seems less than startling in retrospect, one need only look back at the Variety headline announcing the Cosby hire, dubbing the actor “Television’s Jackie Robinson.” Thanks to sharp writing and the chemistry of its leads, I Spy was hip without being campy, as witty as it was exciting. The series was nominated for Outstanding Dramatic Series Emmy every year of its three-year run, and earned Leonard an Emmy nomination for directing in 1965.

Leonard returned to the sitcom form in 1967 with the short-lived Good Morning, World (written and produced by Persky and Denoff), another reflexive, quasi-show-biz format in the Van Dyke vein, concerning a team of radio deejays, which also anticipated the ensemble comedy style of the MTM shows of the 1970s. The producer shifted genres again in the spring of 1969 with the lighthearted mystery My Friend Tony, but it was not renewed after its trial run. Leonard’s most innovative comedy project came along in the fall of that year, My World and Welcome to It, a whimsical comedy based on the stories of James Thurber, and interspersed with animated versions of Thurber’s cartoons. Despite critical acclaim and an Emmy for Outstanding Comedy Series for 1969, the series was not a ratings success, and was canceled after one season. Leonard’s final forays into situation comedy were less prestigious: Shirley’s World, a Shirley MacLaine vehicle in the Mary Tyler Moore mold, and The Don Rickles Show, an ill-fated attempt to package the master of insult comedy in a domestic sitcom.

Throughout the 1950s and 1960s Leonard had continued to take on the occasional acting job, recreating his radio role as the racetrack tout on Jack Benny, appearing as Danny Williams’ agent on Danny Thomas, and doing a gangster turn in a Dick Van Dyke episode. Still typecast after almost forty years, Leonard acted the tough guy yet again in 1975 as the star of the short-lived series Big Eddie (as a gambler-turned-sports promoter) and once more in 1978 in the made-for-TV movie The Islander (as a mobster). That same year Leonard discharged executive producer duties and acted in the TV movie Top Secret, a tale of international espionage starring and co-produced by Bill Cosby. More recently, Cosby recruited Leonard to fill the executive producer slot on I Spy Returns, a 1993 TV-movie sequel that reunited Culp and Cosby as the swinging (and now seasoned) secret agents.

Few individuals have had the longevity in the television business that Sheldon Leonard has, and with a string of hits spanning nearly two decades, even fewer have had such long-run success. Fewer still have had the remarkable impact on the medium, both creatively and institutionally. It might be an exaggeration to say that without Sheldon Leonard there would have been no spin-offs, and no Cosby, but it is certain that both phenomena hit the screens of America when they did through Leonard’s efforts. Certainly without him neither Rob and Laura Petrie nor Mayberry would exist as we know them. At the end of his 1995 autobiography Leonard vows a return to do battle with the networks on the field of television creativity. In the meantime, his contribution to the literature that is American television comedy continues to play out in syndication, and may well do so forever.

—Mark Alvey

SHELDON LEONARD. Born Sheldon Leonard Bershad in New York City, New York, U.S.A., 22 February 1907. Syracuse University, B.A. 1929. Married: Frances Bober, 1931; one child: Andrea. THE LESLIE UGGAMS SHOW
U.S. Music/Variety Show

The Leslie Uggams Show, which premiered in September 1969, was the first network variety show to feature an African-American host since the mid-1950s Nat King Cole Show. The Uggams show took over the CBS Sunday night slot vacated by The Smothers Brothers Comedy Hour, the controversial variety show CBS had censored and then forcibly removed from the airwaves the previous April. Produced by Ilson and Chambers, the same team who put together the beleaguered Smothers' programme, Uggams' show was given very little opportunity to prove itself and find an audience against the popular Bonanza on NBC. CBS pulled the plug in mid-season, replacing the show with Glen Campbell's Goodtime Hour in December 1969.

Leslie Uggams had achieved a modest amount of success both on Broadway and in television. As a teenager, she was a regular player on the Sing Along With Mitch musical variety show broadcast on NBC in the early 1960s. However, many critics argued that she was too much of a novice to deal successfully with the performance rigors of a variety show. Questions were raised about why Uggams was chosen to replace the politically contentious Smothers' programme. Industry observers noted that CBS, suffering from a public relations problem due to its censorious activity, needed to rehabilitate its reactionary image. A black-hosted variety show which included a certain amount of social commentary on race issues might repair some of the damage.

The Uggams show was noteworthy for the number of African-Americans who participated in the show's production, including technical personnel. Regular cast members included actors Johnny Brown and Lillian Hayman. Resident dancers, singers and orchestra were racially integrated, and the show boasted a black choreographer, conductor, and writer.

A major feature of the show was a continuing segment called "Sugar Hill" about a working-class black family. Uggams played the wife of a construction worker in the sketch. They lived together with Uggams' mother (Lillian Hayman), unemployed brother (Johnny Brown), and a "hippie" sister, in an unIntegrated apartment which resembled The Honeymooners home far more than the lavish and much commented upon integrated apartment building of television's other African-American family, the Bakers of Julia.

The show's quick demise generated protest and concern among black organizations from the Harlem Cultural Council, the Southern Christian Leadership Conference, the National Association for the Advancement of Colored People, and the Urban League. Whitney Young, Jr., head of the Urban League, publicly expressed his concern over what he considered an overhasty cancellation. He argued the show was not given any time to prove itself or institute necessary changes. He also pointed out that CBS' action diminished opportunities for black performers and technicians. Twenty-

eight African-Americans were put out of work by the cancellation, according to Young. CBS countered that the show’s demise had not generated much protest from viewers. While the canning of the Smothers Brothers had resulted in thousands of letters of complaint, the Uggams decision led to about 600 letters of disapproval.

While Leslie Uggams did not prove successful in a variety format, she did manage more notable achievements in dramatic acting. She went on to play major roles in the 1970s black-oriented miniseries, *Roots* and *Backstairs at the White House*. The first African-American to really succeed in a variety show would be Flip Wilson in the season following the demise of the Uggams show.

LETTERMAN, DAVID
U.S. Talk-Show Host/Comedian

David Letterman made his mark and cultivated a national following of ardent fans with his off-beat humor and sophisticated smart-aleck television comic style. That style was honed on his night-time talk show on NBC, *Late Night with David Letterman*, which debuted in 1982. Almost a decade later he and his growing audience changed time periods and networks when, in 1993, *The Late Show with David Letterman* began broadcasts on CBS at 11:30 P.M., a more accessible and lucrative time slot.

Letterman rose to fame as talk-show host and celebrity during a period in television history when late-night talk, a unique TV genre, began to stretch beyond the confines of the solid, long-standing appeal of NBC’s *Tonight Show*, starring the king of late night since 1962, Johnny Carson. Indeed, it can be argued that Letterman himself precipitated the expansion of late-night talk. His influence and appeal increased steadily until, by 1995, he was the most-watched and highest-paid late-night television talk-show host in the United States. His success was the result of a combination of factors: hard work and determination in the businesses of broadcasting and comedy, a kind of popularity which spawned sometimes too-adoring fans and occasional contempt, and a programming milieu that included the rise and fall of a number of shows on other networks with similar host/comic formats. On the cultural level, Letterman’s success coincided with a particular climate in the television and entertainment industries and among audiences. The cult of personality was on the rise. So, too, was the appeal of humor based on making light comedy of any topic, from the mundane to the most politically-charged.

Letterman began his career in broadcasting in his native Indianapolis, Indiana, where he worked in both television

David Letterman
(as an announcer and weekend weatherman) and radio (as a talk-show host). In 1975 he moved to Los Angeles, where he wrote comedy, submitted scripts for television sitcoms, and even appeared on various sitcoms and game shows. He performed stand-up routines at the Comedy Store where he met Jay Leno, by then a seasoned comedian, and Merrill Markoe, with whom he would later have a long-time professional and personal relationship. In 1978 he made his first appearance as a stand-up comic on The Tonight Show Starring Johnny Carson. Shortly thereafter he was hired by NBC to host a morning television talk show which was broadcast from New York. Though the program lasted only a short time, it was the comic forerunner to his other NBC hit.

_Late Night with David Letterman_, programmed to follow the familiar Carson performance, was a different kind of talk show, a format in which the comedy usually outshone the interviews. Letterman’s comedy was reminiscent of, yet more off-beat than, that of all the former celebrated _Tonight Show_ hosts, Steve Allen, Jack Paar, and Carson. His fascination with humor of the mundane, his quirky antics (Stupid Pet Tricks, Elevator Races, the Top Ten List), and his overall irreverence came on the heels of a new, hip style of comedy exemplified by NBC’s late-night comedy sketch program, _Saturday Night Live_ (SNL). This style was most appropriate for a younger television audience that had been loyal supporters of _SNL_ since the mid-1970s. However, Letterman retained the _Tonight Show_ comedy/interview format. Letterman was neither as emotionally or politically involved in his interviews as Jack Paar. More like Carson, he exhibited a cool detachment from, and more middle-American stance towards the political and social events of the day.

During his tenure at NBC Letterman occasionally served as guest host on the _ Tonight Show in Carson’s absence_. He shared that job with several others, most notably Joan Rivers and Jay Leno. His guest interview style was sometimes easygoing, sometimes mocking. Indeed, a number of guests found him to be a mean-spirited interviewer and some celebrities claimed he was adolescent at best, highly offensive at worst. Nevertheless he had a loyal following of late-night watchers, and some took their adoration to an extreme. One woman who claimed to be his wife was arrested several times for stealing his car and breaking and entering into his home. Letterman’s popularity was best exemplified, though, in the large number of discussions, references and imitations he inspired among fans, in the media and throughout popular culture.

Thanks in part to Letterman’s influence, late-night talk heated up during the late 1980s and the early 1990s. Though the genre is dominated by male host-performers, Joan Rivers eventually (briefly) hosted her own late-night show. Arsenio Hall and Chevy Chase were also in the competition for viewers, and like Rivers, hosted programs on the new FOX network, competing with Carson and Letterman on NBC. Game-show host Pat Sajak briefly hosted a CBS talk show in the late-night time slot. Rivers, Sajak, and Chase quickly dropped out because of poor ratings. Hall’s show, far more successful, lasted for several years. Through it all, _The Tonight Show Starring Johnny Carson_ remained the steady touchstone of late-night talk TV.

By the early 1990s speculation centered on which of the two most successful young comedians—Leno or Letterman—would be Carson’s successor upon his retirement. After intense network negotiations with both—and considerable public attention—Leno succeeded Carson. Letterman accepted a generous offer from CBS and the two became direct competitors at 11:30 P.M. weeknights. Though each has a unique style, both were slick comics whose monologues, comic material and choice of guests reflected and fed the contemporary TV audience appetite for celebrity, sarcasm, and irony. Both shows were also emblematic of television’s tendency to increasingly blur the line between news and entertainment.

On CBS, Letterman’s popularity grew. He kept much of his off-beat comic style, yet softened some of his angry edge and irreverence. Some commentators have attributed the changes to a desire—on his part and the network’s—to broaden his audience in the earlier time slot. By the mid-1990s David Letterman was a mainstream favorite among a mostly young audience. Prior to week-day taping sessions, sidewalks outside the Ed Sullivan Theater in New York City, venue for the new show, were the site of long stand-by lines of those hoping for seats inside the already packed house. Letterman’s persona was clearly a fitting celebrity for a culture impressed with one individual’s ability to capture so much popular attention.

—Katherine Fry

DAVID LETTERMAN. Born in Indianapolis, Indiana, U.S.A., 12 April 1947. Graduated from Ball State University, 1969. Married: Michelle Cook (divorced). Began career as radio announcer, TV weatherman and talk-show host, Indianapolis; performer, Comedy Store, Los Angeles, from 1975; writer for television, Hollywood, from 1970s; frequent guest host on _The Tonight Show, 1978–82_; performed and wrote songs for the Starland Vocal Band; host, _Late Night with David Letterman_, NBC-TV, 1982–93; host, _The Late Show with David Letterman_, CBS-TV 1993–. Recipient: six Emmy Awards. Address: c/o Late Show with David Letterman, CBS, 530 West 57th Street, New York City, New York 10019, U.S.A.

LEVIN, GERALD
U.S. Media Executive

Gerald M. Levin is chairman and chief executive officer of Time-Warner Inc., a position to which he was elected in 1993. He joined Time Inc. in 1972 after a brief career as an attorney and international investment banker. At Time Inc. he worked in the fledgling Home Box Office (HBO) pay-cable television subsidiary, starting out as a programming executive and eventually becoming chairman of the division. In 1975, during his tenure at HBO, Levin pioneered the use of telecommunications satellites for pay-cable television program distribution. At the time, HBO was using microwave technology to distribute programming to cable systems in Pennsylvania and New Jersey. Levin proposed that all national program distribution be accomplished by satellite transmission, a concept that transformed the U.S. premium-cable industry and led to a dramatic increase in the number of satellite-delivered cable networks. HBO experienced rapid growth after it became available via satellite and became a standard pay-cable offering during the late 1970s and 1980s. By 1979, Levin was a group vice president supervising all cable television operations, and eventually moved into the vice chairman’s position in 1988. His ascension within the Time corporate hierarchy marked a transition from print-oriented managers to others, such as Levin, who were involved with electronic media.

Time Inc. merged with Warner Communications in 1990, forming one of the world’s largest media providers. As Time’s chief strategist, Levin had an influential role in negotiating the complicated merger between two dissimilar corporate cultures. Time-Warner publishes books and magazines, distributes recorded music, makes motion pictures, and operates cable television production and distribution companies. From 1992 to 1995, Levin and Time-Warner were the focus of a public furore over recorded music lyrics that some critics claim were antisocial. Levin defended the constitutional First Amendment rights of the recording artists and film directors who created works for the company, but Time-Warner finally dodged the controversy by divesting the music division that produced the most controversial recordings.

Levin has also been an ardent champion of the Time-Warner’s Full Service Network (FSN), a 100+ channel cable television system that was first introduced in Orlando, Florida. The Full Service Network uses large computer servers to provide digitized programming, such as feature films, on viewer demand. Time-Warner, under Levin’s direction, is making a significant investment in digital interactive services—technology that combines the formerly separate delivery modes of cable television and computer-mediated information.

Levin’s ascension within Time Inc.—and later in Time-Warner—reflects the increasing centrality of electronic communication in mass media companies. Gerald Levin is a champion of electronic media services, and he has risen through the corporate ranks to an influential position as the chief executive of one of the world’s largest media organizations. By 1995 Levin was a central figure in the complex negotiations leading to yet another mega-merger, this time

with Ted Turner's media empire, Turner Broadcasting. As the union neared approval by all regulatory bodies in 1996, and as various protest-oriented law suits from competitors waned, considerable discussion focused on whether or not Levin would be able to hold his position at the top of the giant media conglomerate. If he does remain as the head of the new organization he will lead it into a century defined as much by computer driven mediation as by older forms of print, film, and television. If for some reason he moves out of that position, there is little doubt that he will remain at the contested center of the media world.

LEVINSON, RICHARD

U.S. Writer

Richard Levinson teamed with William Link to write and produce some of the most memorable hours of U.S. network television in the history of the medium. Moving easily from series to Made-for-Television Movies, they created, wrote, and produced at a level which led many of their peers to describe them as the Rolls and Royce of the industry. They received two Emmys, two Golden Globe Awards, three Edgar Allan Poe Awards from the Mystery Writers of America, the Writers Guild of America Award, and the Peabody Award.

As high-school classmates, Levinson and Link made early use of wire recordings as an aid to developing their dramatic writing skills, then continued their collaboration through university studies at the University of Pennsylvania. Following graduation and military service, the two moved to New York to pursue a career in television, only to discover that the production end of the business had largely moved west. In 1959 their drama of army life, Chain of Command, was produced as an installment of Desilu Playhouse, then chosen by TV Guide as one of the best programs of the season. With that success, the team, known fondly by many of their associates as "the boys," moved to Los Angeles where, in 1960, they were the first writers placed under contract by Four Star Productions.

For the first ten years of their work in Hollywood, they wrote episodes for various television series. In 1967, they created one of their own—Mannix. However, that series was taken in a direction opposite to their original intention by head writer, Bruce Geller. In 1969 the partners first grappled with contemporary problems in a pilot for the lawyers segment of The Bold Ones. Their work on this series pressed their use of television to explore serious social and cultural themes in the
Frustrated by Hollywood production routines, Levinson and Link had returned briefly to New York earlier in the decade to write a stage play, *Prescription: Murder*. That play, introducing their character Lt. Columbo, became the foundation for the *Columbo* series, starring Peter Falk, which began on television in 1971 as part of *The NBC Mystery Movie*. As Levinson noted in an interview, "Columbo was a conscious reaction against the impetuous force of Joe Mannix." Columbo was, at one point, the most popular television show in the world. Translated into numerous languages, the show still retains enormous popularity.

In November 1983, the team went to Toronto to film a movie for HBO that examines urban violence, fear, and responses to those realities. After a long and frustrating effort to cast the film on a very tight budget, Link and Levinson chose Louis Gossett, Jr. to play the title character in *The Guardian*—John Mack, and Martin Sheen to play the protagonist, Mr. Hyatt. In New York, Hyatt and his fellow tenants feel so threatened by the growing violence in the neighborhood that they hire a professional "guardian," only to discover that this man quickly establishes his own authority over them, one by one. In the course of the story, Mack successfully intimidates all the tenants even as he physically subdues and ultimately kills one intruder. One after another, the tenants trade freedom for security. Hyatt resists until threatened by a street gang, Mack saves his life.

As always, Levinson worried about the climax of the piece, left intentionally ambiguous. The final scene in *The Guardian* is an exchange of glances between Mack and Hyatt as the latter leaves the building for work the morning following his rescue. Sheen noted in an interview on the set that he played the expression to convey a sense of "What have I done?" Levinson, however, saw in the final frame on Hyatt a "spark of hope." In either interpretation, the underlying question of the drama is made clear: does security demand denial of freedom? Sheen saw it as a parable and related the story to his own concerns regarding U.S. military-political issues and the belief that the only way to get security is to give up more and more freedom. For the writers, the television movie was "only" posing questions. But they saw the implications of what they were doing. In the end the decent character was not a hero. And the frozen stare could signal either hope or despair.

Long and intense conversations between the writers on such issues regularly led to that same conclusion: "We don’t have to have the answers, we just raise the questions." For Levinson those posed questions, though, set his personal direction as a dramatist. One sees this in the *Crisis at Central High* (1981), where Joanne Woodward portrayed assistant principal Elizabeth Huckaby in a drama set in 1958 Little Rock. Though even-handed, the moral high-ground belonged to Huckaby and integration. It is equally evident in the sympathetic treatment of Private Eddie Slovik in the story of the only U.S. soldier executed for desertion in World War II, *The Execution of Private Slovik* (1979). And it informs the search for responsibility and judgment in *The Storyteller* (1977), an exploration of the role of television in instigating social violence.

In the summer of 1986, just a few months prior to his premature death, he explored the problems inherent in the dramatic treatment of another high-profile social issue—terrorism—in his last script, *United States vs. Salaam Ajami*. The television movie was finally aired in early 1988 as *Hostile Witness*. In the film, he sought to provide a valid defense for a Lebanese terrorist charged in an American court for a crime committed in Spain against an American tour group. In the story, the terrorist is kidnapped and brought to justice in a Virginia federal court.

Striving to achieve an objective portrayal of the motives for the terrorist and introduce to the audience some comprehension of his rationale, Levinson was determined to raise philosophical questions, but he wanted no weaknesses in the case against the terrorist.

Richard Levinson died at the age of 52, in 1987. When William Link accepted their joint election into the Television Hall of Fame in November 1995, his words were almost all devoted to Levinson, who would, he said, be pleased with the recognition.

THE LIBERACE SHOW
U.S. Musical Program

Certainly among the most popular early television celebrities and performances, both Liberace the individual and his television program were among the most persistently derided. Oddly folksy and campy at the same time, Liberace and his show defined a certain strata of showmanship in the post-World War II era.

Born Wladziu (Walter) Valentinio Liberace in suburban Milwaukee, he was interested in music from the age of four, and won a scholarship to the Wisconsin College of Music at the age of seven, studying there for seventeen years. Reputedly at the advice of family friend and renowned pianist Paderewski, the youngster decided to someday likewise be known by one name. Receiving classical training, he began to perform pop hits in local clubs as a teen. By the early 1940s he was establishing himself in New York night spots: ads offered a phonetic guide for his fans ("Libber-abchee"). Playing cocktail lounges and intermissions for big bands, he received a rave Variety notice in 1945 while appearing at the Persian Room, which led to strings of dates across the United States. He won a small role in the film South Seas Sinner (1950).

In 1950, Don Fedderson, the general manager of Los Angeles station KLAC-TV, saw Liberace perform before a small audience at the Hotel del Coronado in San Diego, and immediately offered him a chance to appear on the new medium. The resultant series was so popular as to draw network attention, and when Liberace appeared on NBC as a summer replacement for Dinah Shore in 1952 (fifteen-minute shows twice a week in prime time) he began to create a sensation. For a subsequent series, he wisely chose what was at the time an unorthodox format of filming programs for syndication. As a result, when Liberace became a television fixture through the country by the mid-1950s, he also became very rich. The program was one of several shows featuring KLAC talent produced by Fedderson and syndicated by Guild Films. (Betty White was another, starring in Life with Elizabeth from 1953 to 1955.) Fedderson would go on to produce many successful television series, often for CBS, including My Three Sons and Family Affair.

Liberace's TV shows were famous for offering a range of popular and classical standards, and featured tributes to composers, musicians, and genres of music—everything from "The Beer Barrel Polka" to "September Song" to "Clair de Lune." Visually, they showcased Liberace in direct address to the audience and in flamboyant performance, always smiling and often winking. No one in early television worked harder to create a star persona. Ever-present candelabras, piano-shaped objects large and small, and especially his outrageous and glamorous costumes defined Liberace's celebrity. Sentimental but ostentatious, the program also featured elder brother George as violin accompanist and orchestral arranger, plus regular and affectionate mentions of their mother, Frances. The show was immediately successful, appearing on 100 stations by October 1953—more than any network program—and nearly 200 stations a year later. He quickly sold out the Hollywood Bowl, Carnegie Hall, and other venues for live performances. A series of hit albums and a brief resumption of his movie career followed.

