THE EDISWAN S11E12 (CV4060)  
Special Quality Beam Tetrode

**a  
newcomer  
with  
a  
first  
class  
reference**

The S11E12 is the latest addition to the range of Ediswan valves designed specifically for use in series or shunt control circuits.

The S11E12 has an international octal base and the important parameters are as follows:

Heater Voltage (volts)	$V_h$	6.3
Heater Current (amps)	$I_h$	1.6
Anode Voltage, maximum (volts)	$V_a$ (max)	800
Screen Voltage, maximum (volts)	$V_{g2}$ (max)	300
Mutual Conductance (mA/V)	$g_m$	13.5
Anode Dissipation (watts)	$P_a$ (max)	28
Cathode Current (mA)	$I_k$ (max)	300

The new valve is specially designed to resist shock and is quality tested at all stages of manufacture to ensure maximum reliability and life expectancy.

Further information on this and other valves in the CV 4000 range will be gladly sent on request.

# FRAME GRID VALVES FOR TELEVISION

The PCC89 is a variable-mu double triode of frame grid construction, intended for use as a cascode grid amplifier at frequencies up to 220Mc/s. Its heater is designed for inclusion in a 300mA series heater chain. The valve may be used in tuners with the conventional PCF80 mixer valve or with the frame grid PCF86. In either arrangement it provides reduced noise and improved gain. As in the other valves in the new television series, the most obvious effect of introducing the frame grid is doubling of the slope. Thus the slope of each triode in the conventional PCC84 is 6.0mA/V, while under comparable conditions the PCC89 achieves 12mA/V.

## IMPROVED GAIN

A tuner designed round the PCC89 and PCF80 can have a gain of about 52 to 56dB on the various channels, compared with a maximum of about 48dB in a tuner using the conventional PCC84 and PCF80. With the PCC89 and PCF86, the maximum gain is increased to about 60dB, and the noise factor of the tuner is reduced to about 6dB at 200Mc/s. This 'frame grid' tuner can be used in receivers designed for service area or fringe operation. The circuit differences between these two receivers would be in the i.f. amplifier stages.

For optimum performance in a tuner the PCC89 must be operated under carefully chosen conditions. There must be sufficient power gain in the grounded cathode stage to overcome the noise of the grounded grid stage. There must also be sufficient a.g.c. voltage available to allow optimum signal handling and the required delay.

## OPTIMUM CONDITIONS

Optimum noise factor is obtained with  $-0.8$  to  $-1.2$ V bias on the first triode, which is best realised by using cathode bias. Optimum gain is obtained with rather less bias, which can be realised only under grid current bias conditions. This second mode of operation shows up

to 2dB more gain on Band III than that obtainable with cathode bias, and just over 1dB on Band I, at the cost of a small increase in noise factor. However, the d.c. feedback effect of the cathode bias resistor is lost, and the spreads in gain will be a little greater with grid current bias. A tuner gain of 60dB (with PCC89 and PCF86) can be achieved on Band I with either system of biasing; but on Band III this figure is attainable only with grid current bias.

## TAIL AND A.G.C.

The PCC89 has been given a variable-mu characteristic so that it can handle large signals without introducing perceptible cross-modulation. The valve can be operated with any tail length between  $-9$ V and  $-22$ V (which are the voltages for 1/100th slope reduction.)

Signal handling ability, limited by sound on vision or vice versa, can be better than 1.0V at the grid of triode 1 (250mV at the aerial) with long tail conditions and with cathode or grid current bias for triode 2. In fringe areas, with adverse sound to vision ratios, half this figure is realistic.

Many different operating conditions are possible for the PCC89. The choice is based on the gain-slope relationship which is required, the available a.g.c. voltage, and the i.f. arrangements to which the cascode has to be matched.

The high gain of frame grid tuners means that the designer should give special attention to the question of stability in both parts of the cascode circuit. Neutralisation of the anode-to-grid capacitances is advisable.

## Radio Horizons

WHEN Heinrich Hertz confirmed experimentally the mathematical predictions of Clerk Maxwell that electromagnetic waves could be generated and would be propagated with the speed of light he was too preoccupied with the physics of the phenomenon to give much thought to the possible application of cause and effect across the width of a room to the transmission and reception of messages over greater distances. It was left to others to develop the possibilities of this new knowledge and in particular to pioneers like Henry Jackson and Marconi whose vision and persistence were strong enough to break through the contemporary restrictions of inadequate techniques and official scepticism.

Once the first few yards had been extended to miles, the course of future development seemed clear. All that remained was to increase transmitter power and to improve receiver sensitivity. But before ranges had reached hundreds of miles the curvature of the earth's surface appeared as a possible limiting factor. It was once again the persistence of Marconi which cut through all pessimistic arguments and successfully sent a signal from Cornwall to Newfoundland in 1901. Yet another triumph of practice over precept was scored in 1920 by American and British amateurs in spanning the Atlantic on the "useless" short wavelengths of 200 metres or so; this several years before Appleton had established the existence and started to explore the exact nature of the ionosphere.

In the years since 1924 the ionosphere has been the subject of intensive study by means of continuous-wave and pulsed reflections from ground-based stations and the results form the basis of precise forecasting of optimum frequencies and paths of transmission for economical point-to-point radio communications over the whole surface of the globe. The work of the I.G.Y. has considerably extended this study, particularly near the magnetic poles, and the early results, reported elsewhere in this issue, show that the possibilities of conventional sounding techniques are by no means exhausted. But from the scientific point of view they have one serious limitation, namely, that while they give information of the underside of the laminated ionospheric "mirror" they cannot tell us anything about the backing. Signals of frequencies capable of penetrating the ionosphere are either lost in space or, if they are reflected from the moon or if signals originating from satellites are used, they can give only the total electron content of the intervening space. This has proved to be many times greater than the known numbers below the F layer, a fact which suggests a much further extension of the earth's atmosphere (or alternatively of the sun's atmosphere) than had hitherto been supposed. The whistling atmospherics investigated by L. R. O.

Storey\* led to the conclusion that atmospheric conduction extended to a height equivalent to at least two earth radii, and the recent discovery by van Allen and his colleagues of radiation belts at distances up to seven or eight earth radii now confirms the extent and complexity of the earth's immediate environment.

Although these discoveries may have little impact on day-to-day terrestrial radio communications they will be of great interest to radio astronomers, for it is through the window of the earth's atmosphere that they must receive their signals from the limits of the universe. A detailed knowledge of the structure of the window and of possible aberrations is vital. The bandwidths of the visual and radio "holes" in the transmission spectrum of the atmosphere are relatively narrow and the electromagnetic information which penetrates to the earth's surface is often blurred by scintillation. Optical observatories are sited on mountain tops to get as far as possible above thermal turbulence, and it has been suggested that future radio observatories working on frequencies above 30 kMc/s and below 1 Mc/s would have to be mounted on satellites and other space vehicles. It now seems likely that they will have to travel much further than was at first thought necessary in order to get a clear "view."

All this has some bearing too on the possibility of interplanetary communication with civilizations in other solar systems, a topic much discussed recently and the subject of a note on page 87 of this issue. Knowing the diversity of planetary atmospheres in our own solar system we must hope that the radio "windows" of other planets supporting intelligent life will coincide with or overlap our own at least to the extent of including the 21-cm hydrogen line.

That interplanetary communication between different solar systems can be now seriously considered is due in large measure to the novel methods of amplification such as masers and mavarst† (parametric amplifiers) which do not depend primarily on electronic emission currents with their discrete and random noise generating properties. This is a landmark in receiving technique comparable with the change from wiring to "plumbing" and the transfer of energy in confined fields rather than as currents in conductors.

We have travelled a long way since Hertz, and the history of our progressive extension of the range of radio communication is punctuated by successive "break-throughs" in our knowledge, not only of the techniques of generating and receiving signals, but of the medium through which they are propagated.

# RADIO AND THE I.G.Y.

By R. L. SMITH-ROSE,\* C.B.E., D.Sc., Ph.D., F.C.G.I., M.I.E.E.

**T**HE International Geophysical Year denotes the period 1st July, 1957, to 31st December, 1958, during which the scientists of some 66 nations worked at over 4,000 observatories throughout the world on a co-operative programme concerned with the physical properties of the earth and its atmosphere, and with the related solar and terrestrial phenomena. As described in an earlier article,<sup>1</sup> the I.G.Y. was the direct descendant of two earlier enterprises known as the First and Second International Polar Years which took place in 1882-83 and 1932-33 respectively. In the second of these, radio was used for the first time to study the characteristics of the ionosphere in Arctic regions; and as it happens, this took place during a period of minimum sunspot activity, whereas the I.G.Y. was conducted 25 years later during what turned out to be an epoch of the highest solar activity for the past 200 years.

In addition to a calendar of observation days drawn up in advance, provision was made during the progress of the I.G.Y. for the declaration of Special World Intervals when the state of the sun indicated the likelihood of a geophysical disturbance which might affect, for example, the ionosphere, and the earth's magnetic field. For this purpose an international network of radio and line communications was used to alert all participating observers and warn them that such a S.W.I. might, subject to confirmation, begin sixteen hours later. During the I.G.Y. 44 such alerts took place; of these, 22 culminated in a Special World Interval, during 17 of which, major solar and terrestrial disturbances occurred. In addition, there were 6 severe and 33 mild disturbances for which no previous warning or alert had been issued.

Provision was also made in advance for the setting up of a number of World Data Centres. The two main centres in U.S.A. and U.S.S.R. collect data relating to all disciplines in the programme; while in the radio field two additional centres in England and Japan were set up. The former is at the D.S.I.R. Radio Research Station at Slough, where, up to date, over a million sheets of ionospheric records and results, together with atmospheric noise and auroral data, have been received. It is likely that the mass of material brought together in this way will provide the basis of research in geophysics for many years to come, and in this brief review it is possible to refer to only one or two examples of the results which have already been achieved.

## Physics of the Lower Atmosphere

The first International Polar Year, 1882-83, arose from the desire of meteorologists to know more about the physical characteristics of the atmosphere in the less accessible places. This applied particularly to the regions of the north and south poles,

as it was considered that a knowledge of atmospheric conditions in these areas would lead to a better understanding of the factors which determine weather and the climate of the world. Today the network of meteorological observatories provides the basis of what is probably the most detailed international scientific organization throughout the world. Under the auspices of the World Meteorological Organization, with its comprehensive radio and line communications system, a very rapid reporting system has been developed which provides the most up-to-date weather and forecasting information for the needs of the whole world.

The primary aim of the meteorological programme for the I.G.Y. was to obtain a more nearly complete global picture of the mechanism of the general circulation in the atmosphere and its smaller-scale systems. To this end special stations were established in the polar regions, equatorial areas and on oceanic islands to supplement the observations made at permanent stations. Efforts were made at aerological stations to extend radio-sonde measurements to greater heights—to about 30 km where practicable—and to make more frequent soundings during the World Meteorological Intervals and on other World Days. Special mention should perhaps be made of the great expansion of observational facilities in the Antarctic. Some 50 stations made surface weather observations at least four times each day: added to this there were twice-daily upper-air soundings at 16 stations to an average height of about 20 km. For the first time in history it has now been possible to construct charts showing broad circulation patterns at various atmospheric levels above the Antarctic.

**Thunderstorms and Atmospheric Radio Noise.**—For many years past, the meteorologist has used a network of radio direction-finding stations to locate the existence and movement of thunderstorms which make themselves evident by the emission of radio waves from lightning flashes. Having provided this kind of tool to the meteorologist, the radio scientist is further interested in obtaining measurements of the intensity and structure of the waves comprising atmospheric noise, which can so disturb radio reception in various parts of the world. As a result of past work involving international co-operation, tentative charts<sup>2</sup> have been produced indicating the order of magnitude, and probable frequency of occurrence, of the atmospheric radio noise likely to be encountered at different seasons throughout the world.

The main objective of the I.G.Y. noise programme has been the establishment of a network of stations for the measurement of a specific characteristic of the atmospheric noise received from lightning flashes. The characteristic chosen was the received noise power, averaged over a period of about an hour. The measurement of various parameters, including the noise power which is related to the r.m.s field strength, was made at 13 stations during the I.G.Y. At a few of these the observations were made by

\* Director of Radio Research, Department of Scientific and Industrial Research.

# COLLECTION OF DATA : METHODS OF ANALYSIS : NEW KNOWLEDGE OF THE IONOSPHERE AND OF OUTER SPACE

both manual and automatic recording methods, and some apparent discrepancies between the two sets of results are under investigation. A third method, which has been in use for many years at 15 stations in different parts of the world, was continued during the I.G.Y. In this, the strength of a locally generated signal is determined which is just sufficient to be intelligible through the noise.

Other I.G.Y. projects were designed to study the nature of the noise as it is radiated by the source—the lightning flashes—and the manner in which it is modified as it is propagated through the atmosphere. Records of the noise near to the source have been made, at several frequencies, on magnetic tape, and are being analysed to determine their energy, and other characteristics. Fig. 1 shows a record of atmospherics recorded at the D.S.I.R. Radio Research Station, Slough, on two frequencies, from a flash which struck the ground half a mile away. The upper record shows characteristic large impulses at 6 kc/s, from the ground strokes, and the more complex nature of the records at 11 Mc/s. Reproduction of the records at higher gain shown below, reveals that the atmospherics are more complex than first appeared even at 6 kc/s. Many of the features of these records cannot be readily explained on present theories of the lightning discharge.

As an example of the studies of the effects of propagation, low-frequency atmospherics from the same lightning flash were recorded at several stations in Europe; and comparisons are now in progress to examine how their form changes with the distance, and possibly with the direction of propagation.

## Study of the Ionosphere

The exploration of the ionosphere by vertical soundings using pulse techniques was established on a regular basis in the U.K. and U.S.A. over 25 years ago. Only two or three stations were working during the second International Polar Year, but some 80 were in regular operation before the I.G.Y. began, and about twice this number were established during the I.G.Y. The work of these stations has produced

Fig. 1. Waveform of atmospherics from a very near lightning flash. Peak amplitudes 1.4mV/m at 11 Mc/s, 3.5 V/m at 6kc/s

over one million tables of measurements and photographic records which refer to the period of the I.G.Y. The study and assimilation of this vast accumulation of data will take many years; but to illustrate how some of these data have already been used, two examples may be referred to here. One of these deals with small quantities of data which have been examined in great detail and very accurately: the other is concerned with the approximate statistical treatment of a large amount of data referring to specific ionospheric characteristics.

**Distribution of Ionization and M.U.Fs.**—The calculation of maximum usable frequencies (M.U.F.) for radio communication circuits is based on the assumption that the electron density in the F2 layer increases with height according to a parabolic law. The refractive properties of a non-parabolic layer might be expected to lead to maximum usable frequencies above or below those at present in use. Now it is arduous to derive the actual distribution of electron density from the observational records by manual methods. During the I.G.Y., first in the United Kingdom and later in other countries, digital computers have been programmed to calculate these distributions of electron density with height on a routine basis. These distributions are termed  $N(h)$  profiles, and they are often found in practice to be far from parabolic in form. By tracing the ray-paths through ionized layers conforming with the

measured profiles, it has been shown that, although the actual M.U.F. factors do not differ by an appreciable amount from those calculated assuming a single parabolic F2 layer, the angle of arrival of the waves for a given distance between the transmitter and receiver tends to be greater than that for a parabolic layer of the type usually assumed. Thus the practical conclusions reached are that while the maximum usable frequencies now in use are not seriously affected by the shape of the layer, it may be desirable to use aerial systems which project the radiation at a greater angle of elevation than has hitherto been considered the most appropriate.

**Solar-Cycle Changes in  $f_oF_2$ .**—In the previous example, the whole of the observational data for about ten ionograms have been studied in very great detail. The next example deals with the critical frequency of the F2 region using data obtained from many thousands of ionograms from all parts of the world.

During the I.G.Y., solar activity was considerably higher than it has been since regular visual observations of the number and magnitude of sunspots were begun about 200 years ago. As a consequence, the ionization and hence the critical frequencies of the ionospheric layers have reached unprecedented high levels as illustrated in Fig. 2 which shows the critical frequencies observed at the Radio Research Station, Slough, during the past 27 years. This new information on ionospheric behaviour at very high solar activity is unique and is unlikely to be repeated for many years to come. This is important because it adds a great deal to earlier knowledge on the relations between solar activity and critical frequencies, an understanding of which is essential to the accurate forecasting of M.U.F.s for communications.

**Drifts.**—The normal methods of sounding the ionosphere pay no attention to the fact that the reflecting layers are not at rest, but appear to be moving with horizontal velocities which vary with the height of reflexion. Special techniques are required for the measurement of these velocities and these have only been developed in the last decade to a stage where they can be used with some con-

fidence. Although only 20 to 30 observatories undertook measurements of ionospheric drifts during the I.G.Y., the information already available has given results which tend to fall in to a consistent pattern.

The drifts of ionization follow a diurnal variation; for example, at Ibadan in Nigeria, the prevailing directions are to the west by day and to the east by night at all seasons. It was also found that on magnetically disturbed days the drifts are less pronounced than on the quiet days. At the more temperate latitude of Cambridge, there is also a marked north-south component in the drift velocity. This has been found to have a long term variation related to the solar cycle; at the period of maximum activity the drift was towards the equator, whereas at the epoch of minimum activity the direction was reversed. It is likely also that the vertical movement was subject to similar changes in direction.

It is becoming increasingly evident that in some parts of the world the vertical and horizontal movements of clouds of ionization play an important part in determining the characteristics of the ionosphere, which are not simply related in time to the locally incident radiation from the sun.

### Ionospheric Investigation in the Antarctic

The I.G.Y. provided the impetus for a scientific survey of Antarctic and Arctic ionospheric conditions on a scale which had not previously been attempted. In the Antarctic, British ionospheric stations were operated by the Royal Society, at Halley Bay in the Weddell Sea, and by the Falkland Islands Dependencies Survey, at Port Lockroy in Grahamland. Other stations were operated by France, U.S.S.R., and other countries, including one at the South Pole where the U.S.A. had a large base.

The Jodrell Bank radio astronomy observatory made a continuous survey of auroral and meteor activity in co-operation with Halley Bay throughout the I.G.Y. Preliminary results have already shown that radio echo auroral activity at Jodrell Bank corresponds to the peaks in activity at Halley Bay. The incidence of meteors was observed by the range of reflection of radio echoes produced by the trails

Fig. 2. Measured noon values of  $f_oF_2$  at Slough, 1932-1959

of ionization left behind the meteors as they burnt up in the atmosphere. Drifts of ionization were measured at heights of 85 to 105 km; the resulting pattern of these drifts or "winds" in the ionosphere was found to be very regular, unlike the winds at the surface of the earth. The speeds of these ionospheric drifts are about 100 miles per hour\*, and their directional vector rotates clockwise twice each day. They are towards the north at 6.0 a.m., to the east at 9.0 a.m., south at noon, west at 3.0 p.m., and so to the north again at 6.0 p.m. local time. This regular behaviour is due to tidal and heating effects of the sun in the upper atmosphere, which cause the atmosphere to expand and contract twice per solar day in the same way that the moon causes the seas to rise and fall twice each lunar day.

Ionospheric observations made at high latitudes have a special significance; and the complicated behaviour of the F layer in the Antarctic may be clarified considerably by attempting to separate those phenomena due to electrons produced by the sun's radiation on the upper atmosphere from those due to horizontal or vertical movements of electrons from other locations.

Movements of ionospheric layers are almost entirely generated by electrical forces interacting with the earth's permanent magnetic field; and the velocity of the movement therefore depends on the direction of this field, and, in particular, on the angle of dip. The interpretation of detailed studies of a layer thus depends on the magnetic dip in the ionosphere above the sounding station. There is a unique dip anomaly in the Weddell Sea area due to the asymmetry of the magnetic field in relation to the centre of the earth. This anomaly is so great that the dip angle at the Royal Society Base at Halley Bay, 75° S, is the same as that at Canberra, 35° S, or at similar latitudes in Florida in the northern hemisphere. As a result the interpretations of ionospheric phenomena are relatively simple for such a high latitude where the rate of photo-ionization in the F layer near midwinter is zero. For the same reason, it varies only slightly through the day near midsummer. Thus any changes in ionization generated by movements in the layer are more easily seen and interpreted than in locations where photo-ionization may be changing rapidly during the day.

The diurnal variation of the F2 layer critical frequency at Halley Bay in midwinter is shown by the curves linking the circles in Fig. 3, which also shows the corresponding midsummer curve marked by crosses. It is to be noted that, despite the absence of any photo-ionizing radiation from the sun in midwinter, the noon critical frequency exceeds that found in midsummer, when the sun never sets<sup>5</sup>. Clearly the behaviour of the layer must be almost entirely determined by movements of ionization and not by direct solar influences. The curves also show that the critical frequency of the F layer is over three times as high at noon as at midnight in midwinter; this corresponds to an increase of about ten times in the ionization density.

The changes in shape of the layer show that the total electron content below the maximum is also much increased at noon. Detailed studies of the ionograms confirm that these changes are mainly due to horizontal movements of ionization; a new layer moving in and replacing the old during a period of about eight hours. This is the cause of the discontinuity in the curve; for several hours there

Fig. 3. Monthly median values of  $f_oF_2$  at Halley Bay

are simultaneous reflections from a regular layer which is already overhead and from a second, much denser layer which gradually moves into an overhead position.

The differences between the summer and winter diurnal variations at Halley Bay illustrate a worldwide phenomenon, namely that the phases of the diurnal components of velocity reverse with season. This is responsible for most of the seasonal variations found in practice. Considerable further work will be needed before the regularities discovered during the I.G.Y. can be used as the basis for a theory of the F layer, since the density and shape of this layer in any part of the world depend on the difference between the amount of ionization moved into a zone and that moved out of it. Very small changes in these components can cause enormous differences in the shape of the resultant layer. Nevertheless, the data from the high-latitude stations during the I.G.Y. provide a firm and useful starting point for fuller investigations.

### Use of Rockets and Satellites

During the past decade rockets have been used for research purposes to investigate the phenomena and characteristics of the upper atmosphere by direct measurement in a manner which ground-based experiments are unable to provide. Following this work, it was recommended that during the I.G.Y. observations with rockets should be supplemented by means of artificial earth satellites carrying instruments for the measurement of solar radiation—ultra violet, X and cosmic rays—and its effect on the ionosphere. This recommendation culminated in the successful launching on 4th October and 3rd November, 1957, respectively, by the U.S.S.R., of the instrumented earth satellites known scientifically as 1957 $\alpha$  and  $\beta$ , or more popularly as Sput-

Fig. 4. Structure of radiation belts around the earth (J. A. van Allen). The figures shown indicate the particle density in counts per second.

niks I and II. This was followed on 31st January, 1958 by the U.S.A. satellite 1958 $\alpha$ —Explorer I; and others have followed at intervals during the past two years. At the present time, there are about a dozen satellites in orbit round the earth, while two others are pursuing courses round the sun and moon.

These space vehicles contain instruments for the measurement of the properties of the atmosphere, the electron density of the ionosphere and the intensity of cosmic and solar radiation in outer space. The output of these instruments is in electrical form and is either transmitted directly by radio<sup>6</sup> to the ground observing stations, or is recorded on magnetic tape and sent later on receipt of a command signal from a radio station on the earth. Some of the telemetry systems are relatively simple, providing information in only a few channels; others are more complex and use up to 48 channels. For example, the system used on the 20 Mc/s transmissions from Sputnik III (1958 $\delta$ ) contains three channels, one to indicate whether solar or chemical batteries are in use, and two to record cosmic-ray data. A pulse width system of modulation is used, the information being given by the time interval between successive changes of the pulse width from one discrete value to the next. The American satellites have transmitted the information on a frequency of 108 Mc/s supplemented more recently with higher frequencies. In one of the systems used, the modulation consists of 16 bursts of tone, the information being carried by the tone frequency (5 to 12 kc/s), the duration of the bursts and the interval between them, giving 48 channels in all. The power of transmitters in continuous operation varies from 10 to 100 mW, while for intermittent operation on command, a few watts have been used.

Apart from the need to extract the observational information from the satellite, radio transmission is used to track it and to supplement the positional information which may be obtained visually under favourable clear sky conditions. Radio interferometers and tracking equipment have been installed in

a number of countries to give round-the-world coverage by international co-operation. Additional information provided by the radio signals includes a determination of successive orbit periods, from a knowledge of which information is obtained as to the shape of the earth, variations of gravity at different altitudes and the drag of the rare atmosphere at the orbit levels. Moreover, measurements of the total electron density between the earth and the satellite have been made by comparing the speed of the received waves at a frequency just above the critical frequency of the ionosphere, and at a much higher frequency. The difference in speed at these two frequencies depends upon the total number of free electrons along the path; so the distribution of this number with height can be determined from a continuous record of the difference between the two received frequencies. Both the U.S.A. and U.S.S.R. results have shown no clearly defined minimum in the electron density between the E and F layers; and in the U.S.S.R. results there has been a negligible decrease from the maximum of the F layer up to a height of about 470 km. British experiments with Skylark rockets used a different technique, the change in conductivity and dielectric constant of the ionized air being used to change the frequency of an oscillator. This system has a very rapid response and is capable of showing the fine structure of the ionosphere. In view of the fact that radio methods of sounding the ionosphere from the earth's surface are limited to the lower portion up to the maximum of the F layer, and that it is estimated that there is at least as much more ionization above this layer, the satellite clearly provides a very powerful tool for future ionospheric research.

While research on cosmic rays at high altitudes was in progress before the I.G.Y. by means of balloons and rockets, the scope of the work has been considerably extended by the use of satellites carrying instruments for measuring the intensity and the energy distribution of the radiation. Observations made by U.S. Explorers I and III showed a steady increase in intensity with increase of both altitude

and geomagnetic latitude. Similar trends were shown by observations made with the U.S.S.R. Sputniks II and III. The American observers also noted a very rapid increase in intensity at a height of about 1,000 km; and further observations with Explorer IV have confirmed the existence of regions of intense radiation extending partly round the earth. The release of information on the coding of the telemetry signals used in both U.S.A. and U.S.S.R. satellites has enabled confirmatory observations to be made at Slough on Sputnik III in transit over this country, and on Explorer I in Japan.

The discovery by van Allen<sup>7</sup> and his colleagues of the high-intensity radiation belts which surround the earth is one of the outstanding results of the I.G.Y. Later observations made with Explorer IV and Pioneer III have indicated the existence of two belts<sup>8</sup> of high-intensity radiation around the geomagnetic equator, the first at a height of about 10,000 km and the second at about 22,000 km, as illustrated in Fig. 4. These belts consist of charged particles, the density of which, measured by the rates recorded on a Geiger counter, varies over a range of 10,000 to 1 under different conditions. Much speculation has taken place as to the origin of the radiation, but it is thought that the charged particles are trapped in the earth's magnetic field. On this hypothesis, the particles, travelling towards the earth, are subject to a force at right angles to both their initial motion and the magnetic field, causing them to pursue a spiral path. As they approach the earth, the increasing strength of the field results in a steadily increasing transverse velocity and the particles move in a closer and closer spiral. This is the result of the gradual translation of the initial energy of the particles from that of forward motion along the path into transverse rotational form. At a point in the earth's outer atmosphere where the magnetic field is sufficiently intense, the motion of the particles along the lines of force is reduced to zero (see Fig. 5). This, however, is virtually an unstable condition, from which the particles can be displaced by collision with other particles or molecules. Since they cannot advance further towards the earth, the streams of particles start to retrace their spiral path along the lines of magnetic force to the conjugate point of the earth's field, where the process is repeated. Thus, although there may be some leakage of particles in the course of their travel, the incoming streams of particles may be regarded as virtually trapped in the earth's magnetic field, and as travelling in spiral paths about the lines of force and being subject to reflection between the conjugate points of the field near the earth's surface. As the earth rotates these spiral paths may be regarded as revolving in a direction depending on the sign of the charged particles, so that toroidal belts of high intensity will be formed around the earth as indicated in Fig. 5. Further research and observations are required to establish the properties and structure of these radiation belts, but the knowledge of their

existence must be taken into account in future investigations of the space beyond the earth's atmosphere.

In concluding this section, attention may be drawn to the fact that radio signals from the American satellite Pioneer IV (1959  $\delta$ ) sent in orbit round the sun on 3rd March 1959 were received out to a distance of 400,000 miles<sup>9</sup>. This has established a record for direct radio communication with man-made sending and receiving equipment. Furthermore, the Russian satellite, Lunik III, which made a circuit of the moon towards the end of October, established a distance record for photographing the far side of the moon from a distance of the order of 300,000 miles, and transmitting the pictures back to earth by radio technique.

Although it was not strictly part of the I.G.Y. programme, reference may be made to the Argus experiment conducted by the U.S. authorities in August and September, 1958, when three small nuclear devices were detonated at an altitude of about 480 km (300 miles) in the South Atlantic. One of the I.G.Y. satellites, Explorer IV (1958  $\epsilon$ ), contained instruments designed to measure the natural radiation in the van Allen belts. On 27th August a large increase in the intensity of the radiation was recorded by the satellite as it passed through the locality of the explosion some 3½ hours later. Similar, though smaller, effects were observed after the second explosion four days later, together with residual effects from the first event. Although observations were made on very low frequency radio propagation and on the atmospheric noise level, no definite results were recorded.

## Conclusion

In concluding this very brief review of the manner in which the I.G.Y. was associated with radio, two points must be emphasized. First, that the successful exploration of our atmosphere and the outer space beyond depends to an increasing extent on the technique of electronics and radio communications. Secondly, it is clear that the international exercise which was designated the I.G.Y. did not end on 31st December, 1958. The following year was termed

Fig. 5. Diagram showing spiral path of charged particles trapped along magnetic lines of force

**International Geophysical Co-operation—1959;** and it has also been recommended that as far as practicable the various observatories should continue to work in their respective disciplines to extend our knowledge of the earth and its surroundings. It has further been recommended that the World Data Centres established for the I.G.Y. and extended for the results obtained with rockets and satellites, should be continued indefinitely as international repositories of the observational information which is to be freely available for research workers in the future.

## NEW BOOKS

**High Fidelity Sound Reproduction.** A collection, edited by E. Molloy, of essays by leading authorities on subjective and objective judgment of performance, acoustics of sound reproduction, multiple-channel systems, amplifiers, moving-coil and electrostatic loudspeakers, disc and tape records and radio reception. Pp. 208; Figs. 155. Price 20s. George Newnes Ltd., Tower House, Southampton Street, London, W.C.2.

**Topics in Electromagnetic Theory** by Dean A. Watkins. Unified treatment of aspects of field theory having a direct bearing on the design of microwave valves and allied devices. Sections include periodic transmission systems, the helix, coupled-mode theory and anisotropic media (ferrites). Pp. 118; Figs. 185. Price 52s. Chapman & Hall, 37 Essex Street, London, W.C.2.

**The Calculation of the Median Sky Wave Field Strength in Tropical Regions** by W. R. Piggott, O.B.E., B.Sc. D.S.I.R. Radio Research Special Report No. 27 on the principles and method of predicting the field strength of h.f. broadcast transmissions at low latitudes. Pp. 37; Figs. 28. Price 2s 6d. H.M. Stationery Office, York House, Kingsway, London, W.C.2.

**Modern Electronic Components** by G. W. A. Dummer, M.B.E., M.I.E.E., S.M.I.R.E. Comprehensive and concise survey of components with chapters on parametric testing, specifications laid down by Industry and the Services and an extensive bibliography. Pp. 472; Figs. 225. Price 55s. Sir Isaac Pitman & Sons Ltd., Parker Street, London, W.C.2.

**Principles of Frequency Modulation** by B. S. Camies. A comprehensive account of the theory of f.m. broadcast transmission and reception, interference rejection, methods of detection and the applications of f.m. in radar and communications systems, including facsimile. Pp. 147; Figs. 78. Price 21s. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1.

**General Circuit Theory** by Gordon Newstead. Compact account of the mathematical tools used in the analysis of complex circuits. Circuit elements, general network theorems, four-terminal network in the steady and transient states and some extensions of linear circuit theory to non-linear elements. Pp. 144; Figs. 20. Price 15s. Methuen & Co. Ltd., 36 Essex Street, London, W.C.2.

**Fundamentals of Transistors** by Leonard M. Krugman. Second (Revised) edition now includes references to surface barrier, intrinsic, drift, avalanche and spicistor types; and illustrative circuits in the amplifier, oscillator and h.f. application sections have been brought

up to date. Pp. 168; Figs. 120. Price 25s. Chapman & Hall, 37 Essex Street, London, W.C.2.

**Théorie et Pratique des Circuits de l'Electronique et des Amplificateurs. Tome I: Applications du calcul des imaginaires à l'étude des circuits.** By J. Quinet. Comprehensive treatise on the use of complex algebra and circuit theorems in the analysis of radio and electronic circuits. Pp. 256; Figs. 160. Price, 1960F. Dunon-Editeur, 92 rue Bonaparte, Paris 6<sup>ème</sup>.

**Radio Studies of the Universe** by R. D. Davies and H. P. Palmer. Broad survey against the background of optical astronomy of the methods and results of radio astronomy, by two members of the staff of Jodrell Bank observatory. Pp. 200; Figs. 50 and 14 plates. Price 25s. Routledge & Kegan Paul Ltd., 68-74 Carter Lane, London, E.C.4.

**Bringing the Aerial Down to Earth** by R. S. Roberts, M.Brit.I.R.E., S.M.I.R.E. Simple exposition of the technical background of television aerials and their installation. Pp. 33. Available from Wolsey Electronics Ltd., Cray Avenue, St. Mary Cray, Orpington, Kent.

**My Story of the B.B.C.** by Freddy Grisewood. A first-hand account of the B.B.C. from the inside from 1929 to the present day; primarily from the programme point of view but with much interesting technical information. Pp. 224; 29 illustrations. Price 21s. Odhams Press Ltd., 96 Long Acre, London, W.C.2.

**Rapid Radio Repair** by G. Warren Heath. Illustrated guide to bench techniques in locating and remedying faults in sound broadcast receivers. Subject matter arranged alphabetically for quick reference. Pp. 224; Figs. 81. Price \$2.90. Gernsback Library Inc., 154 West 14th Street, New York, 11.

**Abbreviations of Associations, Institutions, Research and Trade Associations.** B.E.A.M.A. Publication No. 159 with more than 400 entries giving the titles and addresses of organizations in the electrical and allied fields. Pp. 16. Price 1s 6d. The British Electrical and Allied Manufacturers' Association, 36 Kingsway, London, W.C.2.

**Principles of Electronics** by M. R. Gavin, M.B.E., D.Sc., F.Inst., M.I.E.E., and J. E. Houldin, B.Eng., Ph.D., A.M.I.E.E. Book of first principles designed to provide the common background for physicists and electrical engineers prior to specialization in any of the many branches of electronics. A collection of 250 examples based on typical examination questions is given. Pp. 348; Figs. 309. Price 30s. The English Universities Press Ltd., 102 Newgate Street, London, E.C.1.

# Signal-Flow Diagrams

## I.—Graphical Aids to the Solution of Complicated Circuits

By THOMAS RODDAM

A SIGNAL-FLOW diagram is a topological model of a system of linear simultaneous equations. In less dignified language, like what you expect of the likes of me, it is a map of what goes on inside a circuit and, like all good maps, it gives you a chance of finding a short-cut or two. The signal-flow diagram is starting to become fashionable in America, where it was first described six years ago by S. J. Mason in *Proc. I.R.E.* for Sept. 1953 (p. 1144), so that in any event you need to know something about it. This article is an attempt to explain what signal-flow diagrams are and how you use them without actually being blinded by science. It does not quite follow the line taken by R. F. Hoskins in *Electronic and Radio Engineer* (August 1959, p. 298) for a reason I shall make clear when I get to it.

We must start off with some rather dreary-looking G.C.E. or O.N.C. algebra before getting to a practical circuit. Bear with me, because it is necessary to get this first step clear: after all you would never have learned French if you had let your aunt's gardener keep that pen. Suppose we have a system with three points, which could be anode, cathode

Fig. 3. Simplification with series and parallel branches.

and grid of a valve, and we associate a variable, which could be voltage, with each. The variables are  $x_0, x_1, x_2$  and by ordinary circuit methods we find that:

$$\begin{aligned} a_0x_0 + a_1x_1 + a_2x_2 &= 0 \\ b_0x_0 + b_1x_1 + b_2x_2 &= 0 \end{aligned}$$

where the  $a$ 's and  $b$ 's are constants.

These equations can be solved by ordinary algebra, or by using determinants. We could write

$$x_0 = -\frac{a_1}{a_0}x_1 - \frac{a_2}{a_0}x_2$$

which Hoskins virtually does, but there is a risk in starting off like this because you then need to apply special tests for stability if  $a_0 = 0$ . It seems a pity to be forced to choose between doing this and manoeuvring round the concealed infinities which may be scattered through the algebra. Another method seems indicated and it is found by writing

$$\left. \begin{aligned} x_1 &= a_0x_0 + (a_1 + 1)x_1 + a_2x_2 \dots \\ x_2 &= b_0x_0 + b_1x_1 + (b_2 + 1)x_2 \dots \end{aligned} \right\} (1)$$

Now let us construct the signal-flow diagram, starting from  $x_0$ , the input signal. Operating in easy stages, Fig. 1(a) shows the three points,  $x_0, x_1, x_2$ . Notice that the points on the signal-flow diagram have the same names as the variables, because this is essentially a map of the signals. Looking at the first equation of (1) we see that we reach  $x_1$  by taking  $a_0x_0$  so in Fig. 1(b) we draw a line from  $x_0$  to  $x_1$ , put an arrow on it to indicate "to  $x_1$ " and write  $a_0$  alongside the arrow; we add the line  $a_2x_2$  from  $x_2$  and the "round-the-houses" line  $(a_1 + 1)x_1$  from  $x_1$  to  $x_1$ . From  $x_0$  to  $x_2$  involves the same sort of operations and is shown in Fig. 1(c). Since the equations are simultaneous the two partial maps must be put together and they then form Fig. 1(d).

We can now use this map to study the way in which maps of this kind can be simplified. Suppose we look at Fig. 2(a). The signal entering  $x_2$  is provided by two branches and gives us

$$x_2 = a_1x_1 + a_2x_1 = (a_1 + a_2)x_1$$

so that we can reduce this little map to the even

Fig. 1. Construction of the signal flow diagram of the two equations (1) in the text.

Fig. 2. Simplification of a signal-flow diagram with parallel branches.

Fig. 4. Simplification with a reversed loop does not just mean writing a minus sign.

simpler form shown in Fig. 2(b). This same simplification has been carried out to get from Fig. 3(a) to Fig. 3(b), from which we see that,

$$x_1 = a_0x_0$$

$$x_2 = (a_1 + a_2)x_1$$

$$x_3 = a_3x_2$$

so that  $x_3 = a_3(a_1 + a_2)a_0x_0$

which has the map shown in Fig. 3(c).

The diagram shown in Fig. 4(a) is deceptively like the one shown in Fig. 3(a) and it is very tempting to write  $-a_2$  in place of  $a_2$  and twist the arrow round. This is quite fatal. You just mustn't drive backwards down a one-way street. Signal-flow, like traffic flow, has its own rules and it is no good trying to use the rules you learnt for something else. Let us see what Fig. 4(a) means. We have

$$x_1 = a_0x_0 + a_2x_2$$

$$x_2 = a_1x_1$$

$$x_3 = a_3x_2$$

so that substituting in the first equation

$$x_1 = a_0x_0 + a_1a_2x_1$$

$$x_1(1 - a_1a_2) = a_0x_0$$

$$x_2 = a_1x_1$$

$$x_3 = a_3x_2$$

The first of the equations for  $x_1$ , taken with the last two, gives us the diagram shown in Fig. 4(b). This has a self-loop at  $x_1$ . We could have made the substitution in the second equation, giving

$$x_2 = a_0a_1x_0 + a_1a_2x_2$$

$$x_3 = a_3x_2$$

which gets rid of  $x_1$  altogether and produces the diagram shown in Fig. 4(c). Alternatively we could go on from the form

$$x_1 = a_0x_0/(1 - a_1a_2)$$

$$x_2 = a_1x_1$$

$$x_3 = a_3x_2$$

to get Fig. 4(d), which contains no self-loop. You see how the self-loop  $a_1a_2$  at  $x_1$  reacts on the  $a_0$  term entering  $x_1$  from  $x_0$  to give  $a_0/(1 - a_1a_2)$ . This agrees with the idea of a self-loop, or indeed a reversed loop like the one we began with, as a feed-

Fig. 5. Introducing test points in a signal-flow diagram.

Fig. 6. The step-by-step reduction of (a) (Fig. 1(d)) representing the equations (1) leads to the solution (g).

back loop. The last step in the reduction is shown in Fig. 4(e).

Before we go back to try and simplify Fig. 1(d) we might notice a trick which is convenient in avoiding confusion. We can do the reduction of Fig. 3(b) to Fig. 3(c) in reverse in the way shown in Fig. 5. Here I have put in a couple of test-points  $x_\alpha$  and  $x_\beta$  without altering the overall flow from  $x_0$  to  $x_1$ .

Back, then, to Fig. 1(d). If we look first at  $x_1$  we see that we have a self-loop and two entering signals: the figure is redrawn as Fig. 6(a) and the self-loop has been eliminated in Fig. 6(b) by dividing both entering signals by  $1 - (a_1 + 1) = -a_1$ . In Fig. 6(c) the second loop has been eliminated and this figure is then redrawn as Fig. 6(d). To get this even

Fig. 7. Circuit of a cathode follower and the construction and reduction of its signal-flow diagram.

simpler we collapse the top-half of the map as in Fig. 4(c) to give Fig. 6(e). The two branches from  $x_0$  to  $x_2$  are then run together in Fig. 6(f) and in Fig. 6(g) the self-loop at  $x_2$  is eliminated by the method we have already described. The answer we have reached is

$$x_2 = \frac{a_0 b_1 - a_1 b_0}{a_1 b_2 - a_2 b_1} \cdot x_0$$

which those skilled with determinants could have written down right away. Of course, the whole operation is merely the elimination of  $x_1$  between the two original equations and in this particular case it would have been much easier to solve the problem directly. When you turn to more complicated problems, however, there is a lot to be said for working on each small area of the equations without having to carry all the rest along with you and without needing to make a lot of substitutions. You do not need Kirchhoff's laws or Maxwell's circulating currents to calculate a voltage divider but you will get thoroughly tied up without these aids if you are dealing with a three-stage ladder network with a bridge across the top. So with the signal-flow

diagram the more complex the problem the more powerful the tool appears to be.

The moment has come to write down some of the rules of the game in a neat list. As given by J. G. Truxal in "Automatic Feedback Control System Synthesis" (McGraw-Hill, 1955) they are:

1. Signals travel along branches only in the direction of the arrows.
2. A signal travelling along any branch is multiplied by the transmittance of that branch.
3. The value of the variable represented by any node (intersection point) is the sum of all signals entering that node.
4. The value of the variable represented by any node is transmitted by all branches leaving that node.
5. The diagram is always drawn so that no branch enters the input node and none leaves the output node.

There is nothing like a practical example to clarify matters. The mapping and reduction exercise above was devised, like all good exercises, to feature all the procedures you may need. We may permit ourselves something a little simpler, with one of the lessons only a practical case can involve, in preparation for a real problem next month. The circuit is shown in Fig. 7(a) and is, of course, our old friend the cathode follower. We can write down some equations for this:

$$\begin{aligned} e_g &= e_i - i_k R_k \\ i_k &= \mu e_g / (\rho + R_k) \\ e_2 &= i_k R_k \end{aligned}$$

These three equations give us the partial maps of Figs. 7(b), (c) and (d), which we can put together in the form of Fig. 7(e). This time one of the nodes is  $i_k$ , a current, although all the others are voltages. It does not matter, the rules are still obeyed, but you will notice that when an arrow points from  $e_1$  to  $e_g$  it bears a transmittance which has zero dimensions but from  $e_g$  to  $i_k$  the dimensions are conductance,  $1/R$ , and from  $i_k$  to  $e_2$  they are resistance. Clearly if two nodes are joined by several branches they must all have the same dimensions and this forms a useful check in complex systems.

The results which have been obtained and the conclusions which may be drawn are worth recapitulation. The signal-flow diagram provides a map of the passage of signals through the circuit. Feedback loops are indicated very clearly, as you can see in Fig. 7(e), and this is true even if there are a number of loops. Although there is nothing in the diagrams which was not in the simultaneous equations, elimination of the dependent variables is often much easier because attention can be concentrated on them one at a time.

Next month I propose to deal with a fairly complicated circuit which most of us would think twice about in its conventional treatment. This will give the signal flow diagram a chance to show its advantages.

"From Us To View," a new Mullard film, sets out to show something of the skill and care that go to ensure the high quality of television pictures. It traces the progress of the picture from its beginning in the studio to its appearance in the living room. The 16-mm black and white sound film, which runs for 23 minutes, is available to clubs and other interested organizations on free loan from Mullard House, Torrington Place, London, W.C.1.

# WORLD OF WIRELESS

## Servicing Examinations

THE Radio Trades Examination Board's syllabuses for sound radio and television servicing have been in operation virtually unchanged since the examinations were first set some years ago. During the past year (reviewed in the Board's 15th annual report) a complete revision of the two syllabuses took place. Apart from revising the material itself an opportunity was taken to combine the sound radio and television subject matter so that there is one syllabus leading up to the issuing of one certificate covering both subjects. The Board will now provide an intermediate examination at the end of the third year of a part-time course and a final examination at the end of the fifth year.

The Board's proposed scheme for certificates for those engaged in installing and servicing "non-domestic" electronic equipment has moved a stage further and a syllabus has now been prepared. It is arranged so that the syllabus for the first two years is common with that for sound radio and television servicing, but separate intermediate and final examinations in electronics are to be held. The first examination will be at the intermediate level in 1961.

The domestic radio and television manufacturing side of the industry is already represented on the Board by B.R.E.M.A. and an invitation has now been extended to the Electronic Engineering Association to be represented.

At the annual general meeting of the Board on December 30th, E. A. W. Spreadbury, technical editor of *Wireless & Electrical Trader*, was elected chairman in succession to E. M. Lee (Belling & Lee).

## I.T.A. Masts

MODIFICATIONS to the aerials at three I.T.A. stations are mentioned in the Authority's recently published report for 1958/59. "Whatever finally happens about the siting of television stations in London, there are good technical reasons for making improvements as soon as possible at Croydon" where there is a temporary 200-foot tower. The Authority is satisfied that experience has allayed earlier fears that the radiation of signals from two high towers, one at Crystal Palace (B.B.C.) and one a mile away at Croydon (I.T.A.), might be harmful to reception because of mutual reflection between the two towers. Plans for a new 500-foot tower and "tailored" aerial system have been referred to the Television Advisory Committee. It will be recalled that the height of the B.B.C.'s mast

was extended at the instigation of the P.M.G., in order to accommodate the aerials of both the B.B.C. and I.T.A. stations.

At Black Hill, central Scotland, where the aerial is unusual in that the elements are located centrally within the 750-foot mast, both the aerial and the mast are to be replaced; it is hoped by the autumn of this year. The present mast will subsequently be dismantled for use elsewhere.

At Lichfield the existing 450-foot tower is to be replaced by a 1,000-foot mast with a new aerial designed particularly to improve reception in the south-westerly direction.

**Dip. Tech.**—A second list of students on whom the National Council for Technological Awards has conferred Diplomas in Technology, has been issued. Of the 82 successful candidates, 49 took electrical engineering at the Birmingham College of Advanced Technology, and all but three of these received their industrial training with the G.E.C. The total number of holders of the Dip. Tech. is now 207. There are now 3,320 students studying for the Diploma compared with 1,786 a year ago.

**Space Science Symposium.**—A British delegation of 40 people led by Professor H. S. W. Massey, F.R.S., chairman of the British National Committee on Space Research, attended the first International Space Science Symposium held in Nice from January 11th to 16th. Organized by the Committee on Space Research (COSPAR) of the International Council of Scientific Unions, it was attended by delegations from nearly 20 countries.

**Stereophonic Broadcasting.**—A time-multiplex system for broadcasting stereophony has been developed by G. D. Browne, of Mullard Research Laboratories, and has been submitted to the European Broadcasting Union for assessment. Details of the system have not yet been released but it is known that stereophonic v.h.f. receivers could be produced with the addition (apart from the extra loudspeaker and audio stage) of not more than two valves or possibly one transistor and two diodes. The system is compatible for mono and stereo broadcasts.

**B.S.R.A.**—A one-day convention covering post-war developments in recording, pickup design and cinema sound systems, is being organized by the British Sound Recording Association during the forthcoming Audio Fair. It will be held on April 23rd at the London School of Hygiene and Tropical Medicine, Keppel Street, W.C.1. Registration will cost 5s for B.S.R.A. members and 10s for non-members. Details are obtainable from S. W. Stevens-Stratten, Greenways, 40 Fairfield Way, Ewell, Surrey.

**"The Computer in Production."**—The Institution of Mechanical Engineers is arranging an informal discussion on the computer in production in order to introduce mechanical engineers and managers to the latest techniques involving the application of computers in production and to provide a forum for users to present their views to computer manufacturers. The meeting will be held on March 21st and 22nd. Further details are available from the Secretary, Institution of Mechanical Engineers, 1 Birdcage Walk, London, S.W.1.

**Receiving Licences.**—There were twice as many combined television and sound broadcasting licences in force in the U.K. at the end of November as sound-only licences. The comparative figures were 9,987,005 and 4,960,788.

### "Wireless World" Index

The index to Volume 65 (1959) is now available price 1s (postage 3d). Cloth binding cases with index cost 9s including postage and packing. Our publishers will undertake the binding of readers' issues, the cost being 25s per volume, including binding case, index and return postage. Copies should be sent to Hiffe & Sons, Ltd., Binding Department, c/o 4 Hiffe Yard, London, S.E.17, with a note of the sender's name and address. A separate note, confirming despatch, together with remittance should be sent to the Publishing Department, Dorset House, Stamford Street, London, S.E.1.

**Information Engineering** is among the subjects for which M.Sc. degree courses are being conducted by the University of Birmingham. These courses, which are "primarily intended for honours graduates of approved universities" differ from the traditional one of original research leading to the degree of M.Sc. Suitably qualified students (preferably with some industrial experience) can obtain the degree on the satisfactory completion of the 12-month course, of which the next session starts on October 1st, 1960. Subjects available in the information engineering course include communications, radar, computers and control systems, with some degree of choice to suit individual requirements. Full details are obtainable from Dr. D. A. Bell, Supervisor of Graduate Courses, The University, Edgbaston, Birmingham, 15.

The **CIBA Fellowship Trust**, which was founded for the purpose of furthering the exchange of ideas between scientists in the United Kingdom and on the Continent, announces that several fellowships will be awarded for tenure during the academic year 1960/61 at Continental universities or institutions for research in chemistry, physics or some allied scientific subject. They will be awarded to graduates of U.K. universities or to members of those universities graduating this year. The basic award for Fellows will be £800 per annum, plus allowances. Details are available from the secretary of the CIBA Fellowship Trust, CIBA (A.R.L.), Ltd., Duxford, Cambridge.

**T.E.M.A. Awards.**—For the third year the Telecommunication Engineering and Manufacturing Association has held a competition for the best final year apprentices (graduate, student and technician) among their member-firms. Awards to the value of £25 will be presented to each of the following at the Association's annual dinner on February 17th: P. J. Langlois, graduate in training, of S.T.C.; P. N. T. Wells, student apprentice, of G.E.C.; and J. R. Bryden, technician apprentice, of Ericsson.

**Hendon Technical College**, London, N.W.4, is holding a ten-lecture evening course on electronic measurements on Tuesdays from January 26th. Fee £1.

**Twickenham Technical College**, Middx., is providing a special course of ten evening lectures on printed circuit techniques. The course begins on February 3rd. Fee £1.

**U.S.A. Tour.**—Malcolm Church (left) a 21-year old apprentice of Plessey, Swindon, being congratulated by the Mayor of Swindon on his selection for a six-month tour of America to study engineering techniques and production methods. On the right is F. B. Langworthy, "the best apprentice to complete his training" in 1959. The Mayor presented prizes to nearly 50 apprentices. A. E. Underwood, the company's resident director at Swindon, is second from the left.

**Craftsmanship and Draughtsmanship.**—With the object of encouraging craftsmanship and draughtsmanship in the scientific instrument industry a competition mainly for young workers of either sex is held each year by the Physical Society. Twenty-four prizes were awarded to successful entrants at the Society's recent exhibition at which the entries were on display. The Silvanus P. Thompson prize was awarded to Christopher Samms of Marconi's W/T Cc. for a mechanical drive unit. In the electronic circuitry section prizes were won by David Elliot (Marconi's), John Butler (Hilger & Watts) and John Mills (Marconi's), and in the microwave components section by James Danbury (Services Electronics Research Lab.), Roy Tucker (Hilger & Watts) and Adrian Short (Services Electronics Research Lab.).

**Paris Components Show.**—Although listed in the diary of conventions and exhibitions in our January issue as the French Components Show, the exhibition to be held in Paris from February 19th to 23rd is international in character. This is the third International Components Exhibition to be organized by the Industries' Association for Radio and Electronic Components and Accessories (S.I.P.A.R.E.) under the patronage of the National Federation of Electronic Industries (F.N.I.E.).

Nigeria's first two television stations, which have been in service since the beginning of November, operate on 625-lines in Band I. The station at Ibadan, the regional headquarters of Western Nigeria, radiates on 66.25Mc/s vision, and 67.75Mc/s sound (European channel 4), with an e.r.p. of 1.5kW. The station at Abafon, serving the Lagos area, operates on 55.25 and 60.75Mc/s (channel 3) with a 15kW e.r.p.

**ELSIE**, the Post Office Electronic Letter Sorting and Indicator Equipment, will be among the features in the display at this year's Ideal Home Exhibition (Olympia, March 1st to 26th), depicting the 300 years' growth of the G.P.O. since the King Charles II "Act for the Erection and Establishing a Post Office."

"Teletype."—The Western Electric Company have informed us that the word "Teletype," used in our report of the Radio Hobbies Exhibition (January, 1960, issue) is a registered trade mark of the Teletype Corporation who are associates of Western Electric Co.

## CLUB NEWS

**Bexleyheath.**—At the February 11th meeting of the North Kent Radio Society, W. J. Green (G3FBA) will discuss the design and construction of a multi-band transmitter which will not interfere with television. On the 25th there will be a demonstration of mono and stereo equipment. Meetings are held at 8.0 at the Congregational Hall, Chapel Road.

**Birmingham.**—A 160-metre mobile rally at Lickey Beacon, Rednal, has been arranged by the South Birmingham Radio Society for 10.30 a.m. on February 7th. The monthly club lecture meeting will be held on the 18th at 9.30 at Friends Meeting House, 220 Moseley Road, Birmingham, 12.

"15 watts in 50 countries" is the title of the talk to be given by R. Roberts, of the B.B.C., to members of the Midland Amateur Radio Society on February 16th. Meetings are held at 7.0 at The Birmingham Midland Institute, Paradise Street.

G. T. Peck, of Ernest Turner Electrical Instruments, will lecture on electronics in the search for oil at the February 26th meeting of the Slade Radio Society which meets on alternate Fridays at 7.45 at The Church House, High Street, Erdington.

**Bradford.**—David Pratt (G3KEP), secretary of the Bradford Amateur Radio Society will give a talk entitled "Inexpensive sound fidelity" at the club meeting on February 9th at 7.30 at Cambridge House, 66 Little Horton Lane.

**Reading.**—A representative of E.M.I. Sales & Service is giving a lecture-demonstration of high-quality sound equipment to members of the Calcot Radio Society on February 18th. Monthly meetings are held at 7.45 at St. Birinus Church Hall, Calcot.

# News from the Industry

**Ultra Reorganization.**—Two subsidiary companies have been formed by Ultra Electric (Holdings) Ltd. Mr. E. E. Rosen, chairman and managing director of the company since its formation forty years ago, will continue as chairman of the holding company and of the subsidiaries, with A. V. Edwards as managing director of each of the subsidiaries. The two new companies are Ultra Radio and Television Ltd. (which has its own subsidiary, Pilot Radio and Television Ltd.), handling domestic sound and television equipment, and Ultra Electronics Ltd., which will handle the activities formerly covered by the Special Products Division. Trevor C. Standeven, who joined Ultra eighteen months ago from Radio and Allied Industries, is general manager of Ultra Radio and Television, A. Bamford, technical manager, and W. H. De Val, works manager. They are also members of the board. L. R. Crawford is general manager of Ultra Electronics, Dr. F. W. Stoneman, who joined the organization from Smith's Aircraft Instruments last June, is chief engineer, J. S. Williams is works manager and E. R. Wright, commercial manager. They are also members of the board.

**Camp Bird's** 57th annual report and statement of accounts presented at the annual general meeting on December 31st records that the group's consolidated earnings before taxation were the highest in the company's history—£666,709, compared with £578,840 the previous year. Reference is made by John Dalglish (chairman) in his review to the activities of the subsidiaries, including Hartley Baird (see below), Electronic Reproducers (previously known as E.V. Ltd., but not to be confused with E.V. Industrials) and A. Prince Industrial Products, distributors of a number of overseas products, including such names as Blue Spot, Dual and Akkord.

**Hartley Baird Ltd.**, in their report for the year ended last April, record a group profit of £54,402 after taxation. During the year under review the company disposed of its share holding in Ambassador Radio and Television Ltd., which is now owned jointly by Camp Bird and an unnamed company. It is understood Ambassador are not continuing in the domestic sound and television receiver field. The Hartley Baird group includes Hartley Electromotives Ltd., manufacturers of the Taperiter dictating machine, and Duratube & Wire Ltd.

**H.M.V. and Marconiphone** sound and television receivers and radio-gramophones will in future be distributed by British Radio Corporation Ltd. (21 Cavendish Place, London, W.1, Tel.: Langham 9291) instead of by the sales companies ("His Master's Voice" Radio & TV Sales and Marconiphone Radio & TV Sales), which ceased to operate on January 1st. Matters relating to accounts will be handled by B.R.C. at 270 Great Cambridge Road, Enfield (Tel.: Enfield 5353).

**Radio Rentals Ltd.** announce a group net profit for the year ended last August of £1,098,616, just over £273,000 above the previous year. This was after allowing £2,968,104 for depreciation and £851,279 for taxation.

**Decca's** recently introduced river radar, type 215, meets the internationally agreed Rhine Radar Specification issued by the Commission Centrale de la Navigation du Rhin. Compliance with this specification allows vessels fitted with radar to continue their passages up or down the Rhine under conditions of poor visibility.

**G.E.C.**—The Leeds branch of the General Electric Co. has moved from Wellington Street to a new building in Gelderd Road.

**Firth Cleveland Group** has recently acquired two organizations in the radio and electronics field. With the acquisition of Broadmead Ltd. on January 4th the group now controls over 500 retail radio stores, including Max Stone, Civic Radio Services and Escott Brothers. The purchase price for Broadmead was £5.8M. John James, the founder and chairman of Broadmead, has joined the board of Firth Cleveland Ltd. The Firth Cleveland Group has also acquired a 53% interest in the Solartron Electronic Group Ltd., which includes fourteen companies in this country and abroad. Charles W. Hayward, chairman of Firth Cleveland, becomes chairman of Solartron. John E. Bolton, who is 39 and was chairman and managing director of the Solartron group, which he joined in 1951, retains his managing directorship but becomes deputy chairman.

**Solartron Electronic Business Machines**, a subsidiary of the Solartron Electronic Group, have received an order for an Electronic Reading Automaton from Domestic Electric Rentals Ltd. The E.R.A. will read directly, at a speed of up to 300 characters per second, information recorded by National Cash Register machines at each branch of the radio-TV rental organization. This information will then be automatically punched on to 80-column cards for subsequent use in a standard punched-card installation.

**Daystrom Ltd.** have moved to new premises at Two Mile Bend, Bristol Road, Gloucester, from their temporary address at Glevum Hall, and an official opening ceremony by the Mayor of Gloucester took place on December 7th. A. E. B. Perrigo, who is managing director, disclosed that 25% of their output of British "Heathkits," of which there are now twenty-two types, is exported.

**Wayne Kerr** have set up a new section to be known as the applications group of the Industrial and Electronics Division. It will be under the direction of G. G. Gouriet, the company's technical director. The administration offices of the new group are at 44 Coombe Road, New Malden, Surrey.

**Wolsey Electronics Ltd.**, of St. Mary Cray, Orpington, Kent, have been appointed sole distributors in the U.K. for Grundig measuring instruments. The range of equipment being handled includes b.f.o.'s, wobblers, valve voltmeters, grid-dip oscillators, resistance and capacitance decodes and stabilized power supplies.

**G. V. Planer Ltd.** have recently completed an extension to their research laboratories at Sunbury-on-Thames, Middlesex. The additional accommodation has been allocated to the growing solid-state physics section and associated X-ray crystallographic group. The research facilities for printed circuit and related techniques under L. S. Phillips have also recently been enlarged.

**Modac connectors**, hitherto produced by Plessey's associate company, Modern Acoustics Ltd., at Boreham Wood, Herts., will in future be manufactured at Plessey's Wiring and Connectors Division at Cheney Manor, Swindon.

**E.M.I.** closed-circuit television is being used to enable one policeman to control four busy traffic lanes at West Drayton, Middx., during reconstruction of a railway bridge spanning the High Street and Station Road.

**Electro Methods Ltd.** have moved their Electrical Connector Division to new premises at Hitchin Street, Biggleswade, Beds., (Tel.: Biggleswade 2086). The divisional manager is D. P. Wright.

**General Electric Co.** has reorganized its General Products Group into five new groups each under the control of a group managing director. The groups, with the name of the managing director in parenthesis, are:— Domestic Equipment Group, incorporating the domestic equipment division (E. A. Fowler); Installation Equipment Group, incorporating the installation equipment division and Pirelli-General cable division (R. H. Phillips); Lighting and Heating Group, incorporating the lighting division and industrial heating department (D. L. Tabraham); Osram Group, incorporating the Osram lamp division and all glass and lamp component units (A. E. Page); and Radio Group, incorporating the radio division (M. M. Macqueen).

## EXPORT NEWS

**Sweden.**—Alma Components Ltd. have appointed AB Solartron, of Hedingsgatan 9, Stockholm NO, as their agents for precision wirewound resistors in Sweden.

**Multi-channel** u.h.f. communication equipment is being supplied by Plessey for installation in vessels of the South African Navy.

**Ghana.**—The Government of Ghana has awarded Marconi's the contract for the design and erection of the transmitting station buildings, the supply and installation of the four 100-kW short-wave transmitters and ancillary equipment, the masts, aerial and feeder systems—in short, an entire external broadcasting station on a "turnkey" basis. In addition Marconi's have contracted to supply technical staff for the supervision and maintenance of the station for a period of four years and to be responsible for training personnel of the Ghana Broadcasting System. Valves for the transmitters will be supplied by English Electric Valve Co. The contract for the complete station at Tema, near Accra, is valued at over £600,000.

**Canada.**—A new microwave link between Moncton and St. John, New Brunswick, using G.E.C. equipment and operating around 2,000Mc/s, was commissioned on December 12th. The installation was carried out by Canadian General Electric Co. The link is primarily for telephones but can be used for television, and work has already begun on extending it from Moncton to Campbellton and from St. John to Halifax and Sydney, Nova Scotia.

# Personalities

**George Macfarlane, Dr. Ing., B.Sc., A.M.I.E.E., F.Phys.Soc.,** a Deputy Chief Scientific Officer at the Royal Radar Establishment, Malvern, has been appointed Deputy Director of the National Physical Laboratory. He succeeds **Dr. Edward Lee**, who becomes Director of Stations and Industry Divisions at the Headquarters of the D.S.I.R. Dr. Macfarlane, who is 43, graduated in electrical engineering at Glasgow University in 1937, and then did two years' post-graduate research at Dresden, where he gained the Dr. Ing.

Dr. G. Macfarlane

degree. He joined the Telecommunications Research Establishment (now R.R.E.) in 1939. Throughout the war he concentrated on mathematical problems in radar and microwave physics and in 1945 became head of the Mathematical Group. Since 1953 he has been carrying out individual research in the Physics Department. Dr. Lee graduated in physics at Manchester University, and after taking his M.Sc. at the University and his Ph.D. at Cambridge University, he joined the Royal Naval Scientific Service in 1939 and was posted to the Admiralty Research Laboratory. He was director of Operational Research at the Admiralty for three years before becoming Deputy Director at the N.P.L. in March, 1958.

**W. G. C. Denny, A.M.Brit.I.R.E.,** who since the war has been in South Africa, has returned to this country and joined the telecommunications division of Elliott Brothers (London) Ltd. as technical sales manager. He was commissioned in the R.N.V.R. in 1941 and from 1942-46 was radar liaison officer on the staff of the Director of Radio Equipment, the Admiralty, Bath. For six years before joining the Navy he was with Western Electric Co., and prior to 1935 was with E. K. Cole and Murphy Radio. Mr. Denny was chairman of the South African section of the Brit.I.R.E. on its formation in 1949.

**M. M. Macqueen**, who has been with the G.E.C. since 1923 when he was appointed assistant to the manager of the company's newly formed Radio Department, has become managing director of the Radio Group under the company's re-organization scheme (see "News from the Industry"). He is 61. Mr. Macqueen has also been appointed a director of General Piped Television, Ltd., a new company (in which G.E.C. has an interest) formed to provide a television relay service to viewers. He has several times been chairman of the B.R.E.M.A. and has also served on the council of the R.C.E.E.A. (now E.E.A.).

M. M. Macqueen

**D. W. Heightman, M.Brit.I.R.E.,** chief engineer of the Radio Rentals group since 1956, has been appointed to the board of Radio Rentals Ltd. as technical director. He was from 1951 to 1956 chief television engineer at the Liverpool works of the English Electric Co. Prior to joining English Electric he was on the board of Denco (Clacton) Ltd., which he formed in 1938.

**Lieut. P. Cave, A.M.I.E.E., R.N.,** who contributed an article on guided weapon techniques to our August, 1958, issue, writes in this issue on beam-riding. Lt. Cave, who is 35, started his technical career at the Post Office Research Station, Dollis Hill, where he was mainly employed on acoustical development work. This was followed by a short period at the laboratories of British Acoustic Films Ltd., before he entered the Electrical Branch of the Royal Navy in 1949.

**G. J. Pope**, author of the article on page 88 describing a transistor constant volume amplifier, is in the local lines branch of the Post Office Engineering Department, where he is concerned with the design of carrier receivers and amplifiers. He joined the Post Office soon after leaving the R.A.F. He is 35.

**P. Ransom, B.Sc.,** recently joined International Rectifier Co. (Gt. Britain) Ltd., as engineering manager. He was previously in the A.E.I. semiconductor research laboratories at Rugby. He joined the A.E.I. group in 1945 and since 1954 has been directly concerned with the development of power diodes.

V. G. P. Weake has relinquished his directorships of Pamphonic Reproducers Ltd., W. Bryan Savage Ltd., and Pye Marine Ltd., to become chairman of a new group of companies to be known as the Derritron Group. No details are yet available regarding the companies constituting this group. Mr. Weake, who is chairman of Audio Fairs Ltd. and of the recently formed Society of Environmental Engineers, is also a director of Eastern Nigeria Broadcasting Ltd.

G. S. Taylor, commercial director of Grundig (Great Britain) Ltd., which he joined on its formation in 1952, has been appointed chairman and managing director of the company in succession to the late A. E. Johnson (see "Obituary"). Mr. Taylor has also joined the board of Gas Purification and Chemicals Ltd., of which Grundig is a subsidiary.

J. F. Golding, contributor of the article in this issue on alignment equipment for mobile radio, started work in the test department of Marconi Instruments when he left school in 1936. During the early part of the war he joined the design department and, after the war, he spent a short period in technical sales and publicity. He then became a designer with E.M.I. Ltd., at Wells, Somerset, but five years ago returned to Marconi's as a technical writer.

## OBITUARY

Philip R. Coursey, B.Sc.(Eng.), M.I.E.E., F.Inst.P., F.Phys.Soc., at one time chief engineer and later technical director of the Dubilier Condenser Company, which he joined in 1923, died on January 3rd in his 68th year. In 1957 he retired from the position of technical director, which he had held since 1931, but remained on the board as an ordinary director and was retained by the company as technical consultant. He was educated at University College, London, where he became assistant to Sir Ambrose Fleming. During the first world war he was Admiralty Inspector of Wireless Telegraphy in H.M. Auxiliary Patrol, and in 1919 became technical research assistant at H.M. Signal School. From 1920 to 1923 he was assistant editor of *Radio Review* and research editor of *Wireless World* until 1925. He has contributed many fundamental articles to *Wireless World* and was the author of several books.

John R. (Jack) Binns, who, as mentioned by "Free Grid" last month, was the first ship's wireless operator to demonstrate the value of radio in saving life at sea, died in New York on December 8th, aged 75. Jack Binns, who was born in this country and was a Marconi operator from 1905 to 1912, had been associated with the Hazeltine Corporation since 1924. He was president in 1942 and chairman of the board from 1952. He was operator in the liner *Republic* when it was in collision in January, 1909, with the Italian vessel *Florida*. His wireless messages relayed by the American station at Nantucket Island resulted in the *Baltic* rescuing all the passengers on board the two ships. Medals were struck for the officers and crews of the three vessels, and Binns was the recipient, at the hand of the Marchese Marconi, of one of four struck in gold (the others went to the three captains).

Admiral Arthur J. L. Murray, C.B., D.S.O., O.B.E., at one time during the war Director of the Signal Department at the Admiralty, died on December 26th, aged 73. He was in command of the Signal School, Portsmouth, from 1937 to 1939. Admiral Murray was president of the British Wireless Dinner Club in 1952.

Albert E. Johnson, chairman and managing director of Grundig (Great Britain), Ltd., which he formed in 1952, died on November 25th after several months' illness. He was also a director of Gas Purification and Chemical Co., and a number of its subsidiaries. Mr. Johnson had been associated with the radio industry for over thirty years.

## NEW YEAR HONOURS

Sir George Nelson, chairman of the English Electric Co. and a number of companies within the group, including English Electric Valve, Marconi's W/T and Marconi Marine, is to be a Baron.

Lt. Gen. Sir Ian Jacob, K.B.E., C.B., Director-General of the B.B.C. from 1952 until the end of last year, and president of the European Broadcasting Union since its formation in 1950, is appointed a Knight Grand Cross of the Order of the British Empire (G.B.E.).

Robert J. P. Harvey, C.B., Deputy Director-General of the Post Office since 1955, and previously director of the Radio and Accommodation Dept., becomes a Knight Commander of the Order of the British Empire (K.B.E.).

Joseph F. Lockwood, chairman of Electric and Musical Industries and a director of the National Research Development Corp., receives a Knighthood.

Dr. Harrie S. W. Massey, F.R.S., Quain Professor of Physics at University College, London, and a member of the Radio Research Board, receives a Knighthood.

Among those appointed Commanders of the Order of the British Empire (C.B.E.) are: L. J. Davies, director of research and education, B.T.H. (now A.E.I., Rugby); D. C. Martin, assistant secretary, Royal Society; W. Stubbs, Director-General of Telecommunications, Malaya; F. Williams, controller of sound broadcasting engineering, B.B.C.

Newly appointed Officers of the Order of the British Empire (O.B.E.) include: F. E. B. Clark, Director of Posts & Telecommunications, Ghana; and A. W. H. Cole, manager, communications division, Marconi's W/T Co.

A. W. H. Cole (O.B.E.)

L. G. Fowell (M.B.E.)

The following are among the new M.B.E.s: A. Allen, chief development engineer, Cossor Radar and Electronics, Harlow; S. R. Brown, signals officer, Ministry of Aviation; F. N. Chadwick, higher executive officer, London Communications-Electronics Agency; R. W. Chandler, chief telecommunications supt., G.P.O.; A. Draper, vice-principal Rugby College of Engineering Technology; L. G. Fowell, executive engineer and general manager, Pye Ltd., West Drayton; M. H. Hall, engineer-in-charge, B.B.C. television studios; D. A. Hewetson, telecommunications technical officer, Ronaldsway Airport, Isle of Man; J. H. Kirk, executive engineer, G.P.O.; W. J. Marshall, senior executive engineer, Engineer-in-Chief's Office, G.P.O.; N. G. Payne, engineer-in-charge, I.T.A. station at Lichfield; and G. H. Prince, head of Apparatus Engineering Dept., Ericsson Telephones, Nottingham.

Recipients of the British Empire Medal include: J. Armitage, civilian instructor, R.A.F. Technical College, Henlow; F. A. Loomes, technical officer, Post Office Research Station; and J. N. N. Murray, civilian radio operator, War Office, Cyprus.

# Ionosphere Review 1959

## DECLINING SOLAR ACTIVITY

By T. W. BENNINGTON\*

**T**HE present cycle of solar activity reached its maximum at the epoch February/March, 1958, and since then the average activity, as evidenced by the twelve-month running average of the sunspot number, has been declining. Throughout 1959, however, the decrease in sunspot activity has been relatively slow, so that, at the end of the year, the running average sunspot number was still above 160, a value which is higher than that reached even at the maximum of any other solar cycle of which we have records. The year 1959 was, therefore, one of exceptionally high solar activity, and, consequently, a year during which the frequencies of use for long-distance communication remained particularly high.

**Course of the Sunspot Cycle.**—The graphs will give an idea of the present situation. In the upper graph are plotted the sunspot numbers (indicative of the degree of solar activity) from the minimum year of 1954 until the end of 1959, and in the two lower graphs the noon and midnight F<sub>2</sub>-layer critical frequencies as measured at the D.S.I.R. station at Slough (indicative of the level of F<sub>2</sub> ionization) are given. The full lines in each graph give the monthly mean, or median, values and the dashed lines show the twelve-month running average of these, and so indicate the average conditions and the general variation in each quantity.

Since sunspot maximum early in 1958 there have been some large fluctuations in the monthly value of the sunspot number, but towards the end of 1959, lower values were reached than for some years past. The twelve-month running average has, during this period, shown an almost continuous, but generally slow, decrease.

The noon critical frequency was only slightly lower during the summer of 1959 than during that of 1958, but the winter values at the end of the year were considerably lower than at the beginning, and during 1958. The midnight critical frequency peaked during the summer at a higher value than during 1958, but towards the end of the year it, also, had reached values lower than those for the previous winter. The change in critical frequency since sunspot maximum has thus, on the average, been a rather slow decrease, as is shown by the dashed-line curves both for noon and midnight, and the implication is that, during the year, the frequencies of use for communications should have remained relatively high. In practice this was found to be so.

**Usable Frequencies.**—The highest broadcast frequency band of 26Mc/s remained usable over many daylight circuits throughout the year, and the 28-Mc/s amateur band, whilst very often above the m.u.f. during the summer months, became workable again in most directions during the autumn. The highest frequencies receivable over the North Atlantic circuits, which were of the order of 50Mc/s at the beginning of the year, decreased to about 26Mc/s during the summer, and increased again to about

44Mc/s during the autumn. The Crystal Palace sound channel (41.5Mc/s) was very frequently receivable in South Africa during March but such reception became rare in the period May to August. During the September to November period it became more frequent, but much less so than during March. The annual pattern for the ionospheric propagation of these high frequencies is thus that of good propagation of the highest frequencies at the beginning of the year, a big frequency decrease in the summer, and an autumnal increase to frequencies which, whilst relatively high, were considerably lower than those propagated at the beginning of the year.

