CORRECTIONS: Volume 44

No. 1, January 1974, page 26: Date of Reference 14 should read 1972.

No. 3, March 1974, page 137: The paragraph following equation (87) down to and including equation (90) should read:

Making use of this intrinsic equivalent circuit in the form of a 'black box' specified by Y, we now draw the circuit of Fig. 9 in which the noise sources specified as short-circuit noise currents in equations (78) and (79) are represented as current generators $i_{p1}(t)$ and $i_{p2}(t)$ across the 'intrinsic' base-emitter terminals and the collector-base terminals. To second order in frequency we have

$$\frac{\delta \overline{i_{p1}^2(t)}}{\delta f} = 2qI_C \left[\left(1 + \frac{1}{\beta_0} \right) + \frac{8}{45\alpha_{0s}} \omega^2 \tau_j^2 \right] \quad (88)$$

$$\frac{\delta \overline{i_{p2}^2(t)}}{\delta f} = 2qI_C \quad (89)$$

and from (15b) and (80)

$$\Gamma_{21} = - \frac{2qI_C \left[1 - \frac{j\omega\tau_j}{3} - \frac{7}{90} \omega^2 \tau_j^2 \right]}{\left[\frac{\delta \overline{i_{p1}^2(t)}}{\delta f} \frac{\delta \overline{i_{p2}^2(t)}}{\delta f} \right]^{\frac{1}{2}}} \quad (90)$$

No. 8, August 1974, page 406: Standard Frequency Transmissions—June 1974.
GBR deviation from nominal frequency, 27 June, should read 0

No. 11, November 1974, page 634: 'Letters to the Editor', from J. Lincoln.
Last line should read: . . . parts in 10^4 (approx. 0.2 cents).

No. 12, December 1974, page 683: Article 'National Electronics Review'.
Last line of para. 2 should read: . . . loose washer in the electronics pack of the second stage of the launcher!