Liberace soon experienced the effects of over-exposure: some local stations, desperate for programming, played his shows twice a day, five days a week. His career suffered a considerable slump after only a few years. In response, a short-lived daytime series in the late 1950s tried and failed to feature a scaled-down, tempered Liberace. A change of management and a return to extravagance in a series of Las Vegas venues restored his notoriety, and he made many guest appearances on TV variety and talk shows through the 1960s and 1970s. In a memorable film cameo, he played a quite earnest casket salesman in the black comedy The Loved One (1965). In the late 1960s, one last TV series was briefly produced in London.

Liberace's popularity was typically met in the press with equal parts disbelief and disdain. The arrangements of his classical pieces were noted as simplifications, and his mix of classical and popular styles raised hackles about an encroaching middlebrow aesthetic. His personal eccentricities were detailed at length. More tellingly, the size and devotion of his following was seen to be problematic. That his audience
was largely female, and often middle-aged, wrought cliché anxieties about insubstantial and wayward popular culture; it even was suggested that he wasn’t providing quality performances but rather an object to be mothered. In response to his critics, he uttered a still-famous retort: “I cried all the way to the bank.” But in two instances, he responded with successful lawsuits—one against London Daily Mirror columnist “Cassandra” (William Neil Connor), and another against the infamous scandal magazine Confidential. Each had discussed his behavior or his appeal in terms that inferred homosexuality.

In retrospect, Liberace’s career seems due for reconsideration as a kind of “queer” open secret. The concern that his audience was mostly female, the regular speculation about his love life (When would he marry?), and the criticism of his attention to his mother all can be seen as touchstones to social anxieties of the time about appropriate gender roles and definitions. Indeed, if Liberace’s appeal was grounded in a deliberately unthreatening masculinity, marked by good manners and simplistic pieties, it also inspired a range of critical attention that often revealed a tendency to sexualize him. The libelous incidents were the culmination of this, and perhaps revealed more than they intended about “normative” attitudes of post-war male behavior. To be sure, there was nothing about Liberace which corresponded to “queer” underground culture or the avant-garde of the 1950s—no one appeared to be more mainstream. But the contradictions within his very successful career and persona raise further questions about post-war society and culture. Liberace died of AIDS-related complications on 4 February 1987.

**LICENSE**
U. S. Broadcasting Policy

Under the Communications Act of 1934, the United States Federal Communications Commission (FCC) is responsible for the “fair, efficient, and equitable distribution” of television broadcast airwaves for use by the American public. As a result, all persons or other entities (other than the federal government) wishing to operate a television broadcast facility must apply for and receive a government-issued license in order to reserve a transmission frequency for its television signal. These broadcast licenses are subject to review and renewal by the FCC every five years unless the FCC determines a shorter period to be in the public interest.

In the United States, private individuals and companies are permitted to own and operate television stations for commercial and non-commercial use. The airwaves themselves, however, because of their limited availability on the broadcast spectrum, are considered a finite public resource that is “owned” and regulated by the federal government on behalf of the American people. During the first half of the 1920s, when commercial broadcasting was in its infancy, pioneers in the industry had unfettered and virtually unlimited access to what was then an abundance of electromagnetic frequencies. By 1926, when the number of broadcast stations increased from

536 to 732, Congress became concerned that the rapid proliferation of broadcasters would quickly deplete available airwaves. In addition, advances in transmission technology enabled powerful, city-based operators to boost their signal range, effectively drowning out smaller, rural facilities. The chaos and cacophony of mid-1920s' broadcasting ultimately led Congress to pass regulatory legislation in 1927, and again in 1934, that requires all station owners to apply for a broadcast license, and meet specific criteria for eligibility before a license is issued or renewed.

Over the last sixty years, the essential aspects of broadcast license grants have largely stayed the same. In the increasingly rare instance in which a potential broadcaster seeks to establish a new station on an available frequency, the first step is to obtain a permit for the construction of a transmission facility. In transfer cases, or those in which a transmission facility already exists, the process begins with a filing of papers at the FCC, public notice of the filing, and the initiation of a reasonable period during which other "parties in interest" may petition the FCC to deny the application. In recent years, the FCC has become much more far-reaching in considering and deciding license applications, the result of increasing competition among would-be broadcasters for fewer available channels and changing standards in what is understood by Americans to be in the "public interest."

In determining who will or will not get a broadcast license, the FCC considers a wide range of factors which can vary or be waived under different circumstances. A successful applicant must be an American citizen or an entity controlled by American citizens, must be in good financial health, and cannot own more than twelve television stations or broadcast to more than 25% of the total national audience. Cross-ownership regulations prevent owners of daily newspapers or multiple broadcast facilities within a single local market from acquiring a license to operate a television station in the same market. In an effort to promote broadcast diversity, the FCC also considers race and gender to be preferential factors in deciding who will or will not be granted the privilege of owning a television station. The FCC's diversity preferences and ownership rules, however, have become the subject of increasing controversy in the United States Congress, which, by the mid-1990s, had made broadcast deregulation a top priority on its legislative agenda.

—Michael Epstein

LICENSE FEE

The term "license fee" has two meanings when applied to television. The first indicates a means of supporting an entire television industry. The second indicates support for the production of specific programs.

When applied in the first sense a license fee is a form of tax used by many countries to support indigenous broadcasting industries. The fee is levied on the television receiver set and paid at regular intervals.

A receiving set license fee for the support of broadcasting was considered and rejected very early in American radio's infancy. At this time the new medium was considered a public resource and the idea of support from advertisers was thought inappropriate. The license fee was one of several funding proposals, including municipal or state funding and listener contributions, offered by various sources in the 1920s. The license fee idea took two distinct forms. The first was modeled on the British scheme of taxing receivers in viewers' homes. At that time, the British levy was ten shillings per receiving set. The second approach, proposed by RCA's David Sarnoff, called for a tax (2%) on the sale price
of receivers. The success of toll broadcasting (broadcasting paid for by advertisers) near the mid-point of that decade squelched further discussion on the issue.

In the early days of American television, the idea of a receiving set license fee was briefly raised again by those who pointed to the failures and inadequacies of radio's commercial nature. But because most early television stations were owned by broadcasters with long experience in AM radio, it was almost inevitable that advertising would provide the primary economic support for the new medium.

This was not the case in Great Britain. The license fee was in place from the earliest days of its broadcasting service, having been mandated by the 1904 Wireless Telegraphy Act (and reaffirmed for radio and television in the Wireless Telegraphy Act of 1949). The level of the fee is set by Parliament through its Treasury Department. The BBC is allowed to make its recommendation and, once set, the fee is collected by the Post Office which is also responsible for identifying and tracking down those who attempt to avoid paying the fee (approximately 6% of the audience). The resulting income supports the broadcasting authority (the BBC) and its programming. As a public corporation supported by these fees (none of the income can be distributed elsewhere), the BBC is theoretically insulated from day-to-day influence by Parliament.

The 10 shillings fee remained in force until the end of World War II. 1946 saw a doubling of the radio fee, and when black-and-white television was first introduced, its fee was 2 pounds (double that of radio). The license fee for radio was dropped in 1971 and today, only the color television fee remains, rising periodically, for example from 46 pounds in 1981 to 85 pounds in 1995.

Although the BBC has occasionally toyed with the idea of running commercials to increase revenues in difficult economic periods, the license fee is well entrenched there. Said a BBC spokesperson when testifying on the future of British broadcasting in 1977, "The license fee system involves each member of the viewing public...in the feeling that he is entitled to a direct say in what he gets for his money. At the same time, the license fee system puts the broadcasters in a more direct relationship with the public than any other system of financing would. It reinforces a frame of mind in the BBC which impels us constantly to ask ourselves the question: 'What ought we to be doing to serve the public better?'"

The value of such a system for supporting a nation's broadcasting has three aspects. First, it assigns the costs for broadcasting directly to its consumers. Second, this tends to create a mutual and reciprocal sense of responsibility between the broadcasters and the audience members which, third, frees the broadcasters from control and influence by governments (as might be the case where direct government support exists) or advertisers (as might be the case in commercial systems). Against these benefits is the problem of complacency. An increasing number of nations with license fees also allow limited commercial broadcasting, in part to overcome this tendency.

Many countries other than Great Britain, including Israel, Malta, France, the Netherlands and Jordan, have some form of license fees. Some base their fee on color television only (like Great Britain) and some on color television and radio (for example, Denmark). Two-thirds of the countries in Europe, one half in Africa and Asia and 10% of those in the Americas and Caribbean rely, at least in part, on a license fee to support their television systems. Common among them is a philosophy of broadcasting that sees it as a "public good."

The second definition of license fee is applied most often in American television, though its use is growing throughout television production communities elsewhere. It refers to funding that supports independent television production for broadcast networks or other television distributors such as cable companies. In this instance the license fee is the amount paid by the distributor to support production of commissioned programs and series. In exchange for the license fee, the distributor receives rights to a set number of broadcasts of commissioned programs. Following those broadcasts, the rights to the program revert to the producer. This form of production financing is central to the economic system of commercial television because the distributor's license fee rarely funds the full cost of program production. Producers or studios still must often finance part of their production costs and hope to recoup that amount when a program returns to their control and can be sold into syndication to other distribution venues. Nevertheless, the initial funds, in the form of a license fee, generally enable production to begin.

THE LIFE OF RILEY

U.S. Situation Comedy

The Life of Riley, an early U.S. television sitcom filmed in Hollywood, was broadcast on NBC from 1949 to 1950 and from 1953 to 1958. Although the program had a loyal audience from its years on network radio (1943–1951), its first season on television, in which Jackie Gleason was cast in the title role, failed to generate high ratings. William Bendix portrayed Riley in the second version and the series was much more successful, among the top twenty-five most watched programs from 1953 to 1955. Syndicated in 1977, the series was telecast on many cable systems.

The Life of Riley was one of several blue-collar, ethnic sitcoms popular in the 1950s. Chester A. Riley was the breadwinner of an Irish-American nuclear family living in suburban Los Angeles. Although most of the program took place within the Riley household, his job as an airplane riveter sometimes figured prominently in weekly episodes. Riley’s fixed place in the socio-economic structure also allowed for occasional barbs directed at the frustrations of factory employment and at the pretensions of the upper classes. After The Life of Riley was canceled, blue-collar protagonists like Riley would not reappear until All in the Family premiered in the 1970s.

A pilot for The Life of Riley starred Herb Vigran and was broadcast on NBC in 1948. Six months later, the series appeared on NBC with Riley played by Gleason; however, Riley’s malapropisms and oafish behavior were poorly suited to Gleason’s wisecracking nightclub style. Bendix, who had played Riley on radio and in a movie version, was originally unable to play the part on television due to film obligations. When he did assume the role, however, he became synonymous with the character.

Bendix played Riley in a manner that resembled many of his supporting roles in Hollywood films of the 1940s—as a heavy-handed, obstinate, yet ultimately sensitive lumox. Each week, Riley first became flustered, then overwhelmed by seemingly minor problems concerning his job, his family, or his neighbors. These small matters—once Riley became involved—escalated to the verge of disaster. Riley’s catch phrase—"What a revolting development this is!"—expressed his frustration and became part of the national idiom. His patient wife, Peg (originally played by Rosemary DeCamp, then by Marjorie Reynolds), managed to keep the family in order despite her husband’s calamitous blunders.

Other central characters included Riley’s studious and attractive daughter, “Babs” (Gloria Winters, Lugene Sanders), and his younger, respectful son, “Junior” (Lanny Rees, Wesley Morgan). Riley also had several neighbors, friends, and co-workers. The most significant of these was Jim Gillis (Sid Tomack, Tom D’Andrea), Riley’s smart-aleck neighbor whose schemes often instigated trouble.

The narrative structure of the series was much like that of any half-hour sitcom: Each week, stasis within the Riley household would be disrupted by a misunderstanding on Riley’s part or by Riley’s bungled efforts to improve his or his family’s status. Catastrophe was ultimately averted by a simple solution, usually the clarification of a fact by Peg or another character besides Riley. Order was thus restored by the end of the episode.

The postwar suburban lifestyle conditioned much of the program’s content. Mirroring trends established during the postwar economic boom, the Riley family lived comfortably, though not lavishly, aided—and sometimes baffled—by many of the latest household consumer gadgets. Gender roles typical of the era were also represented with Chester earning the family’s single paycheck while Peg maintained the household. Similarly, Babs’ problems typically concerned dating, while Junior’s were related to school. Most of the problems in the Riley household occurred when the private and public realms merged, usually when Riley interfered with Peg’s responsibilities.

Like many sitcoms of the 1950s, The Life of Riley reinforced the promise of suburban gratifications open to hard working, white Americans. Even so, Riley’s incompetence set him apart from his television counterparts. More so than Ozzie of Ozzie and Harriet, Riley’s inaptitude called into question the role of the American father and therefore of the entire family structure, thus preceding some 1960s sitcoms such as Green Acres and Bewitched which carried that theme even further.

THE LIKELY LADS

British Comedy

When the BBC’s second television channel began in 1964, it was generally intended to provide the sort of minority-interest, factual and cultural programming which was being marginalised by the struggle for popularity against the commercial channel, ITV. It was also intended to advance the technology of television by transmitting on the new 625-line standard which would pave the way for the introduction of colour. To receive it, viewers needed to buy a new television set—and to sell the new sets in large enough numbers, the new channel needed some popular programming.

In the field of comedy, *The Likely Lads* provided the perfect vehicle, being both innovative and within the tradition of popular entertainment. It launched the comedy career of the writing team of Dick Clement and Ian La Frenais and proved one of the infant channel’s most enduring successes.

The protagonists are two young friends, Terry Collier and Bob Ferris, recently out of school and starting out in their first jobs. Their interests are predictable—girls, drinks, football and fun. However, they are a new breed of working-class heroes. They have some money in their pockets and the “swinging sixties” are getting underway. The first scene of the first episode, “Entente Cordiale,” sees them coming home from a holiday in Spain—the sort of thing that had been unavailable to their kind in earlier years but which was to come to be taken for granted by their generation.

The setting, the Northeast of England, was also fairly new—to television, anyway. In many ways, *The Likely Lads* was television’s response to the portrayal of north country youth in such films of the early 1960s as *A Kind of Loving* and *Billy Liar*. Indeed, the two young actors chosen for the lead roles—James Bolam as Terry and Rodney Bewes as Bob—had begun their careers in minor roles in these films.

As the series progressed the two characters emerged and their differences were to form the basis for the comedy and the development of the show. Both the lads have a sharp intelligence but use it differently, and they reach different conclusions about what they want out of life. Terry is a cynic. He knows his class and his place in society and his sole aim is to get what he can, when he can. Bob has ambitions. He thinks he can make a better life for himself but lacks confidence. Terry’s crazy schemes scare him, but it is usually his friend who comes off worse.

There were three series of *The Likely Lads* between 1964 and 1966, a total of 20 episodes. In the final episode, “Good-bye to all that”, Bob decides to join the army. Missing his friend, Terry signs up too, only to find that Bob has been discharged for having flat feet and that he, Terry, is committed for five years.

So, the likely lads went their own ways and the actors into different projects with varying success. But, with the spread of colour television in the early 1970s, the BBC instituted a policy of reviving its biggest comedy successes of the 1960s. Following *Sieptoe and Son* and *Till Death Us Do Part*, the decision was taken to bring back *The Likely Lads*. However, unlike the other two sitcoms, *The Likely Lads* was not the same as it had been. The new title, *Whatever Happened to the Likely Lads*, reflected the fact that seven years had passed since they last appeared. The actors were older and the characters had aged with them. Terry had seen the world (Germany and Cyprus) with the army. Bob had been successful at work, and, as the series opened in 1973, he is buying a new house and is about to marry his childhood sweetheart Thelma (Bridgit Forsyth), and settle down to a respectable middle-class life.

Terry’s return, and his withering contempt for what he sees as Bob’s betrayal of his working-class roots, threatens to spoil Bob’s plans and ruin his marriage, which takes place as the series progresses. At the same time, the shifting economic circumstances of the Northeast are reflected in Terry’s feeble attempts to find employment or any sort of a role in a place which has changed so much in his absence.

*Whatever Happened to the Likely Lads* provided, amongst all the laughs, a social commentary equal to anything found in the serious drama of the time. Two series were made in 1973 and 1974, a total of 26 shows. The actors, particularly James Bolam, tried subsequently to shake off their roles, but there are still many in Britain who wonder what Terry and Bob are up to now.

PRODUCERS Dick Clement, James Gilbert, Bernard Thompson
LINK, WILLIAM

U.S. Writer

William Link and Richard Levinson formed one of the most notable writing and producing teams in the history of U.S. television. Working in both series and made-for-television movie forms, they moved easily from what they considered light entertainment to the exploration of serious and immensely complicated social problems. Their collaboration was of much longer standing than even their television careers suggest, for they had begun to work together in the early years of high school in Philadelphia, Pennsylvania. Even at that time the two wrote plays together, inspired by radio dramas which they frequently wire recorded. After graduating from the University of Pennsylvania and completing service in the U.S. Army, they quickly formed an adult partnership that was to last until Richard Levinson’s death in 1987. Intent upon building a career in television, they followed the migration of talent to California in 1960 and were quickly identified for their talents.

After almost ten years of working with series television the “boys,” as they were identified by Martin Sheen, who often starred in their movies, began to explore “social issues.” It may have begun with their questions regarding the violence of television shows such as Mannix; their own creation. As Link put it in an interview, “Dick and I did not know whether television violence had an effect or not, but we just decided we were not going to do that kind of writing anymore.” Columbo was the natural answer. In Link’s words, “It portrayed a bloodless murder followed by a cat and mouse game. Columbo was a meat and potatoes cop who brought low the rich and famous.”

The partners made these social concerns explicit in the character of Ira Davidson, central figure in their made-for-television movie, The Storyteller (1977). In that piece Davidson, a television writer, engages his producer in a debate about TV violence. The producer questions the writer’s deletion of violent scenes from his original treatment. Davidson replies that he could tell the story just as well without vehicular mayhem. The producer then accuses him of acquiring a conscience just when non-violence was fashionable and insists he does not want the PTA or anyone else telling him what kind of television to make. He wants to use violence when it works for the plot without interference from the network. Ira responds, “Agreed.” Surprised, the producer says, “Agreed? but I thought ...” Ira ends the
discussion by stating, "I was telling you what I am going to do. What you do is your business."

Discussing those social dramas Link commented, "The best things come to you—they fall into your hand or you see a human life situation like That Certain Summer and you say that would make a good drama. It's hard to begin by saying 'Let's do a social drama.' These things just occur to you." Of course, Link would admit that they "just occur" to him because of who he is and what he thinks.

Link's philosophy of film making is summed up in remarks made in the early 1980s. "In the films where we have serious intentions, we tend to understate. This comes from a feeling that if you're going to deal with subjects such as homosexuality, or race relations, or gun control, you should show some aesthetic restraint and not wallow in these materials like a kid who's permitted to write dirty words on a wall. Our approach is that if you're going to use these controversial subjects—play against them. Don't be so excited by your freedom that you go for the obvious. The danger, of course, is that sometimes you get so muted that you boil out the drama. In The Storyteller we were so concerned with being fair and with balance that we lost energy and dramatic impact."

When Link spoke movingly about Richard Levinson upon their induction into the Television Hall of Fame in 1995 the extremely difficult task of admitting to himself that there was no longer "Link and Levinson" was completed. Even as he oversaw the final production of United States vs. Salaam Ajami (aired as Hostile Witness), that fact had perhaps led to reviving a story idea which Levinson had rejected.

Link wrote and produced The Boys, dealing with a writing partnership in which one man smokes, but the other does not, but who informs his colleague that he has contracted cancer from second-hand cigarette smoke. Here was a social drama on two levels. While not strictly autobiographical, the drama was surely related to individual experience. Levinson smoked heavily during most of his adult years, and the practice most probably shortened his life. The Boys, then, was personal, but it also dealt with a real social issue.

After Levinson's death Link remained active as a writer-producer at Universal, working on new stories for Columbo. By continuing to hold to the producer credit he held creative control over the words. As Link expressed it in an interview, "We produce for two reasons. One is to protect the material. And the second is that we've discovered that producing is an extension of writing. The day before they're going to shoot it you walk on a set designed for a character you've written. You say to the art director, 'The man we've written would not have these paintings. He would not have that dreadful objet d'art sitting there. It's much too cluttered for a guy of his sensibilities. So clean out the set. . . . We created that person as a character. We're also interested in how it's extended.'"

In the late 1980s Link served as supervising executive producer of The ABC Mystery Movie. Leaving Universal in 1991, he became executive producer and writer for The Cosby Mysteries on NBC. He also became an actor in the series when Bill Cosby insisted on casting him as a saxophone instructor for Cosby's character. Appearing infrequently, Link was a natural for the part.

As the season of 1996–97 approached Link was working on a two-hour pilot for a light mystery series for ABC, a series of movies featuring Michael Caine as, if Link has his way, Alex Risk. He was also developing a series of movies featuring the novels of Jonathan Kellerman, the first of which was Bad Love.

William Link has a lively sense of humor and frequently employs it to assail what he perceives as the current decay of the industry he loves. He is an avid reader of mysteries, extremely knowledgeable concerning music and cinema, and an active collector of Latin American art. He and his wife, Margery Link, live surrounded by the collection.

LOACH, KEN

British Director

Ken Loach is Britain's most renowned and controversial director of socially conscious television drama. He is also an internationally acclaimed director of feature films whose radical political messages consistently provoke strong responses in audiences and politicians alike. In 1965 he received the British Television Guild's "TV Director of the Year" Award, while the 1990s have brought prizes and nominations at the Cannes Film Festival. His considerable body of work, documenting British society since the 1960s, is an acknowledged source of inspiration to his contemporaries.