**Ionospheric and Magnetic Disturbances.**—The magnetic and ionospheric data for 1959 show that the number of magnetically and ionospherically disturbed days was somewhat greater than during 1958. On the other hand the number of sudden ionospheric disturbances (which are associated with the occurrence of solar flares near sunspots) was slightly less than during the previous year. As the frequency of occurrence of sunspots and solar flares decreases during the next few years so is the number of sudden ionospheric disturbances likely to continue to decrease. The same is not true for magnetic and ionospheric storms, however, for, during the decreasing phase of the sunspot cycle, many of these are caused by corpuscles emitted from solar regions where there is no sunspot activity.

**The Coming Year.**—During 1960 it is probable that

Variations in sunspot activity with corresponding variations in ionospheric conditions, 1954 to 1959.

\* Research Department, British Broadcasting Corporation

the solar activity will follow a slow decline, but at a somewhat greater rate than during 1959, and that the twelve-month running average sunspot number at the end of the year (applicable to the epoch June/July) will be somewhere in the region of 115. If this be so we may expect the higher daytime frequencies to remain usable until early summer, and then, following on the seasonal decrease which takes place at that time, for there to be a definite tendency for somewhat lower frequencies to be of more use during the autumn and winter, and for the higher frequencies to fail over certain circuits. For example, over North Atlantic circuits the 26-Mc/s broadcast band is unlikely to be usable after March, and

with the 17-Mc/s or even the 15-Mc/s band being best during the summer, the 21-Mc/s band is likely to be the highest usable from September onwards. For communication in more southerly directions the 26-Mc/s band may be usable at the end of the year as well as at the beginning, though during the summer the 21-Mc/s band is likely to be best. As to the night-time frequencies there is already a tendency towards more use of somewhat lower frequency bands, and, following on the summer frequency increase, this is likely to continue in the autumn, resulting in the greater use, over all circuits, of lower night-time frequencies at the end of the year than at the beginning.

## Demonstrating Electron Spin Resonance

A Simple Apparatus for Use in the Lecture Room

By G. B. CLAYTON,\* B.Sc.

THE techniques of nuclear magnetic resonance and electron spin resonance, both branches of radio-frequency spectroscopy, are now firmly established as research methods and are finding an increasing number of applications in many fields of science<sup>1</sup>. It would therefore seem desirable that the basic principle of the magnetic resonance effect, which is common to both n.m.r. and e.s.r., should be more widely known. The phenomenon may be demonstrated with modest apparatus; this article describes such an apparatus and gives a simple explanation of the effect.

The phenomenon of magnetic resonance is essentially a quantum mechanical effect, but its description in terms of classical mechanics is very instructive and leads to results that are in agreement with those found quantum mechanically. Nuclei and electrons

may be thought of as spinning particles having both charge and mass. Consider a spinning sphere having positive charge uniformly distributed over its surface (Fig. 1). The whirling charge on the surface of the sphere represents in effect a circulating electric current, which will produce a magnetic field. The spinning mass of the sphere will give it an angular momentum, so that we may think of the spinning charged sphere as acting in a sense like a flywheel with a bar magnet pointing along its axis.

Now consider this system placed in a steady magnetic field  $H$ , with the magnet inclined at some angle to the field (Fig. 2). The magnet will experience a torque tending to turn it into alignment with the magnetic field, but this will not take place because the magnet is attached to the flywheel. The torque acting on the angular momentum of the flywheel will cause the flywheel to precess about the direction of the magnetic field.

A mathematical treatment of the motion gives the relationship:

$$\omega = \gamma H \quad \dots \quad 1$$

for the angular velocity  $\omega$  at which the precession takes place.  $\gamma$  is a constant called the gyromagnetic ratio and is equal to the ratio

$$\frac{\text{angular momentum of particle}}{\text{magnetic moment of particle}}$$

A simple analogy for the effect may be found in the behaviour of a spinning top (Fig. 3). The weight of the top acting through its centre of gravity produces a torque tending to make it topple over, but because the top is spinning this torque actually causes it to precess, as shown in the sketch.

Return now to the system considered in Fig. 2 and imagine that, in addition to the steady magnetic field  $H$ , a second magnetic field  $H_1$  ( $H_1 \ll H$ ) is applied, and that this field is rotating in a plane at right angles to  $H$  with angular velocity  $\omega_1$  (Fig. 4). This rotating field will also produce a torque on the magnet, but if the field is rotating at a rate that differs appreciably from the rate at which the

Fig. 1. Spinning charged particle (a), producing a magnetic field (b), acting like a flywheel with an axial bar magnet (c).

\* Liverpool College of Technology

magnet is precessing, the direction of the torque will be rapidly changing and its value will average to zero. In this case the rotating field will have no resultant effect. On the other hand, if  $H_1$  is rotating at the same rate as the magnet is precessing it will produce a steady torque on the magnet. This steady torque will cause the magnet to precess about  $H_1$ , while continuing in its precession about the steady field  $H$  (Fig. 5).

The result of this precession about  $H_1$  will be a change in the angle between the magnet and the steady field  $H$ . If the magnet was initially pointing in the direction of the steady field the rotating field would cause it to tip up and down; this tipping of the magnet represents the phenomenon of magnetic resonance.

The resonance condition is that the field  $H_1$  should rotate at the same rate that the magnet precesses about  $H$ , and is given by the equation

$$\omega_1 = \omega = \gamma H \quad \dots \quad 2$$

The energy of the magnet in the steady field  $H$  depends on the angle that it makes with this field. It will be a minimum when the magnet points in the same direction as  $H$  and a maximum when the magnet points in the opposite direction to  $H$ .

The magnet will thus absorb energy from the rotating field  $H_1$ , as it turns against the steady field  $H$  and will return this energy as it lines up with the steady

Fig. 2. The magnet-flywheel of Fig. 1 placed in a steady magnetic field.

Fig. 3. Spinning top analogy for the action in Fig. 2.

Fig. 4. Showing how the second magnetic field  $H_1$  rotates relative to  $H$ .

Fig. 5. Precession of the magnet about the rotating field  $H_1$ .

field. In a system containing a large number of such magnetic particles there will be a resultant absorption of energy from a small field rotating at the resonance frequency if there is always an excess number of particles pointing in the direction of the steady field. In practice this excess is initially established and then maintained as a result of energy exchange between the thermal vibrations of the material containing the particles and the magnetic energy of the particles.

The effect has been described for positive particles (e.g., protons). A similar treatment is appropriate for negatively charged particles (electrons). Values of constants substituted in eq.2 give for the resonant frequencies:

- for proton resonance  $f(\text{kc/s}) 4.26H$  (oersteds)
- for electron resonance  $f(\text{Mc/s}) 2.80H$  (oersteds)

Nuclear magnetic resonance observations are usually carried out in a field of the order 10,000 oersteds, in which field the proton resonance takes place at 42.6Mc/s. Electron spin resonance observations are usually made in fields of the same order, making the resonant frequency lie in the microwave region.

In certain cases where a narrow absorption line is produced e.s.r. may be observed in quite small magnetic fields. For a field of 10 oersteds the resonance occurs at 28Mc/s. Observations of e.s.r. at these frequencies have been reported in metals<sup>2</sup>, in metal ammonia solutions<sup>3</sup>, and in organic free radicals<sup>4</sup>. The apparatus to be described has been used to observe the e.s.r. absorption arising from the unpaired electron spins in the organic free radical diphenyl-picryl hydrazyl.

Free radicals are formed when one of the covalent bonds in an organic molecule is broken. Each fragment takes with it one electron from this bond, and these fragments are called free radicals. The distinguishing feature of free radicals is that they have an unsaturated valency bond; that is, they have associated with them an electron whose spin and magnetic moment is not compensated by another electron with spin and magnetic moment pointing in the opposite direction. It is the presence of these uncompensated electrons that makes the observation of e.s.r. possible.

Free radicals, because of their unsaturated valency bond, are very reactive and are normally short lived. Diphenyl-picryl hydrazyl, the specimen used, is a substance that has an unsaturated valency bond, but it is quite stable. It is a crystalline solid and no difficulties are involved in handling it†.

† Diphenyl-picryl hydrazyl should be obtainable from any supplier of fine chemicals. The organic free radicals tri-p-anisyl-ammonium perchlorate, and tri-p-aminophenyl-ammonium perchlorate have also been reported as giving an absorption signal at the frequencies used and should be suitable for use in the apparatus.

Fig. 6. Basis of the apparatus for demonstrating electron spin resonance.

Fig. 7. Double absorption curve given by the oscilloscope in Fig. 6.

The apparatus consists essentially of an oscillating detector. The tank coil of this oscillator contains the specimen and is positioned at right angles to the magnetic field produced by a pair of Helmholtz coils. The oscillating magnetic field produced by the coil of the oscillator will, of course, be linearly polarized, but a linearly polarized field may be thought of as consisting of two fields rotating in opposite directions, and the effect of the component rotating in the opposite direction to the precessing spins is negligible. In order to observe the absorption the frequency of the oscillator is fixed and the magnetic field produced by the Helmholtz coils is swept through its resonance value. The detected output of the oscillator is made to produce a vertical deflection on an oscilloscope trace while the magnetic field sweep is used to produce the horizontal deflection (Fig. 6).

The current for the magnetic field sweep is supplied by a transformer connected to the 50-c/s mains. This a.c. sweep produces the double absorption hump shown in the oscillogram Fig. 7. The double hump in fact represents only one absorption line,

Fig. 8. Circuit of the oscillating detector used in the apparatus.

for the magnetic field is made to pass through its resonant value first in one direction and then in the opposite direction.

The circuit of the oscillating detector used is given in Fig. 8. It is a modified Clapp oscillator. Absorption by the specimen lowers the Q of the tank coil and produces a change in the level of oscillations which is detected by a change in the voltage across  $R_2$ . Approximately 1 gm of the diphenyl-picryl hydrazyl placed inside the oscillator tank coil has been found to give a change of 400mV in the voltage across  $R_2$  when the magnetic field is swept through its resonance value.

Radio frequency oscillations are eliminated from  $R_2$  by the filter  $C_3, L_1, C_4$ . Capacitors  $C_1, C_2$  are adjusted until oscillations just commence; the circuit is then most sensitive to changes in the Q of the resonant circuit.  $C_1$  is kept approximately equal to  $C_2$ .

There is nothing very critical about the design of the oscillator tank coil. It consists of several turns of enamelled copper wire wound on the  $\frac{1}{2}$ -in diameter tube containing the specimen. The coil is connected to the oscillator circuit by a short length of coaxial cable. Several coils were, in fact, wound to cover the frequency range 15 to 30Mc/s. Plywood formers, of diameter approximately 8in, were used for the Helmholtz coils, each being wound with 100 turns of No. 24 s.w.g. enamelled copper wire. An a.c. amplitude of 1 amp was found sufficient to sweep right through the resonance.

The apparatus described is comparatively simple and inexpensive, and the large and costly magnet normally used in magnetic resonance investigations is not required. It should be emphasized that the primary purpose of the apparatus is for the demonstration of magnetic resonance absorption. If it is required to detect very small absorptions or to study broad absorption lines it is necessary to work with much larger magnetic fields than can be produced with simple coils.

# BEAM RIDING

By LIEUT. P. CAVE, A.M.I.E.E., R.N.

## PRINCIPLES OF RADIO GUIDANCE TECHNIQUE FOR MISSILES

**T**HE missile guidance system known as beam riding is a popular method for medium range missiles and has advantages over some other systems. It is used in modern weapons and probably its use will continue with longer range missiles even if it has to be combined with some other form of guidance for the latter stages of its flight to provide the necessary accuracy.

The system relies on the automatic centring of the missile in a radio beam, and hence the missile flight path may be controlled by moving the beam. In the simplest case the beam is pointed continuously at the target either manually or automatically and hence the missile will fly up the centre of the beam to the target. It will be seen that this guidance system is in two stages, viz.:—

1. Pointing the beam at the target.
2. Making the missile "ride the beam," i.e. follow the beam centre.

For short range missiles, e.g. air-to-air weapons such as FIREFLASH, the first step may be accom-

Fig. 1. Production of a conical scanning pattern.

plished by pointing the radio beam at the target using an optical sight. For longer range missiles it is necessary to establish the sight line by the use of a lock-and-follow radar. In theory it is not necessary to have any connection between the tracking radar and the radio beam other than that they must both point in the same direction. There is generally a close connection between the two transmissions from a viewpoint of mechanical and electrical convenience. For instance, to lock the aim of the two transmissions it is convenient to use the same radar aerial, and electrical synchronisation is necessary to overcome interference problems. In addition, there is a similarity between the method used to obtain the automatic following action and that used in riding the beam. To develop this idea further let us examine the working of a typical automatic following radar.

The most commonly used system is by conical scanning of the radar beam, but other methods that are used include "sequential lobing" and "simultaneous comparison" systems. In the conical scanning system the radar transmissions are focused into a pencil beam and this beam is offset from the axis of

the scanner by a fixed angle. If the beam is now rotated about the scanner axis it will trace out a conical pattern with the apex of the cone at the aerial as shown in Fig. 1.

Consider now the radar echo obtained from a target which is within the conical scan but displaced from the aerial reflector axis as shown at T in Fig. 2. Since the echo received by the radar depends on the misalignment between the centre of the radar lobe and the line of sight to the target, the echo received will vary as the lobe rotates according to the distance PT between the target T and the instantaneous position of the lobe centre P. The shorter this distance the greater the echo, reaching a maximum when the distance is zero, i.e. when the radar lobe is pointing directly at the target. In the case shown in Fig. 2 this distance does not fall to zero but is at a minimum when the centre of the lobe is at A. This is the instant of maximum echo and similarly a minimum echo is received as the lobe passes through B and PT is a maximum. Thus the echo strength will vary from a maximum to a minimum and return to a maximum once per revolution of the scanning lobe.

If a pulsed radar system is to be used, the output of the radar receiver will consist of a series of pulses, amplitude modulated at the conical scanning frequency. The depth of the modulation is approximately proportional to the error of the target from the reflector axis and especial note must be made of the condition when this error is zero. In this case the target is always displaced from the radar lobe by the same amount and hence the echo modulation is zero. Similarly the maximum modulation occurs when the target is on the circle formed by the focus of the centre of the rotating lobe.

Following the block diagram of a simple automatic following system as shown in Fig. 3, the echo modulation signal may be extracted from the radar receiver output by a filter tuned to the conical scanning frequency. In order to discriminate against unwanted echoes, the radar receiver must include a gated amplifier whose operation is controlled by the target range. The filter output signal contains two pieces of information, viz.: (a) its amplitude is proportional to the magnitude of the target misalign-

Fig. 2. Cross-section of a conical scan.

Fig. 3. Simple automatic following radar system.

ment; (b) its peak positive swing indicates the instant in the conical scanning cycle when the lobe sweeps closest to the target.

In order to correct the error in aim, the error along the target axis must now be resolved into component errors along the elevation and training axes of the aerial. In the same way that the target axis is defined by the peak in the error wave, so may the elevation (and hence training) axis be defined by the positive peak of a local reference signal. This is derived from a generator driven from the conical scanning motor and phased so that the positive peak of the generator output occurs as the radar lobe passes through the elevation axis. The phase angle between the reference and error signals is equal to the angle between the elevation and target axis as shown in Fig. 4.

The component errors in elevation and training are given by:—

$$\begin{aligned} \text{Training error} &= E \sin \phi \\ \text{Elevation error} &= E \cos \phi \end{aligned}$$

where  $E$  = peak value of error signal and  $\phi$  = phase of error signal with respect to the reference signal. These component errors are calculated in the resolver which may be of the resistance modulator or of the phase comparison variety. The outputs of the resolver are used to actuate the training and elevation motors via suitable amplifiers which in turn will be made up of a combination of an electronic amplifier and an electric amplifier such as a metadyne or amplidyne system. The polarity of the system is arranged so that the motors train and elevate the aerial in the correct direction.

It will be seen that the overall arrangement is a servo system whose input and output are the target and aerial positions respectively and where the radar and associated resolver form the error measuring device. The performance of this servo may be regulated by the usual servo devices, e.g. phase correcting networks. These are frequently incorporated into the amplifier section. Thus when the automatic following system is working correctly, we have the condition where the target lies on the scanner axis

whilst the beam performs a conical scan around it.

In order to guide the beam-riding missile, a separate conically scanning pulsed beam is radiated and aimed in the same direction as the automatic following beam. The missile is equipped with a receiver and rear pointing aerial capable of detecting the transmitted pulses when it has been launched into the conical scanning pattern.

In theory, there is no reason why the transmission used for the automatic following radar should not be used to guide the missile, but in practice several factors combine to make this undesirable and to give better results when separate beams are used.

The displacement of the missile from the beam centre will cause the missile receiver output to be amplitude modulated at the conical scanning frequency since the instantaneous output will be governed by the displacement of the missile from the centre of the lobe. An error signal may now be derived by detection of this amplitude modulation. The amplitude of the error signal will be indicative of the missile's displacement from the beam centre and the peak positive swing will indicate the instant when the lobe centre is closest to the missile. The production of this error signal is a close parallel to the case of the automatic following radar.

The majority of missiles use a Cartesian control system, i.e., they are controlled by four control surfaces, which, by operating in pairs, cause the missile to move in the pitch and yaw planes. Three further steps are necessary to bring the beam riding missile to the target axis.

(a) The error signal must be resolved into component errors along the radar vertical and horizontal axes.

(b) The missile must be stabilized in the roll plane in such a position that its pitch and yaw axes are in alignment with the radar vertical and horizontal axes throughout the flight.

(c) The control surfaces must be deflected by an amount proportional to the component errors in each case in the correct direction to accelerate the missile towards the centre of the beam.

In the case of the automatic following radar, resolution of the error signal was accomplished with the aid of a reference signal which defined the radar axes. To enable the same process to be used in the

Fig. 4. Phase relationship of error and reference signals.

missile, the reference signal must be transmitted independently to the missile. Whilst this could be accomplished by the use of a separate radio link, a more reliable and less bulky method is to pulse-position-modulate the guiding beam with the reference signal, thus transmitting the reference signal to the missile without interference to the amplitude modulation/error signal process. This means that when the instantaneous value of the reference signal is positive the spacing between pulses of the guiding transmitter will be small and hence the pulse repetition frequency will rise, but when the signal is instantaneously negative, the spacing will be larger and hence the pulse repetition frequency will be lower.

In short, the reference wave is conveyed to the missile by a sinusoidal modulation of the pulse repetition frequency of the guiding transmitter. Reference to Fig. 5 will show that the output of the missile guidance receiver is taken to separate a.m. and f.m. detectors which produce the error and reference signals respectively. The signals are then fed to the resolver whose outputs are the pitch and yaw component error signals.

Another method whereby a reference may be produced in the missile is to rotate the plane of polarization of the guidance beam in step with the conical scan. The small dimension of the rectangular waveguide horn radiating the guiding transmitter signals is kept radial to the scanner axis whilst it is rotated. Hence the conical scan is produced simultaneously with the rotation of the plane of polarization and the instantaneous direction of the polarization (which is parallel to the small dimension of the waveguide) indicates the position of the lobe.

The direction of the polarization can be detected in the missile by the use of two aerials. One aerial is a circular waveguide horn which is not sensitive to the changing polarization. This will enable the amplitude modulation signal to be detected directly. The second aerial consists of a rectangular horn from which the received signal will vary as the polarization rotates and thus the reference signal will be produced. If this system is used, it is not essential to roll-position-stabilize the missile to keep it in line with the radar axes, since the reference signal is being produced with respect to the missile vertical as defined by the rectangular waveguide aerial. A disadvantage of this system is that the rotating plane of polarization introduces the problem of reflection of energy from the surface of the earth at low angles of elevation.

The overall accuracy requirement for a missile system, i.e., the maximum permissible miss distance, is determined by the effective range of the warhead, and the design of the guidance system must be governed by this parameter. For instance, for the beam riding missile to have a maximum miss distance of 150 feet at 20 miles range requires that it must not deviate from the line of sight from radar to target by more than four minutes of arc as measured at the radar aerial. The guidance accuracy is determined by two factors, viz:—

(1) The tracking accuracy of the automatic following radar, i.e., the maximum deviation of the scanner axis from the actual line of sight.

(2) The maximum deviation of the missile from the scanner axis.

In both cases the accuracy achieved depends on

the performance of a complicated servo system. The block diagram of the automatic following radar as shown in Fig. 3 has already been discussed; the diagram of the overall missile servo is shown in Fig. 6. In this servo the input, or required position, is the scanner axis as defined by the beam, whilst the output is the actual position of the missile. The missile receiver is the error measuring device and the error signal produced initiates movements of the control surfaces in such a direction as to correct the error and thus bring the missile position (output) into line with the scanner axis (input).

The performance of both servos will eventually be limited by the signal/noise ratio of the receivers, i.e., the minimum error signal that can be detected.

Fig. 5. Overall block diagram of control system in a beam riding missile.

Fig. 6. The beam rider as a servomechanism.

Since the maximum signal is fixed at 100 per cent modulation of the pulse amplitude, corresponding to a missile or target located on the locus of the centre of the rotating beam, the minimum detectable error signal may be expressed as a fraction of the conical scanning angle. A figure of 1/20 will be used in this example. If the overall error of four minutes, referred to above, is split equally between the two servos (two minutes each), then the radius of the conical scan pattern must correspond to 40 minutes of arc, i.e.,  $\frac{2}{3}$  degree, and the total conical scan angle will be  $1\frac{1}{3}$  degrees.

Unfortunately it is not possible to launch the missile directly into this beam as the flight path of the missile when launched may differ by several degrees from the aim of the launcher. This is partly due to the low speed of the missile when leaving the launcher and to manufacturing tolerances in the air-

DEVELOPMENT OF SPECIAL SIGNAL

GENERATORS

By J. F. GOLDING\*

Marconi Instruments Type TF995A/5 f.m./a.m. signal generator.

**T**HE primary problem arising from the continuing increase in the number of mobile-radio operators is that of congestion of the available bands of frequencies. Two possible solutions to this problem are the reduction of channel spacing and the use of hitherto unallocated frequency bands. Both of these solutions are being exploited; the allocated frequency bands and the specified channel spacings in Great Britain and the United States are shown in Tables I and II respectively.

**TABLE I**  
Mobile-radio Frequency Allocations in Great Britain

Classification	Frequencies (Mc/s)	Channel Spacing (kc/s)
General Land Mobile (low band v.h.f.)	71.5-72.8	25
	76.95-78.0	25
	85.0-86.7	25
	86.95-88.0	25
Police, Fire, Ambulance	80.0-84.0	100
	95.0-100.0	100
Marine v.h.f.	156.0-165.0	50
General Land Mobile (high band v.h.f.)	165.0-173.0	50
General Land Mobile (u.h.f.)	460.0-470.0	100

**TABLE II**  
Mobile-radio Frequency Allocations in the U.S.A.

Classification	Frequencies (Mc/s)	Channel Spacing (kc/s)
Land Mobile (low band v.h.f.)	27.51-28.0	40
	29.71-49.98	40
Land Mobile (high band v.h.f.)	152.03-156.21	60
	157.53-161.79	60
Marine v.h.f.	156.3-157.4	50
	161.9 and 162.0	—
Land Mobile (low band u.h.f.)	452.05-459.95	100
Land Mobile (high band u.h.f.)	890.0-960.0	—

In Great Britain all land-based mobile systems, with the exception of certain of the police forces, employ amplitude modulation. Marine (ship-borne) radio uses frequency modulation, and aero-

\* Marconi Instruments Ltd., St. Albans.

nautical mobile radio uses a.m.—both by international agreement. In most other countries frequency modulation predominates for all mobile radio except, of course, aeronautical.

It is outside the scope of this article to discuss the merits and demerits of either type of modulation. Indeed, it has become evident that the type of modulation used has very little effect on the special requirements of the mobile receiver as they affect the signal generator design. These special requirements appear as secondary problems arising from the steps taken to overcome the primary problem of congestion.

The most important special requirement is that of adequate suppression of adjacent-channel interference. A mobile station may well be operating physically close to a transmitter of some other system; and unless there is sufficiently good rejection of the strong signal from this transmitter, the wanted signal may be masked by interference. At the same time it is obvious that the receiver bandwidth must accommodate not only the modulated signal; but also the combined permitted drift of the receiver and transmitter.

The narrow receiver bandwidth mandatory to close channel spacing produces a further requirement for accurate tuning and high stability, a requirement which is met by using crystal-controlled local oscillators. Most mobile receivers are of the double-superheterodyne type using a comparatively low second intermediate frequency; so there is little likelihood of drift in the i.f. amplifier causing any appreciable change in the tuning frequency of the receiver. Nevertheless, the i.f. amplifier must be accurately aligned to the correct frequency: the reason for this will be pointed out later.

These requirements have two common effects on the design of signal generators; a very high order of stability is required, and the output must be free from unwanted modulation—either a.m. or f.m. Very naturally, the purpose of the signal generator also influences its design to a considerable degree; and, in this connection, signal generators can be divided into two main categories—those intended for routine maintenance and service, and the more elaborate instrument intended for acceptance tests and design measurements.

Of the second category the most stringent requirements are those introduced to produce a signal

generator capable of measuring adjacent-channel rejection. For this reason the method of measurement is outlined together with a brief description of a suitable signal generator.

### Adjacent-channel Rejection Measurements

Assuming that the stability of a f.m. mobile-radio system is the same as that of its a.m. counterpart, the inherently lower sensitivity of the f.m. receiver to adjacent-channel interference is largely offset by its necessarily wider bandwidth. In practice, it has been found that similar adjacent-channel-rejection

Fig. 1 Block schematic diagram of two-signal method of measurement of adjacent-channel-rejection ratio.

performance can be expected for the two types of modulation. For this reason the requirements laid down by the G.P.O. in the U.K. can be regarded as being largely representative of common practice in congested areas throughout the world.

**Single-signal Method of Measurement.**—Originally the rejection ratio was determined by plotting the frequency-response characteristic of the receiver using a single signal generator and comparing the response at the centre of the acceptance band with the response at the centre of the adjacent channel. But the figures obtained in this way are not very realistic; for, when the receiver is in the presence of a strong unwanted signal—such as that produced by a nearby transmitter of another system—the early stages of the receiver may become overloaded. Receiver “blocking” can reduce sensitivity whilst not altering materially the noise level so giving an effect similar to a weak signal and poor signal-to-noise ratio. Thus the interference actually produced can be worse than is indicated by the single-signal response measurement.

**Two-signal Method.**—A standard method of measurement has been evolved: this uses two signal generators. The output of one signal generator represents the wanted signal and that of the other represents the interfering signal. The two signal generators are connected, via a matching network, to the input of the receiver as shown in Fig. 1. Signal generator “A” delivering the “wanted” signal, is tuned to the centre frequency of the receiver’s acceptance band. Signal generator “B” is set to a frequency separated from that of “A” by slightly less than the channel spacing. A predetermined level of modulation is applied to both signals—either a.m. or f.m. as appropriate—a different modulating audio frequency being used for each of the signal generators in order that the wanted component may be distinguished from the interference component in the receiver’s output.

With the output of signal generator “B” reduced to zero, the output of signal generator “A” is adjusted to give a signal-to-noise ratio of 10 dB. The

output level of “B” is then increased until the signal-to-noise ratio is reduced by 3 dB, the interference breakthrough from signal generator “B” being deemed part of the noise. The adjacent-channel-rejection ratio is then equal to the ratio of the output levels of the two signal generators.

This is the method of test approved by the G.P.O. for mobile receivers: a rejection ratio of 70 dB<sup>1</sup> is required.

**Signal Generator.**—Until recently, much difficulty was experienced in making this type of measurement at v.h.f. due to the impure outputs of available signal generators. It is not difficult to appreciate that, if the output of signal generator “B” contains components within the ideal acceptance band of the receiver, the rejection ratio will appear to be less than the true figure. So it is important that the suppression of any such components should not be less than the required rejection ratio of the receiver.

These unwanted components are caused in various ways. Random noise may originate in the oscillator or subsequent stages of the signal generator. If amplitude modulation is used, harmonic distortion of the modulating waveform may produce high-order sidebands outside the channel bandwidth. Such sidebands can also be caused by microphony, which effectively produces both a.m. and f.m.

Good short-term stability is also essential. Although the carrier frequencies are in the v.h.f. range, it is necessary to maintain the tuning to within a few per cent of the channel width. In other words, for reliable measurement, facility for tuning in small increments with an accuracy of a few hundred c/s is necessary. So it is evident that, at the higher frequencies used, the maximum drift that can be tolerated is of the order of 0.0025% of the carrier frequency during the time taken to make a measurement—say 10 min.

These essential requirements for high stability and purity are, in general, not met by the standard type of v.h.f. signal generator. Therefore Marconi Instruments, Ltd., developed a special narrow-deviation version of their f.m./a.m. signal generator—type TF 995A/5—which is suitable for these acceptance tests and laboratory measurements on mobile receivers. This signal generator and the problems that led to its development are described in some detail elsewhere<sup>2, 3</sup>. It is a signal generator of the type employing a single-range oscillator followed by a series of harmonic-multiplier stages. The basic electrical arrangement of both signal generators is shown in Fig. 2.

There are several v.h.f. signal generators of this basic form available, a form which is very suitable for general v.h.f. work. Not only does the arrangement permit the use of the reactance-valve type of frequency modulator; also, due to the application of amplitude modulation to an output stage which is virtually isolated from the oscillator, an a.m. signal can be produced which is sensibly free from f.m. Furthermore, the frequency modulator of an f.m. signal generator offers a convenient means of providing a calibrated fine frequency control by the application of a variable direct-potential bias.

The TF 995A/5 signal generator employs a variable oscillator covering the frequency range 4.5 to 9.16 Mc/s. This is followed by a frequency-treble stage and three doubler stages in cascade. Range switching is accomplished by selecting the output of the appropriate multiplier and feeding it to the

resistive output attenuator. These stages produce four 2:1 frequency ranges covering from 13.5 Mc/s to 216 Mc/s, and an i.f. range covering 1.5 Mc/s to 13.5 Mc/s is provided by beating the output from the first doubler stage with that of a fixed frequency 30-Mc/s oscillator.

A very high order of frequency stability is another requirement; this has been met by the use of temperature-compensated components and the drift has been reduced to 0.002% in a 10-min interval.

Random noise in the r.f. oscillator is inversely proportional to the Q of its tuned circuit. This is inevitably reduced to some extent by the loading of the reactance valve. However, the maximum deviation required for mobile-radio use is 15 kc/s, compared with 75 kc/s for general purpose use; and advantage has been taken of this reduction in maximum deviation to reduce the coupling between the reactance valve and the oscillator, so achieving an improvement in circuit Q. This improvement, together with the use of low-noise valves, has reduced the random noise to a level well below the maximum permissible.

The instrument is equipped with a special directly calibrated incremental-tuning arrangement comprising a switched potentiometer for coarse adjustment of frequency and a continuously variable fine control. There is also an uncalibrated fine-tuning

control which varies the screen-grid potential of the oscillator itself. This control enables the operator to tune accurately to the centre frequency of a receiver's acceptance band with the incremental tuning controls set to zero. A simplified diagram of the tuning arrangements is shown in Fig. 3.

These facilities are of considerable importance when the instrument is used for the two-signal method of measurement. In order to tune the signal generator to the "interference" or adjacent channel frequency, the operator first tunes accurately to the receiver frequency and then changes the signal generator frequency by the specified separation, using the calibrated incremental controls. This would be very difficult without the special incremental tuning system.

In order to meet the requirement that the "interference" signal should be modulated at a different audio frequency from the "wanted" signal, the Marconi TF 995A/5 gives the choice of three switch-selected modulating frequencies. Attention has been given to the purity of the modulating waveforms to prevent high-order sidebands on a.m. and the f.m. content is naturally very small.

### General Maintenance of Mobile Receivers

In signal generators for the general maintenance of mobile receivers the requirement for a high-

Fig. 2. Block schematic diagram of a.m./f.m. signal generator for testing mobile equipment.

Marconi Instruments signal generator Type TF 1064/2 for the servicing of mobile receivers.

purity output is rather less stringent than for the acceptance-test type of instrument. The necessity for high stability, however, remains. For general maintenance purposes the operator of mobile radio equipment requires a rather simpler and less expensive signal generator than that used for acceptance tests, so that the demand is for an economically-priced instrument with the special features necessary for the testing of narrow-band mobile receivers.

It is well known that high stability can be achieved in a restricted-range variable-frequency oscillator which has no switched r.f. connections i.e. the tuned inductor is soldered directly to the tuning capacitor. Accordingly, several manufacturers have adopted the principle of producing a series of single-range signal generators, each covering a narrow band of frequencies. This principle is particularly applicable to mobile-radio servicing owing to the allocation of discrete, comparatively-narrow frequency bands for this type of communication.

The development of the ferrite modulator and semiconductor techniques for frequency modulation has permitted the direct generation of f.m. signals at u.h.f. and v.h.f. without the use of frequency-multiplier stages. The design of these single-range signal generators is thus simplified with consequent reduction in cost.

An aspect of the alignment of mobile receivers which requires particular attention is the precise tuning of the i.f. amplifier. For, with crystal-controlled local oscillators, the correct tuning of the receiver ultimately depends on the tuning of the i.f. amplifier. There is, therefore, a distinct advantage in the use of a crystal-controlled test oscillator for i.f. alignment.

A crystal-controlled oscillator operating at the i.f. also provides an extremely convenient means of accurately setting the signal generator to the correct centre frequency of the receiver's acceptance band, even though the receiver may be misaligned so that this does not correspond to maximum response. The output of the signal generator is

applied to the aerial-input socket of the receiver in the usual way; and the output of the crystal-controlled test oscillator is loosely coupled to the i.f. amplifier. When the signal generator is accurately tuned to the receiver, the i.f. signal due to the r.f. input passing through the frequency changers beats with the loosely coupled i.f. test signal to produce an audible note in the receiver's loudspeaker (with f.m. receivers, the limiter is seldom good enough to suppress this beat note completely). Adjustment of the signal generator tuning for zero beat gives a maximum possible tuning error equal to the combined maximum errors of the crystal-controlled test oscillator and the crystal-controlled local oscillators of the receiver.

**Catering for Several Bands.**—Where various different mobile systems are serviced in the same establishment these single-range instruments are somewhat inadequate, and there is a demand for an inexpensive signal generator which possesses the necessary stability and covers a number of mobile-radio bands. Such an instrument is virtually a combination of several narrow-range signal generators housed in the same case and, of course, utilizing some common components.

The Marconi v.h.f. signal generators of the TF 1064 series conform to this description; they also include built-in crystal-controlled i.f. test oscillators. These instruments, which are basically similar, have three separate and independent r.f. oscillators covering respectively the high and low v.h.f. bands and the low (450 to 470 Mc/s) u.h.f. band. The electrical arrangement is shown in Fig. 4. This instrument is described in detail in an article by its designer<sup>4</sup>.

Each of the two v.h.f. ranges is covered by a fundamental-frequency oscillator using half of a double-triode valve. Frequency modulation and incremental frequency shift are achieved by a ferrite modulator which is common to the two ranges.

The u.h.f. signal is derived from a frequency trebler. It has been found that the frequency sta-

Fig. 4. Block schematic diagram of special signal generator for checking of mobile-radio receivers.

bility of lumped-circuit oscillators is generally poor at frequencies much above 200 Mc/s: for this reason, the u.h.f. range operates from an oscillator covering the band 150 Mc/s to 156.7 Mc/s. This oscillator feeds a double-triode push-pull trebler with a low-Q broad-band fixed-tune anode circuit. Frequency modulation and incremental frequency shift are produced by anode modulation of the oscillator valve and the limiting action of the trebler eliminates the small a.m. component.

The three sections of a standard three-gang variable capacitor act as tuning capacitors for the three oscillators. The outputs of the three sources are applied to a common piston attenuator. Frequency-range changing is achieved by the switching of the h.t. supply to the oscillator covering the selected range.

The crystal-controlled i.f. test oscillator is a completely separate unit housed in the same case. A switch selects any one of five crystals; these crystals fit into sockets at the rear of the instrument, the actual crystal frequencies being predetermined to suit the operational equipment with which the signal generator is to be used.

### Future Developments

The special signal-generator techniques that are being developed for mobile-receiver testing illustrate one aspect of the continuous demand for new types of test gear as progress is made in the operational equipment.

In the U.S.A. mobile-radio frequency allocations have been made in the 890-Mc/s to 960-Mc/s band.

At these frequencies, the signal-generator technique is noticeably different from that at low frequencies. The lumped-circuit type of oscillator is not very satisfactory; and signal generators tend to be rather elaborate mechanically, utilizing resonant-line oscillators and special valves.

### BATTERY SUBSTITUTE

IN *Murphy News* for December 1959 D. Lee describes the "battery substitute" or power supply which Murphy Radio Ltd. use for production tests on transistor receivers. To avoid damage should the output be short-circuited a current limiter is incorporated in the compound-emitter-follower output stage. The limiter consists of a resistor in series with the emitter of one output transistor, and a junction diode joins the "output side" of this resistor and the transistor base. If a large current is drawn the p.d. across the diode causes it to conduct: this "freezes" the base/emitter potential, so limiting the output current to a safe value. Also the high resistance of a run-down battery may be stimulated by a series resistor.

## "Wien Bridge Oscillators"

MR. HICKMAN'S treatment (December 1959 issue) is almost perfect so far as it goes, but I fear he has based his article upon experience of building a fixed-frequency oscillator possibly with power from d.c. sources. Having for my own interest once built an a.f. oscillator, admittedly of the phase shift type, covering 5-100,000c/s, I feel he might well issue a warning and general advice.

The same basic problems of avoiding unwanted phase shifts and spurious couplings arise, as well as the desirability of feeding the frequency-determining networks from low-impedance sources. Attention seems to be called for to these matters.

(1) Power supply. Ripple or heater leakage, etc., can lead to interaction at 50c/s and harmonics.

(2) Power supply. Impedance of h.t. source can cause serious trouble, and even at 50c/s a regulated source seems desirable if variable frequency working is called for.

(3) Coupling of amplifier to Wien Bridge. This capacitor obviously has its influence by introducing a phase shift. Over wide-range working it will need to be switched, because otherwise the effect of capacity to earth will be important. For precision work electrolytics are out, so size becomes physically troublesome.

(4) Other stray capacitance and loading effects, mainly at the h.f. end, call for the lowest possible circuit impedances and cathode follower output, but this of course aggravates (3).

In my case I used 1% tolerance switched capacitors for hand switching, with variable resistance for fine control in steps of 1, 3 and 10. It was not possible to obtain accurate scale matching for each range without considerable attention to the above matters, and, in fact, unless one is content with a frequency accuracy of 5% at the extremes, it is ridiculous to rely upon accuracy of bridge components. C.R.O. checking is required, but this breaks down rather beyond a few kc/s owing to the difficulty of determining the multiple of 50c/s in question. Probably the best system is a circular display from 50c/s with grid brightening from the oscillator, but an auxiliary oscillator is called for to work beyond a few kc/s to the 100kc/s mark. Such methods, carefully used of course, are good to 0.1%, which is no doubt your contributor's goal, but they do show up no end of imperfections in the design. Incidentally, before I am attacked I would point out that I know well that variable resistance control has its own problems since the potentiometers must be wire-wound components possessing by no means negligible inductance and stray capacitances. The alternative of variable condensers and switched resistances for range multiplying leads to high circuit impedance and hum pick-up. It seems to be a case of finding the lesser evil!

London, N.W.11.

L. STREATFIELD.

### The author comments:

I am most grateful to Mr. L. Streatfield for the points which he raises in connection with, in particular, the difficulties associated with the design of Wien bridge oscillators to cover wide frequency ranges. Such considerations should certainly be borne in mind when dealing with variable frequencies.

With regard to power supplies, I would agree that good stabilization and freedom from hum are certainly desirable qualities, but may I point out that the effects of power supply variations and hum are both considerably reduced by negative feedback.

In practice the choice of gain factor for the amplifier

must be a compromise; to reduce the effects of coupling time constants the gain should be large in order to allow a large amount of negative feedback to be applied, but in order to reduce the effects of stray couplings such as hum, etc., the gain should in fact not be too large. These considerations apply equally for any high-gain feedback amplifier and therefore, in general, the same precautions are applicable, such as hum bucking or, if necessary, use of d.c. heater supplies and screening of high-impedance bridge components.

D. E. D. HICKMAN.

## "Alternatives to the Wien Bridge"

I SHOULD like to comment on the article by J. F. Young which appeared in your issue of February 1959.

The article is of considerable interest but, unfortunately, the author did not review the case<sup>1</sup> when  $n > 1$ , and thus a condition contrary to that described in the article (Fig. 7). The increase of damping which takes place when  $n > 1$  is not of great importance, because it can be easily compensated by the amplifier. It is clear

that the increase of selectivity can be attained for  $K=0$  (Fig. 10).

With great interest from a constant reader of your journal.

## Crystal Oscillator Pulling

THE division of crystal oscillator circuits on page 534 of the December 1959 issue contains errors which may mislead some readers. In particular S/Ldr. de Visme states that the amount by which the frequency may be pulled is  $f/Q$ , and thus implies that it depends on  $Q$ . The circuit he shows, however, is the Pierce (1923) circuit, the pulling conditions for which were described in *Wireless Engineer* (June 1941). In this paper it is shown that the pulling range is limited by the ratio of capacitances in the conventional representation of the crystal, a ratio which is always degraded by external circuit capacitances. Certainly ranges of a good deal more than  $f/Q$  can be obtained, for the limit of the ratio of capacitances is below 200, rather than over 20,000.

The alternative circuit with the crystal connected between anode and grid is analysed in a similar manner to that of the reference above by J. Coulon in a Toulouse University doctorate thesis, March 1948 ( $C_1$  is incorrectly labelled in Fig. 1).

London, W.8.

H. JEFFERSON.

### The author comments:

I am much indebted to Mr. Jefferson for pointing out my error in saying that the greatest degree of mistuning possible is of the order of  $f/Q$ .

The error arose from confusion in my mind between the response of a tuned circuit to a forcing frequency other than its resonant frequency—"pulling"—which naturally depends on the circuit Q, and the very different case of directly altering the reactive parameters of a self-oscillating circuit, thereby tuning it.

Taking the minimum possible crystal shunting capacity as about 180 times its equivalent series capacity, the frequency of oscillation of a loss-free crystal can be tuned through a range of  $f/360$ , corresponding to a change in shunt capacity from its minimum value to infinity. For  $f$  equal to 1 Mc/s, this comes to 2.8 kc/s. In fact, I was able to tune the crystal used in the calibrator through about 500 c/s; the difference between the two figures must be attributed mainly to additional capacitive shunting imposed by the associated circuit.

G. DE VISME.

## Inexpensive Photographic Timer

I NOTED with interest the ingenious circuit offered by your correspondent K. Hardisty in the December 1959 issue, whereby clean operation of the relay is obtained.

By the addition of a voltage stabilizer valve (85A2) to the original circuit (August 1958 issue) as shown in the sketch, a similar result is achieved, and calibration of the timing ranges is scarcely affected. As a result of this modification, most types of relay become suit-

able, including some which previously had a tendency to chatter. Further, the timing period becomes more precise.

Among relays successfully tested in this system are:

- (a) The original Siemens h.s. relay with a 1,700 + 1,700Ω coil;
- (b) a P.O. type—600 relay with 5,000Ω coil;
- (c) a P.O. type—3,000 relay with 6,000Ω coil.

Lower resistance coils for the above relays may be suitable, but were not available for test.

Harrow. J. H. JOWETT.

[Mr. Hardisty has asked us to point out that the relay contact RLA/2 in his diagram should have been shown as normally closed. The sequence of operations is: 1—push-button operated, 2—capacitor discharges, 3—neon-lamp extinguishes and relay releases, 4—RLA/2 opens and capacitor begins to re-charge, 5—push-button released. As in Mr. Jowett's design, the enlarger lamp is off (RLA/2 open) when the relay is energized.—Ed.]

## "Servicemen's Pay"

ON page 540 of your issue for December, 1959, you publish details of an agreement between the R.T.R.A. and a body called the Association of Radio and Electronic Engineers.

No intelligent television service engineer will be impressed by the published terms of this so-called agreement. First, because the rate of pay for a man who has served a five-year apprenticeship is under rate by £1 15s 2d in the provinces and £1 6s in the London

area compared with E.T.U. agreements in England and Scotland\*.

Secondly, by its emphasis on the possession by radio and television engineers of the R.T.E.B. certificate, the agreement fails to face up to the fact that the overwhelming majority of skilled television servicing is carried out by highly skilled but, nevertheless, uncertificated engineers†.

This is due to the rapid growth of television and the continued refusal on the part of the Radio and Television Retailers' Association, and the industry, to face up to the need for proper industrial relations and an adequate apprenticeship and training scheme.

Striking evidence of the refusal on the part of the R.T.R.A. to face realities and negotiate with the Electrical Trades Union was to be seen at this year's Radio Exhibition where the R.T.R.A. stand displayed literature advertising a Joint Apprenticeship Council for the industry and proclaiming that the employees were represented on that body by the Guild of Radio Service Engineers, a body (according to the report of the Registrar of Friendly Societies) that has not got a single member and that has ceased to function as a trade union for more than five years.

This Association of Radio and Electronic Engineers represents the latest effort on the part of the R.T.R.A. to offset the growing television membership of the Electrical Trades Union, and consequently its justifiable claims for recognition as the appropriate body to represent the interests of television engineers.

Television service engineers will be all the more reluctant to place much confidence in the claims of the A.R.E.E. to represent them when they learn from the Registrar of Friendly Societies that its contribution income for 1957 was £29 for a total membership of 32. In 1958, however, they claimed a membership of 285, but, strangely enough, they only produced an income of £28 11s 6d.

Other useful information available in the Registrar's report disclosed the fact that neither in 1957 nor in 1958 did this organization engage in any expenditure on benefits, wages, rent or working expenses, in spite of the fact that it has a General Secretary and a registered office at 17, Tottenham Court Road, London, W.1 (just round the corner from the R.T.R.A.'s office).

A. C. BATCHELOR,

National Officer, Electrical Trades Union.  
Hayes, Bromley, Kent.

\* It is learned on enquiry from the Electrical Trades Union that the R.T.R.A./A.R.E.E. rate is here compared with the national minimum rate [£13 2s 6d] established under the E.T.U. agreement with the Electrical Contractors' Association of Scotland. Reference was made in the Report to the Union's 1959 Policy Conference to the need for "the laying down of a minimum rate of pay for radio and television service engineers."

† The R.T.R.A./A.R.E.E. rate for a certificated television service technician is above the minimum basic E.T.U. rate by 5s 2d in the provinces and 16s 2d in London.—Ed.

## Editors and Editing

I WAS interested to see your comments in the January issue on my letter on editors and editing. You will see that I have taken to heart your comment No. 4 about capital letters for common nouns and have addressed this letter to the editor of "wireless world," although I regret to notice that in your comment No. 10 you have yourself suffered a lapse. Comment No. 8 has enlightened me on many points—I had not previously realized that sub-editing is carried out by dull mechanics.

Comment No. 5 illustrates very well the sort of thing I am often up against. I don't use words that I don't know the meaning of, but I often find that editors think they know what I mean better than I do myself.

Finally, your suggestion in comment No. 6 makes me shudder. The style is the scientific equivalent of the officialese that Government Departments are continually bombarding us with, and although the sentence is finite I find it difficult to comprehend as a whole.

Chelmsford.

R. A. WALDRON.

# THE SMITH CHART

## 2.—Effects of Load, Input Impedance and Matching on Transmission Lines

By R. A. HICKSON\*

(Continued from page 9 in the January issue)

IT was explained in the first part of this article how the Smith chart is derived. We can now turn to a consideration of some of its principal applications in connection with transmission lines and aerial systems.

**Effect of Load on Transmission Line.**—(i) *Magnitude and Phase Angle of Reflection Coefficient at the Load.*—Given  $Z$ , locate it on the chart and draw a line from the centre through the point to the edge. The distance of the point from the centre, transferred to the reflection coefficient scale, gives the magnitude. The phase angle is read from the scale round the edge.

Given  $y$ , locate it on the chart and draw a line from the point through the centre to the edge of the chart. The distance of the point from the centre, transferred to the reflection coefficient scale, gives the magnitude. The phase angle is read from the scale round the edge.

*Example (a).*—A load of  $45 + j30$  ohms is connected to a 75-ohm line.

$$z = \frac{Z}{Z_0} = \frac{45 + j30}{75} = 0.6 + j0.4$$

(Point A Fig. 11). From this it can be seen that the reflection coefficient is  $0.34 (+121^\circ)$ .

*Example (b).*—A load of  $0.02 - j0.03$  mho is connected to a 50-ohm line:

$$y = \frac{Y}{Y_0} = \frac{0.02 - j0.03}{0.02} = 1 - j1.5$$

(Point B Fig. 11). It can be seen that the reflection coefficient is  $0.60 (+127^\circ)$ .

(ii) *Voltage Standing Wave Ratio.*—Given  $z$  or  $y$ , locate it on the chart and draw an arc of a circle centred on the centre of the chart moving clockwise from the point. The arc will cross the pure resistance axis at a normalized resistance equal to the v.s.w.r. at the load.

The v.s.w.r. at any point along the line may be obtained by moving towards the centre of the chart by an amount indicated by the "Effect of Line Attenuation" scale.

*Example.*—Load =  $0.6 + j0.4$  (normalized); v.s.w.r. at load = 2.05 (Fig. 12). To find the v.s.w.r. at the end of 150 feet of cable having a loss of 4dB/100 feet at the operating frequency. Line attenuation =  $150 \times 4/100 = 6$ dB. Moving from 2.05 on the v.s.w.r. scale on to the "Effect of Line Attenuation" scale, 6dB towards the generator on this scale and then back to the v.s.w.r. scale, we find: v.s.w.r. at end of line = 1.18.

**Input Impedance of a Transmission Line.**—(i) *Mismatched Line.*—Given  $z$  and  $l$ , locate  $z$  on the chart and draw an arc of a circle centred on the centre of the chart moving clockwise from the point. The length of the arc, measured on the

wavelengths scale, should be  $l$ ; if  $l$  is greater than a half-wavelength, an integral number of half-wavelengths should be subtracted from it. The normalized input impedance is indicated at the end of the arc (Point A, Fig. 13).

The effect of line attenuation may be obtained by moving toward the centre of the chart by an amount indicated by the "Effect of Line Attenuation" scale. (Transmission Loss)

*Example.*—

Normalized load =  $0.6 + j0.4$ .

Length of line = 30 metres.

Velocity factor = 0.833.

Operating frequency = 209.75 Mc/s.

$$l = \frac{209.75 \times 30}{300 \times 0.833} = 25.17 \text{ wavelengths.}$$

Moving clockwise 0.17 wavelength from  $0.6 + j0.4$  brings us to  $2.05 - j0.03$  (Point A). The radial distance of this point from the centre of the chart is transferred to the "Effect of Line Attenuation" scale (Point A'). Assuming that the line loss is 6dB we move six 1-dB steps along this scale to point B'. The radial distance of this point from the centre of the circle, along the line from the centre to point A, gives us point B, the input impedance allowing for line losses. This is 1.2, and has a slight capacitive component ( $j = -0.01$ ) but the chart cannot be read to such a degree of accuracy.

(ii) *Length of Line Required to Produce a Required Reactance.*—A short-circuited line will have a reactance of zero at the short circuit. The reactance at the input of a short-circuited line may be found by moving round the outside of the chart from the zero point by a distance on the "Wavelengths Towards Generator" scale corresponding to the length of a stub.

Similarly with an open-circuited line, we start at the infinity point and move round the outside of the chart in the same direction.

If the shortest possible line is required, an open-circuited line will be chosen when a capacitive reactance is required and a short-circuited line for an inductive reactance.

The effect of line losses is generally negligible for such short sections of line, producing a resistive component in the input impedance of at most 0.01. More important is the fact that the open or short circuit is not always ideal and may itself contain a resistive component. Fringing effect in open circuits is a cause of this. With balanced lines, a short circuit must extend over an area of dimensions comparable with a wavelength to be effective, and for measurements the most reliable termination is a short circuit on a coaxial line.

(iii) *Line Characteristics.*—The procedures described in (i) and (ii) require a knowledge of the characteristic impedance, attenuation and velocity factor of the

\* Belling and Lee Ltd

line. By a converse process we can deduce the characteristics of the line from measurements of the input impedance of a known length of line at six or eight known frequencies: ideally two frequencies would suffice, but, as always, redundancy improves reliability.

**Characteristic Impedance.**—The normal method for this is to take the geometric mean of the input impedances with the far end of the line first short circuited and then open circuited. These impedances are sometimes made resistive by cutting the line to resonance and/or varying the frequency of measure-

ment. The effect of measurements at resonance is reproduced by means of the Smith Chart, using an arbitrary length of line and a set of arbitrary frequencies. The use of different frequencies allows the input impedance of the line at various electrical lengths to be measured. The frequency band over which measurements are made should be such as to give a change in electrical length of one half-wavelength. A larger band than necessary will introduce changes in attenuation per unit length which must be allowed for in plotting the results (on the basis, attenuation (dB) =  $k\sqrt{\text{frequency}}$ ). The input impedances relative to the measuring system will lie on a circle which crosses the pure resistance axis at points representing a line length of (a) an exact number of half-wavelengths (each repeating the load) and (b) an exact odd number of quarter-wavelengths (each inverting the load). The line impedance relative to the measuring system is the geometric mean of these two resistance values.

**Velocity Factor.**—The measured impedances may now be replotted relative to the line impedance, making a new circle centred on the centre of the chart.

The velocity factor is given by:—

$$v.f. = \frac{\delta F \times L}{\delta l \times 300}$$

where  $\delta F$  in Mc/s is the change in frequency required to produce a change  $\delta l$  in the length of the line in wavelengths, and  $L$  is the physical length of the line in metres. The wavelength change  $\delta l$  is determined from the replotted points with the aid of the "Wavelengths" scale.

**Attenuation.**—The attenuation in decibels of the length of line used is given by the radial distance of the replotted points from the edge of the chart, measured on the "Effect of Line Attenuation" scale.

Fig. 11

Fig. 12

Fig. 13

Fig. 11. Reflection coefficient of an impedance (A) and an admittance (B).

Fig. 12. V.S.W.R. at the generator end of a line.

Fig. 13. Input impedance of a mismatched line: neglecting losses, A; allowing for losses, B.

As an example of the use of the foregoing method we will refer to Fig. 14. Points marked with a cross are the input impedances, relative to 50 ohms of a 14-metre length of short-circuited line. Figures adjacent to each point indicate the frequency in Mc/s. The circle through these points crosses the pure resistance axis at 0.05 and 5.0. The characteristic impedance of the line is therefore:—

$$Z_0 = \sqrt{0.05 \times 5.0 \times 50} = 25 \text{ ohms.}$$

The velocity factor is:—

$$\frac{(95 - 88) \times 14}{0.49 \times 300} = 0.67$$

The attenuation is:—

$$0.85\text{dB per 14 metres} \\ \text{or } 1.85\text{dB per 100 feet.}$$

For the most accurate results the loss of the length of cable used should be between 2.5dB and 10dB.

**Nature of an Unknown Load.**—Using a slotted line, the v.s.w.r. produced by the load may be measured directly, as may the change in position of the standing wave pattern produced by replacing the unknown load with a short circuit. Normally the change in position of a voltage minimum is

Fig. 14

Fig. 16

Fig. 15

Fig. 17

Fig. 14. Input impedance of a short-circuited line at various frequencies: X = relative to test gear; O = relative to  $Z_0$

Fig. 16. Matching with single quarter-wavelength section.

Fig. 17. Matching with two quarter-wavelength sections, over the same frequency range as in Fig. 16.

chosen, as the minima are sharper than the maxima. The procedure is as follows:—

Measure the v.s.w.r. with the load in place and note the position of a convenient voltage minimum. Replace the load by a short circuit and note the position of new voltage minima, selecting the minimum which is not more than a quarter-wavelength from the first minimum. The wavelength in the slotted line is determined by measuring the distance between adjacent minima, which corresponds to one half-wavelength.

The load lies on the circle corresponding to the v.s.w.r., so this circle is drawn in, using the pure resistance scale or the separate v.s.w.r. scale. Starting at the point where this circle cuts the pure resistance axis at a value less than 1, move along the circle a distance corresponding to the distance moved by the voltage minimum, in the direction (towards the generator or the load) in which the minimum moved when the load was replaced by a short circuit. The point reached represents the load impedance. *Example.*—The indicated v.s.w.r. is 1.8, the distance between adjacent voltage minima is 20cm and the replacement of the load by a short circuit shifts the minima 6cm toward the generator. The shift in terms of wavelengths is  $6/20 \times 2 = 0.15$  wavelength (Fig. 15).

Moving this distance toward the generator along the "v.s.w.r. = 1.8 circle" brings us to a load impedance of  $1.0 - j0.6$ . If a 50-ohm slotted line is used the impedance is  $50 - j30$  ohms.

**Matching Two Resistive Impedances.**—As shown in the section "Impedance Variations along a Mismatched Line" in Part 1, a quarter-wavelength section of line will match two resistive impedances  $z_1$  and  $z_2$  such that  $1/z_1 = z_2$ . For example, to match a 300-ohm line to an 80-ohm line, a quarter-wavelength section would be required of such an impedance that  $Z_0/80 = 300/Z_0$ , i.e.,  $Z_0 = 155$  ohms.

This matching will of course only be correct at the one frequency for which the length of the matching section is exactly a quarter-wavelength.

Referring to Fig. 16, Point A represents 300 ohms with respect to 155 ohms. This point is transformed to B at the correct frequency, to C at the frequency for which the line is 0.27 wavelength long and to D at the frequency for which the line is 0.29 wavelength long. These points, when normalized with respect to 80 ohms, become points E, F and G.

The matching may be improved by using two quarter-wavelength sections to change the impedance in two stages. In this case, matching 300 to 155 ohms with a 216-ohm section, and matching 155 to 80 ohms with a 111-ohm section. Referring to Fig. 17, Point L represents 300 ohms with respect to 216 ohms. This point is transformed to M at the correct frequency, to N at the frequency for which the line is 0.27 wavelength long and to O at the frequency for which the line is 0.29 wavelength long. These points represent the output impedance of the first section normalized with respect to 216 ohms. To represent the input impedance of the second section they must be renormalized with respect to 111 ohms, when they become points L (again), P and Q respectively. These points are transformed to M (again), R and S, by the 111-ohm section. When normalized with respect to 80 ohms they become points E (again), T and U.

The improvement obtained by use of two sections is apparent: the v.s.w.r. represented by point U is less than 1.1, compared with 1.4 for point G. The use of more sections will give a further improvement, leading in the long run to an infinity long line, the impedance of which changes exponentially. Short tapered sections of line have been used in which the length and character of the taper are usually determined experimentally. Exponential, linear and Gaussian tapers have been used. A recent paper (Ref. 6) contains details of the design of a practical exponential-line transformer.

## SHORT-WAVE CONDITIONS

Prediction for February

THE full-line curves indicate the highest frequencies likely to be usable at any time of the day or night for reliable communications over four long-distance paths from this country during February.

Broken-line curves give the highest frequencies that will sustain a partial service throughout the same period.

- ..... FREQUENCY BELOW WHICH COMMUNICATION SHOULD BE POSSIBLE FOR 25% OF THE TOTAL TIME
- - - - - PREDICTED MEDIAN STANDARD MAXIMUM USABLE FREQUENCY
- FREQUENCY BELOW WHICH COMMUNICATION SHOULD BE POSSIBLE ON ALL UNDISTURBED DAYS

# Tunnel Diode

NEW SUPER-HIGH-FREQUENCY SEMICONDUCTOR DEVICE

A NEGATIVE resistance characteristic which can be made use of at super-high frequencies ( $>3,000\text{Mc/s}$ ) is the main feature of tunnel diodes. These diodes consist of heavily-doped (impurity content as high as  $\approx 10^{20}$  atoms/c.c.) p- and n-type regions connected by a very thin ( $\approx 10^{-6}\text{cm}$  wide) depletion layer sometimes called a space-charge region. When a voltage is applied to such diodes from the p- to the n-region (forward bias) the current at first increases with increasing voltage and then, at a potential of a few hundred millivolts, decreases again before finally increasing as in an ordinary conducting diode (see diagram). The region of decreasing

General voltage/current characteristics of tunnel and normal diodes for forward bias voltages (adapted from Fig. 1 of the article by H. S. Sommers et al. in Part 3 of the 1959 I.R.E. Wescon Convention Record (p.3)).

current corresponds to a negative dynamic resistance. This negative resistance in tunnel diodes was first reported by L. Esaki in *Physical Review*, Vol. 109, p. 603 (1958).

At low voltages, before the normal conduction current level in these diodes is reached, the current is provided by the majority carriers going through a quantum-mechanical process known as tunnelling—hence the name given to these diodes. Using the picture of atomic particles as waves of probability, tunnelling may be looked upon as being due to the fact that the waves of a charged particle can penetrate partially a potential barrier even when the particle does not have enough energy to surmount the barrier. Now a wave on the other side of the barrier represents a finite probability of finding the particle on the other side of the barrier. If and when this probability is realized, and the particle appears on the other side of the barrier even though it did not have sufficient energy to surmount the barrier, the particle is said to have tunneled through the barrier. Of course, the particle can only tunnel through the barrier if it can fill a vacant energy level on the other side. In the tunnel diode certain energy levels cannot be filled and are said to be forbidden. It is the effect of the applied voltage on these forbidden levels which produces the low-voltage/current characteristic of the tunnel diode. For example, at certain small forward applied voltages, the forbidden levels in the p-region overlap the electron energy levels in the n-region. Thus the electron flow from the n- to p-region is decreased and a negative resistance characteristic produced. To complicate the picture still further, in certain directions

relative to the semiconductor crystal lattice structure phonons (ultrasonic vibrations of the crystal lattice) can interact with the electrons so as to assist the electron tunnelling process.

One advantage of tunnel diodes is that they can operate at super-high frequencies ( $>3,000\text{Mc/s}$ ). Since these diodes are majority rather than minority carrier devices, the maximum operating frequency of minority carrier devices (such as the transistor) set by the minority carrier transit time does not apply to tunnel diodes. In the case of tunnel diodes, the maximum operating frequency increases with increasing doping (impurity concentration). Since as the doping increases the impedance decreases, the maximum practical operating frequency of the tunnel diode may be set either by the minimum usable circuit impedance, or by the maximum achievable doping. Such practical considerations are likely to limit operation to below  $10,000\text{Mc/s}$  in the case of germanium tunnel diodes, but higher frequencies should be achievable by using other semiconductors such as germanium arsenide as the tunnel diode material. Germanium tunnel diodes have in fact already been made which can oscillate at  $4,000\text{Mc/s}$ . Such oscillations can be obtained by biasing the diode to a point on the negative resistance portion of its characteristic and placing it across a resonant circuit. The capacitance in the resonant circuit can be obtained from the tunnel diode junction capacitance, and the inductance, at these high frequencies, from a short length of conducting material. Alternatively, the diode can be placed at a suitable position across a short-circuited transmission line.

Since the tunnel diode characteristic consists of a negative resistance region separating two positive resistance regions, such diodes can also be used as very fast switches, and switching times of less than  $1\text{m}\mu\text{sec}$  have already been achieved. Besides their very high maximum operating frequency, another advantage of tunnel diodes is their wide possible range of operating temperature. Tunnel diodes can in fact operate from about  $4^\circ$  absolute up to about  $200^\circ\text{C}$  in the case of germanium, or up to about  $400^\circ\text{C}$  in the case of silicon diodes. One disadvantage of tunnel diodes inherent in all two-terminal devices is the difficulty of separating input and output circuits. Various aspects of the tunnel diode are described in *Proc. I.R.E.* for July 1959 (p. 1201) by H. S. Sommers, and in papers by H. S. Sommers et al. and I. A. Lesk et al. in Part 3 of the 1959 I.R.E. Wescon Convention Record.

## Automatic D.F. Aids Radar Identification

NOW in operation at De Havilland's Hatfield aerodrome are a Marconi Type S232 50-kW 50-cm radar and Automatic Fixer. This latter uses two Type AD200 v.h.f. direction finders, one at Hatfield, the other near Chelmsford (controlled by a v.h.f.-radio link).

The outputs of the two direction finders are fed into the Automatic Fixer which uses a 17-in c.r.t. display covered by a transparent map of the area. When an aircraft calls Hatfield on v.h.f. two traces, which originate from the positions of the d.f. stations and indicate the aircraft's bearing, are produced. These traces intersect at the aircraft position, so enabling the radar-display point to be identified without recourse to an aircraft manoeuvre.

**Handwriting Recognizer**, capable of identifying any one of ten words, "zero," "one," "two" . . . etc., to "nine," written in cursive script, has been devised at Bell Telephone Laboratories. To use the device the words have to be "written" with a metal stylus on an electrode system. Then, when an "Identify" button is touched with the stylus, a light appears beside the numeral corresponding to the word just written. The device examines words as a whole, not by their individual letters. It picks out features of the overall shapes of the words, including the length of word, the dotting of "i's" and the number and position of vertically extended letters such as "h" and "g." The electrode system consists of 15 horizontal metal strips alternately sandwiched between strips of electrical insulating material. Up-an-down movements of the writing stylus gives a sequence of electrical connections with the metal strips. The sequence and number of connections are an indication of which of the ten words has been written. To provide the writer with horizontal guide lines, two of the 15 horizontal bars on the writing surface are made of brass, making a colour contrast with the others, which are copper. The two brass conductors enclose the middle one-third of the writing space, in which the user writes small letters, such as "e" and "n." Vertically extended letters, such as "t" and "g," are carried beyond these limits. The middle bar of the surface is connected to a counter, which gives a rough horizontal location of features. If a recognition feature comes before the

stylus has crossed this middle bar six times the feature is considered to be in the left-hand portion of the word; if later, it is considered to be in the centre or right portion. A logic circuit, consisting of 12 relays and eight diodes, examines each word for six features. These are: a lower vertical extension, as in "g," within the left-hand portion of the word; a

# Technical Notebook

lower extension in the middle or right-hand portion; an upper extension, as in "t," in the left-hand portion; the presence of more than one upper-left extension; a large number (more than nine) crossings of the middle bar; and a dotted "i." As examples, "zero" is identified by a lower-left extension; "four" by both upper- and lower-left extensions; "seven" by more than nine crossings of the middle bar. Theoretically, four separate tests for features are sufficient to identify ten words. This system, however, applies two extra or redundant tests to allow for the great variation in writing styles. The accuracy of the recognizer is said to be 97% of words correctly identified in a test of 1,000 words written by 20 people.

**Interstellar Communications** in the form of radio transmissions from any civilizations that may exist on planets revolving around neighbouring stars may be receivable according to G. Cocconi and P. Morrison in *Nature* for Sept. 19, 1959 (p. 844). Frequencies below about 1Mc/s and above about  $3 \times 10^4$ Mc/s are unlikely to be used for such transmissions either because they are absorbed too greatly in planetary atmospheres or, where this absorption is not serious (at frequencies in or near the visible region), because the power required to produce a receivable signal is impractically large. In the remaining useful frequency band from about 1Mc/s to  $3 \times 10^4$ Mc/s interfering radiation is produced by the galaxy as a whole and also by the neighbouring star (since any feasible size of radio telescope will have a resolving power which will almost certainly be too small to separate a source on a planet from its neighbouring star). These two sources of interfering radiation in the useful frequency band produce a total received power which varies with frequency and is a minimum at frequencies of the order of  $10^4$ Mc/s. Frequencies which would be easy to find are provided by molecular or atomic resonances since these occur at the same frequencies throughout the universe. Such a frequency is provided in the region of minimum interfering radiation by the hydrogen line at 1,420Mc/s. The authors thus suggest a search around this frequency

for such transmissions. The transmitter power and aerial size required for producing a signal stronger than the interfering radiation at this frequency are not much beyond even the present technical capabilities of this earth, and are within what is already planned. The authors suggest that the most likely form of modulation for such a signal would be pulse modulation. The modulation period is unlikely to be very much greater or much less than a second owing to bandwidth and planetary rotation period restrictions. An easily identifiable message would be provided by modulations forming a standard numerical series such as the first few prime numbers. From our present knowledge it is thus quite practicable to receive signals from any civilizations that may exist on planets of neighbouring stars. The authors feel that the importance which the reception of such signals would have overrides the probability that a search for them would prove fruitless.

**F.M. Receiver Distortion** in the i.f. stages and discriminator can be reduced by decreasing the maximum i.f. signal frequency deviation. This can be done by changing the local oscillator frequency in phase with the changes in the transmitted signal frequency produced by the audio modulation. The required changes in the local oscillator frequency can be obtained by using the audio output from the discriminator as a frequency control signal. Circuit details of how this is done in the American Allied Radio Knight tuner are given in *Electronic Equipment Engineering* for July 1959 (p. 25). This system decreases the distortion in proportion to the reduction in the i.f. deviation at normal deviations and by a much greater amount should the unreduced i.f. deviation exceed the i.f. and/or discriminator bandwidths. Two other advantages of reducing the i.f. deviation are that, since the bandwidths of the i.f. and discriminator stages can be decreased, the gain of these stages can be increased, and they can be more easily constructed. The signal-to-noise ratio is not changed by reducing the i.f. deviation, since most of the noise is produced in the r.f. stage.

# Transistor Constant-Volume Amplifier

Gain Control by Input Resistance Variation

By G. J. POPE

VOLUME compressors or constant-volume amplifiers are commonly used in communications systems to equalize volume variations experienced when different operators are liable to broadcast announcements. Further, positioning of microphones becomes less critical and larger average modulation depths may be employed so that an improvement in the signal-to-noise ratio of the system is achieved.

The principle of such circuits involves the inclusion of some variable-gain element in the forward a.f. path, with provision for the automatic adjustment of the gain in inverse proportion to the strength of the incoming signal. By this arrangement, the output approaches a constant level irrespective of the average input level. In order to avoid overmodulation and excessive distortion, the device must be fast to respond to initial syllables of speech after a pause when the gain will have risen to a high level. The rate of recovery of the no-signal high-gain condition during pauses in speech must not be so fast that a disconcerting "snatching" effect occurs at every ensuing opening syllable.

Understandably, the rate of operation of the amplifier must take a finite time, since energy must be obtained from the incoming signal (suitably amplified of course) to charge a capacitor, the level of which charge decides the setting of the variable-gain device. An operating time of 100 msec for a maximum level input signal from silence has been found to be satisfactory in practice. The capacitor is arranged to discharge to any required lower level during pauses in speech over the space of 3-5 seconds, this period having been found to be satisfactory from an intelligibility and listening comfort point of view.

The constant-volume amplifier to be described has been designed to provide substantially similar output signal levels for various operator speech input levels. It is suitable for operation directly from a moving-coil microphone or via a pre-amplifier from a ribbon microphone.

The amplifier consists of four main sections (see Fig. 1):—

- (1) Gain-controlled stages VT1 and VT2.
- (2) Bias amplifier VT4, 5 and 6.
- (3) Bias detector and buffer stages MR1 and VT3.
- (4) A.F. amplifier VT7 and VT8.

**Gain-controlled Stages.**—Stages VT1 and VT2 are controlled-gain amplifiers, the input resistances of which are controlled by the a.g.c. bias fed back via the grounded-collector stage VT3. The same control principles are used as those in a well-tried a.g.c. circuit used in transistor broadcast receivers. Here the dependence of the input resistance of a transistor on the d.c. emitter current is used to control the a.c. input current supplied from the signal source. The best control range will be obtained when the signal source is of low resistance.

The overall feedback loop phase change at mid-band frequencies has been arranged to be 180 degrees, as this obviously aids the basic stability of the circuit when using the most convenient design of bias amplifier. Unfortunately, this means that the bias is fed into the emitter circuits of the controlled stages, which loses the power gain opportunities which would be obtained if the base circuit were fed. However, the present amplifier buffer-stage combination has adequate gain to provide a reasonable compression characteristic.

In accordance with well-established technique in constant-volume amplifier design, push-pull working of the controlled amplifier is arranged. Recombination of the two outputs in a transformer results in cancellation (depending on the degree of balance of the two transistors) of the d.c. "thump" transient that occurs in the collector circuit due to the sudden change of bias and thus collector current on the receipt of a signal level increase. This result is due to the application of the bias to the two emitter circuits in parallel whilst the a.f. is applied to the emitter circuits in a normal push-pull circuit fashion.

The noise level contributed by the controlled

Fig. 1. Circuit diagram of constant-volume amplifier.

Fig. 4. Compression characteristic of constant-volume amplifier.

a.f. signal in the controlled stage, the a.f. level must be kept low, and therefore amplification of the compressed output from the secondary of T2 is necessary. VT7 and VT8 provide approximately 1mW maximum output in any convenient impedance, in the present case 300 ohms. Although the push-pull controlled stages remove most of the "thump" voltage from the signal up to the secondary of T2, the single-ended a.f. stage VT7 is driven to base cut-off on the positive half-cycle of its input by the very large transient signal which is applied after a pause in speech, when the gain of the VT1 and VT2 stages has risen to maximum. The large negative half-cycle at the base of VT7 is amplified and appears in the collector circuit of VT8 in the same phase. However, limitation of this half-cycle has already taken place in VT8 base circuit with the result that the initial transient in the collector circuit of this stage is only 6-10dB above the steady working level. In a practical application of this constant-volume amplifier used by the author, the effect was not considered bad enough to trouble about, but a simple peak limiting circuit as shown in Fig. 3 has been found effective in removing this small residual. The output signal using the above circuit modification is symmetrically limited to an r.m.s. power of approximately 1mW.

**Temperature Stabilization.**—The most vulnerable part of the circuit is the bias amplifier. Sufficient d.c. negative feedback has been applied to ensure adequate gain without serious shift of output stage working point over a temperature range from 0 to 40 degrees C, provided that transistors VT4, 5 and 6 have an  $\alpha'$  of not less than 40. There is a G.P.O. specification of a transistor of this type, but if this is not available it may be necessary to select from a batch of OC71 or GET3, or alternatively to use the OC75 which has an average  $\alpha'$  of 90 and will give excellent results in these positions.

VT1 and 2 stages are relatively unaffected by temperature due to the use of a low-value common-base resistor. The base return resistor  $R_4$ , together with the equivalent rectifier network resistance of MR1 and associated components, are low enough to ensure satisfactory operation of VT3 grounded collector stage over the fore-mentioned temperature range.

Lowering the ambient temperature towards freezing point tends to lower the gain of the bias amplifier especially when the transistors in the VT4, 5 and 6 positions have  $\alpha'$  in the region of 40. This drop is shown up as a worsening of the compression characteristic and hence as an increase in out-

put which masks the fall in gain of the a.f. amplifiers VT7 and VT8 at low temperatures. At high temperatures, the gain of the bias amplifier increases and the overall output falls, so that at 40 degrees C the maximum power output of the amplifier may fall to approximately 1/3 mW using average  $\alpha'$  transistors in VT7 and 8 positions and high  $\alpha'$  transistors ( $\approx 100$ ) in VT4, 5 and 6 positions.

The table summarizes the results obtained on the prototype using transistors of  $\alpha'$  as indicated.

Temperature Degrees C	Output change in dB for 30 dB input change when VT4, 5 and 6 have the following $\alpha'$ :—		
	VT4 } VT5 } = 40 VT6 }	VT4=74 VT5=62 VT6=50	VT4 } VT5 } = 100 VT6 }
0	4	0.6	3
20	1.5	0.5	2
40	1.3	0.7	2

**Input and Output Circuits.**—Unfortunately, due to the use of a controlled-gain amplifier of the variable input resistance type, the input impedance of the amplifier depends on the level of the input signal. Experiment has shown, however, that an average value of approximately 1k $\Omega$  provides a reasonable basis for transformer matching ratio calculation. With a 600 $\Omega$  input, an input transformer having the ratio 1.5:1+1 will be suitable. The output transformer in the model described was designed to feed into a 300 $\Omega$  load, but obviously it is quite a standard component. Transformer T2 may be bifilar wound on the primary side if desired, but this method of construction has not been used in the model described, since closely matched transistors have not been fitted in VT1 and VT2 positions. If a very accurate d.c. "thump" cancellation is required, it might be necessary to bifilar wind the transformer and provide separately adjustable bias supplies to VT1 and 2. This degree of refinement does not appear to be necessary judging from aural tests carried out with the constant-volume amplifier. Further, large "thump" voltages occur only after pauses in speech of 4-5 msec, the majority of "thump" signals consisting of small amplitude transients occurring between short pauses in speech or changes of input level, etc.

