COPYRIGHT

Ş

© IPC Magazines Limited, 1979. Copyright in all drawings, photographs and articles published in *Television* is fully protected and reproduction or imitation in whole or in part is expressly forbidden. All reasonable precautions are taken by *Television* to ensure that the advice and data given to readers are reliable. We cannot however guarantee it and we cannot accept legal responsibility for it. Prices are those current as we go to press.

CORRESPONDENCE

All correspondence regarding advertisements should be addressed to the Advertisement Manager, "Television", King's Reach Tower, Stamford Street, London SE1 9LS. Editorial correspondence should be addressed to "Television", IPC Magazines Ltd., Lavington House, Lavington Street, London SE1 OPF.

SUBSCRIPTIONS

An annual subscription costs £9.50 in the UK, £10.50 overseas (\$21 Canada or USA). Send orders with payment to IPC Services, Oakfield House, Perrymount Road, Haywards Heath, Sussex.

BINDERS AND INDEXES

Binders (£2.85) and Indexes (45p) can be supplied by the Post Sales Department, IPC Magazines Ltd., Lavington House, 25 Lavington Street, London SE1 OPF. Prices include postage and VAT. In the case of overseas orders, add 60p.

BACK NUMBERS

Some back issues are available from the Post Sales Department, IPC Magazines Ltd., Lavington House, 25 Lavington Street, London SE1 OPF at 70p inclusive of postage and packing.

QUERIES

: 15

1

We regret that we cannot answer technical queries over the telephone nor supply service sheets. We will endeavour to assist readers who have queries relating to articles published in *Television*, but we cannot offer advice on modifications to our published designs nor comment on alternative ways of using them. All correspondents expecting a reply should enclose a stamped addressed envelope.

Requests for advice in dealing with servicing problems should be directed to our Queries Service. For details see our regular feature "Your Problems Solved". Send to the address given above (see "correspondence").

this month

343	Leader
344	Teletopics News, comment and developments.
346	Letters
349	Come back, come back by Les Lawry-Johns Les has been confronted by some decidedly awkward sets this month, including ones that kept coming back with intermittent colour faults, and "all that trouble just because you left a lead off."
351	N1700 VCR Modification Showing board changes for one of the modifications suggested last month.
352	The Rank Teletext Receiver by Bob Fisher by
357	Colour Receiver Project, Part 8 by Luke Theodossiou Details of the wiring between the boards and other modules, a suggested cabinet design, and a description of the options – teletext and remote control – that will be featured in later issues.
360	Service Notebook by George Wilding
	Notes on faults and how to tackle them.
362	Colour Pattern Generator, Part 1 by Malcolm Burrell Much servicing starts with an examination of the display on the screen in order to assess the set's performance. For this purpose a test pattern that shows up fault conditions is a great help, particularly when the transmitted test card is not available. The composite pattern provided by this generator has been designed with the service engineer's needs in mind.
369	TV Servicing: Beginners Start Here Part 20 by S. Simon This time e.h.t. faults, again dealt with in questions and answers form.
371	Next Month in Television
372	Long-Distance Television by Roger Bunney Reports on DX reception and conditions, and news from abroad. Also notes on dealing with the problems of adjacent- and co-channel interference.
375	Notes on the Philips G11 Chassis by Larry Ingram Like most modern solid-state chassis, the Philips/Pye G11 is very reliable. There are nevertheless one or two points worth noting.
376	Servicing the ITT CVC20 Series Chassis, Part 2 by <i>E. Trundle</i> This concluding instalment on the CVC20 and its derivatives deals with the line timebase and the switch-mode power supply.
380	Readers' PCB Service
381	Your Problems Solved
383	Test Case 197

OUR NEXT ISSUE DATED JUNE WILL BE PUBLISHED ON MAY 21

### PRICE INCREASE

R

We regret that it has been necessary to increase the cover price of *Television* with this issue. The increase (5p) has been kept to the minimum practical amount, and has been agreed to by the Price Commission. We have held the price steady since November 1977, but the effects on our costs of continuing inflation during this period have now made an increase unavoidable.

### What we already knew

The National Economic Development Council's electronic consumer goods Sector Working Party (SWP) has issued a report on the state of the industry. It doesn't contain anything very surprising – industry watchers will be well aware of the industry's problems in recent years. It's useful however to have everything spelt out in one convenient summary.

The report emphasizes the industry's lack of international competitiveness, and the increasing percentage of the home market taken by imports. The industry's output in 1977 was valued at £523 million, 22 per cent of which was exported. The balance of trade deficit for the year was £214 million. Imports have increased from 19 per cent in 1970 to 49 per cent in 1977, while employment in the industry fell from a peak of around 70,000 in 1973 to about 52,000 in 1977.

Mention of 1973 brings us once again to the great Barber boom. Just to refresh your minds, during that boom year sales of colour sets in the UK rose to 2.775 million, of which over 2 million were home produced, an increase of 43 per cent on 1972. That incredibly rapid expansion in so short a time brought with it many bad habits and conditions from which we are only now escaping – the use of almost any components that could be obtained in a situation of severe component shortages, lack of attention to testing, and crude assembly techniques adopted so as to get the sets produced regardless. The economic situation then led to the government having to slam on the brakes. Colour receiver deliveries fell by 20 per cent in 1974, by a further 28 per cent in 1975, and then bottomed out in 1976, when the fall was only 5 per cent, at 1.506 million. But what a massive overall drop – and with imports continuing to do well as the reputation of UK produced sets came into growing question.

Colour receiver production is only part - though much the largest - of the UK's consumer electronics industry. Returning to the SWP report, the industry's problems in competing with products from lower cost countries is emphasized - mainly Japan, Taiwan, Singapore and South Korea. The report comments that the industry's response has been largely defensive, withdrawing from the production of cheaper lines such as transistor radios to concentrate instead on more sophisticated products - colour receivers in particular. In fact the report points out that concentration on colour receiver production has masked the overall decline of the UK's consumer electronics industry. It also points out that the prolonged spell of depressed demand from 1974 onwards led to reduced profitability and in turn decreased industrial investment. What this amounts to is that the industry has been burdened with excess and increasingly antiquated and uneconomic production capacity, and has not been able to generate the funds required to buy and instal the latest production equipment - automatic component insertion machinery, computerised component testing equipment, and so on. Graphic examples of the consequences can be quoted: the closure of Thorn's Bradford plants for example, and the need for Rank and GEC to link up with Toshiba and Hitachi in order to obtain modern assembly plant.

The SWP has put forward various proposals, though their likely effectiveness is open to question. One is the need to limit imports to protect UK employment in the short run and to provide a respite during which the industry can be reorganised. Voluntary restriction agreements have in fact already been negotiated by the industry. They could well help the TV industry: one can't see anything short of a siege economy leading to the return of large-scale radio receiver production however, and that's clearly not on whatever government we have in the immediate future.

During 1978 the SWP commissioned the Boston Consultancy Group to carry out a study of comparative production costs. Again, this doesn't tell us anything not already pretty widely known. It confirmed the lack of cost competitiveness of UK produced goods relative to those of Far Eastern origin – though UK costs are roughly comparable to those in W. Germany – and pointed out that Japan's substantial cost advantage has been achieved through its high level of investment, automated production and insistence on high-quality components.

A strategy to halt the UK industry's decline and provide a basis for increased exports is suggested. This calls for expenditure of £300 million over the next five years, which it feels would be sufficient to eliminate the trade deficit and provide a foundation for sustained future growth. There seems a certain vagueness about where this money is to come from however. Other proposals are mainly obvious ones, such as industry rationalisation, the use of more sophisticated production techniques and so on.

Against a background of continuing world recession however one fails to be convinced by these fine words. One thing is certain: increased employment is not going to be achieved. Increased investment in modern production equipment means that the industry will end up more capital intensive and less labour intensive. One also has a feeling that the increasing links between the Japanese and the UK consumer electronics industries could end up with the UK industry simply providing off-shore assembly lines for the Japanese. As for talk of increased UK production of radio receivers, tape recorders, public address equipment and so on, someone seems to be whistling in the dark.

### JAP FIRMS INCREASE UK TV INTERESTS

Following the joint operations being set up by Rank-Toshiba and GEC-Hitachi, the latest development is the complete take over of a UK TV setmaking plant by one of the large Japanese TV manufacturers. The opportunity, seized by Mitsubishi, came following the financial difficulties in which Tandberg's Norwegian parent company found itself late last year (see Teletopics, February). Tandberg has now been reorganised, and its profitable data products, educational and high-quality audio equipment divisions are continuing as newly established concerns. The production of colour receivers in Norway, the cause of the loss-making situation, has ceased. This left Tandberg's UK colour setmaking plant at Haddington, outside Edinburgh, out on a limb, since colour receivers no longer form a part of Tandberg's overall sales strategy. Mitsubishi has now taken over the Haddington plant, which has been producing some 25,000 sets a year, and plans to increase production there and also to diversify into other areas such as audio equipment manufacture. It's understood that the present CTV3 chassis is still in production, but that there will be a rapid change over to Mitsubishi designs. Tandberg (UK) comment that existing service and repair guarantees will be honoured, and that parts and expertise will be available for at least seven years.

Meanwhile, Sony (UK) is undertaking a 140,000 sq. ft extension to its Bridgend, South Wales TV plant. This is expected to be completed late next year and will increase the production capacity to 150,000 colour sets a year, about half of which will be exported to markets in Europe, the Middle East and other overseas areas. Matsushita (National Panasonic), which ceased exporting colour TV sets from Japan to the USA last year, has announced that during 1979 it will be increasing its overseas production of colour sets by about 20 per cent – Matsushita also has a colour TV plant in S. Wales.

### WHAT'S IN A NAME?

Fidelity Radio has signed an agreement with EMI giving it exclusive rights to use on a new range of audio and radio products one of the world's most famous trademarks, the "His Master's Voice" dog and gramophone symbol. The aim is to introduce a new up-market range of equipment which will be sold by independent dealers and marketed through a newly formed subsidiary, Intersound Electronics. EMI will continue to use the trademark on its discs and tapes.

EMI ceased to manufacture its own radio and television receivers in the mid-fifties, and for many years after that the trademark and name were used by Thorn for its up-market models. Thorn dropped the brand name a couple of years ago whilst rationalising its operations, and the only firm that's understood to have been using it recently is RCA in the US.

National Panasonic has decided to drop the "National" bit from its brand name and will in future be using the contracted title Panasonic. The parent company Matsushita will be following this policy world wide.

### TRADE SCENE '78

BREMA has released details of colour/monochrome TV/radio/audio equipment deliveries to the trade during

1978. As mentioned in our leader this month, colour receiver deliveries fell to their lowest point in recent years in 1976. There was a slight increase (8.9 per cent) in deliveries in 1977 (to 1.64 million), and a further slight increase (6 per cent) in 1978 (to 1.74 million). Though deliveries of UK produced colour sets rose slightly in 1978, they accounted for a slightly lower proportion of total deliveries at just under 80 per cent. Monochrome set deliveries did well in 1978, rising by 20 per cent to 1.27 million, with the UK share of the total rising to 54 per cent.

### AUSTRALIA TO HAVE TV SATELLITE

Australia is the latest to join the growing number of countries which either have or are planning a satellite TV system to cover their remoter areas. The Australian government plans to spend some \$A9 millions on a three-year plan to bring TV to 76 towns in remote areas. During the first two years of the programme 41 receiving stations for local distribution will be built.

### WHAT WILL 30AX BRING?

Now we all know that the 30AX colour tube/yoke system is on its way - though it's understood that the design details have not yet been finalised - the next question is what will it involve in terms of chassis design? First however the advantages of the system: no convergence correction circuitry is required; improved focus is obtained by using a highervoltage focus system; and use of a more sensitive deflection yoke gives, in combination with the elimination of convergence correction circuitry, a reduction of 10W dissipation in both the field and line deflection circuits. The saving in the field scan circuit is particularly noteworthy, halving the dissipation in comparison to the 20AX system. As a result, Mullard are recommending the use of a class B field timebase i.c., type TDA 2652. A proposal put forward by Mullard is to obtain the drive for the line output stage from the switch-mode power supply. Since with this system the line output transistor and the efficiency diode could both be non-conductive in the event of a large change in the mains voltage, leading to a discontinuity of the line scan, a three-diode EW modulator circuit is recommended - one diode will remain conductive to provide a clamp action, removing the possibility of scan discontinuity. Various switch-mode power supply options are suggested, but it seems that much of the circuitry used for the 20AX system can be retained.

### SONY DEVELOPING VIDEODISCS

At the US IEEE Conference on Consumer Electronics last year Sony showed a prototype videodisc player using, like the Philips system, a helium-neon laser to scan the disc. Sony comments that the same basic player can be used with an adaptor to reproduce digitally recorded (p.c.m.) audio discs, and feels that a compatible video/audio disc system will be more convenient and acceptable to customers. In commenting on possible domestic VCR developments, Sony points out that on the basis of recent trends we could, in the early 1980s, expect track widths of ten microns or so and minimum recorded wavelengths of 0.8-0.9 microns. This would give a recording density three or more times higher than current VCR standards, leading to a three-hour or more cassette as small as the present compact audio cassettes.

### ENGINEERING GOAHEAD FOR TV4

Parliament has given the second reading to a bill authorising the IBA to incur expenditure to equip itself for the transmission of the fourth UK TV network. The IBA will be able to use for the purpose operating surpluses up to a total of £10 million, and to borrow from the government if necessary up to a further £18 million. The Home Secretary pointed out that whatever authority eventually provides and supervises the fourth network, preliminary engineering work needs to be started quickly. It's hoped that the engineering work will be complete by 1982.

### PYE TO MARKET VCR

The Philips N1700 VCR is also to be marketed in the Pye range of domestic TV equipment.

### SALORA ENTERS UK MARKET DIRECTLY

Scandinavia's largest exporter of colour TV sets, the Finnish firm Salora OY, is to establish a wholly-owned subsidiary to market its sets in the UK. The intention is to start a limited dealership distribution system. Salora's sets are not unknown in the UK: for many years they have been supplied to Granada TV Rentals under the Finlandia brand name.

### DOUBLE-HEIGHT TELETEXT DISPLAY

The latest teletext receiver from Philips, the up-dated 26in. Model 674/02, features a double-height graphics facility – either the top or the bottom half of the teletext page can be enlarged to twice the normal size and displayed, giving easier reading. Two extra buttons on the remote control handset control this extra facility. There are plans for including the facility in a smaller-screen model shortly.

### **UP-DATED CRT TESTER**

Video Circuits (1a, Wentworth Court, Alston Road, Barnet, Herts) have introduced a new, up-dated version of their c.r.t. tester, Model V35. There are plug-in bases so that the latest types of c.r.t. can be tested – both monochrome and colour. Beam current is measured at the c.r.t.'s first anode, making it unnecessary to disconnect the e.h.t. cap. Comparisons between the performance of the three guns in a colour tube can be made, there is a tube reactivation facility, and the tester can also be used as a  $50M\Omega$  ohmmeter.

### PORTABLE WITH A FLAT-FACED CRT

Due for release later this year at a suggested retail price of about £110 is a new 5in. radio/TV portable, Model 5TH-65R, from Crown. An unusual and exclusive feature is a com-

The Sony Betamax VCR. TELEVISION MAY 1979

pletely flat-faced c.r.t., which Crown say will give a larger viewing area. A colour version is predicted for next year. The medium/long/v.h.f. radio section has magic-eye tuning, an external aerial can be connected for use in weak signal areas, and the set can be operated from internal batteries, the mains, a rechargeable power pack or a car battery.

### VCR CONVERSIONS

When we first published, in February 1978, some suggestions for converting the earlier Philips N1500 etc. machines to the current N1700 standard, we received several rather rude letters from readers who maintained that such unofficial changes to a very sophisticated piece of equipment were just not on. Well, the proof is in the eating as they say, and it seems that several firms are now willing to undertake this exercise. Reports of successfully converting the N1500 and the N1502 have appeared in our Letters pages (August 1978 and April 1979 respectively), and "Square Wave", a regular contributor to the Electrical and Electronic Trader, wrote on the subject recently in that magazine. He says his firm finds the results very satisfactory and cost-effective in terms of cash saved on tapes, and that the work can be carried out for about  $\pounds$ 120 plus VAT – provided the machine is in good condition of course. The N1700 head unit is mechanically identical to the earlier ones, so can be fitted without trouble. To reduce the tape speed to the required figure, the size of one of the drive pulleys is reduced and a jig specially made for the purpose is used to grind an exact amount off the capstan spindle. Some other mechanical work is necessary, also some work on the electronics to alter the servo circuits. A final point made is that it's considered inadvisable to use a tape with a running time of more than two and a half hours.

### LOW-COST VIDEO/TV SET LINK

Datanomics (Westminster Road, Wareham, Dorset BH20 4SP) have introduced a low-cost u.h.f. modulator unit that enables video and audio signals to be fed into and reproduced through an ordinary TV set. The Datacom, as the unit is known, enables any composite video signal from a TV camera, videotape recorder, TV games chip, microprocessor or character generator for example to be linked to a domestic TV set – with the added advantage of sound. Audio compressors are incorporated to ensure that both soft and loud sounds are clearly audible. Amongst the many possible suggested uses are caller identification, security surveillance, farm animal monitoring, and document/information transmission.

### STATION OPENINGS

The following relay transmitters are now in operation: Ashburton (Devon) BBC-1 ch. 21, Westward Television ch. 24, BBC-2 ch. 27. Receiving aerial group A. Dog Hill (Greater Manchester) BBC-1 ch. 40, Granada Television ch. 43, BBC-2 ch. 46. Receiving aerial group B. Skinningrove (Cleveland) BBC-1 ch. 40, Tyne Tees Television ch. 43, BBC-2 ch. 46. Receiving aerial group B. All the above transmission are vertically polarised

All the above transmissions are vertically polarised.

### SERVICE BRIEFS

A couple of points that may be worth noting from Rank. First the old problem of field bounce due to the time-constants of the a.g.c. circuit, this time on the latest T22A chassis. The cure is to change 2C16 on the signals panel from  $1\mu$ F to  $2 \cdot 2\mu$ F. Secondly, there have been cases of no results on the T20/T22A chassis due to the line oscillator failing to start because of failure of 4D11. Rank suggest using a more robust replacement – type 1N4001.

# Letters

### **VIDEO FAULTS**

I was surprised at AD's description of the fault on the Hitachi HV40 camera fitted with a silicon-diode tube, and even more so that the auto-target control worked. While altering the target voltage of a vidicon tube will alter its sensitivity, this is not so with a silicon-diode tube – hence the need for an auto-iris lens which samples the video output. The target voltage should be fixed at 8V and not altered, the auto-target circuit being superfluous. I suggest carrying out further modifications in this respect.