Loach worked for a brief spell as a repertory actor before joining the BBC in 1963 as a trainee television director. Significantly this was during the progressive Director-Generalship of Sir Hugh Greene and coincided with Sydney Newman's influential appointment as head of BBC drama. Loach's earliest directorial contribution was on episodes of the groundbreaking police series, Z Cars, but he first attracted serious attention with Up the Junction, a starkly realistic portrayal of working-class life in South London, which in 1965 was one of the earliest productions in the BBC's innovative Wednesday Play slot. This success marked the beginning of a long and fertile creative collaboration with story-editor and producer, Tony Garnett, which led to the recognition of their particular mode of documentary drama as the "Loach-Garnett" style. It also positioned Loach as an exponent of television's foray into "social realist" British New Wave, popular in film, theatre, and novel.

Loach collaborated with Garnett on a number of other celebrated Wednesday Play productions, including David Mercer's famous play about schizophrenia In Two Minds (1967), which he later made into a feature film, Family Life (1971), and two significant industrial drama-documentaries written by ex-coalminer Jim Allen: The Big Flame (1969) and The Rank and File (1971). These productions demonstrated Loach's passionate concern to ignore theatrical artificiality in favour of authentic dramas on topical, important issues—dramas which give a voice to politically marginalised sections of society. By far the most powerful work from this period of Loach's career, however, is Cathy Come Home (1966), a study of the effects of homelessness and bureaucracy on family life. This remains one of the most seminal programme events in the history of British television.

Cathy Come Home, written by former journalist Jeremy Sandford, exploded with tremendous force upon the complacent, affluent, post-Beatles culture of the "Swinging Sixties." Drawing attention, as it did, to disturbing levels of social deprivation far in excess of those claimed by government, the play led to a public outcry, questions in Parliament, the establishment of the housing charity "Shelter," and a relaxation of policy on the dissolution of homeless families. Reflecting years afterwards on this succès de scandale, Loach explained that, though he may have believed at the time in the potential of television drama for effecting social change, he had subsequently come to realise it could do nothing more than provide a social critique, promoting awareness of problems capable of resolution only through political action.

It is not only the subject matter of Cathy, and of Loach's television work generally, that struck contemporary audiences and critics as innovative; his chosen form and style were distinctive and provocative too. Above all, he was concerned to capture a sense of the real, extending a range of practiced cinema-vérité techniques to produce a sense of immediacy and plausibility that would in turn produce recognition in the spectator and inspire collective action. Lightweight, hand-held camera; grainy 16mm film stock; a black and white aesthetic; location shooting; natural lighting; direct, asynchronous sound; blending of experienced and non-professional performers; authentic regional accents and dialects; overlapping dialogue; improvised acting; expressive editing; incorporation of statistical information: all these strategies combined in varying degrees to create a compelling and original documentary effect markedly at odds with the look of traditional "acted" television drama.

In 1975, the distinctive "Loach-Garnett" style was employed in a notable exploration, nearly 400 minutes in length, of British labour history, which functioned as a poignant commentary on the parlous state of contemporary industrial relations. This was the four-part BBC serial Days of Hope, scripted by Jim Allen, which follows a northern British working-class family through the turbulent years of struggle from the end of the World War I to the General Strike of 1926. Loach, already subject to criticism for preferring the docudrama form (deemed reprehensible in some quarters for its potential confusion of fact and fiction), now found himself embroiled in an academic debate about the extent to which radical television drama, using the conventions of bourgeois realism, could be truly "progressive." Loach insisted that his priority was populist political discourse rather than a rarefied, aesthetic debate of interest only to a critical elite. In other words, Days of Hope and the other strike dramas that preceded it were intended to open the eyes of ordinary people to the emancipatory potential of free collective bargaining within any capitalist culture.

Loach made his first feature film, Poor Cow, at the height of his television fame in 1967. He became a major founding partner, with Tony Garnett, of the independent production company, Kestrel Films, for which he made half a dozen low-budget films between 1969 and 1986. His first project at Kestrel Films was Kes, a moving story of a young boy and his pet kestrel set against a bleak Northern industrial landscape. Some of the Kestrel Films projects were intended for television screening as well as limited theatrical release. The Thatcher years put Loach increasingly in conflict with those who took exception to the left-wing thrust of his work and wanted to censor it or lessen its impact. Finding it difficult to ensure transmission of the kind of television drama he considered important, he turned for a while almost exclusively to straight documentary, convinced that the nonfiction form could more speedily and directly address the key social and political questions of the day. If anything, however, this route led Loach into even greater problems with censorship, culminating in the controversial withdrawals of the four-part series Questions of Leadership (1983) and Which Side Are You On? (1984), a polemical documentary about the socially disruptive Miners' Strike. It was probably this unsavoury experience, and the greater...
freedom afforded by cinema, that drove Loach away from television at the end of the 1980s.

The 1990s brought Ken Loach renewed success and established him as one of Britain's foremost film directors, albeit not of mainstream commercial films. Beginning with his political thriller about a military cover-up in Ulster, Hidden Agenda, which was reviled and praised in roughly equal measure on its first screening at Cannes, Loach has gone on to make roughly one feature film each year, usually with an early television showing in mind. These are, without exception, films of integrity that continue their director's lifelong principle of bringing issues of oppression, humanity, and hypocrisy to the public's attention. The political content is, if anything, more foregrounded than in the earlier television work; the uncompromising focus on the disadvantaged or voiceless sections of society remains the same.

LOCAL TELEVISION

Even though television networks and syndicators have garnered the lion’s share of historical and critical attention in the United States, these entities could not have existed without local television. In the early struggles surrounding the establishment of television, crucial decisions were made with regard to the structure of the new industry. Central to many of those decisions were those of the Federal Communications Commission (FCC). The commission ground the organization, financing, and regulation of the television industry for the existing radio model of broadcasting, which had insured nationwide service. Thus local TV stations came to serve as the infrastructure of the industry. Local stations negotiated the role TV would play in their communities, coordinating the new medium to local rhythms, interests, sentiments, and ideologies. They have contributed immeasurably to the growth, allure, and impact of television in the United States. The considerable history—or rather, series of histories—of local television are still being written.

All of the earliest television stations were necessarily local stations. Most began in an “experimental” status, non-commercial and sporadically scheduled. Applications for early broadcasting stations had come from a range of potential participants, but many of the first to become truly operational were owned by radio networks or broadcast equipment manufacturers with strong financial reserves; costs for construction and research-and-development were high, and revenues were low or nonexistent for many years. Much of the television industry was developed by those who could withstand continuing financial losses. Stations independent of corporate ties were started by newspapers, automobile dealers, and other local entrepreneurs in major cities across the country. These groups and individuals had also often owned radio stations, or were otherwise experienced in radio.

The advantages of multiple station ownership were clear to some of these early investors, but they were faced with regulatory restrictions. Companies that hoped to attain a network-like reach were allowed to own only a handful of stations—up to five in the early years—each in a different market. As the technology for linking stations emerged, station affiliations grew. A few cities featured stations owned and operated by the existing national broadcasting networks, but most had stations affiliated with more than one network, and some areas had so few stations that each could feature multiple affiliations, often for many years. And some cities did maintain additional, fully independent channels.

But in every city and market, local stations worked to invent, adapt, and expand what television had to offer to their specific audiences. Each station produced a great deal of its own programming, increasingly so as the television schedule expanded to include more daytime and weekend hours. Viewers had a different relationship to the performers and personalities on local stations, a sense of accessibility and proximity that was inflected by all things regional—from speech patterns to weather systems to fashion tastes. Station personnel tended to perform in different capacities and roles throughout the programming day—news reader at one point, talk-show host at another, children’s show performer in still another—all lending them a familiarity and informality that often proved welcome by the audience. Local television could even seem quasi-interactive, and many programs included responses to viewer mail or even phone calls to viewers. For most local programs, budget constraints translated to a lack of production spectacle, but the same financial restriction led to a yen for ingenuity. In some cases this could afford marvelous and bizarre performers and programming formats, often outside the boundaries of what networks—already seeking a “national” audience—would deem suitable.

Certain programming similarities existed among stations of course, especially regarding TV’s emerging relationship to the rhythms of everyday life, a relationship that presumed a family work-week and school-day, conventional gender roles, and regularized daily patterns of behavior and involvement. Kids’ shows quickly became a late afternoon staple. Cooking and homemaking shows were popular around midday. Movies and sports programs could dominate evening and weekend hours. Most of the conventions of television news were also developed at the local level, typically out of necessity rather than conscious design or analysis.

Word quickly spread when a programming innovation proved successful at a local station, often inspiring imitations at other stations and in other markets. Many stations featured disc jockeys who played favorite records, cartoon show emcees in the guise of friendly authority figures, afternoon movie hosts who proffered quizzes and giveaways. In some instances, local talent went on to national success: Ernie Kovacs and Dick Clark began locally in Philadelphia; Dave Garroway, Burr Tillstrom, and Fran Allison first appeared on TV in Chicago; Liberace, Alan Young, and Betty White started their TV careers on local Los Angeles stations.

But local television was more than just a supplement to the networks. In fact, many original formats and regional distinctions emerged in local TV before being subsumed or displaced by network schedules and priorities. In Chicago, for example, pioneer telecasters like William Eddy and Jules Herbeux helped to develop a casual but intelligent style of programming that became known as the “Chicago School.” Many of these programs, featuring the likes of Garroway; Kulka, Fran and Ollie; and even Studs Terkel; appeared on NBC affiliate WNBQ. But when Chicago became networked to the East Coast in 1949, many of the most popular shows were re-tooled according to standards in the New York offices or were dropped entirely, and the regional style quickly evaporated.

Los Angeles was in a slightly different situation, for the network lines did not arrive until late 1951, and only one or two national “feeds” were possible for some time thereafter.
Partially due to this, Los Angeles was a strongly independent early TV market; it had a full complement of seven stations by January 1949, yet the network affiliates were the last on the air. Network stars such as Milton Berle were enormously popular, of course, even via kinescope, but for many years local programs dominated the ratings. The leading station until the mid-1950s was KTLA, owned by Paramount Pictures, Inc., and run by German émigré Klaus Landsberg, who had helped to telecast the 1936 Olympics before coming to this country later in the decade. Often utilizing “remote” coverage, programming in Los Angeles was surprisingly diverse, reflecting local tastes in a variety of musical shows and featuring any number of sporting events. The 1951 network link-up was complemented by a shift in TV production from New York to Los Angeles, especially after NBC and CBS opened elaborate new facilities there in 1952. The independent stations which had dominated were no longer able to compete with network practices, with the stars and spectacle that national advertising rates could afford.

The same pattern prevailed at almost every local station. Nationally-syndicated shows blossomed on local stations through the 1950s, followed in turn by reruns of network programs which began to be syndicated in the early 1960s. Of course there have been exceptions to the hierarchies of the network-dominated system, and the boom in UHF stations in the 1960s insured a fair amount of locally-produced programming. Some stations have even been able to produce work syndicated outside their own markets, sometimes via regional networks. But as more network programs became available for syndication, the demand for them generally meant fewer opportunities for programming tailored to local tastes. Nearly all of television began to reflect past or present nationally-distributed fare. Even the Prime Time Access Rule, designed to promote local programming by blocking out network shows for an hour each weekend, resulted in a boom for the syndication industry. Measured against the costs of original production and the possibility of lower return in advertising dollars, the expense of acquiring syndicated offerings still seemed a clear economic advantage. Game shows such as Jeopardy! and Wheel of Fortune, and slick “infotainment” programming such as Entertainment Tonight became television institutions.

The new technologies of the modern television era have complicated these dynamics. Cable television systems brought a range of new national competitors to existing local broadcast stations, but they also created local access channels. Public access television has in many cases featured informative and alternative programming (often syndicated among stations), as well as a range of often peculiar and amusing fare. But hopes that these channels might produce an enhanced televisual public sphere seem all but exhausted. Many of the politically-oriented and activist users of access television are likely to turn to the Internet as a site for communicating with interest groups that share concerns and extend beyond the local arena.

Satellite technology has similarly both enhanced and threatened local television. The availability of international newsfeeds enabled even local newscasts to compete with what was available from cable networks, and raised opportunities for examining the local ramifications of nonlocal incidents. But satellites have also made available a ready stream of sensationalistic footage and feature stories of little consequence. Conversely, a few local stations have come to enjoy national distribution via cable and satellite: the so-called “superstations,” such as TBS, WOR, WGN, and KTLA. But many other local stations have faced being eclipsed by these same delivery systems, especially since satellite programming packages typically include network affiliates from other parts of the country, but none of the local broadcast stations from the audience’s “home” area.

As a result of these shifts in technology and programming strategy, the future of local television seems uncertain. Certainly the dollar value of local stations has only escalated, especially in light of the competition for affiliates which resulted from the rise of FOX and other fledgling networks. The extent to which these stations will continue to provide truly local service—whether by audience demand or by regulatory edict—remains to be seen. But whatever the changes in technology, industrial organization, or commercial exigency, it will continue to be important to study the consumption and effects of local television—the medium’s role in helping define the very concept of the local.

THE LONE RANGER

U.S. Western

The Lone Ranger originated on WXYZ radio in Detroit in 1933. Created by George W. Trendle and written by Fran Striker, the show became so popular it was one of the reasons why several stations linked together to share programming on what became the Mutual Broadcasting System. Aimed primarily at the children’s audience, The Lone Ranger made a successful transition to ABC television in 1949. Several characteristics were unique and central to the premise of this western, and the initial episode which explained the legend was occasionally repeated so young viewers would understand how the hero gained his name and why he wore a mask. The Lone Ranger was one of six Texas
Rangers who were ambushed while chasing a gang of outlaws led by Butch Cavendish. After the battle, one "lone ranger" survived, and was discovered by Tonto, a Native American who recognized the survivor as John Reid, the man who had saved his life earlier. Tonto thereafter referred to the ranger as "kemo sabe," which is translated as "trusty scout." After Tonto helped him regain his strength, the ranger vowed to hide his identity from Cavendish and to dedicate his life to "making the West a decent place to live." He and Tonto dug an extra grave to fool Cavendish into believing all six rangers had died, and the ranger donned a mask to protect his identity as the single surviving ranger. Only Tonto knows who he is... the Lone Ranger. After he and Tonto saved a silver-white stallion from being gored by a buffalo, they nursed the horse back to health and set him free. The horse followed them and the Lone Ranger decided to adopt him and give him the name Silver. Shortly thereafter, the Lone Ranger and Tonto encountered a man who, it turns out, has been set up to take the blame for murders committed by Cavendish. They established him as caretaker in an abandoned silver mine, where he produced silver bullets for the Lone Ranger. Even after the Cavendish gang was captured, the Lone Ranger decided to keep his identity a secret. Near the end of this and many future episodes, someone asks about the identity of the masked man. The typical response: "I don't rightly know his real name, but I've heard him called... the Lone Ranger."

The Lone Ranger exemplified upstanding character and righteous purpose. He engaged in plenty of action, but his silver bullets were symbols of "justice by law," and were never used to kill. For the children's audience, he represented clean living and noble effort in the cause of fighting crime. His values and style, including his polished manners and speech, were intended to provide a positive role model. The show's standard musical theme was Rossini's "William Tell Overture," accompanied by the Lone Ranger voicing a hearty "Hi-Ho, Silver, away" as he rode off in a cloud of dust. Clayton Moore is most closely associated with the TV role, but John Hart played the Lone Ranger for two seasons. The part of Tonto was played by Jay Silverheels. After the original run of the program from 1949 to 1957, it was regularly shown in reruns until 1961, and later in animated form. The Lone Ranger has also been the subject of comic books and movies. Both the original and animated versions of the program have been syndicated. Perhaps no fictional action hero has become as established in our culture through as many media forms as the Lone Ranger. Clayton Moore made personal appearances in costume as the Lone Ranger for many years, until a corporation which had made a feature-length film with another actor in the role obtained a court injunction to halt his wearing the mask in public. Moore continued his appearances wearing oversized sunglasses. He later regained the right to appear as the Lone Ranger, mask and all.

THE LORETTA YOUNG SHOW

U.S. Dramatic Anthology

The Loretta Young Show, airing on NBC from 1953 to 1961, was the first and longest-running anthology drama series to feature a female star as host and actress. Film star Loretta Young played a variety of characters in well over half of the episodes, but her glamorous, fashion-show entrances as host became one of the most memorable features of this prime-time series.

Premiering under the title Letter to Loretta, the series was renamed The Loretta Young Show during the first season. Originally, the series was framed as the dramatization of viewers’ letters. Each teleplay dramatized a different letter/story/message. Even after the letter device was dropped, Young still introduced and closed each story. At the beginning of each episode, she entered a living room set (supposedly her living room) through a door. Turning around to close the door and swirling her designer fashions as she walked up to the camera, Young was consciously putting on a mini-fashion show, and the spectacular entrance became Young's, and the series', trademark. Glamour and fashion had been important elements of her film star image, and she considered them central to her television image and appeal. (As an indication of how strongly Young felt about this aspect of the series, she later won a suit against NBC for allowing her then-dated fashion openings to be seen in syndication.)

The successful format and style of The Loretta Young Show spurred other similar shows. Jane Wyman Theater (1955–58), The DuPont Show with June Allyson (1959–61), and The Barbara Stanwyck Show (1960–61) were prime-time network series that attempted to capitalize on Young's success. Similar syndicated series included Ethel Barrymore Theater (1953), Crown Theater with Gloria Swanson (1954), and Ida Lupino Theater (1956).

When original sponsor Procter and Gamble snapped up the proposed Loretta Young series, Young and her husband, Thomas Lewis, hired Desilu (credited on-screen as DPI) to do the actual filming for the first season’s episodes. At a time when television was often broadcast live from New York, the series was filmed in Hollywood, where Desilu was already a major force in telefilm production. The first five seasons of the show were produced by Lewislo Enterprises, a company created by Young and Lewis to produce the series. When Lewislo's five-year contract with NBC was up and Lewis and Young had split personally and professionally, Young formed Toreto Enterprises, which produced the series' last three seasons. Young played a variety of characters, but stories most often centered around her as mother, daughter, wife, or single woman (often a professional) finding romance. Presenting both melodramas and light romantic comedies, the series was designed as and considered to be women’s programming. (In fact, NBC reran episodes on its daytime schedule, which was targeted to women.) Young chose stories for their messages, lessons to be learned by characters and audiences. Her introductory remarks always framed the stories in specifically didactic terms, and she closed each episode with words of wisdom quoted from the Bible, Shakespeare, and other authoritative sources.

Stories affirmed postwar, middle-class ideas about the home, families, and gender roles. Single working women found love and were transformed. Mothers learned how to be better mothers. Women found true happiness within the domestic/heterosexual sphere of the middle-class home. Yet, characters sometimes had to stand up for their convictions, putting them at odds with the men in their lives. Women demonstrated strength, intelligence, and desire. This was a series that put women front stage and center, especially when Young portrayed the characters. Even when she did not act, themes of women’s fiction, such as the play of emotions and the focus on character relationships, were present in the stories. Occasionally, the show explicitly addressed social issues of the day, such as American aid to war-ravaged Korea, the plight of East European refugees, and alcoholism. It stands out as a rare, prime-time network drama series where a woman tells her stories.

Unlike many of the live anthology dramas, big-name guest stars were not a regular feature of The Loretta Young Show. The biggest stars appeared as guest hosts during Young’s illness in the fall of 1955. Barbara Stanwyck, Joseph
Cotten, Claudette Colbert, and several other film stars hosted the show in Young's absence. Marking the importance of her swirling entrances, none of the guest hosts came through the door to open the show. Over the years, guest actors included Hume Cronyn, Merle Oberon, Hugh O'Brian, and Teresa Wright.

The Loretta Young Show won various industry awards, including three Emmys for Young as Best Actress. It also was honored by numerous educational, religious, and civic groups. The series and its star were praised by these groups for promoting family- and community-based ideals in a rapidly changing postwar America.

The Loretta Young Show represents a type of television programming that no longer exists. The various anthology dramas of the 1950s disappeared as programs with continuing characters came to exemplify series television in the 1960s. TV series that worked through the image of the glamorous Hollywood star would forever remain a phenomenon of 1950s television, the period in which the Hollywood studio system that had created larger-than-life stars came to a close. The 1950s space for strong female stars also closed because television now had a permanent place in American homes. The industry no longer felt the need to attract specifically female audiences in prime time as a strategy to secure domestic approval for the medium.

HOSTESS
Loretta Young

LOU GRANT
U.S. Drama

Created by executive producers Gene Reynolds with James L. Brooks and Allan Burns, this series drew on the comedy character of the executive producer of TV news in the long-running Mary Tyler Moore Show. But it transformed that comic persona into a serious, reflective, committed newsmans at a major metropolitan newspaper.

As he developed the concept for the series, Reynolds drew on his experience with researching the TV series M*A*S*H. He haunted Toronto newspaper offices to learn first-hand how they operate, how principals interact, procedures for processing news stories, what issues trouble professional newsgatherers, how they thrash out the daily agenda to be distributed to the mass public. From tape-recorded interviews came the seeds of storylines and snatches of dialogue to capture the flavor and cadences of newspaper people in action.

The series sought weekly to explore a knotty issue facing media people in contemporary society, focusing on how investigating and reporting those issues impact on the layers of personalities populating a complex newspaper publishing company. The program served as a vehicle for dramatic reflection, analyzing sometimes bold and sometimes tangential conflicts in business practices, government, media, and the professions. Topics treated dramatically included gun control, invasion of privacy, confidential sources, child abuse, Vietnamese refugees, news reporting vs. publishing economics. Mingled with each episode's issue was interplay of personalities, often light-hearted, among featured characters.

Reynolds risked undercutting issue-oriented themes by importing Ed Asner from the long-running comedy about a flaky TV newsroom to act as city editor of a daily newspaper. Asner not only effectively adapted the original comedic character to the serious role of Lou Grant, off-screen the actor spoke out increasingly about social and political issues possibly causing some audience disaffection in its final years.