All the transformers have been designed for dealing with speech signals bandwidths only and thus have fairly low winding inductances.

The circuit of the 2.6 V bias battery must be broken when the main supply is disconnected in

Fig. 5. Overall frequency response of constant-volume amplifier.

order to avoid excessive discharge through the various resistors across the supply.

In order to fully drive the constant-volume amplifier when a ribbon microphone is used, it may be necessary to use a simple single-transistor pre-amplifier. This course might also be adopted even when using adequate drive if the variations in impedance of the input circuit were required to be screened from the input signal source. However, this latter effect has not been found troublesome in applications of the amplifier used by the author. **Characteristics and Response.**—Fig. 4 shows the

compression characteristic of the amplifier. An isolating pad giving approximately 20 dB attenuation was inserted between the signal generator and the amplifier input in order to mask the input impedance changes which would otherwise upset the attenuator settings.

Fig. 5 shows the overall response which was measured with the bias amplifier inoperative, and a fixed voltage on the base of VT3.

The maximum input voltage which the amplifier will handle without distortion depends to some extent on the transistors used, but is in the neighbourhood of 10-20 mV.

## Transmission-Line Exchange

AUTOMATIC INTERCONNECTION OF TRANSMITTERS AND AERIALS

THE problem, at a transmitting station, of interconnecting the transmitters and several different aerials is an old one and one to which there does not seem to be an easy answer. However, P. & L. Miller, Ltd., have recently completed two automatic transmission-line exchanges at the Royal Navy W/T station at Inskip, near Preston and the flexibility of each installation allows the connection of any ten transmitters—with outputs of up to 40kW—to any one of twenty aerials.

The transmitter outputs are carried on open wire balanced line to a 15-ft high "tower" at the centre of the semicircular exchange. From this tower there is an extension of each feeder line to a horizontally-traveling carriage, via a flexible feeder link, each carriage being at a different height. The carriages, which can be driven to any one of 21 preset positions by a "Teleflex" flexible drive system, have mounted upon them a pair of feed-through insulators bearing domed contacts on the side remote from the tower. Opposite 20 of the stopping points for the horizontal carriages, mounted on the other side of the framework, are 20 similar carriages capable of vertical movement, this time driven by a lead screw, to any of the ten levels at which the horizontal carriages travel. These vertically-moving carriages are connected through a hanging loop of flexible feeder to the outside aerial feeders and, when brought up to a horizontal carriage the contacts engage, so completing a feeder circuit between any one of the transmitters and any aerial.

Electric motors drive the carriages, and these are controlled from a panel in front of the exchange. On this panel are thirty sockets and ten internally-wired plugs, each plug

representing a transmitter. If a plug is removed from its "at rest" socket, when the transmitter carriage is parked in the twenty-first position with its feeder earthed, and placed in a socket corresponding to an aerial the following sequence of events takes place. First, the appropriate horizontal-drive motor is energized and the carriage travels round until it operates a micro-switch opposite the chosen aerial feeder. Then the horizontal motor is stopped by an electromagnetic brake, and the vertical drive is energized, similarly being stopped when the aerial-feeder carriage reaches the transmitter-line carriage. On returning the plug to its "at rest" socket the carriages return to their rest positions, with the transmitter feeder earthed and the aerial-feeder carriage below the arc of travel of the transmitter-feeder carriage on the lowest track.

The control system, which operates on 50V d.p. uses 440 micro-switches and six miles of cable, is interconnected with the transmitter interlock safety system. The drive motors are three-phase, 50-c/s, ¼-h.p. 1440-r.p.m. units using spur and helical gear reduction trains and each has a reversing contactor. The approximate weight of each exchange is about 8 tons.

General view of the P. & L. Miller transmission-line exchange at Inskip R.N. W/T station, seen from back of tower to which flexible feeders are anchored.

## NEW ELECTRONIC EQUIPMENT AND ACCESSORIES

### Artificial-echo Unit

IN the Binson Echorec artificial echoes are produced by magnetically recording the original sound and replaying it a suitable time later to form an echo. The signals are recorded on the magnetically-coated edge of a rotating disc and replayed through one or more of four fixed replay heads near the disc edge as the recorded signal on the disc edge passes under these heads. The replay heads are spaced apart from each other so as to provide four echoes at approximately 0.15-sec intervals from 0.15 to 0.6 sec after the original sound. An erase head erases signals as they pass under it, the total available continuous recording time on the disc being approximately  $\frac{1}{2}$  sec. Repeated echoes may be obtained if desired by feeding the replay heads' echo outputs back into the recording head so as to later produce echoes of the echoes. Such repeated echoes can be made to sound like reverberation. The echoes can also be made louder than the original sound so as to produce "swell" effects. The replay heads are spaced about  $2.5 \times 10^{-4}$  in from the edge of the disc and provide a response up to about 6kc/s. Echoes from any of as many as 12 different combinations of one or more of the four replay heads may be selected. Three other controls allow variation of the total time during which multiple echoes take place, as well as of the mean levels of both the echoes and the

Binson Echorec artificial-echo unit.

original signal independently. Up to three different input signals can be accepted and processed together; alternatively, any of these inputs can be passed through unchanged. As many as six mains-voltage tappings from 110 to 280V are provided. The unit measures  $16\frac{1}{2} \times 11 \times 8$  in and weighs 28lb. It costs 140 guineas and is imported by Modern Electrics (Retail), of 164, Charing Cross Road, London, W.C.2.

### Wide-range Insulation Tester

SHOWN in the illustration is a completely self-contained portable insulation test set with the remarkably wide range of 200M $\Omega$  to 20 million megohms ( $2 \times 10^{10} \Omega$ ). Test voltages variable from 1 to 10kV are generated internally by means of a battery-operated transistor r.f. unit, step-up transformer and a voltage-multiplying stack of rectifiers.

Voltage and resistance measurements are read by a built-in valve-voltmeter with a large rectangular-faced microammeter directly calibrated in megohms (4 ranges) and in kilovolts (one range).

High-stability and "potted" components are used to ensure stability of operation under all conditions. The

Miles Hivolt 20-million megohm insulation test set.

self-contained batteries are standard-type and easily replaceable.

The makers are Miles Hivolt, Ltd., 13 Mortimer Road, Hove 3, Sussex, and the price is £99 10s 0d.

### Band-pass I.F. Filters

FILTERS designed to fix the band-pass characteristics of v.h.f. communications receivers have been introduced by Salford Electrical, a subsidiary of G.E.C. Known as the Types 455KBP50 and 455KBP25 they provide the selectivity necessary to meet G.P.O. recommendations for use in communications systems of 50-kc/s and 25-kc/s channel spacing respectively. Both centre on an i.f. of 455kc/s with a frequency stability better than  $\pm 400$ c/s over the temperature range  $-20^\circ\text{C}$  to  $+70^\circ\text{C}$ .

The filters are completely encapsulated and enclosed in metal boxes. A brief specification of the 455KBP25 is as follows:—

Minimum bandwidth at $-6$ dB points	16kc/s,
Maximum bandwidth at $-85$ dB points	44kc/s,
Minimum out-band attenuation	85dB,
Insertion loss	12dB,
Termination resistance	22k $\Omega$ .

They weigh approximately 1lb each.

The makers are Salford Electrical Instruments, Ltd., Pool Works, Silk Street, Salford 3, also at Magnet House, Kingsway, London, W.C.2.

# Elements of Electronic Circuits

## 10.—TRIGGERED TWO-STATE CIRCUITS

By J. M. PETERS, B.Sc. (Eng.), A.M.I.E.E., A.M.Brit.I.R.E.

A WELL-KNOWN type of two-state circuit is the cathode-coupled multivibrator. The operation of this circuit is similar to that of the conventional multivibrator described in previous issues, and the same kind of cumulative action occurs. Fig. 1 shows the basic circuit, which is that of a two-valve

Fig. 1

amplifier with overall positive feedback, the valves being arranged in what is known as a "long-tailed pair" configuration.

A change in grid-cathode voltage gives rise to a series of events leading to a similar, but amplified, voltage variation being added to the grid-cathode voltage; hence the circuit is unstable and will under normal circumstances oscillate freely. However, if there is too great a bias difference between V1 and V2, the oscillations will stop and the circuit will

become stable with one of the valves non-conducting (see also the description of the operation of the "long-tailed pair," November, 1959, issue, p. 510). A suitable initiating signal to V1 grid will cause the circuit to perform a single cycle of oscillation. A freely running oscillator therefore becomes a trigger circuit.

Let us consider the operation of the circuit when the bias voltages are similar and when positive sync pulses are applied to V1 grid, see Fig. 2. Initially V1 is assumed to be cut off by V2, the grid and cathode of V2 being at the same potential. The anode current of V2 flowing through  $R_k$  produces the necessary voltage to cut off V1. A positive sync pulse of sufficient amplitude causes V1 to conduct, V1 anode voltage falls and is transferred to V2 grid by C.

Because anode current starts to flow in V1, the anode current of V2 will be reduced. The potential across  $R_k$  will fall but will be partly compensated by the rise in anode current of V1. Note: If the drop in anode current of V2 is greater than the rise in anode current of V1, then V2 will be cut off and V1 will continue to conduct.

With V2 cut off, V2 anode rises to h.t. C discharges through R and the conducting V1 until V2 grid rises through cut-off. V2 then conducts and V1 is cut off by the bias on  $R_k$ . C now charges through  $R_1$ , V2 and  $R_2$ ; thus the rise in the V2 anode waveform is curved. It will be noted that because the cathode potential can follow the grid potential during its positive excursion, no grid current flows. The grid waveform at V2 is therefore not squared by grid current as in the conventional multivibrator and it appears as a "differentiated" square wave.

No buffer amplifier is required with this method of connection since the sync voltage is isolated from

Fig. 2

Fig. 3

the oscillatory circuit proper. Similarly, an undistorted square wave output may be taken from V2 anode without disturbing the action of the oscillator.

Fig. 3 illustrates a variation of the cathode-coupled multivibrator by which it is possible to obtain a large positive pulse output at the common cathode with a negative sync input. In the cathode-coupled multivibrator described above the positive pulse appears at the anode of V2 when V2 is cut off. In the Fig. 3 circuit V2 is conducting and the positive pulse appears at the cathode. By tying the cathode as well as the grid of V2 to the varying anode circuit potentials of V1 it is possible to add to the action of positive pulse generation, thereby obtaining a greater positive-going voltage than if the link were omitted. Such a connection, via  $C_1$  in the diagram, is called a "bootstrap" connection (derived from the notion of pulling oneself up by one's bootstraps—or boot-laces when in Britain).

The action is explained as follows. Let us assume that in the quiescent state V1 is conducting and V2 is cut off by the voltage developed across  $R_k$ . On the arrival of a negative sync pulse at the grid of V1 the anode voltage of V1 rises. V2 grid consequently

rises and V2 starts to conduct. In so doing, however, it increases the common cathode potential, thereby cutting off V1.

The positive-going cathode voltage is back-coupled to point A in Fig. 3 via  $C_1$ . (To avoid any distortion of the pulse a long time constant "bootstrap" coupling circuit  $C_1R_2$  is used.) From A the positive going voltage is transferred and added to that appearing at B, and thence back to V2 grid via C. The further increase in current in V2 results in a further rise in cathode potential. This is the "bootstrap" action, for because of the coupling via  $C_1$ , the resultant positive-going output voltage is very much greater than the positive going voltage initially developed across  $R_1$ .

It will be noted that any change in voltage across  $R_1$ , i.e. between A and B, will be applied between V2 grid and V2 cathode. V2 therefore acts fully as an amplifier without negative feedback and not as a cathode follower. The period which must elapse before the circuit resets is dependent on the time constant of the grid circuit of V1 (principally  $C_2R_3$ ). When V1 grid approaches the cathode potential, V1 again conducts, thus continuing the action.

## Vacuum Encapsulating Plant

SHOWN in the illustration is a self-contained plant developed primarily for vacuum encapsulation of radio and electronic components. This model, the Type VP200, consists of a cylindrical work tank assembled alongside a control unit in which is housed the motor-driven vacuum pump, low-voltage mains transformer, d.c. rectifiers, silica gel air driers, vacuum gauges and all

Self-contained plant for vacuum impregnating and encapsulating radio and electronic components.

switches and controls necessary for the operation of the plant.

Two conical-shaped hoppers are mounted on top of the work tank in which the epoxy or polyester "potting" resins are mixed, two being provided so that mixing can be done in one while the other is being poured into the moulds. Each hopper holds about 80 fluid oz of resin and is independently evacuated, heated and thermostatically controlled. Mixing is effected by a rotating vane driven by a variable-speed motor and mounted on a swinging arm so that the vane can be dropped into either hopper.

Access to the work tank for "loading" is by means of a domed end-door secured by six quick-action clamps. The tank is hermetically sealed when the door is closed and can be evacuated down to 1mm Hg in a little over 5 minutes. A 9-in glass inspection window enables the various moulds to be positioned below the pouring nozzles and the filling process observed and controlled.

Inside the work tank is an electrically heated and thermostatically controlled work turntable on which the moulds are placed. It has about 600 sq in of work space and will carry 240 lb of distributed load. It is rotated by means of a handwheel on the control unit.

Eventually it is proposed to produce the plant in various sizes and work is in hand on automatic plant for high rates of production. Further details can be obtained from Pipework and Engineering (Bristol), Ltd., Stanley Street South, Bristol, 3.

**Talking Books**—Tribute is paid in the annual report of the Royal National Institute for the Blind "to the two thousand amateur radio and sound recording enthusiasts throughout the country who render such magnificent help in servicing the [talking book] machines." Reference is also made to the voluntary transcribers who add each year some 1,000 Braille volumes, each hand embossed, to the students' library. Among them are a number of radio textbooks. These are, of course, in addition to the regular supply of mechanically embossed periodicals and books maintained by the Institute.

Omnis definitio periculosa est  
(Every definition is dangerous)

ERASMUS

# IMPEDANCE

By "CATHODE RAY"

It is quite a thought that after 25 years of Cathode Radiation such a basic and elementary subject as impedance can still be found which (a) has not previously come under the beam, and (b) is sufficiently controversial. Yet so it is.

What started it off was my discovery that the meaning of impedance could provide material for argument in the pages of the *Journal of the Institution of Electrical Engineers* to a degree that the correspondents became quite heated—one might almost say personal—while other and cooler minds found in it an occasion for a vivid display of incomprehensible mathematics, bringing in such apparently (to me) unrelated matters as entropy and explosion.

Admittedly the subject discussed was actually *negative* impedance, but it began in the very first paragraph with the British Standard definition\* of impedance:

"The ratio of the r.m.s. electromotive force in a circuit to the r.m.s. current which is produced thereby. Symbol: Z."

R. O. Kapp, Emeritus Professor of Electrical Engineering, University College, London, has said that physicists (in contrast to philosophers, who begin with names for their concepts before they have agreed on what the concepts themselves are) begin with precise concepts, then define them, and lastly standardize names and symbols for them. And, this being so, the definition is not quite as important as we thought it was, since it is needed more for identification of a concept which we are all supposed

Fig. 1. (a) is a particular kind of impedance that is obviously independent of frequency. Though this is less obvious with (b), it too amounts to exactly the same thing.

the eye. We may be prepared to believe that detailed conditions might be left out of such definitions, on the ground that they are so commonly assumed that including them would look pedantic, as well as putting up the price of the publication. But the definers would hardly throw in an expression like "r.m.s." without due thought, just to give their work an air of distinction. And if this definition were meant to be confined to cisoidal waveforms (that is the currently favoured term, I believe, embracing pure sine or cosine forms) there would be no point in limiting it to r.m.s. values—peak values, or any fraction or multiple thereof, would do just as well, since any factor applying to both e.m.f. and current would cancel out on taking the ratio. Therefore, giving the definers the benefit of serious doubts raised on other occasions and assuming they were rational beings, we can infer that their definition of impedance is valid for any waveform.

## Principle of Dependency

Your first reaction to this may be the same as mine was—to object. "Why!" you may exclaim, "most circuits would have quite different impedances to the separate components of, say, a square-wave e.m.f., so the value of Z would depend on what the waveform happened to be!" But after a little thought we can meet this objection with the retort "So what?" For even where the waveform is purely cisoidal and the details of the circuit are fully specified, its impedance is still (apart from a few special cases such as in Fig. 1) quite unknown—it depends on frequency. The principle of dependency having already had to be conceded, why worry because Z depends also on waveform? And having given way so far, surely no one is likely to make a stand against impedance being allowed to depend on yet another parameter of the applied e.m.f.—amplitude. So there is no need to bar non-linear circuits such as iron-cored coils.

Transients are different, though. An r.m.s. value being by definition not an instantaneous value, it implies a steady state.

So, if I interpret the collective mind of the relevant B.S. committee aright, their definition of impedance holds for any waveform and any circuit, but not for transients.†

Offhand, I suspect that not many people in our field take much advantage of this liberal interpretation of impedance. For one thing we seldom have the equipment for measuring the true r.m.s. values of signals. And we tend to regard impedance as a function only of frequency and to analyse non-cisoidal waveforms into their Fourier components for separate consideration. (We shall see one reason why in a minute.) I'm not very well up in high-power

†This appears to hold good on the other side of the Atlantic, for Henney's "Radio Engineering Handbook," 5th edition (1959), p. 1-107, defines impedance in practically the same way as B.S., and goes on to apply it specifically to non-cisoidal e.m.f. and current.

\*B.S.205: Part 1: 1943, Definition 1282.

radio transmitter practice, but perhaps in that sort of work—and anywhere in which bolometers and other heat-operated measuring instruments are used—it is useful to know the impedance of a circuit to a given non-cisoidal e.m.f. for calculating how much heating current will flow therein.

The next thing is to point to the distinction between impedance (as hereinbefore defined) and impedance operator. I might have hesitated to do this, feeling that it verged on insulting the intelligence, had it not apparently been one of the causes of the confusion in *Jour. I.E.E.*, in spite of its high-class professional standing. So it must be emphasized that impedance, according to the B.S. definition, is just a number of ohms, which by itself reveals nothing of the phase angle between the e.m.f. and current. That comes as a separate piece of information. And right away that restricts one to cisoidal waveforms and linear circuits. For unless the e.m.f. is cisoidal and the impedance is linear, the

Fig. 2. The familiar vector method of representing the phase difference between e.m.f. and current.

Fig. 3. Showing how a distance  $Z$  can be set off at any angle on squared paper (not primarily adapted for angles). Vertical or  $y$ -axis measurements ( $X$ ) are distinguished from horizontal or  $x$ -axis ( $R$ ) by the prefix  $j$ .

resulting current has—in general—a different waveform. And unless the current and voltage waveforms are identical it is not possible to identify the phase difference between them. And just knowing  $Z$  without its phase angle is seldom enough.

It is true that it does enable the current to be calculated, given the e.m.f., in the same manner as in “Ohm’s law”:

$$I = \frac{E}{Z}$$

Or the inverse:

$$E = IZ$$

And it is true that the impedance of a loudspeaker is often given just in ohms. But one can’t calculate the power an amplifier can deliver to it without knowing or at least assuming its phase angle,  $\phi$ .

There are quite a lot of different ways of taking account of  $\phi$ . They are explained in any worthwhile book on a.c. theory, and all that is needed here is a few words on the impedance operator. It is a mathematical concept, in contrast to impedance, which is a physical concept. It ties up with the representation of cisoidal currents and voltages by vectors (though physically they are not vector quantities, in circuits, anyway). For example, Fig. 2 represents the e.m.f.  $E$  in a circuit and the current  $I$  due to it. The value

of  $E$  can be found by multiplying  $I$  by the impedance  $Z$ . But that leaves the phase relationship unknown. If the angle  $\phi$  is also given, we have the whole story (for one particular frequency). Mathematical minds like to think of the process of arriving at the full information about the e.m.f. as operating on the current vector by the complex impedance operator  $Z$  (in heavy type to distinguish it from  $Z$ ), specified by  $Z$  and  $\phi$  combined. What this operator does to  $I$  in order to arrive at  $E$  is to alter its length (multiplying it by  $Z$ ) and to rotate it positively (anticlockwise) through the angle  $\phi$ .

One way of specifying  $Z$  is by what are technically called its modulus and argument; in other words, the magnitude  $Z$  and the phase angle of the vector  $E$  relative to the vector  $I$ , usually denoted by  $\phi$ . (If  $I$  leads  $E$ , as it does in a capacitive impedance,  $\phi$  turns out to be negative.) For example,  $Z$  might be  $700\Omega \angle +40^\circ$ . This is the polar presentation, because it uses polar co-ordinates—radius and angle.

But angles don’t fit directly into algebra; nor on squared paper, which is made for cartesian co-ordinates— $x$  and  $y$ . The only angle that can be said to fit into ordinary algebra is  $180^\circ$ , because that can be represented by a minus sign. It reverses the direction along a scale of values, say the  $x$  axis of a graph. What is called complex algebra extends this to include right angles. Quantities to be measured along the  $y$  axis are distinguished from those along the  $x$  axis by the prefix  $j$ . This scheme provides two dimensions, so that a distance can be specified in any direction on a graph and not only along one axis, by prescribing the appropriate numbers of units to be taken horizontally and vertically. So this is an alternative two-part specification for an angle. In the case of impedance, the  $x$  distance is what we know as resistance, and the  $y$  distance as reactance (Fig. 3). And so we have the well-known relationship

$$Z = R + jX$$

(It may be a little confusing for beginners that the symbol for reactance, which is measured along the  $y$  axis, is  $X$ ; but that is just one of those things to keep them alert!)

Quite often one does actually measure impedance by measuring  $X$  (or  $L$  and  $C$ , which are related to it) and  $R$ , in which case this second form is obviously appropriate. Sometimes there is a need to change over between it and the first.  $\tan \phi$  is  $X/R$ , so  $\phi$  is the angle whose tangent is  $X/R$  (written  $\tan^{-1} X/R$ ) and can be found, knowing  $X$  and  $R$ . And our old friend Pythagoras, looking at Fig. 3, tells us that  $Z = \sqrt{R^2 + X^2}$ .

With the further help of trigonometry it is possible to work in terms of  $\phi$  and  $Z$  even on a cartesian framework.  $\sin \phi$  is  $X/Z$  and  $\cos \phi$  is  $R/Z$ , and  $Z = R + jX$ . Putting these together we get

$$Z = Z(\cos \phi + j \sin \phi)$$

In this, where  $Z$  of course is the magnitude of the

(Continued on page 97)

Fig. 4. If the length of the radius is 1 unit, its horizontal and vertical components are numerically equal to the cosine and sine of the angle  $\phi$ .

Fig. 5. Looking from R, the generator appears to be a negative resistance (not an ohmic one in this case!) because I is flowing against the voltage across R.

impedance, its phase angle is given in along-and-up terms by  $(\cos \phi + j \sin \phi)$ . This can perhaps be seen even more clearly in Fig. 4, where a radius is drawn of length 1. The lengths of the two other sides of the right-angled triangle are, by trigonometrical definition, equal to  $\cos \phi$  and  $\sin \phi$ . So " $\cos \phi + j \sin \phi$ " means "move along a distance equal to  $\cos \phi$  and upwards a distance equal to  $\sin \phi$  (downwards if  $\sin \phi$  happens to be negative)" and the total result is a unit-length radius rotated from the x axis position through the angle  $\phi$ . Multiplying  $(\cos \phi + j \sin \phi)$  by the number Z gives an operator which multiplies the unit radius by Z as well as rotating it through  $\phi$ . The whole operation is what is meant by Z. If used on an I vector the result is an E vector.

There is a fourth mode of expression which is quite often useful, but which is much less easily explained. In fact, it looks at first sight quite nonsensical, and if I explained it on the same elementary level it would leave no room for any more about impedance, so I will merely mention that an alternative mathematical form for  $(\cos \phi + j \sin \phi)$  is  $e^{j\phi}$ . It is derivable from the series forms of  $e^x$ ,  $\sin \phi$  and  $\cos \phi$ . Besides its welcome brevity, it is handy where multiplication or division has to be done, because those operations are performed simply by adding or subtracting indices.

## Negative Impedance

Lastly we come to negative impedance; is there such a thing? Apparently feelings run high on the question. I'll try to put it objectively. We start with resistance, which is anything that needs an e.m.f. to drive current through it in phase with the e.m.f.—which means that the current always goes through it from positive terminal to negative. It absorbs power from the source or generator of the e.m.f. This is the situation viewed from the generator and looking into the resistance, which is a load on it. But suppose we turn round and look from the load into the generator. We see that the current is flowing through it from negative to positive (Fig. 5). This, being the reverse of what we saw when looking at the load resistance, is logically called a negative current, and so the resistance we are looking into must be a negative one.

That is quite a useful concept in connection with positive-feedback amplifiers, which when connected to suitable loads can generate alternating currents, or at least reduce load resistance already present. It is logical and convenient to regard such amplifiers as negative resistances. True, the practice has its little pitfalls, which ran to two instalments of "Cathode Ray" in January and February 1957. But I don't know of anyone who seriously objects to this concept in principle.

It is when the concept is extended to the wider range of impedance, as is sometimes done in America at least, that objection is aroused. I would expect the argument for negative impedance to arise from the fact that the current in an a.c. circuit is only

exceptionally in exact phase or antiphase with the e.m.f. So if one connects to a "black box" and finds that current flows out of it—i.e., from its positive terminal—but not exactly  $180^\circ$  out of phase with the voltage, we may be tempted by analogy with negative resistance to call the contents of the box a negative impedance. It sounds plausible, but does it fit what has already been agreed about impedance?

The B.S. definition takes no account of the signs or directions of the e.m.f. and current whose ratio is declared to be impedance. So no sign attaches to that impedance. It is just a number of ohms—the ratio of a number of volts to a number of amps. Why is this, seeing that it is common practice to give a sign to resistance to show whether it is taking or delivering power, indicated respectively by positive and negative conventional direction of current in relation to applied e.m.f.? There is a very good reason. The current through an impedance, *except when that impedance is a pure resistance*, is neither exactly in phase nor antiphase with the e.m.f., so its relationship with the e.m.f. cannot be indicated simply by + or -. During part of each cycle the current is flowing with the e.m.f. and during the remainder against it—whether the impedance is on balance a load or a generator. Fig. 6 shows examples of both, in waveform and vector representations.

"Very well then," the negative-impedance advocate might say; "let's define negative impedance as impedance in which the resistive component is negative. What's wrong with that?"

Well, it would certainly seem to be the most logical definition. But one or two difficulties arise. First, we are obliged to say what we are going to do about impedances which on this basis are neither positive nor negative: pure reactances. Impedance being an all-embracing term, including pure reactances and resistances, this lands us with an anomaly for a start. The fog thickens when we consider that reactances themselves are conventionally either positive or negative. In Fig. 6(b) the resistive component is negative and so is the reactive component.

Fig. 6. Unless an a.c. is exactly in phase or antiphase with the e.m.f. there are parts of every cycle when it is flowing with and against the e.m.f., whichever way the net power flows.

The latter would be positive if  $\phi$  were more than  $180^\circ$ . That real confusion arises from this is demonstrated unintentionally by Dr. B. R. Myers, who speaks up in *Jour. I.E.E.* for negative impedance, when he says "The only time I have seen the term 'negative impedance' misused is in connection with impedances whose real parts were negative. The latter are negative impedances only when their imaginary parts are negative reactances." ("Real" and "imaginary" refer to resistive and reactive components respectively.) So here we seem to have quite a different idea of negative resistance—one in which the reactive part is negative (capacitive). An arguable one, I suppose; but I should have thought that on the whole the direction of power flow was more important than whether the reactive part was positive or negative. One would, I think, tend to regard negative impedance as an extension of the idea of negative resistance rather than of negative reactance (which one more often calls capacitive reactance).

Not only do the negative-impedance advocates have to choose between one or other of the component parts of impedance to decide the sign of the whole (and probably divide into two schools of thought about it); they upset existing definitions and conventions, which sensibly (it seems to me) take the line that attaching a + or - to a complex quantity is an over-simplification, and it is better to use either the simple ratio (as in the B.S. definition) or go the whole hog by specifying the actual phase angle (as in the various forms of the impedance operator).

### Condemnation

I therefore side with Mr. M. O. Williams, who first raised the matter by condemning "negative impedance." As for the consortium of B.B.C. brains who intervened, I'm so far from understanding their mathematical reasoning and its somewhat

bizarre conclusions that I'm not even sure which side they finally come down on. It consoled me considerably to learn that my bewilderment was shared by no less an authority than Prof. Kapp. But I suspect that as regards negative impedance they too are agin' it.

Further research into American literature (especially three articles by E. L. Ginzton in *Electronics*, July-Sept. 1945) has led me to suspect that the interpretation which Mr. Williams (presumably) and I (certainly) put on the quoted remark of Dr. Myers was quite wrong, and no wonder, for it seems that Dr. Myers and the few (let us be optimistic!) who take the same line about negative impedance have been as naughty as motorists who take a sudden turn on a crowded road without warning. Ignoring the long established convention (in U.S.A. as well as G.B.) that positive reactance means inductive reactance and negative means capacitive, they use the term negative reactance to mean a reactance which is either inductive or capacitive but varies with frequency like the opposite kind. Their "negative inductive reactance" increases directly with frequency but is capacitive (*negative* by standard convention, with current leading e.m.f.) and their "negative capacitive reactance" increases inversely with frequency like an ordinary capacitive reactance but is inductive (*positive* by standard convention, with current lagging e.m.f.). And "negative impedance" covers these elements along with negative resistance. The spokesmen for this curious perversion have not been remarkable for the openness and lucidity of their expositions, but as well as I can make out the foregoing is the basis of their creed.

By way of illustration I have been trying hard to think of any small arbitrary departure from common usage which would naturally tend to cause more confusion, but have had to give up. Perhaps that is the most sensible thing to do with the negative-impedance sect.

## FEBRUARY MEETINGS

*Tickets are required for some meetings; readers are advised therefore to communicate with the secretary of the Society concerned.*

### LONDON

2nd. I.E.E.—"Development of the formulae of electromagnetism in the M.K.S. system" by Dr. P. Vigoureux supported by "The choice of basic dimensions in electromagnetism" by P. C. M. De Belatini at 5.30 at Savoy Place, W.C.2.

5th. I.E.E.—Medical Electronics Group discussion on "Computers in medical use" opened by Dr. R. A. Buckingham and Dr. J. M. Tanner at 6.0 at Savoy Place, W.C.2.

5th. Television Society.—"Automatic control systems in television receivers" by K. E. Martin and P. L. Mothersole (Mullard Research Labs.) at 7.0 at the Cinematograph Exhibitors' Association, 164, Shaftesbury Avenue, W.C.2.

8th. I.E.E.—Discussion on "Present views on ground-wave propagation" opened by G. Millington at 5.30 at Savoy Place, W.C.2.

9th. Brit.I.R.E.—"Drift correction of d.c. amplifiers" by D. Leighton Davies at 6.30 at the London School of Hygiene and Tropical Medicine, Keppel Street, W.C.1.

9th. Radar & Electronics Association.—"Transistors today and tomorrow" by E. Wolfendale (Mullard) at 7.30 at the Royal Society of Arts, John Adam Street, W.C.2.

17th. I.E.E.—Faraday Lecture on "Electrical Machines" by Professor M. G. Say at 6.0 at Central Hall, Westminster, S.W.1.

17th. British Kinematograph Society.—"Modern television studios" by W. H. Cheevers (Associated-Rediffusion) at 7.30 at the Colour Film Services Ltd. Theatre, 22-25, Portman Close, Baker Street, W.1.

# RANDOM RADIATIONS

By "DIALLIST"

## What's in a Name?

AN area secretary of the Association of Radio and Electronic Engineers takes me to task for calling those who repair our sound and television sets servicemen. "This," he writes, "seems to fit with milkman and lavatory man." He would prefer service engineer. Well, I'm the last person ever to hurt anybody's feelings if I can help it; but I think he's quite wrong in suggesting that there's anything derogatory about "man." Think, for instance, of sportsman, Government spokesman, nobleman, chairman and so on. Myself, I've no objection at all to being called a writing man. In France the people who see to sound radio and TV sets, record reproducers and the like are called *dépanneurs*, which means simply those who put right *pannes*, or break-downs, and no one is offended by the term. I know, of course, the modern tendency is to use high-falutin titles; the rat catcher is a rodent operative, the dustman a refuse collector and even office boys are now "junior male management trainees"!

## Hard to Define

It's not an easy business to define the meaning of "engineer" as the word is used in this country. Lots of people have had shots with varying

success. There's no doubt that corporate members of our senior engineering institutions are engineers, chartered engineers in fact. But that by no means exhausts the list. I think I'd say that an engineer is one whose high qualifications, long learning and wide knowledge of his particular branch fit him to originate, to design, to co-ordinate and to direct. That, though, may be found too sweeping by some. To come back to the world of wireless, an alternative to "serviceman" might be "service technician," but that seems to me rather too much of a mouthful. If any readers care to send suggestions, they'll be most welcome. I'd be only too happy to find a concise term that is acceptable all round and doesn't cause any hackles to rise and at the same time isn't too pretentious. Give me that and I'll erase "serviceman" from my vocabulary.

## No "Out-of-Stock" Here

THOSE well-known component manufacturers, A. F. Bulgin & Co., have just made a rather remarkable announcement. Under the heading "Continuity of Supply" they state: "Tools are stored and maintained for the future replacement of components shown in all our catalogues during the last 25 years." Now, that really is the stuff to give the troops and I hope that other makers will

follow this excellent example. Few things are more exasperating than to find when some indispensable component in an expensive piece of apparatus packs up that replacements are no longer available. I expect most of us have had the sad experience. Well done, Bulgin's; that can't happen with your products.

## Non-standard Colour Coding

THE I.E.E., I'm glad to see, has issued a warning about imported apparatus provided with triple flex leads which don't conform to our standard colouring. I'd no idea that so many different systems were in use on the Continent until I read an article on the subject by Philip Honey in *Wireless & Electrical Trader*. Germany uses red-covered earth leads, but in Holland they are grey, in Belgium black and in Switzerland yellow. Phase leads can be red, yellow or blue in Belgium, grey (as a rule) in Germany, and any colour but red or grey in Holland. Neutrals are usually grey or black, though in Holland they're red. Well, there's a fine mix-up for you! I suppose that apparatus imported from Germany with its red earth and grey phase leads is by far the most dangerous, for if a 3-pin plug were connected in our fashion to the leads, all metal parts that should be earthed would be at the full mains potential. But Grundig (Gt. Britain) Ltd. have already announced that the colour codings of all their machines with 3-core mains leads conform to the standard British practice.

Any dealer should verify that the colours mean what they suggest to British eyes before putting imported apparatus on sale, and purchasers would be well advised to obtain an assurance on this point. As it is, a number of people have received shocks, though I'm happy to say that no fatalities have been reported and I sincerely hope they won't be.

## Approved Electrical Appliances

IT'S good to read that after discussions extending over a considerable time the electricity supply industry, the British Electrical and Allied Manufacturers' Association and the

ILIFFE & SONS LTD., Dorset House, Stamford Street, London, S.E.1

British Standards Institution have formed a provisional board to manage a national organization for the approval of domestic electrical appliances. The board has been instructed to organize as quickly as possible machinery for safeguarding the British public by approving electrical appliances and publishing lists of those approved. All approved goods will carry a distinctive mark. The scheme is open to all domestic electrical gear manufactured here or imported, and one of the aims is to encourage people to buy only approved goods bearing the special mark. A pity that the plan wasn't in force before those appliances whose triple flex leads don't conform to our standard were imported.

### F.M. in France

WRITING from Aylesbury, a reader tells me that he has been able to receive the f.m. transmissions from Caen ever since they started, and that he has noticed the poor quality to which I referred a month or two ago in these notes. I'd have been inclined to put the shortcomings down to multi-path reception but for the fact that he writes that he regularly receives some of the West German stations and that the quality of their transmissions is superb. His view is that the French broadcasting engineers are so enthusiastic to push the volume up that they're apt to over modulate. But the cause of the trouble could easily be in the links, radio or cable, between studios and transmitters. Anyhow, as I mentioned before, many French listeners are so dissatisfied with the quality that f.m. receivers are much less common than had been expected.

### TV Hazards

UNTIL a doctor friend showed me a recent issue of *The Lancet* I'd no idea that watching the TV screen could be so hazardous an occupation! It appears, though, that prolonged viewing from a chair of the wrong height, or lounging in an easy chair as you watch can bring on pains in the neck and cause damage to veins and arteries. I'll admit that certain items can themselves be pains in the neck—or would be if you were compelled to watch them. There are about half-a-dozen other dire perils to the human frame included in the article. But I was relieved to read they are not serious threats provided that you don't view to excess, wear tight garments or sit in slouchy attitudes. Anyhow, I shall use my set as hitherto and risk it.

# DECADES OF EXPERIENCE

## PLUGS AND JACKS

## Why Electron?

IN many textbooks on elementary electricity and magnetism we are told that when the ancient Greeks rubbed a piece of what they called electron, they found it produced what we today call electrostatic effects. From other sources we learn that two thousand years later Dr. William Gilbert, of Colchester, demonstrated this effect to Queen Elizabeth I by rubbing a piece of amber on her silk stockings.

Now this explanation is all right as far as it goes but the trouble is that it does not go far enough. None of the textbooks, as far as I am aware, go on to explain that long before Thales, of Miletus, discovered the electrostatic properties of amber, it had been given the name of electron because it had been observed that it exhibited what we today would call electromagnetic properties. In short, it was called electron because it exhibited electrical properties; and the contrary, that the electrical properties it exhibited were so-called because its name happened to be electron is *not* true.

Before you all seize your pens and bottles of H<sub>2</sub>SO<sub>4</sub> to write vitriolic letters to the Editor saying "Free Grid must go," I would ask your indulgence while I amplify my remarks. Most authorities are agreed that amber was first brought to Greece by foreign traders, most probably the Phœnicians who would naturally have their own name for it. Since they spoke a Semitic tongue it wouldn't surprise me if it bore some slight resemblance to our own word amber which is also of Semitic origin, being a corrupted form of the Arabic word anbar.

Probably the Greeks would simply have Hellenicised the Phœnician name but they noticed that it had the same property of "glittering" or reflecting light as was possessed

by other substances they already had, namely gold, silver and certain alloys which had already been given the generic name of electrons simply because they glittered or, as we should say, reflected or re-radiated electromagnetic waves in a certain band of the spectrum which we call light waves.

To get at the exact meaning of the word electron we split it up into its component parts elec-tron, the first part being part of the Greek word elector meaning dazzling (and umpteen synonyms). The suffix "tron," as we were told years ago in the pages of *Wireless World* by the late L. H. Bainbridge-Bell\*, means the agency by which a thing is brought about. In English, except in the case of thermionic valve nomenclature, we write "tron" as "tre" as in theatre, which simply means a place which enables us to view (a play, etc.).

\* Letter to the Editor, April 1947.

## Is History Bunk?

NOWADAYS it has become fashionable to believe that it was the Duke of Richmond rather than Richard III who caused Edward V and his brother to be bumped off. This is very confusing to those of us who were brought up to regard wicked Uncle Richard as a nepoticide. We can't do much about all this confusion but what I think we can do is to be sure that we get our own contemporary history correct so that our descendants don't have to unlearn what they will be taught at school about things which happen in our time.

I am, of course, thinking more of the history of radio than of anything else because I recently read some startling statements about the history of the B.B.C. which ought not to go unchallenged. Recently a well-known journal has been serializing the life of Gordon Selfridge, the founder of what used to be called "a certain Oxford Street store" in the days when the B.B.C.'s 2LO transmitter was housed there.

The historian said in one of the instalments that the transfer of the 2LO transmitter from Marconi House to Selfridge's was effected and a more powerful transmitter built because of the coming into use of more and more *valve* receivers. The logic of this argument is so fatuous that I won't deal with it further except to say that the real reason for the transfer was that it was desired to increase

power in order to extend the range of the transmitter. This could not be done at Marconi House without causing further interference with the Air Ministry receivers nearby. Also, of course, the aerial on the roof of Marconi House and the transmitter in the building were only lent by Marconi's.

## Learned Lucubrations

OUR sister journal, until December 1959, *Electronic & Radio Engineer*, and now *Electronic Technology*, has had a career rather like that of a Hollywood star in the matter of nominal inconstancy, but it has never divorced itself from any of the principles with which it started its career in October, 1923, under the title of *Experimental Wireless*. Indeed, so far from any question of divorce arising in its career, it was quite early (September, 1924) joined in marriage with another journal, *Wireless Engineer* which, as in the case of many marriages, eventually ceased to be the nominal junior partner.

I well recollect discussing with the late P. K. Turner, at one time editor of the journal, the merits of a new tuning unit which had been marketed for the purpose of enabling a simple broadcasting receiver to be built with the minimum of trouble. A set was built with this unit, and details published in *Wireless World* (July 1st, 1925), the designer being a very august member of the world of wireless who preferred to hide his light under a bushel by adopting the pseudonym of Wilson.

I had expressed approval of the tuning unit on the grounds that it was neat and compact, in striking contrast to the mass of straggling wires and plug-in coils which were the curse of sets of those days. P. K. Turner treated my remarks with withering scorn on the ground that I had not measured the r.f. resistance of the coil and, therefore, was not in a position to express an opinion in favour of the tuning unit or otherwise.

However, as I told him, he and his journal were as far removed from the everyday world of the average none-too-technical set constructor and broadcast listener as a racing car enthusiast from the ordinary motorist. Yet, of course, were it not for the efforts of the racing motorist, and the mathematics with which the pages of *Electronic Technology* are bespattered by the backroom boys in their learned lucubrations we should never be able to enjoy the comforts of our family cars and domestic sound and television receivers.

Dr. Gilbert demonstrates

# MULTIMINOR

Designed to offer the widest possible range of accurate and reliable measurements at the lowest possible price, the versatility and usefulness of the Multiminor is now further extended by specially designed leads. These new leads, available at no extra cost, will accept crocodile clips or FRODCLIPS.

The Multiminor takes full advantage of the possibilities of printed circuit techniques to achieve outstanding compactness and economy of weight. The scale is clear and open. The fine red coloured pointer and effectively damped movement facilitate easy and rapid reading.

For use in Radio, TV, Electronics, Motor Vehicles, domestic appliances, workshop equipment, you'll find the Multiminor a great little meter!

# Multitone leads in pocket staff location

By far the largest number of hospital and industrial installations of the pocket receiver type in this country, and overseas, are Multitone. Our selective induction system "Personal Call" is saving time, money and worry in well over 100 different types of industrial concerns from airports to zymurgists. (We are looking for a Quill Manufacturer to complete the alphabet.)

The new **MULTI-CHANNEL** equipment provides over 400 individual channels using the new flat Receiver (as illustrated).

THE MULTITONE

# personal call

system of staff location

(the 'peep-peep' in the pocket), the only staff location system worth installing

*Write or 'phone for further particulars. We can be found in 10 seconds.*

MULTITONE ELECTRIC COMPANY LTD., 12/20 Underwood St., LONDON, N.1. (CLErkenwell 8022)

#### *Additional Facilities*

#### **ELECTRONIC TRUNCHEON**

The Electronic Truncheon is no bigger than standard equipment carried by guards and serves the same purpose, but inside there is a transmitter which, when the button is pressed, sends out a signal. This is picked up by the loop of wire around the area to be protected. The pulse is used to operate a small receiver, which automatically switches on any form of electrical alarm. It can be operated from any point in the area.

#### **INTERNAL TRANSPORT COMMUNICATION**

The Multitone "Personal Call" loudspeaker-receiver has been designed to solve the problem of conveying verbal instructions to transport vehicles used for handling loads inside a given area. Messages can be conveyed to all or selected vehicles from the central transmitter.

#### **MULTITONE INDUCTION SYSTEMS CAN SOLVE YOUR STAFF LOCATION PROBLEMS:**

- ★ Equally suitable for large and small areas or concerns
- ★ Low rental terms
- ★ Virtually no internal wiring

# Photo-Electric control...

*the simplest system*

There is no form of photo-electric control simpler, easier, cheaper than that with cadmium sulphide cells. Nothing more is required than a photocell, a relay and the power source. If you are designing photo-electric control equipment, or are interested in any way, you cannot afford to be without full information. Write to Mullard today for details of photocells ORP11 and ORP90.

## *Photocells ORP11 & ORP90*

- *Sensitive*—No amplifiers needed.
- *High Current*—Robust relays operated direct.
- *Non-Polar*—Operation from d.c. or a.c. supplies.
- *Wide response*—Through entire visible spectrum to near infra-red.
- *Low Dark Current*—Typical light to dark current ratio 10,000 to 1.
- *Wide Range of Applications*—Flame failure detection, door opening, automatic lighting control and industrial on/off control are only a few of the many possible applications.

# *Pioneering* T/V - FM RELAY AND COMMUNAL AERIAL SYSTEMS

Produced this high standard Today!

Backed by years of experience, Teleng is the ONLY complete range of equipment that enables any size of co-axial cable system to be built up to any number of outlets for standard T/V-F/M receivers. Such systems have known and measurable performance, and fully obey P.O. Engineering Department requirements. Full advice and planning services are available without obligation of any kind.

● **CO-AXIAL CABLES AND CABLE FITTINGS**

Single and double screened Cables with or without embedded catenary. All Performance Certificated. All types of indoor or outdoor Splitting, Teeing, Tapping, Outlet, Junction and Load Units for co-axial networks.

● **MEASURING INSTRUMENTS**

Mains operated V.H.F.-V.V. for amplifier and repeater alignment.  
Battery operated Signal Level Meters for system servicing.

● **AMPLIFIERS AND SIGNAL CONVERTERS**

Mast Head and Boost amplifiers for all purposes and any channels, with gains from 12 to 56 db. Band 1/ Band 1, or Band 3/1 converters with or without AGC and crystal control.

● **REPEATERS**

All types of Repeaters single channel or wide band with and without AGC and including channel or band combining networks.

# DELAYED PULSE AND SWEEP GENERATOR

A versatile pulse generator designed to meet the need for a comprehensive instrument covering a wide range of pulse work. Four main facilities are provided: a pre-pulse, a main pulse delayed on the pre-pulse, a negative going sawtooth and a fast rising pulse formed from a pure line.

## BRIEF SPECIFICATION

### Period

Continuously variable from  $0.9\mu\text{sec}$  to  $1.05\text{sec}$  i.e.  $0.95\text{c/s}$  to  $1.1\text{Mc/s}$ . Accuracy  $\pm 5\%$ .

### Pre-pulse

$40\mu\text{sec}$ . 8V peak in  $75\Omega$ , positive going.

### Main pulse

Width: Variable from  $0.09\mu\text{sec}$  to  $105\text{msec}$   
 $\pm 5\%$ .

Amplitude: Control gives 4:1 attenuation of each of four maximum outputs as follows:  
5V max in  $75\Omega$  rise time  $10\mu\text{sec}$   
10V max in  $150\Omega$  rise time  $< 20\mu\text{sec}$   
25V max in  $600\Omega$  rise time  $< 40\mu\text{sec}$   
50V max in  $1000\Omega$  rise time  $50\mu\text{sec}$

Polarity: Positive or negative going.

Accuracy:  $\pm 2\%$ .

### Delay

Conclusion of pre-pulse to advent of main pulse, delay variable from  $0.09\mu\text{sec}$  to  $105\text{msec}$ . Accuracy  $\pm 5\%$ .

### Sweep

D.C. coupled negative going sawtooth same width and delay as main pulse.  
15V peak max.

### Cable pulse

Obtained from short circuited pure line.  
One positive and one negative going pulse coincident with main pulse.  
 $25\mu\text{sec}$  wide 3V max in  $75\Omega$ , rise time  $< 8\mu\text{sec}$ .

Sync, trigger or single shot facilities provided.

Full data available on request.

We can now import practically any American Heathkit model. Tell us what you want and we will send prices.

**"GLOUCESTER" STEREO CABINET KIT**

Will house Tape Deck and/or Record Player, F.M. Tuner and Stereo Amplifier. Storage space for records, tapes and power amplifiers. 46 1/2 in. long, 30 in. high, 2 1/2 in. deep. "In the white" for finish to personal taste.

Mk. 1 for Tape Deck or Record/Player **£15.18.6**  
 Mk. 2 for both Tape Deck and Record Player **£17.8.6**

**"COTSWOLD" HI-FI SPEAKER SYSTEM KIT**

Acoustically designed enclosure "In the white" 26 in. x 23 in. x 15 1/2 in., housing a 12 in. bass speaker with 2 in. speech coil, elliptical middle speaker together with pressure unit to cover the full frequency range of 30-20,000 c/s. Complete with speakers, cross-over unit, level control, etc.

**£19.18.6**

**5 in. OSCILLOSCOPE KIT Model O-12U**

Has wide-band amplifiers, essential for TV servicing, F.M. alignment, etc. Vertical frequency response 3 c/s. to over 5 Mc/s. without extra switching. T/B covers 10 c/s. to over 500 kc/s. in 5 steps

**£34.15.0**

**ELECTRONIC SWITCH KIT Model S-3U (Oscilloscope Trace Doubler)**

Enables a single beam oscilloscope to give simultaneous traces of two separate and independent signals. Switching rates approx. 150, 500, 1,500, 5,000 and 15,000 c/s. Sig. freq. response 0-100 kc/s. ± 1 dB. Separate gain controls and sync. output. Sig. input range 0.1-1.8 v. r.m.s.

**£9.18.6**

**AMATEUR TRANSMITTER KIT Model DX-100U**

Covers all amateur bands from 160-10 metres. Self contained including Power Supply, Modulator and V.F.O.

**£78.10.0**

**TRANSCRIPTION RECORD PLAYER Model RP-1U**

4-speed A.C. motor. Ronette Stereo/Mono pick-up. Complete on plinth.

**£12.10.0**

**CAPACITANCE METER KIT Model CM-1U**

Direct-reading 4 1/2 in. scale. Full-scale ranges 0-100µF, 0-1,000µF, 0-0.01µF and 0-0.1µF.

**£14.10.0**

**HI-FI STEREO AMPLIFIER KIT Model S-88**

16 w. output, 10 mV. basic sensitivity (2 mV. available, 30/- extra). Ganged controls. Stereo/Monaural gram., radio and tape recorder inputs. Push-button selection. Two-tone grey metal cabinet

**£25.5.6**

**6-W STEREO AMPLIFIER KIT Model S-33**

3 watts per channel, 0.3% distortion at 2.5 w/chnl., 20dB N.F.B. Inputs for Radio (or Tape) and Gram., Stereo or Monaural, ganged controls. Sensitivity 100 mV.

**£11.8.0**

**TRANSISTOR PORTABLE KIT Model UXR-1**

Pre-aligned I.F. transformers, printed circuit and a 7x4 in. high-flux speaker. Real hide case

**£15.18.6**

**"HAM" TRANSMITTER KIT Model DX-40U**

From 80-10 m. Power input 75 w. C.W., 60 w. peak controlled carrier phone. Output 40 w. to aerial. Provision for V.F.O.

**£29.10.0**

**AUDIO VALVE MILLIVOLTMETER KIT AV-3U**

1 mV. to 300 v. A.C. 10 c/s. to 400 kc/s.

**£13.18.6**

**VALVE VOLTMETER KIT Model V-7A**

7 voltage ranges d.c. volts to 1,500, a.c. to 1,500 r.m.s. and 4,000 peak to peak. Resistance 0.1 ohm. to 1,000 M. ohms with internal battery. D.C. input impedance 11 megohms. dB measurement has centre-zero scale. Complete with test prods, lead and standardising battery.

**£13.0.0**

**R.F. PROBE KIT Model 309-CU**

Extends the frequency range of our V-7A to 100 Mc/s. and enables useful voltage indication to be obtained up to 300 Mc/s.

**£1.5.6**

**AUDIO SIGNAL GENERATOR KIT Model AG-9U**

10 c/s. to 100 kc/s., switch selected. Distortion less than 0.1%. 10 v. sine wave output metered in volts and dB's.

**£19.3.0**

**RESISTANCE-CAPACITANCE BRIDGE KIT**

Model C-3U Measures capacity 10pF to 1,000µF., resistance 100Ω to 5 MΩ and power factor. 5-450 v. test voltages. With safety switch.

**£7.19.6**

VF-1U

F.M. TUNER

DX-100U

S-88

UXR-1

● Please see last month's advertisements for fuller details of our kits ●

**STEREO-HEAD BOOSTER KIT Model USP-1**

Hi-Fi Stereo pre-amplifier for low-output Hi-Fi P.U.'s. Input 2 mV. to 20 mV. Output adjustable from 20 mV. to 2 v. 40-20,000 c/s. Also suitable as low-noise R.C.-coupled high-gain monaural amplifier.

**£5.19.6**

**VARIABLE FREQUENCY OSCILLATOR KIT MODEL VF-1U**

From 160-10 m. Ideal for our DX-40U and similar transmitters. Price less valves £8/19/6.

**£10.12.0**

**HI-FI SPEAKER SYSTEM KIT Model SSU-1**

Ducted-port bass reflex cabinet "in the white." Twin speakers. With legs £11/12/6.

**£10.5.6**

**DUAL-WAVE TRANSISTOR RADIO KIT Model UJR-1**

This sensitive headphone set is a fine introduction to electronics for any youngster.

**£2.16.6**

★ FREE ON REQUEST! A copy of our (British) Heathkit Catalogue. Prices include free delivery in the U.K.

**HI-FI F.M. TUNER**

Tuning range 88-108 Mc/s. For your convenience this is available in two units sold separately as follows:  
 Tuner Unit (FMT-4U) inc. P.T. With 10-7 Mc/s. I.F. output. **£3. 2.0**  
 I.F. Amplifier (FMA-4U) complete with case and valves. **£10.10.6**

**TOTAL £13.12.6**

**MATCHED HI-FI STEREO KIT**

We offer as a "packaged deal" the following matched Hi-Fi Stereo Equipment.  
 4-speed Record Player (RP-1U) ... **£12 10 0**  
 6-W Amplifier (S-33) ..... **£11 8 0**  
 Twin Speaker System (SSU-1) ..... **£20 11 0**  
 Cost of Units ..... **£44 9 0**

**£42.10.0**

At an "all-in" price of Pedestal speaker legs £2/14/- optional extra.

**AUDIO WATTMETER KIT Model AW-1U**

Up to 25 w. continuous, 50 w. intermittent **£13 18 6**

● Deferred terms available on all orders above £10. ●

## Just look at yourself

You couldn't have a better medium than television for advertising TV sets (and the other goods you want to sell). That's because:

- 1 your audience, when thinking about sets, makes a *direct* comparison with the one that's showing them *your* advertisement.
  - 2 the efficiency of your press and point of sale publicity is increased by your appearance on TV so that you can refer to a same day press advertisement and thus stimulate coupon replies.
  - 3 Associated-Rediffusion covers London and its environs — one of the largest and richest markets in the world.
- Put television on television; and you're bound to sell more.

Associated-Rediffusion will be pleased to show you specimen campaign budgets, together with interesting facts about your potential market viewing audience. Just contact John Talbot (HOLborn 7888) for full details.

## ASSOCIATED-REDIFFUSION

# an extended and improved source of information for designers, technicians, research workers

From the January issue, *Electronic & Radio Engineer* has become **ELECTRONIC TECHNOLOGY**—the new title providing a more accurate indication of its present-day content.

With every regular feature retained, many extended and improved, **ELECTRONIC TECHNOLOGY** covers the theory and practice involved in any apparatus embodying thermionic and semiconducting devices.

Articles by leading authorities embrace telecommunications, radio, radar, television, computers, control apparatus and measuring equipment. The world-famous Abstracts & References Section continues as before.

Owing to rising costs of production it becomes necessary to increase the price to 5s.—an increase more than outweighed by **ELECTRONIC TECHNOLOGY**'s widened scope and improved service to designers, technicians and research workers.

5s. 0d. MONTHLY. ANNUAL SUBSCRIPTION £3 7s. 0d.

# Model 1325

# Transistor tester

**ACCURATE  
EASY TO OPERATE  
LIGHT  
PORTABLE**

*Width: 5". Depth: 5". Height: 9½".  
Weight: 6 lbs. Attractively finished in  
grey hammer enamel.*

Outstanding characteristics of the Transistor Tester Model 1325 are accuracy of measurement and ease of operation. The instrument enables direct measurement to be made of the large signal current Amplification Factor  $\beta$ , the Collector Turnover Voltage  $V_t$  and the Collector-emitter leakage Current  $I'c(o)$ , of p-n-p and n-p-n transistors. Two  $\beta$  ranges, combined with seven logarithmically stepped base current settings, cover all types of crystal amplifying devices, including high-gain and power transistors. The value of the collector current at

a given base current can be obtained from the  $\beta$  readings; the small signal current Amplification Factor  $\alpha'$  can be deduced from a few readings of  $\beta$ . Crystal diode-tests can be carried out using the facilities provided for Collector Turnover Voltage measurements. Advantage can be taken of the wide range of available base currents to measure the  $I'c(o)$  under the appropriate dynamic conditions. The meter of the instrument is fully protected; momentary shorting of any pair of terminals will not damage the instrument.

## Nuclear Magnetic Resonance Magnets

Advertisements in this series deal with general design considerations. If you require more specific information on the use of permanent magnets, please send your enquiry to the address below, mentioning the Design Advisory Service.

During the past three years, Mullard have pioneered the manufacture of permanent magnets for Nuclear Magnetic Resonance (N.M.R.) spectroscopy. These magnets are required to give a high order of magnetic uniformity in the gap and maintain extreme stability. This has been achieved in specially designed magnet assemblies using high energy 'Ticonal' G magnets.

N.M.R. may be detected as an absorption of radio frequency energy when a sample containing nuclei with non-zero spin is placed in a magnetic field. The resonant frequency is proportional to the magnetic field and for protons, occurs at 40 Mc/s in a field of approximately 9400 gauss.

The magnetic field at the various nuclei in the sample may be slightly different due to the interactions of the surrounding electrons and nuclei. Consequently, observation of the absorption of energy, produces either a modified line shape or a group of lines (N.M.R. spectra). N.M.R. spectra of liquids are of particular interest because of the relatively simple spectra which in many cases enable the structure of the molecule to be definitely prescribed. For spectra of this kind, resolution of the order of 1 in 10<sup>8</sup> must be obtained. Resolution of this order has been achieved using Mullard permanent magnets.

Mullard N.M.R. magnet type XA

Magnets type EA and type EB are supplied totally enclosed and temperature controlled at 30°C. to within milli-degrees. These types are also available without temperature control as types XA and XB. An abridged specification of these magnets is given in the table.

	XA	EA	XB	EB
Nominal gap flux (gauss)	9400	9400	5500	5500
Min. uniformity of field over 1cm <sup>3</sup> (gauss)	0.1	0.1	0.1	0.1
Working gap (inches)	1.25	1.25	1.25	1.25
Pole diameter (inches)	6.0	6.0	5.0	5.0
Weight (approx.) (tons)	1.2	1.3	0.25	0.3
Field shift coils (gauss)	±50	±50	±50	±50
Field sweep coils (gauss)	±5	±5	±5	±5
Overall size (inches)	30.5 x 38 x 16	47 x 47 x 38	22.5 x 24.5 x 10	38.5 x 40.5 x 33

Sound!*

**BRENELL 3 STAR R/P STEREO**

**Sound all round** to give you utmost realism . . . the true reproduction of the original! The new Brenell 3 star three speed record playback stereo is one of the most convincing recorders of sound over the full audio range and it not only records and replays stereo but monaurally too! Its use as a stereo or monaural amplifier from gram pick-ups is also a wonderful asset to the hi-fi user. Price 89 GNS. or with two microphones 95 GNS.—

- ★ Extremely simple to operate. All controls, input and output sockets grouped at front of recorder
- ★ Frequency compensation at 3 speeds ( $7\frac{1}{2}$ ,  $3\frac{3}{4}$  and  $1\frac{7}{8}$  i.p.s.)
- ★ Two modulation indicators—one for each track
- ★ Two speakers contained within the cabinet
- ★ Two amplifiers with wide range bass and treble controls
- ★ Amplifiers may be used independently for reproduction of stereo disc recordings when connected to stereo pick-up
- ★ Exceedingly low cross talk (—60 db)
- ★ Either track may be replayed whilst the other track is being recorded

**Brenell**

# DOUBLE ENDED STAINLESS STEEL VACUUM OVENS

- ★ Made throughout in polished stainless steel.
- ★ Single action door openings.
- ★ Rectangular with shelf spacings to suit.
- ★ Double ended controls.
- ★ Electrical interlocking of air inlet and isolation valves.
- ★ Outer cover hermetically sealed.
- ★ Temperature range 0°-300°C or equivalent F.
- ★ Temperature Control:  
Normal  $\pm 7\frac{1}{2}^{\circ}\text{C}$ .  
Special  $\pm 1^{\circ}\text{C}$
- ★ Internal Spacing 7in. x 8in. x 18in. (can be altered to special requirements).
- ★ Vacuum Range: To 10<sup>-4</sup>.
- ★ Respective Vacuum Gauges incorporated.
- ★ Automatic air inlet valve on Backing Pump.
- ★ Visual Indicators and fuses on all switches.
- ★ Flanged for fitting into Dry Box.

These photographs show how a complete sequence of production can be organised without exposure to atmosphere, by means of our Ovens.

(Back View)

We design and manufacture Ovens to Customers' special requirements. Should you have any problems in this field our Technical Department is always willing to help you solve them.

Vacuum Ovens with temperatures of up to 600°C are also manufactured by us on similar lines but with Sectional Heating and Water-Cooled Ends.

**A NEW CONCEPT**

**IN POT CORE DESIGN**

**Mullard**

**VINKOR**

**range of**

**adjustable pot cores gives you**

***outstanding***

**advantages**

- Wide range of sizes
- Easily assembled
- Close tolerance permeability
- Precise and easy Inductance adjustment
- Stability
- Single hole chassis mounting

Mullard Vinkors are the most efficient adjustable pot core assemblies commercially available. In addition to high performance, they have the distinct advantage of close tolerance permeability, thus enabling designers to precalculate to within  $\pm 3\%$  the inductance of the core when wound. Final adjustment, taking into account normal capacitor tolerance, can be easily effected to an accuracy of better than 0.02%, by means of a simple self-locking device built into the core.

Write today for full details of the wide range of Vinkors currently available.

**Mullard**

**VINKOR POT CORES**

## A SERVICE FOR DESIGNERS

The possibility of a component change—due to shortage of supplies, increased costs or failure to meet specific conditions—is a problem facing every designer of electronic equipment. However, one basic component can be “tailor-made” from the start, for LAB will supply the precise type of Resistor required, ex stock and at the right price. Write for full technical data, prototype samples and price schedules to:—

**THE RADIO RESISTOR CO. LTD.,**  
50 ABBEY GARDENS, LONDON, N.W.8.

Telephone: Maida Vale 0888

## TYPE E2 SIGNAL GENERATOR

by

*- to be sure!*

The introduction of the Type "E" Series in 1946 set an entirely new standard in Signal Generators for the Service Engineer. To-day, over 10,000 models are being used throughout the world—from Antarctica to the Tropics.

Among this instrument's outstanding features are:—

- Wide Frequency Range** ..... 100 kc/s to 100 Mc/s.
- Exceptionally low leakage** ... less than  $3\mu V$ . at 100 Mc/s.
- Reliable Attenuator** ... Output variable over 100 dB from  $1\mu V$ . to 100 mV.
- Force Output** ..... providing 1 volt at all frequencies.

# MULLARD GENERAL PURPOSE SILICON ALLOY TRANSISTORS ...THE FIRST THREE TYPES

Transistor OC203, the most recent of the first three types in the Mullard series of 50 mA general purpose silicon alloy transistors, is now fully available. This new transistor has a collector hold-off voltage of  $-60V$  and is intended for high voltage applications.

Like the OC200 and OC201 announced earlier, the OC203 has a low bottoming voltage and all the advantages of the well-known OC71 germanium series. The equipment design considerations are basically the same for both the silicon and germanium series, and designers can gain the maximum benefit from their

experience with germanium when using the silicon transistors.

All three silicon transistors feature a low collector leakage current and reduced noise figure. Their wide junction temperature range makes them suitable for use at low and high temperatures in aircraft, guided weapons and industrial equipment.

These silicon 50 mA transistors express the Mullard philosophy for both germanium and silicon devices . . . thorough development followed by extremely large scale production to provide the user with practical and reliable transistors at very favourable prices.

*Your enquiries are invited on the OC200 series and other semiconductor devices in the Mullard range of over sixty types. Please write or telephone the address below.*

## OC200

The basic type in the series. Average current gain 20 and minimum  $f_{\alpha}$  0.3 Mc/s. Maximum collector voltage is  $-25V$ , but the low bottoming point allows operation from supplies as low as 1.2V.

## OC201

A similar transistor to the OC200, but with average current gain increased to 30 and minimum  $f_{\alpha}$  increased to 2 Mc/s.

## OC203

This, the most recent transistor in the series, fulfils the requirements of applications needing higher voltage ratings. Maximum collector voltage, d.c. or peak, is  $-60V$ .

TYPE No.	OC 200	OC 201	OC 203
Minimum operating ambient temperature (°C)	-50	-50	-50
Maximum junction temperature (°C)	+150	+150	+150
<b>Abridged data (at Tamb 25°C)</b>			
$V_{cb}$ (pk) max. (V)	-25	-25	-60
$V_{cb}$ max. (av or d.c.) (V)	-25	-25	-60

# AGEING

The parameters of young capacitors tend to be changeable. Polystyrene capacitors are therefore exposed to extremes of climate (Russian winters and New York summers) in rapid succession. This would put years on anybody's life. By the time a Suflex Capacitor reaches you, it has left the frolics of youth and reached mature dependability: exceptionally good stability, high dielectric strength, low loss. And no middle-age spread whatsoever, for the Suflex Polystyrene Capacitor is as small as any for a given rating. Altogether, a capacitor in the prime of life, steady and fighting fit.

# Transistorised Four-Channel Mixing Units

*This Pye fully transistorised 4-channel Audio Mixing Unit meets the need for a portable high-gain mixing amplifier which may be used with equal facility for sound and TV outside broadcasts, auxiliary studio installations or for augmenting and, in an emergency replacing, existing mixing facilities. The removable A.C. mains power unit can be quickly replaced by either an accumulator unit or a dry battery unit. Robust and light—it is easily carried in a brief case—this unit will prove invaluable to mobile recording and news-coverage teams.*

Type 3053 Pye Audio Mixing Unit

*The rear view of the Audio Mixing Unit (Type 3053) shows the A.C. mains unit partially withdrawn. Any of the power input units which can be supplied as accessories (shown below) to the mixer can be inserted in the position shown. As well as the mains input socket and fuses, the picture shows the 4 channel input sockets, the output sockets and terminals.*

*On the Audio Mixing Unit (Type 3803) a peak programme meter is provided in place of the VU Meter together with its associated PPM Amplifier.*

## *Speed is the need in Printed Circuits*

## **B R I B O N D** *print circuits faster*

The Printed Circuit is rapidly becoming established assembly practice in every field of electro-mechanics. Meeting this increasing demand takes specialist production such as only Bribond offers. Bribond manufacture circuits complete from design to finished board, and every stage is organised on modern line production methods providing outputs of any quantity. And each individual circuit is subjected to three critical inspections. This is increased when the copper is plated with either rhodium, silver, or gold.

## **B R I B O N D** *make prototypes quicker*

The prototype department is at the service of all Bribond customers. It can produce within 48 hours or less, the initial circuit from which future production can be planned. All that is needed is a clean circuit image from which reproduction can be made. Where desired, and time permits, the whole of this work can be carried out in our drawing office. Bribond recognise that quick prototypes—whether for complete units or small sub-assemblies—are essential in these highly competitive days when anything that shortens the time-lag between drawing board and production can mean a big reduction in marketing costs.

## **B R I B O N D** *maintain prompt deliveries*

Bribond have organised production to guarantee prompt delivery of customer's requirements. Consultation and planning of any form of printed circuit—double sided, component notated, flexible, flush surfaced, plated, etc.—is freely offered and your enquiry is invited.

# Isolation at Microwaves

## L324 X-band isolator

This isolator is a ferrite loaded waveguide component with unidirectional characteristics designed to isolate an X-band microwave source from reflections caused by mismatch. It is a versatile component suitable for incorporation in equipment or for use as a laboratory aid. It is tunable for peak performance over X-band.

For information on other microwave components including circulators, co-axial mixers, switches, folded tees, etc., write to the address below.

## EIMAC CERAMIC-METAL REFLEX KLYSTRONS FOR SEVERE ENVIRONMENT APPLICATIONS

In modern airborne and missile systems, reflex klystrons must be capable of maintaining exceptional frequency stability under conditions of severe shock, vibration and acceleration. Eimac's new ruggedized X- and K-Band reflex klystrons achieve this stability through an advanced system of stacked-ceramic construction and integral brazed 'dual-cavity' design.

Ceramic construction permits internal electrodes to be supported on rigid concentric cones and allows the entire vacuum assembly to be furnace-brazed into a single rugged structure. The resonant cavity design consists of a fixed-tuned (and hence rugged) inner cavity closely coupled through a ceramic window to a secondary tunable cavity outside the vacuum envelope. The external cavity is tuned by means of a capacitive slug over a minimum range of 700 megacycles per tube.

This advanced design has resulted in a series of four exceptionally stable reflex klystrons covering the 8500 to 11,500 megacycle range at a typical output power level of 75 milliwatts. At vibration levels of 15 to 20G the peak-to-peak deviation of these tubes is less than 50 kilocycles for any vibrating frequency from 20 to 2000 cycles per second, with the force applied in any plane of the tube. The advantage of this low FM noise level in local oscillator service is obvious. Ceramic construction and the superior tube manufacturing techniques it makes possible permit tube or seal temperatures of 250°C without impairment of operation.

For severe environment microwave applications investigate the advantages of Eimac ceramic-metal reflex klystrons.

LEEVERS RICH

**ADAPTABILITY**

is a feature of the Leever-Rich Magnetic Recorder. The unit design of both mechanism and amplifier permits the basic recorder to be made:

**ADAPTABLE** for tape speeds from 3 $\frac{3}{4}$  in. to 75 in. per second, by replaceable capstans of the synchronous or servo motor type;

**ADAPTABLE** for direct or carrier operation, by means of plug-in amplifiers;

**ADAPTABLE** for  $\frac{1}{4}$  in.,  $\frac{1}{2}$  in. and 1 in. tape width, using the same basic mechanism;

**ADAPTABLE** for single or multiple track recording, using an integral plug-in head assembly.

# HEWLETT-PACKARD DIGITAL VOLTMETER 405 AR

**Automatic range and polarity selection  
Just apply the probe  
and read voltage directly!**

Ⓢ 405AR DC DIGITAL VOLTMETER is a completely new instrument providing, literally, "touch-and-read" voltage measurements between 1 and 1,000 volts. Range, even polarity, are automatically selected. Readout is in-line, in bright, steady numerals.

*New, novel circuitry provides a stability of readings virtually eliminating jitter in the last digit. This reduces operator fatigue and avoids uncertainty.*

Special features include a floating input, electronic analog-to-digital conversion, digital recorder output and front-panel "hold" control permitting manual positioning of decimal. Voltage sampling rate is variable from 1 reading every 5 seconds to 5 per second; or can be controlled externally by a 20 v. positive pulse.

#### BRIEF SPECIFICATIONS

**Range:** 0.001 to 999 v. d.c.; 4 ranges.  
**Presentation:** 3 significant figures, polarity indicator.  
**Accuracy:**  $\pm 0.2\%$  full scale  $\pm 1$  count.  
**Ranging time:**  $\frac{1}{2}$  sec. to 2 sec.  
**Input impedance:** 11 megohms to d.c., all ranges.  
**Response time:** Less than 1 sec.  
**AC rejection:** 3 db at 0.7 c.p.s.; min. 50 db at 60 c.p.s.  
**Height:** 7in. **Weight:** 26lbs.

TOP OF THE BILL

FOR EVERY PERFORMANCE

# TRUVOX

ALL THAT THE NAME IMPLIES

Music or speech, "Pop" or classic . . . they're all on a good thing when they're Truvox taped. The young and gay will delight in the "Melody," the enthusiast will revel in the "Harmony" . . . whichever you choose, every programme will "top the bill" for you and your friends.

## MELODY

Has the size and elegance of a lady's vanity bag, finished in Blue. Ideal for teenagers. Excellent reproduction from 5 x 3 in. hi-flux speaker. Simple to operate. Tape speed 3 1/2 in. p.s. Half track. 4 in. spools. Dimensions 11 x 9 x 5 in.

**£36**  
Complete

## HARMONY

Designed for the enthusiast. Reproduction far in excess of that normally expected from an instrument of its size. Handsome, light tan leatherette case with gilt trim. Tape speed 3 1/2 in. p.s. Half track. 6 x 4 in. hi-flux speaker. 5 in. spools. Dimensions 12 x 9 x 5 1/2 in.

**£44**  
Complete

Supplied with spool L.P. Tape and empty reel, crystal microphone and radio lead. For 110-240 v. A.C. mains.

## MARK VI TAPE DECK

A worthy newcomer to the range of Truvox tape recording equipment, introducing refinements in appearance and facilities for higher quality recording with accurate timing and editing. Fully controlled by push buttons. Electrical and mechanical braking. Speed change knob. Pause control. Reels "locked" in "Off" position. Precision revolution counter. Contemporary colour scheme to harmonise with any cabinet finish.

**TAPE DECK Mk. VI**  
Fitted with Monaural Head, 25 gns.  
Fitted with Stereophonic Head, 37 gns.

● No exposed metal parts other than terminations, which are clean solder coated, thereby ensuring easy soldering.

● Body and terminations free of wax coating or any other low melting point material.

● Long life without voltage derating.

● Designed to meet the requirements of British Joint Service Standards RCS 131 and BS 2131 with humidity classification H.2.

● Solid construction eliminates internal movement, preventing damage by severe vibration.

## DUBILIER ENCAPSULATED PAPER DIELECTRIC TUBULAR CAPACITORS HAVING OUTSTANDING CHARACTERISTICS

The Dubilier Capacitor Type 560 is a new approach to capacitor requirements for all radio and electronic applications. It is constructed to meet long and arduous service conditions. The paper dielectric element is impregnated with a plastics material to produce a solid unit. The terminations are of great mechanical and electrical strength and the assembled element is sealed in an encapsulated mineral loaded epoxy resin so that there are no parts capable of movement, making the capacitor completely immune to shock and all normal atmospheric conditions.

Capacitance Tolerance;  $\pm 20\%$  normal  $\pm 10\%$  by selection. Power Factor; Less than 1% at 1,500 c/s. Insulation Resistance; Better than 20,000M $\Omega$  at normal temperature. Voltage Application; From  $-40^\circ$  to  $+125^\circ\text{C}$  for d.c. and from  $-40^\circ$  to  $+70^\circ\text{C}$  for a.c.