The spreading of light from a bright source is a characteristic of silicon-diode tubes – due to space-charge spread on the diodes. The effect is usually eliminated with the H version of the tube (i.e. 4833H), while Chalnicon and Newvicon tubes do not suffer in this respect.

The auto-iris lens system does not refer to any preset level as such. The video output signal is integrated to an average d.c. level which is then referred to a fixed reference, the iris motor then operating to adjust for any imbalance due to video level changes. The preset is a video level control. A distinct disadvantage of the system is that the autoiris lens will shut down on a single source. For example, if a camera giving a reasonable picture in a room is panned and a window appears in the scene, the auto iris will shut down making it difficult to see anything but the window, due to the video "average" being considerably increased by the single, small high brightness source. A Chalnicon or Newvicon will produce less output from such a source as the tube limits. So much more of the room in the example given would emerge from the black level depths.

In connection with the article on VCR renovations, I'd like to add the following tips:

(1) Good forward wind, good take-up tension, poor rewind. Don't touch the clutches. Replace the small idler wheel between the capstan and turntables (part no. 528-70242).

(2) Start key knob locking down. Adjust the latching plate underneath by bending its little leg.

(3) The worst fault of all, a tracking error at the bottom of the screen on its own recording/replays. Steps to take are: (a) A good clean of the guide surfaces. (b) Check threading cord and springs, and that the head assembly rotates fully on threading up. Lightly oil around the head assembly. (c) Check threading motor for full travel, and adjust nylon screw (180A on exploded view diagram). (d) Panic...

Avoid going in for cosmetic replacements: a lid for the N1500 is more than  $\pounds 50$  plus VAT, and for the N1501 more than  $\pounds 70$  plus VAT.

It will cost nearly £100 in parts to renovate the average machine with a lot of wear. So tread carefully. Steve Beeching, T.Eng. (CEI), Newark.

### DARK HORIZONTAL BANDS

A maniacal cackle of laughter echoed through the workshop when I read in *Your Problems Solved* the plea for help from the bloke with dark bands across the screen of his Pye hybrid colour set. The symptoms, you'll recall (March, page 271), were dark bands across the picture whenever a bright white was displayed (typically caption letters).

I renovate a lot of these sets, and a month or two ago was beating my head against the brickwork when confronted with this problem on *four* sets in which I'd fitted regunned tubes! Took tubes back to regunner, but they checked out perfectly. Rang Philips Service who gave the same advice you did. Changed every panel in the set one by one, but after all this found the fault still present. In desperation gave the set a resounding thump – and the fault disappeared! Aaaargh!

There's an earth strap that goes from the c.r.t. base to the line timebase panel, via the tube shield. I'd been forgetting to put it back on the line timebase earth tag: it had been resting on the metal body of the tower but not contacting – till my thump disturbed it!

Why didn't I take up an easy profession, like alligator wrestling?

Roderick M. Buck, Lincoln.

### **13A PLUGS/SOCKETS**

The electrical query raised in the March *Teletopics* is virtually a stock fault with all (regardless of make) 13A plug and socket combinations when operating at their peak of around 12A say – they start cooking. The square plug pin carries this o.k., but the socket makes insufficient contact area with the pin – hence the heat generated.

Being in an experimental mood the other day, I measured the voltage drop across the 13A fuse with a 3kW load. Surprisingly, this was 0.1V a.c. So with 12.5A flowing this means that the fuse wire is knocking out 1.25W – not bad for a wee piece of wire! The fuse wire is well heatsinked however, so we have to say that the heat producer is the live pin-socket contact – or rather the lack of it.

Conclusion: definitely a case for British Standards tightening up their specification here.

John Riddell, Glasgow.

### **PHASE CONFUSION**

I read with interest the article on phase confusion in the February issue. I'd like to point out an error in Fig. 2(c) however. In paragraph four S. W. Amos states that "to produce the result shown in Fig. 2(c), in which the wave is delayed by half the fundamental period without a change in the waveshape, a network that introduces a 180° phase shift at the fundamental frequency, ..... is needed." This is true of a waveform which, although not symmetrical in the positive and negative going aspect, does at least change from positive to negative (or vice versa) at the 180° time point - in other words when the time period of each excursion is the same. But this is not the case in Fig. 2, and although the inversion of waveform (a) is as illustrated in waveform (b), it's not correct to say that waveform (c) represents a 180° phase change. The correct waveform is shown in Fig. 1 herewith. It will be noticed that the negative

part of this waveform extends over about 215°. This means that a phase change of only 180° gives a waveform which starts at a negative value on the Y axis. J. Sinclair, C.Eng., M.I.E.R.E., Epsom.

## Technical **Training in** Radio, **Television and** Electronics

Start training TODAY and make sure you are qualified to take advantage of the many opportunities open to trained people. ICS can further your technical knowledge and provide the specialist training so essential to success.

ICS, the world's most experienced home study college has helped thousands of people to move up into higher paid jobs - and they can do the same for you.

Fill in the coupon below and find out how!

### There is a wide range of courses to choose from, including:

### **City and Guilds Certificates:-**

Telecommunications Technicians, Radio, TV and Electronics Technicians, Electrical Installation Work, Technical Communications, Radio Amateur, MPT General Radio Communications Certificate.

### **Diploma Courses:-**

Electronic Engineering, Electrical Engineering, Computer Engineering, Radio, TV, Audio Engineering, Servicing and Maintenance. (inc. Colour TV) New Self-Build Radio Courses with Free Kits.

**Colour TV Servicing** Technicians trained in TV Servicing are in constant demand. Learn all the techniques you need to service Colour and Mono TV sets through new home study courses which are approved by a leading manufacturer.

### **The ICS Guarantee**

If you are studying for an examination, ICS guarantee coaching until you are will successful - at no extra cost

# Come back, come back...

### Les Lawry-Johns

WE'VE just had the roughest patch for a very long time. I now realise that as a service engineer I'm a pretty good cowboy. Even so, most of it wasn't my fault . . . but some was.

### An Ageing Ultra

When Mr. Middlestump (initials L.B.W.) brought in his somewhat ageing Ultra 3000 because it didn't go, we thought it was going to be another quick job. It wasn't too easy, but then again it wasn't too bad – at the start that is. The tube heater was glowing, or rather the tube heaters were glowing, and there was plenty of h.t. on the body of the chopper transistor (VT604). Other than this, there were no signs of life.

Checking the 30V line proved that F602 was intact, the 30V was present and was being passed on to the line oscillator. R607 in the feed to the chopper driver transistor VT605 seemed to be warmer than usual however, so the voltage at its "low" end was checked and found to be 5V instead of 12V. Funny, we thought. Until this was cleared up there was no chance of the chopper being driven. So out came the power pack, after the usual struggle with the front hooks.

An ohmmeter check on the 12V line showed a low reading one way but a higher one the other. This didn't seem strange, but in view of the low voltage we thought it worth investigating. Moving the test prod from chassis to the emitter of VT605 showed a dead short whichever way the leads were connected, and in no time at all VT605 was out and another E1222 was fitted.

With the power unit back in the set the chopper started chopping or whatever choppers do, and all services were restored. A fair picture was displayed, and Mr. Middlestump was happy when he took his set away. He wasn't happy for long. He was back the next day. Sound, no picture: screen lighting up, purple. Examining the latter first, with the set on its side, we found the green output transistor's collector voltage high and this transistor proved to be open-circuit. In went another and the grey scale was restored, but of course still no picture.

So back along the line we went and finally ended up on the i.f. strip, set now the right way up. The final i.f. amplifier transistor VT104 turned out to be open-circuit. Replacement restored the picture and made the sound a lot stronger (it would have been much simpler had the sound signals gone right off, as they should have done, but they didn't). So there we were, all systems go. For a while that is.

We showed the picture to Mr. Middlestump and were just saying "nice, isn't it?" when the picture went completely blurred. Surely not the tripler? Removing the rear cover showed the focus lead from the tube away from its pin on the top right side. I was about to plonk it on when there was a sharp crack in the tube (I think) and the set went dead. The cutout had cut out. Putting the focus lead on firmly, I pressed in the cutout button. There was a hum and it popped out again. Frantic investigation showed that both R2009 line output transistors had gone short-circuit.

"Surely nothing else could have gone wrong?" said Mr. Middlestump a trifle irritably.

"It could, it has and I don't like it any more than you do" I said.

We wearily fitted another pair of line output transistors and carefully checked around to make sure that everything was in order. Back came the picture but the height was anything but right – and fluctuating in time with a queer hum which came and went. Voltages were varying on the field panel, and much time was wasted in this area. We then found that the 30V line was fluctuating between 40V and 45V.

Panic stricken, we turned to the 30V stabiliser transistor VT601 and accused it of having emitter-to-collector leakage. So we changed it: the variation continued apace. Unhooking its emitter lead should have killed the lot. It didn't. In fact the voltage went up. There was obviously a leak from the h.t. line, but where? Unhook this, unhook that. Red herrings came and went. Many were the bitter tears that fell.

Bleary eyes scanned the circuit diagram and focused on the power unit. I had looked at the links from the h.t. rail to the feedback amplifier VT608 several times, but had stupidly not seen the relationship between W619 and W620 (see Fig. 1). If W619 goes short-circuit the 30V rail will be connected to h.t. via W620. Fool. A quick check on W619 proved that it was indeed short-circuit. Out it came and in went a replacement. 30V line steady. Height stabilised. Picture quite good.

"It's O.K. now Mr. Middlestump. I think."

"I wouldn't like your job" he said. "Fancy all that just because you left a lead off."

"I, I, er, oh well never mind." I gave up.

I thought (hoped) that that was the end of that one. It wasn't. However...

### No Colour

His name isn't Mr. Hoo actually, but he came from Hoo which is a fair distance from us and is on the Medway. His name was so unusual however that I just can't spell it.

Anyway, it was an ITT CVC5 or something like that and it had no colour. Ah ha, thought I, not going to get caught this time. So off came the back and up the top we went to ensure that the flip-flop was flip flopping (T36, T37). Sure enought, it wasn't. So back to the ident transistor T35 to see how this was faring. "Nice colour" said Mr. Hoo as I touched the test prod on the base of T35. So I took it off. The colour stayed. "Very good" he said. "How did you do it?"

"Blowed if I know" I confessed, thinking to myself that I must have prodded T35 into life thus starting up the 7.8kHz generator. This suggested that T35 was sluggish, so I changed it. Result: no colour.

All associated components were painstakingly checked,

and Mr. Hoo departed because he had a lot to do.

We then found that an electrolytic bridged across C205  $(4.7\mu F)$  in the burst amplifier's collector circuit restored colour signals. That's it! It wasn't.

The temptation to rush round the decoder in a blind panic was resisted since the trouble was right there up on the top right side and was probably a dry-joint of some kind. But where? The burst amplifier transistor T34 next received attention. The voltages were slightly wrong, so the associated components were checked and the transistor changed. Full colour! Nothing would shift it. I thought (hoped) that that was that. It wasn't.

When Mr. Hoo came back we proudly showed him his glorious colour and off he went with many a yelp of pleasure. One hour later he phoned to say that he had no colour. He yelped with displeasure and said he would return the following day. I cried.

### Enter a Jolly River Pilot

"Mr. Lolly-Jones is it?" rubbing me up the wrong way to start with. "Harold said I'd find you here. Frankly I didn't know you existed till he told me over a pint. Anyway, I've a Bush colour set and it keeps going down to a thin white line or two across the screen every week or so and the buggers can't find out why. Harold said to take it to you and you'd sort it out in no time. Speedy Gonzales he called you. Ha Ha!" Bully for Harold. With friends like him you don't need enemies. So in came the Bush CTV 1226 (A823B chassis).

Prodding around the field timebase caused the fault to come and go, but it wasn't till we opened up the panel and played with the pincushion phase coil 6L20 that the cause was evident. Resoldering the coil pegs cleared the trouble permanently.

"Well I never. Perhaps it'll be all right for a week or so, eh?"

"Bet you a pint to a brandy it'll stay longer than that."

It was not quite the end of the saga though.

"Oh, by the way, last night we kept getting a sort of morse code coming through on the sound. Perhaps you could have a quick look at the sound side while it's here?"

Until now I'd kept the sound down. Turning it up produced quite reasonable quality but with an edgy edge to it. After a short time the quality became worse and the thing started to motor boat. I touched the audio transistors and burnt my fingers. Spraying the BC126 driver transistor 2VT11 with freezer stopped the motor boating, but for a short time only. So I stuck in an equivalent and this got hot too. The voltages were haywire, and how, it produced reasonable sound beats me. Checking the output pair cold showed that they gave perfectly good readings, provided they were both npn types that is. *BOTH* npn?

Grabbing the circuit confirmed that the lower one should be a BC139 pnp transistor. The one fitted was an npn field output type 16039. My mind went numb. How long had this been in? Perhaps this is what is meant by bipolar ... Now I knew.

Anyway, we stuck in a BD204 and everything ran nice and cool and there was no more morse code.

Looking back at the screen and changing channels, the faces went green.

"Oh that happens quite often. We just press the buttons in a couple of times and it goes right again."

Getting the faces to go green again, we reset the ident preset 3RV4 and tried it a few times. Now O.K.

Wrap it up and chat. "Thanks very much. Nice to have met you. See you soon. Goodbye." Very nice chap. His wife was very nice too. Funny about that sound output though.

### **Back they Come**

The phone rang. Mr. Middlestump, and I felt my nerves cracking.

"We're having to watch this rotten set in black and white. After it's been on about an hour the colour starts flickering in and out and we're fed up with it."

"So am I. Why don't you find a good engineer?"

"I'll bring it in tomorrow. Perhaps it's only a little thing caused by that wire coming off. Cheers."

So we had a lovely day to look forward to. The ITT with intermittent colour and the 3000. Quite apart from the usual run of the mill heartache. Was tomorrow going to be the day when they would finally cart me off to the funny farm?

When it was time to get up in the morning I didn't want to. I wanted to stay there nice and warm and go back to sleep and not face these colourless colour sets.

The cat insisted that I got up however, so down we went to feed her, take the dog for his sniff around and generally do all the things everyone does at the start of the day.

### Easy Ones

The first set to be tackled was of all things an ITT. No signals. No transistor supply voltage. O.K. at the l.t. bridge. Not passing through the AD161 regulator transistor as its base voltage very low. This comes from T45 (BC170) which was also not being turned on. Check the reference voltage. Very low. Suspect the zener i.c. D11. Change to TAA550. All voltages now back to normal. Picture rolling, so change PCL805. Width in each side, so check drive to PL509. O.K. Change PL509. Done.

Bring on the next one. Thorn 8500, picture very blurred, suspect focus unit. Focus unit O.K. Low voltage at focus pin on tube, so check  $100k\Omega$  series resistor which turns out to be virtually open-circuit. Fit new resistor. O.K.

### The Intermittents

Enter Mr. Middlestump. Spirits fall.

On the bench there was very little colour signal and what there was was varying. We started on the decoder panel, which really was not a good place to start.

There was quite a bit of variation going on. We finally ended up at R306 (see Fig. 2), where there was quite a bit of variation. Now this is the a.c.c. line, so it seemed logical to check the associated preset R308 which could have been playing about. It wasn't, and the voltage at its slider was steady.

So back to the i.f. panel where the first chroma amplifier transistor VT110 lives. This proved to have base-to-emitter leakage, and once a new BF224 was fitted the colour signal was steady and the picture could not be faulted. Our spirits rose. To be quite honest we had spent some time chasing red herrings on the decoder panel, but we are learning, bit by bit, not to leap before you jump or something.

It appeared that Mr. Middlestump had finally been sorted out so it was one down, one to go – with Mr. Hoo.

The latter gentleman finally arrived, and we set to to sort out his intermittent trouble.

It needed only a finger on the base of the ident transistor T35 to cause some sort of colour bars to appear on the screen, so we had to conclude that the trouble was still in the circuit preceding this – the burst detector circuit. The coil, diodes etc. are in the top left can, and although we had

350

Fig. 1 (left): Power supply error amplifier circuit, Thorn 3000 chassis. W620 clamps the emitter of VT608 to the 30V rail. The time-constant of R633-C623 ensures that VT608 is cut off when the set is switched on, giving a slow-start action. W619 is included to discharge C623 rapidly when the set is switched off.

Fig. 2 (right): A.C.C. detector and first chroma amplifier circuits, Thorn 3000 chassis.

already had this off once – to check the diodes – we hadn't really attacked it head on. Now seemed the time to do so. Every connection on this small subpanel was checked and resoldered.

Upon reassembly we had the bistable happily sharing the voltages and the colour on the screen warmed our hearts. It didn't go off any more, so we had to conclude that no component had actually been at fault and that all along it had been a dry-joint in the phase detector even though all the connections had looked good. It was a good job the cat had got me up, or I'd have still been worrying about them. Now we have only the changing colour on that Decca to worry about ...

The above layout should help those carrying out the off-tape monitoring modification suggested last month.

## TECS EXPANDABLE COMPUTER SYSTEM

Full colour, full facility Microprocessor based, Aerial Input decoder locked to broadcast colour picture (newsflash & subtitles in full colour inserted into picture). Remote keyboard control. The most versatile decoder on the market.

★**COMPUTING:** Business or domestic programs in full colour, Teletext – Format Display; runs "Basic" or 6800µp machine code, all at the touch of a button.

Peripherals available e.g. Cassette I/O, Printer, Floppy Discs etc. Available in many forms, fully expandable, from a simple Teletext Decoder to a professional computer/information centre. Available in 19" rack or Table Top versions.

Please send for brochure:

PRICES START AT AROUND £360. MAIL ORDER

DETAILS LARGE S.A.E.

ACCESS WELCOME TECHNALOGICS DEPT. T.V. 8 EGERTON ST., LIVERPOOL L8 7LY.

# The Rank Teletext Receiver

**Bob Fisher** 

RANK RADIO INTERNATIONAL was the first setmaker to produce a teletext television receiver for the ordinary domestic market. Models AC6333 and BC6333 were initially distributed in the London area only, at a price that seemed to settle at around £1,200. Subsequently, with increased production, the sets came to be nationally distributed and seem to be available at around £700-£750.

### **Basic Chassis**

The conventional parts of the receiver are based on the now familiar Z718 chassis, with its Toshiba RIS c.r.t. The purpose of the present article is to examine the sophisticated logic interface required between the conventional receiver circuitry and the teletext decoder section. Many people will breathe a sigh of relief when they discover that the decoder itself is the Texas Instruments Tifax XM11 module, which uses a selection of specially developed l.s.i. chips and is supplied by Texas ready built, tested and aligned.

Many parts of the receiver remain unchanged from the basic chassis – the audio amplifier, timebases, convergence circuitry, basic power supply, width modulator and tube control circuits. Changes have been made in the i.f. panel however, which uses a surface acoustic-wave filter (SAWF) to provide the i.f. bandpass shaping. This is followed by a four-stage wideband amplifier and then a TCA270SQ i.c. which provides further amplification, synchronous demodulation and an a.f.c. output. A TBA120S is used in the intercarrier sound channel.