The series (1977–1982) received critical acclaim for exploring complicated challenges involving media and society. It received a Peabody award in 1978, Emmy awards in 1979 and 1980 for outstanding drama series, plus other Emmies for writing and acting during its five years on the

Yet it never ended any season among the top-20 most popular prime-time programs. First scheduled the last hour of Tuesday evenings (10:00 P.M.), in the second and following seasons it was aired on Mondays at that time. It enjoyed strong lead-in shows *M*A*S*H* and *One Day at a Time*, but competing networks scheduled Monday night football (ABC) and theatrical movies (NBC), both at mid-point when *Lou Grant* came on. Scheduling was thus probably a “wash” as a factor; audiences were perhaps deterred more by the substantive issues explored which called for attentive involvement, unlike more passive TV entertainment.

*Lou Grant* is also significant in the history of MTM Productions as the “bridge” program between comedies such as *The Mary Tyler Moore Show* and later, more complex dramas such as *Hill Street Blues*. Few independent production companies have had such visible success in crossing lines among television genres. The transformation of Asner’s character, then, and the focus on serious social issues pointed new directions for the company and, ultimately, for the history of American television.

**LOW POWER TELEVISION**

**Television Transmission Technology**

Television translators are broadcast devices that receive a distant station's signal from over the air, automatically convert the frequency, and re-transmit the signal locally on a separate channel. Until 1980, the operators of these devices were required solely to rebroadcast the program service of a licensed full service TV station, and were banned from originating all but 60 seconds per hour for fundraising inserts. In 1980 the Federal Communications Commission (FCC) announced that it would accept applications to waive the 60-second cap, so that translators could broadcast original programs—to an unlimited extent—from any suitable source. This liberalization was made permanent in 1982, with the creation of a new broadcast service, low power television, called LPTV.

The name derives from the fact that LPTV stations, like the TV translators that continue to operate, cannot employ transmitter powers in excess of 1,000 watts. This imposes a practical ceiling on the effective radiated power, using a high-gain antenna, of 20 kilowatts or so under ideal conditions. It contrasts with regular, full service TV operations, that are permitted up to 100 kilowatts of effective power (Channels 2 to 6), 316 kilowatts (Channels 7 to 13), or 5,000 kilowatts in the UHF bands (Channels 14 to 69). As of the end of 1995, the FCC had licensed 1,787 LPTV stations, with 1,224 operating at UHF, the remainder at VHF. The total number of LPTVs exceeds the number of licensed full service TV stations in the United States—some 1,180 commercial and 363 non-commercial stations, or 1,543 total.

Prior to the official launch of LPTV services, the FCC had granted waivers to permit origination of programs in several instances, notably for rural educational programming in upstate New York, and for the satellite-fed bush stations in Alaska, where there was no practical alternative for delivering television programming to isolated villages. The first low power television station was constructed in 1981 by John W. Boler in Bemidji, Minnesota. Boler had been a pioneer broadcaster in Fargo, North Dakota, and built the Bemidji facility as a smaller version of a traditional independent TV station, with regular evening news, studios, a sales force, and even a mobile van.

LPTV service expanded just as the equipment manufacturers were introducing significant cost and feature improvements for all broadcast components. It became possible for a crew of one to record programs with a camcorder on inexpensive S-VHS cassette and use them to offer a watchable broadcast picture. Satellite services also expanded, giving LPTV operators a choice of program fare from new networks.

Mark J. Banks, a professor at Slippery Rock University in Pennsylvania, performed mail and telephone surveys of low power television stations in 1988, 1990, and 1994. In the most recent survey, his sample of 456 stations yielded completed interviews with only 129, but the results are somewhat informative. 71% per cent of the LPTV stations were commercial, 17% public or educational, 10% religious, and 2% operated on a scrambled, subscription basis. A plurality, 40%, were in rural areas, but almost as many, 37% were urban, with the remainder suburban or a mixture. The largest “group owners” are Alaska Public Broadcasting and Trinity Broadcasting Network. LPTV was designed to favor minority ownership, but only 8% described themselves as minority controlled.

The Mark J. Banks surveys over time indicated reduced dependency on satellite-fed program services, in favor of increased local programming. Stations reporting use of satellite services dropped from 87% in 1988 to 55% in 1994. Conversely, the amount of station time devoted to local programming has grown. The 63% reporting local programming said their most popular categories were, in order sports, news, talk, community events, public affairs, and children’s programs. Locally originating stations derive their greatest revenue by far from the sale of local advertising, and total revenue is up, to an average of $240,000 per station per year.

Low power television has achieved a solid niche, providing new services to rural areas that cannot support full service TV, and to ethnic and religious groupings in larger urban areas. The full service TV broadcasters, commercial
and noncommercial, opposed LPTV from its inception, and sooner or later may succeed in eradicating it. The FCC no longer assigns any priority to assuring program delivery to underserved audiences and, as of the end of 1995, the agency had made no provision for LPTV in the future to change over to some form of advanced, digitized TV system.

—Michael Couzens

LUMLEY, JOANNA
British Actor

Joanna Lumley’s lengthy career in television has been marked chiefly by two components—her image as glamorous and refined, and the characters she has played in three popular series, which span three decades. Her work over the years has been varied, encompassing theatre, film, and several major advertising campaigns, as well as television drama, comedy and regular celebrity appearances. Equally, her work has been of widely varying standards, ranging from the flimsy and trite to award-winning performances.

A former model in the “swinging sixties,” Lumley landed her first major television role in The New Avengers (1976–77), in which she played special agent Purdey, alongside Gareth Hunt (Gambit) and Patrick Macnee (Steed). The show evidently seemed to be more concerned to promote Lumley’s legs than her character’s crime-fighting skills—not only did her costume consist of a skin-tight trouser suit and kinky high boots, but Purdey’s prime weapon was her immobilising karate kick. In spite of this fetishistic fixation, Lumley became most synonymous with the pudding-bowl haircut named after her character, Purdey, and widely imitated by women and girls alike.

Shortly after The New Avengers came Sapphire and Steel (1979–82), an off-beat science fiction series in which Lumley co-starred with David McCallum. The two played mysterious agents who traveled through time and space, whilst the ethereal Sapphire (Lumley) costumed in a long, floaty dress communed with psychic forces. Although this and the previous show were popular with both children and adults, Lumley claimed she was becoming frustrated with the parts she was playing, primarily as they did not mimic real women.

For the remainder of the 1980s, Lumley was involved in less memorable productions, although she remained in the public eye, as the face for several advertisements, as a regular guest on TV chat shows, and with certain notable film appearances, particularly as headgirl-turned-prostitute in Shirley Valentine (1989). However, it was her performance with Ruby Wax (on The Full Wax) as a washed-up, drugged-out actress, that initiated the revival of her career. This performance instantly transformed her from an idealised myth of feminine perfection to a more complex and humorous persona. Shortly after revealing her talent for comedy and self-parody, through a stroke of pertinent casting, Lumley became Patsy Stone, the aging, neurotic “Fash-

See also Microwave
Mag-Slag,” conceived by Jennifer Saunders for Absolutely Fabulous (1992–96). This casting was central to the success of Absolutely Fabulous and to the renaissance of Lumley’s career. Lumley gives an immensely entertaining performance, but also, because of her on- and off-screen persona, she creates in Patsy a hilarious and hideous satire around the expectations of glamour and refinement assigned to her. As a character, Patsy has several functions which covered new ground in television culture: she overturned ageist assumptions by opening up a space in television for the representation of women of all ages as humorous; as an “unruly woman” she violated, in a highly entertaining way, the unspoken feminine sanction against making a spectacle of herself; and she confronted and redefined the values of beauty, consumerism and decorum inferred upon women, particularly of a certain age and social class.

Since playing what must surely be her ideal role, and achieving high critical acclaim with several awards, including BAFTAs and an Emmy, Lumley’s subsequent work was not nearly so demanding on her talents. She played a down-at-heel aristocrat in the mediocre A Class Act and in a documentary-drama, Girl Friday, she had to fend for herself on an inhospitable desert island, with emphasis on how she copes without couture clothes, haute cuisine, and cosmetics. Both of these shows revolve around Lumley’s conventional image, but neither seeks to recognise the contradictions apparent since Absolutely Fabulous in Lumley’s persona as the epitome of high class. Whilst there may generally be a lack of recognition of Lumley’s specific capabilities as an actor, all her major roles share a common interest in casting her as an independent woman—she is nobody’s wife or side-kick. However, it seems ironic that Absolutely Fabulous, whilst giving Lumley a new lease of life and promoting her to an international audience, has remained an almost unique forum for her talent as a comedy actor.

LUPINO, IDA
U.S. Actor/Director

Ida Lupino’s career in television plays much like a rerun of her career in the cinema. Originally charting her course in each medium primarily as an actor, she apparently fell into directing as a matter of circumstance. Making her debut on CBS television’s Four Star Playhouse in December 1953 as a performer, it was not until three years later that Lupino was commissioned to direct an episode for Screen Directors Playhouse, “No. 5 Checked Out,” for which she also wrote the script. Eventually, after more frequent invitations to helm episodes from a variety of series, Lupino would, over the course of the next 15 years, establish a reputation as the most active woman director working behind the cameras during this formative period in television’s history.
Economic necessity, it would seem, played as much a part as creative opportunities in Lupino’s decision to work almost exclusively within television for the remainder of her career as director. By the mid-1950s Lupino had been offered fewer leading roles, and her activities as a film director had gradually diminished. Although she would continue to act in even more television episodes than she would direct (over 50), her unique position in the fledgling industry rested more upon her reputation as a filmmaker than as a leading lady, in particular upon the critical and commercial success of her most widely seen cinematic work, *The Hitch-Hiker.*

In fact, after 1960 Lupino earned the nickname, “the female Hitch” (as in Hitchcock) for her specialty work in action-oriented television genres that employed her talent at creating suspense. For example, Richard Boone, the star of the popular *Have Gun, Will Travel* series, of which Lupino eventually directed four episodes, had admired her hard-boiled style and offered her a script by Harry Julian Fink, famed for his graphic descriptions of physical violence. From that point on, although she would direct many sitcoms (e.g. *The Donna Reed Show, The Ghost and Mrs. Muir*) and various dramatic programs (e.g. *Mr. Novak, Dr. Kildare*), Lupino would be commissioned primarily for westerns (*The Rifleman, The Virginian, Dundee and the Culhane, Daniel Boone, Tate, Dick Powell’s Zane Grey Theatre*), crime dramas (*The Untouchables, The Fugitive, 77 Sunset Strip*), and mysteries (*The Twilight Zone, Kraft Suspense Theatre, Alfred Hitchcock Presents*). Perhaps the only series that Lupino genuinely shaped as director is *Thriller,* a mystery anthology hosted by Boris Karloff, for which she directed at least ten episodes in its first two seasons. At times lamenting publicly that she had become so typecast as an action director that she was overlooked for love stories, Lupino otherwise exploited her anomalous stature as a woman specializing in shoot-outs and car chases, at one point turning down Hitchcock’s offer of a lead role in one episode of his series in order to replace him as its director.

This figure of Lupino as a “female Hitch,” whose nomenclature suggests the freedom to call her own shots and her status as auteur, is rather misleading within the context of the U.S. television industry, whose creative efforts are shaped and controlled almost exclusively by producers rather than by directors. Thus, although she directed episodes of *The Untouchables* and *The Fugitive,* whose intricate weekly subplots and relatively large guest casts required her creative input, her influence on formulaic series such as *Gilligan’s Island* or *Rebouche* was minimal. For this reason, in contrast to her body of cinematic works, most of which she also co-wrote or co-produced, Lupino’s scattered work in television resists an auteurist approach because of the very nature of the industry. More of a freelance substitute than a series regular, Lupino never pursued long-term contracts with any particular producer or network. Such job security generally was reserved for her male colleagues.

On the other hand, Lupino’s continued interest in acting may have been equally responsible for her irregular directing schedule; it undoubtedly strengthened her reputation as a director who worked well with fellow actors. Although praised for her abilities to link scenes smoothly, to cooperate with the crew, and to come in on time and under budget, Lupino’s most sought-after capacities were her skill at handling players of both sexes and her sensitivity to the problems and needs of her cast, qualities derived from her own training and experience as an actress.

Although Lupino was one of the first woman directors during the early years of American television production, it is odd that she is rarely referenced as a “groundbreaker” for other women entering the industry. Unlike Lucille Ball, Loretta Young, Joan Davis, and other women who were involved as producers in early television programming, Lupino had little creative control over the programs she directed. To contextualize Lupino’s role as a director in relation to other women working contemporaneously as producers is not meant to suggest, however, that a critical analysis of Lupino’s work is irrelevant to television history and feminist inquiry. What remains significant about Lupino as a “woman director” was her unique ability to succeed in an occupation which was (and still is) dominantly coded as “masculine.” Constructed as an outsider and an anomaly, Lupino as a TV director was more often than not represented merely as a woman, her directorial skill either de-emphasized or ignored altogether in the popular press.
After a decade of professional activity spanning all three networks, a variety of genres, and an irregular schedule, Lupino’s commitment to directing, like acting, could not have been said to be total. Working at a period in her life in which her desire for a career chafed at her equally strong desire to raise and care for her family, Lupino suffered the dilemma of the average woman of the time. She was forced to negotiate a notion of “work” dictating that her choices should threaten neither the spheres over which patriarchy dominated, such as the television industry, nor her identity as a wife and mother, whose “natural” place belonged in the home rather than in the studio. It should come as no surprise, therefore, that the nickname bestowed upon Lupino by her production crews—“Mother”—worked to contain her in the dominant role for women at the time.

LYNDHURST, NICHOLAS

British Actor

Nicholas Lyndhurst emerged as a prominent star among a new generation of British situation comedy performers in the early 1980s, though he had by then already amassed a considerable number of years' television experience, having started out as a child actor.

Lyndhurst made the transition from child performer to adult star in stages, beginning as an actor in a string of children's dramas and adventures such as The Tomorrow People, Heidi and The Prince and the Pauper (in which he played the dual leading role). He also tried his hand as a presenter for children's television, co-hosting for a time the series Our Show on Saturday mornings (with Susan Tully and others). In 1978, his selection for the part of Ronnie Barker's son in Going Straight, the sequel to the classic prison comedy Porridge, marked the start of his emergence as an adult performer, a process that continued with his casting as Wendy Craig's teenage son Adam in the long-running situation comedy Butterflies.

The final stage in the transition to a mature performer came in the hugely successful comedy series Only Fools and Horses, in which Lyndhurst was entrusted with the role of Rodney, the hapless and much put-upon younger brother of David Jason's immortal "Del Boy" Trotter. As Rodney, a part he played for some ten years, Lyndhurst was endearingly naive, sensitive, and idealistic—the perfect foil to Jason's streetwise would-be millionaire. Frequently rendered speechless at his brother's tricks and deceptions and all too often living up to the "plonker" tag that his exasperated sibling bestowed upon him, Rodney was widely praised as a beautifully realised comic creation.

Toward the end of the long run of Only Fools and Horses, Rodney was allowed to get married (to the long-suffering trainee banker Cassandra) and much humour was devised from the inevitable difficulties he experienced as a new husband. Subsequent situation comedies that were constructed around Lyndhurst further developed the theme of not dissimilar Rodney-style characters, bemused and indignant though not necessarily quite as dimwitted as Rodney, trying to cope with the demands of wives or girlfriends. In The Two of Us, for instance, Lyndhurst's character, computer programmer Ashley, wrestled with independent girlfriend Elaine's reluctance to get married, despite his entreaties, and with her contrasting views on just about any subject he cared to raise. In Goodnight Sweetheart, meanwhile, his character Gary Sparrow agonized over whether he should stay true to his brash and pushy wife in their modern London flat or whether he should desert her for the barmaid with whom he had formed a relationship while exploring

wartime London after finding a way to travel some 50 years back through time.

Memories of the highly successful Only Fools and Horses series, kept fresh through regular repeats of old episodes, have perhaps dominated perceptions of the sort of roles Lyndhurst is capable of playing. Typecast though he may have been, he remains, however, unsurpassed in his portrayal of the henpecked husband or lover, well-meaning but frequently nonplused by the tricks that fate plays on him.

M*A*S*H
U.S. Comedy

M*A*S*H, based on the movie of the same name (Director Robert Altman, 1970), aired on CBS from 1972 to 1983 and has become one of the most celebrated television series in the history of the medium. During its initial season, however, M*A*S*H was in danger of being canceled due to low ratings. The show reached the top ten program list the following year, and never fell out of the top twenty rated programs during the remainder of its run. The final episode of M*A*S*H was a two-and-one-half hour special that attracted the largest audience to ever view a single television program episode.

In many ways the series set the standard for some of the best programming to appear later. The show used multiple plotlines in half-hour episodes, usually with at least one story in the comedic vein and another dramatic. Some later versions of this form, e.g. Hooperman (ABC 1987–1989) and The Days and Nights of Molly Dodd (NBC 1987–1989), would be known as the dramatic, half-hour programs incorporating elements of both comedy and drama. Other comedies would forego the more serious aspects of M*A*S*H, but maintain its focus on character and motive. And some dramatic programming, such as St. Elsewhere and Moonlighting, would draw on the mixture of elements to distinguish themselves from more conventional television.

M*A*S*H was set in South Korea, near Seoul, during the Korean War. The series focused on the group of doctors and nurses whose job was to heal the wounded who arrived at this “Mobile Army Surgical Hospital” by helicopter, ambulance or bus. The hospital compound was isolated from the rest of the world. One road ran through the camp; a mountain blocked one perimeter and a minefield the other. Here the wounded were patched up and sent home—or back to the front. Here, too, the loyal audience came to know and respond to an exceptional ensemble cast of characters.

The original cast assumed roles created in Altman’s movie. The protagonists were Dr. Benjamin Franklin “Hawkeye” Pierce (Alan Alda) and Dr. “Trapper” John McIntyre (Wayne Rogers). Pierce and McIntyre were excellent surgeons who preferred to chase female nurses and drink homemade gin to operating and who had little, if any use for military discipline or authority. As a result, they often ran afoul of two other medical officers, staunch military types, Dr. Frank Burns (Larry Linville) and Senior Nurse, Lieutenant Margaret “Hot Lips” Houlihan (Loretta Swit). The camp commander, Lt. Col. Henry Blake (McLean Stevenson), was a genial bumbler whose energies were often directed toward preventing Burns and Houlihan from court martialing Pierce and McIntyre. The camp was actually run by Corporal Walter “Radar” O’Reilly (Gary Burghoff), the company clerk who could spontaneously finish Blake’s unspoken sentences and hear incoming helicopters before they were audible to other human ears. Other regulars were Corporal Max Klinger (Jamie Farr) who, in the early seasons, usually dressed in women’s clothing in an ongoing attempt to secure a medical (mental) discharge, and Father Francis Mulcahy (William Christopher), the kindly camp priest who looked out for an orphanage.

In the course of its eleven years the series experienced many cast changes. McIntyre was “discharged” after the 1974–75 season because of a contract dispute between the producers and Rogers. He was replaced by Dr. B.J. Hunnicutt (Mike Farrell), a clean-cut family man quite different from Pierce’s lecherous doctor. Frank Burns was given a psychiatric discharge in the beginning of the 1977–78 season and was replaced by Dr. Charles Emerson Winchester (David Ogden Stiers), a Boston blueblood who disdained the condition of the camp and tent mates Pierce and Hunnicutt. O’Reilly’s departure at the beginning of the 1979–80 season was explained by the death of his fictional uncle, and Klinger took over the company clerk position.

Perhaps the most significant change for the group occurred with the leave-taking of Henry Blake. His exit was written into the series in tragic fashion. As his plane was flying home over the Sea of Japan it was shot down and the character killed. Despite the “realism” of this narrative development, public sentiment toward the event was so negative that the producers promised never to have another character depart the same way. Colonel Sherman Potter (Harry Morgan), a doctor with a regular Army experience in the cavalry, replaced Blake as camp commander and became more both more complex and more involved with the other characters than Blake had been.

Though the series was set in Korea, M*A*S*H, both the movie and the series, was initially developed as a critique of the Vietnam War. As that war dragged toward conclusion, however, the series focused more on characters than situations—a major development for situation comedy. Characters were given room to learn from their mistakes, to adapt...
and change. Houlihan became less the rigid military nurse and more a friend to both her subordinates and the doctors. Pierce changed from a gin-guzzling skirt chaser to a more "enlightened" male who cares about women and their issues, a reflection of Alda herself. O'Reilly outgrew his youthful innocence, and Klinger gave up his skirts and wedding dresses to assume more authority. This focus on character rather than character type set M*A*S*H apart from other comedies of the day and the style of the show departed from the norm in many other ways as well, both in terms of its style and its mode of production.

While most other contemporary sitcoms took place indoors and were largely produced on videotape in front of a live audience, M*A*S*H was shot entirely on film on location in Southern California. Outdoor shooting at times presented problems. While shooting the final episode, for example, forest fires destroyed the set, causing a delay in filming. The series also made innovative uses of the laugh track. In early seasons, the laugh track was employed during the entire episode. As the series developed, the laugh track was removed from scenes that occurred in the operating room. In a few episodes, the laugh track was removed entirely, another departure from sitcom conventions.

The most striking technical aspect of the series is found in its aggressively cinematic visual style. Instead of relying on straight cuts and short takes episodes often used long shots with people and vehicles moving between the characters and the camera. Tracking shots moved with action, and changed direction when the story was "handed off" from one group of characters to another. These and other camera movements, wedded to complex editing techniques, enabled the series to explore character psychology in powerful ways, and to assert the preeminence of the ensemble over any single individual. In this way M*A*S*H seemed to be asserting the central fact of war, that individual human beings are caught in the tangled mesh of other lives and there must struggle to retain some sense of humanity and compassion. This approach was grounded in Altman's film style and enabled M*A*S*H to manipulate its multiple story lines and its mixture of comedy and drama with techniques that matched the complex, absurd tragedy of war itself.

