KIT NEWS
Keeping you posted with news from component suppliers and kit specialists.

KIT FOR KAT
Following our introduction last month of the KIT88, we double up the act with its fellow traveller, the KaT88.

CLOCKING ON
Jon Marks looks at ways and means of improving the heart of your CD player, its clock.

CROSSING OVER THE GREAT DIVIDE
£100 spent on components for your loudspeaker crossover can yield dividends. Nick Lucas considers the options for our KLS12 kit.

BOOK REVIEW:
CHARLES HANSEN - The Joy of Audio Electronics.

ADVERTISERS' INDEX
Harma Diamond KT66

At last a KT66 with the sonic capacity of the original whilst retaining the classic shape. The specification of the Harma Diamond KT66 meets or exceeds that of the original GEC. The anode plate uses specially stiffened alloy to improve life and performance. The use of premium mica spaces and pure copper grid rods give rock solid stability. They undergo a high plate volt test and come in specially dual matched pairs, with a six month no quibble warranty which is the longest in the business. At only £25 each they will take your Quad into the next Millennium. Please note these are NOT the inferior Chinese made valves.

WATFORD VALVES 3 RYALL CLOSE, BRICKET WOOD, ST ALBANS, HERTS AL2 3TS

Fast mail order/next day delivery/World Wide shipping

1000's more valves stocked. Prices exclude VAT and carriage.

**UP THE A77**

If you're one of the half-million owners and users of one of Revox's legendary A77s and your beloved reel-to-reel recorder is starting to get tired after three decades of service, help can now be found on the Internet.

Brian Reeves, officially-authorised service agent for Revox hi-fi in the UK, has taken to the Web with a site which contains exploded parts listings for many of the company's tape decks as well as some of their turntables and CD players.

www.revox.freeuk.com

---

**LIFE AT THE TOP**

Fans of full-range drivers normally list amongst their benefits transparency, imaging precision and an overall seamlessness which your average cone-and-dome box just can't replicate. However, single-unit loudspeakers aren't famous for their high-frequency extension, many of them getting only as far as 14-16kHz before their output starts to droop. One answer to this problem is an add-on super-tweeter, such as Visaton's TH16H, supplied in the UK by South Coast Speakers.

The TH16H consists of an aluminium/titanium diaphragm mounted on a 25mm voice-coil which sits within the field of a large strontium-ferrite magnet. Thanks to its low moving mass, the Visaton tweeter offers an efficiency of between 96dB and 100dB when used with SCS's own switched crossover/attenuation box. This allows the TH16H to be fitted to the likes of Lownthers without the need for users to design a matching crossover themselves.

Giving your loudspeaker's treble a boost will set you back £108.94 plus VAT for individual TH16Hs, or £316.88 plus VAT for a pair with crossover/attenuation boxes.

---

**GOT A LOT ON YOUR PLATE**

If the phrase "300B" crops up in a conversation about hi-fi and valves, you can pretty much guarantee that "2A3" won't be far behind. A smaller, lower-power member of the directly-heated triode family, the 2A3 has built up a loyal following, especially in Japan, for its linearity, tonal richness and transparency.

However, getting hold of an original in fine fettle normally involves handing over large sums of money. Cue Svetlana's new version of the 2A3. Modern manufacturing and superior materials apparently give this 21st century triode an even better sound than its predecessor, and a higher anode dissipation means that output has risen from roughly three watts to five in single-ended operation.

Nick Lucas announces the arrival of KaT88, a matching power amp for our KiT88 integrated.

Judging by the response to the release of our KiT88 integrated amplifier back in February's DIY Supplement No49, it would be an understatement to say that the KT88 tetrode is much loved amongst valve heads. To quote one fan, "I have been waiting for you guys to start using the KT88. What took you so long?" Well, we are now definitely on the case, as KiT88 is about to be joined by KaT88.

KiT and KaT are no relation to a popular piece of confectionery. Instead, one is an Integrated, the other a power Amp. Aesthetically, KaT88 has a similar look to its sibling's, though the only front-panel control is the custom-made chrome knob on the On/Off switch - KaT88 is basically the power amplifier version of KiT88.

Bypassing the selector, tape source switch and volume control that distinguish the integrated and replacing them with a single set of inputs that feeds directly into the first valve has the advantage of a less cluttered signal path and offers greater flexibility to dedicated pre-amplifier users. The circuit is basically identical to that of KiT88, but as the volume control is now unused, R28/R29 has been reduced to 100kohms to compensate. The measured performance remains the same as for the KiT88, but does it sound the same?

CONSTRUCTING THE 88 SERIES

The build sequences of KiT88 and its sister KaT88 follow the same formula that we apply to all our valve equipment:

1) FIXING THE HARDWARE TO THE CHASSIS

The initial stages are straightforward enough and revolve around fitting the front plate and associated sockets and switches before crowning them with their respective chrome knobs. As mentioned before, the KaT88 only has a power switch up front.

