COMPUTERISED ROTATOR CONTROL

We are expecting delivery in early March of a revolutionary new rotator. When under automatic control it has several unique features including:

- scanning between directions stored in the memory
- changing the origin of rotation
- adjustable scanning speed
- adjustable step angle and pause duration
- data can be stored and cleared from the memory
- Manual operation is also possible

it will scan 360 degrees continuously single step rotation available continuous steps over a certain range 360 continuous steps rotation to a direction stored in a memory

COMING SOON - An interface board is under development. It will have the following outstanding features:- An RS232C I/O port that will allow the unit to be connected to a personal computer - a morse code reader - an electronic keyer.