CAPACITANCE $\mu\text{F}$	VOLTAGE RATINGS			DIMENSIONS	
	d.c. Wkg. at $-40^\circ\text{C}$ to $+125^\circ\text{C}$	d.c. Test at $20^\circ\text{C}$	a.c. Wkg. r.m.s. at $-40^\circ\text{C}$ to $+70^\circ\text{C}$ and up to 60 c/s	Diameter $+0.020^\circ$ $-0$	Length $\pm 0.040^\circ$

# Garrard

## MAGAZINE TAPE DECK

- A** **INSTANTANEOUS LOADING**  
Magazine loads on to deck as simply as putting on a record.
- B** **RAPID WIND**  
Provision for rapid wind and tape location.
- C** **ONLY 2 CONTROLS**  
One for record and play.  
One for wind.
- D** **TWO TRACKS**  
Continuous play is always available with the Garrard loading method using two tracks.

### EASE OF OPERATION

Controls reduced to absolute minimum. Magazines eliminate tape threading, spilling, and locating.

### PRECISION CONTROL OF TAPE TRAVEL

Garrard design achieves a new high level of precision engineering to ensure accurate control.

## The Machine for everyone

Write for leaflet "What everyone wants to know"

**GARRARD ENGINEERING AND MANUFACTURING CO. LTD.**

Factory and Registered office: NEWCASTLE ST., SWINDON, WILTSHIRE  
Telephon: SWINDON 5381 (5 lines) Telex 44-316

# If you already own ...

a Loudspeaker system which performs well in the bass and middle registers, but has inadequate or unsatisfactory High Frequency response—

# You can ADD...

a precision built low distortion TREBAX High Frequency unit, and extend the frequency range of your loudspeaker to 20,000 c/s. *Two models are available.*

### TREBAX 5K/20XL

Simplicity itself to install, since it contains its own L.C. crossover network in an integral assembly, and an L-pad level control (with knob and escutcheon) ready wired on flying lead. For use in systems handling up to 20 watts.

**Price £7. 0. 0.**

### TREBAX 100

An even more efficient unit, for use in larger systems employing high flux bass units and handling powers up to 25 watts.

**Price £6. 4. 0.**

Both units, illustrated above, are horn-loaded and pressure driven, employing aluminium diaphragm and voice coils in self-aligning assemblies with air chambers and phase equalisers. The full range of each is 2,500 c/s to 20,000 c/s, and the crossover frequency advised is 5,000 c/s. In the TREBAX 5K/20XL the appropriate network is already built in; for the TREBAX 100, separate network XO/5000 should be employed, together with a variable attenuator.

### AND A FINAL STEP -

can be the addition of the MIDAX mid-range unit; particularly appropriate if the reproduction of the middle register from your original loudspeaker is not fully satisfactory.

### MIDAX 650

This is a horn-loaded pressure driven unit, with a smooth frequency coverage from 650 c/s to 8,000 c/s. Crossover to the bass unit should be at 950 c/s, and a special network — XO/950 — is produced for this purpose. The MIDAX may be used in systems handling up to 25 watts.

**Price £9. 10. 0.**

# NEW TROPO SCATTER SYSTEMS

*can be set up anywhere in 8 hours or less!*

A new, transportable communication system has been developed by Canadian Westinghouse for sending two-way voice or teletype messages up to 200 miles *without* relay stations.

Its name is MICROSCATTER—the most compact system ever developed for low-cost, long range tropospheric scatter communications.

Now in production for customer orders, MICROSCATTER radio is a super high frequency system that can go *anywhere*. MICROSCATTER transmitters and receivers for quadruple diversity, including antennas, can be mounted in a standard 30 ft. truck trailer. Units designed for self-contained field shelters can be set down by helicopter in remote locations—and a MICROSCATTER installation can be set up ready for operation within 8 hours!

### MICROSCATTER APPLICATIONS

COMMERCIAL		MILITARY	
Fixed Station — 120 telephone channels	—television and sound	Wide Band — radar	—data
Transportable — 48 telephone channels	—teletype	—120 telephone channels	Tactical and —48 voice channels
		Transportable — teletype	—data

### FEATURES

- Frequency—4400-5000 mc
- Antennas—10 to 28 ft. diameter
- Power—2 KW
- Range—100 to 200 miles

A Westinghouse communications specialist will gladly furnish complete information on MICROSCATTER radio. Phone your nearest Westinghouse office, or write to Canadian Westinghouse Company Limited, Electronics Division, Hamilton, Canada.

# Plessey

HYPERLYTICS\*  
give

# ten years service

Long shelf life and a working life of 10 years are achieved in the new type of electrolytic capacitor developed by Plessey.

The exacting specifications demanded for specialised electronic equipment have been met by using a high purity etched foil material, and combining the direct Plessey process control with unique manufacturing methods.

With low leakage and high insulation characteristics, Hyperlytics can be supplied in a wide range of values between 0.5 and 12,000  $\mu\text{F}$ . Two types are available, the 1000 series with a temperature range of  $-30^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ , and the 11,000 series with a range of  $-20^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$ .

Capacitance tolerance for both types is normally  $-20\%$  to  $+50\%$  but closer limits can be achieved to meet special requirements.

Write for further details of these outstanding new components.

# Greater versatility for the Redifon G.R. 400 TRANSISTORISED SSB Radiotelephone

The Redifon **GK. 189** TRANSISTORISED Two-Tone Keyer/converter, when used in conjunction with the GR. 400 gives the added facilities of TELEPRINTER working.

## The Redifon **GR. 400**

TRANSISTORISED SSB Radiotelephone gives all the advantages of single side-band, yet is as simple to operate as an ordinary telephone. For R/T or CW operation. Compact. Reliable. Full tropical specification.

These 3 units are available for use with A.C. mains or D.C. 12 or 24 v. supplies.

The Redifon **R. 401** TRANSISTORISED SSB Receiver combines with GR. 400 to give full DUPLEX TELEPHONY.

# AN ANNOUNCEMENT OF IMPORTANCE TO ALL TAPE RECORDER USERS

Now available:  
the complete range of  
professional-quality

# audiotape

TRADE MARK

...on the sensational C-SLOT REEL!

AUDIOTAPE, manufactured in the U.S.A. by Audio Devices, Inc., is known the world over for its flawless perfection of sound reproduction throughout the entire audio range, and its *consistent, uniform quality* from reel to reel and from one type to another. Available in eight different types, with a base material and reel footage to meet every recording requirement, AUDIOTAPE has only *one* standard of quality—the finest obtainable. This sterling performance reflects Audio Devices' more than 10 years of experience in magnetic tape manufacture, and more than two decades of practical experience in the sound recording art.

All 5in. and 7in. reels of AUDIOTAPE are supplied on the exclusive C-Slot Reel—the fastest-threading tape reel ever developed. The tape end, dropped into a slot in the hub, anchors itself automatically at the first turn of the reel. AUDIOTAPE is also available on the popular-size 3in., 3½in., 4in. and 5½in. reels.

For the truest sound that your recording equipment can produce try AUDIOTAPE. *It speaks for itself!*

## Pye at Dounreay

The Pye Instrument Group has supplied all the equipment to the U.K. Atomic Energy Authority for the irradiated fuel element laboratory at Dounreay. In addition to supplying equipment, Pye Ltd. acted as consultants and designers on all matters in that laboratory relating to instrumentation and remote handling. The illustration above shows manipulators working in conjunction with a television camera to handle and measure a sample from the fast reactor.

*The Pye Instrument Group consists of: Pye Atomics Division; Pye Industrial Television Division; Faraday Electronic Instruments Ltd., Labgear Ltd.; W. G. Pye & Co. Ltd.; Pye Telecommunications Ltd.; Unicam Instruments Ltd.; W. Bryan Savage Ltd.; W. Watson & Sons Ltd.*

# Introducing . . .

ADDITIONAL TO THE

## RELIANCE RANGE

This latest addition to the Reliance range of Potentiometers has been designed to conform with specification DEF-5121 style RVW 7 & 3 (formerly RAC.RAD) and is fully sealed with integrally constructed moulded cover. A commercial unsealed version, with identical characteristics is also available. Both types can be supplied in ganged form.

### BRIEF SPECIFICATION

#### RESISTANCE RANGES

Linear Law A..... 5 to 100,000 ohms  
Laws B—G ..... 50 to 50,000 ohms  
Non-Inductive ..... 50 to 10,000 ohms  
(Ayrton Perry)

#### RESISTANCE TOLERANCE

Standard.....over 100 ohms  $\pm 5\%$   
under 100 ohms  $\pm 10\%$   
Also available (at extra) with tolerance  
to  $\pm 1\%$  and linearity to within  $\pm 1\%$ .

#### ROTATION

Electrical Effective.....  $280^\circ \pm 5^\circ$   
Mechanical .....  $290^\circ \pm 5^\circ$

#### MAXIMUM WORKING VOLTAGE

Between spindle and  
track ..... 1,000 V. d.c.

Full technical details and dimensional drawings in Data Sheet No. 9 available on request.

## Fully Guaranteed Components

#### "OO" TWIN CONDENSER

Designed for use in miniature transistor receivers. The front (aerial) section is 208pf. to provide coverage for medium waves, and the rear section is 176pf., which may be padded to match the oscillator—very robust yet light weight. Front area 1 1/4 in.  $\times$  1 17/32 in.  $\times$  1 1/32 in. deep, price 9s. 6d.

#### SL. 16 DRIVE

A general purpose slide rule Drive for F.M./V.H.F. Units, short-wave converters, etc. Printed in two colours on aluminium, with a 0-100 scale and provision is made for individual calibrations. Complete with bronze escutcheon and glass. Price 13s. 9d.

#### F. GANG CONDENSER

A good general purpose gang. Robust, but small in size. "E" law to match our S.L.8 Full Vision, Square Plane and Air Plane Drives. Size 2 1/4 in.  $\times$  1 21/32 in.  $\times$  2 9/16 in. long (3 gang 3 11/16 in.). Price for 2 Gang 13s. 3d. 3 Gang, 17s. 6d. Complete with trimmers.

- Superior Sensitivity**
- Superior Signal-to-Noise Ratio**
- Superior Second Channel Rejection**

*Main tuning control showing a portion of the seven frequency scales, the coarse and fine logging scales and the movable cursor.*

- Frequency coverage from 15—45 kc/s and 100 kc/s—30 Mc/s.
- Frequency setting accuracy better than 1 kc/s.
- Film scale giving actual scale length of 4ft. on each frequency range.
- 90 : 1 slow motion drive with logging scale.

**ADDITIONAL FEATURES**

- Separate incremental tuning control for use with crystal calibrator.
- Double frequency changer circuit.
- Stabilised local oscillator H.T. voltages.
- Image rejection over 100 db.
- Exceptionally high sensitivity and signal/noise ratio.
- Variable selectivity.
- S meter incorporated.
- Very stable B.F.O.
- Muting facilities provided.
- Built-in loudspeaker.
- 2 watts output.
- Turret band switching.

# A NEW *Armstrong* AF208

## VHF/MW RADIOGRAM CHASSIS

In announcing the new AF208, the most economically priced chassis we have ever produced, our aim is to bring traditional Armstrong quality and design to a larger circle of enthusiasts than ever before. The hand-built construction, the superior finish and the high quality components are the same as those used for our more expensive models. We confidently assert that there is no similar product on the market today which equals in value the Armstrong AF208.

### TECHNICAL SPECIFICATION

Full VHF band (87-108 mc/s) and medium waveband ● 5 watts output.  
● Frequency Response 30-22,000 c.p.s.  $\pm$  2dB ● Negative Feedback 15dB ● Harmonic Distortion 0.5% ● Hum Level 60dB down ● Separate wide range bass and treble controls ● Output for tape recording (Independent of volume control to allow monitoring at any level) ● Tape playback input for use with tape recorder or tape deck with tape pre-amplifier ● Two compensated pick-up inputs (switched, to allow two separate pick-ups to be connected) ● Continental reception of good programme value ● Absolute freedom from drift on VHF ● Satinised brass dial surround and veneered fascia board available ● Dimensions 12in. x 8in. x 7in. high.

The name ARMSTRONG is the registered trade mark of  
ARMSTRONG WIRELESS & TELEVISION CO. LTD.

price 22 gns.

For details of other models in our range of radiogram chassis, see our page 181 advertisement.

Post this coupon or write for descriptive literature or call at our Holloway Showroom for full unhurried demonstration and professional advice on your installation. Open 9-6 weekdays and 9-5 Saturdays.

FOR 3 OHM SPEAKERS LDN.1
L = 0.135 mH. C = 30 $\mu$ F.
FOR 15 OHM SPEAKERS LDN.2
L = 0.675 mH. C = 6 $\mu$ F.

## LOUDSPEAKER DIVIDER NETWORK COILS

LDN.1 for 3 ohm speakers. Price 7/6 each (15/- per pair).  
LDN.2 for 15 ohm speakers. Price 10/- each (20/- per pair).

Note:—Two coils are required to complete the network shown in the circuit diagram, i.e., for 3 ohm speakers two type LDN.1 are required. (Please add 1/- to cover postage on each pair of coils.)

In both cases the cross-over frequency is 2.5 kc/s and with the constant resistance circuit recommended, the attenuation beyond the cross-over frequency will be 12 dbs per octave.

We have described values of condensers used in prototype networks but regret we are unable to supply these from works.

**LOUDSPEAKER DIVIDER NETWORKS.** Loudspeakers designed to reproduce the whole audio range are usually very expensive and results comparable with much more expensive units can be achieved by the use of two normal loudspeakers. One is used to reproduce the lower frequencies, the other caters for the higher frequencies where the response of the larger unit will have fallen off. It is clearly necessary to include a frequency dividing network between the speakers and output transformer in order to distribute the low and high frequencies to the appropriate speaker.

The frequency at which the cross-over takes place may lie between 800 c.p.s. and 5 kc/s depending upon the relative performance of the two loudspeakers used. A reasonable compromise which will suit most pairs consisting of an 8in. unit and a 2 1/2in. unit and a 2 1/2in. to 6in. unit, is 2 kc/s.

PLEASE SEND S.A.E. WITH ALL ENQUIRIES.

# The *Superspeed* Soldering Iron heats up from cold in **6** seconds

Designed on an entirely new principle, this light-weight, versatile iron is eminently suitable for soldering operations in the radio, television, electronic and telecommunication industries. For test bench and maintenance work it is by far the most efficient and economical soldering iron ever designed.

Length, 10";  
weight, 3½ ozs.

For best results  
with this iron  
use **ENTHOVEN  
SUPERSPEED  
CORED SOLDER**  
and **ALUMINIUM  
CORED SOLDER**

- ✱ Activated by light thumb pressure on the switch ring. When pressure is released, current is automatically switched off—thus greatly reducing electricity consumption, wear on copper bit and carbon element.
- ✱ Can be used on 2.5 to 6.3 volt supply (4 volt transformer normally supplied) or from a car battery.
- ✱ More powerful than conventional 150-watt irons; equally suitable for light wiring work or heavy soldering on chassis.
- ✱ Simple to operate; ideal for precision work.
- ✱ Requires minimum maintenance—at negligible cost; shows lowest operating costs over a period.

## INTERCHANGEABILITY

of the 5 different sized bits with the 1 Precision iron, creates the most versatile soldering tool yet produced. Bit sizes of .040in., 3/32in., 5/32in., 3/16in. and 3/16in. heavy duty complete the range.

**FINGERTIP CONTROL**, sharp, regulated heat, ensures a quicker better job. Model C.240 (230/240 volts) illustrated, is available from the usual wholesalers or direct from the manufacturers at 29/6 (complete with one bit). Other models for voltages ranging from 6 to 230 volts also available.

Stands as illustrated at 12/6.

### *Just think!*

How things have changed! Yesterday's precision measuring instruments gave you much more precision than you generally needed and cost you so much more. But today Nash & Thompson have overcome your problem with NASHTONS—the tailor-made precision measuring instruments that fit your needs like a glove, and cost you so much less. Now you can buy the way you've always wanted to—the NASHTON way.

*Write or Telephone for full NASHTON specifications to . . . .*

## NASHTON

*precision measuring equipment means accurate economic buying*

These six models are a selection from the wide range of NASHTON miniaturized electronic test instruments available for immediate delivery. Designed by Nash & Thompson to meet your everyday needs accurately, efficiently and economically, NASHTON units are compact, modern, streamlined, easy to read and operate. NASHTON give you what you need most — functional efficiency, not frills.

Others in the range include the A.C./D.C. Valve Voltmeter, Universal D.C. Meter, L.F. Quadrature Oscillator, 0.5 Amp. Stabilised D.C. Power Supply, Transistor Tester, Shorted Turn Detector, Digital Read-Out Meter, Preferred Value Resistance and Capacitance Boxes.

### The L45. A compact High Quality 4-5 watt amplifier

Size approx. 7-5-5½in. high. Sensitivity  
is 28 millivolts so that the input socket  
can be used for either microphone or  
gram., tape, radio tuner, etc. B.V.A.  
valves used are ECC83, EL84, EZ80.  
Controls are: Vol. Treble and Bass with  
mains switch. The Tone controls  
provide full compensation for long  
playing records. Output matching for 3  
ohm loudspeaker. Retail price £5/19/6.

**THE LT45 TAPE DECK AMPLI-  
FIER.** A complete unit (power pack  
and oscillator incorporated) ready for  
connection to A.C. mains. 3 ohm loud-  
speaker and practically any make of  
deck. Negative feedback equalization  
adjustment by multi-position switch  
for 3½, 7½ and 15in. per sec. Retail  
price 12 gns.

**DIATONIC 10-14 WATT.** High  
Fidelity amplifier with integral pre-  
amplifier. Retail 12 gns.

**CONCHORD 30 WATT.** Hi-Fi  
amplifier with two separately con-  
trolled inputs. Retail 15 gns.

**L50 50 WATT AMPLIFIER.** Size  
approx. 13 x 9 x 7in. Sensitivity 25 m.v.  
Outputs for 3 and 15 ohm speakers.  
Retail price 19 gns.

**L3/3 STEREOPHONIC AMPLI-  
FIER.** Sensitivity 150 m.v. Output 3  
watts on each channel. Retail 7 gns.

**MULLARD VALVES:**  
EF86(1); ECC83(2); EL84(2);  
EZ81(1).

**OUTPUT MATCHINGS**  
For 3 ohm and 15 ohm L/Speakers  
from high grade sectionally  
wound output transformer.

**RESERVE POWER SUP-  
PLY** (for Radio Tuner) 300 v.  
30 m.a. smoothed and 6.3 v.  
1.5 a. at 4-pin socket.

# Independent sideband receiver type GFR.552

... developed to British Post Office specification and used on their international circuits.

This equipment is designed for operation on long distance, point-to-point short wave radio links forming part of the international trunk network. Special features of the GFR.552 include a high order of oscillator stability and freedom from cross-modulation through which cross-talk between channels or intermodulation between wanted and unwanted signals might occur.

Frequency range—4 to 30 Mc/s.  
Noise Factor—better than 8dB over the band.

A.F.C.—Motor driven with exceptionally high retuning speed and low residual mistuning.

Cross-talk attenuation between channels is greater than 45dB for modulation frequencies above 200 c/s.

Output—Variable up to +14dB relative to 1mW into 600 ohms.

# A REVOLUTIONARY NEW BRITISH INVENTION!

- ★ Uses standard tapes
- ★ Plays at 7½" per. sec. or 3 other speeds
- ★ Records direct from radio or microphone
- ★ Erase and fast rewind

FULLY  
GUARANTEED

## Instantly turns any gramophone into a first-class Tape-Recorder and back into a record-player in a moment!

Gramdeck is completely *new* . . . a revolutionary and ingenious invention that instantly turns your gramophone into a tape-recorder and back into a gramophone at will! Slip the Gramdeck on to your turntable and you have the finest tape-recorder you've ever heard! Lift it off . . . your gramophone is ready to play records again. There are no motors or valves to go wrong—and you get a quality of reproduction that has to be heard to be believed!

Everyone is praising the Gramdeck. "The quality is at least equal to that obtained from a good microgroove disc," says a leading professional journal.

### WORKS FROM ANY RECORD PLAYER OR RADIOGRAM

Gramdeck records and reproduces with a wonderful depth and breadth of tone. Because it uses equipment that is already in your gramophone it only costs a fraction of the high-quality tape-recorder you would normally require. Full details, specifications, photographs, easy terms, etc., are given in the Gramdeck Book. Send for your FREE copy, today.

MADE BY THE FIRM THAT MAKES RADAR EQUIPMENT FOR VISCOUNTS AND BRITANNIAS

£13-12-0

Special moving-coil microphone and tape extra.

### EASY TERMS

"Ingenious—simple . . . why on earth did no one think of it before!"—THE TAPE RECORDER.  
 "Ingenious and robust."—BRITISH SOUND RECORDING ASSOCIATION JOURNAL.  
 "Quality of reproduction excellent . . . real hi-fi results . . . potential is tremendous . . . both designer and manufacturer should be congratulated."  
 —BRITISH RADIO & T/V RETAILERS' REVIEW.  
 "Better than many so-called hi-fi recorders . . . robust . . . carefully designed . . . excellent value."  
 —AMATEUR CINE WORLD.

### FREE BOOK—POST NOW!

I would like to know how to turn my gramophone into a first-class tape-recorder . . . please send me the Gramdeck Book—FREE and without obligation. (Write if you prefer not to cut page.)

## accuracy and stability for vision circuit testing

For the really effective testing of vision circuits the Video Oscillator Type 022B provides an input signal that is exceptionally accurate and stable.

The accuracy of calibration is, in fact, 1% over the frequency band 10 kc/s to 10 Mc/s, whilst the amplitude remains constant to within  $\pm \frac{1}{2}$  dB throughout this frequency range and is independent of variations in mains voltage and range setting. Thus the necessity for resetting the reference level no longer exists, and instead a means of measuring the load impedance by the reading on the output voltmeter is provided.

The total harmonic content of the output waveform of this high quality oscillator is less than 1%. These standards of performance in a compact, portable item of equipment explain why the Wayne Kerr Video Oscillator Type 022B is so widely used by the G.P.O., B.B.C. and throughout the television industry.

The Wayne Kerr Video Oscillator is fully described in Information Service Leaflet DO 22B, copies of which are available on request.

# TELEGRAPH SIGNAL DISPLAY UNIT

## TYPE TDU2

The T.D.U.2 is designed for use, either as an independent unit for telegraph signal monitoring positions, or as an adjunct to the T.D.M.S.6B to enable a comprehensive analysis of telegraph wave form to be made.

### Principal features are:

- \* Easy to use.
- \* Provision for Z modulation.
- \* A time base having good short term stability and long term accuracy permits either start/stop or synchronous signals to be examined.
- \* X shift control calibrated in code element transition numbers.
- \* X expansion up to 5 screen diameters.

# PORTABLE TELEGRAPH RELAY TESTING

## ADAPTOR RTAI

**Square and sine wave testing.** This adaptor is designed to check all types of polarised relays for bias and transit time, using the test signals generated by the T.D.M.S.5 series at signalling speeds within the range of the T.D.M.S., a visual indication of the condition and results of adjustment being indicated on the T.D.M.S.5.

### Principal features are:

- \* Caters for any type of polarised relay.
- \* Rapid determination of operating conditions.
- \* Rapid adjustment aided by visual indication.
- \* Simple to use.
- \* Square or sine wave test conditions.

**TYER**

(formerly P.A.M. Ltd.)

This instrument has been specially designed for the routine production testing of Commutators; its function is to indicate surface roughness and eccentricity to within very close limits.

Tyer & Co. Ltd. Electronics division combines the technique of several companies, long-established in the Electronic field, with the extensive modern production resources of Tyer & Co. Ltd. Examples of recent work are illustrated.

*\* Whichever stage of the struggle you've reached, we can save you time and trouble—maybe money too—write or 'phone without delay.*

# the 'Professional' tape for the professional user

## Emitape

Magnetic Recording Tape offering the highest technical standards. First choice of leading recording, broadcasting and television organisations and widely used in science and industry.

**VIDEO**

Emitape for Video recording now being supplied to BBC and ITA,

**EMIFILM**

Sprocketed magnetic recording film designed for all applications where absolute synchronisation is required. 16, 17.5 and 35 mm. Single or double perforation.

**EMITAPE INSTRUMENTATION TAPE**

Produced to the most exacting specifications and available in various standard widths. Electrostatic filtration down to a particle size of .00001 mms. ensures manufacture under cleanest possible conditions.

# KEYSWITCH

**RELAYS**

ensure foolproof contact

Versatile and reliable, Keyswitch relays set the standard for design robustness, sensitivity and extremely efficient operation—even under the most hazardous operating conditions.

ALL TYPES OF RELAYS

IMMEDIATE DELIVERY—EX-WORKS

Special combined circuits fitted with 5 amps microswitch and 9 standard 0.3 amp contacts.

RELAYS FOR ALL PURPOSES can be supplied to customers' requirements for :—

- AUTOMATION,
- COMPUTERS,
- BATCH COUNTING & PHOTO-ELECTRICS,
- TELEPHONY & INTERCOM. SYSTEMS,
- AUTO-TIMING & AUTOMATIC SIGNALS,
- MOTOR & MACHINERY CONTROL,
- CURRENT & VOLTAGE REGULATION, etc.

Extremely advantageous quotations can be offered for quantity orders.

## M. R. SUPPLIES, LTD.

Universally recognised as suppliers of UP-TO-DATE MATERIAL which does the job properly. Instant delivery. Careful packing. Satisfaction assured. Prices nett.

**HIGH DUTY AIR CONDITIONING FANS** (Woods-G.E.C.). We have been fortunate in securing a few more of these £75 units which we are again able to offer at only £25 each nett (despatch U.K. mainland 20/-). Aerofoil 2-stage, each fitted with two cap./in.4. motors, 220/250 v. 50 c. 1 ph. and 2 impellers, 12in. dia. 7-bladed, 2,800 r.p.m. Whole unit contained in cylindrical housing 28in. long by 15in. dia. Duty 1,100 CFM (free air) 400 CFM at 3in. W.G.

**SYNCHRONOUS ELECTRIC CLOCK MOVEMENTS**, 200/250 v. 50 c. Fitted with switches for hours, minutes and seconds hands. Self-starting, central hole fixing. Dia. 2 1/2in., depth behind dial only 1 1/2in. Very latest model. With dust cover, 29/8 (despatch 1/6). Sets of three hands to fit, in good style, for 5/7in. dial, 2/6 set, for 8/10in. dial, 3/6 set.

**SYNCHRONOUS TIMER MOTORS** (Sangamo). 200/250 v. 50 cycles. Self-starting, 2in. dia. by 1 1/2in. deep, 1 r.p.m., 1 r.p.h. and 12 r.p.h., any one 37/6 (des. 1/-). Also high torque model (G.E.C.) 6 r.p.m., 57/6 (des. 1/-). These are suitable for display turntables.

**SYNCHRONOUS TIME SWITCHES** (Sangamo) for accurate pre-set switching operations on 200/250 v. 50 c. Providing up to 3 on-off operations per 24 hours at any chosen times, with day-omitting device (see optional). Capacity 20 amps. Compactly housed 4in. dia., 2 1/2in. deep. With full instructions. 25/8/6 (despatch 2/6). Also 8ulth's Relyon Twin-circuit model, 20-amp. switching, 27/8/- (des. 2/6).

**SHORT INTERVAL TIME SWITCHES** (Smith's). Spring driven. Closed circuit period continuously adjustable from 1 to 15 minutes. 15 amp. (230 v. A.C.) switching. 2in. dia. by 2 1/2in. long. Not calibrated. 17/6 (despatch 1/6).

**B.T.H. INDUCTION (S.P.) MOTORS** (Type B.P.1304) with 8in. impeller blade. 200/250 v. A.C. motor body 4in. long by 3 1/2in. dia. Quiet running—no interference. 39/6 (despatch 2/-).

**HIGH SPEED MOTORS** (Deleo). 1/10th H.P., 200/250 v. A.C./D.C., 10,000 r.p.m. Body 4 1/2in. by 3in. with 1 1/2in. shaft proj. 1 1/2in. Made for spin driers and ideal for drills, sanders, mixers, etc., new. 47/6 (despatch 2/-).

**AIR THERMOSTATS** (Kieft-Pullin). Adjustable range 30/90 deg. F. Switching capacity up to 15 amps. A.C. In smart ivoryine housing 4 1/2 x 2 x 2in. Easily installed, ins. ructions with each. Right for greenhouses, rooms, labs., etc., 45/6 (despatch 2/-).

**EXTRACTOR FAN**. A very popular line. Well-made units at much lower than normal prices. 200/250 v. A.C. Induction motor silent running, no interference. With mounting frame and back grille, ready for easy installation. With 8in. impeller (10in. overall dia.), 200 C.F.M., 25/5/-, 10in. impeller (12in. overall), 240 C.F.M., 25/12/8. Also minor model, 6in. overall dia., 75 C.F.M., 24/12/6 (despatch any one 3/-).

**COOLING OR EXTRACTOR FANS** with open type S.P. induction motor, 200/250 v. A.C., 2 1/2in. by 2 1/2in. with 6in. plastic 3-blade impeller. Also suitable for projector lamp cooling and convector heaters. Selling very fast at only 22/8 (despatch 2/9).

**COMPLETE SEWING MACHINE MOTOR OUTFIT**. No better job obtainable at any price. 200/250 v. A.C./D.C. Fitted latest radio/T.V. suppressors. Comprising motor with fixing bracket foot control and switch, needle light with switch, belt, etc., and instructions for easy fixing to ANY machine. The complete outfit, still 23/15/- (despatch 3/-).

**WE CALL THEM**

**CAPACITORS, THESE DAYS"**

Condensers ... or Capacitors ?

Whichever you *really* favour, you'd better fall in line with the little egghead. Any day now, when he's designing his first electronic computer, he'll be solemnly specifying

S.T.C. Capacitors — and expounding at awful length on the reasons why.

Good reasons, too — but you doubtless know them already. So let's

simply remind you

that we are now

manufacturing :

STANTELAC CAPACITORS

STANTELUM ELECTROLYTIC CAPACITORS

MINIATURE STANTELUM ELECTROLYTIC CAPACITORS

STANTELISED METALLISED PAPER CAPACITORS

AIRCRAFT AND MARINE SUPPRESSORS

# 6,000 Times Faster than a Space Rocket

The tracing speed of a high-speed cathode-ray oscillograph is more than 30,000 miles per second compared with 5 miles per second of the last stage of a rocket to put its satellite into orbit. Thus the tracing speed of the oscillograph is 6,000 times faster. This means that the 240,000 miles distance to the moon could be covered in 8 seconds.

Efficient—  
Modern—  
Reliable

### Electronic Valves—

### The Decisive Components of Modern Measuring Instruments

In countless laboratories and workshops rapidly changing electric processes are traced with cathode-ray oscillographs. The quality of its electronic valves determine its efficiency and performance. Measuring instruments are of greatest importance to science and industry, and with each year more and more of them are being produced and consequently the demand for electronic valves and tubes is constantly increasing. Trade with these vital components has developed into an important business on the world market. The valve and tube manufacturers of the German Democratic Republic are in a position to supply you with high-quality receiver valves, long-life valves, oscillograph tubes, thyratrons, and stabilisers for all purposes.

## MOVING COIL VIBRATOR

TYPE VI000C

This vibrator has been developed to fill in the need for a medium power vibrator with a table surface in place of the usual single point drive spigot. The table is cast from a high duty magnesium and is 6in. (15.2 oms) in diameter and provided with 12 x  $\frac{3}{8}$ in. B.S.F. tapped holes for attachment of the test object. The moving coil is attached directly to the table casting. The weight of the moving system is 17.6 lbs. (8 Kgs.), and a bare table acceleration of 31 'G' peak can be obtained for an input current of 10 amps., which is equal to a thrust of 550 lbs. peak for an input power of 1 KW. The vibrator can also be supplied with a blower (V.1000C.B.) and will deliver a thrust of 750 lbs. peak for an input power of 2 KW.

Can be trunnion mounted if required.

EASILY FINISHED  
with paint or p.v.c. foil

Fibreform mouldings are made from an exclusive material of strong cellulose fibres bonded with synthetic resins. They are strong — need no smoothing, readily take an air-dried or stove enamel finish or a bonded P.V.C. foil. Because they mould easily and accurately, we can produce quite large and complex forms at low cost.

We make television receiver cabinets and backs — clock cases — and if you examine its possibilities — your new products.

# electrical components

Our long experience in the design and manufacture of electrical components enables us to offer a wide range of products which will meet with the many requirements of the electronic industry today.

Our technical advisory service is available to assist in the design of any special item of equipment.

We are specialists in the design and manufacture of encapsulated components in Epoxy and Polyester resins. Illustrated on right are a few typical examples. Below is an astatic wound A.F. screened line transformer with windings encapsulated in epoxy resin. The insulation of the 'line' winding provides isolation against voltages of 30 KV RMS.

We illustrate examples of our extensive range of knobs moulded in Polythene. This particular series has been developed for the R.A.F. and was designed by us to enable cockpit controls to be recognised by touch.

Also available in Polythene and P.V.C. are water-proof plugs and sockets which were developed for the R.A.F. and have since been extensively adopted by aircraft companies for use in conditions of high humidity.

Illustrated above is a selection from our range of miniature bobbins, transformers and chokes.

Head only ..... £7/19/11  
Arm only ..... £4/19/11  
(inc. tax)

### STEREOPHONIC AMPLIFIER AND PRE-AMPLIFIER

Twin channel amplifier and pre-amplifier for reproducing monaural and stereophonic sound from disc, radio and compensated tape. Ultra linear push/pull output giving 7.5 watts peak from each channel.

Amplifier £24 . 10 . 0  
Pre-amp. £16 . 10 . 0

### BRAND NEW 2 SPEED STEREO TRANSCRIPTION MOTOR

Operates at 33½ and 45 r.p.m. Full 12in. turntable.

£16 . 13 . 1  
(inc. tax)

### VARIABLE 3 SPEED MOTOR TYPE B (illustrated)

Operates at 33½, 45 and 78 r.p.m. Non-ferrous turntable. Built-in large stroboscope with internal light source. Precision ground and lapped spindles. Adjustable nylon graphite bearings. Synchronous motor.

£27 . 16 . 1  
(inc. tax)

# MICROWAVE LINKS

This Pye microwave television link Type PTC M1000 is suitable for use with the N.T.S.C., C.C.I.R. or the British 405-line systems. A sub-carrier f.m. music link circuit is incorporated. The normal frequency range is 6575 to 7425 Mc/s but models can be supplied to cover the range of 5925 to 6425 Mc/s. The r.f. power output is 1 watt. Wave guide or passive reflector installations available. Transportable link equipment is also available.

*Please write for full details.*

# FRAME GRID VALVES FOR TELEVISION

The PCC89 is a variable-mu double triode of frame grid construction, intended for use as a cascode amplifier at frequencies up to 220Mc/s. Its heater is designed for inclusion in a 300mA series heater chain. The valve may be used in tuners with the conventional PCF80 mixer valve or with the frame grid PCF86. In either arrangement it provides reduced noise and improved gain. As in the other valves in the new television series, the most obvious effect of introducing the frame grid is doubling of the slope. Thus the slope of each triode in the conventional PCC84 is 6.0mA/V, while under comparable conditions the PCC89 achieves 12mA/V.

## IMPROVED GAIN

A tuner designed round the PCC89 and PCF80 can have a gain of about 52 to 56dB on the various channels, compared with a maximum of about 48dB in a tuner using the conventional PCC84 and PCF80. With the PCC89 and PCF86, the maximum gain is increased to about 60dB, and the noise factor of the tuner is reduced to about 6dB at 200Mc/s. This 'frame grid' tuner can be used in receivers designed for service area or fringe operation. The circuit differences between these two receivers would be in the i.f. amplifier stages.

For optimum performance in a tuner the PCC89 must be operated under carefully chosen conditions. There must be sufficient power gain in the grounded cathode stage to overcome the noise of the grounded grid stage. There must also be sufficient a.g.c. voltage available to allow optimum signal handling and the required delay.

## OPTIMUM CONDITIONS

Optimum noise factor is obtained with -0.8 to -1.2V bias on the first triode, which is best realised by using cathode bias. Optimum gain is obtained with rather less bias, which can be realised only under grid current bias conditions. This second mode of operation shows up

to 2dB more gain on Band III than that obtainable with cathode bias, and just over 1dB on Band I, at the cost of a small increase in noise factor. However, the d.c. feedback effect of the cathode bias resistor is lost, and the spreads in gain will be a little greater with grid current bias. A tuner gain of 60dB (with PCC89 and PCF86) can be achieved on Band I with either system of biasing; but on Band III this figure is attainable only with grid current bias.

## TAIL AND A.G.C.

The PCC89 has been given a variable-mu characteristic so that it can handle large signals without introducing perceptible cross-modulation. The valve can be operated with any tail length between -9V and -22V (which are the voltages for 1/100th slope reduction.)

Signal handling ability, limited by sound on vision or vice versa, can be better than 1.0V at the grid of triode 1 (250mV at the aerial) with long tail conditions and with cathode or grid current bias for triode 2. In fringe areas, with adverse sound to vision ratios, half this figure is realistic.

Many different operating conditions are possible for the PCC89. The choice is based on the gain-slope relationship which is required, the available a.g.c. voltage, and the i.f. arrangements to which the cascode has to be matched.

The high gain of frame grid tuners means that the designer should give special attention to the question of stability in both parts of the cascode circuit. Neutralisation of the anode-to-grid capacitances is advisable.

PCC89

# Fatigue Testing

The proved reliability of the Brimar 'T' range of valves has been "built-in" as the result of experience gained from a continuous programme of examination and testing. One of these tests is illustrated. Valves are placed on a specially constructed vibration table which is operated at 170 cps continuous vibration for 100 hours. The plane of the vibration is across the axis of the valves which simulates motion or other vibration which occurs in military use. The information derived from this and other tests on valves for special applications is used to improve manufacturing techniques on commercial types: yet another reason for making Brimar the obvious choice when the demand is for a reliable valve.

(8 small pins)

**MINIATURE  
UNITORS**

L.1389/P & S  
(12 small pins)

These items in our miniature range give three possible pin or socket arrangements, i.e. 4 small and 4 large pins, 8 small pins, or 12 small pins, each connector having a central earthing pin and polarising key. The sockets are gold- or silver-plated (-/Au or -/Ag) beryllium copper, four-slotted to give resilience and ensure good contact with the pins which are gold- or silver-plated brass.

These miniature Unitors have been designed to carry out the functions of the standard Unitor on miniaturized equipment where space and weight considerations prevent the use of the larger type. Their purpose is, of course, the inter-connection of units in an assembly. Various pin combinations and arrangements are possible within the same chassis cut-out, giving a highly flexible method of obtaining an individual connector for each group of inter-connections. The moulding carries corresponding numbers on each side of both plugs and sockets, facilitating wiring and fault finding.

Most "Belling-Lee" products are covered by patents or registered designs or applications.

**"BELLING-LEE" NOTES**

No. 13 of a series

**Some aspects of G : the effect of acceleration**

This series of tests covers far more ground than we can ever hope to touch upon in one issue. One column might serve as an introduction to a very complex subject, that is about all.

Acceleration, i.e. the rate of change of velocity, can affect the performance and reliability of electronic equipment in many ways. The mechanical strain can result in damage, both when the acceleration is steady, and also when it varies, either periodically as with vibration or suddenly as with shock or bumping. These four headings; steady acceleration, vibration, shock and bumping summarize the most important mechanical tests that have to be made to electronic components. Let us look at each one separately.

A good example of steady acceleration is given when you ride in a car. While it is increasing its speed, you find yourself being pressed into the back of your seat. When travelling at uniform speed, although it may be fast, you feel no force acting on you, unless of course you turn a corner. If now the brakes are applied you are apt to crack your head on the dash board.

These same forces occur, but with much greater severity in aircraft and rockets. The forces can be in any direction, for example, backwards during take-off, sideways while manoeuvring and forwards during landing, and the magnitude of the force can be very much greater than the force due to the static weight of a component. In fact, the strain is often expressed in terms of "g," it being assumed that the equipment is being subjected to a "force "g" times its normal weight. In incorrectly designed equipment unretained valves might fly from their sockets, and heavy components such as transformers, if insecurely fixed, might come adrift from their mountings, in both cases causing serious failure of the equipment. All parts of the equipment, however small, have an apparent weight many times their normal weight, and care and good design are required for equipment to remain working under these conditions.

*\*The force acting on a body at rest i.e. gravity, is one 'g' times its mass.*

# we can get you out of a rectifier problem

We, that's the M-O Valve Co. Ltd., have spent over 40 years bottling up hard valves, soft valves, tough going-aloft valves, standard valves, valves to government specs . . . so we know how you feel in there. But we're used to it, because now we've acquired a rare collective know-how that can beat most valve problems. And of course, it's backed by the brilliant research, progressive development and flexible production you'd expect us to have. Next time you're enveloped in a valve problem, let us know—if we haven't a ready-made type for you, we'll see if we can make you one to measure.

**XENON FILLED TYPE.** *The G E C. range will keep going a long time—and has better PIV safety ratings too.*

**MERCURY VAPOUR TYPE.** *We've had over 30 years of know-how in making this type of rectifier. As you'd expect, they're the best you can get. There's a range of eight.*

**VACUUM TYPE** *Too many even to give you an outline. (Bi-phase, full-wave, high voltage, special quality, 450 to 28,000V rms.)*  
*Let us know what types you're interested in and we'll send you full details.*

# Aspects of design

This is the Nineteenth of a series of special features dealing with advanced problems in television and radio circuit design to be published by The Ediswan Mazda Applications Laboratory. We will be pleased to deal with any questions arising from this or other articles, the twentieth of which will appear in the March 1960 issue.

Most television receivers of today employ a fine tuning control to enable the viewer to adjust the receiver to its optimum frequency. Manual tuning adjustments may be necessary when the receiver is switched on from cold or when switched from one channel to another, owing to local oscillator drifts caused by initial warming up and mains voltage fluctuations. Temperature compensation of oscillator capacitors reduces frequency drift appreciably but even so some external adjustment may be required to obtain the best picture quality. The fine tuner itself contributes in no small way to the drift in the oscillator circuit and its total elimination is an advantage. Optimum picture and sound quality can be achieved without the need for manual tuning adjustment of any kind if the receiver incorporates Automatic Frequency Correction. Briefly, the operation of AFC is carried out in the following manner. The sound IF frequency is fed to a frequency discriminator tuned to 38.15 Mc/s. Any drift of the local oscillator frequency results in an identical drift of the IF frequency. A d.c. voltage output is obtained across the discriminator load resistance, whose polarity depends upon the direction of the IF frequency drift about its centre value of 38.15 Mc/s. The output voltage from the discriminator is fed back to a variable reactance element which forms part of the oscillator circuit and it has the property of controlling the oscillator frequency when a d.c. bias voltage is applied to it. By proper arrangement, the d.c. output voltage from the discriminator can be used as the control bias and thus counteract the initial oscillator frequency drift.

Conventional valves have been used as variable reactance elements in FM receivers operating in Band II, but they are more difficult to apply for Band III television frequencies. However, one of the more recent semiconductor devices is the Junction Diode, such as the Ediswan Mazda XD901, which behaves as a voltage sensitive variable capacitor and this device opens up new design possibilities in oscillator control circuits. The Ediswan Mazda XD901 has been specially designed for AFC application and is ideally suited for use in Bands 1, 2 and 3. Its extreme compactness makes it possible to be incorporated in a conventional turret tuner with little modification. The Ediswan Mazda XD901 is a PN junction type germanium diode, hermetically sealed in a compact can and has axial stub leads. The series lead inductance has been made very small, an important feature for use at frequencies of up to 250 Mc/s.

## JUNCTION DIODE CAPACITANCE

The capacitance of a reverse biased abrupt semiconductor function varies with voltage according to the law:

$$c = \frac{k}{(V+U)^{1/2}}$$

where k is a constant, U is approximately 0.4 V for the XD901 and V is the reverse bias voltage.

A typical curve of change of capacitance with reverse bias of the Ediswan Mazda XD901 is shown by curve A, Figure 1.

An oscillator circuit incorporating the Ediswan Mazda Junction Diode for AFC is shown in Figure 2. The diode is operated at a static reverse voltage of 5 V, on which is superimposed the controlling error voltage derived from the frequency discriminator. A d.c. blocking capacitor  $C_p$  in series with the diode is used and its value is made small in order to increase the effective series resonant frequency and thus reduce the effective diode losses across the oscillator grid circuit. When the diode is used in the moulded nylon holder specially designed for the purpose the effective series resonant frequency of the Ediswan Mazda XD901 diode with a series capacitor of 7 pF is about 445 Mc/s at a bias of 5 V. This series capacitor however, reduces the effective capacitance sensitivity of the diode in the circuit. Typical capacitance-voltage curves, as seen across the oscillator grid circuit are shown in curves B, Figure 1, the typical value of  $C_p$  being 7 pF. Further, in order to achieve the highest possible capacitance sensitivity, fixed tuning capacitors are minimised in the oscillator circuit, so that a sizeable proportion of the tuning capacitance is formed by the diode and its series capacitor.

# 19

## AUTOMATIC FREQUENCY CORRECTION WITH A SEMICONDUCTOR JUNCTION DIODE

The diode series resistance  $r_s$ , which is not frequency sensitive, dissipates some available oscillator power. The grid circuit resistance of an oscillator is inherently low and to some extent this masks the damping effect that the diode series resistance may have on the circuit. But to ensure a low loss even at 250 Mc/s, the series resistance of the XD901 has been reduced to 5 ohms.

The undesirable effect of the flow of leakage current in the AFC diode is to cause a voltage drop across the decoupling resistors and thus to reduce the effective applied voltage to the diode. The leakage current of a germanium diode is sensitive to temperature changes but, apart from surface leakage, is almost independent of the applied reverse voltage until the breakdown region is reached. The magnitude of the surface leakage current is influenced by the state of cleanliness of the diode during manufacture. With modern production techniques, the leakage current of the Ediswan Mazda XD901 is controlled to a value which ensures that during life it does not exceed  $10 \mu\text{A}$  at  $55^\circ\text{C}$  and at a reverse bias of 10 V.

In a TV receiver, an AFC loop designed on the basis of the above considerations can give a frequency drift improvement of 7 to 1 on Channel 9, and 3 to 1 on Channel 1, when compared with a similar receiver but without AFC.

**EDISWAN MAZDA XD901 JUNCTION DIODE**

The XD901 is a junction-type germanium diode having the property of a voltage sensitive variable capacitance. It is specially constructed to have a low internal series resistance and minimum residual inductance. These important features ensure successful operation at 250 Mc/s by providing a sufficiently high self-resonant frequency and high Q. The diode is hermetically sealed in a compact can and it has axial stub leads for clip-in connections.

A variable capacitance diode having the small size and low losses of the Ediswan Mazda XD901 has many useful applications in electronics, for instance, it is particularly suitable in Automatic Frequency Control circuits in Bands I, II and III.

**RATING** (Absolute value for  $T_{amb} = 55^{\circ}C$ )

Maximum reverse voltage (d.c.)	(volts)	10
Maximum reverse voltage (peak)	(volts)	14

**GENERAL CHARACTERISTICS**

Capacitance $c$ at $V = 5$ V (Diode biased in reverse direction)	(pF)	$12 \pm 3$
Resistance $r$ (approx)	(ohms)	5
Inductance $l$ (approx)	( $\mu H$ )	7
(With connections made 1/8in. from the seals)		
Maximum leakage current $V = 5$ V at $55^{\circ}C$	( $\mu A$ )	6
Maximum leakage current $V = 10$ V at $55^{\circ}C$	( $\mu A$ )	10

**EQUIVALENT CIRCUIT**

For Diode Biased in the reverse direction.

**DIMENSIONS AND BASING**

\* To bias in reverse direction this lead should be positive with respect to the other lead.

The can is covered with a plastic sleeve of wall thickness 0.01in. which is not included in the above dimensions.

In Fig. 1 curve A shows the variation of diode capacitance at 470 kc/s with applied reverse bias, approaching very closely to the theoretical law relating diode capacitance to applied bias, viz:

$$c = \frac{k}{(V + U)^{1/2}}$$

$c$  = diode capacitance.  
 $V$  = reverse bias in volts.  
 $U \approx 0.4$  volt.  
 $k$  is a constant  $\approx 27$ .

Curves B<sub>1</sub> & B<sub>2</sub> show the capacitance change that would apply at VHF in a practical circuit, in this case an AFC circuit for a television receiver, with the diode mounted in a "Clix" holder in series with a capacitor of 7 pF.

**DIODE MOUNTING**

To avoid any risk of damage to the diode, due to excessive heating, the diode should not be soldered directly into the wiring or be clamped in such a way as to impose excessive mechanical strain. It is preferable to use the diode in conjunction with a suitable holder making use of the short axial stub leads provided for this purpose.

A holder that has been specially designed for clip-in mounting of the XD901 diode is the "Clix" holder type 103/B2362 in which the spring clips, while giving good electrical contact, still provide a low inductance. The XD901 diode mounted in the special "Clix" holder is illustrated above.

The moulded nylon body of the holder is shaped to prevent the diode being accidentally inserted with incorrect polarity and it provides three alternative mounting positions. The illustration shows the mounting where one diode terminal can be directly earthed; alternatively, the holder can be fixed either on its broad or narrow side whichever is more convenient.

**COMPLETE SYSTEM PLANNERS**

# on the subject of suppression

This new Plessey publication is designed to assist all those currently concerned with the problems of suppression of all electrical equipment.

The book provides Design Engineers with a standard reference to the complete range of suppressors produced by Plessey at Towcester, their individual suitabilities in application, their construction and their operational characteristics.

Many illustrations and dimensional diagrams are included.

Please ask for Plessey Publication No. 952.

# 203

For versatility in camera channels

**E.M.I. ELECTRONICS LTD**

BROADCAST EQUIPMENT DIVISION  
HAYES · MIDDLESEX · TEL: SOUTHALL 2468

The E.M.I. Camera Channel Type 203 is unique in possessing the following features :

- \* Designed to operate with 4½ inch Image Orthicon pick up tubes with the facility of rapid interchange to 3 inch Image Orthicon or C.P.S. Emitron pick up tubes if required.
- \* Five position turret including one special position providing facilities for : easy withdrawal of pick up tube through turret without opening camera sides ; and mounting of diascope or non standard type of lens.

### **E.M.I.'s new 203**

- \* Will accommodate TTH Studio Varotal or Zoomar Zoom lens without modification.
- \* Operation on any one of the following systems by simple change of plug connectors :  
625 lines to CCIR/OIR Standards  
525 lines to IRE/EIA Specifications  
405 lines to BBC TV80 Specification
- \* Extensive use of plug-in printed wiring units provides very good accessibility, and ease of maintenance.
- \* Special quality valves and high stability circuits eliminate need for adjustment over long periods of operation.
- \* Remote control of lens apertures by easily detachable servo mechanism.
- \* Optional preset filter wheel, electronic Image Orbiting and hour meter.

*For full technical details, or for a demonstration, get in touch with us.*

**RADIO & TV. SERVICING**  
**this new, easy, practical way!**

**YOUR OWN... BUSINESS...**

**CAREER... OR**

**FASCINATING HOBBY**

*Electronics is rapidly becoming a great new industry with far reaching applications into every field of modern activity.*

*You can learn all the essentials of this new science at home in your spare time and turn your knowledge to good purpose!*

*Now is your chance to set up your own business and be your own boss!*

**RADIOSTRUCTOR EQUIPMENT COURSES MAKE LEARNING SO SIMPLE**

You learn by building actual equipment with the big kits of components and parts which we send you. You advance by simple steps using high quality equipment and performing a whole series of interesting and instructive experiments—there are no complicated mathematics! Instruction manuals and our teaching staff employ the latest techniques for showing clearly how radio works in a practical and interesting manner; in fact, you really have fun whilst learning!

And you end by possessing a first-rate piece of home equipment with the full knowledge of how it operates, and how to maintain it afterwards. In fact, for those wanting help with their radio career training, to set up their own full or part-time servicing business, or the hobbyist, this new and instructional system is exactly what is needed and it can be provided at very moderate cost with payments available. Post the coupon now, for full details. There is no obligation of any kind.

# Vortexion quality equipment

Model W.V.A.

## TAPE RECORDERS

The W.V.A. tape recorder now has provision for Stereo plug in heads to enable this recorder to replay Stereo. The regular models are retained with additions and improvements. Our high standard which has made these recorders famous has been maintained, resulting in their being chosen for the foremost musical centre in this country.

## 30/50 WATT AMPLIFIER

Gives 30 watts continuous signal and 50 watts peak Audio. With voice coil feedback distortion is under 0.1% and when arranged for tertiary feedback and 100 volt line it is under 0.15%. The hum and noise is better than—85 dB referred to 30 watt.

It is available in our standard steel case with Baxendale tone controls and up to 4 mixed inputs, which may be balanced line 30 ohm microphones or equalised P.U.s to choice.

## 12-CHANNEL ELECTRONIC MIXER

This is similar to the 4-channel, but is fitted with 12 hermetically sealed controls, 12 balanced line microphone transformers potted in mu-metal boxes, and a mains transformer also potted in mu-metal. All components which can affect noise are tested and selected before insertion. It is supplied in standard steel case or 7in. rack panel.

## 120/200 WATT AMPLIFIER

Will deliver 120 watts continuous signal and over 200 watts peak Audio. It is completely stable with any type of load and may be used to drive motors or other devices to over 120 watts at frequencies from 20,000 down to 30 cps in standard form or other frequencies to order. The distortion is less than 0.2% and the noise level.—95 dB. A floating series parallel output is provided for 100-120 V. or 200-250 V. and this cool running amplifier occupies 12½ inches of standard rack space by 11 inches deep. Weight 60lb.

Full details and prices of the above on request

# how many ohms

# in a shoelace...?

Fanciful? No, because as our photograph proves, a shoelace can be made electrically conducting by impregnating it with "dag"\* colloidal graphite.

Unrealistic? As a practical proposition the shoelace test is just that; as a simple illustration of a fundamental idea we think it is effective enough.

Over-simplified? Perhaps, yet thousands of cars are fitted with a non-metallic conducting braid which has much in common with a shoelace impregnated with colloidal graphite.

A non-conducting material can be made conductive by treating it with "dag" colloidal graphite, either by impregnation (surface coating or dipping after manufacture) or incorporation (addition during manufacture).

Furthermore, you can impart any or all of the many other characteristics of colloidal graphite: low friction and "parting" properties, resistance to heat and wear, chemical inertness.

\* Registered trade mark of Acheson Industries (Europe) Ltd; licensed user—Acheson Colloids Ltd.

# Amplifiers that are acclaimed throughout the world\*

LEAK Amplifiers are the choice of professional engineers such as the B.B.C. (over 500 delivered), the South African Broadcasting Corporation (600), ITV and many other Commonwealth and Overseas broadcasting and TV systems, who use them for transmitting and/or monitoring the broadcasts to which you listen. Also, many of the gramophone records to which you listen are cut via LEAK Amplifiers.

Extract from Test Report by J. C. G. Gilbert reprinted from the Music Trades Review, also reprinted in our advertisement in the October issue of this magazine. The full two-page Test Report and an illustrated brochure on the amplifiers will be sent you on request.

The "Point-One Stereo" pre-amplifier is designed so that it can be used with any Leak monaural power amplifier or a combination of any two Leak monaural power amplifiers additionally to its more normal use with the "Stereo 20" or "Stereo 50."  
"The Point-One Stereo" pre-amplifier is probably the most comprehensive unit in existence covering every requirement for stereo tape, disc and radio plus monaural amplification for any form of input signal . . . it is difficult to think of any additional requirement that one would ever wish. The equipment performs with the high performance always associated with the tradition of Leak equipment. It is a fine example of design and construction, and the pre-amplifier can be used with any other Leak main amplifiers. How the pre-amplifier can be sold for a little as £21 can be answered only by Harold Leak . . .  
Summing up, therefore, one can highly recommend the Leak stereo system for use with any current monaural or stereo input whether it be from pickup, tape, radio or microphone."

Ask your Dealer to show you Leak Equipment.

### INDUCTOR FLUORESCENTS

These represent today's best value in lighting. All models are complete with polyester-filled chokes (so far as we know not available in any other low-priced fittings) all are made from heavy gauge sheet steel, stove enamelled white, use all canister-type plug-in starters, and all are fitted with interference suppressors. Guaranteed for two years:

- Inductor 80 for 6ft. 80-watt lamp 39/6+5/- carr. and ins.
- Inductor 40 for 4ft. 40-watt lamp 32/6+4/6 carr. and ins.
- The Three-Forty; for 3ft. 40-watt lamp 31/6+3/6 carr. and ins.
- Inductor 20 for 2ft. 20-watt lamp 29/6+3/6 carr. and ins.
- Circle Light for 40-watt circular lamp 49/6+3/- carr. and ins.

Note: Prices do not include tube but these are the latest bi-pin type easily obtainable from your local electrical shop or if you wish direct from us.

#### Special Offers:

- Inductor 40 complete with tube ready to work 39/6+5/6 carr. and ins.
- Three-Forty complete with tube ready to work 39/6+4/6 carr. and ins.

### Miniature Microphone

American made. Dynamic type. Real bargain at 2/8, plus 6d. postage.

### Building a Scope?

3in. oscilloscope tube. American-made type No. 3FF7, octal base 6.3 v. .6 amp. heater, electrostatic deflection, brand new and guaranteed, with circuit diagram of oscilloscope, 15/- each, plus 1/6 post and ins.

### "Dim and Full" Switch

Particularly useful for controlling photo-flood lamps which have only a short life at full brilliance. This toggle switch has three positions: the first position puts two lamps in series at half brilliance for setting up, the second position is off and the third position full brilliance for the operation shots. Also useful for controlling night lights, heaters, etc. Price 3/9 each. Post 9d. Circuit diagram included.

**TV Masks**  
Latest type grey crystallite.  
14in., 10/-; 17in., 12/-.  
Plus 1/- post.

### Dulci DPA10 Amplifier

Made by the Dulci Company. It is laboratory designed and is of the highest fidelity, has superb reproduction and complete freedom from hum, high output sensitivity, 10-watt output and ample feedback all combined to give a truly linear output. Uses all-glass miniature valves, including two EL84s in push-pull. Price £12/12/-, or £1 down and 26 weekly payments of 10/-.

Our 68-page Hi-Fi Catalogue is now being sent out to customers—gives details of the latest and best Hi-Fi equipment with over 400 illustrations. Price 2/6 per copy which is refundable from purchases.

### INFRA RED HEATERS

These latest type heaters are ideal for bathroom, kitchen, bedroom, etc. They are simple to make from our easy to follow instructions—uses silica enclosed elements designed for the correct infra-red wavelength (3 microns). Price for 750-watt element and instructions, 15/8 plus 2/6 post and insurance. Or made-up heater, 52/6 plus 3/6 post and insurance—fully tested and guaranteed.

### Assure your future

The ownership of a good instrument has been the turning point in many a famous career. You can own the latest Fullin Series 100 Test Set which is undoubtedly a most useful instrument by a firm long famous for fine instruments, entirely redesigned, it has a square movement with diacron plastic cover, this makes for a brighter, more readable scale, extra scale length and wider angle of vision. With the test set is included a pair of combined test prods and crocodile clips also a stand for inclining the meter at the best reading positions. Ranges A.C. Volts: 0-10, 0-25, 0-100, 0-250, 0-500, 0-1,000, ditto D.C. A.C. Current 0-100 mA. D.C. Current 0-2.5, 0-10, 0-100, 0-500 mA. Resistance: 0-1M and 0-10K. All at 10,000 ohms per volt—Price £12/7/8 or £14/- deposit and 26 fortnightly payments of 10/-, non callers add 6/- carr. and insurance.

FREE GIFT.—All purchasers of the above items this month will receive Range Extender scale and data which add. capacity 2Pf—ImFd., in two ranges. Inductance 0-100 henrys, etc., etc.

### ANOTHER BATTERY CHARGER BARGAIN Components Would Cost More

Car Battery Charger—ready-made high output battery charger in stove enamelled sheet steel louvered case. New, complete and ready to work. Rated at 12 v. 5 amps. and variable rate selector for trickle charging, also a meter to show charging rate. Suitable for 230/250 A.C. mains. Special snip price of 65/-, plus 3/6 post and ins.

### Unique Opportunity to build Fine Transistor Set

Constructor's parcel: to build Pocket 6 Transistor Set as currently being sold at £17/17/-. Parcel comprises motified, two-tone cabinet as illustrated, tuning dial, two gang tuning condenser, combined bakelite chassis/printed circuit and easy-to-follow circuit. Costing value 57/6—offered while supplies last at only 29/6, plus 2/6 post. Suitable for your own circuit or to build original circuit. All parts available at highly competitive prices. Do not miss this tremendous bargain.

### 12-Channel Turret Tuner

Ideal for converting an old or building into new T.V. These are brand new stock not surplus, supplied complete with valves and coils for local Band I and Band III stations. Model 1. I.F. Output 33/38 Mc/s. series heaters (parallel heaters, 5/- extra). Model 2. I.F. Output 16/19 Mo/s parallel heaters (series heaters, 5/- extra). With instructions and circuit diagram. 79/6. knobs 3/6 extra. Postage and insurance 2/6.

### SPECIAL THIS MONTH

- Battery Charger Rectifier—selenium 12-15 v., 5 amp. 12/6.
- Blank Metal Chassis—all 2 1/2 in. deep from 18 gauge aluminium. Sizes: 6in. x 2in., 4/6; 7 1/2 in. x 5in., 6/-; 13 1/2 in. x 9in., 10/4 x 7 1/2 in., 7/-; 11 1/2 in. x 7 1/2 in., 8/-.
- Metal Chassis—crunched for Mullard 510 Amplifier, complete with inner screening sections and stove enamelled, 12/8 set.
- Geiger Counter Tubes—20th century type, Type No. G24, with circuit of geiger counter, 29/6.
- Luminous Switch, double pole designed for electric blankets, neon indicators glow when appliance is switched on, 10/-.
- Waterproof Heater Wire—suitable electric carpets, electric blanket, hand muffs, foot pads, etc., 7d. per yard.
- Twin Twisted Lighting Flex—equivalent 14/36. rubber insulated, cotton covered, 17/6 per 100 yard coil.
- Movink Coil Meters
  - 0-100 microamp ..... 2in. flush ... 17/6
  - 250-0-250 microamp ..... 2 1/2 in. surface 27/6
  - 750 microamp ..... 2 1/2 in. surface 17/6
  - 5-0-5 microamp ..... 2 1/2 in. flush ... 17/6
  - 0-30 milliamp ..... 2 1/2 in. flush ... 17/8
  - 0-100 milliamp ..... 2 1/2 in. flush ... 15/-
  - 0-300 milliamp ..... 2 1/2 in. flush ... 15/-
  - 0-500 milliamp ..... 2 1/2 in. flush ... 15/-
- Unbreakable Mains Lead type of lead fitted to electric razors makes fine lead for test meters and any other devices where subject to continuous bending. Twin figure eight construction, soft cream p.v.c. covered. Normally costs 2/- per yard. Three 6-ft. leads for 2/-.
- Metal Rectifier, 60/80 mA. 250/300 v., 4/8.
- Filament Transformer, 6.3 v., 14 amps. 6/8
- 3 Amp Dropper—tappings marked 200/220/250, 3/6.
- Output Transformer—standard pentode—4/6, multi ratio, 6/6.
- Bi-metal Strip with heavy duty contact—ideal for thermostat, fire alarm, etc. 2/6.
- Neon Lamp—mid-gate wire ended, ideal mains tester, etc., 2/-, ex Govt., 1/6.
- Philips Trimmers—0-30Pf, 1/- each, 9/6 doz.
- Set of 8 Allen Keys, 3/6.
- Heavy Duty Test Prods—red and black with plug-in lead attachments, 9/6.
- Install those extra points, 3.029 twin flat T.R.S. cable. Big purchase enables us to sell this at 45/- per 100 yds. carriage 3/6.
- Low Resistance Head Phones. Ideal crystal sets, etc., 7/6, plus 2/6.
- Goodmans Multi Ratio Output Transformer, 6 watt, 3 ratios, from 12-1 to 72-1. Centre tapped for push/pull, 7/6, plus 1/6.
- Ditto, unbranded, 6/6, post 1/6.
- Cold Cathode Valve CV413. Voltage regulator or trigger switch—unused but ex-equipment. 2/- each.
- Tag Panels. Ideal for constructors, experimental circuits, etc., 3 of each of 12 different types, 5/-, post 1/6.
- Slydlok Panel Mounting Fuses with carrier, 6 amp. 2/- each, 15 amp. 2/6 each. Belling Lee 2BA fully insulated terminals for mounting through metal panels, 2/- each.
- Terminal Heads, insulated 4BA, 2/- doz. 1 mfd. 350 v. Small tubular metal case condensers made by DuBilier 2/6 doz.
- 50 Assorted Resistors. Well mixed and useful values 1/2 and 1/4 watt, 5/- for 50. Ditto, but 1 watt, 6/6 for 50.
- Mains Transformer. Standard 230 v. input 250-0-250 at 80 mA., 6.3 v. at 6 A., 12/6, post 1/6.
- Toggle Switch. Standard metal body, type with round dolly, fixing ring and on/off indicating plate. 1/3 or 12/- doz.
- Metal Rectifier. 250 v. 60-80 milliamps. ideal for mains set or instrument or to replace that expensive valve, 5/6.
- Screened Cable. Rubber covered flexible with metal braiding, ideal for microphone or gramophone extensions, 4d. per yd., 30/- per 100 yds.
- Install 2-Way Switches. Our outfit comprises: 30 yd. multicore cable, two 2-way switches, two wood blocks. Full instructions, 9/6 each, post and insurance, 2/6.
- Long, Medium and Short Wave Coil Pack. An exceptionally well made coil pack which covers the standard long, medium and short wavebands for 465 k/c I.F. complete with diagram of connections, 19/6, plus 1/6 postage and insurance—limited quantity only.

### For the Record Enthusiast

Non-four speed playing deck by E.M.I. has the following features—  
Velocity operated auto trip.  
Pick-up on switch, cannot be damaged.  
Remarkably low rumble achieved by single ball thrust and magnetic screen on motor.  
Anti-mono-phony mounting.  
The ideal unit to renovate old equipment or to build into new.  
Size: 11 1/2 in. wide, 1 1/2 in. deep, 2 1/2 in. high, depth 2 1/2 in.  
Mains model with stereo cartridge, £7/17/6. Or with monaural cartridge, £6/18/6, post and ins. 3/6.  
H.P. Terms on request.

FOR ADDRESSES SEE OPPOSITE PAGE

**Cine Cameras**

16 mm. motorised (24 VAC) for 16 frames per second, contains fine 1/8.5 triple anastigmatic lens

and spool to carry 25ft. of film—probable cost around £100, brand new and in sealed carton £610/- or 20/- deposit and 13 fortnightly payments of 10/-, post and insurance 3/6.

**SUPER SENSITIVE (2,000 O.P.V.) MULTIMETER KIT**

17 ranges including D.C. volts to 1,000 V. A.V. volts to 1,000 V. D.C. milliamps to 500 ohms, to 2 meg. All the essential parts, including metal case, selected resistors, wire for shunts, selected switches, calibrated scale and instructions, 32/6, plus 2/6 post and insurance.

**Charging Switchboard**

Offered at about one-twentieth of original cost. This is an ex-Government switchboard. It contains three reverse current relays, one voltmeter, one main ammeter, two secondary ammeters and three variable resistors for controlling circuits. These are original cases. Price £2/15/-, Carr. 10/-.

**Band III Converters**

Suitable Wales, London, Midlands, North, Scotland, etc. All the parts including 2 EF80 valves, coils, fine tuner, contrast control, condensers and resistors. (Metal case available as an extra). Price only 19/6, plus 2/6 post and insurance. Data free with parts or available separately, 1/6.

Please send two more kits, the one you sent last week is performing magnificently. We receive this sort of letter every day of the week, so if you have hesitated because you thought our kits too cheap you need hesitate no longer.

**Beginner's Superhet**

As supplied to many schools and colleges. A simple basic superhet—easy to understand and which can be progressively extended—ideal for students—components include—valves—metal rectifier tuning condenser—I.F. transformers, etc. In fact complete superhet except speaker. Price £3 plus 3/- post and insurance. Data included free or sep., 1/6.

**Avo Prodclips**

The advantage of these test prods is that by pressing the trigger at the side they become crocodile clips and can be left in circuit. This is a great time saver when servicing. Price 15/- pair.

**Philips AG2009 Transcription Unit**

Philips AG2009 Record Player a modestly priced 4-speed unit with many outstanding features, is ideal for the enthusiast who is assembling his own equipment or modernising an older installation. The pick-up arm is wired for stereo and the Philips stereo head is available as an optional extra. Eddy Current Brake gives ±2% fine adjustment on all four speeds. Continuously variable pick-up playing weight (2-12 gms.).

Supplied with Philips HI-FI crystal head, type AG3019 for microgrooves and 78 r.p.m. Frequency response 30-15,000 c/s. Pick-up lifting and lowering device. Individually balanced heavy turntable. Muting switch fitted.

Can be used with any amplifier or radio set. Complete with monaural pick-up, £10/10/-, or £1 deposit and 21 fortnightly payments of 10/-.

Available also with stereo head, diamond or sapphire stylus. Prices on request.

**£100 WORTH OF EQUIPMENT 19/6**

The famous R1154—unused but slightly soiled and not tested. Covers 200-500 kc/s. 3-5.5 Mc/s. and 5.5-10 Mc/s. Has unique "click stop" mechanism (7 stops) and permits selected frequency to be held, returned to, etc. Hartley oscillator, power amplifier, keying and speech. Wonderful breakdown value—meters, relays, switches. Complete with valves—real bargain at 19/6, plus 10/- carriage.

**For Your Service Department**

An invaluable tool for working inside a dark cabinet or cupboard. This is a screwdriver with torch and has four interchangeable bits, two for the ordinary slotted screws and two for Philips heads. The torch section operates from 1½ v. batteries in the handle and will save its cost in frayed tempers alone. Why not treat yourself to one of these now? Only 10/6, plus 1/6 post and packing.

**TABBY EQUIPMENT COMPLETE**

Complete equipment for seeing in the dark, as fitted to Army vehicles for night driving, etc. Complete working equipment comprises: 2 Infra Red Radiators, adjustable binoculars, powerpack for 6 or 12 volts, control units and interconnection cables. Original cost, probably around £100. Unused and in perfect order—£8/19/6 or 10/- deposit and 15 fortnightly payments of 10/-.

If ordering by post, address your order to the Company nearest to you. Please include postage.

**A.C./D.C. Multimeter Kit**

Ranges: D.C. volts 0-5, 0-50, 0-100, 0-500, 0-1,000. A.C. volts 0-5, 0-50, 0-100, 0-500, 0-1,000. D.C. milliamps 0-5, 0-100, 0-500. Ohms 0-50,000 with internal batteries, 0-500,000 with external batteries. Measures A.C./D.C. volts. D.C. current and ohms. All the essential parts including metal case, 2in. moving coil meter, selected resistors, wire for shunts, range selector, switches, calibrated scale and full instructions, price 19/6, plus 2/6 post and insurance.

**Crystal Mike by Acos**

Model 39/1, this is ideal for tape or general amplifiers, complete with screened lead, 39/6, plus 1/- post.

**Radio Stethoscope**

This can be slipped into the pocket rather like a fountain pen. With it in most districts a receiver can be checked from the grid of the first valve right through to the output without a signal generator, the stethoscope will operate in both L.F. and R.F. circuits without alteration. It is a complete faultfinder.

All the necessary parts to make this tracer, 6/6, post 1/-.

**T.V. Service Sheets**

200 sheets covering most popular post-war televisions by leading makers—Cosser, Ekco, Ferguson, Fre, etc. £2 post free. PREVIOUS PURCHASERS OF THESE SHEETS PLEASE NOTE: WE CAN SUPPLY SHEETS Nos. 100-200, £1, or 150-200, 10/-.

**Tube Tester and Re-Activator**

We can supply all the main components for making this unit which will not only test Cathode Ray Tubes but also will re-activate them, supplied complete with full instructions. Price £3, plus 2/6 post and ins.

**Hi-Fi Snip  
Infinite Wall Baffle**

Nicely veneered and polished. Corner fitting (attaches to picture rail). Takes up no floor space. Gives really fantastic results with only low-priced Hi-Fi speaker. Fitting for tweeter. Only 45/- each. Carriage and insurance 3/6.

# ADDS A NEW DIMENSION TO SOUND

The Binson "Echorec", distributed by Modern Electrics, is a device for superimposing controlled echo on to any audio signal. It achieves within the size of a compact, fully portable instrument, effects normally requiring large echo chambers and associated equipment. Three working channels are provided for, the echo interval is variable, and swell and other effects are obtainable. The unit is of particular value in recording, for P.A., etc. Its characteristics will also no doubt lend themselves to other original applications.

## THE BINSON "ECHOREC"

### ABRIDGED DESCRIPTION

- Three inputs and outputs.
- Push-button channel selection for 1, 2 or 3 channels.
- Controls for echo intervals, volume of echo, swell effect, volume level on input channels, etc.
- Complete with fitted carrying case, leads, plugs.
- A.C. mains operated.

140 gns. Leaflet on request.  
Trade enquiries invited.

**MODERN ELECTRICS (RETAIL) LTD.**

and of course, the best of Britain's Hi-Fi

We send tape-recorders by leading makers, and the best-known high fidelity equipment for all types all over the world. Our experience in exporting for individual requirements is second to none. Space prevents our publishing our usual detailed selections this month but your enquiries are invited without obligation. Prompt and careful attention given to all enquiries and orders.

We carry extensive and up-to-date stocks of equipment, components and accessories by Britain's leading makers. Enquiries dealt with by return.

## 15 Kc/s AT 3 $\frac{3}{4}$ "/SEC.

**TYPE DR HEAD.** Illustrated actual size is  $\frac{7}{8}$  in. square by  $\frac{1}{2}$  in. long, curved front  $1\frac{1}{2}$  in. radius. Head available as medium impedance 120 mH (parallel connection) or high impedance 450 mH (series connection).

This novel design of head possesses many advantages over larger types—higher output—lower losses—extremely good treble response\*—very low noise and hum pickup.

**AN ERASE HEAD** of the same dimensions also is available, our type "DR" double field erase head.

This is not simply a double gap, but effectively two heads side by side giving complete erasure of any signal with modest power consumption. The power required is approximately 0.5 watt at 50 Kc/s.

Both the above heads are used on many of the leading tape recorders on the market today.

.0001 in. gap available to special order, this extends treble response up to 15 Kc/s at 3 $\frac{1}{2}$  in. per sec.

HEAD TYPE DR

# ILIFFE BOOKS ON RADIO

## TRANSISTOR A.F. AMPLIFIERS

D. D. Jones, MSC, DIC, and R. A. Hilbourne, BSC. This book, the first of its kind to be published in Great Britain, deals systematically with the design of transistor audio-frequency amplifiers, and gives the circuitry and design details of a versatile range of amplifiers, including both those for high fidelity reproduction and for public address systems. Essential to engineers designing transistor audio amplifiers for the first time.  
21s net by post 21s 10d

## WIRELESS SERVICING MANUAL

W. T. Cocking, MIEE. This, the ninth edition of a standard work which has come to be recognised as a reliable and comprehensive guide for amateur and professional alike, has been thoroughly revised and set in a larger and handier format. Essential testing apparatus is described, and logical methods of deducing and remedying defects are explained.  
17s 6d net by post 18s 8d

## SECOND THOUGHTS ON RADIO THEORY

Cathode Ray of "WIRELESS WORLD." Forty-four articles reprinted from the popular "WIRELESS WORLD" series, in which the author examines various aspects of elementary radio science, explains them clearly, and shows that there may be more behind them than is apparent from the usual textbook. This volume deals with basic ideas; circuit elements and techniques; circuit calculations; and some matters in lighter mood.  
25s net by post 26s 4d

## ADVANCED THEORY OF WAVEGUIDES

L. Lewin. Sets out the various methods that have been found successful in treating the types of problems arising in waveguide work. The author has selected the number of topics as representative of the field in which the micro-wave engineer is at present engaged.  
30s net by post 31s

## BASIC MATHEMATICS FOR RADIO AND ELECTRONICS

F. M. Colebrook, BSC, DIC, ACGI. Revised and enlarged by J. W. Head, MA (CANTAB). Presents in readable form a complete course in basic mathematics for engineering students of all kinds and leads on to the more advanced branches of mathematics of increasing importance to radio engineers. In this revised edition the chapter covering the application of mathematics to radio has been enlarged, and many new subjects are included.  
17s 6d net by post 18s 6d

## ABACS OR NOMOGRAMS

A. Giet. Translated from the French by H. D. Phippen and J. W. Head. This book not only demonstrates the many and varied applications of the abac or nomogram, but shows how even those without highly specialised mathematical knowledge may construct their own charts. It deals with both Cartesian abacs and alignment charts and contains a large number of practical examples in mechanics, physics and electrical engineering.