Next to go on are the mains and output transformers, the gold-plated phono sockets and the 4mm binding posts. Yes, I have had a change of heart on the speaker connection front as the majority of kit buyers live in the UK and already use 4mm banana plugs on their speaker leads. The alternative BFAs will be provided for our European cousins. All that remains is
the IEC mains input socket and the earth post situated to the rear.

2) POPULATING THE PCB

The KiT88 and KaT88 owe their ease of construction to the fact that all the valve bases and electronic components are linked together through a Printed Circuit Board rather than hard-wiring.

Additionally, all the parts are supplied in separately-labelled bags, which means less chance of putting the wrong bit in the right place. The PCB itself is double-sided, so all joints require soldering to its upper as well as lower surfaces (except for the electrolytic capacitors). Component orientation is very important when it comes to these caps, the bridge rectifiers and the octal valve bases. The high-power resistors also have to be a good 10mm off the PCB surface to avoid tarnishing it.

3) VALVE HEATERS AND INTER CONNECTIONS

Once all the components are sitting nice-ly, the valve heaters can be wired up. Heaters, and especially those of the output tubes, carry plenty of current. To avoid over-stressing PCB tracks, we chose point-to-point wiring for this area. Each valve base PCB section has pin pairs, or just a single pin, to allow simple wiring direct to the board. Additionally, there are three external wire links.

4) CONNECTING UP THE PCB

The PCB fits snugly into the case, held securely in place by six stand-offs. As we now use PCB terminal pins in our kits, all 23 external connections are easy to make, though this time you may find it slightly easier to complete these connections before fitting the PCB onto its stand-offs. This allows slightly more manoeuvrability without distressing any joints.

5) NON-PCB CONNECTIONS

All that remains now is to hook up the IEC mains input socket to the mains switch and the output transformers to the speaker binding posts.

6) PRE-FLIGHT CHECKS

Insert all the valves, ensuring that you have the KT88s orientated correctly by checking that the 'key' on the base of each lines up. Connect a dummy load, whether an old pair of speakers or a high-power, 7-10 ohm resistor. Bear in mind that you'll need a pre-amp for the KaT88, be it active or passive, to control the signal level.

Once you've fired up the amplifier, you're ready to check the test voltages, but before you do so, remember to put on the safety gloves provided. We have included two 220kohm, 2watt dropper resistors in parallel with the large 470uF, 450V reservoir capacitors, C1 and C2, so that the power amp version of our KiT88 integrated benefits sonically from one of the cleanest valve sounds around. Even used with a passive pre-amplifier, the bass has all the values of the venerable valve, which is a rounded sound that also manages to be tight and tuneful - it literally bounces along. This was best exemplified on an excellent remix I have of Jamiroquai's Space Cowboy. This has some of the subtest, deepest, most powerful bass ever committed to disc, and the KaT88 did it proud. Speed and slam were the prerogatives as the amp brought out the essential aspects of the mix and delivered them with power and control.

Whilst the above track emphasised the clout of the amplifier, a detailed and spacious recording of Stravinsky's Rite Of Spring on Reference Recordings demonstrated the warmth and sweetness of the treble. High percussion had an attractive golden shimmer, leaving the strings and woodwind securely located within the warehouse-style sound stage the amp created. Again the speed and impact of the bass came to the fore on the deep bass drum as window-rattling thumps, although the athletic bottom-end never disturbed the clarity and transparency of the midrange on the light and airy woodwind interjections. The KaT88 really did this excellent recording justice. Great stuff; I am waiting with baited breath for my reference model to arrive.
that after switch-off they are bled of any residual voltage after a few minutes. This safety measure reduces the possibility of an electric shock. The build time for KaT88 is approximately eight hours. If you do encounter any problems once the amp's assembled, turn it off and carefully check your work for any unsoldered pins or misplaced components. Believe me, 99% of all malfunctions are down to silly mistakes. However, should you encounter real difficulties, you are welcome to call our help line. Alternatively, for a nominal fee, we will arrange for the amplifier to be collected, fixed, thoroughly checked and returned to yourself in full working order.

Jon Marks goes on litter duty to clean up messy master clocks inside CD players. Helping him tidy up this month is AudioCom's SuperClock.

One of the greatest cliches in the world of hi-fi has got to be the classic, "Perfect sound forever". However, CD is taking a while to live up to this golden nugget of hype, but then the format itself is not always to blame.