The colour decoder still uses the Mullard three-chip arrangement (TBA560C/TBA540/TCA800), but differs in the following respects. The RGB output stages are now driven from either the TCA800 or the teletext decoder; picture/text blanking is added to the contrast input of the TBA560C (pin 2); and small component changes have been made to facilitate the introduction of remote brightness and colour control.

Changes have also been made to the control panel to enable the touch tuning circuitry to be interfaced with the commands from the remote control transmitter.

### **Remote Control**

An ultrasonic remote control system is employed, using the ITT SAA1024 transmitter/encoder i.c. and SAA1025 receiver/decoder i.c. The hand-held remote control unit has 25 separate push buttons to control most functions of the receiver. The remote control system is conventional and various versions of it have been described in some detail in previous issues – see January/February 1978 for example. We shall pass straight on to the teletext interfacing therefore. Fig. 1 shows the receiver in simplified block diagram form, to serve as an introduction to the basic concepts involved.

Seventeen control functions are applied to the Tifax decoder. They are made by momentarily connecting two wires of a four wire by four wire matrix which is connected to the XM11 module. This gives sixteen commands: the seventeenth (reveal) is made by earthing one of outputs. The connections could be made by a nine-way cable to a seventeen push-button unit, but it's much more elegant as here to operate the controls via the remote control system. Hence the need for interfacing.

### Remote Control Interfacing

The circuit of the remote control interface section of the receiver is shown in Figs. 2-4. It takes the binary-coded decimal (BCD) outputs from the SAA1025 remote control decoder i.c. in the remote control receiver unit and processes them in such a way that they connect the required two wires of the four by four wire matrix just mentioned. The BCD information consists of negative-going pulses approximately 23msec wide, repeated at approximately 185msec intervals whenever a signal is being received from the remote control transmitter. The outputs appear on pins 8, 9, 7, 11 and 12 of the SAA1025 i.c., and are applied to pins 5, 7, 8, 6 and 4 of the interface input connector Z2. All five BCD inputs are reduced in level from 17V peak-to-peak to 5V peak-to-peak by zener diodes ZD1-5. This makes them suitable for use with the 74 series logic i.c.s which are employed in the following circuitry. The first i.c. 14IC12 is used simply to buffer the input signals from the zener diodes before they are applied to the following logic circuits.

The five BCD outputs from the SAA1025 i.c. are given the now conventional code letters A, B, C, D and E. A comes in at Z2-4, E at Z2-6, B at Z2-8, C at Z2-7 and D at Z2-5. During each teletext instruction, the D bit applied to pin 14 of 14IC12 will always be at the logic one level. 14IC12 identifies a teletext command therefore. The resultant signal at pin 15 is used to trigger the monostable 14IC6, which produces at pin 8 an output pulse approximately 200msec long. The timing is determined by C26, C27 and R40 and is chosen to be significantly longer than the 23msec pulses from the BCD decoder but short enough to not fill the spaces between successive teletext commands from the remote transmitter unit. When the receiver is first switched on, 14IC6 could trigger at random: to prevent this, pin 5 is temporarily held at the low state until C25 charges to 5V via R42. The logic outputs at pins 6 and 8 of 14IC6 are used to identify a teletext command.

The 23msec pulse outputs from 14IC12 (pins 2, 12, 4 and 10) next have to be converted to true logic signals which can be used to control the Tifax module. This is done by the quad flip-flop 14IC9. When 14IC6 identifies the presence of a teletext command, its output is used to clear 14IC9 by applying a pulse to pin 1. After a short delay, determined by R43/C29, 14IC9 is clocked, causing the output of each of its flip-flops to assume the same logic state as the input. The output conditions of this i.c. will stay in the same state as the inputs until pin 8 of 14IC6 falls to zero when the D bit input disappears. 14IC9 is not clocked when the remote receiver is receiving analogue control commands (increase/decrease brightness/colour/volume) because the D input then remains at zero.

The outputs from 14IC9 are A, E, B and C plus  $\overline{B}$  and  $\overline{C}$ .

### **TELEVISION MAY 1979**

٢

ء

١.

The B, C,  $\overline{B}$  and  $\overline{C}$  signals, together with the D output from pin 8 of 14IC6, are recoded by 14IC8 and 14IC11 (see Fig. 3). The four outputs produced, together with the A and E outputs from 14IC9, provide separate inputs to the "one-tofour line" decoders 14IC7 and 14IC10. These are arranged in two pairs and decode the information from 14IC11 and 14IC8 to produce the cross contacts on the four by four matrix to and from the Tifax module.

 $12\mu$ sec pulses (determined by the internal timing of the Tifax module) appear at PL1-5 to PL1-8, and depending on the command transmitted one of these lines is connected to one of the input lines on PL1-1 to PL1-4, giving individual page selection etc.

The reveal instruction requires PL1-5 to be earthed. This is achieved by taking the C and E outputs of the buffer 14IC12 and inverting them in 14IC4. Hence pins 1 and 2 of 14IC8 are fed with E and C respectively, and a third input on pin 13 is the unlatched D output of 14IC12. Thus when D is zero (high) and C and E are at one (low) all the inputs to this three input NAND gate are at logic one, and its output at pin 12 becomes low. This causes the cathode of 14D15 to return to zero volts, thus earthing PL1-5 as required.

It should be noted that the E, C and D inputs used for this function are unlatched, and therefore consist of a series of 23mS pulses. In this mode of operation the pulsing is unimportant as the first pulse grounding the cathode of 14D15 will latch the required circuits in the Tifax module. The A and B outputs of 14IC12 are also at low for reveal, but no use is made of these outputs because the D, C and E outputs give an unambiguous identification of the instruction received.

### Channel Change Inhibit

The channel change circuits must be inhibited for either three or four figure commands after a text function has been transmitted. To achieve this inhibit, the page or preselect command must first be identified, and the following numbers of commands (three after a page, four after a preselect command) counted.

The circuitry responsible for carrying out these operations is shown in Fig. 4. The counting element is the five-stage shift-register 14IC5, together with the NAND gates 14IC4 and 14IC3. Under normal conditions, the clear input at pin 16 of 14IC5 is held at 5V via 14R39. The preset enable input is normally low because the two inputs at pins 4 and 5 of the NAND gate 14IC4 are held high (5V) via 14R36 and 14R37. The preset inputs to each of the five flip-flops in the register are also held at 5V, and the serial shift input (pin 9) is grounded.

Selection of the page button on the ultrasonic transmitter causes pin 5 of 14IC10 (Fig. 3) to be pulsed low, and this causes pin 4 of 14IC4 also to go low. Hence the output of this NAND gate (pin 6) drives the preset enable input to 14IC5 high, enabling the shift register to be clocked.

Clocking the register is achieved by taking the D output of the monostable 14IC6 (this identifies the transmission of a text command), delaying this pulse by the network 14R41 and 14C28, and applying it to pin 1 of the shift register. When the D output of 14IC6 returns to 5V, the rising edge clocks the 0V on pin 9 of 14IC5 into the first flip-flop. Exactly the same sequence of events takes place when the preselect command is transmitted, causing pin 5 of 14IC4 to be pulsed low. Again the output on pin 6 goes high, enabling the shift register.

The number commands also cause the D bit from the BCD decoder i.c. to be in the one state, i.e. 23msec negative

pulses. This causes the  $\overline{D}$  output from 14IC6 to change state every time a number command is transmitted. As a result, 14IC5 is clocked on the positive rising edge of the  $\overline{D}$ signal, advancing the zero volts condition applied to the first flip-flop to the second flip-flop. This sequence of events continues until three figure commands have been transmitted, when pin 11 of 14IC5 falls low, and after four commands when pin 10 of 14IC5 falls low. Each of these outputs feeds a separate NAND gate latch, and under normal conditions these are set so that the outputs of both latches are at one, and therefore the two inputs to the NAND gate 14IC3 will be at one. The output of this gate will be at zero, causing 14TR7 to cut off.

Let's assume that a time-preselect command is transmitted. Pin 2 of 14IC4 is pulsed low during the preselect command. This causes the output at pin 3 to go high, producing two logic one inputs to pins 12 and 13 of the second NAND gate 14IC3. The output of this gate (pin 11) now goes to a logic zero, causing the output of the final NAND gate 14IC3 to go to a logic one. This drives 14TR7 into saturation, thus inhibiting the channel change circuitry. This situation will continue until four number commands are transmitted and clocked through the series of flip-flops in 14IC5 as previously described.

On the fourth number command, pin 10 of 14IC5 falls to zero. 14D14 conducts, causing pin 13 of 14IC3 to go to logic zero. This NAND gate now has two logic zero inputs, hence its output will rise to logic one and be latched in that condition by 14IC4. The final NAND gate 14IC3 now returns to its two logic one input state, driving 14TR7 into cut off.

During a page command, an identical series of events takes place using the NAND gates C and D and the output from pin 11 of 14IC5. The difference in this situation is that the output latch is held for only three number commands instead of four.

It's necessary to be able to reset this circuit, so that the channel change inhibit is disabled if half way through a text page or preselect command the viewer wishes to display a television picture. Whenever a picture instruction is transmitted, the output at pin 11 of 14IC10 goes low during the  $12\mu$ sec Tifax strobe pulses. This causes 14D19 to conduct, so that the anode of the diode and hence pin 16 (the clear input) of 14IC5 falls to logic zero. This action clears all the flip-flops in 14IC5, and thus resets the two output latches 14IC3/4.

The start-up circuit previously described in conjunction with 14IC6 (the D-bit flip-flop) is also used to clear 14IC5 initially. At switch on, C25 charges slowly through R42 to 5V. At the beginning of this charge-up time D16 will be forward biased, returning pin 16 of 14IC5 to logic zero. Diode D17 is used to discharge C25 via the low impedance of the power supply smoothing circuits when the receiver is switched off.

To prevent the receiver displaying either text or mixed picture when it's switched on it's necessary to hold the D bit low, which the Tifax module interprets as a clear instruction. To produce this effect D22 is connected between the D bit line and the positive end of C25. When the receiver is switched on C25 is in a discharged state. D22 conducts, returning the D bit line to logic zero on switch on.

### Tifax/Video Interfacing

The analogue interface circuits (see Fig. 5) handle the pulse, video and RGB signals to and from the Tifax unit. They are considerably simpler than the logic circuits just described, and use circuit techniques with which the reader

Fig. 3: The interfacing circuitry which controls the Tifax teletext module.

Fig. 4: The circuitry used to inhibit the channel change circuits during a teletext command.

will be familiar. A detailed explanation is not necessary.

A composite video signal from the i.f. amplifier is applied to the base of TR2, which is in turn d.c. coupled to the phase splitter TR3. A non-inverted output from the collector of TR3, whose gain is controlled by RV3, is used to supply the Tifax module with its video input, via PL2-16. An inverted video output from the emitter of TR3 is coupled via C11 to the TBA950, IC1. This section of the circuit is the same as that used in the receiver's line timebase. Text line hold is adjusted by RV2, and text centring (horizontal phase control) is achieved by RV1. A line sync output from pin 2 of IC1 is d.c. restored by D1 and C9 and then applied to the base of the sync pulse amplifier transistor TR1. An inverted and amplified output from this transistor is coupled via C10 to PL2-15 to supply the Tifax module with the required sync information.

Inverted RGB outputs from the Tifax unit appear at PL2-19, 18 and 17 respectively, resistors R27/28/29 forming collector loads for transistors mounted on the Tifax unit. Each of these signals is inverted in IC2, producing non-composite positive-going RGB text signals at pins 12, 8 and 10 respectively. The amplitude of the blue text level is fixed, adjustment via RV4 and RV6 enabling the green and red text levels to be matched to produce the correct levels to

#### **TELEVISION MAY 1979**

4 1

355

Fig. 5: The circuitry which interfaces the Tifax module with the set's video circuits. The lower part of the circuit feeds sync pulses to the Tifax module.

give a black and white display. Overall gain in the text mode, achieved by adjusting RV5, is effected by controlling the current flowing through TR8. This in turn controls the current flowing through RV4, RV6 and R24/25, the output load resistors of IC2.

From here the three signals are a.c. coupled (C14/15/16) to the output emitter-followers TR4/5/6. The base of each emitter-follower is d.c. restored to a reference voltage derived from the RGB output stages of the receiver. This ensures that the black level of the text information closely matches that of the picture, so that large changes in brightness do not occur when switching from picture to text or vice versa.

To provide a box display between picture and text, a blanking signal is made available at PL2-21. It takes the form of a switching waveform that changes level when a change over from picture to text or vice versa is required. This output is inverted by IC2 and then fed via L1 to the luminance circuitry, where it turns off the video signal during the boxed section of the picture. The inserted text information is fed to the RGB output stages of the receiver via the interface circuits just described.

In the mixed text mode a monochrome output from the Tifax unit at PL2-20 is added to the blanking signal. This produces a monochrome text display that's superimposed on top of the colour off-air picture.

This is the first teletext receiver to have been examined in any detail in *Television*. Most of the major setmakers are now producing receivers which follow very similar lines to those just described, and as the number of teletext receivers on the market increases so the service engineer will begin to encounter this sort of circuitry more frequently. It would seem that the logic probe and the 16-pin logic checker will soon be taking their place alongside the well established multimeter!

# **Colour Receiver Project**

### Part 8

WE are now nearing the end of the basic receiver, and the only remaining details to be covered are the board interconnections, construction of a suitable cabinet (both covered this month), the setting up procedure, and a faultfinding guide with oscillograms.

It's important at this stage to consider the receiver as a whole, as this will affect the cabinet design and the purchase of the various miscellaneous cabinet components (e.g. the station selector/potentiometer assembly). Three options will be featured in forthcoming issues, and constructors are advised to make their choice before tackling the cabinet. If you are unable to decide until you have seen the components list (for economic reasons) then we strongly advise that the cabinet is left in abeyance until you have been able to come to a decision.

### Options

¢

The options are as follows:

(1) Remote control: This system allows the volume, brightness and colour saturation levels to be remotely controlled, along with remote selection of up to eight preset channels. In addition, there's a normalise function, sound mute and mains off. The selected channel number is dis-

played on a seven-segment l.e.d. display.

When this option is adopted, the only component mounted on the cabinet as a user control is the mains on/off switch to allow switch on and manual switch off (the former operation cannot be performed by remote control).

(2) Teletext: This employs the Texas Instruments XM11 Tifax module with a keyboard which is linked to the set via a multiway cable. In this case the only difference from the cabinet point of view between the basic receiver and one equipped for teletext reception is the need for an additional hole for the multiway connecting cable. All other control operations are performed by the cabinet-mounted controls.

(3) Remote control plus teletext: This is similar to (1) but involves the use of a different transmitter unit to cater for the additional commands and an interface board within the receiver to enable the transmitted commands to control the Tifax module.

So the cabinet design will be affected whichever of these options may be selected. Further details will be provided when we come to cover each of the options in turn. Note that a station selector/potentiometer assembly is not required when remote control is incorporated.

At this stage it's advisable to wire up the basic receiver using manual controls which are not mounted on the cabinet to enable setting-up adjustments to be carried out. The receiver can then be set up and tested without getting involved with the added complications the options introduce.

### **Cabinet Design**

The basic cabinet details are shown in Fig. 2. We used Contiboard for the first prototype, with a plywood front panel. The method of construction is quite straightforward, with only glueing being required to produce a rigid structure. The back can be made of pegboard, with a rectangular protruding section added to accommodate the end of the tube and the tube's base board.

Either rotary or slider controls can be used in the basic receiver. The cutouts in the front panel will have to be made to suit. Either a  $7 \times 4in$ .  $15\Omega$  or an  $8 \times 5in$ .  $15\Omega$  speaker can be used – we don't recommend the use of a hi-fi type of speaker since its high flux density will adversely affect the purity of the display (we speak from experience!). For similar reasons the mains transformer should not be permanently fixed in position until the receiver has been set up and tested. The transformer can then be oriented so as to eliminate any interference between it and the c.r.t.

Alternatives to the suggested cabinet design can of course be used. One possible approach, which has been successfully adopted with another prototype, is to make use of a cabinet rescued from an older, scrapped set. Another approach is purchase a cabinet as a replacement part from a setmaker. The operation of the set is quite cool, so that the exact board layout and mounting arrangements are relatively unimportant. One should adopt a logical arrangement however so as to keep the wiring as simple as possible. The compactness of the basic receiver design allows quite a

TELEVISION MAY 1979

358

I

Fig. 2: Details of the cabinet used in the first prototype. The design was shown on the front cover of our October 1978 issue. Stain and polish the outside to obtain the desired finish.

degree of flexibility in the choice of layout adopted, and no problems should be experienced when a ready-made cabinet is used.

### Wiring Details

1

The wiring diagram for the basic receiver is shown in Fig. 1. When making connections, either individual ones or via wire looms, it's worth checking back to the circuit diagrams of the boards that are being interconnected so as to get an overall view of the wiring. Many of the connection points are also used as test points – so it's useful to familiarise yourself with as many of them as possible while wiring up.

Mating connectors are used for all board connections, and ribbon cable can be used in all cases except for the mains connections, the connections to the c.r.t. base board, and those to the mains transformer, the degaussing coils and the deflection yoke.

Keep wiring as short as possible and straightforward. Avoid passing any wires near the line output transformer and e.h.t. tripler. When complete, secure the wiring looms to the cabinet. The controls are all d.c. operated, so there's no need to use screened cable. If neither of the two remote control options is to be used, a mains switch and a station selector assembly are required. The mains switch can be of any type, rated at 240V a.c. 2A or greater. In the case of a remotely controlled receiver, the mains switch required is a special type incorporating a solenoid – details will be given in the article describing the remote control. For test pur-

### **TELEVISION MAY 1979**

poses, use any type of switch as specified above.

The station selector we used in the first prototype is a Telefunken unit which we understand is available from Manor Supplies. Virtually any type can be used -4, 6 or 8 position. Since the a.f.c. is permanently connected, ignore any a.f.c. switch which may be present. Again, if you choose one of the remote control options this unit is not required – for test purposes even a standard  $10k\Omega$  linear potentiometer can be used, though the tuning will be very critical.

There now follows a very strong warning: do not switch on as soon as you have finished wiring up. We apologise for getting so far in our description and then leaving the switchon precautions and the setting up procedure until next month, but these are rather involved. Resist the temptation to switch on, since it's very likely that damage to expensive components on the timebase board and stress to others will be the result if various preliminary precautions are not taken.

Finally, it should not be necessary to emphasize that all wiring should be double checked. Reversed connections can be dangerous and can result in serious damage.