# SERVO SYSTEMS DEMONSTRATION UNIT

A new addition to the comprehensive range of training equipment produced by PHILCO whose products have been adopted by training establishments throughout the world.

This versatile set can be used at all levels of instruction in servo mechanisms for both qualitative and quantitative approaches to the subject, ranging from simple discontinuous systems through proportional and speed control to analogue computing functions. All the servo components characteristics, even to backlash and shaft whip, may be varied and their effects studied.

The system is self contained, HT, regulated HT, LT, 26v DC and 400 c/s supplies are provided so that only a mains connection is required. Many accessories are available including a low cost pen recorder specially designed for instructional use.

Write for full details of this and other items in the range (from components to microwave training aids) to:—

## UNIVERSAL AVOMETER MODEL "D"

D.C. VOLTS	A.C. VOLTS	D.C. Current	A.C. Current
150 mv.	7.5 v.	15 ma.	75 ma.
300 mv.	15 v.	30 ma.	150 ma.
1.5 v.	75 v.	150 ma.	750 ma.
3 v.	150 v.	300 ma.	1.5 amp.
15 v.	300 v.	1.5 amp.	7.5 amp.
30 v.	600 v.	3 amp.	15 amp.
150 v.	750 v.	15 amp.	Resistance
300 v.	1,500 v.	30 amp.	ance
750 v.			1,000Ω
1,500 v.			10,000Ω

Supplied reconditioned as new, with internal battery, instructions and leads £8/19/6 each. P/P. 3/6.

## WESTON MODEL 772 TESTMETER

A.C. VOLTS	D.C. CURRENT	A.C. CURRENT
2.5 v.	100 micro/a.	500 ma.
10 v.	1 ma.	1 amp.
50 v.	10 ma.	5 amp.
250 v.	50 ma.	RESISTANCE
1,000 v.	100 ma.	100 ohms
D.C. VOLTS	500 ma.	1,000 ohms
2.5 v.	OUTPUT METER	100k. ohms
10 v.		10 megohms
50 v.		
250 v.		
1,000 v.		

Supplied in perfect working order complete with internal batteries. £7/10/- P/P. 4/-.

**FIELD TELEPHONES TYPE F.** Generator bell ringing. Supplied complete with batteries, fully tested, and complete with wooden carrying case. 59/6 each. P/P. 3/6.

**R.1155 RECEIVERS MODEL B.** Perfect working order, fully tested, £7/19/6 each. P/P. 7/6. Combined power pack and output stage, 85/- extra.

**MARCONI TF-373 IMPEDANCE BRIDGE.** Reconditioned to maker's specification, 1,000 c/s. Ranges: 100 henry; 100 mfd.; 1 megohm; 100 Ω. 200/250 volts A.C. operation. £35 each.

**24 AMP. VARIAC TRANSFORMERS.** 230 v. input. Variable output 185-250 volts or 185-250 volts input, 230 volts out. £12 10/- each. P/P. 10/-.

**AR.88 WAVE CHANGE SWITCH ASSEMBLY.** Brand new with screens. 17/6 each. P/P. 2/6.

**CRYSTAL MICROPHONE INSERTS,** 4/6 each. P/P. 6d.

**MUIRHEAD PRECISION STUD SWITCHES.** 4 bank, 4 pole, 24 positions. New, boxed, 17/6 each. P/P. 1/3.

**R.1155 N TYPE DRIVES.** Improved geared version new, 12/6 each. P/P. 1/6.

**MARCONI STANDARD SIGNAL GENERATOR TF-144G.** 85 Kc/s. to 25 Mc/s. Output 1 microvolt to 1 volt. 200/250 volts A.C. operation. Reconditioned to maker's specification. £55 each.

**AR 88.** 1st I.F. Transformers 3/6. P/P. 1/-.

**POST OFFICE TELEPHONE HANDSETS.** Std. type, new boxed, 12/6 each. P/P. 1/6.

**UNIVERSAL AVO METERS MODEL 7.** Reconditioned perfect order, £12/19/6 each. P/P. 3/6.

**2 v. 3AH. ACCUMULATORS.** Lead Acid, unfilled, 12 for 21/- P/P. 4/6.

### METER BARGAINS

25 microamp D.C. M/C flush rd. 2 1/2in.	69/6

300 volt A.C. M/L. flush rd. 2 1/2in.	25/-
300 volt A.C. M/C. rect. flush rd. 2 1/2in.	25/-
500 volt A.C. M/L. flush rd. 2 1/2in.	25/-

**FURZEHILL BEAT FREQUENCY AUDIO OSCILLATORS.** Frequency range 0-10,000 c.p.s. Output 10 or 600 ohms. Separate 50 c.p.s. check. Set zero control, 200/250 volt A.C. operation. Supplied in perfect working order. £9/19/6 each. P/P. 10/-.

**E.M.I. POTTED MIC. INPUT TRANSFORMERS.** High quality, 50:1 ratio, 4/6 each. P/P. 9d.

**CR.100 SPARES KIT.** Contains 15 valves, resistors, pots, condensers, output trans., etc. All brand new, 59/6. P/P. 3/6.

**CV.967 1 IN. CR. TUBES.** 4 volt heater suitable for 'scope, new, 19/6 each. P/P. 1/6.

**LEACH 12 VOLT AERIAL CHANGE-OVER RELAYS.** Double pole, 7/6 each. P/P. 9d.

**DYNAMO EXPLODER UNITS.** For detonating explosive charges. Hand generator operation. Brand new 29/6 each. P/P. 3/6. Hide leather cases 19/6 extra.

**230 VOLT A.C. MOTORS.** Ideal for fan or blower. 15/6 each. P/P. 1/3.

**AMERICAN H.T. BATTERIES.** Tapped 90 v., 67 1/2 v., 45 v., 22 1/2 v. New, 5/- each. P/P. 2/-.

**MARCONI TF.428 B/1 VALVE VOLT-METERS.** 5 ranges A.C. and D.C. 1.5, 5, 15, 50 and 150 volts. Operation 200/250 volts A.C. Supplied brand new complete with internal HF probe. £17/10/- each. P/P. 10/-.

**R.1294 V.H.F. COMMUNICATION RECEIVERS.** 500 to 3,000 mc/s. Perfect condition with handbook. £25. P/P. 10/-.

**8 RANGE SUB-STANDARD D.C. AMMETERS.** Ranges, 1.5, 3, 7, 15, 30, 60, 300 and 450 amps. Bin. mirror scale. Meter housed in polished teak case. Supplied complete with all shunts and leather carrying case. £15 each. P/P. 7/6.

**MARCONI TF-329 "Q" METERS.** Range 0 to 500 Ω. Frequency 50 kc/s. to 50 mc/s. Re-conditioned to maker's specification. 200,250 volts A.C. operation. £65 each.

**1,000 WATT MAINS ISOLATION TRANSFORMERS.** 230 to 230 volts. Heavy duty, ex-Admiralty. New boxed, £5 each. P/P. 10/-.

**GRESHAM POTTED L.T. TRANSFORMERS.** 230 volts input. Secondary tapped 70, 75 and 80 volts 4 amps. New boxed, 42/6 each. P/P. 3/6.

**750 WATT AUTO TRANSFORMERS.** Tapped from 110 to 230 volts. Fine heavy duty type, 69/6 each. P/P. 5/-.

**FERRANTI FILAMENT TRANSFORMERS.** Two types, both 200/250 volt input. Type 1: 6.3 volt CT. 5.6 amp., 6.3 volt CT. 4.8 amp., 6.3 volt CT. 1 amp., 19/6. Type 2: 6.3 volt CT. 3.3 amp., 6.3 volt CT. 1 amp., 6.3 volt CT. .9 amp., 6.3 volt CT. .6 amp. 15/6. P/P. 2/-, both types.

**DEAF-AID EAR-PIECES.** 250 ohm imp. 4/6; 1,000 ohm imp. 7/6. P/P. 6d.

**EX-ADMIRALTY 12 VOLT D.C. MOBILE AMPLIFIERS.** Std. mic. or gram. input. Push pull 10 watt, output matched to 3 or 15 ohms. Good working order. £8/19/6 each. P/P. 6/6.

**R.C.A. PLATE TRANSFORMERS.** Input 200/250 volts 50 cycles. Output 2,000/1,500/0/1,500/2,000 volts 500 m/a. Supplied brand new in transit cases, £6/10/- each. P/P. 10/-.

## G.E.C. SELECTEST MULTI-RANGE TESTMETERS

D.C. Volts	A.C. Volts	D.C. Current	A.C. Current
150 mv.	7.5 v.	15 ma.	75 ma.
300 mv.	15 v.	30 ma.	150 ma.
1.5 v.	75 v.	150 ma.	750 ma.
3 v.	150 v.	300 ma.	1.5 amp.
15 v.	300 v.	1.5 amp.	7.5 amp.

	100 ma.	1 megohm
	1 amp.	DECIBELS
		-10 to +69

ALL BRAND NEW. COMPLETE WITH INTERNAL BATTERY, TEST PRODS AND INSTRUCTIONS. £3/19/6 EACH. P/P. 3/-.

**UNREPEATABLE OFFER**  
 DUE TO LARGE PURCHASE  
 FROM GOVERNMENT  
**COSSOR 339**  
**DOUBLE BEAM**  
**OSCILLOSCOPES**  
 PERFECT WORKING CONDITION  
 WITH HANDBOOK  
**ONLY £15 EACH**  
 Carriage 10/- extra.

**MARCONI TYPE TF-340 OUTPUT POWER METERS.** Meter calibration 50 MW/17DB F.S.D. Meter multipliers, 0.1-10-100. Impedance values, 25-30-40-50-60-80-100-125-150-200 ohms. Impedance multipliers, 0.1-1-10-100. Perfect condition. £9/19/6 each. 7/6 carriage.

**SURPLUS HEADPHONES.** R.C.A. chamois padded, moving coil, fitted jack plug, 19/6 pr. P/P. 1/6. AMERICAN HS.30 super light weight, 50 ohms. 15/- pr. P/P. 1/6. 4,000 ohms light duty, 12/6. P/P. 1/6.

**DON MK. V FIELD TELEPHONES.** Ideal for all inter-communication. Buzzer calling. Supplied fully tested complete with batteries and instructions. 39/6 each. P/P. 3/6 each.

**PARMEKO TABLE TOP TRANSFORMERS.** Input 230 volts. Output 620/550/375/0/375/550/620 volts 250 m/a. Also 2-5 volt 3 amp. windings. Size 6½ x 6½ x 5½ in. New, boxed at 45/- each. P/P. 5/-.

**24 VOLT ROTARY CONVERTERS.** Input 24 volt D.C. Output 230 volts A.C. 50 cycles, 100 watts. Housed in metal case with inlet/outlet plugs. Brand new. 92/6 each. P/P. 7/6.

**VORTEXION PORTABLE AMPLIFIERS** Operation from 200/250 volts A.C. or 12 volts D.C. Separate inputs for microphone or gram. Push-pull 10 watt output matched to 7.5 15, 250 or 500 ohms. Incorporate volume control and full switch tone control. Not brand new but good working order, 10 guineas each. P/P. 6/-.

**MINE DETECTORS No 4a**

Complete equipment comprises Search Head, Amplifier Headset, Control Box, Telescopic Rods for Search Head, Search Head Test Unit and Test Depth Measure and Haversack. Operation is from a standard 60 v./1.5 v. combined dry battery. The unit will detect ferrous or non-ferrous metals to a depth of 24in. giving maximum signal but can be used at greater depths giving lower output. Ideal for tracing underground pipes or cables and any hidden metallic objects. Complete equipment supplied brand new in original transit cases complete with circuit and operating instructions.

PRICE  
**99/6** EACH  
 Carriage 10/6.

**PORTABLE PRECISION  
 VOLTIMETERS**

Brand new and boxed instruments by famous manufacturer. Housed in polished teak case. Moving iron movement reading A.C. or D.C. volts on 2 ranges. 0-160 v. and 0-320 v. Bin. mirror scale. Accuracy within 2%. Supplied at a fraction of original cost. Only £5/19/6 each. P/P. 3/6.

**CRYSTAL CALIBRATORS NO. 10.** Range 500 Kc/s. to 30 Mc/s. Compact size 7 x 7½ x 4in. Utilise 2-IT4, IR5 and CV286 valves and 500. Kc/s. crystal. Supplied in perfect condition with instructional handbook. 59/6 each. P/P. 3/6.

**MARCONI TF868 UNIVERSAL IMPEDANCE BRIDGES.** Ranges 1pf-100 mfd. 1µh-1h, .1Ω-10 megohm, 200-250 v. A.C. Perfect as new £65 each.

**PARMEKO TRANSFORMER.** Input 230 volts. Output 350/0/350 volts 150 m/a. 6.3 volts 3.5 amp. 5 volts 4 amp. New, boxed, 32/6 each. P/P. 2/6.

**PHOTO VOLTAGE AMPLIFIERS.** These special instruments incorporate a 1 microamp mirror galvanometer and a double selenium photo-electric cell. Housed in aluminium case complete with 12 volt lamp and housing. Brand new. £9/19/6 each. P/P. 7/6.

**MARCONI TF-517 SIGNAL GENERATORS.** 10-18 Mc/s., 33-58 Mc/s; 150-300 Mc/s. 200/250 volts operation, 65/- each for callers only.

**6 VOLT VIBRATOR PACKS.** Output 120 volts 30 m/a. Fully smoothed. New, boxed 12/6 each. P/P. 2/-.

**POTTED TRANSFORMER.** Primary 230 volts. Secondary 350/310/0/310/350 volts. 220 m/a. 6.3 volts 13 amp., 5 volts 3 amps. 49/6 each. P/P. 3/-.

**HOOVER ROTARY TRANSFORMERS.** Miniature type, 12 volt D.C. input. Output 310 volts 30 m/a. New boxed 12/6 each. P/P. 1/3.

**12 VOLT ROTARY CONVERTERS.** Input 12 volt D.C. Output 230 volt A.C. 150 watts, 50 cycles. Housed in wooden case and fitted with voltage control slider resistance switch, plugs and A.C. mains voltage output check meter. Supplied in perfect condition fully tested, £9/19/6 each. P/P. 10/-.

**MARCONI TF410c VIDEO OSCILLATORS.** Ranges 20 c/s.-30,000 c/s., 30 Kc/s-5 Mc/s. Variable attenuator 200/250 v. A.C.

**AVO POWER PACKS.** 230 volts input. Output 67½ volts, 6 m/a. and 1.5 volts 250 m/a. Fully smoothed. New boxed 19/6 each. P/P. 2/6.

**FIELD TELEPHONE TYPE L.** Generator bell ringing, light and very portable. Supplied complete with batteries. Fully tested. As new, 59/6 each. P/P. 3/-.

**POST OFFICE JUMPER LEADS.** 4ft., fitted with two std. jack plugs, 3/- each. P/P. 9d. Standard jack sockets 9d. each.

**SOUND POWERED TELEPHONE HAND-SETS.** No batteries required to use. Ideal for inter-com. New boxed 15/- each. P/P. 1/6.

**BATTERY CHARGING OR MODEL RECTIFIERS AND TRANSFORMERS.** Rectifiers. All full wave and bridged. 12/18 volt 1.5 amp., 4/3; 12/18 volt 2.5 amp 6/9; 12/18 volt 4 amp. 9/9; 12/18 volt 6 amp. 18/6; 24/30 volt 1 amp. 12/6; 24/30 volt 4 amp. 22/6; 24/30 volt 15 amp. 62/6.

**Transformers.** All primaries tapped 200/250 volts. 3.5, 9 or 17 volt 1 amp. 9/9; 3.5, 9 or 17 volt 2 amp. 14/3; 3.5 9 or 17 volt 4 amp. 16/6; 9 or 17 volt 6 amp. 26/-; 3, 4, 5, 6, 8, 10, 12, 15, 18, 20, 24 or 30 volt 2 amp. 18/6. Please add postage.

**EDDYSTONE MAINS POWER PACKS.** 200/250 volts input. Output 175 volts 60 m/a. and 12 volts 2.5 amp. Double choke and condenser smoothed, 5Z4 rectifier. Supplied new and unused only 22/6 each. P/P. 3/6.

**ROTARY TRANSFORMERS.** Two models either 6 or 12 volt input D.C. Output 250 volts 80 m/a. 22/6 each. P/P. 2/6.

**SPECIAL OFFER OF P.V.C. RECORDING TAPE.** Brand new, boxed on 7in. universal spools. 600ft. std., 12/-; 1,200ft. std. 19/6; 1,800ft. long play, 30/- P/P. 1/-

**BRAND NEW R.C.A.  
 EXTENSION  
 LOUDSPEAKERS**

Bin., 3 ohm Quality Speaker mounted in attractive black crackle case to match AR88 Receivers, etc.

45/- each. P/P. 3/6.

## and MAIL ORDER SERVICE

### TACHOMETER CALIBRATOR Mk. 2

Brand new, current design, r.p.m. tester with direct and reduced ratio driving shafts and three ranges of speed indication by dual sensitivity galvanometer in Maxwell Bridge circuit. Heavy duty 24 volt, 6in. dia.,  $\frac{1}{2}$  h.p. motor with coarse and fine speed control into 1:1 and 1:4 output drives giving 0 to 1250 and 0 to 5000 r.p.m. for testing direct and gearbox type tachometer generators. Interlocked forward and reverse switching.

Ten position speed selector for balancing bridge over each of three ranges 600 to 5,000, 1,200 to 10,000 and 2,400 to 20,000 r.p.m. Final balancing done at increased sensitivity by push-button control. Quick mounting provision for two indicators and generators with two sets of quick fitting interconnecting leads, spare flexible drives, spare brushes, bulbs, etc., in rear compartment. Smart grey enamel bench unit with sloping panel, overall size 19in. high x 15in. deep x 16in. wide, plus 11in. extension platform for generators. **£20** carriage paid

### SIGNAL GENERATOR. 600-1200 Mc/s

Test Set 281, Ref. 10SB/6152. Operates from 230 volt 50 cycle mains. In case 14in. x 14in. x 12in. Fitted 11in. dia. parabolic aerial and Perspex radome. 2.CV.90 (Mazda Osram E.1368). Oscillator in precision cavity. Modulator and 6X3 rectifier. Suitable for 23 centimetres and latest B.B.C. television 654 mc/s band. Direct dial reading wide band. **£20** carriage paid  
BRAND NEW.

**£4.10.**

DELIVERED FREE

At this remarkable price the Test Set 74 is one of the most suitable units for beginner or specialist to adapt to his own particular purpose. Already a basic 'scope with brilliance and focus controls adjacent to VCR139A 2½in. tube, the front panel also contains X-plate terminals, gain control and two-speed time-base switch. There is a substantial EHT and HT power pack (VU120 & 5Z4G) well at the rear with valves on either side and plenty of free room. Immediately behind the panel is a separate screened compartment that houses the two VR65 and VR92 of the tunable input receiver (convert to input amplifier) and a signal generator (3xVR65 & VR135) modulated at two frequencies over its 155 to 255 mc/s. range. There are four high-voltage pre-set pots at the rear of the under chassis, which has two full length tag boards very conveniently arranged for easy alteration. Total of 12 valves.

### SIGNAL GENERATOR AND WAVEMETER

Type W.1649. Frequency of signal generator: 140 to 240 mc/s. Accuracy  $\pm 0.5$  mc/s. Frequency of heterodyne wavemeter: 155 to 255 mc/s. Accuracy  $\pm 0.2$  mc/s. Containing VR.135 and 4-VR.91, 5 meg. crystal. Retractable aerial. Power requirements: 6.3v and 120v. Unit housed in copper lined wooden case. Size: 15½in. x 13in. x 14½in. In good used condition. **£2.10.** plus 10/- packing and carr.

### MARCHING COMPASS

Genuine Service pocket marching compass in durable black plastic case with sighting reflector inside lid for accurate bearing indication. Luminous dial, pointer, and sighting lines. Pointer locks automatically as lid is closed. **12/6** post free.

### RAF Oscilloscope Type II . . £6.10. plus 10/- carriage.

As illustrated, portable, 6 valve, general purpose signals section radio servicing oscilloscopes with VR.139, 2½" CRT. Features include: 6 range timebase, 8 step Y amplifier gain, variable amplitude internal or external synchronisation, brilliance, focus, x and y shifts, timebase speed and vernier, etc. on front panel and external deflection direct to any plate or beam modulation through rear panel links. For 200/250 volt mains. In copper lined neat wooden case size 8½ x 12 x 13in. deep with flat handle on top.

Used, but in quite fair condition and well worth a bit of titivating.

### SIGNAL GENERATOR 52A . . . £10 plus 10/- carriage.

As illustrated, mains operated 7 valve precision generator covering 5 to 50 mc/s in 4 turret-tuned accurately calibrated bands with RF voltage set and monitored by 50 microamp meter in valve voltmeter circuit. Optional CW or internal modulation at 400 c/s to 30%, or variable depth external amplitude or pulse modulation down to 1 microsecond as required. 1 microvolt to 100 mV output through 5 step and microvolt calibrated vernier attenuator (accuracy  $\pm 3$  db) into 70 or 100 ohm dummy antenna on 3 foot cable. BRAND NEW with calibration charts and handbook.

### W.1191A WAVEMETER . . . £4.10. plus 15/- carriage.

Four valve crystal controlled heterodyne frequency meter covering 100 kc/s to 20 mc/s in 8 switched bands with variable RF oscillator zero beat against crystal to give an audio output into high or low impedance phones. Designed to work as a signal generator with CW or modulated output through variable attenuator and incorporating also a second crystal oscillator that can be switched in to convert the unit to a fixed spot frequency receiver or transmitter at the wavelength of any spare crystal between 100 kc/s and 20 mc/s. Precision two speed dial, calibrated book with crystal check points in lid of neat metal case. Designed for 2v and 40-60V. supply. Circuit diagram supplied. Additional technical information 10/- extra by order only. Used, but in good order.

### ETCH-YOUR-OWN PRINTED CIRCUIT KITS 21/- post free

Each contains over 60 sq. in. of laminated board and sufficient chemicals to make dozens of printed circuits, plus comprehensive instruction book giving advice and examples on translating theoretical circuits into layouts ready for etching. High-quality materials—completely safe to handle—carefully prepared to ensure fine definition and uniform results without laboratory control.

### Brand New, Individually Tested, Fully Guaranteed LOW - VOLTAGE, HALOGEN - QUENCHED, GEIGER - MUELLER TUBES 25/- post free

Working voltage 400-450. Highly sensitive. Effective length 11.8 cm. Background count 90/minute. Response 30,000 counts/minute. 80-volt plateau. Standard British 4-pin base, stainless iron electrode. Ideal for basic experimentation and instructional demonstration. Circuits of simple all transistor and conventional valve counter circuits supplied on request with each tube.

**COSSOR 554 TRANSISTOR RECORD PLAYER**  
Battery operated, using two 4½ v. AD28 batteries. Incorporates latest Garrard BA1 Turntable and Pick-up, fully-transistorised Amplifier, and high quality 7x4in. elliptical Speaker. Suitable for 7in. 45 r.p.m. records. Attractive two-tone Carrying Case, 11x8½x5in. **LASKY'S PRICE** **£9.19.6** Post 4/-  
Batteries extra, 3/3 each.

**STEREO CARTRIDGES**  
ACOS type 73-1A turnover, list 52/6. **LASKY'S PRICE** **29/6** Post 1/-  
All makes and types in stock. Write for our bargain list.

**PICK-UP CARTRIDGES**  
B.S.R. "ful-fi" TCS or ACOS type HGP.59, turnover crystal cartridge with L.P. and standard styl. List 39/7. **LASKY'S PRICE** **18/-** Post free.

**LASKY'S RADIO**

**CONVERT YOUR ALL-DRY PORTABLE RADIO TO MAINS 200-250 v.**

with the **COSSOR BATTERY ELIMINATOR**. Two separate units identical in size to the B126 and AD35 batteries. 1.5 v. L.T., 90 v. H.T. Suitable for the latest low consumption valves, fully stabilised. New in original cartons. Listed at 63/-. **LASKY'S PRICE** **37/6** Post 1/6

**A TRANSISTORISED RADIO FOR 25/10**  
The "DIODEON"—a high-efficiency 2-stage receiver using crystal diode detector and transistor in cascade. Covers 200-500 meters (medium wave). Chassis shows pictorially all components and connections. Built in minutes! Complete parcel including two U16 batteries. **25/10** Post free.  
**EARPHONES**. High imp., 14/6. Low imp., 7/6. Post 1/6.

**COMBINED AM/FM TUNER, CONTROL UNIT AND PRE-AMPLIFIER (Self-powered)**  
Famous make Mdl. H11. See December issue or send for brochure. LIST £29/3/10. **LASKY'S PRICE** **20 GNS.** Carr. and Ins., 12/6. Available on H.P. terms.

# LASKY'S RADIO

## LASKY'S HIGHLY EFFICIENT EASY-TO-BUILD SETS : TUNERS : AMPLIFIERS

### GREAT REDUCTIONS IN TRANSISTORS

P.N.P. Junction types. **AUDIO**, suitable for high gain and low freq. amplifiers, and for output stages up to 250 milliwatts. Double spot—yellow and green. Each **5/-**

R.F. suitable for medium and low freq. oscillators, freq. changers and I.F. amplifiers (1.5 to 8 Mc/s). Double spot—yellow and red. Each **5/-**

Type T81. Suitable for all audio applications. Each **3/6**

Special prices quoted for large quantities.

OC44 and OC45, 21/-; OC70 and OC71 12/6; OC72, 17/- (Matched Pair 30/-); OC73, 15/-; OC16, 45/-.

EDISWAN MAZDA TRANSISTORS. The very latest types. XB/102, 10/-; XB/103, 14/-; XC/101, 16/-; XA/101, 23/-; XA/102, 26/-.

SPECIAL OFFER. Set of 7 Ediswan Transistors: XA/101, XA/102, 2 XB/102, XE/103, 2 matched XC/101. Price 79/6.

CRYSTAL DIODES. General Purpose GEX00, each 1/- . Per doz. 9/- . All other types in stock.

### "GOLDTOP" POWER TRANSISTORS

All types in stock. Example—V15/10P. Ideal for output stage of car radio, will give approx. 3 watts operating from 12 v. Each 15/- post free. Suitable Output Transformer for above. correct ratio, matched to 3 ohms, 9/6. Post 1/- . Driver Transformer, 9/6. Post 1/- .

SUB-MIN. RESISTORS, 1/4th watt, most values available. Each 3 1/2d., per doz. 2/6.

### COSSOR Model 701K VHF/FM RADIO KIT

Everything to build a VHF/FM radio receiver for 200-250 v. A.C./D.C. mains. All components, printed circuit, valves and Goodmans 10x6in. elliptical speaker, in makers' carton with full assembly instructions. Valve line-up: UCC85, two UF89, UABC80, UL84, UY85. Complete Kit, listed at 15 gns.

LASKY'S PRICE **£8.19.6**  
Post 2/6.

### MULTI-TEST METER

Famous make, new and unused. AN/27. 27 range. 5,000 ohms per volt A.C. and D.C., in black leatherette-covered wood case, 7 1/2 x 9 1/2 x 3 1/2in.

LIST 15 GNS. LASKY'S PRICE **£9.19.6**  
Post 6/- . Leads, 7/6 extra.

### Circuit Diagram and Building Instructions, 1/6 each, post free.

**7-TRANSISTOR PORTABLE**, 250 milliwatts p.p. output. **NEW CIRCUIT**, medium and long wave.

COMPLETE PARCEL

£10/10/-  
Post 3/6

**TRANSISTOR SUPERHET TUNER**, uses 3 R.F. transistors, 1 germanium diode, etc. Printed Circuit 3 1/2in. x 3 1/2in.

£5/12/6  
Post 3/6

**4-TRANSISTOR AUDIO AMPLIFIER**, Mk. II, 200/250 milliwatts, with 2 OC72 and 2 yellow/green. Size 5 1/2 x 2 x 1 1/2in.

£3/19/6  
Post 3/6

**4-VALVE SUPERHET PORTABLE**. Medium and long wave. Mains/battery version, £8/19/6. Battery version

£7/7/-  
Post 3/6

**MIDGET T.R.F.** for 200-250 v. A.C. mains. Uses two latest double-purpose valves. Plastic case, 8 1/2 x 4 1/2 x 5in.

£4/19/6  
Post 5/-

**LASKY'S F.M. TUNER**. Printed Circuit version of the G.E.C. 912 "F.M. Plus," using 5 valves.

£7/19/6  
Post Free

**PORTABLE GRAM AMPLIFIER**, 2 watts. Uses EL84 output and 6X4 rect. Size 6 1/2in. x 3 1/2in. x 5in. high.

49/6  
Post 2/6

ALL JASON KITS IN STOCK. Send for Brochures

## LASKY'S CAR RADIO

CAN BE BUILT  
ABSOLUTELY COMPLETE  
FOR **£12.19.6**

- ★ Small size. Will fit any car
  - ★ 12 volt operation
  - ★ New Hybrid circuit
  - ★ Transistor output
  - ★ New type Brimar valves
  - ★ No Vibrator, 12 volt H.T. & L.T.
  - ★ T.C.C. Printed Circuit and Condensers
  - ★ Tuned R.F. stage
  - ★ Medium and long waves
  - ★ Permeability tuning
  - ★ 7in. x 4in. elliptical speaker.
- Send 1/6 for Instruction Booklet giving full details, illustrations, dimensions, circuit diagram and shopping list.

## G.P.O. RACKS

19in. Heavy duty, all steel. Standard drilling. Two types: 5ft. 6in. angle uprights, £3/10/-, carr. 10/-; 6ft. channel uprights (as illustrated), £5, carr. 10/-.

19in. x 14in. PANEL SHELF in 14 s.w.g. steel. Suitable for above racks. 15/- P. & P. 5/-.

**OLDHAM MINERS' LANTERN** (all steel). 9 3/4in. tall, 3 3/4in. dia. Complete with bulb and rechargeable accumulator. Ideal inspection lamp for garages, outhouses, etc. 19/11. Post 2/6.

**TELESCOPIC AERIAL MAST**. 20ft., 4 sections of 5ft. each. Independently locking at any height. Tapering from 2in. to 3/4in. (less accessories). 50/-, carr. 5/-.

**AERIAL MAST** (Army type). 32ft. high. Light-weight kit comprising 10 steel screw-in sections (approx. 1in. dia.). Complete with guys, insulators, pegs, etc. All in canvas carrying bag. Only £4. Carr. 7/6.

## RE-ENTRANT LOUD HAILERS

(Ex-Govt.) Heavy duty 20 watts all-metal 15 ohms. Diameter 15in., length 15in. (approx.) good condition. £6/10/- Carr. 10/- Ditto. Brand new, £8. Carr. 10/-.

**HEAVY DUTY—ALL STEEL TRIPOD STANDS**. Adjustable every 6in. to approx. 9ft. 6in. when fully extended. (Folds up to only 4ft. 6in. for storage). Suitable for outdoor speakers, public address systems, floodlighting, etc., etc. (as illus Dec.). OUR PRICE £3/10/- Carr. 5/-.

**VITAVOX PRESSURE UNITS TYPE N** Heavy duty. Special quality. 20 watts P.M. Brand new. 80/- Ditto but in good order, 40/- Carr. 5/- on each.

## TRUVOX/TANNOY LOUD-HAILERS

With 180 ohm line transformer and condenser. Impedance 7 1/2 ohms, handling capacity 8 watts. Complete in slope-front wooden case. In good condition 18/6. P. & P. 3/6. Brand new 25/- P. & P. 3/6.

**PRECISION SERIES 834-S (U.S.A.)**. Multi range tester for A.C./D.C. volts, ohms and milliamps. Basic movement 400 microamps. Housed in wooden box with carrying strap. Overall size 7 1/2 x 7 x 5in. Complete with test prods, batteries, etc. Ready to use, £4/19/6. Post 2/6.

## ACCUMULATORS

12 v. 25 A.H. New and unused. Housed in strong wooden case for extra protection, 45/- Carr. 7/6. 2 v. 100 A.H. 75 actual, Ex Govt. New and unused. Complete with carrying handle. Size 6 1/2 x 6 1/2 x 3 1/2in., 15/- each, Carr. 3/6. 3 sent for 50/-, P. & P. 2/-; 6 for 24/-, P. & P. 10/-; Ditto 14 A.H., less handle, 5/-, P. & P. 2/-; 6 for 24/-, P. & P. 10/-.

**CATHODE RAY TUBES**. 2 1/2in. Type VCR139A 25/-; 3in. Type 3BP1 30/-; 5in. Type 5FP7 35/-; 5in. Type 5CP1 35/-; 6in. Type VCR97 25/- All post free.

**ROTARY CONVERTER**. 24 v. D.C. to 230 v. A.C. 50 cycles, 150 watts. Brand new and unused, £8/10/- Carr. 7/6. Ditto, 100 watts, £6/9/6 Carr. 7/6.

**ROTARY CONVERTER**. Ex-Govt. 12 v. D.C. input, 230 v. A.C. output, 50 cycles at 135 watts. Complete in carrying case with lid. Voltage control, sliding resistance, mains switch and 0-300 v. A.C. flush meter. In good condition, £10. Carr. 10/- Motor only, without case, etc. Brand new and unused £8/10/- Carr. 5/-.

**VARIABLE VOLTAGE TRANSFORMER**. (BERCO Regulator) Pri. 440 v. 50 cycles, sec. 0-440 v. at 6.5 amps. or can be connected for 230 v. to give 0-230 v. at 12 amps. Brand new and unused £18/10/- Carr. 10/-.

**HEAVY DUTY LT TRANSFORMERS**. 230 v. 50 cycles pri. 17 v. sec. at 35 amps., capable of carrying 25% over actual rating. Perfect condition. ONLY 115/- Carr. 5/-.

**6 kV/A. AUTO-TRANSFORMER**. 230/110 v. 50 cycles (fully tapped primary and secondary). Capable of 25% over actual rating. Brand new and unused, £18. Carr. 20/- Also 3 kV/A as above. £12/10/- Carr. 20/-.

**20 kV/A AUTO-TRANSFORMER**. 230/115 v. 50-60 cycles, by Jefferies Transformer Co., U.S.A. Perfect condition. £20. Carr. £1.

**CONSTANT VOLTAGE TRANSFORMER**. 190-260 v. primary, sec. 115 v. at 1 1/2 kV/A (listed at 2 kV/A). Brand new and unused. £25 or £45 per pair. Carr. 10/- each.

## A.C.-D.C. RECTIFIER POWER SUPPLY UNITS

110-230 v. A.C. 50 cycles input, 100/110 v. D.C. output max. 2 1/2 amp. Brand new and unused, £4/10/- Carr. 7/6.

230 v. A.C. 50 cycles input, 200/220 v. D.C. output at 3/4 amps. approx. Good condition. £10. Carr. 10/-.

200/250 v. A.C. 50 cycles input, secondary 24 v. at 26 amps. D.C. Capable of 25% over actual rating. Brand new and unused. £12/10/- Carr. 20/-.

200/250 v. pri., 110 v. sec. at 4 amps. max. Brand new and unused. £8/10/- Carr. 10/-.

## AIRBORNE TRANSMITTER RECEIVER.

TYPE 1986. A mobile 10-channel crystal controlled V.H.F. Tx/Rx. covering 124.5/156 Mc/s. I.F. band width 23 kc/s. Complete (less external attachments) in metal case, with all valves and 24 v. rotary power unit. Used, but in first-class condition. ONLY £8/10/- Carr. paid. Also, complete with control box and all necessary connecting leads, £12, carr. paid.

**AIRCRAFT RADIO RECEIVER**. (By R.C.A.) Freq. 195 Kc/s to 9050 Kc/s. (33-1500 metres) continuous. For 28v. D.C. input with built-in dynamotor. This 6 valve receiver with 2 R.F. stages and 2 I.F. stages with B.F.O. and C.W. is in our opinion one of the finest sets so far released by the Air Ministry. £7.10.0. Carr. 5/-.

## TELEPHONE SETS (TELE "F")

Housed in bakelite cases, complete with built-in ringing generators and batteries. Ideal between two or more positions up to practically any distance. Tested before despatched. ONLY 70/- P. & P. 3/6. 2 sent for £6/10/- Carr. paid.

**TELEPHONE CABLE**. Twin one-mile drums (Don 8), £5. Carr. 20/- Single one-mile drums (Don 3), 50/- Carr. 7/6.

**TELEPHONE DIALS**. Standard (G.P.O.) Pattern. 0-9. Brand new. 30/- P. & P. 1/-.

**C.M.G. 25 PHOTO CELLS (OSRAM)**. Brand new, 15/- P. & P. 1/-.

**EVERSHED 12 PEN TIME RECORDER**. Portable 12-channel instrument for simultaneous recording of 11 events with time marks provided by the 12th pen. Recording is in the form of "on/off" pulses. Speed 2in. per sec. Price unused (less pens), £10. Carr. 10/-.

## SELENIUM METAL RECTIFIERS, FULL BRIDGE

6 or 12 v. 1 amp. 7/6; 24 v. 1 amp. 13/6; 12 v. 2 amp. 10/-; 24 v. 2 amp. 20/-; 12 v. 2 1/2 amp. 15/-; 24 v. 2 1/2 amp. 25/-; 12 v. 4 amp. 16/6; 24 v. 4 amp. 30/-; 12 v. 6 amp. 23/6; 24 v. 6 amp. 35/-; 12 v. 10 amp. 40/-; 24 v. 10 amp. 80/-.

**BRAND NEW CRYSTAL CALIBRATOR** No. 10. (Battery powered 1.4 v. valves.) Complete with full working instructions, circuit diagram, carrying haversack, connecting lead and spare valves. Frequency range: 1.5 to 10 Mc/s. (Nominal) but can actually be used up to 30 Mc/s. Weight 5lb. Size 7in. x 7 1/2in. x 4in. A miniature B.C.221 in every respect. A must for every laboratory, etc. ONLY £4/19/6. P. & P. 2/6.

## BRIDGE MEGGERS

Evershed and Vignoles Series 2 in perfect condition. 250 v. £22, carr. paid. Leather case available at 20/- extra.

**EVERSHED AND VIGNOLES WEE MEGGERS**. 500 v. £12/10/- Ditto 250 v. £10/10/- P. & P. 3/- on each.

## EVERSHED AND VIGNOLES MEGGER

### CIRCUIT TESTER

(low reading ohm meter), 2 ranges, 0-3, 0-30 ohms. The perfect meter for continuity and polarity testing, complete with test leads and ready to use. Brand new. Only £4/17/6. P. & P. 3/-.

## MULLARD BRIDGE

Type GM. 4140/1. Mains operated from 100-250 v. A.C. Will test resistances from 0.1 ohm to 10 megohms and condensers from 10pf. to 10mf. Good condition and complete with instruction booklet. £6/19/6. P. & P. 2/6.

**MARCONI SIGNAL GENERATOR. TYPE TF517-F/1**. Covering 10-18 Mc/s. 33-58 Mc/s. 150-300 Mc/s. In very good condition. Complete with full technical data and instructions. Unrepeatable at only £12/10/- Carr. 20/-.

**ALSO MARCONI SIGNAL GENERATOR. TYPE TF390G** for 200-250 v. A.C. mains input. Frequency range 4-16 Mc/s. and 32-100 Mc/s. indirect calibration. Output 1 μV to 100 M.V. 400 c/s internal modulation. In good order. Only £12/10/- Carr. 20/-.

**MARCONI VALVE VOLTMETERS TF.428 B/1**. 5 ranges A.C. and D.C. 1.5, 5, 15, 50 and 150 v. A.C. mains operation 200/250 v. Supplied in good working order. £14. P. & P. 7/6.

**AVO VALVE DATA MANUAL**. Containing a host of information on hundreds of valves including civilian equivalents of many service types. 21/- Post free.

### R.S.C. HI-FI TAPE RECORDER KIT

Build a high quality recorder in the £70 class for only

**29 1/2** GN3. Carr. 17/6.

INCORPORATING THE LATEST MK. IV COLLARO TAPE TRANSCRIPTIONER. THE LINEAR LT45 HIGH QUALITY TAPE AMPLIFIER. A HIGH FLUX 7 x 4in. LOUDSPEAKER, Reel of Best Quality TAPE. Spare Tape Spool, a Portable Cabinet, size approx. 18 x 13 x 9in., finished in veneered walnut or sapsels, and connection diagram for wiring amplifier to transcriptioner.

**FEATURES INCLUDE**

- ★ 3 SPEEDS. ★ FREQUENCY RESPONSE 50-11,000 c.p.s. ★ SWITCHED NEGATIVE FEEDBACK EQUALIZATION FOR EACH SPEED. ★ OUTPUT 4 WATTS. ★ MAGIC EYE RECORDING LEVEL INDICATOR. ★ TWIN TRACK OPERATION. Both bottom and top tracks can be recorded or played back without removing tape. ★ INSTANTANEOUS CHANGES can be made from one track to another. Fast rewind in either direction. ★ TAPE MEASURING AND CALIBRATING DEVICE. ★ TAKES FULL 7in. DIAMETER REELS OF TAPE. ★ NEGLIGIBLE HUM. ★ ENTIRELY FINE DIAMETER ERASURE. Full descriptive leaflet supplied on receipt of S.A.E.

OR DEPOSIT 3 GNS. and 18 monthly payments of 53/9. Cash price if settled in 3 months.

### HI-FI 10 WATT AMPLIFIERS

**£5-15-9** Carr. 7/6

BRAND NEW BUT IN SLIGHTLY SOILED CONDITION

A REMARKABLE OPPORTUNITY  
Push-pull output. Latest high efficiency Mullard valves. Dual separately controlled inputs for mike and gram. Separate bass and treble controls. High sensitivity. Output for 15 ohm loudspeaker. Guaranteed, tested, and in perfect working order.

**VALVES!** Full range at really competitive prices. All guaranteed!

### REPANCO CONSTRUCTIONAL ENVELOPES AND COMPONENTS ALWAYS IN STOCK

All parts for: One Transistor Receiver 25/-; Two Transistor Receiver 42/-; 3 Dec 3 Transistor Receiver £3/19/6; Mini 7 Seven Transistor Pocket Portable Receiver £9/19/6; Major 7 Seven Transistor Portable Receiver 15 gns. Only Mullard, Ediswan, or Brimar Transistors supplied for Mini 7 and Major 7 Receivers.

Constructional Envelopes. 3 Dec 9d. Mini 3 Pocket Portable 1/3, Mini 7 1/6, Major 1/6.

### THE SKY FOUR T.R.F. RECEIVER

A design of a 3 valve 200-250 v. A.C. mains. L and M. wave T.R.F. receiver with selenium rectifier. For inclusion in cabinet illustrated or walnut veneered type. It employs valves 6X7, 6F6, 6BE and is specially

designed for simplicity in wiring. Sensitivity and quality are well up to standard. Point-to-Point wiring diagram. Instructions and parts list 1/9. This receiver can be built for a maximum of £4/19/6 including cabinet. Available in brown or cream bakelite or veneered walnut.

### R.S.C. BATTERY TO MAINS CONVERSION UNITS

Type BM1. An all dry battery eliminator. Size 5 1/2 x 4 1/2 x 2in. approx. Completely replaces batteries supply 1.4 v. and 90 v. where A.C. mains 200-250 v. 50 c/s. is available. Suitable for all battery portable receivers requiring 1.4 v. and 90 v. This includes latest low consumption types. Complete kit with diagram 39/9 or ready for use 46/8.

Type BM2. Size 8 x 5 1/2 x 2in. Supplies 120 v. 80 v. and 60 v. 50 mA. and 2 v. 0.4 a. to 1 amp., fully smoothed. THEREBY COMPLETELY REPLACING BOTH H.T. BATTERIES AND H.T. 2 v. ACCUMULATORS when connected to A.C. mains supply 200-250 v. 50 c/s. SUITABLE FOR ALL BATTERY RECEIVERS normally using 2 v. accumulator. Complete kit with diagrams and instructions. 49/9 or ready for use 56/8.

### PHILIPS CONCENTRIC (Dual Cone) P.M. SPEAKERS

10 in. Diameter. 29/8.

### R.S.C. TR2 PORTABLE TAPE RECORDER

A fully assembled unit housed in attractive two tone rexine covered portable cabinet.

- ★ Single Speed 3 1/2 in. per sec.
- ★ Negative Feedback Tone Compensation.
- ★ Excellent Frequency Response.
- ★ Takes 5 1/2 in. Tape Reel.
- ★ Fast rewind.
- ★ Magic Eye Recording Level Indicator.

Complete with Reel of best quality Tape Spare Spool, and Microphone. H.P. TERMS, DEPOSIT 2 Gns. and 12 monthly payments of 33/6. ★ Twin Track. ★ Automatic Erasing. ★ High Sensitivity. ★ High Flux 7 x 4in. P.M. Speaker. ★ Output 3 watts. ★ For 230/250 v. 50 c.p.s. A.C. mains.

**19** GN5. Carr. 10/6

### AGOS HI-FI CRYSTAL 'MIKES'

300-0-300 v. 100 mA., 6.3 v. 4 a., 5 v. 3 a.	25/8
350-0-350 v. 100 mA., 6.3 v. 4 a., 5 v. 3 a.	25/8
350-0-350 v. 150 mA., 6.3 v. 4 a., 5 v. 3 a.	33/8
425-0-425 v. 200 mA., 6.3 v. 4 a., c.t. 5 v. 3 a.	49/8

#### TOP SHROUDED DROP-THROUGH TYPE

260-0-260 v. 70 mA., 6.3 v. 2 a., 5 v. 2 a.	16/8
350-0-350 v. 80 mA., 6.3 v. 2 a., 5 v. 2 a.	18/8
250-0-250 v. 100 mA., 6.3 v. 4 a., 5 v. 3 a.	23/8
300-0-300 v. 100 mA., 6.3 v. 4 a., 5 v. 3 a.	23/8
350-0-350 v. 100 mA., 6.3 v. 4 a., 5 v. 3 a.	23/8
300-0-300 v. 130 mA., 6.3 v. 4 a., c.t. 6.3 v. 1 a. suitable for Mullard 510 Amplifier	29/8
350-0-350 v. 150 mA., 6.3 v. 4 a., 5 v. 3 a.	29/8

#### ELIMINATOR TRANSFORMERS

Primaries 200-250 v. 50 c/s.	
90 v. 15 mA., 6-0-6 v. 250 mA.	14/8
	8/11

#### FILAMENT TRANSFORMERS

Primaries 200-250 v. 60 c/s.	
6.3 v. 1.5 a. .... 5/6	12 v. 1 a. .... 7/8
6.3 v. 2 a. .... 7/8	6.3 v. 3 a. .... 8/11
0-4-6.3 v. 2 a. .... 7/8	6.3 v. 6 a. .... 17/8

#### OUTPUT TRANSFORMERS

Midget Battery Pentode 6B 1 for 3S4, etc.	3/8
Small Pentode 5,000Ω to 3Ω	3/8
Standard Pentode 5,000Ω to 3Ω	5/8
Standard Pentode 8,000Ω to 3Ω	5/8
Push-pull 8 watts 6V6 to 3 ohms	8/8
Push-pull 6 watts EL84 to 15 ohms	8/8
Push-pull 10-12 watts 6V6 to 3Ω or 15Ω	16/8
Push-pull 10-12 watts to match 6V6 to 3-5-8 or 15Ω	17/8
Push-pull EL84 to 3 or 15 ohms	17/8
Push-pull Ultra Linear for Mullard 510	27/8
Push-pull 15-18 watts, sectionally wound, 6L6, KT66, etc., or 3 or 15 ohms	
Push-pull 20 watt high-quality sectionally wound 6L6, KT66, etc. to 3 or 15Ω	47/8

#### SMOOTHING CHOKES

250 mA., 5 H., 100Ω	11/8	80 mA., 10 H., 300Ω	5/6
150 mA., 7-10H 250Ω	11/8	60 mA., 10 H., 400Ω	6/11
100 mA., 10 H., 200Ω	8/8	1 amp. 0.5Ω LT type	6/8

### A.M./F.M. RADIOGRAM CHASSIS

A 6 valve unit by a leading manufacturer. Covers L. and M. wavebands plus V.H.F./F.M. Excellent quality output. High sensitivity. Built in Ferrite aerial. For 200-250 v. A.C. mains. 12 months guarantee. Only **13 1/2** GNS. Carr. 10/- Or deposit 45/-, and 12 monthly payments of 22/6. A beautifully designed and finished walnut veneered table cabinet made to suit the chassis can be supplied for only 35/8

### R.S.C. A12 STEREO AMPLIFIER KIT

**£3-19-6**

A complete kit of parts to construct a good quality 3 + 3 watt (total 6 watt) stereo amplifier providing really life-like reproduction. Suitable for use with all stereo pick-up heads at present available. Ganged volume and tone controls. Preset balance control. Outputs for matched 2-3 ohm speakers. For 200-250 v. A.C. mains Astonishing value.

Carr. and packing 7/8.

### W.B. "STENTORIAN" HIGH FIDELITY P.M. SPEAKERS

HF1012, 10 watts 15 ohms (or 3 ohm) speech coil. Where a really good quality speaker at a low price is required, we highly recommend this unit with an amazing performance. £4/10/9. Please state whether 3 ohm or 15 ohm required.

AM/FM RADIOGRAM CHASSIS, HIGH QUALITY, PUSH-PULL, 6-8 WATT OUTPUT, Current manufacture. 12 months guarantee. For 200-250 v. mains. Covers L. and M. wavebands plus F.M. Includes 8 latest type miniature B.V.A. valves. Only 22 gns. plus 7/6 carr. Or deposit £2/12/- and 9 monthly payments of £2/12/-.

E.M.I. 4-speed Single Players with hi-fi T/O crystal pick-up head for Stereo and Monarch. £6/19/8. Carr. 5/6.

GARRARD 4-SPEED AUTO-CHANGERS Type RC/120H. Limited number at £10/19/8 (approx. half price). Carr. 5/6. Brand new.

### EXTENSION SPEAKERS

Limited number in hand - some walnut veneered cabinets. 2.3 ohms speech coils, 6in. 29/8. 8in. 35/9. 10in. 56/9.

**DRY SHAVERS.** Brand new in carrying case. Operation from 3 U2 batteries, fitted in case. Just the thing for travel. Only 59/6 (approx. half price).

**RECORDING TAPE. GEVASONOR.** Best quality 5in. 600ft. 15/11. L.P. 5in. 850ft. reels 22/6. 7in. 1,700ft. reels 35/- Less than wholesale price.

### SUPERHET RADIO FEEDER UNIT

Design of a high quality Radio Tuner Unit (specially suitable for use with any of our Amplifiers. A Triode Hepkote F/changer is used. Pentode I.F. and double Diode Second Detector, delayed A.V.C. is arranged so that A.V.C. distortion is avoided. The W. Ch. B.W. incorporates Gram-positon. Controls are Tuning, W. Ch. and Vol. Output will load most Amplifiers requiring 500 mV. input depending on A.C. location. Only 250 v. 15 mA. H.T. and L.T. of 6.3 v. 1 amp. required from amplifier. Size of unit approx. 9-6-7in. high. Send S.A.E. for illustrated leaflet. Total building cost is £4/15/- Point-to-Point wiring diagrams and instructions 2/6.

### GARRARD BATTERY OPERATED RECORD PLAYING UNITS. Complete with Pick-up to take 45 r.p.m. records. Used by leading manufacturers in Transistorised Record Players. Require 6 v. battery. Only £3/19/6. Carr. 3/6.

#### PORTABLE CABINET

Two Tone Rexine with all cut outs to take above unit, amplifier and speaker. 29/8.

#### B.S.R. MONARCH AUTO-CHANGERS

Type UA8, 4 speed, T/O Pick-up with sapphire stylus. £7/19/6. Carr. 4/6.  
Collaro AC4/564 4-speed single players with hi-fi turnover crystal pick-up head £6/12/6. Carr. 4/6.

## 30 WATT AMPLIFIER R.S.C. A.10 ULTRA LINEAR

HIGH FIDELITY PUSH-PULL UNIT EMPLOYING SIX VALVES. EP86, EP86, ECC83, 807, 807, C234. Tone Control. Pre-Amp stages are incorporated. Sensitivity is extremely high. Only 12 millivolts minimum input is required for full output. THIS ENSURES THE SUITABILITY OF ANY TYPE OR MAKE OF MICROPHONE OR PICK-UP.

Separate Bass and Treble controls give both "lift" and "cut" with ample tone correction for long playing records. An extra input with associated vol. control is provided so that two separate inputs such as "micro" and gram, etc., can be simultaneously applied for mixing purposes. AN OUTPUT SOCKET WITH PLUG IS INCLUDED FOR SUPPLY OF 300 v. 20 mA. and 6.3 v. 1.5 A. FOR A RADIO FEEDER UNIT. Price in kit form with easy-to-follow wiring diagrams.

Or Factory built with 12 months guarantee £13/19/6. TERMS ON ASSEMBLED UNITS. DEPOSIT 24/6 and 12 monthly payments of 24/6.

ONLY 11 Gns. Carr. 10/-.  
Cover as illustrated Type 807 output valves are used with High Quality Sectionally wound output transformer specially designed for Ultra Linear operation. Negative feedback of 20 D.B. in main loop. CERTIFIED PERFORMANCE EQUAL TO MOST EXPENSIVE UNITS AVAILABLE. Frequency response  $\pm 3$  D.B. 30-20,000 c/cfs. Tone Controls  $\pm 12$  D.B. at 50 c/cfs.  $\pm 12$  D.B. to  $-6$  D.B. at 12,000 c/cfs. hum and noise 70 D.B. down. Good quality reliable components used. Chassis finished blue hammer. Overall size 12 x 9 x 9in. approx. Power consumption 150 watts. For A.C. mains 200-250 v. 50 c/fs. Outputs for 3 and 15 ohm speakers. EQUALLY SUITABLE FOR THE CONNOISSEUR OR FOR LARGE HALLS, CLUBS OR OUTSIDE FUNCTIONS, IDEAL FOR USE WITH MUSICAL INSTRUMENTS SUCH AS STRING BASS, ELECTRONIC ORGAN, GUITAR, etc. FOR DANCE BANDS, GARRISON THEATRES, etc., etc. We can supply Microphones, Speakers, etc., at keen cash prices or on terms with amplifiers. EXPORT ENQUIRIES INVITED.

LINEAR "DIATONIC" 10 WATT HIGH FIDELITY AMPLIFIER. A compact attractively finished unit. 12 Gns. Cash. Send S.A.E. for leaflet. H.P. Terms. Dep. 22/3 and twelve monthly payments of 22/3.

LINEAR LU10 10 WATT HIGH FIDELITY AMPLIFIER, with 3 position equalization switch. 13 Gns.

LINEAR LS/5 HIGH QUALITY STEREO AMPLIFIER. Total output 10 watts. Handsome Perspex Facia Plate. All controls ganged. Only 11 Gns.

LINEAR L45 MINIATURE 4/5 W. QUALITY AMPLIFIER. Suitable for use with any record playing unit and most microphones. Negative feedback 12 D.B. Bass and Treble controls. For A.C. mains input of 200-250 v. 50 c.p.s. Output for 2/3 ohm speaker. Three miniature Mullard valves. Size only 6x5x5 1/2 in. high. Chassis fully isolated from mains. Guaranteed 12 months. Only £5/19/6 Or Deposit 22/- and 5 monthly payments of 22/- Send S.A.E. for leaflet.

L63 MINIATURE 3 WATT GRAM AMPLIFIER For 200-250 v. 50 c.p.s. A.C. mains. Overall size only 6 1/2 x 4 1/2 x 2 1/2 in. Fitted Vol. and Tone Control switch. Designed for use with any kind of single player or record changing unit. Output for 2-3 ohm speaker. Guaranteed 12 months. Only 5/7/6.

R.S.C. A7 3-4 WATT QUALITY AMPLIFIER. Spec. exactly as A5 below with exception of output voltage. Complete kit of parts, diagrams and instructions £3/15/-, carr. 3/6.

R.S.C. A5 4-5 WATT HIGH GAIN AMPLIFIER A highly sensitive 4-valve quality amplifier for the home, small club, etc. Only 50 millivolts input is required for full output so that it is suitable for use with the latest high fidelity pick-up heads in addition to all other types of pick-ups and practically all mikes. Separate Bass and Treble controls are provided. These give full long playing record equalisation. Hum-level is negligible being 71 D.B. down. 15 D.B. of negative feedback is used. H.T. of 300 v. 20 mA. and L.T. of 6.3 v. 1.5 a. is available for the supply of a Radio Feeder Unit or Tape Deck pre-amplifier. For A.C. mains input of 200-250 v. 50 c/fs. Output for 2-3 ohm speaker. Chassis is not alive. Kit is complete in every detail and includes fully punched chassis (with baseplate) with the blue hammer finish, and point-to-point wiring diagrams and instructions. Exceptional value at only 24/15/- or assembled ready for use 25/- extra, plus 3/6 carriage. Or Deposit 22/- and five monthly payments of 22/- for assembled unit.

P.M. SPEAKERS. 2-3 ohm 2 1/2 in. Perdio 21/9. 5in. Goodmans 17/9. 7 x 4in. R.A. Elliptical 19/9. 6in. Rola 19/9. 8in. Rola 19/9. 8in. Goodmans 21/9. 8 x 6in. Elac with high flux magnet 25/9. 10in. R.A. 25/9. 10 x 6in. Elliptical Goodmans 29/9. 12in. R.A. 29/11. 12in. R.A. 3 or 15 ohms, 10 watts, 12,000 lines. 59/6.

TWEETERS. 4in. Plessey, 3 ohms, 18/9. R.A. 15 ohms 25/9.

COLLARO CONQUEST 4-SPEED AUTO-CHANGERS. With studio pick-up with turnover head. BRAND NEW. Cartoned latest model. For 200-250 v. A.C. mains. £17/9/6. Carr. 4/6.

COSSOR V.H.F. F.M. RADIO RECEIVER KITS. Brand New Boxed with valves, printed circuit and 10 x 6in. Speaker. For 200-250 v. A.C. mains. Pre-aligned I.F.T.s. Normal price 15 Gns. Our price £8/19/6.

## R.S.C. MANCHESTER, LEEDS & BRADFORD (LEEDS) LTD.

Open to callers at the following branches :-  
5-7 County (Mecca) Arcade, Leeds, 1.  
54-56 Morley Street, (above Alhambra), Bradford.  
8-10 Brown Street, (Market, St.) Manchester, 2.

## HIGH FIDELITY 12-14 WATT AMPLIFIER TYPE A11

PUSH-PULL ULTRA LINEAR OUTPUT "BUILT-IN" TONE CONTROL PRE-AMP STAGES

Two input sockets with associated controls allow mixing of "micro" and gram, as in A10. High sensitivity. Includes 5 valves. ECC83, ECC83, EL84, EL84, 5Y3. High Quality sectionally wound output transformer specially designed for Ultra Linear operation, and reliable small condensers of current manufacture. INDIVIDUAL CONTROLS FOR BASS AND TREBLE "Lift" and "Cut." Frequency response  $\pm 3$  D.B. 30-30,000 c/cfs. Six negative feedback loops. Hum level 60 D.B. down. Only 25 millivolts INPUT required for FULL OUTPUT. Suitable for use with all makes and types of pick-ups and microphones. Comparable with the very best designs. For STANDARD or LONG PLAYING RECORDS. For MUSICAL INSTRUMENTS such as STRING BASS, GUITARS, etc. OUTPUT SOCKET with plug provides 300 v. 30 mA. and 6.3 v. 1.5 a. For supply of a RADIO FEEDER UNIT. Size approx. 12-9-7in. For A.C. mains 200-250 v. 50 c/fs. Output for 3 and 15 ohms speakers. Kit is complete to last nut. Chassis is fully punched. Full instructions and point-to-point wiring 8 Gns. Carr. 10/- diagrams supplied. (Or factory built 45/- extra). Only 10/- required laured metal cover with 2 carrying handles can be supplied for 18/9. TERMS ON ASSEMBLED UNITS. DEPOSIT 18/9, and 12 monthly payments of 18/9. Send S.A.E. for illustrated leaflet detailing Ready-to-assemble Cabinets, Speakers, Microphones, etc., with cash and credit terms.

## R.S.C. PORTABLE GUITAR AMPLIFIERS

JUNIOR 5 WATT. High Quality Output. Separate Bass and Treble "cut" and "boost" controls. Sensitivity 15 mv. High Flux 8in. 1/2 speaker. Input sockets for Radio/Tape or Gram Pick-up and Mike /Instrument Pick-up. Handsome strongly made cabinet (size approx. 14 x 14 x 7in.). Finished in satin walnut and fitted carrying handle. £8/19/6 Carr. 7/6. Or Deposit £1 and nine monthly payments £1. Send S.A.E. for leaflet.

SENIOR 10 WATTS. High Fidelity Push-Pull output. Separate Bass and Treble "cut" and "boost" controls. Twin separately controlled high gain inputs so that two instruments such as Guitar and String Bass can be used at the same time. Two Loudspeakers are incorporated, a 12in. P.M. for Bass notes, and a 7 x 4in. elliptical for Treble. Cabinet is well made and finished satin walnut. Size approx. 18 x 18 x 8in. 15 Gns. Plus 10/- carr. H.P. TERMS. DEPOSIT 26/6, and 12 monthly payments 26/6. Both models for 200-250 v. A.C. mains.

STAAR GALAXY 4-SPEED MIXER AUTO-CHANGERS. Brand New, cartoned. Turnover sapphire styl. Many exclusive features. Unique design motor virtually free from rumble. For 200-250 v. A.C. mains. Limited number tested and guaranteed 25/19/6. Carr. 4/6.

## PORTABLE CABINETS

For Record Players or Tape Recorders. Revine covered. Wide selection of attractive designs and colour combinations. PRICES FROM 15/9

12in. 10 WATT HIGH QUALITY LOUDSPEAKER IN POLISHED WALNUT FINISHED CABINET

Gauss 12,000 lines. Speech coil 3 ohms or 15 ohms. Only 24/19/6. Carr. 5/-.  
Terms: Deposit 11/- and 9 monthly payments of 11/-.  
12in. 20 WATT 15,000 line 1/2-speaker 15 ohms. In Cabinet finished as above. Size 18 x 18 x 8in. £7/19/6 or Deposit 13/10 and 12 monthly payments 13/10.

PORTABLE CABINETS. Attractive design Two-tone revine covered. Will take Collaro, B.R.E., Garrard or Staar Auto-Changer, amplifier and 7in. x 4in. or 5in. speaker. Slightly soiled. Only 49/6.

ACOS HIGH FIDELITY PICK-UPS. GP54 with HGP59/52 Cartridge. Turnover sapphire styl, cream finish. Limited number at approx. half-price. Only 29/11.

## SPECIAL OFFER

Above cabinet Staar Changer, Gram amplifier, and 5in. or 6in. x 4in. speaker £9/19/6. Carr. 10/- Or with Collaro Conquest changer in lieu of Staar, 12 Gns. Carr. 10/-

PLESSEY DUAL CONCENTRIC 2in. P.M. SPEAKERS

(15 ohms), consisting of a high quality 12in. speaker of orthodox design supporting a small elliptical speaker ready wired with choke and condensers to act as tweeter. This high fidelity unit is highly recommended for use with our A11 or any similar amplifier. Rating is 10 watts. Gauss 12,000 lines. Price only 25/17/6. Or Deposit 10/6 and 12 monthly payments of 10/6.

TERMS: C.W.O. or C.O.D. No C.O.D. under £1. Postage 1/9 extra on all orders under £2. 2/9 extra under £5 unless carriage stated. Trade supplied. Post orders to Mail Order Dept., 29-31 Moorfield Road, Leeds, 12.

6 v. or 12 v. 2 amps. .... 42/9 (inclusive of ammeter)

6 v. or 12 v. 4 amps. .... 53/9

6 v. or 12 v. 4 amp. with variable charge rate selector and ammeter .... 59/9

## CHARGER AMMETERS

0-1.5 amp., 0-3 amp., 0-4 amp., 0-7 amp., 0-25 amp., 0-60 amp. 8/9

## ASSEMBLED CHARGER

6 v. or 12 v. 2 amps. Fitted Ammeter and selector plug for 6 v. or 12 v. Louvred metal case, finished attractive hammer blue. Ready for use with mains and output leads. Double Fused. Only Carr. 3/9. 49/9

As above, but for 3 amp. charging. Only 59/6. Carr. 3/9

Fitted Ammeter and variable charge selector. Also selector plug for 6 v. or 12 v. charging. Double fused. Well ventilated steel case with blue hammer finish. Ready for use with mains and output leads. Carr. 5/- Or Deposit 13/3 and 5 monthly payments of 13/3. As above but for 6 amp. charging. 4 GNS. Carr. 5/-. Or Deposit 16/- and 5 monthly payments of 16/-. The 6 amp. model only, is slightly store soiled and is being offered at well below usual price.

Terms of business—Cash with order or C.O.D. only. Post/Packing charges 6d. per item. Orders over £3. post free. C.O.D. 2/6 extra. We are open for personal shoppers. Mon.-Fri. 8.30-5.30. Sat. 8.30-1 p.m.

Latest catalogue of over 1,000 different valves, also metal rectifiers, volume controls, electrolytic condensers, transistors, germanium diodes, valve holders, and Hiwaco miniature valves, price 6d.

All valves new, boxed and subject to makers' full guarantee. First grade goods only, no seconds or rejects. Please enquire for any type not listed. S.A.E. please.

## D.C. OSCILLOSCOPE

### A.C. MAINS 200-250 VOLTS

**SIMPLIFIED SERVICING PROBLEMS WHEN USING THE 'TESTGEAR' SCOPE**

**3in. D.C. OSCILLOSCOPE**

Engineered to precision standards, this high-grade instrument is made available at the lowest possible price, incorporating the essential features usually associated with luxury instruments. This "SCOPE" will appeal particularly to Service Engineers and Amateurs. A high gain, extremely stable differential Y-Amplifier (30 mV/C.M.). Provides ample sensitivity with A.C. or D.C.

inputs. Especially suitable for measurement of transistor operating conditions where maintenance of D.C. levels is of paramount importance. Push-pull X amplifier; Fly-back suppression; Internal Time-base Scan Waveform available for external use; pulse/output available for checking T.V. Line O/P Transformers, etc.; Provision for external X 1/P and CRT. Brightness Modulation. Size 10in. high, 6 1/2in. wide, 9in. deep. Wgt. 11 1/2lb. £15/15/- plus P. & P. 7/6, or 30/- deposit, plus P. & P. 7/6 and 12 monthly payments of 26/6.

**FULL 12 MONTHS' GUARANTEE INCLUDING VALVES AND TUBE**

## ALIGNMENT ANALYSER TYPE MC12

A.C. MAINS, 200/250 volts. Provides:—"WOBBULATOR" (SWEEP FREQUENCY) OPERATION, for FM/TV alignment linear frequency sweep up to 12 Mc/s. From 400 Kc/s.—80 Mc/s. CAPACITANCE MEASUREMENT. Two ranges provided 0—60 pf and 0—120 pf. SPECIAL FACILITY enables true resonant frequency of any tuned oct. I.F. transformer, etc., to be rapidly determined. Cash price £6/19/6 and 5/- P. & P. H.P. terms, 25/- deposit and 5/- P. & P. and 6 monthly payments of 21/6.

## CHANNEL TUNER

Will tune to all Band 1 and Band III stations. BRAND NEW by famous manufacturer. Complete with P.C.C. 84 and P.C.F. 80 valves (in series). I.F. 16-19 or 33-38. Also can be modified as an aerial converter (instructions supplied). Complete with knobs.

**22/6** Plus 3/6 P. & P.

### HEATER TRANSFORMER

To suit the above, 200-250 v., 6/- Plus 1/6. P. & P.

## B.S.R. MONARCH UA8 with FUL-FI HEAD

4-speed plays 10 records 12in., 10in., or 7in. at 16, 33, 45 or 78 r.p.m. Internerizes 7in., 10in. and 12in. records of the same speed. Has manual play position; colour brown. Dimensions: 12 1/2in. x 10 1/2in. Space required above baseboard 4 1/2in., below baseboard 2 1/2in. Fitted with Ful-Fi turnover crystal head. £6/19/6. Plus 5/- P. & P.

**STEREO HEAD £7/19/6 Plus 5/- P. & P.**

## LINE E.H.T. TRANSFORMER

With built-in bias and width control and winding for EY51. 14 KV. Scan coil, 90° deflection, on ferrite yokes. Frame O.P. transformer 500 pf. 18 KV. smoothing condenser. Can be used for 14in., 17in. or 21in. tubes. Complete with circuit diagram.

**29/6** Plus 4/- P. & P.

Focus Magnet suitable for the above (state tube). 10/-, 2/6. P. & P. 17in. PERSPEX MASK 6/6 Plus 2/6 P. & P.

## AC/DC POCKET MULTI-METER KIT

Comprising 2in. moving coil meter scale calibrated in A.C./D.C. volts, ohms and milliamperes. Voltage range A.C./D.C. 0-50, 0-100, 0-250, 0-500. Milliamperes. 0-10, 0-100. Ohms range, 0-10,000. Front panel, range switch wire-wound pot (for ohms zero setting), toggle switch, resistors and rectifier. Basic movement, 2mA. In grey hammer finish case.

**19/6** Plus Built and tested P. & P. 1/6. 7/6 extra. Point-to-point wiring diagram 1/- free with kit.

## SIGNAL GENERATOR

**£6/19/6**

Covering 100 Kc/s—100 Mc/s. on fundamentals and 100 Mc/s to 200 Mc/s. on harmonics. Metal case 10in. x 6 1/2in. x 6 1/2in., grey hammer finish. Incorporating three miniature valves and Metal Rectifier. A.C. Mains 200/250 v. Internal Modulation of 400 c.p.s. to a depth of 30%. Modulated or unmodulated R.F. output continuously variable 100 millivolts C.W. and mod. switch, variable A.F. output. Incorporating magic-eye as output indicator. Accuracy plus or minus 2%.

Or 25/- deposit and 6 monthly payments of 21/6. Post & Packing 5/- extra.

## SIGNAL GENERATOR

Coverage 120 Kc/s.—230 Kc/s., 300 Kc/s.—900 Kc/s., 900 Kc/s.—2.75 Mc/s., 2.75 Mc/s.—8.5 Mc/s., 8 Mc/s.—25 Mc/s., 16 Mc/s.—56 Mc/s., 24 Mc/s.—84 Mc/s. Metal case 10in. x 6 1/2in. x 4 1/2in. Size of scale 6 1/2in. x 3 1/2in. 2 valves and rectifier. A.C. mains 230-250 v. Internal modulation of 400 c.p.s. to a depth of 30 per cent. modulated or unmodulated R.F. Output continuously variable 100 millivolts C.W. and mod. switch variable A.F. output and moving coil output meter. Grey hammer finish case and white panel. Accuracy plus or minus 2%.

**£4/19/6**

Or 25/- deposit and 4 monthly payments 21/6. P. & P. 5/- extra.

## SIGNAL & PATTERN GENERATOR

**£6/19/6** P. & P. 6/-

Or 25/- deposit. P. & P. 5/- and 6 monthly payments of 21/6. Coverage 7.6 Mc/s.—210 Mc/s. in five bands, all on fundamentals, slow motion tuning audio output. 8 vertical and horizontal bars, logging scale. In grey hammer finished case with carrying handle. Accuracy ±1% A.C. mains 200-250 v.

## F.M. TUNER UNIT

Permeability tuned by famous German Manufacturer. Coverage 88—100 Mc/s. Complete with EOC85. Size 4in. x 2in. x 2in.

**25/-** Plus P. & P. 1/6.

Circuit diagram free with unit. **1/-**

10.7 Mc/s. I.F. and Discriminator Coil 2/6 pair

## 2-TRANSISTOR POCKET RADIO

Plus Germanium diode, fully tuneable over medium and long waves. Size 3 1/2in. x 4in. x 1 1/2in. Complete set of components including case, 2 transistors and earpiece (less batteries). Point to point wiring diagram 1/6. (Free with kit).

**19/6** Plus P. & P. 1/6.

## PUSH-PULL OUTPUT STAGE

Inclusive of transistors with input and output transformers to match 3 ohm speech coil, suitable for use with the above kit. Complete kit of parts including transistors. Point to point wiring diagram 1/6. (Free with kit).

**19/6** Plus P. & P. 1/6.

## MAINS TRANSFORMERS

All with tapped primaries 200-250 volts. 0-160, 180, 200 v., 60 ma., 6.3 v., 2 amps., 10/6. 320-0-320 v. 75 ma., 6.3 v., 2.5 amp., 5 v., 2 amp., 10/6. 280-0-280, 80 ma., 6.3 v., 2 amp., 6.3 v., 1 amp., 10/6. Postage and packing on the above 3/-.

## 8 WATT PUSH-PULL AMPLIFIER

COMPLETE WITH CRYSTAL MIKE AND 5in. LOUDSPEAKER

A.C. mains 200/250 v. Size 10 1/2in. x 6 1/2in. x 2 1/2in. Incorporating 6 valves, H.F. pent., 2 triodes, 2 output pent., and rectifier. For use with all makes and types of pick-up and mike. Negative feedback. Two inputs, mike and gram., and controls for same. Separate controls for Bass and Treble lift. Response flat from 40 cycles to 15 Kc/s. ±2 db; 4 db down at 20 Kc/s. Output 8 watts at 5%, total distortion. Noise level 40 db down, all hum. Output transformer tapped for 3 and 15 ohm speech coils. For use with Std. or L.P. records, musical instruments such as Guitars etc.

**£4.19.6** Plus P. & P. 7/6

Or £1 deposit, plus P. & P. 7/6 and 4 monthly payments of 23/-.

SPECIALISTS

### "FAMILY FOUR"

Our super-sensitive T.R.F. Receiver for home construction. Covers Long and Medium Wavebands, is housed in very smart plastic table cabinet in Brown or Black. For A.C. Mains 200/250 v. Compre-

hensive assembly instructions provided, including practical and theoretical diagrams, which are easy to follow and will enable you to complete this receiver which will be the envy of your friends. ALL NECESSARY COMPONENTS ARE BEING OFFERED FOR LIMITED PERIOD ONLY AT THE REMARKABLE PRICE OF ONLY 79/6, plus 2/6 p.&p. Instruction book available separately if you wish to study before purchase at 1/6 post free.