One of the major problems with digital replay is that, when you're putting all those sampled bits of information from the disc back together, the timing has to be spot on - it's no use a few turning up late with excuses like, "Sorry, Miss, the cat ate my homework." You might be thinking that the master clocks inside CD players (which do, after all, synchronise all the machine's various digital circuits) would be works of quartz-regulated art, designed to exacting timing tolerances to squeeze every last ounce of performance from the small silver disc. Unfortunately, the reality is rather different - many companies seem to work to the adage that 'bits is bits' and as long as they're all there, and the timing isn't miles off, then that's alright. Actually, instead of producing a clean, stable square wave whose regularly-spaced peaks and troughs tell the master clock precisely when to 'tick' and when to 'tock', the oscillators in most equipment put out saw-tooth waves that are the equivalents of 'errm, tick, no tock!'

Recognising this pitfall, companies such as AudioCom, Trichord and Acoustic Precision have cooked up their own high-accuracy after-market clocks. In this Supplement, we examine AudioCom's in our two test beds, a Pioneer DV-505 DVD player and an aged but sprightly Pioneer PD-91 CD player. This pair was chosen for two main reasons, the chief being that they have a common clock frequency of 16.9344MHz. The other is that many of these clocks will be soldered into machines which are old enough to be built like tanks but fitted with particularly poor clocks.

AudioCom's SuperClock

INSIDE THE SUPERCLOCK

Designer of the SuperClock, John Cheadle, was aiming for a clock with a very fast rise time (and so a clean square wave), negligible jitter and low phase noise. Minimising the last of these involves a push-pull circuit with a series-mode oscillation quartz crystal placed at the point of lowest impedance. After travelling through a MOSFET buffer stage, the signal is fed into an IC which converts it from a sine to square wave.

GETTING IN

Gaining access to the relevant board in the DV-505 is a rather fiddly affair. Having removed the lid, undo the two screws which hold the SCART socket onto the rear panel and lift the metal clip above it which will still be holding it in place. Next, take out all the screws remaining on the rear panel and lift it up and off.

To fit the new clock, you'll have to take out the beige PCB with the output sotckery on it. This entails disconnecting CN301, which is located beside crystal 301(not the one you should replace, by the way, as it operates at 18MHz, not 16MHz!). This leaves two ribbon cables hooking the output board to the main PCB, but these are fairly flexible and won't hamper the clock-fitting process. Once the four screws holding the board down have been removed, you can lift it gently away from the chassis.

SOLDER SURGERY

Now it's time to get down to the real modifications. Once you've warmed up your soldering iron, use it to remove R320...
Audiophile Sound • Professional Finish • Affordable

Our aim at Riverside Audio is to enable the home constructor to build valve amplifiers which combine true audiophile sound quality with the professional finish of high-end products at an affordable price.

The Riverside 4040 is an integrated amplifier featuring dual mono construction, five line level inputs and both 4 and 8Ω outputs. The chassis is hand polished stainless steel and includes a matt black valve cover. The amplifier delivers 40 W rms per channel at less than 0.1% distortion. Kit £625, fully built £725.

The Riverside P2 moving magnet phono amplifier is designed to partner the Riverside 4040 for those who enjoy the vinyl sound. High accuracy equalization is provided for a moving magnet input to a generous line-level output. Kit £225, fully built £275.

Contact Riverside Audio for further information and pricing. Most parts are available separately - even down to individual components. Riverside Audio can also design special audio mains and output transformers.

Riverside Audio, 18 Riverside, Cambridge CB5 8HL
Telephone (01223) 512253 Facsimile (01223) 572629
Internet—http://www.riverside-audio.demon.co.uk/
Make sure you remove the correct crystal when working on the DV-505 - it's X302,X301 that controls the video circuitry

(1Mohm), R322 (910ohm), C320 (27pF) and C322 (12pF), all of which are located on the underside of the output board. (Beware, as these are very small surface-mount parts which are most easily removed with the appropriate bit, although a standard iron and some solder braid will also work). Crystal X302 has to be removed with the appropriate bit, whereas the X301 mount parts which are most easily emphasise how important this is, as the clock wires are relatively thick. I ended up soldering it to the CN191 side of near-Cl as strongly as possible. Unfortunately, it's this classic situation which tends to lead to more barbecued equipment than any other. Check the polarity and position of all the connections from the S-Clock, and only when you're 100% satisfied that you've made no errors, reassemble the player and power it up. SQUARE SOUNDS So what sonic differences come with the widespread use of tantalum decoupling caps, but the addition of the S-Clock was a vastly more effective upgrade.

The most obvious change to the sound was the extra solidity and impact on all kinds of music. Trying out something with a weighty bassline now (Moloko's I'm Not A Doctor, Asian Dub Foundation's Rafi's Revenge, Presence's All System's Gone) turned out to be a revelation. Drum machines now had greater focus, speed and slam than the '505 had previously been able to endow them with, and rhythms were crisper and enjoyed more drive. Classical recordings benefited in a similar fashion, Elgar's violin concerto possessing superior dynamics, involvement and overall realism. The Pioneer's level of finesse and transparency also took a leap forward with the S-Clock in place, complex passages easier to follow and the performers more clearly depicted within a larger, more convincing acoustic.