#### Correction

An error occurred on the timebase board component layout – Fig. 2, page 254 of the March issue – where two capacitors were identified as C14. The capacitor in series with R8 should have been shown as C7.

Service Notebook

George Wilding

### **Plugs 'n Sockets**

It should never have happened of course, but it was all so easy and can cause needless, time-consuming checking. The power supply/line timebase panel of a Pye hybrid colour receiver (697 chassis) had been brought in for replacement of the tripler, the h.t. reservoir/smoothing electrolytic can and, while we were at it, all those resistors which so commonly change value on this board to produce various symptoms. Regular readers will know them  $- R203 (47k\Omega)$ , R227 (100k $\Omega$ ) and R210 (100k $\Omega$ ) in the line timebase, plus the thermistor R305 and its series surge limiting resistor R306 in the power supply section. When renovating the panel the flywheel line sync discriminator diodes D40/41 should be checked for good forward/reverse resistance ratio, C215 (16 $\mu$ F) which decouples the supply to the PCF802 should be changed if at all suspect, and the various small can electrolytics used to smooth and decouple the various l.t. supplies should be similarly checked - look for domed end caps and slight white deposits around the soldering tags, sure signs of deterioration and impending failure. Change the c.r.t. first anode supply decoupling capacitor C224 (0.1 $\mu$ F) if at all discoloured, and it won't do any harm to change the boost capacitor C218  $(0.47\mu F)$  if it appears to be the original one.

Following this overhaul, we took the panel back to the customer's set and plugged up. Result, sound and valves alight but an otherwise dead set due to no h.t. The immediate suspicion was that a break could have developed in one of the five edge connectors. On second thoughts however this didn't seem likely, since most feeds to and from the edge connectors were in order. But there we were: ample h.t. on the smoothing electrolytic, none in the line output stage. The penny dropped on glancing over the panel: two of the five edge connectors, one red and one white, are interchangeable and had been transposed. Changing them to their correct positions restored normal operation, and it appeared that the connectors were so wired that transposing them would cut off the h.t. supply to avoid possible damage. Wouldn't it have been simpler to have had non-interchangeable connectors though, or at least to have had the three at the side of the panel in one colour, different to that of the connectors on the top edge? As it is, the sole red plug is between the two white plugs at the side, complementing the top edge which has a red plastic fuse cover between two white connectors.

Usually, miniature plugs on flying leads fit into panel sockets of similar colour. In the solid-state Pye 731 chassis to which we were called the other day however we found that while the several plugs to the chrominance panel, which had to be changed, were on separately coloured leads, there was no matching identification on the sockets. Before removing them therefore it was necessary to mark the coloured lead positions on the diagram in the manual. Imagine the work that could have been caused if this had not been done and there was no other set to refer to.

### Lack of Width

The trouble with a hybrid ITT colour set (CVC5 chassis) 360

was lack of width. Fitting new line output stage valves produced no improvement, so as this fault is very often in all sets with valve line output circuits due to increase in the value of one or more of the resistors in the width circuit these were next checked. All turned out to be within specification, the trouble eventually turning out to be due to one of the  $0.0022\mu$ F decoupling capacitors associated with this network – C300.

### **No Raster**

The owner of a Pye hybrid colour receiver (697 chassis) reported that the picture had suddenly gone, leaving the sound only. Naturally we first suspected the line timebase, so the back was removed and a spark test made at the anode of the PL509 line output valve. The arc obtained was only about half the normal size, so valve replacements (PL509 and the associated PY500 boost diode) were then tried - without success. The PL509's wirewound screen grid feed resistor couldn't be open-circuit or there would have been no sort of arc at all. The next possibility that occurred to us was that maybe the PL509's cathode resistor R226 had gone open-circuit, with the result that the shunt electrolytic had broken down to become a much higher value resistor, in this way biasing the valve excessively. R226 read correctly at  $10\Omega$  however. A check on the h.t. voltage then revealed that it was only 160V instead of around 285V. The most likely, though unusual, cause would be sudden loss of capacitance in the h.t. reservoir electrolytic. Inspection of the main electrolytic canister showed considerable curvature of the end cap – always a bad sign - and on removing it from the set the reservoir section was found to be virtually without capacitance, though the smoothing section appeared to be normal. Absence of hum on sound was due to the audio circuits being fed from a separate l.t. supply.

### **Trouble with Rectifier Diodes**

We've come across three Waltham monochrome portables recently, all with the same fault – a blown mains input fuse due to a short-circuit diode or diodes in the bridge rectifier circuit. The shorted diode(s) can be detected even without a meter – by their discoloured or burnt appearance. They are particularly small, and we find it best to replace all four with BY127s or equivalents.

### **No Results**

A Pye hybrid colour set with the fault condition "no results" proved to have a blown mains fuse, the very blackened nature of it showing that the rupture had been violent. First suspect was the mains filter capacitor, but this was o.k. Then, on looking down the component side of the vertical panel, we saw that the insulation of the mains lead at one point was badly damaged and burnt, completely exposing one of the conductors for a fraction of an inch. One fitting a new lead and trying again the fuse held but there was quite severe sparking around the surge-limiting thermistor R305, which is in series with the h.t. rectifier D49 and a  $3.3\Omega$  resistor (R306). The thermistor was very brittle, breaking off when touched and more or less unsoldered from the print. There was no short-circuit across the h.t. line, but the h.t. rectifier itself was short-circuit, thus applying the full a.c. mains input to the reservoir/smoothing electrolytics via R305/6. Surprisingly, first class results were obtained after replacing the diode, thermistor and resistor, the high-value electrolytics

apparently being none the worse for the overload they'd received.

### Solid-state Pye Chassis

اه راهم

Over the past few months we've come across several Pye solid-state colour sets fitted with the 731/725 series chassis, all with the same fault – a broken down tripler. In each case the cause of the trouble was the same, a short-circuit in the capacitor C563 across which the tube's first anode supplies are developed – the capacitor is connected to the earthy end of the e.h.t. overwinding on the line output transformer. You'll find the h.t. supply fuse F971 (1A) blown, but no apparent h.t. short. It's always worth checking this capacitor first when these conditions are encountered – it's mounted horizontally just under the top side of the e.h.t. can on the line timebase panel. Note that it's a 1.25kV working type – the common 1kV type boost capacitor is quite unsuitable here.

### **Signals Missing**

Ð

ŧ

One rule I always follow is never to unsolder any components, especially semiconductor devices of any type, unless such action proves to be unavoidable – rather like the advice given by a famous royal physician about taking medicine! After first isolating suspect components as far as possible by removing plug-in connectors etc., double check junction resistances using a low-reading ohmmeter.

The value of this rule was well illustrated by an example that came our way recently - an ITT hybrid colour set fitted with the CVC9 chassis and a Feathertouch touch-tuner assembly. The fault was no picture, only weak sound from a foreign radio station - with the channel selector completely inoperative and not even any bulb illumination. The symptoms suggested absence of one or more l.t. rails feeding the varicap tuner, control panel and other associated circuitry. A quick check showed that all the fuses were intact, but the main l.t. rail was at only a few volts instead of 20V. The line is stabilised by a series regulator circuit, with a zener diode being used to provide both the reference voltage here and also the regulated supply for the preset tuning potentiometers (see Fig. 1). The diode (D11) is shown as a zener on the circuit, but is actually a dual-lead miniature i.c. (type ZTK33B). The same low voltage was found across it, instead of the 32-38V shown on the circuit diagram, suggesting at first that either this component or the  $0.0047 \mu F$ shunt decoupling capacitor C41 was faulty. We switched off

Fig. 1: 20V stabiliser and tuning voltage regulator circuitry, ITT CVC9 chassis. The supply to the tuning potentiometers is taken via i.c.s which provide channel switching. A defective zener i.c. D11 can affect the 20V supply as well as the tuning. The TAA550 and ZTK33B are alternative devices in this position.

**TELEVISION MAY 1979** 

and found a low-resistance reading across these components in both directions, seeming to confirm our suspicion.

Nearby however there are two multicontact plugs and sockets, one supplying the tuner and the other the Feathertouch control panel. Remove the latter, and the shortcircuit across D11 vanished. So the trouble was on the control panel. Removing and dismantling the latter turned out to be a simple matter, and we then discovered that removing the SAS560S plug-in i.c. removed the short. Fitting a replacement restored the short however! So we followed the same course with the other, SAS570S, plug-in i.c., whereupon normal operation was restored. Both being digital i.c.s, they are d.c. connected.

Incidentally, if you ever want to fit a zener diode or voltage stablising i.c. to a set that's just been switched off, especially if the original was open-circuit, always first connect the connection points. These devices are very susceptible to surges, and can easily be made useless.

### **Dark Picture**

The owner of a Thorn monochrome set fitted with the 1500 chassis said that the picture had suddenly gone very dark while viewing. Inspection showed that the symptoms were very similar to those of a very low emission tube, though without the silvery effect and tendency to defocus at the edges. In addition, flyback lines were quite noticeable, even with the brightness control setting at minimum. We often come across these symptoms, indicating a defective tube, and in most cases find that lightly tapping the tube's neck confirms the diagnosis by producing bright horizontal streaks. In a high proportion of such cases, further judicious tapping restores a normal picture for a while - sometimes for a considerable time. Before writing off tubes that exhibit these symptoms therefore it's worth checking whether tapping the neck provides a cure. On this particular occasion the restored picture lasted a couple of days, but following a repeat of the process it's lasted a couple of months without further trouble.

### **Christmas Day Saga**

A blown mains fuse in sets fitted with the various Pye hybrid colour chassis seems to be a very common fault. Last Christmas day we received an urgent call to one of these sets and encountered the fault yet again. The mains filter capacitor was in order and the power supply seemed o.k., so attention was turned to the line output stage, the first check being to connect the ohmmeter from the anode of the PL509 line output valve to chassis. Only a low ohms reading was obtained, indicating that the  $0.47\mu$ F boost capacitor C218 was almost certainly short-circuit. This particular set was one of the earlier ones, with a wired chassis type of line timebase/power supply unit, with C218 mounted just under the line output transformer. It was found to have broken down as expected, but on replacing it and switching on we found we had another fault-field collapse.

Since the set had been working normally prior to the fuse blowing, our immediate reaction was that somehow we'd disconnected a lead – there are five multicontact edge connectors to the line timebase/power supply unit. Nothing amiss could be seen visually – we should be so lucky! – but we were rather pleased to find that the cases of the BD124 field output transistors were cold. At least we knew the cause of the trouble, a non-operative, probably non-powered field output stage.

As you're probably aware, the two field output transistors

# **Colour Pattern Generator**

### Part 1

Malcolm Burrell

SEVERAL pattern generator designs have been published in recent years, including the odd colour one. Most have tended to be variations on the crosshatch theme however, and thus of limited practical use. When carrying out service work, most technicians prefer to have a fairly detailed test pattern available, but all too often one's not there when most needed. The obvious answer is to create one's own!

Several factors influenced this design. Foremost was cost. Although the unit uses the rather expensive ZNA134 integrated circuit as the source of sync pulses, this was favoured due to its quality and simplicity. Plans are afoot however to develop a very basic random-interlace unit which could be used in conjunction with this pattern generator by those willing to forgo a little stability on grounds of cost.

The printed boards are also expensive items, but are preferable to hand-wiring as used in the two prototypes which tended to resemble a telephone exchange! It's well worthwhile investing in a set of i.c. sockets, since the odd faulty i.c. - or one inserted the wrong way around - which has to be removed could spoil the board.

Where possible, TTL i.c.s were used because of their low cost. There are rather a lot, but they are readily available and the logic used is very basic in spite of one or two deviations from convention. The disadvantage of these components is their high power consumption, amounting to about 700mA on the 5V rail. Apart however from the design problem created by carrying such currents on narrow printed tracks, the fact that we are transforming our current from the mains and not indulging in the purchase of hefty batteries means that the actual energy consumed is very small.

Since a high proportion of workshop and field service work relies upon the observation and diagnosis of screen symptoms, it was felt best to simplify the circuitry so as to provide only a single satisfactory display. There's scope for the ambitious user with elaborate test equipment to modify the design, but this is outside the confines of the present article.

Fig. 1: Simplified diagram relating the digital waveforms to the test pattern.

In any case, many home constructors would probably not possess any more test equipment than a multimeter, which brings us to the next criterion: that there should be a minimum of preset adjustments, and that by judicious use of the built-in r.f. modulator many constructional errors can be traced by observing the display produced on a conventional receiver.

### **Patterns Provided**

1

.1

1 1

As many features as possible have been incorporated in the composite pattern so that the operation of a receiver can be assessed at a glance. Also, in the event of it being distributed to service bays in a workshop, the single pattern should suffice most purposes with no need of any selection system and the no argument as to who is going to use which pattern!

Since it might be used for demonstration purposes, the pattern should also be aesthetically acceptable – both in monochrome and colour. This necessitated much initial doodling, and the eventual production of scale line drawings with corresponding waveforms sketched in at the sides. A simplified version of the final drawing appears in Fig. 1. The two accompanying tables show the combinations of these waveforms: those shown and the inverted (bar-numbered) ones not shown on the drawing give the desired patterns when applied to the appropriate gates. There is ample scope for those who so desire to extend the unit so that it gives out a complete range of different test patterns, such as crosshatch and chequerboard, but since this is a matter for the individual the generator will be treated for the present as a single output unit.

A symmetrical castellated border is incorporated for picture centring and geometry checks. The width of the leftand right-hand borders is a little over one sixteenth of the active line period (or about  $3 \cdot 2\mu$ sec) to give a rather thick border so that at least some of it should be visible on any TV receiver screen irrespective of the aspect ratio – unless there is grossly excessive overscanning of the line.

The grill consists of almost exact squares for linearity and convergence checking. Where the grill lines are partly obscured in the vicinity of other patterns there may be some cross-colour due to the rapid picture transitions that occur and the fact that the vertical grill lines are less than the intended  $0.1-0.2\mu$ sec in width. On modern sets this crosscolour will be slight, but on certain older receivers or those below par it will be prominent. This is a very real check on the quality of i.f. strips and decoders.

Near the top there's a "letterbox" pattern. This gives a check on the l.f. response of a receiver: minor defects may introduce slight streaking on either the black or the white boxes, but this should not be excessive.

Normal full-screen width colour bars are used in the next segment, but with the white and black sections removed. They are very approximately 100% saturation, and are the usual colours in order of decreasing luminance – yellow, cyan, green, magenta, red and blue.

The intersection of the grill lines at the centre of the test card is backed by a black square to emphasise poor static convergence. It also marks the centre of the card, and provides an area of high contrast to improve the appearance on monochrome receivers.

Although a full multiburst had initially been envisaged, it would have added too much to the complexity of the unit. It was felt that some fine detail was needed however, especially with the increasing popularity of videocassette machines which need regular maintenance and a reliable test signal for assessment purposes. Both the frequency gratings used in the test card, corresponding to about 1.125MHz and 2.25MHz, should be clearly resolved under all conditions. They should create virtually no cross-colour.

The step wedge together with the neutral grey background enables a check on grey-scale tracking to be made. The steps are intended to be about equal as seen on the average colour TV receiver screen.

There's virtually no bandwidth limiting of the chroma signals in the unit. This helps to keep the coder simple and also makes it ideal for observing the quality obtainable with most decoders, given this slightly sharper colour image, and by using the "colour fit" pattern at the bottom one can observe any luminance/chrominance delays which seem to cause complaints that "footballers' shirts don't fit when shown in long shot." In fact the red box between the yellow "cheese" should sit quite happily over the two centre grill line squares. It's very unlikely that any real faults will show up, since they rarely occur in this area. The pattern was included to give an extra tool to the engineer as a customer relations exercise. It also adds to the aesthetic appeal of the pattern.

### Power Supply

The power supply (to be shown next month) is very simple. Most of the pattern generator needs a 5V regulated supply whilst the transistors, subcarrier oscillator and chrominance modulator i.c.s need 12V. Mains transformer T1 feeds a full-wave rectifier and main  $4,700\mu$ F reservoir capacitor which in turn supply the regulators for each rail. The  $10\mu$ F capacitors together with the  $0.1\mu$ F ones assist in smoothing and the removal of transients.

### Sync Pulse Generation

Since it's probably the simplest way to generate a fullyinterlaced sync waveform, the ZNA134 i.c. was selected. It's rather expensive, especially when one realises that with

ctions of the colour pattern generator.

+ +

**TELEVISION MAY 1979** 

its 2.5625MHz crystal the cost will be in the region of £30. Those willing to forgo transportability may find it possible to drive the unit from an external sync generator which gives line drive, field drive, mixed syncs and blanking. Those who find the cost exhorbitant and are willing to accept slightly inferior performance may find the random interlace pulse generator to be described later of interest.

The number of gates driven by the various sync waveforms are few, but in the interest of protecting IC1 from overload, IC2 is included simply to act as a buffer. This is a 7408 which houses four AND gates.

The pulse outputs from IC1 are at logic 0 during the relevant pulse periods and revert to logic 1 between the pulses. It is these gaps at logic 1 that trigger the inputs to each AND gate, thus enabling it to function as a buffer.

### Offset Sync

The various patterns are derived by counting down from a regular series of pulses. Our main concern is for the appearance of the pattern on the screen during the active picture period. The line and field drives are outside this and are normally masked by the blanking pulses which effectively put a frame around the raster. We cannot perform all the triggering operations from the line and field drives however, because the picture would be displaced to the left and would also be too high up. The latter effect is caused by dividing the  $312\frac{1}{2}$  lines in the vertical direction by an even number.

The simplest solution is to utilise the drive signals to produce false sync pulses slightly shorter than the blanking pulses. IC3 is a 74121 monostable whose timing is set by C2/R1 for the line, whilst IC4 similarly functions as a field pulse generator. C3 together with R5 and VR2 affect the duration, with VR2 acting as a fine vertical centring control. Part of the NAND gate IC7 is used to OR the outputs, which are inverted again in IC10 to give a mixed sync waveform.

### Line Waveform Generation

The finest detail required in the horizontal direction is that for the fine frequency gratings. Rather than generate them separately, it was decided to use a high clock pulse frequency of about 4.5MHz and divide by two to give the 2.25MHz grating then again by two to give the coarse grating of 1.125MHz.

The clock pulse generator is formed from two 74121 monostables, IC5 and IC6, with fine frequency adjustment for setting up by VR1. This mode of generation was chosen partly for simplicity and partly because the 74121 is a very good, temperature-compensated device which, as used here, provides a stable combination locked rigidly to the line drive with negligible drift. The two NAND gates are strapped as inverters for convenience, and provide isolation between the main line drive feed and the multivibrator, thus preventing feedback of spurious waveforms.

Incidentally, a gated Schmitt oscillator had been employed in this position in a prototype, but suffered from excessive drift with temperature change. This resulted in the picture moving off centre, and defeated the object of trying to produce a stable picture source which could be used in many environments. This final arrangement is more satisfactory.