### NEW LOOK ECONOMY FOUR

Our very popular three valve plus rectifier mains T.R.F. receiver is now available with a new De-Luxe cabinet with polished Walnut finish and Cream trimming (as illustrated). Brief Spec.: Valve line-up 6K7, 6J7, 6V6, and contact cooled rectifier. Ready

drilled chassis, good quality 5in. loudspeaker, Special Denco Coils. Covers Medium and Long Wavebands. Overall dimensions: 12in. x 6in. x 5in. high A.C. 200/250 v. Simple construction with guaranteed results. Easy to follow practical and theoretical diagrams supplied. All necessary components, down to the last nut and bolt, are offered at a SPECIAL INCLUSIVE PRICE OF £5/10/-, plus 5/- p. & p. Instruction book available separately 1/6, post free. Also available with plastic cabinet in IVORY or BROWN if preferred at ONLY £5/5/-, plus p. & p.

### PRINTED CIRCUIT DE-LUXE SUPERHET

Housed in our Standard Economy cream or brown bakelite cabinet and employing the latest circuitry, assembly technique and miniature valves. Incorporates ferrite aerial and covers Medium and Long Wavebands. All required components at special inclusive price of £7/19/6 (or 5/- extra for new style cabinet) plus 5/- p. & p. Instruction book with full description, itemised price list, etc., available separate at 1/6 post free.

### MULLARD 510 HIGH-FIDELITY AMPLIFIER

Our printed circuit version of this excellent amplifier, with ULTRA-LINEAR PUSH-PULL output stage, giving an exceptionally high quality output of 10 watts (max.). Built-in Controls are provided for independent bass and treble Tone correction to suit all types of signal input. Will match all crystal or high impedance

magnetic pick-up heads, F.M., A.M. or A.M./F.M. tuners or tape recorder output. All required components of best quality to Mullard spec. are offered at a special inclusive price of £9/9/- plus 3/6 p. & p. Instruction book, containing full constructional details, theoretical, and practical wiring diagrams, itemised, price list available separately at 3/6 post free. This amplifier is also available ready-built at £12/12/- H.P. available.

### MULLARD TYPE "C" TAPE PRE-AMPLIFIER

All necessary components, including valves, for this truly "Hi-Fi" pre-amplifier can be supplied at a special inclusive price of ONLY £12/9/6, plus 3/6 p. & p. All components available separately if required, send stamp for price list.

### VISIT OUR FULLY EQUIPPED HI-FI SHOWROOM AT TOTTENHAM COURT ROAD FOR DEMONSTRATIONS OF THE LATEST HI-FIDELITY EQUIPMENT BY ALL LEADING MANUFACTURERS.

i.e., Leak, Quad, Armstrong, Dulci, Ferrograph, Vortexion, Linear, Wharfedale, Grundig, Goodmans, W.B., Rogers, Garrard, Lenco, B.T.H. etc., etc. A full range of high quality cabinets to suit all purposes is on show, i.e. "RECORD HOUSING," "W.B.," etc. Enquire about our interesting part-exchange scheme for personal callers.

### THE "SUPERIOR FOUR"

Our superior four-valve receiver A.C. mains, 200/250 v. M. and Long waves. As

with our very successful "Economy Four" all required components are supplied. Valve line-up: 2 6SG7, 6 X5GT and 6 V6GT. Chassis ready drilled. Cabinet size 10 1/2 in. x 10 in. wide. Maximum depth at base 5 in. tapering to 3 1/2 in. at top. Sloping front. Very attractively finished in light walnut and peach. Each component brand new and tested prior to packing. Complete instruction booklet with practical and theoretical diagrams is provided. Booklet available at 1/6 post free. Our price complete £5/15/- Please add 2/6 P. & C. If preferred, we can supply Cabinet Assembly only, comprising Cabinet and bracket wave-change switch; dial pointer, drum, pulleys, drive spindle, drive spring and knobs, at 45/-, plus 2/6 P. & C. N.B.—Our parcels are even supplied with sufficient solder for the job.

### PRINTED CIRCUIT CAR RADIO (for Home Construction)

We are proud to be able to offer this New type Car Radio employing up to the minute circuitry, special 12 volt valves and transistorised output stage. The highest degree of sensitivity is assured by the incorporation of Permeability Tuning and a tuned R.F. Stage. Covers Medium and Long Wavebands. NO VIBRATOR PACK IS REQUIRED. This is a really compact receiver that will fit any car. Comprehensive assembly instructions are provided with all necessary components, including valves and transistor at a Special inclusive Price of Only £12/19/6 plus 3/6 p. and p. Instruction booklet with itemised price list, full description dimensions, etc., available separately at 3/6 post free.

### SUPER MAGNETIC RECORDING TAPE

#### SPECIAL !!

First delivery Famous American Ferrodynamics Acetate Base High Quality Recording Tape. An enthusiast's "must." Brand new (NOT SUB-STANDARD), 7in. 1,200ft. on plastic spool, 25/-; 7in. 1,800ft. on plastic spool, 35/- Professional quality "MYLAR" Du Pont 7" 1800ft. 46/- 7" 2400ft. 65/- P. free.

### THE R.C. 3/4 WATT AMPLIFIER KIT.

Compare the advantages. Treble, base AND middle controls. For crystal or magnetic pick-up. A.C. Mains 200/250 v. Valve line-up: 6V6-GT, 6SG7 metal 6X5GT. Negative feedback. Built on stove enamelled steel chassis, measuring only 8in. x 4in. x 1 1/2 in. Four engraved cream knobs are included in the price of the complete kit with all necessary practical and theoretical diagrams at £4/5/- only, plus 2/6 packing and post or Instruction Book fully illustrated for 1/- Post free. This amplifier can be supplied assembled, tested, and ready for use at £5/5/- plus p. & p. Hearing is believing.

**POWER PACK.** All necessary components for power pack for above amplifier. 50/- plus 1/6 p. & p. This combination will be the envy of anyone interested in quality recording & reproduction!!!

### THE NEW JASON FM TUNER

The latest addition to the impressive JASON range, and like all JASON equipment, can be depended upon for QUALITY, RELIABILITY and PERFORMANCE.

Incorporates the very latest features in design to ensure simplicity of operation and faultless performance. Housed in smart metal shelf mounting cabinet in pastel green with grey plastic dial. Built-in power supplies enable connection to any amplifier or radio fitted with Pick-up sockets, without complications. Two versions are available, i.e., Standard or Fringe Area. ALL NECESSARY COMPONENTS SUPPLIED AT SPECIAL INCLUSIVE PRICE OF: STANDARD TUNER £8/19/6; FRINGE AREA TUNER £10/19/6, both plus 3/6 p. & p. Comprehensive Assembly Instructions with full descriptions and itemised price lists are available separately if required at 2/6 post free.

Full range of JASON equipment available ex-stock

If not stated, please add postage on orders under £1. Cash with order or C.O.D. (charges extra).

Our Advantageous H.P. and Credit Sale Terms are available on any single item over £5. Your enquiries invited. Please print your name and address !!

**RETURN OF A WINNER!!!**

(Exclusive)

We have been fortunate in obtaining further limited supply of this fine and popular cabinet. Instantly recognised as being of leading High Quality manufacturers' stock, this trolley-type cabinet is finished in polished dark walnut. Can easily be adapted to accommodate tape recorder, amplifier, radiogram, etc., etc. External measurements: 24in. x 16in. x 29in. The whole is mounted upon "easy run" castors. Subject to being unsold. £5/19/6. plus 15/- C. & P.

**VERDIK "QUALITY 10."** A superb Hi-Fi amp. and pre-amp. with 10 watt push-pull ultra linear output. Beautifully finished in grey-green stove enamel. Controls: Bass, Treble, Volume and input selection for Radio, Mike, Tape, Scd. and L.P. Records. Limited stocks at only £4/19/6 plus 7/6 P. & P. (List 20 gns.). Terms available.

**OUR PRINTED CIRCUIT F.M. TUNER.** This is our printed circuit version of the Osram 912 F.M. Tuner—using T.C.C. printed circuit and condensers, incorporating 5 valves and two germanium diodes. Attractive black and gold dial, with gold escutcheon plate. Dial aperture only 5 x 2in. Osram F.M.

booklet plus our additional instructions and individually priced components list—2/6 post free or absolutely complete parcel of components (even the solder!) at £8/8/- plus 2/6 P. & P. Alignment service available if required. We are demonstrating at both branches.

**Latest COLLARO STUDIO TAFE TRANSMITTER.** 3 motors, 3-speed: 1 1/2, 3 1/2, 7 1/2 i.p.s., takes 7in. spools. Push-button controls. £15/15/- plus 5/- P. & P. Usual H.P. facilities.

**"ROLEX" SPECIAL HEAVY DUTY MAINS/BATTERY AMPLIFIER.** Very smart unit housed in grey crackle finish case with chrome any cream fittings. For use on A.C. mains 200/250 v. or 6 v. D.C. battery. Valve line-up: 6SK7, 6SN7, 6SL7, 2-6V6, 6X5 and 629C vibrator. 20 watts output to match 4, 8, 16, 250 and 500 ohm speaker systems. Ideal for P.A. work, etc. Size: 13 1/2in. x 8 1/2in. x 7 1/2in. Mike and gram inputs with separate gain controls, tone control, Brand new, fully guaranteed. ONLY £15/15/-, plus 7/6 P. & P.

**A SPECIAL HIGH QUALITY PUSH-PULL AMPLIFIER**  
By famous manufacturer

Limited stocks only of this really wonderful quality amplifier employing 4 valves: 2-EL84, ECC83, EZ80. Separate Bass and Treble Controls mounted with Volume Control upon loose panel with flying leads. Excellent quality components employed throughout. Overall dimensions: (Main chassis) 12in. x 4in. x 5in. high. Control panel: 6in. x 2 1/2in. Input to match standard high impedance crystal or magnetic pick-up. Output approx. 8 watts max. **WHILST STOCKS LAST ONLY £6/19/6**, plus 3/6 P. & P.

**DECCA PORTABLE AMPLIFIER.** As supplied in famous DECCAMATIC III. Complete with small cream knobs. Full range tone and volume controls. Employs ECL82 valve. Size 3 x 3 1/2 x 8 1/2in. Only 59/6 plus 2/6 P. & P.

**SPECIAL CELESTION 8 x 6in.** elliptical high flux loudspeaker 30/- plus 1/- P. & P.  
**VERY ATTRACTIVE PORTABLE CABINET** in Red and White polka dot for accommodating the above items and ancillary equipment, 75/- plus 5/- P. & P.

NOTE. Supplied post free if all above items purchased together.

**EXTRA SPECIAL OFFER!!**

A small three-valve **PORTABLE RECORD-PLAYER AMPLIFIER** mounted on baffle 12x7in., with High Flux 6in. Loudspeaker, Valve line-up ECC83, EL84, EZ80. Incorporates separate bass and treble controls. Max. output 3 watts. Will match all types of high impedance pick-up. Ready to use, £5/12/6 plus 3/6 P. & P.

**NEW STYLE CABINET** finished in two-tone Leatherette. Will accommodate above Amplifier and Baffle without modification, also most types of Ancillary Equipment. Overall size 18 x 13 1/2 x 8 1/2in. Fitted with carrying handle, £3/9/6 plus 5/- P. & P. **NOTE.** If both items purchased together they will be supplied at a special inclusive price of £8/7/6 plus 6/6 P. & P.

**CABINET SPECIAL!!! JUST ARRIVED!!**

Leading manufacturers' special tape equipment cabinet—multi purpose. Will house all your portable tape or record playing equipment, speaker up to 8in. or 10in. x 6in. Size 18in. x 16in. x 14in. Dark green rexine covered, chrome carrying handles and fitted detachable lid with lockable clips. (Keys supplied.) Brand new in original packing. **PRICE ONLY 75/-** plus 5/- part packing and carriage. (Limited quantity). A truly professional job!

**NEW! FOR THE CONSTRUCTOR**

**SUPER 1-VALVE SHORT-WAVE RADIO.** World-wide coverage at most reasonable cost. Covers 40-100 metres with the coil supplied. Can be extended to cover 10-100 metres. Provision is also made for the addition of two extra valve stages. Employs the famous Acorn-type 954 valve. All necessary components can be supplied complete with full assembly instructions at **ONLY 35/-** plus 2/- P. & P. Send 2/- for point-to-point wiring diagram and price list.

**SUPER PERSONAL PORTABLE.** A wonderful little set that you can take anywhere. Ideal for camping, picnics, etc. Detachable aerial rod supplied. Covers Medium waveband 200-500 metres. Can be built in approx. 1 hour. All necessary components available at the following **SPECIAL INCLUSIVE PRICES:** 1-valve version **ONLY 35/-**. Super 2-valve version **ONLY 41/-**. Plus 2/- P. & P. Send for point-to-point wiring diagram and parts price list 2/- post free. Extra for use with the above DLR5 balanced armature headphones, 7/6 pair.

**TWO-TRANSISTOR PERSONAL PORTABLE.** This is an amazing little receiver with built-in aerial, and small enough to be held in the palm of the hand. Medium wave reception at wonderful volume. Supplied with drilled chassis and colour coded components. Easily assembled with the aid of the easy-to-follow assembly instructions provided. Total cost of all necessary components, including transistors, Deaf-aid type earpiece, wiring wire and even solder. **ONLY 69/6** or complete with single standard High Resistance earphone at **ONLY 62/6**. Plus 1/6 P. & P. Parts price list and Easy Lay-out Plans 2/- post free.

**RECORD PLAYERS**

Full range of changers, single players, transcription units at usual competitive prices. Interesting H.P. facilities.

**E.M.I. 4-SPEED STEREO SINGLE RECORD UNIT.** Complete with Stereo Head and Sapphire Styli, Brand New and Fully G'reed. **ONLY £6/19/6** plus 3/6 P. & P. whilst stocks last.

**ADVANCE ANNOUNCEMENT!**  
**TWO NEW COMPETITIVELY PRICED TAPE RECORDER KITS NOW READY!**

Both 3 watts output, printed circuit construction, valve line-up EF86, EL84, ECC83, EZ80 and EM84 recording indicator. Latest 9" x 4" High Flux Speaker. Complete with Tape and empty Spool, and Acos 39-1 stick mike with stand. Attractive two-tone Cabinet. Supplied with latest COLLARO Studio 3-speed deck. Total price 25 guineas. Supplied with B.S.R. single-speed deck, total 20 guineas.

**N.B.** These are Kits, amplifier supplied un-assembled. Full assembly instructions are included. Please add 7/6 for packing and carriage. All parts available separately. Full details on application.

**SPEAKER BARGAINS**

Goodmans 8in. x 2 1/2in., 3 ohms, 25/- plus 1/6 P. & P. 10in. Elac High Flux 3 ohm, 39/6 plus 2/6 P. & P. 8in. Celestion High Flux 3 ohm, 32/6 plus 2/- P. & P. 4in. Plessey Tweeter, 15/- plus 1/6 P. & P. R. & A. Type 9120, Mk. II, 12in., 10-12 watts, 3 ohm, 12,000 gauss, 55/- plus 3/6 P. & P. R. & A. Type 8120, Mk. II, 12in., 10-12 watts, 3 ohm, 10,000 gauss, 39/6 plus 3/6 P. & P. 12in. Bakers Selhurst, 15 ohms, 15 watts, 30-14,000 c.p.s., £4/10/- plus 3/6 P. & P. All the above brand new and fully guaranteed.

**SUPER TRANSISTOR/CRYSTAL RECEIVER.** Our amazing extra sensitive transistor/crystal receiver for local stations, with built-in ferrite aerial, can be supplied for home construction at **ONLY 27/6** for all necessary components inc. pen torch batt. P. & P. 2/- extra. Simple to construct, excellent in performance, most attractive in appearance. Instruction envelope available separately if required at 1/- post free. Suitable Deaf-aid ear piece for above, 12/6.

**JASON TEST EQUIPMENT**

The following equipment of top quality is now available for home construction.

**AUDIO GENERATOR AG10.** Covers from 10 c/s. to 100 Kc/s. in four ranges. Max. output 10 volts. Min output 100 microvolts. Square wave output with excellent rise time. Makes this generator very useful for checking all Audio equipment. Housed in attractive metal shelf mounting case measuring 11 1/2 in. x 6 1/2 in. x 5 1/2 in. high. All necessary components available, including valves, at a Special Price of £14/5/-, plus 3/6 p. & p. Fully descriptive booklet with comprehensive assembly instructions available at 2/- post free.

**OSCILLOSCOPE OG10.** This is a general purpose Oscilloscope based on a "Mullard" circuit employing a DG7-32 3in. cathode-ray tube. A sensitivity of 100 microvolts per c.m. with a band width of 2 c/s. to 2.5 mc/s. makes this a useful unit for T.V. servicing as well as audio amplifier checking. Housed in smart metal case complete with carrying handle. All necessary components available, including valves, at a Special Price of £22/10/- plus 5/- p. & p. Fully descriptive booklet with comprehensive assembly instructions available separately at 3/6 post free.

**CLYNE CATHODE RAY OSCILLOSCOPE for Home Construction**

The latest addition to our comprehensive stocks of quality equipment for the constructor. This is an exceptionally sound and robust instrument of the most versatile type, that will be a boon to the seriously minded amateur, serviceman or constructor. Specifications: 8-Range Time Base, switched from 20 c/s. to 160 Kc/s. Y-Plate Amplifier has a sensitivity of 50 mV. and frequency response of 20 c/s to 600 Kc/s with a gain of 150. A calibration voltage of 6.3 v. 50 c/s is provided. Employs ECR30 2 1/2 in. Cathode Ray Tube and 4 valves: 2/ECF80, 1/EF91, 1/EZ35, 6X5. Controls: X-shift, Y-shift, Focus, Width, Brilliance. ON/OFF. Time

Base Frequency (Fine), Time Base Frequency (Course), Sync Selector. Sync Amplitude. Y-input Selector. X-input Selector. Amplifier Gain. Operates from 200/250 v. or 110 v. A.C. Mains. All required components for the construction of this wonderful instrument, including comprehensive assembly instructions, available at a SPECIAL INCLUSIVE PRICE OF ONLY £12/19/6 plus 5/- carriage. and packing.

**A.M. GRAM CHASSIS SPECIAL!** (By famous manufacturer) This special offer chassis is being offered for a limited period only and represents the best possible value for money. Spec.: 3 wavebands, Long, Medium and Short. 5 miniature valves—6C7, 6F15, 6LD20, N108, U107. Attractive vertical glass dial (13in. x 3 1/2in.) in red, green and gold on black background. Two-speed dial drive. Full range tone control. Output approx. 4 watts to match 3 ohm speaker. For A.C. mains 110/250 v. Overall size 13in. x 6 1/2in. x 6 1/2in. high. **WHILST STOCKS LAST, £7/19/6 ONLY, plus 7/6 P. & P.**

**VALVES.** We have perhaps the most up-to-date valve stocks in the trade. New imported valve types fully guaranteed and P.T. paid and all the usual surplus types at special prices. We also carry a comprehensive stock of all B.V.A. types at current list prices. Send stamp for NEW list now available. Note: Certain American special purpose types can be supplied. Enquiries invited.

**RE-GUNNED CATHODE RAY TUBES.** (As new.) Guaranteed 12 months. 12in., 14in., and 15in., £5/10/-; 17in., £6; 21in., £7/19/6, plus 10/- c. and p.

★ **BARGAIN CORNER** ★

**12 CHANNEL T.V. TURRET TUNER** (By famous manufacturer). Brand new, NOT surplus or ex-equipment. 35 Mc/s. I.F. PCF 84 and PCC 80 valves. Complete with coils: Band I Channels 1 to 5. Band III Channels 8 to 11. In manufacturers original carton. Fully guaranteed at only 39/6 plus 2/6 P. & P.

**ACOSMIC 39-1.** Crystal stick microphone with stand. List price 5gns. Our price 39/6 plus 1/6 P. & P.

**DEAF AID TYPE EARPieces.** Standard magnetic type complete with lead and plug. As new. ONLY 12/6 plus 1/- P. & P.

**BARGAIN! REPLACEMENT PICK-UP INSERTS.** All brand new and fully guaranteed. Complete with Sapphire Styli. PHONOFLUID 21/- each. B.S.R. TC8 (less bracket) 15/- each. B.S.R. Hi-G with bracket, 18/- each. B.S.R. Hi-G (less bracket) 15/- each. E. V. POWER POINT in Garrard plug-in shell, 18/6 each. E. V. CARTRIDGE only 11/6 each. All plus 9d. P. & P.

**3-SECTION WHIP AERIALS.** Ideal for fishing rods, etc. Each section 4ft. ONLY 7/6 set, plus 2/6 P. & P.

**EX-WLDY. DON MK. V FIELD TELEPHONE SET.** Complete with handset, buzzer, hand generator, Morse key. £3 each or £5/10/- pair. (Both above plus 2/6 P. & P.)

**WIRING WIRE.** 5 coils 10 yards each in different colours contained in cellophane bag, 5/- plus 9d. postage.

**TRANSFORMER SPECIAL.** Superior quality half shrouded drop thro' Mains Transformer. Input 200/250 v. Output 350-0-350 v. 80 mA.; 6.3 v. 3 amps. 5 v. 2 amps. Ex-equipment but guaranteed O.K. ONLY 9/6 plus 1/- P. & P.

**8in. LOUDSPEAKER.** Ex-equip. as new. Less transformer 3 ohm speaker ideal for extension speaker. 22/6 plus 1/6 P. & P.

**A COMPACT TEST METER FOR HOME CONSTRUCTION.** This is a very sensitive multi-range test meter (500 microamp basic movement) covering the following ranges: A.C./D.C. voltage: 0-10 v., 0-50 v. and 0-500 v. Current: D.C. 0-10 mA., 0-50 mA. and 0-500 mA. Resistance (on internal battery) 2 K.ohm to 100K.ohm. Housed in a smart grey stove enamelled case measuring 3 1/2 in. x 7 in. x 1 1/2 in. overall. Brand new best quality components and High Stability resistors are used throughout, resulting in a thoroughly reliable, accurate instrument.

**NOTE:** Meter is supplied with calibrated scale fitted, and all components, including shunt, are prepared for immediate soldering into position. Comprehensive assembly instructions with practical and theoretical diagrams are supplied together with all necessary components at a SPECIAL INCLUSIVE PRICE OF ONLY 59/6 plus 1/6 P. & P. The instruction envelope is available separately if required at 1/6 p. free.

**PRECISION TEST METER (To build yourself)**

Nineteen ranges, D.C./A.C. Current and resistance. Designed and produced for us by the famous Pullin Company. All necessary components at Special Inclusive Price of only £5/19/6 plus 2/6 P. & P. Illustrated leaflet with full description available on request.

**CABY UNIVERSAL TEST METERS**

These pocket-size multi-range test meters are of excellent quality and cover all the most useful ranges (A.C. Volts, D.C. Volts, resistance and current). Supplied complete with test prods, instruction book and batteries. Model A.10 (2,000 ohms per volt) £4/17/6

Model B.20 (10,000 ohms per volt) £6/10/- Plus P. & P. 3/6 on each. Fully detailed and illustrated leaflet available on request.

**ALFA POCKET TESTMETER**

A most versatile test meter covering 15 ranges. 3,333 o.p.v. basic movement. Ohms ranges: 0-20K, 0-2 Meg. Volts: A.C. and D.C. 6 v., 12 v., 60 v., 300 v., 1,200 v. Current: D.C. 300 microamps, 30 mA., 300 mA. Size only 3 1/2 in. x 5 in. x 1 1/2 in. overall. Supplied complete with instructions and test prods. ONLY £5/19/6 plus 2/6 P. & P.

**EVERSHED AND VIGNOLES BRIDGE MEGGERS.** Series 2.

250 v. Perfect and complete with leather carrying case. FEW ONLY at £19/19/-, plus 7/6 P. & P.

**DLRS BALANCED ARMATURE HEADPHONES.**

Complete with headband and leads, 7/6 pair, plus 1/6 P. & P.

**HIGH IMPEDANCE LIGHT-WEIGHT HEADPHONES.**

Brand new imported type 4000 ohms. Complete with leads, 15/- plus 1/6 P. & P.

**ALLAN DOUGLAS ELECTRONIC ORGAN**

Readers will no doubt be pleased to know that our working model of this amazing organ for home construction, may now be heard and seen, at our Hi-Fi Showroom in Tottenham Court Road, W.1. For the benefit of constructors all components, keyboards, chokes, etc. are available ready made. Full constructional details are available in book form at 15/- plus 1/6 p. & p. We shall be happy to forward a complete price list on receipt of a stamp. Please address all organ enquiries for the attention of Mr. L. Roche.

300 v.	1,500 v.	30 amp.	
750 v.			Resistance
1,500 v.			1,000 Ω
			10,000 Ω

**ONLY £8/19/6** (Postage, etc., 3/6).

**CANADIAN MOVING COIL PHONES.** Low-resistance. fitted noise-excluding chamomis ear muffs, and leather covered head-band. Lead terminates to jack plug. **BRAND NEW. ONLY 19/8** (Post 1/6).

**POWER UNITS TYPE 234**

Primary 200/250 v. 50 cycles. Outputs of 250 v. 100 mA., and 8.3 v. 4 amps. Fitted double smoothing. For normal rack mounting (or bench use) having grey front panel size 19in. x 7in. **BRAND NEW. ONLY 59/8** (carriage, etc., 7/6).

**HETERODYNE FREQUENCY METERS TYPE LM14**

Frequency range 125-30,000 kc/s. In 2 bands. This is the United States Navy model of the well-known BC-221 Frequency Meter, but has many additional features which increase their usefulness. Voltage stabilisation circuits and Crystal control ensure extreme accuracy, and in addition they are fitted with an Internal Modulation switch to allow use as a Signal Generator. Size only 8 1/2 in. x 8 in. x 8 1/2 in. Full information on request.

**RCA 8in. P.M. SPEAKER**

In heavy black crackled metal case, designed for use with AR 88 Receiver, or any set with 3 Ohms Output. **BRAND NEW IN MAKER'S CARTONS ONLY 45/-** (Post 3/6).

**AR88 LF RECEIVERS**

Reconditioned as new, and in perfect order. Frequency coverage 75-150 kc/s. and 1.2-30 Mc/s. **ONLY £50** (carriage 25/-).

**OSCILLOSCOPE No. II**

Made by A. C. Cossor. Incorporates Hard Valve Time Base with speeds of 1.5-40 milliseconds, but simply converted to produce 3 cycles per second to 30 kc/s. Controls include Fine and Coarse Gain, Brightness, Focus, X and Y shifts. Has Power Pack for nominal 115 v. and 230 v. A.C. with adequate fuse protection. Employs 2 1/2 in. tube type ACR10. Grey and black engraved front panel, size 19in. x 7in. For standard rack use if required, depth of unit being 12in. In steel trunk case as illustrated. Complete with leads and suggested modification data. **BRAND NEW. ONLY £12/10/-** (carriage 15/-).

**CARRIAGE CASES, solid leather BRAND NEW.** Internal dimensions 8 1/2 in. H. x 8 1/2 in. W. x 4 1/2 in. D. Fitted lock and key, and shoulder strap. Ideal for Test Instrument, Camera and accessories, etc. **ONLY 35/-** (postage 2/-).

**AMPLIFIER N24**

Utilises 4 valves, 1 each 5Z4G, 6V6G, 6J7G, 6J5G and high quality components such as "C" Core Transformers and Block Paper Smoothing Condensers. A.C. Mains Pack for nominal 110/230 volts. Provision for 600 ohms or High Impedance Input. Output to 600 ohm Line. For normal use only requires changing Output Transformer. Output approximately 4 watts. Designed for Standard Rack Mounting, having grey front panel size 19in. x 7in. All connections to rear panel, front having "On/Off" Switch. Gain Control, Indicator Light. Fuses and Valves Inspection Panel. **BRAND NEW IN MAKER'S PACKING. ONLY 24/9/6** (carriage 10/6).

**CRYSTAL CALIBRATOR No. 10**

A superb Crystal Controlled Wavemeter just released by the Ministry of Supply. Has directly calibrated dial for nominal coverage of 1.5-10.0 Mc/s. but may actually be used from 500 kc/s. up to 30 Mc/s. Complete with 500 kc/s. Crystal, 2 valves type IT4, 1 or 1B5 and 1 of CV286 (Neon Stabiliser), and Instruction Book. Size 7in. x 7 1/2 in. x 4in., weight 5lb. Used but in first class condition. **ONLY £2/19/6**. Ca. r. 3/6.

**12 VOLTS AMERICAN DYNAMOTOR.** Delivers 220 volts at 100 mills. Size 5 1/2 x 3 1/2 in. diameter. Ideal for running Radio and Electric Shaver, etc., from car battery. **ONLY 32/6**.

**EHT TRANSFORMERS.** 5.5 kV. (Rect.) with 2 v. 1 a., 79/6. 7 kV. (Rect.) with 2 v. 1 a., 89/6. 2.5 kV. (Rect.) with 2-0-2 v. 1.1 a., 2-0-2 v. 2 a. (for VCR 97 tube, etc.), 47/6 (postage 2/- per trans.).

**6 v. VIBRATOR PACKS.** Output approx. 130 v., at 30 mA., fully filtered and smoothed. Complete, **ONLY 12/6**. (Post 2/6)

**HIGH FREQUENCY A.C. VOLTMETER**

A First Grade Moving Iron Instrument with 6in. Mirror Scale, reading up to 150 volts A.C. at 400 and 1,200-2,400 cycles. In substantial Oak case with removable lid, overall size 8 1/2 in. x 8 1/2 in. x 5 1/2 in. Recently made for the Air Ministry, by Everett Edgcombe, and in perfect order. **Brand New & Unused. ONLY £7/10/-**. Can also be supplied for 50 cycles, use either 0-150 or 0-300 volts.

**TAPPED TRANSFORMER.** Normal primary, delivering 30 v. 2 amps., which is tapped to obtain 3 v., 4 v., 5 v., 6 v., 8 v., 9 v., 10 v., 12 v., 15 v., 20 v., 24 v. **ONLY 20/-**. (Post 2/6).

**"Q FIVER" COMMAND RECEIVER.**

The famous American BC 453 covering 190-550 kc/s. I.F.s being 85 kc/s. Complete with all 6 valves and circuit. Size 11 x 5 1/2 x 5in. **BRAND NEW IN MAKER'S CARTONS. ONLY 89/6** (Post 3/6).

**TCS RECEIVERS**

The renowned American set designed by Collins for static or mobile use. Coverage 1.5-12.0 Mc/s. in 3 bands. Complete with all 7 valves. Power required 12 v. L.T. and 225 v. E.T. Size 11in. x 13in. x 1 1/2 in., in black crackled case. **IN NEW CONDITION. ONLY £10/10/-** (carriage 15/-).

**10,000 OHMS PER VOLT TESTMETER**

This latest Caby model is a handy pocket sized tester 5 1/2 in. x 3 1/2 in. x 2 1/2 in. Reads low D.C. voltages at 10,000 ohms per volt, up to 1,000 v. A.C. and D.C. at 4,000 o.p.v. Resistance to 20 mega. D.C. current to 250 milliamps, and also Decibels. Complete with Test Leads, Batteries, and Instruction Book. **ONLY £8/10/-**.

**MAINS ISOLATING TRANSFORMER.** Manufactured by Vortexion. Fully shrouded. Will provide true 1:1 Ratio from nominal 230 v. Primary. Rated at 100 watts. **BRAND NEW. ONLY 22/6** post 2/6).

## REPLACEMENT RE-BUILT T.V. TUBES

**CASH  
PRICE  
£8.10.0**

**OR Yours for 8/6 initial payment (plus Carr. & Ins.) and 19 weekly payments of 8/6.**

**12 months full guarantee**

All sizes except 10in. Completely rebuilt gun assembly, new cathode heaters, etc., giving the high standard required for long picture life quality and value. Carr. and ins. 15/6.

### EXPRESS DESPATCH SERVICE

Please 'phone to confirm tube in stock. Send Telegraph Money Order. Tube despatched passenger train same day. This service only available with remittance by a Telegraph Money Order and cash sales—not terms.

## MODERN 17" T.V. CHASSIS 24 Gns. COMPLETE & WORKING or Terms

**15/3 Initial Payment. Balance at 14/3 for 35 weeks.  
or 29/6 Initial Payment. Balance at 25/6 for 19 weeks.  
Ins., Carr. 25/-. (Must be paid with Init. Payment.)**

Latest chassis including 17in. tube. Permanent magnet speaker, 13-channel turret tuner (any two selected channels fitted). Other channels supplied on request at 7/6 each. 13 valves. Chassis and valves guaranteed for three months. C.R.T. for 12 months full guarantee. Sound I.F. 19.5 Mc/s. Vision 16 Mc/s. A.C. only.

Ready and working to fit into your own cabinet. Carr. and ins. 25/-.  
As above with 14in. tube, complete and working, £19/19/-.

### SOUND/VISION AND I.F. STRIP 2/9

Salvaged. Complete sound and vision strip. Eight valve holders. Less valves. I.F.'s 16-19 Mc/s. Size 8½ x 4½ x 4¼in. Drawings free with order. P. & P. 2/6.

### SOUND/VISION AND I.F. STRIP 7/9

Plessey. I.F.'s 10.5 Mc/s. vision. Eight valve holders. Less valves. Size 8½ x 5 x 4¼in. Circuit incl. The tuner unit plugs directly into this chassis. P. & P. 2/6.

### TIMEBASE 2/9

Containing scanning coils, line transformer, etc. Less valves. Drawings free with order. P. & P. 2/6.

### R.F. E.H.T. COIL 7/9

7-10 KV.R.F. Frequency approx. 22 Kc/s. Uses 6V6 or P61 as osc. Suitable for Ultra model V600, 700 and many other sets or replacing E.H.T. mains transformers. Ideal when using a larger tube. Size 4½ x 2in. dia. Base 4 x 4¼in. Circuit drawings available with order. P. & P. 2/6.

### T.V. AERIALS

For all I.T.A. channels. Outdoor or loft. Three elements. P. & P. 2/6.

### AERIALS

B.B.C. indoor type. Folded dipole with 12ft. co-ax cable fitted. Post 1/9.

### COMBINED T.V. AERIAL 35/6

Loft type. Single dipole B.B.C. with 3 elements. I.T.A. Swivel bracket for universal fixing. Ins., carr. 3/-. Or initial payment of 2/3 plus ins. and carr. and 19 weekly payments of 1/9.

### CO-AX CABLE 6d. YARD

Cut to any length. Good quality at a very cheap price. Allow 1/6 postage on 20 yards. 45/- per 100 yards. Post and packing 3/6.

## SUPER SUPERIOR RADIO 89/6

(Two Tone Covered)  
4 wave band. 5 valve superhet radio.

Complete in strong attractive metal cabinet. 4 control knobs. Positions for gram. P.U. and extension speaker. A.C. only. Size 24½ x 12 x 10in. deep. Insurance and carriage 8/6 or on extended credit terms; initial payment 5/4 plus ins., carr., and 19 weekly payments of 4/2.

### FOCUS MAGNETS 9/9

Brand new. 38 mm., incorporating picture shift control. P. & P. 1/3.

### FOCUS MAGNETS 12/6

38 mm. Brand new. Post and packing 1/3.

### SCANNING COILS 10/6

Low impedance. 38 mm. Brand new. Post and packing 1/3.

### SCANNING COILS 15/9

Wide angle 90°. 38 mm. Low impedance. P. & P. 1/3.

### T.V. MASKS 2/9

Gold plastic for 15in. tubes. Post 1/3.

### CHASSIS 1/-

6 or 8 valve, latest type midget valve design for A.M. or F.N. Brand new. Cadmium plated. Size 12½ x 7½ x 2½. P. & P. 1/9.

## A CHASSIS IS FOR SPARES ALL THIS FOR ONLY 9/6

56 Resist., incl. 7 variable. Controls. Condensers, incl. electrolytics. Coils. 7 I.F. and R.F. trans., 14 valve holders. 9 B7G, 5 B5G, 3 octal, 4 trans., mains, O.P.P. Line-Frame. Chokes 250 m.a. Metal rec., 300 volt 250 m.a. Fuse panel, scanning coils, fuses magnet. Plugs, sockets, switch, chassis, screws, tag strips, etc. I.F. strip in separate power pack can be used without dismantling. Chassis have been used but were working when stored. Seven pages of circuits and instructions showing position of each component. Carriage 10/6.

## SUPER CHASSIS 79/6

Five-valve superhet chassis including 8in.

P.M. speaker and valves. Four control knobs (tone, volume, tuning, w/change, switch). Four wavebands with position for gram. P.U. and extension speaker. A.C. Ins., carr. 5/6.

### IDEAL RADIO CHASSIS 39/6

Five-valve superhet. A.C. Radio or radiogram chassis. Three waveband and gram., switched, 8in. P.M. speaker included. Valve line-up: 6K8, 6K7, 6Q7, 5Z4 (not included). Chassis size 19½ x 7½ x 9in. (Knobs 2/- extra. Set of valves 45/9 extra. Complete £45/5/-). Ins., carr. 5/6

### I.F. TRANSFORMERS 1/- per pair

465 Kc/s. All tested and guaranteed. Post 1/-.

### RECTIFIERS 2/9

250 v. 100 mA Full or half wave. Salvage, guaranteed. P. & P. 1/3.

### GENERATORS 1/9

24 volt in. Less brushes. Size approx. 4 x 4in. P. & P. 1/9.

### CAR AERIALS 6/9

Whip antennae. Plated. 50in. long collapsing to 11in. One-hole fixing. Post 1/-.

### INSULATING TAPE 1/6

Finest quality tape. 75ft. x ¼in. wide in sealed metal container. Post 9d.

## SOLO SOLDERING TOOL 12/6

110 v., 6 v. or 12 v. (special adaptor for 200/250 v., 10/- extra). Automatic solder feed including a 20ft. reel of Ersin 60/40 solder and spare parts. It is a tool for electronic soldering or ear wiring. Revolutionary in design. Instantly ready for use and cannot burn. In light metal case with full instructions for use. Post 3/6.

## TRANSFORMERS

### MAINS TRANSFORMERS 7/9

Primary 200-250. Secondary 300-0-300. 6 v. at 3.3 amps. Post and packing 2/9.

### MAINS TRANSFORMER 5/9

Primary 200-250. Secondary 0-100-250. 150 m.a. Suitable for small amplifiers using two series of valves. Size 2½ x 1½in. Post and packing 1/9.

### MAINS AUTO 0-205-225-245 v. at 300 m.a.

8/9  
Isolated windings of 6.3 v. at 2-6 amp., 6.3 volt at 3-6 amp., 2 v. at 1-4 amp. P. & P. 3/9.

### MAINS TRANSFORMERS 3/9

Primary 200 250. Secondary 250-0-250. 6.3 v. at 3 amp., 5 v. at 2 amp. P. & P. 2/9.

### FRAME OUTPUT TRANSFORMERS 1/9

500 ohms primary. 18 ohms secondary. P. & P. 1/6.

### HEATER TRANSFORMERS 3/9

2-1 ratio. Auto trans., 2 v. to 4 v., 3 watts. P. & P. 1/9.

### HEATER TRANSFORMER 12/9

12 volt at ½ amp. 0-200-250 primary. P. & P. 1/9.

### EY 51 ISOLATION TRANSFORMERS 7KV 5/9

1-1 ratio. Isolation trans. for 6.3 v. tube. P. & P. 1/9.

### O.P. TRANSFORMERS 1/3

Standard size. 2-5 ohms. Post and packing 1/-, 20 for £1. P. & P. 5/6.

### SMOOTHING CHOKE 250 mA 5/9

2nd 40 ohms. D.C. Res. New. P. & P. 1/6.

### AUTO TRANSFORMERS, NEW, 8/9

4-5 v. at 2 amps. P. & P. 2/9.

### MAINS TRANSFORMERS, NEW, 11/6

Type 672 primary. 210/250 v. See 6.3 at 2 amp. Centre tapped 5 v. at 2 amp. P. & P. 2/6.

## HOME RADIO 79/6

A.C./D.C. Universal mains. Five valve octal superhet. 3

waveband receiver can be adapted to gram. P.U. In attractive wooden cabinet. 9½ x 18½ x 11½in. Ins., carr. 4/6.

### NODARK OVERLOAD CUT-OUT SWITCH 8/9

This will stop the search for that illusive fuse wire and the annoyance of repairing the fuse. Accidental crossing of wires or faulty connections will automatically throw the switch of the Nodark cutting the current to the fuses. It now only remains to rectify the fault and switch on the Nodark. 200-250 v. Maximum load 2-5 amps. A fraction of the list price. P. & P. 1/6.

### TOGGLE SWITCHES 9d.

Make 2 break 2. New. Post 6d.

### 2 GANG CONDENSER 3/6

Brand new. Standard size. 2-5 ohms 0005. P. & P. 1/-.

### BUGIN 2-PIN FLEX CONNECTORS, 1/- pair

(Flat type). Post 6d.

### YAXLEY SWITCH 1/9

Panel mounting. Make 2 break 2. 4 pole. P. & P. 9d.

# MULLARD DESIGNS

*Still by far the finest value*

## COMPLETE KIT OF PARTS

Designed by MULLARD—presented by STERNS strictly to specification

### MULLARD "5-10" MAIN AMPLIFIER

For use with the MULLARD 2-stage preamplifier (described below) with which an undistorted power output of up to 10 Watts is obtained. This combination is thoroughly recommended for "Hi-Fi" enthusiasts who contemplate a versatile and very high quality home installation. We supply SPECIFIED COMPONENTS AND NEW MULLARD VALVES including PARMEKO MAINS TRANSFORMER (which has extra Power available to drive Radio Tuner) and the choice of the latest Ultra-Linear PARMEKO or the PARTRIDGE Output Transformer.

ABOVE INCORPORATING PARTRIDGE OUTPUT TRANSFORMER £1/6/0 extra

Price: COMPLETE KIT (Parmeko Output Trans.) **£10.00**  
Alternatively we supply ASSEMBLED AND TESTED **£11.10.0**

### MULLARD'S PRE-AMPLIFIER TONE CONTROL UNIT

Employing two EFS1 valves, and designed to operate with the Mullard 3-3 and 5-10 MAIN AMPLIFIERS, but also perfectly suitable for other makes.

Our kit is strictly to MULLARD'S SPECIFICATION and incorporates:  
 ● Equalisation for the latest R.I.A.A. characteristics.  
 ● Input for Crystal Pick-ups, and variable reluctance magnetic types.  
 ● Inputs (a) Direct from High Imp. Tape Head. (b) From a Tape Amplifier or Pre-Amplifier.  
 ● Sensitive Microphone Channel.  
 ● Wide range BASS and TREBLE Controls.

Price: COMPLETE KIT OF PARTS **£6.6.0**  
Alternatively we supply ASSEMBLED AND TESTED (Carriage and Insurance 5/- extra.) **£8.0.0**

### MULLARD 3-3 MAIN AMPLIFIER

Based entirely on the very popular "3-3" model and designed to operate with the 2-stage PRE-AMPLIFIER (shown here) thus providing all the facilities associated with the more expensive "Hi-Fi" equipment. We recommend it as the IDEAL SMALL HOME INSTALLATION where very high quality is desired at the lower volume level (up to 3 watts). We supply completely to MULLARD'S SPECIFICATION INCLUDING the latest PARMEKO Output Transformer, specified Valves and Components. Has Power available to drive a Radio Tuning Unit.

Price for COMPLETE KIT OF PARTS **£7.0.0**  
Alternatively we supply ASSEMBLED AND TESTED (Carriage and Insurance 5/- extra.) **£8.0.0**

### COMPLETE MULLARD 5-10 AMPLIFIER

The popular and very successful complete "5-10" incorporating Control Unit providing up to 10 Watts high quality reproduction. Input channels for high output pick-ups and all modern Radio Tuning Units only. Specified Components and new MULLARD VALVES are supplied including PARMEKO MAINS TRANSFORMERS and choice of the latest PARMEKO or PARTRIDGE ULTRA Linear Output Transformers. Adequate power available to drive Radio Tuner. Price: COMPLETE KIT, Parmeko Transformer..... **£11.10.0**  
Alternatively we supply ASSEMBLED AND TESTED **£13.10.0**

Price: COMPLETE KIT, Parmeko Transformer..... **£11.10.0**  
Alternatively we supply ASSEMBLED AND TESTED **£13.10.0**  
H.P. Terms Deposit £2/14/-, 12 months at 17/10.  
ABOVE incorporating PARTRIDGE OUTPUT TRANSFORMER £1/6/- extra.

## SPECIAL PRICE REDUCTIONS

- (a) The COMPLETE KIT OF PARTS to build both the "3-3" Main Amplifier and the 2-Stage Pre-Amplifier Control Unit..... **£12.10.0**
  - (b) The "3-3" and the 2-Stage Pre-Amplifier both Assembled and Tested..... **£15.0.0**  
H.P. TERMS: Deposit £3 and 12 months of £1/2/-.
  - (c) The COMPLETE KIT OF PARTS to build both the "5-10" Main Amplifier and the 2-Stage Pre-Amplifier Control Unit..... **£15.15.0**

THE COMPLETE ASSEMBLY MANUAL AVAILABLE FOR 1/6.

### COMPLETE MULLARD 3-3

A VERY HIGH QUALITY UNIT DEVELOPED FROM THE VERY POPULAR 3-VALVE 3-WATT AMPLIFIER DESIGNED IN THE MULLARD LABORATORIES.

Price for COMPLETE KIT OF PARTS..... **£7.10.0**  
(Plus 6/6 carriage and insurance.)

Alternatively supplied ASSEMBLED AND FULLY TESTED (Plus 6/6 carriage and insurance.)..... **£8.19.6**

Our kit is complete to the MULLARD specification including supply of specified components, valves and PARMEKO OUTPUT TRANSFORMER. We also include switched inputs for 78 and L.P. records plus a Radio position. Extra power to drive a Radio Tuning Unit is also available.

# MULLARD - STERN STEREO DESIGNS

Model 3-3 M/S

### DUAL "3-3" MAIN AMPLIFIER

Comprises two "3-3" MAIN AMPLIFIERS (described above) on one chassis and is designed to operate with our DUAL CHANNEL PREAMPLIFIER for both STEREPHONIC or MONAURAL operation.

Price: COMPLETE KIT OF PARTS **£10.0.0**  
Alternatively ASSEMBLED AND TESTED **£11.15.0**

H.P. Terms Deposit £2/7/-, 12 months at 17/4.  
Its output power is 6 Watts (3 watts per channel) and together with our PREAMPLIFIER provides a very acceptable STEREO installation.

### DUAL CHANNEL PRE-AMPLIFIER

STEREPHONIC or MONAURAL operation. It is designed primarily to operate with our range of MULLARD MAIN AMPLIFIERS but will also operate equally well with any make of Amplifiers requiring an input of 250 mV.

Price: COMPLETE KIT OF PARTS..... **£12.10.0**

H.P. Terms £3 Deposit and 12 months of £1/2/-.  
Perfectly suitable for MONAURAL only operation, with one "3-3" or one "5-10" MAIN Amplifier to which the second Main Amplifier can at any time be added thus very easily providing for both STEREO or MONAURAL reproduction. Recommended combination for STEREO operation.

- (a) The DUAL CHANNEL PRE-AMPLIFIER together with the Dual "3-3" MAIN AMPLIFIER.
- (b) The DUAL CHANNEL PRE-AMPLIFIER together with two "5-10" MAIN AMPLIFIERS. Assembly Manual is available for 3/- or send S.A.E. for Descriptive Leaflet.

When ordering please advise MAKE and MODEL OF AMPLIFIER in use.

Only New HIGH GRADE Specified Components and MULLARD VALVES are supplied in all these models.

Please enclose S.A.E. if ILLUSTRATED and DESCRIPTIVE LEAFLETS are required. Alternatively, the COMPLETE ASSEMBLY MANUALS containing component Price Lists and practical Drawings, etc., are available at 1/6 each.

### COMPLETE STEREO AMPLIFIER

for a low priced but good quality DUAL CHANNEL STEREPHONIC AMPLIFIER. Price: COMPLETE KIT OF PARTS **£8.10.0**  
Alternatively ASSEMBLED AND TESTED..... **£10.10.0**

Two Mullard ECL 82 Triode Pentode Valves are incorporated in the design, they form a "CLASS A" single ended output stage in each channel. The input sensitivity is 300 mV/vo, therefore when used with most STEREO Crystal Pick-Ups, or Radio Tuning Units, an output of 2 Watts per channel is achieved, or similarly when switched to MONAURAL Pick-up position a combined output of 4 Watts is produced.

**STERN RADIO LTD.** DEPT. W. 109 FLEET ST., LONDON, E.C.4  
Telephone: FLEET STREET 5812/3/4

Each Model incorporates the highly successful HF/TR3 Amplifier (described opposite), thus ensuring truly "Hi-Fi" record and playback facilities.

PLEASE ENCLOSE S.A.E. WITH ALL CORRESPONDENCE

# SCOPE FOR A BARGAIN

## DOUBLE-BEAM OSCILLOSCOPE TYPE 13A

Made for the Ministry by leading manufacturers (e.g., Erskine & Hartley Electromotives) this fine instrument is suitable for the examination of waveforms from two cycles to ten megacycles. It is extremely well designed and incorporates such desirable features of construction as potted "C" core transformers and paper smoothing capacitors for complete reliability. No electrolytic condensers are used.

**TIME BASE** 2 cps. to 750 Kcs.  
**Y PLATE AMPS.** 5 Mc/s. bandwidth (3 dB).  
**CAL. MARKERS** 1μ sec. and 10μ sec.  
**SIZE & WEIGHT** 13in. x 10in. x 22in. 58lbs.  
**EXTERNAL PROBE** For RF measurements  
**POWER SUPPLIES** Internal (AC mains)

All instruments are in first class condition and are carefully checked and tested before despatch. Mains connector, test leads, probe and circuit diagram are neatly contained in the detachable front cover.

**£25** Carr. 30/-

### VIDEO OSCILLATOR TF885A

Frequency coverage in two ranges: 25 cps. to 30 Kc/s. and 30 Kc/s. to 5 Mc/s. (sinewave) and 50 cps. to 150 Kc/s. (squarewave). Output 1 watt into 1000Ω (sinewave) and 64 volt peak to peak (squarewave). Operates from A.C. mains. MODERN equipment in first class electrical and mechanical condition. £100 carr. paid.

### SPECTRUM ANALYSER TF984/1

For viewing the spectra of "S" band transmitters in the range 2,900-3,150 Mc/s. These are in virtually new condition but are NOT tested. Operation is from 180 volts 500 cps. power supplies. £30 carriage paid.

### MARCONI VIDEO OSCILLATOR TF410C

An earlier design of video oscillator having the same frequency coverage as the TF 885. The output meter is a circular 3½in. instrument. For AC mains operation. In good condition and working order. £35. Carriage paid.

### MARCONI B.F.O. TF602A

Frequency range 10 cps. to 12,000 cps. Operation is from AC mains. Output indication by magic eye. Incorporates 50 cycles check. A reasonably compact instrument useful for general audio testing. Fair condition, tested and working perfectly. £6/19/6. Carriage 10/6.

### MARCONI BRIDGE TF868

Measures L, C. & R. each in 7 steps; L. & C. at 1,000 c/s. and R at D.C. L: 1μH to 100H; C: 1μF to 100μF. R: 0.1Ω to 10MΩ. Power factor 0.001 to 0.995. AC mains operation. First class MODERN equipment in virtually new condition. Perfect working order. £65. Carriage paid.

### FERRANTI TESTMETER TYPE Q

Volts 0 to 30, 150, 600 A.C./D.C. with additional 0-3 v. D.C. and 0-15 v. A.C. ranges; milliamps 0 to 7.5, 30, 150 and 750 D.C., ohms 0-25K. Accuracy BSS 1st grade. 500 ohms per volt. With leads, prods, battery and instructions. In velvet lined 4x7x3in. case. Brand new condition, perfect working order 52/6. Post 2/6.

### UNIVERSAL IMPEDANCE BRIDGE TF373

An excellent bridge of earlier design having an almost identical specification to the TF868. Those we offer are in very good electrical and mechanical condition and are in perfect working order. £35 carriage paid.

### G.E.C. SELECTEST DIII

### OUTPUT POWER METER TF340

Impedance from 2.5Ω to 20,000Ω in 40 steps. 100 W. to 5 watts. Four ranges 0-5 mW., 0-50 mW., 0-500 mW., and 0-5 Watts. First class condition. Tested. £9/19/6. Carriage 7/6.

### AVOMETER MODEL D.

£8.19.6 (P. & P. 3/6)

D.C. Volts	A.C. Volts	D.C. Current	A.C. Current
150 mV.	7.5 V.	15 m/A.	75 m/A.
300 mV.	15 V.	30 m/A.	150 m/A.
1.5 V.	75 V.	150 m/A.	750 m/A.
3 V.	150 V.	300 m/A.	1.5 Amps.
15 V.	300 V.	1.5 Amps.	7.5 Amps.
30 V.	600 V.	3 Amps.	15 Amps.
150 V.	750 V.	15 Amps.	
300 V.	1.5 KV	30 Amps.	
750 V.			
1.5 KV			

Thoroughly overhauled. Complete with batteries and instructions. An extremely robust meter at a very reasonable price.

This testmeter has exactly the same ranges as the Avo "D". The scale is even larger. Those we offer are in first class condition, completely overhauled and carefully tested prior to despatch. Complete with battery, test leads and instructions. £7/10/- P & P. 3/6.

**FERRANTI VOLTMETERS NS.**

0-300 volts, 25-100 c/s. Moving iron, 6in. scale. Fl. mg. Hermetically sealed, grade IN. Made 1955. BRAND NEW. Boxed. 79/6, post 3/6.

**CRYSTAL CALIBRATOR No. 10**  
A crystal controlled heterodyne wave-meter covering 500 Kc/s to 10 Mc/s. (Harmonics up to 30 Mc/s.) Requires 15 m/a. and 12 v. 0.3 A. d.c. but can be easily modified for 120 v. and 1.4 v. working. Size 7x7x4in. First class condition, complete with valves, crystal, instruction manual and circuit. ONLY 59/6. Post 3/6.

**CHOKES.** Parmeko 5 H. 200 m/amps., 6/6. HRO chokes, 17 H., 80 m/amps., 7/6. AR-88 chokes, 15 H., 90 m/amps., 8/6. Parmeko 8 H., 100 m/amps., 7/6. Postage any type, 1/6.

**Q'SER (BC-453)**

This Command Receiver covers 190-550 Kc/s.-(I.F. 85 Kc/s.) and is ideal for double superhet conversion etc. Supplied BRAND NEW in original cartons, with all 6 valves and CIRCUIT. 89/6. Post 3/6.

**SELENIUM BRIDGE RECTIFIERS.** Funnell cooled. A.C. input 45 v. RMS. D.C. output 30 v. 10 amps. BRAND NEW. Boxed. 45/-. Post 3/6.

**HEAVY DUTY L.T. TRANSFORMERS.** (Gresham.) Latest type potted, oil filled, Pri. 230 v. 50 c/s. Sec. 0-70-75-80 v. 4 amps. Size 5 1/2 x 4 1/2 x 6 1/2 in. high. Wt. 19 lb. BRAND NEW. 42/6, carr. 5/-. Gardner's Transformer. Tapped mains input. Secondary 12 volts RMS (C.T.), 30 amps. Housed in sheet metal case 9 1/2 x 8 1/2 x 6 1/2 in. high. BRAND NEW. 72/6, carr. 7/6.

**DUAL PURPOSE TRANSFORMERS** (Gresham.) Pri. 230/250 v. Secs. 240-0-240 v. 1.5 amps., 5 v. 12.5 amps., 5 v. 1.75 amps. Ideal for ISOLATING TRANSFORMER, to obtain TWO 240 v. 360 watt lines. Potted, oil-filled, 7x7x10 1/2 in. high. Wt. 50 lb. BRAND NEW. £3/10/-. Carr. 10/-.

**ADVANCE CONSTANT VOLTAGE TRANSFORMERS.** Input 190-260 v., 50 c/s. A.C. mains. Output 230 v. 150 watts. £8/10/-. Carr. 5/-.

**STANDARD TRANSFORMERS**  
Vacuum impregnated, interleaved, E.S. screen, universal mounting. Size 4x3 1/2 x 2 1/2 in. ALL BRAND NEW. 18/6 each. Post 1/6.  
Type 1. 250-0-250 v. 80 m/a., 6.3 v. 3 A., tapped at 4 v. 4 A., 6.3 v. 1 A. tapped at 4 v. and 5 v. 2 A.  
Type 2. As above, but 350-0-350 v. 80 m/a.  
Type 3. 30 v. 2 A., tapped at 12, 15, 20 and 24 v., to give 3-4-5-6-8-9-10 v., etc. Ideal for models, trains, etc.

**6-VOLT VIBRATOR PACKS.** HRO type, 180 v. D.C., 65 m/amps. BRAND NEW. 29/6, post 3/6. Type PU2, 200 v. D.C. 100 m/amps., with OZ4 rectifier. BRAND NEW. 25/-. Post FREE.

**CRYSTALS.** 200 Kc/s. American GEC, 10/- each. 100 Kc/s. RCA bars, 15/-.

**ADMIRALTY HT TRANSFORMERS**  
Pri. 230 v. 50 c/s. Secs. 620-550-375-0-375-550-620 v. (620 and 550 v. 200 m/amps., 375 v. 250 m/amps.), plus two 5 v. 3 Amp. rectifier windings. Total rating 278 VA. Upright mtg. Wt. 25 lb. Made 1953. BRAND NEW. Original boxes. 45/-. Carr. 5/-.

**INSTRUMENT TRANSFORMERS**  
230 v. A.C. input. Outputs 0-65-130-195 v. 85 m/amps., 6.3 v. 5 amps., 6.3 v. 0.3 amps. Shrouded. Size 3 1/2 x 3 1/2 x 3 1/2 in. high. 15/-, post FREE.

**AR88D MAINS TRANSFORMERS.** Input 110-240 v. Output 345-0-345 v. 125 m/amps., 6.4 v., 4.5 amps., 5 v. 2 amps. 4 1/2 x 4 1/2 x 5 1/2 in. high. Wt. 12 lb. Potted. Tag ends. RCA BRAND NEW. Boxed. 29/6, post 3/6.

**MARCONI CR100**

Completely overhauled. In perfect working order. LOOK LIKE NEW. £21.  
Later model with Noise Limiter, £25.  
Carr. Eng. and Wales 30/-. Send S.A.E. for full details.

**RCA AR-88 SPEAKERS**

A high quality 3 ohm unit fitted into heavy gauge black cracked steel cabinet, size 10 1/2 x 11 1/2 x 6 in. Fitted with rubber feet and 6ft. lead. Ideal for extension speaker, CR100, etc. In original cartons. BRAND NEW. 45/-. Post 3/6.

**CR150 COMMUNICATIONS RECEIVERS**

Covers 2-60 Mc/s. in 5 ranges. Double superhet, with 2 EF50 R.F. stages, 500 Kc/s. crystal calibrator H.T. stabiliser, "S" and valve-check meter, audio filter, etc. Variable selectivity, using TWO double-crystal band-pass filters. External power supply required, 300 v. D.C. 65 m/amps, and 6.3 v. 3.7 Amp. Size and appearance similar to CR100. In superb condition and working order, £45. Carr. 30/-.

**LOUD HAILER EQUIPMENT**

IDEAL FOR CROWD CONTROL, FACTORIES, FETES, ETC. CONSISTS OF 4 SPEAKER UNITS AND CONTROL UNIT, COMPLETE WITH MICROPHONE, HEADPHONES AND SPARES. OPERATES FROM 12 VOLTS D.C. OR 8 VOLTS D.C. WITH SLIGHTLY REDUCED OUTPUT, CONSUMING ONLY 3 AMPS. OUTPUT POWER 8 WATTS ALL TESTED AND WORKING, BUT SLIGHTLY SOILED. A GENUINE BARGAIN. £4/10/6. CARRIAGE 25/6.

**MORE METER BARGAINS**

METER RECTIFIERS. Full wave bridge. BRAND NEW. Salford 1 mA. 8/6, 5 mA. 8/6. 8TC 2 mA. 5/6.

**MINIATURE 373 IF STRIPS.** For FM tuner described in "Practical Wireless." Complete with 3 of EF91, 2 of EF92 and 1 of EB91. A fresh release enables us to offer these once again. BRAND NEW. Complete reprint of conversion instructions and circuit supplied free. 35/-. OR less valves, 12/6. Post, either, 2/6.

**T.C.C. VISCONAL CONDENSERS.** 8 mFd. 800 v. D.C. wkg. at 71 deg. C. CPI52V. Size 3 x 1 1/2 x 5 in. high. BRAND NEW. Boxed. 8/6 each post paid.

**MINIATURE RELAYS (ALL BRAND NEW and BOXED)**  
G.E.C. sealed, wire ends, 670Ω, 2 H/D makes, M1099..... 15/-  
G.E.C. sealed, wire ends, 670Ω, 4 C/overs, platinum, M1092 19/6  
G.E.C. sealed, wire ends, 5000Ω, 2 C/overs, platinum, M1052 17/6  
Siemens High Speed, 1K+1KΩ, 1 C/over..... 10/6

**HRO SENIOR RECEIVERS**

Complete with ALL NINE general coverage plug-in coilsets for 50 Kc/s. to 30 Mc/s. Instruction booklet, and circuit, but less external power supply unit. Table models, as new condition, 21 GNS. Rack mounting, 18 GNS. Packing and carriage 22/- extra. Send S.A.E. for further details.  
**HRO POWER PACKS.** 115/230 v. A.C. mains input. Tested, and in good condition. Table or rack, 69/6. Post 4/-.

**CHARLES BRITAIN (Radio) LTD.**  
11 UPPER SAINT MARTIN'S LANE  
LONDON, W.C.2 TEMple Bar 0545

One minute from Leicester Sq. Station (Up Cranbourne St.)  
Shop Hours: 9-6 p.m. (9-1 p.m. Thursday.) Open all day Saturday

**SANGAMO-WESTON VOLTMETERS**

**S61.** Dual range 0-5 and 0-100 v. D.C. FSD 1 m/A. 3in. scale, Recent manufacture. Ideal for schools. Complete in super quality canvas carrying case, with test prods and leads. BRAND NEW. Boxed 27/6. Post 2/6.

**ELECTROSTATIC METER Dn.** 6 1/2 ins. reads 5-18.5 Kv. Manufactured 1953. Contained in wooden case 10x10x9 ins. high. £9/19/6. Post paid.

**SANGAMO-WESTON ANALYSER E772.** A useful multi-range meter. Thoroughly overhauled and in perfect working order. For full details see previous adverts. £7/10/-. Carr. 4/6.

**AVO LC & R BRIDGES.** Capacity 5 pFd to 50 mFd. Resistance 5 ohms to 50 megohms. Inductance can be measured against external standard. Balance is indicated on a meter, which can be used as a valve voltmeter from 0.1 to 15 v. Leakage test and Power Factor scale. For use on A.C. mains. Tested and guaranteed. £8/10/-. Post 3/6.

**HICKOCK I-177 VALVE TESTERS.** Checks dynamic mutual conductance, shorts, emission, gas, and noise. For UX4, UX5, UX6, UX7, Octal, Localt, B7G, and Acorn types. Portable, in wooden carrying case 15 1/2 x 8 x 5 1/2 in. Wt. 13 1/2 lb. BRAND NEW. Complete with instruction book and valve testing charts. For 117 v. A.C. 10 gns. Carr. 7/6. Matching auto. transformers for 230 v. A.C. 12/6.

**MARCONI SIGNAL GENERATORS**  
85 Kc/s. to 25 Mc/s. A.C. mains operation. In fair condition and good working order. TF144F. £40. TF144G. £50.

**RII55 RECEIVERS.** With latest type super slow-motion drive. In good condition and perfect working order. re-aligned and air tested. Model "B" £7/19/6. Model "L" (covers trawler and shipping bands) £12/19/6. Carr. (either) 10/6. Send S.A.E. for details of sets and power units, or 1/3 for illustrated booklet.

**SCR522 TRANSMITTER/RECEIVERS.** 100-150 Mc/s. Comprises BC624A rec., and BC625 trans. with valves, and in good condition. BC624A, less relay 19/6. With relay, 25/-. BC625 22/6. These two, on rack 47/6. Carr. 7/6.

**MOVING COIL PHONES.** Finest quality Canadian, with chamois ear-muffs and leather-covered headband. With lead and jack plug. Noise excluding and supremely comfortable. 19/6. Post 1/6.

**VITAVOX PRESSURE UNITS TYPE N.** 20 watts. P.M. Heavy duty. BRAND NEW, boxed. 89/6. Carr. 5/6.

**RESISTORS**

Morgan "T" (1/2 watt) and "R" (1 watt). Latest types, all BRAND NEW. 100 assorted, 10/-, Post 1/-.

**HEAVY DUTY SLIDER RESISTORS.** 1.25Ω 20 A., 12/6, post 3/6. 1Ω 12 A., 8/6. ZENITH ADJUSTABLE 25Ω 4 A., 8/6. Post 2/6.

**PRECISION RESISTORS.** 1 Megohm 1% 1 watt wire wound. Ex-U.S.A. BRAND NEW. 10/6 per dozen.

**DC/AC CONVERTERS.** Input 12 v. D.C. Output 230 v. 50 c/s. A.C. at 135 watts. Fitted with 0-300 v. A.C. 2 1/2 in. meter and slider resistor for voltage adjustment. In stout wooden carrying case with lid. Perfect working order, £9/19/6. Carr. 10/6.  
24 v. Input 230 v. A.C. 50 c/s. 100 watts output. In grey metal case. BRAND NEW. 92/6. Carr. 7/6.

**RADIATION METERS.** Portable dose-rate meter, containing modern type rectangular 50 microAmp meter, CVX494 electrometer valve, etc. BRAND NEW. In canvas carrying case. £3/19/6. Post 2/6. For details of other equipment, see our previous adverts.

# NEW—The "CONTINENTAL-6" "For Style, Quality Performance and Value for Money"

## COMBINED TRANSISTOR PORTABLE/CAR RADIO SUPERHET

### SPECIFICATION

- ★ 195 to 560 metres on medium wave.
  - ★ 1,150 and 1,800 metres on long wave.
  - ★ 400 mW. push-pull output.
  - ★ A.V.C. and Car radio. Standard Fitting.
  - ★ Slow motion tuning.
  - ★ HI-FI SPEAKER.
  - ★ Double tuned IF's.
  - ★ 6 months' battery life.
  - ★ Resistor and Condenser leads pre-trimmed.
  - ★ Printed circuit board marked with component numbers.
  - ★ EDISWAN TRANSISTORS.
- XA102, 2-XA101, XB103, 2-XC101, 2-DIODES.

**TOTAL COST OF ALL SPECIFIED COMPONENTS INCLUDING CABINET, BATTERY, ETC., ONLY £11/10/- P.P. 3/6.**

All components available separately. Send for descriptive leaflet and prices.

A highly sensitive and selective portable fully tuneable on medium and long waves. Performs equally well as a car radio. Low running costs, good looks and ease of construction combine to produce a radio equal to any commercial receiver in the 20 gn. class.

- ★ Size 9½ x 7 x 3½.
- ★ Weight 4lb.

### 2-WATT POWER STAGE

For use with 'Continental.' Works from 12-volt supply. Overall size 4½ x 3½ x 2½in. All parts with Power transistor, less speaker, 52/6. P.P. 2/-.

**TRANSISTOR "8"**  
STILL AVAILABLE AT £10-19-6 (pp. 2/6)  
FREE BOOKLET ON REQUEST

### MAJOR—2 (2-Transistor Pocket Radio)

TOTAL 69/6 POST 1/6

NEW BOOKLET FREE: All components sold separately

GOOD RECEPTION ANYWHERE!

- ★ 4-stage reflex
- ★ Medium wave; tuneable
- ★ Very sensitive
- ★ No aerial or earth
- ★ Complete layout
- ★ Over 6 months on one battery.
- ★ 4½ x 3 x 1½in.
- ★ Weight only 4 ozs.
- ★ Personal phone

### MAJOR—3 (3-Transistor Radio)

(See "R.C." Sept., '59)  
All parts sold separately.

TOTAL 87/6 P.P. 1/6

RESULTS GUARANTEED ANYWHERE  
NEW BOOKLET FREE

- ★ 5-stage Reflex Circuit
- ★ No Aerial or Earth.
- ★ Min. Volume Control.
- ★ 3 Ediswan Transistors.
- ★ Medium Wave Tuning.
- ★ Size 4½ x 3 x 1½in.
- ★ Personal phone.

### MINOR—1 (1-Transistor Radio)

All components 49/6 P.P. 1/6

Free list on request

- ★ 3-stage Reflex
- ★ Medium wave
- ★ Ferrite aerial
- ★ Size 3 x 2 x ½in.
- ★ Includes personal phone
- ★ Layout diagrams

THE SMALLEST ON THE MARKET

### "SUPER-SIX" Transistor Portable Superhet

- ★ Medium and Long Waves
- ★ 6 Mullard Transistors
- ★ Printed Circuit
- ★ Sensitive and Selective
- ★ Ferrite Rod Aerial
- ★ 3in. 150Ω Speaker
- ★ Full Assembly Instructions
- ★ Size 7in. x 2in. x 1½in.
- ★ Trimming Tool supplied.

High sensitivity and selectivity combine to give excellent reception on both medium and long waves, this set is recommended by us as being one of the easiest-to-build printed circuit transistor sets ever offered.

Complete set of parts including attractive cabinet

**£9.10.0**

## The world famous E.M.I. Angel Transcription P.U.

### SPECIFICATION

**Physical**  
 Length 15 1/2 inches (40.32 cms.)  
 Height 2 1/2 inches (6.41 cms.)  
 Width 2 1/2 inches (6.03 cms.)  
 Centre of base to stylus tip 12 inches (30.72 cms.). Approx. overall.

**Stylus**  
 A diamond stylus is fitted to the 33 1/2/45 r.p.m. head supplied.

**Head Impedance**  
 1 ohm. (measured at 1,000 c.p.s.)

**Frequency Response**  
 For a constant recorded velocity the frequency response is sensibly level within the following limits; with micro-groove stylus. 20—16,500 c.p.s. With standard stylus 20—20,000 c.p.s.

**Distortion**  
 Measured at 400 c.p.s., the total harmonic distortion is less than 5% for a recording level of +20 db referred to 1 cm./sec. r.m.s. transverse velocity

**Sensitivity**  
 50 mV at secondary of transformer provided from a recording level of +10db referred to 1 cm./sec. r.m.s. velocity

**Weight at Stylus Point**  
 Variable from 3—10 grammes as required.

★ (MODEL 17A)

A PICKUP FOR THE CONNOISSEUR ORIGINALLY PRICED AT £17/10/- WE CAN OFFER THE LAST REMAINING FEW AT

**12 ASSORTED POTS.** Wire wound and carbon. Switched and unswitched. All useful sizes at 2/- dozen. Plus P. P.

**TAYLOR WINDSOR  
240A PATTERN GENERATOR.** Not New, but perfect. £8/10/- each. Plus P. P.

**WIRE.** Twin padded, grey, with maroon tracer Mains lead—usually 10d. per yd.—Our Price 25/- per 100 yd. coil.

**THIS MONTH'S OFFER:** Small generator or motor, 12 v., with reduction gear. Has dozens of applications, ideal for the model maker. Don't miss this, 12/6 each. Plus P. & P.

**SPECIAL OFFER. LIMITED QUANTITY.**  
**GENERAL PURPOSE CATHODE RAY OSCILLOSCOPE**

The famous model 160-B C.R. 'Scope, manufactured by R.C.A. of U.S.A. Best general purpose instrument of its kind, complete with 6in. cathode ray tube. Unused, guaranteed perfect. For operation on 110 v. A.C. Price £22/10/-. Carr. 10/-. Step-down transformer to enable the above to operate on 230 v. Price 19/6.

**FRESHLY IMPORTED MINIATURE CONTACT COOLED RECTIFIERS**

**Half-Wave Type**  
 Max. A.C. in 125 v. D.C. Out. 80 mA. 4/-  
 Max. A.C. in 250 v. D.C. Out. 50 mA. 7/-  
 Max. A.C. in 250 v. D.C. Out. 85 mA. 8/6

**Television Type**  
 Max. A.C. in 250 v. D.C. Out. 300 mA. 18/6  
**Full-Wave Bridge Connected**  
 Max. A.C. in 250 v. D.C. Out. 75 mA. 9/6  
 Max. A.C. in 250 v. D.C. Out. 150 mA. 15/-

**MAINS POWER SUPPLY UNITS,** potted and sealed transformer and choke by famous maker. Mounted on metal chassis 6½ x 7½ in., complete with 5Z4 rectifier valve and full smoothing. Input tapped 220-230-240 volts.

Output: 300 V. D.C. at 100 mA.  
 6.3 V. A.C. at 4.5 amp.  
 6.3 V. A.C. at 2 amp.  
 Rectifier supply 5 V. A.C. at 3 amp. Very conservatively rated. Price 42/6 plus P. & P. 6/6.

**WHEATSTONE BRIDGE UNIT.** 4 stud switches 0-10, 0-100 ohms, galvanometer centre zero, F.S.D. 2.5 mA. In oak carrying case 16 x 7½ x 6 in., 40/- each. P. & P. 3/6.

**EVERSHED & VIGNOLES.**

Circuit testing Ohms Meter, pattern "S" complete with testing prods, inst. book etc. Two ranges: 0-3 and 0-30 ohms. Brand new, guaranteed perfect, as illus. Offered at fraction of maker's price £4/17/6 each. P. & P. 2/6.

**TRIPLE RANGE VOLTMETER.** 0-5 25-250 v. D.C. M/C 3½ in. meter 3 in. scale, mounted in bakelite carrying case 7½ in. x 4½ in. x 3 in. complete with handle and test leads, 27/6 each. P. & P. 2/-.

**12 v. D.C. AMPLIFIER,** as new, for operation on 12 v. car battery, 10 watts undistorted output, with 6L6 valves in push-pull. Mike/Gram input, tapped output 7½, 15, 62, 100, 250 or 500 ohms. £12/10/- each. Carr. 15/-.

**MIDGET ROTARY TRANSFORMERS.** 2½ in. dia. x 4½ in. Input 11.5 volt. Output 310/365 volts at 30 mA. Brand new. 12/6 each. P. & P. 1/6.

**VENNER 8-day clockwork Time Switch.** Contacts 1 amp. 230 volt. 24 hour phase, ½ hour divisions, allows setting for one make and one break to be made every 24 hours, complete with key. Used but guaranteed perfect. Price 27/6 each. P. & P. 1/6.

**FRESHLY MANUFACTURED TRANSFORMERS.** Ideal for model makers. Input tapped 200/250 volt. Output multi-tapped from 3 to 30 volts at 2 ampere. Price 19/6. P. & P. 2/6.

**METERS GUARANTEED PERFECT**

Postage on all meters 1/- each

**NEW UNCHARGED UNFILLED 12 VOLT ACCUMULATOR** 9 ampere in unspillable plastic cases. Comprises 6 x 2 v. separate cells connected by terminal strips. 6 x 5½ x 4½ in. over terminals. Price 19/-. plus P. & P. 2/9. Wooden carrying case for same with lid and strap price 3/6.

**MINIATURE P.M. MOTOR.** 12/24 volt, reversible. 1½ in. dia. New. Price 9/6 each. P. & P. 1/-.

**AIRCRAFT CINE CAMERA G45B Mk. III** Fully modified, fitted with f/3.5 triple anastigmatic lens, takes 25ft. of 16 mm. film, fitted with 24 v. motor. 16 exposures per sec. Brand new, original packing, £4/10/- each. P. & P. paid.