Moving on to Bonnie Raitt, Suzanne Vega and the Jazz of Tois' Forbidden Fruit confirmed tonal colour and expression had nipped a rung or two up the evolutionary ladder along with everything else. Not that the '505 has ever scored on the musicality scale anywhere near paint drying, but now it really went with the musical flow, whatever its speed. The player was all bump and grind on BR's 'Tangled And Dark', while still maximising the tear-jerk balladeering of 'One Part Be My Lover'. 505 DOWN, 91 TO GO After the major rise in sound quality I'd heard with the SuperClock in the 505, I had high hopes for the PD-91. Actually reaching the listening stage took a little longer than anticipated though. Getting inside the PD-91 to remove the relevant components wasn't particularly tough, but grafting on the SuperClock takes some planning. Having unscrewed the Urushi side cheeks and lid to expose the upper surface of the PCB, you'll need to flip the
These capacitors are the very best available anywhere in the world and are sonically superior to all others irrespective of price. Silver Foil Paper in Oil Pro-Caps are perfect for single end triode amplifiers, push-pull power amplifiers, tube preamp, power supplies and premium loudspeaker designs. You will hear superior detail in your music, but none of the harshness, only deliciously liquid, sweet and rich music.

Available in the following values

**Silver Foil Paper in Oil Capacitors (650 V)**
- 0.005µF - 0.01µF - 0.02µF - 0.05µF - 0.1µF - 0.22µF - 0.47µF
- 1µF - 2µF - 4µF - 8µF - 16µF - 32µF

**Low Voltage Speaker Crossover Silver Foil Paper in Oil Capacitors**
- 1µF - 2µF - 4µF - 8µF - 16µF - 32µF

**Howard Dawson Audio**

**Hand-Crafted Loudspeaker Units for Music Lovers**

Let your craving for that elusive tweeter upgrade end HERE! Howard Dawson Audio 16 Copeman Road, Aylsham, Norwich NR11 6JL, U.K. Tel (01263) 743461

Design-in the HRL-1 audiophile tweeter/supertweeter and sit back for a lifetime of listening pleasure.

The HRL-1 is a 'traditional' hand-made ribbon transducer for the discerning audiophile. A very low inertia all-aluminium membrane is used in conjunction with a massive Alcomax III cobalt magnet system to provide effortless clarity and presence. Sine wave response is specified as 3kHz to 30kHz, but useful output is available to beyond 50kHz.

Benefits include substantial improvements in location and identification of sources containing significant energy above 10kHz. These are mainly voices and acoustic instruments. Metallic percussion, for example, is reproduced with scalp-tingling precision and presence, while simultaneously there is no trace of harshness or 'listener fatigue'.

Units are supplied in pairs with templates and comprehensive applications guidance, including crossover section design. and are intended to last a lifetime. Spare ribbon elements are available at low cost in case the unthinkable should ever happen.

HRL-1 Ribbon Tweeter/Supertweeter........ £300.00 per pair
Replacement ribbon insert for HRL-1...... £10.00 each
Remanuf. inserts for Kelly/Decca ribbon units ... £16.00 or your own inserts rebuit (new ribbon + tags) .... £13.50
U.K. p&p : ribbon inserts free, HRL-1 pair .. £10.00
HRL-1 overseas at cost (6kg parcel) - ribbon inserts .. £5.00
Write/phone for further information or see our website

**M. WALTHER**

**AUDIO ELECTRONICS**

**HIGH GRADE AUDIOPHILE COMPONENTS**

**APPLIED AND TESTED PERFORMANCE**

[http://www.walther.cjb.net](http://www.walther.cjb.net)

We would like to thank the DIY audience for the warm welcome of our friendly & cost effective services. Because most of you proved to be internet orientated we have our full price list complete with comments on the WEB now. Naturally we still send lists and answer queries via post, fax and email. Our personal approach policy became a success with international DIYers as it happens for years now with the hundreds of our local customers. For everything 'audio' under consideration contact us and keep in mind that our parts list is never the limit. Ask for things not mentioned and we will seek and recommend. You already know that we carry only what works and has good value for money.

VISA, MasterCard and cheques to 'M. WALTHER' are accepted.

New items are the SCR double tin & polypropylene foil caps. A sensational product at an excellent price and a big hit among our customers.

**M. WALTHER AUDIO ELECTRONICS, 86 KOLOKOTRONI STREET, 18535, PIRAEUS, GREECE.**

The PD-91's master clock is built around IC2 and X1

Pioneer over and remove the baseplate too. Be careful with the laser sled while you're doing this - it's best to lock it in place with the plastic 'switch' on the transport's underside to stop it sliding up and down along its guide rails.