M*A*S*H was one of the most innovative sitcoms of the 1970s and 1980s. Its stylistic flair and narrative mix drew critical acclaim, while the solid writing and vitally drawn characters helped the series maintain high ratings. The show also made stars of it performers, none more so than Alda, who went on to a successful career in film. The popularity of M*A*S*H was quite evident in the 1978-79 season. CBS aired new episodes during primetime on Monday and programmed reruns of the series in the daytime and on Thursday late night, giving the show a remarkable seven appearances on a single network in a five day period. The series produced one unsuccessful spin-off, AfterM*A*S*H, which aired from 1983-84. The true popularity of M*A*S*H can still be seen, for the series is one of the most widely syndicated series throughout the world. Despite the historical setting, the characters and issues in this series remain fresh, funny and compelling in ways that continue to stand as excellent television.

FRANK N. MAGID ASSOCIATES

Though little known by the public at large, Frank N. Magid Associates is one of the most successful and influential television and entertainment consulting companies in existence. Founded in 1957 by a young social psychologist, the company has grown to over 300 employees and serves clients around the world. The first broadcasting client was television station WMT (now KGAN) in Cedar Rapids, Iowa. The company is still headquartered in neighboring Marion, Iowa, but also has offices in Los Angeles, London, and Kuala Lumpur.

Magid Associates emphasizes custom research on audience and client attitudes and behavior, and this specifically tailored work is designed to answer questions about business strategy. For local television, the company operates in considerably more than the top 100 markets in the United States. In each market it provides consulting to one television station. It also provides various services for each of the U.S. networks and many studios and syndicators. Magid’s services have been extended to clients elsewhere in the entertainment industries, such as record companies and movie producers, and the company contracts with any other businesses desiring marketing or survey research. It is increasingly employed by international clients in television and other media.

A significant part of Magid operations, indeed the work for which they are most well known, is consulting with the news departments of local television stations. The company became the leading news consultant of the 1970s and growing controversy over its influence. Magid is often credited—or blamed—for design of the “Action News” format, and the sameness of local news broadcasts from station to station and city to city is seen as a result of their advice and that of similar news consulting firms. This sameness is produced by the repetition of news presentation techniques. The formulas include the use of co-anchors, a reliance on short news stories with time for chatting and expressing emotional reactions between items, an emphasis on graphics and live shots irrespective of their contribution to the news story, special attention to the looks and clothes of the news presenters, and the use of lighter stories and positive news in a mix with sensational crime and accident stories.

On the other hand, Magid does consistently emphasize the importance of local news. They claim that their client stations win more journalism awards than their competitors and promote the generalization that stations that lead their markets in news usually also lead in overall ratings. This perspective provides a rationale for localism in a business, network TV, that often ignores local issues. Certainly the news presentation styles that Magid Associates advise have attracted an audience and been successful for television as a business. And from the financial perspective it is also important that local news broadcasts include as many or more minutes of local advertising time as any other programming activity. The news programs are a major source of direct income, making the profitability of the local news one of the most important factors in the business success of a television station.

A typical news consulting operation involves a meeting between a team of consultants, researchers, and the management of a television station. The purpose of this meeting is to identify the concerns of the local managers. The consultants’ primary research method is telephone surveying, sometimes with people who have agreed ahead of time to watch the newscast in question and compare it with the newscast they regularly watch. They may also mail video tapes to selected interviewees or use focus groups for trial broadcasts. The newscast in question is subjected to expert critique and compared to the competitors’ newscasts, national trends, and leading newscasts in other markets. Finally the consultants offer advice on anything from personnel hiring and firing, through story selection and news script writing, to set design, graphics, promotions, lighting, camera angles, on-camera demeanor, clothes, make-up, and hair style.

Using similar research techniques, which emphasize data gathered from audience members asked to make evaluative comparisons, Magid Associates consult on any aspect of television station operations of concern to the client, on program evaluations or on marketing research. The basic rationale of Magid’s consulting is that television stations and other entertainment businesses will be more successful if they attract and hold a sizeable audience; that the best way to do this is to give the audience what it finds attractive; and finally, that since audience members are not often articulate about what they want, researchers and expert consultants are needed to identify what the audience will find attractive.

MAGNUM, P.I.

U.S. Detective Program

A permutation of the hard-boiled detective genre, *Magnum, P.I.* aired on the CBS network from 1980 through 1988. Initially, the network had the series developed to make use of the extensive production facilities built during the 1970s in Hawaii for the successful police procedural, *Hawaii Five-O*, and intended the program to reflect a style and character suited to Hawaiian glamour. For the first five years the series was broadcast, it ranked in the top twenty shows for each year.

The series was set in the contemporary milieu of 1980s Hawaii, a melting pot of ethnic and social groups. Thomas Magnum, played by Tom Selleck, was a former Naval Intelligence officer making his way as a private investigator in the civilian crossroads between Eastern and Western cultures. In charge of the security for the estate of the never-seen author Robin Masters, Magnum lived a relatively carefree life on the property. A friendly antagonism and respect existed between Magnum and Jonathan Higgins III (John Hillerman), Masters’ overseer of the estate. Though both men came from military backgrounds, Magnum’s free-wheeling style often clashed with Higgins’ more mannered British discipline. In addition, two of Magnum’s former military buddies rounded out the regular cast. T.C., or Theodore Calvin (Roger Mosely), operated and owned a helicopter charter company, a service which came in handy for many of Magnum’s cases. Rick Wright (Larry Manetti), a shady nightclub owner, often provided Magnum with important information through his links to the criminal element lurking below the vibrant tropical colors of the Hawaiian paradise.

Though originally dominated by an episodic narrative structure, *Magnum, P.I.* moved far beyond the simple demands of stock characters solving the crime of the week. Without using the open-ended strategy developed by the prime-time soap opera in the 1980s, the series nevertheless created complex characterizations by building a cumulative text. Discussion of events from previous episodes would continually pop up, constructing memory as an integral element of the series franchise. While past actions might not have an immediate impact on any individual weekly narrative, the overall effect was to expand the range of traits which characters might invoke in any given situation. For the regular viewer of the series, the cumulative strategy offered a richness of narrative, moving beyond the simpler “who-done-it” of the hard-boiled detective series that populated American television in the 1960s and 1970s.

Part of the success of *Magnum, P.I.* stemmed from the combination of familiar hard-boiled action and exotic locale. Just as important perhaps, the series was one of the first to regularly explore the impact of the Vietnam War on the American cultural psyche. Many of the most memorable episodes dealt with contemporary incidents triggered by memories and relationships growing out of Magnum’s past war experiences. Indeed, the private investigator’s abhorrence of discipline and cynical attitude toward authority seem to stem from the general mistrust of government and military bureaucracies that came to permeate American society in the early 1970s.

On one level, Magnum became the personification of an American society that had yet to deal effectively with the fallout from the Vietnam War. By the end of the 1980s, the struggle to deal with the unresolved issues of the war erupted full force into American popular culture. Before Magnum began to deal with his psychological scars in the context of the 1980s, network programmers apparently believed that any discussion of the war in a series would prompt viewers to tune it out. With the exception of Norman Lear’s *All in the Family* in the early 1970s, entertainment network programming acted, for the most part, as if the war had never occurred. However, *Magnum, P.I.*’s success proved programmers wrong. Certainly, the series’ success opened the door for other dramatic series which were able to examine the Vietnam War in its historical setting. Series such as *Tour of Duty* and *China Beach*, though not as popular, did point out that room existed in mainstream broadcasting for discussions of the emotional and political wounds that had yet
to heal. As Thomas Magnum began to deal with his past, so too did the American public.

Critics of the show often point out, however, that in dealing with this past, the series recuperated and recontructed America’s involvement in Vietnam. While some aspects of the show seem harshly critical of that entanglement, many episodes justify and rationalize the conflict and the American role. As a result, *Magnum, P.I.* is shot through with conflicting and often contradictory perspectives and any “final” interpretation must take the entire series into account, rather than concentrate on single events or episodes. The construction of this long-running narrative, riddled as it is with continuously developing characterizations, ideological instability, and multi-layered generic resonance, illustrates many of commercial U.S. television’s capacity for narrative complexity, as well as some of its most vexing problems and questions.

—Rodney A. Buxton

**MALONE, JOHN C.**

U.S. Television Executive

U.S. Television Executive/Entrepreneur John C. Malone is the Chief Executive Officer of TeleCommunications, Inc. (TCI), the largest operator of cable systems in the United States. Malone has overseen TCI’s phenomenal growth from the time of his arrival at the company in 1972, and in the process has come to be regarded as among the most powerful people in the television industry. He has been praised by many for his outstanding business acumen and his technological foresight, but at the same time, he has also acquired a less flattering reputation for his hardball style of business practice. Among those who have been openly critical of Malone in this latter vein was then Tennessee Senator Albert Gore, who dubbed Malone the “Darth Vader” of the cable industry.

Malone began his career at AT and T Bell Labs in the mid-1960s, before moving on to become a management consultant for McKinsey and Company in 1968. He received his Ph.D. in Industrial Engineering from Johns Hopkins in 1969, and soon joined the General Instrument Corporation, where he became president of its Jerrold cable equipment division. It was here that he first established ties to many of the cable industry’s pioneers. In 1972, he turned down an offer from Steve Ross of Warner Communications to head its fledgling cable division, opting instead to leave the East Coast to accept an offer from TCI founder Bob Magness to run the small cable company from its Denver headquarters.

Malone joined TCI just before it fell into very difficult times. Malone’s first major success at TCI was in negotiating
a restructuring of the company's heavy debt load. Once freed from the burden of this debt, Malone embarked on a conservative growth strategy for TCI. Rather than attempting to expand its holdings by building large urban cable systems at great expense, as many other cable companies did in the late 1970s, Malone focused TCI's growth efforts on gaining franchise rights in smaller communities, where the costs to build the systems would be far less onerous. The wisdom of Malone's strategy soon became evident. TCI was able to grow without encountering the exceedingly high costs associated with building capital intensive urban cable systems, and in the early 1980s, it was able to purchase several existing large market systems, such as those in Pittsburgh and St. Louis, at bargain prices from companies that had financially overextended themselves in the construction process.

As TCI grew throughout the 1980s, so did its power within the television industry. The company invested heavily in programming services, and currently holds stakes in more than 25 different cable networks. But TCI's success has been sometimes overshadowed by the public's perception of it as a heavy-handed company that occasionally resorts to bullying tactics to achieve its desired ends. For instance, in TCI's earlier days, some of its systems were known to replace entire channels of programming for days at a time, leaving these channels blank except for the names and home phone numbers of local franchising officials. The strategy aimed to gain leverage in franchise negotiations. Fairly or not, Malone came to personify TCI and its negative public image.

But despite its poor public relations record, few would deny that Malone and TCI are among the most powerful forces shaping the television industry as it moves into the next century. Like Paley and Sarnoff of an earlier era, Malone exercises great control over what America's television viewers will or will not see. Nearly one in four subscribers in the United States is served by a TCI system, and these viewers are directly affected by the decisions Malone makes. Even those who are not TCI subscribers feel Malone's influence, because access to the critical mass of viewers represented by TCI's cable systems is crucial to any programmer's success. Programmers often must seek to gain positions on TCI systems in order to gather the audience numbers that provide solid financial status. John Malone is therefore in the position of a gatekeeper who wields enormous influence over the entire television marketplace, which helps to explain another nickname sometimes applied to him—"The Godfather" of cable television.

Malone's most ambitious undertaking was an attempted merger between TCI and regional telephone company Bell Atlantic. Announced in October 1993, the deal was scuttled four months later after financial and philosophical concerns left the two companies unable to reach a final accord. Despite the merger's failure, the venture is indicative of Malone's vision and resolve to secure TCI's place in the future television marketplace. TCI continues to expand its empire by purchasing more cable systems, forging alliances with other cable companies and telephone service providers, and strengthening its non-U.S. holdings in cable and telecommunications. These connections position the company for a central role in an emerging full-service communications marketplace. But whatever the future holds for TCI, John Malone already has cemented his place as one of the key shapers of the American television landscape over the last quarter of the 20th century.

MAMA
U.S. Domestic Comedy/Drama

Mama, which aired from 1949 to 1957 on CBS, proves that television was capable of complex characterizations in the series format even early in its history. A weekly family comedy-drama based on Kathryn Forbes's Mama's Bank Account, as well as its play and film adaptations I Remember Mama, Mama would best be described today as "dramedy." Unfortunately, except for its last half-season, when it was filmed, the program aired live, with kinescope recordings prepared for west coast broadcasts. Consequently it is unavailable in the repetitive re-runs that have made other domestic situation comedies from the 1950s—many, like Father Knows Best, that it influenced—familiar to several generations of viewers.

Each episode dramatizes, with warmth and humor, the Hansen family's adventures and everyday travails in turn of the century San Francisco. The working-class Norwegian family included Mama, Papa (a carpenter), and children Katrin, Nels, and Dagmar. Mama's sisters and an uncle were semi-regular characters. Although earlier incarnations of the Forbes material had focused the relationship between Mama and Katrin, the television series centered episodes on all of the characters, a technique made available and almost demanded by the production of a continuing series.

The stories might revolve around Dagmar's braces, Nels starting a business, or the children buying presents for Mama's birthday. The entire family would contribute to the drama's resolution, however, and images of them sitting down to a cup of Maxwell House Coffee—the show's long-time sponsor—would frame each episode of the show. As George Lipsitz points out, it was common for the dramatic solutions to involve some kind of commodity purchase, not surprising given the commercial basis of American network television and the consumer culture of post-war America. What is surprising—but also what makes Mama so special—is how often the show foregrounded both the contradictions of this consumer culture in which everyone does not have access to the desired goods. Dramatic tension often results from the realization that Mama's endeavors provide the foundation for the achievements of individual family members. It was not uncommon for Papa and the Hansen children to have to come to terms with the value of Mama's work.

The program's complex treatment of cultural tensions resulted not only from Forbes's original material, but also from head writer Frank Gabrielson, director-producer Ralph Nelson (a Hollywood liberal of Norwegian descent who went on to direct the film Lilies of the Field), and a distinguished cast. Peggy Wood, who incarnated Mama, was a versatile stage and film actress who had starred in operetta and Shakespeare, and is probably best known to today's audiences for her Oscar-nominated role as Mother Superior in The Sound of Music. (Mady Christians, who starred in the role of Mama on Broadway, was not considered for the television role because she was blacklisted.) Dick Van Patten played Nels, and would later star in television's Eight Is Enough in the 1970s. Robin Morgan, who played Dagmar, is now a well-known feminist activist and writer. Not surprisingly, she attributes to Mama many of her early lessons in feminine power.

MAN ALIVE

Canadian Religious/Information Program

A critically-acclaimed, non-denominational program which the show’s executive producer, Louise Lore, describes as “a religious program for a post-Christian age,” Man Alive is one of Canada’s longest-running information programs. Begun in 1967 amidst a renewed sense of theological activism inspired by the reforms of Vatican II, Man Alive takes its name and inspiration from a St. Iranaeous quote: “the glory of God is man fully alive.” From a format which concentrated on theological issues, the show’s focus has broadened considerably in its 30 seasons.

It has profiled and interviewed many of the world’s most important religious figures from Mother Teresa to the Dalai Lama and Archbishop Desmond Tutu. An 8 October 1986 interview with the Aga Khan was this religious leader’s first formal North American interview. He had declined previous requests from such well-known shows as CBS’ 60 Minutes in favour of Man Alive because of the show’s reputation for balance and the relaxed, soft-spoken interviewing style of the show’s host, Roy Bonisteel. Many of these interviews were marked by their candidness and honesty as in the case of Archbishop Tutu, who related how Jackie Robinson and Lena Horne were his boyhood heroes.

Bonisteel, the show’s host from for 22 seasons and so identified with it that many mistake him for a minister, was a journalist by training. He had been producing radio shows for the United Church of Canada in the mid-1960s when he was approached to be the host of the new television program. By the time he left he had become the longest running host of any information program in Canada. He was succeeded by Peter Downie, former co-host of CBC’s Midday current affairs program in the fall of 1989. Man Alive observed its 25th anniversary with a one-hour special in February 1992, which celebrated not only its longevity but also the diversity of its programming.

Throughout its history, the show has consistently provided programming that appeals to a broad audience and this has been one of the keys to its success. It has delved into a variety of topics, from UFOs to the threat of nuclear war, from father-son relationships to life in a maximum security hospital for the criminally insane. Nor has it avoided con-
troversial and unpopular subjects such as the Vatican bank scandal, sexual abuse in the church, or aid to El Salvador. Some of the show's most critically acclaimed episodes have been those that have chronicled very personal human dramas such as the story of David McFarlane who met the challenges presented by his Down's Syndrome to star in a television drama, or the story of the Rubineks, Holocaust survivors, and their moving return to Poland after 40 years. In spite of the changing nature of television audiences and serious budgetary constraints, Man Alive continues the tradition of providing an informative and well-balanced examination of relevant social issues and contemporary ethical questions.

U.S. Spy Parody

The Man from U.N.C.L.E., which aired on NBC from September 1964 to January 1968, has often been described as television's version of James Bond, but it was much more than that. It was, quite simply, a pop culture phenomenon. Although its ratings were initially poor early in the first season, a change in time period and cross-country promotional appearances by its stars, Robert Vaughn and David McCallum, helped the show build a large and enthusiastic audience.

At the peak of its popularity, The Man from U.N.C.L.E. was telecast in 60 countries and consistently ranked in the top ten programs on U.S. television. Eight feature-length films were made from two-part episodes and profitably released in the United States and Europe. TV Guide called it "the cult of millions." The show received 10,000 fan letters per week, and Vaughn and McCallum were mobbed by crowds of teenagers as if they were rock stars. U.N.C.L.E. was also a huge merchandising success with images of the series' stars and its distinctive logo (a man standing beside a skeletal globe) appearing on hundreds of items, from bubble gum cards to a line of adult clothing.

The show had a little something for everyone. Children took it seriously as an exciting action adventure. Teenagers enjoyed its hip, cool style, identifying with and idolizing its heroes. More mature viewers appreciated the tongue-in-cheek humor and the roman a clef references to real-life political figures like Mahatma Gandhi and Eva Peron, interpreting it as a metaphor for the struggle common to all nations against the forces of greed, cruelty and aggression.

The Man from U.N.C.L.E. redefined the television spy program introducing into the genre a number of fresh innovations. Notably, the show broke with espionage tradition and looked beyond the Cold War politics of the time to envision a new world order. The fictional United Network Command for Law Enforcement was multinational in makeup and international in scope, protecting and defending nations regardless of size or political persuasion. For example, a third season episode, "The Jingle Bells Affair" showed a Soviet premier visiting New York during
Christmas time, touring department stores and delivering a speech on peaceful coexistence at the United Nations, twenty-two years before Mikhail Gorbachev actually made a similar trip.

The show also broke new ground in re-conceptualizing the action adventure hero. Prompted by a woman at the BBC he once met who complained that the leads in American series were all big, tall, muscular and, well, American, producer Norman Felton (Eleventh Hour, Dr. Kildare) decided to vary the formula. His series, developed with Sam Rolfe (co-creator of Have Gun, Will Travel) teamed an American agent, Napoleon Solo (Robert Vaughn) with a Soviet one, Illya Kuryakin (David McCallum). Each week, they were sent off on their missions (called “affairs”) by their boss, Alexander Waverly, a garrulous, craggy, pipe-smoking spy master played by Leo G. Carroll.

Neither the suave Solo nor the enigmatic Kuryakin were physically impressive. They were instead intelligent, sophisticated, witty, charming, always polite and impeccably well-tailored. Sometimes they made mistakes, and often they lost the battle before they won the war.

What made U.N.C.L.E. truly appealing was the way it walked a fine line between the real and the fanciful, juxtaposing elements that were both surprisingly fantastic and humorously mundane. For example, as they battled bizarre threats to world peace like trained killer bees, radar-defeating bats, hiccups, suspended animation devices, and earthquake machines, the agents also worried about expense accounts, insurance policies, health plans and interdepartmental gossip.

While the series showed that heroic people had ordinary concerns, it also demonstrated that ordinary people could be heroic. During the course of each week’s affair at least one civilian or “innocent” was inevitably caught up in the action. These innocents were average, everyday people—housewives, stewardesses, secretaries, librarians, school teachers, college students, tourists, even some children—people very much like those sitting in U.N.C.L.E.’s viewing audience. At the start of the story, they often complained of their boring, unexciting lives—lives to which, after all the terror and mayhem was over, they were only too happy to return.

By contrast, U.N.C.L.E.’s villains were fabulously exotic and larger than life. In addition to the usual international crime syndicates, Nazi war criminals, and power hungry dictators, U.N.C.L.E. also battled THRUSH, a secret society of mad scientists, megalomaniac industrialists, and corrupt government officials who held the Nietzschean belief that because of their superior intelligence, wealth, ambition and position, they were entitled to rule the world.

A number of prominent actors and actresses guest starred each week as either villains or innocents, including Joan Crawford, George Sanders, Kurt Russell, William Shatner and Leonard Nimoy (who appeared together pre-Star Trek in “The Project Strigas Affair”) and Sonny and Cher.
The *U.N.C.L.E.* formula was so successful that it spawned a host of imitators, including a spin-off of its own, *The Girl from U.N.C.L.E.* in 1966. Starring Stefanie Powers as female agent April Dancer and Noel Harrison (son of Rex) as her British sidekick, Mark Slate, *The Girl from U.N.C.L.E.* took its cue from the wild campiness of the then-popular *Batman* rather than from its parent show. Although it featured many of the same elements of *Man*, including a specially designed gun and other advanced weaponry and the super-secret headquarters hidden behind an innocent tailor shop, *Girl’s* plots were either absurdly implausible or downright silly and the series lasted only a year.

By its third season, *The Man from U.N.C.L.E.* had also become infected by the trend toward camp and though the tone was readjusted to be more serious in the fourth season, viewers deserted the show in droves. Once in the top ten, the series dropped to sixty-fourth in the ratings and was canceled mid-season, to be replaced by *Rowan and Martin’s Laugh-In*.