Fig. 1 shows the line and field waveforms related to the basic pattern. These are numbered 1 to 12. We also need inverted versions, which are indicated with a bar sign - for example the opposite of waveform 1 is  $\overline{1}$ . Some outputs of the four-bit counters IC8 and IC9 are in the "bar" mode,

Fig. 3: Assembling the colour sections of the pattern.

and where necessary are inverted in IC10 to give the other outputs. Each counter houses four bistables, which are all cascaded but have a common reset to the offset sync pulses from IC7a. In all eight bistables are used, but the output from pin 8 of IC8 is not used. The numbering of the line waveforms is from 1 to 7.

Waveform 4 corresponds to the smallest chunk of pattern needed in the horizontal direction, but 3 is needed to trigger monostable IC38 which provides the vertical grill lines. These take on a similar spacing to the number 4 waveform

### Line Patterns

Table 1 shows the various waveform combinations used to produce most of the essential features of the pattern. The components of the colour bars and the step wedge are . obtained directly from waveforms 5, 6 and 7 which correspond to blue, red and green respectively (see Fig. 3). In some cases, such as the colour fit pattern which traverses the vertical centre line, the patterns are made in two halves. This would seem to encourage the possibility of a fine vertical bar down the middle, but this is easily removed as explained later.

All the above need one of four combinations of waveforms 6 and 7. It's possible to save gates by producing these combinations in IC11 (7408). Pin 11 provides the combination of 7 and 6; pin 8 gives 7 and  $\overline{6}$ ; pin 6 gives  $\overline{7}$ and 6; and pin 3 gives  $\overline{6}$  and  $\overline{7}$ . Each of these can define in which of four areas a pattern is placed horizontally.

### Background

Before describing the basic patterns, we will describe the formation of the background pattern. This consists of a white grid on a grey background, which is mated to the other signals. The gating waveforms for each pattern are inverted and fed to the NAND gate IC35 which effectively ORs them together, the result being inverted again and fed to IC32a and b. IC38 is a 74121 monostable with a short time-constant. It's triggered by waveform 3 to give fine vertical grill lines. IC39 is a 7474 dual D-type bistable. Half of it is used to provide the 7.8kHz half line switching for the coder. The other half is triggered by field waveform 8 and is reset by the output of IC12 (7490), which gives horizontal lines each of about two lines duration per field. This provides the horizontal part of the grill – slightly thicker than conventional crosshatch waveforms to make visibility on the grey background easier.

The outputs of the two i.c.s are combined in the OR gate IC18 and are fed to IC32a, the output of which consists of the grill with black cutouts corresponding to the wanted waveforms. The grill is logic 1, background logic 0.

Blanking is fed to IC32b. Since the mating signal is also fed to this i.c., the output is logic 1 except during the mating waveform blackout and, of course, the actual blanking period.

By passing the outputs of each i.c. through identical value resistors (R9 and R10), each signal assumes half its original amplitude. If one assumed that each was 1V p-p, each will now be  $\frac{1}{2}V$  p-p. The actual values are relatively unimportant. Since the grill signal is sitting on the  $\frac{1}{2}V$  output from IC32b, it assumes 1V amplitude. The output of IC32b is  $\frac{1}{2}V$  of course, but during the mating period it's 0V in common with that of IC32a. Thus we now have three signal levels, peak white, mid-grey, and black.

#### Letterbox

The mating line waveforms are similar for both the letterbox and the colour fit pattern. For clarity they are shown in the table. OR gate IC26 combines the two sets of line waveforms which pass to the AND gate IC31. Here the appropriate field waveforms cause the i.c. to conduct during only the relevant period to form the rectangle at the top of the raster for mating. The output is fed to inverter IC34, thence to IC35 as described above, and also to IC25c where it gates the signals from IC26 to give the characteristic white box on each side of a black one. IC26 is an OR gate combining the signals from IC25a and b.

The letterbox then passes to the OR gate IC24, where it's combined with the castellated border, to be described later, and finally via IC23 where blanking takes place to the 7410 IC42 which is again used to OR together the various component parts of the pattern, in this case those which are purely black and white.

#### **Colour Fit**

The line waveform for the letterbox from IC26 is fed to IC29 together with the field waveform from IC21b. Blanking is also added, since this will prevent any part of this pattern recurring during the field blanking period as it would like to. This would cause a section of the colour fit to appear at the top of the picture, perhaps giving coloured flyback lines on receivers with slow field flyback.

The resultant mating signal from IC29 goes to inverter IC34 and also to IC32 and IC43. This is where things become more interesting, because we are trying to create a colour signal.

The colour fit pattern consists of a large yellow bar the same width as the letterbox. Into it is fitted a small red bar two grill squares in width. Yellow is made by mixing red and green (additive colour mixing) in equal proportions. It's necessary therefore to provide two patterns, one red and

### **TELEVISION MAY 1979**

one green. Fig. 3 illustrates this. IC43a is an OR gate through which pass the red colour bars. The signal from IC29 is equivalent to the red signal, so it's combined with the red bars here. But the green part should consist of two bars with a gap corresponding to where the red signal only occurs. Thus, as will be seen from the table, we need to generate a signal to produce the small middle gap. This is done in two halves, IC28a and b, which are ORd by IC30 and inverted by IC33 to give a negative signal to interrupt that applied to the AND gate IC32. The resultant green part of the colour fit is combined with the green colour bars in IC43b.

### Frequency Gratings

Line frequency grating signals from IC27a and b are combined in the OR gate IC26 to give a composite signal for mating purposes. The field waveform from IC30 is added to it in IC31. As with the other signals, this is fed to the 7404 inverter and subsequently to the 7430 (IC35).

Separate signals from IC27a and b are fed to the IC42 NAND gates which are also turned on by the field waveform and the relevant 1.125MHz or 2.25MHz waveform. The result is two blocks of frequency gratings on a logic 1 background. These directly connect with IC42c, providing the combined letterbox, border and gratings output.

### Step Wedge

Six grey-scale steps are incorporated in the step-wedge design in order of increasing luminance. They complement the colour bars for reasons of symmetry, and are of roughly equal steps when viewed on a c.r.t. screen.

Line waveforms from IC27c and d are combined in the OR gate IC26 to give the horizontal part of the gating/mating signal. Since it's easier to gate in portions of the screen corresponding to the gaps at each side, this signal is inverted to give the solid centre block needed. IC19 provides the positional field waveforms in two halves, which are combined in the OR gate IC30 and fed to IC31b together with the line waveform. As well as feeding the mating circuit, IC31 feeds three AND gates in IC41. Each AND gate is fed respectively with waveforms  $\overline{5}$ ,  $\overline{6}$ , and  $\overline{7}$  – equivalent to inverted colour bars. The output of each gate is mixed in a resistor network to give a grey-scale output near the bottom of the raster.

### **Colour Bars**

The same line waveforms from IC27 are used for the colour bars but are fed to IC31a where the vertical position is dictated by the waveforms from IC20, via the OR gate IC18.

#### Centre Cross

The centre cross was something of a latecomer to the pattern. Although considered in the planning, it was not until it was realised that a spare gate existed in IC29 that it was thought worth incorporating this feature, to make static convergence checking easier as well as improving the appearance of the pattern.

Its generation involves creating a black square in the centre of the test card behind the grill. This is achieved by feeding the inverted grill to pin 11 of IC29, the centre part of the colour fit from IC30 pin 6, and field waveform  $\overline{11}$  from pin 2 of IC22. The second waveform defines the width of the square, whilst waveform  $\overline{11}$  defines the height. In spite

Fig. 4: Example showing the production of the right- and lefthand borders from field waveforms 9-12.

of being larger than needed, the latter ensures sufficient vertical coverage which is then corrected by the other mating waveforms. The result is a large oblong with grill information which is injected into the mating i.c. (IC35) only. This reduces the centre area to logic 0, with the centre grill at logic 1 coinciding with the grill output from IC32a also at logic 1 during the grill period. The combined result consists of the blacked-out background as before, grey with peak white grill, but with the addition of a black square backing the centre part of the grill which remains peak white in the centre due to the presence of grill on this part of the mating signal.

### **Castellated Border**

As with the other patterns, mating/gating waveforms are needed for the castellated border. For the top and bottom it was decided to make the height one half the duration of one grill square, whilst for the left- and right-hand side one whole square width, half the width of each colour bar, was thought necessary. IC14 and IC15 provide the vertical timing for the former, which are combined in IC17 to give the necessary gap at the top and bottom.

For the line, the AND gates IC28 and IC29 give the side pieces which are combined in the OR gate IC24 and then in IC24 again with the top/bottom to give the mating signal which is inverted and fed to IC35. This is quite straightforward.

### Service Notebook

### – continued from page 361

in this chassis are connected in series with each other across +20V and -20V rails. Meter checks revealed only positive voltages, implying no -20V supply from the line timebase/power supply unit to the field timebase panel. This at first suggested a break inside an edge connector, but on tracing back to the line timebase/power supply chassis we found no -20V line here either. This meant going back to the small panel on the rear of the chassis, where the supply rectifiers and feed resistors reside. Here we found that the 27 $\Omega$  series resistor R309 was intermittently open-circuit – it's a wirewound component – and on replacing it we assumed that our troubles would be over.

On plugging up again however – making sure to fit the back

For the border at each side we need field waveforms combined to define the centre halfway down the raster. Waveforms 11 and 10 are combined in OR gate IC18 to give a single pulse at logic 0 at the centre. This is fed into IC17, together with waveform 12, resulting in half the scan at logic 1, the other at 0. Our waveform 9 is fed into NAND gate IC37 with this waveform, as shown in Fig. 4, resulting in an output of squarewaves from pin 11 for half the scan only, terminating in one long pulse at logic 1.

The 50Hz half scan pulse is inverted in another NAND gate, with pins 1 and 2 strapped, and the result is fed into pin 4 of another gate. The  $\overline{9}$  waveform is fed in here to give the opposite effect to that above, i.e. a long pulse at logic 1 followed by a train of pulses at waveform 9 frequency. The result is ORd in the final NAND gate and inverted to give a complete vertical pattern of bars with a thick one in the centre. This waveform is fed to IC17, which is gated only during the period of the side border. The output is a castellated border at the left and right of the raster.

Generating the symmetrical pattern for the top and bottom is a little easier. Waveforms 4 and 7 are fed into IC23 pins 1 and 2. The output from pin 3 is a train of pulses terminating at the centre, followed by a broad pulse at logic 1. Similarly, waveforms  $\overline{4}$  and  $\overline{7}$  are fed into pins 4 and 5 to give the opposing effect of a broad positive pulse followed by a train of pulses. These are ORd in the other NAND gate, pins 12 and 13 of IC23, with the combined output from pin 11 going to pin 1 of IC25. Pin 2 is fed by the top/bottom border from IC30, giving at pin 3 the castellated border for the top and bottom.

Both castellated borders are ORd together in IC24a and fed to IC24b where the letterbox is inserted. The output is fed to the remaining NAND gate in IC23, where the signal is blanked to ensure that the borders do not trespass into the sync period. It then goes to IC42, where the frequency gratings are inserted as previously described, giving a complete output of the black/white parts of the pattern. These are then resistively mixed with the background and the grey scale.

row of connectors first – we were still greeted with field collapse. Some rather difficult test probing revealed that while there was -20V at R309 there was nothing on the fixed edge connector pin it is supposed to supply.

As this was all taking place in front of a steadily increasing gathering of people, and with a steadily increasing alcoholic intake (including yours truly), it was decided that the quickest remedy was to fit a new supply lead. After doing this we at last had a picture.

After years of service at comparatively high working temperatures it's so easy for wirewound resistors, thermistors and their soldered connections to just break away merely on chassis handling or panel strain. In extreme cases, as here, you can end up with a fresh fault more time consuming to put right than the original one. Wilding's Law therefore is to aim for minimum chassis and connection handling: the older the set and the more power consuming the circuitry, the more important this rule becomes.

# TV Servicing: Beginners Start Here...

### Part 20

S. Simon

### You said that disconnecting the line scan coils could well produce a white line down the centre of the screen. What sort of fault condition could produce this effect?

The fact that the white line (vertical) is present denotes that the line timebase is functioning, since the e.h.t. for the tube's final anode is derived from the line output stage and if this were not functioning there would be no illumination at all. Therefore there must be a break between the line output transformer and the line scan coils. It is becoming increasingly common to find this defect, particularly in portable sets with a capacitor employed to couple the scanning drive to the coils. Depending upon the design, the value of this will usually be between  $2\mu F$  and  $6\mu F$  – compare this to the value of the scan-correction capacitor found in larger screen mains sets: since these operate at higher voltage and lower current to produce the equivalent energy, the value is more like  $0.1\mu$ F. This coupling capacitor will often be found damaged (swollen or punctured) and a replacement will restore the width provided the correct value is employed.

## What if the value cannot be read and the circuit is not to hand?

Try a  $2\mu$ F capacitor (not electrolytic) and if the picture is oversized increase the value to say  $4\mu$ F – made up of two  $2\mu$ F capacitors if necessary. It may be thought that a larger value would *increase* the picture size, but this is not so. The coils and transformer must be matched for correct operation – a mismatch will detune the output stage and reduce the e.h.t., thus producing an enlarged picture.

If large screen sets also employ a capacitor in series with the coils, is this not just as likely to become open-circuit to produce the same vertical white line?

No. That is, it's not just as likely. It can and does happen, but not often. The point however is that this possibility may have to be checked, together with the circuit print, leads and contacts.

### What is the most common point of failure?

We are dealing with high energy. Sparking can occur if the connections are not 100 per cent good. Suspect points are where the pegs of the output transformer are soldered to the panel, where any series coil, e.g. linearity or width, or the capacitor referred to above, is soldered. Sparking will decompose the solder and in a short time a complete break will occur at this point. This is a common failing found on many types of printed panel, and although we are concerned here with the connections to the scan coils it's well worth bearing in mind that the line output transformer provides many "services" to other parts of the receiver, by way of clamping and gating pulses to "time" various circuits. Poor soldered connections are often the cause of many baffling fault symptoms which may appear unrelated. This is a *must* for your memory bank. Write it large, and remember it well.

This also applies to the earthing points scattered around the average panel. The metal frame may have several tags protruding through the panel, and these are used to provide common earth returns. All too often they are not properly cleaned off in production, which means that the solder cannot "bite". After a period they become oxidised beneath the solder blob, which may still look good, and all sorts of fault conditions may occur, perhaps intermittently as contact is made and lost. The only solution is to clean off thoroughly, removing the existing solder, ensure that the tag is bright (file if necessary) and resolder using a large iron.

As the line output stage provides so many services, how does one proceed to sort out whether the line timebase is not providing the services, or the services are affecting the timebase, in the event of a fault condition?

By adopting a methodical approach, coupled with one or two "aids". No serviceman (serviceperson, please) is ever without a neon screwdriver to tell him (or her) where the juice is and where it isn't. As you know, the higher the difference or potential across the two ends, the brighter it will light to a point where the neon itself will burn out if the voltage is excessive – despite the presence of a limiting resistor of about  $1M\Omega$ . Therefore one does not apply a neon screwdriver to a working line output stage. There is considerable radiation from such a stage however, particularly from the transformer, and if a neon is in the vicinity it will light up, thus providing an immediate indication of whether the timebase is working, or when it is restored to life by say disconnecting a faulty service, for example a defective e.h.t. unit.

### Can we stop here a moment and clear up what is meant by disconnecting a defective e.h.t. unit?

The rather general expression was used as there are so many variations on the basic theme of transforming a pulse voltage produced in the line output stage into a high, smoothed d.c. voltage suitable for application to the tube's final anode. As you well know by now, one can wind on to the transformer lots more turns to step up the potential of the pulses, then rectify and smooth them. Rectification can be done with a valve which requires a heater winding to get its cathode emitting, or with a stick rectifier which consists of lots of little discs which pass current only in one direction. In either case the resulting d.c. is still rippled and thus needs to be smoothed either by a separate capacitor or by the capacitance formed by the tube's inner and outer graphite coatings, the latter one being earthed.

To disconnect, one needs only to remove the top cap of the valve (ensuring that it is well clear), or the c.r.t.'s final anode connector, or the transformer end of a stick rectifier.

Alternatively, the high voltage required can be produced not by winding on the transformer many turns to step up the pulse, but by taking a comparatively low-amplitude pulse and multiplying the rectified output by means of a series of rectifiers which charge up capacitors each of which sits on the end of the preceding stick so that each step takes you higher up the staircase as it were. The rectifiers and capacitors are contained in a convenient tray, which can be unclipped or unsoldered from the transformer as the case may be.

## What can happen in such circuits to render the line output or perhaps the receiver inoperative?

١

Obviously a short of some sort will impose a heavy load, and this can happen in several ways. Let's take a few practical examples which will be of use to you.

If a valve rectifier is used, this can short as the result of the internal assembly becoming loose, the cathode leaning over to touch the anode. In this case there will be an a.c. pulse voltage on the cathode, which "sees" the tube capacitance as a short-circuit (see Fig. 1). A severe overload is presented therefore and is relieved when the top cap is removed from the valve, or the e.h.t. clip is removed from the side of the tube (assuming that there is no separate capacitor involved – there may be on some portables).

A very common failing is a breakdown of the insulation of the single turn of cable wrapped round the transformer to energise the heater of the valve. The heater is at the same potential as the cathode (say 18-20kV). Now it's one thing to ask a straight cable to contain a high voltage; it's another to loop the cable sharply and expect it to live near a hot valve such as a PL504. The insulating material hardens and splits, and the eighteen thousand volts crack sharply across to anything at a lower potential (which is everything).

It's no hard task to renew this loop of cable once the valve base has been removed from its plastic housing, but the cable used *must* be suitable for e.h.t. applications.

The cable from the valve to the e.h.t. connector can also break down, but this is less common except where the cable is screened and earthed as in the case of quite a few portables and some large screen sets.

As far as portables are concerned, the e.h.t. rectifier is usually a single stick which can itself give trouble, and incidentally give off quite a pungent odour, or be damaged by either a short from the inner of the e.h.t. cable to the outer screening (if any) or by a shorted capacitor if one is used in addition to the tube coating. Such a capacitor may be found directly connected to one end of the stick, or incorporated in a housing close up to the tube.

Some larger screen sets use the single stick arrangement, fed from a fairly large overwinding on the transformer; others, including most colour sets, do not use a large overwinding but instead use the multiplier idea already outlined. Such doublers, triplers, quadruplers or simply "trays" are a frequent cause of breakdown, and their disconnection is an essential initial step to take if the line output stage is showing any sign of stress.

## This seems to imply that only colour sets use the tripler (etc.) idea. Is this so?

By no means. All large screen Thorn monochrome sets produced in recent years have used a tray – the portables use a single stick. Depending upon the model, the tray usually contains three or five sticks which with the integral capacitors perform the multiplier action.