**CABY MULTI-RANGE TEST METER.** Freshly Imported.

**Guaranteed Model A-10. A.C./D.C. Voltages, sensitivity 2,000 ohms per volt. Ranges: 10, 50, 250, 500, 1,000 v. Resistance: 10K ohm and 1 megohm. D.C. Current: 0.5 mA, 25 mA, 250 mA. Decibel range. Accuracy: 2 to 3%. Price £4/17/6.**

P. & P. 1/6. Ask for leaflet fully illustrating and describing this and other models.

**LEATHER CARRYING CASES FOR AVO MULTIMINOR WILL ALSO FIT MODEL A-10 ABOVE. NEW. Price 10/6 each. P. & P. 1/-.**

**WAVE GUIDE** 3 cm. mounted on a carrying board consisting of: (1) directional coupler. (2) 90 degree bend. (3) co-ax to wave guide adaptor type N. (4) British to W.916. (5) Co-ax to wave guide adaptor circular flange. (6) Circular to American adaptor. Complete in carrying case with coaxial cable. Price 60/- Carr. 10/-.

**AERIAL AS ILLUSTRATED.** Ideal for Car. Overall length 33in., khaki, with flexible shaft which enables the aerial to be fixed firmly in any position. Price 8/6, plus P. & P. 1/6.

**NEW WIRE WOUND RHEOSTAT ON CERAMIC.** 58 ohm. 50 watt, complete with instrument knob. Price 8/6. P. & P. 1/6.

**W. W. RHEOSTAT.** New. 3.5K, 25 watts. Price 7/6. P. & P. 1/6.

**W. W. RHEOSTAT.** New. 5K, 25 watts. Price 7/6. P. & P. 1/6.

**SLIDER RESISTANCE.** 44 ohm. 1½ amp. Price 18/6. P. & P. 2/-.

**EX P.O. MAGNETIC COUNTER** 3 ohms type for 4½/6 volt D.C. operation. Price 6/6 each. P. & P. 1/-.

**AS ABOVE** 500 ohm for 24/36 volt D.C. operation. Price 6/6 each. P. & P. 1/-.

**MINIATURE UNISELECTOR SWITCH.** Two banks of ten plus home contacts one bank continuous of normal. 30 ohms coil for 24 volt operation. Brand new, manufacturer's packing. Price 22/6 each. P. & P. 2/6. As illustrated.

**SIEMENS H.S. RELAY.** Very latest type, sealed. H96E. 1,700 ohms plus 1,700 ohms, single C.O. contacts. Brand new with fixing clip. In maker's cartons. Price 16/6 each, plus 1/- P. & P.

**NEW CARPENTER'S TYPE POLARISED RELAYS.** 2 x 9,500 turns at 1,685 ohms. Price 22/6 each. P. & P. 1/-.

**BRAND NEW SOUND POWER OPERATED EX ADMIRALTY HEAD AND BREAST SETS.** Two such sets connected up will provide perfect inter-comm., no batteries required. Will operate up to 1/2 mile. Original manufacturer's boxes. Price 17/6 each, plus P. & P. 2/-; or 32/6 per pair. P. & P. 3/-.

**AUTO TRANSFORMER**

Air cooled, very conservatively rated at 3 kVA., will handle 6 kVA. Tapped 220/230/240/250 volt, 12 amp, 105/110/115/120 volt, 28.5 amp. Brand new. Each one shrouded in a metal case and packed in original manufacturer's wooden case. Price £15. Carr. £1. Nett weight over 2 cwt.

**NEW GALVANOMETERS**  
Solid brass, 3in. dia., in polished wooden case. 70 degree scale, 35 mA either side. 100 ohm coil. Price 12/6 each. P. & P. 1/6.

**L.T. TRANSFORMER.** Input 230 V. Output 50 V. 50 amp. Adjustable by regulator switch on primary. Steel case with mains switch. Will take 100% overload. Weight 150 lb. Wound at 800 amps. per sq. inch. Brand new. Price £15. Carr. £1.

**PLATE TRANSFORMER** of very best U.S.A. make, brand new, original manufacturer's cases. Input tapped at 190/210/230/250 V. Output 2250-0-2250, centre tapped 400 mA. Nett weight 76 lb., size 13in. x 9in. x 6 1/2in. Price £6/10/- each plus carr. 10/-.

**MINIATURE MOVING COIL DIFFERENTIAL RELAY.** Two coils 350 ohms each. Operating current minimum 140 microamp, nominal 400 microamp, maximum 8 millamp. One pole two way, or centre stable. Two way contact current 100 mA, at 50 V. A.C. or D.C. Size 1 1/4 x 1/2 x 3/8 in. Price 22/6 each.

**HIGH SPEED RELAY.** Siemens, two bobbins, 1,000 ohms each. New, 10/6 each. P. & P. 1/-.

**SOLENOID OPERATED MAGNETIC RELAY.** Type S. 5CW/3942 with 4 make, 4 break 25 Amp. contact D.C. coil resistance 160 ohms, 24 v. operation. Housed in metal screening can 2 1/2in. x 1in. x 1 1/2in. Brand new. 7/6 each. P. & P. 6d.

**U.S.A. 27-volt 4-pole CHANGE-OVER RELAYS.** Brand new and boxed, 5/6 each. P. & P. 6d.

**ROTARY RELAY,** 12 volt. Heavy duty change-over contacts and one low current for external circuit, plus one break set. Price 7/6. P. & P. 1/6.

**A VERY SUPERIOR BRAND NEW RELAY IDEAL FOR MODEL WORK.** 7,000 ohms coil. Will pull in at 750 microamp and out at 450 microamp. Change-over, platinum contacts. Vacuum sealed, will therefore not be affected by oil, moisture or water and never needs adjusting. Weight 2 1/2 oz. Price 18/6. P. & P. 1/-.

**MINIATURE TYPE SEALED SLAVE RELAY.** 700 ohms coil. Will work on 12 v. D.C. Single pole change-over contact. Weight 2 ozs. Ex. new equipment. Price 9/6. P. & P. 1/-.

**MUIRHEAD PRECISION,** 4 bank, 1 pole, 24 position Stud Switch. Heavy duty contacts, brand new, original boxes. Price 17/6 each. P. & P. 1/-.

**CERAMIC PRECISION SWITCH.** 2 pole, 6 way, 4 banks. New in manufacturer's boxes. Price 10/6 each. P. & P. 1/6.

**20 WAY STRIP** containing standard Post Office telephone Jack Sockets, overall size 11 x 3 1/2 x 1/2 in. New. Price 15/- each. P. & P. 1/6. **10 WAY STRIP** standard Post Office telephone Jack Sockets, spacing allowing Igranac Jack Plugs. New. Price 10/- each. P. & P. 1/6.

**LATEST MOST MODERN TYPE OF EX W.D. MINIATURE HEADPHONES**  
As illustrated. Brand new, low Impedance. Price 10/6 plus P. & P. 1/6.

**NEW MOVING COIL HEADSETS.** Complete with Tannoy carbon hand microphone, with plug suitable for No. 19 set. Price 12/6 each, plus P. & P. 2/-.

**AUTO TRANSFORMERS.** Step up, step down, 110-200-220-240 v. Fully shrouded. New. 300 watt type £2/2/- each. P. & P. 2/6. 500 watt type £3/3/- each. P. & P. 3/9. 1,000 watt type £4/4/- each. P. & P. 6/6. Also 60 watts, 19/6 each. Plug P. & P. 2/-.

**MARCHING COMPASS Mk. I.** Brand new ex W.D. Price 14/6. P. & P. 1/-.

**BRAND NEW SELENIUM FULL WAVE BRIDGE TYPE RECTIFIERS,** in manufacturer's original packing. D.C. output 36 v. 10 amp., made up of 12 x 110 mm. dia. plates. These fitted in cooling funnel (removable). Size 11 1/2in. x 8in. x 4 1/2in. Price 45/- each. P. & P. 3/3.

**TWELVE PLATE F.W. BRIDGE CONNECTED RECTIFIER** mounted on 200/250 volt A.C. input transformer. Output 36/40 volt D.C. at 12 amps. New, perfect. Price 16/6. P. & P. 3/6. **SPRING LOADED FUSED TEST PRODS,** complete with wire leads and spade terminals. Price 4/6 per pair. P. & P. 1/-.

**MUIRHEAD VERNIER DRIVE.** Scaled 0-180 degrees, ratio 31/1, dia. 3in., as fitted to R.F.26 units. Complete with lampholder. In manufacturer's original packing. New. 8/6 each. P. & P. 1/6.

## RCA 15 KW TELEGRAPH TRANSMITTER Type ET-4750-X

Frequency range—2 to 22 megacycles.  
Keying Speed—up to 250 words per minute.  
Power Supply requirements—230 v. 3 phase 50/60 cycles.

Tube complement: Oscillator—807 (1), Doubler (1st) Amplifier—807 (1), Intermediate Power (2nd) Amplifier—813 (4), Power (3rd) Amplifier—889-R (2), Plate Rectifier—872 A(6), Auxiliary Rectifier—872A (3), Bias Rectifier—872A (2), Keyer—807 (2).

	Length	Height	Depth
Enclosure	11ft. 7ins.	6ins.	4ft. 1in.
Rectifier Unit	4ft. 2ins.	5ft. 3ins.	3ft. 2ins.
Plate Transformer	2ft. 6½ins.	3ft. 6½ins.	1ft. 9½ins.

	Weight (Nett)
Enclosure (including control, R.F. and Output panels)	3,000 lbs.
Rectifier Unit	1,675 lbs.
Plate Transformer 7,000 volts	1,250 lbs.

We have a full range of spares for this equipment.

If desired, we can modify this transmitter to work also on the telephone with an output of approximately 5 kW.

**OIL FILLED HEAVY DUTY L.T. TRANSFORMERS.** Pri. 420 v., 400 v., 380 v. Single phase. Sec. 19 v. 150 amps. Weight 141 lbs. Supplied dry £10. Carr. 15/-

**ADMIRALTY THREE-PHASE TRANSFORMERS.** Pri. 400-440 v. 50 cycles. Sec. 50 v. 6 amp. Completely tropicalised. Size 7½ x 14 x 5in. Weight approx. 60lb., 85/- Carr. 7/6. Brand new in maker's cases.

**HEAVY DUTY AUTO TRANSFORMERS.** Tropicallly rated at 5 kVA Tapped 250, 240, 230, 220, 120, 115, 110, 105 volts Completely enclosed in metal case. Size 23 x 14 x 11 inches. Weight approx. 2 cwt. Brand new £15. Ex. Warehouse.

**B.T.H. AIRCRAFT STARTER MOTORS.** Type C/W., 24 v. D.C. A very heavy duty high-speed motor. Length 7½in., dia. 4in. Length of spindle ½in. 32/6. P.P. 3/6.

**LATEST M.O.S. RELEASE. AMERICAN SEALED RELAYS.** Brand new. 9,000 ohms. 1 CO. 1M 15/-; 7,500 ohms 1 CO. 1M 12/6; 7,000 ohms 1 CO 10/6; 270 ohms 1M 1B 7/6 all tag ends, 5,500 ohms 2 CO, Octal Base 15/-; 270 ohms 2 CO 8/6. P.P. 1/6 each.

**BRITISH 3000 TYPE. RELAYS NEW M.O.S. 6,000 ohms, 4M 2B 12/6; 6,000 ohms 2M 2B 10/6; 1,000 ohms 2 CO 8/6; 250 ohms 4M 4B 10/6; 100 ohms 3M 8/6; 2,000 ohms 1B 6/6, 200 ohms 1M 1B 7/6; 600 Type 750 ohms 1M, 600 ohms 2 CO, 150 ohms 1CO 5/6 each. All Relays Guaranteed and Checked Before despatch. Please include sufficient for Postage.**

**A.C. CHECK METERS.** 200-250 v. 20 amp. 22/6. 10 amp., 19/6. Carr. 3/6. Reconditioned and guaranteed.

**SANGAMO SYNCHRONOUS MOTORS.** A.C. 200-250 v. 1½in. dia., 7/6. P.P. 1/6. Attached to Gear Train Unit containing over 30 Gear Wheels, 10/- P.P. 1/6.

**VENNER EIGHT-DAY CLOCK-WORK TIME SWITCHES.** One make and one Break every 24 hours. 5 amp. 230 volt switch contacts. Complete with Key and Mounting Bracket in Perfect Condition, 29/6. P.P. 1/6.

## SPECIAL OFFER OF LT SUPPLY UNITS

SUITABLE FOR THE ELECTRONIC INDUSTRY RESEARCH LABORATORIES, SCHOOLS, ETC.

**S.T.C. Type ZB10234.** A.C. input 100-260 v. D.C. output 24 v. 10 a. at max. ambient temperature of 131°F. But guaranteed output of 20 a. Fitted with fuses. 2½in. 0-20 ammeter. Heavy duty output terminals. Mains indicator lamp. Ballast and control resistances. Built in strong metal cabinet, size 2ft. x 1ft. 3in. x 2ft. 8in. Weight 141 lbs. Supplied Brand New with Instructions Book. £22/10/- Ex. Warehouse

**WESTINGHOUSE.** Type No. 139. A.C. input 200-250 v. D.C. output, 36 v. 18 a. Continuous Rating at 50 deg. C. Fitted with Input and Output Fuses and Mains On/Off Switch. Size of cabinet. 26 x 19 x 14in. £17/10/- Ex. Warehouse.

**G.E.C. TYPE O.S. 1773 G.A.** A.C. input 200-240 v. D.C. output 24 volts 10 amps. Tropicallly rated. Built-in metal case size 20 x 15½ x 10ins. Supplied Brand new in Maker's cases, £13/10/- Ex. Warehouse.

**S.T.C. Type YA8087.** A.C. input 100-250 v. D.C. output tapped 12/24 v. continuous tropical rating 3 amps. Built in metal case 17 x 7 x 6½in. Fitted with output socket on/off switch and fuses, £3/17/6. Carr. 7/6.

**F.W. BRIDGE LT. RECTIFIERS.** Max. A.C. input 17 v. 6-12 v. D.C. 12 a. output, 37/6. P.P. 3/6. 6 amp., 18/6. 4 amp. 15/- 2½ amp., 11/6. Supplied new and guaranteed.

**A.C. METERS.** 0-300 volt MI 2½in. panel mounting, 32/6. P.P. 1/6. D.C. 0-15 amp MC 2in. round panel mounting, 15/- P.P. 1/6. New and boxed.

**A.M. LT. SMOOTHING CHOKES.** Resistance ½ ohm. Ideal for smoothing 12-24 volts D.C. 5 amps. Tropicallly rated. Unused, 15/- P.P. 4/-

TRANSISTORS. A.F. 7/6 each. R.F. 15/- each.

TRANSISTOR CONDENSERS. Miniature Electrolytic Capacitors: 32 mfd. 3 v., 25 mfd. 25 v., 25 mfd. 6 v., 16 mfd. 12 v., 8 mfd. 6 v., 5 mfd. 12 v., 2.5 mfd. 25 v., 1.6 mfd. 6 v., 1 mfd. 12 v. All these types of condensers are 2/6 each. SPECIAL DISCOUNTS FOR QUANTITIES.

### THREE ASTOUNDING TV TUBE OFFERS

All brand new in famous makers' cartons

- (1) 17in. rectangular aluminised 6.3 HTRS. 3A current; max. anode voltage 16kV. Usual price £17/5/-. OUR PRICE £9/19/6. Crating and carr. 15/-
- (2) Ferranti T12/44 and T12/54G 12 in. magnetic white fluorescence; 4 v. heater; max. anode 10 kV. As used in many TV receivers. Original price £17/5/-. Our price £4/19/6. Crating and carr. 12/6.
- (3) Ferranti 9in. Tube round white fluorescence, 5 v. heater, max. anode voltage 7 kV. Our price £2/19/6. Crating and carr. 11/6.

**JONES PLUGS AND SOCKETS.** 4 pin 2/6 pair; 6 pin 3/6 pair; 8 pin 4/6 per pair; 12 pin 6/6 per pair. If cover required send 1/6 extra per cover.

**WANDER PLUGS.** Red and black ..... doz. 2/-  
**PHILIPS TRIMMER TOOLS** 1/- each ..... doz. 10/6  
**4-WAY PUSH-BUTTON UNITS** 2/6 each. Knobs for same, 3d. each.  
**POINTER KNOBS.** Small black with white line, 7/6 per doz. Small white with black line 8/- per doz. Both types ½in. spindle. Large price reductions for 1,000 lots and over.

CASH WITH ORDER OR C.O.D. ALL ORDERS DEPT. W.1. ALL ORDERS FOR LESS THAN £2 ADD POSTAGE.

We invite your enquiry: for items not listed.  
Trade Counter open 9 to 6 Monday to Friday.  
Also 9 to 1 Saturday. Callers welcomed.

Large stocks of all types of resistors, condensers, valveholders always available ex stock. Manufacturers' enquiries welcome.

## SOUTHERN TECHNICAL SUPPLIES TRANSFORMERS FOR ALL MULLARD AMPLIFIERS

- OUTPUT TRANSFORMERS (Secondaries for 3.75 and 15 ohms)
- T.44. 5-10 amp. ultra linear, 8,000 ohm. 43% tapplings 30/- P.P. 2/-
  - T.182. 5-10 amp. and Osram 912, 6,600 ohm, 20% tapping\* 30/- P.P. 2/-
  - T.100. 5-10 amp. LOW loading, 6,000 ohm, 28/- P.P. 2/-
  - T.142. 7 watt stereo amp. 9,000 ohm. 20% tapplings, 26/- P.P. 2/-
  - T.140. 3 watt amp. type A tape amp., 2 watt stereo, 6,000 ohm, 12/- P.P. 2/-
- MAINS TRANSFORMERS (Primaries 240-220-200; 0-10 v. 50 c/s.)**
- T.55. 5-10 amp. and tuner, 300-0-300 v., 120 mA., 6.3 v. 2.5 a., c.T. 6.3 v. 2.5 a., 6.3 v. 1 a., 32/- P.P. 2/6.
  - T.58. 5-10 amp. 300-0-300 v., 100 mA. 6.3 v. 2.5 a. c.T. 6.3 v. 1 a., 27/- P.P. 2/6.
  - T.101. Two 5-10 amp. Low loading, 300-0-300 v., 150 mA., 6.3 v. 4 a., c.T. 6.3 v. 1 a., 34/- P.P. 2/9.
  - T.143. 7 watt stereo, 250-0-250 v., 150 mA., 6.3 v. 4 a., c.T. 6.3 v. 1 a., 33/- P.P. 2/9.
  - T.141. 3 watt, 300-0-300 v., 60 mA., 6.3 v. 1 a. c.T. 6.3 v. 1 a., 22/- P.P. 2/-
  - T.163. 2 watt stereo 250-0-250 v., 80 mA., 6.3 v. 2 a., c.T. 6.3 v. 1 a., 25/- P.P. 2/6.
- All transformers fully guaranteed, all rounded fully except T.140 and T.B.  
SPECIAL OFFER. T.44 and T.55 55/- P.P. 3/6. Used on "Britbond P.C."

### "POWER-PAKS"

- T.A. Trans and Siemens contact cooled metal bridge rectifier delivers 270 volts D.C. 100 mA. and 6.3 v. c.T. 3 a., 32/- Plus 2/- P.P.
- T.B. Trans. and Siemens contact cooled metal bridge rectifier delivers 270 volts D.C. 60 mA. and 6.3 v. c.T. 2 a., 25/- plus 2/- P.P.

# New additions to GOODMANS speaker range

**50 only Philips Hi-Fi Speakers**  
 10" Dual Concentric Models, as currently fitted, in quality receivers.  
**Only 2 gns. each** plus 2/6 p. & p.  
**DON'T BE DISAPPOINTED!**  
 Orders executed in strict rotation.

**Latest release of two 10" units**  
**AXIOM 110 - £5.**  
**AXIOM 112 - £8 10s.**  
 also the new Triaxiette Super 8" Unit, £13 10s.  
 The well known 8" Axiette (£6 12s.) and the 12" Audiom 60 (£9 12s.) as recommended for two speaker systems, are still available, ex stock.

**RECORD PLAYER BARGAINS—Latest 4-speed models**

**NEW RELEASE** by E.M.I.—4-speed Single Player Unit fitted with latest stereo and monaural Xtal cartridge and dial sapphire stylus. Auto stop and start. A fidelity unit and bargain buy at only £6/19/6.

**SINGLE PLAYERS.** BSR (TU9), 90/-; COLLARO (4/564), 6 gns.; GARRARD (4SP 27/10/-, Carr. and Ins. 3/6).

**AUTOCHANGERS.** BSR (UAS), 26/19/6. COLLARO 27/19/6. GARRARD (RC121 4D Mk. II) plug-in head, stereo adapted, 10 gns. Stereo head 42 extra.

**RECORD PLAYER CABINETS**

Contemporary styled, rexine covered cabinet in two-tone fawn and brown, or mottled red with white polka dots. Size 18 1/2 x 13 1/2 x ht. 8 1/2 in. fitted with all accessories, including baffle board and anodised metal fret. Space available for all modern amplifiers and autochangers, etc. Uncut record player mounting board 14 x 13 in. supplied.

**2-VALVE 2-WATT AMPLIFIER**

Two stage ECL82 with vol. and neg. feedback. Tone controls AC. 200/250 v. with double-wound mains trans. Complete with knobs, etc. Ready wired to fit above cabinet.

£2.17.6 P. & P. 1/-.  
 6-in. Speaker and matching trans. 22/- P. & P. 1/6.

**TRANSISTOR 'ONE-WATT' AMPLIFIER**  
 6 v. Battery operated

Latest Push-Pull, 4 Transistor circuit giving full 1 watt Output into standard 3 ohm speaker. Good sensitivity and improved freq. response. Neg. feedback. Var. Tone and Volume Controls. Chassis size 6 1/2 in. x 3 1/2 in. x 1 1/2 in. Current consumption 10 mA quiescent—250 mA at 1 watt.  
 2 matched GEC GET13 Transistors 42/- pr.  
 2 GEC GET3 Transistors 21/- pr.  
 Driver Trans. 8/6  
 Output Trans. (to 3 ohms) 10/6  
 Complete Kit of parts incl. circuit etc. less speaker. ONLY 99/6 P. & P. 2/6.

Circuit and instruction booklet 1/6 post free

**NOW! The TOURIST Portable**

4 valve, Med. & L.W., (1/2 weight battery Radio. Size only 8 in. x 5 1/2 in. x 4 in. Weight 3 1/2 lb. with battery— P. & P. Complete receiver component kit 57/6 1/6 Set 4 miniature valves (90 series) 35/- 9d. 5th. Speaker & Output Trans. 21/- 1/6 Cabinet, Dial and Knobs, etc. 22/6 2/- Latest superhet circuitry, delayed AVC and A.F. Neg. feedback.

Complete kit—BARGAIN—only £6.10.0, post free

Terrific performance— Remarkable size— Staggering Value  
 Send for Booklet NOW! 1/6 post free

**2 WAVEBAND CAR RADIO KIT**

12 v. operation Med. & Long Waves

Modern development of the famous Brimar Hybrid vibratorless car radio circuit. Five latest type Brimar low voltage valves and power transistor. B.F. stage and permeability pre-aligned Cydon Tuner Unit provide extremely good sensitivity and signal/noise ratio. Printed circuit for easy construction and 7 x 4 in. elliptical speaker for fidelity output. Self-contained in neat metal cabinet 8 x 7 x 2 1/2 in. with attractive calibrated dial. Speaker and power transistor stage mounted separately approx. 8 x 5 x 3 in.

Recommended Buy Complete Kit Bargain Price £12.19.6  
 Instruction booklet and parts list available 3/6 post free. P. & P. 3/6.

Input 11.5 v.  
Output 490 v. at 65 mA.

AS SUPPLIED TO GOVERNMENT DEPARTMENTS AND LEADING MANUFACTURERS. NEW AND BOXED.

### ROTARY TRANSFORMERS

Made by DELCO  
TYPE 1 27/6. P. & P. 3/6.  
TYPE 2, 37/6. P. & P. 3/6.  
Type 1. Dual voltage 12 or 24 v., input 265 v., 120 mA. output; 500 v., 26 mA. output.  
Type 2. 12 v. input 275 v. 110 mA. output; 500 v., 50 mA. output.  
Both types dual output.  
MADE IN U.S.A.

OTHER DYNAMOTORS IN STOCK, SEND FOR LIST

# 120 INCHES OF SCALE

The CR50 Bridge covering 10pFd to 100mFd and 1 ohm to 10 Megohms in fourteen ranges has a total length of scale of over 120 inches thereby ensuring easy and accurate readings. A leakage test is incorporated for condensers. Complete with valves, instructions and ready for operation from 200/250 volt A.C. mains. £8/2/6 plus 4/6 carr./packing.

SC30 OSCILLOSCOPE. A 3in. 'scope for service and design purposes at an extremely low price of £17/10/- plus 6/- carr./packing.

VV60 AUDIO VOLTMETER measures 1 milli-volt to 100 volts in five ranges. £14 plus 4/6 carr./packing. Further details sent by return of post on receipt of stamped addressed envelope.

TRADE supplied direct. CREDIT TERMS available

# INSTANT MULTI-PURPOSE VALVE FILAMENT TESTER

*Pocket Size! Battery Operated!*

**GIVES INSTANT CHECK OF:-**

- All Radio Valves.
- All Television Valves.
- All TV and Radio Fuses.
- All Pilot Lamps.
- Circuit Continuity.
- Built-in 7 and 9 pin Valve straighteners.
- Built-in Battery Test.

**MODEL VT-41**

Saves time and money. No more need for finding correct filament pins with trailing meter leads etc., will test any modern valve in less than five seconds. Designed in both size and value to suit the pocket of the Service Engineer and Radio Hobbyist.

A completely new and revolutionary precision instrument for testing valves, fuses, continuity and a large range of radio parts.

Each component tested is shown "Good" or "Faulty" by a panel light.

Already acclaimed by Radio and T.V. Engineers as an indispensable instrument for quick filament runs, fuses and lamp tests.

Finished in black hammer case with gold front panel. Complete with internal batteries and ready for immediate use. **FULLY GUARANTEED**

**30/-**  
POST AND PACKING 2/6

★ Manufactured by Eagle Products, one of Britain's leading Test Equipment Specialists.

**TRADE ENQUIRIES INVITED**

**POCKET MULTI-METER**  
Brand New. 2,500 o.p.v. Multi range. 6/30/120/300/1,200 v. A.C., ditto D.C. 0-1k., 0-1 meg-ohm; 400 micro-A., 12 M.A., 300 M.A.; -∞ to +65 db, 5 ranges 3x4 1/2 x 1 1/2 in. Large clear dial. Leads supplied. (List price £6/19/6). OUR PRICE £4/7/6. P. & P. 2/6.

**SIGNAL GENERATOR.** 100 kc/s.-100 Mc/s. and 100 Mc/s.-200 Mc/s. Internal Mod. 400 c.p.s. to a depth of 30%, modulated or unmodulated R.F. output continuously variable 100 milli-volts. C.W. and mod. switch, variable A.F. output. Magic eye. Metal case 10x6 1/2 x 5 1/2 in. A.C. 200/250 v. Brand New. Only £6/19/6. Carr. 5/-.

**T.C.S. RECEIVER**  
1.5 to 12 Mc/s. 7-valve superhet, built like a dream. 12SK7-RF, 12SA7 Mixer, 12A6 Oscillator, 12O7 Detector, AVC - BFO - 1st AF, 12SK7-I.F.s. The 12A6 final

puts 1.4 watts into 500 ohms with an input modulated only 30%. Panel controls: R.F. Gain, A.F. Gain, C.W. Pitch, band-switch, mod.-C.W. switch, power switch, ground and aerial posts, M.O. or crystal frequency switch, speaker jack, card holder to log 30 stations, hand vernier tuning knob turning a large etched calibrated plate behind hair lined window, anti-backlash gears used. Used condition. £8/10/-, carriage 15/-.

**T.C.S. TRANSMITTER** available at £9/10/-, carriage 15/-.

Note.—If both items purchased together, £17. Carriage 25/-.

**MONITOR TYPE 28.**  
Consists of VCRI38 6-SP61, 1-5U4, 1-VU120, 3-EA50, 1 m A. meter scaled 100-0-100v. Incorporates Y shift, X shift in u/sec. Focus, sync., Bias; Input to X plates switched X20. X5 and direct, requires only suitable power pack for use as oscilloscope. 70/-, carr. 10/-.

**COSOR DOUBLE BEAM OSCILLOSCOPE 339.** 10-position time base, 6 c.p.s. to 250,000 c.p.s. Amplifier 10 c.p.s. to 2 mill. c.p.s. Used condition but in working order, £22/10/-, Carr. £1.

**BRAND NEW VARIABLE TRANSFORMERS.** Input 230 volts. Output 0-240 volts, 5 amps. Brand new, only £8. Carr. 12/6.

**LEAD ACID ACCUMULATORS**  
(unspillable). 2 volts 16 A.H. Ideal for 6 volts and 12 volts supply. Brand new original cartons. Size 4in. X 7in. X 2in. **5/6** each.  
3 for 15/- P. & P. 1/6  
3 for 15/- P. & P. 3/6  
6 for 27/6 P. & P. 5/-

**AMERICAN LIGHTWEIGHT HEAD SET**  
These H.S.30 phones are the smallest used by the U.S. Air Force. 250Ω imp. using soft rubber miniature ear moulds for maximum music and voice reproduction of the finest quality.  
ONLY 15/- P. & P. 2/6.

**PORTABLE TRANS/RECEIVER No. 18**  
A self-contained Trans/Receiver for Telephone and C.W. Range approx. 10 miles. Frequency 6-9 Mc/s. (50-33.3 metres). Valve line-up; 3 AR-12, 1 AR-8, 1 ATP4. Complete with aerial, H.T. and L.T. meter and all accessories. Weight 20lb., size 8 X 10 X 17in. Brand New only 80/-, Carr. 10/-.

**MARCONI CRI00 RECEIVER.**  
60 kc/s.-30 Mc/s. Internal A.C. power supply crystal and audio filters, variable selectivity. Output for phones and speaker. Fully guaranteed. £18/10/-, Carr. 30/-.

**CONVERT TO V.H.F.**  
Within minutes you can extend the frequency of your receiver to cover V.H.F. by using our brand new V.H.F. Converters. R.F.26 covers 50-65 Mc/s, vernier calibrated tuning, 20/-.

R.F.25 covers 40-50 Mc/s, switched tuning, 8/6. Circuits supplied. P. & P. 3/6 on each.

**1960 Illustrated Catalogue 1/3**

**WIRELESS SET No. 19. MK. II.**  
This most famous Army Trans/Receiver covers 2-8 Mc/s. (150-37 metres) in two bands and 230-240 Mc/s. V.H.F. Has an intercom. amplifier. Designed for 12 and 24 volt operation. Uses a 6 valve superhet receiver. I.F. being 465 Kc/s., and a 6 valve transmitter designed for voice and C.W. operation. Incorporates test and tuning meter for voltages, aerial loading and current tests. Panel Controls: Frequency tuning, P.A. tuning, Gain control, MCW, CW, R/T switch, Het-tone, netting, off-on, Quench, aerial-AVC-LT-HT-Drive tests. Supplied complete with 15 valves and instruction book.

Complete station (as illus.), comprising: 19 set, Supply Unit, Control box, Headphones, Microphone, Morse Key, Variometer, Short Wave and V.H.F. Aerials and bases and full set of leads. All for only £9. Carr. 25/-.

**SET ONLY 65/-**  
Carr. 10/-

## BENSON'S BETTER BARGAINS

**POWER UNITS.** Input A.C. 115/250 v. Outputs: D.C. 330 v., 120 mA., and 6.3 v. A.C. twice. Potted trans. and LF choke; new (post 3/8), 30/-, Input 230 v. A.C. Outputs: D.C. 350 v., 80 mA., A.C. 6.3 v. Valves: 807, EA50, EF50, 5Z4G, 25/-, WAVEMETER 1252; A.C. Input D.C. 250 v. Output. Valves EA50, 6J5, 6X5, 6Y3, 22-34 mos. 4in. SM Drive. Copper-lined, hinged case. (Rail 7/6), 35/-

**MONITOR 56** comprising Indicator 248 and Power Unit 675. Valves VCR138a, 3/EF50, 2/ECC33, 5/EF55, EF37A, 6V6, 3/EA50 and 2/5U4G, VU120A. Two units each 12x9x18in., black finish. Panel controls: Brill, Focus, T.B. Expansion, "Y" shift, "X" shift (two). T.B. 10/20k secs. A.C./D.C. switch, "Y" amp. multiplier/divider. Sig. input, trig., and Y2 input. Voltmeter centre-zero, 5/20/100. "X" "Y" and "Z" on "jumpers" at rear. 230 v. A.C. input, with 18-way cable and mains cable. Cathode probe unit extra, 17/8, 28 10s. (Rail 20/-)

**RELAYS** (Contactors), two heavy-duty make contacts: 12 v. or 24 v. either 3/6. **INDICATORS**, type 277, with 1in. C.R.T., 4/VR01, 2/VR02, 37/6 (p.p. 3/6). Type 101, with VCR580 (6in. Blue, magnetic. Octal base), and 2/EB01, 2/EF01, 2/R10, new cond., 30/- (Post 3/6). Type 1, with VCRX263, 2/EF52, 5/6J6, 1/8V6, 1/EF51, 2/EB01, 3/EP01, RF EHT Generator and 28 kc/s. xtal, 45/- (Rail 7/6). Type 97 with VCR517, 10 valves, 30/- (Rail 7/6).

**HEADPHONES, CLR, 7/6.** CR109 Noise Limiter assemblies, with valve, 3/6. **NEW W.C. METERS**, 3in. round flush, 50uA, 70/-; 100uA, 65/-; 1 mA., 65/-; 2 mA. (rectified), 45/-, 2 1/2in., 1 mA., 22/6; 2in. 200 mA., 300 mA., each 8/6. 2 1/2in. 20 v. A.C., 8/6; 2in. 40v., 8/6; 300 v. A.C. 2 1/2in., 15/-

**VIBRATORS**, Mallory G834C 12 v. 4-pin, 7/6; 6 v. 5-pin reversible, 7/6. R1155B, good condition, tested with handbook, 27/10/- (Rail 10/-). SCR522 Modulator or Driver Trans., either 7/6. **MORSE TRAINER SET** with buzzer and key wired for 41 v. battery, 8/6. **DRIVES:** slow-motion Admiralty 200:1 ratio, scaled 0-100, 5/6. R1155 S.M. slow-motion Admiralty 200:1 ratio, scaled 0-100, 5/6. R1155 S.M. "N" type, new, 10/6. **VIBRAKAP**, 6 v. D.C. to 250 v. 80 mA., smoothed case, 22/6. 12 v. to 250 v. 60 mA., 21/- (p.p. 3/6). **DYNAMOTORS** (post 3/6); 12 v. to 250 v. 60 mA. and 6.3 v. 2.5 A., 11/6; 6 v. to 250 v. 60 mA., 11/6. Potentiometers, miniature wirewound, 60, 100, 600, 1k and 2k, each 1/-

**CHOKES**, LF 10H 200 mA., 8/6; 9H 100 mA. 5/6; Potted 10H 100 mA., 7/6; "C" 5H 400 mA., 10/6. **SWITCHES**, toggle U.S.A., DPDT, 1/6. R.F.27, good cond., 18/- (p.p. 3/6). **METAL RECTIFIERS**, 240 v. 100 mA., 4/-; 240 v. 30 mA., 3/6; 300 v. 30 mA., 5/6; 240 v. 80 mA., 5/6; 1,000 v. 30 mA. 7/6. Mic inserts, G.P.O. carbon, 2/6, bal. armature type, 2/6. **CONTROLS** Camera Type 35; a timing device with 24v. miniature motor; new, (post 3/6). 10/6. **TRANSFORMERS**, input 230 v. Output 6.3v., 1.5A., 6/9; 3A., 8/8; 1A., 3A., 8/6; 325v., 20mA & 6.3v., 1 A., 8/6. Fulltrio output (40mA), 6/6.

ELECTRONIC COMPONENT DISTRIBUTORS FOR OVER 25 YEARS

## BLANK CHASSIS

Precision made in our own works from commercial quality half-hard aluminium of 16 s.w.g. (1/16in.) thickness, these chassis go all over the world (they even go off it—in rockets!). Same day service for ANY SIZE, to nearest 1/16in. and up to 17in. long and 4in. deep, of straightforward two, three or four-sided chassis. Orders for specials dealt with promptly when accompanied by clear instructions or drawings.

### SOLDERED CORNERS

While these chassis, owing to their thickness, hardness and efficient folding, will carry components of considerable weight and normally require no corner strengthening, we can do this if required by a special soldering technique at 6d. extra for each corner.

### FLANGES

1/2in., 3/4in. or 1in. flanges (inside or outside) 6d. extra for each bend.

### PRICE GUIDE (normal chassis only)

Work out total area of material required, including waste, and refer to table below:

48 sq. in.	4/-	176 sq. in.	8/-	304 sq. in.	12/-
80 sq. in.	5/-	208 sq. in.	9/-	336 sq. in.	13/-
112 sq. in.	6/-	240 sq. in.	10/-	368 sq. in.	14/-
144 sq. in.	7/-	272 sq. in.	11/-	and pro rata	
	Post 1/3		Post 1/6		Post 1/9

Discount for quantities. Trade enquiries invited. Spray finishing arranged for quantities of 25 or over.

### PANELS

The same material can be supplied for panels, screens, etc. Any size up to 3ft. at 4/6 sq. ft. (sq. in. x 1/2d.) Post, up to 72 sq. in. 9d., 108 sq. in. 1/3, 144 sq. in. 1/6, 432 sq. in. 1/9, 576 sq. in. 2/-.

## LYONS RADIO LTD.

SLYDOK FUSE HOLDERS. 5 amp. 18/- per doz., 6 for 10/-, 3 for 5/6. 15 amp. 19/6 doz., 6 for 11/9, 3 for 6/3, post paid. Reduced prices for larger quantities. SUPPLY UNITS No. 19. Mk. 2. Rotary transformer units in metal cases 10 x 8 x 6in. Input 12 v. D.C. Output smoothed D.C., 500 v. at 50 mA., and 275 v. at 110 mA.

In good condition. PRICE ONLY 45/-, carriage 7/6.  
**POWER UNITS TYPE 528.** Designed for mains operation of such installations as the SCR522, TR1430 etc. Input 200/250 v. 50 cps. A.C. mains. Output 300 v. at 200 mA. H.T., 150 v. at 20 mA. grid bias, 13 v. at 5 A. L.T., all fully smoothed D.C. Size 20 x 13 x 1 1/2in. In good condition. PRICE ONLY £5/17/6, carriage 18/6.  
**UNIVERSAL MEASURING BRIDGES.** Ex-Govt. by Mullards, measure 0.1 ohm. to 10 megohms, and 10 pfd. to 10 mfd. Can also be used to calculate power factor, with external standards can be used for the measurement of inductance also for percentage tolerance. Operate from 100 v. to 250 v. A.C. mains. Supplied in good condition and working order and operating instructions. PRICE ONLY £7, post 3/6.  
**INVERTERS.** Known as Motor Generator type 7, Air Min. ref. 5U/3238. Input 23/24 v. D.C. Output 80 v. at 1,600 cycles, 240 vA. Carbon pile V/R and filter unit incorporated. In good condition. PRICE ONLY 45/-, carriage 5/-.  
**METER BARGAINS.** Moving coil types, Bush panel mtg. 2 1/2in. dia.: 0/500 mA., 0/200mA., 0/100 mA., 0/50 mA., all at 3/6 each. 2in. dia. 0/100 mA., 8/- Projection mtg. 2 1/2in. dia. 0/1 mA., 17/8. Plug-in type 50/0/50 mA. 2 1/2in. dia., 7/6. Postage 1/-.

Another amazing scoop for the Hi-Fi enthusiast  
 Huge purchase of RCA equipment at enormous reductions

TO ALL CONNOISSEURS OF GOOD AMPLIFIERS, THIS OFFER IN LIMITED QUANTITY IS CAUSING QUITE A STIR.

**THE NEW RCA ORTHOPHONIC AMPLIFIER**

12-20 watt output; frequency response:—within 0.2 DB 20/25,000 CPS, within 0.5 DB 10/60,000 CPS; noise level:—85 DB below rated output, distortion:—total harmonic less than .01% at 10 watts; valve line up:—two EF86, two KT66, GZ32; dimensions:—16½ x 8 x 7½in.; weight 32 lb.

Pre-Amp Input Mic., radio/tape high and low level, crystal p/up and magnetic p/up. Output Tape and record, bass and treble, mixing facilities, low and high pass filter, valve line up:—one EF86, two ECC81. Dimensions:—12½ x 6½ x 3½in.

THE COMPLETE EQUIPMENT AT 29 gns. Carriage extra 15/-.

**RCA PANORAMIC MULTIPLE SPEAKER SYSTEM**

Beautifully made in walnut finish, using one 15in. Hi-Fi speaker. Response down to 25 c/s, 2-2½ m/coil tweeters. Response up to 20,000 c/s, crossover at 2,000 c/s. Cabinet ported bass reflex and acoustically damped. 25 watt rating. **FEW ONLY—£35.**

**THE RCA VARIABLE RELUCTANCE PICK-UP**

A new design variable reluctance pick-up. Cartridge completely protected from dust, damp and mechanical shock. Embodies an 8-pole balanced design providing the advantages of sensitivity and negligible hum with smooth and extended frequency response. Pick-up arm has simple tracking pressure selector and adjustable pedestal to suit all turntable heights. Fitted with dual sapphire stylus. Tracking pressure: micro-groove 5-7 gms., 78 r.p.m. 9-12 gms. Original price £13/9/6. **OUR PRICE £7/10/-.** Post and pkg. 1/6.

**AUTO CHANGERS**

Brand new snip in manufacturer's carton. RCA 4-speed auto-changers in maroon finish incorporating auto. and manual control. Complete with Ronette Studio turnover crystal pick-up with sapphire styli for L.P.s and 78 r.p.m. records and including 45 centre post for large hole records. **AT THE AMAZING PRICE OF £7/19/6,** plus 4/6 post and pkg.

complete. Fully guaranteed for valves and service. Post & Pkg. 7/6. Fully guaranteed

**AMPLIFIER AND PRE-AMPLIFIER**

**HI-FIDELITY TAPE HEADS**

Made by famous manufacturer. Brand new. Upper or lower track, record/play-back, high impedance giving up to 12,000 c.p.s. at 7½ I.P.S. output 5 m/volts at 1 KC at 7½ I.P.S. Erase heads low impedance. Only 39/6 per pair. Post 1/-. State upper or lower track.

**SNIPS IN TAPE ACCESSORIES**

Brand new E.M.I. 7in. take-up spools in polythene bag, 3/9 each post free, 6 for 20/- . Brand new 5in. Scotch Boy take-up spools 3/3 post free. 6 for 18/- .

1,200ft. P.V.C. tape on plastic spools made by famous manufacturer, 21/- reel. Post & pkg. 1/- . 1,200ft. P.V.C. tape on 5½ plastic spool, 22/6, plus 1/- post & pkg.

The New American Audio Tape with plastic base. Also supplied in green or blue at no extra cost.

3in. reel 150ft..... 6/-  
 4in. reel 300ft..... 10/6  
 5in. reel 600ft..... 18/-  
 Post and packing 1/- per spool.

**THE NEW "INSTANT" BULK TAPE ERASER**

Can erase a spool of magnetic tape in a few seconds. Demagnetises oxide deposits on tape heads. Only 27/6 post free.

**TWO SNIPS FOR THE CONSTRUCTOR**

**THE FAMOUS RCA EQUIPMENT IN LIMITED NUMBERS**

- (1) Completely assembled with attractive control panel. Just connect units together. RCA 10 watt p/pull amplifier, less than 1% distortion. Valve line-up: 6BR7, 12AX7, 6BW6, 6WV6. Frequency response: 25-20,000 c.p.s., bass, treble and balanced loudness feature. Ideal for good quality reproducer. **AT THE VERY LOW PRICE OF £7/19/6.** Post and pkg. 4/6.
- (2) The Junior RCA 5-8 watt p/pull amplifier. Valve line-up: 12AX7, 19AQ5, 19AQ5, 35W4. Frequency response: 40-20,000 c.p.s. Completely assembled with attractive control panel. Just connect amplifier to power supply. **ONLY £6/19/6.** Post and pkg. 4/6.

# RADIO & ELECTRONIC ENGINEERS . . .

The MORSE CODE is still, and always will be, the basic Code for individual Signalling, whether on visual or telecommunication circuits. So add this simple and interesting subject to your qualifications. Apart from the pleasure derived from this extra knowledge, it counts for much when a step up the ladder is under consideration. Write for the **CANDLER BOOK OF FACTS** and see for yourself how fascinating the Candler method of teaching the Morse Code will prove.

**CANDLER SYSTEM CO.**

# THE EMPIRE RUBBER SELF-CONFORMING GROMMET

The new designed grommet. Contour at manufacture

This grommet provides a thoroughly efficient seal. Around the panel hole the first seal is effected, while a good, tight second seal around the top periphery is set up by tension. In the grommets designed for cable entry the internal seal is applied within the conical section. All grommets can be fitted to various panel thicknesses—thus reducing the range.

Enquire for catalogue section and detailed particulars.

**SWITCHES.** 1 hole fixing, 3 amp. 250 volt.

1/8 each, 12/- doz.

**RACKS—POST OFFICE STANDARD.** 6ft. high with U-channel sides drilled for 19in. panels, heavy angle base, 4ft. 10in. in stock.

**SOLENOIDS.** 12 volt D.C. with 3½ in. lever. Ideal for remote control, model railways. 5/- ea., post 1/6. Unit of 26, 84/8. Cge. 15/-.

**NIFE BATTERY.** Nickel cadmium. 6 volts 75 amps., crated and connected. Alkaline filled. Brand new, 87/10/-, Carr. 15/-.

**LOUDSPEAKERS.** P.M. Elac 5in. round 15/6, post 1/6. Axiom 150 dual cone 12in. 15 watts 15 ohms, fully dustproof, 87/19/6, post 7/6. Pye 10in. portable 3 ohms 50/-, carr. 7/6.

### 3 IN. ROUND PLESSEY SPEAKER, SEALED TYPE WITH PROTECTIVE GRILLE . . . 19/6, POST 1/6

**JACK PLUGS.** Cylindrical bakelite screw-on cover, 2 contact 2/6, post 6d.

**SOCKETS.** One hole fixing for above, 3/6, post 6d.

**TELEPHONE PLUGS TYPE 201** with headphone cord, 3/- each, post 1/-.

Large quantities available from stock.

**TERMINAL BLOCKS.** 2-way 4/- doz. or box of 50 for 15/-, 3-way 6/- doz., 50 for 22/6. Post 1/6.

**AIR BLOWER.** 230 volt A.C. 15in. fan. Volume of free air at max. r.p.m. is 1,250 cu. ft. per min. At maximum efficiency 900 cu. ft. per min. Brand new 82s. Carr. 20/-.

**XPELAI EXTRACTION FANS.** 7½ in. blades. Baffle outlet 190/-, Cge. 5/-.

**HEADPHONES.** Balanced armature DLR5, 10/6 pr., post 1/6.

**HEADPHONES.** High resistance 4000Ω CHR, 15/- pr., post 1/6.

**HEADPHONES.** Balanced armature DHR, 17/6 pr., post 1/6.

**LOUDHAILERS RE-ENTRANT TYPE** all metal 15in. diameter with mounting bracket 85/10/-, carr. 10/-.

**AVO TEST BRIDGES.** 220/240 volt A.C. Measure capacities from 5 pf. to 50 mfd. and resistances from 5 ohms to 50 megohms. Valve voltmeter range 0.1 to 15 volts and condenser leakage test. BRAND NEW. Full working instructions supplied with instrument. 89/10/6. Post 3/-.

**OSCILLOSCOPE.** Type 43. With 3½ in. C.R.T. 138A, 4-617, 3-VR54, 5Z4, VU120. Brand New with usual controls, power pack and leads. Suitable for 230 volts, 810/10/-, carr. 12/6.

## A LARGE AND COMPREHENSIVE STOCK OF WIRELESS AND ELECTRONIC COMPONENTS

### TELEPHONES Easy to Fix Wiring Diagram Free

**TELEPHONE SET TYPE "A"** Ringing and speaking both ways on a 4-core cable. Very loud and clear over any distance. The handsets are as illustrated and the set is complete except wire. 4-core at 8d. per yard or 2-core at 3d. per yard extra. Price 75/- set, post 3/6.

**SET B.** Two headphones connected to breast microphones, with leads, plugs and fitted carrying cases. Join instruments together with two wires and 1½ volt battery for a super Intercom., 25/-, post 3/6. **SET "G"** Similar to Set "A." Instead of P.O. Type handsets, two P.O. Desk Type Instruments are supplied with usual drawer in base. Complete ready for use. Price 150/-, post 7/-.

### 10 AMP BATTERY CHARGER

**HERE IS YOUR CHANCE TO PURCHASE A BRAND NEW UNIT WORTH £40! FOR OUR SPECIAL PRICE £17.10.0**  
 Carriage 20/-.

Input 200/250 v. A.C. 50 cy. Output 10 amps, 22 volts D.C. Controlled by two 4-position switches for fine and coarse control which enables 6 to 24 volt batts. to be charged. Brand new with 0/12 ammeter. Fused A.C./D.C.

**ROTARY CONVERTERS.** Input 12 D.C. Output 230 A.C. 50 cy. 135 watts. In fitted case with variable resistance, 0/300 voltmeter. The ideal job for television where A.C. mains are not available. £10. Carr. 15/-.

**BATTERIES.** Portable Lead Acid type, 6 volts 125 ampere hours. In metal case 16in. x 18in. x 11in. (Two will make an ideal power supply for our 12 volt Rotary Converters). Uncharged 86/10/- each, carriage 15/-.

**UNI-PIVOT GALVANOMETER** by Cambridge Instruments, 50-0-50 microamps, dia. 4in. Knife pointer, mirror scale. Complete with leather carrying case. Ideal for laboratory use. £10, carriage 3/-.

**FLIGHT TO GROUND SWITCHES.** 5C/2828 as used on aircraft. Very robust, will carry a very heavy current 25/- each; or in pairs with auxiliary switch 50/-, post 3/-.

**SIGNAL GENERATOR TYPE 52A.** Input 230 volt 50 cycles, complete with leads, dummy antenna. Brand new in transit case. 6 to 52 Mc/s. inclusive in 4 bands with calibration charts. Coarse and fine attenuators. Int. and ext. mod. Output 0.5 volt to 100mv., impedance 70 and 100Ω. £10. Carriage 10/-.

**MAINS MOTORS.** Capacitor 230 v. A.C. 1/40th h.p. 1,400 r.p.m. 55/-, post 3/-.

**MAINS TRANSFORMER WITH RECTIFIER** mounted on top. Giving a D.C. output of approx. 30 to 40 volts 1 amp. Price 27/8 each, post 2/6.

**VARIAC TRANSFORMER.** Input 230 volts. Output infinitely variable 0-230 volts and 0-270 volts. 9 amp., bench or panel mounting. £15, carr. 12/6.

**SELENIUM METAL RECTIFIERS.**

Charging Rectifiers. Full Wave Bridge.	12 Volts 1 Amp	8/6 each	24 Volts 1 Amp	13/- each
	12 Volts 2 Amps	13/6 each	24 Volts 2 Amps	24/- each
	12 Volts 3 Amps	16/8 each	24 Volts 3 Amps	28/- each
	12 Volts 4 Amps	20/- each	24 Volts 4 Amps	36/- each

Discounts for quantities of above charging rectifiers.

**MAINS TRANSFORMERS** to suit above rectifiers.

12 Volts 1 Amp	12/6 each	12 Volts 4 Amps MT5	25/- each
12 Volts 2 Amps	24/- each	12 Volts 4 Amps CT107	29/6 each
12 Volts 2.5 Amps	22/- each	24 Volts 3 Amps	25/- each

### RESISTORS EX STOCK IN QUANTITY WIRE WOUND, HIGH STABILITY CARBON ETC., BEST MAKES AT LOWEST PRICE.

### MAGNETIC COUNTERS

Counting to 9999.

2-6 v. D.C., 15/- each, post 1/6.

Type 16A 75/230 v. D.C. 15/- each, post 1/6.

HIGH SPEED TYPE No. 100c, 35/-, post 1/6.

SWISS TYPE COUNTER WITH ZERO RESET, 45/-, post 1/6.

**VEEDER-ROOT MAGNETIC COUNTER.** General purpose type with zero re-set. 800 counts per minute up to 999,999. 48 volt D.C. 55/-, post 2/6.

**THERMOSTAT SATCHWELL,** 12in. stem 0/250 volt A.C./D.C. 15 amps. A.C. 10 to 90 degrees cent. 25/-, post 2/6.

**ROOM THERMOSTAT.** Adjustable between 45 and 75 deg. Fahr., 250 v. 10 amp. A.C. Ideal for greenhouses, etc., 35/-, post 2/-.

**THERMOSTAT.** For frost protection, on at 34 deg. F., off at 40 deg. F., 1½ amps. at 250 volts, adjustable, 4/6, post 1/-.

**SIMMERSTAT BY SUNVIC.** Plug-in type with knob control, 15 amps 3-pin 200/250 volts, 35/-, post 2/-.

**BATTERIES FOR THE MODEL MAKER. MINIATURE—SILVER ZINC. VENNER TYPE H.105.** 1.5 Volts 1.5 amp. hour. 8ize: Height 2in., width 1.13in., depth .63in., weight 1.25 oz. PRICE 17/6. Post 1/-.

## Training in Radio and Television Servicing

The **Pembridge College of Electronics** provides a full-time One Year course in the basic principles of Radio and Television for prospective servicing engineers. This course is also suitable for those wishing to maintain all types of industrial electronic equipment.

The next course commences on 26th April, 1960. Following course commences on 6th September, 1960.

Home-study courses in Radio and Telecommunications and also kits-of-parts are now available.

For details of these courses, write for prospectus and admission forms to:

## RECO KITS

**"RECO" MIDDY ONE  
TRANSISTOR KIT**

(M/L or M/S Waves). Size 4 1/2 in. x 3 1/2 in. x 1 1/2 in. Variable sensitivity control Vari Q ferrite rod aerial. "Sonotone" min. dynamic earpiece with insert. Pencil battery. Complete kit with Edlewan transistor and easy build diagrams, 37/6. P.P. 2/-.

**"RECO" PUSH-PULL FIVE KIT**

(M/L Waves)  
(Size: 6 1/2 in. x 4 1/2 in. x 1 1/2 in.)  
As the Transigen Three but with Push-Pull output stage. Uses EDISWAN Transistors. New improved 3in. speaker. Complete kit £8/7/6. P.P. 2/6. Easy build practical wiring diagrams free with kit.

**"RECO" TRANSIGEN  
THREE KIT**

(M/L Waves)  
Entirely self contained (no external aerial required). R.F. stage EDISWAN transistors. Combined volume and sensitivity control. On test (50 miles from London) tuned in the Home, Light, Third and in the evening Radio Luxembourg. A.F.N. and many others. Attractive pale blue polystyrene case with red grille. Sensitive B.A. Reproducer or "Sonotone" min. earpiece. Complete kit with easy build diagrams and battery, 77/6. P.P. 2/6.

**"RECO" PUSH-PULL  
FOUR KIT**

(M/L Waves and 2 S.W.1 coils free).  
Four EDISWAN transistors. Volume control. 3in. speaker. Improved lay-out. Gleaming pale blue polystyrene case with red speaker grille.  
Complete kit with easy build diagrams and 3-volt battery. £5/3/6. P.P. 2/6.  
Parts price list and circuits for the above kits 2/6 set of four.

ALL CONDENSERS AS ADVERTISED IN THE JANUARY ISSUE, PAGE 152, ARE STILL AVAILABLE

## and now . . . RADIO CLEARANCE LTD. proudly presents the greatest ALL-TRANSISTOR CIRCUIT of our time

BUY AS YOU BUILD the "MIRACLE" Super Six Plus  
ANY PART SOLD SEPARATELY

Makes up to a portable transistor superhet embodying all the latest design developments including a self-oscillating mixer, two double-tuned IF stages, audio amplifier and a matched push-pull output stage. Also two germanium diodes are incorporated, additional to the six Mazda transistors, one as detector and the other to assist the AGC as a variable damping element.

### 12 Good Reasons why the Miracle has no equal

- ★ Printed Board engraved with component locations
- ★ Special provision for use as a CAR RADIO
- ★ Double-tuned IF Transformers.
- ★ 6 First grade Mazda transistors plus 2 Mazda hi-gain diodes
- ★ Hi-flux 5in. (12000 lines) 25-ohm loudspeaker
- ★ Full coverage Medium and Long wavebands
- ★ 3½in. tuning dial with 5:1 slow motion
- ★ Long life dry battery. 150/200 hours
- ★ Internal high-Q Ferrite Aerial
- ★ Push-pull matched output stage 400 Milliwatts
- ★ 3½in. x 7½in. x 10in. two tone vyanide covered case—total weight approx. 4lb
- ★ Comprehensive Manual supplied—so easy to build

Our inclusive price for all components, cabinet and battery, complete in every detail:

## Unrepeatable Bargains !!!

THE FAMOUS COSSOR 3 WATT AUDIO AMPLIFIER KIT 562K

ORIGINAL PRICE £9/15/-  
**OUR PRICE £5.19.6** P. & P. 2/6

This Kit assembled will provide a compact versatile Amplifier which incorporates the most up-to-date pre-assembled printed circuit and is suitable for operation from Radio, Microphone or Gramophone. The circuit design includes negative feedback, valve line-up 6V4, 6BQ5, EF86. Two Loudspeakers are used, i.e., 10 x 6 in. Elliptical and 4 in. Treble, ensuring high quality output, suitable for use on 200/250 v. A.C. mains. All items are supplied, including Loudspeakers, Knobs and Escutcheon, with full assembly instructions and in makers' original carton.

### SPECIAL OFFER—LIMITED QUANTITY ONLY

#### A 5-WAVEBAND AM/FM RADIOGRAM CHASSIS

(By Famous Manufacturer)  
**PRICE**

**£17.19.6**  
plus 5/- P. & P.

A really good quality Chassis with outstanding features: Valve line-up ECC85, ECH81, EF89, EABC80, 2/EL84, ECC83, EZ81; waveband coverage, long, medium, two short and F.M. Power Pack and push-pull output stage mounted on separate chassis. Fly-wheel tuning; pickup and extension speaker sockets provided, and edge fit facilities for quality tape recording or playback. Glass Dial supplied suitable for either horizontal or vertical mounting and finished in black with gold lettering. H.P. Terms: Deposit 36/- and 12 monthly repayments at 29/9.

### THE "MID-FI"

#### A NEW DESIGN 4 1/2 WATT AMPLIFIER KIT MAY BE BUILT FOR **95/-** Plus 3/- P. & P.

A new circuit for the home constructor requiring a good-quality medium-powered Amplifier for reproduction of Records of F.M. Broadcasts. Technical Specifications: separate bass and treble controls. Valve line-up EF86, EL84, EZ80. Voltage adjustment for A.C. mains from 200/250 volt 3 or 15 ohms impedance. Negative feedback. Size 7 x 5 x 2 1/2 in., overall height 5 in. Silver-hammered finished Chassis.

### RCA VICE-PRESIDENT 8-10 WATTS PUSH-PULL AMPLIFIER

A compact versatile Amplifier complete with plug-in Power Pack, valve line-up HY90, 2 - 19AQ5 and 12AX7, separate bass and treble control, suitable for Speakers of 15 ohms impedance and two 3-ohm tapplings for Tweeters. For use on A.C. mains, tapplings 115-150 and 210-250 can also be supplied with Power Pack suitable for AC/DC mains. **PRICE COMPLETE WITH ESCUTCHEON AND KNOBS**, £6/19/6, 3/6 p. & p.

### RCA PRESIDENT 10-WATT PUSH-PULL AMPLIFIER

A well-designed compact Amplifier with 10 watts push-pull output; specifications: valve line-up 6BR7, 12AX7, 2 - BW6 and Metal Rectifier. Separate Power Pack and separate Control Panel incorporating Volume On/Off, Bass and Treble Controls, suitable for Speakers of 15 ohms impedance with separate tapplings for two 3-ohm Tweeters, for use on A.C. mains 110-150 and 200-240. **PRICE COMPLETE WITH ESCUTCHEON AND KNOBS**, £7/19/6, 3/6 p. & p.

### RCA TRANSCRIPTION PICK-UP

A superb transcription Pick-up with variable reluctance cartridge and finger-tip weight adjustment for accurate settings. Suitable for standard and L.P. recordings. **PRICE FOR LIMITED PERIOD ONLY**, £8/10/- plus 2/6 p. & p.

**SOUTHERN RADIO'S  
SPECIAL BARGAINS  
TRANSMITTER - RECEIVER**

Complete in Metal Carrying Case. 9in. x 6 1/2in. x 4in. Weight 6lb. Frequency 7.3 to 9 Mc/s. Five valves, £12/2/6. Post paid.

These TX-Rs are in NEW CONDITION, but owing to demand they are not tested by us and carry no guarantee, but should prove SERVICEABLE. ATTACHMENTS for Type "38" Transmitters. ALL BRAND NEW. Headphones 15/6; Throat Microphones 4/6; Junction Boxes 2/6; Aerials, No. 1 2/6; No. 2 5/-; Webbing 4/6; Haversacks 5/6; Valves—A.R.P. 12 4/6; A.T.P. 4 3/6; Set of FIVE VALVES 19/- the set. SPECIAL OFFER No. 2:

"38," as above, complete with set of external attachments, 42/6, post paid.

SPECIAL OFFER No. 3: Transmitter-Receiver "38" Mk. II. Brand new with complete set of external attachments including Webbing, Haversacks and Valves. 57/6 post paid. Fully guaranteed.

CONDENSERS. 100 assorted Mica; Tubular, etc., 15/- NEW.

CONTACTOR TIME SWITCHES. 2 impulses per sec., in case, 11/6.

REMOTE CONTACTOR. For use with above, 7/6.

LUBRICA HOLE CUTTERS. Adjustable 3in. to 3 1/2in. For Metal, Plastics, etc., 7/-.

MAGNETS. Strong Bar type, 2 x 1/2in., 1/6 each.

MORSE TAPPERS. Midget type, 2/9; Standard, 3/6; Heavy type on base, 5/6. ALL BRAND NEW.

MORSE PRACTICE SET. TAPPER with BUZZER on base. Complete with battery, 12/6.

BRAND NEW.

PACKARD-BELL AMPLIFIERS. Complete. BRAND NEW, with valves, relay, etc., etc., 17/6 each.

QUARTZ CRYSTALS. Types F.T.241 and F.T.243. 2-pin, 3in. spacing. Frequencies between 5,675 kc/s. and 8,650 kc/s. (F.T.243), 20 Mc/s. and 38.8 Mc/s (F.T.241, 54th Harmonic), 4/- each. ALL BRAND NEW. TWELVE ASSORTED CRYSTALS, 45/-. Holders for both types, 1/- each. Customers ordering 12 crystals can be supplied with lists of frequencies available for their choice.

RECORDING BLANKS. Brand new. "Emidisc." Ready for cutting. 13in. 6/- each or 15 complete in metal case 4/.

RESISTANCES. 100 assorted useful values. New wire end 12/6. NEW.

SPECIAL OFFER. 12 ASSORTED METERS. Slightly damaged. Mainly broken cases (perfect movements). Including 3 BRAND NEW Aircraft Instruments. 12 for 45/-.

STAR IDENTIFIERS. Type I A-N Covers both Hemispheres, 5/6.

T154 TRANSMITTERS. Complete in transit case. New condition, £25/-.

TEST METERS D.C. PORTABLE 0-5,000 ohms 0-6mA 0-1.5v and 3v. In case 3 1/2in. x 3 1/2in. x 2 1/2in. Voltage range can easily be extended by addition of resistances to suit individual requirements. Brand new, 12/6.

ATTACHMENTS for "18" Transmitters. ALL BRAND NEW. Headphones 15/6; Hand Microphone 12/6; Aerials 5/6; Set of 6 Valves 30/-.

TRANSPARENT MAP CASES. Plastic 14in. x 10 1/2in. Ideal for Maps, Display, etc., 5/6. Post or carr. extra. Full list Radio Books, etc., 3d.

**SOUTHERN RADIO SUPPLY, LTD.**

**"BARGAINS WITH PERSONAL SERVICE"**

COMMUNICATION RECEIVER R206. 30-0.55 Mc/s. in 6 ranges, separate power pack for 110/230 v. a.c., 12 v. d.c. vibrator pack included, slightly used, but in good condition. £29/10/-, carriage 30/- (Mainland). Frequency Adaptor, for same with 3 further ranges, 600-50 kc/s., 55/-, carriage 5/- (Mainland). Size 24 x 13 x 17in.

COMMUNICATION RECEIVER R107. 9 valve, 3 band, 1.2-17 Mc/s. 18-200 metres. 110/230 v. a.c. and 12 v. d.c. for mobile operation, used but in good condition, from £7/19/6, carriage £1 (Mainland). Size 24 x 13 x 17in. TX/RECEIVER No. 18. 2-8 Mc/s (150-37 metres) in 2 bands, also 230-340 Mc/s V.H.F., 12/24 v. operation. Mk. II model, as new, 70/-; Mk. III, 80/-, carriage on both 12/6 (Mainland). Complete station set, supply unit, variometer, etc., £8/10/-, carriage 25/- (Mainland).

MARCONI TP987/1 NOISE GENERATOR. Range 100 kc/s-200 Mc/s., 230 v. a.c. input, brand new, £21, carriage 10/- (Mainland).

FREQUENCY METER BC221, as new, £32/10/-, carriage 10/-.

SIGNAL GENERATOR, TYPE TS.13/AP. "X" Band, £85, inc. carriage.

AVOMINOR UNIVERSAL TESTMETER. As new, in leather case, 75/- P.P. 2/6.

ROTARY CONVERTORS. 24 v. d.c. input, 230 v. a.c. 50 c. 100 watts output, brand new, £4/10/- Ditto, 125 watts, £4/17/6. A few of these models, store soiled, at a reduction of 10/-. Ditto, 180 watts new £5/10/-, with sliding resistor for same £8. Carriage on all the above 7/6 outside mainland extra.

ROTARY CONVERTOR. By Lancashire-Crypto, 24 v. d.c. input, 230 v. a.c. 50 c. 135 watts output in wood carrying case, with 3-pin. flush output socket, absolutely brand new and unused in original packing case, £7/19/6, carriage 10/-. A small number left, 24 v. d.c. input, 50 v. a.c. 50 c. 4 amps. output in steel case, £2/10/-. Auto transformer 50/230 v. to suit same, £1/10/-. Carriage on each 5/6.

GRIMES (U.S.A.) SEARCHLIGHT SIGNALLING SPOTLIGHT. 12/13 v. approx. 80 watts sealed beam, pistol grip handle incorporating micro switch, separate on/off switch, 20ft. tough rubber flex, size overall 7in. x 7in. x 12in., weight 6lb. Superb light, just the job for boats etc. BRAND NEW, only 45/-, P. & P. 2/6.

CONTROL JUNCTION BOX. Type 165, Ref. No. 10D 19102, incorporating 2 high speed 870 ohms sealed relays, also 2 Co-Axial relays with miniature Coax. sockets. Brand new, few only, 35/- P. & P. 2/6.

BATTERY CHARGERS. 230 v. a.c. input, 24 v. d.c. output at 10 amps. with meter, fine and coarse controls enables 6, 12, or 24 v. batteries to be charged, fused with on/off switch, £9/10/-. Carriage £1 mainland.

RECTIFIER SETS. 230 v. 1 ph. input, 24 v. d.c. at 25 amps. output, £12/10/-; 230 v. ditto, 36 v. d.c. at 50 amps. output, £17/10/-; 230 v. ditto, 3 ph., 36 v. at 50 amps. £20. 380/440 v. 3 ph. input, 36 v. d.c. at 60 amps. output £27/10/-.

NIFE ALKALINE BATTERIES. 25 a.h., 1.2 v. per cell, 10/- ea. P. & P. 1/6.

CONDENSERS. "Pyranol" oil filled 10uF 2 kv. wkg. (part of the Transmitter ET368) 22/6 ea.; 1 dozen lots at 19/- ea.; 50 to 100, 16/- ea. Packing and carriage at cost.

TELEGRAPH LINEMEN'S SAFETY BELTS. Leather 2in. x 1in. double buckles, with safety catch, a must for all climbing purposes. Brand new, 17/6. P.P. 2/-.

HAND MICROPHONE. Moving coil No. 12, round 2 1/2in. diameter, with thumb press switch, brand new, only 12/6. P.P. 1/-. Inserts for same, 4/6. P.P. 6d.

ANTENNA CURRENT INDICATOR. U.S.A. New 2 1/2in. flush, 8/6. P.P. 6d.

ALFAL VARIOMETERS. Part of 19 set Mk. II. New, 12/6. P.P. 1/6.

373 MINIATURE I.F. STRIP. F.M. conversion, 9.72 Mc/s. complete with 6 valves. Conversion details "P.W." April 1957. Now only 29/6. P.P. 1/6.

CONTROL UNIT, U.S.A. Case 12 x 6 x 3in., hinged lid, with 1 ea. 2 1/2in. meter flush fitted, 5 main on and 2 toggle switches, relays, condensers and other components, wonderful bargain, 22/6. P.P. 2/6. Terms. C.W.O. or approved monthly accounts S.A.E. inquiries.

**BARGAINS FROM PORTLAND ELECTRONICS**

POWER PACKS. Input 110-200-240 v. 50 cycles or 12 v. D.C. OUTPUT 200 v. 60 ma. and 2, 100 v. 80 ma. one +ive and one -ive to earth. Unit is BRAND NEW and contains a wide assortment of useful power components including 4 8 MF 350 v. paper condensers, 2 chokes, 2 100 v. bridge metal rect. and 2 250 v. 1 wave metal rect. Also a 5 pole 2/0 heavy duty rotary switch with silver contacts, 5/100k fuses and several small components and a potted double screened mains transformer as advertised previously at 12/6. (Output from vibrator winding 24 v. C.T. 3 amps.) Less barretters and vibrator but with full details of input and output corrections, etc. A real snip at 27/8 each.

CONDENSERS. T.C.C. Tubular "METALPACK" 0.1, 500 v. Brand new, 7/6 dozen.

TOROIDAL CHOKES. S.T.C. 1 mH. on a ferrite ring. High Q and ideal for filter applications. 3/- each.

PRECISION POTENTIOMETERS. Covern 50K. 4in. cam corrected with centre tap. Only slightly used and exceptional value at 15/- each. Ideal for bridges, etc.

SPECIAL OFFER. A few FURZEHILL B.F.Os. No. 5 left, reduced to £9/15/- each. Here is a chance to obtain an excellent instrument at a rock-bottom price. Range 0-10 kc/s. 2 watts output. Supplied in excellent condition with 7 valves and in good working order.

MISC. NEW ITEMS. Valves. EP91. 6C4. 3/- 4313C 3/8. 3A4 4/- 68N7 5/-. CRTs. 5CP1. 20/- EP7 15/- each. Wearite I.F.T.s 6/6 pair. Heilmann circuit breakers 2 1/4 A. 5/6 each. W/W pots 50 ohm 1/3. 5 K 1/6. 50 K. 100 K. log. Carbon 1/3. 230 v. A.C. solenoids, very powerful pull, 1/4n. stroke. 8/6 each.

METERS. 5 ma. F.S.O. Scaled 0-15, 0-75, 0-150. 3in. scale flush round mtg. Brand new by leading U.S.A. manuf. 12/- each.

TRANSMITTER V.F.O. Less relays but with 3 807 temp. stabilized V.F.O. and many useful components. Freq. range 2.4-13 Mc/s. 12/6 each.

RECEIVER Type 78. 2-4-13 Mc/s. V.L.U. EP50, ECH35, 675, EA50, F03. Has very accurate tuning dial and temp. stabilized local osc. Complete with 100 Kc/s. callibrator assembly with X1a1 and Desynn trimmer. Requires external I.P. and Det. Range 2-4-13 Mc/s. £2 each.

All prices include post and packing. Terms C.W.O.

# Ferranti

## ELECTRONIC COMPUTERS

The outstanding success of Ferranti Computers not only in Britain but overseas is reflected in the Company's requirements for:—

(i) **SUPERVISING COMPUTER ENGINEERS**

who should possess sound electronic knowledge based on a Higher National Certificate or on good experience in the technical branches of the Services.

(ii) **COMMISSIONING ENGINEERS**

of at least H.N.C. status and preferably possessing knowledge of computing circuitry and techniques. Previous experience in development would be an advantage.

These vacancies offer:

★ RESPONSIBILITY

★ HIGH TECHNICAL INTEREST

★ CLEAR PROSPECTS IN THIS ADVANCING NEW INDUSTRY

★ EXCELLENT SALARIES AND CONDITIONS OF SERVICE

The Company has a Pension Scheme and a Dependants Insurance Scheme.

Application forms can be obtained from:

**T. J. Lunt, Staff Manager, Ferranti Ltd.,  
Hollinwood, Lancs. Please quote ref. CD(i) or (ii)**

## STEREO £7.7.0

Independent twin channel amplifier with excess of 3 watts per channel.

Concentric volume control (optimum balance arranged immediately without additional knobs).

Stoved grey or blue hammer chassis 9½in. x 5½in. x 6in.

Input suiting most modern crystals; output matching 3 ohm speaker each channel.

For operation on AC mains 200/250 v. Post & pkg. 4/—.

**E.K.E.**

**BROTHERTON, KNOTTINGLEY, YORKS.**

*If your local dealer has not one in stock we will gladly loan him one for you to hear. Another Model, £3/12/- carriage paid*

### AN EXPANDING COMPANY

engaged in the manufacture and development of a wide range of thermionic devices wishes to engage the services of **FOUR QUALIFIED**

#### ELECTRICAL ENGINEERS OR PHYSICISTS

who have had some relevant experience in the design, development, or manufacturing of valves.

Applications will be treated in confidence and selected applicants will be interviewed by arrangement.

Salary will be assessed within the range £1,500-£2,000.

Details of experience, qualifications, age and present salary, etc., to Box 1016, L.P.E., Romano House, 399/401, Strand, London, W.C.2.

### MARCONI INSTRUMENTS, ST. ALBANS require

#### TECHNICAL WRITERS

This Company has immediate vacancies in its Technical Literature (Telecommunications) Section. Applicants should have electrical engineering qualifications and/or experience in the design or development of electronic equipment. The duties are varied and interesting and the posts provide permanent and pensionable positions in a well-established Company.

Please write giving full details of experience and qualifications to Dept. C.P.S., Marconi House, 336/7, Strand, W.C.2, quoting reference WW 2970L.

# Out in the blue

## 2 radio men on 4 wheels

Take one wireless truck, one wireless operator, one wireless mechanic. Drive 300 miles on rough tracks, find a spot that's just a map reference. Set up a radio station and link strike aircraft with base. Keep it going . . . stay fit . . .

These R.A.F. men are no mere tradesmen. Nobody's mere anything in the R.A.F. Every man has skilled training, and a job he's counted on to do supremely well.

But the R.A.F. gives a man far more than 'know-how'. It gives him a career that's both secure and exciting. It gives him a standard of living that's hard to better in civilian life. It takes him—with his family—all over the world.

A full life  
in the  
**R.A.F.**

IS THIS YOUR LIFE? The R.A.F. wants men who make the most of life's chances. There are vacancies now in these key jobs. Full pay while you train, specialist pay when you qualify. Tick your particular interests, and post the coupon for free booklets about the R.A.F.