This was not the end of *U.N.C.L.E.*, however. Because of concerns about violence voiced by parent-teacher groups, the series was not widely syndicated and reruns did not appear until cable networks began to air them in the 1980s. Nevertheless, *The Man from U.N.C.L.E.* was not forgotten. Nearly every spy program that appeared during the ensuing decades borrowed from its various motifs (naming spy organizations with an acronym has become a genre cliche). *The Sкаrcrow and Mrs. King* expanded the premise of *U.N.C.L.E.*’s original pilot episode into an entire series, and even non-espionage programs as diverse as *The A-Team* and *thirtysomething* continued to make references to it. In 1983, Vaughn and McCallum reunited to play Solo and Kuryakin in a made-for-TV movie, *Return of the Man from U.N.C.L.E.: The Fifteen Years Later Affair*.

**MANN, ABBY**

U.S. Writer

Abbey Mann’s television and film writing career has spanned four decades and earned him widespread critical acclaim and numerous prestigious industry awards in the United States and abroad. He has received an Academy Award and New York Film Critics Award for his screenplay for *Judgment at Nuremberg* (1961), and Emmys for *The Marcus-Nelson Murders* (1973, the *Kojak* pilot), *Murderers Among Us: The Simon Wiesenthal Story* (1989), and *Indictment: The McMartin Trial* (1995).

Mann’s made-for-television movies—a television genre in which he is widely acknowledged as a leading practitioner—have covered a breadth of subjects. His most daring (and controversial) scripts have offered viewers a withering critique of the functioning of America’s criminal justice system. Although some critics have argued that Mann has, on occasion, selectively marshaled facts and taken “polemical” positions in his portrayal of his subjects, almost all have expressed admiration for his exhaustive investigative research, and his rich dramatic portrayal of character. Most importantly, few have questioned the factual basis for his arguments.

Mann, the son of a Russian-Jewish immigrant jeweler, grew up in the 1930s in East Pittsburgh—a predominantly Catholic working-class neighborhood he describes as a “tough steel area.” As a Jewish youth in these surroundings, Mann felt himself an outsider. Perhaps this in part explains the persistent preoccupation, in his scripts, with the working poor and racial minorities—outsiders who are trapped in a social system in which prejudice, often institutionalized in the police and judicial apparatus, is used to deprive them of their rights.
This recurrent overarching theme is developed in stories focusing on the forced signing of criminal confessions; inadequate police and district attorney investigation of murder cases involving victims who are minorities or poor, or both; judicial and police officials who protect their reputations and careers, when confronted with evidence of possible miscarriage of justice, by refusing to re-open cases in which innocent persons, often minorities, have been convicted; the possibility that law enforcement officials conspired in the assassination of Martin Luther King, Jr.; the failure of union leaders to adequately fight for the rights of their workers; the greed and questionable ethics of some members of the legal, medical, and mental health professions; and the sensationalized coverage of murder cases by the media, who tend to prejudge cases according to their perception of general public sentiment.

Mann began his professional writing career in the early 1950s, writing for NBC's Cameo Theater, and for the noted anthology series Studio One, Robert Montgomery Presents, and Playhouse 90. His script for the celebrated film drama Judgment at Nuremberg (1961), recounting the Nazi war crimes trials, was originally produced for Playhouse 90. Mann moved to Hollywood as production on the feature film version began. Other successful film scripts quickly followed, including A Child Is Waiting (1963), directed by John Cassavetes, which offered one of the first sympathetic film portrayals of the care and treatment of mentally challenged children; and a screen adaptation of Katherine Anne Porter's novel Ship of Fools (1965), the story of the interlocking lives of passengers sailing from Mexico to pre-Hitler Germany, directed by Stanley Kramer (who had directed Judgment at Nuremberg).

Mann returned to television writing in 1973 with the script for The Marcus-Nelson Murders, which launched Universal Television's popular Kojak series. Universal approached Mann about doing a story based on the 1963 brutal rape and murder of Janice Wylie and Emily Hoffert—two young, white professional women living in midtown Manhattan. George Whitmore, a young black man who had previously been arrested in Brooklyn for the murder of a black woman, signed a detailed confession for the Wylie and Hoffert murders. Whitmore later recanted his confession, claiming he was beaten into signing it. Mann visited Whitmore in jail in New York before agreeing to write the screenplay, and became convinced not only that Whitmore was innocent, but also that some top officials in the Manhattan and Brooklyn District Attorneys' offices had ignored Whitmore's alibi that he was in Seacliff, New Jersey—fifty miles from New York City—at the moment of the murders. After the airing of The Marcus-Nelson Murders, for which Mann won an Emmy and a Writers Guild Award, Whitmore was released from prison.

Although he was not involved in the production of Kojak, Mann was unhappy with the treatment of the series by its producer, Universal Television, which, he argued, re-framed the police melodrama as a formulaic cops-and-robbers potboiler, whereas he had sought to show, in The Marcus-Nelson Murders, that law enforcement officials should be watched.

In his next television project, Mann cast his critical gaze on one of the country's most sacrosanct institutions—the medical profession. Medical Story, an anthology series produced by Columbia, premiered on NBC in 1975 and had a brief four-month run. Mann was the series creator and also served as co-executive producer.

Mann made his directorial debut with King, a six-hour docudrama on the life of civil rights leader Martin Luther King, Jr. He had wanted to do a feature film on King while King was still alive, but was unable to raise the necessary financing. Ironically, unforeseen circumstances brought the project to fruition in 1978, ten years after King's death.

The central figure in The Marcus-Nelson Murders, George Whitmore, had claimed that he was watching King's "I Have A Dream" speech on television when the murders were committed. Mann asked King's widow, Coretta Scott King, for the rights to use the film clip of King's speech in The Marcus-Nelson Murders, which she granted. She then asked Mann if he was still interested in the piece on King's life. Encouraged by Mrs. King's continued interest, Mann
pursued the project. In doing research on the script, Mann uncovered information that led him to believe that a conspiracy involving the Memphis, Tennessee, police and fire departments may have been responsible for King's death. The conspiracy theory focused on the reassignment, just prior to the assassination, of a black police officer and two black firefighters who had been stationed in a firehouse overlooking the motel where King was shot, despite numerous threats of assassination while King was in Memphis.

Reporter Mark Lane assisted Mann in his investigation of the circumstances surrounding the King assassination. The research resulted in an official House of Representatives inquiry into whether a conspiracy had indeed been involved in the assassinations. As a result, Mann was publicly maligned by the Memphis police and fire chiefs.

For Skag, his next television project which aired on NBC in 1980, Mann returned to the scene of his youth—the steel mills of the suburbs surrounding Pittsburgh. He developed the concept and wrote the script for the three-hour pilot, and was given "complete freedom" by NBC President Fred Silverman. Starring Karl Malden as Pete "Skag" Skaggska, Skag was the unflinching, realistic portrait of a middle-aged steel worker who had worked hard all his life, but when stricken by a stroke, found himself suddenly "expendable" because he was no longer able to provide food for the table or perform sexually with his wife. Skag also dealt with the larger social issues of steel workers' unhealthy working conditions, and the failure of their unions to fight for their rights. Steel workers unions bitterly attacked Skag, calling Mann "anti-union." But with this series Mann was attempting to draw attention to a class of Americans who until the 1980s were grossly underrepresented in prime-time television drama, a fictional world largely populated by white, blue-collar, middle-aged male protagonists.

While the premiere episode won critical praise and high ratings, viewership rapidly declined, and the series ended its run after six weeks on the air. Mann, who was involved in the first two regular series episodes, attributed the series failure to uneven directing of some of the subsequent episodes and artistic interference from the show's star Malden.

Mann's direct involvement with Medical Story and Skag convinced him that the process involved in producing series television inevitably led to too many compromises, both ideological, as politically controversial themes became "muddled," and creative, as strong pilots were followed by aesthetically weak regular series episodes. For these reasons, he decided in the 1980s to focus his artistic energy exclusively on made-for-television movies, over which he had greater artistic control.

The Atlanta Child Murders aired on CBS in 1985. The notorious Atlanta child murders case focused on Wayne Williams, a black, who was accused of recruiting young boys for his homosexual father, using them sexually along with his father, and then murdering them. Mann was urged by prominent black leaders in Atlanta not to take on the project because, they argued, the additional publicity generated by a television movie focusing on an accused black mass murderer would, in the end, only further damage the black community. Mann initially withdrew from the proposed project, but attended the Williams trial and was disturbed by the courtroom proceedings, which revealed to him the inadequate investigation into the murders of victims who belonged to poor minority families, the introduction of potentially unreliable evidence, and the sensationalized media coverage of the trial.

Mann, the only writer able to speak to Wayne Williams in prison after his conviction, raised doubts about the case, arguing that the judicial system itself was on trial, as was a society that had neither compassion for the victims during their lives nor justice for them after their deaths. Critics praised the dramaturgy of The Atlanta Child Murders, but some questioned Mann's doubts about both the propriety of the courtroom proceedings and Williams' guilt, arguing that after all, the State Supreme Court of Georgia had upheld Williams' conviction. After seeing the television movie, prominent defense attorneys Alan Dershowitz, William Kunstler, and Bobby Lee Cook agreed to join in a pro bono defense of Williams, but, according to Mann, once the publicity died down they did not pursue the appeal to re-open the case.

Mann's more recent made-for-television movies premiered on HBO, which has found to be much more supportive of his often-contentious stands on controversial social issues than were the commercial broadcast networks, who felt they must avoid the inherent commercial risks of alienating significant sectors of their mass audience. Most recent among these was Indictment: The McMartin Trial, created by Mann and his wife Myra. The film won an Emmy and a Golden Globe in 1995. Once again Mann questioned the workings of the judicial system. This case involved the McMartin preschool in Manhattan Beach, California, at which it was alleged that seven preschool teachers had molested 347 children over the course of a decade. Most people in Los Angeles were convinced of the veracity of the charges, which were supported by the accounts of hundreds of children who attended the school. Mann became intrigued by the case when charges against five of the defendants were dropped. The two remaining defendants, Peggy Buckey, the school superintendent, and her son, Ray, were still under arrest. Buckey's daughter argued on Larry King's show that the Los Angeles district attorney was continuing with the prosecution of her mother and brother because they had been kept in jail so long that the district attorney could not admit his error without losing face. As Mann investigated the case, he once again confronted the seamy side of the justice system: informers who supposedly heard confessions only because they had made financial deals to their own advantage; greedy parents who were suing to get damages; and prosecutors who withheld crucial evidence and selectively ignored facts to advance their own careers by obtaining a conviction. Mann was also intent in exploring the important psychological question regarding the case with which
children can be led by manipulative adults into admitting events that never occurred.

Ultimately, despite two trials, no one was convicted in the McMartin case. Indictment produced very strong reactions among viewers. According to Mann, “People seem . . . obsessed by it. I suppose they realize that they have watched and believed stories that were as incredible as the Salem witch hunt.” Reaction to the television film had a direct impact on the Manns as well. On the day production on Indictment began, their house was burned to the ground. Undeterred, Mann, at age 69, began work on his next HBO movie—on the lives and trial of Julius and Ethel Rosenberg.

MANN, DELBERT
U.S. Director/Producer

Like many directors of television’s “golden age,” Delbert Mann came from a theatrical background. While studying political science at Vanderbilt University, Mann became involved with a Nashville community theater group where he worked with Fred Coe, who went on to produce the alternating programs known as Philco-Goodyear Television Playhouse. He received an M.F.A. in Directing from Yale School of Drama and then worked as a director/producer at the Town Theatre (Columbia, South Carolina) and as a stage manager at the Wellesley Summer Theater. When he first went to New York, Mann worked as a floor manager and assistant director for NBC.

In 1949, Mann began directing dramas for Philco-Goodyear Television Playhouse, where he was one of a stable of directors that included Vincent Donahue, Arthur Penn, and Gordon Duff. During the 1950s, Mann also directed productions for Producers’ Showcase, Omnibus, Playwrights ’56, Ford Star Jubilee, and Ford Star Time. Although he worked almost exclusively on anthology series, Mann also directed live episodes of the first domestic situation comedy, Mary Kay and Johnny.

Mann is perhaps most often identified with the Philco-Goodyear Television Playhouse (and subsequent film) production of Paddy Chayefsky’s Marty, which has been thought by many of today’s critics to be one of the most outstanding original dramas produced by Fred Coe and the Philco-Goodyear Television Playhouse. Although it did not receive outstanding reviews when it first aired, it was one of the first television plays to receive any major press coverage and more than one line in a reviewer’s column. When Mann directed the film version of Marty two years later, he was awarded the Oscar for Best Director, and the film won the Cannes Film Festival and Oscars for Best Picture, Actor, and Screenplay. The film was nominated but did not win Oscars for Best Supporting Actor, Supporting Actress, Cinematography, and Art Direction.

Many of Mann’s works tackled social issues, such as the plight of the elderly in Ernie Barger Is Fifty. However, the director contends that, at the time, the plays were not thought of in terms of their social issues—they were stories about people and “just awfully good drama.”
Mann's theatrical training was a tremendous influence on his television work. Cameras are fairly static and actors are staged within the frame. At Coe's direction, close-ups were used only to emphasize something or if there was a dramatic reason for doing so. The static camera is particularly effective in the *Marty* dance sequence, which Mann filmed with one camera and no editing. Actors were carefully choreographed to turn to the camera at the exact moment when they needed to be seen. Combined with the crowded, relatively small set, the static camera focused the audience's attention on the characters and their sense of uneasiness in the situation. Chayefsky has credited the success of *The Bachelor Party* to Mann's direction noting that, through simple stage business and careful balancing of scenes, Mann was able to illustrate the emptiness of life in the small town and the protagonist's increasing depression.

Many of Mann's works are period pieces based on the director's own love of history, which he tried to recreate accurately. But historical context serves as background to the personal relationships in the story. *The Man Without a Country*, produced during the height of anti-Vietnam protests, is a patriotic story of love of country and flag intended to stir a sense of nationalism during the Civil War and, simultaneously, the intimate story of one man's oppression.

Mann shifted to filmmaking in the 1960s but periodically returned to television to pursue more personal, people-oriented stories in made-for-television films. Productions such as *David Copperfield* and *Jane Eyre* allowed him to, once again, tell stories of personal relationships in an historical setting.

Mann returned to his live television roots for the productions of *All the Way Home* (1981) and *Member of the Wedding* (1982) for NBC's *Live Theater Series*. These productions differed from live television in the 1950s in that they were staged as a theatrical production in a theater rather than a studio and were filmed with a live audience in order to show their reaction to the piece.

Mann has been nominated for three Emmy Awards for directing: *Our Town* (1955, *Producers' Showcase*, 1955), *Breaking Up* (ABC special, 1977), and *All Quiet on the Western Front* (CBS special, 1979).

MANSBRIDGE, PETER

Canadian Broadcast Journalist

As anchor of the Canadian Broadcasting Corporation’s (CBC) flagship nightly newscast Prime Time News, Peter Mansbridge holds a critical position within Canada’s most influential broadcast news organization. His three-decade-long career within the CBC has made him one of Canadian media’s most familiar figures, synonymous with “the corporation.” The prominence to which Mansbridge has risen, however, began in a somewhat unorthodox fashion.

In what is now Canadian news media folklore, Mansbridge was “discovered” by a local CBC radio producer as he was making an airport public address announcement while working as a freight manager for a small airline in Churchill, Manitoba. Mansbridge turned the resulting position as a disc jockey into one as a newscaster, simultaneously transforming himself into a journalist, despite his lack of formal training or apprenticeship. From this unlikely beginning, Mansbridge moved quickly through the ranks of CBC television news, beginning with a one-year stint in 1972 with the CBC Winnipeg station as a local reporter, followed by another one year position as the Saskatchewan-based reporter for the CBC national newscast. From 1976 to 1980, Mansbridge held a spot on the prestigious parliamentary bureau in the nation’s capital. Anchor status commenced with the Quarterly Report (co-anchored by Barbara Frum), a series of special reports concerning issues of an urgent, national nature that aired four times a year. Beginning in 1985, Mansbridge anchored the newly formed national weekly Sunday Report.

Mansbridge’s nationwide prominence was secured in 1988 when he accepted the enviable position of chief correspondent and anchor of the flagship CBC broadcast The National, a weekday 10:00 P.M. newscast (22 minutes) that was followed by the highly respected current affairs and documentary broadcast, The Journal (38 minutes). The status attributed to this anchor position was reflected in the public interest created by the events which preceded Mansbridge’s assumption of the position. Amid much press speculation, Mansbridge was offered a co-anchor position in the United States, opposite Kathleen Sullivan on CBS This Morning (1987) for a salary reputed to be five to six times his earnings. It was expected that Mansbridge would follow the familiar exodus of Canadian broadcast journalists to the United States, where the level of national and international experience of many Canadian journalists is highly valued. This emigration has included journalists such as Don Miller (CNN), Don McNell (CBS), Robert MacNeil (PBS), Morley Safer (60 Minutes), and Peter Jennings (ABC). In a last-minute, much-publicized effort to stop Mansbridge from leaving Canada, the current chief anchor Knowlton Nash stepped down early to offer his position to Mansbridge. Nash and Mansbridge were consequently heralded as patriots and, moreover, managed to promote the turnover of anchors.

Despite the respectable audience numbers drawn under Mansbridge’s leadership, The National was moved in 1992 to CBC’s all-news network Newsworld. Mansbridge assumed the role of anchor (originally co-anchored by Pamela Wallin) on CBC’s Prime Time News. This new broadcast was part of a controversial (and subsequently reversed) decision to move the national evening news from the 10:00 P.M. to the 9:00 P.M. time slot.

During his tenure as CBC’s star anchor, Mansbridge has covered many of the key events which have attracted public attention in Canada, including federal elections and leadership campaigns, the Gulf War, the Charlottetown Referendum, and the events of Tiananmen Square. Coverage of these and other stories has garnered Mansbridge four Gemini awards (Academy of Canadian Cinema and Television) in 1988, 1989, 1990, and 1993. Mansbridge’s style of presentation is understated and sober, but sufficiently amiable to attract viewers in the increasingly entertainment-oriented news media. His understated delivery, in combination with his appearance—once described as “bland good looks”—makes Mansbridge’s presentation and persona consistent with the standard among Canadian broadcast journalists.

Although the CBC has historically placed a great deal of emphasis on news and current affairs programming, this
was particularly evident during the years of Mansbridge’s rise within the corporation in the 1980s. The reduced resources made available to the broadcaster, in addition to the challenges of broadcasting in the increasingly multi-channel media system, demanded a renewed focus on this traditionally strong area. The subsequent commitment to news is evident in the continuing production of quality news programming and has assisted Mansbridge in developing a particularly strong profile within the industry.

MARCUS WELBY, M.D.

U.S. Medical Drama

Marcus Welby, M.D., which aired on ABC from late September 1969 through mid-May 1976, was one of the most popular doctor shows in U.S. television history. During the 1970 television year, it even ranked number one among all TV series according to the Nielsen Television Index. As such, it was the first ABC program to take the top program slot for an entire season. The Nielsen data suggested Marcus Welby, M.D. was viewed regularly in about one of every four American homes that year.

The Tuesday, 10-11:00 P.M. program was created by David Victor, who had been a producer on the hit Dr. Kildare television series during the 1960s. Victor took a centerpiece of the basic doctor-show formula—the older physician-mentor tutoring the young man—and transferred it from the standard hospital setting to the suburban office of a general practitioner. The sicknesses that Marcus Welby and his young colleague Steven Kiley dealt with—everything from drug addition to rape, from tumors to autism—ran the same wide gamut that hospital-based medical shows had. In fact, many of the patients ended up in the hospital, and Welby even moved his practice to a hospital toward the end of the show’s run. Nevertheless, Marcus Welby, M.D. was different from other shows of its era such as Medical Center and The Bold Ones. Those shows stressed short-term illnesses that paralleled or ignited certain unrelated personal problems. Welby, on the other hand, dealt consistently with long-term medical problems that were tied directly to the patient’s psyche and interpersonal behavior. Acute episodes of the difficulty often sparked movement toward a cure, but only after Welby or Kiley uncovered the root causes of the behavioral problems.

In one case, for example, Dr. Welby and Dr. Kiley become concerned about Enid Cooper, a counselor in an orphanage, when they learn she’s addicted to pills. The doctors are unable to persuade the young woman to give them up. Then, under the influence of pills, Enid is responsible for a car accident in which one of her charges is hurt. That allows Welby to move her towards conquering her addiction.

Marcus Welby, M.D.
This emphasis on the psyche and medicine was celebrated by Robert Young, who played Marcus Welby. Young suffered from chemical imbalances in his body that led him toward depression and alcoholism. To fight those difficulties, he had developed an approach to life that mirrored the holistic health philosophy that he now acted out as a TV doctor. People who worked with him on the set said that it was often hard to tell where Young stopped and Welby began, so closely did the actor identify with his role. Viewers seemed to have that difficulty, too. Young received thousands of letters asking for advice on life’s problems.

In choosing topics to deal with in the program itself, Welby’s producers and writers benefited from a softening in the U.S. television networks’ rules regarding what was acceptable on TV in the early 1970s. The relaxation came about partly because of increased network competition for viewers in their 20s and 30s and partly as a result of new demands for openness and the questioning of authority that the social protests of the late 1960s brought. It allowed David Victor to initiate stories, such as one on venereal disease, that he could not get approved for Dr. Kildare.

The show did ignite public controversies. One episode called “The Outrage” centered on the rape of a teenage boy by a male teacher. It ignited one of the first organized protests against a TV show by gay activists. More general were complaints by the rising women’s rights movement that Marcus Welby’s control over the lives of his patients (many of whom were women) represented the worst aspects of male physician’ paternalistic attitudes.

While scathing, such opposition made up a rather small portion of the public discussion of the series over its seven-year prime-time life. More consistent was the controversy over Welby’s impact on physicians’ images. With previous doctor shows, the concern of physicians was to cultivate as favorable an image as possible. Now some physicians worried that Welby’s incredibly solicitous and loyal bedside manner was leading their patients to question why they did not act toward them as Welby would. Was it true, as writer-physician Michael Halberstam contended in The New York Times Magazine, that the series couldn’t help “but make things better for American doctors and their patients”? Or, was it the case, as others claimed, that Welby was among the factors contributing to the rise of malpractice actions against physicians?