The next parts to come out are the large, copper-plated metal screen that runs down the centre of the player, and the copper-covered plastic skirt that sits to its right (looking from the front of the PD-91). Beneath the latter you'll find the crystal X1, resistors R69, R122 and R123, and two small, ceramic caps, C47 and C48. Desolder all of these and place a wire link across C47's position on the PCB. The link to the player's power supply should be made at C85, one of the four 3300uF, 25V electrolytics towards the rear left corner of the case.

TAKE COVER

Now the job becomes slightly trickier. The SuperClock's signal output has to be taken to pin 9 of IC2, the matching signal ground to pin 7 of the same chip. Based on my experience with the DV-505, I chopped down some solid-core copper wire (whose sound AudioCom prefer to that of coax), used self-adhesive foam pads to mount the clock board vertically with its front edge stuck to the top of IC2, and soldered in a pair of short clock leads (less than 15mm each). This approach meant leaving off the copper-covered plastic skirt, but if the '505 hadn't needed shielding, I reasoned the '91 might not either. Wrong!

Having completed my 'go over it five times or watch it go up in smoke' checklist, I turned the Pioneer on and loaded it with a disc. Barely a second after pressing Play, it was obvious something wasn't right - accompanying the music was a kind of 'crackling' which definitely wasn't in the recording. A swift call to AudioCom provided an explanation: without the shield in place, RF radiation emitted by the SuperClock was interfering with the Pioneer's digital circuitry. The solution consisted of replacing the skirt, having punched a hole in it to allow a short length of coaxial cable through from the clock to IC2. This hole should be approximately 80mm in from the rear of the PD-91, and 20mm in from the side of the plastic shield.

AudioCom recommend XXXX coax, even if it is delicate: I chose a strip about 40mm long and soldered it to the underside of the clock board, which was fixed at an angle to one edge of the large metal shield. Powering up proved less disappointing on this occasion, as the PD-91 worked perfectly and was in fine form.
KIT & COMPONENT SUPPLIERS

LOUDSPEAKER KIT SUPPLIERS

Wilmot Audio, 50 Main Street, Broughton Astley, Leicester LE9 6RO
Tel: (01455) 286603 Fax: (01455) 286605
UK distributors of Drive Units from ATC, COLES, D'NAUDIO, KEI MOREL, PRELEVEL, RCL SEAS, SCANSPEAK and VOLT.
Comprehensive range of high quality crossover components, acoustic damping products, connectors and covers. Over 20 different D.I.Y. loudspeaker kits on demonstration, including ATC 50 & 100.

Audio Unit (UK) Ltd
Unit C, Peacock Ind. Ext. 125-127 Daventry Road, Hove, East Sussex BN3 1SG
Tel: 01273 232516 Fax: 01273 723198
Suppliers of a large amount of components for the Audiofile kit builder. Valve amplification data and vintage circuits also available. See the double page spread in the back page of the magazine for extra & more detailed information.

European Precision Mouldings Ltd
Highwyth, Sawbridgeworth, Herts, CM12 0QS
Tel: 01279 600428 Fax: 01279 723846
Manufacturers of the Red Scorpion range of loudspeaker terminals and binding posts.

Chelmer Valve Company
130 New London Road, Chelmsford, Essex CM2 0RG
Tel: 01245 265885 Fax: 01245 490064
Supplier of premium range of audio valves, other valves and components also available. (Please see our main advertisement in this supplement).

CLASSIC TURNTABLES

Technical & General
P.O. Box 53, Crawborough, East Sussex TN6 2BY.
Tel: 01909 36 45 34.
The original specialist source of spares, replacement and expertise for the classic turntables. Yearly list of appearance and comprehensive range of parts (origins and re-manufacturers). Major stockists. No dubious 'improvements' - no harmful modifications'. Our specialties: Connoisseur; Garrard; Lenco; M.E.; Thorens; Watan; Orttohn; Shure; Cartridges and stylis for 78s; Mono LPs, Stereo LPs.

COMPONENT SUPPLIERS

Avadare Audio, The Hallis, Arundale Road, Chesterfield S40 4TF
Tel: 01246 200996 Fax: 01246 207240
Audio Engineers; upgrades; Improvements & services to both static and moving parts. Reliable turntables, the hi-fi chain, (amps as well as turntables). Also bespoke range of own equipment and an extensive range of parts & components available.

White Noise
1 Station Road, Beardsen, Glanfield GH1 4AW
Tel: 0141 942 2660
Specialist supplier of the highest quality; solder masked, silkscreened, PCBs and kits for audio-grade, solid state power amplifiers, power supplies,MM/MC phono stages, and active crossovers, with many more to come. We also supply a wide range of top quality audiophile passive and active components, specializing in the highest performance Japanese transistors and UK & Japan audio power models. Write for a free catalogue. Mail order only.

Audio Links
Thorn Mount, Cressenhour, North Lincolnshire, DN16 1EL.
Tel: 01724 870432 Fax: 01724 875340
Large range of specialist audioophile components for solid state and valve enthusiasts.
Friendly mail order service. Monday to Saturday, 9am - 6pm. 30 Page Catalogue - £3.00.