## Can individual sticks be replaced if only one is obviously faulty (as indicated by its appearance and smell)?

Sometimes, but the fact that access to the sticks is possible means that the tray is of the open variety: these are more prone to break down. It's better from a reliability point of view to fit a sealed replacement.

### Are such units used to supply the tube's e.h.t. supply only?

In the case of monochrome sets yes, but units for use in colour sets often have leadouts to supply the focus control (say at 5kV) and other services. The internal construction can be quite complicated therefore, making a unit for one set quite unsuitable for use in a different set (before you ask).

Fig. 1: One method of generating the e.h.t. The positivegoing flyback pulse at the anode of the PL504 line output valve is stepped up by the e.h.t. overwinding on the line output transformer and rectified by the valve e.h.t. rectifier.

### Apart from shorting out to overload the line output stage, what other common faults affect e.h.t. units and what is the effect on the displayed picture?

They can become open-circuit or partially so, in the latter case offering a high resistance to the beam current they are supposed to pass. As you know, a high resistance drops a correspondingly higher voltage across it for a given current, thus leaving less voltage where it's really required.

As the beam current increases (brighter picture), the voltage across the unit also increases, so that there is less voltage at the tube's final anode to give the c.r.t.'s beam current the velocity it requires. The effect of this is to defocus and enlarge the picture to a degree dependent upon the current passing, so that at low brightness the picture may appear almost normal but as the brightness is increased the picture "balloons" out dramatically, perhaps with a dark spot or patch in the centre before the screen blanks out completely. This is typical of a low-emission valve rectifier, or one which is not able to emit properly due to being undersupplied.

### How does one tell the difference?

It isn't always easy. Now remember that we are talking about a valve rectifier, usually driven from a valved line output stage. Remember also that the rectifier's heater is supplied by a loop of cable wound round the transformer. Depending upon the energy radiated by the transformer, the loop may supply too much energy to the valve's heater if directly coupled to it. It's common practice therefore to take one end of the loop to one side of the heater directly but the other to a blank pin, the connection to the other side of the heater being completed either by a small resistor which looks like a resistor or a length of resistive wire which doesn't. The resistor or the wire can decompose (become a higher resistance), thus robbing the valve heater of its current.

The valve heater in this case will not glow, and this is perhaps the clue. We say perhaps because the series resistor may be intact and there may be other causes. One may be that the valve pins are not in good contact with the holder clips (another high resistance possibility). This is a distinct possibility, as the high voltage present can have a chemical effect. Again, these are only possibilities.

The heater loop may not be picking up enough energy because the energy is not fully there in the first place. If the line output stage is not working at full efficiency, the e.h.t. rectifier cannot be properly supplied. Shorted turns in the transformer could be damping down the efficiency, the line output valve or the associated boost diode (efficiency diode) could be low emission, the width control or an associated resistor could be defective resulting in incorrect bias of the
output valve - there are many possibilities.

If the picture is darkened so that it is only just visible, you may observe a distinct lack of width which may not be obvious if the picture is viewed at a lighter setting. This gives us the clue that the output stage is not functioning properly, and should direct attention to the line output valve and its biasing. The latter is backed off by the width or "set boost" control, which could have a dud spot on it, or an associated resistor could well be defective. A voltmeter should record the negative drive applied to the control grid of the line output valve. The actual reading is not so important as the effect of applying the meter between the control grid and chassis. If the meter is set to the 100V range (positive lead to chassis, negative to the control grid) it will show the approximate negative bias, but the resistance of the meter will provide an alternative path to chassis. Thus if there's a fault in the "width" circuit (control, resistors etc.) there will be a dramatic change of width and e.h.t. It's worth carrying out this quick check early in the chase rather than later.

If connecting the meter in this way makes no difference, it's fair to suspect the valves and in some cases the line output transformer.

## What is meant by "some cases"?

Like most things, line output transformers have their own particular characteristics. Some develop shorted turns far more readily than others, which tend to short more between windings thus breaking down in a far more definite manner, whilst there are makes of transformer that very rarely break down at all. Avid reading of past issues of this journal will reveal the names and models. If one is dealing with e.h.t. trouble in a Thorn monochrome set for example, particularly if there is line break up or "sizzling" when the brightness is advanced, one would suspect the e.h.t. tray itself. If width is lacking, one would suspect resistors or valves. The line output transformer would not be suspect.

## Which brings us to the subject of the different symptoms displayed when the e.h.t. unit is a solid-state one.

Yes. As there's no valve involved, no heating energy is required from the line output stage and fault location is easier. Thus the lack of width denoting line output stage inefficiently is more obvious before the picture balloons to hide it as the e.h.t. falls.

There are two main systems to consider. As in the case of a valve e.h.t. rectifier, the voltage step up may be obtained by an overwinding on the transformer, in which case the rectification is done by a single stick which merely replaces the valve. Alternatively there may be no overwinding as such, the lower pulse voltage being stepped up by a staircase of rectifiers and capacitors as previously described. A recent variation on this theme is for the diodes to be incorporated within the transformer itself.

In these solid-state systems the presence of a high resistance in the stick or one of the sticks shows in no uncertain way. There is either no e.h.t. at all or precious little, and consequently no screen illumination; or the picture expands and "sizzles" when the brightness is increased.

There's a complicating factor in the "no e.h.t." condition however when a separate smoothing capacitor is employed, as in the case of many portables. This consists of a thick disc with one lead to earth, which can be the screening of the e.h.t. lead where a screened lead is employed. It's not uncommon for this capacitor to short, causing excessive current through the stick, probably damaging it and possibly damaging the transformer as well. Thus a "smelly stick" can mean more than merely a new stick, and where a capacitor is present it should be suspect.

TELEVISION

## TELETEXT IN COLOUR

One of the most popular of our projects was the *Television* teletext decoder. It was always our intention to add colour to the display – colour characters and/or background – to enhance readability or emphasize particular sections of the display, and this has now been done. The facility, together with flash and reveal, are all neatly arranged on one printed board which can be plugged into a new mother board designed to accommodate it. The use of the National Semiconductors LM1889 i.c. for the colour encoder section provides a particularly simple design with the minimum number of preset adjustments. A later instalment will give details of a new adaptive data slicer circuit and i.f. board (using the original i.f. strip components) which greatly enhance the performance of the decoder.

#### RENOVATING KÖRTING HYBRID COLOUR RECEIVERS

Large numbers of these well made, reliable sets were imported and are now appearing at trade disposal outlets. They give a very good picture, and are well worth renovating. Mike Phelan describes the chassis and its possible ailments.

#### IMPROVED FLYWHEEL SYNC

The Bush TV125 is widely used by DX-TV enthusiasts and is an excellent set for this purpose. The performance of the flywheel line sync circuit leaves something to be desired however under certain reception conditions. Garry Smith and Keith Hamer experimented using a simpler circuit from a later chassis, and obtained much improved results.

#### BIONIC PYES

The shortcomings of the old Pye hybrid colours sets are well known – particularly the tendency of the CDA panel to cook. An alternative solid-state panel is now available and, with one or two other bits and pieces, has been tried out by E. Trundle.

# **Long-Distance Television**

AT long last there's been F2 propagation in the lower v.h.f. TV channels, and for many enthusiasts the last few weeks have presented glimpses of really exotic DX-TV. Unfortunately many of the signals were very badly smeared or distorted, or were accompanied by several co-channel signals. At times however the signals cleared to give quite acceptable quality, and the actual picture content could be resolved. Station clocks showing times six hours ahead of GMT were certainly dramatic! We've also received reports of possible times nine-ten hours ahead of GMT, taking the point of signal origin to the far eastern seaboard of the USSR. Chinese faces, programmes with Chinese figures and other oriental signals have been noted, again on ch. R1, and certainly from the various radio harmonics received Chinese signals must have arrived in the UK, albeit generally unbeknown.

Conditions first opened up on February 6th, just after 0800, with Russian test cards on ch. R1 - in fact a variety of test cards floating over each other. Programmes started at 0900 with a clock – showing 1500! Thereafter each day produced similar conditions, normally from 0800, sometimes fading out by 0930 and on other days continuing until midday. A variation on the 0249 test pattern was noted by both Mike Allmark and Kevin Jackson in Leeds – one with a predominantly white background. An unfortunate result of the excellent v.h.f. conditions to the east was the considerable amount of interference accompanying the Russian video signals. With the multitude of communications, ch. E2 was virtually blotted out, rendering any chance of Malaysian reception impossible, though a close watch on this channel was kept.

In total, distant F2 Russian signals were noted daily on ch. R1 between the 6th-12th and the 14th-18th, with further reception on the 20th, 24th and 26th. By normal standards the signals were very strong – David Martin at Shaftesbury measured an input of  $350\mu$ V from his four-element array on one occasion, and several days later, on the 15th, ch. R1 peaked at  $650\mu$ V!

Strangely, the improved conditions did not affect ch. E2

Roger Bunney

to the south until late in the month, though Hugh Cocks, now at Robertsbridge, noted an F2 signal on ch. E2 on the morning of the 9th, with frequency-grating and grey-scale test patterns – too early for the "usual" African stations. Both the 24th and 25th produced relatively strong (peaking at  $40\mu$ V) African signals on ch. E2 during the midafternoon, from the south/south west – most likely from Ghana or Nigeria.

Not surprisingly, I've received many letters during the past few weeks reporting on these remarkable conditions, and I'm encouraged to have heard from several newcomers. Anthony Wishing (Croydon) saw Chinese material on the 13th - some sort of educational programme with Chinese script, thought possibly to be a schools programme of Russian origin. Frank Lumen and Donald Bassnett in Glasgow both logged strong but ghosty signals from Russia. Hugh Cocks has been extremely active these past three weeks. His local Band I BBC-1 relay transmitters, which translate ch. B1 Crystal Palace off-air to chs. B3 and B4, have been switched on by the high-level F2 signals. Radiating the lower 40-45MHz signals in the ch. B3-4 spectrum, they've caused some confusion to say the least. He reports that on the 8th-9th the MUF to Mexico and Cuba reached just under 50MHz, while on the 15th there were strong contacts between UK and American radio amateurs in the 50MHz band (the UK amateurs had to reply using the 28MHz band, since 50MHz is not a licenced amateur band in the UK). Earlier, on the 6th, there were Indians at 42MHz with English speech.

James Burton-Stewart tells me that his BBC ch. B2 transmitter has been radiating a 625-line test card with positive vision modulation. Ian Beckett has also received this. It seems that only the Oxford transmitter has been radiating this signal, and if the reason for this unusual transmission can be established I'll report further. I've again seen the 1982 period mentioned as the possible time for ending the 405-line transmissions, and one wonders about the future use of Band I in the UK, certainly a useful spectrum and, it's understood, of great interest to commercial users

The Polish PM5544 test pattern, received on ch. R29 by Ryn Muntjewerff in Holland.

for mobile communications. There's also the possibility of a citizens' band, the home office having made it clear that should CB ever come to the UK it will be at v.h.f.

### **News** Items

. . .

Malaysia: Colour transmissions have commenced, with some nine hours weekly. The aim is for full colour by 1984. China: There seems to be a possibility that within the next few years the USA will supply and launch a TV satellite for use by China.

**Canada:** Brian Fitch reports that a second Anik satellite has been launched, carrying two channels – one for the CBC and the other for remote area linkage. The cost of a 12GHz receiver for use with the CTS satellite project in Canada is expected to be about \$2,500 assuming a production run of 10,000 units, falling to around \$500 with mass production.

**Europe:** The Koblenz and Muenster transmitters in West Germany were damaged by explosions following the screening of Holocaust. A Catalonian TV programme service, financed through foreign programme sales, is to be established. Based in Barcelona, it will have a nine-transmitter network and use the PAL colour system. One transmitter would beam signals into France. The service could start within a year, but the date of starting construction is being delayed for political reasons. The Italian broadcast service, RAI is buying equipment for the start of an RAI-3 service, which is expected to start sometime next year.

Sunspots: Kevin Jackson reports that the monthly average Zurich sunspot number for January 1979 was 165.8, the highest value since August 1959.

## Commercial Corner

Antiference Ltd., Bicester Road, Aylesbury, Bucks have introduced an ultra wideband (40-860MHz) low-loss combining unit, intended for either combining two signals or for splitting inputs between two receivers. The insertion loss is less than 5dB and the isolation between inputs/outputs greater than 15dB. It's intended for indoor use.

The Schrader tunable masthead varicap amplifier is now in production in Holland. The gain is 22-26dB and the noise figure 4.5dB maximum. We hope that Ryn Muntjewerff will be reporting on its performance.

#### Varicap Tuning Arrangement

In the May 1978 issue of *Radio Communication* Pat Hawker reported on a sensitive tuning control suitable for use with varicap tuners. The arrangement, which provides a performance equivalent to that of a ten-turn helipot, is shown in Fig. 1.

#### From Our Correspondents . . .

Geoff Perrin has been rejoicing in the enhanced TV conditions at Abu Dhabi, with Pakistan ch. E4 and many un-

Fig. 2: (a) Basic layout of a system using two aerials and a phase-shift network to provide signal cancellation. (b) Simple phase-shift network. L consists of 10 turns, 3/16in. diameter,  $1\frac{1}{2}$ in. long, of 20 s.w.g. wire, self-supporting.

Fig. 3: Brian Williams' coupling filter for Band I. (a) Circuit. (b) Physical details. L1 consists of 16 turns of 24 s.w.g. enamelled wire spaced over 1 in., wound on a nylon bolt, L2 of  $1\frac{1}{2}$ turns, tightly coupled, wound over the earthy end of L1, and L3 of  $1\frac{1}{2}$  turns, similar to L2 but wound at the live end of L1. Trimmer: 5-25 or 30pF, with spindle. The filter can be housed in a tobacco tin with lid.

identified signals. One unusual signal was the Bob Hope Christmas Show – received in mid-January! Dubai is now transmitting strong signals on ch. E33. Geoff is at Al Ain, some miles away from Allan Latham who has also been receiving both daytime F2 and evening spread-F signals. China chs. R1 and R2 are well received, Malaysia is received at times, and there are many African stations on Band I channels. Of greater interest however is a programme from the south on ch. E4: this can be only Mauritius. System M 525-line signals from the SE have also been seen from time to time. This suggests Thailand or Korea.

### Co- and Adjacent-Channel Interference

The problem of co-channel and adjacent-channel interference on weak signals is of great importance to DXers. A local or semi-local Band I BBC signal can cause severe distortion of distant signals of even moderate strength. More fortunate enthusiasts may have to contend with only a ch. B1 local signal, which can be filtered away, but most will suffer in varying degrees from the effects of BBC-1 signals on chs. B2-5. Take for example the ch. E2 video frequency (48.25MHz), which is shared by the ch. B2 sound frequency. Tuning to ch. E2 when a ch. B2 sound signal is present will result in a display of moving bands – the movement relating to the BBC sound modulation at any given instant. A narrow-band notch filter will obviously attenuate both signals.

A method of successfully minimising the ch. B2 sound problem, mentioned in these pages before, is to combine with the signal from the main aerial another signal consisting mainly of ch. B2 sound information phase shifted so as to provide partial or complete cancellation of the ch. B2 sound information (see Fig. 2). This technique has been advocated in the past with outdoor aerials and varying degrees

Vary the signal and phase values: a fine tuning control can be fitted to maintain a reasonable degree of cancellation. The two signals are combined using a wideband ferrite coupler, such as the Antiference CS100 or Labgear CM6011/OS, thus providing good isolation (20dB) between the two inputs. A practical demonstration of the system proved that it's capable of giving exceptionally good results. When the local signal carrier frequency is say 250kHz away from the wanted carrier the notch filter approach will normally provide sufficient attenuation of the unwanted signal.
Brian Williams (Penarth, S. Wales), who lives under the Wenvoe mast, has brought up the subject of the crossmodulation/overloading effects produced by a nearby highpower transmitter, especially when a wideband transistor

modulation/overloading effects produced by a nearby highpower transmitter, especially when a wideband transistor amplifier is being used. Brian experiences high-strength signals on chs. B5 and B13, three group B u.h.f. channels. and various v.h.f./f.m. services - St. Hilary is also not too far distant, with transmissions on chs. B7 and B10. With so many high-strength signals present in the low-Q wideband transistor circuits, we have the classic conditions for the onset of overload distortion. With all these signals the use of notch filtering is clearly inconvenient if not impossible due to the additive insertion losses. Brian has come up with an inexpensive bandpass filter however (see Fig. 3). Inserting this in circuit ahead of the aerial amplifier completely removes the overloading effects. The two low-impedance coupling coils are wound on to each end of the tuned circuit, the main coil being tuned by a 5-30pF r.f. trimmer. The bandwidth (3MHz) is sufficient to pass a single channel, and there's up to 35dB attenuation off-resonance. Brian comments that it certainly gets rid of unwanted signals etc. from local stations.

of success, though there can be a problem when the sub-

sidiary aerial's signal also produces cancellation of the

wanted DX signal from the main aerial. We've recently seen this system used on ch. E2 with an indoor dipole adjacent to

the operating position, the arrangement being optimised to give complete cancellation in one specific direction, e.g. with

the main aerial pointing south. An indoor aerial will give

considerably reduced pickup of the wanted signal, and can

be positioned to provide a reasonable amount of the un-

wanted signal. Rotating the main array would obviously

#### Field Strength

In the September 1978 issue I wrote an article on U.H.F. Reception Problems. Towards the end of the article some formulae to calculate field strength were given. The fact that we're no mathematician obviously showed, and we've received from Tony Harwood of the IBA, Crawley Court, more accurate information on the subject of calculating field strength. One has to take into account the effect of ground-wave reflection. Following a calculation of Tony's relating to phase angle, we arrive at the following formula:

$$E = 88\sqrt{P} \frac{H_t H_r}{\lambda d^2}$$
volts/meter

where P is in watts and the other quantities are in metres. This formula is fairly accurate at v.h.f., under conditions where the ground reflection is strong. If the ground reflection is not strong, the following formula applies:  $E = (7.014 \times \sqrt{P})/d$  volts/metre. At u.h.f. the situation becomes even more complex, since calculations for both maximum and minimum reflection values must be found. For more information, refer to the *IBA Technical Review* No. 10, A Broadcasting Engineer's Vade Mecum. My thanks to Tony for his help.

**TELEVISION MAY 1979** 

# Notes on the Philips G11 Chassis

## Larry Ingram

THIS popular chassis is the Philips group's successor to the G8 chassis. Amongst its technical features are the use of the 20AX c.r.t., a diode-split line output transformer, and a class D field output stage in i.c. form. As a general observation, it seems to follow the trend of design simplification based on "lumps of circuitry" centred around i.c.s. This means complication in the power supply however, in order to take into account anything nasty that might happen to disturb the peace of these little oblong blocks. Although the chassis has been around for a couple of years now, little trouble has been experienced apart from a tendency for diodes D4092/1 in the mains bridge rectifier to go short-circuit, and noisy mains filter chokes.