- Wireless Mechanic  Electrical Mechanic  Nursing Attendant  Air Defence Operator  Operations Clerk  Radar Mechanic  R.A.F. Police  Progress Clerk  Teleprinter Operator  Typist  Wireless Operator  Tape Relay Operator

— THE LATEST EDITION OF ENGINEERING OPPORTUNITIES

## Have you sent for your copy?

ENGINEERING OPPORTUNITIES is a highly informative 156-page guide to the best paid engineering posts. It tells you how you can quickly prepare at home for a recognised engineering qualification and outlines a wonderful range of modern Home Study Courses in all branches of Engineering. This unique book also gives full details of the Practical Radio & Electronics Courses, administered by our Specialist Electronics Training Division—the B.I.E.T. School of Electronics, explains the benefits of our Employment Dept. and shows you how to qualify for five years promotion in one year.

## We definitely Guarantee "NO PASS — NO FEE"

Whatever your age or experience, you cannot afford to miss reading this famous book. If you are earning less than £20 a week, send for your copy of "ENGINEERING OPPORTUNITIES" today—FREE.

**NEWMARKET TRANSISTORS LTD.**

**ENGINEERS  
AND  
PHYSICISTS**

**FOR EXPANSION SCHEME**

Our Production expansion plans coupled with the rapidly increasing utilisation of semiconductor devices has created the following classes of

**VACANCIES.**

**PHYSICISTS**

To work on semiconductor material and device problems with an ultimate target of performance improvement and fabrication simplification. Good general academic qualifications essential.

**PROCESS CONTROL ENGINEERS**

To monitor, maintain and analyse the production of semiconductor devices. Some previous experience in allied field desirable.

**PROCESS DESIGN ENGINEERS**

To develop and initiate production methods and machines. Some experience of labour saving methods and tooling desirable.

**MAINTENANCE ENGINEERS**

To maintain chemical and mechanical equipment of specialised nature. A recognised apprenticeship in some branch of production engineering would be an advantage.

Salaries will be paid in accordance with qualifications and experience and ample opportunities exist for promotion.

Apply, giving full details, to:

**PERSONNEL MANAGER,  
NEWMARKET TRANSISTORS, LTD.,  
EXNING ROAD, NEWMARKET**

**RADIO TECHNICIANS  
IN  
CIVIL AVIATION**

Men aged 19 or over for interesting work providing and maintaining aeronautical telecommunications and electronic navigational aids at aerodromes and radio stations in the U.K. Fundamental knowledge of radio or radar with some practical experience essential; training provided on special types of equipment. Salary according to age and station, approx. £670 at age 25 rising to £795. Prospects of permanent pensionable posts. Good opportunities for those who obtain O.N.C. in Elec. Eng. and certain C. and G. Certificates for promotion to posts with maximum salaries of £875, £1,035 and £1,260. Apply to the Ministry of Aviation (ESBI/RT), Berkeley Square House, London, W.1 or to any Employment Exchange (quoting Order No. Westminster 3552).

**MARCONI INSTRUMENTS LIMITED**

ST. ALBANS, HERTS.

have vacancies for  
**SENIOR DRAUGHTSMEN** with experience in electronics.

also

**DETAIL DRAUGHTSMEN** with experience in electronics or otherwise.

Excellent opportunity for experienced men to widen experience with well established and continually expanding company, offering long term progressive employment and good working conditions.

Please write giving full details of experience and qualifications to **Dept. C.P.S., Marconi House, 336/337, Strand, London, W.C.2.** quoting reference **WW2070K**

**VACANCIES FOR  
RESEARCH AND DEVELOPMENT  
CRAFTSMEN IN GOVERNMENT  
SERVICE AT CHELTENHAM**

- Experience in one or more of the following:—
- (1) Maintenance of radio communication receivers.
  - (2) Sub-assembly lay out, wiring and testing of radio type chassis.
  - (3) Cabling, wiring and adjustment of telephone type equipment.
  - (4) Fault finding in and maintenance of electronic apparatus.
  - (5) Maintenance of teleprinter or Cypher machines and associated telegraph equipment

Basic Pay £9/9/8 per week plus merit pay, assessed at interview and based on ability and experience as under:—

**ORDINARY RATE 10/- to 32/-**  
**SPECIAL RATE 33/- to 70/- per week.**  
Opportunities for permanent and pensionable posts. Five-day week, good working conditions, single accommodation available.

Apply in writing to: **Personnel Officer,  
C.G.H.Q., (3/BDC),  
53, Clarence Street,  
Cheltenham, Glos.**

**NELSON RESEARCH LABORATORIES  
THE ENGLISH ELECTRIC COMPANY LIMITED  
STAFFORD**

**SENIOR & JUNIOR ELECTRONIC  
and  
ELECTRICAL ENGINEERS**

are required for interesting and varied work in the Nelson Research Laboratories, English Electric Company Limited, Stafford.

Applicants should have sound workshop experience and some knowledge of Drawing Office procedure.

Qualifications up to H.N.C. level are desirable. Duties will include responsibility for the Engineering Design of prototype electronic equipment and electrical control equipment from the rough circuit stage to the issuing of manufacturing information to the Laboratories' Workshops.

These posts offer ample scope for advancement to men with initiative and ability.

Salary according to qualifications and experience. Please write giving full details of salary and qualifications to **Dept. C.P.S., Marconi House, 336/7, Strand, London, W.C.2,** quoting reference **WW 995C.**

**ARE YOU A SKILLED AND EXPERIENCED  
ELECTRONICS TECHNICIAN ?**

**HAVE YOU BEEN A WIRELESS OR RADAR  
FITTER IN THE ARMED FORCES ?**

**DO YOU HAVE GOOD TECHNICAL QUALIFICATIONS  
BUT LACK INDUSTRIAL EXPERIENCE ?**

If you can answer "YES" to at least one of these questions then we should like to hear from you.

We need new test and calibration engineers to help us increase the output of our very wide range of telecommunications measuring instruments.

The work requires the understanding of the most modern and varied circuit techniques and embraces all frequencies up to 10,000 Mc/s.

The posts are permanent and pensionable and will prove attractive to men who believe strongly that there is a real career for them in production.

Call and talk it over if you live close to us at St. Albans. Alternatively, write to **Dept. C.P.S., Marconi House, 336/7, Strand, London, W.C.2.,** giving full details of your education and experience and quoting reference **W.W.2970J.**

**MARCONI INSTRUMENTS LIMITED  
LONGACRES, HATFIELD ROAD, ST. ALBANS**

**VENNER ELECTRONICS**

due to continued expansion require

**DEVELOPMENT ENGINEERS  
PLANNING ENGINEERS  
WIREMEN**

**DEVELOPMENT ENGINEERS:** Applications are invited for work on transistorized equipment. These vacancies call for applicants possessing H.N.C. or equivalent.

**PLANNING ENGINEERS:** Preference given to men with electronic planning experience. Qualifications: H.N.C. preferable but not essential.

Age range for foregoing vacancies 21-40 years.

These positions are permanent and the Company offers salaries in line with the requirements. There is an attractive Pension Scheme in operation which applicants may join after having served a probationary period, the scheme also providing life assurance cover. Excellent working conditions prevail.

**WIREMEN:** Having experience of electronic equipment, preferably employing transistors. These positions are of hourly status and the pay is good. Age range 21-50.

The company is situated on the Kingston By-Pass, and therefore is well served by train and bus services, including Green Line. We offer numerous welfare amenities, canteen and social facilities.

All these positions offer the chance to become included in a progressive and expanding Company.

Applications for Development and Planning Engineers in writing please, marked "Confidential" to:-

The Personnel Manager,  
Venner Electronics Limited,  
Kingston By-Pass,  
New Malden, Surrey.

**UNITED KINGDOM ATOMIC ENERGY AUTHORITY  
PRODUCTION GROUP  
INSTRUMENT MECHANICS**

Windscale and Calder Works, and Chapelcross Works require experienced men with knowledge of electronic equipment and/or industrial instrumentation for fault diagnosis, repair and calibration of a wide range of instruments used in nuclear reactors, radiation laboratories and chemical plant. This interesting work involves the maintenance of instruments using pulse techniques, wide band low noise amplifiers, pulse amplitude analysers, counting circuits, television and industrial instruments used for the measurement of pressure, temperature and flow.

Men with Services, Industrial or Commercial background of radar, radio, television, industrial or aircraft instruments are invited to write for further information. Training in our Instrument School will be given to successful applicants.

Married men living beyond daily travelling distance will be eligible for housing. A lodging allowance is payable whilst waiting for housing. Working conditions and promotion prospects are good.

Applications to:

**Works Labour Manager, Windscale and Calder Works, Sellafield,  
Seascale, Cumberland**

or

**Works Labour Manager, Chapelcross Works, Annan,  
Dumfriesshire, Scotland**

**Murphy Radio**

require technical staff for work on  
**COMMUNICATIONS AND  
RADAR SYSTEMS**

Current vacancies in the laboratories and drawing offices of the Electronics Division include the following positions:

1. **DESIGNER DRAUGHTSMEN** to be responsible for the mechanical design of Service communications equipments; mobile radio; and radar systems. Experience of electronic design work is essential and some academic qualification would be an advantage.
2. **DRAUGHTSMEN** to be responsible for much of the necessary detail draughting work associated with these projects. Ample opportunity will be given to incorporate original ideas and first class experience will be gained in the accurate design of electronic equipment.
3. **ELECTRONIC ENGINEERS** to assist with laboratory design and development in these fields. Relevant experience is obviously an advantage and a degree or H.N.C. is desirable, but the most important qualifications are initiative and a capacity for hard work.

Starting salaries for these posts will be attractive and other benefits will include extremely favourable working conditions when new laboratory and drawing office accommodation is completed early next year.

These positions will appeal to all ambitious men in this field, and they are invited to send full details of themselves to our Personnel Department (E.128), so that an early interview may be arranged.

**MURPHY RADIO LIMITED,  
WELWYN GARDEN CITY, HERTS.**

**SENIOR DEVELOPMENT ENGINEERS**

**Sobell & McMichael**

require additional Senior Development Engineers for home and export television receiver development and transistor circuitry work, willing to travel abroad occasionally.

Applicants should have had some years of successful design experience, or professional qualifications or University degree.

These appointments which are pensionable, provide an excellent opportunity for progressive engineers of exceptional ability to join a successful and rapidly expanding organisation.

Applications should be addressed to:

**CHIEF ENGINEER  
RADIO AND ALLIED INDUSTRIES LIMITED,  
Wexham Road, Slough, Bucks.**

## DIGITAL COMPUTER ENGINEERS

'English Electric' has vacancies for a number of

### SITE COMPUTER ENGINEERS

for diagnosis of logic and circuitry faults at operational establishments. Successful applicants will, after an initial training course, be required to take up responsible positions at Computer Installations on customers' premises.

Qualifications required are H.N.C. or equivalent with preferably two years' experience in development or maintenance of Computers or other pulse circuitry. During training, special subsistence allowance will be made for any successful applicants who have to live away from home. Attractive salaries would be offered with these positions which are permanent and enjoy the benefits of the English Electric Staff Pension Scheme and qualify, after initial service, for three weeks' annual holiday.

Applications giving full details of qualifications and experience should be addressed to Dept. C.P.S., Marconi House, 336/7 Strand, London, W.C.2, quoting reference WW390E.

## NEWMARKET TRANSISTORS

Applications are invited from Senior and Junior Engineers for vacancies in the following departments:—

- Applications,
- Laboratory Measurements,
- Production Testing,
- Production Test Equipment.

Salaries will be paid in accordance with qualifications and experience and ample opportunities exist for promotion. All applications will be treated in the strictest confidence.

Apply giving full details to:—

Personnel Manager, Newmarket Transistors Ltd.,  
Exning Road, Newmarket.

A MAST PROBLEM?

WRITE TO

# Skymasts

BEADON GARAGE      BEADON ROAD      LONDON W6      Telephone RIVerside 1124 and 7878

### SENIOR TEST ENGINEER

Required for an expanding organisation producing television and radio transmission equipment. The successful candidate must be capable of formulating test specifications and procedures for a wide variety of equipment, and will be required to train and direct a group of test engineers. Adequate theoretical qualifications and good practical experience are required.

Applications, which will be treated as confidential, should be sent to:

Staff Appointments,  
BRITISH RELAY WIRELESS Ltd.  
1-7 Croft Street,  
LONDON, S.E.8.

### TECHNICAL WRITER RADIO & TELEVISION

The preparation of service manuals for our radio and television receivers is undertaken by a small team of people having up to date knowledge of good service practice plus the ability to write effectively and well. We are now able to invite a suitably experienced man to join this team.

Applications including details of age and experience should be sent to the:

Personnel Manager (R.22),  
Murphy Radio Limited,  
Welwyn Garden City, Herts.

## SOLARTRON

A bright future for really good

### TECHNICAL WRITERS

We regard technical writers as especially important in our programme of expansion. This programme has already included development of many technically advanced equipments, often in new and exciting fields where previous documentation was sketchy or non-existent.

If your technical knowledge and ability to express yourself lucidly, can meet our high standards, you should seriously consider the progressive career prospects and unusual degree of creative satisfaction we can offer.

Opportunities exist in the following fields:—

Computers, character recognition, Industrial controls, X-ray spectrometry. Please write to the Personnel Officer:

Solartron Electronic Group  
Limited  
Farnborough, Hampshire.

## SCIENTIFIC & EXPERIMENTAL OFFICERS

Vacancies exist in a Government Establishment in North Buckinghamshire in the following grades:—

### PRINCIPAL SCIENTIFIC OFFICERS

Salary range £1,420—£2,020 p.a.

### SENIOR SCIENTIFIC OFFICERS

Salary range £1,160—£1,350 p.a.

Applicants should possess an Honours Degree in Physics or Engineering, or show evidence of equivalent qualifications.

### EXPERIMENTAL OFFICERS

Salary Range £954—£1,166 p.a.

Applicants should possess a Degree, H.N.C. or C. & G. Final Certificate, or show evidence of equivalent qualifications.

### ASSISTANT EXPERIMENTAL OFFICERS

Salary Range £382—£930 p.a.

Applicants should possess O.N.C. or C. & G. Intermediate or show evidence of equivalent standard of knowledge

### QUALITY CONTROL INSPECTORS

£11—£13 per week according to merit.

Applicants should possess knowledge to the level of C. & G. Intermediate.

All candidates should have experience in radar system design, H.F., V.H.F., and U.H.F. communications or general electronics.

Candidates must be British Subjects or citizens of the Irish Republic born within the Commonwealth, or in the Irish Republic of parents born within those territories.

Write giving age, qualifications and experience to Box No. 6447 c/o "Wireless World."

## AUTOMATION IN PRINTING

This progressive Company, situated in North London, specialises in the development of electronic equipment for the printing and allied industries and also in transistorised document handling machines.

Spectacular expansion of world markets has led to the creation of attractive new posts with high salaries and excellent prospects. Applications are therefore invited for:—

### SENIOR DEVELOPMENT ENGINEER

To lead a team engaged on character recognition using transistor, pulse and digital techniques.

### DEVELOPMENT ENGINEERS

A sound understanding of valve or transistor circuits, initiative and qualifications ranging from O.N.C. to honours degree standard.

### LABORATORY TECHNICIAN

A keen interest in electronics and preferably substantial practical experience.

Please apply in confidence to the Chief Engineer.

Box 6609 c/o 'Wireless World'

## BRITISH RELAY WIRELESS LTD.

have vacancies in the London Area for:

1. Experienced ENGINEERS with sound knowledge of the servicing of television and audio equipment to be responsible for the maintenance of television relay stations. Technical qualifications to C. & G. Final Certificate or equivalent.
2. ENGINEER to carry out the planning and estimating of wiring projects in all types of buildings. Applicants should have a sound knowledge of the wiring techniques associated with modern buildings and be able to co-operate with architects and contractors throughout all stages of the work. Experience of Television and audio distribution systems would be an advantage.

Apply in writing giving details of experience, qualifications and present salary to:—

London Area Engineer  
BRITISH RELAY WIRELESS LTD.  
9/13 Camberwell Rd., S.E.5.

# SMITHS Radiomobile

BRITAIN'S CAR RADIO SPECIALISTS  
INVITE APPLICATIONS FOR THESE POSTS

### ASSISTANT TO SERVICE MANAGER

A sound technical and practical knowledge of broadcast receiver engineering and maintenance is required, together with administrative ability. Car radio experience desirable but not essential to person of right calibre.

### ASSISTANT FOREMAN

Experience of car radio application and maintenance desirable but not absolutely essential. This progressive appointment is in the Service Department.

### EXPERIENCED SERVICE ENGINEERS

These appointments hold out very definite prospects of advancement for the right individuals.

Applications giving full details of career to date should be addressed to:

THE STAFF MANAGER, S. SMITH & SONS (ENGLAND) LTD.,  
CRICKLEWOOD, LONDON, N.W.2 quoting ref. SM243.

## ELECTRONIC ENGINEERS

The General Electric Company, has a few vacancies for qualified electronic engineers to join a small team engaged on the development of Data Transmission Systems.

The work is varied and will be of particular interest to men interested in railways and in remote control problems generally.

Applicants should have a university degree in electric engineering or physics, or a Higher National Certificate. Experience of transistor circuitry and of pulse techniques would be an advantage.

The positions are permanent and pensionable and carry attractive starting salaries which will be assessed according to age, qualifications and experience.

Apply giving full details to the Staff Manager, General Electric Co., Ltd., Copswood, Coventry.

**AEI**

ASSOCIATED ELECTRICAL INDUSTRIES  
LIMITED

### TEST ENGINEERS

The Electronics Department requires Test Engineers with at least H.N.C. qualification, and sound knowledge of electronics. Some experience of fault diagnosing and testing of such equipment as Radar or Computers would be desirable.

These are staff positions qualifying for the Company's pension scheme and offer opportunities for advancement.

Please apply for application form, quoting reference E.14 to:—

Personnel Manager,  
Associated Electrical Industries,  
(Manchester) Ltd.,  
Trafford Park,  
Manchester, 17.

## DEVELOPMENT TECHNICIAN

required to work on Aircraft Electrical Systems. H.N.C. or equivalent qualification necessary with experience in transistors, A.C. electronics and a basic knowledge of circuit design at "breadboard" stage.

Applications should be sent to the

Personnel Officer,  
Fairey Aviation Limited,  
Hayes, Middlesex.

**METEOROLOGICAL RADIO SONDE TRANSMITTERS**

Frequency Range approx. 400 mc/s. Transmitter consists of modulator Valve 5375 and RF valve 5794. Operation from a dry battery 110 v.; 6.6 v. and 1.4 v. Dimensions—complete with aerial—2 1/2 in. dia. x 5 in. long. Weight, less batteries, 7 oz. R.F. output is pulse modulated with an audio frequency dependent on the value of resistor used in the 5975 circuit.  
**PRICE**, new, with circuit diagram..... 16/- p.p. 3/6.

**RELAYS**

**High Speed Relays**  
 G.E. CR8791, 2,000 ohms coil, operating current 3-4mA, sealed, SPST..... 7/- p.p. 1/6.  
 SIGMA Type C1, or equivalent; SPST, 5,000 ohms coil, operating current 4 mA; will operate with change of current of 2mA..... 5/6 p.p. 1/6  
**Miniature Relays, SPST, 300 ohms coil, 6-volts operation**..... 4/- p.p. 1/6  
**LEACE Relays:**  
 Type 1087WB, DPDT, Heavy Duty, 160 ohms coil, 24 volts operation..... 5/- p.p. 1/6  
 Type 1013-24, SPST, 200 ohms coil, 24 volts operation..... 2/8 p.p. 1/6  
 Type 1016, SPDT, 95 ohms coil, 12 v..... 3/6 p.p. 1/6  
 Type 1227-893, Canned, SPST, Heavy Duty, 24 v., 160 ohms coil..... 7/6 p.p. 1/6  
**Sealed Relays:**  
 Type A-8811, 3PST, 425 ohms coil, 28 v. 10 amps. Contacts (at 24V)..... 10/6 p.p. 2/-  
 Type 974-0048-009, Collins, SPST and SPDT, 8,000 ohms coil, 24V..... 7/6 p.p. 1/6  
 SPST 70 ohms coil, 24 volts..... 1/6 p.p. 1/-

**RATCHET MOTORS, 12 v.**  
 1 Amp, (Impulse Motors) 5.75 ohms..... 3/6 each  
 Packing and postage..... 1/6

**BUZZERS**

Post Office Buzzers Model T Mk. 1. Minimum operating voltage 3 volts. **PRICE**..... 4/6 p.p. 1/6

**V.H.F. RECEIVER UNITS BC-624**  
 (part of SCR-922 Transmitter-Receiver)

4 Crystal controlled channel, 100-156 Mc/s. (13.0-14.95 metres). Valves 9003 R.F. stage; 9003 Mixer; Three I.F. stages 128G7; Det./AVC/Audio 12C8; Second Audio 12J56GT; Oscillator 12AH7GT; Harmonic Generator 9002; Harmonic Amplifier 9003; Audio Squelch—other section of 12AH-7GT. High and Low Impedance output.  
**PRICE**, complete with valves, with description and circuit diagram, but without squelch relay 25/-, p.p. 5/-  
**PRICE**, chassis only, less valves 7/6, p.p. 3/6.  
**ALSO LIMITED QUANTITY ONLY:**

**TRANSMITTER UNITS BC-625**  
 (part of SCR-922 Radio Set)

Valves; Speech Amplifier 6587; Push-Pull Modulator (two 12AB); Oscillator 6066; 1st Harmonic Amp. 12A6; 2nd Harmonic Ampl. 832; Power Anpl. 832. Output 8 watts.  
**PRICE**, complete with valves, description and circuit diagram..... p.p. 5/- 22/6  
**Price**, chassis only, less valves..... p.p. 3/6 7/6  
 Descriptions and circuits available at 8d. each.

**5 1/2 in. T.V. TUBES TYPE ACR-1**

4 v. Heater; Anode No. 1—3,000 v.; No. 2—700 v.; No. 3—3,000 v.; Grid—25 v.; New.  
**PRICE ONLY**..... 18/8 p.p. 4/6

**5 in. 5FP7 CATHODE RAY TUBES**

6.3V heaters, Anodes: No. 1—250v; No.2—7,000v. Electrostatic Focussing and Electromagnetic Deflection. Green short persistence trace with yellow long afterglow.  
**NEW, only**..... 12/6 p.p. 4/-

**ROTATABLE LOOPS MN20E**

For M.F. Direction Finding. NEW and complete with two lengths of flexible shafting, remote rotation handle and precision azimuth indicator unit..... 85/- p.p. 7/6.

**AVO C-R BRIDGES**

Portable Mains Operated Serviceman's Component Bridge. Ranges of measurement: Capacity from 5mmF to 50mF; Resistance from 5 ohms to 50 megohms. Valve Voltmeter from 0 to 15V RMS; Neon Leakage Indicator; Power Factor measurement in %.  
**PRICE**..... £9/0/0. p.p. 10/-

**AVO WIDE RANGE SIGNAL GENERATORS**

Portable Serviceman's Signal Generators; Range 50kc/s to 30mc/s. Output 0.5V. Max. Reliable Attenuator. Internal Modulation at 400 c/s. Universal Mains supplies.  
**PRICE**..... £18/0/0. p.p. 17/6.

**VALVE TESTERS TYPE 12X3**

Roller switch type Valve Tester for measuring mutual conductance. Mains operation. Fitted with base; Acorn, B3G, B7G, B9A, U.S. Octal, U.S. Local, UK6, UK5, UK7; British: 4/6 pin Octal, E7, B9; P1 (8SC).  
**PRICE**..... £8/10/0 p.p. 15/-

**AVOMINORS**

DC AVOMINOR (Testmeter Type E); Ranges: 2-20-200-1,000 x1 and x2; 20mA-100-200mA, 2A and 20A. all D.C. only. Complete with leather case..... £319/6  
 AVOMINOR UNIVERSAL (Testmeter Type E); Ranges 5-25-100-250-500V AC/DC; 2.5-5-25-100-500mA DC. Complete with leather case..... £319/6 p.p. 2/6 each.

**SPECIAL OFFER OF METERS**

500-0-500µA 3 1/2 in. Rd. Fl. M.C. DC. calibrated 50-0-50 yards, second hand, tested..... 20/-  
 1mA, 2 1/2 in. Rd. Fl. M.C. DC., enclosed in a 2 1/2 in. square steel box, with lead, new..... 20/-  
 300 v. 2 1/2 in. Rd. Fl. M.I. AC, new..... 20/-  
**P.P. 2/6 per meter.**

**TESTED AND GUARANTEED VALVES**

1/6—12J5GT; 2/6—3B24, 6C4, 6G6G, 128G7, 937, EF50; 3/-—1A2; 4/-—6X4; 5/-—6X5; 6/-—6X6; 6S7GT, 12A6; 6/6—EAC9; 4/6—6AM6, 6J5; 5/-—6AM5, 6SN7GT, 12A6; 5/6—OD3/VR-150, 9002; 6/-—6K7, 6N7, 68S7, 6X5GT, 9003, 9006, EF92, KT33; 6/6—OC3W, 6SL7GT; 7/-—185, 2228, 384; 9/-—1N6GT; 10/-—8852; 12/6—6787, QV047; 15/-—832; 35/-—TT18.  
 Please add 2/6 in £ for p.p.

Please send s.a.e. for price lists of meters and valves

**TEXAS INSTRUMENTS LIMITED**

Due to continued expansion several vacancies have arisen in the Quality Assurance Department. For these posts previous experience in the semiconductor field is desirable but not essential; those with the following qualifications are invited to apply:—

- (1) Graduates in the physical sciences or electrical engineering.
- (2) Applicants with previous experience in process control or quality control generally.
- (3) Applicants with experience on environmental and life testing or the evaluation of components.

Prospects of advancement are excellent.

Applicants should write, giving chronological details of qualifications and experience to date, quoting reference No. 64/8, to:—

**The Personnel Manager**  
**TEXAS INSTRUMENTS LIMITED**  
**DALLAS ROAD, BEDFORD**

**RADAR, WIRELESS and INSTRUMENT FITTER CIVILIAN INSTRUCTORS**

(Male) required by Air Ministry in the provinces. Appointments unestablished, but good prospects of becoming pensionable. Trade training, practical experience and ability to teach are essential. Pay £727 at age 26 rising to £900.

Apply to:  
 Air Ministry, C.E.4e (CIV), London, W.C.2.

**Bradford Institute of Technology**

Principal: E. G. Edwards, Ph.D., B.Sc., F.R.I.C.

Applications are invited for the post of:  
**SENIOR LECTURER**  
**IN ELECTRICAL ENGINEERING**

This rapidly expanding department offers exceptional opportunities for teaching, consulting and research work. Candidates should be suitably qualified to teach to final degree standard in Electrical Power and Machines or Electronics and Telecommunications. The successful candidate will be encouraged to develop industrial contacts and to undertake research for which adequate facilities will be available.

Salary scale £1,550 to £1,750 per annum. Previous industrial and research experience, at a suitable level, will be taken into account in fixing the commencing salary.

Further particulars and forms of application may be obtained from the Registrar, Bradford Institute of Technology, Bradford, 1.

**W. H. LEATHAM**  
 Clerk to the Governors

**GARLANDS HOSPITAL MANAGEMENT COMMITTEE**

**GARLANDS HOSPITAL**  
**CARLISLE (1,060 Beds)**

**ELECTRO-ENCEPHALOGRAPHY RECORDIST GRADE I.** Applications are invited from experienced technicians. The Department serves the inpatients and outpatients of the mental hospital and also the general hospitals in the area. Whitley Council salary scales and conditions (£585 rising to £730 per annum). House available on Hospital estate if required for which rent and rates are charged. Applications giving qualifications, age and experience, together with names of two referees, to the Medical Superintendent as soon as possible.

## AN/AMT-II RADIO SONDE TRANSMITTERS

Complete transmitter designed to transmit signals in the range of 395-406 mc/s. range audio modulated at 10 to 200 c/s., modulation frequency depending on the magnitude measured. Measurements range: pressure 1,000 to 5 millibars; Relative Humidity 15 to 100%; Temperature -90 to +50°C. Equipment includes barometric switch and measuring device, humidity and temperature measuring elements, aerial and pressure calibration chart. Transmitter Circuit consists of Double Triode 3A5 with one half acting as modulating oscillator, the other as a buffer, and UHF Triode 5703.

PRICE, brand new ..... £2 10 0  
Manual ..... 17 6  
One manual supplied free per each six transmitters. Packing and postage ..... 6 6

## UNIVERSAL IMPEDANCE BRIDGE

(Test Set Type 373)

General Purpose Impedance Bridge for 115/230 v. A.C. operation. Measurements ranges: 0.1 to 100,000,000 ohms, 1pF to 1,000mF; 0.1μH. to 100H. Accuracy 1 to 2% (centre of the range) for resistance and capacitance and 10% average for inductance. Operating frequency 1,000 c/s. except higher capacitance ranges where measurements are made at mains frequency. Direct leakage current reading up to 5mA. Polarizing voltage from 0 to 500 volts for reforming electrolytic capacitors. Neon tuning indicator and headsets for balancing. No Zero Indicator provided.

PRICE, unused and guaranteed ..... £30 p.p. £1.

## INSULATION TESTERS

**EVERSHED SERIES 1 MEGGER INSULATION TESTERS**, 500 volts, 40 megohms, secondhand, fully overhauled and guaranteed ..... £25 0 0  
Packing and carriage ..... 15 0

**EVERSHED SERIES 2 BRIDGE MEGGERS**, 500 volts, 100 megohms, with built-in four decade resistance box and ratio arms of .01-10-1.0-10-100; Selector for Bridge, Megohms and Varley measurements. Unused and fully guaranteed ..... £85 0 0  
Packing and carriage ..... £1 0 0

**EVERSHED SERIES 2 MEGGER INSULATION TESTERS**, 1,000 volts, 200 megohms, in leather cases, brand new ..... £45 0 0  
Packing and carriage ..... 15 0

300 volts, 100 megohms in leather case, secondhand. Fully overhauled ..... £17 10 0  
Packing and carriage ..... 15 0

**EVERSHED SERIES 3 MEGGERS (Wee Meggers)**, 500 volts, in leather case ..... £13 10 0  
250 volts, in leather case ..... £11 10 0  
Packing and carriage ..... 15 0

## TYPE 106 SIGNAL GENERATOR

Frequency Range: 5.5 to 52 mc/s. Output 1 microvolt to 100 mV. Output Impedance: 70 and 100 ohms. Internal modulation. Provision for External Modulation. Power supplies: 230 v. 50 c/s. or 80 v. 1,000 c/s.

PRICE, unused, complete with calibration charts ..... £12 10 0  
Without calibration charts ..... £8 10 0  
Packing and carriage ..... 15 0

## COMMUNICATION RECEIVERS

ALL AVAILABLE ON H.P. OR CREDIT TERMS, Completely overhauled to "as new" performance and with six months' guarantee.

RCA AR-88LF RECEIVERS ..... £80 0 0  
RCA AR-88D RECEIVERS ..... £85 0 0  
HALLICRAFTERS 8-27 (28-143 mc/s.) ..... £85 0 0  
MARCONI CR-100, 60 kc/s.-30 mc/s. .... £42 0 0  
BC-342, 1.5-18 mc/s. .... £42 0 0

Please write for further details.

## WESTON MODEL 155 PORTABLE MIRROR SCALE A.C. MOVING IRON AMMETERS

0-150 amps. A.C.

PRICE, new ..... £6 10 0  
Post and packing ..... 1 0 0

## CATHODE FOLLOWER VALVE VOLTMEETER

Voltage Range: 100 microvolts to 200 volts in six steps. Frequency Range 300 c/s. to 200 Kc/s. Noise level: 50 microvolts max. Accuracy: better than 3%. Input Impedance 100 megohms; 15 pF. The instrument

can also be used as an A.C. Amplifier with a maximum output of 10 volts. Power supplies: 200-250 v. C. Mains.

PRICE ..... £35 0 0  
Packing and carriage ..... £1 0 0

## TF-582B/1 MARCONI OSCILLATOR-DETECTOR UNIT

Frequency Range 100 kc/s. to 20 mc/s. in six bands. Oscillator output: 3 to 1V; Detector sensitivity at least 10μV at low frequency end, falling off to 200μV at high frequency end; The Unit consists of separate Oscillator and Detector Units mounted in common cabinet. RF output modulated at 1,000 c/s.; Headphone balance (null indication).

PRICE, fully overhauled and guaranteed ..... £75 0 0  
Packing and carriage ..... £1 0 0

## B.T.H. "X" BAND PERFORMANCE TESTING RESONATOR (ECHO BOX)

Directly calibrated frequency dial, graduated from 9,170 to 9,470 mc/s. Graduated Attenuator; Microammeter Resistance Indicator; complete with R.F. Cable and Waveguide Adaptor.

PRICE ..... £32 0 0  
P. and carr. .... 15 0

## SULLIVAN STANDARD WHEATSTONE BRIDGE

5-decade Wheatstone Bridge. -1.10-10-100-1000 absolute ohms; Ratio Arms Ratios: .001-.01-1.10-10-100-1000. PRICE ..... £85 0 0

**CAMBRIDGE SPOT GALVANOMETER**, for use with the above: nominal sensitivity 35-0-35 microamps. PRICE ..... £12 10 0  
Packing and carriage ..... £2 0 0

## MARCONI TF-144G SIGNAL GENERATOR

Frequency Range 85 kc/s. to 25 mc/s.; Output 1μV. to 1 volt; 200-250 v. A.C. mains power supply or battery operation. Complete with mains lead and output lead with Dummy Aerial.

PRICE ..... £85 0 0  
Packing and carriage ..... £1 0 0

## AUDIO OSCILLATORS

**HEWLETT PACKARD MODEL 200A**, Resistance tuned Oscillator with a frequency range of 35 to 35,000 c/s. in three ranges. Max. output 1 watt into 500 ohms with distortion not exceeding 0.5%. Output is not metered. Power Supplies 115 v. A.C.

PRICE, new, fully guaranteed ..... £28 0 0  
Packing and carriage ..... 15 0

**HEWLETT PACKARD MODEL 205A**, Resistance Tuned Oscillator with a frequency range of 20 c/s. to 20 kc/s. in three bands. Output 5 watts into 50, 200, 600 and 5,000 ohms with distortion not exceeding 1%. Output Meter. Input Meter; Calibrated Attenuator. PRICE, fully overhauled and guaranteed ..... £85 0 0  
Packing and carriage ..... 41 0 0

**LO-50 B.S.R. AUDIO OSCILLATOR**, Frequency range 0-16,000 c/s.; Maximum Output 0.5 Watts into 600 ohms. Output Meter, Tuning by means of two dials. Power Supplies 230 v. A.C.

PRICE, fully overhauled and guaranteed ..... £30 0 0  
Packing and carriage ..... £1 0 0

## SPECIAL UHF AND EHF RECEIVERS

AN/APR-4 Search Receivers. Frequency Range 40 to 2,000 mc/s. Panoramic Adaptors type RDO available.

AN/APR-5 Search Receivers, 1,000-6,000 mc/s.

R-1294 Receivers, 500-3,000 mc/s.

R-1619 Receivers 1,250-5,000 mc/s.

Prices and details on application.

## CATHODE RAY TUBES

	V(a1)	V(a2)	V(a3)	ES	15/-
3ACP2	4,000	2,000	550	ES	12/6
3BP1	2,000	—	575	ES	40/-
5CP1	4,000	2,000	575	ES	70/-

VCR-47	2,500	—	—	ES	15/-
VCR-52	1,000	—	—	ES	3/6

Bases for 3ACP2, 3BP1, 5CP1 ..... 1/-  
Bases for 5FP7 (Int. Octal) ..... 2/6 in £  
Packing and carriage 2/6 in £

## 5SP7 DOUBLE GUN ELECTROSTATIC CATHODE RAY TUBES

Screen coating gives blue-white short persistence and excellent persistence trace. Average operating conditions: V(a1) 4,000 v., V(a2) 2,000 v., V(a3) 350-700 v. Cut-off voltage 45-70. Sensitivity 80-100 v. D.C. per inch on "Y" and 70-80 v. D.C. per inch for "X" axis. Heater 6.3 v. 0.8 A.

PRICE, new and guaranteed, ONLY ..... £7 0 0  
Postage and packing ..... 3 6

## SPECIAL TEST EQUIPMENT

TS-3 Wave-Wattmeter 2,700-3,400 Mc/s.  
TS-12 R.W.R. Indicator 9,305-9,445 Mc/s.  
TS-13 Portable Signal Generator/Wattmeter 9,305-9,445 Mc/s.  
TS-14 Signal Generator 3,200-3,370 Mc/s.  
TS-34 Portable High Speed Oscilloscope.  
TS-35 Portable Signal Generator 8,700-9,500 Mc/s.  
TS-36 Power Meter 8,700-9,500 Mc/s.  
TS-45 Signal Generator and Wave/Wattmeter, 8,700-9,525 Mc/s.  
TS-47 General Purpose Oscillator 40-3,000 Mc/s.  
TS-56 Slotted Line, 358 Mc/s.-690 Mc/s.  
TS-61 Echo Box 3,140-3,360 Mc/s.  
TS-118 R.F. Output Power Meter, 20-750 Mc/s.  
TS-225 Peak Power Meter 405-425 Mc/s.  
Type 57 Standing Wave Indicator, 9,100-9,700 Mc/s.

Details and prices of all the above equipment will be supplied on request.

## STANDARD WAVEMETER No. 2

Laboratory Standard Wavemeter covering a range 0.5 kc/s. to 10 mc/s. on fundamentals and up to 500 mc/s. in harmonics. Generation of any frequency from 0.5 kc/s. to 10 mc/s. with accuracy of 1 in 10<sup>4</sup> ±0.1 c/s.; Generation of any kc/s. from 2 kc/s. to 10 mc/s. with accuracy of 10<sup>4</sup>. Output signal amplitude 0.2 to 0.3V. Decade tunings. Mains operation. PRICE ..... £280 0 0  
Packing and carriage ..... £5 10 0

## KLYSTRONS AND MAGNETRONS

**Klystrons:**  
417A (2K41), 9.1-11.3 centimetres; Output 25 milliwatts ..... £2 0 0  
Packing and postage ..... 5 0  
723A/B, 8703-9548 mc/s. .... £3 10 0  
Packing and postage ..... 5 0

**Magnetrons:**  
2J39, 9003-9138 mc/s., 14 kW. .... £8 0 0  
Packing and postage ..... 7 6  
5J29, 770 mc/s., liquid cooled, 150 watts ..... £3 0 0  
Packing and postage ..... 5 0  
Packing and postage ..... £2 0 0  
QK59, QK60, QK61, 10 cm. band ..... £2 0 0  
Packing and carriage ..... 5 0

## EXPORT ONLY

SCR-522 Transmitter-Receivers and complete installations for Airborne or Ground Use.

WIRELESS SETS No. 38 Mk. III, incorporating Crystal Calibrators.

BC-950-A four-channel crystal controlled Aircraft Transmitters, 100-124 mc/s., or 100-146 mc/s.

Details and prices on application.

## UHF PORTABLE TRANSMITTER-RECEIVERS

RT-159/URC-4.  
Pocket Size Handie-Talkies, two crystal channels (125 and 250 mc/s. bands), powered by Mercury batteries.

PRICE, new and complete with Mercury Battery £35 ea.  
Packing and carriage ..... 15 0

## Fidelia

Our present range includes:  
 Fidelia Major AM FM tuner unit with pre-amp., tone controls, etc., R.F. stage on all wavebands, variable selectivity, etc. Price £27/4/-, or with the Major amplifier, £42/14/-  
 Fidelia Imperial, VHF tuner. Price £15/5/-, or with pre-amp. and tone controls, £19.  
 Fidelia Precision, switched VHF tuner. Price £14/6/-, or with pre-amp. and tone controls. £18.  
 Fidelia Major amplifier, £18.

Full details willingly on request. (6d. for postage is appreciated.)

## WARNING

Readers are warned that Government surplus components and valves which may be offered for sale through our displayed or classified columns carry no manufacturers' guarantee. Many of these items will have been designed for special purposes making them unsuitable for civilian use, or many have deteriorated as a result of the conditions under which they have been stored. We cannot undertake to deal with any complaints regarding any such items purchased.

### NEW RECEIVERS & AMPLIFIERS

**A PROMPT** cash offer for your surplus brand new valves, speakers, components, test instruments, etc.—R.H.S., 155, Swan Arkers, Bradford, 1. [0190]

**WANTED**, all types of communications receivers and test equipment.—Details to R. T. & I. Service, Ashville Old Hall, Ashville Rd., London, E.11. Ley 4986. [0163]

**URGENTLY** wanted, manuals or instruction books, data, etc., on American or British Army, Navy or Air Force radio and electronic equipment.—Harris, 93, Wardour St., W.1. Gerrard 2504. [8880]

**WANTED**, good quality communication RYS tape recorders, test equipment, domestic radios, record players, amplifiers, valves, components, etc., establish 18 years.—Call, send or phone Ger. 460 Hillier radio, 38a, Newbury Court, Leicester Square, W.C.2. [8563]

**PROMPT** cash for the purchase of surplus stocks of televisions, tape recorders, radios, amplifiers and domestic electrical appliances of every description, substantial funds available.—Spears, 14, Watling St., Shudehill, Manchester, Deansgate 7705 (3 lines). Bankers: Midland Bank, Ltd. [0216]

**REPAIRS and SERVICE**

**BOULTONS OF BRADFORD.**  
**LOUDSPEAKER**, pressure unit and microphone repairs, DCB cone assemblies and field coils in cartons; service and satisfaction guaranteed.—D. C. Boulton, 134, Thornton Rd., Bradford 1. Tel. 22838. [0171]

**MAINS** transformers wound to any specification.  
**MOVIE** rewinds and complete overhauls; first-class workmanship; fully guaranteed.  
**F.M. ELECTRIC Co. Ltd.**, Potters Bldgs., Warser Gate, Nottingham. Est. 1917. Tel. 54898. [0113]

**LOUDSPEAKERS** repaired promptly.—Model Loudspeaker Service, Sonic House, Shipton on Cherwell, Oxford. [0230]

**WE** undertake the manufacture of transformers singly or in quantities to any specification; all work guaranteed for 12 months.

**LADBROKE** Rewind Service, Ltd., 820a, Harrow Rd., London, N.W.10. Tel. Ladbroke 0914.

**TRANSFORMERS** of any specification. Singles, rewinds, small or large batches; quick and efficient service, competitive prices, estimates by return of post from:  
**MESSRS. Newman & Son, 1, Grove Crescent, South Woodford, E.18.** [0333]

**T.I.T.A.**, and leading radio manufacturers, single or long runs, prompt delivery, home and export, rewinds to all makes.  
**FORREST (TRANSFORMERS) Ltd.**, Shirley, Solihull, Warwick. Tel. Shl. 2435. [0128]

**SPEAKER** repairs, cones altered fields and clock coils wound, guaranteed satisfaction, prompt service.—L. S. Repair Services, Pluckley, Ashford, Kent. [0223]

**MISCELLANEOUS**

**METALWORK**, all types cabinets, chassis, racks, etc., to your own specification, capacity available for small milling and capstan work up to 1in. bar.  
**PHILPOTT'S METAL WORKS, Ltd.**, Chapman St., Loughborough. [0208]

**PAINTS, CELLULOSE, ETC.**

**PANL**, recognised for many years as the unique, one-coat black crackle finish, brush applied, no baking; available by post in 1/8 pint cans at 3/9 from: G. A. Miller, 255, Nether St., London, N.3. [0260]

**CAPACITY AVAILABLE**

**ELECTRONICS** engineers to the industry. Production with 100% inspection.  
**RADIO-AIDS, Ltd.**, 29, Market Street, Watford (25988), Herts. [0214]

**ELECTRONIC** assembly, coil winding and machining; A.I.D. approved.—Bel Sound Products, Marlborough Yard, London, N.19. Tel. Arc. 5078. [0815]

**WORK WANTED**

**ASSEMBLY**, wiring of electronic and V.H.F. equipment; prototypes; high standard of work.—Electronic Service, 4, Ashmead Rd., London, S.E.8. [8881]

**INVEST THIS YEAR IN THE BEST LONG TERM GOOD SOUND SECURITY**

One which pays regular high dividends in pleasure with many bonuses—**DUODE**.

Apart from the enjoyment which comes from Duode's crystal clear, full range naturalness, there is its unique permanent value.

Any Barker or Duode unit bought since 1948 can be fitted with a new 1960 type assembly, bringing it right up to date, at a very moderate cost. And any Duode bought today will be equally up to date ten years hence. If you want good sound value, write today to:—

**DUODE Ltd.**

24 Dingwall Rd., Croydon, Surrey

**HANDBOOK OF ELECTRONIC CONTROL CIRCUITS**

With this comprehensive compilation of over 250 electronic circuits, each complete with values of components, industrial electronic and design engineers have a carefully selected reference of extreme usefulness.

TRANSFORMERS FOR ENGINEERS  
TECHNICIANS, SCIENTISTS

TROPICAL LIGHTING, NEON, SPECIAL PURPOSE

## SITUATIONS VACANT LONDON COUNTY COUNCIL.

**NORWOOD** Technical College, Knights Hill, S.E.27, require (a); 2 Grade B assistants; (b) lecturer; each to conduct classes in one or more of branches covered by department which offers full-time courses in telecommunication and electronics, radio operating and radar, with part-time courses which also include radio and TV servicing, TV technology and other specialist subjects.

**FOR** Grade B assistants, good qualifications required; appointments temporary in first instance.

**BURNHAM F.E.** salary scale (men) within the range £738 to £1,486; commencing and final salary depending on age, qualifications and experience.

**FOR** lecturer, certain administrative responsibilities entailed; appropriate high academic qualifications and/or good specialist experience required. Salary scale (men) £1,370-£35 to £1,550 plus London allowance £38 or £51. Possible entry to scale above minimum for specially approved experience.

**APPLICATION** forms (foolscap s.a.e.) from Principal at College, to be returned as soon as possible. (2694) [8875]

### GO Ahead Electronics Engineers.

**FRUSTRATED** due to lack of scope for their abilities or lack of prospects for future advancement, are invited to discuss the openings which exist for them in the field of technical publications with a national organization. Experience in one or more of the following fields is desirable. Radar systems, Guided Weapons, Microwave techniques, Pulse circuitry, Instrumentation. Preference will be given to those applicants possessing formal qualifications (B.Sc. H.N.C. City and Guilds Telecomms. etc.) A good general standard of education is essential. This is a field in which Ability and Enthusiasm are well rewarded by a Four Figure Salary. Also require first-class Technical Illustrators. We can only consider the highest calibre candidate who is used to preparing technical illustrations from orthographic prints. Vacancies are available in Manchester, London, Chelmsford and Maidenhead. YOU are invited to write to Technivision Ltd., Braywick House, Nr Maidenhead, Berkshire [8900]

**LOUIS NEWMARK, Ltd.**, have the following vacancies at the development laboratories at New Addington, Croydon.

**AN** engineer or assistant engineer with H.N.C. or equivalent, and experience in the light electrical, electronics, electro-mechanical or aircraft electrical fields to work on the development, installation and flight test of automatic pilots for helicopters.

**AN** engineer or assistant engineer, with a degree or H.N.C. in light electrical or mechanical engineering and relevant experience, for design and development work on small mechanisms and electro-mechanical devices.

**PENSION** scheme. Apply in writing, giving full particulars to Personnel Officer, Louis Newmark, Ltd., Prefect Works, Purley Way, Croydon, Surrey. [0351]

**PART-TIME** electronic engineers for LP disc cutting, installation work, technical advising, wanted in London.—Box 6677. [0134]

**HI-FI/COMPONENTS** salesmen for West End; top salary for right men; permanency.—Tel. Manager, Pad. 3271. [8911]

**PART-TIME** advertising and office manager required by London hi-fi dealers; age immaterial; experience important.—Box 6676. [0133]

**SKILLED** chassis wirers are required by well known manufacturer of sound amplifying equipment. Good all round knowledge and previous experience essential. Box 6594. [8902]

**MECHANICAL** Draughtsman required for work on designs of commercial radio and TV equipment; write stating qualifications, experience and salary required.—Box 6516. [8898]

**TELEVISION** bench and field engineers required at all times for vacancies in most parts of the British Isles; permanent positions with highest salaries plus bonus for suitable applicants, 5½-day week.—Box 1757. [0251]

**LEE PRODUCTS (G.B.) Ltd.**, require a Chief Production Tester who has experience of staff control. This is a progressive position in an expanding organisation.—Apply to Factory, 97, Villiers Road, N.W.2. Willesden 6678. [8998]

**ELECTRONIC** Technician; H.N.C. with Electronics or exceptional practical experience; maintenance and operation magnetic playback systems; geophysical field or playback experience an advantage. Hayes-Orpington area. Box 6028. [8856]

**DEVELOPMENT** engineer.—E. K. Cole, Ltd., Southend-on-Sea, have a vacancy in their development laboratories for an engineer experienced in the development of transistorised radio.—Write, stating age, qualifications and experience, to Personnel Manager. [8915]

**ERIE RESISTOR, Ltd.**, require a junior laboratory engineer experienced in prototype manufacture, together with a minimum of G.C.E., O.L., in maths., physics and English.—Write, giving full details, to Personnel Officer, Millora Works, South Denes, Great Yarmouth, Norfolk. [8873]

## STEREO-TWELVE CHASSIS

36 GNS

The most complete unit yet produced for stereo giving 6 watts high fidelity push-pull output on each channel, 12 watts total. Full VHF, medium and long wavebands. Stereo and monaural inputs for records, tape and radio and outputs for stereo and monaural tape recording. Comprehensive matching for all types of crystal pick-ups. The perfect basis for a complete monaural reproducing system or for a complete stereophonic system now or later.

## STEREO 44 CHASSIS 27 GNS

A stereo and monaural chassis providing 8 watts output, 4 watts on each channel, and covering the full VHF and medium wavebands. Stereo and monaural inputs for tape playback and all types of crystal pick-ups and outputs for stereo and monaural tape recording. Separate bass and treble ganged controls together with dual volume control for ease of balancing.

## JUBILEE CHASSIS 28 GNS

An AM/FM chassis with nine valves and two diodes with push-pull output stage providing 6 watts. Full VHF, medium and long wavebands with automatic frequency control on FM and ferrite aerial on AM. Tape record and playback facilities.

## AF208 CHASSIS 22 GNS

See page 60 for details of the new Armstrong Chassis.

Post this coupon or write for descriptive literature or call at our Holloway showroom for full demonstration. Open 9-6 weekdays, 9-5 Sats.

## LONDON CENTRAL RADIO STORES

**EX-NAVAL SOUND POWERED TELEPHONES** with Hand Generator calling, and neon Indicator in iron clad case size approximately 9in. x 7 1/2in. x 7in. 50/-  
**SOUND POWERED BREAST MIKE AND HEAD-SET.** No Batteries needed. 25/-  
**CARBON TELEPHONE HANDSETS, New.** 12/6.  
**SOUND POWERED INSERTS.** Suitable for Transistor Sets. New. 3/9.

**CENTRE ZERO mA. METER.** 1.0-1. Suitable for tuning indicator or galvo. Resistance 75 ohm. Panel mounting overall dimensions 3in. 25/- new and boxed.  
**AVO UNIVERSAL TEST METERS.** Reconditioned as new. In perfect working order. Model 40 £10/10/- Model Z £8/9/-  
**3 1/2in. P.M. SPEAKER 3Q** in grey metal cabinet complete with volume control. Very sensitive. Approx. measurements 5 1/2 x 5 1/2 x 2 1/2in. Approx. weight 2 1/2lb., 25/-.

**HIGH-SPEED ELECTRO-MAGNETIC COUNTERS.** Ex Govt. 0.9,999, 25/50 v. D.C. Size 4 x 1 x 1in. Single coil 2,300 Ω or single coil 500 Ω. 18/6.  
**VENNER TIME SWITCHES,** for switching on/off lighting and power. Reconditioned as new. In iron-clad cases, 10 amp., 75/-; 15 amp., 85/-; 20 amp., 95/-.

**TELEPHONE DIALS.** 0-9. Suitable for inter-office and factory installations. With fixing mount, fitted with connecting tags. 21/-.

**3-OHM P.M. SPEAKERS.** In good working order, 10in., 27/6; 3in. 9/6; 6in. 9/6; 5in., 11/6.

**ELECTRICITY SLOT METERS (1/2-in slot)** for A.C. mains. Fixed tariff to your requirements. Suitable for hotels, etc. 10 A., 84/-; 15 A., 94/-; 20 A., 104/-.  
 Other amperages available. Reconditioned as new.  
**QUARTERLY ELECTRIC CHECK METERS.** Reconditioned as new. 10 A., 42/6; 15 A., 52/6; 20 A., 57/6. Other amperages available.

**BALANCED ARMATURE HEADPHONES.** Suitable for crystal sets, 12/6.  
**LIGHT WEIGHT HEADPHONES.** Low resistance 300 ohm each earpiece. 12/6.

**VENNER 8-DAY CLOCKWORK TIME SWITCHES.** 240 volts 1 amp., 3 1/2 x 2 1/2 x 2 1/2in., with key and connecting socket, 27/6.  
**MOVING COIL HAND MIKE.** Type 7. 7/6.

All prices include carriage

### SITUATIONS VACANT

**TANNOY PRODUCTS Ltd.** Sound Equipment Designers and Engineers, require personnel for their Electrical Test Department. Good all round knowledge and previous experience essential.—Apply Tannoy Products Ltd., Norwood Rd., London, S.E.27. [8901]

**E. K. COLE, Ltd.,** Malmesbury, require production testers and inspectors for radar and electronic equipment. Ex-service radio and radar filters suitable. Full current & welfare facilities; transport from outlying areas. Applications should be made to Personnel Manager. [0333]

**ROOTES, Ltd.,** Birmingham, require experienced radio service engineer with specialised knowledge of Radiomobile, Ecko, etc., to operate Mobile Radio Service; good pay and comm. n.—Write in first instance to Service Manager, Rootes, Ltd., 90, Charlotte St., Birmingham, 3. [8886]

**COILWINDING.**—Senior engineer required to take charge of design small audio transformers; knowledge of current transistor practice an advantage; applicant would be required to work at Rickmansworth.—Full details to Colne Electric, Ltd., Bury Lane, Rickmansworth. [8909]

**ENGINEER** for audio design work required by small manufacturing company, West Essex, should have drive and administrative ability; experience in public address field an advantage; ample scope is offered in this appointment.—Write fullest details of experience, salary required, etc., in confidence, Box 8618. [8905]

**TV/RADIO engineer** (fully skilled)—Expanding organisation (Plymouth) has vacancy for above average type; familiar all types, rental business; leadership organising ability essential; opportunity man with ideas, able shoulder responsibility; good wages; super-annuation scheme; write stating wages [8916 experience.—Box 6667.

**ELECTRONIC engineer** required, familiar also with auto electrical circuits; appointment as development engineer but to be prepared in early stages to assemble and install equipment; keen brain required but very good prospects for the right man.—Phone for appointment Lan. 4746, or write Box W.W. 520, c/o 191, Gresham House, E.C.2. [8883]

**SKILLED test equipment engineer** required to take charge of new section, completely overhaul H.F. and V.H.F. signal generators, audio and R.F. power meters, oscilloscopes, etc., etc.; good pay according to qualifications. Bromley area; write with full details of experience and salary required to—Box No. 6554. [8896]

**DECCA Navigator Training Department** at New Malden require full-time instructor to train senior field engineers in electronic equipment maintenance; excellent prospects for someone combining technical ability with a genuine interest in teaching.—Please apply: Personnel Officer, The Decca Navigator Co., Ltd., 247, Burlington Rd., New Malden, Surrey. [8918]

**DEVELOPMENT Engineer** required by an expanding company, with good practical and theoretical experience of general electronics, also a working knowledge of sheet metal and light engineering practice; staff position; pension scheme and sick club; write giving full details and salary required.—Grundy & Partners, Ltd., 3, The Causeway, Teddington, Middx. [8905]

**RADIO Technicians** required by International Aeradio, Ltd., for overseas service. Permanent and pensionable posts. Normally tax-free, inclusive salary in local currency varying with location, and additional marriage and child differentials. U.K. leave, free air passages and insurance. Kit allowance. Qualified candidates to whom replies will be sent write to Personnel Officer, 40, Park St., W.1. [0262]

**TECHNICAL Sales Engineer** is required by the Sales Director of a leading company marketing television and radio receivers and other domestic products: sound technical knowledge preferably coupled with commercial experience are basic requirements together with a pleasing personality and tact in dealing with executives within the organisation and externally.

IN reply, please submit fullest information without which your application may have to be discarded. All applications will be treated with the confidence that such correspondence merits and no references will be taken up without the applicant's permission.—Write Box 6456. [8877]

**OVERSEAS Oil Exploration Company** with world-wide scientific parties offers permanent career to electronic technicians. Work consists in maintaining and operating electronic recording equipment under field conditions. Live generally in camp. Qualification: H.N.C. or equivalent essential, with practical experience in electronics. Home leave every two years.—Box No. 5829. [0331]

**OXFORD UNIVERSITY COMPUTING LABORATORY** has vacancy for electronics engineer, to assist the maintenance of a Ferranti Mercury computer and ancillary equipment; annual stipend £825-£925, according to age and experience, for 40-hour week.—Applications, before 1 Jan., to the Director, University Computing Laboratory, 9, South Parks Rd., Oxford. [8889]

**NEW BASS REFLEX 4 1/2in. SPEAKER.** And separate 4in. Tweeter in floor stand walnut cabinet 22 1/2 x 8 x 13 1/2in. by prominent manufacturer. Freq. range 40-15,000. List price £15/15/-. Our price £8/15/-. **COSSOR** 3 watt Audio Amplifier Kit with two speakers. List £9/15/-. Our price £6/2/-.

**STEREOSOUND 5W. STEREO AMPLIFIERS.** In polished cabinet 14 1/2 x 6 x 8ins. Weight 15lb. 12 months' guarantee. 15 gns. P.P. 12 v. D.C. MAGNETIC SWITCH. Cuts out on 2 amp. overload or dead short. 13/6. P.P.

**NEW AND BOXED BSR MONARCH UAS 4-SPEED RECORD AUTO CHANGERS.** 200/250 v. A.C. £6/19/6. Carriage 5/-.

**OUR FAMOUS TRANSFORMERS.** Input 200/250. Output tapped 3 to 30 v. 2 a. or tapped 5, 11, 17 v. 5 a. Each 24/6. P.P. Tapped 4 to 30 volts 8 amps 52/6.

**F.W. METAL RECTIFIERS.** 12/6 volt, 1 a., 7/6; 3 a., 13/-; 4 a., 17/6; 6 a., 27/6; P.P. **TOGGLE SWITCHES DPDT 3/6.**

**MICRO SWITCHES** Make and Break 5/6. **MAINS TRANSFORMER AND RECTIFIER** giving 12 v. 1 a. D.C. Output 19/6. P.P.

**NICKEL NIFE BATTERIES.** 1.2 volt. 2.5 amp. Size 3 x 2 1/2 x 1in. Practically everlasting. 6/- or 3 for 16/- P.P. 4 for 21/-.

**ARMY MORSE KEYS.** 3/- P.P. **LIGHT WEIGHT H.R. PHONES.** 17/6. **FULL SIZE H.S. TWIST DRILLS.** Set 7 in wallet 1/6 — 1/2in. 6/-.

All items new and guaranteed

**RELAYS.** We hold large stocks. Any contact combination and operating coil voltage supplied from 3/-.

6 v. Relays 4 make 6/-, 2 for 11/6, 3 for 16/- P.P.

**KEY SWITCHES** from 3/-.  
 Lists sent on request. Post orders only to

THE  
**RADIO & ELECTRICAL MART**  
 29 STATION APPROACH, SUDBURY TOWN,  
 WEMBLEY, MIDDX.

Any parcel insured against damage in transit for only 6d. extra per order. All uninsured parcels at customer's risk. Postage and packing 6d. per valve extra. Over £3 free. C.O.D. or C.W.O. only. C.O.D. charge 3/- extra.

**S.A.E. WITH ENQUIRIES**

**SITUATIONS VACANT**  
**A**IRCRAFT radio engineers and mechanics required with specific workshop experience of one or more of the following: VHF, HF/MP, ADF, ILS, VOR, X band radar; 40-hr. week. Top basic wages—engineers £16 p.w.; mechanics £14 p.w.; overtime and bonus system in operation.—Apply in writing, stating experience, to: Managing Director, Air Transport (Charter), (C.I.), Ltd., 7, Willow Rd., Poyle Trading Estate, Colnbrook, Slough, Bucks.

**A** VACANCY occurs for a first-class R.F. Service Engineer, in the London area; he must have thorough practical and theoretical experience in all aspects of his craft, and preference will be given to applicants also experienced in pneumatics and electronic switchgear; a good salary and excellent prospects are offered; apply, stating age, date available, and giving brief summary of qualifications to Box 6541.

**VACANCIES** exist for senior and junior laboratory engineers to work on sound recording and reproducing equipment and kindred projects for T.V., 35 and 16mm films, experience with transistors an asset; salary according to age and experience; pension scheme, staff canteen, 5-day week.—Applications in writing, giving details of education and experience, should be forwarded to: Personnel Officer, Rank Precision Industries, Ltd., Woodger Rd., Shepherds Bush, W.12. [8908]

**E**LECTRONIC authors.—The Company is able to offer positions to electronic authors who should be experienced in the compilation of civil and service publications, and familiar with various types of electronic equipments.—Authors, and/or technicians who possess a flair for this work, are invited to write for an interview, stating full relevant details of previous experience, etc., addressed to Personnel Manager, Marshalls' Flying School, Ltd., Airport Works, Cambridge. [8907]

**I**NSTITUTE of Cancer Research: Royal Cancer Hospital, Technician to work in Physics Department situated in Royal Marsden Hospital, Fulham Road, S.W.3. Capacity to maintain and service existing electronic equipment and assist with design and construction of new apparatus. Wide range of research and scope offered to enthusiasm and ability. Salary within M.R.C. scale £555-£655. Applications, with names and addresses of three referees, to the Secretary, 33 Summer Place, S.W.7, quoting Ref. 301/8/20. [8904]

**B.E.A.** require a radio engineer to assist in the development of airborne radio communication and navigation systems, prepare performance specifications and investigate defects; applicants should have City and Guilds Final Certificate in Telecommunications or H.N.C. (Radio) and at least 2 years' experience in radio/radar systems or equivalent experience in other spheres; salary £940-£1,120.—Write to Personnel Manager, Engineering, British European Airways, Engineering Base, London Airport, Hounslow, Middlesex. [8917]

**E**RIE RESISTOR, Ltd., require a young man, aged 21 to 25 years, smart appearance, educated to G.C.E. standard and preferably with O.N.C. or equivalent experience in the radio field, to act as a junior assistant to the quality control engineer; duties will embrace the handling of correspondence on various technical issues in connection with the usage of radio components manufactured by the company; good salary, superannuation, etc.—All applications will be treated in strict confidence and should be addressed to the Personnel Officer, Millora Works, South Denes, Great Yarmouth, Norfolk. [8874]

**C**IRCUIT Designers and Circuit Laboratory Engineers required for design and testing of automatic telephone exchange systems and other similar projects. Candidates should have had previous experience of this work and preferably have at least an O.N.C. or an intermediate grouped C. & G. certificate. Knowledge of Crossbar Switching or totalizers would be an advantage. Good salary paid to selected applicants. Pension scheme after qualifying period.

**WRITE** giving full details of qualifications and experience to the Personnel Manager, Ericsson Telephones Limited, Beeston, Nottingham quoting Ref. DA/1 [1016]

**R.E.M.E. Technical Services (Woolwich)**—Technical Assistants, Grade III. A first-class opportunity for entry into the Technical Branch of the Civil Service. Suitably qualified men are urgently required for training as Scale Assessors in Scales Branch, Electrical and Guided Weapons Wing, R.E.M.E. Technical Services. The job consists of assessing scales of spare parts needed to maintain and repair guided weapons systems and radar and control equipments, and entails liaison with commercial firms. Experience in repair of wide radar or control equipment at all levels essential. Training in scales work, together with equipment training, will be given.

**APPLICANTS** must hold a C. & G. Intermediate Certificate in Telecommunications Engineering with Radio II or O.N.C. in Electrical Engineering, or produce evidence of an equivalent of technical education, or have passed a R.E.M.E. Artificer Course. The appointment carries a starting salary of £720 at 26 years rising to £900, with good prospects of promotion, 3½ weeks' leave a year, plus other benefits and privileges. Write, giving age, full details of qualifications, and exp. to: Manager (P.E.2863), Ministry of Labour, Professional and Executive Register, Atlantic House, Farringdon Street, London, E.C.4. [8885]

## SITUATIONS VACANT

**MINISTRY of Aviation** require electrical engineers (Assistant Signals Officers) for aviation telecommunication and electronic navigational aids. Min. age 23, 1st or 2nd Class degree in physics or engineering, or A.M.I.E.E. or A.F.R.Ae.S. (candidates with Parts I, II & III of A.M.I.E.E. or Parts I and II of A.F.R.Ae.S. or equiv. or of very high professional attainment without these quals. considered). Salary £690 (age 23) to £1,125 (age 34) max. £1,300. Slightly lower outside London and for women. Promotion prospects. Further details and forms from Ministry of Labour, Technical and Scientific Register (K) 26, King Street, London, S.W.1 quoting D.554/9A. [0026]

**D.S.I.R.** requires Assistant Experimental Officer/Experimental Officer at Radio Research Station, Ditton, Datchet, Slough, Bucks, to prepare abstracts of Scientific and Technical articles on radio research and development. Quails.—G.E.C. "A" level in two science or maths, subjects or equiv. preferred in Physics or Electrical Engineering. Over 22, Pass degree. H.N.C. or equiv. generally expected. Experience in radio research or development, or communications, and ability to read technical French and German an advantage. Salary ranges.—A.E.O. £392 10s.—£230. E.O. £294—£1,166. Forms from Ministry of Labour, Technical and Scientific Register (K), 26, King Street, London, S.W.1. (quote A.340/9A). Closing date 19th February, 1960. [8899]

**ADMIRALTY** require Technical Class Grade III Officers for its Naval Aircraft Repair Organisation. Vacancies exist primarily in the London, Portsmouth, Belfast and Chippenhams areas. Candidates must be British subjects, aged 21 or over. Quails.—A recognised apprenticeship, O.N.C. or equiv. in Electrical Engineering and a good knowledge of electronics as applied to Airborne Radar and Radio equipment and instruments. Service in the Air Electrical Branch of R.N. or R.A.F. would be valuable. Five day week, eight days' annual leave, salary in the range £565 (age 21) to £750 on entry, rising to £875 (National rate). The posts are non-pensionable. Applications, with full personal details to Ministry of Labour, Professional and Executive Register, 20 Nelson Street, Bristol, 1, quoting FE 5343. [8903]

**INSTRUCTOR** (Telecommunications) required by Sierra Leone Government Technical Education Department on contract for three tours of 10/12 months each in first instance; salary according to age and experience in scale (including inducement addition) £966, rising to £1,528 a year; gratuity at rate of 15% of total salary drawn; outfit allowances £60; children's allowances £48 to £288 per year; liberal leave on full salary; free passages for officer, wife and 3 children under 18 years; candidates should be between 22 and 45 years of age and must possess C. and G.; Full Technical Certificate in Telecommunications specialising in radio transmission or similar qualifications with at least five years practical experience; experience in Technical Education desirable; write to the—Crown Agents, 4, Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M2A/50686/WF [8897]

**AIR MINISTRY** require experimental/assistant experimental officers in (1) Soils Laboratory Cardington, Bedford, Ref. E518/9A. (2) Ruislip, Middlesex, Ref. D641/9A. (1) Duties to take charge of small soil survey teams engaged on foundation investigations for runways, buildings and other civil engineering works at airfields, etc., and to progress and supervise associated laboratory testing. Work requires ability to use Geological Survey maps and publications in interpretation of results of survey. Quails. Higher School Certificate (pref. including geology) or H.N.C. or equiv. quals. and wide experience in responsible capacity in connection with field surveys and associated standard laboratory tests for soils investigations. (2) Duties: experimental work in connection with installation, operation, adaptation and modification of radio equipment and aeriels. Quails., H.N.C. Elect. or equiv. quals. and sound general knowledge of principles of radio; practical experience of one or more ground radio systems employed in R.A.F. such as navigational aids, air-ground communications, long range communications or radar an advantage. Salary scales: Cardington E.O. £954-£1,166. A.E.O. £382/10-£830; Ruislip E.O. £1,005-£1,233. A.E.O. £397/10-£880. Forms from Ministry of Labour, Technical and Scientific Register (K), 26, King St., London, S.W.1, quoting appropriate reference. Closing date 12 February, 1960. [8894]

**CATALOGUE** No 14 Government surplus and model radio control, 500 illustrated items, 2/- (refund on purchase), p.p. 6d.—Arthur Salls Radio Control Ltd., 93 (C), North Rd., Brighton. [0193]

**BOOKS** for C. and G. exams.: Telecom. Principles, A. and B. 9/6; Maths. for Tels., 1. 7/6; Maths. for Tel., 2. 5/-; all post free.—Riddiford, 394, Tilehurst Rd., Reading, Berks. [8652]

**"ABACS or Nomograms"** By A. Giet. Translated from the French by H. D. Phippen and J. W. Head. Most engineers have made use of nomograms at some time in their careers, and are fully alive to the fact that they are a very convenient tool when the same formula has to be solved repeatedly for several sets of variables. It is fair to say, however, that only a small proportion of even those who habitually employ nomograms know how to construct them for their own use. Most of the comparatively small literature on the subject is written for mathematicians and is extremely difficult for the practical engineer to comprehend. This book is essentially practical, and not only demonstrates the many and varied applications of the above nomogram, but shows how even those without highly specialized mathematical knowledge may construct their own charts, 35/- net. From all booksellers. By post 36/- from Illife & Sons Ltd., Dorset House, Stamford St., London, S.E.1.

**"INTRODUCTION to Valves"** By R. W. Hallows, M.A. Cantab. A.M.I.E.E., and H. K. Millward, B.Sc. Lond., A.M.I.E.E. Describes the principles, construction, characteristics and uses of most types of radio valves. The approach is simple and, as far as possible, non-mathematical, but the book provides the student with a thorough understanding of valves and how they work. 8/6 net from all booksellers. By post 9/4 from Illife & Sons Ltd., Dorset House, Stamford St., London, S.E.1.

**THRILLING PERFORMANCE**

Certain conductors can extract from an orchestra the most thrilling and exciting performances, making others seem lifeless and uninteresting. The same can be said for a Massicore output transformer. With a good amplifier and other equipment it can bring to life such performances that will thrill in a way you may not have experienced before.

**BOOKS, INSTRUCTIONS, ETC.**

"**ADVANCED Theory of Waveguides.**" By L. Lewin. Sets out various methods of treating problems arising in work on this complex subject. The author has selected for discussion a number of topics as representative of the field in which the centimetre-wave engineer is engaged, many of the examples being concerned with the rectangular waveguides, 30/- net from all booksellers, 31/- by post from Iliffe & Sons Ltd., Dorset House, Stamford St., London, S.E.1.

"**TELEVISION Explained.**" B. W. E. Miller, M.A. (Cantab.), M.Brit.I.R.E. Revised by E. A. W. Spreadbury M.Brit.I.R.E. The sixth edition of a book which assumes a knowledge of the ordinary sound receiver, but no previous knowledge of television circuits. It is non-mathematical, written in simple language and comprehensively illustrated by many diagrams and photographs. It will prove of great assistance to all students of television, to radio service engineers who wish to embark upon television work and want to understand the principles and circuits involved, and to knowledgeable owners of television receivers who would like to understand the working of their set. 12/6 net from all booksellers. By post 13/5 from Iliffe & Sons Ltd., Dorset House, Stamford St., London, S.E.1.

"**SECOND Thoughts on Radio Theory.**" By Cathode Ray of WIRELESS WORLD. Forty-four articles reprinted from popular WIRELESS WORLD series, in which the author examines various aspects of elementary radio science, explains them clearly, and shows that there may be more behind them than is apparent from the usual text-book. This volume deals with basic ideas, circuit elements and techniques, circuit calculations, and some matters in lighter mood. An entertaining and helpful text-book for the student, refresher course for the engineer, and reference book for all combined; 25/- net from all booksellers. By post 26/4 from Iliffe & Sons, Ltd., Dorset House, Stamford Street, S.E.1.

# Introducing—

## —the **EDDYSTONE** '880'

### High Stability Communications Receiver

The Eddystone "880" High Stability Communications Receiver, now in the production stage, reaches high modern standards. It has been designed expressly for use in professional communications systems and, with the many refinements provided, is widely versatile in its applications.

The principle employed results in an exceptionally high degree of frequency stability. Throughout the tuning range of the receiver, which is from 500 kc/s to 30.5 Mc/s, the long term drift does not exceed 50 cycles. Particular care has been taken to reduce spurious responses to an absolute minimum and the figures for such characteristics as cross-modulation, blocking, inter-modulation and image ratio are extremely good. The electrical performance is well maintained in every way and conforms to accepted professional standards.

There are two fully tuned r.f. stages and all tuning is accomplished with a single knob. The tuning rate is linear and the large clear scale shows only the range in use. The frequency can be set to within one kilocycle. Radiation at any frequency has been reduced to a very low figure. Comprehensive information and full specification available on request to commercial and professional concerns.

Manufactured by **STRATTON & CO. LTD.** BIRMINGHAM 31

# ERSIN

# Multicore SOLDER

Twenty years of specialising in the manufacture of Ersin Multicore Solder has produced the finest cored solder in the world.

Only virgin metals of the highest possible purity and a high grade rosin flux manufactured under laboratory controlled conditions are used.

All these factors combine to produce an even-flow solder characterised by a freedom from dry joints.

## SAVBIT FOR THE SMALL USER

The Size 1 Carton contains approximately 43 ft. of 18 s.w.g. SAVBIT. It is also supplied in 14 s.w.g. and 16 s.w.g. Obtainable from radio and electrical stores. Ersin Multicore 5-Core Solder is also supplied in 4 specifications of Standard Tin/Lead alloys. Price 5/- each (subject).

## STANDARD TIN/LEAD ALLOYS

Ersin Multicore 5-core Solder is available in the following standard alloys:

60/40, 50/50, 45/55, 40/60, 30/70, and 20/80 and in 9 standard gauges on 7 lb. and 1 lb. reels.

## SAVBIT FOR THE SERVICE ENGINEER

Approx. 170 ft. of 18 s.w.g. SAVBIT is supplied on a 1 lb. reel packed in a carton. Price 15/- each (subject).

## SAVBIT FOR FACTORIES

Ersin Multicore Savbit Type 1 alloy containing 5 Cores of non-corrosive flux is supplied to factories at bulk prices on 7 lb. reels. 16 and 18 s.w.g. are the diameters most suitable for the majority of soldering processes. Supplies are also available on 1 lb. reels.

## SPECIAL HIGH AND LOW MELTING POINT SOLDERS

Consol (Melting point 296°C)  
P.T. (Melting point 232°C)  
L.M.P. (Melting point 179°C)  
T.L.C. (Melting point 145°C)

## HOME CONSTRUCTOR'S 2/6 PACK

Now available containing alternative specifications: 19 ft. of 18 s.w.g. 60/40 alloy or, for soldering printed circuits, 40 ft. of 22 s.w.g. 60/40 alloy. Both wound on Reels. 2/6 each (subject).

## Bib WIRE STRIPPER AND CUTTER

This 3-in-1 tool strips insulation without nicking the wire, cuts wire cleanly and splits extruded plastic twin flex. Adjustable to most wire thicknesses. 3/6 each (subject).

## Bib RECORDING TAPE SPLICER

Recording enthusiasts can effect considerable tape economies with this splicer. It makes the accurate jointing of tape so simple and quick that every scrap can be used. 18/6 each (subject).

A free copy of an interesting article "How to Edit Tape Recordings" will be sent you if you will kindly send us a stamped addressed envelope.