AudioCom (UK)
Unit 46 & 70, Tidelle Centre, Warren Street, Tenny Pembroke, South Wales, SA70 7YJ
Tel: 01834 841203 Fax: 01834 842804 E-Mail: audiocom@scotnet.co.uk
Audiocom are international suppliers of premium grade components. We stock a large range of top quality parts which include: ALPS, Burmester, Gate, Elma SLIMIC & CERAFINE, Danis Audio Connect CT1, Holco, REL-CAP, Sanyo OS-CON, MIT MultiCap Memrec, Vishay, plus top grade OFC Inductors & RCA connectors. Our full colour 1999 catalogue is available at £2.50 (UK). £3.50 overseas.

Mort Electronic Kits Ltd
Penylan Mill, Oswestry, Shropshire SY10 9AF
24 Hr sales enquiries Tel: 01994 652894
A range of Audiophile kits for 80 watt Power Amplifiers, Tuners, Pre-Amps and Moving Coil Moving Magnet RIAA Preamplifiers. All kits are fully engineered, with our thirty years design experience, for easy constructions from circuits by John Lindsey Hood, the most respected designer in the field. Send for lists.

AP Electronics
20 Darwen Court, Clarke Street, Derby, DE1 2UB
Check out the AP ELECTRONICS catalogue. It's free with every order of over £40.00 or can be purchased for a £4.59 cheque payable to AUDIONIC. Our 80 page catalogue includes pre and power amplifier kits, high grade audiophile resistors, capacitors and semiconductor diodes, and mains cables, gold and rhodium plated connectors and many CONDENSOR NOTES using high grade parts.A quarterly newsletter 'AP PERFORMANCE AUDIO' has been recently launched and your first issue is free.

Restoration
Audio Laboratories (Leeds) 3, Kidder Terrace, Whitkirk, Leeds, LS12 1DB
Tel: 01132 244038
Specialist restoration of 301's and 401's using genuine and factory re-manufactured parts to original pristine standards in our newly built workshops designed specifically for these purposes.

Welding
N.C Clark Welding & Fabrications 14 Redhills Road, Easton Industrial Estate, Southwoodham Ferrers Essex CM3 SUP	Tel: 01245 333336 Precision welding and sheet metal work TIG/MIG welding, C/N/C Punch and Press Milling and Turning Fine Limit and General Engineering Prototype work and batch work undertaken.

Specialist Upgrade Services
AudioCom (UK), Unit 46 & 70, Tidelle Centre, Warren Street, Pembroke, South Wales, SA70 7YJ
Tel: 01834 642803 Fax: 01834 642804 E-Mail: audiocom@scotnet.co.uk
Professional modifications using leading edge components. Modifications are carried out by engineer with over 30 years experience in the field of analogue and digital electronics. Upgrades available to all types of audio equipment including CD players, Transports, D/A converters, Pre & Power Amplifiers. Call us today for more information.
Internal view of DV-505 after fitting of Superclock

SWEET SOUNDS

Bolted back together, the transformation to the presentation of this older machine proved that the SuperClock was once again an effective modification. In this instance the upgrade might not have been such a leap forwards as it was with the DV-505, but it was still very noticeable.

On Natacha Atlas' Halim album, all the Arabic rhythms picked up extra drive and speed courtesy of a faster, more controlled bass. Sound staging and imaging were both more holographic too, and the overall level of detail was considerably higher.

One CD where the greater grip in the lower frequencies was really appreciated was Bob Marley And The Wailers' Early Years compilation. Where the original PD-91 had been rather too laid-back and mellow on some of the skankier tracks, now it handled all of them convincingly, putting the necessary bounce into basslines. The differences in production quality between songs was much more evident as well, as certain numbers 'had that authentic 'recorded in a shed by stoned musicians' feel to them.'

In spite of the Pioneer's 18-bit Burr-Brown DACs lacking the sort of dynamics and low-level subtlety that more up-to-date designs are capable of, it still had a very musical, involving way with any of the discs that I fed it. In fact, John Cheadle, the SuperClock's designer, swears by a heavily tweaked PD-91 as a transport, although the changes there include a huge number of component substitutions and a replacement digital output board amongst other things.

However, we hope to be covering other mods for the PD-91 in future issues.

The Superclock is available from:
Audiocom(UK)
at a cost of £160.00 self fitted
& £195.00 fitted by Audiocom, price includes return carriage.

SUGDEN audio products

New products from Sugden

Wide-bandwidth d.c coupled high current class A power amplifier and matching pre-amplifier. Available as a stereo power amplifier
you can upgrade or balanced monoblocks.

Handcrafted from the finest materials and components, Sugden guarantee to
add an extra dimension to your listening pleasure. Our superior wide-bandwidth designs will increase the dynamic range and sonic accuracy of
your audio system - without fatigue.