Other things do go wrong however. A simple one first. A new set was taken out of its carton and when switched on there was no field sync. The field sync pulses appear at pin 8 of the TDA2590Q sync separator/line oscillator i.c. and pass via R2037 and R2044 to the TDA2600 field timebase i.c. They are also taken via R2037 and then plugs and sockets 2D11 and 5D2 to transistor T5060 in the a.f.c. anti lock-out circuit. Connecting a scope to 2D11 proved that the TDA2590Q was producing field sync pulses, but there was nothing on either side of R2044. The panel was removed therefore and it was found that where the plastic support went through the board the corner of the print was neatly broken off, taking with it part of the copper track. A similar thing could happen on the other side of the board, between plugs 2D16 and 2C3, so care must be taken when removing or replacing this board.

Another of these sets was reported to have only a "threequarter inch wide band down the centre of the screen" after a couple of weeks' use. From what could be seen of the picture, the brightness and focus seemed to be normal. It seemed likely therefore that there was a fault in the scan coils or the connections to them. So we removed plug 3D and made a resistance check between 3D1 and 3D4/5, i.e. via the line scan coils and their series windings - line linearity etc. A sensible low-resistance reading was obtained, so we took a look at the line timebase panel. Careful examination showed a suspicious bulge on the side of the scan-correction capacitor C3135 (0.91 $\mu$ F). Removing it and temporarily fitting a couple of  $0.47\mu$ F capacitors in parallel restored the picture to normal, but what to use as a replacement? - $0.91 \mu F$  is not a value readily to hand in the spares cupboard, while the panel is tightly though neatly packed. The only course was to obtain an exact replacement from the makers.

The next fault was a little more difficult, and would appear after a few hours' use. The problem was that the h.t. rail would then cycle on and off, due to the beam limiter circuit coming into operation. The circuit is shown in Fig. 1 and has two modes of operation, both based on sensing the e.h.t. current flowing via the e.h.t. overwinding on the line output transformer and R3122 to chassis. D211, T4085 and T4086 are all normally non-conductive. When the

c.r.t.'s beam current exceeds 1.5mA, D211 begins to conduct, reducing the brightness though its action on the blacklevel clamp in the TBA560C i.c. in module U6200 on the decoder panel. In the case of an excessive e.h.t. overload however, due say to a short-circuit RGB output transistor, the voltage across C3123 will swing negatively - limited by the clamping action of the 4.7V zener diodes. T4085 and T4086 will then switch on, reducing the emitter voltage of the mains-rectifier thyristor trigger-pulse phase-control transistor T4045. The effect can be great enough to reduce the output voltage from the regulated power supply virtually to zero. The c.r.t. heater, which is fed from the line output transformer, will then cool, and if there's no fault present the circuit will return to normal operation. In the presence of a serious overload however the circuit will cycle on and off.

Reverting to our fault condition, we found that switching off any two of the c.r.t. first anode switches would stop the cycling, leaving a flooded raster of just one colour. We also noted that the brightness and colour controls were not functioning, while the collector voltages of all three RGB output transistors were of course low. So the fault was common to all three channels: our previous experience of modern colour processing panels shows that a small d.c. variation earlier in the circuit can cause dramatic changes in the d.c. conditions in later stages.

A check at TP3, the luminance output from module U6200 (luminance/chrominance control unit), revealed incorrect voltage and, on connecting a scope, no luminance – just a strange pulse at line frequency. The l.t. supply to the module was correct, but on connecting the scope to pin 7 (plug 6D1) a weird waveform was observed. The waveform here should be the burst gating and blanking pulse – a composite "sandcastle" pulse consisting of a square pulse with another square pulse sitting on top. The pulse was of about the right height and width, but it looked as if the tide had been over it (and left a flag there!). The combined pulse comes from the TDA2590Q sync separator/line oscillator i.c., so a replacement was tried. This cured the problem, and goes to show that some faults on modern sets would be almost impossible to trace without the manual and a scope.

There's another fault that we occasinally encounter in the beam limiter circuit. The 4.7V zener diodes can go shortcircuit, resulting in loss of raster due to the beam limiter circuit being permanently on. They presumably don't like e.h.t. flashovers. Why two of them? Well, they're on different boards, so presumably no one noticed . . . In later production an  $0.0022\mu$ F ceramic capacitor replaces D4090.

Loss of field scan is sometimes experienced, almost always due to failure of the TDA2600 field timebase i.c.

In the latest sets a TDA2591Q i.c. is used in place of the TDA2590Q sync separator/line oscillator i.c., and to reduce line striations a ferrite tube has been added on the wire link between tag 14 of the line output transformer and C3128.  $\blacksquare$

# Servicing the ITT CVC20 Series Chassis

## Part 2

LAST month we covered the signal circuits and the field timebase. In this concluding instalment on the ITT series of solid-state colour chassis we'll be covering the line timebase, EW modulator, switch-mode power supply, and things that can go wrong on the tube base panel.

## LINE OSCILLATOR/SYNC MODULE

During the evolution of these chassis most of the modules throughout the set have been changed or updated. Some newer versions are compatible with their predecessors, others aren't. The change that seems to cause the most confusion is the line oscillator/sync separator module on which the TBA920 i.c. resides - the change from the CMS10 used in the CVC20 and CVC20/2 to the CMS11 used in the CVC20/3 and CVC20/4. The differences are only minor, but the modules are not compatible without modification. To adapt the CVC20/3 chassis to accept the CMS10 module, remove C703 (330pF) from the CMS10 panel and use it to replace C2 (if 100pF) on the mother board. Discard the 100pF capacitor. To adapt the CMS11 module to suit the CVC20 or CVC20/2, change C712 from 150pF to 120pF and add a  $330pF \pm 20\%$  ceramic capacitor between the junction R701/C702 and chassis. The 110° receivers use the CMS30 module, which is quite different.

Having got that out of the way, we'll go on to describe the stock faults that may be encountered on the line oscillator/sync module. R702 will cause weak sync if it goes high-resistance. Line wobble may well be due to the line hold control – clean or replace it if necessary. If C707 should fail and short, the picture will be displaced about three inches to the left. In our experience, the TBA920 i.c. has not proved itself very reliable in these chassis, giving rise to symptoms ranging from no sync to no line drive. Before condemning the chip on the latter count however check C711 (polystyrene) by substitution, while if the receiver is an early one the earthing of module pin F2 to the metal chassis is suspect. Check by grounding the pin with a clip-lead.

On models CS500, CS600 and CS700 the right-hand channel selector button does not have a VCR facility. Provided the off-air signal is good, the flywheel line sync filter time-constant can be shortened by grounding pin 10 of IC701 at module pin G7.

## LINE TIMEBASE

Bearing in mind what has been said about the line oscillator/sync separator module, and assuming that line drive is emanating from this, the next possibility in the case of a dead line timebase is that the line driver transistor T13 has died. Sometimes it will come back to life to torment the technician with intermittent line drive. If in doubt, change it. If the set is an early one however there's a good chance that the emitter of this transistor has come off-earth. The cause and cure are obvious once the fault has been located.

Having arrived at the very threshold of its goal, our

(rather vulnerable, it seems!) line drive may be thwarted at the point of connection with the BU208 line output transistor T14. Check for bad joints on the two legs, and also for hair-line cracks which can occur in some models on the print between T14's collector and the series choke L35.

Turning now to a line timebase with drive but no output, note first that most fault conditions here will cause the power supply to trip. First on the list comes a short-circuit BU208 line output transistor, not a common occurrence and one which generally takes place for internal reasons. More often the e.h.t. tripler fails, and it's a sad fact that the elaborate overload protection circuit does not always prevent the line output transformer being ruined by a defective tripler. When this happens the overwinding will run warm, even with no tripler connected, if the power supply continues to operate. The other nasty habit of the tripler, internal discharge causing interference on the picture, has already been mentioned in the section dealing with the i.f. amplifier. To increase its reliability, stand the replacement tripler off the chassis metalwork with longer bolts and spacers (available from ITT).

C57 and C58 (0.016 $\mu$ F each) tune the line flyback. If one goes open-circuit, the e.h.t. will rise and trip the power supply. In later chassis the equivalent component is C1102 (0.0082 $\mu$ F), which is proving much more reliable. All these capacitors are special high-ripple types, and only exact replacements should be used. The scan-correction capacitor C67 (2.2 $\mu$ F) is sometimes guilty of going short-circuit, again tripping the power supply by effectively grounding the 125V h.t. line.

A heavily-loaded line output transformer, which may or may not cause power supply tripping, is the result when the shift choke L30 in the CVC20 chassis develops short-circuit turns. Later sets have different arrangements.

The line shift circuit used in the CVC25 chassis is neat and worthy of note. As can be seen from the circuit (see Fig. 5), it works entirely on and from the feed to the horizontal deflection coils. L26/27 is simultaneously a stepdown transformer and shift choke.

The CVC30 and CVC32 chassis are not fitted with any form of picture shift control, basically because the manufacturers of the 20AX c.r.t. deemed it unnecessary, claiming that close c.r.t. manufacturing tolerances ensure adequate picture centring. In practice this is open to considerable doubt, and whereas other setmakers have fallen foul of this

Fig. 5: The horizontal shift circuit used in the CVC25 chassis operates by rectifying the scan current.

E. Trundle

Fig. 6: The line driver and output stages, the EW correction and modulator circuits, and the tube base panel circuitry, as used on the basic CVC20 chassis. The 70V pulses from tag 12 of the line output transformer are fed to the NS correction transductor, to the TBA920 IC701 as the reference pulses for the flywheel line sync system, and to the TCA800 IC503 to provide PAL switch triggering. The –120V pulses from tag 5 are fed to the NS correction transductor circuit, to the TBA560C IC501 to provide line flyback blanking, to the TBA440N IC301 for a.g.c. gating, and are rectified to provide the supply for T7 in the field timebase.

one ITT prudently made provision for line and field shift on the mother board. Where shift facilities are needed on these chassis, three components must be added for vertical shift and five for horizontal shift. The following components are merely fitted in the positions marked on the mother board:

Vertical shift: Remove R34. Fit R34A 250 $\Omega$  shift control part no. 02460, R34B 100 $\Omega$  4W part no. 07733, R34C 150 $\Omega$  4W part no. 071006. Add a wire link from the junction of R34/R39 to R34A's wiper.

*Horizontal shift:* Add L26/27 part no. 04165, C75  $0.001\mu$ F 20% 500V part no. 08954, C76  $22\mu$ F 16V part no. 08461, R113 15 $\Omega$  shift control part no. 02459, and D31 BY206 part no. 12735.

There's a lot of energy in the scanning yoke, and the high current through the linearity coil L29 (back to the CVC20 again) means that a minor burn-up can occur if, as sometimes happens, it becomes dry-jointed. Usually the fusible damping resistor R100 opens to call attention to the fault.

An annoying audible whistle can usually be traced to the transductor L3-L7, although the line output transformer, the linearity coil L29 or the driver transformer L15/16 can also be responsible. Firm pressure on the suspect inductor with an insulated tool will quickly pinpoint the offender.

A low-emission c.r.t. effect, gradually disappearing during a lengthy run, should direct attention to the resistor in series with the c.r.t.'s heaters – R96 in the CVC20, R99 in 110° sets. Check its jointing and resistance, as it can go high. We once found that a  $6.8\Omega$  resistor had been fitted in production!

#### **EW RELATIONS**

Where the picture width is incorrect and there is no sign

of distress from the line output stage or the power supply, the chances are that the EW modulator is in trouble. The modulator diodes themselves (D23/4 in CVC20 etc., D24/5 in 110° sets) can fail in various ways – most commonly D23 goes short-circuit to open the fusible resistor R101. The modulator driver transistor T17 (T13) can go opencircuit to give low width. On early CVC20 chassis, T17's emitter came off earth with the same result. In either case, the quick check is to ground T17's collector – or T13's emitter as the case may be – whereupon the width should jump out. T903 on the EW modulator panel is also suspect in cases of incorrect width.

In 110° sets, the EW correction transformer L22/23 can develop short-circuit turns, resulting in excessive width. The same symptom occurs sometimes when the BD238 transistor in the T13 position goes short-circuit. This can be brought on, we believe, by e.h.t. tripler failure.

Still on 110° sets, C69 (value varies with chassis) has been known to go open-circuit, this time reducing the width.

Turning now to the EW control department, the width, pincushion and trapezium control potentiometers in all chassis can become "junky", giving rise to intermittent changes in width and picture geometry. Very often cleaning is all that's required, our old enemy flux usually being at the root of the trouble. A degree of compensation for picture breathing is introduced into the EW control circuit via R105A (150k $\Omega$ ). This resistor has been known to go opencircuit, and is worth checking if regulation of the width with brightness changes is poor.

## **CRT BASE PANELS**

The c.r.t. base connector panel varies somewhat with different chassis types. Each type of panel contributes its quota of faults, so we'll briefly look at them individually.

On the CMB10 c.r.t. base panel fitted to  $90^{\circ}$  sets, vertical striations will appear if D601 goes open-circuit. The first anode preset control R610 can develop an open-circuit track, brightening or extinguishing the picture depending on the position of the wiper relative to the break. A bright, broad streak down the left-hand side of the picture will usually be resolved by checking R609, which may be opencircuit or badly jointed. Finally, failure of R615 will manifest itself as a vertical striation on the right-hand side of the display.

The CVC25 chassis uses c.r.t. base panel type CMB25, which is broadly similar to CMB10 just dealt with. It's prey to many of the faults described above. The first anode supply potentiometer is fed from a  $180k\Omega$  resistor, R616, and in some component batches this resistor could fail, giving a low brightness or no picture fault. A reading of less than 450V at pin 10 of the c.r.t. betrays this one. In some CVC25 chassis the line flyback blanking pulse feed diode D601 was replaced by two 1N4148 diodes connected in series.

The CVC30 and CVC32 chassis use c.r.t. base panel type CMB30. This is quite different from the other types, incorporating as it does three first anode presets and two gun switches. Common troubles here are confined to failure of R603 (510k $\Omega$ ) and R608 (100k $\Omega$ ), causing excessive brightness in either case.

### SWITCH-MODE POWER SUPPLY

In discussing the power supply we'll disregard the CVC40 and CVC45/1 chassis altogether – they are relatively new as yet, use a totally different power supply circuit, and we've had no failures to date.

In the other sets it's important to be sure that the switchmode module is correct for the chassis type, as they are not interchangeable. On sets whose chassis type number starts with the five characters CVC20, the CMP10 module is used, providing an output on the main h.t. line 3 of 125V. The CVC25, CVC30 and CVC32 chassis, also the /1 and /3 variants of these, all use the CMP30 module, which is designed to produced 160V on the h.t. 3 line. To distinguish them, look at R814 – in the CMP10 it's 18k $\Omega$ , in the CMP30 it's 27k $\Omega$ .

A comprehensive write up on this power-supply circuit will be found on page 576 of the September 1977 issue of *Television*. Since the appearance of that article, a revised setting-up procedure has been produced.

To set the over-current trip potentiometer R810, remove pin 1 of the module and apply an external source of 4V to TP801. The potentiometer may now be adjusted so that the power supply just trips. The over-volts trip potentiometer R817 should next be set so that the power supply trips out at 29kV e.h.t.

This power supply has been around long enough for a few stock faults to have emerged. It's an excellent circuit however, and much less trouble than some other manufacturers' designs. We regret its passing as the CVC40 and CVC45/1 come into the limelight: it's whispered in gaul that the TDA2640 power supply module might diappear from the new production scene soon.

Suspicion naturally falls on the power supply in cases where "pumping" takes place. Very seldom is the power supply responsible however. If the output voltage rises, the trip will operate due to excessive e.h.t. voltage; much more commonly, excessive current will cause tripping, with a short on the h.t. 2 (20V) or h.t. 3 (125V) lines, or a heavily loaded and damped line output stage drawing excessive current from the 125V line.

Chart 2 may be found helpful where the power supply is tripping. Remember however that the i.c. will do only five or six pump cycles before shutting down. This state of affairs is indicated by the presence of about 6V on pin 15 of the TDA2640, and necessitates switching off the set for a few seconds – when the mains power is restored, the power supply will again sample conditions.

In cases of intermittent shut down, check the TDA2640 by substitution then if necessary replace the h.t. rectifier (D18 in the CVC20, D19 in  $110^{\circ}$  sets). Ensure that the line hold control R710 is correctly set.

The BY133s in the mains bridge rectifier circuit and the  $1\mu$ F mains filter capacitor (on the mother board on some chassis, on the control panel on others, and on both in other cases) are uncommonly well behaved in this chassis, so that a blown mains fuse is quite a rarity. When it does happen, C44A (C44 in 110° sets) is as likely a culprit as the filter capacitor and bridge. This is a disc ceramic capacitor across the -320V line – it's on the mother board. A very much less likely possibility is a defective chopper transformer. We've had some mains switch failures – they generally fizz and grumble internally, thus causing sporadic failure.

No sign of life in the set, with the mains switch and fuses intact, should lead to a check of the zener diode D801 which sets up 12V to operate the TDA2640 i.c. Beware of switching on the set with the switch-mode power supply control module removed, as C40 on the mother board, robbed of its shunt load, will instantly go short-circuit. Beware even more of the -320V line itself. It has a very low source impedance, and is derived directly from the mains. The problem is that the voltages in the power supply are referred to this line, which forms an "apparent earth". One

## Chart 2: Power supply fault guide.

All voltages quoted measured with respect to the -320V rail,  $\pm 5\%$ All component reference numbers refer to the CVC20 chassis.

Is there an audible whistle from the chopper transformer (at approximately 1.5kHz)?

To isolate an overload, proceed as follows:

- (1) Unplug the line oscillator/sync separator module. If this clears the overload, check the a.c. load components in the line output stage the tripler, rectifiers D21/22, shift rectifier D25, shift blocking coil L30, EW modulator diodes D23/24, flyback tuning capacitors C57/8, and the associated components including the line output transformer.
- (2) If the overload remains after unplugging the line oscillator module, remove the scan coil plug. If the overload is cleared, check the BU208 etc. for a d.c. short-circuit.
- (3) Refit the module and the scan coils plug and check for a short-circuit in each by removing one at a time. Check power supply outputs for short-circuits, and the power supply module by replacement.

real earth and one apparent earth, the two 320V apart and both capable of giving a nasty shock to true earth (earthy stuff this, isn't it?).

gives rise to just about 38V across C809, its measuring point within the module.