The debate marked the first time that the physicians establishment got involved in a large-scale argument over whether fictional images that were positive actually had negative effects on their status. The argument would continue about other doctor shows in the coming years. But to Robert Young, Marcus Welby incarnate, it was a non-issue. According to an article in McCall’s magazine, a doctor said to Young at a convention of family physicians, “You’re getting us all into hot water. Our patients tell us we’re not as nice to them as Doctor Welby is to his patients.” Young didn’t mince words. “Maybe you’re not,” he replied.

—Joseph Turow

MARKET

Broadcasting is inherently a medium of fixed location and, because of its dependence on direct-wave radiation, television broadcasting is particularly so. In the United States, because of the dominance of advertising, these fixed locations have come to be called markets. Additionally the term market may refer to a group of people of interest to broadcasters and/or advertisers for business reasons. Indeed, the term is increasingly used in this manner throughout the world as more and more television systems become supported by advertising revenue or other commercial underwriters.

The broadcast television signal operates by direct-wave radiation; the signal waves must travel in a straight line from the transmitting to the receiving antenna. Even if transmitters could operate with unlimited power, television broadcasting operates in a geography fixed by the horizon of the curve of the earth’s surface. As the signal radiates outward from a transmitting antenna it produces a more-or-less round geographical coverage pattern, with a radius of about 60 miles for VHF (Very High Frequency) stations and about 35 miles for UHF (Ultra High Frequency) stations. The coverage contour can be distorted by hills and mountains that block the signal, increased by antenna height, or added to by translators that rebroadcast the signal at another frequency in another location, or by retransmission on cable television systems.
Reflecting the inherent locatedness of television broadcasting, the United States Federal Communications Commission (FCC) allocates channels and assigns licenses to facilities in communities. The word “market” has come to be the designator of those communities, reflecting the degree to which advertising dominates television in the United States. Anyone doing any type of business in an area may of course refer to that area or the people living in it as a market, placing the boundaries wherever sensible for the business in question. This practice includes the operators of commercial television. (The operators of noncommercial television facilities have less reason to use the word “market,” though it is increasingly applied in this arena.) In the business of television these geographically outlined markets are formally defined by the ratings companies, among which Nielsen Media Research dominates.

Markets are defined by Nielsen as Designated Market Areas (DMAs) in a manner essentially the same that the Arbitron company, which is no longer in the business of providing television ratings, once defined Areas of Dominant Influence (ADIs). Both acronyms are still commonly used and designate essentially the same thing.

DMAs are defined by county, or in some cases parts of counties (for convenience counties will suffice). Every county in the United States is assigned to one and only one DMA. Each DMA is named after the city that defines its center, such as the Chicago DMA or the Des Moines DMA. Each county is assigned to that DMA for which the most-watched television stations are broadcast. So, for example, Los Angeles County is assigned to the Los Angeles DMA because the television stations that the people in Los Angeles County watch most often are located in Los Angeles County. But Orange County is also assigned to the Los Angeles DMA because the most frequently watched television stations by viewers in Orange County are also located in Los Angeles County.

Such a system of categories, in which every county in the United States is assigned to one and only one DMA, is considered mutually exclusive and exhaustive. Such systems have formal advantages. The key benefit here is the simple arithmetic for manipulating numbers associated with the categories. Since none of the markets overlap, numbers associated with any of them can be added together to describe a market that would be defined as the aggregate of the smaller markets. Since no area is left out of the system of market definitions, the sum of all of them defines the national market. This cases calculation of ratings and other data for local, regional, or national markets, and for syndicated, cable, and network television shows available in different areas.

In addition to these formal uses of the term “market,” as Nielsen’s DMA or regional or national aggregates of DMAs, there are various other uses for the term in the television business. One of the most common is in phrases such as “the African-American market,” “the Hispanic market,” or “an upscale market”. These are extensions of the use of demographics to define types of people of interest to advertisers and other business people. In either usage the term remains a clear marker of the commercial aspects of the U.S. television business, in which buying and selling—of both programs and audiences—is a central component.

**MARKETPLACE**

Canadian Consumer Affairs Program

*Marketplace*, which went on the air in 1972, is a weekly half-hour, prime-time consumer news show on CBC. It has won many national and international awards, including the Gemini in 1994 as Canada’s best information program. The format, which has changed little over its history, involves a pair of hosts introducing segments on product testing, service evaluation, fraudulent practices and trends in consumer advocacy. The show’s audience has held up well for more than two decades—it remains one of CBC’s most highly rated shows—and it is regarded by many in the Canadian Broadcasting Corporation as the benchmark by which other public affairs programs should be judged.

The first producer, Dodi Robb, with consumer reporter Joan Watson (from CBC radio) and broadcaster George Finstad as hosts, had a mandate to inform consumers about questionable sales practices and inferior products. From the beginning, the show treated consumer information as hard news, but it gradually expanded its mandate to include investigative reports with particular attention to public
health and safety. According to *Globe and Mail* television writer John Haslett Cuff, the program is "a veritable gadfly in the hard-sell marketplace of consumer television." It is "routinely monitored . . . by manufacturers and government regulatory agencies and frequently copied by American newsmagazine programs such as *60 Minutes* and *20/20.*" Although it does put defenders of commercial practices and products on "hot seat," it has an earnest quality that distinguishes it from the "ambush journalism" sometimes practiced by U.S. public affairs producers.

The program not only gets headlines, but, as one reviewer put it, it gets results. Laws have been amended, new regulations adopted and consumer guidelines imposed as a result of *Marketplace* reports. Its major contributions include the banning of urea formaldehyde foam insulation (UFFI) and lawn darts; warnings on pop bottles that sometimes explode on store shelves; prosecution of retailers for false advertising (leading in one case to a fine of $1 million); new standards for bottled drinking water and drinking fountains; new regulations for children's nightwear (to make them less flammable); and new designs for children's cribs. From tests for bacteria content in supermarket hamburger (an early report) to checks on the safety of furnaces and long-haul tractor trailers, the program has used its small staff—relying on independent laboratories for tests—to considerable effect. Despite law suits and threats of suits (and other pressures), the show has retained its probing quality. The longest serving hosts, Joan Watson and Bill Paul, became leading consumer advocates.

Reviewers have commented that the tough-minded consumer advocacy practiced by *Marketplace* is the kind of programming that public broadcasters, somewhat insulated from commercial considerations, should be providing. It is unlikely that the show would have had the same effectiveness and longevity in private-sector television. Its producers attribute consistent good ratings to its focus on the personal concerns of its audience, which derives in part from careful attention to the thousands of letters it receives from viewers each year, many of which have led to *Marketplace* investigations. Freedom from commercial pressures may also be significant.

**MARRIED...WITH CHILDREN**

**U.S. Situation Comedy**

*Married...With Children*, created by Michael Moye and Ron Leavitt, premiered as one of the new Fox Broadcasting Company's Sunday series in 1987. Moye and Leavitt had previously produced *The Jeffersons*, a long-running comedy about a black entrepreneur who becomes wealthy and moves his family to an almost all-white New York City neighborhood. Set in Chicago, their new show was a parody of American television's tendency to create comedies dealing with relentlessly perfect family. Their program was immediately termed "anti-family."

At the time of *MWC's* appearance, the top-rated television series was *The Cosby Show*. In the *Cosby* version of family, an African-American doctor and his attorney-wife raised their college bound offspring in an upper-middle-class environment.
Instead of such faultless people, Moye and Leavitt presented "patriarch" Al Bundy (Ed O’Neil) whose family credo is, “when one of us is embarrassed, the others feel better about ourselves.” In Married... With Children, almost every character is amusingly tasteless and satirically vulgar.

Bundy is a luckless women’s shoes salesman who hates fat women, tries to relive his days as a high-school football hero, and does almost anything to avoid having sex with his stay-at-home, bon-bon eating spouse Peggy (Katie Sagal). Peg loves to shop and her ability to buy always exceeds Al’s capacity to earn. She refuses to cook and the Bundys must take desperate measures to stay fed, frequently searching beneath the sofa cushions for crumbs of food. After one family funeral, the Bundys steal the deceased man’s filled refrigerator. Peggy’s clothes are too tight, her hair too big, make-up too thick, and heels too high. She wants sex as much as Al avoids it.

The Bundy's stereotypically beautiful dumb blonde daughter, Kelly (Christina Applegate), is a frequent target of their naive con artist son, Bud (David Faustino). Moye and Leavitt created Kelly in the guise of Sheridan’s Mrs. Mala- prop; she can never manage to find the right word and her verbal confusions are felicitous. According to Bud, Kelly will have sex with any available male. In one episode, Kelly acquires backstage passes to a rock concert and announces she is just one paternity suit away from a Caribbean home. The Bundys think Bud has no chance of ever attracting a date; running jokes mention his collection of blow-up rubber women. All characters have a common failing: none exercises good judgment.

In MWC Moye and Leavitt not only lampoon Cosby, they parody its creator, Marcy Carsey. The other continuing characters in Married... With Children are Al and Peggy’s upscale next-door neighbors, Jefferson and Marcy D’Arcy. Marcy and her husband serve as a device to entice and challenge the Bundy clan, then put them down. Marcy (Amanda Bearse) is a banker and activist for almost any cause which defeats Al’s current get rich quick scheme. She marries Jefferson (Ted McGinley) while drunk and discovers him in her bed the next morning. He has no career although he has claimed to be a clever criminal, now living in the witness protection program. Marcy’s first husband Steve Rhoades (David Garrison) makes frequent guest appearances.

The show had a small, loyal following until February 1989, and the producers had a history of arguments over taste.
and language with Fox’s lone, part-time network censor. One episode, “A Period Piece” in which the Bundy and Rhoades families go camping, was delayed one month in the broadcast schedule because it focused on the women’s menstrual cycles. Two months later, the episode scheduled for 19 February 1989, “I’ll See You in Court,” was pulled from the schedule and never aired on the Fox network. The episode involved sexual videotapes of Marcy and Steve, which Al and Peggy viewed when they rented a sleazy motel room. When both couples realized their activity at the motel was broadcast to other rooms, they sued. The jury chose to compensate the couples for their performance quality, with Al and Peggy getting no money.

That same winter, two weeks after “A Period Piece,” an episode titled “Her Cups Runneth Over” led to a social stir. The segment featured Peggy’s need for a new brassiere, which coincided with her birthday. Al and Steve traveled to a lingerie shop in Wisconsin where an older male receptionist wore nothing below his waist but panties, a garter belt, stockings and spike heeled shoes. Steve fingered leather-fringed falsies attached to the nipples of one near-naked mannequin; women flashed Al and Steve, though the nudity was not shown on camera.

One television viewer, Terry Rakolta, from the wealthy Detroit suburb of Bloomfield Hills, Michigan, took offense at the show after the brassiere episode. She saw her children watching the program and found both the language and partial nudity unacceptable for viewing during a time when children made up a large portion of the audience. Rakolta acted by writing to advertisers and asking them to question the association of their products with Married...With Children’s content. She also brought her cause to national television news shows.

In March 1989 Rakolta said on Nightline, “I picked on Married...With Children because they are so consistently offensive. They exploit women, they stereotype poor people, they’re anti-family. And every week that I’ve watched them, they’re worse and worse. I think this is really outrageous. It’s sending the wrong messages to the American family.”

Rakolta had mixed success. Advertisers such as major movie studios and many retail stores refused to buy commercials on the new FOX network (prime-time telecasts had started less than two years earlier). Media brokers cited a bad connotation. Newsweek magazine featured a front-page story on “Trash TV” questioning the standards of taste in prime-time television. Married...With Children and tabloid news shows such as A Current Affair were primary examples. Yet the greater effect was strongly positive.

Among FOX’s greatest problems at the time of the controversy was limited viewer awareness. Many viewers simply did not know a fourth network existed. Related to this was the fact that a small, similar viewing group comprised Fox’s entire audience. Moreover many Fox stations had weak UHF signals which were difficult to receive. Rakolta’s complaints garnered substantial national publicity and this seemed to assist the network in solving many of its difficulties. After Nightline, Good Morning America, Today and most other national and local news shows featured the controversy over Married...With Children viewer awareness.
MARSHALL, GARRY

U.S. Producer/Writer/Actor

Garry Marshall was the executive producer of a string of sitcoms that helped ABC win the ratings race for the first time in the network's history in the late 1970s. While Norman Lear's Tandem Productions and Grant Tinker's MTM Enterprises had put CBS on top in the early part of the decade, by the end of the 1978–79 season, four of the five highest-rated shows of the year were Marshall's.

Marshall became a comedy writer during the last years of television's "golden age." He started out as an itinerant joke writer for an assortment of TV comics and eventually secured a staff writing position on The Joey Bishop Show. There he met Jerry Belson, with whom he would go on to write two feature films, a Broadway play, and episodes for a variety of TV series, including The Dick Van Dyke Show, The Lucy Show, and I Spy. The last project Marshall and Belson did together was the most successful of their partnership. The Odd Couple, a series they adapted from the Neil Simon play in 1970, would run for five seasons and have a major impact on Marshall's comic style.

Rather than forming his own independent production company, which had become standard procedure for producers at the time, Marshall remained at Paramount to make a succession of hit situation comedies for ABC. Happy Days debuted as a series in January 1974, and by the 1976–77 season it was the most popular show on TV. Set in Milwaukee in the 1950s and centered around a teenager (Ron Howard), his family, and his friends, Happy Days generated three spin-offs, all of which Marshall supervised. Laverne and Shirley featured two working-class women (Penny Marshall and Cindy Williams), whose antic schemes were reminiscent of those portrayed on The Lucy Show. Viewers were introduced to the frenetic young comic Robin Williams in Mork and Mindy, a series about an alien (Williams) who comes to Earth to study human behavior by moving in with an all-American young woman (Pam Dawber). Joanie Loves Chachi followed two of the younger characters from Happy Days, as they struggled to make it as rock 'n' roll musicians.

While Norman Lear had used shows like All in the Family and Maude to explore contemporary social issues like racism, the women's movement, and the war in Vietnam, Marshall's shows were usually more concerned with less timely, personal issues like blind dates, making out, and breaking up. Lear, Tinker, and others had attracted young audiences with "relevant" programming earlier in the decade; Marshall attracted even younger ones with lighter, more escapist fare, most of it set in the supposedly simpler historic past. In an interview reprinted in American Television Genres (1985), Marshall recalled that, after producing the adult-oriented Odd Couple, he had been anxious to make shows "that both kids and their parents could watch." When he gave a speech upon accepting the Lifetime Achievement Prize given at the American Comedy Awards in 1990, Marshall said, "If television is the education of the American people, then I am recess." Not surprisingly, four of Marshall's sitcoms were adapted into Saturday morning cartoons.

Marshall continued to borrow from The Odd Couple throughout his career. Over and over again he employed the comic device of coupling two distinctly different characters: the hip and the square on Happy Days, the earthling and the Orkan on Mork and Mindy, the rich and the poor on Angie, and, later, the businessman and the prostitute in the movie Pretty Woman. In 1982, he brought a short-lived remake of The Odd Couple to ABC, this time with African-Americans Ron Glass and Demond Wilson playing the parts of Felix and Oscar.

By the mid-1980s, Marshall had turned his attention to directing, producing, and occasionally writing feature films, including Young Doctors in Love (1982), The Flamingo Kid (1984), Nothing in Common (1986), Overboard (1987), Beaches (1989), Pretty Woman (1990), and Frankie and Johnny (1991). He also began appearing on screen occasionally, most recently in a recurring role on Murphy Brown.

Marshall's television tradition was carried on by Thomas L. Miller and Robert L. Boyett, two alumni of

—Robert J. Thompson

GARRY MARSHALL. Born in New York City, New York, U.S.A., 13 November 1934. Educated at Northwestern University, B.S. in journalism 1956. Married: Barbara; children: one son and two daughters. Served in the U.S. Army during the Korean War, writing for Stars and Stripes and serving as a production chief for the Armed Forces Radio Network. Worked as a copy boy, and briefly as a reporter, for the New York Daily News, 1956–59; wrote comedy material for Phil Foster and Joey Bishop; drummer in his own jazz band; successful stand-up comedian and playwright; in television from late 1950s, starting as writer for The Jack Paar Show; prolific television writer through 1960s, creator-executive producer for various television series from 1974; also active creatively in films and stage.

MARTIN, QUINN

U.S. Producer

Quinn Martin, among the most prolific and consistent television producers, helped to create and control some of television’s most successful and popular series from the 1950s through the 1970s. At various times in the 1960s and 1970s, Martin simultaneously had as many as four series on various networks.

Martin’s early television career consisted of writing and producing for many shows at Ziv Television and at Desilu. He produced the Desilu Playhouse two-hour television movie, “The Untouchables,” which served as the basis for the series. Under Martin, The Untouchables became a huge hit for ABC. Martin left after the first two seasons to form his own production company, QM Productions. The first series from QM, The New Breed, was unusual for Martin in that it was unsuccessful. But during the years at Desilu and the first years of QM, Martin surrounded himself with a cadre of writers, directors, and producers who would later ably serve him when he was juggling the production schedules of several series. Alan Armer, George Eckstein, Walter Grauman, and John Conwell are but a few of the names to appear again and again in the credits of QM productions.
QM and Martin entered into an era of considerable success in the 1960s. Among the shows to come from QM during this period was The Fugitive, Twelve O’Clock High, The FBI, and The Invaders, all broadcast on ABC. Indeed, the relationship between QM and ABC was enormously beneficial to both, despite repeated charges that they rode to their mutual successes upon a wave of violent programming begun with The Untouchables and continuing as a central stylistic feature in QM programs.

It was also during this period that two aspects of Martin’s approach to television production emerged. First was the QM segmented program format: a teaser; an expository introduction which often employed the convention of a narrator; a body broken into acts I, II, III, and IV; and an epilogue, using an off-screen narrator to explain or offer insight into the preceding action. So recognizable did this convention become that it was parodied in the 1982 sitcom Police Squad. Second, Martin compartmentalized his productions. This was done not only out of necessity, resulting from the volume of television being produced by the company, but also because of the trusted individuals with whom Martin populated QM. At QM, the writers, producers, and post-production supervisors had very well-defined tasks and would rarely stray beyond the parameters established by Martin. John Conwell, casting director and assistant to Martin for years, often referred to Martin as “Big Daddy” because of his paternalistic approach to production.

Additionally, as Cooper reports, Alan Armer credited Martin with changing the face of the telefilm by moving from the soundstage to the outdoors and by ensuring authenticity by employing night-for-night shooting, as described in The Fugitive. Too often producers would save a few dollars by simply darkening film footage shot during the day to simulate night time. Not Quinn Martin. He made money and he spent money. In 1965, Television Magazine quoted Martin as saying that the 10% he would have paid an agent (if he had retained one) was simply rolled back into production.

The successes of QM and Martin continued well into the 1970s. Preeminent and longest running among the QM shows of this era were The Streets of San Francisco, Cannon, and Barnaby Jones, itself a spin-off of Cannon. Martin had at least a half dozen other series in prime time during the 1970s. During this period virtually every QM show dealt with law enforcement and crime.

Since the first days of The Untouchables Martin had been criticized for using excessive violence in his productions. A new criticism was now mounted against Martin’s work because of the subject matter. Critics claimed that Martin’s shows enforced the dominant ideology of the inherent value of law and order. They suggested that the bulk of Martin’s work legitimized a right-wing, conservative agenda. As Newcomb and Alley indicate in The Producer’s Medium, Martin openly acknowledged his fondness for authority and his positive presentation of institutions of police powers—individual, state, and federal.

Martin sold QM Productions to Taft Broadcasting around 1978. Part of the agreement was for Martin to leave television production for five years and not to compete with Taft. Martin became an adjunct professor at Warren College of the University of California, San Diego. In the late 1980s Martin became president of QM Communications, which developed motion pictures for Warner Brothers. He died in 1987, leaving a production legacy of 17 network series, 20 made-for-television movies, and a feature film, The Mephisto Waltz. No one has yet surpassed his streak of 21 years with a show in prime time.

MARX, GROUCHO
U.S. Comedian

A lthough often remembered as the quipping leader of
the team of brothers who starred in anarchic film
comedies of the 1930s and 1940s, Groucho Marx reached
a far bigger audience through his solo television career. As
the comic quizmaster of the long-running You Bet Your
Life, Groucho became an icon of 1950s television, main-
taining a weekly presence in the Nielsen Top 10 for most
of the decade.

The familiar Groucho persona served as a comedic
anchor for the popular quiz-show format when the sixty-
year-old Marx made the transition to television in 1950.
Groucho replaced his trademark greasepaint mustache with
a real one, but his attributes were otherwise unchanged.
The show simply let Groucho be Groucho. He unleashed his
freewheeling verbal wit in repartee with contestants, scat-
tered good-natured insults at his willing participants, and
lived up to his billing as “TV’s King Lear” by greeting female
guests with his characteristic raised eyebrows and waggling
cigar. Groucho’s personality and gift for gab drove the
program, with the quiz playing only a minor role. So im-
mediate was his success in the medium that Groucho re-
ceived an Emmy as Outstanding Television Personality of
1950 and was on the cover of Time a year later.

Groucho’s move to TV was not surprising, but the
magnitude of his success was. Like many of early television’s
“vaude” stars, he was a show business veteran with roots in
vaudeville and an established presence on national radio.
However, his radio career had been erratic. He lacked a
successful show of his own until program packager John
Guedel brought You Bet Your Life to ABC radio in 1947.
Guedel modeled the show on his other popular series, People
Are Funny and House Party, which featured host Art Linklet-
ter interacting with audiences. The format showcased
Groucho’s talents well. He gained a large listenership and
moved to the more powerful CBS after two seasons. Like
other radio hits, You Bet Your Life moved into television.