With over thirty years experience in design and manufacturing
Sugden has become a reference for reviewers, musicians and audiophiles
around the world. Prices start at £549.00 for the Audition series
so why settle for anything less?

World Radio History
A topic which we have rarely touched upon in the DIY supplement is upgrade components for that most easily modifiable of all hi-fi components, the loudspeaker. As any manufacturer attempting to balance cost against profit understands, the all-important bottom-line dictates that the majority of commercial loudspeakers use caps and inductors that were sourced with price rather than absolute performance in mind. But with most crossovers just a screwdriver and a bit of elbow grease away, changing this situation needn't be a DIY nightmare.

Unless the components inside your loudspeakers are custom made, you're unlikely to require a circuit diagram to understand what's going on as the parts values should all be clearly marked. Getting to the crossover normally entails either removing the mid/bass or bass unit and unscrewing a PCB from whichever panel it's mounted on, or, if you're lucky, merely taking off the terminal plate where simple filters are often to be found.

To illustrate the upgrade power of crossover revamps, we dusted down a pair of our budget KLS12 two-ways in floor-standing guise, and faxed over a circuit diagram to Audio-Links in Scunthorpe with a price limit of £100 for the most effective mods possible.

Iron At The Ready
The most obvious upgrade in a complex crossover like the KLS12's is any part that lies directly in the signal path. For L1 and L2 we plumped for M CAPfusion Air Core Inductors (1% tolerance, wound on a large diameter former, with a low ESR). These hefty beasts are constructed from 99.998% oxygen-free copper wire and, after production, each inductor undergoes a special process, resulting in the winding bonding to itself and the spool. This process creates an inductor that is a single mass with near-zero microphony.

Sonically, the improvements are claimed to include greater clarity, tonal realism and spaciousness. When it came to C4 and C5, we settled on Ansar’s smooth but affordable polypropylene capacitors. These were then bypassed with M CAPzn polypropylenes, C4 with a 0.1uF and C5 with a 0.47uF. The zn's are very tightly wound from solid tin foil and high-purity polypropylene film to give an extremely dense and thus low-microphony capacitor. Audio-Links informed us that they have a beautifully clear sound with a tone that is very even-handed across the audio bandwidth. The final substitution consisted of R4, where a Caddock MP930 non-magnetic, non-inductive power resistor with copper leads and 1% tolerance replaced the standard fare. After 100 hours' burn-in, Jon Marks sampled the sound of the hot-rodded KLS12Cs.

Sound Quality
For £100 you'd be entitled to expect a fairly radical lift to sound quality, and the Caddocks, Ansars and M CAP parts didn't disappoint. Rather than a subtle enhancement of the KLS12s, what I heard was immediately obvious. However, where many upgrades that stick out like a sore thumb on the first listen can become wearing as the hours roll by, these were welcome to stay.

Nusrat Fateh Ali Khan’s chanting can verge on the painful through loudspeakers where there are more rough edges than smooth, but his voice dipped and soared in a natural, dynamically unrestricted way as it emerged from the high-spec KLS12Cs. His Shahen Shah album has a crystal clarity to the recording of the venue, and this was much more vivid than it had been previously, as if a layer of gunge that had previously obscured a wealth of fine detail had been peeled off the music. Evidently, M CAP's low-microphony construction techniques were paying their way.

Shifting from the wholly acoustic to the wholly electronic, I cued up Presence's All Systems Gone CD. Again a disc which can go wrong if played via transducers which suffer from too cold or clinical a character, ASG sounded well at home here. The fact that the vocals were far clearer and crisper than before without there being any sibilance counted heavily in the upgrade's favour, as did the firmer, faster and more controlled basslines. In spite of the synthetic nature of this recording, it had a sweetness you only hear through electronics and speakers which don't dirty its surprisingly high standard of...
DESKADEL Products

371/733 Ormskirk Road • Pemberton
Wigan • Lancashire • England • WN5 8AT
TEL/FAX: 44 - 1 - 942 887171

The DESKADEL range of HI-FI interconnect, speaker cables, hook-up wires and tone arm wires are precision manufactured featuring PURE SILVER conductors insulated with PTFE in a variety of designs to suit all applications. Using only the finest materials and the latest manufacturing techniques we aim to provide a selection of quality products for superb natural sound reproduction on a scale previously unheard.
More digital ditties were supplied by Unkle's Psyence Fiction. Talking of dirty, this CD is about as rough as a builder's behind, and any 'speaker that makes a decent stab of it has to be spacious, transparent and devoid of any midrange or treble nasties. Although a sock over the tweeter is probably the best way to get the most from Psyence Fiction, the post-upgrade KLS12Cs managed to strike the right balance without resorting to woolly high frequencies. Removing the esoteric additions and going back to the common-or-garden KLS12Cs proved just how much more listenable this album was for £100 spent on the crossover. Reverting to the more basic bits brought it a grainy, fuzzy edge to the midrange and treble, while the bass put on weight and loosened its belt, sapping a lot of its drive and impact. JM