#### **Components on Main Board**

Within the control module, C803 can go open-circuit to give width flutter. In some production, R816 is suspect for open-circuit. This deletes the line sync pulses from the chip, which will then free run at about 18kHz. This has no effect on the performance of the i.c., but gives rise to an interesting little fault condition which may stretch your powers of diagnosis a bit: striations appear on the display, roughly  $\frac{1}{4}$  in. wide and  $\frac{1}{2}$  in. apart, disappearing when the chassis is lowered.

If the current trip potentiometer R810 is burnt, along with R805 and R809, resolder or replace the  $1\Omega$  current sampling resistor on the mother board (R89 in the CVC20, R86 in 110° receivers) and pray that the TDA2640 has survived – it usually does.

The output voltage from the power supply as a whole is based on the reference zener D802, which should be checked in cases of output voltage drift or difficulty in setting the h.t. It's worth knowing that the correct e.h.t. of 25kV

## **TELEVISION MAY 1979**

The rest of the power supply is on the mother board, starting with the driver transistor T11 (T10 in 110° sets). In early production versions of the CVC20, its base bias resistor R80 (150k $\Omega$ ) acquired a certain notoriety on account of its habit of going high-resistance or open-circuit, often intermittently. Unfortunately, this usually results in the destruction of the BU126 chopper transistor.

D19 and D20 are there to protect the chopper transistor from over current and over voltage respectively (in 110° sets they are designated D20 and D21). They should be checked along with the associated components and R80 in cases of BU126 failure. If the BU126 has shorted, the 5.6 and 100 $\Omega$  resistors in its base circuit (R84/86 in CVC20) should be checked for damage.

A mysterious case of low h.t. can arise if the h.t. reservoir/smoothing capacitors C51/52 dry up or lose

capacitance. The h.t. will fall to about 80V on load, rising to virtually normal when the load is removed. Under normal conditions, a lightly loaded power supply (under no line drive conditions for instance) will give rise to a whistle at about 1.5kHz from the converter transformer.

## **Scoping the Power Supply**

When investigating the power supply module, oscillograms can be taken peacefully with fuse F3 removed, thus de-energising the receiver and preventing damage to the BU126 when a test probe is connected to the base or collector of the driver transistor (T11 or T10).

## **MISCELLANEOUS MATTERS**

Resistor value changes in the beam limiter circuit were listed in the caption to Fig. 2 last month. Note that R20/21/22/23/25 should all be 2% tolerance types.

The following modifications were made at the front end of the decoder board. T501's emitter resistor R501 has a series *RC* network added across it: a  $470\Omega$  resistor (R501b) is connected to T501's emitter and is taken to chassis via a 470pF capacitor (C501b). The wiper of S501 is taken to the junction of these added components instead of to the emitter of T501. The value of R505A was increased to  $470\Omega$ . And an addition diode, type 1N4448 (D505a), was mounted on the copper side of the board in an insulating sleeve, with its anode to pin 10 of IC501 and its cathode to the junction of D501/D502.

Finally, one or two odds and sods not associated with any particular module or circuit section. Flux may contaminate the pins of any of the modules, so that these are worth checking in all cases of "flag-waving" faults. On some early production sets, the earthing of the print on the mother board to its metal frame was suspect, again leading to intermittent effects when the set or chassis is tapped.

Looking back over this chronicle of misery and disaster, we are prompted to restate the comment we made at the beginning, that the reliability is generally good and that these receivers are not the rogues we seem to have made them out to be. We've had many sets of the CVC20 type out on rental for periods of up to two and a half years with few or no service calls having been required. Our own records bear out the fact that the reliability is increasing as feedback from the trade takes effect in ITT's design and production departments.

It could well be that future production will be based on the CVC45/1 type of chassis, and it seems unlikely that in future chassis the designs will be produced and updated and outmoded quite so quickly as in the past three rather hectic years. If necessary, we'll return to these chassis and their successors in a couple of years or so, when the habits of the CVC40 and CVC45 series are better known.■

Requests for advice in dealing with servicing problems must be accompanied by a 50p postal order (made out to IPC Magazines Ltd.), the query coupon from page 383 and a stamped addressed envelope. We can deal with only one query at a time. We regret that we cannot supply service sheets nor answer queries over the telephone.

## **TELETON TH14**

There's very little brightness on this set, despite a new line output transformer and a complete set of power transistors and diodes. When the set is switched on, there's a small flash in the tube gun. Do you think there's a short in the tube?

We doubt it. This would result in no picture of any entertainment value. Check the tube base voltages: there should be 11.5V across the heater pins 3-4, 0-90V at the cathode (pin 2) depending on the setting of the brightness control, zero voltage at the grid (pin 1), and about 290V at the first anode (pin 6). The voltage at pin 7 depends on the setting of the focus tapping. Low voltage at pin 6 could indicate leakage in the tube if the voltage returns to 290V when the tube base socket is removed. If the voltage is low with the tube base off, the first check should be of the associated electrolytic decoupling capacitor C432 ( $3 \cdot 3\mu F$ , 350V) which could be leaky.

## TANDBERG CTV2

The raster went off suddenly, accompanied by a smell of burning resistors, and smoke. The sound is o.k., but the horizontal centring potentiometer R772 is completely burnt.

The potentiometer has burnt out because the a.c. blocking choke L752 in the horizontal shift circuit has gone short-circuit. It can be taken out of circuit altogether if the picture is reasonably centred without it.

### BAIRD 700 CHASSIS

This set has given excellent pictures until now. The set was operating normally, then the picture suddenly went very much brighter. It was noticed that the brilliance of the heaters had increased. On switching off, there was a frying sound for a couple of seconds.

The usual cause of this trouble is heater-cathode leakage in one of the valves, and from the symptoms it would seem that the PFL200 luminance output/reference oscillator valve is a hot favourite, in which case its cathode components should be checked as well. It should be possible to see where the fault is since the valves on the earthy side will probably be glowing less brightly. If necessary, check the heater voltages systematically from the PY500 at the highvoltage end of the chain to the ECC82 at the earthy end. There are also two decoupling capacitors in the chain, C315 and C194 (in the v.h.f. tuner), either of which could be defective.

#### **TELEVISION MAY 1979**

## **KB WV05**

The trouble with this 19in. dual-standard set is lack of width. It's normal on both systems on switching on, but after about a quarter of an hour on 625 lines the width starts to come in from the left – the last time the set was left on the width started to come in from the right as well. On 405 lines the fault takes longer to appear – about an hour and a half. All the line timebase valves and the boost capacitor have been replaced, and the value of the resistors in the tapped width control chain checked and found to be correct. The associated decoupling capacitor C125 has also been replaced. I now suspect the line output transformer, which hisses when the set is switched off.

It's possible that the h.t. is dropping as the set warms up – if the voltage at the anode of the PY801 boost diode (pin 9) is less than 180V when the fault is present, replace the h.t. reservoir/smoothing block C138/C136. It would be worth checking the line drive coupling capacitor C123, and the condition of the focus control. Also ensure that the heater current is correct. Otherwise the line output transformer is suspect – also the scan coils, though this is much less likely.

### THORN 2000 CHASSIS

The trouble is poor field hold, especially on ITV. The field hold is reasonably steady on an indoor aerial, but when the set is connected to the communal aerial the hold becomes intermittent. Hold can be kept if the contrast is reduced to a low level, but at an acceptable contrast level the conditions are as described above.

This sort of thing is usually caused by incorrect sync separator biasing. We suggest checking the bias resistor R25  $(3.3M\Omega)$  and the series diode W2, also C8  $(50\mu F)$  which decouples the base of the pre-sync amplifier transistor VT4. These components are on the video board. Defective a.g.c. filtering can also give rise to field roll: C54 and C55 (both  $50\mu F$ ) on the i.f. panel are the capacitors to go for.

## SONY KV1810UB

There are about 25-30 light horizontal bars across the screen, about a quarter of an inch apart, especially noticeable on dark scenes. They run all through the picture, from top to bottom. Sometimes they run upwards, stop for a second, then run downwards. The speed at which they run up and down varies. The picture and colour are otherwise satisfactory, and I can't see any ripple on the picture.

We are inclined to suspect the smoothing downstream from the chopper transistor – faults here can do strange things to the display. The capacitors to check are C621  $(33\mu F)$  and C623  $(10\mu F)$ . If this fails to cure the problem, the best course would be to obtain an oscilloscope and a pattern generator capable of giving a plain raster, so that the fault can be traced to its source – starting at the c.r.t. cathodes.

#### **REDIFFUSION Mk 1 CHASSIS**

The trouble with this set – which carries the identifications BWE President and Rediffusion CU2213 – is that the field will trip (roll) when certain shots occur, also on camera changes. Is there any modification to overcome this?

If the collector of the a.g.c. amplifier TR007 is decoupled by a  $125\mu$ F capacitor (C062), this should be changed to  $25\mu$ F. Otherwise, we suggest you check the value of R401 (1M $\Omega$ ) in the sync separator circuit and C045 ( $5\mu$ F) which smooths the distribution amplifier transistor's base bias.

## THORN 9000 CHASSIS

There's a vertical line down the screen, just to the left of centre, with a kink in it. The kink moves slowly up or down. There's no hum bar across the screen. There are also multiple images, rather like ghosting, but the fault is really noticeable only when the picture consists of a light background, e.g. a cloudless sky.

We have traced the first fault on more than one occasion to the zener diode W603 on the Syclops control panel – it's in series with the base of the line driver transistor VT412. In early production it was a 6.2V type: it was changed to a 4.3V type to improve the driver transistor's switching performance. For the second fault we suggest you check whether C125 and C116 in the a.g.c. circuit are  $100\mu$ F and  $0.001\mu$ F respectively, as in later production. The luminance delay line could also be responsible. Another point that might help is to ensure that W712 is type MR914.

## DECCA 10 SERIES CHASSIS

The picture is normal when the set is first switched on, but after an hour or so a  $1\frac{1}{2}$  in. vertical band of incorrect colours (green on red, magenta on blue) develops on the left-hand side of the screen, remaining there. It disappears very quickly if the back is removed, so I've been unable to check around the ident/PAL switch area with freezer or a hairdryer.

The ident signal itself is used to drive the PAL switch on this chassis, i.e. there's no bistable. This fault can arise when the ident signal is incorrectly phased, and can be demonstrated by adjusting the ident coil L207. We suggest you replace C238 ( $0.1 \mu$ F) which tunes the ident coil, and the colour-killer rectifier diode D208 (BA154), then retune L207 to eliminate the effect. If the fault drifts back, replace the coil itself.

## GEC C2040 SERIES

The problem with this hybrid colour receiver is lack of sync. I cannot get either the field or line timebases to lock. The field timebase can be synchronised, but lock cannot be held, while the line will sometimes produce a sort of false lock with three or four flickery images. The sound is o.k., and there's a full range of brightness, contrast and colour.

The main suspects are the sync separator transistor TR109 and the two electrolytics C169 ( $47\mu$ F) and C135 ( $1\mu$ F) – the former provides coupling between the luminance delay line and the luminance emitter-follower, the latter providing coupling between the emitter-follower and the sync separator. It would be worth checking the values of R500 and R501 on the timebase panel, since these set the sync separator's collector voltage and tend to change value.

## ITT CVC9 CHASSIS

The set gives a perfect picture when switched on from cold. After about half an hour however the picture reverts to monochrome, though with horizontal bands of colour across the screen (these are not all that pronounced). A correct colour picture can sometimes be regained by turning the set off and on again, though this is less likely to be effective the longer the set has been on.

The trouble is that the reference oscillator in the decoder is going out of lock. Next time the fault occurs, try adjusting R311d (on the left-hand side of the decoder panel) until the bars just disappear to give a colour picture, then rotate the control a few more degrees in the same direction. If the fault persists, C208d  $(6.8\mu F)$  and the 1.5V zener diode D36d in the reference oscillator control loop, also the crystal, are suspect (in that order).

## **TELETON TW12BS**

The trouble with this set is no field scan - just a horizontal white line across the screen. I'd appreciate advice on tackling the fault.

Check whether R525 ( $100\Omega$ ) in the supply to the field output stage is burnt. If so the output transistors TR504/TR505 are suspect, and the driver transistor TR503 could be damaged. If R525 is intact, ensure that 26.5V is being developed on the positive side of the boost reservoir capacitor C419, then as before check TR503/4/5. The field drive waveform is developed across C506 in the Miller integrator circuit. There should be 26V or so on one side – if not check D501 – and 0.35V at the junction of R516/7 on the other side. If these voltages are incorrect, check the Miller integrator transistor TR502 and the discharge transistor TR501.

#### DECCA MS1700

The basic problem is sound but no raster. When either the brightness or the contrast is increased, a fairly good but reduced size picture appears which then increases in size and fades away. The picture appears intermittently for two-three seconds, the process repeating. The boost voltage and thus the voltage at the c.r.t.'s first anode is low, but the boost diode and capacitor are in order.

The line timebase is at least operational, though at reduced efficiency. We suggest you try a new PL504 line output valve, and check the values of R111 (3.9M $\Omega$ ) and R106 (1.5M $\Omega$ ) in the width circuit – R111 is the most likely suspect. If these are in order, check the ECC82 line oscillator valve and the 27k $\Omega$  load resistor R102 across which the output is taken.

#### THORN 1590 CHASSIS

The problem is sound distortion after the set has been on for approximately an hour and a half. It disappears when the back has been removed from the cabinet. The TBA120B intercarrier sound i.c. has been replaced (with a TBA120A), also the preamplifier transistor VT10. All voltages in the audio circuits are within tolerance, and all the electrolytics in this area have been checked by shunting them with appropriate value capacitors when the fault is present.

While the output transistors VT12/13 or the bias transistor VT27 (if applicable) could be faulty, it's more likely that the loudspeaker cone is warping at high temperatures. Try a replacement speaker, ensuring that it's the correct impedance (12 $\Omega$ ). Note that when a TBA120A is used to replace a TBA120B, the 12k $\Omega$  resistor fitted on the print side of the board between pins 8 and 11 should be removed.

## PYE 169 CHASSIS

The fault with this set is sound but no raster. All the line timebase valves have been replaced. Disconnecting the width control restored the picture, but with increased width. So the control and the v.d.r. in series with it were replaced, but still no difference. Replacing the 500k $\Omega$  width control with a 2M $\Omega$ resistor reduced the width of the restored picture, but the side of the screen started to jitter, and with the brightness control at maximum there's ballooning.

An unusual fault. There seems to be something amiss with the d.c. conditions at the control grid of the line output valve, possibly due to the coupling capacitor C69  $(0.047 \mu F)$  being leaky. The feedback capacitor C67 (820pF) in the oscillator circuit may have changed value, and it would be worth checking the values of R80 (1M $\Omega$ ) and R81 (1.2M $\Omega$ ) in the PL504's control grid circuit, also the pulse feedback capacitor C71 (120pF).

## **GRUNDIG 6010**

The trouble with this set is that the safety cut-out keeps operating, removing the supplies, though there don't seem to be any shorts. Resetting the cut-out sometimes brings the set to life again, but it works for only ten minutes or so before cutting off again. I've monitored the shift voltage at tag c of the line output transformer, and this seems to remain steady before the set cuts off.

The problem is usually due to dry-joints in the line output stage. Check in particular the connections to L501 and L515, which are in series with the gates of the two thyristors, and the condition of the soldered joints on the pins of the large wirewound components in the line scan/e.h.t. circuit.

## PHILIPS G8 CHASSIS

The BT116 mains rectifier thyristor on the power supply panel seems to last only two-three years and is now difficult to get. Any suggestions for alternatives?

A BT106 with suitable heatsink can be used, or a BT119 or

Each month we provide an interesting case of television servicing to exercise your ingenuity. These are not trick questions but are based on actual practical faults.

A Bush Model CTV1526 (RRI Z179 110° chassis) arrived in the workshop with the complaint that the picture was falsely coloured and that there were coloured edges to the picture components even on a monochrome transmission or when the colour control was fully retarded. Using a crosshatch signal from a Pye Unicam pattern generator, it was dramatically revealed that the red and green horizontal convergence was badly out of adjustment.

Looking at the circuit diagram, it was noted that line pulses for this part of the convergence circuit are coupled to the top of the secondary winding of 5T1 (R/G amplitude) through an  $0.1\mu$ F capacitor (5C4), the circuit then continuing to the green convergence coil 7L9 and the red convergence coil 7L10 via each side of the centre-tapped R/G differential amplitude coil 5L3.

Using the crosshatch, it was found that by adjusting 5T1 there was movement of only the red crosshatch lines. No combination of adjustment to 5T1 or 5L3 would produce accurate convergence of the red and green crosshatch lines however.

The blue horizontal and lateral adjustments appeared to be working reasonably well, since appropriate adjustments at the left and right sides of the display could be achieved, but the centres of the vertical lines of the crosshatch at the left and right sides could not be brought into proper BT120 as in some thyristor line output stages, again with metal work, or a BRC4443 can be used. A diode such as the BY127 can be added in series with the thyristor: this protects the thyristor against reverse breakdown, and also helps to prevent excessive e.h.t. in the event of a gate-cathode short in the thyristor. The latest official Philips recommended replacement is the 2N4444.

## ITT VC53 CHASSIS

The trouble is that the DY86/87 e.h.t. rectifier valve keeps going out, with resultant loss of the picture. The valve has been changed and a check made for loose pin connections, but the fault remains.

There are two common causes of this trouble. First, you'll find inside the shroud carrying the valveholder a  $2.5\Omega$  1W resistor which is in series with the valve's heater. Check this by substitution. Secondly, green corrosion often builds up on the sockets and their connections. A new valveholder is the only lasting cure for this.

registration. It was proposed to check the current in the red and green coils to see how this varied with control adjustment. A method of making this measurement was devised, and it was found that the current through the coils was not as would have been expected.

What was the most likely cause of the trouble, and what method do you think was adopted to measure the coil current? See next month for the answers and for a further item in the series.

## SOLUTION TO TEST CASE 196 – page 328 last month –

The mistake made by the technician in the test case reported last month was not to extend his tests at the tube's base. The vital one he left out was pin 3, the first anode, for with no voltage here there can be no screen illumination. The first anode supply is obtained from the boost line via a smoothing network consisting of a 270k $\Omega$  resistor and an  $0.22\mu$ F decoupling capacitor (3C38). The latter was shortcircuit, robbing the tube of its first anode supply. The line output stage continues to operate in this condition – hence the ability to obtain a spark at the anode of the line output valve – but due to the overload will be working at reduced efficiency, explaining the low e.h.t.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 25 Å                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 186 Transistor    

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 83 A0 

                                                                                         | .83 A0 

  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 47 Al 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 83 AI 

  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 65 A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 114 Transistor 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 47 A 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 93 A 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | .82 AI 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 41 A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 125 Transistor<br>126 Transistor 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 41 A 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 41 A 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 41 AL  

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | 41 AU 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 108 Transistor