A pilot was made at CBS with Groucho simply filmed
performing one of his radio episodes. A bidding war for
Groucho’s services ensued (the star later wrote that he chose NBC over CBS because William Paley displeased him by trying to appeal to their Jewish solidarity). *You Bet Your Life* remained a staple of NBC’s Thursday night TV lineup for eleven seasons, and played on the network’s radio stations each Wednesday until 1957. Television episodes were different editions of performances aired on radio the previous evening.

The show’s idiosyncratic production methods had as much to do with the nature of Groucho’s performance style as they did with the logistics of working in two media simultaneously. Both the radio and television versions of *The Groucho Show* (as it was retitled in its final season) were somewhat pioneering in that they were recorded and edited for later broadcast. Visually, the TV edition was quite static, using a single set: Groucho sitting on a stool chatting with contestants. A multi-camera system used two cameras to film the interviews from each of four angles, including a slave camera on Groucho. The look was simple, but the set-up allowed the producers to edit and sharpen Groucho’s performances. He could venture into risqué banter, knowing anything too blue for broadcast could be cut. Dull bits of his unrehearsed, hour-long interviews were deleted, leaving only the comic highlights for the thirty-minute telecasts.

Putting the program of film (and paying a star’s salary) gave *You Bet Your Life* a higher production cost than other game shows. The investment was returned, however, by both high ratings and the ability to repeat episodes. During the thirteen-week summer hiatus, NBC aired *The Best of Groucho*, helping to innovate the programming convention of the rerun. *The Best of* telefilms also went straight into daily syndication for several years when production ceased in 1961.

Throughout its run, *You Bet Your Life*’s formula remained unchanged. Announcer and straight man George Fenneman began “Here he is: the one, the only . . . ,” prompting the studio audience to shout “Groucho!” The quizmaster previewed the week’s “secret word” as a wooden duck (in Groucho guise) descended with $100 whenever the word was spoken. Male and female contestants were paired up to talk with Groucho, who often played matchmaker. The show recruited entertaining, oddball contestants as well as celebrities. Many performed vaudeville-style numbers, making *You Bet Your Life* as much variety show as talk or quiz program. After each interview, Groucho posed trivia questions. Winners received modest amounts of money, while losers got a consolation prize for answering a variation of Groucho’s famous query: “Who’s buried in Grant’s Tomb?”

The routine thrived because of Groucho’s rapport with guests. He was a living encyclopedia of show biz patter, gags, and lyrics and possessed a genuine gift for witty ad libs. Yet his material was more scripted than it appeared. A staff of writers provided teleprompted jokes. Working off of these, Groucho maintained a palpable spontaneity, never meeting with the screened contestants before the show.

While *You Bet Your Life* was Groucho’s greatest contribution to television, he was a popular TV raconteur until the latter years of his life. After a short-lived series revival on CBS (*Tell It To Groucho*) and appearances on British TV in the early 1960s, he hosted variety programs, did cameos, and sat in on panel shows. However he found his most comfortable niche as a talk show personality with an intellectual edge. His acerbic manner went well with fringe late-night programming, such as Les Crane’s controversial talk show (on its 1964 premiere Groucho served as a meta-critic to political dialogue among William F. Buckley, John Lindsay, and Max Lerner). Of more lasting importance, Groucho served as an interim host for *The Tonight Show* when Jack Paar stepped down and introduced Johnny Carson when he debuted as host. Groucho also developed a famous friendship with *Tonight Show* writers Dick Cavett and Woody Allen, thereby influencing a new generation of TV and film comedians.

In the 1970s, Groucho’s celebrity was revived by a surprisingly successful re-syndication of *You Bet Your Life* (though later imitations of it by Buddy Hackett and Bill Cosby flopped). Books, films, and LPs by and about Groucho also sold well. His popularity extended to both those nostalgic for a past era and those who made his
anti-authority comedy style part of the younger counter-
culture.

This contradiction was appropriate for the performer
who was simultaneously an insightful intellectual critic and
a pop icon. Groucho is attributed with a memorable put-
down of television: "I find television very educational. The
minute somebody turns it on, I go into the library and read
a good book." Yet, in true contrarian fashion, when promot-
ing his own show’s premiere he added a seldom-quoted
rejoinder: "... now that I’m a part of television, or "TV" as
we say out here on the Coast, I don’t mean a word of it."

—Daniel G. Streible

GROUCHO MARX. Born Julius Marx in New York City, New
York, U.S.A., 2 October 1895. Married: 1) Ruth Johnson,
1922 (divorced, 1942), children: Miriam and Arthur; 2)
Catherine Gorcey, 1945 (divorced, 1950), children: Me-
linda; 3) Eden Hartford, 1953 (divorced, 1969). With
brothers Chico, Harpo, and Zeppo formed comedy team,
the Marx Brothers, successful in film comedies; served as
host for radio and television game show You Bet Your Life.
Recipient: Emmy Award, 1950. Died in Los Angeles, Cali-
fornia, 19 August 1977.

THE MARY TYLER MOORE SHOW

U.S. Situation Comedy

The Mary Tyler Moore Show premiered on CBS in Sep-
tember 1970 and during its seven-year run became one
of the most acclaimed television programs ever produced.
The program represented a significant change in the situa-
tion comedy, quickly distinguishing itself from typical plot-
driven storylines filled with narrative predictability and
unchanging characters. As created by the team of James
Brooks and Allan Burns, The Mary Tyler Moore Show pre-
sented the audience with fully-realized characters who
evolved and became more complex throughout their life on
the show. Storylines were character-based and the ensemble
cast used this approach to develop relationships which
changed over time.

The program starred Mary Tyler Moore, who had
previously achieved success as Laura Petrie on The Dick Van
Dyke Show. As Mary Richards, a single woman in her thirties,
Moore presented a character different from other single TV
women of the time. She was not widowed or divorced or
seeking a man to support her. Rather, the character had just
emerged from a live-in situation with a man whom she had
helped through medical school. He left her upon receiving
his degree and she relocated to Minneapolis determined to
“make it on her own.” This now-common concept was rarely
depicted on television in the early 1970s, despite some
visible successes of the women’s movement.

Mary Richards found a job in the newsroom of fictional
television station WJM, the lowest rated station in its mar-
ket, and there she began her life as an independent woman.
She found a “family” among her co-workers and her neigh-
bors. Among these were Lou Grant (Ed Asner), the crusty
news director, Murray Slaughter (Gavin MacLeod), the
cynical news writer, Ted Baxter (Ted Knight), the supercil-
ious anchorman, and, later, Sue Ann Nivens (Betty White),
the man-hungry “Happy Homemaker.” Sharing her apart-

ment house were Rhoda Morgenstern (Valerie Harper), Mary’s best friend, and Phyllis Lindstrom (Cloris Leachman), their shallow landlady. This ensemble pushed the situation comedy genre in new directions and provided the show with a fresh feel and look.

The “workplace family,” while not new to television sitcoms (Our Miss Brooks and The Gale Storm Show were among earlier incarnations of this sub-genre), was redefined in The Mary Tyler Moore Show. Here were characters easily defined by traditional familial qualities—Lou as the father figure, Ted as the problem child, Rhoda as the family confidante, and Mary as the mother/daughter around whom the entire situation revolved. But the special nature of these relationships gave the show its depth and humor. Never static, each character changed in ways previously unseen in the genre. One of the best examples occurred when Lou divorced his wife of many years. His adjustment to the transition from married to divorced middle-aged man provided rich comic moments but also allowed viewers to see new depths in the character, to see behind the gruff facade into Lou’s vulnerability, to grow closer to him. This type of evolution occurred with all the cast members, providing writers with constantly shifting perspective on the characters. From those perspectives new story lines could be developed and these fresh approaches helped renew a genre grown weary with repetition and familiar techniques.

Similarly, the program set the standard for a new sub-genre of situation comedy: the working woman sitcom. Beginning as a determined but uncertain independent woman, Mary Richards came to represent what has since become a convention in this type of comedy. Unattached and not reliant upon a man, Mary never rejected men as romantic objects or denied her hopes to one day be married. But unlike Rhoda, Mary did not define her life through her search for “Mr. Right.” Rather, she dated several men and even spent the night with a few of them (another new development in TV sitcoms). Working-woman sitcoms since, including Kate and Allie and Murphy Brown, owe a debt to Mary Richards.
The program became an anchor of CBS' Saturday night schedule and, along with All in the Family, M*A*S*H, The Bob Newhart Show and The Carol Burnett Show, was part of one of the strongest nights of programming ever presented by a network. From September 1970 until its final airing in September 1977, The Mary Tyler Moore Show was normally among the top 20 shows. It garnered three Emmy Awards as "Outstanding Comedy Series" (in 1975, 1976 and 1977). Moore, Asner, Harper, Knight and White all won Emmy's for their performances and the show's writing and directing were similarly honored several times.

The show was the first from MTM Productions, the company formed by Moore and her husband, Grant Tinker. MTM went on to produce an impressive list of landmark situation comedies and dramas including The Bob Newhart Show, Newhart, The White Shadow, Hill Street Blues, St. Elsewhere and L.A. Law. The characters from The Mary Tyler Moore Show provided the focus for several successful spin-offs in the 1970s: Rhoda, Phyllis and Lou Grant. The latter was significant in that it represented the successful continuation and transformation of a character across genre lines. In the new show Asner played Grant as a newspaper editor in a serious, hour-long, issue-oriented drama. MTM Productions developed a reputation, begun in The Mary Tyler Moore Show, for creating what became known as "quality television," television readily identifiable by its textured, humane and contemporary themes and characters.

Traits of The Mary Tyler Moore Show have become standard elements of many situation comedies since its airing. Because numerous writers and directors worked at MTM and on this show, then moved on to develop their own productions, its influence is notable in sitcoms such as Taxi, Cheers and Night Court.

The Mary Tyler Moore Show was also one of the first sitcoms to bring closure to its story. In its last episode in 1977, the entire WJM news staff, with the exception of the very expendable Ted Baxter, was fired. Mary’s neighbors, Rhoda and Phyllis, had departed previously for their own programs. Now the rest of her “family” was being broken up. Ironically, television brought them together and now the vagaries of television were separating them—in the “real” world as well as in their own fictional context. In the final moments Mary, Lou, Murray, Ted, his wife, Georgette, and Sue Ann mass together in a teary group hug and exit. Then Mary turns out the lights in the newsroom for the last time. It was a fitting conclusion to a program which had become very comfortable and very real in ways few other programs ever had.

MASS COMMUNICATION

The term "mass communication" is a term used in a variety of ways which, despite the potential for confusion, are usually clear from the context. These include (1) reference to the activities of the mass media as a group, (2) the use of criteria of "massiveness" to distinguish among media and their activities, and (3) the construction of questions about communication as applied to the activities of the mass media. Significantly only the third of these uses does not take the actual process of communication for granted.

"Mass communication" is often used loosely to refer to the distribution of entertainment, arts, information, and messages by television, radio, newspapers, magazines, movies, recorded music, and associated media. This general application is only appropriate as designating the most common features of such otherwise disparate phenomena as broadcast television, cable, video playback, theater projection, recorded song, radio talk, advertising, and the front page, editorial page, sports section, and comics page of the newspaper. In this usage "mass communication" refers to the activities of the media as a whole and fails to distinguish among specific media, modes of communication, genres of text or artifact, production or reception situations, or any questions concerning actual communication. The only analytic purpose served is to distinguish mass communication from interpersonal, small-group, and other face-to-face communication situations.

Various criteria of massiveness can also be brought to bear in analyses of media and mass communication situations. These criteria may include size and differentiation of audience, anonymity, simultaneity, and the nature of influences among audience members and the media.

Live television spectaculars of recent decades may be the epitome of mass communication. These may include such serious events as the funerals of John Fitzgerald Kennedy or Martin Luther King, Jr., and entertainment spectaculars such as the Olympic games, the Superbowl, and the Academy Awards. These transmissions are distributed simultaneously and regardless of individual or group differences to audiences numbering in several tens or even a few hundreds of millions. Outside of their own local groups, members of these audiences know nothing of each other. They have no real opportunities to influence the television representation of the events or the interpretation of those representations by other audience members.

By contrast the audience for most cable television channels is much smaller and more differentiated from other audience groups. The audience for newspapers, magazines, and movies is less simultaneous, again smaller and more differentiated, and holds out the potential for a flow of local influences as people talk about articles and recommend movies. Still, compared to a letter, phone call, conversation, group discussion, or public lecture all of these media produce communication immensely more massive on every criterion.

All of the criteria used in defining mass communication are potentially confused when one is engaged in a specific research project or critical examination. The most confounding problem is encountered when determining the level of analysis. Should the concern be with a single communication event or with multiple events but a single communication channel? Should the focus be upon multiple channels but a single medium? Does the central question concern a moment in time or an era, a community, nation, or the world?

Radio provides an excellent example of the importance of these choices. Before television, network radio was the epitome of mass communication; it was national, live, available and listened to everywhere. Today it is difficult to think of radio this way because the industry no longer works in the same manner. Commercial radio stations depend on local and regional sources of advertising income. Essentially all radio stations are programmed to attract a special segment of a local or regional audience, and even when programming national entertainment materials such as popular songs, stations emphasize local events, personalities, weather, news, and traffic in their broadcast talk. Radio is an industry characterized by specialized channels each attracting relatively small, relatively differentiated audiences. But the average home in the United States has five and half radios, more than twice the number of televisions. Cumulatively the U.S. audience for radio is just as big, undifferentiated, and anonymous as that for television; and because radio is normally live and television is not, the reception of radio communication is more simultaneous than that of television. Is radio today, then, a purveyor of mass communication? It depends on whether the concern is with the industry as a whole or with the programming and audience of a particular station.

Most uses of the term "mass communication" fall into one of these first two categories, either to refer to the activities of the mass media as a whole, or to refer to the massiveness of certain kinds of communication. Both uses have in common that they take issues of communication for granted and instead place emphasis on the size, the massiveness of the distribution system and the audience. Attention is given to what are called the mass media because they are the institutional and technological systems capable of producing mass audiences for mass distributed "communications." Communication, then, ends up implicitly defined as merely a kind of object (message, text, artifact) that is reproduced and transported by these media. For some purposes this may be exactly the right definition. But it diminishes our ability to treat communication as a social accomplishment, as something people do rather than as an object that gets moved from one location to another. If communication is something people do, then it may or may not be successful, may or may not be healthy and happy. If communication means "to share" for example rather than
to transmit," then what, if anything, of importance is shared when people watch a television show.

Scholars of mass communication are often more interested in communication as a social accomplishment than they are in the media as mass distribution systems. This interest is based on an intellectual independence from existing habits of terminology, and most importantly, independence from media institutions as they exist. The term mass, however it may be defined, is then treated as a qualification on the term communication, however it may be defined. Such intellectual exercises, of course, can work out in a great variety of ways, but a few examples will suffice.

At one extreme, if communication is defined so that interaction between parties is a necessary criterion, as in "communication is symbolic interaction," and mass is defined as an aggregate of non-interacting entities, then mass communication is an oxymoron and an impossibility. At the opposite extreme, if the term "mass communication" is defined as involving any symbolic behavior addressed "to whom it may concern" then choices of clothing, furniture, and appliance styles, body posture, gestures, and any other publicly observable activity may well count as mass communication. Both of these extremes may seem like mere intellectual games. But they are important precisely because their intellectuality frees them of the practical contraints under which we operate in other realms. The contribution of such intellectual games is precisely to stimulate new thinking. Perhaps pausing to consider the idea that mass communication may be an impossibility could help us to understand some of the paradoxes and incoherencies of contemporary American culture.

Consider a third example in which we use a model of communication to evaluate industry practices. Definitions of mass communication that take communication for granted and focus simply on the massiveness of the medium are always in danger of implicitly adopting, or certainly failing to question, the assumed criteria of evaluation already used in industries. In commercial television, as in any of the other commercial media, what is assumed is that television is a business. The conventions of the industry are to evaluate things solely in business terms. Is this television show good for business? Would increasing network news to an hour be a good business decision? Would noncommercial, educational programming for children be a successful business venture? In such an environment it is an important intervention to point out that these industries are communicators as well as businesses. As such they can and should be held to communicative standards. The public has a right to ask whether a television show is good for communication, whether an hour of network news would be a successful form of communication, whether there is a communication need for noncommercial, educational children's programming.

As the terms of the questions shift, so, of course, may the answers. Becoming aware of such possibilities begins with being sensitive to the definitions of such terms as mass communication.

—Eric Rothenbuhler

MAUDE

U.S. Situation Comedy

Maude, the socially controversial, sometimes radical sitcom featuring a strong female lead character played by Bea Arthur, ran on CBS from 1972 to 1978. Like its predecessor All in the Family, Maude was created by Norman Lear’s Tandem Productions. Maude Findlay was first introduced as Edith’s liberal, outspoken cousin from suburban Tucahoe, New York on an episode of All in the Family in 1972 before spinning off later that year to her own series set in upper middle-class Tucahoe where she lived with her fourth husband, Walter Findlay, her divorced daughter Carol, and Carol’s young son Phillip. The Findlays also went through three housekeepers during the run of the series, the first of whom, Florida Evans, left in 1974 to her own spin-off, Good Times. These three shows, among others, comprised a cadre of 1970s Norman Lear urban sitcoms that raised social and political issues and dealt with them in a manner as yet unexplored in television sitcom. Maude enjoyed a spot in the top ten Nielsen ratings during its first four seasons despite being subjected to day and/or time changes in the CBS schedule that continued throughout the entire run of the program.

Like many of Lear’s productions, Maude was a character-centered sitcom. Maude Findlay was opinionated like Archie Bunker, but her politics and class position were completely different. Strong-willed, intelligent and articulate, the liberal progressive Maude spoke out on issues raised less openly on Lear’s highly successful All in the Family. While questions of race, class and gender politics reverberated throughout both, certain specific issues, like menopause, birth control and abortion were more openly confronted on Maude. In a two-part episode that ran early in the series, the 47-year-old Maude finds out that she’s pregnant and decides, with her husband Walter, that she would have an abortion, which had just been made legal in New York state. Part two of the double episode also dealt with men and birth control as Walter considers getting a vasectomy. Thousands of viewers wrote letters in protest of the episode because of the abortion issue. In other episodes Maude gets a face-lift, Walter’s business goes bankrupt, and he deals with the resulting bout with depression; in yet another Walter confronts his own alcoholism. The realism of Maude, though conforming to the constraints of the genre, made it one of the first sitcoms to create a televisial space where highly charged, topical issues and sometimes tragic contemporary situations could be discussed.

Maude represented a change in television sitcoms during the early 1970s. Many 1960s sitcoms reflected the context and values of white middle America, where gender and family roles were fixed and problems encountered in the program rarely reached beyond the confines of nuclear family relationships. Despite variations on that theme in terms of alternative families (Family Affair and My Three Sons) and an added supernatural element (Bewitched and I Dream of Jeannie), the context was middle to upper-middle class, mostly suburban, and white. However, cultural upheaval in the 1960s, the political climate of the early 1970s, shifting viewer demographics and the maturing of television itself were responsible for a departure from the usual fare. By the early 1970s a growing portion of the viewing audience, baby boomers, were open to new kinds of television, having come of age during the era of Civil Rights, Vietnam protests and various forms of consciousness raising. However, the changing tastes of the audience and the social climate of the early 1970s cannot by themselves account for the rise of socially conscious television during this period. The sitcom had also matured and producers like Norman Lear, familiar generally with American humor and specifically with the rules of television sitcom, decided to make television comedy that was more socially aware. Like All in the Family, Maude set out to explode the dominant values of the white middle-class domestic sitcom with its traditional gender roles and non-white stereotypes by openly engaging in debates where various political points of view were embodied in the sitcom characters.
Such debates were the staple of *Maude* throughout its six-year run. In an early episode Maude hires Florida Evans, a black woman, to be housekeeper. Maude goes out of her way to prove her progressive attitude to Florida by insisting she become like one of the family. Florida, along with Walter and Carol, points out to Maude the foolishness of her extreme behavior. In the end Maude recognizes her underlying condescension towards Florida who, as witty and outspoken as Maude, retains her dignity and decides to remain as the Findlay housekeeper on her own terms. The interaction between Maude and Florida in this episode was a comment on the issues and attitudes about race that stemmed from the Civil Rights efforts of the 1960s. Maude's attitudes and behavior were indicative of white liberal politics during a time when race relations in the United States were being reconfigured.

Another reconfiguration was taking place within the arena of women's rights. In one of the final episodes of the show, Maude is given the opportunity to run for New York state senate and Walter refuses to consider the possibility. He offers Maude an ultimatum, and after mulling over her decision, she decides to let Walter leave. This episode, like many others, reflected a feminist sensibility emerging within the country, and can be viewed as a platform for discussions about the changing roles of women and the difficulties they encountered as they were faced with new challenges and more choices. Maude's character agonized over the conflict between tradition and her own career aspirations.

The show's ratings began to fall after its fourth season, and by 1978 Bea Arthur announced that she would leave the show. The end of *Maude* marked another shift in the domestic sitcom, away from open political debate and towards a renewal of the safer, more traditional family-centered sitcoms of an earlier period in television history.

**MAVERICK**

**U.S. Western**

A subversive Western with a dark sense of humour, *Maverick* soared to sixth place in the Nielsen ratings during its second season with a 30.4 share as well as winning an Emmy Award for Best Western Series in 1959. Starring the then relatively unknown James Garner as footloose frontier gambler Bret Maverick, shortly after joined by Jack Kelly as brother Bart, this hour-long series followed the duplicitous adventures and, more often, misadventures of the Mavericks in their pursuit of money and the easy life.

Starting out as a straight Western drama (the first three episodes, “The War of the Silver Kings”, “Point Blank” and “According to Hoyle”, were directed by feature Western auteur Budd Boetticher), the series soon developed a comedy streak after writer Marion Hargrove decided to liven up his scriptwriting work by inserting the simple stage direction:
"Maverick looks at him with his beady little eyes." Other scriptwriters then followed suit. Garner, in particular, and Kelly joined in with the less-than-sincere spirit of the stories and Maverick took a unique turn away from the other, more formal and traditional Warner Brothers-produced Westerns then on the air (Lawman, Colt .45, Cheyenne and Sugarfoot).