Cross-over with upgrade components
THE JOY OF AUDIO ELECTRONICS

By Charles Hansen

Reviewed by Richard White

Many years ago, when I was a boy there were not many books on electrical matters suitable for the enquiring mind. There was a number of reasons for this. For a start, in those days everything educational seemed to begin with first principles and work up gradually. As an example, if a practical demonstration of audio amplification were to be given, it seemed impossible to commence without the phenomena of current, voltage, resistance, capacitance and inductance being first explained. Unfortunately, there was a risk that enquirers would too easily fall by the wayside, felled by the cumulative effect of too many algebraic expressions and the continual postponement of the plans for a working Tardis.

Times change; Science had been trodden underfoot by Technology and it doesn’t seem to matter if you know how it works as long as you can buy it. Ohm’s law has been sent ‘ome, and comparatively simple word-processor programmes will manipulate algebraic expressions to A-level and beyond.

The Joy of Audio Electronics squeezes in somewhere between these two extremes. The author’s aim seems to be to lead people into the hobby, teaching along the way. Two specific projects are described, the first of which is a loudspeaker ‘peak power indicator’, which lights an LED when a voltage determined by the builder is exceeded. A pair of circuit boards (one for each channel) is provided free with the book, rather in the way that the Dandy Thunderbang or Beano Fizzer were ‘presented free’ with comics. These little gadgets derive their operating power from the loudspeaker signal and so require no external supplies.

The other project is The Quadpod, a powered device intended for extracting ‘hidden information’ from standard stereo signals. In essence, the idea is to disentangle L-R and R-L leftovers from recordings made with the well-known ‘Blumlein pair’ microphone configuration. These gleanings can then be played (through a suitable amplifier and loudspeakers) to give two rear ambience channels from an ordinary stereo record. Not very many modern Rock & Pop mixes are recorded with a Blumlein pair, although it is still a ‘classic’ for Classical.

Making these projects is described in very fine detail, including a little theoretical digressing and entirely practical hints such as the best way to bend wires to fit a PCB. While this approach may irritate the more experienced builder, for the beginner any time spent inculcating good habits is well spent and will go a long way towards avoiding the ‘solder sculpture’ results of a first PCB project.

The remainder of the book is devoted to, in its own words, ‘Where do we go from here?’ Advice is given on the modification of published projects and the techniques used for making PCBs at home. Breadboard and hard-wire techniques are also discussed. A chapter is given on the design and furnishing of a home electronics workshop or testing station.

Elementary theory, including a glossary, has an informative chapter to itself. In addition to pencil-and-paper formulae, Excel computer programmes for theoretical modelling are identified alongside their applications.

A few cautionary words will not be out of place. First, this is an American publication and the author has done his absolute utmost to smooth the path of the reader, provided that the said reader resides in the USA. Chapter Five, which deals with suppliers suffers much from this export limitation. Similarly, estimated costs for the projects are given in dollars which may not correspond elsewhere.

Second warning; the United States is not a metricated country. This doesn’t bother me in the slightest, but if you are uneasy around ‘three-sixteenths’ and other such homely phrases, better have your conversion tables handy. In one instance, the author designates drills by Morse Gauge numbers, an engineering standard with 106 sizes between roughly quarter-inch and minuscule! You won’t get much help with these at B&Q.

Notwithstanding these caveats, the joy of Audio Electronics is above all a friendly book. The author rightly understands that not everyone knows everything before they’re told, and sets about leading the way to an increased appreciation of the chief points of the hobby with a companionable air. Whether or not the specific projects appeal to you, there is a mine of handy information here, presented in a very readable form. After all, studying a book on motor mechanics does not necessarily make you Herbert Austin, but it might help you when it comes to changing the oil filter. In the same way, the little tit-bits of knowledge in this book may seem to have no immediate application - until you find yourself wishing that someone had told you to make a good joint before applying the soldering iron. When all the insulation has melted and the thing still won’t stick, it is usually too late!

World Radio History
Everybody in the tube business knows that the justly famous Brand names of yesteryear like BRIMAR, GEC, MULLARD, RCA & TELEFUNKEN Etc. Etc. are scarce and often very expensive.

Although we supply all major brands when available (and have many in stock) our policy is to offer a range of tubes, mostly of current manufacture, the best we can find from factories around the world, which we process specially to suit audio applications. The result - CVC PREMIUM BRAND.

Our special processing includes selection for LOW NOISE, HUM & MICROPHONY and controlled BURN-IN on all power tubes to improve STABILITY and select out tubes with weaknesses Etc.

A selection of CVC PREMIUM Audio Tubes
